In 2019, the total road length in Great Britain was estimated to be 247,100 miles.

There were 31,800 miles of major road in Great Britain in 2019, consisting of:

- 2,300 miles of motorway (99% trunk, 1% principal)
- 29,500 miles of ‘A’ road (18% trunk, 82% principal)

There were 215,200 miles of minor road in Great Britain in 2019, consisting of:

- 18,800 miles of ‘B’ road
- 196,400 miles of ‘C’ and ‘U’ roads

By length, most roads in Great Britain are managed locally (by a local highway authority or Transport for London). This includes all minor roads (‘B’, ‘C’ and ‘U’ roads), and some major roads (principal ‘A’ roads and motorways).

The rest of the major roads (trunk motorways and ‘A’ roads) are managed centrally by Highways England (formerly the Highways Agency), Transport Scotland, and the Welsh Government.

Motorways, ‘A’, ‘B’ and ‘C’ roads are classified roads, and ‘U’ roads are unclassified. ‘U’ roads are typically residential streets or rural lanes.
In 2019, there were 247,100 miles of road in Great Britain. This was 2,000 more miles than a decade earlier in 2009, and 5,000 more miles than in 1999.

**Chart 1: Road length by road type in Great Britain, 1999 to 2019 in miles [RDL0103]**

There were 700 more miles of major road in Great Britain in 2019 than in 1999, with motorways contributing 200 miles and ‘A’ roads contributing 500 miles of that increase. Whilst the overall length of ‘A’ roads increased by 500 miles between 1999 and 2019, the length of trunk ‘A’ roads decreased by 1,900 miles and the length of principal ‘A’ roads increased by 2,400 miles. This largely reflects the Government’s de-trunking programme where centrally managed roads were transferred over to local authorities, with most transfers carried out between 2001 and 2003.

There were 4,300 more miles of minor road in Great Britain in 2019 than in 1999, almost entirely driven by an increase in ‘C’ and ‘U’ roads.

**Interpreting these statistics**

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Which roads are included?</strong></td>
<td>These statistics cover all roads maintained at public expense, whether managed centrally or locally.</td>
</tr>
<tr>
<td><strong>What does ‘length’ mean?</strong></td>
<td>Road length statistics in this release are based on ‘route miles’ (as opposed to ‘lane miles’).</td>
</tr>
<tr>
<td><strong>Do we know why road length has changed?</strong></td>
<td>We can identify a number of contributing factors to the differences we see. Examples include:</td>
</tr>
<tr>
<td></td>
<td>• roads that have been built, opened and adopted.</td>
</tr>
<tr>
<td></td>
<td>• roads that have been reclassified (e.g. from a ‘B’ road to an ‘A’ road).</td>
</tr>
<tr>
<td></td>
<td>• roads that have been permanently closed.</td>
</tr>
<tr>
<td></td>
<td>• improvements or changes to underlying data sources.</td>
</tr>
<tr>
<td></td>
<td>It is not possible to use the figures in this release to separately identify the impact of each factor that affects the overall length of the road network.</td>
</tr>
</tbody>
</table>

The statistics do not cover any privately maintained minor roads or off road tracks or alleys.
Road Lengths in Great Britain 2019

Of the 247,100 miles of road in Great Britain in 2019, 189,100 miles (77%) of road were in England, 36,900 miles (15%) were in Scotland, and 21,000 miles (9%) were in Wales. Table 1 and Chart 2 show the varying composition of each country’s road network by road type.

Chart 2: Road length by country and road type in Great Britain in 2019

The Strategic Road Network (SRN) includes all trunk motorways and ‘A’ roads in England. In 2019, the SRN was 4,500 miles long and made up 2% of total road length in England. By comparison, there was a higher proportion of trunk roads in Scotland (6%) and Wales (5%). The composition of these trunk roads differed in each country, with 42% classified as motorways in England, compared to only 8% in Wales and 14% in Scotland.

In 2019, a higher proportion of the road network in Scotland consisted of major roads (18%) compared with England (12%) and Wales (13%). A greater proportion of ‘A’ roads were classified as principal in England (87%) compared to Scotland (72%) and Wales (63%).

Scotland and Wales estimates
In 2019, by length, the majority of roads in Great Britain were rural, with 76% of ‘A’ roads, 81% of ‘B’ roads, and 58% of the combined ‘C’ and ‘U’ roads classified in this way.

Just as the composition of the road network by road type varied between England, Scotland and Wales, so did the proportion of urban and rural road length. England had a lower proportion of minor roads classified as rural (57%) than Scotland (68%) or Wales (77%). England also had the lowest proportion of rural ‘A’ roads out of the three countries.

Rural / Urban Breakdowns

Chart 3: Urban/Rural road length by road type in Great Britain, in 2019

Rural / Urban classifications

The classifications in this release are based on the latest definition published by the Office for National Statistics for England and Wales (using 2011 census), and the 2013/14 definition published by the Scottish Government for Scotland. See p.5 for more information.

Background Information

Rounding

Figures quoted in this publication are rounded to the nearest 100 miles. Raw differences and percentage changes are always calculated from unrounded numbers.

Methodology changes

Ongoing improvements to the accuracy of data sources and methodology may account for some of the slight changes between years.

Traffic and Road Length in England

Vehicle activity is unevenly distributed across Great Britain’s road network. Road traffic estimates for 2019 are provisionally due to be published in June 2020, and so were unavailable at the time of publication.

In 2018, 66% of the motor vehicle miles travelled were on motorways and ‘A’ roads, despite comprising only 13% of the road network by length.

On an average day in 2018, 82 times more vehicles travelled along a typical stretch of motorway than a typical stretch of rural minor road (‘B’ roads, ‘C’ roads and unclassified roads).

Urban / Rural Methodology

For 2017, the Department improved the methodology used to calculate urban and rural road lengths, so that urban and rural road length estimates are calculated consistently across major and minor roads, and are more precise. Data for years prior to 2017 are still based on the older classification (2001 for England and Wales). More information can be found at the following links:

Further Information about this Release

Future Road Length Statistics Publications

The Department is continuing to assess how the OS MasterMap Highways Network dataset can be used to produce improved estimates of road length in future. The product is continuously being developed with Ordnance Survey (OS), GeoPlace and other stakeholders. If you have any questions, please email road.length@dft.gov.uk

National Statistics

National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They undergo regular quality assurance to ensure customer needs are met.

Details of ministers and officials who receive pre-release access to these statistics up to 24 hours before release can be found in the pre-release access list: https://www.gov.uk/government/publications/road-network-size-and-condition-statistics-pre-release-access-list

Next publication

The next update, Road Length in Great Britain 2020, is due to be published April 2021.
