

ROMANIZATION OF UKRAINIAN

BGN/PCGN 2019 Agreement

The BGN/PCGN system for Ukrainian was designed for use in romanizing names written in the Ukrainian alphabet. It is an adoption of the Ukrainian national system in use since 2010, and supersedes the BGN/PCGN 1965 System for Ukrainian.^{Note1}

Notes

1. The 2019 system was adopted by BGN and PCGN after monitoring a good level of implementation of the national system within Ukraine. Note, however, that this system is not recommended for reverse transliteration; take caution when attempting to convert a romanized name back into Ukrainian. This system also lacks the methodology outlined in the 1965 System to provide additional differentiation between digraphs and individual character sequences. For example, unlike the 1965 System, the 2019 System doesn't differentiate the special character sequences зг, кг, сг, тс, and тсг (previously romanized as **z·h**, **k·h**, **s·h**, **t·s**, and **ts·h**) from the digraphs **zh**, **kh**, **sh**, **ts**, and the letter sequence **tsh**, which are used to render the characters **ж**, **х**, **ш**, **ц** and the character sequence **тш**.
2. To use the keyboard Unicode function, hold ALT and enter in sequence listed in the table.
3. The character sequence з Г, previously romanized as *zh*, is romanized *zgh* under the 2019 system.
4. These characters differ significantly in romanization from the BGN/PCGN 1965 system.
