

15 April 2020

Year: 2020 Week: 15

In This Issue:

- Key messages.
- Diagnostic indicators at a glance.
- Weekly report statistics.
- Total attendances.
- Respiratory.
- Gastrointestinal.
- Cardiac.
- Notes and caveats.
- Acknowledgements.

Key messages

Data to: 12 April 2020

During week 15 the number of ED attendances for respiratory conditions and acute respiratory infections were stable (figures 4 to 8), though acute respiratory attendances in adults aged over 45 years increased (figure 5a). Attendances for influenza-like illness decreased but the 15+ years age groups remained high (figures 7 & 7a).

Please note: recent decreases in respiratory attendances may be due in part to the use of new clinical coding introduced within EDs, which is not yet fully available for this report.

Diagnostic indicators at a glance:

Further details on the syndromic indicators reported can be found on page 9.

Indicator	Current trend	Level
Respiratory	no trend	below
Acute Respiratory Infection	no trend	similar
Bronchiolitis	decreasing	below
Influenza-like Illness	decreasing	similar
Pneumonia	decreasing	similar
Asthma	no trend	below
Gastrointestinal	no trend	below
Gastroenteritis	decreasing	below
Cardiac	increasing	below
Myocardial Ischaemia	no trend	below

EDSSS weekly report statistics

Only Type 1 EDs meeting the weekly reporting criteria are included (see page 6 for details).

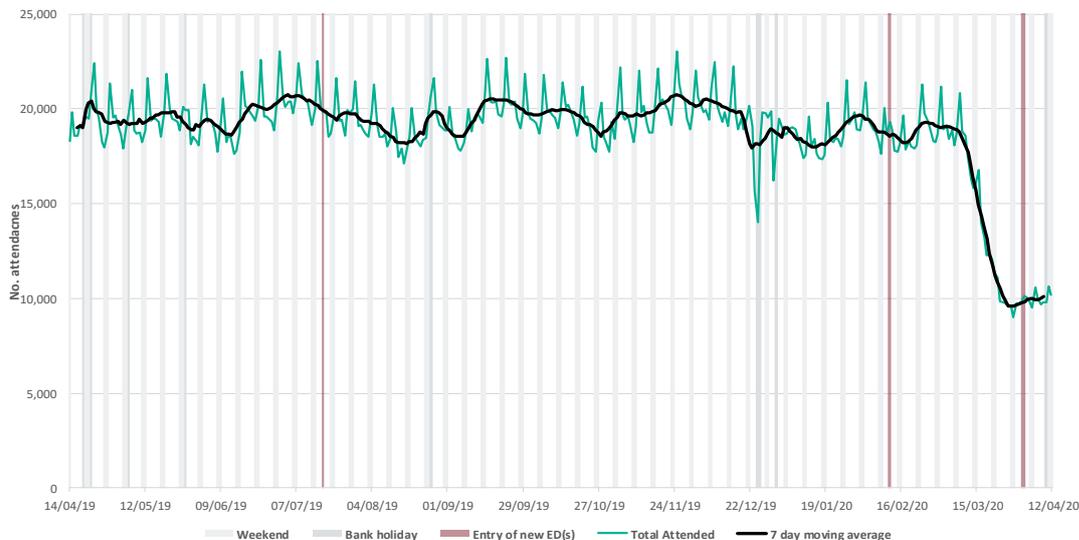

*max EDs included across full time period reported in charts, individual days may include fewer EDs.

Date	Total Attendances	Diagnoses Coded		Type 1 EDs Included
		Number	%	
06/04/2020	10,596	6,906	65.2%	83
07/04/2020	10,036	6,776	67.5%	83
08/04/2020	9,714	7,135	73.5%	83
09/04/2020	9,781	7,036	71.9%	83
10/04/2020	9,815	6,986	71.2%	83
11/04/2020	10,649	7,568	71.1%	83
12/04/2020	10,214	7,268	71.2%	83
Total	70,805	49,675	70.2%	(max)* 83

1: Total attendances.

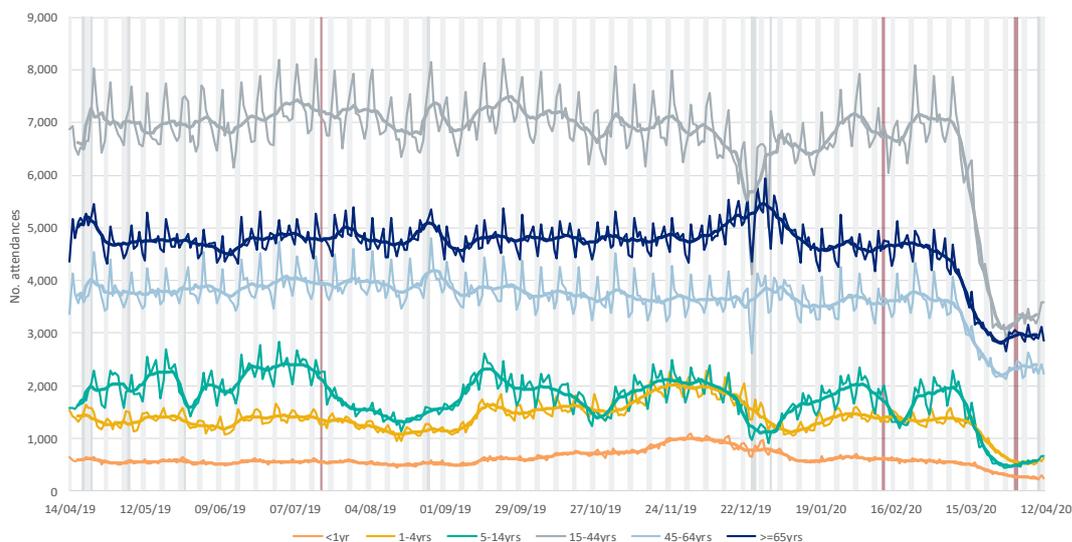

Daily number of total attendances recorded, across the EDSSS network.

The entry of new ED(s) is marked by a vertical red line (see page 6 for inclusion criteria).

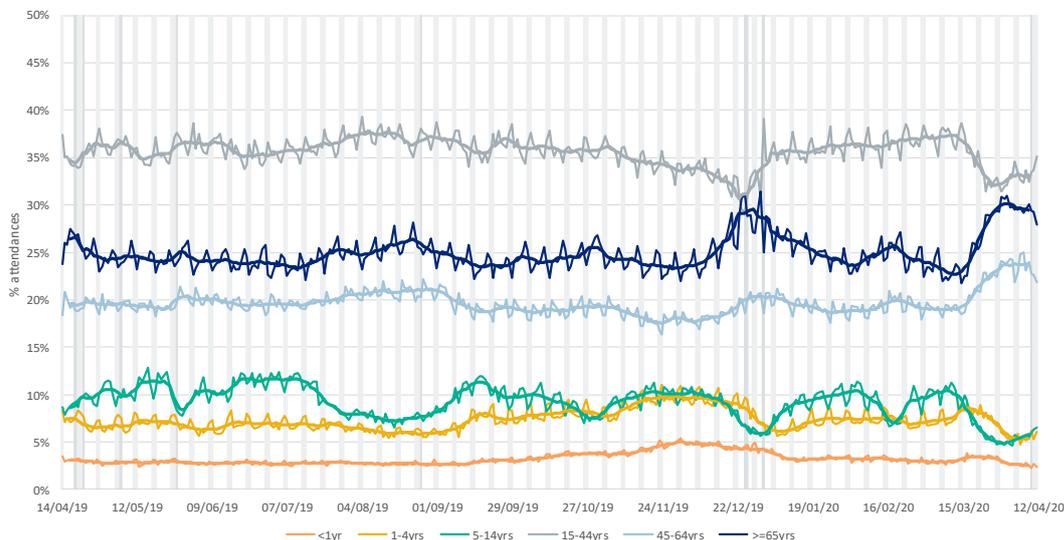

2: Daily attendances by age: Numbers.

Daily number of total attendances, by age group, recorded across the EDSSS network.

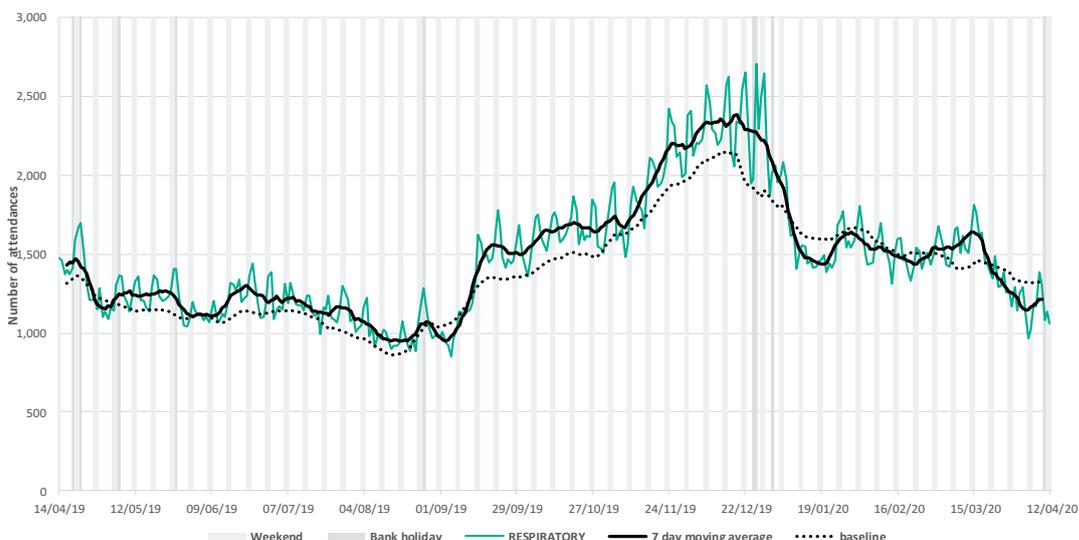

3: Daily attendances by age: Percentages

Daily percentage of total attendances by age group, recorded across the EDSSS network.

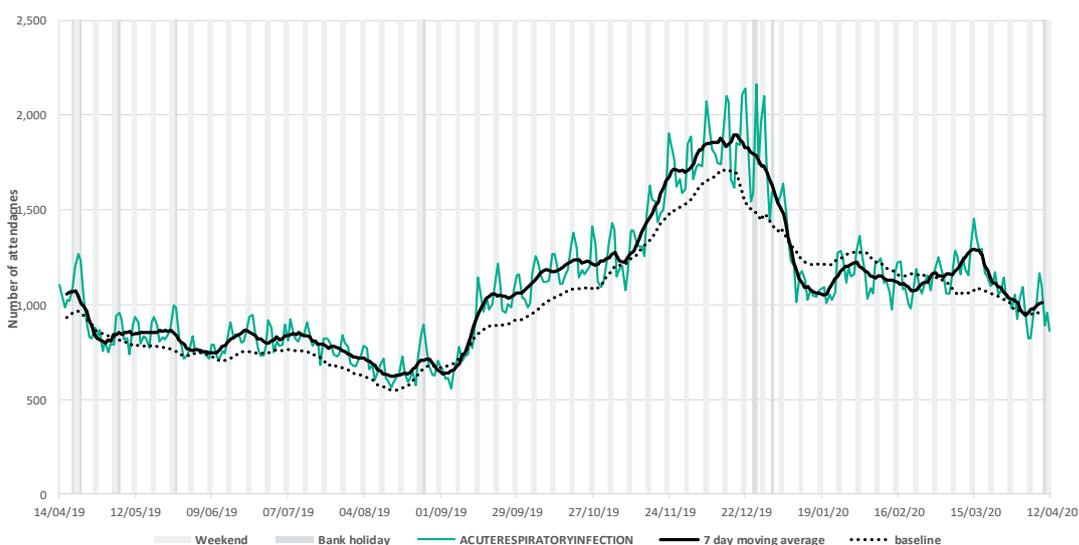

4: Respiratory.

Daily number of attendances recorded as respiratory attendances across the EDSSS network.

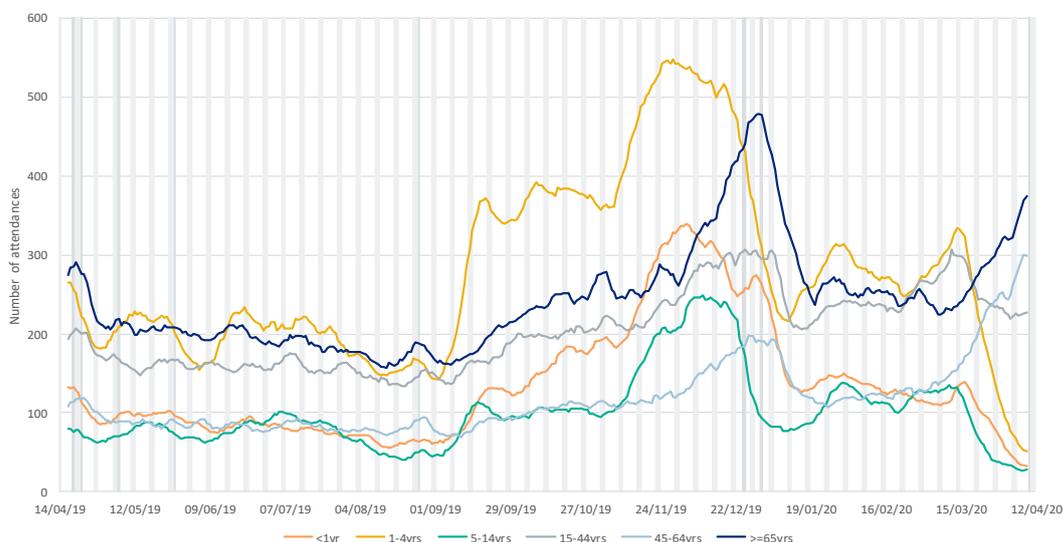

5: Acute Respiratory Infection.

Daily percentage of all attendances recorded as acute respiratory infection attendances across the EDSSS network.

5a: Acute Respiratory Infection by age group.

7 day moving average of ARI attendances within each age group.

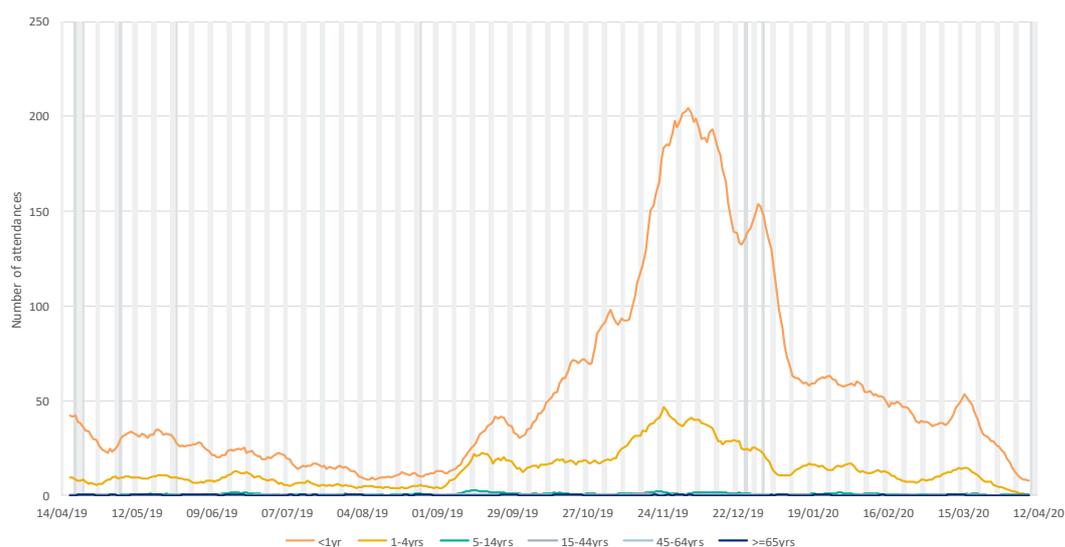

**6: Bronchiolitis/
bronchitis.**

Daily number of attendances recorded as bronchiolitis/ acute bronchitis attendances across the EDSSS network.

**6a: Bronchiolitis/
bronchitis by age
group**

7 day moving average of bronchiolitis/ bronchitis attendances within each age group.

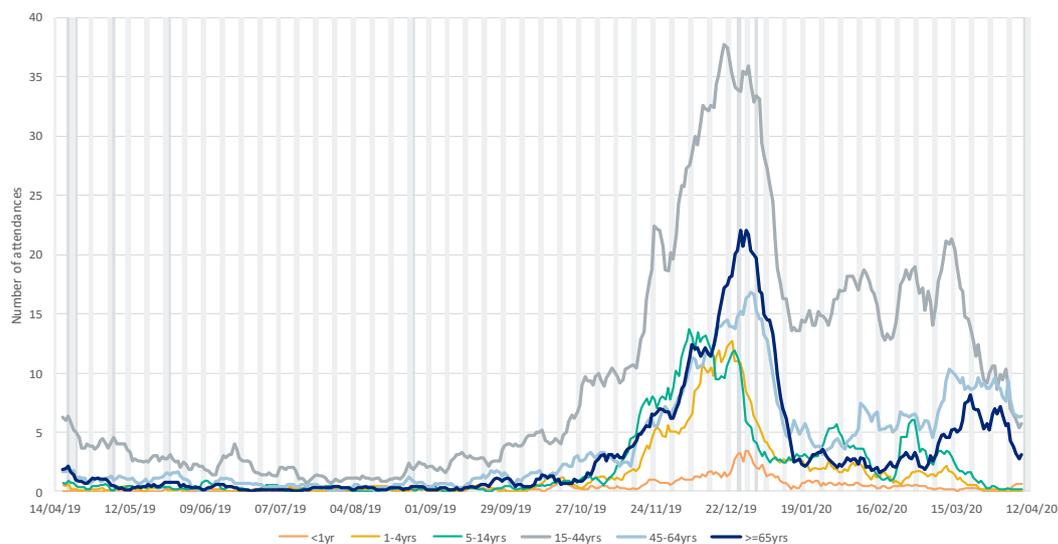

**7: Influenza-like
illness.**

Daily number of attendances recorded as influenza-like illness attendances across the EDSSS network.

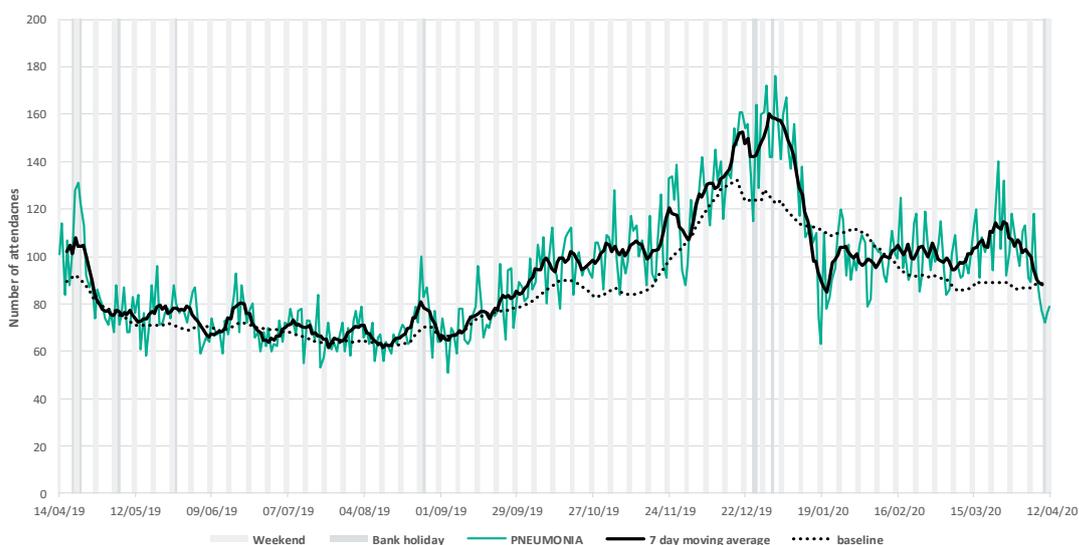

7a: Influenza-like illness by age group

7 day moving average of ILI attendances within each age group.

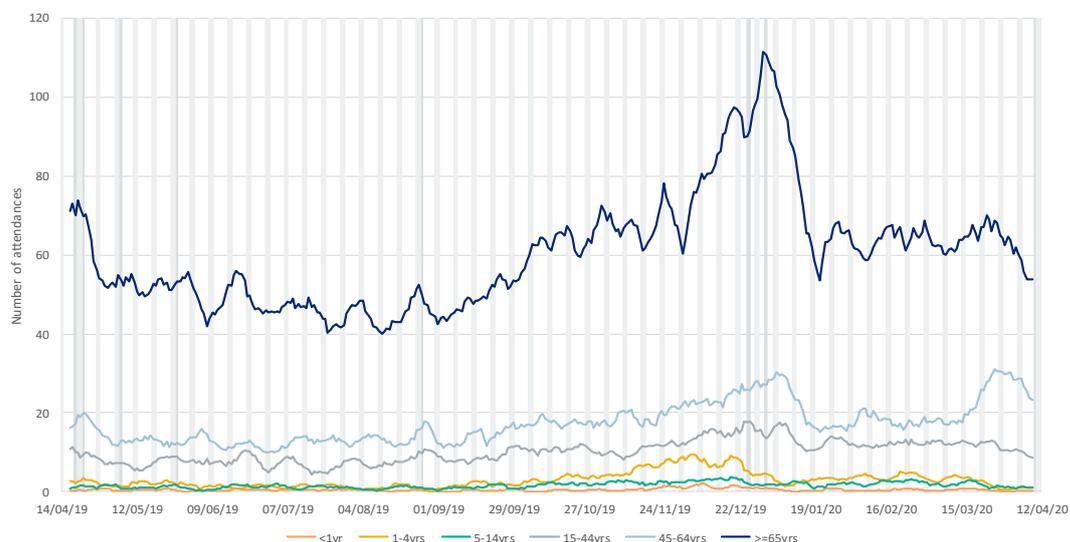

8: Pneumonia.

Daily number of attendances recorded as pneumonia attendances across the EDSSS network.

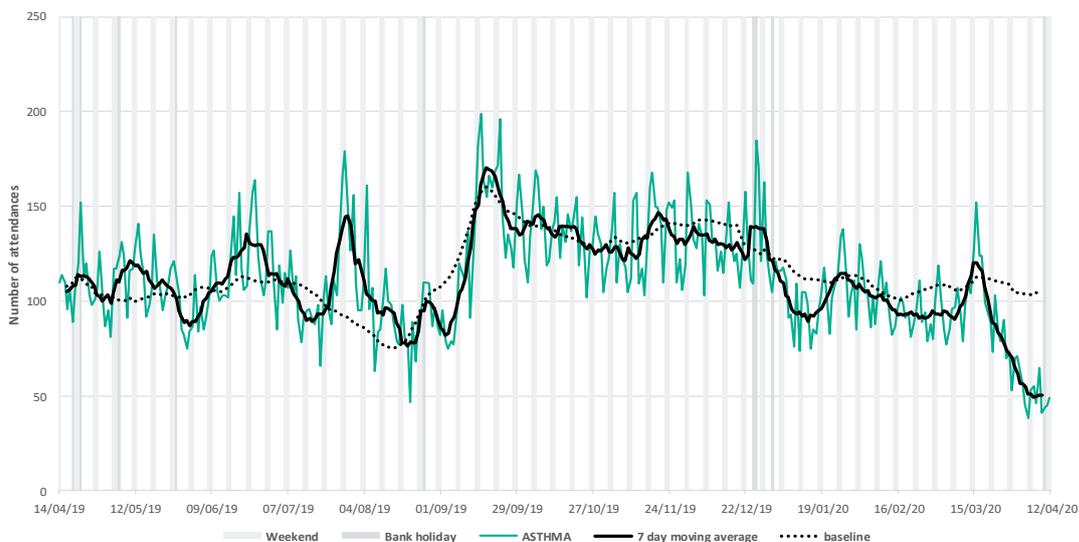

8a: Pneumonia by age group.

7 day moving average of pneumonia attendances within each age group.

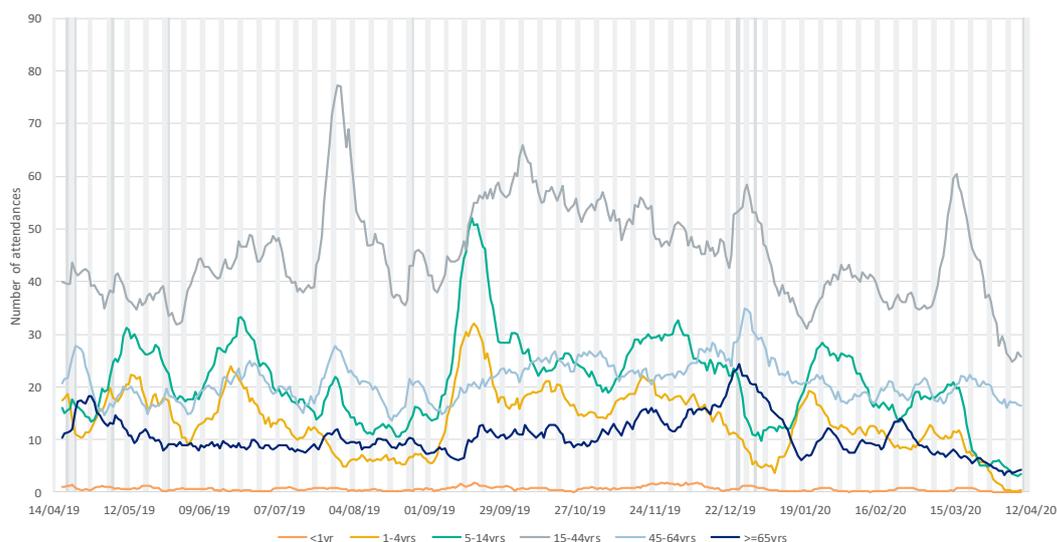

9: Asthma.

Daily number of attendances recorded as asthma/wheeze/difficulty breathing attendances across the EDSSS network.

9a: Asthma by age group.

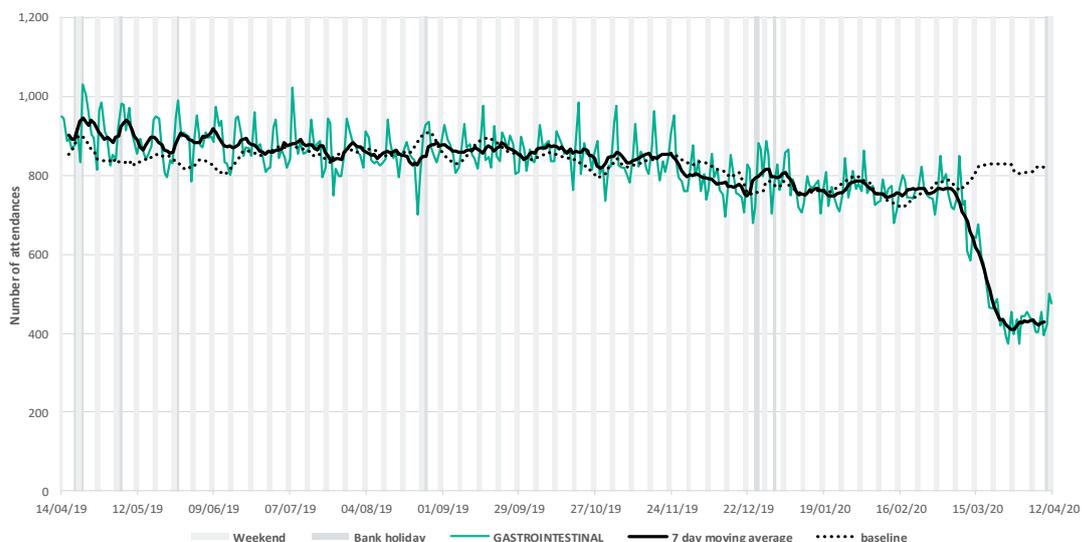

7 day moving average of asthma attendances within each age group.

Intentionally left blank

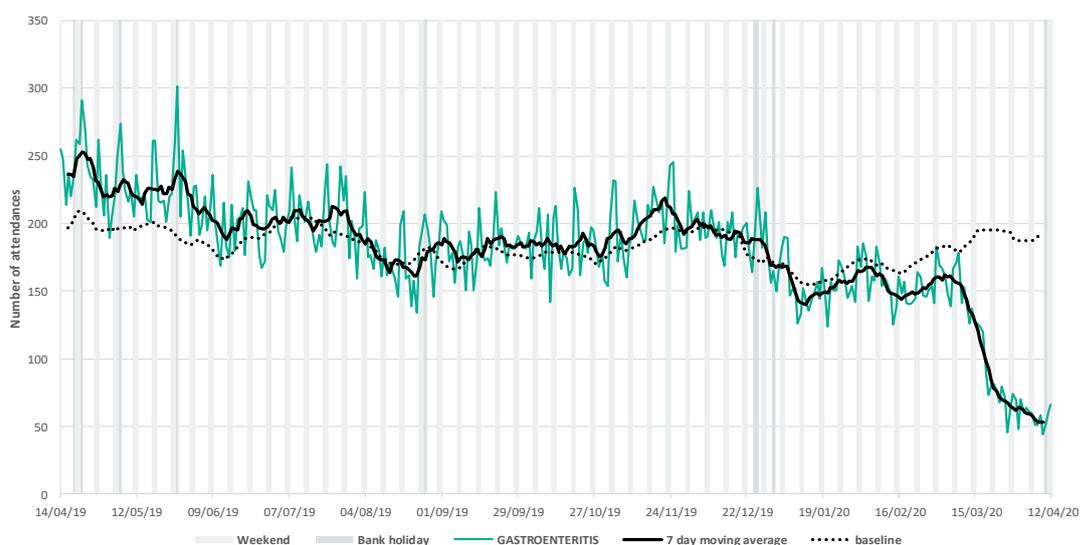

10: Gastrointestinal.

Daily number of attendances recorded as gastrointestinal across the EDSSS network.

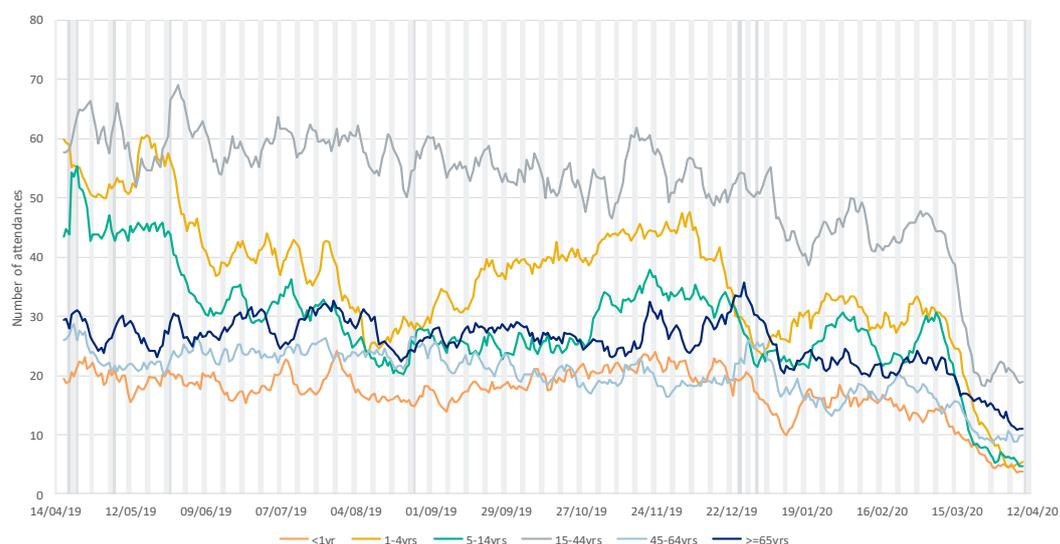

11: Gastroenteritis

Daily number of attendances recorded as gastroenteritis across the EDSSS network.

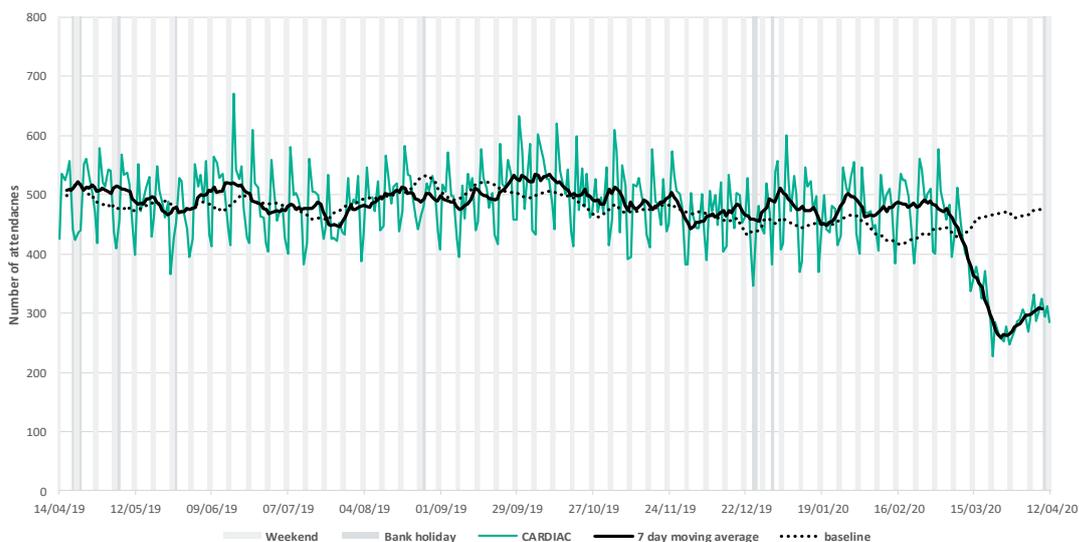

11a: Gastroenteritis by age group.

7 day moving average of gastroenteritis attendances within each age group.

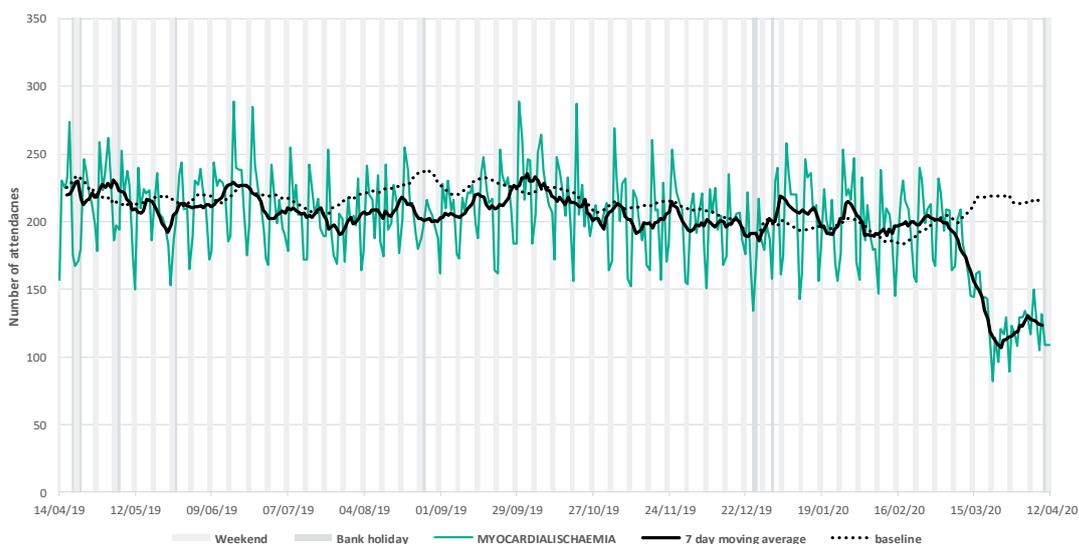

12: Cardiac.

Daily number of attendances recorded as cardiac attendances across the EDSSS network.

13: Myocardial Ischaemia.

Daily number of attendances recorded as myocardial ischaemia attendances across the EDSSS network.

Notes and caveats:

- ▶ **National EDSSS** began operating in April 2018
- ▶ Following the introduction of the Emergency Care Data Set (ECDS) the national reporting of secondary care activity data through the commissioning data sets mechanism from EDs to NHS Digital became a daily feed:
<https://www.england.nhs.uk/ourwork/tsd/ec-data-set/>
- ▶ EDSSS receives an automated daily transfer of anonymised ED data from NHS Digital
- ▶ The number of EDs reporting through ECDS continues to increase
- ▶ Not all EDs currently provide data through ECDS on a daily basis
- ▶ EDs are eligible for inclusion in this report only where the **EDSSS reporting criteria** have been met during the surveillance week reported:
 - Data relates to attendances at a type 1 ED
 - Data for 7 of the 7 most recent days was received by PHE
 - Data for those days was received within 2 calendar days of the patient arrival
- ▶ Where an ED meets these criteria, all data received from that ED previous to the current surveillance week is included.
- ▶ EDs eligible for inclusion is likely to change each week, which will in turn affect the historical data inclusion
- ▶ Individual EDs will not be identified in syndromic surveillance reporting in these bulletins

- ▶ All EDs report diagnoses to EDSSS using SnomedCT codes. Where Snomed codes are not used the ED is excluded from indicator analysis
- ▶ The syndromic indicators presented in this bulletin are based on the SnomedCT diagnosis codes reported by EDs:
 - Respiratory:** All respiratory diseases and conditions (infectious and non infectious).
 - Acute Respiratory Infections (ARI):** All acute infectious respiratory diseases.
 - Asthma:** As indicated by title.
 - Bronchiolitis/ bronchitis:** As indicated by title (excluding 'chronic').
 - Influenza-like Illness (ILI):** As indicated by title.
 - Pneumonia:** As indicated by title.
 - Gastrointestinal:** All gastrointestinal diseases and conditions (infectious and non infectious).
 - Gastroenteritis:** All infectious gastrointestinal diseases.
 - Cardiac:** All cardiac conditions.
 - Myocardial Ischaemia:** All ischaemic heart disease.

- ▶ Baselines represent seasonally expected levels of activity and are constructed from historical data since July 2010. They take into account the change from sentinel EDSSS to National EDSSS and current coverage. Gastroenteritis, diarrhoea and vomiting baselines also account for changes since the introduction of rotavirus vaccine in July 2013. Baselines are refreshed using the latest data on a regular basis.
- ▶ **Sentinel EDSSS** 2010 to March 2018, collected data through a bespoke, voluntary network of EDs across England and Northern Ireland
- ▶ **Sentinel EDSSS** reports be found in bulletins up to and including week 13 2018:
<https://www.gov.uk/government/collections/syndromic-surveillance-systems-and-analyses>

Acknowledgements:

We are grateful to the clinicians in each ED and other staff within each Trust for their continued involvement in the EDSSS.

We thank the Royal College of Emergency Medicine, NHS Digital and NHS England for their support in the development of national EDSSS, using anonymised data collection from ECDS.
