# Laboratory confirmed cases of pertussis in England

## Annual report for 2019 supplementary data tables

# About Public Health England

Public Health England exists to protect and improve the nation's health and wellbeing, and reduce health inequalities. We do this through world-leading science, research, knowledge and intelligence, advocacy, partnerships and the delivery of specialist public health services. We are an executive agency of the Department of Health and Social Care, and a distinct delivery organisation with operational autonomy. We provide government, local government, the NHS, Parliament, industry and the public with evidence-based professional, scientific and delivery expertise and support.

# Laboratory confirmed cases of pertussis in England: 2019 data tables

Laboratory confirmed cases of pertussis reported to the enhanced surveillance programme in England: annual report for 2019:

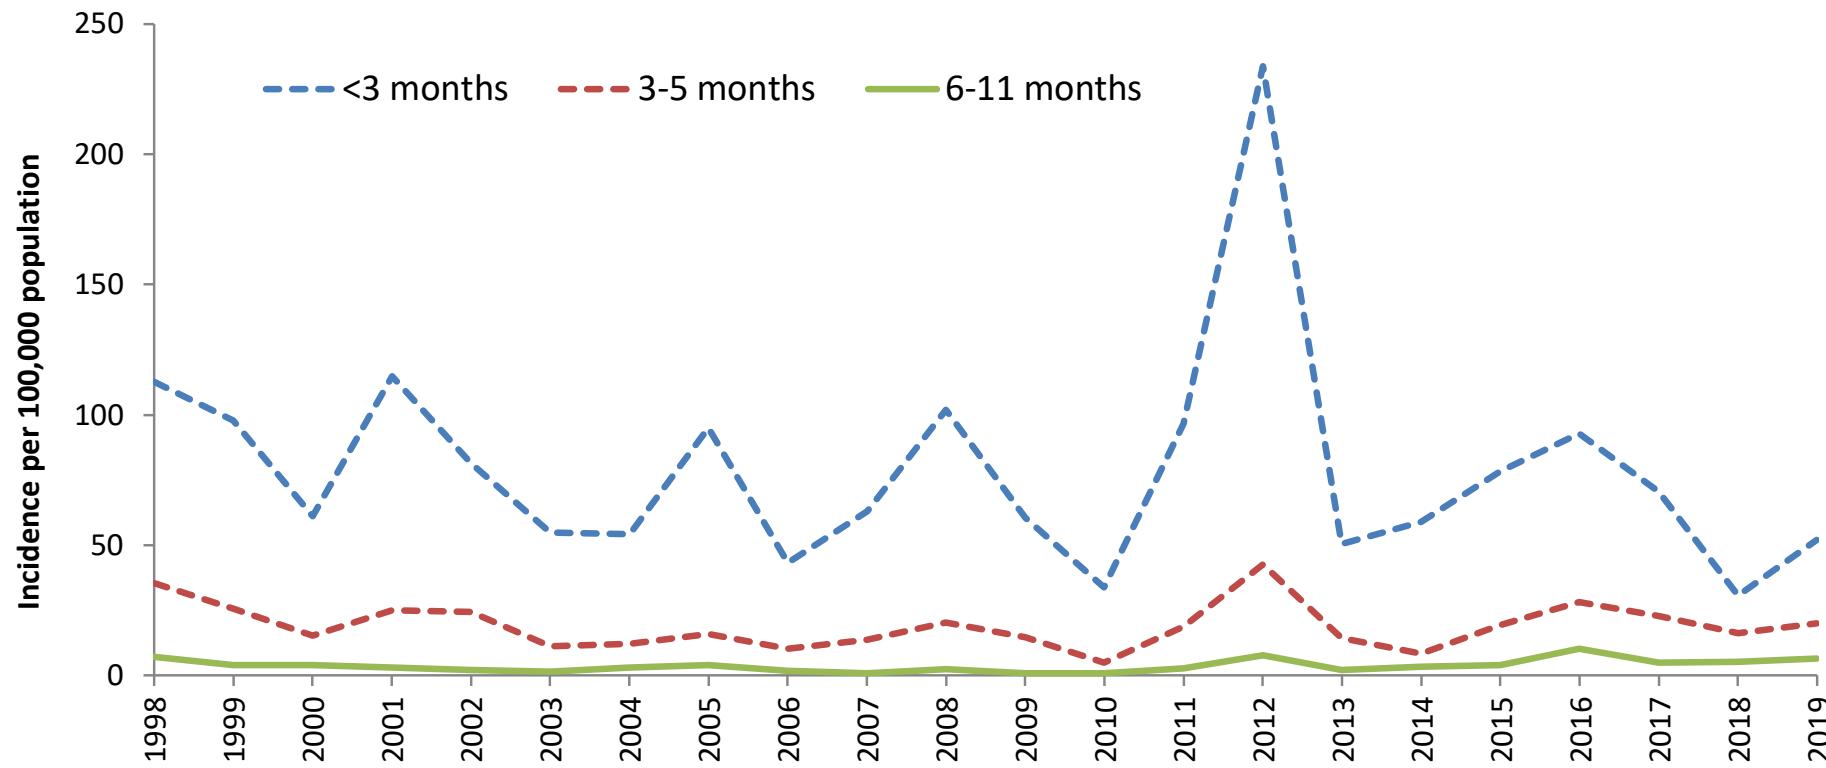

<https://www.gov.uk/government/publications/pertussis-laboratory-confirmed-cases-reported-in-england-2019>

**Figure 1: Laboratory confirmed cases of pertussis infection by year and quarter, England: 2010 to 2019\***

\*2019 are provisional data.

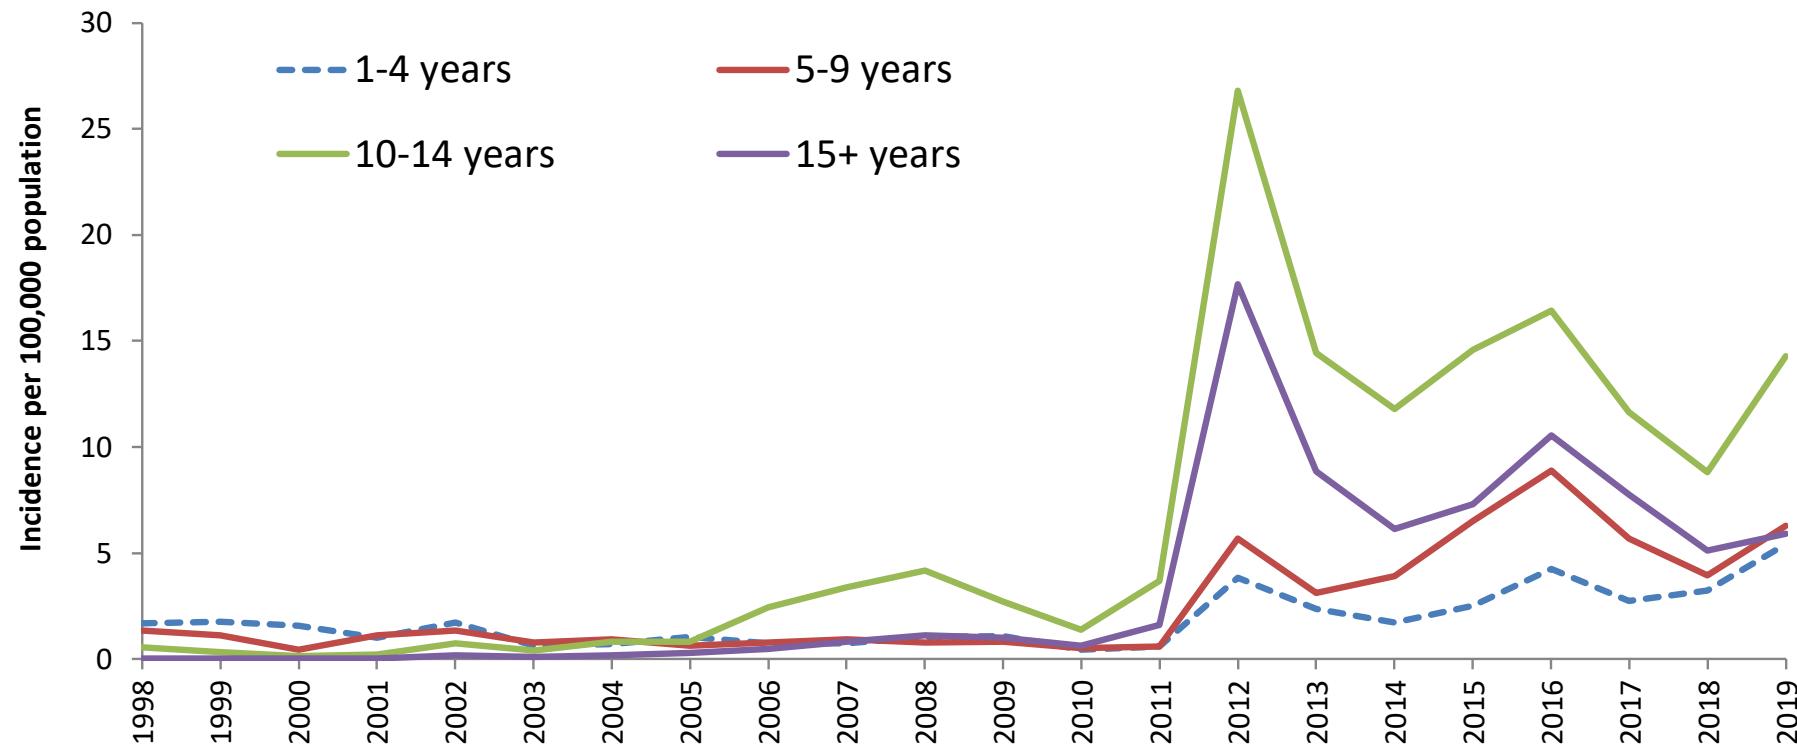

**Figure 2a: Incidence of laboratory confirmed pertussis cases, aged < 1 year, England: 1998 to 2019\*~**

\*2019 are provisional data.

~More diagnostic methods have become available over the time period presented with increasing use of serology in particular from around 2006 (see Table 4 and Figure 3) and oral fluid testing introduced from 2013 for those aged 5-16 years and extended to 2-16 years from May 2018.

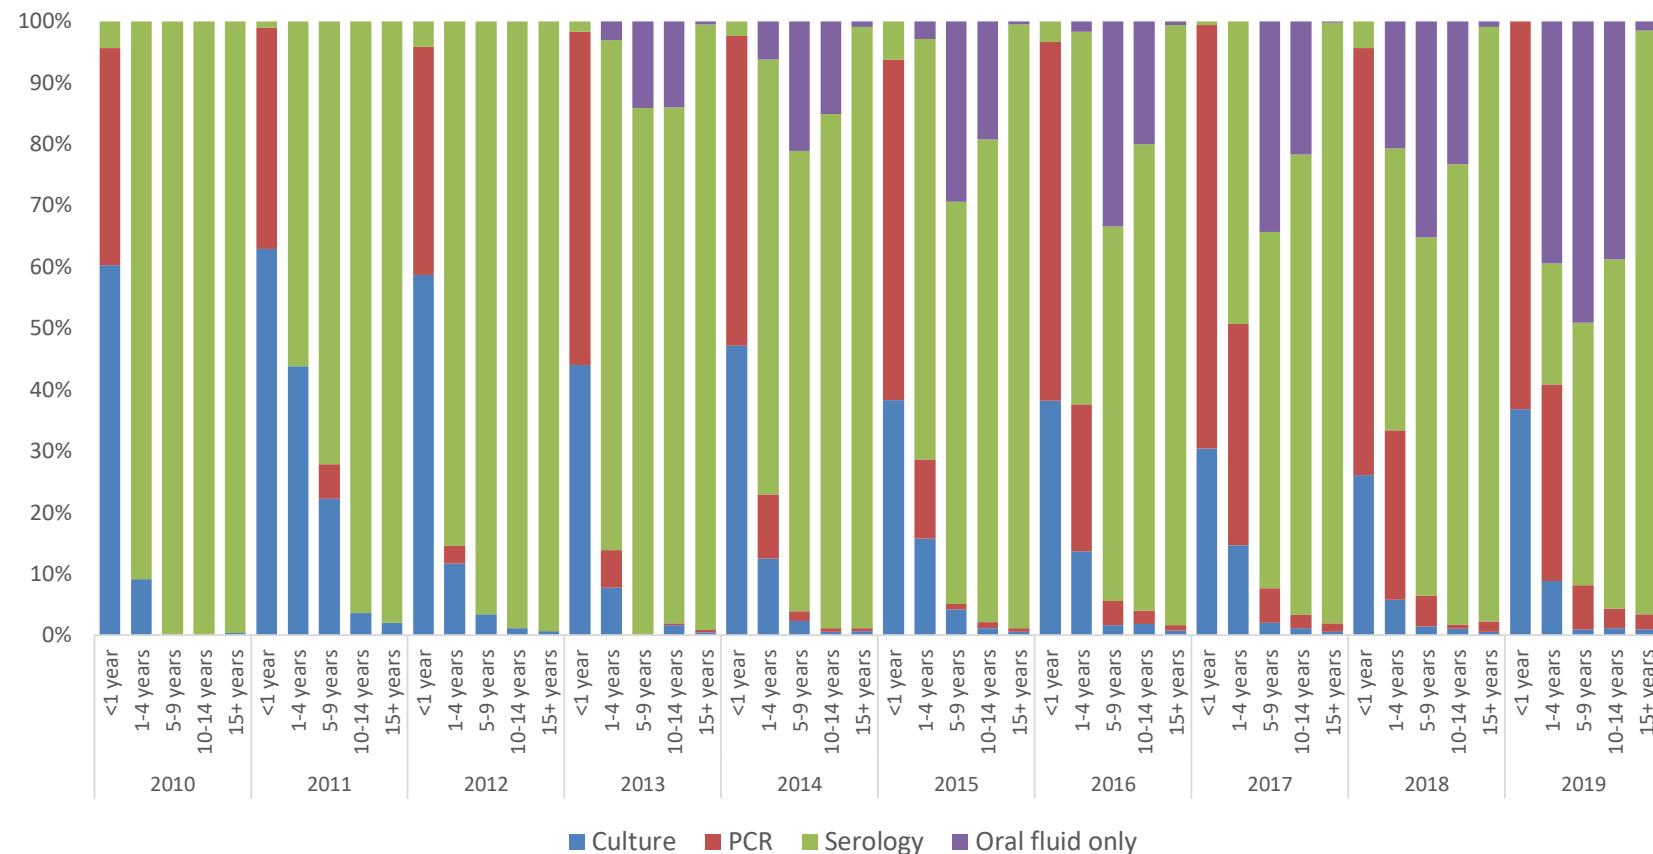

**Figure 2b: Incidence of laboratory confirmed pertussis cases, aged 1 year and older, England: 1998 to 2019\*~**

\*2019 are provisional data.

~More diagnostic methods have become available over the time period presented with increasing use of serology in particular from around 2006 (see Table 4 and Figure 3) and oral fluid testing introduced from 2013 for those aged 5-16 years and extended to 2-16 years from May 2018.

**Figure 3: Proportionate distribution of laboratory confirmed pertussis cases by laboratory method shown by year and age group, England 2010 to 2019\*~**

\*2019 are provisional data and excludes 2 cases with unknown age.

~Culture confirmed cases may additionally have tested positive by any other method, PCR confirmed cases may have additionally tested positive by serology or OF and serology confirmed cases may also have been confirmed by OF. Cases are only represented once on the graph.

**Table 1: Laboratory confirmed cases of pertussis infection by laboratory method<sup>#</sup>, and year, England: 2002 to 2019<sup>\*~</sup>**

Year	Culture	PCR	Serology	Oral fluid only	Total	Serology reports as % of total
2002	215	15	106	-	336	32%
2003	102	14	76	-	192	40%
2004	109	30	117	-	256	46%
2005	170	45	151	-	366	41%
2006	101	15	288	-	404	71%
2007	100	43	472	-	615	77%
2008	162	75	640	-	877	73%
2009	95	49	549	-	693	79%
2010	43	24	342	-	409	84%
2011	158	75	818	-	1,051	78%
2012	376	193	8,798	-	9,367	94%
2013	80	82	4,362	97	4,621	94%
2014	85	86	3,109	107	3,387	92%
2015	110	130	3,784	167	4,191	90%
2016	155	233	5,328	233	5,949	90%
2017	87	212	3,884	157	4,340	89%
2018	46	137	2,610	155	2,948	89%
2019	96	229	2,965	391	3,681	81%

<sup>#</sup>Culture confirmed cases may additionally have tested positive by any other method, PCR confirmed cases may have additionally tested positive by serology or OF and serology confirmed cases may also have been confirmed by OF. Cases are only represented once in the table.

<sup>\*</sup>2019 are provisional data.

<sup>~</sup>More diagnostic methods have become available over the time period presented with increasing use of serology in particular from around 2006 (see Table 4 and Figure 3) and oral fluid testing introduced from 2013 for those aged 5-16 years and extended to 2-16 years from May 2018.

**Table 2: Laboratory confirmed cases of pertussis infection by region<sup>#</sup>, England: 1994 to 2019\*~**

Year	East Midlands	East of England	London	North East	North West	South East	South West	West Midlands	Yorkshire & Humber	England Total
1994	28	53	38	24	119	67	59	20	48	456

#Culture confirmed cases may additionally have tested positive by any other method, PCR confirmed cases may have additionally tested positive by serology or OF and serology confirmed cases may also have been confirmed by OF. Cases are only represented once in the table.

\*2019 are provisional data.

∞The totals include a very small number of cases where the age was not known.

~More diagnostic methods have become available over the time period presented with increasing use of serology in particular from around 2006 (see Figure 3) and oral fluid testing introduced from 2013 for those aged 5-16 years and extended to 2-16 years from May 2018.

**Table 5: Pertussis notifications and deaths, England: 2001 to 2019\***

Year	Notifications	Deaths <sup>∞</sup>
2001	851	8
2002 <sup>#</sup>	858	4
2003	386	3
2004 <sup>#</sup>	475	3
2005	567	7
2006	539	5
2007	1,070	4
2008	1,465	6
2009	1,126	3
2010	382	1
2011	811	5
2012	6,223	14
2013 <sup>#</sup>	2,967	3
2014	2,302	7
2015	2,680	4
2016 <sup>#</sup>	4,134	4
2017	3,027	0
2018	2,400	1
2019*	3,689	1

∞ From 2001 death data includes deaths from the Pertussis Enhanced Surveillance, Hospital Episode Statistics, Office of National Statistics aged less than 1 year.

# Where a case was confirmed in 1 year but died the following year this is recorded as a death in the year it was confirmed. This ensures consistency between data presented on laboratory confirmed cases of pertussis and related deaths.

\* 2019 data are provisional data.

\* 2019\* are provisional data.

~ More diagnostic methods have become available over the time period presented with increasing use of serology in particular from around 2006 (see Table 4 and Figure 3) and oral fluid testing introduced from 2013 for those aged 5-16 years and extended to 2-16 years from May 2018.
