Summary.

Reporting week: 6 July to 12 July 2020.

During week 28, community-based respiratory indicators, including ‘COVID-19-like’ indicators, remained stable or decreased across all syndromic surveillance systems.

Please see the ‘notes and caveats’ sections in each individual syndromic surveillance bulletin for information about ‘COVID-19-like’ syndromic indicators, including important caveats around the interpretation of these indicators.

Remote Health Advice:
During week 28 NHS 111 calls and online assessments for potential COVID-19 remained stable (figures 8 & 19). Other respiratory indicators also remained stable.

Access bulletin

GP In Hours:
During week 28, COVID-19-like GP consultations remained stable.

Please note that due to technical difficulties during week 28 there is a considerably reduced denominator population and number of GP practices available for inclusion in the report. Rates should therefore be treated with caution (baselines are also not available this week).

Access bulletin

GP Out of Hours:
During week 28, GP out of hours contacts for respiratory indicators continued to remain stable (figures 2-4).

Access bulletin

Emergency Department:
During week 28 the overall number of ED COVID-19-like attendances decreased slightly (figure 3). All other respiratory attendance indicators remained stable.

Due to technical issues this report only includes daily data up to and including 10/7/20 and therefore does not capture all data from week 28.

Access bulletin

Ambulance:
During week 28, COVID-19-like ambulance calls decreased slightly (figure 2).

Access bulletin
Key messages are provided from each individual system.

The different PHE syndromic surveillance systems access data from different areas of the national health care system.

Each syndromic surveillance system is able to monitor a different selection of syndromic indicators based upon a different case mix of patients.

Access to the full version of each syndromic surveillance bulletin is available through the PHE Syndromic Surveillance website found at: (https://www.gov.uk/government/collections/syndromic-surveillance-systems-and-analyses); reports are made available on Thursday afternoons.

Remote Health Advice Syndromic Surveillance System:
A remote health advice syndromic surveillance system that monitors syndromic calls from remote health advice services e.g. NHS 111 each day across England.

GP In-Hours Syndromic Surveillance System:
A large general practitioner surveillance system monitoring daily consultations for a range of clinical syndromic indicators across England.

GP Out-of-Hours Syndromic Surveillance System (GPOOHS):
A syndromic surveillance system monitoring daily GP out-of-hours activity and unscheduled care across England using a range of clinical syndromic indicators.

Emergency Department Syndromic Surveillance System (EDSSS):
A national ED network across England monitoring daily attendances and presenting symptoms/diagnoses.

National Ambulance Syndromic Surveillance System (NASSS):
The national ambulance syndromic surveillance system (NASSS) monitors daily calls made by persons to an ambulance trust. All 10 ambulance trusts in England provide data.

We thank and acknowledge the contribution of all data providers including:

- NHS 111 and NHS Digital.
- QSurveillance®; University of Oxford; EMIS/EMIS practices; ClinRisk®.
- TPP, ResearchOne and participating SystmOne GP practices.
- Advanced Health & Care and the participating OOH service providers.
- Participating EDSSS emergency departments.
- Royal College of Emergency Medicine.
