

Coronaviruses are a family of viruses that cause disease in people and animals. COVID-19 refers to the “coronavirus disease 2019” and is a disease that can affect the lungs and airways. The World Health Organization classified COVID-19 as a pandemic on 11 March 2020. This fortnightly official statistic provides information on the number of Defence personnel who have had a COVID-19 test administered through the UK national testing programme; and for the UK armed forces, the number of positive cases of COVID-19.

Key Points

- As at 17 July:
 - 10,099 Defence personnel had a COVID-19 test administered as part of the national testing programme:
 - 9,220 UK armed forces personnel.
 - 879 civilian personnel.
 - 406 UK armed forces personnel had a positive test for COVID-19 recorded in their medical record.

Introduction

Coronaviruses are a family of viruses that cause disease in people and animals. They can cause the common cold or more severe diseases, such as COVID-19. COVID-19 refers to the “coronavirus disease 2019” and is a disease that can affect the lungs and airways. The World Health Organization classified COVID-19 as a pandemic on 11 March 2020. A pandemic is where a disease is prevalent over a whole country or the world.

Defence, in line with the rest of the country, entered lockdown on 23 March 2020, and continues to follow the rest of the country as these restrictions are eased.

Since the start of the pandemic, the Ministry of Defence (MOD) has been following the COVID Defence Management Plan which has several objectives including:

- a. Deliver an accurate and timely picture of the impact of COVID-19 on Defence personnel and Defence outputs;
- b. Enable delivery of any COVID-19-related Military Assistance to Civil Authorities (MACA) support;
- c. Protect Defence personnel, as far as possible, from the impact of COVID-19;
- d. Enable Defence to recover to normal levels of activity rapidly after the impact.

Personnel reporting, including testing for Defence personnel and reporting of positive cases in the UK armed forces is being used to monitor the effect that COVID-19 is having on Defence outputs.

In April 2020 the House of Commons Defence Committee (HCDC) requested that the MOD provide fortnightly updates on the numbers of Defence personnel tested and positive cases in the UK armed forces.

Findings

Defence Personnel – COVID-19 tests

All symptomatic Defence personnel and household members are eligible for testing in England, Wales, Scotland and Northern Ireland. This ensures the MOD can bring its key personnel back to the workplace, further enabling the support of the national effort and ensuring the delivery of essential Defence activity, including the COVID Support Force.

The Ministry of Defence has been collecting data on the number of Defence personnel who have had a COVID-19 test administered through the national testing programme. This includes data on UK armed forces personnel and civilian defence personnel (people who live in the same household as UK armed forces or civilian personnel have not been included in the numbers presented).

Table 1: Defence personnel who have attended a COVID-19 national testing programme, by Top Level Budget¹, numbers

As at 17 July 2020

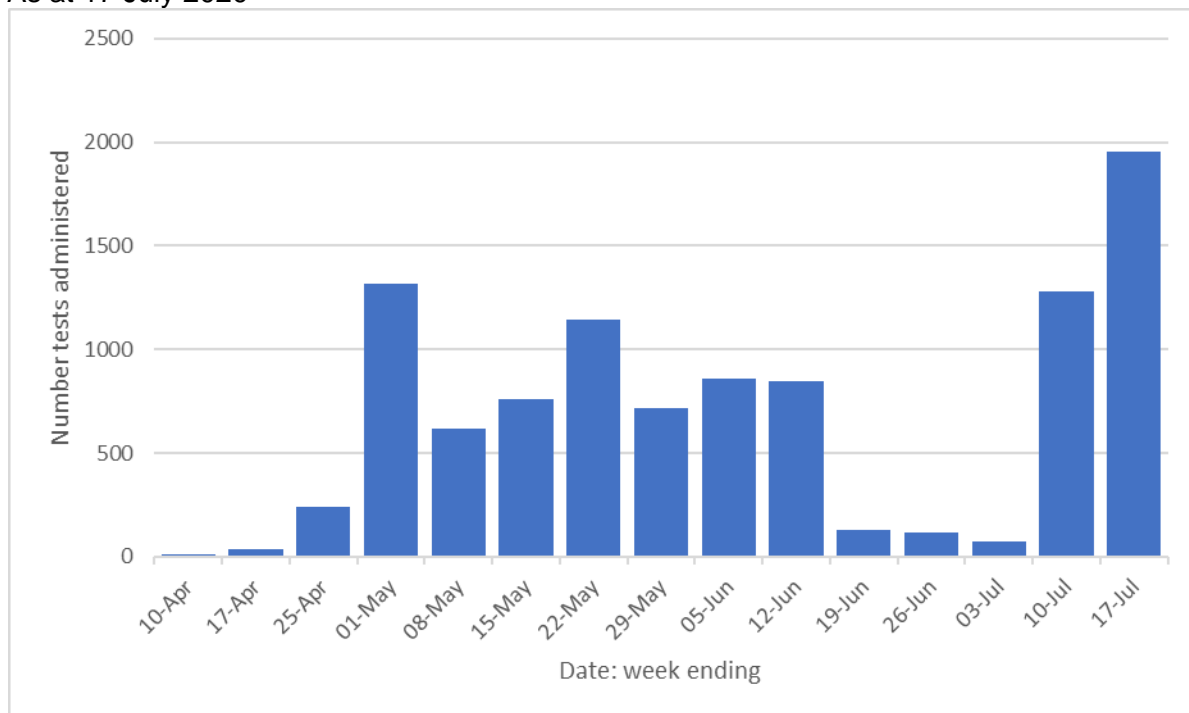

Top Level Budget	ALL	Service Personnel	Civilian Personnel
ALL	10,099	9,220	879
Navy	2,483	2,236	247
Army	1,223	1,150	73
RAF	480	435	45
UK Strategic Command	5,473	5,382	91
Other	440	17	423

Source: TLB weekly returns

¹ "Other" includes Defence Electronics and Components Agency, Defence Equipment & Support, Defence Infrastructure Organisation, Defence Nuclear Organisation, Defence Science and Technology Laboratories, Head Office, Oil & Pipelines Agency, Submarine Delivery Agency, UK Hydrographics Office.

Figure 1: Defence Personnel¹ attended COVID-19 national testing programme, numbers

As at 17 July 2020

Source: TLB weekly returns

¹ Includes UK armed forces personnel and MOD civilians.

Findings

Positive test results in the UK armed forces

Following a test for COVID-19, the results are provided to the individual's primary health care provider. For UK armed forces service personnel, results are sent to Defence Primary Health Care (DPHC) and records show that, as at 17 July 2020, a minimum of 406 service personnel have tested positive for COVID-19 (**Table 2**).

Table 2: UK armed forces personnel¹ by service and location, positive COVID-19 test result, numbers

¹ Personnel include all UK armed forces regular and reserve, trained and untrained personnel.

Methodology

This section provides a brief summary of the methodology and data sources; more detailed information is available in the Background Quality Report for this bulletin.

COVID-19 Testing Data

As part of the national testing programme¹ MOD civilians, contractors and armed forces personnel are considered essential workers and thus eligible for priority testing.

The tests may be administered at regional test centres, mobile testing units, in hospital or as home test kits.

The MOD require TLB to report on a weekly basis, with returns submitted by 12:00 every Friday, specifying the number of personnel who have taken a COVID-19 test over the previous 7 days for:

- military (regulars and reservists, if mobilised or full-time reserve service).
- civilian defence personnel (civil servants and crown servants, other than members of the armed forces; and fixed defence contractors).
- household persons (which are to include any persons living in the same household as military or civilian defence personnel).

Each weekly submission represents the total number of tests administered to personnel during that week. TLB's are responsible for the accuracy of their testing data.

Limitations of the test data:

- As the test data is based on aggregate counts supplied by the TLB on a weekly basis, it is not possible to link the aggregate counts with other data such as the military personnel record or the civilian personnel record including demographic information or other data such as the military medical record.
- It relies on Defence personnel informing their line management chain that they have had a COVID-19 test administered.

The MOD does not receive any information from the national testing programme on the outcome of tests administered to MOD personnel.

Positive COVID-19 Test Data

It is the responsibility of UK armed forces personnel to inform their military GP of the outcome of their COVID-19 test. The information on positive test results are then documented in their military healthcare record by Defence Primary Health Care (DPHC).

UK armed forces personnel with a confirmed test result of COVID-19 were identified using;

- Electronic medical records (Defence Medical Information Capability Programme, DMICP) with a COVID-19 related Read code. Please note that DMICP is a live data source and subject to change. Date of data extract 27 July 2020.

Methodology continued

- Notification of Casualty (NOTICAS) data where a positive test for COVID-19 was recorded. A casualty notification is raised when a member of the UK armed forces is admitted to hospital for more than 72 hours and/or where there is serious risk to life.

Location of where personnel were diagnosed with COVID-19 was identified as the first location at which a positive test result was entered for that individual. This is not necessarily where personnel are currently located or where they were first exposed to COVID-19.

The voluntary reserves not undertaking MOD tasks receive their primary medical care from the NHS. Any information on COVID-19 entered in an NHS record is not held by MOD thus has not been included in the figures presented.

MOD civilian personnel: results are sent to the individual and their NHS GP and therefore Defence does not hold information on the number of positive tests.

Limitations of the positive test data for UK armed forces:

- The reporting process relies on the individual reporting the positive test result to their military medical centre.
- Positive tests results were sourced from the military medical record, DMICP, using read codes from the data warehouse where the read code indicated a positive test for COVID-19 or coronavirus. Information entered using free text has not been included as the information is not held in the central data warehouse; therefore, the figures provided are a minimum.
- NOTICAS data relies on the chain of command/line manager and the medical officer completing the form documenting that a positive test has been received, thus the figures provided are a minimum.

Glossary

Army - the British Army consists of the General Staff and the deployable field army and the regional forces that support them, as well as joint elements that work with the Royal Navy and Royal Air Force. Its primary task is to help defend the interests of the UK.

Coronavirus - Coronaviruses are a family of viruses that cause disease in people and animals. They can cause the common cold or more severe diseases, such as COVID-19.

COVID-19 - COVID-19 refers to the “coronavirus disease 2019” and is a disease that can affect the lungs and airways. It is caused by a type of coronavirus.

Defence Medical Information Capability Programme (DMICP) - The DMICP programme commenced during 2007 and comprises an integrated primary Health Record (iHR) for clinical use and a pseudo-anonymised central data warehouse.

Full time reserve service - are personnel who fill service posts for a set period on a full-time basis while being a member of one of the reserve services, either as an ex-regular or as a volunteer.

Lockdown - Lockdown is the shutting down of all non-essential activities to slow the spread of COVID-19. In the UK, this has seen strict limits imposed on daily life. The UK lockdown was applied on 23 March 2020. This has formed the basis for each nations’ stay at home guidance.

Mobilised reservists - are volunteer or regular reserves who have been called into permanent service with the regular forces on military operations under the powers outlined in the Reserve Forces Act 1996.

Naval Service: Royal Navy, the sea-going defence forces of the UK and Royal Marines, sea-going soldiers, but excludes the Royal Fleet Auxiliary Service (RFA).

NOTICAS - Notification of casualty is the name for the formalised system of reporting casualties within the UK Armed Forces.

Pandemic - A pandemic is where a disease is prevalent over a whole country or the world. The World Health Organization classified COVID-19 as a pandemic on 11 March 2020.

Top level budgets - The MOD comprises seven top-level budgets. The head of each TLB is personally accountable for the performance and outputs of their organisation.

Royal Air Force (RAF) - the aerial defence force of the UK.

UK Armed Forces - full time service personnel, including nursing services and gurkhas, naval activated reservists, mobilised reservists, Military Provost Guarding Service (MPGS), Non-Regular Permanent Service (NRPS) and reservist personnel. Unless otherwise stated, includes all trained and untrained personnel.

UK StratCom – UK Strategic Command, provides strategic and operational integration across the five war-fighting domains
