Care Home COVID-19 Testing Guidance

Non-Randox test kits

This guidance is for all care homes without outbreaks and includes information about testing for coronavirus (COVID-19).

**Before you do any testing**

- Read this guidance in its entirety
- Make sure you have booked a courier collection by 7pm the day before you start testing. This can be arranged at [www.covidtestingcollect.co.uk](http://www.covidtestingcollect.co.uk)

3. Record test sample 11
4. Register completed tests online 12
5. Securely package and give the completed tests to the courier 14

Further Advice 15

Instructions for testing your staff and residents for coronavirus (COVID-19) 17
Introduction

Providing testing within all care homes will help you protect your residents and staff, and is an important part of the national effort to tackle coronavirus. Thank you for everything you are doing to help the country beat the virus at this hugely challenging time.

Order test kits via the online portal for care homes: gov.uk/coronavirus

Check which type of test kit you will be using

There are two types of test kits delivered to care homes, Randox test kits and all other types which are collectively referred to as non-Randox test kits.

Both test kits look very similar and test for whether someone currently has coronavirus in the same way. You will be told which test kits you will be using when you receive confirmation of your delivery.

This guidance document is for Non-Randox test kits. If you are using Randox test kits please refer to the Randox guidance.

Prepare your care home for testing

This will help to ensure you are ready to test staff and residents on a regular basis. Make sure to test new residents and staff as soon as they join your care home. If residents develop symptoms test immediately, don’t wait for the next retesting cycle.

• Familiarise yourself with the guidance and instructions and assist your team to prepare by watching the instructional video for over 65s and dementia and specialist care homes and completing the online self-assessment tool.
• Discuss the testing approach with your residents and staff. Spend time preparing residents and explaining the procedure to them
• Make sure that you obtain written consent.
• Review your personal protective equipment (PPE) supply and ensure you have the correct PPE to carry out testing.
• Ensure a proper workstation is available for preparing and packing the tests
• Look out for the delivery confirmation email letting you know when tests will be delivered
• Have a workflow to allow tests to be easily recorded, conducted and registered as swiftly as possible — it is recommended to have two staff members; one to conduct the test and the other to record the relevant information needed for registration
• Make sure you have booked a courier collection by 7pm the day before you start testing. This can be arranged at www.covidtestingcollect.co.uk

## Testing process overview

<table>
<thead>
<tr>
<th>What to expect:</th>
<th>What to do:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Initial Order</strong></td>
<td>Start planning in advance so that you are ready to begin testing when the test kits are delivered to you:</td>
</tr>
<tr>
<td>You will receive an email from <a href="mailto:care.home.portal.for.coronavirus.test.kits@notifications.service.gov.uk">care.home.portal.for.coronavirus.test.kits@notifications.service.gov.uk</a> confirming your successful order of tests.</td>
<td>• Read the instructions and watch the instruction video(s)</td>
</tr>
<tr>
<td></td>
<td>• Prepare a workflow and allocated work stations for testing</td>
</tr>
<tr>
<td></td>
<td>• Ensure you have enough of the appropriate PPE</td>
</tr>
<tr>
<td><strong>Delivery Confirmation</strong></td>
<td>Make sure you:</td>
</tr>
<tr>
<td>You will receive a second email confirming the test kits are scheduled for delivery. Take this time to start preparing.</td>
<td>• Communicate the testing plan to all staff and residents</td>
</tr>
<tr>
<td></td>
<td>• You should obtain consent to conduct the test from the resident in line with your usual policies and procedures. (more on page 8 - obtaining consent)</td>
</tr>
<tr>
<td></td>
<td>• Obtain agreement from staff to be tested, and schedule testing of staff taking into account shift patterns</td>
</tr>
<tr>
<td><strong>Receive test kits</strong></td>
<td>Start preparing for testing</td>
</tr>
<tr>
<td>You will receive your delivery of test kits via courier after 10am. Ensure that all test kits are stored safely at an ambient temperature. Do not refrigerate or leave in direct sunlight.</td>
<td>• Re-familiarise yourself and staff with the test instructions to prepare, collect and package the sample for each person being tested</td>
</tr>
<tr>
<td></td>
<td>• Prepare your record keeping spreadsheet and workstations for an easy testing and registration workflow</td>
</tr>
<tr>
<td></td>
<td>• Spend time preparing residents and explaining the procedure to them</td>
</tr>
<tr>
<td><strong>Before testing</strong></td>
<td>You can book all your courier collections at once or you can book ad hoc courier collections as and when you plan to test. Make sure that you have a confirmed courier collection for the day that you are due to start testing.</td>
</tr>
<tr>
<td>Book a courier collection at least a day before testing (by no later than 7pm)</td>
<td></td>
</tr>
<tr>
<td><strong>Testing days</strong></td>
<td><strong>For EACH day of testing:</strong></td>
</tr>
<tr>
<td>Testing days, on day(s) of your choice: Conduct your tests between 6am - 3pm. Stop testing at 3pm to allow time for packaging before courier collection. Courier collection will take place between 4pm and 10pm on each day you have a booked collection.</td>
<td>• Take time to prepare yourself, your space, your residents and staff</td>
</tr>
<tr>
<td></td>
<td>• Follow the test instructions to prepare, collect and package the sample for each resident or staff member between 6am and 3pm</td>
</tr>
<tr>
<td></td>
<td>• Note the barcode number and time of each test against the name of the person tested</td>
</tr>
<tr>
<td></td>
<td>• Register the completed test online as close as possible to the time of the swab</td>
</tr>
<tr>
<td></td>
<td>• Courier collects completed test samples between 4pm and 10pm</td>
</tr>
<tr>
<td><strong>Results</strong></td>
<td>• Notify, as appropriate, the resident, GP and family of the test result</td>
</tr>
<tr>
<td>You will receive the test results by email or text within 72 hours of test kits arriving at the laboratory</td>
<td>• Take appropriate actions if the test result is positive or inconclusive</td>
</tr>
</tbody>
</table>

There will be a delay between placing your order and confirming your delivery as we prioritise care home orders. Use the time to prepare your care home for testing.
Who should be tested?

Testing should be done for the whole home.

Even where residents and staff are not symptomatic. Whole care home testing is about prevention rather than waiting until it is too late and having to deal with an outbreak.

Re-testing

From 6 July onwards, we will start to roll out weekly testing of staff, as well as testing of residents every 28 days. We will initially prioritise care homes for over 65s and dementia and will expand to mixed and specialist care homes from early August.

Residents with or without symptoms

All residents should be tested, even those who have previously tested positive for Covid-19.

Residents who develop new symptoms should be tested immediately and should follow the existing self isolation guidance.

Individuals who have previously tested positive can be retested after six weeks or immediately if they develop an onset of new symptoms.

As far as possible, residents should be offered the choice to either self-administer the test on themselves or to have the test administered by a suitable member of staff. Children age 12-17 years old may choose to self administer the test with adult supervision, while children age 11 years and under should have the test administered by an adult.

If you choose not to conduct tests on symptomatic residents in your home, please notify your local health protection team.

Any individual who tests or retests positive for coronavirus should follow the existing guidance on isolation.

COVID-19 Symptoms

COVID-19 symptoms include a new continuous cough and/or high temperature (>37.8℃) and/or loss of, or change to, sense of smell or taste. However, symptoms may be more subtle in older people in care homes who may present with Influenza Like Illness (ILI), shortness of breath, new onset confusion, reduced alertness, reduced mobility, or diarrhoea and sometimes do not develop fever. This may be true for COVID-19, so such changes should alert staff to the possibility of new COVID-19 infection. Please refer to the latest guidance online for up to date guidance on symptoms.

Staff with symptoms should NOT be tested in the care home

Staff with symptoms should instead be referred for testing at a regional / local test centre or in their own home. Please visit go.gov.uk/apply-coronavirus-test-essential-workers to arrange a test.

Staff members should register the tests themselves to receive the test results directly, or may give consent to the care home to register and receive their test results. This consent should be given in writing. As test results are personal information no staff member should be compelled to provide consent.

Retesting

From 6 July onwards, we will start to roll out weekly testing of staff, as well as testing of residents every 28 days. We will initially prioritise care homes for over 65s and dementia and will expand to mixed and specialist care homes from early August.

Staff without symptoms

All care home staff (including agency workers) without symptoms can be tested, even those who have previously tested positive for Covid-19.

Staff who previously tested positive can be retested after six weeks.

Staff with symptoms should NOT be tested in the care home

Staff with symptoms should instead be referred for testing at a regional / local test centre or in their own home. Please visit go.gov.uk/apply-coronavirus-test-essential-workers to arrange a test.

Staff members should register the tests themselves to receive the test results directly, or may give consent to the care home to register and receive their test results. This consent should be given in writing. As test results are personal information no staff member should be compelled to provide consent.

Booking your courier collection

Please read the below instructions that describe how to arrange a courier collection before you start testing

Please book your courier collection via covidtestingcollect.co.uk

Arranging your test kit courier collection:

1. Once you have planned for when to do testing book your courier collection at covidtestingcollect.co.uk

2. Make sure that you have your Unique Organisation Number (UON) and care home email address ready and follow the steps on screen to arrange your courier. **Note: you have until 7pm to arrange a next day courier collection**

3. Receive your courier collection confirmation email

4. Conduct testing between 6am and 3pm on the day your courier has been arranged (see page 8 for more information about testing)

5. Package your test kits up before 4pm using one of the empty boxes you will have received with your test kit delivery and add the UN3373 label to the box

6. The courier will collect completed kits from you between 4pm and 10pm on the day you have selected

Tests must be picked up on the same day they are taken

**Why courier timing is important:** There is a 48 hour window to get a swab sample to the laboratory for processing. If this window is missed, there is a high chance that the individual may not get their results and a retest may be required at a later time.

You will be able to book multiple collections, but please make sure that you only test on a day where you have a confirmed courier scheduled to collect your test kits that same day between 4pm and 10pm.

If you have received test kits for testing in your care home from any other source (for example directly from Public Health England or your local Clinical Commissioning Group), please keep these tests separate and do not return these tests with the same courier.

Note: Do not send any personal information along with the completed test kits, in the form of a record keeping spreadsheet or otherwise.

!!! Important

Please only test on a day that you have a confirmed courier collection arranged

If you have any questions please call 119
Lines open from 7am - 11pm daily

For people who have hearing or speech impairments, please call 18001 0300 303 2713
Follow the instructions provided with your test kits
For care home specific instructions see the back of this guidance document

Testing your staff and residents for coronavirus (COVID-19) for non-Randox test kits

Before you test:
• Make sure you have booked an end-of-day courier collection before you start testing. (See guidance)
• Read the online guidance, watch the instructional video and complete a competency assessment before carrying out swabbing at gov.uk/guidance/coronavirus-covid-19-getting-tested
• Make sure you have consent from the person you are testing.
• Where possible, we recommend two people support testing; one to test and the other to record the test details.

1. Wash your hands and put on the necessary Personal Protective Equipment (PPE)
   Wash your hands thoroughly for 20 seconds, using soap and warm water. Make sure you wear your mask, visor, gloves, and apron when testing.

2. Clean surfaces
   Clean and dry a surface to place the test kit on. Unpack everything from the kit onto the clean surface.

3. Find the tonsils (back of the throat)
   Look inside the person’s mouth and find their tonsils. This is the area where you will take the swab sample. You can use a torch to help.
   If tonsils were removed, swab where they would have been at the back of the throat.

4. Ask the person to gently blow their nose and cough into a tissue
   This is so excess mucus does not interfere with the test. Throw the tissue away in a closed bin.

5. Open the swab inside sealed wrapper
   Open the package and carefully take out the swab. You’ll use it for both the throat and nose.

6. Take the throat sample
   Holding the swab in your hand, open the person’s mouth wide and gently rub the swab over both tonsils and the back of the throat for 10 seconds use a torch and/or mirror to help you do this.

7. Take the nose sample
   Put the same end of the same swab gently into the nostril by about 0.5 cm (1 inch) or until you feel some resistance. This may feel uncomfortable. Do not insert the swab any deeper if there is strong resistance or pain.
   Rotate the swab for 10-15 seconds and slowly remove it.

8. Place swab into plastic vial
   Make sure the fabric tip is facing down as you place it into the vial. Snap off the stick end, so that it fits inside the vial without bending.

Important
The fabric tip of the swab must not touch anything apart from the tonsils, back of throat and nose. If it touches anything else, use a new swab.

Important
You will use the same swab for both the throat and nose. This may be uncomfortable, and they may feel like gagging, but it should not hurt.
Take care not to touch their tongue, teeth, or gums, or any other surfaces with the swab.
If it is too difficult to do a throat swab take a swab from both nostrils instead, but only as a last resort.

Important
for non-Randox test kits

If you have any questions please call 119
Lines open from 7am - 11pm daily

For people who have hearing or speech impairments, please call 18001 0300 303 2713
1 Prepare for testing

Learn how to conduct the test

To ensure that tests are carried out safely, you must ensure that suitably competent staff conduct the tests. Every person involved in conducting the test in your care home MUST read the detailed instructions provided and watch the instructional videos for elderly and specialist care homes before conducting the swab test. Residents who would prefer to self administer the test on themselves should watch this self-swabbing instruction video, as should staff. Staff are expected to self swab.

If a test isn’t correctly undertaken it may lead to inaccurate test results.

It is recommended that staff complete the COVID-19 Care Home Swabbing Online Individual Competency Assessment to improve the success of the swab test. It is quick and easy to use and follows on from the above video. Individuals can register at www.genqa.org/carehomes and will be given a login for immediate use. Alternatively care home managers can create an organisational account and arrange this centrally. Please contact info@genqa.org to set this up.

PPE (Personal Protective Equipment)

We recommend that you share with your staff, and follow, the current guidance from Public Health England on how to work safely in care homes and this short video guide on putting on and removing PPE. You should not conduct any tests if you don’t have the correct PPE.

PPE is not needed for people who are self swabbing.

Obtaining Consent

You should obtain consent to conduct the test from the resident, consulting family members and their GP as appropriate and in line with your usual policies and procedures. Some residents, for example some people with dementia, learning disabilities or mental health conditions, may lack the relevant mental capacity to make a decision about their own testing. If the person lacks the relevant mental capacity to consent to the test, and they are aged 16 or over, you should consider if the principles of the Mental Capacity Act 2005 allow you to make a ‘best interests decision’ to swab and receive results, on their behalf.

As far as possible, residents should be offered the choice to either self-administer the test on themselves or to have the test administered by a suitable member of staff. Likewise, the resident should be offered the choice to receive the results directly (rather than via the registered manager on their behalf), in which case you should follow the same process set out in this guidance but using the resident’s contact details to register the test online.

Obtain written agreement for all staff to be tested and how the results will be shared. For example, directly with the staff member or to the care home directly via the care home manager.
2 Conduct testing

Swabs should be taken between 6am and 3pm for collection by courier between 4pm and 10pm the same day

This ensures that night shift staff can be tested at the end of their shift, and ensures tests are delivered to the laboratory within 48 hours of collecting each sample.

</tr>
</tbody>
</table>

If you can’t test everyone in one day you can book more courier collections

It is recommended you have two colleagues conduct the test

One recording the test, and the other swabbing the resident. This ensures that there is no cross contamination between the test materials and the materials you are using to record the information.

Preparing your resident for testing

Take a moment to reassure the resident to help them feel more comfortable while you perform the test. Follow local guidance on obtaining consent for the test.

Check nasal passages for any recent nasal surgery or abnormalities, cuts or injuries that would make swabbing difficult. Have the resident gently blow their nose and cough into a tissue to dispose of any excess mucus, and dispose of the tissue immediately in a bin.

Have a clean workstation for test preparation.

If you have any questions please call 119
Lines open from 7am - 11pm daily

For people who have hearing or speech impairments, please call 18001 0300 303 2713
2 Conduct testing

Combined nose and throat swabbing

Where possible a combined nose and throat swab should be taken.
However a person-centred approach should be used to assess which sample to take from each resident.

Taking a throat swab is more invasive than taking a nose swab and can be uncomfortable. To take a throat swab safely, the person being swabbed needs to be able to understand and comply with instructions, including having the ability to maintain their mouth wide open for the period of the swabbing. This can be difficult not only for people with advanced dementia, but also for those with limited strength due to severe frailty.

Where a combined nose and throat swab is not possible, a nose swab from both nostrils should be taken, if this is feasible. The swab does not need to be pushed far into the nostril. Extra care is needed when interpreting the results from a nasal swab compared to a full throat and nose swab. If the result is negative but the resident has persistent symptoms, a clinical assessment should be made to determine whether a repeat test is required. Isolation should continue until symptoms reside.

Unused test kits and further testing

Any residual test kits not used should be retained by the care home for future ad hoc tests if required. Please do not return unused test kits with the courier even if they insist.

Store test kits in a safe place with an ambient temperature of between 5 and 22 degrees Celsius.

Retesting is currently being rolled out to over 65s and dementia care homes. These homes should follow a regular retesting cycle by testing staff every week and retesting residents every 28 days. Use any spare test kits to test new residents and staff as soon as they join your care home. If any residents develop symptoms test immediately, don’t wait for the next retesting cycle.

Book a courier collection for any tests (ad hoc or planned) via www.covidtestingcollect.co.uk. Make sure you book the courier first and then test on the same day as the courier collection. It is important to test on the same day as courier collection as once a test has been used it must be tested by the lab within 48 hours of swabbing or the test will become void.
Record swab samples

When you conduct the swab test, you must register each completed test online (see section 4 on page 12). This will record the URN or barcode of each swab against the name and details of the individual who has been tested. This will also enable you to receive the test results back by email (or text if a number has been provided) within 72 hours of the test arriving at the laboratory. You should monitor your email account carefully.

Ensure that each swab sample is clearly recorded against the correct resident details. Extra care should be taken when more than one swab is being collected in the home from residents and staff. You should follow these steps:

- If possible, complete each test in full on a patient by patient basis including swabbing, packaging and record keeping, before moving on to the next person.

- Please use the record keeping spreadsheet to capture the personal information of those being tested alongside the barcode or URN number of the test. To help with record keeping, you should save the file and fill in the personal details of the individuals being tested on your device. As you test individuals, update the record keeping spreadsheet with the date, time and associated barcode of the test, and then use this to register the test online.

- Please only use the spreadsheet provided to register tests.

- Keep hold of the record keeping spreadsheet for your personal record. Please do not send any personal information along with the completed tests to the lab. This will be reported as a clinical incident and could delay getting your results back.

Register completed tests online

It is crucial that you register each completed test online at 
gov.uk/register-organisation-tests

This registration process is essential, as without it, the laboratory will not be able to provide you with the test results. Note that you must complete this on the SAME DAY that you conduct the swab testing and as close as possible to the time that the swab is taken.

There are two ways of registering:

A Register the tests individually

- You can use the link above to register staff or resident tests individually

B Register the tests in bulk in batches of 50

- You will need to use separate record keeping spreadsheets for staff and residents
- You may pre-populate the record keeping spreadsheet with all the personal details before testing.
- Download this spreadsheet and save it as a Master copy to use in future retesting
- Print out the spreadsheet to fill in the barcode (URN) and the date and time of testing.

Once you have successfully registered each test you will receive a confirmation email or text message. You will receive the test results by email or text within 72 hours of the test arriving at the laboratory. You should monitor your email account carefully. Registered managers should not use a personal email or phone number to receive test results for any residents or staff.

When you receive the test result email, this may not include the name of the resident or staff member. You should therefore retain a careful record of each test URN/barcode and the name of the resident or staff member. Staff members should also retain a record of their own test URN/barcode.

Register test kits for your organisation

Use this service to register coronavirus (COVID-19) tests for your organisation.

Before you start
- Read the online guidance tool and your printed instructions
- If you need to, book your on-site collection here
- Take your test on the same day you’re returning your kit

Make sure people getting tested have feedback you consent to:
- register them
- get their results sent to the contact details you enter

What you'll need
- your 8 digit organisation number
- a completed and updated version of our record keeping spreadsheet if you’re registering lots of tests
- the barcode or unique reference number for each test kit
- the email address (and mobile number where you can get the test results

Register the tests in bulk in batches of 50

- You will need to use separate record keeping spreadsheets for staff and residents
- You may pre-populate the record keeping spreadsheet with all the personal details before testing.
- Download this spreadsheet and save it as a Master copy to use in future retesting
- Print out the spreadsheet to fill in the barcode (URN) and the date and time of testing.

Important

When registering over 50 staff or 50 residents at once, you will need to download additional spreadsheets. Do not exceed 50 tests per spreadsheet.
What you will need to register your test online:

BEFORE TESTING: You may pre-populate sections on the registration portal spreadsheet.

1. **UNIQUE ORGANISATION NUMBER (UON):** This is the unique 8-digit number provided to you by the National Testing Programme which will be sent to you via email. Otherwise visit [https://organisation-number-lookup.test-for-coronavirus.service.gov.uk/](https://organisation-number-lookup.test-for-coronavirus.service.gov.uk/) for a reminder.

2. **STAFF OR RESIDENT:** Select Staff or Resident.

3. **FIRST AND LAST NAME:** Of the person who has been tested

4. **DATE OF BIRTH, GENDER, AND ETHNIC GROUP:** Of the person who has been tested

5. **COUNTRY AND POSTCODE:** This will be the care home address (for residents) or a home address (for staff members).

6. **NHS NUMBER:** Of the person who has been tested, if available (not required)

7. **WORKING CIRCUMSTANCES, AREA OF WORK, OCCUPATION, AND EMPLOYER:** Of the person who has been tested, if available (not required)

8. **EMAIL AND PHONE OF THE PERSON WHO SHOULD RECEIVE THE TEST RESULTS:** i.e. the resident or staff member. In certain cases it may be more appropriate for the registered manager to receive the test results on behalf of residents and, in exceptional circumstances staff, if consent has been obtained. Registered managers should not use a personal email or phone number and must ensure that written consent has been obtained via usual policies and procedures. As test results are personal information no resident or staff member should be compelled to provide consent.

9. **SYMPTOMS:** Indicate whether the person being tested is experiencing symptoms at the time the test is taken

**DURING TESTING:** this information will need to be collected while testing

10. **ENTER THE TEST BARCODE:** Enter the 11 character reference below the barcode on your test kit, or scan the barcode using your phone or computer camera. Take care to double check that this number is correct.

11. **DATE AND TIME OF THE TEST:** to ensure tests have reached the lab within the 48 hour window required for a valid test result

---

When a registered manager is receiving the test results on behalf of a resident:

The registered manager should not use a personal email or phone number to receive test results for any residents. When you receive the test result email, this may not include the name of the resident. You should therefore retain a careful record of each test URN/barcode and the name of the resident.

All test results for residents should be notified to the resident, their GP and family (if appropriate)

When you receive the test results you should follow the [Public Health England Guidance](https://www.gov.uk/) on admission and care of people in care homes.
5 Securely package and give the completed tests to the courier

Important

Make sure you have received email confirmation of your courier collection before you test.

Package your test kits before 4pm

Use one of the empty boxes you will have received with your test kit delivery and add the UN3373 label to the box.

The courier will collect completed test kits from you between 4pm and 10pm on the day you have selected.

Tests must be picked up on the same day they are taken

There is a 48 hour window to get a swab sample to the lab for processing. If this window is missed, there is a high chance that the individual may not get their results and a retest may be required at a later time.

When returning test kits, please do not send any personal information along with the completed test kits, in the form of a record keeping spreadsheet or otherwise.

You will be able to book multiple collections, but please make sure that you only test on a day where you have a confirmed courier scheduled to collect your test kits that same day between 4pm and 10pm.

If you have received test kits for testing in your care home from any other source (for example directly from Public Health England or your local Clinical Commissioning Group), please keep these tests separate and do not return these tests with the same courier.

If there is a problem with your courier collection

If your courier has not collected your test kits by 10pm, please call the helpline number at the bottom of this page to request an urgent collection the following morning. You will receive an email confirmation of your revised collection time.

If the courier arrives before 4pm and your test kits are not yet ready for collection, please politely ask the courier to wait or return at 4pm the same day.

If you have any other problems with your delivery or collection that are not addressed above, please call the helpline number at the bottom of this page.

If you have any questions please call 119
Lines open from 7am - 11pm daily

For people who have hearing or speech impairments, please call 18001 0300 303 2713
Further Advice

Early reporting of a coronavirus outbreak in your care home

You should report any suspected coronavirus outbreak (two or more residents or staff cases within 14 days with confirmed or suspect COVID-19 infection) to your local health protection team.

You can find contact details of your local health protection team here.

Support with conducting tests in your care home

If you have any questions regarding conducting tests on residents in your home, please call the Contact Centre for advice (phone number at the bottom of this page).

If you require assistance with conducting the tests in your home (swabbing of residents and/or staff), training and advice can be sought via the local Clinical Commissioning Group Director of Nursing, in the same way that infection control training is being accessed.

Further support from Public Health England

If you are experiencing difficulties with implementing the above guidance, or if you are experiencing a significant increase in new cases or deaths or any other serious problems, you should contact your local health protection team.

You can find contact details of your local health protection team here.

Further guidance for care homes

For the latest information and guidance on self-isolation and test results see the Public Health England guidance. This will continue to be updated regularly.

Need help?

If you have any questions or problems with this test kit, please call us.

Helpdesk number **119**.
Lines are open everyday, 7am to 11pm.

It is free of charge from any mobile or landline.

Thank you for supporting us.
Wash your hands and put on the necessary Personal Protective Equipment (PPE)
Wash your hands thoroughly for 20 seconds, using soap and warm water. Make sure you wear your mask, visor, gloves, and apron when testing.

Clean surfaces
Clean and dry a surface to place the test kit on. Unpack everything from the kit onto the clean surface.

Find the tonsils (back of the throat)
Look inside the person’s mouth and find their tonsils. This is the area where you will take the swab sample. You can use a torch to help.
If tonsils were removed, swab where they would have been at the back of the throat.

Ask the person to gently blow their nose and cough into a tissue.
This is so excess mucus does not interfere with the test. Throw the tissue away in a closed bin.

Open the swab inside sealed wrapper
Open the package and carefully take out the swab. You’ll use it for both the throat and nose.

Important
The fabric tip of the swab must not touch anything apart from the tonsils, back of throat and nose. If it touches anything else, use a new swab

Take the throat sample
Holding the swab in your hand, open the person’s mouth wide and gently rub the swab over both tonsils and the back of the throat for 10 seconds (use a torch and/or mirror to help you do this).

Important
You will use the same swab for both the throat and nose.
This may be uncomfortable, and they may feel like gagging, but it should not hurt.
Take care not to touch their tongue, teeth, or gums, or any other surfaces with the swab.
If it is too difficult to do a throat swab take a swab from both nostrils instead, but only as a last resort.

Take the nose sample
Put the same end of the same swab gently into the nostril by about 2.5cm (1 inch) or until you feel some resistance. This may feel uncomfortable. **Do not insert the swab any deeper if there is strong resistance or pain.**
Rotate the swab for 10-15 seconds and slowly remove it.

Place swab into plastic vial
Make sure the fabric tip is facing down as you place it into the vial. Snap off the stick end, so that it fits inside the vial without bending.
Securely fasten the lid
The lid should screw on and fit securely.

If the swab stick is too long still, you may need to use scissors to cut it to size. Clean and dry the scissors first.

Securely fasten the lid on the vial. Make sure the lid is securely fastened and sealed so that no liquid can leak.

Package the complete test kit in the box provided.
The box should have a UN3373 label and an identical barcode to the vial and biohazard bag. **Check that the barcodes match.**

Fill out the test record and keep for your records
You can choose to fill in the record keeping spreadsheet with personal information of those being tested, before you start testing, or ask a colleague to fill in this information while you carry out the test. Your colleague should also record the barcode number and the time of the swab as the test is conducted. This is to ensure that you avoid touching anything while testing.

You can stick one of the barcodes to the record keeping spreadsheet to make the administration process easier and to help ensure that the test is connected to the right individual. Note: Do not send the spreadsheet along with your completed tests.

Important
Your vial, biohazard bag and box should have pre-affixed barcode labels.

If any barcodes are missing, or they do not match, please contact the helpdesk on 119.

Check that the vial has the same barcode stuck on it as the barcode on the biohazard bag.

Place vial and absorbent pad into the resealable clear plastic bag
Place the plastic vial and the absorbent pad into the resealable clear plastic bag.

Seal the bag.

Place into the larger biohazard bag with the same barcode as the vial
Seal the bag using its silver seal.

Important
Change your apron and gloves each time you do a test. Throw these away in a closed bin.

Finish testing by 3pm each day to allow time to package your completed tests securely using the packaging provided. Courier collection will take place between 4pm and 10pm.

Make sure you record the individual’s information correctly on the test record and match them with their test barcode.

Register the completed test online as soon as possible at [gov.uk/register-organisation-tests](http://gov.uk/register-organisation-tests)
