North East of Haig Fras Marine Conservation Zone

This document sets out why this site is important, the features protected and general management information.

Overview

This site became a Marine Conservation Zone (MCZ) in May 2019. This means that specific features within this area are protected and, where necessary, regulators will manage marine activities.

Where is the site?

North East of Haig Fras MCZ is an offshore site that covers an area of approximately 464 km² and is located in the Western Channel and Celtic Sea region.

Why is the site important?

MCZs, together with other types of marine protected areas, will form the UK contribution to an international network of protected sites in the north east Atlantic. The network will help to deliver the government's vision of clean, healthy, safe, productive and biologically diverse oceans and seas. MCZs protect typical, rare and declining habitats and species found in our seas.

The North East of Haig Fras site is located on an area of the UK continental shelf in depths typically between 50 – 100 metres. The seabed is characterised by a range of sediments including subtidal sand, subtidal mud and subtidal coarse sediment. The amount of light reaching the seabed at these depths is restricted, resulting in a seabed dominated by animal communities. Due to the varied nature of the seabed, the site supports a wide range of animals, both on and in the sediment, for example polychaete worms, bivalve molluscs, starfish, anemones, sea firs and sea urchins. The site is also important as a nursery and spawning area for fish.

Designation of this site as a Marine Conservation Zone protects the following features. You can find detailed information about each of the protected features on the <u>JNCC</u> <u>website</u>.

Protected features	General management approach
Subtidal coarse sediment	
Subtidal mud	Recover to favourable condition
Subtidal sand	

Management of the site

The General Management Approach for all three protected features of this site is to 'Recover to favourable condition'. To ensure that the site achieves its conservation objectives, some activities may need additional management. Activities and the management measures used to regulate them may also need to change if new evidence becomes available.

Most marine activity is already regulated by the relevant regulatory bodies (see section below). There is an existing legal framework that regulators use to manage fishing, offshore industry, recreation and pollution. This also applies in MCZs.

Regulators will manage each site according to the features and activities in, or near, a specific area. Management measures will be implemented at sites most at risk of damage first, regulating only those activities which have a detrimental impact on the designated features. Any management measures that are required for MCZs will be applied on a case-by-case basis.

Management in MCZs can take several different forms, including introducing voluntary measures, use of the existing planning and licensing framework, specific byelaws and orders. There has to be public consultation on permanent byelaws and orders. For activities that already need a marine licence, regulators consider the MCZ in their decision as soon as the site is consulted on. Find out more about marine licensing in MCZs at https://www.gov.uk/government/publications/marine-conservation-zones-mczs-and-marine-licensing.

Regulators

This table lists the authorities responsible for MCZs and the activities they manage.

Lead regulator	What it manages
Inshore Fisheries and Conservation Authorities (IFCAs) http://www.association-ifca.org.uk Marine Management Organisation (MMO) https://www.gov.uk/government/orga nisations/marine-management- organisation	 Fisheries in the inshore area (0-6 nautical miles (nm)) including commercial fisheries and recreational sea angling. Fisheries within British limits around the coast of England. Licensable activities such as construction, alteration or improvement of works, dredging and disposal, other removals or deposits, incineration or the scuttling of vessels within England's marine area. Section 36 (of the Electricity Act 1989) Consents and Safety Zones for offshore renewable energy installations producing up to 100MW. Activities requiring a marine wildlife licence.
Environment Agency (EA) <u>https://www.gov.uk/government/orga</u> <u>nisations/environment-agency</u> Oil and Gas Authority <u>https://www.ogauthority.co.uk/</u>	 Fisheries for migratory and freshwater fish. Coastal protection and flood management. Water quality, including environmental permits for discharges from terrestrial sources. Licensing for exploration and exploitation of oil and gas reserves.
