The best estimate of local authorities’ budgeted total service expenditure for 2020-21 on a pre COVID-19 basis was £98.3bn. This was 0.3% higher in real terms than 2019-20 budgets (Table 1a).

Total revenue expenditure by all local authorities in England on a pre COVID-19 basis was budgeted to be £102.0 billion in 2020-21. This was 0.8% higher in real terms than 2019-20 budgets (Table 3).

This statistical release was updated 1 October 2020 to include returns from eight local authorities who submitted their return late and also revised figures from two other local authorities.
Introduction

This Statistical Release, and all the associated tables, present statistics on budgeted revenue expenditure for local authorities in England for the financial year 2020-21. This release presents detail on how much authorities are budgeting to spend across the services that they provide, and the main sources of income available to finance this expenditure.

Impacts of COVID-19

The Revenue Account (RA) data return form which is the source for this statistics release was launched mid-February. In response to the Coronavirus outbreak, we wrote to local authorities in early April, extending the deadline and adding an additional question to the RA return for local authorities to indicate whether their return included any COVID-19 funding. The majority of budget returns were made on a pre-COVID-19 basis, however some local authorities have made adjustments as a result of the outbreak and have done so to varying degrees, largely by including additional grant funding paid in late March.

Based on the answer to the additional question and verification of this, 49 local authorities (11%) made some adjustment to their budget as a result of COVID-19. The basis for the remainder - 382 (89%) - are of budgets as set prior to COVID-19.

MHCLG is continuing to collect data on budget pressures, lost income, and cash flow through the Local Authority COVID-19 financial impact monitoring information collection. Data from this can be found at: www.gov.uk/government/publications/local-authority-COVID-19-financial-impact-monitoring-information.

Temporary suspension of National Statistics designation

Although efforts been made to make data comparable and interpretable as detailed below, MHCLG and the Office for Statistics Regulation have agreed to temporarily remove this publication’s national statistics status for this year. This is to reflect that:

- While the majority of the data returns (382, 89%) are on a pre-COVID-19 basis, 49 (11%) of the returns reflect differing point-in-time snapshots of budgets. This makes it difficult to interpret the aggregate data, for example hindering comparisons to previous years.
- The impacts of COVID-19 are likely to result in substantial differences between budget and the subsequent outturn.

Changes to this publication

We have made the following changes to aid interpretation of budgets on differing snapshots:

- In Table 3: adjusted total financing and revenue expenditure by deducting the reported COVID-19 grants to give a pre-COVID baseline.
- In the local authority level data tables (RA and SG): included an additional column to indicate whether any adjustments were made due to COVID-19. We have a high level of completeness on what grants have been included.
- In the local authority level data tables (RA and SG): indicated the additional COVID-19
related income an LA has reported (e.g. from the following grants paid in March 2020: COVID-19 £1.6bn grant, from the £500m Council tax hardship grant, and from the grants made via local authorities to eligible businesses).

- Indicated in the local authority level RA data table and the England summary Table the categories of service expenditure where local authorities’ returns showed substantial increases following additional COVID-19 funding. This list is less exhaustive than the reported additional COVID-19 income that has been identified.

Note also that the returns from local authorities who have adjusted their budget data as a result of COVID-19 are not directly comparable to the returns which have no adjustment.

**Revenue Account returns and response rate**

The information is compiled from RA budget returns submitted to the Ministry of Housing, Communities and Local Government by local authorities in England. This information was then validated as part of a data quality exercise with the Chartered Institute of Public Finance and Accountancy (CIPFA).

Due to the exceptional circumstances this year a number of local authorities were unable to submit their returns in time for publication. Therefore, this publication is based on returns from 402 (93%) local authorities in England and 29 imputed records. These authorities are flagged in the RA and SG Live drop-down tables with an ‘S’. The data for these imputed records were estimated using adjusted 2019-20 budget data, 2019-20 Business Rates and 2020-21 data for Council Tax and some grants where 2020-21 data were readily available in time.

The number of authorities has decreased from previous years due to the following local government reorganisation:

- On 1 April 2020, Buckinghamshire County Council and the Aylesbury Vale, Chiltern, South Bucks, and Wycombe district councils were replaced by Buckinghamshire Unitary Authority.

**Key contextual information**

Functions and responsibilities of local government can change year on year so comparisons between financial years may potentially not be wholly valid, but where major changes occur these will be highlighted in the release.

Figures in this report and the associated tables are collected and reported as net current expenditure. So, for example, a decrease may be driven by decreases in expenditure or increases in income that is specific to a service area.

Definitions of terms used in this release can be found from page 14. Full definitions of what is included in each service category are provided in the guidance notes on the forms section of our website.
Since 2017-18 some local authorities have been able to retain 100% of their business rates revenue as part of their Devolution deal. In 2017-18, the local share for London boroughs was also increased to 67% to reflect additional functions given to the GLA. Additionally in 2018-19 and 2019-20, some local authorities participated in pilots to retain an increased share of revenue for that year only. For 2018-19, this was 100% retention and in 2019-20, this was 75% retention. Details can be found here: https://www.gov.uk/government/speeches/final-local-government-finance-settlement-2019-to-2020-written-statement. These business rates pilots have now ended.
Local Authority Expenditure

Local authorities report revenue expenditure on services they provide. Most local authority expenditure can be divided into different service areas which sum to **Total Service Expenditure**. This is a net figure calculated as total expenditure minus income that is specific to each service.

### Service Expenditure – adjusted to pre-COVID-19 basis

In order to derive a figure for Total Service Expenditure that is on a consistent basis nationally, Table 1a nets off the identifiable additional COVID-19-related income that was reported by the 49 (11%) of local authorities that were not wholly on a pre-COVID-19 basis.

</table>

(a) Total Service Expenditure for 2020-21 is inflated due to a minority of local authorities including some COVID-related funding. The amount of such grants are shown in this table.

(b) Of those that included the COVID19 grant, the vast majority of those figures matched the first tranche of funding only.

(c) This is a best estimate of budgeted total service expenditure for 2020-21 on a pre-covid basis. It is assumed that all COVID19 funding reported in these returns will be used as service expenditure in 2020-21.

* Small Business Grants Fund
** Retail, Hospitality and Leisure Business Grants Fund
Service Expenditure – as reported

We have been able to identify a number of service areas where local authorities have indicated they have made some adjustment to their budgeted expenditure, although this list has a lower level of completeness in comparison to additional income Local authorities have reported. These include:

- Highways and transport services
- Children’s Social Care services
- Adult Social Care services
- Public Health services
- Housing services (excluding Housing Revenue Account)
- Cultural services
- Environmental services
- Planning and development services
- Fire and rescue services
- Central services
- Other services

The local authority ‘Revenue Account (RA)’ data table indicates the service categories where higher expenditure due to COVID-19 was identified.

The increases in expenditure overall for Planning and Development, Central Services and Other Services were wholly due to the 49 (11%) of returns that reported some additional COVID19-related income and expenditure.

Table 1 shows that the sum of reported budgeted Service Expenditure for 2020-21 was £98.8 billion, £736 million (0.8%) higher in real terms than was budgeted for 2019-20. Within this overall change the following increases are most notable:

- Children’s social care higher overall by £529 million (+5.7%) to £9.8 billion in 2020-21. The largest changes within this are from expenditure on:
  i) looked after children, which continues to be the highest budgeted area of spend at £5.0 billion, up by £438 million (9.6%) compared to 2019-20 budget.
  ii) safeguarding of children of £2.4 billion, up by £164 million (7.4%) from the previous year.

- Adult social care up by £568 million (+3.3%) to £17.7 billion in 2020-21. Much of this corresponds with increase in grants allocated to authorities in 2020-21 e.g. Social Care Support Grant and Improved Better Care fund (iBCF) grant allocation. More information on allocations can be found here: [https://www.gov.uk/government/publications/core-spending-power-final-local-government-finance-settlement-2020-to-2021](https://www.gov.uk/government/publications/core-spending-power-final-local-government-finance-settlement-2020-to-2021)

- Planning and development services higher overall by £102 million (+ 8.0%) to £1.4 billion in 2020-21. Much of this increase is due to those local authorities having made adjustments to their budget as a result of COVID-19, recording increased expenditure particularly on business support.

- Central services overall higher by £38 million (+1.3%) to £3.1 billion in 2020-21. The
majority of this increase is due to those local authorities having made adjustments to their budget as a result of COVID-19, with the largest changes within this from expenditure on emergency planning.

- Other services up overall by £179 million (+ 51.7%) to £525 million in 2020-21. Over half of this increase comes from Local authorities who made COVID-19 adjustments to their budget reporting additional expenditure due to COVID-19 pressures.

**Housing Benefits**
- **Mandatory Housing Benefits**
  - Rent Allowances
  - Rent Rebates to Non-HRA Tenants
  - Rent Rebates to HRA Tenants
- **Non-Mandatory Housing Benefits**
- **Parish Precepts**
- **Levies**
- **Trading Account Adjustments and Other Adjustments**

**Non Current Expenditure and External Receipts**
- **Capital expenditure charged to Revenue Account (CERA)**
- **Housing Benefits Subsidies**
- **Community Infrastructure Levy (CIL)**
- **Capital financing and debt servicing**

**Revenue Expenditure**

(a) Includes all Mandatory and Non-Mandatory Housing Benefits. This has been on a downward trend as Universal Credit has been replacing this.
(d) Includes provision for repayment of principal, leasing payments, external interest payments and HRA item 8 interest payments and receipts.
(e) The majority of the increase in these three service areas are due to those Local Authorities who made adjustments due to Covid-19, attributing most of their additional income to be spent in these service areas.
(f) During 2019-20 9 Education authorities were identified as incorrectly including academies schools funding, therefore the correct 19-20 would have been accordingly lower.
(g) Total Service Expenditure for 2020-21 is inflated due to a minority of local authorities including some COVID-related funding. The amount of such grants is noted in footnote (d) of table 3.
(h) This change is largely due to Transport for London having a new group tax arrangement since 2019-20. This was implemented after Revenue Account budget data was provided for 2019-20.
Chart A shows the largest proportions of local authority service expenditure. This covers expenditure by councils, combined authorities and single-purpose local authorities, including Police. Education funding, which is ring-fenced, is budgeted to account for 35% of this total. Adult Social Care and Children’s social care are large elements of council expenditure, and whose expenditure accounts for 18% and 10% across all expenditure of all authorities.

Table 2a shows budget and outturn total service expenditure for the main areas of spend over recent years in cash terms and Table 2b shows budget and outturn total service expenditure for the main areas of spend over the recent years in real terms (adjusted to 2020-21 prices).

The majority of returns from local authorities related to budgets initially set over the winter, and even for local authorities that included some COVID-19 related funding, this was only partial. It is therefore very likely that there will be far more differences between budget and outturn figures than in a typical year.

Source: Revenue Summary (RS) returns 2014-15 to 2018-19, Revenue Account (RA) budget returns 2019-20 to 2020-21. All figures shown in real terms (a) are in real terms, i.e. They have been adjusted for inflation.

(b) Expenditure on education services from 2014-15 is not comparable due to those schools that changed their status to become academies, which are funded centrally rather than via local authorities.

(c) These figures exclude transfers from the NHS (including Winter Pressures money in 2014-15 and Better Care Fund from 2015-16 onwards).

(d) The Health and Social Care Act 2012 transferred substantial duties to local authorities from 2013-14 to protect and improve the public’s health, including for ages 0-6 during 2015-16.
Revenue Expenditure and Non-Current Expenditure (table 1)

Revenue expenditure involves accounting for other current expenditure in addition to service expenditure and non-current expenditure. Other current expenditure includes housing benefits paid to residents, any money passed down to parish councils through local precepts and any additional levies and adjustments charged during the year.

Non-current expenditure includes financial payments necessary to balance local authority's budgets: generally expenditure where the cash impact falls in one year but the cost is spread over more than one year.

The figures included in the non-current expenditure also include interactions with local authority accounts other than the revenue account. The largest of these are with the capital account. The main interactions are capital financing (interest payments and leases) and CERA (capital expenditure charged to the revenue account).

The Revenue Account budget 2020-21 returns included £486 million of identifiable additional COVID-19-related income, of which £390 million is within Total Revenue Expenditure. Total Revenue Expenditure by local authorities in England on a pre COVID-19 basis was therefore budgeted to be £102.0 billion in 2020-21. This was 0.8% higher in real terms than the forecast for 2019-20.
Revenue Expenditure Financing

This section outlines the different funding streams that finance local authorities' budgeted expenditure and how these differ for 2020-21 from what was budgeted in 2019-20.

Authorities additionally receive income from sales, fees and charges. Service line expenditure is collected and presented net of sales, fees and charges in the revenue account. Sales, fees and charges are not identified at budget stage but they are reported and published in the Revenue Outturn returns.

Central Government funding comprises funding announced in the annual Local Government Finance Settlement plus grants from a number of government departments.

In response to COVID-19 the government announced a number of additional grants to be allocated to each local authority in England. The following are the initial grants announced that we have identified that some local authorities included in their return:

- COVID-19 funding (first tranche £1.6bn)
- Council tax hardship fund (£500m)
- Small business grant fund and retail, hospitality and leisure grant fund (£12.3bn)
- Homelessness (£3.2m) – Only the London Borough of Islington included this grant (value of £38,000).

We did not find evidence of other subsequent COVID-19 related funding either in the returns or from local authorities in response to our challenges and queries.

Finances:

| Revenue expenditure | 101,145 | 102,389 | 1,244 | 1.2 |
| Retained income from Business Rate Retention Scheme | 17,422 | 16,498 | -923 | -5.3 |
| Appropriations to (-) / from (+) revenue reserves | 1,229 | 442 | -786 | -64.0 |
| Other items | 472 | 432 | -40 | -8.5 |
| Council tax requirement | 32,098 | 33,118 | 1,021 | 3.2 |

**NB Some COVID grants were included by a few local authorities e.g. as follows:**
- COVID grant - first tranche (£1.6bn) reported inside AEF only | 141 |
- Grants for payments to businesses (SBGF* and RHLGF**) reported inside AEF only | 244 |

**Government grants excluding reported Covid related funding:**
- Other grants inside AEF (excluding reported Covid funding) | 4,332 | 636 | 17.2 |
- Specific grants inside AEF (excluding reported Covid funding) | 42,003 | 373 | 0.9 |
- Total Government Grants (excluding reported Covid funding) | 51,512 | 1,587 | 3.2 |
- Revenue expenditure (excluding reported Covid funding) | 102,003 | 858 | 0.8 |

(a) Figures as reported by local authorities. These may differ from allocations amounts despite data collection forms having been pre-populated with allocations data for larger grants.
(b) Revenue Support Grant was lower and Retained Business Rates were higher in 2019-20 than in 2020-21 due to business rates pilots in 2019-20.
(c) Education grants include Dedicated Schools grant (DSG), Pupil Premium grant and Universal Infants Free School Meals.
(d) Whereas the returns from the majority of local authorities related to budgets as initially set in the winter, some local authorities included COVID19-related grants from March (notably those shown as COVID funding in this table). When the form for this data collection launched in February, there were no prescribed places for these grants. Many local authorities included them within ‘grants inside Aggregate External Finance’; this table subtracts these to show an England total for Revenue Expenditure on a consistent pre-COVID-19 basis. There were a further £101m of these grants recorded in revenue account returns ‘grants outside Aggregate External Finance’. While this further amount does not need to be net off from revenue expenditure, COVID-related grants reported in this return both inside and outside AEF would need to be net off Total Service Expenditure (TSE) to arrive at a pre-COVID-19 budget figure for TSE.
(e) Of those that included the Covid grant, the vast majority of those figures matched the first tranche of funding only. A further £10m was reported as grants outside aggregate external finance (AEF) which does not to be net off from Revenue Expenditure.
(f) Council tax net collection fund deficits / surpluses from the previous year.
(g) A increase is due to both increases in the tax base and bills. A small number of queries challenging differences from the CTR return were unanswered at the time of publication.
(h) Some local authorities have included all of their allocated Covid related funding, however others have reported only some of the grants allocated to them. Further details by local authority is available in the accompanying RA data by LA spreadsheet.
Accompanying tables

Accompanying dropdown tables presenting detailed revenue expenditure and financing figures for 2020-21 for all local authorities are available to download alongside this release.

These tables present all revenue information, by local authority, in a similar format as returned to the Ministry for Housing, Communities and Local Government. This data forms the basis of the tables in this release.

These are available here: https://www.gov.uk/government/collections/local-authority-revenue-expenditure-and-financing

Definitions

A list of terms relating to local government finance is given in Local Government Finance Statistics England (LGFS). The most recent edition is LGFS No. 30 2020. This is accessible at: https://www.gov.uk/government/collections/local-government-finance-statistics-england

The most relevant terms for this release are explained below.

**Aggregate External Finance**
This is the total amount of grant provided to finance all local government expenditure, excluding that subject to separate arrangements under statutory schemes, rent allowances and rebates and council tax benefit, which are funded by specific grants outside Aggregate External Finance.

**Central Government Grants**
The biggest source of funding that local authorities receive is from central government. This is made up from ‘specific’ grants and a general grant (also called the Revenue Support Grant). Central government grant money pays for capital projects, such as roads or school buildings, as well as revenue spending, such as the cost of maintaining council housing and running services, including employee wages.

**Central Services**
These are services organised on a corporate basis that support the delivery of services to the public. Central services include building costs, administration and IT

**Council Tax Requirement**
The amount of revenue a local authority needs to raise through council tax, (its council tax requirement) is calculated by deducting from its planned spending any funding from reserves, income it expects to raise, and funding it will receive from the Government.

**Current expenditure**
This is the cost of running local authority services within the financial year. This includes the costs of staffing, heating, lighting and cleaning, together with expenditure on goods and services consumed within the year. This expenditure is offset by income from sales, fees and charges and other (non-grant) income, which gives total **net current expenditure**. Total net current expenditure also includes payments made by local authorities on behalf of central government, under statutory schemes and the payment of rent allowances and rebates. Such payments are fully funded by central government through specific grants outside Aggregate External Finance.

**Dedicated Schools Grant (DSG)**
There was a change in the funding of specific and formula grants in 2006-07 largely due to changes in the way that expenditure on schools is funded. From 2006-07, local authorities receive school funding through specific grant rather than funding previously included in formula grant.
Funding through the Settlement Grant
This the main channel of government funding. This includes

Retained income from the Rate Retention Scheme, Revenue Support Grant, and Police grant. The distribution is determined by the Formula spending shares formulae, also taking account of authorities’ relative ability to raise council tax and the floor damping mechanism. There are no restrictions on what local government can spend it on.

Greater London Authority (GLA) Group
This includes the GLA (the Mayor of London and London Assembly) and it’s five constituent functional bodies; the Mayor’s Office for Policing and Crime (MOPAC), the London Fire Commissioner (LFC), Transport for London (TfL), the London Legacy Development Corporation (LLDC) which administers Queen Elizabeth Olympic Park and the Old Oak and Park Royal Development Corporation (OPDC). Transactions in their General Fund Revenue Account are reported by the GLA and the five functional bodies as a group.

Housing Revenue Account
The HRA is a local authority statutory account, it contains all the spending and income related to the housing stock owned by the council.

Mandatory Housing Benefit
This is financial help given to local authority or private tenants whose income falls below the prescribed amounts as required by law. This usually consists of mandatory Rent Allowances and mandatory Rent Rebates, to HRA and non-HRA tenants.

Net Current Expenditure
see Current Expenditure

Reserves
These are sums set aside to finance future spending for purposes falling outside the definition of a provision. Reserves set aside for stated purposes are known as earmarked reserves.

Non-ringfenced revenue reserves comprise of unallocated reserves and other earmarked reserves. Local authorities often earmark reserves to meet known financial commitments and to mitigate known risks. As reserves of this type cannot be used without putting wider service delivery at risk, most local authorities will have significantly lower usable revenue reserves than their non-ringfenced revenue reserves balance would imply. It is not possible to identify usable revenue reserves in the current release.

Retained income from the Rate Retention Scheme
Since 2017-18 some local authorities have been able to retain 100% of their business rates revenue as part of their Devolution deal. In 2017-18, the local share for London boroughs was also increased to 67% to reflect additional functions given to the GLA. In 2018-19 and 2019-20, some local authorities participated in pilots to retain an increased share of revenue for that year only. For 2018-19, this was 100% retention and in 2019-20, this was 75% retention.

16 Revenue Expenditure and Financing, 2020-21 Budget, Statistical Release – UPDATED 1 OCTOBER 2020
These business rates pilots have now ended.

**Revenue expenditure**

Revenue expenditure involves accounting for other current expenditure in addition to service expenditure and non-current expenditure. Other current expenditure includes housing benefits paid to residents, any money passed down to parish councils through local precepts and any additional levies and adjustments charged during the year. It excludes expenditure financed by grants outside **Aggregate External Finance**. Revenue expenditure is financed by grants inside Aggregate External Finance, council tax and authorities' reserves.

**Revenue Support Grant**

A general grant now distributed as part of **Funding through the Settlement Grant**.

**Specific Grants inside AEF**

These are revenue grants which are paid to local authorities by individual government departments, for which the local authority has sole responsibility for decisions on how the grant is allocated. The main purpose for the provision of these grants is to deliver core local authority services.

**Specific Grants outside AEF**

These are revenue grants, which are paid to local authorities by individual government departments. However, the local authority usually only acts as the ‘middle person’, as the grants are passed over to a third party who administers the service. The local authority does not normally have any control over the service for which the grant was intended for. This responsibility rests solely with the third party that receives the grant.
Technical notes

Symbols

…  = not available
0   = zero or negligible
-   = not relevant
||  = discontinuity
(R) = revised since the last statistical release

Rounding

Where figures have been rounded, there may be a slight discrepancy between the total and the sum of constituent parts.

Data collection

Survey design for collecting Revenue Account data in 2020-21

From February until April 2020, all 431 local authorities in England were requested to complete the Revenue Account (RA) suite of forms to show all their budgeted transactions related to the general fund revenue account. This included net current expenditure, capital charges and also elements that finance net current expenditure, which includes; levy payments, interest receipts, central government grants, use of reserves, council tax and other non-current expenditure items.

The estimates requested cover local authority revenue expenditure and financing for the financial year 1 April 2020 to 31 March 21. These estimates are on a non-International Accounting Standard 19 (IAS19) and PFI “Off Balance Sheet” basis except where stated otherwise.

Data quality

This Statistical Release contains Revenue Account (RA) budget returns that have been produced at different snapshots in time which makes it difficult to interpret the data as well as make direct comparisons to previous years. As such, national statistics status has been temporarily removed from the RA publication this year.

The information for 2020-21 in this release is derived from Ministry of Housing, Communities and Local Government (MHCLG) RA forms and is based on returns from 402 local authorities in England and 29 imputed records. Figures are subjected to rigorous pre-defined validation tests both within the form itself, while the form is being completed by the authority, and also by the Ministry of Housing, Communities and Local Government and the Chartered Institute of Public Finance and Accounting as the data are received and processed.

A full outline of the statistical production process and quality assurance carried out is provided in
the flow chart in Figure 1.

**Figure 1: Quality Assurance Flow Diagram**

START: new RA form on online data system: live February

Forms completed by local authorities on online data system (validations within the form will flag large year on year changes)

Any data queries or technical difficulties dealt with via email / phone

Collection closes April

Validations run on data by MHCLG and CIPFA simultaneously:
1. Year on year changes (prescribed thresholds)
2. Low reserve levels
3. Missing data
4. Incorrect sign
5. Missing comments

Local authorities make amendments on online data system or send comments via email

Data quality issues (errors) sent to local authorities

Local authorities make amendments on online data system or send comments via email

Data close down 2 weeks before publication date

Internal quality assurance meetings to assess sensitivity of data

Imputation carried out for any missing records

Final data quality issues (errors) sent to local authorities

Final Data agreed

END: publication June

19 Revenue Expenditure and Financing, 2020-21 Budget, Statistical Release – UPDATED 1 OCTOBER 2020
Revisions policy

This policy has been developed in accordance with the UK Statistics Authority Code of Practice for Official statistics and the Ministry of Housing, Communities and Local Government Revisions Policy (found at: https://www.gov.uk/government/publications/statistical-notice-dclg-revisions-policy)

There are two types of revisions that the policy covers:

**Non-Scheduled Revisions**

Where a substantial error has occurred as a result of the compilation, imputation or dissemination process, the statistical release, live tables and other accompanying releases will be updated with a correction notice as soon as is practical.

**Scheduled Revisions**

At time of publication there are no scheduled revisions for this series

Uses of the data

Data in this Statistical Release are essential for providing the Secretary of State for Housing, Communities and Local Government, Ministers, HM Treasury and the Office for National Statistics with the most up to date and comprehensive information available on local authority revenue spending for decision making. They are used by the Office for National Statistics in compiling Public Sector Finances and National Accounts, which are used to set fiscal and monetary policy.

Data collected are an important source for the department to create evidence based policy, make financial decisions and answer parliamentary questions. They are used by local authorities and their associations, regional bodies, other government departments, academics, research organisations, members of the business community and the general public.

The release allows for trends in funding for different local authority services and types to be identified over a period of years when compared with previous releases. Local authorities can also compare their own spending with the aggregated figures presented here or with the equivalent data for individual local authorities. However, caution should be taken in comparing figures across years prior to 2013-14 due to changes in responsibilities. There were a number of changes to local government expenditure and financing in 2014-15 which have an impact on the figures in this release:

**Education Services**; expenditure on education services from 2014-15 is not comparable to previous years due to a number of schools changing their status to become academies, which are centrally funded rather than funded by local authorities. As a result of this discontinuity, total net
current expenditure is not comparable from 2013-14 and the years beyond.

**Children’s Social Care;** local authority expenditure on ‘services to young people’ moved from education services to children’s social care services in 2014-15, therefore total net current expenditure on children’s social care is not comparable between 2013-14 and the years beyond.

**Public Health Grant;** the Health and Social Care Act 2012 transferred substantial duties to local authorities from 2013-14 to protect and improve the public’s health and reduce health inequalities. Local Authorities were given a ring-fenced grant to improve outcomes for the health and wellbeing of their local populations through Public Health England.

**Business Rates Retention;** From April 2013 local authorities, except police authorities, could retain a share of their business rates and keep the growth of that share, this impacted the amount of business rates authorities retained in 2013-14. In addition to this since 2017-18 some local authorities have been able to retain 100% of their business rates revenue as part of their Devolution deal. In 2017-18, the local share for London boroughs was also increased to 67% to reflect additional functions given to the GLA. In 2018-19 and 2019-20, some local authorities participated in pilots to retain an increased share of revenue for that year only. For 2018-19, this was 100% retention and in 2019-20, this was 75% retention. [These business rates pilots have now ended.](https://www.gov.uk/government/speeches/final-local-government-finance-settlement-2019-to-2020-written-statement) More information on Business Rates pilots can be found here:

**Police Grant;** police authorities, which are not part of the rates retention scheme, starting receiving all of their funding through a police grant in 2013-14.

**User engagement**

Users are encouraged to provide feedback on how these statistics are used and how well they meet user needs. Comments on any issues relating to this statistical release are welcomed and encouraged. Responses should be addressed to the "Public enquiries" contact given in the "Enquiries" section below.

MHCLG engages with the CLIP Finance (CLIP-F) group, which is a consultative group made up of other government departments, local authorities and stakeholders to consider the collection, presentation and analysis of data on local government finance. To ensure users are made aware of significant changes and adjustments to Local Government Finance forms papers are tabled, discussed and published.

Comments and feedback from end users for further improvement or about your experiences with this product will be welcomed. Please send all views to: lgf1.revenue@communities.gov.uk

Notes

This Statistical Release and previous publications can be accessed from: https://www.gov.uk/government/collections/local-authority-revenue-expenditure-and-financing

The CIPFA Finance and General Statistics publication also contains detailed information on local government finance.

Devolved administration statistics

Scotland, Wales and Northern Ireland have different local government structures and funding to those in England. Their finance statistics are therefore also different, and cannot be meaningfully compared with the statistics for England. However, information on local government funding within the devolved administrations is available – some of the most useful sources are listed below.

Scotland:

- The Scottish Local Government Finance Statistics
- Local government finance: Facts and figures 2010-11 to 2017-18
- Local government finance: Draft Budget 2018-19 and provisional allocations to local authorities.

Wales:

- local government finance
- revenue budgets and financing
- central funding settlement
- CIPFA revenue statistics for England and Wales

Ireland:

- The Northern Ireland Audit Office
- Overview of Local Authorities
