# CORONAVIRUS

## England Briefing

Situation Report  
**Main Body**

date: 4 November 2020

## We have reached the point when a different approach is required

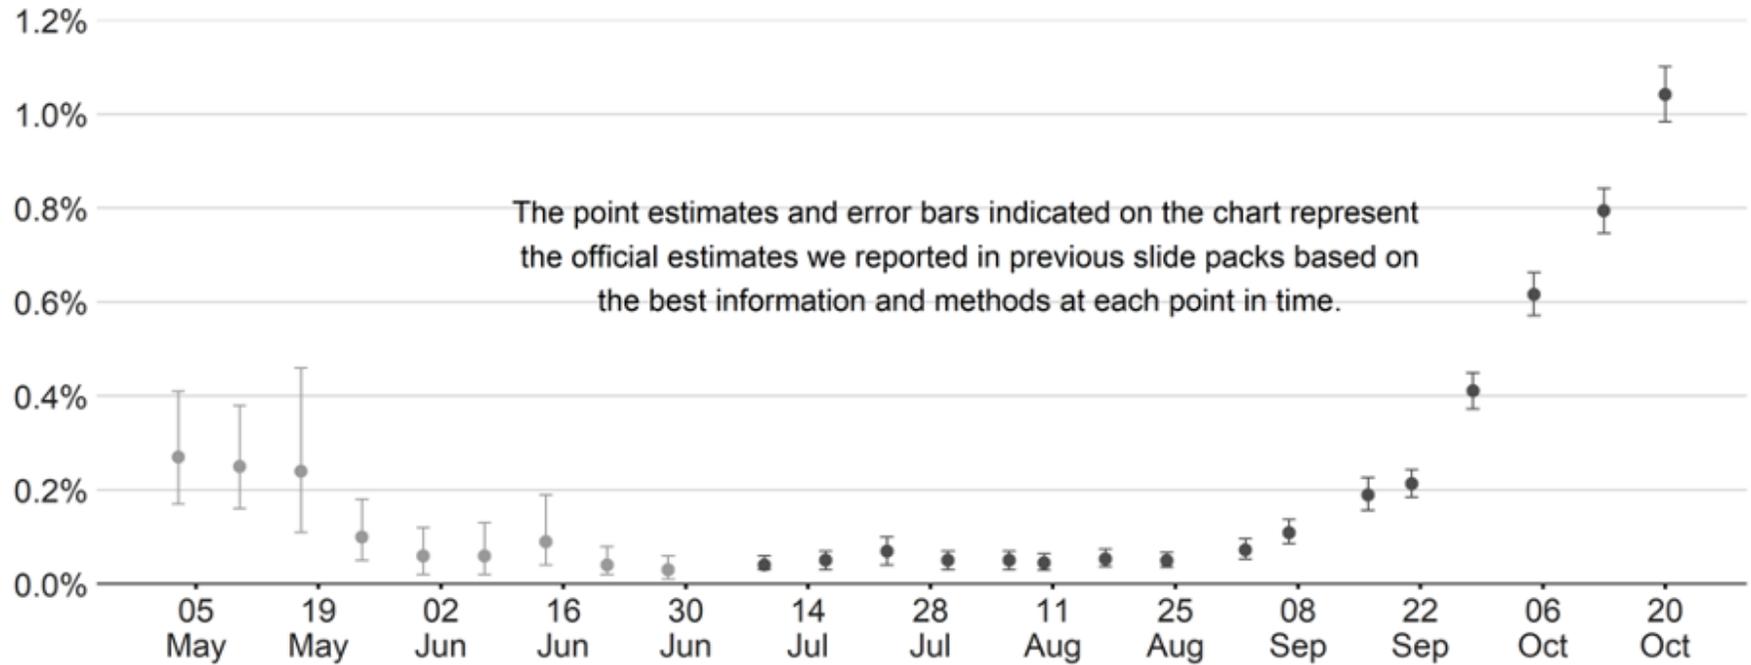

- The virus is spreading rapidly, and case numbers are high or rising in most parts of England.
- All regions in England have rates higher than or are fast approaching the level Leicester was at when it went into lockdown.
- Some of the fastest doubling rates are in the areas of lowest prevalence, meaning that we need to be concerned about them levelling up to the areas of already high prevalence.
- Other countries in similar situations, with local outbreaks escalating to widespread national epidemics. Realising this, they are deploying stringent national measures.
- Despite increasing NHS capacity, it will still be overwhelmed at this rate if R remains above 1:
  - unless you can get R down, you need to keep pace with the growth of the virus. It is not possible to double NHS capacity as fast as cases double - we need to take significant action to bring R down.
  - As hospitals fill up, we won't be able to provide other services, which would lead to far more non-Covid related deaths. *The danger is not focusing on Covid too much, it is not focusing on Covid enough.* We need to suppress the virus so the NHS can still carry out critical functions.

# The virus is spreading rapidly in England

## Percentage of people testing positive for COVID-19 in England

Official Estimates

● 14-day weighted estimates ● modelled weekly estimates

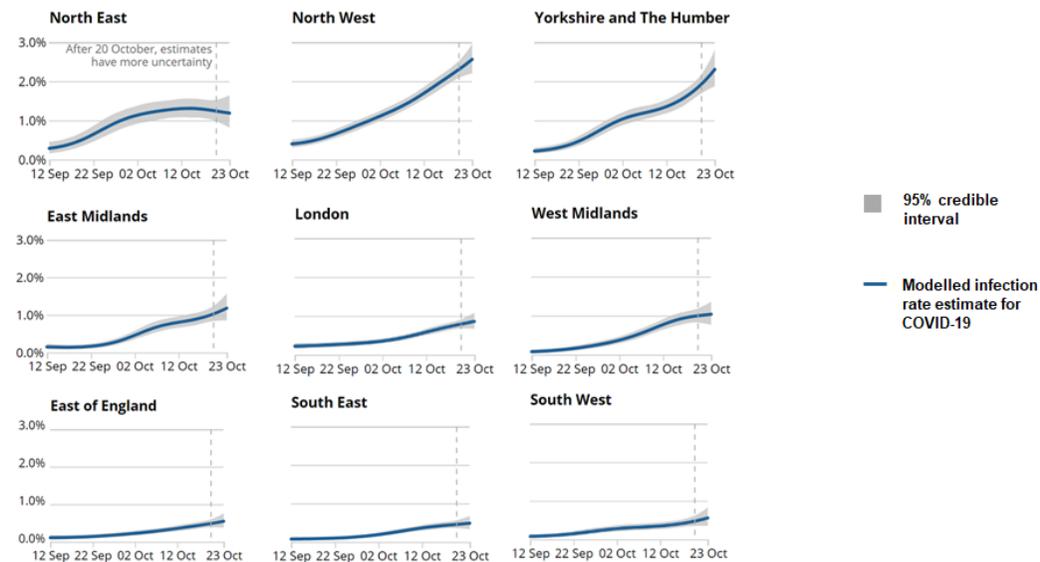

Data from 03 May to 20 October 2020

Case numbers are rising quickly even in areas of low prevalence - while the virus is more widespread in the NW, doubling times are fastest in the Midlands and fast in areas of lower prevalence; E, SE and SW.

Region	Weekly cases per 100k (22-29 Jun)	Weekly cases per 100k (last 7 days)	Doubling time (days, Oct 27th)
North East	3.4	294	27
North West	11.3	431	15
Yorkshire and The Humber	18.2	390	15
London	3.5	154	18
West Midlands	6	244	12
East Midlands	18.2	274	12
East of England	4.7	103	16
South West	1.5	142	18
South East	4.5	110	14
Leicester (pre-June lockdown)	141.2	N/A	N/A

### ONS COVID-19 household infection survey estimates of infection rates in England by region

Source: Office for National Statistics – Coronavirus (COVID-19) Infection Survey

Source: ONS (doubling times) and coronavirus.data.gov (weekly cases per 100k)

Source: ONS COVID-19 Infection Survey

# Other countries with a similar regional spread of cases to us - such as France - are deploying national measures

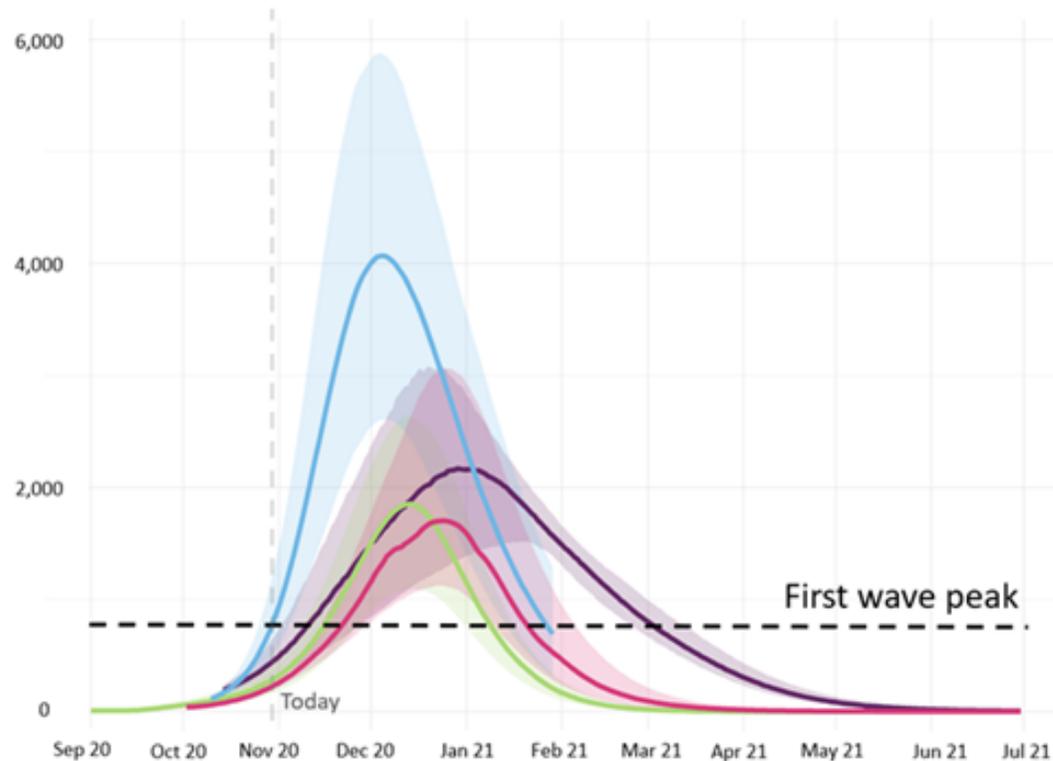

Case rates in subnational regions: Each point shows the case rate in a region within the country. Source: ECDC

The dispersion of case rates by region (a measure of how much they vary) shows that England and France are very similar.

Early working analysis from SAGE's SPI-M gave an indication that if the government does not act, the number of deaths could exceed the peak seen in April this year

## WINTER SCENARIOS FROM EARLY WORKING ANALYSIS England daily deaths if no changes in policy or behaviour

Early SPI-M working analysis

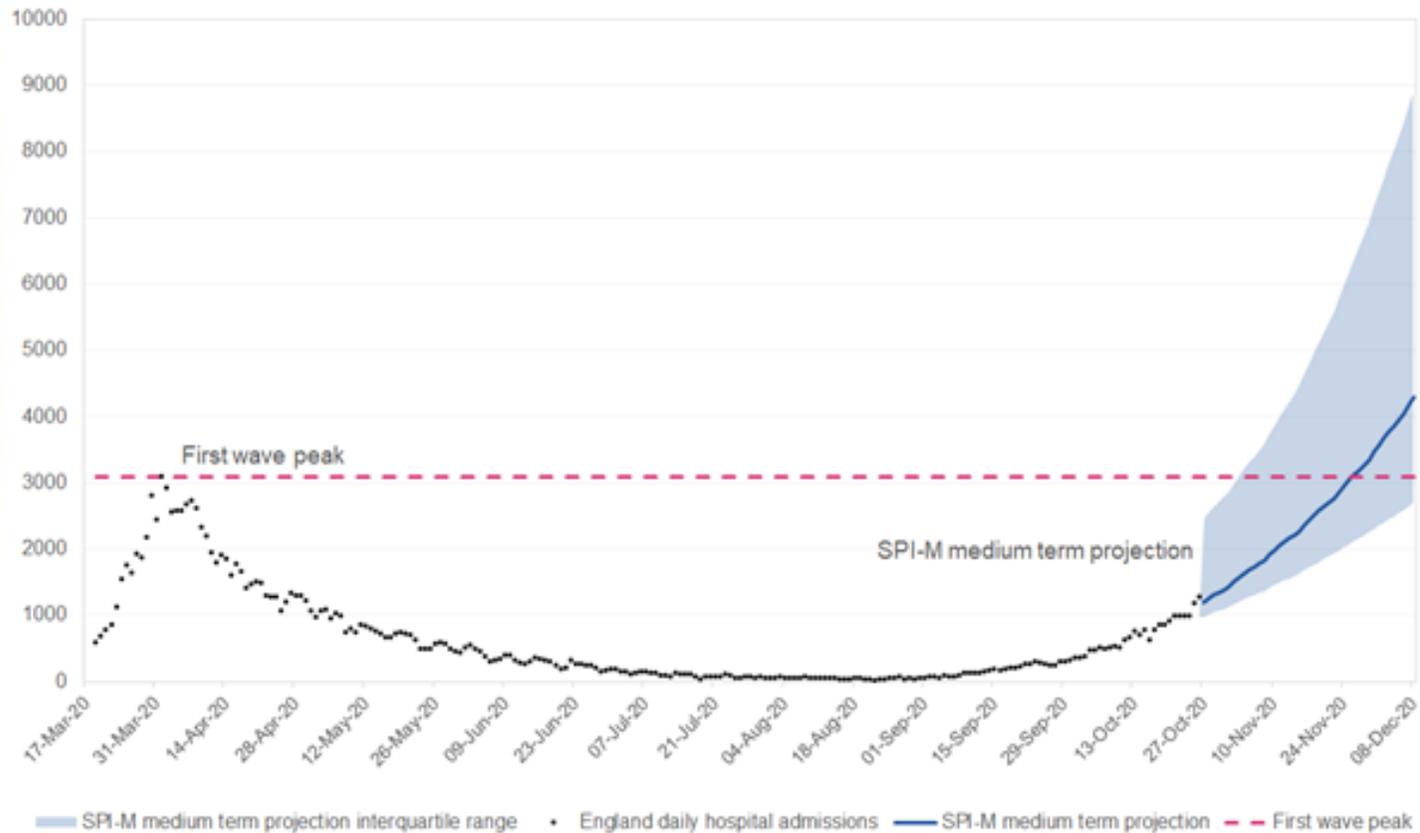

These curves represent scenarios from a number of academic modelling groups.

**THESE ARE SCENARIOS - NOT PREDICTIONS OR FORECASTS**

**This plots various scenarios from a number of academic modelling groups, all of which show a general trend.**

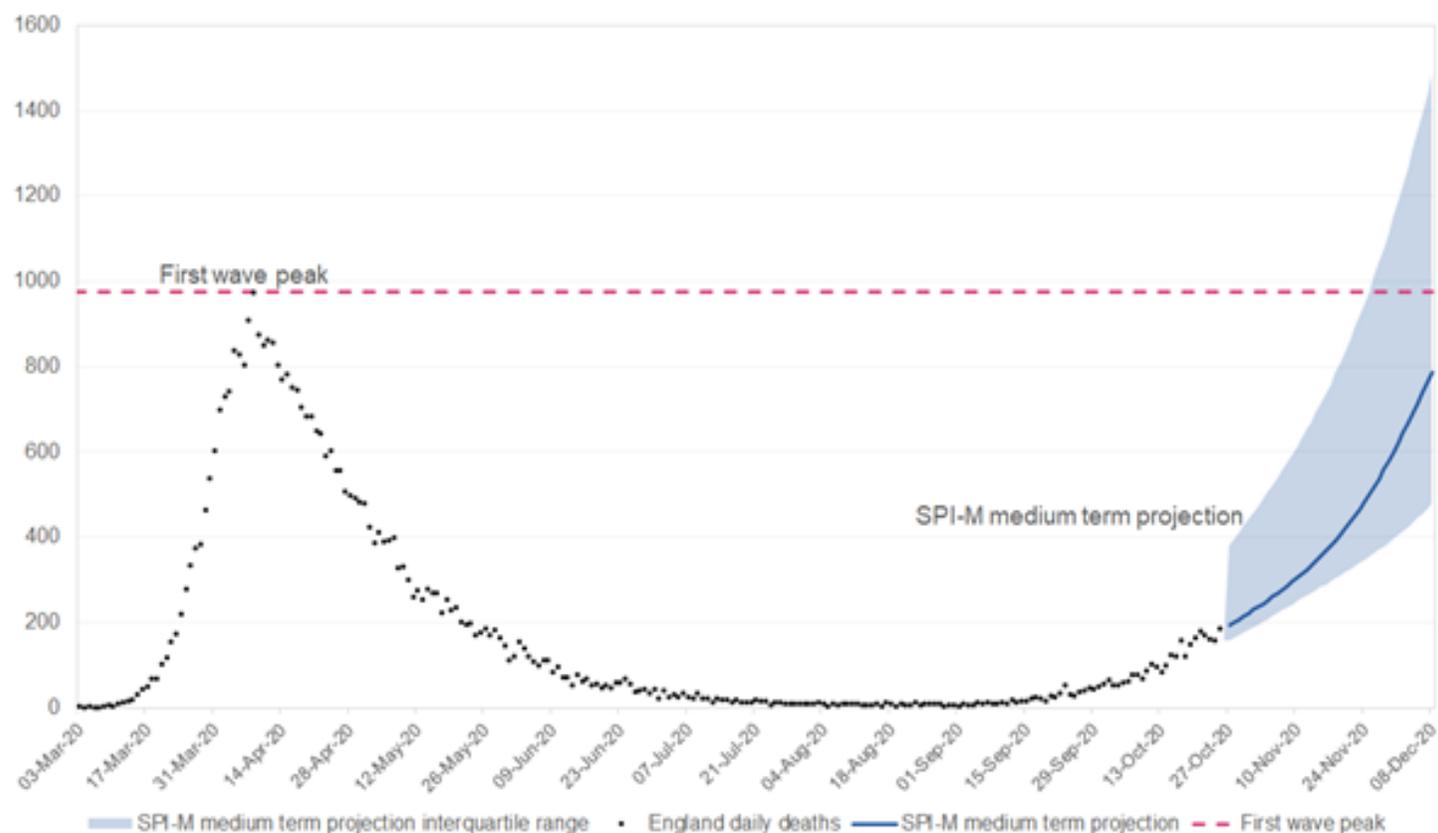

Shorter term projections from SPI-M indicates that we could exceed the first wave peak for hospital admissions by the end of November.

## England - daily hospital admissions to date with SPI-M medium term projection for the next six weeks

...And be rapidly approaching the first wave peaks for deaths by mid December.

## England - daily deaths to date with SPI-M medium term projection for the next six weeks

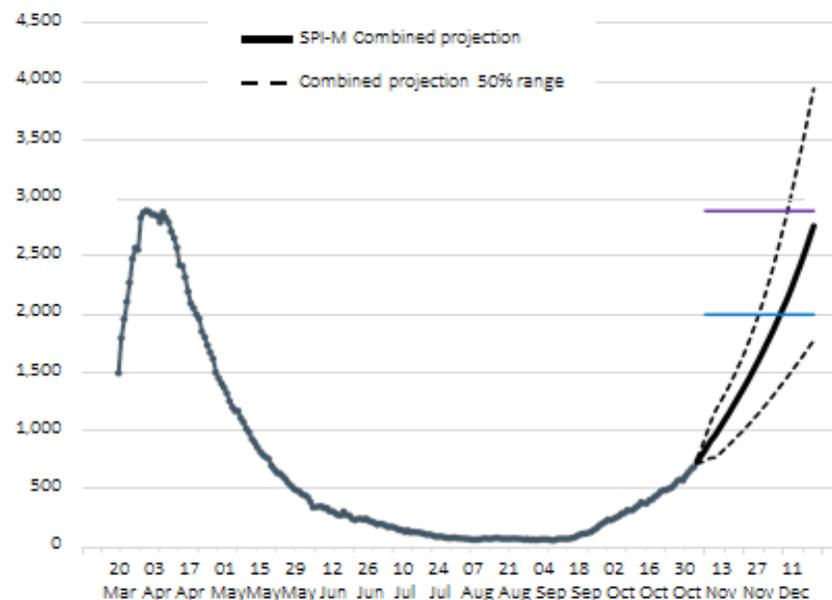

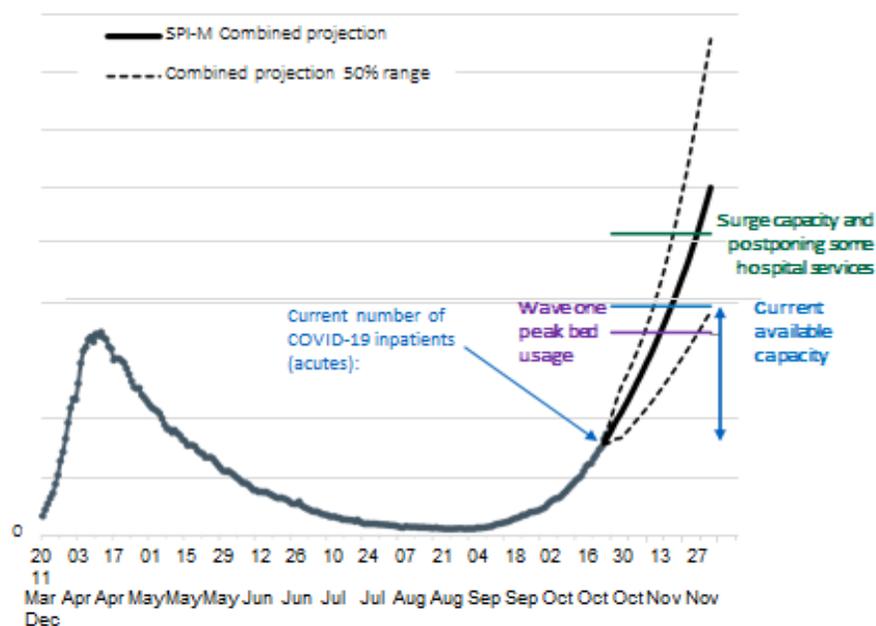

# Modelling of NHS capacity based on SPI-M projections indicates that we could breach even the surge capacity for acute beds by early December

## England new SPI-M combined projection bed usage

Exceeds peak on circa 20/11/2020  
 Exceeds currently available beds on circa 23/11/2020  
 Exceeds surge capacity and capacity freed up from postponing some hospital services on circa 04/12/2020

England - all acute beds

England - V beds

Source: SPI-M modelling provided 29/10/20. 'V' bed demand numbers are not separately modelled and are based on current ratios to all beds, which may result in discontinuity between historical data and forecasts. Currently available beds assumes max 95% G&A bed occupancy and 90% 'V' occupancy.

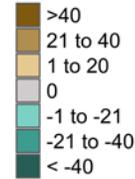

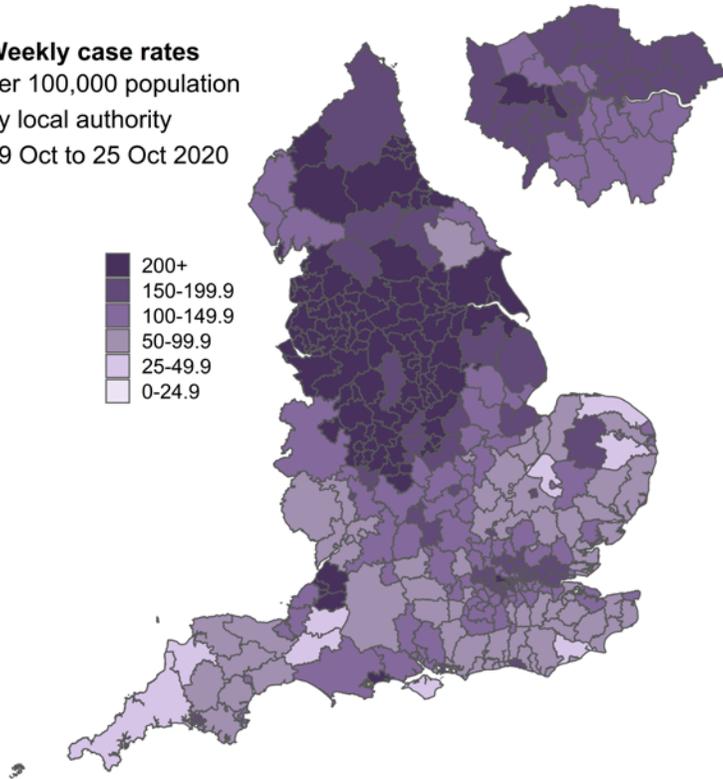

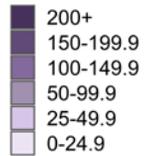

6 |

Current confirmed Covid positive inpatients as reported by providers as 0800 29 October 2020.

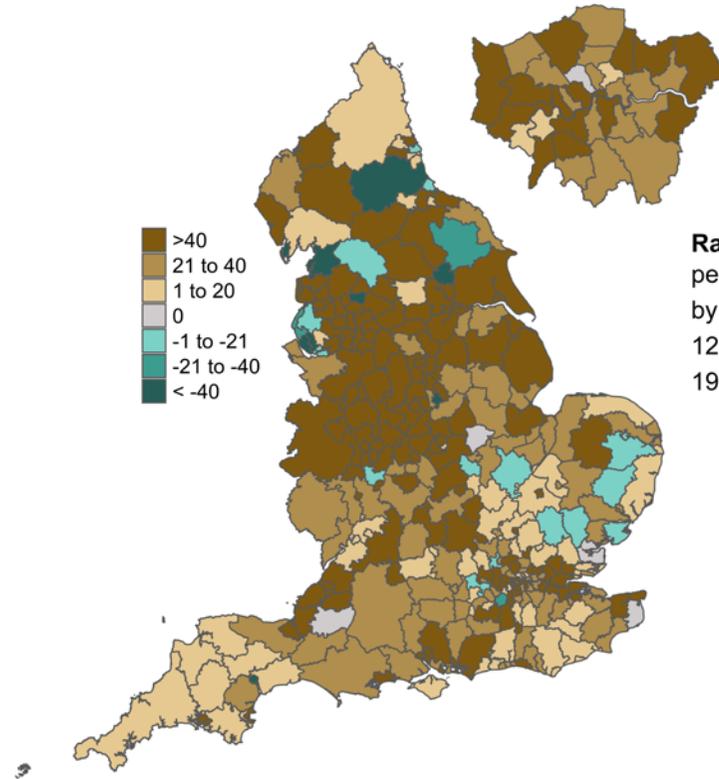

# 7 day rate of COVID-19 cases (Pillar 1 and Pillar 2) per 100,000 population, by lower-tier local authority, England

## Geographical spread of COVID-19 in England

**Weekly case rates**  
per 100,000 population  
by local authority  
19 Oct to 25 Oct 2020

**Rate change**  
per 100,000 population  
by local authority between  
12 Oct to 18 Oct 2020 and  
19 Oct to 25 Oct 2020

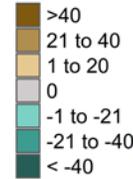

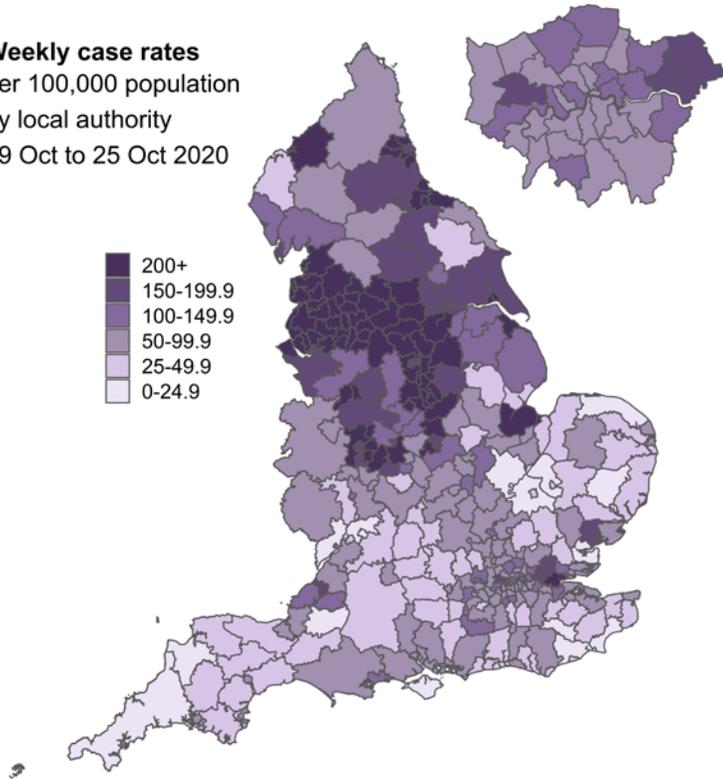

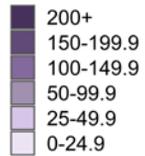

Data from SGSS; Pillar 1 and 2 testing. Figure by Outbreak Surveillance Team, Public Health England.
