

Home Office

National ANPR Standards for Policing and Law Enforcement

November 2024

Version: 3.3

1. Executive Summary

These standards articulate the requirements with which the police and other Law Enforcement Agencies ([LEA](#)), as detailed at [Annex A](#) must comply to access the National ANPR Capability ([NAC](#)). These standards do not cover the use of Automatic Number Plate Recognition (ANPR) for any purpose that is not law enforcement and will identify the purposes for which this document shall be applicable. Data from the [NAC](#) may not be used for other purposes, however in appropriate circumstances a camera may provide data to both the [NAC](#) and organisations other than those listed at [Annex A](#) to be managed independently.

This document includes a description of the legal basis for [ANPR](#) as well as the applicability of these standards. The standards comprise three main sections: [Data Standards](#), [Infrastructure Standards](#) and [Data Access and Management Standards](#). Audit standards and technical requirements are covered in other documents.

[Data Standards](#) comprise the security requirements that must be met for the [NAC](#) as well as the composition requirements for read data.

[Infrastructure Standards](#) cover the end-to-end infrastructure requirements for the [NAC](#), including infrastructure development, cameras, networks, databases, infrastructure access and performance and legal requirements.

[Data Access and Management Standards](#) include the management of data within the [NAC](#), including collection, storage, transfer and deletion of data. This section also provides guidance on [FOI](#) and [Data Protection Act \(DPA\)](#) enquiries.

The Annexes to this document include password requirements, guidance on investigation categories, the approval process for accessing [ANPR](#) data and a list of approved organisations that may access [ANPR](#).

Serious Investigations	46
Priority and Volume Investigations	48
Annex C: Data Access Requirements	50

Document Revisions

Version 1.1 draft	July 2020	Change ref from CAST to DSTL in 8.14 Clarification at 9.8 re Command and Control Update of links within text
Version 2.0	September 2020	Published with amendments as above
Version 2.1	November 2020	Footnote added re data deletion (para 9.5.1)
Version 2.2	November 2021	Clarification of requirements for roadside camera mounting condition monitoring. (para 8.9.9) Addition of Food Standards Scotland as 'Approved LEA'
Version 2.3	January 2022	Scottish Environment Protection Agency added as 'Approved LEA'
Version 2.4	July 2022	Minor change to wording 9.4.3.2 Camera Locations in Evidence. Addition of The Pensions Regulator as an 'Approved LEA'
Version 3.0	January 2024	Revision to provide clarity and application of standards to a blend of local and national ANPR operational capability. Update Approved LEAs.
Version 3.1	February 2024	Detailed description of password requirements deleted
Version 3.2	May 2024	Addition of Serious Fraud Office (SFO) as an 'Approved LEA'
Version 3.3	October 2024	Additional details re VOI list management requirements. Update to ref UKGDPR Police Management Code of Practice. Reference to NSAP. Revision of section 9.13 re VOI list accuracy and deletion Addition of the Financial Conduct Authority (FCA) and His Majesty's Prison and Probation Service (HMPPS) as 'Approved LEA'

3. Definitions

Acronym	Description
ANPR	Automatic Number Plate Recognition
ANPR Data	Includes the Vehicle Registration Mark (VRM) as interpreted by the ANPR System together with associated records of location of the ANPR camera that obtained the data together with details of the time of collection and any images associated with that data details at 7.3 and 7.4 post
ANPR READ	The interpretation of a VRM by an ANPR system with associated reference to time and location.
ANPR system	A collection of cameras, readers components linking to NAC
Audit Standards	National Standards for Compliance and Audit of Law Enforcement ANPR
CCTV	Closed Circuit Television
CAMERA	The device used to capture an ANPR read
CAPTURE RECORD	The record of a vehicle recorded by NAC for a vehicle passing an ANPR camera including the ANPR READ, associated images and meta data.
COMMUNICATIONS LINKS	The connections between the camera, any local infrastructure and the NAC
CONTROLLER	The competent authority which alone or jointly with others determines the means and purposes of the processing of personal data. Part 3 data Protection Act 2018
CCA	Crime and Courts Act 2013
CPIA	Criminal Procedure and Investigations Act 1996 and the CPIA Code of Practice
DPA	Data Protection Act 2018
FOI	Freedom of Information Act 2000
UKGDPR	General Data Protection Regulation
GSCP	Government Security Classifications Policy – (formerly the Government Protective Marking Scheme (GPMS))

GPS	Global Positioning System
HIT	The report of a match of a vehicle registration mark (VRM) READ with a VRM that is included on a vehicle of interest list (VOI)
ICO Code	ICO Code of Practice for Surveillance Camera Systems
ISO	Information Security Officer – The member of staff with responsibility for ensuring compliance with requirements for IT security
ITHC	IT Health Check – The process for ensuring that security provisions for IT are appropriate and in compliance with requirements that are current at the time of the check.
JCA	Joint Controller Arrangements under provisions of the Data Protection Act 2018-
JPEG	Joint Photographic Expert Group image format
LEA	Law Enforcement Agency – Includes police forces and other agencies undertaking law enforcement activities. For the purpose of this document, LEAs shall only include those organisations listed at Annex A.
MIDAS	Motor Insurance Bureau (MIB) data of uninsured vehicles
MOPI	Police Information and Records Management Code of Practice
NAC	<p>National ANPR Capability includes:</p> <ul style="list-style-type: none"> • the core NAS which is a national system consisting of the functionality to enable use for operational response, investigation and intelligence purposes and a national store of data, and, • any other national store of data provided for law enforcement purposes relating to terrorism and serious criminal offences. • The National Strategic ANPR Platform (NSAP) • local ANPR systems to enable use for operational response, investigation, and intelligence purposes, and, • the National ANPR Infrastructure (NAI) which is a network of ANPR cameras, communications links, firewalls and other related supporting components, which are the responsibility of LEAs, which connect to the NAC.

NAI	A network of ANPR cameras, communications links, firewalls and other related supporting components
NAS	The core National ANPR Service
NASP	National ANPR Standards for Policing first version published in 2013 and replaced by NASPLE recognising the applicability to all law enforcement agencies that access the NAC
NASPLE	National ANPR Standards for Policing and Law Enforcement.
National VOI List	Nationally circulated lists that include stolen vehicles, vehicles requiring an operational response and vehicles within Schengen circulations
Network Connections	The IT links between components of the NAC
NPCC	National Police Chiefs' Council
NPCC Vetting Policy	The NPCC standards for vetting of staff for access to police information
NSAP	National Strategic ANPR Platform
PERSONAL DATA	<p>Means any information relating to an identified or identifiable living individual.</p> <p>'identifiable living individual' means a living individual who can be identified directly or indirectly, in particular by reference to_</p> <p>a) an identifier such as name, an identification number, location data or an online identifier, or</p> <p>b) One or more factors specific to the physical, physiological, genetic, mental, economic, cultural or social identity of the individual</p> <p>Data Protection Act 2018</p>
PDS	Police Digital Services - Responsible for confirming that police IT systems are in accordance with security requirements and authorising connection to national systems.
PNC	Police National Computer
READ	The interpretation of a VRM by an ANPR system
RIPA	Regulation of Investigatory Powers Act 2000
RIPSA	Regulation of Investigatory Powers (Scotland) Act 2000

Schengen	The Schengen Information System will enable the authorities of signatory countries to have access to reports on persons and objects for the purpose of border checks and controls and other police and customs checks
SMS	A Standards format for text messaging
TSpec	The document prescribing the technical specifications for data within the National ANPR Capability (NAC) to comply with the requirements of NASPLE.
VOI	The details of a vehicle that are of interest to law enforcement for operational response or investigation purposes that is included on a list to enable it to be READ and for authorised staff to receive a report of that READ.
VRM	Vehicle Registration Mark

4. Introduction

The Home Office issues these standards on behalf of the Joint Controllers for the National ANPR Capability (NAC) in support of the management and use of the (NAC). ANPR by the police and other law enforcement agencies (hereafter referred to as LEAs) for law enforcement purposes. LEAs should use these policy standards to shape technical standards, standard operating procedures and audit standards in support of compliance.

This document covers the use of ANPR within the NAC and will identify for which uses this document shall be applicable. The use of ANPR within the NAC otherwise than in accordance with this document is not permitted.

This document is divided into 3 sections:

- Part 1 – [Data Standards](#), which define the compliance requirements for ANPR Data
- Part 2 – [Infrastructure Standards](#), which define the compliance requirements for ANPR infrastructure
- Part 3 – [Data Access and Management Standards](#), which define the access requirements for LEAs and other organisations that are associated with ANPR data for law enforcement purposes.

5. Background

[ANPR](#) technology is used for law enforcement purposes, to help detect, deter and disrupt criminality at a local, force, regional and national level. This includes tackling traveling criminals, Organised Crime Groups and terrorists. [ANPR](#) provides lines of enquiry and evidence in the investigation of crime and is used by [LEAs](#) throughout England, Wales, Scotland and Northern Ireland. In appropriate circumstances, and with compliance with data protection legislation, the [NAC](#) may also be available to Intelligence Services and the Crown Dependencies of the Channel Islands and the Isle of Man.

There exists a National Law Enforcement [ANPR](#) capability [NAC](#) which enables [LEAs](#) to benefit from operational use of [ANPR](#). The [NAC](#) comprises:

- The primary [NAS](#). This is a national system comprising standardised functionality to enable use for operational response, investigation and intelligence purposes and a national store of data;
- any other national store of data provided for law enforcement purposes relating to terrorism, serious criminal offences and where necessary and proportionate for other law enforcement purposes.
- The National Strategic ANPR Platform (NSAP)
- any national components to support the transfer of data including any data cache.
- local ANPR systems to enable use for operational response, investigation, and intelligence purposes, and,
- The National ANPR Infrastructure ([NAI](#)), which is a network of [ANPR](#) cameras, communications links, firewalls and other related supporting components. Any element of this network that is connected to the [NAC](#) shall be the responsibility of the [LEA](#) that manages that connection.

5.1 Technical Specifications

Technical specifications for the [NAC](#) are detailed within a technical specification document ([TSpec](#)). [LEAs](#) are required to conform to the requirements of that document.

6. ANPR Legislation

ANPR operates under a complex framework of legislation of general application, including the Data Protection Act 2018, UK [General Data Protection Regulation](#) (UKGDPR), and Common Law.

The National Law Enforcement ANPR capability (NAC) is subject to the [Information Commissioner's Office](#) (ICO) regulatory provisions.

6.1. ANPR Data: Legal Basis

ANPR data from police forces is police information within the meaning of The Code of Practice on the [Police Information and Records Management Code of Practice 2023 \(MOPI\)](#) made under the Police Act 1996 and Police Act 1997. It may be shared between LEAs in accordance with the provisions of that Code or any other document which applies similar standards in its place, including the National Crime Agency's (NCA) Statement of Information Management Practice (SIMP).

Access to and the retention and management of [ANPR](#) data obtained by [LEAs](#) must be compatible and consistent with their relevant legal obligations, which include: The Data Protection Legislation (i.e. the General Data Protection Regulations (UKGDPR) and the [Data Protection Act 2018 \(DPA\)](#);

- [ICO Code of Practice for Surveillance Camera Systems \(ICO Code\)](#);
- College of Policing Approved Professional Practice – Information Management. ([MOPI](#));
- [Part 2 of the Protection of Freedoms Act 2012 \(PoFA\)](#);
- [The Surveillance Camera Code issued under Part 2 of PoFA.](#)
- [Criminal Procedure and Investigations Act 1996](#) and [Code of Practice issued under Part II of that Act](#) (CPIA);

6.2. Use of ANPR for Law Enforcement Purposes

ANPR infrastructure may only be deployed for law enforcement purposes as defined in [Part 3 of the DPA](#) ; or on grounds of national security. Law Enforcement is defined by the [DPA](#) as “the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal

penalties, including the safeguarding against and the prevention of threats to public security”.

The Joint Controller Arrangements ([JCA](#)) details the responsibilities of controllers for compliance with the [DPA](#). The National Police Chiefs’ Council ([NPCC](#)) ANPR lead is designated as the lead controller within the [JCA](#) for the national components of NAC and for national policy. Local components of the [NAC](#) are the responsibility of the Chief Officer for the organisation that provides and manages that local component.

Joint Controllers have determined within the JCA that they will conform to consistent policy and procedures for the elements of the [NAC](#) for which their own [LEA](#) is responsible and for which they are the controller.

6.3. Use of ANPR for other Policing Purposes and Public Benefit

LEAs may the NAC for operational purposes relating to individual and public safety including in collaboration with other public authorities. For example, those partners with accountability for traffic management and road safety. Data may be processed independently by the LEA or other public authority using shared collection equipment (10.2.3 post) such that each are independent controllers for the processing that they undertake, or statistical information may be provided by the LEA devoid of personal data. In all cases a Memorandum of Understanding (MOU) must be in place setting out the arrangements for compliance with these standards.

6.4. ANPR Audit

The Home Office has also issued a separate document entitled “National Standards for Compliance and Audit of Law Enforcement ANPR” ([Audit Standards](#)). This document sets out the requirements for compliance and audit by all [LEAs](#) and of the national components of the [NAC](#).

7. Applicability

These standards apply to the [NAC](#) operated by [LEAs](#) that connect to or receive data from any other components of the [NAC](#).

Where, under an agreement, [LEAs](#) receive data from components that are under the ownership or control of other organisations it is the responsibility of the receiving [LEA](#) to ensure compliance with the [NASPLE](#).

[ANPR](#) cameras that are used solely for speed enforcement are outside the scope of these standards.

ANPR systems that are not operated by [LEAs](#) and do not submit data to the [NAC](#) are similarly outside the scope of these standards.

7.1. Approved Organisations

An [LEA](#) may only connect to, or receive data from, the [NAC](#) following approval of the NPCC policing lead for [ANPR](#) within the [NPCC](#) Crime Operations Committee (NPCC policing lead for ANPR) - an “[Approved Organisation](#)”.

For an organisation to be designated as an “[Approved Organisation](#)” it must be involved in and can lawfully process data for one or more of the following activities:

- National security and counter terrorism
- Law enforcement purposes namely the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, including the safeguarding against and the prevention of threats to public security.

In granting access, the [NPCC](#) policing lead for [ANPR](#) must be satisfied that it is necessary and proportionate for the organisation to be approved.

Approved Organisations must ensure that their organisation complies with the requirements of [NASPLE](#) and Compliance and Audit Standards.

References to [LEAs](#) within [NASPLE](#) includes only “[Approved Organisations](#)” unless indicated otherwise. Approved Organisations are listed in [Annex A](#).

In addition to the above purposes [LEAs](#) may use the [NAC](#) for operational purposes relevant to individual and public safety. E.g Missing persons.

8. Part 1: Data Standards

8.1.1. Data Standards Overview

Part 1 prescribes the data standards for the [NAC](#).

8.1.2. Data Security

[LEAs](#) have a duty to protect [ANPR](#) data to ensure its integrity and to maintain its value for law enforcement purposes. [ANPR](#) data must therefore be attributed a protective marking of OFFICIAL, in accordance with the Government Security Classifications Policy ([GSCP](#)).

When in the [NAC](#) databases is used, other material may be accessed such that personal details of persons associated with the [ANPR READ](#) data may be identified. Once [ANPR READ](#) data is available within the [NAC](#), it is personal data in the context of the [DPA](#).

All [ANPR](#) data in the national and local components of the [NAC](#), should therefore be managed in accordance with [DPA](#) principles and handled as OFFICIAL - SENSITIVE data, in accordance with the [GSCP](#).

Whilst in the custody of, or being transmitted to or from a [LEA](#), [ANPR](#) data should be handled in accordance with [Part 2](#) and [Part 3](#) of [NASPLE](#).

Access to data within [ANPR](#) systems must be in accordance with [Part 3](#) of [NASPLE](#).

8.2. ANPR Read Records

8.2.1. Composition

An [ANPR READ](#) places a [VRM](#) at a specific location and time. It is obtained by a camera as part of an automatic number plate reading system. The data components of a record must not be entered manually into the [NAC](#) unless for the purposes of correcting a mis-read [VRM](#) on the system or by an administrator for testing the connectivity of a camera.

The [READs](#) must include [VRM](#), time, location of read and camera identifier and be consistent with the requirements of [section 8.4](#).

8.3. ANPR Data

8.3.1. Vehicle Registration Mark (Mandatory)

[ANPR](#) data must accurately represent [VRMs](#) of all vehicles with correctly represented EU and [Schengen](#) Community number plates. Systems must accurately record the [VRM](#) for vehicles passing within the field of view for each camera. The capture and read rates must be in accordance with the type of camera defined at Section [9.7](#).

8.3.2. Vehicle Registration Mark – Not Read (Mandatory where functionality is in place)

Where a [CAMERA](#) has the capability to record images of vehicles passing within the field of view where no [VRM](#) is identified by the system, information will be recorded in the [VRM](#) field in accordance with current [TSpec](#).

8.3.3. Time (Mandatory)

System audit provisions must provide evidence of synchronisation at least once every 10 minutes using standard time source techniques in accordance with current [TSpec](#).

Components of [ANPR](#) systems must automatically adjust the display of the time to daylight saving time during the period when this is in-force.

8.3.4. Location (Mandatory)

[ANPR](#) data must place a read in a location, accurate to within 10 metres. In addition, all fixed-site [ANPR](#) cameras must have their [GPS](#) co-ordinates accurately recorded to within 5 metres.

8.3.5. Supporting Imagery

In order to assist with assessment of the accuracy of individual read records, [ANPR](#) data may include images:

- Plate patch – showing the number plate only, to allow comparison of the visual image with the textual representation interpreted (Mandatory for systems under ownership or control of a [LEA](#))
- Overview Image – showing the vehicle to allow identification of the make, model and colour of the vehicle within the read zone (Optional)
- ‘Geo Tagging’ - if an accurate [GPS](#) Geo Location is available, then this detail may be added to images (Optional)

Should any image be found to exceed prescribed limits for image size, cameras submitting the images must be revised to ensure images obtained are within the limits prescribed within a maximum of 7 days.

All images must be linked to the corresponding read record.

All images recorded must be forwarded to the national databases of the [NAC](#). Where no overview image has been recorded, the read record must include a reference to identify that no image is recorded.

8.4 Record Retention and Deletion

All read records received by [LEAs](#) including any associated images must be supplied to the national databases of the [NAC](#).

All records must be managed and subsequently deleted in accordance [Section 10.6](#).

8.5 Camera Performance Evaluation

[Camera](#) Performance evaluation, as detailed in [Section 9.14](#) of all components within [LEA](#) ANPR systems must be conducted to ensure compliance with the Data Standards. Where performance falls below the Data Standards then this must be corrected and reassessed to confirm that performance conforms to data standards, within 30 days of that issue being identified.

If camera performance issues are not resolved within 30 days of identification, then the feed of data from those cameras must cease until corrected.

9 Part 2: Infrastructure Standards

9.1 Infrastructure Standards Overview

Part 2 prescribes the standards for the components of the [NAC](#), including the operability standards required that are to be used by [LEAs](#) connected to it.

9.2 Accreditation

To preserve the integrity of the [NAC](#), all components of infrastructure that connect to it must be assessed to ensure that they do not pose a threat to the [NAC](#) and are suitably for handling data up to [GSC](#) OFFICIAL level.

9.3 LEA Domain

The assessment of risk to an [LEA](#) domain rests with the controller for each [LEA](#), which will normally be discharged by the Information Security Officer ([ISO](#)) for that [LEA](#). The level of risk posed should be determined through completion of a Risk Analysis Document and an IT health check ([ITHC](#)). Review of compliance with the risk analysis outcomes and the conduct of an [ITHC](#) is to be completed annually.

9.4 ANPR Network

Police Digital Services ([PDS](#)) as the National Accrator for Police Systems (NAPS), needs to be assured that the local [LEA](#) Infrastructure poses no threat to [NAC](#). The [NAPS](#) will liaise with the [LEA ISO](#) to assess the level of risk posed, as documented through the [LEA](#) corporate information risk management and [ITHC](#) process.

The [PDS](#) will approve the components of local infrastructure for connection to the [ANPR](#) Network. This will be confirmed by the completion of the relevant security assurance processes as determined by PDS.

9.5 ANPR Infrastructure Development

A consistent and standardised approach must be applied to infrastructure development within the [NAC](#). Compliance with Technical Specifications and any requirements to support consistency in configuration of components within the NAC is required.

Police Forces and LEAs are responsible for ensuring that any proposed deployment of additional static ANPR cameras within their area, is appropriate taking account of data protection legislation and these standards. LEAs must ensure that current infrastructure within their area is managed in compliance with these standards before deploying any additions to the NAC.

9.5.1 Strategic Assessments

A strategic assessment should be carried out prior to the deployment of an [ANPR camera](#). An assessment should also be carried out prior to receiving [ANPR](#) data for onward submission to any component of the [NAC](#), that is received from [ANPR](#) systems operated by organisations that are not defined as [LEAs](#). These assessments must identify a need for [ANPR](#) at that location for law enforcement purposes.

Where a need is identified, consideration of whether the deployment, or the receipt of [ANPR](#) data is appropriate and proportionate. This requires an assessment of the value for law enforcement purposes taking account of the impact on fundamental rights and freedoms of individuals. Consideration of the legitimate expectations of individual privacy is also required. Strategic assessment should consider:

- National Security and Counter Terrorism,
- Serious, Organised and Major Crime
- Local Crime,
- Community Confidence and Reassurance, Crime Prevention and Reduction.

9.5.2 Data Protection Impact Assessment

A Data Protection Impact Assessment ([DPIA](#)), which may include consultations with relevant stakeholders, is required for all planned new infrastructure.

The [DPIA](#) must include:

- A description of the proposed development
- An assessment of the risks to the fundamental rights and freedoms of individuals – the data subjects.
- Measures to mitigate those risks
- Confirmation of safeguards and security measures to ensure protection of personal data and compliance with the [DPA](#).
- Details of any stakeholder consultation

9.5.3 Information Commissioner's Office Consultation

The [NAC](#) may result in high risk to the rights and freedoms of individuals and prior consultation with the Information Commissioner's Office ([ICO](#)) may be required before the deployment of any new [ANPR](#) infrastructure. When a [DPIA](#) identifies a large increase in the number of deployed [ANPR](#)

infrastructure or where significant privacy risks are identified the [ICO](#) should be consulted. (Section 64 [DPA](#))

The advice of data protection specialists within the LEA should be obtained when assessing the data protection risks and the need for consultation.

9.5.4 Strategic Assessment and DPIA Reviews

[LEAs](#) must monitor the continued requirement for a camera to be maintained at a location, or for an [LEA](#) to receive data from [ANPR](#) systems operated by other organisations. Should the justification for deployment at that location cease, the device must be removed, and the receipt of data must be terminated.

The locations of all cameras and the need to receive data from systems operated by other organisations must be reviewed annually, considering requirements for infrastructure development to ensure that camera deployment or receipt of data remains appropriate and proportionate

LEAs must ensure that Strategic Assessments and DPIA are reviewed at least annually and maintain a record of that review.

9.6 Vehicle-Mounted Systems

Vehicle-mounted [ANPR](#) may only be deployed where any of the following circumstances arise:

- For the purposes of monitoring hits against a list of [VOI](#) with the intention that an operational response to the hit will take place, either by staff within the vehicle containing the [ANPR](#) system or by others deployed in support of that vehicle for the purpose of providing a response.
- Deployed at locations identified following completion of [infrastructure development](#) assessment prior to the deployment of other camera at the location.
- Deployed as a result of Operational tasking processes within an [LEA](#) where it has been determined that it is proportionate for short-term deployment of [ANPR](#);
 - In response to identified criminal activity
 - In response to identified community problems
- To support assessment of a location for future more permanent camera deployment in accordance with the [infrastructure development](#) procedure

- In support of immediate operational response following report of a crime or incident.

9.7 System Standards

The performance standards for camera shown below are most easily met for vehicles travelling towards a camera, and it is recommended that unless unavoidable, for example in some dual-lane deployments, that this configuration is used in all cases.

9.7.1 Static ANPR Systems

A static [ANPR](#) system has been built for the primary purpose of ‘capturing’ and ‘reading’ [VRMs](#) and is located in a fixed position, with no intention of the system being moved. The performance standards for these systems must be achieved at all times. Systems must capture 98% of all [VRM](#) that meet the reflective requirements detailed within the [BS AU 145](#) (as related to the age of the plate) and are visible to the human eye¹ and accurately read 95% of captured [VRM](#).

9.7.2 Moveable ANPR Systems

A moveable [ANPR](#) system has been built for the primary purpose of ‘capturing’ and ‘reading’ [VRMs](#), is located in a fixed position on a temporary basis and may be moved. The performance standards for these systems must be achieved at all times. Systems must capture 98% of all [VRM](#) that meet the reflective requirements detailed within the [BS AU 145](#) (as related to the age of the plate) and are visible to the human eye and accurately read 95% of captured [VRM](#).

9.7.3 Multi-Lane ANPR Systems

A Multi-Lane [ANPR](#) system has the capability to read [VRM](#) for vehicles travelling in multiple lanes of the highway using a single camera. The performance standards for these systems must be achieved at all times. For vehicles travelling towards the camera, systems must capture 98% of all [VRM](#) that meet the reflective requirements detailed within the [BS AU 145](#) (as related to the age of the plate) and are visible to the human eye and accurately read 95% of captured [VRM](#).

For vehicles travelling away from the camera, the system must capture 90% of all [VRM](#) that are visible to the human eye and accurately read 95% of captured [VRM](#).

¹ ‘Visible to the Human eye’ should be determined from the viewpoint of the camera within the ANPR system. A number plate visible to a ‘human eye’ at that location should also be visible by the ANPR system taking account of circumstances prevailing at the time including adverse weather conditions.

9.7.4 CCTV Integrated ANPR Systems

A [CCTV](#) Integrated [ANPR](#) system may operate both as a [CCTV](#) camera and as an [ANPR](#) camera. The camera should be optimised² for the purposes of [ANPR](#) when being deployed as a camera. Integrated systems must only provide data to the other components of the [NAC](#) when in [ANPR](#) mode. The performance standards for these systems must be achieved at all times when deployed in [ANPR](#) mode. [CCTV](#) systems may not be optimised to capture [ANPR](#) reads therefore systems must capture 85% of all [VRM](#) that meet the reflective requirements detailed within the [BS AU 145](#) (as related to the age of the plate) and are visible to the human eye and accurately read 95% of captured [VRM](#).

9.7.5 Mobile ANPR Systems

A mobile [ANPR](#) system has been built for the primary purpose of 'capturing' and 'reading' [VRMs](#). These include vehicle-mounted [ANPR](#) systems and other portable systems deployed on a temporary basis. Any equipment procured after the publication of version 1 of National [ANPR](#) Standards for Policing ([NASP](#)) (May 2013) must be live-linked to the other components of the [NAC](#).

To achieve the optimum performance requirements, mobile equipment should be capable of night-time and low-light operation. The performance standards for these systems must be achieved at all times.

Systems must capture 98% of all [VRM](#) that are visible to the human eye and accurately read 95% of captured [VRM](#) unless deployed in a moving vehicle, when the system must capture 80% of all [VRM](#) that meet the reflective requirements detailed within the [BS AU 145](#) (as related to the age of the plate) and are visible to the human eye and accurately read 95% of captured [VRM](#).

9.7.6 Covert Systems

It is recognised that circumstances may arise where moveable or purpose-built, covert systems are deployed in support of an investigation in circumstances where it is not possible to establish a live-link to other components of the [NAC](#). Deployments of this type that are authorised within provisions of the [RIPA](#) or [RIPSA](#) are the only circumstances where

² The optimum configuration of CCTV systems differs when used for general CCTV surveillance to when operated as an ANPR reader. It needs to be configured for ANPR use to ensure maximum possible data accuracy

equipment procured after the publication of version 1 of [NASP](#) (May 2013) may not have the capability to live-link to the [NAC](#).

Unless unachievable due the nature of the deployment the performance standards for these systems must be achieved at all times. Systems must capture 98% of all [VRM](#) that are visible to the human eye and accurately read 95% of captured [VRM](#).

9.8 Camera Access Settings

Unless a camera is designated a 'Restricted Access' camera, all cameras that submit data to NAC must be attributed the settings of 'Open Access', such that all data received from that camera is visible to all users with appropriate permissions to access the data.

With appropriate authority, a camera may be designated a 'Restricted Access' camera. Designation of a camera for 'Restricted Access' may only be authorised by a senior manager. A 'Restricted Access' camera may or may not be [covert](#) and the designation of a device for 'Restricted Access' may require authorisation within the provisions of the [RIPA](#) or [RIPSA](#).

A record of all authorisations for restricted access must be retained for the duration of the restriction and a period of 2 years thereafter.

9.9 System Capability and Resilience

9.9.1 Image Capture

All cameras under the ownership or control of [LEAs](#) must have the capability to capture and record supporting imagery in accordance with [section 8.4.5](#).

There may be circumstances where the shared collection equipment that is owned and managed by a non-[LEA](#) organisation is being used that are not enabled for the recording of imagery. In these circumstance, these cameras may be connected to the [NAC](#) subject to the standards for [ANPR Infrastructure Development](#).

Supporting Images are important to assist with the accuracy of individual capture records and therefore, where data is received from other a non-[LEA](#) organisation without supporting images, provision for upgrading of the system to enable the provision of images should be established.

9.9.2 Schengen Information Systems (SIS)

All [ANPR](#) systems must be capable of reading plates that form part of the [SCHENGEN](#) community.

9.9.3 Data Storage

The [NAC](#) must not allow any data loss. Data may be held in approved national data stores that provide for user access and in any cache to support transfer and managed in compliance with these standards.

9.9.4 Local System Resilience

All local [ANPR](#) systems must transfer data to the national components of the [NAC](#) on receipt in local systems from a [camera](#) and also have the capacity to retain [ANPR](#) reads and their related images for 7 days from the time of the [ANPR](#) read in a format that will enable submission to the national components of the [NAC](#).

This will provide resilience should the local infrastructure connections, the [NAC](#) or communications to the national components of the [NAC](#) become unavailable and will prevent the loss of data. In the event of a failure to send read records and associated images to the national components of the [NAC](#) local systems must have the capability to re-send that data.

If for any reason reads from a camera are submitted to the local system more than 7 days after initial capture the reads may be retained on the local system for 7 days in a format that will enable submission to the national components of the [NAC](#) to prevent loss of data, should connection to the national components of the [NAC](#) become unavailable.

9.9.5 Local system connection and data transfer

Local [ANPR](#) systems must not enable connection to or the transfer of data to local [ANPR](#) systems operated by other LEA for the purposes of searching of data or monitoring of [VOI](#) lists created and managed by other LEAs, Access to data from other LEAs and [VOI](#) lists is provided from national components of [NAC](#) and in compliance with data protection principles additional local copies of other LEAs data is not permitted. except that [VOI](#) lists may be transferred to Mobile [ANPR](#) Systems to enable monitoring by those systems when not connected to the [NAC](#). LEAs must establish procedures to ensure that [VOI](#) lists held on Mobile [ANPR](#) Systems are current versions of lists as required by 9.13.3 (post)

LEAs may, in partnership, establish a single shared local component of the [NAC](#) to enable use by their staff for for operational response, investigation, and intelligence purposes provided that system is not connected to any other local system.

[LEAs](#) must not disclose [VOI](#) lists to other [LEAs](#) for use on local components of the [NAC](#), even in circumstances of national components of the [NAC](#) unavailability; however, [LEAs](#) may share information and intelligence relating

to those [VOI](#) lists using established intelligence management procedures. Where [LEAs](#) receiving intelligence reports have an interest in the vehicles subject to those reports they may include details of VOI within their own VOI lists and are accountable for the management of those lists.

9.9.6 Local system data deletion

Data held on local systems must be deleted within the next 24 hours after the period of 90 days following the time of the read. Where a read is submitted to the local components of [NAC](#) more than 24 hours after the time of the read by a [camera](#) it must be deleted 90 days after the time that it was read by that camera.

9.9.7 Mobile ANPR Systems Data Transfer

All [ANPR](#) data held on mobile [ANPR](#) units that have been unable to transmit their data in real time must be transferred to the [NAC](#) within a maximum period of 48 hours from the time of capture except in circumstances where the camera is unable to connect to the local system.

9.9.8 Support and Maintenance

[ANPR](#) systems should be commissioned only with an appropriate level of support and maintenance to safeguard against component failure and assist with business change. Local provisions must be in place to ensure that, in the event of any failure of a component of infrastructure that provides communications to the [NAC](#), to prevent loss of data. Reinstatement must be within a period consistent with the ability to retain data locally for that failed component and subject to a maximum period of 96 hours from the time that the component failed.

Roadside infrastructure must be compliant with the requirements of any required permissions and installed to meet safety standards. All components including camera brackets and mountings must be inspected at least annually for signs of corrosion, damage and overall condition to ensure that they remain safe. Records of the inspection for each installation must be kept for 2 years from the date of that inspection.

9.10 System Connectivity

9.10.1 Local ANPR Infrastructure Connectivity to LEA networks

Local [ANPR](#) Infrastructure must connect to the [LEA](#) network infrastructure to allow user access to the [NAC](#) and to support connections to the Police National Computer ([PNC](#)) and the national components of the [NAC](#).

The security of all infrastructure connections must be managed via an organisation maintained and managed firewall in accordance with that

organisation's own policy and the Community Code of Connection and NPCC/Police Scotland Community Security Policy.

9.11 National Databases

[NAC](#) must have the capacity to check against the following national data sets, as a minimum; PNC; Includes 'Fast Track' 'Extract', 'Schengen' and 'MMC' data.

9.11.1 Response Times

In order to ensure compliance with [DPA](#) principles in the circulation of [VOI](#), Real-time matching performance standards must be achieved in 95% of all reads.

The following table summarises maximum response times within the [NAC](#):

System Type	Read to alarm	Number plate read by a camera to delivery to national core NAS	NAC process to delivery at a LEA for visibility by staff
Static ANPR system	4 sec	2 sec	2 sec
Moveable ANPR system	4 sec	2 sec	2 sec
Multi-Lane ANPR System	4 sec	2 sec	2 sec
CCTV Integrated ANPR system	4 sec	2 sec	2 sec
Mobile ANPR system	6 sec	4 sec	2 sec

9.11.2 Real-Time Data Delivery

In order to ensure operational capability and to support compliance with [DPA](#), local [LEA ANPR](#) infrastructure must clearly display the current state of connectivity to the [NAC](#) and/or any time when data is not being sent to the national components of the [NAC](#). In the event of a communications or systems failure, the [LEA](#) infrastructure must buffer that read data and deliver it to the national components of the [NAC](#) once the communications or failed systems have been restored. The real-time delivery of data is a priority and the delivery of any buffered data should take place in addition to delivery of real-time data.

9.11.3 Search and Export of Data

The [NAC](#) must provide for the identification and export of data to enable identification using criteria defined in [TSpec.](#):

The ability to export [ANPR](#) data shall be limited to defined users.

Bulk data, including images, required for investigative purposes that is stored under provisions of the Criminal Procedure and Investigation Act 1996 ([CPIA](#)) may be exported to an external [LEA](#) defined storage area and managed in accordance with local policy.

The [NAC](#), both at a national and a local level, must provide for user defined privileges for use of data export functions and data may only be exported by users with those privileges.

9.11.4 Security

The [NAC](#) must provide for adequate security measures, including access control, to protect against unauthorised access to the system and data held within it. [LEAs](#) must ensure compliance with [NAC](#) requirements and are accountable for the security of all components of the [NAC](#) that are within their control. [LEAs](#) must ensure that individual user privileges are consistent with the requirements of their role and individual [level of vetting](#).

Audit trails must be maintained to record all significant actions taken, including:

- User login,
- Successful and failed database searches, and;
- the addition to, and deletion of data from lists of [VOI](#).

There must be provision within the [NAC](#) for users to record the reasons and any required authorisation for their actions. Access to audit trails must also be auditable and restricted to users who require this access as part of their role, as defined within policy.

The security of all [LEA](#) components of the [NAC](#) must be managed via an [LEA](#). The [LEA](#) shall maintain and manage a firewall in accordance with the [LEA's](#) own policy, the Community Code of Connection and Community Security Policy. The requirements of the [national network](#) connections and [GSC](#) as confirmed by the appropriate governance authority in each case.

9.12 Databases

9.12.1 National Database

[LEAs](#) that receive [VOI](#) lists and updates from a [national VOI list](#) shall ensure that this list is loaded on their [mobile system](#) at the first opportunity following receipt of that list or update.

9.12.2 Third Party Databases

Where data is provided by a third party (e.g. the [MIDAS](#) File as provided from the Motor Insurance database), then there must be measures/procedures to ensure that the data is handled consistent with these standards. The criteria that must be addressed through these procedures include:

- Provisions must be in place to ensure that only the most up-to-date data set is in use.
- Version control and file naming systems must be in place
- Distribution methods must be in accordance with [GSC](#) security requirements.

9.13 Lists of Vehicles of Interest

9.13.1 Vehicle of Interest List Purpose

Lists of Vehicles of Interest ([VOI](#)) may be maintained by [LEAs](#) to support intelligence development, operations and investigations. The contents of a list of [VOI](#) will depend upon the purpose of that list, the format for which is detailed in [TSpec](#).

9.13.2 Vehicle of Interest List Information and Access Controls

[VOI](#) Lists used for monitoring purposes and that do not require an operational response may include the details defined within the [Tspec](#). When a [VOI](#) List is used to support operational response, sufficient information to ensure an appropriate response must be included.

[LEA](#) may maintain a [VOI](#) list for operational response purposes; however, these lists should only be used in circumstances that do not meet the need to include the information on the [PNC](#). Access permissions for those lists must be restricted to ensure that data access is proportionate in each case.

Special Categories of Data and Criminal Convictions Data as defined by Schedule 1 of the [DPA](#) and Articles 9.1 and 10 of UK[GDPR](#) should only be included within a [VOI](#) list when it is essential to the purpose of circulation. The [LEA](#) circulating the list must ensure that the content and provisions for the access to any such list are appropriate at all times.

9.13.3 Vehicle of Interest List Resilience

The [NAC](#) will make lists of [VOI](#) available to [LEA](#) in order that they can be loaded onto management servers and mobile systems should the live-link to [NAC](#) become unavailable and to support the monitoring of lists within local components of the [NAC](#) .

Except as above, [LEAs](#) must not load [VOI](#) lists received from [NAC](#) onto any other systems and must establish procedures to ensure that [VOI](#) lists loaded onto the management server or mobile systems are current versions of those lists.

9.13.4 Actions required for a Vehicle of Interest List

Any [LEA](#) publishing a list of [VOI](#) onto [NAC](#) will determine access controls for that list and the extent that it may be made available to other LEAs for access within local components of the NAC. Lists will only be accessible to [LEAs](#) where it is proportionate for that accessibility. Where one [LEA](#) subscribes to the [VOI](#) Lists of another [LEA](#), there is an obligation to monitor the list, assess a 'hit' against the list and respond subject to local resource availability and operational demands.

National data sets will only be accessible to [LEAs](#) where it is proportionate for that accessibility taking account of the remit of the LEA and their authority to respond to an alert against that list. Where an [LEA](#) subscribes to a national [VOI](#) List (E.g PNC fasttrack) there is an obligation to monitor the list, assess a 'hit' against the list and respond subject to local resource availability and operational demands.

Logs of the loading of any [VOI](#) list onto a mobile system shall be maintained as required by [Section 10.11.2](#).

9.13.5 Vehicle of Interest List Accuracy

The [LEA](#) supplying a [VOI](#) list to the [NAC](#) must ensure that information within the list is accurate, of current relevance, and is in a format that conforms to the requirements detailed within [TSpec](#). All lists held locally or supplied to the NAC must be reviewed on a regular basis to ensure current accuracy. All lists must be reviewed at least once in each 28 day period by the [LEA](#) holding or supplying the list.

9.13.6 Vehicle of Interest List Deletion

An LEA will be advised of the intended deletion of a list provided to the NAC where that list has not been reviewed within a 28 day period. Lists received from an [LEA](#) will be deleted from the [NAC](#) no later than 56 days after the last date of review unless revised by the [LEA](#) that supplied the list within that overall 56 day period.

LEAs must ensure that lists held locally remain accurate and that contents are deleted should they become inaccurate or no longer required for operational purposes.

9.13.7 Vehicle of Interest List Extraction

[LEAs](#) will not extract data from a list of [VOI](#) from another LEA, for the purposes of creating a composite list from a number of such lists, to be held within local components of the [NAC](#)

A national composite list may be established for vehicles in respect of compliance with requirements, for some or all of, national VOI lists for current vehicle insurance, tax, a valid test certificate and record of a current keeper provided that lists are reviewed, updated as appropriate or deleted after a maximum of 24hours after their creation.

9.13.8 Vehicle of Interest Alert Notifications

LEAs may provide for alerts against a VOI list to be provided by mobile communication technology including secure SMS text messages and secure email. An email message may include the details of the read including images and a map of the location. Information received by SMS and text may not be forwarded to other persons and must be deleted within 48hours of receipt.

9.14 Performance Evaluation

Performance testing must be consistent with current guidance provided by the Defence Science and Technology Laboratory (DSTL). ([DSTL Guidance](#))

9.14.1 Installation of ANPR Infrastructure

Unless the exceptions for [covert systems](#) apply, on installation of any component of [ANPR](#) Infrastructure compliance with performance standards detailed within [NASPLE](#) must be confirmed and recorded.

Compliance with performance standards is required for both initial installation or on re-installation or re-deployment of any [ANPR](#) camera or other component.

9.14.2 Capture Rate Assessment

Any assessment of 'capture' rate must be based on not less than 250 consecutive vehicles (or a minimum period of 2 hours) displaying a [VRM](#) visible to the human eye passing within the field of view for a camera and in

the case of a multi-lane system this applies to each lane covered by that system.

9.14.3 READ Rate Assessment

The [READ](#) rate for each type of [system](#) must be determined for not less than 250 consecutive 'captured' Vehicles displaying a [VRM](#) visible to the human eye.

Performance must be assessed for daylight and night time conditions. It is advisable to assess for a range of conditions including; bright daylight (dawn); bright daylight (dusk); overcast daylight and night time.

9.14.4 Performance Evaluation Schedules

The performance of all [ANPR](#) systems must be regularly reviewed to ensure conformance with the data standards defined in this document. [NAC](#) functionality should be used to monitor continued compliance with required 'capture' rates.

Compliance with the [READ](#) rate for a camera should be reviewed at least annually with a sample of not less than 250 consecutive reads. Provisions for performance evaluation must be defined in [LEA](#) policy and procedures.

In addition to the annual assessments, the performance standards for all cameras that do not have the capability to provide supporting imagery must be evaluated at no less than 6 monthly intervals. Assessments for this additional assessment shall include a sample of east 50 vehicles passing consecutively within the field of view.

9.14.5 Performance Evaluation of Covert Cameras

Where covert installation of [ANPR](#) infrastructure has been authorised within the provisions of [RIPA](#) or [RIPSA](#), and the purpose of the installation may be compromised as a result of testing, the testing need not be completed.

9.14.6 Performance Evaluation Logs

A log for all performance evaluation activities must be retained in a form to enable the record of reviews for each component within [ANPR](#) systems to be identified and retrieved when required.

10 Part 3: Data Access and Management Standards

10.1 Data Access and Management Standards Overview

Part 3 prescribes the standards required for access to and management of [ANPR](#) data within the [NAC](#).

The obligations that arise under the [DPA](#) are different depending on the reason for processing of data. It is the responsibility of the controller for the [LEA](#) that is processing the data to ensure compliance with relevant parts of the [DPA](#) in each case.

10.2 Data Management

10.2.1 Policy

All [LEAs](#) that connect to, or have access to, the [NAC](#) must have an up to date written policy in place for the access, management and use of [ANPR](#) data, including provisions for audit, which must be consistent with Compliance and Audit Standards.

Access to [ANPR](#) data must be proportionate to the circumstances of that access and taking account of the impact on the fundamental rights and freedoms of individuals.

10.2.2 Data Access Management

Authorised members of [LEAs](#) may access and use data within the [NAC](#) to the extent that is compliant with the [DPA](#) in the circumstances of each case, without reference to a controller unless otherwise required within the terms of [NASPLE](#).

10.2.3 Shared Collection Equipment

10.2.3.1 Data provision by non-LEAs

The [NAC](#) may receive data via an [LEA](#) from [ANPR](#) systems not directly within the control of the [LEA](#) in circumstances where it is using shared collection equipment that is owned and managed by a non-[LEA](#) organisation.

In these circumstances, the controller for the [LEA](#) that initially receives the data and the organisation owning the collection equipment are both [controllers](#) who will store data in separate databases that they manage independently. [LEA controllers](#) for data received under any such

arrangement may manage the data and allow access to the data without reference to the owner, or any other user of the shared collection equipment.

10.2.3.2 Data received directly into national components of the NAC

The [NAC](#) may receive data directly from [ANPR](#) systems not within the control of an [LEA](#) in circumstances where data is submitted to the [NAC](#) using shared collection equipment that is owned and managed by a non-[LEA](#) organisation, without the data first being received by a [LEA](#).

The [NPCC](#) policing lead for [ANPR](#) as [controller](#) for data received under any such arrangement may manage the data and allow access to the data without reference to the owner, or any other user, of the shared collection equipment

10.2.3.3 Management of data provided by non-LEAs

In circumstances where a non-[LEA](#) has provided data to the national components of the [NAC](#), the [NPCC](#) policing lead for [ANPR](#) and the organisation owning the collection equipment are both [controllers](#) who will store data in separate databases that they manage independently.

The [NPCC](#) policing lead for [ANPR](#) as [controller](#) for data received under any such arrangement may manage the data and allow access to the data without reference to the owner, or any other user, of the shared collection equipment.

10.2.3.4 Compliance Agreement

The [LEA](#) that receives data from a non-[LEA](#) organisation for submission into [NAC](#), or the [NPCC](#) policing lead for [ANPR](#) in respect of data submitted directly to the national components of the [NAC](#), must ensure that a formal written-agreement is in place with the owner of the camera and other components of the [ANPR](#) infrastructure detailing appropriate arrangements to enable compliance with [NASPLE](#).

10.2.4 Data Extraction from NAC

Where an [LEA](#) accesses data within any component of the [NAC](#) they are controller for any data extracted from the [NAC](#) as a result of that access. Management of all data that is extracted must be in accordance with the provisions within [NASPLE](#) and any reports or other documents that include data from [NAC](#) must be marked in accordance with the requirements of the Government Security Classifications ([GSC](#)). Personal data must only be processed in accordance with the [DPA](#).

10.3 Organisational and User Access to ANPR Data

10.3.1 ANPR Password Policy

Password requirements for access to [NAC](#) is based on national Cyber Security Centre (CSC) guidelines and is applicable to all roles within [LEA](#), third party contractors and suppliers and staff responsible for [NAC](#) service management.

Staff will be allocated individual accounts that may only be accessed using a password in a format approved by the national Accreditor or alternative CSC format as approved by PDS.

10.3.2 ANPR Account Management

Staff who are approved to access [NAC](#) as both a user and for administrative purposes must be allocated separate accounts such that these functions cannot be achieved using a single log in account. Accounts must be reviewed, suspended or terminated in the following circumstances:

- An account must be suspended if it is not accessed for a period of 90 days. The need for access must be reviewed within the subsequent 7 days. The account may then be reactivated or deleted as appropriate,
- Access permissions must be reviewed within 7 days of a person changing role within an [LEA](#).
- An account must be terminated within a maximum of 48 hours of a person leaving an [LEA](#) or partner agency.

10.3.3 Provisions for Data access

Any access to data must be for law enforcement purposes relating to national security, counter terrorism, the investigation of criminal offences as defined in [Annex B](#), for operational purposes relevant to individual and public safety. E.g Missing persons. or for the purpose of audit both scheduled and in relation to allegations of misconduct.

Staff within an [LEA](#) may be granted access to the extent relevant to their role, in accordance with local [LEA](#) policy in an [LEA](#). [LEA](#) policy must be consistent with the purposes and standards within this document and the specific requirements at [Annex C](#).

Intelligence and evidential reports may only be provided by authorised staff with appropriate access permissions using functionality within NAC components. The extraction of data by other means such as 'screen shots' from components of the NAC is not permitted.

10.3.4 Vetting Requirements for access to ANPR data

Staff accessing the [NAC](#) are required to have successfully completed vetting to the standards as detailed below unless in exceptional circumstances with express written approval of the [NPCC](#) Policing lead for [ANPR](#), as lead [controller](#), approves any vetting process as equivalent to the required standard.

10.3.4.1 Police

Staff within a police service [LEA](#) authorised to access [ANPR](#) data must have successfully completed Recruitment Vetting (RV) to [NPCC vetting standards](#).

10.3.4.2 Non - Police LEA

Staff within an Approved Organisation that is a non-police [LEA](#) authorised to access [ANPR](#) data must have current vetting clearance to national non-police personnel vetting ([NPPV](#)) Level 2.

10.3.4.3 Partner Agencies

Controllers may allow access to non-police staff in partner agency (e.g. local authority controllers) for the law enforcement purposes of the controller, subject to have them having current vetting clearance to [NPPV](#) Level 2, to the extent necessary for their role.

10.3.4.4 Police Service Administration, Monitoring and Audit

Police [LEA](#) staff conducting activity in respect of administration, monitoring and audit of any components of the [NAC](#) will have a current security clearance to SC level and [NPPV](#) to Management [Vetting standard](#).

10.3.4.5 Non-Police LEA Administration, Monitoring and Audit

Non-police [LEA](#) staff conducting activity in respect of administration; monitoring and audit of any components of the [NAC](#) will have a current security clearance to SC level and [NPPV](#) Level 3.

10.3.4.6 National Audit

Staff appointed to any National Audit role must have a minimum current security clearance to Developed Vetting (DV) level and [NPPV](#) Level 3.

10.3.4.7 National Administration and Processor Companies

Staff within [NAC](#) supplier companies or the Home Office that have access to the national components of the [NAC](#) for management or administrative

purposes will have a current security clearance to SC level and [NPPV](#) Level 3.

10.3.5 Authorisation Requirements for access to NAC Data

Where an authorisation for access is required, staff providing that authorisation must ensure that access is proportionate in each case taking account of the [DPA](#) and associated principles and that access is in the interest of justice.

10.3.5.1 Authorisation of Staff Access

Each [LEA](#) will designate a senior manager who is accountable for the authorisation of staff who may access [ANPR](#) data.

10.3.5.2 Role Based Access and Training

Personnel will only be granted access to [ANPR](#) data to an extent that is necessary and proportionate to their role. [LEAs](#) must ensure that authorised staffs have completed any required training and are fully aware of the provisions within [NASPLE](#). Authorised staff will have individual access accounts and permissions.

10.3.5.3 Records of Authorised Staff

[LEAs](#) will maintain a list of authorised staff and ensure that a persons' authorisation is revised or cancelled as appropriate when they change role or leave the organisation.

10.4 Disclosure and Evidential Use of Data

Data held within or obtained from the [NAC](#) may not be used or disclosed for any purposes except those as authorised within [NASPLE](#).

10.4.1 Disclosure schedules

Where [ANPR](#) data obtained is retained as material within the meaning of the [CPIA](#) (or similar procedures in Scotland), in preparation of disclosure schedules, information relating to [ANPR](#) methodology, tactics and camera locations will be recorded on the Schedule of Sensitive Material and may be disclosed to prosecution authorities.

10.4.2 Restrictions on personnel in disclosure of ANPR and in production of evidential materials

Statements of evidence in respect of data within the [NAC](#) may only be provided by staff authorised within [LEAs](#) to provide [ANPR](#) evidence with current access permissions within [NAC](#) for that purpose. Subject to the

following authorised staff may provide a statement of evidence for any data held within the [NAC](#).

10.4.3 Provisions to safeguard the location of ANPR infrastructure

The order to safeguard the national [ANPR](#) infrastructure, apart from data obtained from a [Mobile ANPR system](#), the precise location for an [ANPR](#) read obtained from a camera will not be disclosed during an investigation, nor included in evidence unless the controller with responsibility for the camera that recorded the data has been consulted and provided written consent for that disclosure or for evidence to be provided. The following principles apply:

10.4.3.1 Evidential Use of Data

Evidence of an [ANPR](#) read will only be included where it is of specific relevance to an investigation and is of material value to any judicial proceedings.

10.4.3.2 Disclosing of Camera Locations in Evidence

Apart from data obtained from a [Mobile ANPR system](#) the disclosure of the precise location of the camera that recorded an [ANPR](#) read, by the production of a map, or otherwise, is not permitted during any stage of an investigative or prosecution process, unless specifically authorised by the data controller for the [LEA](#) with responsibility for the camera that recorded that data.

10.4.3.3 Information to be included in evidential disclosure

The location of a read will be described in the following decreasing order of preference;

1. The general area of the location (e.g. Town, District, Metropolitan Borough)
2. The postcode (following consultation with the controller with responsibility for the camera that recorded the data, in circumstances where this will identify the precise location of the camera)
3. The name of the road (following consultation with the controller with responsibility for the camera that recorded the data, in circumstances where this will identify the precise location of the camera)
4. The precise location (following consultation with the controller with responsibility for the camera that recorded the data)

10.4.3.4 Disclosure of ANPR data for non-evidential purposes

Unless permitted within [section 9.6](#) of this document, core [ANPR](#) read data and any [supporting imagery](#) as defined by [section 7.4.5.](#), is not to be transferred to other systems, nor disclosed to any third party, including staff from an organisation that is not listed at [Annex A](#). Data may only be disclosed to the data subject in accordance with procedures for dealing with [FOI](#) and [DPA](#) enquiries in accordance with [section 9.12](#). Data may be shared with an organisation that is not listed at [Annex A](#) with the express written authority of the [controller](#) with responsibility for the [camera](#) that recorded that data.

10.4.3.5 Disclosure to non-Approved Organisations

Where an [LEA](#) has an active role in collaboration with another [LEA](#) which is not listed at [Annex A](#) in the conduct of an investigation, and circumstances consistent with the provisions of Schedule 2 [DPA](#) apply, the results of a search of [ANPR](#) data may be disclosed to that other [LEA](#) with a requirement that it is not further disclosed without the express written authority of the controller for the 'Approved Organisation' collaborating in the investigation.

10.4.3.6 Controller Representations re Disclosure of Camera Locations

In addition to the above, the controller that owns or controls the camera that captures 'read' data will be provided with a specific opportunity to make representation to any court that is to consider an order for information to be disclosed regarding the location of a camera.

10.4.3.7 Recording of Disclosure

In all circumstances where data is disclosed a record must be maintained to include the identity of those disclosing and receiving the data and the reason for and any authorisation of that disclosure.

10.5 Dissemination of Data Otherwise than for Evidential Purposes

Data may be disseminated by authorised staff for investigation and intelligence purposes consistent with Law Enforcement processing of data. Dissemination must follow the College of Policing Authorised Professional Practice (APP) for Intelligence Management using the National Intelligence Report (NIR) format.

10.6 Retention and Deletion

10.6.1 Record Retention and Deletion

[ANPR READ](#) records in national components of the [NAC](#) must be deleted 12 months³ after their initial capture, unless retained under provisions of [CPIA](#) or similar provisions in Scotland. Retained data may only be accessed in connection with the investigation subject to that retention after a period of 12 months following initial capture.

[ANPR READ](#) records in local components of the [NAC](#) must be deleted 90 days after their initial capture, unless retained under provisions of [CPIA](#) or similar provisions in Scotland.

Records may also be retained external to the NAC following a review that identifies a continuing policing purpose for those items of data under provisions of [MOPI](#). These records must be retained and managed in accordance with those provisions. [LEAs](#) must establish procedures for the management and review of any data held under these provisions including arrangements for deletion as required.

Data held within a national cache supporting approved transfer to any other systems must be deleted within 7 days of entering the cache.

10.7 Storage of ANPR Data otherwise than in NAC

Data must not be stored outside the [NAC](#) unless for the purpose of retention in accordance with [section 10.6.1](#) or in accordance with [section 10.9](#) below where those requirements cannot be met within the [NAC](#), or it has been extracted as a result of a court order or other lawful authority for the provision of the data.

10.8 Record Amendment

Records that are identified as incorrect for any reason must either be corrected or deleted at the time that they are found to be incorrect.

10.9 Record Deletion from Third Party Systems

[ANPR](#) data must be deleted from any computer-based system within 7 days of entry of that data, where an [LEA](#) has established any link between the [NAC](#) and any other computer-based system for the purposes of:

³ Read metadata is deleted on day 366 after initial capture. Associated images are deleted the following day. Data may only be accessed up to 12 months after initial capture (Annex C) unless in circumstances of 9.5.1 above.

- Monitoring and the initiation of an operational response to any hit against a list of vehicles of interest or
- More advanced research and analysis purposes in relation to an investigation.
- Entries are included in command and control records

An exception exists for deletion after 7 days when a review has been conducted of the data that it is proposed to be retained which has identified the items of data where a continued policing purpose remains that can only be satisfied by the continued processing of the data within the system external to the [NAC](#).

In this case provisions of [MOPI](#) (or similar provisions in Scotland) apply and the relevant items of data may be retained and managed in accordance with those provisions; or

An exception also exists for deletion after 7 days when a review has been conducted into the data that it is proposed to be retained which has confirmed that the items of data are relevant to an investigation. In this case the relevant items of data may be retained, managed and deleted in accordance with the requirements of [CPIA](#).

10.10 Transfer to local systems for basic user access

Data may not be transferred to any local systems external to the [NAC](#) to facilitate basic user access to [ANPR](#) data.

10.11 Records of Data Processing, Access and Disclosure

10.11.1 NAC Logging

A log of all automated processing operations will be maintained within [NAC](#) to include records of access by administrators and authorised users, data capture, alterations and any search of data or records within [NAC](#). Logs of administrator or user access must include details of the identity of the user together with the justification, date and time of that access and a record of any authorisation relevant to that access.

10.11.2 Mobile Systems Logging

A log recording the details of all lists of [VOI](#) that have been loaded onto mobile systems as authorised by [section 9.13.4](#) will be maintained by the [LEA](#) that loaded the log onto the mobile systems.

10.11.3 Logging of Access on systems external to NAC

In addition, [LEAs](#) are required to maintain a record of any access by their staff to [ANPR](#) data, in any external system, to include records of access by administrators and authorised users, data capture, alterations and any search of data or records within the [NAC](#). Logs of administrator or user access must include details of the identity of the user together with the justification, date and time of that access and a record of any authorisation relevant to that access in a readily retrievable form.

10.11.4 Logging of Escalation of Investigation Category

[LEAs](#) are required to maintain a record of any escalation of an investigation to the category '[Major Investigation](#)' or '[Serious Investigation](#)', including details of the reason for escalation, in a readily retrievable form.

10.11.5 Logging of data Disclosures

Unless disclosure is in accordance with the provisions of the [CPIA](#) or similar provisions in Scotland, [LEAs](#) will maintain records of all disclosure of [ANPR](#) data including the justification, data and time of the disclosure, the identity of the person disclosing the data and the identity of the recipient of the data.

10.11.6 Use of Logs in Disciplinary Proceedings

Logs within [NAC](#) and those recorded by an [LEA](#) may be used for the purposes of self-monitoring by the controller or the processor, the conduct of internal disciplinary proceedings, in ensuring the integrity and security of personal data and for the purposes of criminal proceedings.

10.11.7 Disclosure of Logs to ICO and Home Office

Records within [NAC](#) and any local records must be made available to the Information Commissioner, and the Home Office on request for audit and monitoring purposes.

10.12 Management and Audit of NAC

Audit must be conducted in accordance with National Standards for Compliance and Audit of Law Enforcement [ANPR](#) by staff with appropriate [security clearance](#).

[LEAs](#) will support all controllers for [NAC](#) in the audit and management of the [NAC](#).

[LEAs](#) will support the national auditor in the monitoring and audit of access to the [NAC](#) and will provide relevant information on request.

[LEAs](#) will audit the access to [NAC](#) by their staff in accordance with Audit Standards and maintain a record of all audits that are undertaken. Details of such audits will be made available to the Information Commissioner, the Surveillance Camera Commissioner and the national auditors on request.

10.13 Freedom of Information Act and Data Protection Act Enquiries

All requests for Information regarding the [NAC](#) made to a public authority under the provisions of the [Freedom of Information Act 2000](#) (FOI) will be referred to the relevant controller for consideration and will be managed according to the [JCA](#).

All requests in relation to data held on [NAC](#), made under provision of the [DPA](#), will be referred to the controller for consideration and will be managed according to the [JCA](#). This includes any subject access requests and requests for erasure or restriction on processing.

Annex A: Approved Organisations

List of Approved Organisations
Avon and Somerset Constabulary
Bedfordshire Police
Border Force
British Transport Police
Cambridgeshire Constabulary
Cheshire Constabulary
City of London Police
Civil Nuclear Constabulary
Cleveland Police
Cumbria Constabulary
Department for Work and Pensions (DWP)
Derbyshire Constabulary
Devon and Cornwall Constabulary
Dorset Police
Driver and Vehicle Licensing Agency (DVLA)
Driver and Vehicle Standards Agency (DVSA)
Durham Constabulary
Dyfed-Powys Police
Environment Agency
Essex Police
Food Standards Agency
Food Standards Scotland
Gangmasters and Labour Abuse Authority
Gloucestershire Constabulary
Greater Manchester Police
Gwent Police
Hampshire Constabulary
Hertfordshire Constabulary
H M Revenue & Customs (HMRC)
Humberside Police
Immigration Enforcement
Intelligence Services

Isle of Man Constabulary (IOM)
Kent Police
Lancashire Constabulary
Leicestershire Constabulary

Staffordshire Police
Suffolk Constabulary
Surrey Police
Sussex Police
Thames Valley Police
The Pensions Regulator
Thurrock National Investigation Service
Warwickshire Police
West Mercia Constabulary

West Midlands Police
West Yorkshire Police
Wiltshire Police

Annex B: Investigation Categories

Investigations within LEAs fall within three main categories, so that there is a consistency of understanding within LEAs as to which investigations should be included within each category. The main categories are:

- Major Investigations
- Serious Investigations
- Priority and Volume Investigations

A consideration of the category of the investigation informs effective management and decision making, including the scope for an investigation and determination of the resources that are to be deployed. These categories provide the framework to support a national policy for retention of, and access to ANPR data. The categorisation of an investigation should be determined taking account of the circumstances in each case, using the below framework as a guide.

Major Investigations

A key characteristic is that Major Investigations should normally be led by a Nationally Registered Senior Investigating Officer (SIO) within a police force or similarly senior investigator in non-police LEAs.

Designated Major Investigations

Major Investigation Types
Murder
Attempted Murder
Manslaughter
Infanticide
Child Destruction
Kidnapping

Terrorist related crimes

Serious Investigations

Designated Serious Investigations

Serious Investigation Types
Arson
Abduction
Aggravated Burglary dwelling and non-dwelling
Arson High Value or life endangered
Blackmail
Drug Trafficking
Death by Dangerous Driving
Female Genital Mutilation
Fraud and Associated Offences (80hrs + investigation time)
Gross Indecency Child
Offences under S1 Firearms Act
Offences involving indecent images of children
Offences under Modern Slavery Act
Perverting Justice
Public order (racially motivated)
Rape
Robbery (Firearms or ABH or more serious injury caused)

Sexual Assault (children under 13)
Threats to Kill
Vulnerable Missing Person
Wounding (S18/20)
Response to incidents of significant public interest / public safety/ public security

Serious Investigation Escalation

Serious Investigations may, with the authority of a senior manager⁴ be escalated to the category of Major Investigations.

Investigations that have been escalated to serious from the category of Priority and Volume Investigations may not be further escalated to the category of major Investigation.

Any authority to escalate to the higher category together with the reasons for the grant of that authority must be recorded. Any authority to escalate will take account of the following factors:

Serious Investigation Escalation Factors

Consideration	Examples
Community factors	<ul style="list-style-type: none"> • Likely to escalate into large scale disorder or critical incident • Has escalated from a previous offence • Sensitivity regarding individuals involved

⁴ an officer of at least superintendent rank in the police or the equivalent level of seniority in a non-police organisation

Offence characteristics	<ul style="list-style-type: none"> • Aggravating factors of the offence • Vulnerability of victims/witnesses, • Has crossed force or national boundaries • Forms a previously undetected series
Offender Characteristics	<ul style="list-style-type: none"> • Organised crime • Terrorism links • Resistance to police operational strategies • Multiple offenders

Priority and Volume Investigations

Investigations not included within the above categories will be considered as within the remit of Priority and Volume Investigations. This will include investigations into street robbery, burglary and vehicle-related criminality and non-crime issues such as anti-social behaviour, vehicle excise enforcement, road traffic offences, safeguarding and missing persons.

Priority and Volume Investigations may with the authority of manager⁵, be escalated to the category of Serious Investigations.

Any authority to escalate to the higher category together with the reasons for the grant of that authority must be recorded and will take account of the following factors:

⁵ an officer of at least Inspector rank in the police or the equivalent level of seniority in a non-police organisation

Priority and Volume Investigations Escalation Factors

Consideration	Examples
Community	<ul style="list-style-type: none"> • High risk of critical incident • Sensitivity regarding individuals involved
Offence Characteristics	<ul style="list-style-type: none"> • Aggravating factors of the offence such as: • Hate crime • Weapons used • Injuries sustained • Vulnerability of victims/witnesses, • Priority issue identified within NIM business process. • Series of offences e.g. forensic links to the offender(s) • Complexity of the Investigation
Offender Characteristics	<ul style="list-style-type: none"> • Criminal history • Resistance to investigative strategies • Prolific offender • Multiple offenders

Annex C: Data Access Requirements

Age of data to be accessed (as required)	Purpose of access to data
	<p>To monitor alarms or receive reports from matches against a list of Vehicles of Interest (VOI) from a NRD for operational response or intelligence purposes.</p>
<p>Real or near real time during the course of monitoring</p>	<p>By any member of staff authorised to access ANPR systems with no additional authority required.</p>
	<p>To research data for ‘Priority and Volume Investigation’ purposes.</p>
<p>Up to 90 days</p>	<p>By any member of staff in accordance with their authorisation to access ANPR systems.</p>
<p>Over 90 days</p>	<p>By any member of staff in accordance with their authorisation to access ANPR systems with written authority of an Inspector or equivalent staff grade;</p> <ul style="list-style-type: none"> a) where there has been a significant delay in reporting the offence to be investigated, or; b) new information or evidence has become available, or; c) the investigation is being conducted diligently and expeditiously and is not yet completed.

	To research data for ‘Serious Investigation’ purposes.
Up to 1 year	By any member of staff in accordance with their authorisation to access ANPR systems.
	To research data for ‘National Security’, ‘Counter Terrorism’ or other ‘Major Investigation’ purposes.
Up to 1 year	By any member of staff in accordance with their authorisation to access ANPR systems.
	To prepare evidential material for information revealed during a previous search of ANPR data.
	By any member of staff in accordance with their authorisation to access ANPR systems with no additional authority required.
	To comply with a written request from the Crown Prosecution Service, the procurator fiscal or on the direction of a court.
	By any member of staff in accordance with their authorisation to access ANPR systems with no additional authority required.
	To research data as part of an investigation into alleged breach of the policing Code of Ethics or similar LEA professional standards purposes.
	By any member of staff in accordance with their authorisation to access ANPR systems with written authority of a superintendent or equivalent staff grade.
