HM Prison and Probation Service COVID-19 Official Statistics

Data to 31 January 2021

Ministry of Justice

Published 12 February 2021

Introduction

This official statistics release provides monthly data on the spread of COVID-19 in the prison and probation service in England and Wales and mitigating actions being taken to limit the spread of the virus and save lives. This release covers the period from Monday 16 March 2020 at the start of the COVID-19 outbreak to 31 January 2021.

It provides information on:

- Deaths where prisoners, children in custody or probation service users have died having tested positive for COVID-19 or where it was confirmed post mortem.
- Confirmed COVID-19 cases in prisoners and children in custody (i.e. positive tests).
- Narrative on capacity management data for prisons.

Revisions have been made to the positive tests data from previous months in this release. Approximately 1% of the test result dates before the 1 November 2020 were incorrectly recorded in the figures that were published on the 15 January 2021. This has now been corrected but has resulted in minor revisions between March 2020 and October 2020 where a small number of positive test results have been reassigned to the correct month.

Key Findings

The key findings in this release are:

- **119** prisoners, children in custody and probation service users have died having tested positive for COVID-19 or where it was confirmed post mortem. Of whom **86** were prisoners and **33** were probation service users.
- Of the **119** deaths, **95** were suspected or confirmed to be caused by COVID-19, **64** were prisoners and **31** probation service users.

- **10,354** prisoners or children have tested positive for COVID-19 since the start of the pandemic, across **126** establishments, almost all of whom were adults.
- The number of new confirmed cases has increased by **4,227** since December 2020.
- **107** establishments had prisoners or children testing positive in January 2021.

Background

Since the start of the COVID-19 pandemic, there has been keen public and Parliamentary interest in how the Ministry of Justice (MOJ) and Her Majesty's Prison and Probation Service (HMPPS) are managing the running of prisons and the probation system to limit the spread of the virus while maintaining the core functions of these vital parts of the justice system. Publishing this data aims to bring transparency to the strategies HMPPS is employing to manage the prison and probation systems, as well as the impact of the virus on service users and staff.

The core tenet of HMPPS's prison strategy, building on Public Health England (PHE) and Public Health Wales (PHW) advice and learning developed in managing an early outbreak of the virus, is the implementation of effective isolation, reverse cohorting of new entrants to custody, and shielding of vulnerable prisoners.

Using modelling from PHE, HMPPS estimated that creating a headroom across the prison estate of 5,500 (5,000 in the adult male estate) would allow them to fully implement this strategy and could be effective in limiting the spread of the virus¹. This headroom has been achieved through a combination of reductions in operational capacity, new prison accommodation (which has enabled prisons to hold an increased number of prisoners in single cell accommodation), releases from prison, and reduced receptions into prison. The management of HMPPS' actions has been informed by the advice of experts from public health authorities and will be kept under constant review.

1. Capacity management

As at 29 January 2020, the prison population was 78,100, showing a reduction of 5,900 since 13 March 2020². Whilst total population has reduced, the remand population has increased during the pandemic, mostly due to the challenges in holding Crown Court trials during this period.

HMPPS have adopted a capacity management approach known as 'compartmentalisation'. This involves the isolation of all prisoners with symptoms, the shielding of vulnerable prisoners in the system and all new arrivals being quarantined for 14 days. These measures minimise the risk of infection spreading throughout prisons, but also impact prison capacity.

The strategy is being kept under ongoing review and regularly adapted in response to operational learning as well as evolving pandemic risks in the community. There is a balance between effective infection control and maintaining a commitment to support prisoners through their custodial sentence and help them access appropriate services.

² <https://www.gov.uk/government/statistics/prison-population-figures-2020>

2. Deaths

The service has taken the measures outlined to limit the spread of the virus and to protect staff and service users. However, prisons and probation, like all other sectors in the England and Wales have experienced deaths due to COVID-19.

The counting of deaths in prisons and probation are aligned to the Public Health England definition, and reports on deaths where the service user had tested positive for COVID-19 or where there was a clinical assessment that COVID-19 was a contributory factor in their death. This consists of:

- Deaths suspected or confirmed to be due to COVID-19
- Deaths believed to be due to other causes, but where the service users had tested positive for COVID-19.

From March 2020 to the end of January 2021, 119 HMPPS service users died having tested positive for COVID-19 within 28 days of death or where it was confirmed post mortem. 86 were prisoners. There were no deaths of children in custody. Amongst the probation caseload, there were 33 deaths. Of these, 22 were under National Probation Service supervision and 11 under Community Rehabilitation Companies supervision. Figure 1 shows the cumulative number of HMPPS service user deaths since March 2020.

Figure 1: Cumulative number of HMPPS service users who have died testing positive within 28 days of the death or where it was confirmed post mortem, England and Wales, monthly from March 2020 (Source: Summary Tables, Table 1)

49 deaths occurred before July 2020 and 70 deaths have occurred since September 2020.

Of the 86 prisoner deaths, 64 are suspected or confirmed to be due to COVID-19. The remaining 22 deaths are believed to be due to other causes, although the individuals had tested positive for COVID-19. Of the 33 probation service users who have died, 31 are suspected or confirmed to be due to COVID-19 with the remaining 2 believed to be due to other causes, but where the service user has tested positive for COVID-19.

The cause of death in each case is provisional until the official cause of death has been determined by the coroner. As such revisions made be made to the data as part of this process.

Data relating to the deaths of prison and probation officers to 31 October 2020 have been published in the [HMPPS Workforce Statistics](#)³.

Data relating to the deaths of service users have also been published in the National Statistics report [Safety in Custody](#)⁴ and will be published in the official statistics report [Deaths of Offenders in the Community](#)⁵.

3. Testing

Testing practices in prisons and Youth Custody Service (YCS) sites have been determined locally. Initially, once a small sample of prisoners or children had tested positive in an establishment, no further tests were carried out on symptomatic individuals to preserve testing kits and on the assumption all further tests would be positive. This policy was changed on 15 April 2020 due to the increased availability of testing supplies meaning all symptomatic prisoners or children are now tested. As such data trends should be considered with caution and do not represent true like-for-like comparisons.

In the period to 31 January 2021, a cumulative total of 10,354 prisoners or children tested positive for COVID-19 across 126 establishments. 10,274 of these positive test results were for adults and 80 were children. The number of new monthly confirmed cases has increased by 4,227 since December 2020. Figure 2 shows the cumulative monthly service users testing positive for COVID-19 to 31 January 2021.

Figure 2: Cumulative number of Prison and YCS service users testing positive for COVID-19, England and Wales, monthly from March 2020 (Source: Summary Tables, Table 2)

⁴ <https://www.gov.uk/government/collections/safety-in-custody-statistics>

⁵ <https://www.gov.uk/government/collections/death-of-offenders-in-the-community>

Seven establishments had their first positive test results during January 2021. 107 establishments had prisoners testing positive during January 2021, 10 more sites than in December 2020. Figure 3 shows the monthly number of establishments with prisoners testing positive since March 2020.

Figure 3: Monthly number of Prison or Youth Custody Service establishments with prisoners or children testing positive for COVID-19, England and Wales, monthly from March 2020 (Source: Summary Tables, Table 2)

Recognising the unique environment in prisons, HMPPS now routinely test staff and offenders to bolster defences against the virus – to identify and isolate cases earlier and move quickly to contain outbreaks and protect the local NHS.

Alongside the measures HMPPS have put in place since March 2020, regular testing will continue to limit the spread of the virus and save lives.

HMPPS has been working closely with the Department of Health and Social Care, the NHS, and health authority colleagues in England and Wales for a number of months on providing access to COVID-19 tests in a prison environment. Initially, this involved the testing of symptomatic prisoners; then during the summer the testing of all consenting prisoners commenced, along with HMPPS employees and non-directly-employed staff across 28 prisons in England.

In Autumn of 2020, additional testing capacity was made available to limit the importation of infection into prisons. This included the regular testing of staff across all prisons and carrying out the asymptomatic testing of new receptions to stop the virus spreading into and between prisons. More recently Lateral Flow Device (LFD) testing has been introduced to supplement the existing current PCR testing and is available for all staff attending the workplace.

Data Quality

Although care is taken when processing and analysing the returns, the detail collected is subject to the inaccuracies inherent in any large-scale recording system. Any inaccuracies may result in revisions of previously published information in future releases. Much of the data collected during the COVID-19 pandemic has been done at pace, with recording practices evolving as we understand more about the requirements and conditions we are facing. In order to present the timeliest information, the data presented in this report have not been subjected to the usual standard of quality assurance associated with official statistics.

Much of the data will undergo additional assurance in due course and be reported as official statistics in the following releases:

- [Safety in Custody](#)
- [Deaths of Offenders in the Community](#)

All deaths are phoned into MOJ headquarters on a daily basis. The cause of deaths in prison are classified as *apparent* until a police investigation and coroner's inquest have been concluded and the Prisons and Probation Ombudsman's office publish a detailed 'Fatal Incident Report'. Recording practices for COVID-19 related deaths have been updated since the start of the pandemic, meaning the exact cause is not always available or known. Furthermore, the cause of many deaths will be uncertain and awaiting an inquest; we have taken steps to reflect this uncertainty by reporting all cases in which COVID-19 was suspected to be a factor.
