1 EXECUTIVE SUMMARY

1.1 Decommissioning Programme

This document contains the Decommissioning Programme for the Stirling Field subsea pipelines.

The only installation in the Stirling field was a wellhead protection structure (WHPS) for the Stirling well 16/21A-33. This WHPS was removed to shore and recycled in May 2018 under its own Decommissioning Programme.

Note that the Stirling Field decommissioning is part of a programme of decommissioning activities for the Greater Balmoral Area. Each field comprising the Greater Balmoral Area has its own Decommissioning Programmes.

1.2 Requirement for Decommissioning Programme

Pipelines:

In accordance with the Petroleum Act 1998, the Section 29 notice holders of the Stirling pipelines (see Table 1.4) are applying to OPRED to obtain approval for decommissioning the pipelines detailed in Section 2.3 of this programme. (See also Section 8 – Partner Letters of Support).

In conjunction with public, stakeholder and regulatory consultation, the Decommissioning Programme is submitted in compliance with national and international regulations and OPRED guidelines. The schedule outlined in this document is for an eight year decommissioning project plan due to begin in 2021.

1.3 Introduction

The Decommissioning Programme has been prepared to support the decommissioning of the Stirling Field, which is part of a wider suite of Decommissioning Programmes for the Greater Balmoral Area.

The licensees have submitted to OGA for consideration a Cessation of Production document which demonstrates that all economic development opportunities have been pursued for; the field and associated infrastructure, current and future development opportunities, and consideration of access to current infrastructure.

A Cessation of Production application for the field has been discussed with and submitted to the Oil and Gas Authority, and was approved on the 23rd April 2018.

The Greater Balmoral Area consists of the Premier Oil operated subsea Fields; Balmoral, Brenda, Nicol, Stirling and Glamis, all of which are tied-back to the Balmoral Floating Production Vessel (FPV). Two further subsea Fields, Burghley and Beaully, which are operated by Repsol Sinopec North Sea Limited, are also tied-back to the Balmoral FPV. Repsol Sinopec North Sea Limited, as operator, will submit Decommissioning Programmes for Burghley and Beaully.

The Stirling Field is a subsea development located across UKCS Blocks 16/21a and 16/21b located approximately 222km northeast of Aberdeen. The wells lie 3 km to the East of the Balmoral FPV, and production from the Stirling field came online during October 1993. Stirling lies in 142m of water and is tied back to the Satellite Well Production Manifold (SWPM) on the Balmoral template. The Balmoral FPV

is the processing centre for the produced fluids, and hydrocarbons are exported via pipeline to the Forties Pipeline System.

The main components of the Stirling subsea field consist of; a suspended appraisal well and two production wells which are tied back to a dedicated subsea manifold on the Balmoral template.

The Wellhead Protection Structure (WHPS) for Stirling well 16/21A-33 was removed to shore and recycled in May 2018 under its own Decommissioning Programme. There are no further subsea installations in the Stirling field.

Following public, stakeholder and regulatory consultation, the Decommissioning Programme is submitted without derogation and in full compliance with OPRED and Oil & Gas UK guidelines. The Decommissioning Programme explains the principles of the removal activities and is supported by a Comparative Assessment (CA) of decommissioning options and an Environmental Appraisal (EA).

1.4 Overview of Pipelines Being Decommissioned

1.4.1 Installations

Table 1.1: Installations Being Decommissioned			
Field:	Stirling	Production Type (Oil/Gas/Condensate)	Oil/Gas
Water Depth (m)	142	UKCS block	16/21a 16/21b
Surface Installations			
Number	Type	Topsides Weight (Te)	Jacket Weight (Te)
N/A	N/A	N/A	N/A
Subsea Installations		Number of Wells	
Number	Type	Platform	Subsea
N/A*	N/A*	N/A	3
Drill Cuttings pile(s)		Distance to median	Distance from nearest UK coastline
Number of Piles	Total Estimated volume (m³)	km	km
Please refer to Section 3.7 Drill cuttings		27.8 km (UK/NOR median)	190.8

*The Stirling well A33 WHPS was removed in 2018 under its own Decommissioning Programme.

1.5 Summary of Proposed Decommissioning Programme

Table 1.5 Summary of Decommissioning Programme		
Selected Option	Reason for Selection	Proposed Decommissioning Solution
1. Topsides		
N/A	N/A	N/A
2. Floating Facility		
N/A	N/A	N/A
3. Subsea Installations		
N/A	N/A	N/A
4. Pipelines, Flowlines & Umbilicals		
Group 1*: Surface Laid Flowlines & Umbilicals Full Removal.	Leaves a clear seabed and meets regulations.	Full Removal. Returned to shore for recycling or appropriate treatment and disposal.
Group 4*: Trenched & Buried Flexible Flowlines & Umbilicals. Full Removal.	Leaves a clear seabed and meets regulations.	Full Removal. Returned to shore for recycling or appropriate treatment and disposal.
Group 5*: Flexible Jumpers. Full Removal.	Leaves a clear seabed and meets regulations.	Full Removal. Returned to shore for recycling or appropriate treatment and disposal.
Group 13*: Subsea Mattresses – flexible concrete mattresses with polypropylene rope. Full Removal.	Leaves a clear seabed and meets regulations.	Full Removal. Returned to shore for recycling or appropriate treatment and disposal.
5. Wells		
Wells will be plugged and abandoned to Premier Oil E&P UK Limited standards which comply with “Offshore Installations and Wells (Design and Construction, etc.) Regulations 1996” and align with Oil & Gas UK Guidelines for the Suspension and Abandonment of Wells (Issue 6, June 2018).	Meets HSE regulatory requirements in accordance with O&G UK and OGA guidelines.	A Master Application Template (MAT) and the supporting Subsidiary Application Template (SAT) will be submitted in support of activities carried out. Applications to abandon the wells will be submitted through the Well Operations Notification System (WONS). Additionally, planned work will be reviewed by a well examiner to Premier Oil E&P UK Limited standards, then submitted to the HSE for review.

Table 1.5 Summary of Decommissioning Programme		
Selected Option	Reason for Selection	Proposed Decommissioning Solution
6. Drill Cuttings		
Screening of cuttings requirements based on desktop exercise and pre-decommissioning environmental survey data.	Compliance with OSPAR Recommendation 2006/5 requirements.	As there are no multi-well locations where OBM contaminated cuttings have been discharged in the Stirling field, no visual indication of a cuttings pile being present and survey data indicates no significant sources of contamination, any cuttings should be left to degrade naturally.
7. Interdependencies		
Subsea infrastructure flushing and cleaning to be completed prior to removal of the Balmoral FPV, and prior to commencement of subsea decommissioning operations. Decommissioning activities to be coordinated to minimise simultaneous operations (SIMOPS).		

* Refers to the Inventory Group Categories as defined in the Comparative Assessment Report

1.6 Field Location Including Field Layout and Adjacent Facilities

Figure 1.1: Field Location in UKCS

Figure 1.2: Field Layout

Table 1.6 Adjacent Facilities					
Operator	Name	Type	Distance/ Direction	Information	Status
Premier Oil E&P UK Limited	Nicol	Subsea	18.3 km W 281°	Oil & gas production co-mingled with Brenda	Operational
Premier Oil E&P UK Limited	Balmoral	Subsea	2.8 km WNW 288°	Oil & gas production tied back to Balmoral FPV	Operational
Premier Oil E&P UK Limited	Glamis	Subsea	8.7 km SW 232°	Oil & gas production tied back to Balmoral FPV	Operational
Premier Oil E&P UK Limited	Brenda	Subsea	11 km WSW 256°	Oil & gas production tied back to Balmoral FPV	Operational
Premier Oil UK Limited	Caledonia	Subsea	13.3 km S 184°	Oil & gas production tied back to Britannia	Shut-In
Repsol Sinopec North Sea Limited	Beaully	Subsea	4.5 km SSW 201°	Oil & gas production tied back to Balmoral FPV	Operational
Repsol Sinopec North Sea Limited	Burghley	Subsea	6.9 km NE 45°	Oil & gas production tied back to Balmoral FPV	Operational
Impacts of Decommissioning Proposals					
The Stirling field will be decommissioned in a programme of activities comprising the Balmoral, Glamis, Nicol and Brenda Fields. Decommissioning activities are planned so they will not affect the decommissioning of other fields or the operation of other developments in the area. The environmental appraisal will consider the potential cumulative implications of decommissioning activities in context of other oil and gas / other industry activities in the area.					

Note: Adjacent facilities refer to those potentially impacted by this programme.

Figure 1.3: Adjacent Facilities

1.7 Industrial Implications

The Stirling decommissioning activities are part of the Balmoral Area Decommissioning Project which will be managed by Premier Oil in Aberdeen. All decommissioning activities will be planned to realise synergies and efficiencies in offshore execution.

A Supply Chain Action Plan (SCAP) has been produced for these Decommissioning Programmes in accordance with OGA guidance. The SCAP has been submitted to and approved by the OGA. Premier Oil have some pre-existing Master Service agreements with specialist contractors, which were the result of previous tender exercises. These contractors will be asked to quote for services to support the decommissioning activity in the first instance. Other specialist services will be competitively tendered or novated. Suppliers' offers will be assessed along many criteria, among which are capacity to execute the work safely; the commercial offer and experience of carrying out this type of operation on the UKCS.

2 DESCRIPTION OF ITEMS TO BE DECOMMISSIONED

2.1 Installation: Surface Facilities (Balmoral FPV)

The Stirling subsea field is tied back to the Balmoral FPV. The Balmoral Decommissioning Programmes are separate Decommissioning Programmes, and are not included in this document.

2.2 Installations: Subsea including Stabilisation Features

Table 2.1: Subsea Installations and Stabilisation Features					
Subsea installations including Stabilisation Features	Number	Size (m)/ Weight (Te)	Location		Comments/Status
Stirling					
Protection Frame(s)	N/A	N/A	N/A	N/A	The A33 WHPS was removed in 2018 under its own Decommissioning Programme.
Concrete mattresses	N/A	N/A	N/A	N/A	
Grout bags	N/A	N/A	N/A	N/A	
Rock Dump	N/A	N/A	N/A	N/A	

2.3 Pipelines Including Stabilisation Features

Table 2.2 Pipelines/Flowlines/Umbilicals Information									
Description	Pipeline No. (as per PWA)	Dia. (in)	Length (km)	Description of Component Parts	Product Conveyed	End Points From / To	Burial Status	Pipeline Status	Current Contents
6" Oil Flowline	PL983	6	2.056	Composite Flexible	Well fluids (Oil, Water, Hydrocarbon)	Well No 16/21a-20z to Balmoral Template	Surface laid	Out of use	Filtered seawater
2" Gas Lift Flowline	PL984	2	2.056	Composite Flexible	Natural Gas	Well No 16/21a-20z to Balmoral Template	Surface laid	Out of use	Filtered seawater
Umbilical Hose	PL985.1	0.375	2.000	Umbilical	Hydraulics/ Scale/Corrosion Inhibitor	Balmoral Template to Well No 16/21a-20z	Surface laid	Out of use	Filtered seawater / Hydraulics
Umbilical Hose	PL985.2	0.375	2.000	Umbilical	Hydraulics/ Scale/Corrosion Inhibitor	Balmoral Template to Well No 16/21a-20z	Surface laid	Out of use	Filtered seawater / Hydraulics
Umbilical Hose	PL985.3	0.375	2.000	Umbilical	Spare	Balmoral Template to Well No 16/21a-20z	Surface laid	Out of use	Filtered seawater
Production Flowline	PL2000	7.7	3.82	Composite Flexible	Produced Fluids	South East Stirling Wellhead to Balmoral Manifold Template	Trenched & Buried	Out of use (disconnected)	Filtered seawater
Gas Lift Flowline	PL2001	4.4	3.81	Composite Flexible	Lift Gas	Balmoral Manifold Template to South East Stirling Wellhead	Trenched & Buried	Out of use (disconnected)	Filtered seawater
Control / Chemical Injection Umbilical	PLU2002	0.5 0.374	3.816	Umbilical	Hydraulic fluid / Corrosion Inhibitor	Balmoral Manifold Template to South East Stirling Wellhead	Trenched & Buried	Out of use	Water based hydraulic fluid / Potable water

Table 2.3: Subsea Pipeline Stabilisation Features

Stabilisation Feature	Total Number	Weight (Te)	Location(s)	Exposed/Buried/Condition
Concrete mattresses	24	96.1	At A33 Well end of PL2000, PL2001, PLU2002	Exposed, in good condition
Grout bags*	1600	40	At A33 Well	Partially covered by concrete mattresses
Rock Dump**	N/A	N/A	N/A	

*Estimated using GVI footage, as-built drawings and mobilisation procedures.

**There are approximately 16 concrete mattresses and 6,000Te rock dump associated with the Burghley pipelines' crossings to be accounted for in the Burghley Decommissioning Programmes (to be submitted by Repsol Sinopec North Sea Limited).

2.4 Wells

Table 2.4 Well Information					
Platform Wells		Designation	License	Status	Category of Well
N/A		N/A	N/A	N/A	N/A
Subsea Wells					
WONS Name Current bore	Premier Oil Well Name	Designation	License	Status	Category of Well
16/21a-20z	16/21a-20z	Producer	P201	Completed Operating	SS 3-3-1
16/21a-33	16/21a-33	Producer	P201	Completed (Shut In)	SS 3-3-3
16/21c-22	16/21c-22	Suspended Appraisal	P344	Abandoned Phase 1	SS 0-3-3

The well categories are indicative and require to be evaluated in accordance with the OGUK Well Decommissioning Guidelines, Issue 6, June 2018. This work is ongoing at the time of submission.

2.5 Drill Cuttings

(See Section 3.7 for further information)

Table 2.5: Drill Cuttings Pile(s) Information		
Location of Pile Centre (Latitude/Longitude)	Seabed Area (m ²)	Estimated volume of cuttings (m ³)
N/A	N/A	N/A

2.6 Inventory Estimates

Table 2.6 provides an estimate of the total weight of materials associated with the Stirling pipelines. There are no subsea installations associated with the Stirling field.

A further breakdown of the inventory estimates for the subsea pipelines is provided in Figure 2.1.

Table 2.6: Inventory of material associated with Stirling pipelines		
Item	Description	Weight Te
Metals	Ferrous (steel - all grades)	330.8
	Non-Ferrous (copper, aluminium, etc.)	0.1
Concrete	Aggregates (mattresses, grout bags)	96.1
Plastic	Rubbers, polymers	88
Hazardous	Residual fluids (hydrocarbons, chemicals)	trace
	NORM scale	trace
Other		0
Total (Tonnes)		515

Figure 2.1: Pie Chart of Estimated Inventory (Pipelines)

Please refer the Greater Balmoral Decommissioning Environmental Appraisal for further details.

3 REMOVAL AND DISPOSAL METHODS

Decommissioning of the Stirling field will generate a quantity of waste. Premier Oil is committed to establishing and maintaining environmentally acceptable methods for managing wastes in line with the Waste Framework Directive and principles of the waste hierarchy:

Recovered infrastructure will be returned to shore and transferred to a suitably licenced waste treatment facility. It is expected that the recovered infrastructure, i.e. flowlines and umbilicals will be cleaned before being largely recycled.

Concrete mattresses and grout bags that are recovered, will be cleaned of marine growth if required, and either reused, recovered as aggregate for infrastructure projects or disposed of in landfill sites.

An appropriately licensed disposal company and yard will be identified through a selection process that will ensure that the chosen facility demonstrates a proven track record of waste stream management throughout the deconstruction process, the ability to deliver innovative reuse / recycling options, and ensure the aims of the waste hierarchy are achieved.

Geographic locations of potential disposal yard options may require the consideration of Trans Frontier Shipment of Waste (TFSW), including hazardous materials. Early engagement with the regulatory authorities will ensure that any issues with TFSW are addressed.

Premier Oil will engage with other companies and industries to identify potential reuse opportunities. However, Premier Oil believes that such opportunities are best achieved through the tendering and selection of a waste management contractor with the expert knowledge and experience in this area.

3.1 Floating Production Vessel (FPV)

Not applicable to the Stirling Field Decommissioning Programme.

The decommissioning of the Balmoral Field, including the Balmoral FPV, are separate Decommissioning Programmes.

3.2 Jacket(s)

Not applicable to Stirling subsea field decommissioning.

3.3 Subsea Installations and Stabilisation Features

Table 3.1: Subsea Installations and Stabilisation Features			
Subsea installations and stabilisation features	Number	Option	Disposal Route (if applicable)
Manifold(s)	0	N/A	N/A
Template(s)	0	N/A	N/A
Protection Frame(s)	0*	N/A	N/A
Concrete mattresses	N/A	N/A	N/A
Grout bags	N/A	N/A	N/A
Rock Dump	N/A	N/A	N/A

*The A33 WHPS had been removed in 2018 under its own Decommissioning Programme.

3.4 Pipelines

Decommissioning Options:

1A - Leave as-is	2A – Remove Exposed Ends/Exposures & Rock Placement	3A – Disconnect & Retrench Entire Line	5B – Reverse Reel No Deburial
1B - Remove Exposed Ends & Local Rock Placement	2B – Remove Exposed Ends/Exposures & Burial	3B – Disconnect & Full Rock Placement	5C – Deburial & Cut and Lift
1C - Remove Exposed Ends & Trench/Bury	2C – Trench/Bury Ends & Exposures	4 – Re-use in New Development	5D – Deburial Lift & Cut on Vessel
1D - Accelerated Decomposition	2D – Rock Placement Ends & Exposures	5A – Deburial & Reverse Reel	5E – Lift & Cut on Vessel

Table 3.2: Pipeline or Pipeline Groups Decommissioning Options			
Pipeline or Group (as per PWA)	Condition of line/group (Surface laid/ Trenched/ Buried/ Spanning)	Whole or part of pipeline/group	Decommissioning Options considered
Group 1: Surface laid flowlines and umbilicals. PL983, PL984, PL985.1, PL985.2, PL985.3	Surface laid	Whole	1A, 3A, 3B, 4, 5A, 5B and 5C
Group 4: Trenched and buried flexible flowlines and umbilicals. PL2000, PL2001, PLU2002	Trenched & Buried	Whole	1B, 2A, 3A, 3B, 5A and 5C
Group 5: Flexible Jumpers. PL983	Surface laid	Whole	Full removal

Comparative Assessment Method:

Comparative Assessment is integral to the overall planning and approval of decommissioning options. Premier Oil's strategy for the Comparative Assessment process is aligned with the Oil & Gas UK Guidelines for Comparative Assessment in Decommissioning Programmes and OPRED Guidance Notes for the Decommissioning of Offshore Oil & Gas Installations and Pipelines.

Premier Oil has scoped all of the infrastructure into logical groupings. All feasible decommissioning options for each of the infrastructure groups have been identified, assessed, ranked and screened, utilising the OPRED Guidance Notes: Decommissioning of Offshore Oil and Gas Installations and Pipelines to carry forward credible decommissioning options to be assessed through the comparative assessment process.

The comparative assessment process uses five assessment criteria, which are; Safety, Environment, Technical, Societal and Economic to compare the relative merits of each credible decommissioning option for each group of infrastructure. The assessment criteria are equally weighted to balance and represent the views of the each of the stakeholders.

An independent consultancy utilising its bespoke Multi Criteria Decision Analysis (MCDA) process was employed to facilitate comparative assessment workshops. The workshops were attended by specialists from the Operator, Field Partners and representatives from key stakeholders namely:

- Scottish Fishermen's Federation
- Joint Nature Conservation Committee
- Marine Scotland
- Oil and Gas Authority
- OPRED EMT
- OPRED ODU (observers)
- Premier Oil E&P UK Limited
- Repsol Sinopec North Sea Limited
- Rockrose UKCS4 Limited
- ConocoPhillips (U.K.) Limited now Chrysaor Production (U.K.) Limited

At each workshop, each decommissioning option for each infrastructure grouping was assessed against each of the assessment criteria utilising a pairwise comparison system. The relative importance of each of the criteria was assessed in a qualitative way, supported by quantification where appropriate. The process provides for differentiation between decommissioning options in each infrastructure group taking account of stakeholder views.

Outcome of Comparative Assessment:

Table 3.3: Outcomes of Comparative Assessment		
Pipeline or Group	Recommended Option	Justification
Group 1: Surface laid flowlines and umbilicals. PL983, PL984, PL985.1, PL985.2, PL985.3	Full removal	Overall, option 5A is assessed as the most preferred option. It was clearly preferred against Technical, Societal and economic criteria and marginally preferred against the Safety and Environmental criteria. Given that option 5A is also the full removal option, this will form the decommissioning option for this group.
Group 4: Trenched and buried flexible flowlines and umbilicals. PL2000, PL2001, PLU2002	Full removal	Overall, Option 5A is assessed as the most preferred option. It has been assessed as the equal most preferred option against the Technical, Societal and Economic criteria. Whilst overall it is only marginally preferred to options 1B and 2A, given that option 5A is a full removal option, this will form the decommissioning option for this group.
Group 5: Flexible jumpers. PL983	Full removal	Items are surface laid and recoverable.

3.5 Pipeline Stabilisation Features

Table 3.4: Pipeline Stabilisation Features			
Stabilisation features	Number	Option	Disposal Route (if applicable)
Concrete mattresses	24	Full removal – It is intended that the mattresses will be recovered to shore, however, in the event of practical difficulties OPRED will be consulted.	Recover and transport ashore for recycling or other waste treatment as appropriate.
Grout bags	1600	Full removal is intended with an option to reuse on location.*	Recover and transport ashore for recycling or other waste treatment as appropriate.
Rock Dump**	N/A	N/A	N/A

*A number of grout bags may be redeployed/repurposed locally as snagging hazard mitigation.

There are approximately 16 concrete mattresses and 6,000Te rock dump associated with the Burghley pipelines' crossings to be accounted for in the Burghley Decommissioning Programmes (to be submitted by Repsol Sinopec North Sea Limited).

3.6 Wells

Table 3.5: Well Plug and Abandonment
The wells for the Field covered by this Decommissioning Programme will be plugged and abandoned, as listed in Section 2.4 (Table 2.4), in accordance with the Oil & Gas UK Well Decommissioning Guidelines, Issue 6, June 2018. A WONS application update will be submitted along with an appropriate suite of permit applications, via the UK Energy Portal, in support of each well abandonment.

3.7 Drill Cuttings

Drill Cuttings Decommissioning Options:

Table 3.6 Drill Cuttings Decommissioning Options					
How many drill cuttings piles are present?				See below for further details	
Tick options examined:					
☐ Remove and re-inject		☒ Leave in place		☐ Cover	
☐ Relocate on seabed		☐ Remove and treat onshore		☐ Remove and treat offshore	
☐ Other					
Review of Pile characteristics		Pile 1	Pile 2	Pile 3	Pile 4
How has the cuttings pile been screened? (actual samples taken)		Y	N/A	N/A	N/A
Dates of sampling (if applicable)		2016			
Sampling to be included in pre-decommissioning survey?		N			
Does it fall below both OSPAR thresholds?		Y			
Will the drill cuttings pile have to be displaced in order to remove the jacket?		N/A			
What quantity (m³) would have to be displaced/removed?		N/A			
Will the drill cuttings pile have to be displaced in order to remove any pipelines?		N/A			
What quantity (m³) would have to be displaced/removed?		N/A			
Have you carried out a Comparative Assessment of options for the Cuttings Pile?		N			

Comparative Assessment Method:

No comparative assessment is required under Stage 2 of OSPAR Recommendation 2006/5 on a Management Regime for Offshore Cuttings Piles in relation to decommissioning of the Stirling field, as discussed further below.

There are two production wells in the Stirling field satellite development, Well 16/21a-20Z and Well 16/21a-33. These wells are situated 2.75 km apart. Well 16/21a-20 was originally drilled in 1990, using a water base mud (WBM) system. However, the production sidetrack (Well 16/20a-20Z) was subsequently drilled with an oil base mud (OBM) system in 1992. As it was drilled before the prohibition of untreated oil base mud discharge to sea, January 2001, it is assumed that the related OBM contaminated cuttings were discharged to sea at the surface.

Although it is not technically part of the Stirling development, the Balmoral former satellite production well, Well 16/21a-2 is situated approximately 20 m from Well 16/21a-20Z. Well 16/21a-2 was drilled in 1979 to 1980. It is understood that the upper sections were drilled with WBM and the deepest sections drilled with OBM. Given the proximity of these wells and the use of OBM, the discharges from these two wells could technically constitute a “cuttings pile” under the parameters described by OSPAR Recommendation 2006/5 on a Management Regime for Offshore Cuttings Piles.

However, subsea imagery gathered of the seabed around Wells 16/21a-20Z and 16/21a-2 during pre-decommissioning habitat assessment survey work undertaken in 2016 observed no physical evidence of drill cuttings. A pre-decommissioning environmental baseline survey of the Balmoral development was also undertaken in 2016. Given the proximity of the two wells, four sample stations were located in a cross shape around Well 16/21a-20Z and Well 16/21a-2 at distances of 20 m in order to investigate the physical, chemical and biological characteristics of the seabed local to both wells. Analysis of the samples taken recorded that the total hydrocarbon concentration (THC) ranged considerably, between 5.4 mg/kg and 291 mg/kg. The latter value is above the general OSPAR environmental effect threshold cited in Recommendation 2006/5 (50 mg/kg).

Compared to actual large cuttings piles found around templates, jackets and other infrastructure, the level of contamination is relatively low. Given the small numbers of wells involved and the lack of any distinct cuttings pile that could be disturbed during decommissioning it is argued that no further management in relation to cuttings piles in preparation for decommissioning is feasible or necessary. Removal and treatment of the relevant material is likely to have a greater environmental impact on balance than natural degradation considering the energy and other resources required in processing and disposal of the recovered material. Given the low energy current regime in the area, any limited disturbance of the seabed during pipeline disconnection or well abandonment is unlikely to redistribute the contamination present to any great extent. Re-exposure may in fact increase the rate of breakdown through natural physical and biological processes. As such, any drill cuttings and associated contamination related to these wells should be left in place. Again, it should be borne in mind that no actual cuttings pile has been observed at this location, nor was there physical evidence of cuttings deposition of any kind.

Well 16/21a-33 was drilled in 2003 to 04. The tophole sections were drilled with WBM, followed by OBM to the bottom of the well. As it was drilled after January 2001, the OBM contaminated cuttings were contained on the rig and shipped to shore for disposal. As an isolated well with no OBM cuttings discharge to sea, Well 16/21a-33 is exempt from the cuttings pile management requirements of OSPAR Recommendation 2006/5.

Well 16/21c-22 is an exploration well drilled in the Stirling field in 1992. It is situated approximately 1 km from Well 16/21a-33 and 3.5 km from Well 16/21a-20Z. The tophole sections were drilled with WBM, switching to an OBM system to reach the bottom of the well. Although OBM cuttings may have been discharged from this well, these are unlikely to have accumulated with discharges from the other wells given the considerable distances involved. Therefore, as an isolated well, it is also exempt from the cuttings pile management requirements of OSPAR Recommendation 2006/5.

Given the above information, it is argued that no further sampling-based evaluation of “pile” characteristics or deeper comparison of potential management regimes for cuttings is justified in this case. Any cuttings present can be allowed to degrade naturally, although as stated above, seabed imagery has not observed any notable cuttings accumulation or even deposition around these well locations.

Outcome of Comparative Assessment:

Not applicable - see above for details.

3.8 Waste Streams

The Premier Oil Waste Management Strategy specifies the requirements for the contractor waste management plan. The waste management plan will be developed once the contract has been awarded during the project execution phase. The plans shall adhere to the waste stream licensee conditions and controlled accordingly. Discussion with the regulator will ensure that all relevant permits and consents are in place.

Table 3.7: Waste Stream Management Methods	
Waste Stream	Removal and Disposal method
Bulk liquids	Bulk flushing/de-oiling by either round-trip flushing from/to the Balmoral FPV or utilising DSVs to flush to the Balmoral FPV. Waste fluids will be processed by the Balmoral FPV and may be discharged to sea under appropriate permit.
Marine growth	Some marine growth may be removed offshore. Onshore disposal will be managed by the selected waste management contractor.
NORM/LSA Scale	NORM contaminated material may be removed and discharged offshore under appropriate permit, or returned to shore to be disposed of by the selected onshore waste management contractor.
Asbestos	N/A
Other hazardous wastes	Will be recovered to shore and will be managed by the selected waste management contractor and disposed of under appropriate permit. The inventory of hazardous materials will identify hazardous materials present and Premier Oil’s risk management process will be used to prevent spills offshore.
Onshore Dismantling sites	Appropriate licenced contractor and sites will be selected. Facility selected must demonstrate competence and proven disposal track record and waste stream management & traceability throughout the deconstruction process and demonstrate their ability to deliver innovative recycling options.

Table 3.8 Inventory Disposition			
	Total Inventory Tonnage (Te)	Planned tonnage to shore (Te)	Planned left <i>in situ</i> (Te)
Pipelines	459	459	0
Subsea Umbilical	56	56	0
Subsea Installations	N/A	N/A	N/A

All recovered material will be brought onshore for re-use, recycling or disposal. It is not possible to predict the market for reusable materials with any confidence; so, the figures in Table 3.9 are disposal aspirations.

Table 3.9 Recovered Inventory Reuse, Recycle, Disposal Aspirations			
	Reuse	Recycle	Disposal
Pipelines	<5%	>95%	<5%
Subsea Umbilical	<5%	>95%	<5%
Subsea Installations	<5%	>95%	<5%

Please refer to the Greater Balmoral Decommissioning Environmental Appraisal for further details.

4 ENVIRONMENTAL APPRAISAL

4.1 Environmental Sensitivities (Summary)

Table 4.1: Environmental Sensitivities	
Environmental Receptor	Main Features
Conservation interests	The project area is located outside of any conservation sites, and the nearest such sites are the Scanner Pockmark SAC (9 km) and the Norwegian Boundary Sediment Plain MPA (29 km). Both of these conservation sites have been designated for the protection of seabed habitats and features: submarine structures formed by leaking gases and ocean quahog habitat and aggregations, respectively. Whilst there was evidence of some pockmark features and ocean quahog (<i>Arctica islandica</i>) presence from the site specific environmental survey data, there was no evidence of submarine structures associated with leaking gases or aggregations of ocean quahog which would constitute OSPAR or Annex I protected features. The closest known such ocean quahog aggregation is approximately 24 km west of the project area.
Seabed Habitats and Fauna	The water depths across Balmoral fall between roughly 138 m to 152 m LAT (Fugro, 2018a). The seabed generally comprises poorly sorted coarse to medium silt with moderate carbonate and low organic content. Hydrocarbon levels showed a similar distribution across the survey area and was considered typical of low level weathered petroleum residues commonly found in CNS sediments. The majority of the survey area was characterised as the European Nature Information Systems (EUNIS) biotype complex, 'Circalittoral fine mud (A5.35)' (Fugro, 2017b). The Scottish Priority Marine Feature (PMF) 'Burrowed mud' and its component habitat 'Seapens and burrowing megafauna in circalittoral fine mud' were prevalent throughout the project area (Fugro, 2018b). There are numerous seabed depressions present across the area, although none of the more than 40 depressions investigated in the Fugro (2018a) and Gardline (2005) surveys were found to support Methane-Derived Authigenic Carbonate (MDAC) or associated communities that could classify these depressions as the Annex I habitat 'Submarine structures made by leaking gases'. Assessment for the presence of the OPSAR protected/threatened habitat, 'Seapen and burrowing megafauna communities,' suggested that the seabed surrounding the project area is a strong example of this habitat and burrows generated by megafauna were 'abundant' (on the SACFOR scale) during the 24 transects run within the survey area. These burrows could possibly be attributed to Norwegian lobster (<i>N. norvegicus</i>), however, no individuals were observed during the surveys and thus the presence of such megafauna cannot be confirmed.

	Equally, other burrowing crustaceans or polychaetes could have generated the burrows; burrowing prawns (<i>C. subterranea</i>) were recorded during the surveys for example (Fugro, 2018a). Juvenile ocean quahog were found in low numbers across the majority of stations (the maximum in any single sample was seven individuals). However, no adults were identified nor any aggregations of the quahog, indicating the survey area is not of particular importance to this species (Fugro, 2018b). No other protected habitats or fauna were identified during the surveys.
Fish	The Greater Balmoral Area is located within the spawning and nursery grounds of cod, mackerel, Nephrops and Norway pout (Coull et al., 1998; Ellis et al., 2012). Additionally, the following species are likely to have nursery grounds near or within the project area: anglerfish, blue whiting, European hake, haddock, herring, ling, sandeel, spotted ray, spurdog and whiting (Coull et al., 1998; Ellis et al., 2012). However, fisheries sensitivity maps indicate that the probability of significant aggregations of juveniles of these species in the offshore project area is low (Ellis et al., 2012). Aires et al. (2014) provides modelled spatial representations of the predicted distribution of 0 age group fish. The modelling indicates the presence of juvenile fish (less than one year old) for multiple species: anglerfish, blue whiting, European hake, haddock, herring, mackerel, horse mackerel, Norway pout, plaice, sprat, and whiting. However, the probability of juvenile fish aggregations occurring across the Greater Balmoral Area is low to very low (< 0.2) for all species.
Marine Mammals	Harbour porpoise (<i>Phocoena phocoena</i>), white-beaked dolphin (<i>Lagenorhynchus albirostris</i>), white-sided dolphin (<i>Lagenorhynchus acutus</i>), and minke whale (<i>Balaenoptera acutorostrata</i>) are known to regularly occur in the waters surrounding the project area, either as residents or regular visitors (Hammond et al., 2017; Reid et al., 2003). Harbour and grey seal densities are very low across the region comprising Balmoral due to its distance from shore (SMRU and Marine Scotland, 2017).
Seabirds	The seabird species most commonly observed in the waters surrounding the project area include: northern fulmar (<i>Fulmarus glacialis</i>), Manx shearwater (<i>Puffinus puffinus</i>), European storm-petrel (<i>Hydrobates pelagicus</i>), northern gannet (<i>Morus bassanus</i>), Arctic skua (<i>Stercorarius parasiticus</i>), great skua (<i>Stercorarius skua</i>), black-legged kittiwake (<i>Rissa tridactyla</i>), Arctic tern (<i>Sterna paradisaea</i>), common guillemot (<i>Uria aalge</i>), razorbill (<i>Alca torda</i>), little auk (<i>Alle alle</i>) Atlantic puffin (<i>Fratercula arctica</i>) and pomarine skua (<i>Stercorarius pomarinus</i>). Herring gulls (<i>Larus argentatus</i>), common gulls (<i>Larus canus</i>), and great and lesser black-backed gulls (<i>Larus marinus</i> and <i>Larus fuscus</i>, respectively) also use the area in winter (Kober et al., 2010). The Seabird Oil Sensitivity Index (SOSI) identifies areas at sea where seabirds are likely to be most sensitive to surface pollution; the SOSI values in Blocks 15/25 and 16/21 are classed as low throughout the year, with an increase to medium in Block 15/25 in June (Webb et al., 2016). No SOSI data is available during the months of November or December for this region.

Commercial Fisheries	Balmoral is located in International Council for the Exploration of the Seas (ICES) rectangle 45F1 (Scottish Government, 2019). Commercial fishing effort and landings were dramatically higher to the west of the project area than in 45F1, when considering totals and averages for the five most recent fishing years (2014-2018; Scottish Government, 2019). Within this time period, pelagic species comprised the greatest total and average live weight and shellfish made up the largest total and average value of landings for UK and foreign vessels landing into the UK (Scottish Government, 2019). According to fishing data from the Scottish Government (2019), the waters comprising the Greater Balmoral Area are fished for a variety of species by both UK and foreign vessels. ICES rectangle 45F1 is predominantly targeted for deep-water demersal and pelagic species, whilst the adjacent ICES rectangle 45F0 experiences a much greater amount of pelagic fishing. For the last five fishing years, the total landings value was greater in ICES rectangle 45F0 than 45F1 by nearly £6.4M, and the live weight of those landings were greater by approximately 10,000 Te because of this discrepancy. Trawls (both pelagic and demersal) were the most utilised gear in rectangle 45F1 and was attributable to more than 99% of total fishing effort in the ICES rectangle 45F1, with <1% of fishing effort comprising seine nets (Scottish Government, 2019). Based on the low to moderate levels of demersal trawling across the pipelines associated with Balmoral (Rouse et al., 2018), it is likely that these data primarily characterise midwater trawling effort targeting pelagic and some demersal species.
Other Users of the Sea	Across the region comprising Balmoral, sea users other than commercial fisheries mainly relate to offshore Oil and Gas. There are nine surface installations located within 40 km of the Balmoral FPV, the closest of which is the Alba North platform located 19 km to the southwest. Shipping density across the project area is very low and consists mainly of cargo and supply vessels. The closest submarine cable to the Greater Balmoral Area is the TAMPNET CNSFTC cable, which is located 40 km to the south of the project area (KIS-ORCA, 2019). The NorthConnect power cable, a subsea HVAC power cable connecting Long Haven Bay, Scotland (near Peterhead) to Norway will be located several kms north of the project area. Construction works for this North Sea spanning cable are due to take place between 2021 and 2024. As cable installation will be on a prescribed route outwith the project area, there is minimal potential for interactions with the proposed decommissioning activities within the Greater Balmoral Area. There are two unknown wrecks in the vicinity of the project area, approximately 5km southeast and 4 km northwest of the project area; additionally, there is one named wreck (Elhanan T) located approximately 8 km from the project area. This wreck is classified as a non-dangerous wreck (NMPi, 2019). There are no military restrictions or known military or renewables activities within the vicinity of the project area.
Atmosphere	The majority of atmospheric emissions for the decommissioning of the five fields and FPV associated with the Greater Balmoral Area are attributable to vessel use or are associated with the recycling of material returned to shore. The worst case estimate for total CO2 emissions generated by the decommissioning activities for all of the assets in the Greater Balmoral Area is 83,380 Te, of which 50,757 Te

	is related to vessel emissions. This equates to 0.65% of the total annual UKCS vessel emissions (excluding fishing vessels) when considering 2017 data (7,800,000 Te; BEIS, 2019). The remaining 32,623 Te CO ₂ will be generated through the life cycle of the project materials; those recovered and not reused or left in situ.
Onshore Communities	Waste generated during decommissioning will be transported to shore in an auditable manner through licensed waste contractors, as managed under the Balmoral Late Life Project (BLLP) waste management plan. Wastes will be treated using the principles of the waste hierarchy, as defined in the BLLP, focusing on the reuse and recycling of wastes where possible. Raw materials will be returned to shore with the expectation to recycle the majority of the returned material. There may be instances where infrastructure returned to shore is contaminated (e.g. by NORM, hazardous, and/or special wastes) and cannot be recycled. In these instances, the materials will require disposal. However, the weight and/or volume of such material is not expected to result in substantial landfill use.

4.2 Potential Environmental Impacts and their Management

Environmental Appraisal Summary:

The EA addresses potential environmental and societal impacts by characterising the likelihood and significance of interactions between the proposed decommissioning activities and the local environment, whilst considering stakeholder response. The EA also details mitigation measures designed to abate potential impacts in accordance with Premier's Environmental Management System (EMS) and Health, Safety, Environment and Security (HSES) Policy.

Key potential environmental and societal impacts which were considered to be 'potentially significant', and thus requiring further assessment, were identified through an environmental issues identification (ENVID) workshop; they include: impacts to water quality; seabed impacts; and impacts to commercial fisheries. These potential impacts have undergone detailed assessment within the EA. The following environmental and societal impacts were screened out from further assessment due to existing controls limiting the likelihood of potential significant impacts: emissions to air; vessel presence; underwater noise emissions; resource use; onshore activities; waste; and unplanned events. The justifications for screening out these impact pathways are detailed in the accompanying EA.

The EA concludes that the recommended options to decommission the Stirling Field subsea pipelines can be completed without causing significant impact to environmental or societal receptors.

Overview:

Table 4.2 describes the potential impact pathways identified from the relevant infrastructure to be decommissioned, alongside the proposed management measures in place to mitigate against them.

Table 4.2: Environmental Impact Management

Activity	Main Impacts	Management
Decommissioning Surface-laid and Buried Flexible Flowlines and Umbilicals (incl. Stabilisation Features)	Seabed impacts from: • removal of surface laid flexible flowlines, umbilicals and jumpers, rigid spoolpieces and flexible risers; • reverse-reeling of buried flexible flowlines; • removal of stabilisation features; and • clear seabed verification which may require direct intervention (e.g. overtrawling). Impacts to commercial fisheries from project activities excluding access to fishing grounds.	Operations will be conducted as carefully as possible to minimise sediment disturbance, avoiding dragging of items on the seabed where possible. Excavated areas remediated and any berms created profiled to mitigate snagging risks to other sea users. Vessel use will be optimised/minimised for the decommissioning activities and managed per Premier's existing vessel management procedures, including a vessel work programme. The 500 m safety exclusion zone will remain in operation during the decommissioning activities reducing risk of non-project related vessels entering into the area where decommissioning activities are taking place. This safety exclusion zone will be removed following the completion of the relevant decommissioning activities enabling fisheries to regain access to grounds. Use of established contractors with appropriate capability, licences and maintenance procedures will be selected and audited. Other sea users will be notified in advance of activities occurring and Premier keeps manned bridges. The infrastructure is currently shown on Admiralty Charts and the FishSafe system. When decommissioning activity has been completed, updated information will be made available to update Admiralty Charts and FishSafe system. All pipeline routes and installation sites will be the subject of oilfield debris clearance and as-left verification surveys when decommissioning activity has concluded.

5 INTERESTED PARTY CONSULTATIONS

Consultations Summary:

Table 5.1 Summary of Stakeholder Comments		
Who	Comment	Response
Informal Consultations		
Various Stakeholders	Premier Oil has engaged with interested parties and stakeholders who participated in comparative assessment workshops, held 16th November 2017, including: Scottish Fishermen's Federation (SFF), Joint Nature Conservation Committee, Marine Scotland, Oil and Gas UK, OPRED EMT, OPRED ODU (observers), Repsol Sinopec North Sea Limited, Rockrose UKSC4 Ltd, Chrysaor Production (U.K.) Limited, Premier Oil E&P UK Ltd. In addition, meetings held with SEPA and the SFF.	N/A
Statutory Consultations		
Various Statutory Consultees	Following statutory consultation (21st September – 8th November 2020), Premier received a number of guidance notes, questions and actions relating to the five Greater Balmoral Area Decommissioning Programmes and supporting documents from the consultees.	All consultee comments have been satisfactorily addressed throughout OPRED's process and minor updates to the Decommissioning Programmes and supporting documents have been implemented where appropriate.
Public	No comments received.	N/A

6 PROGRAMME MANAGEMENT

6.1 Project Management and Verification

A Project Management team will be appointed to manage suitable contractors for the decommissioning of the Stirling subsea infrastructure. Standard procedures for operational control and hazard identification and management will be used. The work will be coordinated with other decommissioning operations in the Greater Balmoral Area. The Project Management team will monitor and track the process of consents and the consultations required as part of this process. Any changes in detail to the offshore removal programme will be controlled by the Premier Oil Management of Change processes and discussed and agreed with OPRED.

6.2 Post-Decommissioning Debris Clearance and Verification

During site clearance activities, reasonable endeavours will be made to recover any dropped objects and items subject to any outstanding Petroleum Operations Notices. All recovered seabed debris related to offshore oil and gas activities will be returned for onshore disposal or recycling in line with existing disposal arrangements. A post decommissioning site survey, to verify decommissioning activities have been completed, will be carried out across the designated 500m safety zones of installation sites and 100m corridor (50m either side) along each pipeline over its length.

The clear seabed will be validated by an independent verification trawl over the installation sites and pipeline corridors, non over-trawl techniques such as Side Scan Sonar (SSS) / ROV or by the post decommissioning survey. A dialogue will be opened with OPRED at the appropriate time to establish the most suitable method for completing this task.

6.3 Schedule

Project Plan:

The high level Gantt chart Figure 6.1 provides the overall schedule for the Greater Balmoral programme of decommissioning activities, which include the following Fields operated by Premier Oil; Brenda, Nicol, Glamis, Stirling, and Balmoral.

Prior to the removal of the FPV, Premier Oil will also flush the subsea pipelines associated with the Repsol Sinopec North Sea Ltd operated Burghley and Beaully fields.

Figure 6.1: Gantt Chart of Project Plan

6.4 Costs

An overall cost estimate following UK Oil & Gas Guidelines on Decommissioning Cost Estimation (Issue 3, October 2013) will be provided to OPRED.

6.5 Close Out

In accordance with the OPRED Guideline Notes, a close out report will be submitted to OPRED and posted on the Premier Oil website, reconciling any variations from the Decommissioning Programme within one year of the completion of the offshore decommissioning scope. This includes debris removal and, where applicable independent verification of seabed clearance, and the first post-decommissioning environmental survey.

6.6 Post-Decommissioning Monitoring and Evaluation

A post-decommissioning environmental seabed survey, centred around the well locations, will be carried out. The survey will focus on chemical, physical and biological changes, disturbances and be compared with the pre decommissioning survey. Results of this survey will be available once the work is complete, with a copy forwarded to OPRED.

All pipeline routes and installation sites will be the subject of oilfield debris clearance and as-left verification surveys when decommissioning activity has concluded. All snag hazards created by drilling and/or production related activities will be removed or mitigated as part of the execution of the Decommissioning Programmes.

The main risk from infrastructure remaining in situ is the potential for interaction with other users of the sea, specifically from fishing related activities. Where the infrastructure is trenched below seabed level or trenched & buried below, the effect of interaction with other users of the sea is considered to be negligible.

The infrastructure is currently shown on Admiralty Charts and the FishSafe system. When decommissioning activity has been completed, updated information will be made available to update Admiralty Charts and FishSafe system.

When decommissioning activities have been completed, and where applicable, the designated safety zones around offshore infrastructure will be removed.

The licence holders recognise their commitment to undertake post-decommissioning monitoring of infrastructure left in situ. After the post-decommissioning survey reports have been submitted to OPRED and reviewed, a post-decommissioning monitoring survey regime, scope and frequency, will be agreed with OPRED.

Dear Sir or Madam

STIRLING DECOMMISSIONING PROGRAMME PETROLEUM ACT 1998

We acknowledge receipt of your letters dated 8th January 2021.

We, Repsol Sinopec North Sea Limited confirm that we authorise Premier Oil E&P UK Limited to submit on our behalf an abandonment programme relating to the Stirling pipelines as directed by the Secretary of State on 8th January 2021.

We confirm that we support the proposals detailed in the Stirling Decommissioning Programme dated 11th January 2021, which is to be submitted by Premier Oil E&P UK Limited in so far as they relate to those facilities in respect of which we are required to submit an abandonment programme under section 29 of the Petroleum Act 1998.

Yours faithfully

For and on behalf of **Repsol Sinopec North Sea Limited**

8th February 2021

Dear Sirs,

Letter of Support: Stirling Decommissioning Programme

RockRose UKCS4 Limited hereby confirm that Premier Oil E&P UK Limited ("Premier") is authorised to submit, on our behalf, the abandonment programme relating to the Stirling Field subsea pipelines, as detailed in document no. AB-BL-PMO-LL-PM-PG-0006 revision B04, dated January 2021 and titled "Stirling Decommissioning Programme", as directed by the Secretary of State in your letter of 8 January 2021.

We confirm our agreement to the proposals detailed in the Stirling Decommissioning Programme dated 11 January 2021, which is to be submitted by Premier, in so far as they relate to those facilities in respect of which we are instructed to submit a programme under Section 29 of the Petroleum Act 1998.

Yours faithfully

15 January 2021

Dear Sirs,

Letter of Support: Stirling Decommissioning Programme

Premier Oil UK Limited hereby confirm that Premier Oil E&P UK Limited ("Premier") is authorised to submit, on our behalf, the abandonment programme relating to the Stirling Field subsea pipelines, as detailed in document no. AB-BL-PMO-LL-PM-PG-0006 revision B04, dated January 2021 and titled "Stirling Decommissioning Programme", as directed by the Secretary of State in your letters of 8 January 2021.

We confirm our agreement to the proposals detailed in the Stirling Decommissioning Programme dated 11 January 2021, which is to be submitted by Premier, in so far as they relate to those facilities in respect of which we are instructed to submit a programme under Section 29 of the Petroleum Act 1998.

Yours faithfully

Dear Sir or Madam

**STIRLING DECOMMISSIONING PROGRAMME
PETROLEUM ACT 1998**

We acknowledge receipt of your letters dated 8th January 2021.

We, Repsol Sinopec Resources UK Limited confirm that we authorise Premier Oil E&P UK Limited to submit on our behalf an abandonment programme relating to the Stirling pipelines as directed by the Secretary of State on 8th January 2021.

We confirm that we support the proposals detailed in the Stirling Decommissioning Programme dated 11th January 2021, which is to be submitted by Premier Oil E&P UK Limited in so far as they relate to those facilities in respect of which we are required to submit an abandonment programme under section 29 of the Petroleum Act 1998.

Yours faithfully

For and on behalf of **Repsol Sinopec Resources UK Limited**

Director

Subject: RE: Calling for Decommissioning Programmes in respect of the Stirling Installations and Pipelines

Dear Robert

I refer to your email below with attachments, and confirm receipt.

It is my understanding that Premier Oil has prepared a decommissioning programme in respect of the Stirling field which is to be submitted on behalf of the Section 29 holders. Obviously, Idemitsu is not a partner in the Stirling field and never has been although its former UK subsidiary held an interest between 2009 – 2017.

The proposed decommissioning programme was shared with Idemitsu on 22 December 2020 and Idemitsu has no objections to it.

Kind regards
Katsunori

OFFICIAL-SENSITIVE: COMMERCIAL

Good afternoon Katsunori

Please find attached letters addressed to the managing director of Idemitsu Kosan Co., Ltd. requesting formal submission of the Stirling decommissioning programmes. Unfortunately due to current circumstances we have been unable to issue hard copies of these letters.

All parties with an abandonment obligation in respect of the installations and pipelines in the Stirling field have been sent a similar letter.

The Stirling decommissioning programmes will be submitted to the department by Premier Oil E&P UK Limited.

Please do not hesitate to contact me should you have any questions regarding the above information.

Kind regards,
Robert

APPENDIX I – COPIES OF THE PUBLIC NOTICES

The Press and Journal:

PUBLIC NOTICE

The Petroleum Act 1998

Decommissioning Programmes for the Balmoral Area installations and pipelines

In accordance with the provisions of the Petroleum Act 1998, Premier Oil E&P UK Limited (Premier) has submitted, for the consideration of the Secretary of State for Business, Energy & Industrial Strategy, the draft Decommissioning Programmes for the installations and pipelines associated with the Balmoral, Glamis, Stirling, Brenda and Nicol Fields (the "Balmoral Area Fields"). It is a requirement of the Act that interested parties be consulted on such decommissioning proposals.

The Balmoral Area Fields are located in blocks 15/25a, 15/25b, 16/21a and 16/21b of the Central North Sea, approximately 225km northeast of Aberdeen. The Balmoral Area Fields were developed as subsea tiebacks to a Floating Production Vessel (FPV), with produced oil exported to shore via the Forties Pipeline System.

The facilities covered by the five Balmoral Area Decommissioning Programmes are:

- The Balmoral FPV facility,
- All subsea installations, and
- All subsea pipelines associated with the Balmoral, Glamis, Stirling, Brenda and Nicol Fields.

Premier hereby gives notice that the Decommissioning Programmes for the Balmoral Area Fields are available on its website at www.premier-oil.com, or alternatively a hard copy of the documents may be requested by contacting Premier during office hours on 01224 618900.

Representations regarding these Decommissioning Programmes should be submitted in writing to the person named at the address below, or via email to abzdecommissioning@premier-oil.com, by the consultation closing date of 1st November 2020. Submissions should state the grounds upon which any representations are being made.
