

29th April 2021

United Kingdom Egg Statistics – Quarter 1, 2021

This release shows quarterly information on the numbers of eggs packed in UK packing stations. This covers the vast majority of total eggs produced. It shows usage and farm-gate egg prices and includes monthly information on the trade in eggs and egg products.

The key results for Quarter 1 2021

- 7.9 million cases of eggs were packed in UK egg packing stations during the first quarter of 2021. This represents 1.1% increase on the first quarter in 2020 and a 1.4% decrease on quarter four 2020.
- The average UK farm-gate egg price through the first quarter of 2021 was 87.2 pence per dozen, this represents a 15% increase on quarter one of 2020 and a 0.8% increase on quarter four 2020.
- The production of egg products during the first quarter of 2021 totalled 18.1 thousand tonnes, a 1.9% decrease on the previous quarter and a 18% decrease on the first quarter 2020.

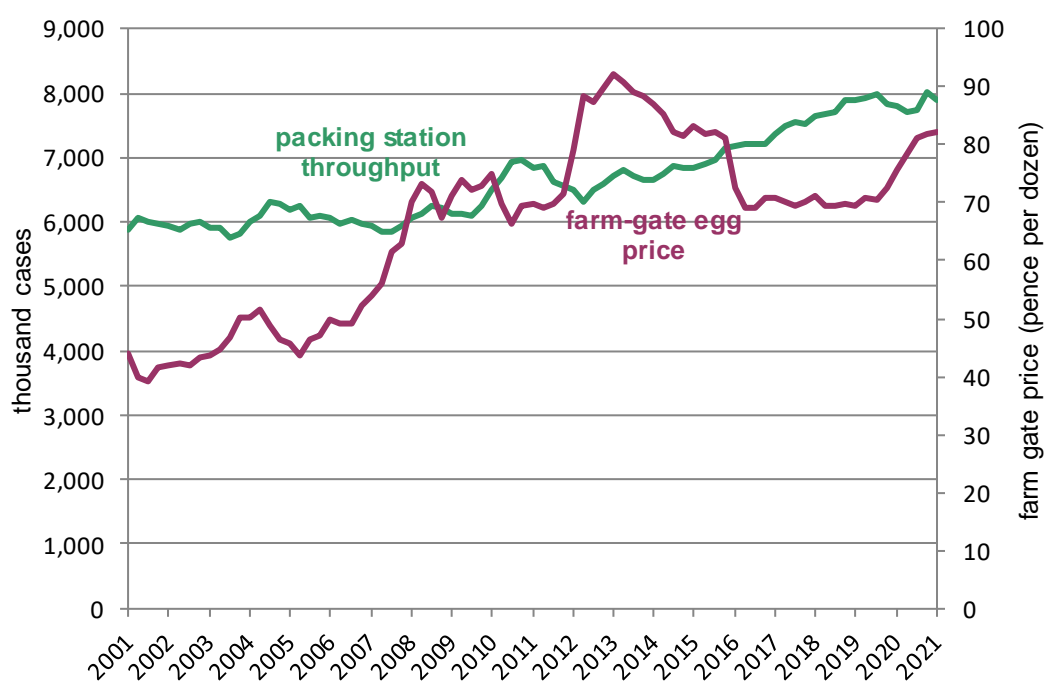

Section 1 – UK egg packing volumes, methods of production, UK country breakdowns and price statistics

The tables in this section show quarterly information on the volumes of eggs passed through the UK egg packing stations. These eggs generally account for nearly 90% of total egg production. Packing station figures include throughput of both graded and ungraded eggs.

- The number of eggs which passed through the packing stations in Q1 2021 increased 1.1% on the same quarter in 2020.
- Egg prices increased to 87.2p per dozen, a 0.8% rise on Q4 2020 price; 15% higher than Q1 2020.

Section 2 – UK egg processing statistics

The number of eggs bought by UK egg processors in Q1 2021 totalled 833 thousand cases (equating to 18.3 thousand tonnes), a decrease of 22% on the same period in 2020.

Liquid egg accounted for 68% of the total production in Q1 2021. Total production was down 18% in Q1 2021 compared to the same quarter last year.

Table 2.1: Number of eggs bought by UK Egg Processors

Period		Thousand cases	Tonnes	% change year on year

(a) Separate data for Hard Boiled Eggs and Other Products is currently unavailable to avoid disclosure of confidential information.

Figure 3: Intake and Production of Egg Products by UK Egg Processors (a)

The volume of eggs processed also includes any processing carried out for external customers who supply their own eggs. This can cause the overall volume of eggs processed to be higher than the volume of eggs purchased, as in the statistics for Q3 2019

Section 3 – UK Egg Trade

Trade figures are supplied by HM Revenue and Customs. Trade data marked as provisional may be subject to revision.

- The latest data for February 2021 shows imports of shell eggs at 53,000 cases, a 59% decrease on the same period last year. Imports of egg products are down 63% at 167,000 cases compared to February 2020.
- Shell egg export figures for February 2021 are 30,000 cases, down 6% compared to the same period in 2020, whilst egg product exports were 32,000 cases, up 34% compared to February 2020.
- The data highlighted in the table below has been subject to challenge with HMRC and should therefore be treated with caution although no errors have been notified.

National Statistics Status

National Statistics are produced to high professional standards. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

The continued designation of these statistics as National Statistics was confirmed in 2014 following a compliance check by the UK Statistics Authority (now the Office for Statistics Regulation) against the Code of Practice for Statistics.

For general enquiries about National Statistics, contact the National Statistics Public Enquiry Service:

Tel: 0845 601 3034

Email: info@statistics.gov.uk.

You can find National Statistics on the internet at www.statistics.gov.uk

Future publications

This quarterly release will be next updated at 09:30 on 29th July 2021. Full time series are available to download at: <https://www.gov.uk/government/statistics/egg-statistics>.

Section 4 – About these statistics

Data users

1. Representatives of the egg and poultry industry are also major users of the data. The data on egg production volumes and egg type are key sector indicators for the British Egg Industry Council (BEIC) as they reflect the size of the national laying flock. The British Free Range Egg Producers Association also makes heavy use of our data as it indicates the size of the free range sector. We work closely with these users and consult widely when considering any changes to our surveys or associated datasets.
2. The Agricultural and Horticultural Development Board (AHDB – cereals and oilseeds), rely on egg production data as a good indicator of the commercial layer flock and associated feed demand and hence grain usage by the sector.
3. Our statistics are also often heavily referenced in industry publications such as “Poultry World” and “The Ranger”, the official magazine of the British Free Range Egg Producers Association.

Methodology

4. **Egg Packing Statistics:** The number of commercial laying hens is estimated based on the Defra Hatchery Survey layer chick placings. Total egg throughput is modelled using the number of commercial laying hens, average egg yields, average mortality rates and the proportion of UK eggs that go through packing stations. To estimate further breakdowns from this total output, Defra runs a quarterly survey of registered UK egg packing stations. It collects data on egg production methods (i.e. free range, enriched cages etc.), country of packing and prices. This “Egg Packers survey” is a voluntary survey of 27 packing stations across the UK, which accounts for around 75% of eggs packed in the UK. The response rate is typically 100 per cent.
5. The prices obtained on the survey are weighted according to the volume of eggs packed by each packing station to obtain average prices for the UK. From 2012, prices include any bonus payments paid to producers.
6. **Egg processing statistics:** Defra runs a quarterly survey of all registered egg processors. It is a voluntary survey of 11 respondents that collects information on the number of eggs bought by egg processors and the quantity of egg products produced. The response rate is typically 100 per cent.
7. In tables that show numbers of eggs the units used are 'thousand cases'. There are 360 eggs in one case.
8. **Trade statistics:** These figures come from HM Revenue and Customs, but are validated and adjusted if necessary prior to publication. The Standard Industrial Trade Classification codes used to produce each table are given in the footnotes below the tables.

9. The data are subject to a variety of validation checks which identify inconsistencies in the data. All data are cleaned prior to publication.
10. The percentage changes shown are calculated using unrounded figures. Thus any percentage changes calculated using the published (rounded) figures may not equate exactly with the changes shown.
11. The UK 12 month moving totals represent the sum of the 12 months up to and including the date indicated. They can be seen as a trend measure that is not affected by seasonality.
12. Contact details are available on the front page of this notice, for you to send feedback or ask questions about the information provided.

National Statistics status

13. National Statistics status means that our statistics meet the highest standards of trustworthiness, quality and public value, and it is our responsibility to maintain compliance with these standards.
14. The statistics last underwent a full assessment [[Assessment Report 271 Statistics on Agriculture](#)] against the [Code of Practice for Statistics](#) in 2014.
15. Since the latest review by the Office for Statistics Regulation, we have continued to comply with the Code of Practice for Statistics and have enhanced data quality by reviewing methodologies and data sources.

Revisions policy:

16. Figures in this notice are provisional and subject to revision. We will provide information about any revisions we make to previously published information in this statistics notice, and the associated datasets. Revisions could occur for various reasons, including:
 - a. if we have not received survey data from respondents we make an estimate based on their previous returns. These estimates will be replaced with actual survey data when it is received.
 - b. survey respondents occasionally supply amended figures for previous periods.
