

The number of people testing positive for COVID-19 in the UK

Number of cases each day, by date reported, up to 14 May

The number of people in hospital with COVID-19 in the UK

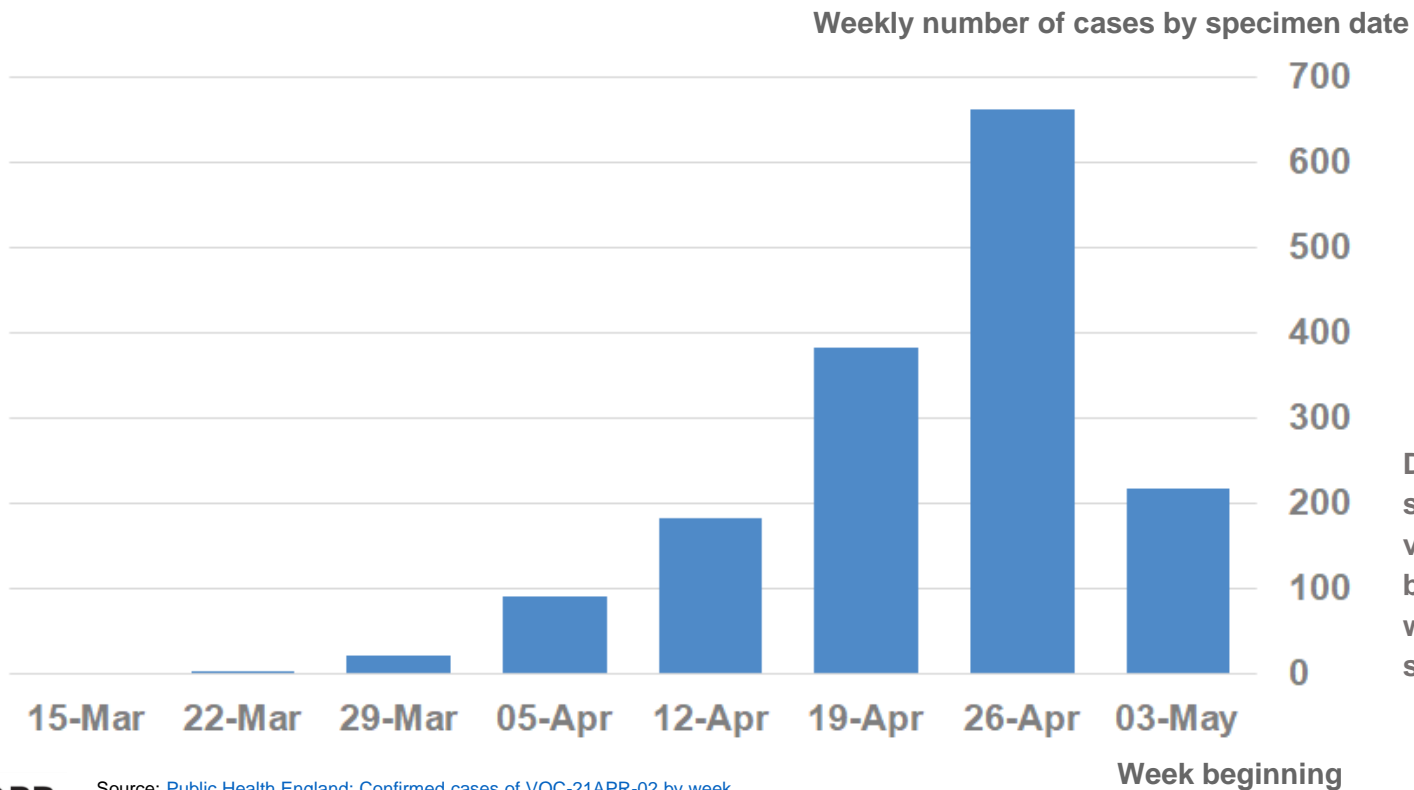

The number of deaths of people who had a positive test result for COVID-19 in the UK

Number of deaths each day, by date reported, up to 14 May

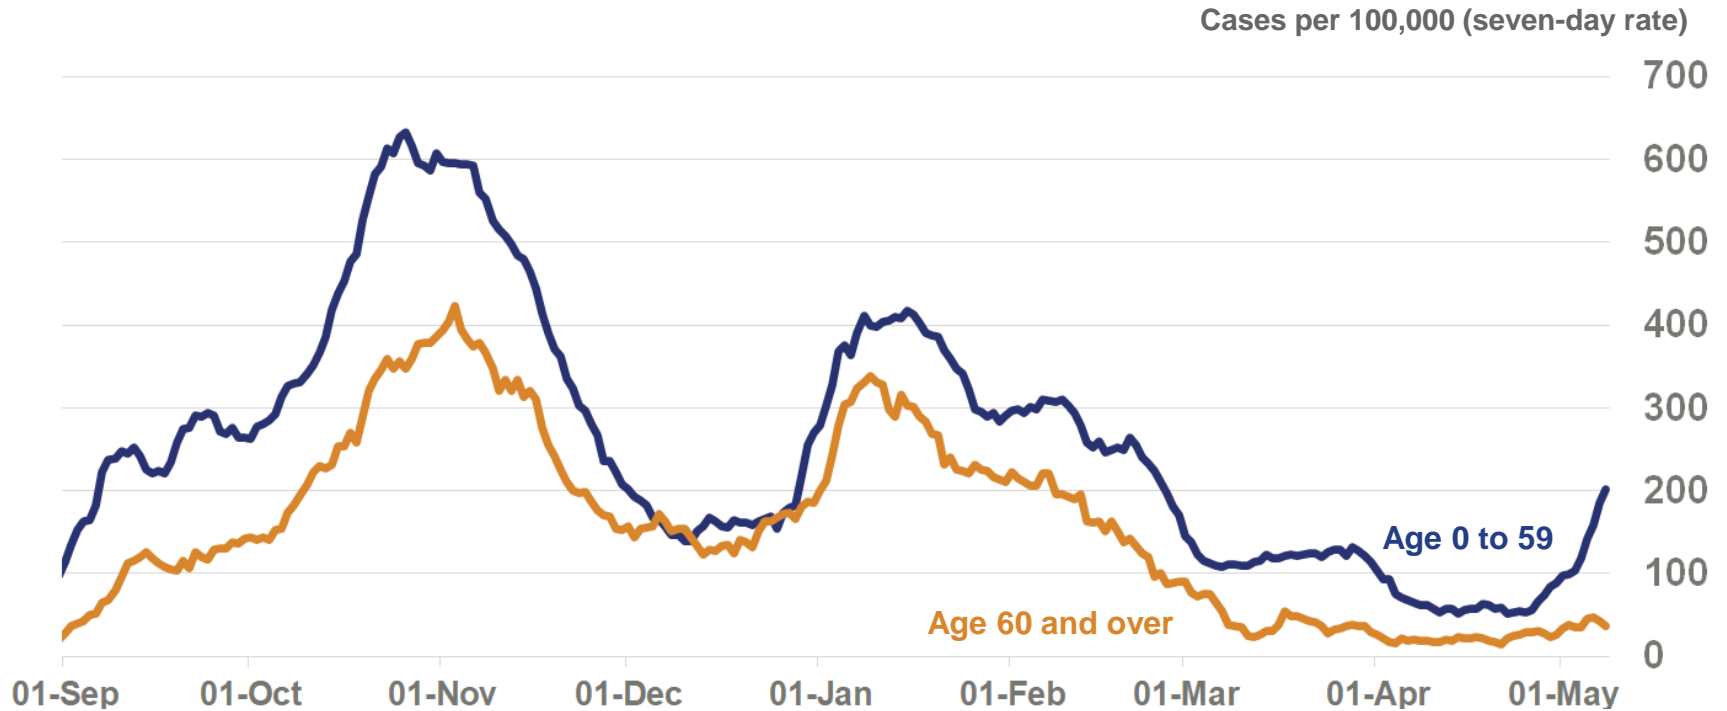

Weekly number of sequenced cases in England of the variant first detected in India (B.1.617.2)

Due to the lag in sequencing variant cases can be identified many weeks after the sample date.

7-day case rates by age in Bolton

The number of COVID-19 Admissions in Greater Manchester NHS Trusts

Number of admissions each day, up to 9 May

7-day rolling average

Statistical notes

Number of daily cases, UK:

Number of people who have had at least one positive COVID-19 test result, either lab-reported or lateral flow device (England only), by date reported - the date the case was first included in the published totals. COVID-19 cases are identified by taking specimens from people and testing them for the presence of the SARS-CoV-2 virus. If the test is positive, this is referred to as a case. Positive rapid lateral flow test results can be confirmed with Polymerase Chain Reaction (PCR) tests taken within 72 hours. If these PCR test results are negative, these are not reported as cases. People tested positive more than once are only counted once. The 7-day rolling mean average of daily cases is plotted on the chart on the middle day of each seven day period.

As of 9 April 2021, the way cases are reported has changed. Cases that have been identified through a positive rapid lateral flow test are now removed for people who took PCR tests within 3 days that were all negative. Cases of this type that were previously reported have been removed from the cumulative total, reducing the total by 8,010. Newly reported numbers of cases for the UK and England were unaffected by the removal of these. Historical published date totals have not been changed.

People in hospital with COVID-19, UK:

Total number of people in hospital with COVID-19 in the UK. Definitions are not always consistent between the four nations. England data now covers all Acute Trusts, Mental Health Trusts and the Independent Sector and are reported daily by trusts to NHS England and NHS Improvement. Welsh data include confirmed COVID-19 patients in acute hospitals only, including those recovering.

COVID-19 daily deaths within 28 days of a positive test, UK:

Number of deaths of people who had a positive test result for COVID-19 and died within 28 days of the first positive test. Data from the four nations are not directly comparable as methodologies and inclusion criteria vary. The 7-day rolling mean average of daily deaths is plotted on the chart on the middle day of each seven day period. Data presented is by date reported rather than date of death or registered.

Weekly number of sequenced cases in England of variant first detected in India (B.1.617.2)

Data represents confirmed cases of VOC-21APR-02 (also known as B.1.617.2) by week of sample. Due to a time lag in sequencing (approximately 10 to 14 days) and the prioritisation of samples of concern, variant cases can be identified weeks after the sample date. The numbers represent weekly new cases, not a cumulative total for each week.

Statistical notes

7-day case rates by age in Bolton

Cases refer to the number of people with at least one positive COVID-19 test result, either lab-reported or lateral flow device, by age and specimen date. Positive rapid lateral flow test results can be confirmed with PCR tests taken within 72 hours. If the PCR test results are negative, these are not reported as cases. People tested positive more than once are only counted once, on the date of their first positive test. Rates are presented as rates per 100,000 people in the rolling 7-day period ending on the dates shown.

Number of COVID-19 Admissions in Greater Manchester NHS Trusts

Daily number of confirmed COVID-19 patients admitted to hospital in eight NHS trusts comprising Greater Manchester: Manchester University; Pennine Acute; The Christie; Tameside and Glossop; Wrightington, Wigan and Leigh; Salford Royal; Bolton; Stockport.

Data include people admitted to hospital who tested positive for COVID-19 in the 14 days prior to admission, and those who tested positive in hospital after admission. Inpatients diagnosed with COVID-19 after admission are reported as being admitted on the day prior to their diagnosis. Admissions to all NHS acute hospitals and mental health and learning disability trusts, as well as independent service providers commissioned by the NHS are included.
