Aircraft Accident Report Form submitted by the pilot

The aircraft was on turnaround with the flight crew completing their normal duties in the cockpit. A baggage handler was marshalling a baggage truck towards the forward freight door. However, the truck did not stop in time and the handler's hand was crushed between the truck and the aircraft door frame. The impact was sufficiently strong to alert the commander in the cockpit but, by the time he got to the scene the handler had been taken for medical attention; injuries were assessed as lacerations and moderate bruising. A check of the aircraft revealed no damage.
