

## **Letter from the Chief Inspector of Air Accidents**

This issue of the AAIB Bulletin contains four Incident Reports relating to electrical wiring damage issues on Public Transport Aircraft, and these are presented in this Bulletin, together with an Overview. It addresses some of the wider issues of maintenance related and ageing problems with aircraft wiring systems and makes four Safety Recommendations.

The publication of a group of Accident/Incident reports with a common theme, possibly together with an Overview, will be a future occasional feature of the AAIB Bulletin.

**Ken Smart**

Chief Inspector of Air Accidents
