## Device

**Oral swabs with a foam head.**

All manufacturers.

## Problem

Foam heads of oral swabs may detach from the stick during use. This may present a choking hazard for patients.

## Action

- Follow the manufacturer’s instructions for use (where available).
- Check that the foam head is firmly attached to the stick before use.
- Do not leave the swabs soaking in liquid prior to use as this may affect the strength of the foam head attachment.
- If required moisten the swab immediately before use.
- If the patient is likely to bite down on the swab consider using an alternative such as a small headed toothbrush with soft bristles.
- Ensure that all users, including unsupervised patients and carers, are aware of this advice and the manufacturer’s instructions for use.
- Discard oral swabs after use.

This advice supersedes the advice given in MDA/2008/017.

## Action by

All those involved in the use and supply of these devices including those who advise patients and carers.

## CAS deadlines

- **Action underway:** 27 April 2012
- **Action complete:** 14 May 2012
Problem
The MHRA is aware of a recent incident in Wales where the foam head detached from the stick of an oral swab while a carer was providing mouth care to an elderly patient. The foam head could not be retrieved. The patient subsequently died.

Distribution
This MDA has been sent to:
