CCAFS Gender Impact Pathway for Latin America

Gaps in specific sectors

Universities: Little use of research results as an input for policy changes and strategic planning with GAD approach with government and private institutions

Government has poor understanding of GAD approach. WID is still dominant

There is a need to strengthen skills & practices in **NGOs** to promote the GAD approach

The **Private sector** needs to improve understanding of the GAD approach and how to apply it as part of CSR

Research institutions carry out rural development research on gender issues with WID rather than GAD

Also little use of research results as an input for policy changes and strategic planning with GAD approach

Gaps in policy

Some regional research institutes lack a gender strategy while others face challenges in implementing gender strategy

The work of regional research institutes on climate change adaptation and women is not demand-driven

Limited use of research results to inform policy, strategies and programs

Gaps in sensitization

ECADERT is a **gender blind** strategy that doesn't address special needs of women and disadvantaged groups

Gaps in implementation & lack of capacity

Regional advocacy activities have a weak approach to gender and empowerment

Capacity development activities do not address access and control of resources & assets and have a limited gender perspective

Limited and gender blind information on adaptation to climate change and access to resources and assets

Most decision makers are not reached by the media

Appropriate technology for women and marginalized groups is not available

New activities that can fill gaps

Increase interactions with government and private institutions to share research results

Strengthen communication skills and strategies to reach and influence decision makers

Training on GAD approach. Institutionalize GAD approach in rural development policies and programmes as a state (long term) policy

Training on GAD & Integrate GAD in rural development projects and programmes

> Training on GAD and how to apply it through CSR

Carry out rural development research

Promote massive use of research results on GAD approach as input for policy changes and strategic planning

Develop or review/analyze gender strategies to identify gaps in mainstreaming gender and climate change

Improve capacity to network with rural development partners and institutions

Disseminate results to targeted audiences including policy makers, donors and practitioners

Review/analyze ECADERT to identify gender gaps on access to resources and to mainstream equal access for women and other disadvantaged groups

Hold regional advocacy and sensitivity activities for policy makers, practitioners, donor community, multilateral organizations and private sector emphasizing the importance of providing equal access to and control of assets, resources and income

Conduct capacity development activities for women and other disadvantaged groups (leadership, use of CSA technology, value links, and adaptation to climate change)

Provide information tailored to women and other disadvantaged groups

Improve media strategies to reach the right decision makers

Identify and prioritize technology needs of different groups in agriculture

Identify institutions and companies with skills required to develop the technologies

Generate the appropriate technology according to group needs

Develop strategies for financial mechanisms to access the technology: loans, subsidies, etc

Disseminate information on available technologies and financial mechanisms

Develop a training program

Develop follow up mechanisms for the implementation of the technology

Outcome Targets for Latin America

Gender Impacts for Latin America

Use of GAD approach in development, research and academic programmes and projects by the government, NGO's and private sector

Balance in access to and control of resources and assets to improve adaptation to climate change

More research results are used to inform rural development and poverty reduction policies and programs

Active and equal participation of women and other disadvantaged groups in decision making processes leading to access to and control of resource, assets and income achieved at family, farm, community and market levels

Active and equal participation of women and other disadvantaged groups in decision making processes leading to access to and control of resource, assets and income achieved at family, farm, community and

Media programmes reflect GAD

market levels

Technology providers and extension services popularize new technologies that meet the needs of rural households – focus on women and youth Needs and interests of rural women and men of different ages and ethnicities are met

> Cultural change in social norms at family, community, state and market levels
