

## RIU NIGERIA: Summary of Outcomes and Outputs

DFID have recently put in place new reporting requirements that will help them to demonstrate effective investment in development research. Data needs to be collected for the years 2008 and 2009 so that a baseline data collection can be established. With this data DFID will be able to prove that its investment is having a beneficial effect on the world's poorest people. This exercise will also be an incredibly useful record for us, so we can keep track of our progress, help us complete our annual reports to DFID and help to maintain and update our records / website.
