

# **Integrated Modeling of RMS Impacts: Hydrological Processes, and Water Resources Modeling**

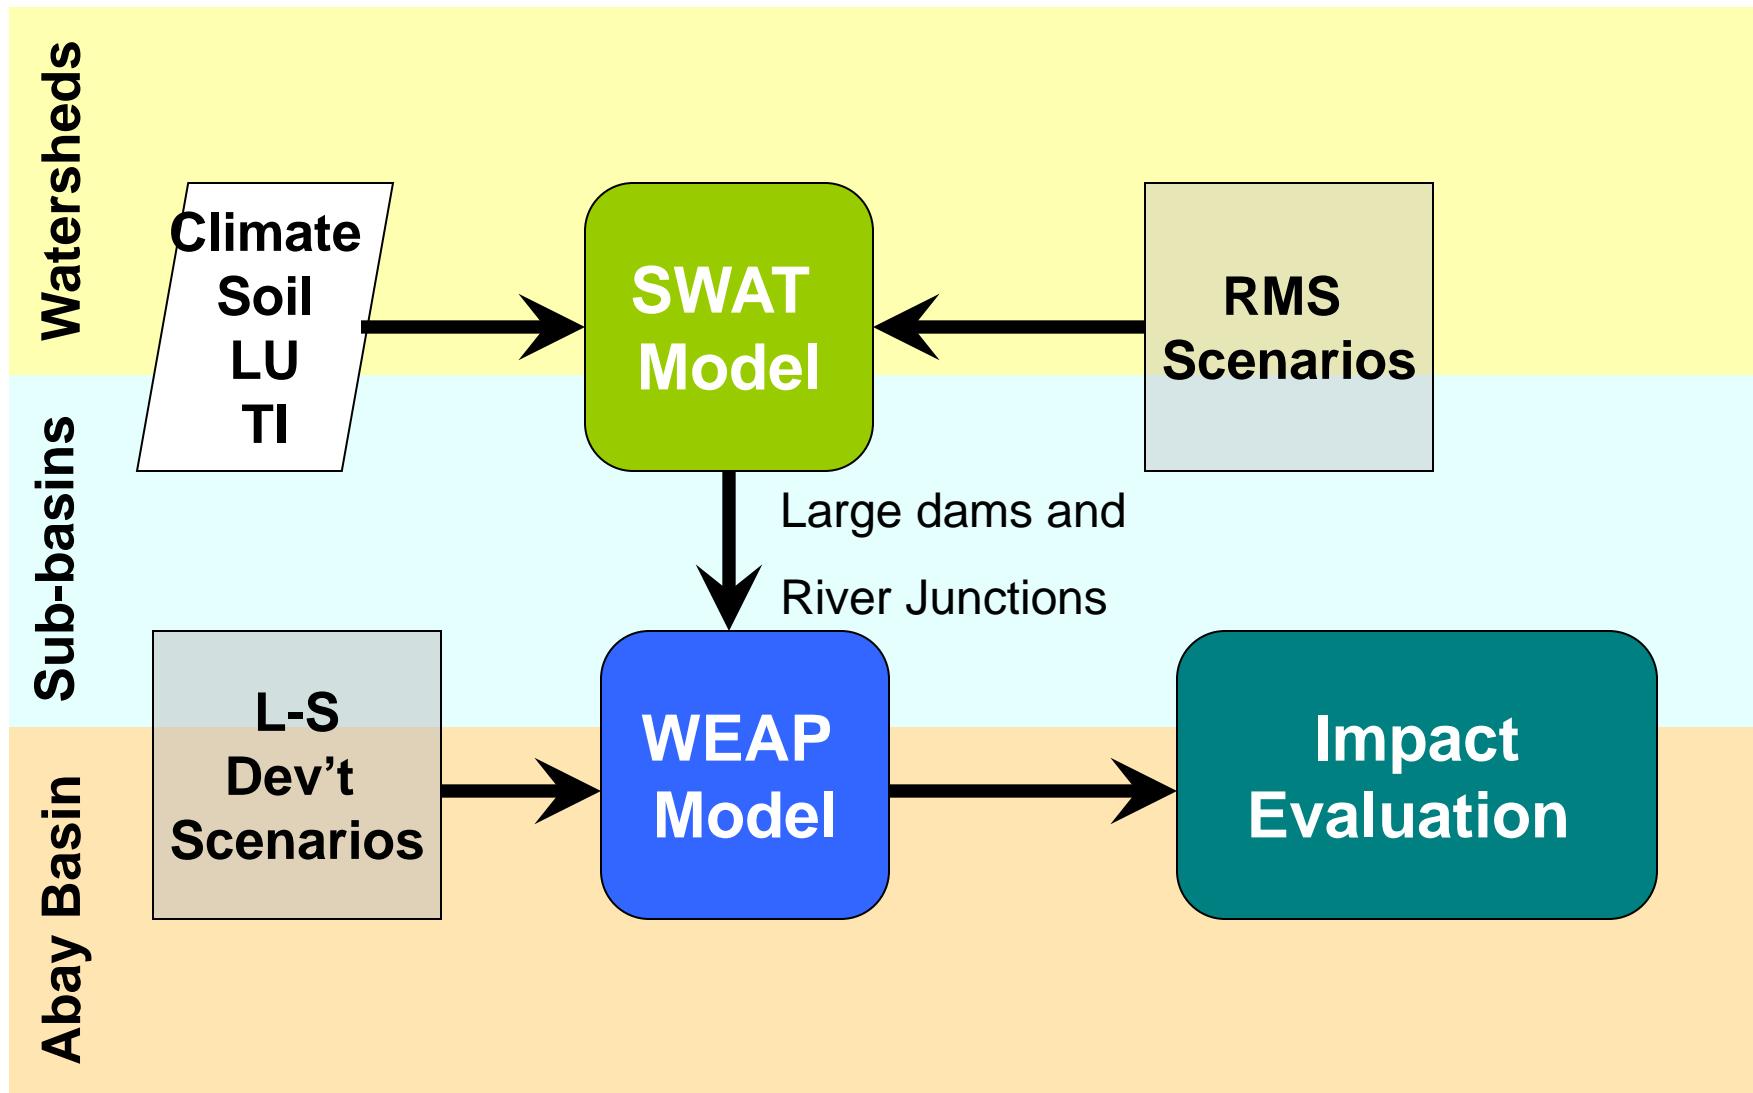

Nile BDC Symposium on Modeling in the Blue Nile Basin  
Addis Ababa, 12 November 2012

Solomon Seyoum  
IWMI

# Objectives

1. Assess integrated biophysical impacts of RMS practices and large-scale developments on water availability, sediment load (and groundwater recharge)
2. Device mechanisms of incorporating RMS practices into basin IWRM planning
3. Investigate up- and out-scaling options of RMS practices using sustainability criteria of satisfying downstream requirements

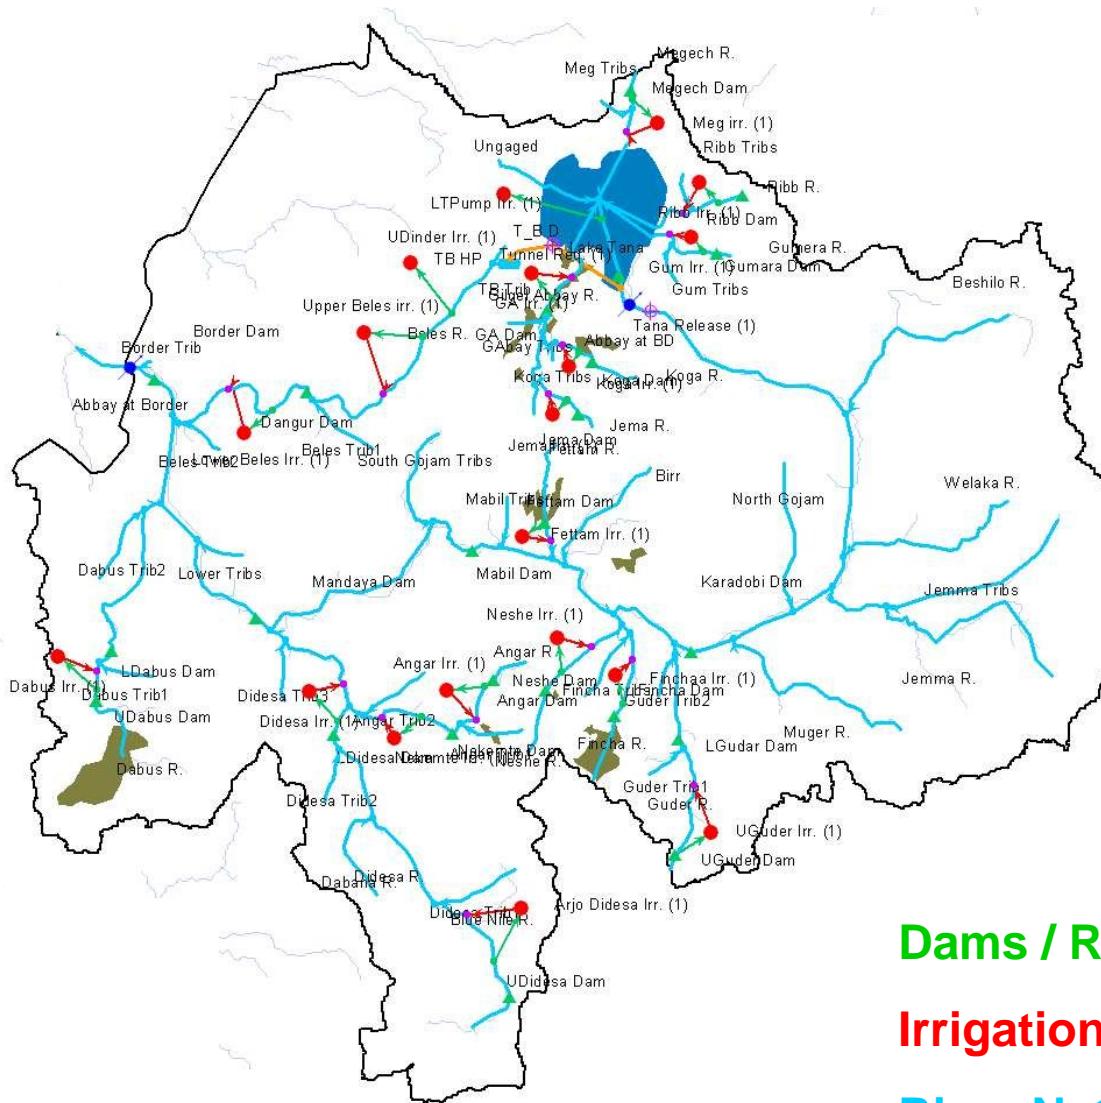

# Framework

# WEAP Modeling

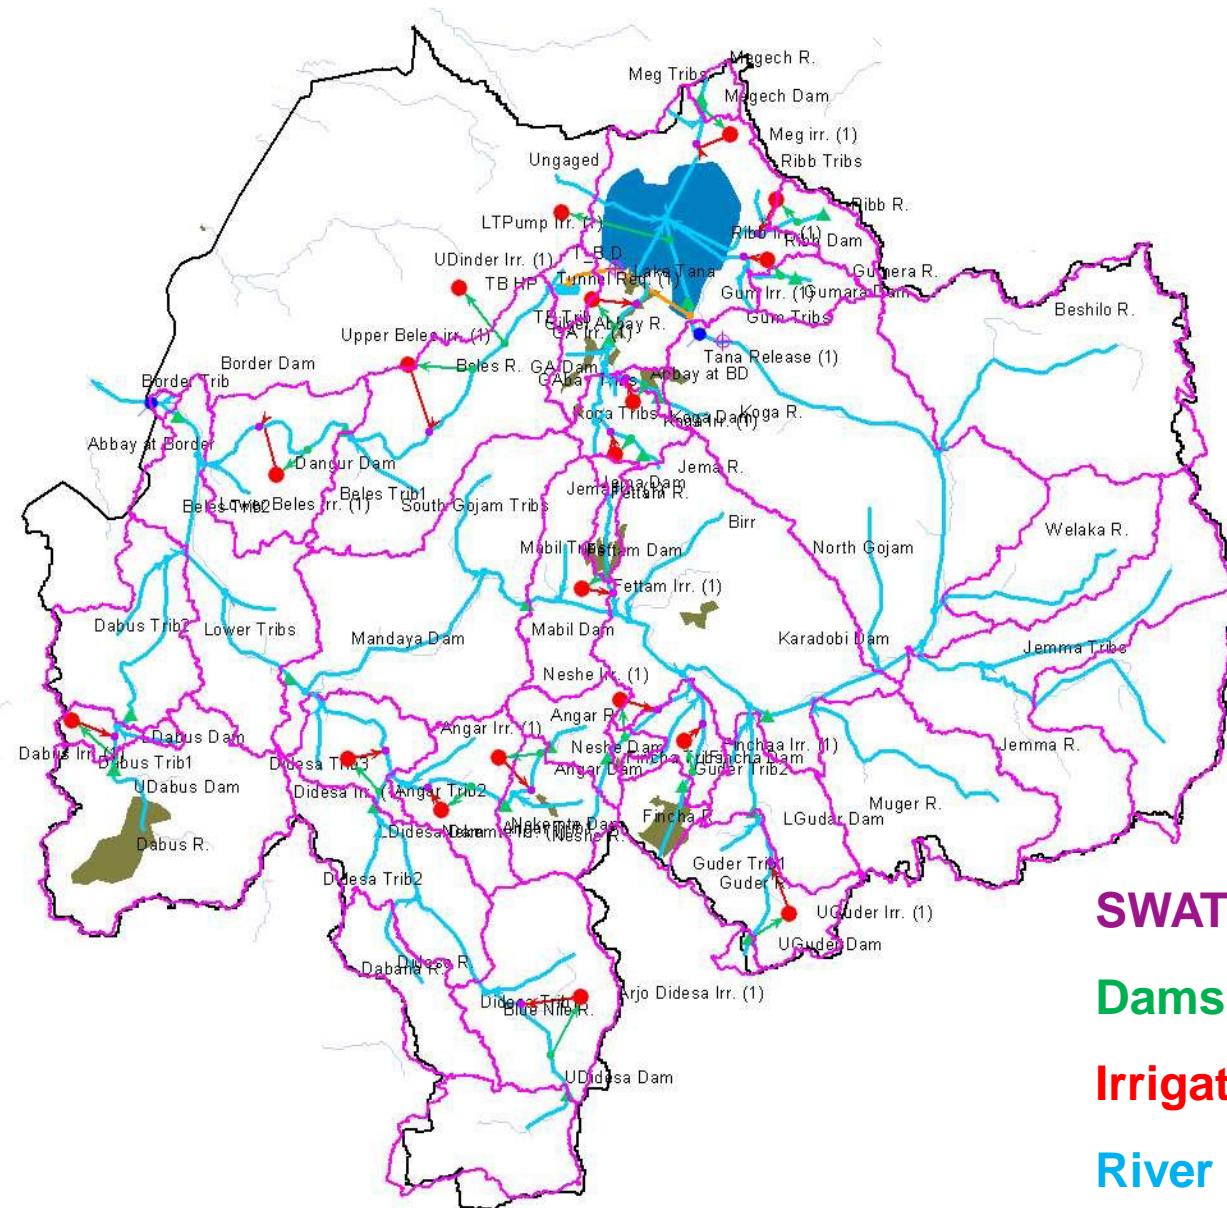

- Large-scale development interventions (practices):
  - Water control and storage infrastructures
  - Irrigation schemes
  - Hydropower plants
  - Environmental flows
- Improved schematization for SWAT-WEAP linkages
- SEI provided first feedback on the WEAP setup
- Scenario definition (development + RMS) ?

# WEAP Schematization

**Dams / Reservoirs**  
**Irrigation demands**  
**River Networks**

# SWAT-WEAP Interface

# SWAT Modeling

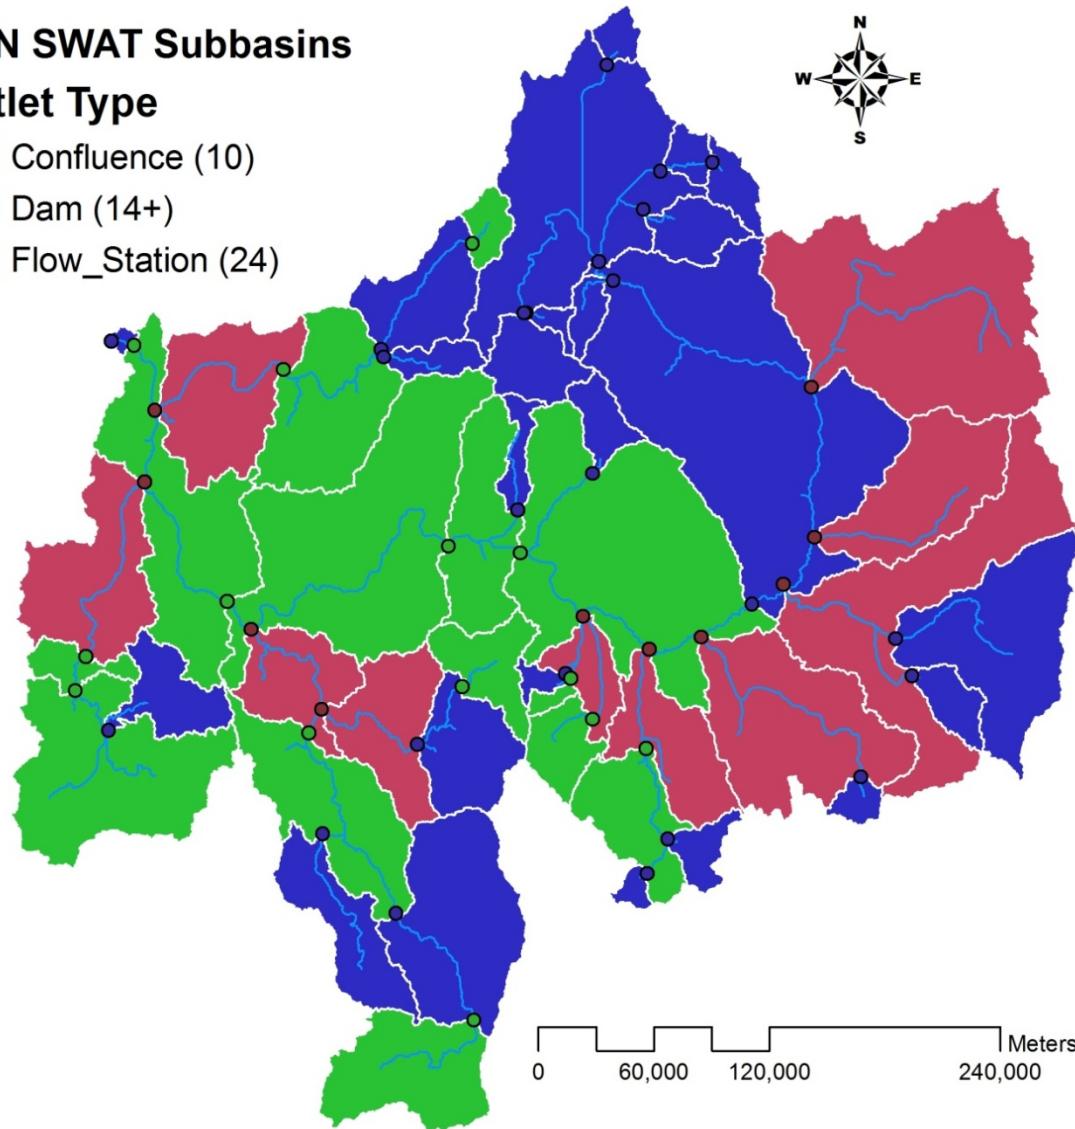

- SWAT initialized based on WEAP requirements and flow data availability
- Landuse, soil and climate data improved
- Variable sources area (VSA) concept implemented using TI
- GIS Tool developed for the Soil-TI derivation
- Calibration and RMS scenarios

# SWAT Sub-basins +

## UBN SWAT Subbasins

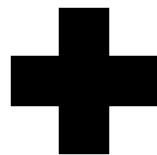

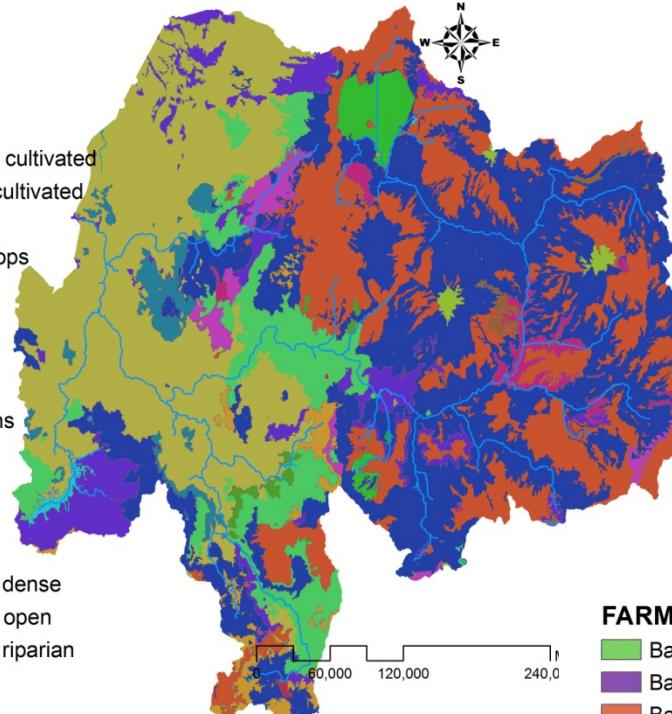

### Outlet Type

- Confluence (10)
- Dam (14+)
- Flow\_Station (24)

## LAND COVER

- A: Afro alpine
- B2: Bushland
- BA1: Bamboo
- C1: Dominantly cultivated
- C2: Moderately cultivated
- C5: Irrigated
- C6: Perennial crops
- F2: Forest
- G1: Grassland
- H1: water body
- H2: Swamp
- P1.1: Plantations
- R: Rockland
- S1: Shrubland
- SF: State farm
- U: Urban
- WD: Woodland dense
- WO: Woodland open
- WR: Woodland riparian

# Landuse Map for SWAT

## FARMING SYSTEM

- Barely-Wheat Based Double Cropping
- Barley-Teff-Potato Based Single Cropping
- Barley-Wheat Based Single Cropping
- Barley-Wheat-Teff Based Single Cropping
- Coffee-Maize-Sorghum-Teff Perennial Complex
- Forest
- Maize-Sorghum Based Shifting Cultivation
- Maize-Sorghum Based Single Cropping
- Maize-Sorghum-Teff Based Single Cropping
- Not Suitable
- Sorghum-Maize-Sesame Based Shifting Cultivation
- Sorghum-Teff-Maize Based Single Cropping
- Teff-Maize-Millet Based Single Cropping
- Teff-Maize-Sorghum Based Single Cropping
- Teff-Maize-Wheat Based Single Cropping
- Teff-Sorghum Based Single Cropping
- Teff-Wheat Based Single Cropping
- Teff-Wheat-Barley Based Single Cropping
- Water Body

# SWAT Scheduled Management Operations

<b>Code</b>	<b>Practice</b>	<b>Operation</b>
1	Terracing	Simulates a terrace to the HRU
2	Tile drainage	Simulates a tile to the HRU
3	Contouring	Simulates a contour to the HRU
4	Filter strip	Simulates a vegetative filter strip to the HRU
5	Strip cropping	Simulates strip cropping to the HRU
6	fire	Simulates fire to the HRU
7	Grassed waterway	Simulates grassed waterways to the HRU
8	Plant parameter	Updates crop parameters to the HRU

# Outlook

- Finalize SWAT Calibration and SWAT-WEAP interactions for baseline scenarios
- Develop scenarios of RMS practices and large-scale developments
- Implement RMS Scenarios in SWAT and large-scale development scenarios in WEAP
- Evaluate RMS impacts using WEAP and SWAT outputs
