EDSSS weekly report statistics

Including new EDs which have recently started reporting*.

Key messages

Data to: 19 June 2016

ED attendances for asthma/ wheeze/ difficulty breathing have been increasing, particularly in children aged 5-14yrs (figures 15 & 16), but remain within seasonally expected levels.

A Heat-Health Watch system operates in England from 1 June to 15 September each year. As part of the Heatwave Plan for England, the PHE Real-time Syndromic Surveillance team will be routinely monitoring the public health impact of hot weather using syndromic surveillance data during this period.
Heat-health watch level (current reporting week): level 1 [Summer preparedness](http://www.metoffice.gov.uk/weather/uk/heathealth/)

**Introduction to the
EDSSS charts:**

- ▶ Weekends and Bank holidays are marked by vertical **grey** lines (bank holidays **darker**).
- ▶ The entry of each new ED is marked by a vertical **red** line.
- ▶ **A new site is not included in charts until it has reported a minimum of 14 days.**
- ▶ A 7 day moving average is overlaid on the daily data reported in each chart, unless specified.
- ▶ Where the percentage attendances related to an individual syndromic indicator is given, the denominator used is the total number of attendances with a diagnosis code recorded.

Notes and caveats:

- ▶ Participating Hospital Emergency Departments (EDs) report to EDSSS through the automated daily transfer of anonymised data to PHE, for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST).
- ▶ Several EDSSS contributing departments are now using the new RCEM Unified Diagnostic Dataset (UDDA) to record diagnoses. Where UDDA is in place the ICD-10 or Snomed CT code is extracted for EDSSS reporting.
- ▶ The syndromic indicators presented in this bulletin are based on the WHO recommendations for syndromes to be used for mass gatherings. Each code system has been mapped to the syndromes described:

Level 1: Broad, generic indicator, available using all ED coding systems reported.

Level 2: More specific indicator, available from EDs using ICD-10 and Snomed CT.

Level 3: Very specific indicator, available from EDs using ICD-10 and Snomed CT.

Respiratory: All respiratory diseases and conditions (infectious and non infectious).

Acute Respiratory Infections (ARI): All acute infectious respiratory diseases.

Asthma/Wheeze/Difficulty Breathing: As indicated by title, including dyspnoea and stridor.

Bronchitis/ Bronchiolitis: As indicated by title (excluding 'chronic').

Influenza-like Illness (ILI): As indicated by title.

Pneumonia: As indicated by title.

Cardiac: All cardiac conditions (including 'chest pain').

Myocardial Ischaemia: All Ischaemic heart disease.

Gastrointestinal: All gastrointestinal diseases and conditions (infectious and non infectious).

Gastroenteritis: All infectious gastrointestinal diseases.

Other (chart only presented when a public health need):

Meningitis: All cause meningitis (exc. meningococcal disease without mention of meningitis).

Heat/ sunstroke: As indicated by title.

- ▶ Details on diagnosis are not consistently recorded for all ED attendances and the levels of attendances coded vary considerably between each ED.
- ▶ Where the diagnosis codes used in an individual ED cannot be matched to level 2 and 3 syndromic indicators, the ED is excluded from the analysis of those indicators.
- ▶ If you are interested in joining the EDSSS please contact ReSST using the details below.
