Introduction to charts.	Syndromic indicators at a glau	ice:	

Level * Trend Indicator Cold/flu no trend above baseline levels Fever decreasing below baseline levels Cough no trend above baseline levels Difficulty breathing no trend above baseline levels Sore throat no trend above baseline levels Diarrhoea decreasing below baseline levels above baseline levels Vomiting no trend Eye problems above baseline levels increasing

*Since week 47 2014 new baselines have been introduced for comparison with previous years. Baselines use historical data from the NHS Direct surveillance system to estimate seasonal trend but with levels adjusted to reflect changes since the switch to using NHS 111 data in September 2013.

Data summary:

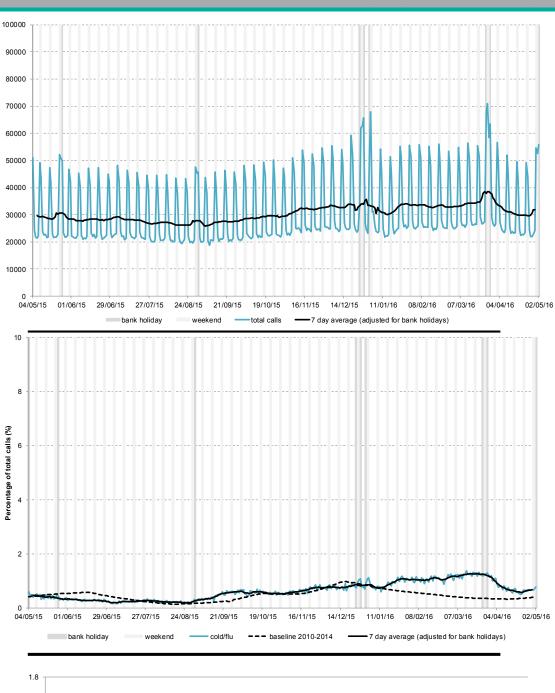

Year	Week	Total calls
2016	17	253,920

1: Total calls.

The total number of syndromic calls recorded each day by NHS 111.

Daily 'cold/flu' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

Cold/flu calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays. Age groups below 5 years old, not shown.

% of calls (within age group)

Remote Health Advice

3: Fever

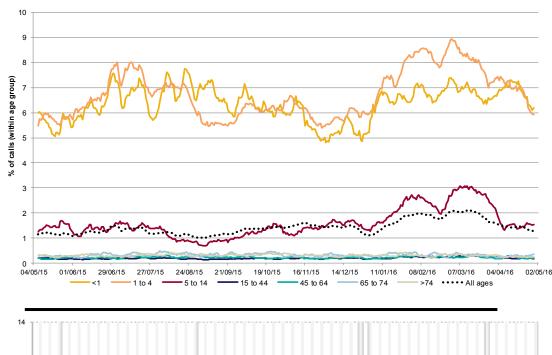

Daily 'fever' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

3a: Fever calls by age group

Fever calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

Remote Health Advice

4: Cough

Daily 'cough' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct. 12

5: Difficulty breathing

10

Daily 'difficulty breathing' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

5a: Difficulty breathing calls by age group

Difficulty breathing calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

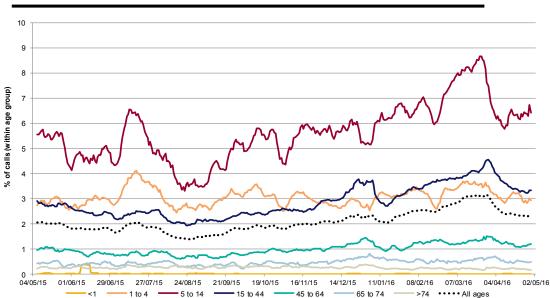

6: Sore throat

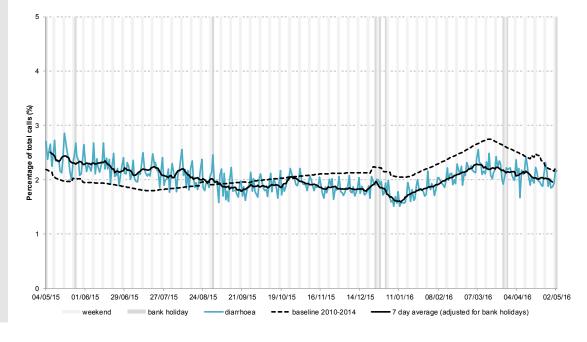

Daily 'sore throat' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

4 Percentage of total calls (%) 0 04/05/15 01/06/15 29/06/15 27/07/15 24/08/15 21/09/15 19/10/15 16/11/15 14/12/15 11/01/16 08/02/16 07/03/16 04/04/16 02/05/16 weekend bank holiday sore throat --- baseline 2010-2014 7 day average (adjusted for bank holidays)

6a: Sore throat by age group

Sore throat calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

7: Diarrhoea

Daily 'diarrhoea' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

Remote Health Advice

7a: Diarrhoea by age group

Diarrhoea calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

8: Vomiting

Daily 'vomiting' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

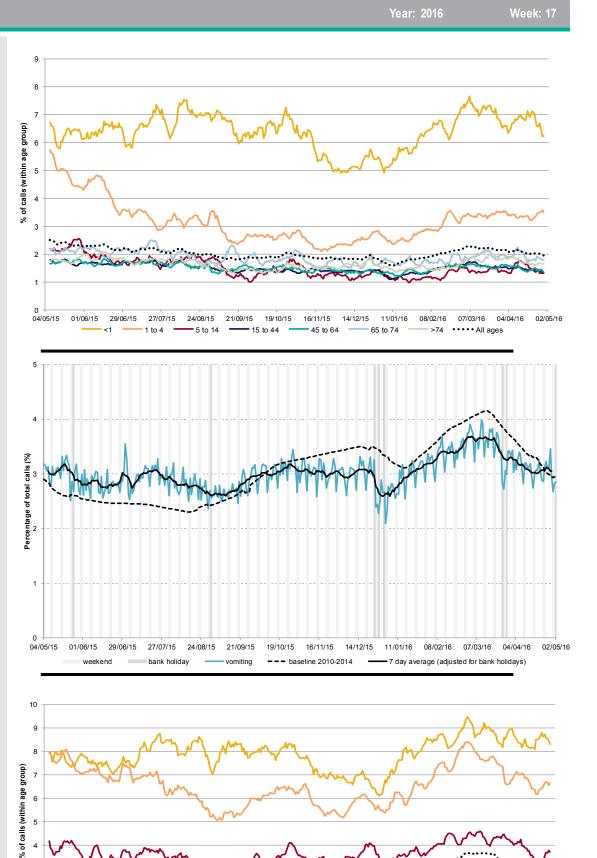

Vomiting calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

03 May 2016	Year: 2016 Week: 17
03 May 2016 Introduction to charts:	 Year: 2016 Week: 17 Weekends and bank holidays are marked by vertical grey lines (bank holidays darker grey). A 7-day moving average (adjusted for bank holidays) is overlaid on the daily data reported in each chart, unless specified. Baselines are constructed using historical data, including data from both NHS111 and the NHS Direct syndromic system (which was replaced by NHS 111 data in September 2013). Seasonal trends reflect the average over past years, with levels adjusted to reflect differences between NHS 111 and NHS Direct data. This new syndromic surveillance system is still under development and further analyses at PHE Centre level will be included in future bulletins. NHS 111 call data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.
Notes and further information:	Further information about NHS 111 can be found at: http://www.nhs.uk/NHSEngland/AboutNHSservices/ Emergencyandurgentcareservices/Pages/NHS-111.aspx The Remote Health Advice Syndromic Surveillance bulletin can also be downloaded from the PHE Real-time Syndromic Surveillance website which also contains more information about syndromic surveillance: https://www.gov.uk/government/collections/syndromic-surveillance-systems- and-analyses
Acknowledgements:	We are grateful to NHS 111 and to HSCIC for their assistance and support in providing the anonymised call data that underpin the Remote Health Advice Syndromic Surveillance System.
