Key points

This release shows the latest monthly information on the slaughtering of cattle, sheep and pigs. It also includes dressed carcase weight and meat production information. The key results for **September 2014** are given below:

- **Cattle:** UK prime cattle (steers, heifers and young bulls) slaughterings were 0.6% higher than in September 2013 at 151 thousand head. Beef and veal production was 68 thousand tonnes, 1.8% higher than in September 2013.
- **Sheep:** UK clean sheep slaughterings were 1.0% higher than in September 2013 at 1119 thousand head. Mutton and lamb production was 25 thousand tonnes, 1.3% higher than in September 2013.
- **Pigs:** UK clean pig slaughterings were 3.6% higher than in September 2014 at 822 thousand head. Pigmeat production was 70 thousand tonnes, 5.7% higher than in September 2013.

This notice will be updated at 09:30 on 20th November 2014. Additional time series which include weekly slaughter averages, production and trade data can be found at https://www.gov.uk/government/publications/cattle-sheep-and-pig-slaughter

Section 1: Monthly numbers of home killed livestock slaughtered

Table 1 shows monthly estimates of the number of home killed cattle, sheep and pigs, slaughtered as meat for human consumption in UK abattoirs. The survey is run according to statistical, rather than calendar months, the number of weeks in the statistical month is specified below.

	September 2013 4 weeks	July 2014 5 weeks	August 2014 4 weeks	September 2014 4 weeks	yr on yr % change
Steers	72	85	71	79	10.3%
Heifers	54	60	50	54	-1.5%
Young Bulls	24	31	21	18	-23.8%
Cows and Adult Bulls	50	49	45	48	-4.5%
Calves(1)	9	10	9	11	24.9%
Clean Sheep	1108	1273	1070	1119	1.0%
Ewes and Rams	166	172	155	153	-7.9%
Clean Pigs	793	970	776	822	3.6%
Sows and Boars	20	23	17	19	-5.9%

Table 1: United Kingdom monthly numbers of livestock slaughtered thousand head

(1)The definition of Calves from May 2014 is "Bovines less than 1 year old". Pre-May 2014, the definition was "Bovines weighing less than 165kg". Please see Methodology page for full details.

Section 2: Average dressed carcase weights

Table 2 shows the monthly average dressed carcase weight of livestock slaughtered for meat for human consumption in the United Kingdom.

Table 2: United Kingdom ave	kilogramme		
	July 2014	August 2014	September 2014
Steers	368.9	364.7	362.6
Heifers	326.1	323.8	322.1
Young Bulls	353.6	351.2	345.7
Cows and Adult Bulls	317.0	313.4	311.9
Calves(1)	54.3	49.9	44.1
Clean Sheep	19.0	19.1	19.2
Ewes and Rams	26.8	27.1	25.8
Clean Pigs	79.5	80.3	81.7
Sows and Boars	146.6	139.7	139.6

(1)The definition of Calves from May 2014 is "Bovines less than 1 year old". Pre-May 2014, the definition was "Bovines weighing less than 165kg". Please see Methodology page for full details.

Section 3: Monthly volumes of home killed meat production

Table 3 shows the monthly volumes of meat produced in UK abattoirs. Data is shown according to statistical, rather than calendar months, number of weeks in statistical month as specified.

Table 3: United Kingdon	thousand tonnes		
	July 2014 5 weeks	August 2014 4 weeks	September 2014 4 weeks
Beef	78	64	68
Mutton and Lamb	29	25	25
Pigmeat	80	65	70

Section 4: Average weekly numbers of home killed livestock slaughtered

Table 4 shows the average weekly slaughter figures for the last thirteen months. The monthly slaughter figures in section one are affected by the number of weeks in the statistical month. To get a clearer measure of trends weekly averages are calculated by dividing the number of livestock slaughtered each month by the number of weeks in the statistical month.

Longer term trends can be seen in Figures 4:1, 4:2 and 4:3, following this table.

											thous	sand h	nead
	2013				2014								
	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	Мау	Jun	Jul	Aug	Sep

Table 5: United Kingdom monthly numbers of livestock slaughtered by country

* Data are confidential

Section 6: Data users, methodology, Definitions and revisions policy

Data users

- Users of the data include the EU Commission where these slaughtering statistics are required monthly under Regulation no. EC.1165/2008. Detailed information on this legislation is available by selecting "Animal Production" at <u>http://epp.eurostat.ec.europa.eu/portal/page/portal/agriculture/legislation</u>. European level statistics on meat products (which includes data tables showing results at EU Member State level) are available at <u>http://epp.eurostat.ec.europa.eu/statistics_explained/index.php/Agricultural_product</u> <u>s#Meat_and_milk</u>
- 2. The livestock industry are also major users of the data, including divisions of the Agriculture and Horticulture Development Board (AHDB) known as BPEX (representing the English pig industry) and EBLEX (representing the English beef and sheep industry). Industry users rely heavily on the numbers of slaughterings and meat production to assess the current state of the industry and predict the available supplies of meat for the coming year. This, in turn, can affect meat prices and trade decisions on levels of imports and exports to maintain supply. Users have always been very keen for the slaughtering statistics to be produced as quickly as possible so that the data is still relevant. For this reason, we collect and publish these statistics to a very tight timetable, publishing within three weeks of the survey date. The "Market Intelligence" and "Market Outlook" Reports on the EBLEX website refer consistently to our statistics at http://markets.eblex.org.uk/markets/market-intelligence-publications.aspx. The BPEX site provides more in-depth analysis of pigmeat production statistics at

BPEX site provides more in-depth analysis of pigmeat production statistics <u>http://www.bpex.org.uk/prices-facts-</u> figures/production/UKpigmeatsuppliesforecasts.aspx

3. Contact details are available on the front page of this notice, for you to send feedback or ask questions about the information provided.

Methodology

- 4. Defra runs a monthly survey of registered England and Wales slaughterhouses. It is a statutory survey (approximately 97) that collects information on livestock slaughter numbers and weight of meat produced. All major slaughterhouses participate in the survey and the response rate is typically 100%. Similar surveys are run by RERAD in Scotland and by DARD in Northern Ireland. Scottish statistics on livestock slaughterings are available in the Economic Report on Scottish Agriculture at http://www.scotland.gov.uk/Topics/Statistics/Browse/Agriculture-Fisheries/PubEconomicReport (Tables A5 and A6). This website also contains contact details and more information. Northern Ireland results are available at http://www.dardni.gov.uk/index/statistics/agricultural-inputs-and-outputs.htm
- 5. The England and Wales slaughter survey accounts for around 90% of the E&W slaughterhouse throughput for each livestock type. These data are supplemented by administrative data for smaller slaughterhouses to give complete monthly coverage of livestock slaughterings.
- 6. Information on the weight of meat produced from a sample of animals weighed at slaughterhouses is obtained from survey respondents, around 55 slaughterhouse

respondents. From the information provided average dressed carcase weights for each animal type are primarily calculated by adding up the total weight of the meat produced and dividing by the number of animals weighed. Cold dressed carcase weights are recorded.

- The volume of meat production is estimated from the number of all livestock slaughtered and average dressed carcase weight information collected. This total 'Home killed' production includes livestock imported into the United Kingdom for slaughter.
- 8. The data are subject to a variety of validation checks which identify inconsistencies in the data. All data are cleaned prior to publication in discussion with the survey respondents.

Definitions

9. To align with EU regulatory requirements, the definition of calves has been changed in this survey from May 2014 onwards to refer to age of animals, rather than weight. The new definition of calves is "bovines aged 12 months or under", whereas previous data (pre-May 2014) referred to "bovines weighing less than 165kg". This change in definition has had negligible impact to both the numbers of slaughterings and the volumes of production as the levels of UK calf slaughterings are so small. Veal production only contributes around 0.7% (470 tonnes) to the total 68 thousand tonnes of beef and veal produced in May 2014. This compares to 0.4% (280 tonnes) in May 2013.

The main difference can be seen in the calf weights as they have jumped up from an average 52kg in April 2014 to 67kg in May 2014. This is due to extra (heavier) animals which are less than a year old so which now fall into the calf category.

10. Steers (or Bullocks): Castrated males over 1 year old, raised for beef.

Heifers: Female animals that have not calved. Over 1 year old, raised for beef.

Young bulls: Non-castrated young males, raised for beef, generally slaughtered around 13 months old.

Prime cattle: All those raised specifically for beef production. Total of Steers + Heifers + Young Bulls.

Breeding bulls: Older cull males, previously used for breeding

Cows: Older cull females, previously used for breeding

Calves: All bovine animals aged 1 year old or younger. Prior to May 2014, the definition was "animals weighing less than 165kg" but this has been amended in line with EU Regulation 1165/2008 definitions. See "Revisions" section for details of the impact of this change.

Revisions policy

11. Figures in this notice are provisional and subject to revision. We will provide information about any revisions we make to previously published information in this

statistics notice and the associated datasets. Revisions could occur for various reasons, including:

- a. if we have not received survey data from respondents we make an estimate based on their previous returns. These estimates will be replaced with actual survey data when it is received.
- b. survey respondents occasionally supply amended figures for previous periods.
- c. if we have not received administrative data for the smaller slaughterhouses we make an estimate based on previous data received. These estimates will be replaced with actual data when it is received.
- 12. The change in Calves definition in May 2014 (from <165kg to 1 year old or younger) has had negligible impact to both the numbers of slaughterings and the volumes of production as the levels of UK calf slaughterings are so small. Veal production only contributes around 0.7% (470 tonnes) to the total 68 thousand tonnes of beef and veal produced in May 2014. This compares to 0.4% (280 tonnes) in May 2013. The main difference can be seen in the calf weights as they have jumped up from an average 52kg in April 2014 to 67kg in May 2014. This is due to extra (heavier) animals which are less than a year old so which now fall into the calf category.</p>
- 13. This month minor revisions have been made to the data from June 2014 to August 2014 as administrative data has now been received for these months, so has replaced previous estimates and amended survey data has been received. The scale of revision is small, for example the July 2014 UK Beef production has only been revised by around 3730 tonnes (0.5%).
