

THE MORECAMBE BAY INVESTIGATION

University Hospitals of Morecambe Bay NHS Foundation Trust (UHMBT)
Maternity and Neonatal Services Investigation

Wednesday, 5 March 2014

Held at:
Park Hotel (Council Building)
East Cliff, Preston, PR1 3EA

Before:

Dr Bill Kirkup CBE -- Chair
Mr Julian Brookes -- Expert Adviser, Governance
Dr Catherine Calderwood -- Expert Adviser, Obstetrics
Ms Jacqui Featherstone -- Expert Adviser, Midwifery
Professor Jonathan Montgomery -- Expert Adviser, Ethics
Professor Stewart Forsyth -- Expert Adviser, Paediatrics
Dr Geraldine Walters -- Expert Adviser, Nursing

Ms Oonagh McIntosh -- Secretary to the Investigation

Ms Hannah Knight - Analyst

PANEL MEETING

Record from the Stenographic notes of Ubiquis,
Clifford's Inn, Fetter Lane, London. EC4A 1LD.

Index

PANEL DISCUSSION

1

1

2 CHAIR: Right, welcome. I think we're all
3 here. It's slightly past 11 a.m. and we have
4 a fair amount of business to get through today
5 so thank you for attending. You are very
6 welcome.

7 I do apologise that I was not able to be
8 at the last meeting and thanks to Julian for
9 more than ably standing in. I have mostly
10 caught up with where we got to and it's clear
11 that you had a very good and productive
12 discussion despite the transport difficulties
13 that everybody had. Well done to everybody
14 for getting here.

15 You will have seen that the PSO, the
16 Parliamentary Health Service Ombudsman Report,
17 was reported last week. I hope you have all
18 had a chance to read it. It's worth a read.
19 If you are interested in these things it does
20 get a mention in Medicine Balls in this
21 week's Private Eye as well, as we do we. We
22 should take encouragement from that.

23 I understand that Geraldine has agreed to
24 lead the Trust management sub-group. Thank
25 you for that. That's much appreciated. I

1 think that it would be useful to have a
2 conversation about consistency of approach of
3 all of the subgroups and I think to some
4 extent we will pick that up at the appropriate
5 time on the agenda today but, if necessary, I
6 think will have a further discussion about
7 that depending on how far we get to.

8 I think one of the most important things
9 for today is making significant progress on
10 the interview programme. Because my
11 experience of these things is that the
12 interviews and the arrangements that go with
13 them and sorting out what's been said and all
14 that process afterwards is the biggest
15 regulating step that we have. It will be the
16 key regulating step. We absolutely must come
17 away from today with the ability to kick that
18 process off. Starting this afternoon. I
19 think that's what we need to do.

20 We need to come back to freeing up time in
21 diaries but we will do that at the appropriate
22 point on the agenda.

23 We've got not just a significant number of
24 interviewees to look at, to interview, we also
25 have masses of documentary evidence, quite a

1 lot of which still has not come through
2 because of difficulties with successor
3 organisations processing 39 boxes of files
4 that have just been dumped on them and all the
5 rest of it. It's clear that we have a
6 challenging programme.

7 I have had a couple of conversations with
8 Catherine earlier in the week because it's
9 very clear that obstetrics is going to be a
10 key pinch point in all this. There is a load
11 of evidence to look at, there is lot of people
12 to interview, there is a lot of careful
13 consideration that we need to do and it's very
14 clear, sparing your blushes, that you have a
15 pretty heavy workload outside of this panel.
16 You have a day job in Edinburgh and NHS
17 England to cope with as well. As a result of
18 that I'm going to recommend that we take
19 somebody on to work alongside Catherine to
20 give some support on the obstetric front and
21 the person who was recommended and who would
22 be ideally suitable, in my view, and Catherine
23 confirms that she will be happy to work with
24 him is Jim Walker from Leeds.

25 I do not know whether anybody is familiar,

1 apart from Stewart, which I will come back to
2 in a second but he would be a strong
3 recommendation, I think. If that is
4 acceptable to you all as a way forward?

5 MR BROOKES: Is that as an additional member of
6 the group or as a supporting person?

7 CHAIR: A supporting person. An associate
8 Panel member, not a full Panel member. There
9 is an important point in that. We need to
10 keep Catherine in the lead in all these
11 things. You have clearly formed a bond with
12 many of the families and developed some trust
13 there and you are clearly very familiar with
14 all of what's gone on up to now, which he
15 won't be.

16 The second point that I do need to mention
17 is that unknown to both of us there is a
18 family connection with another Panel member,
19 Stewart, a relationship by marriage, I think.

20 PROFESSOR FORSYTH: Yes, he's my brother-in-law.
21 He doesn't know or he didn't know - that I
22 was on this.

23 PROFESSOR MONTGOMERY: He did know he was your
24 brother-in-law.

25 CHAIR: How did you break it to him!!

1 PROFESSOR FORSYTH: So personally I have no concerns
2 about that, there is no family feuds or
3 anything to declare but as long as you feel
4 that there is nothing that may be picked
5 up as an adverse effect or impact on the
6 Panel. I have certainly no personal concerns
7 to declare.

8 CHAIR: Thank you. I mean, I think two
9 things, it's important that we register it at
10 this point because I do not want anybody coming
11 along later and saying, "There is some
12 connection that we didn't know about."
13 Secondly, I would recommend that it doesn't
14 alter the position on this. Most important on
15 that is that Catherine is the lead on these things
16 things and he will be working with you on
17 them.

18 If it had been a question of full panel
19 membership that would be different but it is
20 not. So that would be my recommendation. Do
21 I hear any disagreement? You are content with
22 that? Okay. Thank you. I appreciate it.

23 Let's move on to the next agenda item in
24 that case. Apologies. We don't have any
25 apologies. Full compliment. Well done to

1 everybody.

2 Notes of the previous panel meeting and
3 matters arising.

4 MS McINTOSH: Only really the one and Tom is going
5 to lead on it and it's building on a
6 discussion that you had the last time about
7 the responses to the notice that went into the
8 local paper. It's agenda item 5.1, so you
9 have a table which is an update but Tom will
10 talk about that.

11 MR BACON: The key points since we last met are there
12 have been four more contacts made with the
13 Investigation in response to the notice
14 placed, bringing the number up to 45 in total.
15 This table has eleven of those cases in and
16 that's where we received proformas from those
17 individuals. Those are all considered to be
18 in scope because they refer to standards of
19 care receive in maternity and neonate services
20 in the Trust during the period in question.

21 Also in your pack is a draft letter which
22 just picks up on the discussion that took
23 place at the last panel meeting about making
24 sure the people who have got in touch and have
25 provided information are kept aware of what's

1 being done with that and so basically explains
2 that the Panel, you, would be considering
3 their information in more detail. At this
4 stage it is not expected they will be asked to
5 come and be interviewed or provide oral
6 evidence and that the Trust themselves may get
7 in touch with those people and seek their
8 permission to supply the Investigation with
9 medical information.

10 So really the question for today is does
11 that letter cover the points that you wanted
12 considered from the last meeting? Is there
13 anything you want taking out or additionally
14 including? Just to note that we have further
15 contacts and we will probably have more
16 information at the next one, two meetings.

17 CHAIR: Any comments?

18 PROFESSOR MONTGOMERY: Not quite sure I would be
19 clear quite why these are alternatives.
20 Relating to a specific incident I mean I might
21 think my care going on was a specific
22 incident. I am just wondering how this would
23 be read by people because is the issue about
24 trying to flag up whether we need to the
25 clinical notes? Is that the reason we have

1 the alternatives in there?

2 MR BACON: In the letter?

3 PROFESSOR MONTGOMERY: Yes.

4 MR BACON: Yes. As I understand the position,

5 because the Trust obviously own the medical

6 information, if we want to see the medical

7 notes because there was maternal death and in

8 order for the Trust to supply that they may

9 have to ask that family's permission to supply

10 that information, so that would be relevant in

11 some cases. So the reference is included in

12 the letter so that if the Trust do get in

13 touch with them it doesn't come as a surprise.

14 PROFESSOR MONTGOMERY: I'm wondering whether it

15 would be better to include that in all of

16 them? Because we may discover a bit later on,

17 when we start we do not want to see it, we

18 then think do we need to look at the letters.

19 I don't think warning that that's a

20 possibility raises hares running. I wonder

21 whether one letter without that alternative

22 might be a better way of doing it.

23 MR BROOKES: Just a point on that. I try to read this

24 from a family's perspective. It's the

25 question of what happens. If we're saying you

1 are now included there is no indication that
2 you maybe called for if necessary, you won't
3 necessarily be called for interview. We will
4 look at your result. There is no indication
5 about what the outcome for the family would
6 be. I wonder if it's worth saying something
7 about and if it is relevant it will be
8 included in the report. I don't want them
9 anticipating they will get a personalised
10 response from the Panel about their particular
11 case. It's about this will then be taken to
12 evidence as part of the Investigation, rather
13 than anything specific because it doesn't say
14 anything about what happens. It just leaves you
15 thinking, yes, you are going to be included at
16 and you go well, what does that mean? We need
17 to provide something just along those
18 lines.

19 DR CALDERWOOD: Anticipating then, was going to
20 make the same point. What if they come back
21 and say I would like something specific to me?
22 We would probably at this stage need to think
23 through our process, which perhaps more
24 appropriately then is Trust, because these
25 people have been variously investigated or not

1 already, we take their information and it's in
2 a report but with no direct face-to-face
3 feedback or even a bit of feedback.

4 CHAIR: Okay. I mean, depends to a certain
5 extent on how manageable the numbers are. I
6 do not anticipate that everybody would want to
7 have personalised feedback.

8 MR BROOKES: You are right. You are absolutely
9 right. It is one we need to think through. I
10 hadn't thought of it that way. We need to be
11 clear this is about an Investigation and the
12 report that comes out from the investigation.
13 It may be that our recommendations are that
14 the cases that haven't been reviewed need to be
15 thoroughly reviewed. I hadn't thought through
16 about personalised response from the Panel and
17 whether that was appropriate.

18 DR CALDERWOOD: Or a response where we have agreed
19 that something else will happen because
20 certainly for families, dates and, you know,
21 finality of a report being published, they
22 will know the date, they will look for that as
23 an answer and it may then not be a closure for
24 some of them.

25 PROFESSOR MONTGOMERY: That's really important.

1 Thinking through how we would we respond. We
2 have got an FOI request after the report is
3 published. If we have an FOI request that
4 said, "What was the summary the panel advisors
5 made of my case?" We need think through do we
6 need to manage evidence in a way that will
7 enable us to say that here is the page that
8 logs the evidence that the Panel identified
9 that related to your case and if we had any
10 particular conclusions what those conclusions
11 were so that we can gear up to being able to
12 respond to requests and that might be that we
13 recommend that they discuss that with the
14 Trust or we might send to it the Trust saying
15 we recommend that you have some conversations
16 but that would be independent of what would go
17 in the report but I think we could reasonably
18 expect the families to ask a question like
19 that.

20 CHAIR: Yes, I think so.

21 DR CALDERWOOD: Whatever the follow up it will
22 need to be agreed. I do not know, we would
23 need to agree with the Trust that they are
24 prepared to take that step forward.

25 MS McINTOSH: Maybe we could have a separate

1 conversation with Trust and say let them know
2 now the number of responses, not detail of but
3 the type of responses and the wishes of the
4 Panel and actually agree that and come back to
5 you with some proposals. We might need to
6 engage them and they might go, "Not sure about
7 that" and we need to have that discussion.
8 Does that feel reasonable?

9 DR WALTERS: You said there were 45?

10 MR BACON: Yes, in total.

11 DR WALTERS: So do you know of those 45
12 which have been complaints to the Trust.
13 already?

14 MR BACON: Of the 45 so far we've had 24
15 submit further information. Of those, this is
16 a rough estimate, I would say maybe half had
17 made a complaint, which had either been
18 unsatisfactorily dealt with or they have
19 not taken any further but they still have
20 concerns.

21 DR WALTERS: Because I think some of these
22 we have to bat off down what would be the
23 normal route. Some going from 2013 which, if
24 they have been subject to a complaint, have
25 they had a response? Are they not happy but

1 they have not gone back to the Trust? We
2 might have to say, "Here is a letter of
3 complaint. We would advise you to send this
4 back to the Trust and go down the complaints
5 process" because otherwise this is going to
6 get out of hand.

7 CHAIR: What we do not want to do is trip
8 over an ongoing Trust process.

9 DR WALTERS: My initial question was how
10 many of these are the Trust looking at as
11 serious incidents or did look at as serious
12 incidents and how many were complaints that
13 the Trust think are closed down that obviously
14 the person thinks are not. So rather than
15 send a bit of a sweeping letter which gives
16 the impression that we're going to look at it.

17 MR BACON: You think a personalised letter would
18 be more appropriate?

19 DR WALTERS: I think a proforma needs to
20 pick up a bit more detail about the individual
21 issues before we decide what to do --

22 CHAIR: Identifying what's already been
23 done, what's happening.

24 MR BACON: This is a summary of those because the
25 proformas are long, some are handwritten.

1 They would not be easy in this format to read
2 quickly, so this is a summary of the
3 information contained within that that the
4 secretariat has done.

5 Absolutely, I think, at some stage, and
6 actually I would welcome the Panel's thoughts
7 about how you would like to see the proformas.
8 Because that's something that the clinical
9 sub-group might like to consider at one of
10 their meetings, actually the detail of those,
11 we can absolutely provide, we have got them all
12 electronically, they can go on Huddle very
13 quickly.

14 CHAIR: It seemed to me, just on a very
15 quick overview of them, that there are a
16 couple that raise questions about
17 communication and attitudes and so on and
18 there are maybe four or five that on the face
19 of it raise clinical incident questions
20 similar to the sort of things we had heard
21 from the families. I certainly think that
22 however we deal with the other we ought to be
23 seen to be dealing with at least those four or
24 five and whether it's compatible with the way
25 we dealt with the index families.

1 DR WALTERS: Do we know if any of these were in
2 their list of SUIs?
3 MS McINTOSH: We haven't cross-referred yet. If
4 they are not we can look at them in random
5 sampling.
6 DR WALTERS: We need information. I do not
7 know if the Trust could help. Is this a
8 complaint already?
9 CHAIR: We have to be a wee bit careful
10 because about that though, don't we? Because
11 we do not necessarily know whether these
12 people would consent to us sharing what they
13 have said with the Trust.
14 DR WALTERS: We can go back to the
15 individuals and ask them what stage and some
16 of them are telling us what stage they are up
17 to. If the complaint is ongoing then it is
18 very unfair of us to intervene in a process
19 that the Trust has to complete.
20 CHAIR: But on the other hand it's
21 reasonable for us, I think, under those
22 circumstances to ask the Trust to keep us in
23 touch with what they are doing.
24 PROFESSOR MONTGOMERY: Two things. One is, I do
25 not think we should be frightened of

1 saying we're not going to do very much about
2 this. If we've got a reason for doing it, be
3 insistent and clear and if we are going to
4 say, let's say the 2013 complaints we're not
5 going to look further at those because our
6 working assumption is that they will not yet
7 have come to a conclusion.

8 Linked to that, I think we need to reflect
9 back how it is going to help us address the
10 Terms of Reference. If the bit of the Terms
11 of Reference is about how the Trust responds
12 to complaints I think it is unreasonable for
13 us to try and draw much of an inference from
14 complaints in a similar process as opposed to
15 complaints that have had a reasonable chance
16 to go through.

17 The bit about of Terms of Reference which
18 is around the current fitness of the
19 organisation, I think we should have a feel
20 for how many complaints are coming through and
21 are they all very strong. We might use this
22 to say how does what we were told in the
23 advert reflect the information given by the
24 Trust. But we perhaps wouldn't need to go
25 into following them through when we do not

1 believe the Trust has had a chance yet to deal
2 with that.

3 So I think we need to work on the set of
4 consistent lines, do we not, we are happy to
5 say to the families this is what we did do
6 with your notification and this is what we
7 didn't do.

8 CHAIR: Yes.

9 MR BROOKES: I hesitate in some way to say this
10 because I do not want to sound like the
11 horrible person in the room kind of thing but
12 I want us to be clear that are we acting with
13 within Terms of Reference if we're going back
14 in terms of individual cases? Is that within
15 our scope? Because there is a difference
16 between us making comments about the
17 complaints processes and using the relevant
18 cases to make recommendations about
19 systems, processes and our assessment of
20 whether they are and acting as a broker for
21 individual cases back to the organisation and
22 taking on actions as a panel on their behalf.
23 Either way, I just want us to be clear on what
24 we're doing.

25 The second bit is actually probably

1 morally more right but I just want to be
2 clear, are we acting within our Terms of
3 Reference if we do that because if we're not
4 we just need to make sure we're not working out
5 of scope. Do you see what I mean? I just want
6 to raise it because I can see absolute good
7 things to do and say in terms of the individual
8 cases that we raise but are we using those to
9 identify how the systems and the organisation
10 works or are we actually going to come back
11 and in the Report or separately to the Report
12 say, this is what happened in your individual
13 case and this is what we as a Panel want the
14 organisation to do? They are different and I
15 just want to be clear that we know what we are
16 setting ourselves up to do at that point.

17 MS McINTOSH: Our Terms of Reference talk about
18 how the Trust responded to serious untoward
19 incidents and the management of incidents. I
20 think you are right that we won't talk about
21 individual cases because our report shouldn't
22 refer to individual cases but we can say legitimately
23 we have looked at a random sample including the cases
24 that were brought to us in the response to the notice
25 that we placed in local papers and this

1 pattern flows, or is it interesting that with
2 people who came to us that different patterns
3 emerged or, yes, they were or, no, they
4 weren't handled properly. So I think they can
5 legitimately be included in the work that the
6 Panel are doing and the Investigation is
7 doing. They need to be incorporated into the
8 whole and I think that's how they are used.

9 MR BROOKES: From my point of view that's
10 systematic, systemic and generic but it's not
11 about providing that individual family
12 necessarily with a bespoke response coming
13 from the Panel. That's what I wanted us to be
14 clear on.

15 PROFESSOR MONTGOMERY: My point earlier, Julian,
16 we need to anticipate what we would be asked
17 after the event. We need to know what we will
18 have in place.

19 MR BROOKES: In terms of what we say to people,
20 we're not saying that we will give you
21 specific response to yours. It would be part
22 of the evidence base on which we base our
23 overall assumptions.

24 CHAIR: Yes.

25 PROFESSOR FORSYTH: I agree. I think what we have

1 done is, just reinforcing what Oonagh is saying,
2 we decided at the start we were going to
3 review a number of cases, which included the
4 index cases, a sample from SUIs and to make
5 sure there was no other cases out there that
6 had not been brought to the attention of
7 the Investigation we advertised. We
8 have these cases now. They need to come into
9 the pool of cases. If we're going to plan
10 this we need to be clear what the strategy is
11 in terms of case record reviews and how that
12 is documented and part of that process is
13 examining what we then feedback to the
14 families at the end of the day.

15 PROFESSOR MONTGOMERY: Our first question is how
16 confident are we that the Trust understands
17 what incidents are in the process and
18 the first thing the process is asking for
19 is how many cases came through that weren't
20 handled.

21 CHAIR: Okay. I can see a potential
22 difficulty when we get to the end of the
23 process though that families who were part of
24 the initial group are going to get a slightly
25 different deal from the ones who have now

1 joined in as part of this process. I expect
2 somebody sooner or later to say, well, that's
3 unfair.

4 DR WALTERS: That was my point because I
5 think we talk about the information strategy,
6 the evidence strategy, we really have to
7 decide whether we are going to look at all
8 these however many cases or not and I think,
9 depending on how the conversation goes between
10 us, I might propose that we didn't look at all
11 of them. So it's hard to selectively say
12 somehow we've got to address these ones. So I
13 think it's something about sort of stratifying
14 them, 45, because we only have the 11 and how
15 many of them we would we want to respond back
16 to saying thank you for your information, this
17 will form part of our review of evidence but
18 we do not envisage your case being looked at,
19 singled out for special attention or maybe
20 said a little bit better than that.

21 CHAIR: Got you. Or alternatively, yours
22 raises different issues which are comparable,
23 I'm not expressing it correctly and,
24 therefore, we will look at it on the same sort
25 of basis.

1 PROFESSOR MONTGOMERY: Could we express it in
2 terms of cases which raise issues that we've
3 not seen and, therefore, are not yet able to
4 investigate or cases that are constant with others.

5 DR WALTERS: Yours is a new thing.

6 PROFESSOR MONTGOMERY: Some explanation. The key
7 thing is we have to be able to explain
8 consistently why we have treated them in the
9 way that we have.

10 MR BROOKES: We have to tell them in these letters
11 what we're doing with them.

12 DR CALDERWOOD: There should not also be, I mean,
13 everybody who has something to query does not
14 have a panel like us to deal with it. So
15 there are processes for all of these that
16 should be in place. We can have a discussion
17 about whether they are adequate, that's why
18 we're here, but surely I just feel if I was
19 one of these ones parents that I have read and
20 have given their story and they were told,
21 thank you but we've got a case that's similar
22 to that, that's doesn't help me about my
23 daughter or son that died. So if they have
24 been brave enough to come forward and give us
25 detail, they clearly haven't had the answers

1 they want and so we need to see what the
2 proper structures are, don't we? To say we
3 suggest you this would be who to write or to
4 the patient advocate and so on, even if they
5 do not want to take a complaint forward.
6 Again, I suppose that has to be cleared with
7 the Trust.

8 CHAIR: I am seeing a number of different
9 strata which we have to work through. One of
10 them is this raises serious significant issues
11 that we need to consider on a individual
12 basis, i.e., they are equivalent to one of the
13 people that came to talk us to us in the first
14 place, or this raises issues which we will
15 take into account in the overall report about
16 how complaints are handled but not look at it
17 individually and here's how we recommend you
18 take this forward. There maybe another couple
19 underneath that.

20 DR WALTERS: What would happen in similar
21 situations, but this is probably too far down
22 the route, if you have an incident in the
23 Trust there is some sort of help line set up.

24 CHAIR: Absolutely.

25 DR WALTERS: Which wouldn't be us.

1 CHAIR: That's true.

2 DR WALTERS: I think some of these indicate
3 that there still needs to be some sort of
4 route.

5 CHAIR: I agree, yes. Yes. Jonathan, did
6 you want to come back?

7 PROFESSOR MONTGOMERY: Reflecting on something in
8 the latest commissioner's report which was
9 around in a case where somebody died you would
10 expect a more serious response. I wonder
11 whether we need to think through should we in
12 cases of deaths be seen to be making sure we
13 are going to look at this a little bit closer,
14 even though it should be dealt with elsewhere.
15 I wonder whether that may be something we
16 should be doing?

17 PROFESSOR FORSYTH: I did wonder about that
18 myself. A few of these are obviously deaths
19 and I think we cannot treat that lightly, oh,
20 thank you very much but we've already got
21 other cases.

22 To me I think that to me I think that any
23 case where there has been a death and the
24 family have got concerns about the quality of
25 care I think it's difficult for us not to

1 actually use cases and to then have a
2 response for the family if they request it.
3 CHAIR: The death or serious harm?
4 PROFESSOR FORSYTH: It is where do you draw the
5 line for me. I think we have again this
6 process and we need to think through this on
7 what are our criteria at each level in terms
8 of communicating with families.
9 MS FEATHERSTONE: It is their hope, isn't it? We
10 have just opened the door for them.
11 DR WALTERS: Yes.
12 CHAIR: Can we take that away and come back
13 with something -- probably by e-mail for the
14 next Panel meeting -- that attempts to
15 progress that along those lines so then we
16 stratify the cases in there. Okay.
17 MS McINTOSH: By then we can actually have done
18 some work to look at the list, because
19 some of these should be included in the list
20 of deaths we have got from the Trust anyway so
21 we can cross-reference to see if any are on
22 the list of serious incidents.
23 MR BROOKES: Very quickly just to check because
24 that relates to how we describe this
25 left-hand -- finalise this left-hand --

1 CHAIR: I would not propose finalising --

2 MR BROOKES: I just want to make sure that I am

3 assuming these have had acknowledgements and

4 know that we are considering it.

5 MR BACON: Every pro forma we receive gets an acknowledgement.

6 MR BROOKES: I would not want a black hole.

7 MR BACON: In the interim shall we ensure that the

8 pro formas we received are uploaded to Huddle,

9 so that you can look at them.

10 MS McINTOSH: And they will indicate -- we will

11 indicate with those if they are on the list of

12 deaths that the Trust has supplied us with

13 neonatal deaths, long-term deaths, maternal

14 deaths and in the list of serious incidents;

15 we will do that spade work.

16 CHAIR: Thank you. I was optimistic in

17 that we can tick off that agenda item.

18 MS McINTOSH: It would be really good.

19 MR BROOKES: It is pressing on other matters.

20 CHAIR: Are we finished on actions from the

21 last Panel meeting? All right.

22 MS McINTOSH: The rest are substantive agenda

23 items.

24 CHAIR: Thank you.

25 Item four is workforce data. We have

1 raised queries collectively and individually a
2 number of times about staffing levels and all
3 of that. Hannah has done some work on this.
4 Can you help us on that? We might have to
5 move.

6 MS KNIGHT: You might have to rearrange your
7 chairs.

8 The workforce question, which has been
9 raised under Terms of Reference one, was
10 around whether there are any workforce-related
11 issues during the period of the Investigation
12 at the Trust. This data has been prepared by
13 the Health and Social Care Information Centre.
14 This is preliminary data and it is based on
15 the electronic staff records, which began in
16 2008. Prior to that there was an annual
17 survey every September of the workforce; we
18 have not got access to that data yet, but the
19 Information Centre has agreed to conduct an
20 analysis and on our behalf we need to confirm
21 with them exactly what questions we want them
22 to answer.

23 You have copies of these slides in your
24 pack as well. The first one relates to staff
25 absence during the period, with the Trust in

1 blue here and the North West is shown in red.
2 On the whole you can see that staff absence at
3 the Trust has been below average, but then
4 around 2011 there has been an increase.
5 PROFESSOR MONTGOMERY: Just to check we are
6 comparing obstetrics and maternity in the
7 North West; or is this all staffing in the
8 North West?
9 MS KNIGHT: Obstetrics and maternity.
10 DR WALTERS: How are you defining
11 "absence"?
12 MS KNIGHT: This has been conducted by the
13 Information Centre, they are experts in
14 analysing workforce data and it is very much
15 more complicated than you might think so.
16 CHAIR: There are possibly questions of
17 definition are there?
18 DR WALTERS: Yes.
19 CHAIR: That some people will classify
20 groups of staff one way and some another.
21 MS KNIGHT: It might be useful to clarify with
22 them exactly what defines it.
23 PROFESSOR MONTGOMERY: We are not necessarily
24 interested in what definitions are, so much as
25 are they genuine comparisons?

1 CHAIR: Yes.

2 PROFESSOR FORSYTH: Consistent so they show a
3 trend, which is probably comparable.

4 DR WALTERS: We would be interested in
5 definitions because is that sickness absence?
6 Is it people suspended who are employed? Is
7 it unpaid leave?

8 MS McINTOSH: Yes.

9 MS FEATHERSTONE: The same for each member of staff
10 whether they are midwives/doctors/healthcare
11 assistants, the whole.

12 MS KNIGHT: I will take the questions back to our
13 contact there.

14 This is the stability index, which is
15 defined as the number of staff present both at
16 the start and the end of the period, over the
17 number of staff present at the start of the
18 period. Again this is between 2008 and 2013.
19 We have in red the North West, as it is shown
20 in the stability index. The blue is the
21 Trust's. We can see that, on average, the
22 Trust's workforce is much more stable than
23 average. I suspect this maybe related to its
24 geography.

25 PROFESSOR MONTGOMERY: Is this month by month? So

1 this is the number of staff who left each
2 month?

3 MS KNIGHT: I think it is every two months.

4 PROFESSOR MONTGOMERY: Staff member period.

5 MS KNIGHT: I think it is every quarter from the
6 dots on the line. April, June, August. Two
7 months maybe. Every two-month period.

8 The slide shows how the obstetrics and
9 maternity workforce changed beginning in 2008,
10 again up to 2013. This top graph relates to
11 the doctors. The bottom graph is non-medical
12 Section 30 staff. Full-time equivalent by
13 grade.

14 Between September 2010 and September 2011,
15 there was an increase in the number of doctors
16 from 12 to 20. You can see, I think, the
17 number of registrars increased from 10 to 15.
18 The number of associate specialists from one
19 to three. The number of specialist doctors
20 from one to two. At this stage it is the same
21 since 2011.

22 CHAIR: That is a big jump, isn't it?

23 MS KNIGHT: Yes.

24 CHAIR: Do we have any explanation for
25 that?

1 DR WALTERS: They were concerned --
2 CHAIR: Well, yes --
3 MS KNIGHT: Around the time the concerns were
4 raised.
5 MR BROOKES: Do we know what the establishment was
6 at the time? Was it for example the position
7 of 10 the establishment; or they increase the
8 establishment as they had lots of vacancies
9 and they have filled?
10 MS KNIGHT: I do not know whether it was an issue
11 of vacancies or not.
12 CHAIR: You can take that up with the
13 Trust.
14 DR WALTERS: They look like they
15 increased.
16 MR BROOKES: It looks like.
17 DR WALTERS: Increased registrars after
18 September 2010. They are migrating a little
19 bit.
20 DR CALDERWOOD: They may be responding to concerns.
21 The registrars rotate in the North West and
22 there may have been changes in the number of
23 registrars that were being allocated to them.
24 So there has been an increase, but they may
25 not have been shown that that will be

1 sustained, which it has not been, and the
2 number of Trusts have then taken the option of
3 trying to employ permanent staff specialist
4 doctors; that is often not successful so they
5 end up getting consultants so there is a
6 general reduction in the number of training
7 grades doctors available. A lot of Trusts are
8 responding to that because their doctors are
9 relatively expensive. By saying, well, in
10 fact, we may need to up our permanent members
11 of the fully-qualified/fully-trained staff, by
12 the combination of consultants and specialist
13 doctors. Actually there has been an expansion
14 in general in those grades over that time
15 period because of the reduction of middle
16 grade.

17 MR BROOKES: Should you ask the Trust to explain
18 those figures because you are right that makes
19 absolute sense, but there might be another
20 reason.

21 DR CALDERWOOD: Yes, I am suppose I am talking
22 generally that might be the case.

23 PROFESSOR FORSYTH: I think this is a response to
24 other reports that have happened in the past
25 where we have seen Manchester's clinical

1 review. I think they said they have not got
2 enough staff covering 24/7 and they have
3 thrown huge investment, in fact they
4 continue to do so, in numbers for 2014
5 in paediatrics, I know, who are
6 contributing to the neonatal care, they
7 are almost at double their consultants in
8 total.

9 DR WALTERS: When did the hours go up from
10 96.

11 DR CALDERWOOD: On the labour ward? Well the
12 recommendation has actually been in place
13 since 2005, or 2007. In fact, this size of
14 unit it would only expect 40-hours a week
15 consultant.

16 DR WALTERS: I assume that CNS required
17 something in 2010; that is why they did that.

18 PROFESSOR FORSYTH: I think the value of this
19 information, I think, is when we get to the
20 interviews, where we are interviewing the
21 previous Chief Executive and directors,
22 medical directors and directors of nursing,
23 and saying, "Well, you were there, in the
24 early part of 08/09 et cetera, so since then
25 you have actually massively increased the

1 medical staff, but were the problems related
2 to the fact you were running a service, which
3 had an insufficient medical staff to support it?"

4 I think that is the kind of information
5 that will be useful. The actual how detailed
6 and accurate it is, I mean there is a trend,
7 which I think is important here; something has
8 happened, why has it happened and was it done
9 because one problem previously was inadequate
10 medical members of staff.

11 DR CALDERWOOD: You have got to remember there are
12 only three or four babies born a day in this
13 unit, and the rota must be a 24/7 rota, or it
14 could not be a consultant-led unit. So they
15 were on a bit more often. They were not run
16 off their feet.

17 PROFESSOR FORSYTH: I think that is what we need
18 to get to if we are going to be
19 also making recommendations in terms of
20 is the unit now fit for purpose, and the
21 fact that we have got dozens of staff there
22 not getting a lot of experience and becoming
23 deskilled might not be the answer. You know,
24 these are issues as far as I am concerned, when

1 it comes to interviews.

2 CHAIR: I think that is spot on, yes. I do

3 not think we can be as diagnostic as that. It

4 helps us to answer that.

5 DR WALTERS: Yes.

6 MS KNIGHT: Before I move to the next slide we

7 talked about the increase in the number of

8 doctors. There has been a 9 percent increase

9 in the number of non-medical staff in the

10 maternity unit between 2012 and 2013.

11 Having spoken to the contact at the

12 Information Centre, there are other types of

13 information that his team will be able to

14 produce for us and, for example, looking at

15 the midwife to birth ratio during the period,

16 looking more in depth at the skill mix

17 available and how that compares to similar

18 units, and looking at the staff absence and

19 retention through the whole period of the

20 Investigation, and using data prior to 2008

21 and the census.

22 Finally there is unpublished data

23 available on the expenditure on bank staff and

24 overtime during the period. We want to know

25 whether that will be of interest to the Panel.

1 PROFESSOR FORSYTH: Yes.

2 MR BROOKES: Yes.

3 MS KNIGHT: Can I get your initial thoughts on the
4 four questions then I will take you through it
5 before we contact them again.

6 PROFESSOR MONTGOMERY: Can I ask about the similar
7 unit problem? How easy it is to define
8 acceptable comparators?

9 MS KNIGHT: Yes. We did some initial looking at
10 other rural, geographically-isolated units
11 with a similar number of babies a year and
12 there were six or seven. I think, Bill, you
13 have looked, but we wanted to avoid drawing
14 direct comparisons between the units because
15 it is such a unique situation in Morecambe.
16 One for them would be to compare all the units
17 and then you have trends that are available
18 for all the units, regardless of whether they
19 are similar or not if we want to avoid issues
20 of selecting.

21 PROFESSOR MONTGOMERY: There is a whole series of
22 figures that I do not know the answer to and
23 one is talking about such a small number of
24 comparators; are they ever going to be
25 comparable, or will they all have quirks on

1 how they organise things and what they expect
2 midwives to do? I mean actually we might not
3 get very much from the comparisons, it might
4 be that the trend analysis, that is more
5 useful to us than the snapshot comparisons.

6 DR CALDERWOOD: We have three units within the
7 Trust that are different from each other. You
8 already have figures where they are squashed together,
9 so then we need comparisons of each type of unit
10 put together.

11 PROFESSOR MONTGOMERY: We probably cannot put much
12 weight on the similar-unit type of comparison?

13 MS KNIGHT: I am understanding then that having
14 trends at a unit level, rather than Trust
15 level, would be what you feel is most useful
16 rather than trying to benchmark against the group.

17 DR WALTERS: It will be good to see the
18 graph focused.

19 MS KNIGHT: Broken down.

20 CHAIR: Yes.

21 PROFESSOR WALTERS: Also would there be community
22 midwives in these?

23 MS KNIGHT: I will double check. I had assumed so
24 because they would be on the database.

25 DR WALTERS: Yes. So if you could do all

1 the midwife to birth ratio, Jackie, you would
2 want to know about the unit, do you think
3 you should leave out community midwives?
4

5 MS FEATHERSTONE: No, I would include because of
6 the whole picture. It is an
7 integrated service so community midwives are
8 part of the Trust community and it should be
9 that when you do the birth rate you include
10 community.

11 DR WALTERS: Would we want to know actually
12 how many hospital-based midwives there are?

13 DR CALDERWOOD: Very difficult to answer.

14 MS FEATHERSTONE: Yes, because depends how they
15 work. Everybody works in very different ways.
16 You have to use it as a whole. Yes.

17 PROFESSOR MONTGOMERY: I would suspect we will
18 not get much of a comparator.

19 MS KNIGHT: Is the midwife to birth ratio based on
20 needing midwives to provide antenatal care?

21 MS FEATHERSTONE: It is the whole package. The
22 whole thing.

23 DR CALDERWOOD: Certainly in the Manchester report
24 that Stewart referred to earlier, there was
25 comment, I remember, about there being a low

1 midwife ratio. In fact in response to that
2 they recruited quite a significant number of
3 senior midwifery staff. So clearly there has
4 been a recognition, at some stage. I wonder
5 if we could, could we look at the detail of
6 that report and see what it was exactly they
7 thought was wrong. They must have looked at
8 something to give them that answer, that the ratio was low.

9 PROFESSOR FORSYTH: Yes.

10 DR CALDERWOOD: They then appeared to respond
11 appropriately to that. That was from Barrow.

12 MS KNIGHT: Right.

13 DR CALDERWOOD: I think it was a significant
14 proportion of senior -- seven new senior
15 midwives -- I can't remember, but it was, you
16 know, seven in addition.

17

18 MS KNIGHT: What year was it?

19 DR CALDERWOOD: We had it in the very first pack
20 of documents to read.

21 CHAIR: Yes.

22 MS KNIGHT: Yes. All right.

23 MR BROOKES: Can I ask clarification on the last
24 point, are we looking at that across the Trust
25 or related to maternity staff?

1 MS KNIGHT: It will be looking -- focusing on
2 maternity at the Trust level.
3 MR BROOKES: I think we need to look at the
4 services we are looking at rather than the
5 whole Trust; that might give us a different
6 picture.
7 PROFESSOR FORSYTH: I think the number of
8 substantive staff versus locum staff in
9 particularly, in relation to medical staff.
10 All the reviews I have done in the past --
11 issues have usually arisen because of the high
12 proportion of locum staff. It is not just
13 "bums on seats" really; it is: Who are these
14 people? You know even if it is possible to
15 get sort of a feel for what kind of locum
16 staff were they employing -- whether
17 they are people coming in and out or whether
18 they are long-term locums.
19 PROFESSOR MONTGOMERY: That will also relate to
20 the stability and the question, which is they
21 are not just numbers.

.....[simultaneous conversation].....

1
2 PROFESSOR FORSYTH: That kind of detail is quite
3 useful, you know. I think you cannot judge
4 too much, but it gives the picture of whether
5 the staff is maintained or rather just numbers.
6 CHAIR: Thank you. Thank you for that.
7 MS KNIGHT: The next section is about the staff
8 survey results, which have now been uploaded
9 on to Huddle. Start in 2003, feeding back to
10 each unit, their own results to the staff
11 survey. These are the 2013 results. The
12 overall staff engagement score, which is a
13 score that began in 2009, has been below
14 average at this Trust every year since 2009.
15 In 2012 and 13 it was in the worst 20 percent
16 of Trusts. You can see here 2012 score, 2013
17 score, and the national average for 2013,
18 which is very similar in 2004.
19 There is a lot of information available in
20 these staff surveys. I am sure some of you
21 have come across some of these before.
22 CHAIR: Are the overall results reasonably
23 stable from year to year?
24 MS KNIGHT: Yes.
25 CHAIR: It is almost quintile and doesn't have

1 the same membership.

2 MS KNIGHT: It is, it is not standardised, it

3 does change year to year, but in 2012 it was

4 very similar. I think it has been improving

5 actually year on year, the national average.

6 CHAIR: What I wonder is, do most of the

7 Trusts tend to scatter about? So one year they

8 maybe in the second quintile and next they are

9 on the fifth and so on.

10 DR WALTERS: No. It is difficult to shift

11 the staff survey.

12 MR BROOKES: It does not move a lot. It will be

13 useful to see the trends there since 2009.

14 MS KNIGHT: All the information is available in

15 giant spreadsheets on the internet so I can do

16 that type of analysis.

17 PROFESSOR MONTGOMERY: When I was sitting in my

18 PCT office I used to try to correlate the

19 staff survey data on witnessing errors and

20 near misses with the National Learning Service

21 data on what Trusts were reporting. I do not

22 know if it is worth asking that question to

23 get a sense of how much is witnessed and then

24 not exchanged and set anywhere else. I do not

25 think you can correlate that.

1 MS KNIGHT: Yes. These results, taken from the
2 2013 report, these were the bottom five
3 ranking scores for the Trust. We have got
4 percentage of staff experiencing violence,
5 percentage of staff reporting good
6 communication, and interesting in 2013 it is
7 very, very low. Staff recommending the Trust
8 as a place to work, or to receive treatment,
9 low score. Staff motivation, lower than
10 average. Percentage of staffing satisfied
11 with quality of the work and patient care they
12 are able to deliver.

13 The "!" next to the each means it was in
14 the bottom 20 percent.

15 On the other hand, there are a number of
16 areas where the Trust has improved since 2012.
17 Effective team working, despite the
18 communication issue being raised as one of the
19 low scores in previous category; support from
20 immediate managers; and percentage of staff
21 receiving health and safety training.

22 This is an overall summary of the results,
23 in 2013, comparing the Trust with all other
24 Trusts. It is time-lined, but essentially the
25 green means it is positive findings; less than

1 average. If it has a tick it is one of the
2 20 percent best growing trusts. Likewise with
3 the red scores it has an "!" it is amongst the
4 bottom 20 percent of Trusts.

5 That is the end of the staff data that I
6 have at the moment. Do you want to see those
7 staff survey results? They are all available
8 on Huddle under the Trust organisations.

9 MR BROOKES: The full staff survey, how was the
10 information available?

11 MS KNIGHT: The full staff survey results that
12 were given back to the Trust. They were
13 also published.

14 MR BROOKES: Thank you.

15 CHAIR: Okay. We need a kind of
16 easily-accessible digest of this, that may be
17 more or less the slide when we come to do the
18 relevant interviews. I think it will be
19 important to have the information at our
20 fingertips to ask people to explain this and,
21 if necessary, challenge them.

22 PROFESSOR FORSYTH: It will be quite good to have
23 a comparator from about 2000 and one if there
24 was a survey done in 2005/6.

25 MS KNIGHT: It goes back to 2000.

1 PROFESSOR FORSYTH: It would be good to have the
2 figures for the height of the problems. 2013
3 is a difficult time, it is very much the
4 transitional period from the Trust. I am not
5 sure how to interpret that. It will be good
6 if there was a comparator in the middle.
7 How often is the survey done?
8 MS KNIGHT: Every year.
9 MR BROOKES: You see the trend-through will be
10 really useful.
11 PROFESSOR FORSYTH: Yes.
12 MS KNIGHT: Yes. If the Panel would like to
13 suggest any another key questions they're
14 interested in, I could do a trend over time.
15 The overall staffing engagement score was
16 only developed in 2009, but the other question
17 remained stable throughout the whole period of
18 the Investigation.
19 PROFESSOR MONTGOMERY: I certainly like those
20 questions around, "Have you seen a near-miss",
21 they will give you a sense of their feeling of
22 quality. Do we know about response rates?
23 Have they changed because I think that will be
24 interesting.
25 MS KNIGHT: This year the hresponse rate was about

1 50 percent; so of 800 staff, approximately
2 400 responded.

3 DR WALTERS: They only did 800 staff
4 but you can opt to do all of them.

5 MS KNIGHT: 400 out of 800.

6 DR WALTERS: Right. They used a sample.

7 PROFESSOR MONTGOMERY: I think it will be
8 interesting to see whether the response rate
9 changed over the period as well. Are there
10 more people wanting to give feedback than
11 previously or not? It will be quite useful to
12 see.

13 PROFESSOR FORSYTH: Not giving you more work
14 to do, but it will be interesting to see
15 the service breakdown of the different
16 categories of staff who responded.

17 MS FEATHERSTONE: Did you say everybody? It was a
18 full staff survey? Because it is only just a
19 sample normally when we have done them, there
20 is only a certain amount of people get them.
21 It is all anonymous, but it is only a certain
22 percentage of staff.

23 MS KNIGHT: The trusts can opt to pay more to do
24 the full complement of staff.

25 PROFESSOR MONTGOMERY: Just 800 of the staff.

1 MS KNIGHT: It did not happen here.

2 PROFESSOR MONTGOMERY: Can I say, so this is 800

3 staff in the whole Trust, so actually there

4 may not be very many from maternity in Furness

5 General. I think we should be quite cautious

6 about the coverage in maternity and that may mean

7 the trends are very unreliable as well because

8 actually one year they may have sampled them and

9 the next one they may not.

10 DR WALTERS: It is a random sample of 800

11 who are externally sent the survey. Normally

12 it picks up about the same across the Trust,

13 but we have always found if you try to look at

14 the results by division it is difficult. It

15 is not picked up.

16 PROFESSOR MONTGOMERY: We may get a sense of the

17 general Trust's approach to quality, but we

18 will not get much about the midwives. Stewart, when

19 we talked about breaking down by staff groups,

20 do we need that by all staff groups or are you

21 particularly interested in midwives and

22 doctors? I mean because it may make Hannah's

23 job more manageable.

24 PROFESSOR FORSYTH: Numbers are tiny; that is the

25 problem.

1 DR CALDERWOOD: You need to be careful to get the
2 work done on the staff that is going to give
3 us answers. Maternity is a tiny proportion of
4 Trust staff, up to 50 percent of them do not
5 answer across the board; it maybe more or less
6 in maternity. We are going to end up in a
7 situation where we cannot interpret it
8 because the numbers are too small.

9 PROFESSOR MONTGOMERY: If we were asked for
10 information about midwives if that is
11 available, that probably is in services that
12 are relevant to us?

13 CHAIR: Would that be more helpful, or
14 would it be more relevant to see whether we
15 can get a break down between Furness and
16 Lancaster.

17 MS KNIGHT: That is not there, unfortunately.

18 CHAIR: That is not possible? That would
19 be more helpful as I think they will be very
20 different.

21 PROFESSOR MONTGOMERY: I am minded to think and would
22 probably say here we do not want too much work
23 done on it because it will not tell us very
24 much that is useful. A bit of trend analysis
25 on two or three of the questions might be all

1 that is worth having.

2 PROFESSOR FORSYTH: I think we are going to be in
3 for a Chief Executive and chief of nursing et
4 cetera, it will be nice to have how the
5 general status of the Trust is perceived by
6 the staff.

7 DR CALDERWOOD: That is already here.

8 PROFESSOR FORSYTH: I think it is.

9

10 DR WALTERS: I think the interesting thing
11 here is that they are lower than average, and
12 I think the next interesting thing will be,
13 what you said, what's happened between 2004
14 and 2013 are they very different.

15 CHAIR: Any other points on this? I think
16 they are very well-made points. Right.

17 In that case can we move on. It is Hannah
18 again and I presume that you will want us to
19 stay on our seats here.

20 MS KNIGHT: Yes.

21 CHAIR: I will not give you any further interruptions.

22 MS KNIGHT: The next section from me is basically
23 an update on what we have so far. I think the
24 very first Panel meeting that I attended I gave
25 an overview of the sources of data that might be

1 of interest to the Panel and that we know is
2 available.

3 This is an update then of where we have
4 got to so far with the various sources of
5 data. I did some timeline for when the final
6 data pack can be expected. The hospital
7 episode statistics database, which I have
8 presented a few times now, we have now got
9 agreement from the Clinical Effectiveness Unit
10 at the Royal College of Surgeons to provide us
11 with data and to provide expert supervision
12 analysis. This is a national centre of
13 excellence for this type of analysis. David
14 Cornwall (the director) has been very useful
15 in advising how some of the rates should be
16 interpreted and how the adjustment can be
17 made.

18 The proposed outcomes that are now agreed
19 with the Panel to look at from the maternal
20 side are the mode of delivery, severe maternal
21 morbidity and rate of maternal re-admission to
22 the hospital within 28 days.

23 The neonatal side is the rate of
24 stillbirth. That is broken down into total
25 stillbirth rate. Sorry this should be a

1 separate section. Neonatal death rate broken
2 down into areas of neonatal deaths; that is
3 through linkage with ONS death register that
4 we are able to calculate these rates.

5 It was requested that we look into the
6 proportion of stillbirths and early neonatal
7 deaths of term babies weighing more than
8 2500 grams. Severe neonatal morbidity rate.
9 Stewart has had some correspondence looking at
10 what is available in the data and how that
11 rate might be conducted.

12 Unplanned neonatal readmission to hospital
13 within 28 days. Then another specific
14 readmission for sepsis. Then long-term
15 complications associated with birth trauma.
16 For example, hospital re-admission rates, for
17 hypoxic brain injury. More work needs to be
18 done on determining whether this can be
19 reliably used from the HES data.

20 DR WALTERS: Is this by unit?

21 MS KNIGHT: Yes, by unit.

22 Then examination of the overall data
23 quality from the Trust, which we saw in the
24 previous meeting had dipped dramatically
25 around 2007 and risen in 2008.

1 CHAIR: How, if at all, can we take into
2 account transfers to other units for some of
3 these conditions?

4 MS KNIGHT: Yes, we can because HES provides a
5 unique ID which enables you to track patients
6 longitudinally.

7 CHAIR: Is one of the outcomes transferred
8 to a specialist unit?

9 MS KNIGHT: I will come to that in the next slide
10 because there is a separate database which
11 looks at admissions to neonatal care units.
12 So what the outlook will be from hospital
13 episodes statistics is repeated
14 cross-sectional analysis looking at how the
15 Trust and the units within the Trust compare to
16 other Trusts and units within Trusts. So as I
17 say, here all analysis will be performed at
18 two levels, Trust and hospital. We will use
19 funnel plots where appropriate to illustrate
20 the amount of variation and whether the Trust
21 was an outlier and then time series comparing
22 the Trust against itself to changes at the
23 time.

24 We anticipate this will be ready by the
25 end of May 2014. As the different results

1 become available I can share them rather than
2 waiting until the end.

3 I made a visit to the Trust on 10th
4 February to try and establish once and for all
5 what legacy data is available directly from
6 the Trust's own maternity information system
7 which, as we will know, captures more detailed
8 information than that which is available in
9 the national Hospital Episode Statistics data.
10 So data items which might be particularly of
11 interest available locally are Apgar scores at
12 one and five minutes and lots of the
13 information which was missing in HES like
14 gestational age and birth weight,
15 particularly in that 2007 period,
16 it's missing in 75 per cent of delivery
17 records. This is an alternative way of
18 getting that information. It has now been
19 confirmed that it does exist and we have
20 formally requested it on 25th February. We
21 also requested copies of the Trust maternity
22 dashboard which it introduced two years ago,
23 with the new head of midwifery, and we will be
24 able to compare the Trust against other Trusts
25 and like hospitals with other hospitals that

1 submit to the Perinatal Institute's peer
2 database which covers the West Midlands and
3 has about 250 maternity episodes recorded.
4 They also collect Apgar scores and detailed
5 clinical data items. So we have to wait until
6 we receive the information from the Trust
7 before that can progress any further.

8 DR CALDERWOOD: To reassure people, I was reading
9 this before the meeting and I got to the slide
10 before that I wondered if the Perinatal
11 Institute would be able to give us comparative
12 data? I thought I must give Hannah a phone. I
13 then turned the page. [Laughter].

14 MS KNIGHT: Jason Gardosi has been very helpful.

15 DR CALDERWOOD: I know him. You were lucky I
16 turned the page because I was just about to
17 text him.

18 MS KNIGHT: Going back to Bill's point on transfer
19 of babies. This is the National Neonatal
20 Research Database held at Imperial College
21 London, they have a Neonatal Data Analysis
22 Unit. They conduct the national audit which
23 now covers 97 per cent of neonatal units in
24 England. They submit their data to this audit and
25 the data is available for research and service

1 valuations.

2 There are on-going discussions with Neena
3 Modi, who heads the unit, as to what they will
4 be able to provide the Investigation and at
5 her request I prepared a draft protocol, which
6 I'm hoping to get some feedback on from Stewart
7 maybe after this, if you do not mind, because
8 the types of questions that I think this data
9 will allow us to address are, A, are there any
10 transfers out from the Trust that we're not
11 already aware of. We have been given a
12 list of 23 neonatal deaths that the Trust are
13 aware of babies born in the Trust transferred
14 elsewhere. There maybe others that we're not
15 aware of. Not just deaths but other severe
16 outcomes.

17 We should be able to ascertain how many of
18 the babies that were admitted to neonatal care
19 were term newborns weighing 2500g. How many
20 were admitted with symptoms associated with
21 substandard intra partum care. How many
22 subsequently died. It's an issue of trying to
23 make comparisons between other NHS Trusts. It's
24 very difficult but Neena thinks that we might
25 be able to do something there. I feel that's

1 useful.

2 CHAIR: That's a lot of work if you can do

3 it.

4 MR BROOKES: How far back does the database go?

5 MS KNIGHT: I think it's 2006 that it started then

6 very quickly reached quite high submission

7 rates.

8 Their next steering meeting is on 14th

9 March and that's when our protocol will be

10 considered. I do not imagine it will be a

11 negative response from them. The question

12 will be whether they can supply the data to us

13 for me to analyse or whether we will have to

14 commission them to conduct the analysis in

15 house because there are lots of restrictions

16 on it. Any questions. Shall I move on?

17 Incident reporting. We now on Huddle have

18 all of the clinical incidents that have been

19 reported by the Trust and there are separate

20 spreadsheets available for all clinical

21 incidents which total almost 74,000. All

22 maternity incidents just over 10,000. Not

23 sure what the difference is between maternity

24 specific incidents and maternity incidents but

25 that brings us down to 4,000. Then SUIs 142,

1 maternity SUIs 142. There has been talk about
2 getting a random sample and whether we could
3 explore that a bit more so that this can be
4 progressed.

5 MS McINTOSH: One of my concerns is that if we
6 take a random sample, we talked about this
7 previously, say take the first two on the
8 first of every month, something like that, the
9 number, the random sample would be such a
10 small percentage of the overall, it just --
11 that's a risk we take, isn't it? Because a
12 risk of ultimately someone saying you didn't
13 look at very many, did you, even though it
14 might take a phenomenal amount of time and we
15 might look at a high number it will still be a
16 small percentage but you pointed out that we
17 need to be looking at not the paper cuts type
18 thing.

19 CHAIR: No, we need to concentrate on the
20 SUIs but we need to do some sort of checking
21 exercise to make sure that we think that all
22 incidents that are not classified as SUIs are
23 not going to throw up any unwelcome surprises
24 and the only way I can see to do that is to
25 take a random sample of them. I think there

1 are ways to do that that would a avoid bias.
2 The important thing is it a big enough sample,
3 because it doesn't have to be very big, but is
4 it unbiased and maybe taking ones by database
5 might not be unbiased but there are other ways
6 of randomising which ones you look at.

7 DR CALDERWOOD: I was going to say that the
8 perinatal reviews that are going on under
9 Embrace they have used a percentage out of the
10 whole to look at that, that's perinatal
11 morbidity rather than mortality. It might
12 be worth finding out how they did that or how
13 they chose those case notes.

14 DR WALTERS: You also can stratify them
15 further. You should be able to do that. The
16 Trust have decided whether they were red,
17 amber or green incidents. We were looking at
18 a list this morning. You can knock a load out
19 just because it's, you know, appointment,
20 missed appointment.

21 MS FEATHERSTONE: There were a lot you could do.

22 DR WALTERS: Or admin issue and when you
23 take all those out you then get to a smaller
24 sample, you take a random sample to make it
25 significant.

1 CHAIR: The difficulty is can you automate
2 the going through 70 odd thousand to knock out
3 the admin ones, because if not it is going to
4 be time consuming.

5 DR WALTERS: You should at least get to the
6 4,000, depending on what the difference
7 between the 10,000 and the 4,000 is. The
8 10,000 might be administrative issues, staff
9 arguing, that sort of thing.

10 CHAIR: Yes, I mean, I think we're talking
11 about coming to the same problem from slightly
12 different approaches. I do not see any
13 problem in producing a randomised sample that
14 is lookable at and finding out that quite a
15 lot of them are admin issues and missed
16 appointments. We're not concerned with those.
17 Of the other ones are there ones that would
18 give us cause for concern that maybe should be
19 reported as a more serious incidents?

20 MS KNIGHT: How many incidents would you consider
21 to be manageable? 100? 1000?

22 CHAIR: I am suggesting a stratified
23 process where somebody, maybe me, goes through
24 them all and says no, no, no, no. They are
25 interesting, they are interesting. Hang on,

1 we should look at that in more detail. In
2 which case we could do a couple of 100 without
3 a problem. He said confidently.

4 PROFESSOR FORSYTH: Do not minute that. I was
5 also interested in training analysis in all of
6 this and has this changed over the time period
7 that we are reviewing. Also, in light of some
8 recent discussions across national level, some
9 of the more serious ones, breakdown in terms
10 of days of the week, week days versus
11 weekends.

12 MS FEATHERSTONE: Day and night as well.

13 PROFESSOR FORSYTH: Certainly, again, because, I
14 mean, a lot of these issues, this unit is an
15 exception, there will be a high proportion of
16 locum doctors on the weekend. So if there was
17 any trend there where weekend were higher.

18 MS KNIGHT: We have seen in previous meetings the
19 reporting increases exponentially over time,
20 starting around 2010 the increase. So that
21 addresses the first and it was broken down
22 into maternity.

23 The days of the week thing I haven't seen
24 exactly how it's recorded in the database but
25 I can look at that.

1 MS McINTOSH: We can have a look at that.

2 MR BROOKES: Days of the week are really

3 important. Other subject areas are very clear

4 issues relating to particular times of the

5 day, particular days of the week, Fridays and

6 Monday come to mind and a number of those

7 things.

8 Coming back to what you were saying, Bill

9 it's a separate issue about a statistically

10 relevant sample size which confirms whether or

11 not we think the others are being treated

12 properly, which is the question ...

13 CHAIR: Exactly.

14 MR BROOKES: And what we do around SUIs and

15 the 142.

16 CHAIR: Two completely different questions,

17 yes.

18 MR BROOKES: We shouldn't get them confused.

19 CHAIR: Yes, yes.

20 DR WALTERS: If they are on the NRLS or

21 STEIS system wouldn't that allow you to do

22 more analysis by day and time that sort of

23 thing?

24 MS KNIGHT: I spoke to somebody from NRLS and

25 another expert on STEIS and she said that's

1 all taken from the Trust's own system anyway,
2 so you would be better working with the Trust,
3 what the Trust has already sent us.

4 DR WALTERS: You sometimes have to put more
5 on STEIS than you would, it's more a forced
6 reporting system. If they do the same thing
7 at the Trust then, yes.

8 MS KNIGHT: Moving on. Confidentiality inquiry
9 reports. They are now available on Huddle
10 under CMACE from 2003 to 2009 for perinatal
11 mortality. Then there was a local review of
12 perinatal mortality in Cumbria between 2009
13 and 2010 on Huddle under NHS Cumbria CCG.

14 I have taken a few screen shots from the
15 reports. This one looks at trends in
16 perinatal mortality between 2005 and 2009 at
17 the Trust, the overall trust level. You see
18 quite a variation in the still birth rate over
19 those years and the perinatal mortality rate
20 mainly because the numbers are so small but
21 there is that amount of variation.

22 This table breaks it down by the three
23 units. This is just for 2009. The still
24 birth rate at Furness General was 6.2
25 compared with 3.4 at Royal Lancaster. That's

1 the same with the perinatal mortality rate.
2 There were no neonatal deaths at Furness
3 General that year. So that's the same as
4 their still birth. The rate is 1.5 since they
5 have about 2,000 deliveries at the Royal
6 Lancaster. It means there were three neonatal
7 deaths that year.

8 CHAIR: Looking at the intervals you can't
9 say there is anything wrong in the chance
10 operating. Can you get this for the aggregate
11 period as a whole?

12 MS KNIGHT: Yes, you can get it from the CMACE
13 national report and each Trust has sent its
14 own data confidentially.

15 CHAIR: I would be interested to see it for
16 the whole period with the same kind of
17 breakdown because, on the face of it, although
18 it's not significant, Furness appears to be
19 higher which it shouldn't be.

20 MS KNIGHT: North-west SHA and England as a whole
21 are at the bottom here.

22 CHAIR: Yes, that's true but, I mean, if
23 anything Furness you would expect to be lower
24 than Lancaster bearing in mind there is a
25 stratifying, a more problematic risk of

1 incidences than Lancaster. Okay, thank you.

2 MS KNIGHT: These funnel plots show the location
3 of the Trust firstly for still birth and
4 secondly for neonatal mortality. These are
5 just babies that died within the Trust, so do
6 not take into account babies that were
7 transferred elsewhere and died which may
8 explain why the Trust actually was lower
9 average rate of both still birth and neonatal
10 mortality when adjusted by excluding deaths
11 less than 22 weeks from the sample.

12 Similar funnel plots are available for
13 2008, 2007, and on Huddle.

14 This snapshot taken from the Cumbria
15 review 2009 to 10. It shows the age related
16 weight at time of delivery for Morecambe Bay
17 Trust and north Cumbria Trust. What is worth
18 highlighting here is that you have a larger
19 proportion of these babies that died were
20 above the 50th centile, some of them even
21 above the 97th centile for their birth weight
22 gestational age and so these were larger and
23 long-term babies that are dying. Having said
24 that, the numbers are very small again. So
25 whether you can draw robust conclusions from

1 this is not answered.

2 DR CALDERWOOD: This was where I felt that was a
3 trend that was very different, not just in
4 this but because we tend to have small babies
5 at still birth and that the largest single
6 cause of still birth, small babies are eight
7 times more likely to be a still birth than
8 full-term. If they are undetected it is 20
9 times the risk. So this is not comfortable
10 reading if you understand the still birth data
11 well.

12 This report did highlight that as
13 something because they made the point that, as
14 Hannah has correctly said, about the small
15 numbers on the funnel plots but they did say
16 they could not explain why there was the
17 difference between Morecambe Bay Trust and
18 north Cumbria Trust in this trend of the types
19 of babies who were stillborn.

20 MS KNIGHT: HES may be useful for addressing this
21 in more depth, so a line of the questions that
22 we had to look at using much larger numbers
23 and the proportion of still births that were
24 less than a 2,500 grams and more than 37
25 weeks.

1 CHAIR: Yes.

2 MS KNIGHT: In terms of patient experience data,
3 we have three surveys that were conducted by
4 the CQC or its predecessors in 2007, 2010 and
5 2013. I have had a look at these and in none
6 of them does the Trust appear as a poor
7 performer from maternity service users.
8 Actually in 2007 and '10 it was identified as
9 a better performing Trust. However, the
10 sample sizes are very small, the number of
11 women that responded to the survey and we also
12 can't differentiate between FGH and Royal
13 Lancaster.

14 CHAIR: That's quite hard to interpret,
15 isn't it? I mean, given that the great
16 majority of people do not end up with a bad
17 outcome and given that smaller units generally
18 tend to be well thought of because they are
19 less impersonal and friendlier, all of that.
20 It's quite hard to interpret that.

21 PROFESSOR FORSYTH: That is quite a useful talking
22 point when we get to interview representatives
23 of the Care Quality Commission. Are their
24 systems sensitive enough? Do they have the
25 right information to draw conclusions.

1 MS KNIGHT: Now that the Friends and Family Test is
2 available, I think it began just before the
3 end of the period, in April 2013, so there
4 will be a few months within the scope of the
5 Investigation.

6 DR CALDERWOOD: It started in October 2013.

7 MS KNIGHT: That's when it was published. Work
8 force is something we have already touched on
9 so this is to emphasise that work is going to
10 be carried out by the Information Centre and I
11 will take the questions that have been raised
12 today to make sure we get the output that
13 would be most useful.

14 CHAIR: Okay.

15 MS KNIGHT: The staff survey results were
16 available on Huddle.

17 MR BROOKES: In terms of staff survey, the
18 information, does it tell us what staff size
19 was?

20 MS KNIGHT: Yes. There are vast numbers of tables
21 and towards the end you have overall response
22 rates broken down by category of staff. So,
23 yes.

24 CHAIR: Thank you. We picked up most of
25 the questions as we have gone along. Are

1 there any other others? I think there is in
2 that case one very important question, this
3 is our last chance to commission fresh work,
4 not totally last chance as we would have to do
5 so specifically in response to something that
6 cropped up at a later stage, perhaps as a
7 result of the interviews. Is there anything
8 which at the moment you can see is missing
9 from this that we do need to commission at
10 this stage?

11 MR BROOKES: Relating to clinical information or
12 any information?

13 CHAIR: Relating to this lot of data set
14 which is about clinical information. Shall we
15 ask people to have a think about that and come
16 back to us?

17 MS McINTOSH: Yes, I mean, as you have said, it's
18 not closing everything down but I think, as
19 Hannah pointed out, really well, it's
20 important that you bear in mind that if you
21 commission data it takes time to get in and
22 for Hannah to analyse and for us to turn it in
23 to something useful for you to use when you
24 are interviewing. What I do not want to do is
25 get information in very late in the day, too

1 late in the day for it to be relevant and then
2 us to face criticism down the line. So I am
3 trying to protect the integrity of the work
4 really. If anybody has got any ideas about
5 data that they think will be useful, and beyond
6 terms of reference one and two, because that is
7 what we have tended to focus on, I think you
8 need to highlight it by the end of this week so
9 we can just look at how we can find that and
10 source it and fit into the timeline.

11 CHAIR: Particularly things that will feed
12 into the interviews.

13 MR BROOKES: Because we're going to do analysis
14 around the clinical side of things around SUIs
15 but actually it's an analysis around their
16 operation of SUIs that is really quite important as
17 well. That's what was in my mind when I was
18 asking that question. Looking at it and
19 seeing how that compares, rather than just a
20 clinical element of it I think would be quite
21 helpful.

22 CHAIR: Okay.

23 DR WALTERS: The other thing for the
24 interviews is that we will need things that
25 are time bound. Because we can't ask people

1 who are around in 2007, we can't expect them
2 to know the total picture but we would expect
3 them to know what they looked at at the time.

4 MS KNIGHT: Once we have a schedule for the
5 interviews I will make sure you will have that
6 at your fingertips, the most relevant data.

7 CHAIR: It may well be that there is a
8 relatively limited sub set of things that we
9 need to think about but it's important that we
10 do identify all of that as far as we can at
11 this stage. If you can let us know of
12 anything that you want to add in by close of
13 play Friday that would be great. Thanks,
14 Hannah.

15 Shall we rearrange the furniture?
16 Let's have a look at item 6(a) addressing the Terms of
17 Reference. You have a fair amount of stuff in your packs.

18 MS McINTOSH: We certainly have and I just want to
19 start, Chair, by thanking a number of
20 people in the team upstairs who have been
21 beavering away to pull together the work that
22 the Panel has been doing. We touched on this
23 right at the end of the last Panel meeting
24 when we had a sample of what the table will
25 look like. You have now in front of you got

1 pages and pages and pages of A3 and, as I
2 pointed out to some of the Panel, it's a sort
3 of a bit of a Blue Peter activity that you can
4 take it back home with you, Sellotape it
5 together and put it up on the back of the
6 door.

7 CHAIR: Sticky back plastic!

8 MS McINTOSH: How do we get the inside of a toilet
9 roll into it. I don't know. What we have
10 done in true style, here is one we prepared
11 earlier, upstairs Sellotaped to the wall
12 outside the room you are going to have your
13 lunch in is the full table thus far. This is
14 a document that we need your help with in
15 particular two areas that need populating
16 further.

17 What the team are doing, as you know,
18 working from a Term of Reference to the key
19 questions that have been identified and agreed
20 and then looking at the sources of evidence to
21 answer and address those questions to enable
22 you to draw your conclusions.

23 What we have listed, and it's the sort of
24 second set of blue headings that you have got,
25 is the sort of relevant organisations. What

1 we have done is we have had a go at working
2 out which organisations you need to be looking
3 at the evidence of but that list is not
4 complete. I really, really need to make a
5 plea to sub-group leads, to all colleagues but
6 particularly to sub-group leads that maybe
7 even at lunchtime day using the strategically
8 positioned dangling felt tip pen secured by
9 elastic bands so that it can reach all parts
10 of the table, that you actually populate more
11 fully the list of relevant organisations that
12 you consider there may well be evidence that
13 will help you answer the question.

14 What that will enable Paul and his team to
15 do is actually to identify within that the
16 evidence from the organisation and actually
17 provide you with sort of an indicator or
18 pointer to where that evidence is. So you do
19 not have to look through everything that the
20 Trust has sent. We can actually try and
21 funnel that work for you.

22 Now that's not going to be complete and
23 the counterbalance to that is that we will be
24 keeping a track of evidence that is not looked
25 at and is not included in that so that we can

1 make sure we capture with sub-group leads
2 material that has not been brought to your
3 attention immediately so that we do not lose
4 anything by the time you are making your
5 findings and writing the report.

6 That's one request that we need help with.

7 The second one is something we will come
8 to further on in the agenda which is about
9 potential interviewees. Also in your pack,
10 which we are going to get to when we look at
11 how interviews will proceed and reach
12 agreement on that, is actually a list of
13 likely names of people who are likely to need
14 to be interviewed or may need to be
15 interviewed.

16 What we will need to do on an ongoing
17 basis is for subgroups to be populating
18 or to inform us of the names of interviewees
19 so that Paul and his team, Hannah has done the
20 lion's share of the work on this but she has
21 plenty of other work to do, so you can set us
22 off on it but actually so that the team can
23 populate this and we know who needs to be
24 interviewed. That will help with planning so
25 that if two sub-groups want to interview Fred

1 Bloggs we can actually do the joined up work
2 that you asked us to do at the last meeting.

3 It's a huge document. When you see it up
4 on the wall I know it sort of looks like a bit
5 daunting but it will be useful, it is
6 important, it's necessary and as Julian
7 pointed out it can be targeted. We can stream
8 it so that you just get your sub-group or
9 another sub-group or you just get one Term of
10 Reference, it can be broken down. It's an
11 Excel spreadsheet so we can manipulate so that
12 it's most useful to you. But this is the
13 point at which we need your input quite
14 swiftly so that we can point you in the
15 direction of the material that we have
16 received thus far.

17 So that's where we're up to with that.

18 CHAIR: Thank you. What is it you would
19 like us to do here and now as opposed to going
20 away and trying to stretch the elastic band?

21 MS McINTOSH: It's difficult to read at the
22 moment. Therefore, you do not necessarily
23 need to stretch the elastic band. If it's a
24 case of people go away, look at the table at
25 lunch time and say actually to answer question

1 1.3 we actually need some information from,
2 the SHA who will have had x, y, z and then if you
3 just literally crayon on to the sheet or send
4 us an e-mail by the end of this week, it will
5 help the team to actually locate if we have
6 received evidence. I am using as an example
7 an organisation who have not yet submitted any
8 evidence to the investigation but actually
9 there are organisations that have been able to
10 submit evidence. We just need to move on a step,
11 really by the end of this week. It might not be
12 complete, I know that this is something that
13 is going to run on, but actually we need something
14 to help us give you the material.

15 CHAIR: Stewart.

16 PROFESSOR FORSYTH: I mean, I am very supportive
17 of this. I think it is a fix on this and I
18 think that this is good because it helps us
19 because we have all got bits and pieces and it
20 is good to see where will this fit within the
21 jigsaw, so that at the end of the day we have
22 a full picture. I think that it is helpful.
23 I think there is a good start and we do need
24 to all think about what other pieces we want
25 to fit into this; where they actually go onto

1 the jigsaw.

2 MS McINTOSH: I think the key thing in this is not

3 just the questions that are pertinent to each

4 Term of Reference; it is any questions that

5 have also been raised in any Panel meeting, or

6 when you have heard from any of the families,

7 any questions they have asked. We have

8 incorporated them into it as well and they are

9 being taken as prompts for information.

10 CHAIR: I think that is very important

11 because I do not want to end up, at the end of

12 the process, with a question that somebody has

13 raised being unanswered and us having the lame

14 excuse; it was not included in the Terms of

15 Reference. If a question has been raised we

16 will find a way to include it. Hannah?

17 MS KNIGHT: I want to ask Oonagh whether when

18 filling in the potential interview column,

19 would you like the Panel to put specific names

20 of the interviewee. As in are we able to

21 identify them.

22 MS McINTOSH: Yes.

23 MS KNIGHT: Or general categories.

24 MS McINTOSH: I think at the moment you are helped

25 enormously by the final paper in the pack,

1 because you are actually given names and
2 roles. But if you are not and that table is
3 not complete, so I think if you don't know and
4 you want to put the role in, put the role in
5 and we will try to find out from the
6 evidence who the person was.

7 CHAIR: I think it might be quite time
8 consuming to cross-reference who was the
9 appropriate person at the time.

10 MS McINTOSH: We can find out. You will get
11 that information from us.

12 CHAIR: But as far as possible, specific
13 roles rather than categories, I think, will be
14 good. Any other comments?

15 DR WALTERS: I might understand it better
16 when I see it later.

17 MS FEATHERSTONE: It is hard to work out which bit
18 goes where.

19 MR BROOKES: I have to say it is easier when you
20 can see it on there. I think a couple of
21 things -- I was just looking at it in terms of
22 names as well, which I know is getting
23 slightly ahead. But there will be a couple of
24 things here, there may be some, like myself,
25 who might have a conflict of interest when we

1 get to some of the names on the basis one of
2 the names on here is my current Chief
3 Executive, for example. You know, it seems
4 like one that might be a conflict we need to
5 be aware of those things so we probably need
6 to map some of that out.

7 The second thing was an observation.
8 They are about the Trusts, but there are a
9 number of organisations that have
10 non-executive boards with chairs responsible
11 for the running of the organisations and you
12 might want to consider whether they are people
13 we want in as well.

14 CHAIR: Very good point. I think you are
15 absolutely right; we need to think about what
16 constitutes a conflict of interest. What
17 constitutes a conflict of interest such that
18 somebody should withdraw from that sub-group
19 for that particular session. What might
20 constitute a slightly-less significant conflict
21 of interest when somebody might want to take an
22 observer role rather than a questioning role. I
23 cannot spot any ex-bosses of mine but I can
24 certainly see some of the names are known to me.

25 MR BROOKES: I do not mind the ex ones, it is the

1 current ones.

2 CHAIR: Yes. I do not have a boss at the

3 moment.

4 DR WALTERS: I think the perception of NHS

5 families, we have all got a conflict of

6 interest in here anyway. How do we get over

7 that? You know.

8 CHAIR: That is why I was trying to get the

9 kind of gradations. I mean some of them are

10 there theoretically and some practically.

11 MS McINTOSH: I think when, sorry I am jumping

12 the gun a bit too soon, when we get to how we

13 handle the interviews, one of the things that

14 the interview team are doing is drawing a

15 speaking note, which I think by the end of it

16 Bill will know off by heart and you will be

17 fed up hearing, but at the start of every

18 interview he will read out something which

19 probably will not sink in with the interviewee

20 as he or she might be nervous, but for the

21 benefit of the public record it will be

22 including those things that this is an

23 independent Panel, working independently, just

24 dealing on this, which actually should help

25 some of the issues. It will not sink in for

1 the interviewees but for the audience it will
2 be important for them to hear that and to
3 know. We have to keep trying.

4 DR WALTERS: Yes.

5 CHAIR: If there is not anything else
6 specifically on this, Geraldine, you raised a
7 good point about the relationship between the
8 subgroups. Shall we take that before lunch?

9 DR WALTERS: Well, I thought we could have
10 a brainstorm on how we approach the data
11 because I think what we have not got is it
12 arranged in a way that is helpful, the
13 evidence, we have almost got too much detail
14 and we have not got an initial sift. So we
15 were having a chat with Paul this morning
16 about how we might try to rearrange the
17 evidence.

18 I wondered if the groups are going to take
19 the same approach. How the groups are going to
20 approach it because there is something about you
21 have got here a group of cases and if you were a
22 member of the SHA or even a Chief Executive,
23 you would not investigate all of those cases
24 individually at the first sign of the problem.
25 You would first look to see if that group of

1 cases were within the normal limits; if they
2 were, you would not choose to look at each of
3 them individually. That is going to be the
4 situation that chief executives, or directors,
5 or obstetricians might find themselves in
6 at the time. If I was in charge of the unit for
7 two or three years that was fine, but now six
8 years down the line it all looks a bit
9 different.

10 I am worried about diving into cases,
11 diving into incidents, or do we first want to
12 look at the wider picture. Have we looked at
13 the incident profile, we have looked at the data,
14 and, actually, between this period and this
15 period, it was normal, therefore, would you be
16 content? I just want a bit of discussion
17 about how we were all thinking about all this
18 information.

19 CHAIR: I mean, I will get the views in a
20 minute, but just a couple of thoughts on that.
21 I mean I think you are absolutely right about
22 re-interpreting what looks like a trend in
23 hindsight from the point of view of somebody
24 there at the time.

25 DR WALTERS: Yes.

1 CHAIR: On the other hand, I am slightly
2 concerned that one of the reasons that was
3 given why things were not taken any notice of
4 is that they all had different clinical
5 end-points. Yes, they all have different
6 clinical end-points, they have different
7 things that actually led to the untoward
8 outcome in pathological terms, but that
9 ignores the fact that there are some common
10 factors like relationships between different
11 staff groups and professional relationships
12 and working practises and all the rest of it.

13 Which I think leads on to the second
14 point, which is that I think that a large
15 focus of the questioning of people in
16 executive positions and chief executive
17 positions in the Trust is not so much about
18 individual cases, but it is about responding
19 to concerns that are raised at the time. Not
20 subsequently, at the time.

21 DR WALTERS: I think you are right,
22 therefore, I think, in looking at the
23 information, you have got to look at what was
24 happening at the time.

25 CHAIR: Yes.

1 DR WALTERS: That is great because I am
2 really worried about looking at 142 SUIs,
3 really worried about the ability to look at
4 120 cases. I think we are talking about that
5 before we have done the initial sift and
6 really got a road map of the whole thing since
7 2004, which I think the way things are
8 organised on Huddle at the moment you will
9 never get there. There is something about
10 sifting things by chronology and by type of
11 document, and then perhaps agreeing between
12 the subgroups what our approach is going to
13 be, which might be, in this, you know, look at
14 the cases at the time-map, this appears to be
15 a critical couple of years: At that point,
16 who is in charge; what were the policies
17 around; how were those issues looked at; was
18 there a cause for concern? You know, I think,
19 otherwise the task is going to be undo-able.

20 PROFESSOR MONTGOMERY: I am thinking there is
21 another wall being covered opposite this one,
22 which has got a time line on it. I am trying
23 to run through and say this is when these
24 reports became available. So I wonder whether
25 the way into this, which should start from the

1 minutes of the Trust boards and its
2 committees, and actually say what was examined
3 on the time-line, including the reports and
4 action plans to it. We then have to ask the
5 questions in due course, which is what should
6 that time-line have looked like? But I think
7 we have picked up very early on that core to
8 this whole task is going to be mapping out the
9 time-line.

10 CHAIR: Absolutely, yes.

11 PROFESSOR MONTGOMERY: I wonder whether what we
12 need to do is mirror the analysis of clinical
13 data, that we have thought a lot about how we
14 will do that, with sorting out this time-line,
15 about plotting visually whether things came
16 in. Starting by tracking that through minutes
17 and documents, so that we are able to say this
18 was how the organisation did respond.

19 MR BROOKES: I support that because I think if I
20 knew in 2006, as an example, this incident
21 happened, this was the system in place, this
22 is processes and policies that were in place
23 that were in the organisation, this is how
24 they should have responded, this is how they
25 did or did not react, that is really quite

1 important.

2 PROFESSOR MONTGOMERY: I think if we get the

3 time-line of what they did, and ask what

4 should they have done and find out what the

5 prevailing policies were and guidance at that

6 stage.

7 There is a sort of above-the line version.

8 You have got what they did. Then above the

9 line you have got things they should have

10 looked at. We will be able to ask sequence by

11 sequence did they respond to it. Then maybe

12 below the line on the map you have got these

13 incidents that are coming in and we look at

14 them individually, and we may well reach the

15 conclusion that with hindsight it looks very

16 different. But somehow we need to have a

17 picture of what will be available without the

18 benefit of hindsight.

19 CHAIR: Maybe I have picked this up wrong,

20 but I had not seen us analysing 142 SUIs so we

21 can pick out number 38 and challenge the Chief

22 Executive about how that was handled. That

23 was not the intention at all. I think it was

24 to use that analysis as a bit of overall

25 aggregate information about how they operated

1 their processes and procedures. It is a sort
2 of alternative look on the triangulation
3 system that we will say; what did you do? How
4 did you do it? How did you operate this
5 process? But we have also got a look at the
6 data, which shows how it actually operated in
7 practice. Separately.

8 DR WALTERS: I think we are saying the same
9 thing. I think that, I think that when the
10 SUIs were being logged and how they were
11 coming in, is the first; the trend on those is
12 the first sort of phase one. Then you would
13 want to see, right, this seems to be an awful
14 lot; so how did the Trust respond to that. In
15 that "awful lot", we might have to look at
16 some of those to say, were they really awful?
17 Because that is what you would expect people
18 to do at the time.

19 CHAIR: That is it.

20 DR WALTERS: But then the other side of
21 the coin is that the SUIs are only really what
22 is reported. They are, I suppose, less
23 susceptible to propensities to report the
24 incidents. They are pretty reliable. But
25 actually would that be the full picture, if

1 you have got more, were they getting more
2 near-misses that were not SUIs, that would
3 have indicated, I think it is sort of
4 seeing, from the interviewing point of view,
5 what indications had they got to be concerned.
6 If there was cause for concern, did they do
7 the right thing?

8 PROFESSOR MONTGOMERY: When we are interviewing we
9 probably need to try to distinguish the
10 question we are trying to get at to find out
11 what actually happened, which will not, in
12 itself, necessarily be able to attach blame.
13 The question we are trying to get at, around
14 what governance did you make on the basis of
15 what you knew at the time, where clearly we
16 are inviting people to implicate themselves in
17 a judgment or misjudgment. If we can't keep
18 that separate, we will not get the help from
19 the people without getting to the heart of
20 what happened. We need to be able to say it
21 might be really obvious now, but we are not
22 saying you should have known that at the time,
23 but we need your help in saying what might
24 have been done.

25 CHAIR: Yes. Stewart.

1 PROFESSOR FORSYTH: I mean I agree with Jonathan
2 very much on how we set out the time-line, I
3 think that that is how we should be operating.
4 We should be starting back in 2004, in
5 January, and taking up cases that were the
6 first cases and looking at what the
7 difficulties were then and how the Trust
8 responded at that time. Then we move forward
9 into the next period and see what the cases
10 were, how the Trust responded, what were they
11 meant to say, what was the governance doing et
12 cetera. Then moving through to 2009
13 eventually. I think we may then need
14 another big wall for that to be seen
15 because it will be sizable.

16 CHAIR: I think it is three dimensions.

17 PROFESSOR FORSYTH: -- because then I think we can
18 then triangulate a lot of things under the
19 things that happened at various time periods,
20 including the staff who are present at that
21 time, and the questions that are coming up
22 more specifically to them at that particular
23 time.

24 PROFESSOR MONTGOMERY: You want to know what data
25 came in after they received the report. That

1 adds a different context.

2 PROFESSOR FORSYTH: We have got the reports coming

3 in, you have got different levels.

4 MR BROOKES: And building the environment in which

5 they were working as well as best you can. It

6 will not be perfect but you will have it.

7 PROFESSOR FORSYTH: Different levels, you have

8 got cases, you have got the Trust's response,

9 you have then got enquiry coming in at

10 different times and then right through. I

11 think you see how there is a good timescale to

12 all of those. I think it makes more sense for

13 those of us who are involved in this.

14 DR WALTERS: Then I think the links between

15 the cases, the Trust response, are where the

16 subgroups sort of give their own insight into

17 that bit of the geology, if you like, and

18 different levels of it.

19 CHAIR: Catherine?

20 DR CALDERWOOD: The clinical one, the governance

21 one have moved on a lot in this decade that we

22 are talking about. I feel that we need to be

23 as objective as we can be. There are

24 different guidelines that were not available

25 at the start of the process, that now are, but

1 there are also, I suppose, some of what we
2 have heard raises concerns that there was not
3 an awareness that certain guidelines, if they
4 were present, even should have been followed.
5 I worry that they may have had a policy, but
6 was that the appropriate policy even? I mean,
7 yes, they followed their own, but there was
8 one that was 10-years out of date.

9 PROFESSOR MONTGOMERY: Yes, yes. They were doing
10 it but not what they should have been doing.

11 MR BROOKES: Exactly. That is what I was going to
12 say. So you try, I think we try, to build
13 the environment they were working in. We need
14 to test that environment about whether it was
15 best practice as well. I think that is
16 absolutely right. It will not be perfect, we
17 will able to do what we can with the evidence
18 that we have got, but that says how they were
19 operating; was that reasonable et cetera.
20 Then these things happened; did they then
21 apply the environment they were working in,
22 irrespective of whether it was the best or
23 not; or did they not? Then you have got the
24 key things along the line that are feeding the
25 report, other investigations, information they

1 should have had, and how did they respond to
2 that. I think that will be really helpful.

3 DR CALDERWOOD: If we could, from the clinical
4 point of view, again it is adding to the numbers,
5 but there is a finite number of guidelines that
6 have come out at different stages in the
7 last 10 years, the NICE Quality Standard et
8 cetera, and also the mode of feeding
9 back to Trusts has changed over that time as
10 well so that the CMACE we got, for example,
11 was a simple one A4 sheet back in 2008. You
12 know more recently it is a whole booklet.
13 You again need to be careful that when we are
14 interviewing that we get their response to what
15 they were given. I would expect it to be very
16 different more recently, given the amount of
17 detail and lots of things have changed and the
18 scrutiny with which we examine cases has
19 changed as well. Almost very rapidly in that
20 time period, so that it is a different
21 expectation at the beginning than at the end, but
22 quite markedly different for some cases that we
23 have heard about. I mean one of the ones you will
24 hear about this, it was the thing I am interested
25 in, one of the reasons that I believe that the

1 stillbirth rate has been so static is that we
2 have not had an awareness that we can do
3 anything about it; but that has begun to change.
4 In a way I might not think that that was an
5 attitude that pervaded everywhere and still
6 does, so that, you know, it is the context of
7 the time and the inference is about the quality
8 of the information that was available.

9 PROFESSOR MONTGOMERY: Yes.

10 DR WALTERS: I think the sort of scenario you had
11 back in 2005 you have got a few local
12 consultants who are coming and going, three
13 doctors, and in two months you have a couple
14 of stillbirths; who should have thought that
15 was a problem? Probably not the people in the
16 unit, maybe not the Trust because you have got
17 somebody in place. External bodies? So it is
18 a case of who should have known?

19 DR CALDERWOOD: Yes.

20 DR WALTERS: Yes. It is this building of a
21 picture.

22 MR BROOKES: I think those are important
23 questions. I think that we cannot answer them
24 until we have some feel about what the
25 environment is where these things were

1 happening in. What is going through my head
2 while we are talking about this, because that
3 has made it clearer in my mind, is how do we
4 construct that environment because I take your
5 point, Geraldine, it was almost by implication
6 what you were saying, we need that in place
7 before the sub-group actually works. There is
8 a task here that we can perhaps nominate or
9 identify on how we want to build environments
10 and how much can we do with what we know, how
11 much help will the Panel need and how much can
12 be done from the team developing that?

13 CHAIR: Do we also need to know how some of
14 the systems operated in the Trust or in the
15 unit? It is a necessity that means that inevitably
16 we have to have findings as we go along.

17 MR BROOKES: We do, but having some of the
18 basics will help.

19 CHAIR: Absolutely.

20 DR WALTERS: I had a conversation with Paul
21 this morning about how, just in the list of
22 evidence by the Trust, how it could be
23 re-vamped/re-jigged to make it easier to look
24 at. If you do it that way, I think the timing
25 of it, the time-line will fall out of that.

1 CHAIR: Yes.

2 PROFESSOR FORSYTH: I mean in terms of how the

3 subgroups work, I mean some of my thoughts to

4 begin with were it will be focussed very much

5 on the clinical cases from 2004 and forward.

6 Clinical members are focusing on the clinical

7 care. But if we are then also saying we want

8 to know how the Trust responded, so then it is

9 the governance and the standing and the trust

10 management, you could actually pick up a lot

11 more. The information will be saying first

12 case, case one, whatever one it is, we take

13 all the clinical notes, and you then have to

14 go through all the Trust information in

15 relation to these cases in terms of complaints

16 and through to whatever else happened, and

17 from that you then begin to build up how did

18 the Trust respond.

19 PROFESSOR MONTGOMERY: There are all sorts of

20 potential complexities. The clinical

21 governance could decide that actually the care

22 of the case was acceptable, but a tragic and

23 unavoidable outcome. The governance could

24 decide that a really heavy intensive look

25 was required in order to find out what the

1 clinical group has discovered about the outcome.
2 On the one hand you can have a relatively
3 favourable finding about how the care was
4 managed and an unfavourable finding about the
5 way to approach it.
6 PROFESSOR FORSYTH: Vice-versa.
7 PROFESSOR MONTGOMERY: There is also the
8 complexity we have already had it raised and I
9 think that some things we have identified are
10 some questions around the relative
11 prioritisation the Trust gives. We have had
12 the question raised about status
13 and we are going to have to somehow ask
14 ourselves whether or not what was working
15 through the governance systems and the board
16 was interested in, was a reasonable judgment
17 about relative priorities and what might
18 look very unreasonable now, we know some of
19 the history, may not have looked
20 unreasonable in terms of prioritisation at the
21 time. So there is something around us having
22 to get a sense of the agenda the Trust had,
23 which is outside our Terms of Reference but we
24 have to pursue it.
25 MR BROOKES: It is relevant in terms of the

1 environment in which the organisation existed.

2 CHAIR: It is very relevant. It is very
3 relevant. We have to come at it from two
4 directions. In a sense that underlines the
5 formation of the subgroups, but, you know, one
6 is the top-down and the other is the
7 bottom-up. The difficulty is where they meet
8 in the middle and how it has to be a high
9 degree of co-operation and liaison at that
10 point .

11 MR BROOKES: Yes.

12 DR WALTERS: Maybe on one of our two-day
13 sessions we should run it a bit like a
14 scenario, so the clinical group are reporting
15 X cases and what will the Trust group expect
16 to have done and what did they do. If you
17 have got six cases then you go back to
18 clinicians and you say, "We would like you to
19 look at all these in depth because this is" --

20 PROFESSOR MONTGOMERY: Shall we try to pick a
21 date, say look at 18 months in terms of the
22 reference and try to construct what the
23 environment might have looked like at that
24 point and begin to ask the questions.

25 CHAIR: Good.

1 DR CALDERWOOD: We maybe do that, Jonathan, about
2 the time when families came forward in those
3 years. The ones where we think that there
4 were a number of incidents that were close
5 together and then got the ground swell.

6 PROFESSOR MONTGOMERY: By that stage there should
7 have been some questioning at least, is
8 something happening here.

9 DR CALDERWOOD: That might not be correct but we
10 have got to start somewhere --

11 PROFESSOR MONTGOMERY: We perhaps would have expected
12 that question to have been asked.

13 MR BROOKES: If we use that on the basis of test
14 construction, we take a case, or some cases at
15 that time, we build an environment around
16 it and we then start asking all the questions
17 we want to ask and then we realise we do not
18 know the answers because we have not of what is
19 missing. Then I think that will be much more
20 comfortable because I do not feel we have got
21 that right at the moment, to be honest. I think we will
22 we will only do it by knowing.

23 PROFESSOR MONTGOMERY: We will be role-playing.

24 DR CALDERWOOD: It is the objectivity that we have
25 got to get right because this is how we prove

1 something. We have got to go back to what
2 standards were available, what guidance were
3 people following and then what actually
4 happened.

5 CHAIR: I think that is absolutely right.

6 I also think there is an element of having to
7 start doing this for real; that we need to
8 focus minds on it. We can do a certain
9 amount in abstract in preparation but

11 DR WALTERS: I think --

12 CHAIR: -- we just have to do it.

13 DR WALTERS: Sorry, because I am
14 passionate, we have got to have, I think we
15 have got to have that line. We have got to
16 have that visible line in order to know where
17 to get started.

18 PROFESSOR MONTGOMERY: I mean we know they decided
19 to commission reports about the points; we
20 could start by trying to reconstruct what was
21 the trigger of that decision and actually was
22 there material all ready available that might
23 have triggered it earlier, for example what
24 did everyone say and did they recognise the
25 problem.

1 CHAIR: Okay. Thank you. That has been
2 really helpful. We have got grids to
3 populate, as well as lunch to have, before we
4 start to build the second wall, so I suggest
5 we break at this point. Let us see how we
6 progress.. Thank you.

7 (The Panel adjourned for lunch)

8 CHAIR: Right. Are we all assembled?
9 Let's get under way. Thank you. Item 7 we're
10 up to now, I think, which is the protocol for
11 interviews. Two main substantive bits of work
12 to get through. So, Oonagh, can you talk to us
13 about the protocol for interviews?

14 MS McINTOSH: As Geraldine referred to this this
15 morning, these are about the practical
16 arrangements that we need to put in place and
17 that need to be communicated to the interested
18 organisations who are going to pass this
19 information initially on to interviewees
20 because obviously at the moment we don't have
21 contact details for interviewees.

22 I think it's worth working through just
23 for two reasons. One, if anybody can see
24 that we've omitted something it would be very
25 helpful and, equally, if you can see a

1 pitfall in anything, that would also be good
2 to recognise now so that we can either explain
3 why it is in there, or amend it as necessary.
4 I do not know if everybody has had a
5 chance to have a read of it. They may not
6 have done. I do not know if you want to have
7 a couple of minutes just to look at it and
8 then work through it or work through it first
9 then have questions afterwards? What's the
10 preferred approach?
11 DR WALTERS: Quick look through.
12 MS McINTOSH: Okay.
13 CHAIR: Okay (Pause) Okay. Are we about
14 ready? Right. Views, please?
15 MS FEATHERSTONE: I was going to ask about the
16 interviewees coming. If there is any outcome?
17 If something is brought up that has not been
18 brought up before, or if they have already
19 been referred through the NMC like a midwife,
20 in particular, through the NMC or they haven't
21 or they haven't and something comes up, are
22 they coming and thinking that they could be
23 referred?
24 CHAIR: They are coming knowing that the
25 Report at the end will be public and will be

1 sent to all the relevant organisations. So
2 that would be a potential outcome. I think
3 there might be some limited circumstances
4 where we'd have to take action ahead of the
5 Report being produced but they are pretty few
6 and far between.

7 MS FEATHERSTONE: It just says that people are, that
8 we're just expecting full co-operation from
9 the staff but they do not or they do have to
10 come?

11 CHAIR: They do have to come because it's
12 written into people's duties that they have to
13 co-operate in full with an investigation to
14 find out where something has gone wrong and
15 improve services for the future.

16 MS FEATHERSTONE: If they do not still work for
17 the NHS?

18 CHAIR: I was going to ask you whether you
19 thought I was going too far in the final
20 sentence of paragraph 2.

21 "It's expected that this will extend to
22 anyone no longer employed in the NHS and we
23 would consider that present or future receipt
24 of an NHS pension carries the same
25 responsibility".

1 MS FEATHERSTONE: There are some people that are
2 not employed and they are ones we
3 definitely want to interview.
4 CHAIR: Yes.
5 PROFESSOR MONTGOMERY: I see no problem with that.
6 Whether we can make it stick.
7 MR BROOKES: Is it legally enforceable. I do not
8 think there is any harm in putting it in
9 there.
10 PROFESSOR MONTGOMERY: We could add something
11 about professional obligations, if people are
12 still professionally regulated even if they
13 are not working for the NHS.
14 DR CALDERWOOD: I wondered about putting a
15 quotation into the documents. So in the Good
16 Practice GMC documents there is one, I presume,
17 I presume the NMC has one. I didn't think it
18 was strong enough.
19 CHAIR: Okay.
20 PROFESSOR MONTGOMERY: We refer to professional
21 duty but if we put it like the pension
22 sentence, a reference to the good practice?
23 CHAIR: Sure, okay. Thank you.
24 MR BROOKES: Can I clarify, I notice, this is
25 about the legal representation. I understand

1 that we're saying they can have legal
2 representation at the interviews. A lot of
3 them will have legal representation outside of
4 that particular process. If they want to
5 bring their legal representative as a friend
6 are we going to stop them from doing that?

7 CHAIR: I do not think we can stop them doing
8 that but you can make it clear you are not
9 going to deal with them.

10 DR WALTERS: They could advise them not to
11 answer a question. They may because it sounds
12 all nice and friendly and then anything they
13 say can lead to them possibly losing
14 registration or pension or serious
15 consequences afterwards.

16 CHAIR: I mean, we're not sitting as a
17 judicial panel. We're not making judgments on
18 those things. If somebody says something
19 which demonstrates that they are putting their
20 own likelihood in jeopardy they have to be
21 responsible for that but that doesn't detract
22 from their obligation under their terms and
23 conditions and their professional duties to
24 co-operate in full with a fact finding
25 investigation.

1 DR WALTERS: If it was me then if I brought
2 a legal representative and they said do not
3 answer that question I probably wouldn't.
4 CHAIR: Yes, I know. You are right. There
5 is kind of an elephant in the room here. I would
6 love to be able to say that you cannot bring a
7 legal representative but I do not think we
8 have the power to ban them from bringing
9 somebody in the capacity as a friend.
10 PROFESSOR MONTGOMERY: You will have to say the
11 Panel have to draw inferences from the fact
12 that you have chosen not to answer that
13 question. That may result in them having a
14 short recess and deciding I will answer it.
15 MR BROOKES: We do not want to get in the
16 ridiculous situation of hand signals.
17 DR WALTERS: It is just being aware what
18 might happen.
19 DR CALDERWOOD: Again, back to what we have set
20 ourselves up to, which is to provide answers
21 to the families and there are processes
22 whereby that if there was negligence or there
23 was something that that needs to be dealt with

1 by a completely separate route. That's nothing
2 to do with us.

3 CHAIR: Exactly.

4 DR CALDERWOOD: So that it's the same as reporting
5 back to the families or the complaints with
6 the families, there are already mechanisms by
7 which those facts should have been, may not
8 have been dealt with, but they should have been
9 dealt with for those individuals concerned. We're
10 a secondary and completely separate process.

11 I do not know whether we can make people answer I
12 agree with you that might put me off answering
13 but can we make some statement, you know, that we
14 do not have the statutory powers but the onus is on
15 them to provide answers.

16 CHAIR: We can but then you get into the
17 territory where people are going to be saying
18 you are indemnifying us against that and we
19 can't do that either if something does emerge.

20 PROFESSOR MONTGOMERY: I guess you can sometimes
21 ask questions in different ways and a question
22 which is, "So help us work out what was going
23 on?" might sound less hostile than, "Did you
24 make a mistake?" or "In hindsight do you wish
25 you had done something different?" We have to

1 try and make it easier for them.

2 CHAIR: That leads me on to re-rehearsing

3 something that I rehearsed with some of you

4 but not necessarily all of you before we

5 started. One of the concerns that I have

6 about this is managing expectations of

7 families who come along to the interviews

8 because I think they will be looking for a

9 very inquisitorial, quasi-judicial process

10 here and my view is that we will not get the

11 best out of people if we adopt anything like

12 that. We need to, as far as possible, make

13 people want to contribute to this in the

14 spirit of investigating and putting things

15 right for the NHS. We have to be clear that

16 that means that the way that we approach it is

17 not to be hostile otherwise we will not get

18 the reaction that we want, we will not get full

19 cooperation. We will get people being inclined

20 to saying I'm not answering the question.

21 because I'm concerned it will incriminate me.

22 MS McINTOSH: At the end when you report to the

23 Secretary of State and we place the

24 records of these meetings into the public

25 domain and the interviews, when I say into the

1 public domain they will be put in the
2 departmental record office and then they will
3 be FOI-able, in books with an index, labelled
4 and they will then be FOI-able. They will be
5 FOI-able. One anticipates that the families
6 will FOI request to see them but I also
7 anticipate that if I were the Trust or the
8 Cumbria Constabulary I would also want to get
9 them because actually they need to look at
10 them if the police still have an ongoing
11 police investigation or want to revisit
12 anything or the Trust are concerned that they
13 may need to check that the disciplinary
14 proceedings that they have been taking were
15 okay. So I imagine that they will be
16 scrutinised by others who are in a better
17 position to make those decisions than the
18 Investigation is allowed to.

19 PROFESSOR MONTGOMERY: I do not think that comes
20 across from the statement. We've talked about
21 being shown the records but what's going
22 to happen to the records later on.

23 Probably wiser to put that in.

24 CHAIR: That's a fair point.

25 MR BROOKES: We have still have a duty, if

1 something comes up which we feel is criminally
2 negligent or is of a stage we need to take
3 action, don't we?

4 CHAIR: There are circumstances.

5 MR BROOKES: That's not us about taking the
6 action, it is about referring.

7 CHAIR: I agree with that. What I am
8 saying is that at this stage after this amount
9 of scrutiny it's unlikely that something so
10 urgent would emerge that we had to do that
11 but, you are quite right, if it does then we
12 will have to take action.

13 PROFESSOR MONTGOMERY: That duty doesn't come from
14 the fact that we're a panel of investigation.
15 I do not think we need to draw attention to
16 this. If it was something that was created
17 because of the Investigation then we should
18 draw attention to it, which is why I think the
19 fact that there are records and they may
20 in the future become accessible, that's only
21 because of the Investigation. Whereas if they
22 disclose information, which if they disclosed
23 in any other circumstances the same obligation
24 would arise, they ought to know that already.

25 CHAIR: Okay.

1 DR WALTERS: We're not interviewing anybody
2 who is directly involved in any care?
3 MS McINTOSH: We have not gone into that
4 in the bullet points. We can amend the bullet
5 points to put that in because there are
6 midwives, for example. Although some of them
7 may not work in the NHS any more. We can
8 amend that.
9 DR WALTERS: If that's what you want to do?
10 I just wondered why you left them out.
11 CHAIR: Yes.
12 DR WALTERS: And obstetricians.
13 PROFESSOR FORSYTH: I wondered if there were any
14 circumstances in which we would want to
15 conduct an interview by video or telephone
16 conference. I think of examples if we were
17 going to be interviewing people who were
18 involved in care which, for example, some of
19 the doctors were, probably overseas doctors
20 some of them, out of the country. It may be
21 fairly critical to get their perspective on
22 this case and, therefore, the only way we
23 would be able to achieve that would be to
24 conduct some sort of telephone conference.
25 MS McINTOSH: I am smiling because we rehearsed

1 that at length in the office yesterday when we
2 had a brain storm about this and the team
3 upstairs can find lots of reasons why we
4 should do things differently, we had good
5 discussions. One of the things was around
6 video conferencing saying, we weren't thinking
7 of overseas. We were thinking of maybe
8 someone, we had a lot people to interview
9 from, for example, from the Trust and it was
10 going to have an impact on the delivery of
11 service to bring several people here. Might
12 it be better to use the Trust and to do a
13 video conference from there.

14 I was playing devil's advocate throughout
15 the whole discussion saying what if, what if,
16 we can't do that. One of the things we
17 maintained is only the families should be able
18 to observe what is happening, apart from the
19 friend or colleague or the family member that
20 the interviewees bring along. Actually if we
21 have something off site we have no control or
22 accountability to the families that we're
23 doing what we said we would do. So that's the
24 only reason Tom and I were smiling, as well as
25 some of the logistical difficulties about the

1 fact that there are technical reasons why
2 video conference systems are not compatible
3 well beyond my capability of understanding but
4 actually they do not all join up terribly well
5 but I do get the point.

6 PROFESSOR FORSYTH: I mean, I was not thinking
7 about it for people such as that. I did feel
8 that maybe some individuals that we think are
9 really important, perhaps a doctor on a
10 specific night, and to speak with them.

11 PROFESSOR MONTGOMERY: There is nothing to stop us
12 going back on this if we discover there is a
13 crucial bit of information and there is no
14 other way of getting to it but if we open up
15 the possibility in the beginning lots of
16 people will want to do it. We're going to say
17 you can't take a laptop and they could be
18 sitting in the room with all their friends
19 saying, "Say this, say that" and we will have
20 no control over what's happening.

21 CHAIR: From personal experience it is much
22 harder to assess what lies behind what people
23 are saying, even on a video conference. If
24 it's just a phone it's even more difficult.
25 But by exception I agree that we may need to

1 do that.

2 PROFESSOR FORSYTH: My question was: was there any
3 circumstances where we might consider it.
4 Just to pick up on the point about practical
5 issues such as staff who are working, would we
6 consider interviewing, if we're going to do
7 two days together, interviewing in the
8 evening, 6 until 8 o'clock or something?

9 CHAIR: We talked about reasonable
10 transport times.

11 MS McINTOSH: If you are talking about
12 interviewing people at the Trust, a number of
13 the families, if we actually went to the Trust
14 and did the interviews at the Trust then had a
15 facility there. I am thinking off the top of
16 my head. If we had a room there that the
17 investigation used and the families could come
18 and observe. I do not know, that might be a
19 way round it and we could then maybe do it at
20 times that were more flexible, probably less
21 flexible for the panel but more flexible for
22 the individuals who we are interviewing.

23 PROFESSOR FORSYTH: It might be more efficient, we
24 might get through more interviews and the last
25 point was if somebody comes with information

1 in their defence or they think is relevant
2 which we have not seen or heard of, it's not
3 been provided, do we accept that and is there
4 a process for that?

5 CHAIR: We have to take it into
6 consideration. I do not think we can be seen
7 to be rejecting it but then we have to assess
8 where it fits into the scheme of things and
9 why we have not been given it before.

10 MR BROOKES: What I have done before in these
11 circumstances is you continue with questions
12 that you have but you accept that there maybe
13 other evidence in there which means that you
14 might need to recall them. They should have
15 provided it before.

16 MS McINTOSH: Similarly as there is an opportunity
17 built in for the panel to show interviewee A a
18 document and give them some time to look at
19 that, maybe equally there should be
20 time for the Panel to adjourn if they want to
21 have a quick look at a document and then
22 decide whether to continue with the interview
23 or adjourn and reconvene so we have to just bear
24 in mind the end product. That is the
25 framework within which we work, we will work

1 and we communicate to people that this is what
2 we're going to stick to but there will be
3 exceptions that we have to make.

4 PROFESSOR MONTGOMERY: It is really important that
5 there are exceptions to build control. You
6 shouldn't create an expectation that
7 somebody could delay the questioning by
8 handing a document across that we need to
9 read.

10 MS McINTOSH: So in a way not putting it in
11 doesn't cause a problem.

12 CHAIR: Absolutely.

13 PROFESSOR MONTGOMERY: Couple of things, one is do
14 we want them to be able to refer to notes and
15 things or not. Because you are saying no
16 laptops and things. We have to form a view
17 about whether or not we want them to be able
18 to come in with a sheet full of their notes
19 and work through. Will that help us or
20 hinder us? I do not know the answer to that
21 one.

22 CHAIR: I think it helps. The point about
23 laptops and mobiles is to prevent transmission
24 out, not reception in. I do not have a
25 problem. Again, the more we get people to

1 give us in the way of information the more we
2 will get to the bottom of this.

3 PROFESSOR MONTGOMERY: We're going to give them a
4 chance to come back with information.
5 afterwards? How will we handle the families'
6 expectations in that they may say we are here
7 for questions. We didn't see the 75 page
8 letter that they wrote in. I do not think it
9 is very clear in this that the families are
10 going to be there or might be there. I think
11 we could make that clear. We talk about
12 observers but not families.

13 MS McINTOSH: We can quote from the method
14 statement to be absolutely clear.

15 CHAIR: You are absolutely right, if
16 somebody raises something substantive that
17 changes our appreciation of what we have been
18 told then we need to share it.

19 PROFESSOR MONTGOMERY: Somewhere that shows that.
20 Also I wondered whether early on we might be
21 clear that it won't necessarily be the
22 whole Panel who will be interviewing. That
23 emerges later on but it might be helpful to
24 set that out right at the top.

25 CHAIR: Yes. Okay.

1 DR WALTERS: Not quite the same as people
2 bringing notes along. Do we want to put
3 anything about interviewees who want to
4 provide anything in advance to us?

5 MS McINTOSH: We need to incorporate that in the
6 correspondence that we have with individuals
7 when we say you are likely to be invited to
8 interview because. When we move on to the
9 next agenda item, we want to communicate to
10 people singularly. Then when the time comes
11 if there is anything they want to submit we
12 flag that up in that, rather than this,
13 because what we run the risk of is being
14 inundated now with material that is general
15 rather than what is relevant to the
16 individual.

17 CHAIR: I'm dubious about the value of
18 getting written submissions here. In my
19 experience what you tend to get is a lot of
20 rather irrelevant stuff which is hard to wade
21 through and sort out and then people being
22 prone to saying I have already, it's already
23 in my statement so I do not need to answer any
24 questions about it.

25 On a similar theme. We need to have a

1 sceptical filter on material that we're
2 provided with afterwards, particularly on the
3 records as well. Because people say they
4 are raising substantive points but they are
5 not. They are disagreeing with
6 interpretations or whatever. Both of those
7 counts. We try and keep that to a minimum.

8 DR WALTERS: Just two bits of housekeeping.

9 I do not know if we might have to say we
10 reimburse any loss of work?

11 MS McINTOSH: I realised that last night. Thank
12 you.

13 CHAIR: Not for NHS people.

14 DR WALTERS: There is somebody I know on
15 this list who has retired.

16 CHAIR: Fair enough.

17 DR WALTERS: I just wondered if we ought to
18 say anything about the conduct of any
19 observers during the interview?

20 MS McINTOSH: The Chair and I have spoken about
21 it and it comes into what we do with this now
22 which is, do you mind if I jump to that now?

23 CHAIR: Go ahead.

24 MS McINTOSH: I would like to get your comments on
25 this today, then share this with the

1 interested parties, the nearly 20 organisations
2 we already know about, just on the practical
3 side so that they can come back and comment
4 because they might be answering questions on
5 this as well as others and we want them on side
6 as well to maintain the quality of co-operation
7 that we've had thus far.

8 Actually then there is something the
9 Chair and I have talked about which is how
10 this is communicated to the families before we
11 finalise it and place it on the website as the
12 agreed way forward. It's a conversation, more
13 than a letter, it's a sitting round the table
14 and explaining the background that you have
15 summarised in the comments that you have made
16 today about how you want it to work, you want
17 it to work in a not threatening way because a
18 number of organisations have already contacted
19 the Investigation because they are concerned
20 about everybody being in the same room and
21 even down to physical proximity. We had a
22 letter in yesterday from a firm of solicitors
23 about that. So there are concerns and I think
24 if we can reassure the organisations that the
25 Chairman has had conversations with those

1 observing and members of the family to explain
2 the Panel's approach and what the
3 Investigation hopes to achieve.
4 CHAIR: What will be expected on the day.
5 I think that is the way to handle it
6 personally, I think rather than putting it
7 onto the website which is subject to a
8 misinterpretation.
9 MS McINTOSH: Exactly. It's a conversation first
10 and then putting it on.
11 MR BROOKES: Can I raise a point? I haven't seen
12 it in here. I may have missed it. If I was
13 giving evidence, I know there is going to be
14 records taken, do I have an opportunity to
15 read the record?
16 CHAIR: Yes.
17 MR BROOKES: And amend.
18 CHAIR: Yes.
19 MR BROOKES: Should we say that?
20 CHAIR: Yes. It obviously needs
21 strengthening.
22 MS McINTOSH: It is in here. "Interviewees will
23 be shown a copy of the record of their
24 interview as soon as practical after their
25 attendance. They will be asked to edit --"

1 MR BROOKES: I missed that.

2 MS McINTOSH: That comes with a sort of

3 understanding that, as the Chair said in a

4 conversation when we talked about this earlier

5 in the week, they are not the people who are

6 going to leak it. We have to ask them to

7 respect the confidentiality because they are

8 seeing something that other people haven't

9 seen.

10 CHAIR: Okay.

11 DR CALDERWOOD: That point, especially if there

12 are people communicating, because there is

13 concern about physical proximity of people,

14 you are having the conversation, we have no

15 way of enforcing any behaviour or good

16 behaviour.

17 MR BROOKES: Other than adjournment.

18 CHAIR: Yes. Stop proceedings. Yes.

19 MR BROOKES: It is more some of the ones we do

20 around deaths where there are some high

21 emotions, making sure you have the facilities

22 outside to keep people separate. When they

23 are in the room it's having conversations

24 beforehand but it is bumping into people

25 outside.

1 MS McINTOSH: We're starting to work on the
2 literally what is everyone's role and
3 responsibility within the secretariat and
4 there is line there that says, "The
5 interviewees will be accompanied throughout"
6 and we have a small room upstairs that will be
7 the sort of waiting room and where they have a
8 lunch if they stay or sit with their friend or
9 colleague. You know any observers that come,
10 any family members, that come we have a
11 slightly different layout. You know, we will
12 have, yes, the interviewee here, but might
13 have seats in a semi-circle over there or
14 something like that so they can see everyone.
15 CHAIR: I think we need some physical
16 separation.
17 MS McINTOSH: We need some space, so we need to
18 think about that.
19 CHAIR: We need to think about how people
20 go in and out.
21 MS McINTOSH: Yes. Exactly, yes.
22 CHAIR: Okay.
23 MS McINTOSH: All right.
24 CHAIR: Any other points? Okay, thank you.
25 MS McINTOSH: We will proceed with that.

1 CHAIR: We will. That is really helpful.
2 Interview and timetable. This is the bit
3 that I am particularly keen on because I do
4 see the interview process, as a whole, as the
5 next step; I think the sooner we embark, the
6 sooner we will have a planned way through
7 this. I think that it is also important that
8 we send out a signal that we have got to that
9 stage in the process. We have a list of
10 potential interviewees. Do you want to run us
11 through that?
12 MS MCINTOSH: Yes. Again it is
13 with thanks to colleague upstairs in the
14 team who have done a lot of work on this and
15 pulled it together, you know it is not
16 comprehensive but it is quite a list already
17 and it has been pulled together from the
18 material that we have got thus far on people;
19 also looking at who were the people in
20 leadership positions. Also some
21 of the other organisations provided us
22 with organograms and structure charts so we
23 were able to get some of that information.
24 I think it is a case of that it is to be
25 almost looked at in tandem with the calender

1 you have got that I know I keep saying this,
2 you know your PAs will be so hacked off with
3 the Investigation because you are still
4 holding a huge number of dates in the diary,
5 but I think when we work through the list at
6 5.7 you will see that the days that we have
7 got are not going to be enough and we are
8 going to need more.

9 Also there is something about being
10 realistic about this. Easter is, I mean
11 Lent starts today, so Easter is only a matter
12 of, you know, 40-days away; there is a lot of
13 work to do before that. We have dates
14 in the diary before Easter and Geraldine was
15 talking earlier about, you know, you mentioned
16 using some of the days to actually do some
17 scenario planning and scenario work. It maybe
18 is that we use those dates for planning sessions
19 and actually people come together to do
20 that, or those who are free come together to
21 do that, then we start after Easter in
22 earnest with a rigorous approach --

23 CHAIR: With the interviews. I think I
24 would like to add to the "before Easter-bit",
25 making a start on case reviews as well. I

1 think we can usefully do that as well. I
2 will subject to availability.

3 MR BROOKES: Drawing time-lines.

4 CHAIR: Subject to your views I think
5 that is a sensible suggestion. I am not
6 aiming to start interviews until after Easter.

7 PROFESSOR FORSYTH: I was going to say, Chair,
8 the case reviews; I was not quite sure where
9 they fitted in. Clearly I think that they are
10 going to be the foundation for a lot of the
11 questions that we want to be asking.
12 Therefore, the time of these and actually how
13 we do them and I am still not clear how, are
14 we going to go through the case records, they
15 are not going to be scanned and on Huddle, we
16 will be sitting in the room going through the
17 case records.

18 MS McINTOSH: We can talk to the Trust I am pretty
19 sure we can get hard copies if it is easier.
20 What I was thinking was it might be useful to
21 actually just go upstairs, sit down, get
22 together and work your way through them using
23 the sort of methodology that you have agreed.
24 Also, you know, in that room if you need to
25 look at documents on Huddle you can have a

1 member of the team there to pull them up for
2 you very quickly; you can work through it like
3 that.

4 DR WALTERS: What would you getting out of
5 that? What would you be getting out of that?

6 CHAIR: The assessment of the case which I
7 think we have to do. I think we have to have
8 an independent assessment of the case.

9 PROFESSOR FORSYTH: Yes.

10 DR WALTERS: You see I think we want to
11 thrash it out because I think that if there
12 was not cause for concern about numbers, would
13 you want to do all of them?

14 CHAIR: All of what?

15 DR WALTERS: The cases.

16 CHAIR: Yes, but it is what we are defining
17 as "cases". The index families, plus the ones
18 that we come up with where we think there is
19 cause to add them, from the additional
20 contacts that we have had, and then
21 the question is do we look at all of the
22 stillbirths and the neonatal deaths as well.
23 I certainly think we can start on looking at
24 the families and the additional cases that we
25 have come up with.

1 DR WALTERS: We are only looking at them
2 because they are drawing them to our
3 attention, which is a random group, is it?
4 CHAIR: Yes.
5 MR BROOKES: They generated this Investigation.
6 PROFESSOR MONTGOMERY: Part of our job is to get
7 them answers and ask whether or not the
8 answers should have come up from other ways.
9 I think our reason for looking at those cases
10 is independent of the Report of the Panel.
11 It may go into that as well but we have an
12 independent reason for looking at it.
13 DR WALTERS: Yes. Okay.
14 CHAIR: Yes.
15 PROFESSOR FORSYTH: I mean, I think that we need
16 to have dates in the diary for that, for those
17 of us who are going to be most actively
18 involved in that and have a good bash at that
19 before we actually even get dates for the
20 first interviews because I think we do need to
21 be able to, it is quite difficult if we are
22 interviewing some key individuals and we have
23 not actually had, at that point, an insight
24 into, we cannot even say we have been through
25 the case notes.

1 CHAIR: Yes.

2 PROFESSOR FORSYTH: We need some of them. They
3 are not all required though.

4 CHAIR: That is my point about we have to
5 start with index cases and we have to do them
6 early. I think we can get dates in the diary
7 for the interviews, but I think we have to
8 make sure that we have completed those case
9 reviews by the time we get to the key
10 interviews, although some of them they are
11 clearly not going to be concerned with the
12 individual cases.

13 PROFESSOR FORSYTH: I think it will be nice, from
14 our credibility point of view, to say we have
15 been through some of the cases and here are
16 some examples and why we have said this.

17 CHAIR: Yes. Absolutely.

18 MS McINTOSH: There are dates in the calendar you
19 have got at 5.8. The week after next we start
20 with dates in the diary that, you know, you
21 are holding. I know not everybody is
22 available on those dates, but, we know what
23 your availability is and you have told us what
24 your availability is; we have some dates
25 there.

1 CHAIR: There is a point that I would like
2 to make here as well that is the rationale for
3 establishing subgroups. I know it is
4 difficult in that there are things that cross
5 over between the different ones, but the
6 rationale is the impossibility of getting
7 people together, as an entire group often
8 enough to be able to crack this within
9 anything like the time scale we have got.

10 We have ended up with slightly larger and
11 fewer subgroups, which I think is right, but I
12 think as a corollary of that we have to accept
13 that we're not going to be able to get dates
14 when every member of every subgroup is going
15 to be there. I think we have to accept that
16 we will have to crack on with a reasonable
17 core membership and people will have to
18 communicate about what questions they would
19 have wanted and what answers they would have
20 heard if they had been there.

21 MR BROOKES: I assume members will have access to
22 the records themselves, so they will have
23 access to the records themselves.

24 MS McINTOSH: Yes.

25 CHAIR: Okay. Shall we start with the list

1 of interviewees then move on to the dates?
2 We start out with a bang, don't we,
3 Permanent Secretary.
4 MS McINTOSH: Start at the top. We had to find a
5 way to start with an Una.
6 PROFESSOR MONTGOMERY: How many Permanent
7 Secretaries do we need?
8 MS McINTOSH: To change a light bulb.
9 CHAIR: Having said that, that raises two
10 points in my mind. One is where is the
11 Medical Director because I think if we have
12 got a Permanent Secretary we should have
13 the Medical Director.
14 PROFESSOR MONTGOMERY: He's at the end.
15 CHAIR: That will probably put me in
16 the same position as you, with a current
17 employer/ex-employer.
18 The other question is that in quite a
19 number of these cases we are going to get
20 answers along the lines of, I suspect,
21 "Dunno", "Never crossed my radar, "Was dealt
22 with by somebody else, I wasn't aware" and the
23 whole thing will take about two weeks because
24 there is a limit to the number of times you
25 can ask the question, unless you have any

1 reason to suppose it is wrong. Is there any
2 merit in proposing a slightly different
3 approach to one or two of the names at the
4 very first page?

5 MS McINTOSH: Certainly.

6 DR CALDERWOOD: I wonder if we should look at what
7 we are going to expect this information to
8 give us that we are going to then put in the
9 Report.

10 CHAIR: Yes.

11 DR CALDERWOOD: Start with the end result.

12 Because I can see exactly you know, Una
13 O'Brien is extremely able, but she will never
14 have been near there and maybe the ultimate
15 responsibility is hers but does that help us?
16 Does that help families that sat there? Does
17 that help something to move forward on this point?

18 MR BROOKES: My --

19 DR CALDERWOOD: You have somebody at a very high
20 level saying, "If only I had known I might
21 have", "Yes, ultimately I accept it was my
22 responsibility", that may be the case for some
23 people because of their job status et cetera,
24 should have been, they should have done
25 something about it. But I am not

1 specifically responsible. I do not know whether we
2 should go through every person, but it is the
3 principle of: What are we aiming to get out
4 of these?

5 CHAIR: I agree with that. Can I suggest
6 that we actually invert the list?

7 MR BROOKES: That was exactly what I was going to
8 say. I think you start at the bottom point,
9 and then it may raise questions about who
10 knew what in the next tier, or the next part
11 of the organisation so you ask them those
12 questions; that might lead you to another one.
13 If it doesn't then fair enough.

14 CHAIR: Exactly. You draw the line.

15 MR BROOKES: If we started with Una, what will
16 we ask? You know? It is only starting at
17 the other end and raising questions about
18 who knew what and when and where because we
19 may not actually need to get to some of these
20 people.

21 CHAIR: We have said from the start that we
22 will follow the leads as far as they go. The
23 corollary is that the lead comes to a stop at
24 some point and you don't ask any more
25 questions.

1 PROFESSOR MONTGOMERY: If we do not know what we
2 are asking it will provide the questions.

3 DR WALTERS: I would like to know what
4 their interest was in the quality of care and
5 how they looked at it; how they discharged
6 that responsibility down further tiers of the
7 organisation. The route of some of this
8 starts at the top. If all you want to do is get
9 the Trust to FT-status, then they will not be
10 very interested in things like staffing and
11 services, that sort of thing. To be really
12 controversial.

13 I mean you cannot say, it has got nothing
14 to do with the centre, what people at Trust
15 level are looking at, because they set the
16 direction.

17 MR BROOKES: I know that but at the same time we
18 need to be clear on what questions we are
19 asking.

1
2 DR WALTERS: The relevant question is:
3 What, in their structure, have they put in
4 place to secure the quality of services and
5 make sure that they knew that quality of
6 service was okay and would not lead to a Panel
7 like this.
8 CHAIR: If we stand it on its head and do
9 it from your direction, we will know what, if
10 anything, specific comes up from this to ask
11 people. If we are simply asking a purely
12 generic question about quality of care and the
13 NHS, and what the department's role is and all
14 the rest of it, we will get a very generic
15 answer because Una and all the other people on
16 the list have been in front of the Health
17 Select Committee and lots of other people
18 asking those very same questions.
19 MR BROOKES: Absolutely.
20 DR WALTERS: What I am saying is that we
21 can't not invite them at all, that is what I
22 am saying. I do not care which way up it is,
23 but you cannot have a Panel like this that
24 seems to not address people at the top.

1 DR CALDERWOOD: We need also to be careful we are
2 not trying to solve all of the ills of the NHS
3 and the structure and all of these things you
4 are saying. There are other structures and
5 organisations that are set up to do that.
6 This Panel is not set up to do that. If you
7 take the premise of the centre-setting policy
8 in this X, Y and Z, that may well be a
9 fundamental problem, but that is not what
10 this, frustrating as it may be, this Panel
11 is not set up to fix all of the
12 difficulties around the structure of the NHS.

13 DR WALTERS: No. We might not fix it, but
14 we play a part in how things are set out in
15 the future. You know? If David Nicholson was
16 not on the hook about Francis, do you think
17 any of that would have been in the press?
18 Would we have had any change around it? No,
19 we would not. We cannot ignore it. I know
20 they cannot look after each individual Trust,
21 but it is the way that the message is filtered
22 down and if that message is filtered down the
23 wrong way, there has got to be some messages
24 going back up, hasn't there?

25 CHAIR: I do agree with you that I think

1 that a part of this will be a message about
2 the system as a whole. I absolutely think you
3 are right about that. I think if we stand it
4 on its head and we work through it
5 systematically we will know (a) who we want to
6 ask these questions to in a more selective way;
7 and (b) exactly what we want to put to them.

8 DR WALTERS: No problem with it being the
9 other way up, I thought we were starting to
10 sort of, you know, not look at them at all, in
11 which case we may as well ask Midwife X why
12 she said that on 12 December 1933 or whatever;
13 they will not know either.

14 PROFESSOR MONTGOMERY: We will ask Midwife X that.

15 CHAIR: Okay. Mentally retain the fact
16 that it is the other way up. Do we have any
17 other comments about the potential content of
18 it?

19 I also have no problem at all at keeping
20 it as comprehensive and inclusive as we can,
21 subject to the fact you will have to refine it
22 as data emerges.

23 DR WALTERS: There seems to be some gaps at
24 the NHS North of England, on the SHA level.
25 We have got the Chairman, the Director of

1 Public Health and the Chief Executive. Were
2 there performance people? Were there
3 governance people?

4 MR BROOKES: Performance was the one I would
5 suggest. I would assume the equivalent of
6 what we call the Associate Directors of
7 Performance who have the responsibility for
8 those areas; the one in the SHA would have
9 known what was going on in the organisation,
10 and would have had the responsibility of
11 ensuring the SHA did what they did.

12 PROFESSOR FORSYTH: Picking up on that discussion
13 we have just had, I think it is, again, when
14 you are refining the interviews, we are
15 planning our way up the stream of
16 responsibility, I think, so that you know we
17 can see the pattern, we do go through the case
18 records, we get the materials on that, we then
19 start interviewing people who are involved at
20 the time in those incidents, and put questions
21 to the management and the Trust and then SHA.

22 MR BROOKES: Exactly.

23 PROFESSOR FORSYTH: And move up in that
24 direction. As you say, Bill, we follow the
25 trail as far as it goes.

1 CHAIR: Yes.

2 PROFESSOR FORSYTH: That helps to bring some logic
3 to this process and, hopefully, we can see
4 where we are going, I think.

5 CHAIR: Yes. We need to reserve the right
6 to add people as well as subtract them at that
7 point. I agree with that, yes. It is just
8 whether there are any obvious omissions.

9 MR BROOKES: One I mentioned before, in terms of
10 where we have statutory authorities, there
11 were non-executive statutory authorities;
12 non-executive chairman of the PCT.

13 CHAIR: I think the Chairs would have been
14 called. The other thing is you have got
15 Directors of Public Health and/or Medical
16 Directors at some levels but not all of them.
17 For instance, Cumbria PCT. I do know that
18 John Ashton would be dismayed not to be asked
19 to come and talk to us.

20 MS McINTOSH: Yes. He appears on the list
21 somewhere else. He's here as Regional
22 Director of Public Health.

23 CHAIR: He was North West first, but after
24 2006 he was at Cumbria PCT. You are right
25 about that.

1 MS McINTOSH: Who is that?
2 CHAIR: James Owen Drife. He provided
3 an independent report on one of the cases.
4 PROFESSOR FORSYTH: Right. There are staff without
5 dates of when they were employed at the Trust.
6 MS McINTOSH: No. We will get that
7 from the case reviews. The actual staff we
8 will get from the case reviews.
9 MR BROOKES: For the PCT I suggest Director of
10 Commissioning.
11 MS McINTOSH: Which? Sorry.
12 MR BROOKES: PCT.
13 MS McINTOSH: Could you tell me the page numbers
14 please.
15 MR BROOKES: The PCT on page two, you need the
16 Director of Commissioning. You might not need
17 all of them but you need the one who had lead
18 commissioning responsibilities for the Trust.
19 MS McINTOSH: Especially in light of the
20 discussion we had at the last Panel meeting in
21 whether the shift into quality moved or did
22 not.
23 CHAIR: As the case maybe.
24 PROFESSOR FORSYTH: Your Medical Director on page
25 12.

1 MS McINTOSH: Page 12.

2 PROFESSOR FORSYTH: National Medical Director

3 seems to have slipped in.

4 CHAIR: So he is.

5 MR BROOKES: You could not resist, could you?

6 PROFESSOR MONTGOMERY: Do we need to take a view

7 on how long they need to be in interim

8 positions before it makes sense to talk to

9 them? Have you got to be interim for about one

10 or two months for it to be worthwhile.

11 CHAIR: I agree.

12 MS McINTOSH: For example, we have got, at the

13 Trust, I think, an interim Chief Executive as

14 well.

15 DR WALTERS: For a month?

16 PROFESSOR MONTGOMERY: February, March and

17 there are others.

18 MS McINTOSH: What do you consider is a reasonable

19 period. Is three or four months just

20 holding the fort?

21 CHAIR: I think anything less than three

22 months is holding the fort. I think if you

23 are there three months or more you need to

24 start taking an interest.

25 MS McINTOSH: Yes.

1 CHAIR: Julie Walters.

2 MS McINTOSH: I know, the one and only.

3 MR BROOKES: Again back on page one, just thinking

4 through who would be involved if there were

5 issues. The Nurse Director would be clearly

6 involved.

7 MS McINTOSH: PCT?

8 MR BROOKES: Well, all of them.

9 MS McINTOSH: Okay, yes. SHA et cetera. Yes.

10 MR BROOKES: The other thing that occurred to me

11 was I do not have a strong view on this, but

12 there is a number of reports whose authors

13 might be of interest to us. I wondered

14 whether they should be at least considered?

15 MS McINTOSH: Yes. Okay. We will find them out

16 and share them with the Panel, yes. We will

17 add them to the list.

18 PROFESSOR MONTGOMERY: Do we have a view on how

19 many of the non-executive directors that we

20 think we should see? We have got a list of

21 all the ones identified at the Trust, we have

22 got a long list of chairmen; do we see them

23 together? Do we see them all individually?

24 Do we sample them?

25 CHAIR: I think we have to have all of the

1 Chairs separately.

2 PROFESSOR MONTGOMERY: Yes.

3 CHAIR: I think one of the questions that

4 we might ask ahead of time is did anybody have

5 specific responsibilities, either for that

6 unit or for quality or clinical services.

7 PROFESSOR MONTGOMERY: Yes. That is sensible.

8 DR WALTERS: What is CNTW?

9 MS McINTOSH: What page are you on?

10 DR WALTERS: 12. A whole load of people

11 here.

12 CHAIR: It is in brackets after the title.

13 MR BROOKES: Central North?

14 DR WALTERS: You have got NHS England

15 and then there.

16 PROFESSOR MONTGOMERY: One for each region.

17 DR WALTERS: I do not know.

18 MS McINTOSH: I do not know.

19 CHAIR: It is, isn't it. Yes. It is,

20 Central North and Tyne, and yes. Cumbria

21 Northumberland and Tyne and Wear.

22 PROFESSOR MONTGOMERY: We have John here. Where

23 was he?

24 MS McINTOSH: He is covering an odd bit of the

25 country at the top there.

1 CHAIR: Yes.

2 PROFESSOR FORSYTH: Are we just interviewing
3 health-related people.

4 MS McINTOSH: Meaning?

5 PROFESSOR FORSYTH: We are not interviewing the
6 Constabulary or Coroner for instance.

7 MS McINTOSH: The Coroner is a bit different in a
8 way because the piece of work the Secretary of
9 State has asked the Chair to look at is in
10 addition to our Terms of Reference to look at
11 the children. How do we collate information
12 regarding children who are transferred,
13 babies who are transferred out and die
14 elsewhere. That is not actually within our
15 Terms of Reference. It is almost a
16 stand-alone piece of work, isn't it?

17 The Coroner who raised the issue and wrote
18 to the Secretary of State about it has
19 actually offered to give his full co-operation
20 to the Chairman and will help in any way he
21 can but has just raised a question.

22 CHAIR: He sees himself as a kind of
23 "collaborator" rather than an interviewee.

24 MS McINTOSH: Yes.

25 PROFESSOR FORSYTH: You don't think there will be,

1 let us say, something missing by not seeing
2 the police. There has been communication
3 between yourself and the constabulary; I
4 wondered whether, you know, if it is raised
5 at the end of the day about whether the police
6 were doing an investigation, the communication
7 between this investigation and the police
8 investigation. Or are we seen to be running in
9 parallel but not communicating? I wonder whether
10 there is someone --

11 DR WALTERS: We cannot test.

12 PROFESSOR FORSYTH: -- who was leading the
13 investigation that we should be asking is
14 there anything we should know?

15 MS McINTOSH: I do not know. I need to think. I
16 suppose we could. I do not know.

17 DR WALTERS: No. I was going to say
18 because it cannot be interpreted that we're
19 testing out their processes.

20 CHAIR: That is definitely outside the ToR.

21 DR WALTERS: Unless they have got evidence
22 to give to the Panel I think we are like,
23 they are not an interviewee.

24 MS McINTOSH: We have a memorandum of
25 understanding with the Cumbria Constabulary,

1 that was agreed even before the Panel was
2 convened, and they have co-operated throughout
3 and they have communicated what progress they
4 are making and the time-line they are working
5 to. I think that needs to be duly reflected
6 that you have the co-operation, when you wrote
7 to the Chief Constable and asked for it.

8 I think as far as interviewing them, we
9 ruled that out, when we said we would look at
10 the police investigation at the meeting that
11 we had in Lancaster, I think it would feel
12 unfair to go back on that now.

13 CHAIRMAN: Yes. Yes.

14 MR BROOKES: We are investigating different
15 things, I think, or certainly different tests.

16 PROFESSOR FORSYTH: Yes. I appreciate that
17 position. I am wondering if they may
18 have information which they have decided
19 themselves is not criminal and, therefore,
20 is not in their remit, but may actually
21 be an issue, as they see it, for health;
22 and if this is appropriate to this Investigation.

23 MS McINTOSH: It is almost if you turn the other
24 way around and said to the Trust, you know,
25 for example, just said to the Trust, "At what

1 point would you engage with the local police
2 if you had issues of concern?" Then we can
3 legitimately say to the police, you know, is
4 this a fair reflection of practice?
5 You can do that in a way that is not
6 interviewing the police, but actually testing
7 with them. I do not know if the Trust did
8 approach the police, but I am using that as a
9 sort of hypothetical. It might be a way round
10 it.

11 CHAIR: I do not think we have got any
12 evidence at all that the police held anything
13 back. I think they have shared everything
14 they have with us.

15 PROFESSOR FORSYTH: We have got everything there
16 is.

17 MS MCINTOSH: Yes.

18 MR BROOKES: The one that crossed my mind, I
19 thought of before, which is about the earlier
20 Scrutiny Committee, the local authority,
21 and what has tweaked my mind there as well
22 was the gold command, which was
23 multi-agency approach. It might be worth a
24 conversation with the local authority about
25 whether or not there were any other

1 multi-agency discussions about issues of this
2 nature within the Trust. Because there could
3 have been, there could have been the, what
4 do they call them now, multi-agency reviews
5 they do now.

6 DR CALDERWOOD: The Trust was under the gold
7 command wasn't it for some time?

8 MR BROOKES: It was. You know there will have
9 been multi-agency involvement, yes.

10 DR CALDERWOOD: We will have evidence from
11 somebody that was involved at the time; they
12 were brought in, I suppose, at the start of
13 the gold command.

14 MR BROOKES: Yes.

15 MS McINTOSH: Okay.

16 CHAIR: Jonathan?

17 PROFESSOR MONTGOMERY: I think we have mentioned
18 maternity services at the committee and
19 whether they happened at the time because we
20 were told they had just established one,
21 haven't we? It was a bit of news. We have
22 got the link, but we do not have any of the
23 information going forward and all the things
24 that preceded that with Healthwatch and
25 Monitor. It could turn out to be the same

1 person, just pre-2011, or it could be one
2 person who ran it for the last 20 years,
3 but we should try to track that back.

4 MS McINTOSH: That is one thing that is almost
5 something we are hitting a brick wall with at
6 the moment because we have got Healthwatch
7 saying they have got nothing to give us at the
8 moment because they are virtually new. We are
9 still trying to find where the archive
10 material is in particular; we are still
11 searching for that. The Department of
12 Health is searching, on our behalf, probably
13 in those boxes.

14 PROFESSOR MONTGOMERY: The other group that I am
15 not sure whether or how or whether we should
16 pick it up. The education activity that must
17 be going on, there must be commissioning of
18 education that would have been the workforce
19 development federation, the PHSA of the
20 period. Were there students going through
21 this that might have been picking up feedback
22 that they were giving to the organisations? I
23 do not have a sense of what that might be in
24 this area.

25 DR WALTERS: Yes. Deanery.

1 MR BROOKES: For medical staff, yes.
2 PROFESSOR MONTGOMERY: I mean [REDACTED]
3 [REDACTED] they pick up things about
4 the quality of services from the students who
5 come back and say this cannot be right.
6 MS TEACHERS' UNION: There should be lecturers
7 attached to the Trust.
8 PROFESSOR MONTGOMERY: Exactly. St, yes.
9 MS MONTGOMERY: Okay.
10 CHAIR: Any others?
11 We will keep it under review and it is
12 going to be added to as well. Can we turn
13 then to the thorny questions of dates?
14 MS MONTGOMERY: Right. Okay. You have all got in
15 front of you a calendar that takes in the rest
16 of the year, but the key dates for us are from
17 March. The key months are March, April, May,
18 June, and July. These are the months in which
19 we are holding dates for interviews/additional
20 Panel meetings. I said earlier that not all
21 of you are available on all of the dates. You
22 have just spent a quarter of an hour looking
23 through a very long list of people and agreed
24 between you that that is not complete. If you
25 look at the dates you are holding, even if you

1 saw two or three people a day you will still
2 not have enough dates.

3 CHAIR: I think we can do better than two
4 or three people a day for lots of them. Some
5 of them not, but for many.

6 DR CALDERWOOD: It goes back to my original
7 question. Although we have got all of these
8 people, do we feel we need to interview them
9 all?

10 CHAIR: No, probably not, but I think that
11 is why we have to keep it under review and
12 refine it as we go along and there may be
13 somebody we have to add. There probably will
14 be somebody that we will take out as
15 irrelevant, the trail has gone cold before we
16 get to it. Some of them we need to interview,
17 but on a pretty limited sub-set of questions.
18 I mean we certainly should not give equal
19 duration. There will be some that will take a
20 couple of hours, but there will be some that
21 half an hour is probably too much.

22 MS McINTOSH: At the moment we've got these dates,
23 I do need you to find more dates, that's not
24 just for interviews but it's actually for the
25 planning and getting together and doing work

1 together which might speed up the process and
2 enable sub-groups to work through huge chunks
3 of evidence.

4 PROFESSOR MONTGOMERY: There are not many more
5 dates in June!

6 MR BROOKES: Just for clarification. When we are
7 meeting, certainly in the planning sessions in
8 the groups, those are not in public sessions
9 or are they?

10 MS McINTOSH: No, they are not.

11 MR BROOKES: A number of us could get together in
12 London.

13 MS McINTOSH: Exactly, exactly.

14 CHAIR: Or, indeed, by telephone.

15 MS McINTOSH: Yes, yes. Or if you want to come
16 here and have the team helping you bring
17 documents. May be the clinical group might
18 find that easier. Some of it might be easier.

19 Yes, I need more dates in the diary.

20 CHAIR: I also think we need to ask the
21 subgroups leads to take an active role in
22 this, particularly in terms of identifying
23 when we've got a sufficient core membership
24 for any particular date and go with it and the
25 other people that can't make it we will have

1 to manage around that and find other ways of
2 communicating. Otherwise, it becomes an
3 impossible task if every single member has to
4 be there for a particular day to work, we will
5 not get a fraction of these, I'm afraid.

6 PROFESSOR MONTGOMERY: Should the next step be the
7 sub-group leads sitting down with a list of
8 interviewees and identifying which sub-group
9 they mainly fit with?

10 CHAIR: Yes, certainly for the initial
11 tranche.

12 MS McINTOSH: I would like to push you to do that
13 quite fast.

14 MR BROOKES: It's about lead responsibility
15 because it may be some of the subgroups want
16 to feed questions into that.

17 CHAIR: Yes.

18 PROFESSOR MONTGOMERY: We're only going to ask the
19 people once initially and we have to decide
20 which is the primary place.

21 CHAIR: Drawing the right topics and
22 questions. Yes, I agree.

23 MS McINTOSH: Can we do that quite soon? I am
24 looking at the leads. Can we do it as a
25 telephone conference? Or a meeting, I do not

1 know.

2 PROFESSOR FORSYTH: The sooner the better. For

3 the clinical group to get dates in the diary

4 for the case review starting by next week. I

5 think it's really important. Are we able to

6 sort of discuss that?

7 MS McINTOSH: What's the chance of a telephone

8 conference? I think you have to be part of

9 that as well.

10 CHAIR: Do I? I thought I had been very

11 smart in not being a sub-group lead.

12 MS McINTOSH: What about Friday of this week? If

13 we could fit a phone call in for the sub-group

14 leads this week. What's your diary like,

15 Geraldine?

16 PROFESSOR MONTGOMERY: Friday this week. I will

17 pull out of something else, I could pull out

18 of that if it was after ten.

19 PROFESSOR FORSYTH: It won't take that long.

20 MS McINTOSH: Hopefully not.

21 CHAIR: Ten on Friday is the one time I

22 can't do. I have another telephone conference

23 between 10 and 10.30. Once that is done.

24 DR WALTERS: I can do sometime on Friday.

25 If you let me know the rest.

1 PROFESSOR MONTGOMERY: I'm in an all day workshop
2 from ten, that's the thing I can't move. I
3 will come out of that at whatever the slot
4 is.
5 PROFESSOR FORSYTH: I'm okay.
6 MS McINTOSH: It would be quite useful for you to
7 listen in.
8 PROFESSOR FORSYTH: When are you free on Friday?
9 CHAIR: 10.30 until about 3.30?
10 DR WALTERS: I will try and do 10.30. I.
11 MS McINTOSH: We will send an electronic
12 invitation with a telephone number for the
13 dial in.
14 PROFESSOR FORSYTH: When we speak we will discuss
15 what?
16 MS McINTOSH: We are discussing --
17 PROFESSOR FORSYTH: So I can think about it
18 beforehand.
19 PROFESSOR MONTGOMERY: We fundamentally need to
20 divide the list, we need to match the
21 interviewees with the sub-groups so we can
22 prioritise where they best fit. Then I guess
23 we handle who we should see first.
24 MS McINTOSH: The Investigation is beginning to
25 get contacted by admittedly senior people who

1 held senior positions in a number of the
2 organisations saying, "I imagine you want to
3 interview me. Have you any idea when it's
4 going to be?" When we send out the protocol
5 it is going to be very helpful if I can write
6 out and say, "We're not anticipating starting
7 the formal interview process until after
8 Easter and as soon as possible but
9 nevertheless as soon as possible we will
10 notify people if they are likely to be
11 interviewed" and we will then write because in
12 this document that you cleared earlier, the
13 protocol, it only gives a very short time
14 period for notice, giving people notice to
15 come and be interviewed. Some of those people
16 are saying they need to read all the material
17 that the SHA will be sending, all the material
18 that the Trust is sending. You are not going
19 to be doing a forensic interview and,
20 therefore, they do not need to be knowing what
21 they said in minute x on x, y, z date. So we
22 do not want them to spend huge amounts of time
23 and resources preparing unnecessarily but
24 actually we want to give them an indication
25 that they will be given a relatively short

1 period of notice to attend. If they can't
2 attend for genuine reasons we need to be
3 getting someone else lined up.

4 DR WALTERS: Are we saying the interviews
5 are going to take place after Easter and the
6 group work before Easter?

7 MS McINTOSH: Yes, if possible. We will only give
8 them a week's notice. Your sub-group work you
9 will say we just need to interview them for
10 maybe an hour. Another sub-group might say we
11 have lots of stuff we want to talk about.
12 Before you know it we've got to just get a
13 rough idea to enable us to have people lined
14 up so that I'm not wasting your time and we're
15 not being unfair to the interviewees.

16 CHAIR: Yes.

17 DR WALTERS: That does mean the timeline
18 has to be done quite quickly, so we can do
19 work before this?

20 MS McINTOSH: Yes.

21 PROFESSOR FORSYTH: For the clinical sub-group,
22 how quickly can you get case notes here?

23 MS McINTOSH: We have case notes in 30 of the
24 cases already.

25 CHAIR: So we could start with the index

1 cases, it includes all those.

2 PROFESSOR FORSYTH: You have the case notes here?

3 MS McINTOSH: Yes, they are on Huddle.

4 PROFESSOR FORSYTH: I would be happy for us to get

5 our first date, it would be quite good if the

6 clinical group could all somehow get together

7 on the first day and so that we could actually

8 discuss our process a little bit but also then

9 start going through the case notes and then my

10 original view is that, well, each case note

11 should be reviewed by two people, a minimum of

12 two people, ideally some of whom know about

13 obstetrics, midwifery, neonatology would be

14 helpful. It would be good if the clinical

15 sub-group have an early date where we could

16 all be here and get started.

17 MS KNIGHT: It's Jimmy Walker as well.

18 MS McINTOSH: I have to contact him. I need to

19 contact Catherine afterwards.

20 CHAIR: How about the 19th and 20th, which

21 we have been keeping clear?

22 MS McINTOSH: Upstairs I have got the availability

23 of the sub-groups, so I can give you that

24 afterwards.

25 PROFESSOR FORSYTH: It would be nice to have a two

1 day crack at it.

2 CHAIR: 19th, 20th.

3 PROFESSOR FORSYTH: Three days?

4 CHAIR: I'm not available but you can if the

5 sub-group says it is necessary.

6 MS McINTOSH: You are coming here to do it?

7 PROFESSOR FORSYTH: If the notes are here. I

8 thought it would be quite nice for the

9 clinical group, looking at the clinical group

10 members here, if we felt it would be quite

11 good if we got together for the first day, got

12 some common understanding of what we were

13 doing and the process involved and then we can

14 divvy it up and look at who is available. It

15 just needs two people to look at certain case

16 notes. Take it from there. It is really

17 important to test the system out fairly

18 quickly in case we find there are some major

19 issues, like this is not going to work or

20 something like that.

21 CHAIR: Okay. Everybody happy with that?

22 DR WALTERS: We were just wondering whether

23 not getting the data until the end of May

24 would be a big problem?

25 MS McINTOSH: The data that Hannah is talking

1 about?

2 MR BROOKES: I do not think it is in terms of what

3 you have talked about.

4 DR WALTERS: The sub-group work and the

5 interviews will be done before we get the

6 data.

7 CHAIR: If we are starting at a relatively

8 down the organisation level that sort of

9 information is less relevant, isn't it? It

10 will become more relevant as you get to the top.

11 DR WALTERS: In my head I suppose we ask

12 the questions, then we see what the data shows

13 but I suppose what we won't be able to find

14 out is to what extent they were aware of it.

15 PROFESSOR MONTGOMERY: We should be able to find

16 that out by seeing the papers that go to the

17 Governance Committees. We ought to see what

18 they knew. We can then ask when we see our

19 data whether we think they should have known

20 other things or whether we think they

21 shouldn't have known it given the prevailing

22 systems. That information could have been

23 accessed if people had concerns. So I think we

24 ought to be able to get enough to interview

25 people by seeing what was covered in the

1 paperwork that went through their governance
2 meetings.

3 MS KNIGHT: Was there anything you would
4 particularly like to see before interviews?
5 Because I will send the analysis around as
6 soon as it becomes available rather than all
7 at the end of May. If there is anything you
8 would like earlier then I would ask for that
9 to be passed on.

10 MS McINTOSH: What shall we do about the future
11 dates that we need? Shall we leave it to the
12 sub-group leads to supply me with extra dates?

13 CHAIR: That would be my suggestion. You
14 can be ruthless in making sure that they do
15 that. The sub-group leads need to be ruthless
16 about saying we have to go with the core
17 membership. We can't get everybody on this
18 particular day but just go for it. Okay.
19 Anything else on this one? Excellent. That's
20 really spoiled the tone.

21 Thank you. Any other business? No.

22 Thank you very much. The next meeting will be
23 on 3rd April here. That's the full Panel, of
24 course, and there will be plenty of activity
25 in the meantime. Thank you very much. Thanks

1 for coming.

THE MORECAMBE BAY INVESTIGATION

XXXX 2014

Dear

Information shared with the Investigation

Thank you for contacting the Investigation in response to the Notice placed in local newspapers. It was helpful of you to complete a proforma detailing the incident.

The Investigation's terms of reference form the guiding principles for its work and all of the evidence it receives must be considered against these to determine its pertinence. The Investigation is extremely grateful for your contribution. Having considered the information you have supplied the Investigation concludes your case is within its remit [or...it is highly probable that your case is within its remit].

The Investigation's Panel of expert advisors will now review your case in more detail. After this review is complete the Investigation may request additional information from you however it is not expected you will be asked to attend an interview with the Panel.

Additionally the Investigation may request information related to the care you received from the Trust. The Trust may therefore ask for your permission to release medical information to the Investigation.

Or

As your case relates to a specific incident, rather than the standards of care in maternity and neonatal services, the Investigation intends to include your case in its review of how the Trust responded to incidents during the period the Investigation's terms of reference cover.

The Investigation will keep you informed of when its Report has been submitted to the Secretary of State for Health. You can also follow the Investigation's progress via the Investigation's website www.gov.uk/government/organisations/morecambe-bay-investigation.

Once again, thank you for getting in touch and providing the Investigation with details of your case.

Yours sincerely,

OONAGH McINTOSH
SECRETARY TO THE INVESTIGATION

Independent investigation into the management, delivery and outcomes of care provided by the Maternity and Neonatal services of University Hospitals of Morecambe Bay Trust from January 2004 – June 2013

List of interested organisations

MBI URN Code	Organisation
1001	University Hospitals of Morecambe Bay NHS Foundation Trust
