The appendix also provided an assessment as to the effects of the proposal on specimen policyholders – and analysed this against attractive options.

[**13:32**] FSA's Head of Life Insurance distributes the information to FSA officials and GAD's Directing Actuary B, asking the latter to advise on whether there was anything significantly wrong or missing from the proposals.

[**15:31**] GAD's Directing Actuary B notes that the schedule showing the potential impact of the scheme on the statutory balance sheet purported to show improvement of nearly £2bn in Equitable's free reserves. The Directing Actuary says that this schedule was difficult to follow, and that GAD would wish to clarify in any event the following points with Equitable and with the appointed actuary:

> *1) Can they confirm that the post scheme free reserves still include both an implicit item of £0.8 Bn and the £0.3 Bn* [subordinated loan]*?*
>
> *2) It is not clear how they have allowed for resilience effects. These appear at first sight to be included in both lines (i) and (iv).*
>
> *3) I am not sure that the new Regulation 72 would allow them to achieve the reduction of £1 Bn in the provision as suggested in line (ii). This needs further explanation from them.*

[**16:37**] FSA reply, saying that they had spoken with Equitable about the points raised by GAD, along with others. FSA say that Equitable had emphasised that the draft was a preliminary one, but that they were grateful for those comments. FSA also say that they could expect further documentation, and probably a request for a meeting, from Equitable over the next day or two.

30/01/2001 [12:12] FSA's Director of GCD asks Chief Counsel B to confirm that PIA's ability to require assessment and compensation would not cease on 1 December 2001, when FSMA 2000 comes into force.

30/01/2001 [15:35] FSA write to Equitable to confirm their '*approach to the issue of whether the expected bid from* [Halifax] *should be put to* [Equitable's] *policyholders before it is agreed*'. FSA say that Equitable '*need to be sure that it is legally open*' to the Board to decide this issue, rather than through consultation with policyholders or whether policyholder approval was required by their Constitution. On the assumption that it was open to Equitable's Board to do so, FSA state:

> *We consider that for your Board to decide to go ahead without consulting policyholders, you would need to be fully satisfied that it was in their interests to do so. In practice, in the current circumstances, this will require you to assess the interests of policyholders in being consulted about the bid against the risk that if the bid were made subject to consultation, the bidder would withdraw it ...*
>
> *It seems to us that the judgement breaks down into two issues:*
>
> - *Whether you are satisfied that the proposed bid is better than any realistic alternative, either in the form of another possible deal, or in the form of alternatives in the absence of a deal.*
> - *If so, whether consultation would put the deal in jeopardy.*

FSA conclude:

In these circumstances, we have considered whether it would be open to us to intervene to require you to consult policyholders on the ground that not to consult would involve failing to give due regard to the interests of your policyholders. It would be open for us to do so, if we considered that going ahead without policyholder approval involved failing to pay due regard to their interests. But if your Board can assure us that it has considered the points set out above I can confirm that, on the basis of our own assessment of the situation, we would not expect to intervene require consultation on this ground. Indeed we would fully understand it if you reached the view that going ahead without consultation in these circumstances is in the best interests of all policyholders.

30/01/2001 [17:00] GAD inform FSA that they were happy with Equitable's proposals about German deferred annuity business (see 25/01/2001 [**entry 1**]). GAD also ask for a copy of a leaflet that Equitable had produced on the rectification scheme, which had come to their attention when it had been produced by the appointed actuary of another company at a recent meeting, held at FSA, on an unrelated matter at which GAD had been present.

30/01/2001 [18:08] FSA's Director of GCD sends Managing Director A a revised draft of the letter to be sent to Halifax which says that FSA '*are agreeable*' to the purchase of Equitable's assets.

The draft concludes by saying that: '*You also require that we should be ready publicly to confirm that this is the case, and this we are happy to do*'.

[**18:19**] Line Manager E, noting that the draft refers to the disciplinary hearing of that morning, says that he had been working on a letter to be sent to Equitable, informing them of the outcome, and that he was intending to ask Equitable to allow FSA to disclose it to Halifax. The Line Manager says that the letter should be ready by tomorrow.

30/01/2001 [20:18] FSA's Legal Adviser C sends Line Manager E a revised draft of the letter to the OFT, following a meeting that afternoon.

30/01/2001 [entry 12] FSA's Head of Life Insurance sends the Director of Insurance a copy of PIA's paper of 26/01/2001, annotating it by saying: '*Given the date, I think it needs to come under the terms of Enforcement's expression of willingness not to fine if remedial action is properly undertaken*'.

On 4 February 2001, the Head of Life Insurance writes '*Now done*'.

31/01/2001 [09:54] FSA's Chief Counsel B advises the Director of GCD that the PIA rule (which gave them the power to require a company to make an assessment of, and provide compensation for, mis-selling) was not being carried forward into the new regime. The Chief Counsel says that the nearest thing was a piece of guidance in the supervision manual.

[**10:16**] The Director of GCD asks a PIA Head of Enforcement whether he was content that this was adequate '*for purposes of the PIA "understanding"*'.

[**10:49**] An official advises Chief Counsel B and the Director of GCD of one additional rule that might be relevant, but which was far weaker than the PIA rule.

31/01/2001 [10:03] The Director of GCD sends the Director of Insurance (copied to other FSA officials, GAD and Counsel) a note that aimed to '*question the saleability*' of the GAR buy-out proposal. The Director explains: '*The current proposal is that there should be a standard policy uplift of 20%. As shown in the proposals from the Equitable, the effect of this for paid up policies varies according to the age of the holder. A 60 year old would be offered 8% less than the value of the benefit, while a 35 year old would be offered 12% more. Similarly for those policies where the premium is still being paid, the proposal is that everyone older than 35 should be paid an under value*'.

The Director of GCD says that the proposals '*do not look all that attractive*' and so, in order to be accepted by the people they were being offered to, Equitable must '*operate a sliding scale*'. He continues:

> *This issue also seems to me to impact on the legal achievability of the scheme.* [Counsel] *has advised that the way to avoid needing the approval of a multiplicity of classes is to create a tapered offer. This offer seems to involve everyone else subsidising those in the 35 to 45 year age range with paid up policies. This seems to me to be a recipe for those who pay the subsidies to ask to be treated as separate classes.*
>
> *The flat approach also seems to me to be problematic if we are to be asked to reach a judgement that the proposal is fair. Unless it is designed to give people a rough approximation of the value of the rights being bought out, it seems to me very difficult to regard it as fair.*

[**10:35**] In reply, GAD agree that the idea of operating a sliding scale would be preferable and say that they understood that Equitable were now working on this possibility. GAD advise that:

> *The amount to be offered to those with the option to pay further premiums is more judgemental and depends also on the amount of premiums likely to be paid and the likely effect of such payment on the Equitable's investment policy. In theory, though, the payment might be some multiple, varying by age, of the most recent premium paid.*
>
> *There is also the difficult issue of how much of the offer should be in the form of an increase to the guaranteed fund and how much offered as non-contractual final bonus. I would expect that those near retirement would need to be offered mainly guaranteed benefits (or possibly a rather higher overall uplift if only part is guaranteed).*

GAD continue: '*I am also apprehensive about including policyholders who are able to claim immediate benefits alongside those with no immediate contractual entitlement to benefits. I understand that the Courts have previously declined to implement any reduction in benefits under a scheme arrangement for policies where benefits have become due for payment. Equitable may therefore need either to have the policies included as a separate class, or ensure that the proposed formula will not result in any such reduction in benefits*'.

31/01/2001 [11:11] The Director of GCD sends Managing Director A a revised draft letter to be sent to Halifax (see 30/01/2001 [**18:08**]).

[**15:06**] The Director of GCD sends the Director of Insurance a further revised draft letter to be sent to Halifax. This version now says, in conclusion, that '*this letter therefore confirms that we are agreeable to it ... and* [that] *we will confirm publicly that this is the case*'.

[**17:02**] The Director sends the Director of Insurance a revised draft letter to be sent to Halifax, as amended by FSA's Chairman.

31/01/2001 [14:15] Equitable send FSA their latest discussion document, setting out their assessment of the three options for a compromise scheme under section 425 of the Companies Act 1985. The options are described as:

> <u>*Option 1 – High, flat % uplift to cash benefits*</u>
> *Description:*
>
> - *All GAR policyholders are offered a flat uplift to cash values*
> - *The level of the uplift is set so that it can be very favourably compared with the current GAR/CAR uplift. For this note the uplift is assumed to be 30%*
> - *The uplift may be partly in guaranteed form and partly in non-guaranteed form.*

- *The total cost of the benefits to GAR policyholders will be greater than the current best estimate of £1.3bn (assume £2bn for this note).*

<u>Option 2 – Medium, flat % uplift to cash benefits</u>
Description:

- *All GAR policyholders are offered a flat uplift to cash values*
- *The level of this uplift is set so that the total additional benefits are similar to the current best estimate of GAR costs of £1.3bn (20% for this paper)*
- *The uplift may be partly in guaranteed form and partly in non-guaranteed form*

<u>Option 3 – Graduated uplift to cash benefits</u>
Description:

- *GAR policyholders are offered an uplift to cash values depending on age with higher uplifts for older ages*
- *The level of uplift should be set so as to encourage the perception of fairness at each age but without adding much additional cost to be paid by non-GAR policyholders*
- *The uplift may be partly in guaranteed form and partly in non-guaranteed form*
- *Figures have been produced on a scale from 25% at age 60 and above down to 10% at 45 and below.*

FSA's Head of Life Insurance circulates the document within FSA and to GAD and Counsel.

31/01/2001 [15:47] GAD write further on Equitable's GAR buy-out proposals, having received a copy of the latest documents. GAD say that they could see why option 1 would be unattractive, as it would be costly and would give almost all the potential value of the Halifax payments to the GAR policyholders only. GAD say that they were less clear why option 3 was seen as unattractive and, regarding option 2, write: '*I remain apprehensive though about applying a single factor to all GAR policyholders and treating them as a single class. It still seems to me that many of those policyholders who are entitled to take immediate benefits could allege that they are losing out unreasonably. At the least, I would hope that such policyholders would be given the option to take these immediate benefits instead of the Section 425 potentially reduced benefits*'.

GAD also discuss the impact on Equitable's financial position, saying:

> *Regarding the effect on the balance sheet, they appear to have accepted our point about Regulation 72. However, they still include an expected release of around £0.5 Bn for the "resilience impact" of the payment by* [Halifax]. *The rationale for this figure is not yet clear to me.*
>
> *However, assuming that all these figures were accepted, then the scheme (if accepted) would appear to improve the statutory balance sheet directly by some £1 Bn, with a further £1.5 Bn resulting from the payments by* [Halifax] *(with the latter being of course dependent also in part on the actual performance of the salesforce, and the level of persistency of policies over the next few years.)*
>
> *At the same time, the fund would become more resilient to falling interest rates but still relatively vulnerable to a fall in equity values. Moreover, the bonus expectations would continue to be difficult to manage, as they could have to reduce the final bonuses below the level already illustrated to individual policyholders, and of course apply a significant MVA in that latter event.*

GAD note:

> *Incidentally, they have not, I think, mentioned the MVA in their recent papers, but I do not see anything to suggest that this could be reduced by more than 1-2 % in current investment conditions, even if the Scheme and the* [Halifax] *transactions could both take place.*

31/01/2001 [16:39] FSA's Director of Insurance informs the Director of GCD of a conversation he had had with Equitable about their preference for a '*straight line approach*' to uplifting GAR policy values, in which he had said that FSA were '*unpersuaded that this could be regarded as fair and did not understand their reasoning*'.

The Director of Insurance's record of the discussion continues:

> [Equitable's Chief Executive] *said that their view was the result of very considerable analysis of the impact on the different categories of policyholders and they believed quite strongly that a flat line approach was fairer than a tapered approach. The nub of the issue, from their perspective, was the sacrifice that younger GAR policyholders would be asked to make, in giving up the right to put in future premiums over a long period of years, attracting the guaranteed rate at maturity. They believed that this opportunity, which was not enjoyed in the same degree by policyholders nearer maturity, offset the need that they accepted would otherwise arise to taper. If all policies were paid up with no possibility of future premiums being paid in, then they would share our analysis and approach. He pointed to the scenarios set out in the annexes to this note as demonstrating this.*
>
> *We left it that we would need to reach a common view on this during the course of tomorrow morning. While such a view would not need to be definitive – the actual proposal needed to be worked up and might need to be amended subsequently in the light of the consultation which the Equitable plan to undertake with policyholders we did need to common understanding of the starting point if we were to be able to welcome the deal in suitable terms.* [Equitable's Chief Executive] *will ensure that suitably qualified and empowered people would meet us tomorrow morning. (He could not come himself but* [the Appointed Actuary] *would.)*

31/01/2001 [entry 7] PIA write to Equitable to formally inform them of PIA's decision not to take any disciplinary action with respect to sales of income drawdown products and the handling of the pensions review, in the event of the eventual conclusion of a disposal of all or parts of its business substantially on the terms currently proposed.

31/01/2001 [entry 8] FSA's Head of Life Insurance sends Halifax a copy of PIA's letter to Equitable setting out the decision of PIA's Disciplinary Committee. FSA write:

> *We discussed the fact that there is one issue which is not covered in that letter, which we think we should draw to your attention to avoid the risk of any subsequent misunderstanding. As you are aware some questions have been raised by policyholders about sales made by the Equitable in the months running up to its closure to new business, and whether the risks arising from the court action and from the uncertainty of the sale process were properly disclosed. We are considering the Equitable's actions in this context, and have made some initial enquiries of them. We have reached no view at this stage and I therefore cannot rule out the possibility that we may find that some misselling took place.*

You made clear that you would not wish to proceed with [Halifax's] *agreement with the Equitable without a similar understanding in respect of the possibility of disciplinary proceedings against the Equitable arising out of possible misselling in the circumstances I have described.*

As you know the decision of the PIA not to institute disciplinary proceeding in relation to the issues identified in their letter is conditional on receiving, and the Equitable honouring, certain undertakings as to remedial action including paying compensation to policyholders where appropriate. In the case of possible misselling in the context of uncertainty over the litigation and subsequently the sale process, it does not seem to us that it would be appropriate to seek any blanket undertaking from the Equitable in respect of remedial action and compensation. In our view it follows that the PIA could not be expected, at this stage, to reach a definitive view on whether disciplinary action would be appropriate as it has in respect of the two cases identified in the PIA's letter. I can say, however, that given the importance you attach to this issue in relation to your proposed agreement with the Equitable, and the clear interest that policyholders have in that agreement being reached, the FSA executive in advising the PIA, or the FSA (after N2) in determining whether itself to institute disciplinary proceedings, would take a similar approach to that taken by the PIA in the letter of [31 January 2001]*. That is, provided the Equitable acted reasonably and quickly to compensate any losses suffered by policyholders arising from any misselling which we might find to have taken place, we would not recommend that the PIA should institute, or ourselves institute, disciplinary proceedings against the Equitable in respect of that misselling.*

31/01/2001 [entry 9] FSA inform Equitable, in reply to their letter of 25/01/2001, that:

... we are indeed keen to ensure that there is no further unnecessary exposure to the with profit fund. However, in the circumstances that you have outlined where "these particular clients are seriously disadvantaged by the restricted choice they can make" we do not intend to object to the further exposure envisaged (up to 317 policies).

However, we are concerned that where there are different possible retirement options for policyholders (whether or not they are currently invested in the with profit fund) that these are properly explained to them and that the risks of investing/continuing to invest in the with profit fund are clearly explained.

For example, you state that "most clients either have no choice but [to] *buy their annuity from us, or to surrender and suffer a tax penalty". But some policyholders may decide in the context of their own tax planning arrangements that a surrender may be in their own best interests.*

Could you please confirm what the position is on best advice. We will wish to communicate the details of those arrangements to the [German regulatory authority].

31/01/2001 [entry 10] FSA's Chairman records in a note to Managing Director A that he had provided an update on the Equitable situation to the Cabinet Secretary and to the Treasury's Permanent Secretary.

31/01/2001 [entry 11] FSA's Chairman reports on a luncheon meeting he had had with Prospective Bidder A's Chairman and Chief Executive, saying: '*On the Equitable, they were careful not to ask what was going on.* [The Chief Executive] *said, looking backwards, that one of their key issues was the possibility of long drawn out litigation (a point he has also made to the Treasury, I understand). He also believes that expectations were so unrealistically high before Christmas that it was very difficult to make the deal add up. He was particularly scathing about the* [National Association of Pension Funds]. *He says that one of their people had attended a* [National Association of Pension Funds] *meeting to talk about the Equitable in the autumn, where the discussion had all been about how pension funds would handle demutualisation bonuses. Their people had reported that they were completely unrealistic about the position*'.

In a separate note, FSA's Chairman noted that Prospective Bidder A:

> *... recognises that the Equitable affair, coming on top of the problems with endowment mortgages, will have a damaging effect on the image of with-profits funds and with-profits policies. And he is concerned to try to find a way of improving the way the policies are presented, so as to protect that part of the market which has a continued rationale.*
>
> *He thinks one key is to improve the disclosure and the terminology. He agreed with me that the average bonus statement is incomprehensible and, indeed, that the term "bonus" itself is inappropriate for the yearly allocations to individual policies, which can hardly reasonably be described as bonuses. He was toying with terminology such as "minimum and guaranteed return" to replace the existing one about recurring bonuses or whatever.*

February 2001

01/02/2001 [entry 1] FSA reply to Prospective Bidder D's letter of 26/01/2001 saying that, even though they had withdrawn from the bidding process, and although FSA '*had not looked at all aspects of the proposal in any great detail*', the bidder might find it helpful to know that FSA had formed the view that they could see no regulatory show-stoppers in the proposals that had been outlined.

01/02/2001 [01:56] Equitable's solicitors send FSA a note of a conference with Counsel that had taken place on 31January 2001 concerning their Board's powers in relation to entering into the deal with Halifax, and in doing so without a resolution of the Society in a general meeting (that is, without the members' agreements). This note recorded that: '*Counsel advised in summary that there is no obstacle under the Society's Memorandum of Association in the Society entering into the transaction currently contemplated with Halifax, and that there is no obstacle to the Board approving the transaction without the support of a resolution of the Society in general meeting*'.

[**12:11**] Chief Counsel A passes the advice to the Director of GCD and Managing Director A saying that, while it did not allay all concerns, she believes '*it does provide additional comfort*'.

With the note of the conference, Equitable's solicitors also submitted their instructions to Counsel. As part of the background to the issue, the instructions stated that:

> [The] *financial position of the Society was adversely affected in July 2000 by the judgment of the House of Lords ... The Society's board of directors (the "Board") announced immediately after the judgment that it would seek to find a buyer for the Society by way of a demutualisation. Efforts in this regard were unfortunately not successful ... The Board thereafter took the view that it was probable that the most favourable return for the Society's members/with profits policyholders would be obtained if the Society were to find a purchaser for as much as possible of the Society's goodwill and operating assets, ideally combined with the negotiation of a third party administration agreement for the run-off of the Society's in-force business.*

After explaining that Board members were concerned about whether they had sufficient power to effect an agreement based on the Halifax proposals, the instructions indicated that:

> *... the pragmatic solution to the Board's concerns might be to agree voluntarily to seek ratification by the Society's members. There are strong commercial arguments in the present case that this would be not only inappropriate but also impossible in practice to achieve, largely because:*
>
> > *a) Halifax has made it clear that it is not willing to take the risk of entering into a transaction conditionally on members' approval; and*
> >
> > *b) in any case, the sales force is ... perceived to be a rapidly wasting asset.*

01/02/2001 [entry 3] FSA write to a policyholder who had written seeking their assurance that no further assets of Equitable would be sold until members had had an opportunity to express their views on whether they wished this to happen. FSA explain that Equitable must have due regard to the interests of policyholders when considering such issues and that it would be open to FSA to intervene if they considered that the Society was not doing so. FSA say '*I can therefore tell you that we will monitor this as necessary*'. Earlier drafting, which said that FSA did '*not believe that* [Equitable were not paying due regard to policyholders' interests]' was removed.

01/02/2001 [08:30] Equitable telephone FSA to report that their advisers for the sale had been approached by Prospective Bidder F with what they described as a '*spoiling proposal*'.

01/02/2001 [11:30]	Halifax telephone FSA to report that the deal was '*moving ahead well*' but Halifax '*are inclined to move the announcement*' of it to the following week. Halifax explain that the rationale for this was '*to focus on "getting the message right", specifically getting the right balance between the message to the City and policyholders*'.
01/02/2001 [18:26]	Equitable send FSA their analysis of the current benefits available to retirement annuity policyholders and the benefits that would be available after the proposed compromise scheme. The analysis concludes that, for policyholders who could take retirement benefits immediately, the benefits before and after the scheme were broadly comparable. For policyholders who could not take retirement benefits immediately, the analysis concludes that '*on a s425 uplift of 20% on policy value on average represents reasonable compensation for giving up the GAR benefit*'. Among the detailed analysis, it was noted that: • policyholders who could take retirement benefits immediately which attracted GARs would be able to gain '*an uplift in value over the policy value (a smoothed asset share) of around 35%*'; and • that, taking into account the loss of flexibility associated with taking GAR benefits in restricted forms of annuity and also the loss of the opportunity of tax-free cash, a '*realistic value*' of giving up their rights was '*an 18% uplift to the policy value*'. For those who could not take retirement benefits immediately, it was noted that the uplift available to GAR policyholders – if interest rates stayed the same and if mortality improvements were as predicted: *... the uplift ... factors at retirement would be:* *45 41%* *50 39%* *55 37%* FSA's Head of Life Insurance circulates the information, saying it was the follow-up to a meeting with Equitable that morning.
01/02/2001 [19:15]	Equitable inform FSA that they had been approached by Prospective Bidder F, '*acting with another party whose identity they could not disclose*', who had outlined a bid. It was explained that Equitable '*had received nothing in writing, but the outline of a bid, which could be confirmed immediately, had been given them over the telephone*'. FSA record that Equitable believed that FSA knew the identity of the other party. FSA also record that the substance of the bid is: *Phase one* • *£250m up front + £60m after two years + £70m after 5 years (both additional amounts subject to sales performance)* • *administration to be provided at cost +25% profit margin* • *asset management to be provided at arms length commercial rate* *Phase two* • *Subject to successful s425 compromise: £750m "surplus relief treaty" at best commercially available rate* Equitable tell FSA '*that in their view this proposed new offer ... was plainly less advantageous to policyholders than was the, now reasonably secure, agreement with the Halifax*'. FSA record that Equitable had asked for an indication of FSA's attitude.

FSA note that they had:

- reminded Equitable that both FSA and Equitable should '*have regard to the probable commitment of any prospective purchaser, and the likelihood that they would see a deal through*';
- asked Equitable whether, if they now believed there to be a genuine potential alternative proposal, they should consider whether this made it desirable to consult policyholders before committing to a deal; and
- asked Equitable '*whether they believed that it might be possible to secure an improvement in the proposed new deal, and what risks might be involved in trying to do so*'.

FSA record that Equitable were of the opinion that it was '*impossible to have any confidence*' in the new bid; that, as it '*clearly offered the better outcome*' for policyholders, their efforts should be to secure the Halifax bid; and that the Halifax deal would be at risk if Equitable delayed agreement with them.

FSA record that they had told Equitable that:

> *... we believed that the Halifax deal would represent a significantly better outcome than no deal or than any piecemeal disposal of assets that was likely to be achievable. From what they told me, I could see why they took the view that the proposed new bid – even taken at face value – was less attractive than that on the table from Halifax, though this must, of course be a matter for them to decide ... The issue of whether to consult their policyholders was one for the Equitable Board, but in the circumstances they faced I saw no reason to think that we should seek to influence their decision or to intervene to require consultation. Similarly, if they believed it to be in the best interests of policyholders to enter into the exclusivity agreement with the Halifax, without taking further time to see if the proposed new bid might be improved, because of the risk of jeopardising the Halifax deal, I saw no basis on which we should seek to second guess that view.*

FSA note that, after some discussion, they had indicated to Equitable that '*they could say, that we were closely in touch with the Equitable over the sale process; that we understood their position, and that we would continue to monitor the situation very closely*', when discussing these matters with Prospective Bidder F.

02/02/2001 [entry 1] FSA's Legal Adviser A writes to the Director of GCD about Equitable's proposal to appoint their new Managing Director. The Legal Adviser sets out the grounds for objecting to such an appointment, the process to be followed, and the possible grounds for objection in this case.

Legal Adviser A advises that FSA could object if a person were not 'fit and proper' to be appointed or where it appeared that, if the person were to be appointed, the criteria of sound and prudent management would not be, or might not continue to be, met. The Legal Adviser explains: '*The relevant criteria are that <u>each</u> controller (which includes* [the Managing Director]*) must be fit and proper, the company must be directed and managed by a sufficient number of persons who are fit and proper, the business of the company must be carried on with appropriate integrity, due care and professional skill and with due regard to the interests of policyholders*'. The Legal Adviser says, in this case, that it was likely to boil down to whether the individual was 'fit and proper'.

Legal Adviser A examines the meaning of 'fit and proper', noting that fitness and properness had to be judged in relation to the particular company to which the appointment related. He explains that the legislation required the serving of a preliminary notice before serving notice of objection and that, while HMT were not obliged to disclose the grounds on which they are making such an objection, this would not be acceptable in European Convention of Human Rights terms.

Legal Adviser A suggests there were three possible areas to consider in deciding whether there are grounds to object: the history leading up to closure to new business; matters arising after the closure to new business; and the effect of the appointment on the future of the company. The Legal Adviser advises:

> *I do not think it can be successfully argued that by reason only that a person has been involved with a company that has failed (or otherwise got into difficulties) that it must follow that he is not fit and proper to hold the position of* [Managing Director]. *It is necessary that we point to particular areas/decisions where we consider that he was at fault either by omission or commission. Without some specificity, it is difficult to see how he can defend himself.*
>
> *I have discussed this with* [the Head of Life Insurance]. *Although there may be a number of decisions made by the company which were questionable (and will be questioned) we do not believe there is anything which the FSA can say in a notice of objection, in effect, "this was wrong and your part in it demonstrates that you are not fit and proper".*

Legal Adviser A continues:

> *I understand the position to be the same with regard to the second area. I am not aware of any specific matters which can be put forward as evidence of lack of fitness and properness.*
>
> *The third area is dependent on the particular circumstances of the company. The argument is more tenuous and would run along the following lines.* [The individual] *is involved in the public mind with a management that has lost credibility in the eyes of the policyholders. This is at a time when the policyholders are going to be asked to make decisions in relation to their policies relying in part on information/recommendations made by the management. This could work against the interests of the policyholders i.e. by them going against a proposal because it is put up by a discredited management. This would be so even if, in fact,* [the individual] *has done nothing wrong and that the information/recommendations, viewed impartially, cannot be faulted.*

Legal Adviser A concludes:

> *However, this comes down to whether we have sufficient evidence for us to suggest that* [the proposed Managing Director] *is so closely involved in the policyholders mind with the perceived failure of the previous management that this is a serious risk. On present information I tend to doubt whether this is the case.*

02/02/2001 [10:41] FSA's Director of GCD says to the Director of Insurance that the material received from Equitable, on 01/02/2001, concerning the compromise proposals was disappointing. The Director of GCD says that, when FSA had met Equitable on the previous day, FSA had made it clear that the proposals should not just be fair between GAR and non-GAR policyholders but also that there should be '*a reasonable degree of fairness*' within those groups.

The Director of GCD notes:

> *The Equitable urged us that a flat line increase of 20% across the board was fairer than any form of sliding scale. This was on the basis that the value of top-up rights to younger policyholders would provide a reason for what we had previously regarded as disproportionately beneficial to them.*

We said that we could see that this argument meant that it might be fairer to operate a flat line, rather than some form of sliding scale. But we said that we were looking for some rational basis for believing that it actually was fairer.

In order to assist with this, we asked them to provide two sets of documents. The first was a set of illustrations of how the proposals would operate for policyholders in different positions. The second was a distribution graph which would show the proportions of policyholders who would do well by the offer, and those who would do less well by it. Neither of these is included in the material received yesterday evening.

In considering whether these proposals are fair, we need to be clear what we mean by "fair". We do not mean that each policyholder must necessarily be offered some estimate of the value of his own share. Though this might be an ideal, the Equitable have asserted, and our own advisers have not denied, that it is not practical, given the number of uncertainties, for such an estimate to be made.

But as Counsel pointed out, we do not mean only that the scheme is fair between the GAR and non-GAR policyholders as groups. In particular the court will look, under the Section 425 Scheme, at whether it is sufficiently fair to the dissentient minority for it to be prepared to bind them to the scheme.

In relation to the example, the Director of GCD says that the key question was whether the deal overall was sufficiently good to compel him to give up his GAR rights. He notes further:

What in my view we still need is a proper assessment from the Equitable of the different anomalies which a flat line proposal would create, and the basis for concluding that the deal is nevertheless fair for those concerned. If they cannot do this, my view would be that we should endorse the proposal only in terms which leave open the possibility that either a flat line or a sliding scale may be the route chosen.

[**13:15**] The Head of Life Insurance informs the two Directors that he had spoken to Equitable and they were going to send over some supplementary material and had suggested a meeting later that day to take FSA through it. Equitable had said that, in relation to providing a distribution graph, it would be difficult to produce anything meaningful, due to the element of discretion over future payments.

[**14:08**] The Director of GCD notes that the material provided did not compare different policyholders but the average policyholder and, therefore, '*it would be good to know how significant are the variations from the average*'. He also says '*the fundamental problem seems*' to be that a compromise offer '*based on the current value of a policy may not work well*' for policyholders whose interests result primarily '*from the fact that they have top-up rights, rather than the current value of their policies*'.

[**15:03**] The Head of Life Insurance gives his opinion that: '*the fundamental problem is that, because the value of the option depends crucially on how much an individual pays in future premiums – which is entirely at their discretion, and is by definition unknowable at this point – the only significant variable is age*'. The Head of Life Insurance concludes:

Since all policyholders have the right to pay future premiums, it may be reasonable to give greater weight to the results in that category. These are already pretty "flat" and thus arguably fair ... for younger policyholders, whose rights to future payments were more valuable than those of older policyholders, the benefit of the greater GAR value which they were giving up was broadly offset by the greater value they obtained from the effect of the uplift combined with greater investment freedom in the fund.

02/02/2001 [12:55] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

02/02/2001 [13:13] Halifax send FSA their suggested amendments to a draft FSA press notice and letter to be sent to Halifax. Halifax suggest the inclusion of the following in FSA's letter to them:

> *Moreover we recognise the special circumstances surrounding this transaction and understand and accept the reasons why the contractual agreements do not follow our published guidelines on outsourcing.*

This drafting is not included in the final version of the letter sent on 04/02/2001. An official circulates the drafts and asks for comments by 17:00. FSA's Director of GCD notes in manuscript that '*we have a problem with saying that the proposed compromise scheme represents a fair deal*'.

Additional text is suggested by Halifax, including: '*at no stage will you exercise any control over its financial affairs. There are therefore no circumstances under which we would look to you to stand behind the closed fund if it were to get into difficulty*'.

Halifax also suggest deletion of text, which states:

> *The court will need to consider the transfer of the in force business under Schedule 2C of the Insurance Companies Act. On the basis of the proposals in the draft heads of agreement, we would not be minded to object to such a transfer.*

02/02/2001 [15:03] FSA's Director of GCD writes to the Head of Life Insurance about two substantive doubts that he has concerning the proposed compromise:

> *The first relates to the three statements about the proportion of GAR policyholders taking GARs, rather than alternative benefits. My concern is that we have no reason to doubt that these proportions represent the actions of policyholders who are properly advised. My worry would be if we thought that there was any reason to believe that, for example, people have been encouraged to take the maximum tax free cash sum because it was cheaper for the company rather than because it was in their own interests.*

The second is that he did not understand how the figures added up to the direct uplift of 18%. The Director of GCD says that, while '*these points are not fundamental*', he would be reassured to know that GAD were happy with the analysis and that the material was consistent with what they had seen before.

[**15:46**] GAD reply that they '*remain uncertain*' about Equitable's analysis and they set out some concerns. GAD say:

> *While I can understand that almost all policyholders would take the maximum cash sum (both for tax reasons and a likely preference for cash upfront), they do not indicate what alternative forms of annuity have been taken by the unquantified "majority" or what their reasons may have been for this alternative selection.*
>
> *... The note of* [the Head of Life Insurance's] *conversation with* [Halifax's Chief Executive] *suggests that they are now though thinking of presenting this as proposed uplift as being equal to 80% of the "value" of the annuity option, although this begs the question of what is the present "value". It sounds though as if they would like to be able to say that assuming everyone takes maximum cash, then they are making a further 20% deduction to allow for the additional flexibility that will be available for all policyholders. If this interpretation is correct, then I would guess that many policyholders near retirement would be willing to accept this percentage reduction in benefits as being a reasonable trade-off for the new flexibility.*

I am less sure though about his other suggestion of applying all of the 20% uplift only in the form of final bonus. Many policyholders may well not appreciate that they are giving up a guarantee and at the very least may consider that they have a reasonable expectation that this uplift will always be maintained. Accordingly, they may well still need to set aside some provision in the balance sheet for this uplift.

The flat rather than sliding scale probably can be rationalised by the arguments presented for an average policyholder. However, I agree that it would be useful to know rather more about the level of premiums relative to accumulated funds for a spread of policyholders. This should give some measure of how much benefit individual policyholders may be giving up. (Even though some may have the theoretical option to pay much higher levels of premiums now than they have in the past, I am not sure that they need to offer very much for such an option to increase the level of premiums paid each year, if in practice this option has never been utilised to its full extent.)

[**16:48**] The Director of GCD believes that FSA needed to urgently understand how the value of the uplift, being equal to 80% of the value of the guaranteed annuity rate, worked, as he had '*seen nothing on it beyond the original phone message this morning*'.

02/02/2001 [entry 6] FSA request from Equitable further information on the section 425 scheme. FSA say that they are concerned about the fairness of the scheme being fair to all policyholders. FSA note that the scheme was designed to attempt to be fair to average policyholders, but that they were still concerned about '*non-average policyholders*'. FSA ask for a '*breakdown of the fairness of the offer to policyholders*' of different age groups and size of policy. In doing so, FSA say that:

[We] *think that account needs to be taken of the different interests of two policyholders of the same age with policies in widely differing values. How are they properly to be described as fairly treated in respect of their top-up rights?*

In addition, FSA note that such a breakdown would be especially helpful if it were '*related to any method of determining expected take-up under top-up rights*'.

02/02/2001 [16:03] FSA's Head of Life Insurance informs Managing Director A that Halifax had called him about the press notice and letter to be issued. The drafting issues discussed include that the paragraph explaining the transfer of Equitable's unit-linked business by the Schedule 2c scheme was no longer needed, as Halifax now planned to transfer the business by means of reinsurance. FSA say that Halifax had been told that:

... we could not go as far as he wanted without further discussions with Equitable on the GAR/non-GAR compromise. He accepted that; said they wanted more time, and would come in on Monday. (In fact, I think we could accept this first amendment now; but the second ("represents") goes too far at this stage.)

The issues also include that: '[Halifax's Chief Executive] *wants a reference in this letter to the understanding already given on enforcement, and also to the understanding on marketing issues ...*'.

[**16:50**] The Director of GCD says that he did not understand why Halifax no longer needed a Schedule 2c scheme. He also asks whether the unit-linked business would no longer be automatically transferred.

02/02/2001 [17:25] An official informs FSA and PIA that Equitable's advisers for the sale had telephoned Managing Director A to say that Prospective Bidder F intended to make a further offer to Equitable that day.

02/02/2001 [17:31] Equitable provide FSA with the information requested earlier that day.

The Head of Life Insurance circulates the information within FSA and to GAD and suggests that they should meet on 5 February 2001.

04/02/2001 [entry 1] FSA write to Halifax and say that they saw no difficulty with them becoming the owner of the relevant parts of Equitable. FSA say:

> *We understand that the proposed relationship between you and Equitable Life means that it will not be a subsidiary and that at no stage will you exercise any control over its financial affairs. There are therefore no circumstances under which we would look to you to stand behind the closed fund if it were to get into difficulty ... We see no difficulty with you as owner of relevant parts of Equitable Life. No issues of regulatory standing or consulting an overseas regulator arise.*
>
> *The Board of Equitable Life will form its own views about whether the bid can be agreed without consulting policyholders. Our current assessment is that there is unlikely to be any basis for us to intervene to require such consultation.*

FSA continue:

> *... More work remains to be done, and the FSA will need to consider the detail before forming a definitive view, but the FSA's view is that this is a promising basis for a fair deal for policyholders. The FSA will continue to work with Equitable Life and the Halifax to ensure that the terms of the deal are communicated clearly to the policyholders, and that policyholders understand the choices they will have to make as part of the court process.*
>
> *Your proposed agreement indicates that it is subject to the FSA being agreeable to the proposed transaction. This letter therefore confirms that we are agreeable to it, as set out above, and we will confirm publicly that this is the case.*

FSA conclude:

> *You also have* [FSA's Head of Life Insurance's] *letter to you of 31 January 2001, enclosing a copy of a letter to Equitable Life on enforcement issues, and* [PIA's] *letter to* [you] *of 2 February 2001 on marketing issues.*

04/02/2001 [20:12] FSA's Line Manager E circulates a revised draft of a '*defensive briefing*' in the form of a question and answer guide and says that FSA's Consumer Relations Department was working on some general lines to take for the consumer helpline.

The briefing deals with the compromise, the sale to Halifax, and FSA's note in reference to both. Amongst the answers suggested in relation to the compromise, and for GAR policyholders, were:

- *... that buying out GARs will reduce uncertainties about the future liabilities of the Equitable. If policyholders agree to this, it would enable Equitable to achieve greater certainty about* [it] *in its financial position and it should be able to produce better returns for policyholders as its investment freedom is restored.*
- *Any proposals to buy out* [the right to a guaranteed investment return] *would be set out in the detailed compromise scheme.*
- *The cost of buying out the guarantees will be met from the with-profits fund. It is intended that reserves held to meet the GAR liability (estimated following the House of Lords judgement) will be used to cover the cost.*

In response to non-GAR policyholders, it was suggested that the following should be stated:

> *The value of your policy should be protected. Moreover, in future you should get the benefit of the increased investment freedom that will be available to the Equitable from the release of statutory reserves (and the consideration being paid by the Halifax). This should allow greater investment freedom which in turn should lead to higher bonuses than would otherwise have been available, although ultimately the benefits will depend on the relative performance of the different types of investments such as gilts and equities.*

The FSA, in relation to how the compromise might work, said that:

- [If] *the required majority vote in favour, dissenters can be bound to the terms of the compromise by the court ... If the proposed compromise is rejected, the second tranche of capital that was to be injected into the with-profit fund by Halifax will not happen. And the opportunity for the Equitable to release statutory reserves will be lost. This will mean that the constraints on the investment policy of the Equitable will continue. It will have to carry on investing more heavily in safer investments such as government stocks and bonds to protect its financial position.*
- *We cannot prejudge the court. And there are a number of steps to be taken before the matter can be taken to the court, including a vote of the policyholders concerned. Equitable and Halifax believe their proposals offer a fair compromise. At this preliminary stage, we would agree there is a promising basis for a fair deal for policyholders. However, there are still many details to be sorted out.*

In relation to the proposed Halifax deal in this context, FSA said that:

> *Equitable believes that the initial consideration of £500 million, that is not dependent on the compromise, is better than any other offer that had been firmly put on the table ... and that the bid from Halifax was the only firm proposal it received.*

In response to more general questions about whether the Equitable situation showed that '*it is risky to invest*', FSA suggest a reply as follows:

> *Investments do carry a certain risk and regulation seeks to ensure that people are protected from unreasonable risk and that consumers are aware of the risks that they face and the gains they may make.*
>
> *The FSA understands the importance of stability and certainty in personal finance arrangements, such as pension. We believe that this package goes a long way to achieving this. We think that there is a promising basis for a fair deal for policyholders. If a resolution is achieved this should improve investment freedom going forward which should help bonus levels. The actual levels of future bonus will depend on the relative performance of the different types of investment such as gilts and equities.*

In response to a question, which asked why there was '*such a rush ... If Equitable is solvent*', FSA state:

> *The last few months have caused anxiety for many Equitable customers. While the with-profits fund is still solvent, it had been seriously weakened by the House of Lords judgment; the longer the uncertainty about Equitable's future lasted, the greater the risk that the assets of the Equitable would fall in value. The directors of the Equitable believed that the Halifax deal on the table was too good to risk letting it slip away.*

On their own role, FSA state:

> *The deal announced ... is a commercial matter between Equitable and Halifax, and in the case of the compromise, the Equitable and its members. However, the FSA has powers to act if it believes that the reasonable expectations of policyholders may not be met or if it considers that policyholders have been treated unfairly. We therefore considered the broad terms of the deal before the Halifax went ahead ... We think the deal with Halifax is good news for all Equitable policyholders. We also think it is important that there is a compromise to deal with the GAR problems. At this stage, we think that there is a promising basis for a fair deal for policyholders.*
>
> *Ultimately it will be for the policyholders to express a view on the compromise and for the court to decide whether to approve it.*

FSA also explain that '*there was no case for* [an industry] *bail out*' as:

> [It] *is important to remember that ... the Equitable has been solvent throughout and the issue of compensation does not arise.*

FSA concluded that they have:

> *... acted in accordance with the statutory framework throughout, and in particular has always had as its priority the objective of protecting the interests of the policyholders. We have sought to facilitate a deal, by providing appropriate support to Equitable, Halifax and other interested parties, including representatives of policyholders and other prospective purchasers. We have also sought to ensure that so far as practicable, any outstanding regulatory issues have been dealt with so that a deal could be concluded at the earliest opportunity.*

Other points include that:

- FSA had done the same for Halifax as it would have done for any other bidder that was offering a deal that FSA thought would be fair to policyholders – that is, to reassure the bidder that the regulator would not seek to use its powers to prevent a deal being completed;
- FSA did not need to formally approve the deal, as a whole;
- if the majority of policyholders voted in favour of the compromise scheme, FSA need not give specific consent as the court must approve it; and
- FSA had met with various parties to facilitate a possible deal by discussing regulatory issues that might arise from a bid by these parties. FSA had also worked closely with Equitable's management to provide advice and assistance on regulatory matters.

04/02/2001 [entry 3] FSA's supervisory file includes an extract of the minutes of an Equitable Board meeting, held on 4 February 2001, where the Board had resolved that Halifax's offer should be accepted by Equitable.

05/02/2001 [10:00] FSA hold an Equitable Life Lawyers Group meeting.

Chief Counsel A reports that there appeared to have been little progress on formulating a response to the OFT's letter about Equitable's use of the market value adjuster. Legal Adviser C says that some concern had been raised by FSA's consumer protection division that the proposed letter to be sent to the OFT was too '*pro-Equitable*' and that such a letter might '*limit FSA's hands with a view to future policy*'. However, Legal Adviser C felt that this last concern was misplaced. The Director of GCD emphasises it was important that Equitable made a public statement to policyholders that: '*the MVA discretion was a fettered discretion so that the policy holders* *understood that there was an implied term that they could enforce*'. It is agreed that Legal Adviser C would ask Line Manager E to establish if he was content for the letter to be sent to the OFT.

Chief Counsel A reports that a meeting on winding up issues had been held on 2 February 2001 and an accountancy secondee (FSA's Insolvency Practitioner) was to be taken on to map out what would happen in the event of insolvency.

Chief Counsel A notes that the Halifax deal now proposed the use of reinsurance '*to avoid*' Schedule 2C of ICA 1982 procedures.

The Director of GCD requests that the minutes of their meetings were accompanied by a list of current legal issues and that the following issues were added: Article 4 of Equitable's Articles of Association; work on the compromise scheme; counterfactuals, including winding-up; and reviews.

Attached to the minutes is a list of outstanding legal issues.

05/02/2001 [13:38] Equitable send FSA a draft 'dear policyholder' letter about the sale to Halifax of its operating assets, sales force and non-profit and unit-linked business for a payment of up to £1bn into the with-profits fund. Equitable ask whether FSA were happy with it. Equitable also send FSA their policyholder question and answer material and an extract from their press release, which had been issued that morning.

05/02/2001 [14:30] FSA's Insurance Supervisory Committee approve, without discussion, the recommendations to approve Equitable's application for a section 68 Order on the admissibility limits of shares. (See 23/01/2001 [**entry 5**].)

05/02/2001 [15:51] GAD write to FSA, further to their comments on 22/01/2001 about how the sale of Permanent Insurance should be treated in Equitable's 2000 returns. GAD thank FSA for providing a copy of the sale agreement. GAD advise that, subject to certain caveats that they set out (which include that their comments are subject to any legal opinion FSA may receive), GAD believe it would be reasonable to treat the sale price as an unsecured debt in the 2000 returns.

05/02/2001 [entry 5] FSA's Chairman informs Managing Director A that he had updated the Chancellor of the Exchequer on 1 February 2001 about Equitable. The Chairman says that it had been useful to do so, as the Chancellor '*appeared to have been getting his information on progress largely from the press. I was able to explain the circumstances surrounding the switch of forces from* [Prospective Bidder D] *to Halifax. He was clearly relieved by these turn of events*'.

06/02/2001 [09:44] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

06/02/2001 [10:01] Equitable's advisers for the sale send FSA a letter received by Equitable from Prospective Bidder F on 2 February 2001 and a draft comparison (of the deals from both Prospective Bidder F and Halifax) underlying the Board's decision to accept Halifax's offer.

FSA's Head of Life Insurance comments, when forwarding the document to various colleagues, that: '*At first glance, this looks inferior to* [Halifax's] *offer (see final paragraph). But it envisages reopening the* [Equitable] *with profits fund in due course*'.

06/02/2001 [entry 3] FSA meet with Prospective Bidder F, at their request, in order to be informed about the counter-bid which they envisage putting to Equitable the following day.

Following the meeting, FSA (Chairman, Managing Director A, Director of GCD, Director of Insurance, Head of Life Insurance, Head of Press Office and Line Manager E) meet to discuss the proposed bid.

According to Line Manager E's note, FSA say that the bid could be described as being worth £1.5bn (compared to the £1bn Halifax offer), but in real economic terms was worth much less. FSA agree to attempt to establish the true value of certain parts of the proposals. FSA note that the Halifax proposal was already '*in the bag*' and any negotiations that Equitable entered into with Prospective Bidder F could jeopardise that. The Line Manager's note also records that Prospective Bidder F had given an undertaking to sell the sales force to Prospective Bidder D on completion of the deal, which could complicate matters.

FSA agree that it would be important for Equitable to ensure they followed due process when reacting to any further bid. FSA record: '*The FSA was entitled to form a view as to the economic and legal assessment of Equitable and its professional advisers. However, on the basis of the facts before us, we saw no basis to intervene provided we were sure that the Society's and the Board's obligations had been properly assessed and considered*'.

FSA consider whether they could disclose information about the meeting to Equitable and Halifax. It is agreed that Managing Director A would warn both companies and the Head of Life Insurance would inform Equitable's advisers for the sale.

06/02/2001 [11:59] FSA receive a telephone call from a policyholder action group. The action group challenge the merits of the Halifax deal. FSA explain that the Halifax offer was the only offer on the table and better than other proposals that had been explored. FSA also indicate that they had looked carefully at the issues before the announcement and had concluded that it was in the best interests of policyholders.

06/02/2001 [19:00] FSA telephone Equitable to inform them that they could expect to receive an offer from Prospective Bidder F the following day. FSA say that they would need to be satisfied that Equitable's decision on the offer had been reached in a reasonable manner and with regard to due process.

06/02/2001 [20:15] Managing Director A informs the Director of Insurance that he had spoken to Halifax and informed them that a bid for Equitable's assets from Prospective Bidder F was likely the following morning.

07/02/2001 [entry 1] FSA write to the OFT setting out their thinking on Equitable's use of their market value adjuster. FSA provide a copy of a note prepared by FSA legal advisers, which concludes that it could be argued that the Unfair Terms in Consumer Contracts Regulations 1999 did not apply in this case.

FSA note that the OFT had:

> *... indicated that your latest thinking was to accept the arguments as to why it was not unfair for an adjustment to be made to the value of policies on early transfer or surrender.*

FSA's letter continues:

> *As I understand it, your concern is not so much about the application of an mva in itself, but rather the way in which any adjustment is calculated. You indicated that you might be looking to ask* [Equitable] *to take steps to amend the wording of its policy documentation to explain more precisely the basis on which adjustments would be made.*

There is of course a wider industry issue. I think I mentioned that [Equitable's] *position is slightly different to that of most other life offices (even if overall the outcome is the same in economic terms). This is because of the way in which* [Equitable] *has declared (annual) reversionary bonuses at higher than usual rates and because, in calculating the surrender value,* [Equitable] *also takes into account the value of the policyholder's share of the "terminal bonus" which in most companies would only be payable on a contractual date under the policy. Other companies are less transparent about the way in which the surrender values are calculated. However, I think that in the light of our discussion, you were going to talk to the Association of British Insurers to get a clearer picture of general industry practice.*

FSA inform the OFT that:

[Our] *own legal view is that the* [Unfair Terms in Consumer Contracts Regulations 1999] *are unlikely to apply to the mva, as it is currently applied to policy values, provided that the MVA operates in a way that is reasonable. If the mva were applied in a way that was entirely arbitrary and without regard to the kinds of factors described in my letter of 21 December 2000, we too would be concerned about the effect that that could have on policyholders (and indeed in such circumstances we would have to consider the exercise of our powers of intervention under section 45 of the Insurance Companies Act 1982). That seems to be consistent with the position that you are moving towards in looking for a more explicit form of words to be inserted in the policy documentation.*

FSA conclude by saying:

I think that achieving your objective by way of a contractual change may present some difficulties and you will understand our concern, for prudential reasons, that nothing should be done to undermine [Equitable's] *(or any other life office's) ability to adjust contract values at early termination in appropriate circumstances. Given that in policy terms we seem to be thinking along similar lines, and our objectives seem entirely consistent, I think it would be useful for us to meet fairly soon to work out how those objectives might best be achieved.*

07/02/2001 [08:50] FSA's Director of Insurance seeks advice from GAD's Directing Actuary B on the surplus relief treaty element of the bid by Prospective Bidder F. In particular, the Director of Insurance asks whether it was possible to evaluate what impact this would have on Equitable's investment freedom.

[**11:05**] The Directing Actuary says that it would be difficult to make such an assessment from the limited information he had. However, the Directing Actuary's '*very rough estimate would be that this might allow another 5% of the fund to be invested in equities, probably then generating no more than 0.1% per annum additional investment return*'. The Directing Actuary says that it would be helpful to see any notes or papers that had been received from the bidder.

[**12:57**] The Director of Insurance explains that Prospective Bidder F did not leave anything with FSA at their meeting the previous day but that FSA had just received copies of an offer that had been submitted to Equitable that morning.

[**14:14**] Directing Actuary B provides FSA's Director of Insurance with his views on the differences between the bids from the two companies.

07/02/2001 [10:37] Halifax reply to FSA's letter of 04/02/2001, saying that they were proceeding on the basis that FSA were satisfied with the proposed outsourcing arrangements that had been negotiated with Equitable – and that FSA saw '*no reason why IMRO should object to the proposed change of control of Equitable Investment Fund Managers Limited*'.

07/02/2001 [15:00]	FSA hold a conference with Counsel about their responsibilities in relation to the offer from Prospective Bidder F. FSA's note of the meeting states that Counsel advise that FSA should not suggest that an entity should breach its contract but they must ensure that Equitable had properly considered whether there were any lawful way out of the Halifax deal if the offer from Prospective Bidder F was a significant improvement.
07/02/2001 [15:07]	FSA's Director of Insurance writes to various people at FSA, commenting that the offer from Prospective Bidder F contained a condition that acceptance did not involve Equitable breaching any legal obligation. The Director of Insurance says that this meant the offer was not capable of being accepted, unless Equitable secured the agreement of Halifax.
07/02/2001 [16:49]	Equitable's advisers for the sale send FSA two draft responses to Prospective Bidder F's revised proposal, together with an outline side by side analysis of the value of both proposals.

07/02/2001 [entry 7] FSA hold a telephone conference with Equitable, their advisers and solicitors about the bid from Prospective Bidder F. According to Line Manager E's note, in summary:

> [Equitable's advisers] *had advised that the new offer was only of marginal better value;*
>
> *Equitable had clear legal advice that they could not entertain the new proposal;*
>
> *Halifax had made it clear that they would seek to enforce the contract;*
>
> *Equitable wanted to reject the offer quickly, but we recommended to them that they should ensure that in so doing, they followed due process including with the support of the board.*

FSA say that their starting point was that the bid was a commercial matter for Equitable, but:

> *... we felt we had a responsibility because of our duties and the statements we had made about being closely involved. We therefore wanted to be sure that due process had been followed. We therefore took the view that Equitable needed to:*
>
> - *take proper legal advice;*
> - *make a comparison of the merits of the offer, including as to security;*
> - *if they concluded the bid was very much better, they needed to look at the options available to them, including considering whether Halifax would release them;*
> - *consider the extent to which the board should be involved in the decision (which was not very clear from the minutes of the last board meeting).*
>
> [Equitable's Chief Executive] *said that the board had been appraised of the last* [Prospective Bidder F] *offer last Thursday, when it was telephoned through. It was for that reason that there was limited consideration given to it when the Board met on Sunday to commit to the Halifax deal.* [FSA's Director of Insurance] *said that our concern was that a disgruntled policyholder might seek to argue that the board had not properly considered all the options available. For that reason, we preferred the more detailed letter that made it clear that due process had been followed.* [The Director] *said that we would wish to be able to say that that had been done, and be satisfied that the position had the full support of the board.* [Equitable's Chief Executive] *took the point but said that he was concerned that the imperative in his mind was to close the matter as soon as possible to avoid the risks of a row in the media. He said there would be difficulty in calling a board meeting within the timescale required. He expressed concern about the fact that one regulated firm was seeking to induce another into breaking a binding contract.*

Equitable's solicitors confirm they had been told by Halifax that they would seek to obtain an injunction if they thought that Equitable would break the terms of the contract. The Society's solicitors also say that there would be a real risk of a claim against Equitable for loss of value, damages and performance of the contract.

FSA agree to review the drafting of a letter that had been prepared for Equitable to send to Prospective Bidder F, rejecting their proposals.

07/02/2001 [entry 8] FSA have a further discussion with Equitable, their advisers and solicitors, in which FSA offer comments on the proposed letter to Prospective Bidder F and clarify some points in the 'side by side' comparison of the Halifax and Prospective Bidder F bids which underpins it. On the letter, FSA:

- Ask whether Halifax were subject to regulatory clearance from PIA. Equitable's advisers say that they had received confirmation that clearance had been agreed.
- Express concern about the references to consideration of the bid by Prospective Bidder F by Equitable's Board, as: '*If, as seemed likely, consideration would formally* [be] *by a directors meeting (since it would be a minuted directors meeting by conference call rather than a board meeting which, under Equitable articles required the physical presence of a quorum meeting together) to claim that the board had been involved might leave the Society open to criticism and possible challenge*'.
- Repeat their concerns that Equitable should be absolutely certain that decisions taken on the basis of discussions in a directors' meeting had been properly taken and could not be challenged subsequently.

On the side by side comparison, FSA:

- Ask whether Equitable's advisers were confident that they had properly reflected the combined effect of the charges Prospective Bidder F had proposed on asset management and administration. Equitable's advisers say they are confident and there was no difference between the bids on charging structure. Therefore, Prospective Bidder F's proposals were not as good as Halifax's, as their cost charging was 25% higher.
- Seek clarification on the element in the comparison relating to the benefits obtainable from the different upfront cash offers and Prospective Bidder F's proposals for £400m '*surplus relief reinsurance*'. FSA's Director of Insurance records: '*While this showed some advantage to* [Prospective Bidder F] *the £400m was calculated to provide a benefit of only £40m.* [Equitable's advisers] *were confident of their calculation of this benefit. While neither* [Chief Counsel A] *or I were competent to judge the methodology (essentially calculating the charges payable as, in effect interest on a loan, and the return achievable through equity investment) was reassuringly familiar*'.

07/02/2001 [entry 9] FSA speak with Halifax, who say they are comfortable with the approach being taken by Equitable. Halifax say they would write to Equitable's Board stating that they were committed to seeing the deal through and there were no circumstances in which they would alter the value of the offer. FSA record that '[Halifax's Chief Executive] *concluded by* [commenting]*, with some feeling, and in reasonably predictable terms, about the conduct of a regulated entity* [Prospective Bidder F] *which appeared to be set on inducing a breach of contract between two well established financial institutions with long and honourable traditions*'.

07/02/2001 [20:53] FSA's Director of Insurance forwards to Managing Director A (copied to others at FSA) GAD's analysis of the proposals (see 07/02/2001 [**14:14**]), commenting that it '*confirms (independently because it was prepared before we had sight of* [Equitable's adviser's] *"side by side" analysis)*

	the overall conclusion that [Equitable's advisers] *have reached on the comparative merits of the bids which the Equitable directors are to be asked to consider*'.
07/02/2001 [21:21]	FSA inform Equitable's solicitors that they were aware of no circumstances which might warrant refusal of the proposed acquisition of Equitable Investment Fund Managers Limited by Clerical Medical Investment Group (Holdings) Limited (a subsidiary of Halifax).
08/02/2001 [11:24]	FSA's Managing Director's Office ask Line Manager E to draft a reply to Halifax's letter of 07/02/2001 about assumptions regarding outsourcing. There is some discussion about how to take this issue forward.
08/02/2001 [entry 2]	Halifax write to FSA to express their concern about Prospective Bidder F's approach to Equitable. Halifax say: [We] *are very much in uncharted waters. However, the situation is becoming so serious that I believe I have no alternative but to set out our position on paper.* *Throughout the process of our acquiring Equitable Life we have done everything in our power to ensure that our behaviour is completely beyond reproach, and in particular does nothing to destabilise the position of Equitable Life policyholders. And after eight months of uncertainty we were the only organisation prepared to stand up before its shareholders and argue for a transaction which genuinely holds out for the real prospect of ensuring the future solvency of the closed fund.*
08/02/2001 [entry 3]	FSA reply to Halifax's letter, saying that FSA have considered whether there was any basis for FSA to take '*legal action*' to protect Halifax's position or that of Equitable's policyholders, but that they had reached the conclusion that FSA had no powers which would be exercisable for this purpose.
08/02/2001 [13:02]	FSA's Director of Insurance informs Managing Director A about a conversation he had had with Equitable in relation to the bid by Prospective Bidder F. The Director of Insurance explains that: '*The Equitable held a board meeting yesterday evening* [and had] *concluded that they should reject the* [Prospective Bidder F] *in the terms of the longer of the two draft letters which we had seen earlier*'.
08/02/2001 [17:47]	Equitable send FSA a copy of a letter of that day to Prospective Bidder F about their offer, which had stated that Equitable cannot pursue further discussions with the bidder.
08/02/2001 [18:03]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.
08/02/2001 [entry 7]	FSA meet a policyholder action group to discuss recent developments at Equitable. FSA record: [FSA's Director of Insurance] *began with a few key points about the Halifax announcement. He noted that the Halifax deal was a good one, in the circumstances, and that the proposals for contracting with Clerical Medical were on the basis of reasonable charges. He then commented on the proposed compromise over which Equitable would be looking to consult before putting forward a formal proposal. Equitable wanted to be fair to all policyholders and the Halifax deal, with the goodwill element of the consideration conditional on a deal being accepted, gave an incentive for policyholders to accept it. He noted that the transfer of value as a result of the House of Lords judgment had happened so the intention was to seek to remove future uncertainties by crystallising current entitlements. There was no prospect of the lost bonuses being restored but the compromise, along with the sums payable by the Halifax,*

gave a reasonable prospect of restoring the investment freedom of the with-profits fund so that it would be able to support higher equity backing ratios going forward.

... [the Director of Insurance] *said that we had had discussions about Equitable's GAR liabilities in late 1998, which had led to an increase in their reserves of £1.6bn, which represented a prudent estimate of the likely GAR take up at the time.* [FSA's Head of Life Insurance] *said that there had been some discussion about the right level of reserving, with Equitable taking the view that it did not need to hold significant reserves because of the evidence of low levels of take up. However, we had insisted that reserves be held on the basis of close to full take up.* [The Director] *said that the reserving requirement had been met in part by the reinsurance, which would cover the costs if the take up exceeded 25% but that the cover was conditional on Equitable maintaining the same policy towards the allocation of terminal bonus. The House of Lords judgment imposed a new bonus policy, which meant that the reinsurance had to be renegotiated – it now provided cover if take up exceeded 60%. The combination of the impact of the judgment and the further tightening of the reserving requirements generally had left Equitable in a position where it had relatively few free assets which constrained its investment freedom, and this was the reason for looking for a buyer. Now that the deal had been done with the Halifax, the financial position would be stronger and current policy values should be protected.*

They asked whether there was any prospect of a sweetener being offered to non-GAR policyholders to sign the deal ... We ... pointed out that the removal of future uncertainty of the size of the GAR liability, the increased investment freedom and the fact that it was intended that the costs of the deal would be contained within the cost of the transfer of value that had already taken place would all be beneficial to non-GAR policyholders. They asked why this had not been proposed before now. We pointed out that before the closure announcement, it was unrealistic to believe that people would have agreed to any kind of deal – some were expecting windfall payments from the demutualisation at that stage. They also asked about the role of the independent actuary and whether it would be possible for the appointment to be made by one or more of the action groups. We said that it might be difficult for them to make the appointment, but we could consider whether there was any way that the action groups might have an input to the appointment, or the drafting of the terms of reference.

We answered a number of detailed questions. We confirmed that the Halifax deal did not have any impact on the operation of the Policyholders Protection Acts ... FSA's report into its regulation of Equitable was being worked on ...

In relation to the particular difficulties that with-profits annuitants currently faced, FSA acknowledged the difficulties and invited the action group to suggest what kind of protection might be achievable and desirable, perhaps as part of the compromise scheme.

08/02/2001 [entry 8] On FSA's supervisory file for Equitable is a copy of a letter from PIA to the Society about their continuing supervision work. In that letter, PIA had said:

Much of PIA's contact with Equitable over the last two months has concerned your firm's closure to new business and related issues. Whilst this new work has been undertaken, PIA has continued work on issues relating to Equitable before its closure to new business.

These pre-closure issues fall into two broad areas:

1) Work arising out of PIA's Supervision Visit to Equitable in June 2000.

2) Assessment of the standards of business written by Equitable since the Court of Appeal ruling on 21 January 2000.

	PIA had said that they had received Equitable's response to their supervision visit report and would respond in due course. PIA then explained that the purpose of writing had been to request information to help them quantify and assess the business written since the Court of Appeal ruling. PIA sought information from the Society on: new business data; information about all new with-profits and unit-linked contracts; complaints information; advertising and promotional material; training and briefing material for sales staff; standard paragraphs used in communications with policyholders; and sales process documentation. PIA asked for the information to be categorised into the periods: 21 July 1999 to 20 January 2000; 21 January to 20 July 2000; and 21 July to 8 December 2000.
09/02/2001 [entry 1]	FSA reply to Halifax's letter of 07/02/2001 saying that, while they would need to consider the details of outsourcing arrangements, they could confirm that, in principle, they saw no difficulty with the proposed arrangements. FSA also state that: '*On the proposed change of control of Equitable Investment Fund Managers Limited ... We are not aware of any circumstances that might warrant refusal by IMRO of this proposed acquisition*'.
09/02/2001 [entry 2]	Prospective Bidder D write to FSA to thank them for the '*very constructive approach*' that FSA had taken in connection with the asset management issues in relation to their bid. The Bidder said that it had been grateful for and impressed by the speed with which FSA had been able to come back to them.
12/02/2001 [09:05]	Equitable send FSA a copy of a letter that was being sent to policyholders about the sale to Halifax. Equitable also supply some information on their handling of telephone enquiries.
12/02/2001 [10:00]	FSA hold an Equitable Life Lawyers Group meeting. The minutes of the meeting record that: • FSA had now replied to the OFT's letter. • An update was provided on the sale to Halifax and the Prospective Bidder F bid. • FSA had not yet made a formal approach to Halifax/Equitable regarding amendments to Article 4 of Equitable's constitution. It is noted that, if at any stage it became necessary to express a view, the appropriate time would be during the second stage of the sale. • A paper on 'counterfactuals' was being prepared. • With regard to the proposed appointment of Equitable's Managing Director, FSA would serve notice under Schedule 2D of ICA 1982, requesting further information and that: *This will have the effect of preventing further moves to appoint* [the individual]. *The additional information will help the FSA to decide whether as a matter of fact* [he] *is fit and proper to act as managing director. As to whether the FSA can impose conditions on* [his] *appointment (should it go ahead) such as a time limit, we are reasonably confident that we can but there may be policy issues to consider fully first.*
12/02/2001 [entry 3]	FSA meet The Consumers' Association to discuss Equitable. According to a note of the meeting made by the Head of Life Insurance, FSA explain the recent history of the bidding process and indicate that FSA were satisfied that Equitable had gone through due process to decide that the Halifax offer was the best available. FSA explain that it was for Equitable to propose a compromise scheme and for FSA to satisfy themselves that the scheme was the result of a proper and thorough process.

12/02/2001 [entry 4]	FSA meet a policyholder action group. The note produced by FSA records, in summary, that '*the two sides agreed to differ on whether the sale of Equitable's businesses to the Halifax was in the interests of the Equitable's policyholders* [and] *that further meetings would be helpful*'.
13/02/2001 [entry 1]	Halifax's advisers send FSA copies of letters (dated 14 February 2001) to PIA and IMRO giving Notifications in respect of Equitable Investment Fund Managers Limited and a copy of a letter to their FSA supervisors about the outsourcing arrangements. (See 14/02/2001 [**entry 1**].)
13/02/2001 [18:29]	Equitable send FSA information on calls to Equitable's helpline.
13/02/2001 [19:45]	FSA have a telephone conversation with Equitable about their new President, advertising post-House of Lords, and the value of withholding seven months' bonus. FSA say that their PIA colleagues had not been successful in getting information from Equitable on advertising post-House of Lords' decision. Equitable promise to provide some figures the following day; however, Equitable say that they did not think that their expenditure on advertising at that time had been out of line with previous years. On the loss of bonus, Equitable's Chief Executive estimated that it represented a 5% reduction in policy value: '*But he thought that this somewhat misrepresented the true position*'. FSA record the Chief Executive as saying: *To set aside funds to cover the transfer of value from non-GAR to GAR it would have been necessary for the Equitable to distribute less by way of bonus in earlier years. While this would avoid some of the inter-generational unfairness the overall result would have been no different. The Equitable would be trying to get this point across at the* [Treasury Select Committee], *emphasising that no funds had been lost or misappropriated and that the value of the fund remained as it would otherwise had been. It was the uncertainty which currently afflicted the fund, and which limited investment freedom, which was the major problem. This would be resolved by the Halifax deal and the GAR/non-GAR accommodation <u>if it went through</u>.*
14/02/2001 [entry 1]	FSA's regulatory supervisor for Halifax sends Line Manager E a copy of the Administration and Asset Management Agreement that they had received that day. He suggests that Line Manager E should take the lead on this.
14/02/2001 [12:04]	Commenting on the Director of Insurance's note of the call (see 13/02/2001 [**19:45**]), the Director of GCD says: *We need to be cautious about appearing to accept the Equitable's characterisation of the* [House of Lords'] *decision as involving a <u>transfer</u> of value from non-GAR to GAR. The effects of the* [House of Lords'] *decision is that all with-profits holders participate in the overall profitability of the business, and similarly bear their share of its liabilities. This may appear to be a transfer of value, but only because the Equitable had characterised the position of the non-GAR with profits policyholders as participants in a separate non-GAR fund, unaffected by the liabilities to the GAR holders – a characterisation the Court did not accept.* [**12:29**] The Director of Insurance replies: *Yes, but it certainly represents a change from what had previously been assumed to be the aggregate shares of the fund represented by the GAR and non GAR policies so that the assumed value of the one declined by the same amount that the assumed value of the other increased.*

I don't think, as a matter of fact, that the Equitable did characterise the GAR and non GAR policy groups as separate sub-funds. In practice their belief that they could distinguish on the basis of exercise rather than availability of the option meant that they never faced up to this issue. It is interesting to consider what the [House of Lords] *might have concluded, had they been faced with a situation in which there had been two defined and separate sub-funds (even if the assets were pooled).*

Nonetheless I am sure your analysis is correct. But for the purposes of gaining understanding it seems to me that the concept of transfer is very helpful, provided it is clear that this is a transfer between the shares in the fund that had previously been assumed.

14/02/2001 [14:22] FSA's Director of GCD asks Chief Counsel A, in the light of a point made at the meeting on 12/02/2001 with one of the policyholder action groups, whether it was right that there could be no ring-fencing of the costs of providing a guaranteed interest rate on certain policies.

[**21:10**] Chief Counsel A replies: '*The 3½% guarantee is not an issue now because it has not been triggered. Investment returns continue to be well in excess of 3½%. If it were triggered, then I am not sure the Equitable judgment would necessarily mean no ring fencing, but it would almost certainly raise a "case to answer".*'

15/02/2001 [entry 1] The OFT reply to FSA's letter of 07/02/2001 about the Unfair Terms in Consumer Contracts Regulations 1999. The OFT say:

[We] *are clear that the Regulations apply here. We cannot agree with the argument that the mva terms are fair or fall outside our scope to take action under the Regulations if they are operated fairly. The question is whether the terms have the potential to be used unfairly in the future or mislead customers, and we consider that they have. Equitable will need, in order to meet the requirements of the Regulation, to limit the scope of its "absolute discretion" and conform its conditions to the fair practices that it says it applies and the fair principles that are enforced by regulation, though these principles may need further elucidation. Similarly, the scope of the FSA to regulate Equitable and Equitable's present practice in operating the relevant terms, do not remove the problem or confer any kind of exemption. The Regulations set a new and high standard for business and public authorities contracting with consumers; they give consumers additional protection, and they put us under a continuing obligation to ensure that unfair terms with potential for unfairness are modified or removed. Whether a standard term is unfair does not depend on an assessment of factors such as the practices and potential remit of any regulators, the likelihood that the courts will overturn the unfair term when it is challenged, or the current practices and policies or culture of the business using the terms.*

The OFT continue that:

We discern few points of agreement with the legal advice that you have received. The second and third paragraphs lead to an analysis of the "core terms" exemptions in Regulations 6(2) which is incorrect. [A named bank] *failed to persuade the High Court and then the Court of Appeal of the validity of this kind of approach in relation to the use of the "interest after judgement" clause. The court preferred a narrow definition of what was a "core term" and considered that the exemption could not apply to terms that determined what would happen if the agreement was in default (or thus – by extension – was terminated early).*

The advice discusses the application of the core terms exemption. But a core term is by definition very much at the forefront of the consumer's mind (even ambiguity in core *terms relieves it of the exemption). So the argument that consumers invest in full knowledge that the Society might decide to give them nothing at all is implausible. Equitable would have been in severe difficulties many years before if it had tried to sell its products on that proposition.*

The arguments on "absolute discretion" are addressed in the letter to Equitable. The width of the discretion is at the core of our concern. The term in question does not at all imply that the term will be exercised "reasonably". "Absolute" means precisely that – the discretion cannot be challenged – and the whole point of including this word is to make the discretion immune to any such challenge. This is reinforced by the inclusion of "(if any)". The reason that the term is not expressly subject to "reasonableness" is that it would modify or contradict the "absoluteness" of the discretion. At any event if there were an implied reasonableness requirement in the term, it would not meet the transparency requirements of Regulation 7 unless it were expressed.

The OFT conclude by stating:

I note your concern that nothing should be done to undermine Equitable's ability to adjust contract values at early termination in appropriate circumstances. However the effect of the Regulations is that the relevant terms should not enable Equitable to make unfair adjustments. The width of the terms is without doubt challengeable under the Regulations and could therefore be seen as unenforceable, whereas fair terms would not be. It seems to us essential therefore for Equitable to face this concern and that it would meet both your prudential concerns and ours for Equitable to do so by revisiting the terms to clarify and objectify the expectation that investors can legitimately have. Given, as you say, that our objectives essentially mesh together, I agree that it would be very useful to meet, perhaps early next week, to discuss these issues and next steps.

The OFT also enclose a copy of a letter to Equitable, dated 8 February 2001.

15/02/2001 [entry 2] FSA's Managing Director A submits a paper (dated 8 February 2001) to FSA's Board on the decisions on the bids for Equitable and the results of their ongoing supervision of the Society. The paper sets out the sequence of events on the bidding process following Equitable's closure to new business and explains the consideration and actions which had been given and taken by FSA and PIA.

15/02/2001 [entry 3] FSA provide PIA with their views on a booklet intended for Equitable policyholders that had been prepared by an independent financial adviser. FSA comment on those parts which were wrong or misleading.

16/02/2001 [13:09] FSA's Line Manager E asks for comments on a draft letter to Equitable on the proposed appointment of their new Chief Executive. The letter says that FSA '*cannot properly reach a decision on the application without additional information*', which is requested.

16/02/2001 [18:53] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

16/02/2001 [entry 3] FSA send PIA and IMRO information, received on 15 February 2001 from Halifax's advisers, on the change of control of Equitable Investment Fund Managers Limited.

16/02/2001 [entry 4] FSA meet the National Association of Pension Funds to discuss recent developments at Equitable.

19/02/2001 [09:17]	FSA's Head of Life Insurance asks Line Manager E to put together an agenda for a proposed meeting with Equitable's Appointed Actuary. The Head of Life Insurance says that he had spoken to the Appointed Actuary and that possible topics for discussion would include: end-2000 results; current and ongoing solvency position; surrender rates; and section 425 scheme. A meeting is arranged for the following day. [**18:15**] FSA send Equitable a letter setting out these key issues that they would like to discuss at the meeting, in the following terms. <u>End year 2000 results</u> FSA would like an update on Equitable's likely year end solvency position (i.e. 31 December 2000). FSA would also like to explore the possibility of their returns being provided to an accelerated timetable. <u>Current and ongoing solvency position</u> FSA would like an indication of the latest solvency position. FSA emphasise the importance of the timely provision of all reports on the solvency position of the Society, while noting that Equitable had not yet provided the monthly reports for November and December 2000 and that the January 2001 report was now due. <u>Surrender rates</u> FSA suggest that it would be helpful to discuss trends in the levels of surrender requests since closure to new business and since the announcement of the Halifax deal. FSA say that relevant to this was the discussion with the OFT regarding the market value adjuster. <u>Section 425 scheme</u> FSA request an update on the compromise scheme, including a discussion on the approach that the Society would take and its thinking on whether an uplift to GAR policy values should be on a flat rate or a sliding scale. FSA say that it would be helpful to have an indication of the likely timetable. <u>The Halifax deal</u> FSA ask for an indication of when the contracting-out agreements were to be finalised and whether any late changes were being proposed. On a copy of this letter, an official has written the following further points to raise: • *Assuming no compromise what can be done to protect position?* • [financial condition report] *at some point* • *2000 bonus declaration, content/timing*.
19/02/2001 [10:00]	FSA hold an Equitable Life Lawyers Group meeting. Among other things, the Group discuss the issues on the legal issues list and add a status report to each of the actions. Chief Counsel B informs the Group that he had recently become aware of a letter from Equitable to PIA of 20 December 2000, informing them that, prior to the court case, they had vested several policyholders with annuity rate guarantees into non-guaranteed rate annuity policies. He says that Equitable were proposing a mechanism for dealing with complaints about this but, as it would not be ready in time, had requested a PIA Rule waiver. Chief Counsel B reports that PIA were minded to grant the waiver but that it would need senior approval. The legal issues list attached to the minutes of the meeting includes: • Advice from Counsel on the interpretation of Article 4 had not yet been received. • The OFT had responded to FSA's letter of 07/02/2001, disagreeing with FSA's interpretation. It is noted that FSA were to meet the OFT on 22/02/2001 [**13:27**] and

also that FSA had concerns about the implications for the industry of the OFT's stance on market value adjusters.

- Under '*Possible use of intervention powers should MVA be further increased*', the Group record that this is '*not an issue at the moment, though it may become so should the FTSE index drop below 6000*' which '*was at one stage mentioned as a potential "trigger" for a further review by the Equitable of the amount of the mva*'.
- Work on the need to consider the full implications if winding up were undertaken and on any breach of solvency margin was ongoing.
- It is noted that there was a difference of view between FSA and GAD on the interpretation of Regulation 72 of ICR 1994 and that a meeting was to be held on 21 February 2001.

19/02/2001 [12:56] An email exchange occurs between FSA officials about a proposed meeting with the OFT regarding Equitable's use of the market value adjuster.

[**13:33**] Legal Adviser C notes:

> [If] *this is to be a meeting primarily to discuss the legitimacy of the Equitable's mva provisions in its policy documents, I wonder what a meeting with the OFT is going to achieve. I attended a meeting of the Equitable Life Lawyers Group this morning at which the letters to Equitable and to ourselves from the OFT were briefly discussed; the feeling around the table was that were we not likely to persuade the OFT to change their minds on this and would be wasting our time and energy doing so.*
>
> *... The good point that emerges from the OFT letter is that they at least appear to agree with us that on 8 December Equitable exercised its discretion to increase the mva in a way that was not unreasonable. Consequently, the prospect of action against Equitable by the OFT for the increase itself seems very remote.*

Line Manager E replies that his:

> *... concerns are wider than just the interests of Equitable in all this since it has potential implications for the whole industry ...*
>
> [It] *also seems to me that their analysis is a bit theoretical and does not take into account certain practical realities – not least that the "notional fund values" take into account growth, in the form of bonuses, that would never have been awarded if Equitable had the slightest idea that something was suddenly going to be found to be objectionable about its current practice. If the answer is for Equitable to clarify the basis on which the discretion might be exercised, I would like to know how OFT think that the terms of the contract might be amended. If a satisfactory exchange cannot be delivered and the terms were struck down, in practical terms this could cause a risk of insolvency and if that happened, people would get less than they would had an mva been applied since they would lose the entitlement to terminal bonus, and so get less than the surrender value. And going forward, Equitable and other firms will just reduce the amount of the bonuses they declare in the future.*
>
> *It may be that this does not affect the underlying analysis, but it seems odd that legislation that is designed to protect the interests of consumers might be used in a way that leaves them clearly disadvantaged.*

20/02/2001 [11:36] FSA's Line Manager E provides the Head of Life Insurance with the action points for FSA that arose out of the recent meetings with the National Association of Pension Funds and with a policyholder action group. (Note: these were provided as points to be raised with Equitable at the meeting later that day.)

Line Manager E says that, for the National Association of Pension Funds, FSA were to:

- seek clarification from Equitable on how pension fund trustees would vote on any compromise. The Line Manager notes that the Association was also concerned about what would happen where the group schemes included GAR and non-GAR policyholders; and
- seek reassurances from Equitable that '*"sensible" suggestions for new* [non-executive] *appointments were being given proper consideration*'.

In relation to FSA's meeting with the policyholder action group, Line Manager E says that the action group:

- wanted a '*token sweetener*' for non-GAR policyholders;
- believed that something needed to be done to protect the interests of with-profits annuitants, as this group had been disproportionately affected by '*recent events*'; and
- were concerned about the '*independence of the independent actuary*' and would like to see policyholder action groups having some involvement in the appointment and/or the terms of reference for that appointment.

20/02/2001 [14:00] FSA and GAD meet Equitable's Appointed Actuary.

Equitable provide the monthly solvency figures for December 2000 (note: I have not seen the information disclosed) and explain that one of the reasons for the delay had been due to the strain that had continually been put on resources since closure. FSA record:

> *The position disclosed demonstrated fairly thin solvency cover and had assumed that both the concessions for the artificial bond (valuation rate of interest) and for an increased valuation taking into account the sale of the Permanent* [Insurance] *had already been given. Without these concessions the company would not be able to demonstrate coverage of the* [required minimum margin] *in its statutory returns. The* [Appointed Actuary] *had, however, now adopted the stronger resilience basis that had been required by recent changes in the regulations in these figures. He thought that all other reserving issues had been ironed out but GAD pointed out that there was still an issue surrounding Regulation 72 and retirement dates to be resolved.*

FSA confirm that Equitable had not yet applied formally for the section 68 Order for the valuation of Permanent Insurance and for the '*artificial bond*' Order that Equitable still needed to confirm that, once issued, it would be used permanently.

Equitable say that they thought that their current financial position had improved as they had disposed of £1bn of equities since the year end, which had reduced the resilience reserve required. Equitable report that their equity backing ratio was now 61%, down from 68% last year, and which had historically been as high as 75-80%. Equitable say that the £500m Halifax payment, due next month, should boost solvency.

Equitable say that the current effect of the market value adjuster on remaining members was broadly neutral. Equitable inform FSA that they had rejected the OFT's arguments about the need to identify the circumstances in which an adjuster would be used and how it would be applied. Equitable say that they thought the OFT had raised generic industry issues to which the whole industry had to respond.

Equitable say that they were not keen on the possibility of having to submit accelerated returns, as staff would be concentrating on integration with Halifax and on the compromise scheme. FSA explain that the main driver for accelerated reporting would be that the information was in the public interest. Equitable argue that the compromise scheme would make available to policyholders a lot of details on solvency and that '*it was also possible that the availability of further public information at this time could muddy the waters*'.

Equitable next explain that the timetable for the compromise scheme was not clear, although the substance would need to be settled and made public by the annual general meeting set for 23 May 2001. FSA say that they would need to be involved in the construction of the scheme proposals, as they might be able to play a role of 'honest broker' in the proceedings, as they had done in another case. FSA say that they would also like to vet the Independent Actuary for the scheme and be involved in setting his terms of reference.

On the bonus declaration for 2000, FSA record:

> *The* [Appointed Actuary] *proposed to postpone the 2000 bonus notice until after the vote on the accommodation. If there was a positive vote it may be possible to offer a* [guaranteed] *bonus to everyone for 2000 of possibly 4%, (although as 3.5% is guaranteed under some GAR policies the real additional cost of this bonus was effectively the same as a 1% bonus across the board). This could be another carrot to help "sell" the deal to all classes of policyholders.*

Under '*Action Points*', Equitable agree to send FSA their latest response to the OFT as soon as possible and to provide their January 2001 solvency figures in the next two weeks. FSA's action is '*to push Equitable to apply for Section 68 orders*'.

20/02/2001 [17:01] FSA's Managing Director A sends a note to the Director of Insurance and others at FSA saying that the FTSE 100 Index '*fell like a stone this* [afternoon]*, through the 6000 barrier*'. The Managing Director suggests that the most obvious impact of this would be on Equitable and their solvency cover. He says: '*I'm hoping? correctly? that Halifax's £500 mn gives a fair bit of lee-way below 6,000 before our technical solvency requirements are breached*'.

[**17:45**] Line Manager E replies and relays information from the meeting with Equitable earlier. The Line Manager says that he did not wish to speculate on Equitable's solvency position but suggests that the current level of the stock market was the same as it had been on 31 December 2000. On the meeting, the Line Manager says:

> ... [Equitable's Appointed Actuary] *reported that at the year end (at 31 December 2000), Equitable had free assets of £340 million, giving 1.3 times coverage of the solvency margin. That valuation relies on the granting by the Treasury of certain accounting concessions, none of which has actually been granted yet:*
>
> - *allowing them to count more than the normal permissible number of shares in* [a company] *following the merger, which is fairly straightforward and routine (and worth less than £10* [million]*);*
> - *the valuation of Permanent* [Insurance]*, which was on the books at about £30 million, but the sale of which was agreed before the year end at £150 million. Our willingness to recommend the concession may depend on the auditors' willingness to allow the higher valuation in the companies act account, but I think there is a good case for a fair valuation to be on the basis of the agreed value of the transaction;*
> - *and the valuation of the synthetic bond, which is still under discussion, but the likely impact on the final figures is an improvement of up to £300m.*

So there will be issues for us and the Treasury to consider about the way in which the statutory returns show the end year position – the third of the concessions above seems to me to be the most difficult one to deal with.

Since the year end, Equitable has sold £1 billion of equities which reduces exposure to the market, but even now 61% of the assets are in equities. The first tranche of the Halifax payment will help matters, but it is not payable until completion, scheduled for 1 March 2001.

The above does point to the need to be careful about what we say, if we want to be certain that we are right. Either we should refer specifically to the position at 8 December, or simply say that the company is solvent.

[**17:58**] The Managing Director responds with a few points:

a) re [the newly merged company]*, I think their shares have fallen quite a lot in recent weeks ...*

b) the extra valuation for Permanent [Insurance] *sounds reasonable.*

c) I'm unsighted on the synthetic bond. Can we [please] *have a bit more on this? (we are going to have to be very careful in the current climate before giving anything remotely unusual to* [Equitable]*).*

[**18:13**] In response to '*a)*', Line Manager E explains that Equitable's application for a section 68 Order (see 12/01/2001 [**entry 2**]) is:

... one of a kind that has been granted whenever major plcs merge, and so is routine. Several companies are in line to receive concessions for this, and it has been with the Treasury for weeks. There is no reason to treat Equitable differently.

Line Manager E provides some text from a note on section 68 concessions that he had prepared '*a while back*'. He says:

On the face of it, the concessions themselves are not of great concern, though clearly they will be subject to abnormal levels of scrutiny. What is more difficult (assuming that the concessions have been granted before the returns are due) is that Equitable would like to be able to report the year end position as if the concessions had been in place at the year end.

FSA's Chairman underlines '*as if the concessions had been in place at the year end*' and writes '*If we are to concede that, I hope there are precedents (and preferably hundreds of them)!*'. His comments are sent back to Line Manager E, Managing Director A, the Director of Insurance and the Head of Life Insurance.

21/02/2001 [16:02] Equitable send FSA a copy of a draft letter to the OFT dated 16 February 2001.

21/02/2001 [14:18] In response to the minutes of the previous day's meeting with Equitable, GAD's Scrutinising Actuary F says to Directing Actuary B that he thought that Equitable had said that they accepted GAD's stance on Regulation 72 but the minutes of the meeting did not reflect this.

22/02/2001 [entry 1] FSA's Managing Director A informs the Director of Insurance that he had received a telephone call from Equitable's Chief Executive, who had confirmed that he was moving to the new administration company and had asked what FSA's reaction would be to Equitable's current Appointed Actuary taking on the dual role of Equitable's Appointed Actuary and Chief Executive. The Managing Director says that he told him that FSA '*would not favour*' that happening.

22/02/2001 [entry 2] HMT send Equitable the section 68 Order on admissibility limits of shares which Equitable had applied for on 12/01/2001.

22/02/2001 [entry 3] Having been passed the documents by FSA's supervisory officer for Halifax, Line Manager E distributes to colleagues at FSA and GAD the agreements which set out the basis on which Halifax would provide services to Equitable. The Line Manager writes:

> *I am not aware that any of these arrangements require formal approval under any of the regulatory regimes. However, we will wish to ensure that the contracts enable Equitable to maintain satisfactory arrangements, for example, for the protection of its policyholders, and to ensure that it continues to be able to comply with PIA conduct of business rules. We probably need, therefore, to focus on whether the contracts transfer to Halifax group any responsibilities that we consider should not be contracted out by an authorised insurance company. It will be important to ensure also that adequate arrangements will be maintained by Equitable to monitor performance against the contracts, and we will in due course need to discuss that with the Society.*

22/02/2001 [13:27] FSA meet the OFT to discuss Equitable's application of a market value adjuster on surrenders and transfers. According to Line Manager E's note of the meeting, FSA and the OFT continue to disagree on the underlying legal analysis of the application of the Unfair Terms in Consumer Contracts Regulations 1999 but did not pursue their differences; instead, they '*focussed on the substance of the issue, using the fact that we agree that a 10% adjustment is not unreasonable or unfair as a starting point*'.

FSA point out that, as Equitable were no longer writing new business, they could not improve the terms of contracts for the future. FSA also suggest that policyholders might be reluctant to consent to any changes to their current contracts. The OFT indicate that they would be satisfied if Equitable were to explain to policyholders the basis on which they would exercise their discretion and provide some examples. FSA say they would be happy to attempt to encourage Equitable to reply to the OFT along those lines. However, Line Manager E:

> *... also emphasised the need for us to be sure that whatever was done would not leave the Equitable exposed to unforeseen events; and that it would not cause problems for the industry ...*
>
> *I also warned against us trying to do too much at this stage, pointing to the fact that it is an industry wide issue about the operation of with-profits business, and that it is something that really needed to be looked at in the context of practice among all life offices. I told them about the with-profits review that we have announced and suggested that it was an issue that would very usefully be addressed in that context. Again they thought that would be helpful (and indicated that they had no appetite for carrying out an industry-wide review themselves).*

The following day, FSA's Head of Life Insurance comments that the meeting appeared to have produced a promising means of defusing the issue.

23/02/2001 [14:43] FSA's Legal Adviser A expresses some concerns about the agreements with Halifax. He notes:

> [That] *we are going to have to be satisfied with all the* [reinsurance agreements related to the Halifax bid] *that they are satisfactory with regard to the interests of the policyholders in Equitable, Halifax and* [Clerical Medical] *although I accept that not all the agreements are going to impact equally or at all on all the companies ...*
>
> [We] *need to be satisfied that there will be no variation in the rights of policyholders such that they should have been given an opportunity to make representations. Therefore it is necessary to bottom out exactly how the rights of policyholders will be changed if the reassurance goes ahead.*

Chief Counsel A notes to the Director of Insurance and the Director of GCD that some of these were significant issues '*to bottom out*' by 1 March 2001.

26/02/2001 [entry 1] Equitable write to FSA about the issue of whether they could continue to write certain new business. Equitable say that they would like to honour certain options to transfer to other policies, where they were not now writing such business, even though the policy option specified that they must still be writing such business.

26/02/2001 [entry 2] Halifax's advisers for the sale send FSA a copy of the '*Merged Agreement*' which replaces the '*Asset Management Agreement*' and the '*Administration Agreement*'.

26/02/2001 [entry 3] FSA write to Equitable about the sale to Halifax. FSA explain that PIA and IMRO had given urgent consideration to the applications in respect of the change of control of Equitable Investment Fund Managers Ltd. FSA say they understand that a letter confirming approval of the change of control was to be sent later that day.

FSA state that they needed to examine the detail of the transaction and consider whether to give approval to those areas that required it and whether to use their intervention powers. FSA say:

> *It remains the case that we do not have any objections in principle to the proposals. However, this is a complex transaction and we have not had sufficient time properly to review the papers that have been provided so far by the Halifax's legal advisers and the Equitable. Indeed even now we understand that we do not have a complete set of the final documents.*
>
> *In reviewing the papers that have been provided we have already identified some issues that we would need to pursue further. For example, in the proposed reassurance agreement under which the Equitable's unit linked and non-profit business is to be effectively transferred to Halifax Life, we have concerns about the position of relevant policyholders in the unlikely event of the insolvency of Equitable Life. We also wish to have a better understanding of the continuing powers of the Board of the Equitable to control aspects of the business for which they retain legal responsibility. Finally, we will wish to be satisfied that the arrangements are properly communicated and explained to the relevant policyholders. We have been looking at the reassurance agreement with ... the appointed actuary of Halifax Life, today who has been able to give us comfort on some of our concerns.*

FSA reiterate that they do not have any fundamental objections to the proposed transaction and say they did not wish to frustrate or delay completion of the deal. FSA say it would, therefore, be helpful for Equitable and Halifax to give an undertaking that they would address any reasonable concerns FSA might raise.

FSA write similarly to Halifax.

26/02/2001 [entry 4] FSA's Legal Adviser A writes to Line Manager E about the interpretation of Regulation 72. The Legal Adviser notes that benefits under personal pensions policies could be taken at any time from the age of 50. Legal Adviser A sets out GAD's view, quoting them as saying:

> *We take the view that Regulation 72(3) overrides Regulation 72(1) and requires the actuary to set up a liability to cover the cash payment that would result from an exercising of the vesting of the option, at any time that the option may be exercised.*

and Equitable's view, being that:

I am not sure why you feel that Regulation 72(3) requires that one should assume that all policy holders will take retirement benefits at age 50. The regulation states that one should ensure that the value will provide for payment if the option were exercised assuming the valuation assumptions were fulfilled in practice.

Legal Adviser A says that his preference is for Equitable's interpretation. He reproduces the Regulation and advises:

Regulation 72(3), of course, deals with the provision that must be maintained in respect of options under the contract. It must be such as to ensure that if the assumptions adopted for the valuation of the contract are fulfilled in practice then the provision is not less than the amount required to provide for the payment which would have to be made if the option were exercised.

The fundamental question is whether the "assumptions" in regulation 72(3) can include assumptions as to the age at which benefits are taken. I cannot see anything in the wording or structure of the regulation that leads me to the view that the (prudent) assumptions that are to be made do not include assumptions as to the age at which benefits are taken.

Additionally, I am struck by the contrast between regulations 72(2) and 72(3). Regulation 72(2) requires a provision to be made on the basis that the option will be exercised with no scope for assumptions as to whether or not the option will be exercised. I would have thought similar drafting could have been employed if the intention was to give a similar effect to regulation 72(3).

Thirdly, as a matter of practicalities, there seems no good reason for the regulation to <u>demand</u> a scenario (everyone retiring at 50) that is highly unlikely to be fulfilled in practice. Obviously, if the particular circumstances of a company made that more likely then the actuary would have to take this into account in deciding what assumption was prudent.

Legal Adviser A says that he has circulated the note fairly widely given the importance of the matter and that he understands that the amounts involved could be around £200m, depending on the assumption taken.

26/02/2001 [entry 5] The Financial Ombudsman Service's Chief Ombudsman writes to FSA '*because of my concern about how* [the Financial Ombudsman Service] *and FSA can handle complaints arising from Equitable Life's closure to new business*'. The Chief Ombudsman says that there had been a significant number of complaints arising from Equitable's use of a differential bonus policy for GAR policies. He informs FSA that: '*Unsurprisingly, following the announcement in December that Equitable Life was closing to new business, we have received a significant number of new contacts from policyholders concerned that they had not been properly advised and were not informed of the potential impact on the company of an adverse House of Lords' decision*'.

The Chief Ombudsman says: '*the level of co-operation required to ensure that Equitable Life's policyholders who have complaints, whether raised solely with the company or in due course referred to* [the Personal Investment Authority Ombudsman]*, are treated fairly and have their complaints resolved appropriately seems to be singularly absent*'.

26/02/2001 [15:23] FSA's Press Office inform the Director of Insurance and the Head of Life Insurance that a national newspaper had obtained Equitable Board papers and was going to use them for a number of negative stories about the Board and management. The Press Office say that some of those papers indicate that Equitable's management had not been keen for FSA to see certain information.

27/02/2001 [10:40]	FSA's Director of GCD suggests to Managing Director A that: '*If* [Equitable's Chief Executive] *is to have any continuing role, I think we should now revisit the evidence we have about inadequacy of disclosure to the regulator*'. [**14:08**] The Managing Director says that he does not think the Chief Executive's future role was subject to FSA's approval. The Managing Director says that this suggests to him that FSA should await all relevant material, including the actuarial profession's report on Equitable (the Corley Report), before deciding whether to launch an investigation. He says that he was '*not keen to spend very scarce resources now unless we have to (because* [the individual's] *new position is indeed authorisable)*'.
27/02/2001 [entry 2]	FSA's Managing Director A notifies the Director of Insurance that, in a telephone call that day, Equitable's Chief Executive had confirmed that he was going to run the Administration company. The Chief Executive had also asked what FSA's reaction would be to Equitable's Appointed Actuary taking on the dual role of Appointed Actuary and Chief Executive, to which he had said that FSA would not favour this. The note reports that they '*talked very briefly about the future, with me reminding* [Equitable's Chief Executive] *of the importance of keeping a very close eye on the solvency position*'.
27/02/2001 [entry 3]	Equitable reply to FSA's letter of 26/02/2001 about the sale. Equitable say that they are happy to agree that they '*will take steps to address any reasonable concerns that the FSA might raise*' regarding the sale including, if necessary, amendment to the terms of the agreements.
27/02/2001 [11:10]	FSA's Director of GCD suggests to the Director of Insurance that it would be wise for FSA '*to stand back a little from the view that the only way of achieving an accommodation among the Equitable's policyholders is by means of a court process following majority policyholders votes*'. The Director of GCD says that, while it would bind policyholders, it was '*a high risk strategy, where dissentient policyholders can cause difficulties*'. The Director of GCD suggests that FSA should explore the possibility of a '*pro tanto*' accommodation. [**13:57**] Managing Director A agrees that FSA should rule nothing out but understood that a '*pro tanto*' approach would be '*suboptimal*' because: *a) ... it leaves more uncertainty (in respect of the policies that don't accommodate, reducing the possibility of reducing reserves)* *b) it involves adverse selection in that those who don't agree stand to benefit from those who do (because in* [the Director of Insurance's] *immortal words the piranha have more goldfish to eat). It therefore encourages people to vote against accommodation and subsequently those who don't accommodate are more likely to put more money in compounding the problem.* *A third issue is whether the Halifax deal is all or nothing – if as I suspect it is, that is a 3rd reason why pro tanto is clearly sub-optimal (albeit no doubt better than nothing at all).* [**16:20**] The Director of GCD responds to the Managing Director's arguments, and says that '*it is precisely this mutuality* [of the scheme proposed] *that makes what the Equitable has discussed so far high risk. It means that each policyholder is invited to give up his rights in the interests of policyholders as a whole rather than his own interests. So it encourages the designers of the scheme to believe they need not make the offer to each policyholder reflect a fair offer* [for] *that policyholder's own rights*'.
27/02/2001 [17:47]	Equitable send FSA a draft letter that they proposed to send to the OFT. Equitable ask FSA for any comments. In the letter, Equitable say:

> *I was obviously disturbed by your belief that a term reserving to the Society discretion in setting surrender values is unfair within the meaning of the Regulations because of the breach of the reserved discretion; and by your belief that a number of other policy terms are insufficiently clear as to be transparent and intelligible to policyholders.*
>
> *The Society's rules and policy terms in respect of its with profits business are at least as clear as most used elsewhere in the industry, and the provision reserving discretion on surrender values is, I believe, virtually standard.*

FSA speak to Equitable and they: '*Suggested they might offer an olive branch up front. And also noted the final paragraph on publicity was out of date following the leak*'.

28/02/2001 [entry 1] Halifax write to FSA about the sale. They make a similar statement in reply to FSA's letter of 26/02/2001 to that made by Equitable: they would consider and address any issues that FSA might raise in regard to the sale.

On '*Other Regulatory Issues*', Halifax say that, in conjunction with the Equitable management, they would do their best to ensure that the various issues with PIA's enforcement team were satisfactorily resolved. Halifax say that they have commissioned an independent compliance risk assessment and would share the results with FSA.

Halifax give their thanks to FSA '*for the exceptional and very flexible manner in which you and your colleagues have responded to our various requests over recent weeks*'.

FSA reply the same day saying that, on the basis of their letter and a similar undertaking by Equitable, FSA had no objection to the sale being completed as planned.

FSA write similarly to Equitable.

28/02/2001 [10:43] FSA receive a copy of a letter from Equitable to PIA dated 27 February 2001, in response to a letter from PIA dated 15 February 2001. Equitable give their formal undertaking that they would implement a programme of remedial action in relation to income drawdown mis-selling. They say that the programme would include provisions for fair and reasonable compensation in appropriate cases. The basis and criteria for such compensation were to be agreed with PIA. Equitable explain that, under the planned transfer of administrative functions to Halifax, the review might be carried out by Halifax staff. However, responsibility for the review would remain with Equitable as the regulated entity.

28/02/2001 [entry 3] FSA's Line Manager E asks Line Supervisor C to consider Equitable's letter of 26/02/2001 about new business and to consult with their legal department and GAD. He says that he has '*no objection in principle to allowing this provided they ensure policyholders are clear about any implications of exercising the options*'.

Line Supervisor C sends Legal Adviser A and GAD a copy of Equitable's letter of 26/02/2001 about continuing to write new business in limited circumstances. He notes that Equitable remain authorised to write new business but had given FSA a formal undertaking to '*stop writing new risks*'. The Line Supervisor says that FSA had generally adopted a sympathetic approach to the small number of cases where policyholders had wanted to switch to a different product. The Line Supervisor asks Legal Adviser A and GAD for their views about this case.

28/02/2001 [entry 4] GAD prepare a review of the administration and asset management agreement between Equitable and Clerical Medical.

March 2001

01/03/2001 [entry 1]	Equitable's administrative and asset functions are transferred to Halifax.

01/03/2001 [entry 2] FSA's Director of GCD forwards FSA's note of the meeting with Equitable on 20/02/2001 [**14:00**] to Managing Director A and comments in manuscript as follows:

> *1. In case you were not aware of this note, which I have only seen today.*
>
> *2. I do not know the context of the discussions on s68 orders, but we will need a very clear record of the basis for making such orders in the current circumstances.*
>
> *3. The sidelined passages seem to me to reflect a dangerous degree of robustness about OFT and about the need to sell a compromise to all policyholders, to persuade the court it is right to bind dissentients.*

The sidelined passages referred to by the Director of GCD are:

> *On the OFT investigation* [Equitable's Appointed Actuary] *had rejected the OFT's arguments about the need to identify the circumstances under which the MVA would be used and how it would be applied. He thought that Equitable's contracts contained clauses that were "industry standard" and were necessary for any actuary operating a WP fund. He thought that the OFT had raised generic industry issues that the industry (not just the Equitable) had to respond to. Furthermore it would not be realistic to consider amending existing contracts and since the Company was no longer writing new business, there were no new contracts to amend.*'; and:
>
> [The Appointed Actuary] *said that the test for a s425 scheme would be different from that of a Schedule 2C because in a 2C the* [Independent Actuary] *needs to argue that no policyholder would lose out. By definition, this test was not relevant in a compromise.*

01/03/2001 [08:56] FSA's Managing Director A informs the Director of Insurance (copied to others) that the FTSE 100 Index had fallen that morning and now stands at 5.5% below the end-2000 level. The Managing Director notes, '*on the positive side*', that the Halifax money would arrive that day, which would boost Equitable's solvency position. The Managing Director says that he thinks that FSA should '*increase contact*' with Equitable and review their position on two key issues:

> *a) the MVA. We've always understood that the MVA would have to be increased in the face of a sharp fall in equity prices. Do we know how near we are to that? Shouldn't we?*
>
> *b) solvency. Obviously it's helpful (from the solvency point of view) for 2000 bonuses to be "final" only but just how confident are we that* [we] *can identify pretty promptly the point at which* [Equitable] *would fall below our solvency standards?*

[**10:24**] The Head of Life Insurance replies, saying that he had spoken to Equitable that morning. The Head of Life Insurance reports that the Society's Appointed Actuary: '*is acutely aware that the solvency margin is thinly covered. The Halifax £500m. removes immediate concern, but he would regard a fall in FTSE100 below 5,900 as a trigger for review of the MVA. If it were to be increased (and he recognised the political sensitivity of that) his actuarial gut feel would suggest a rise to 20%, but realism would suggest 15% (any smaller increase would incur more PR downside than the financial benefit would justify). But at present, he can justify no increase to the MVA because he can use the cash from the December/January asset sales to pay surrenders; if he had to sell more assets, the case for an increased MVA would be very strong*'.

[**10:27**] Managing Director A thanks the Head of Life Insurance for the quick action, commenting that '[the Appointed Actuary's] *reaction shows how little room there is*' and '[regarding] *the "fall below 5,900" in the FTSE I would just point out that, as I write this, the figure is 5882!!!*'.

[**11:24**] The Director of GCD replies, saying:

> *1. You need to know that there is some £200m of solvency dependent on a view of the interpretation of regulation 72 of the Insurance Companies Regulations.*
>
> *2. ... GAD's view was that provisions for options need to be made on* [the] *basis that all will be exercised at 50. Our legal analysis (though this is not beyond doubt) is that the regulation allows provisions to be made on the basis of assumptions about when people will exercise.*
>
> *3. Given the importance of the issue, we will need some more due diligence before offering a final view, for example, about generally accepted actuarial practice, and views taken previously. But in any event you should know that this sum is dependent on which provisioning route is used.*

[**11:58**] The Head of Life Insurance adds that GAD now accepted FSA's provisional interpretation and that Equitable had not yet taken credit for this interpretation in their solvency calculation.

01/03/2001 [11:25] FSA's Director of GCD responds to Legal Adviser A's advice on Regulation 72 (see 27/02/2001 [**14:32**]), saying he agreed that the interpretation of the Regulation was not free from doubt. Given the significance of the matter, the Director says that he wants to check past advice, check professional guidance, establish what other companies do, ask GAD for analysis, and seek confirmation from Counsel.

[**17:26**] Chief Counsel B writes to the Director to explain why he believed Regulation 72(3) would have the effect of requiring policies to be valued on the basis that policyholders would exercise the option to retire at 50 where this was provided for in the contract.

01/03/2001 [12:34] GAD send FSA and PIA their review of the Merged Agreement between Equitable and Clerical Medical (sent to FSA on 26/02/2001).

GAD note that they have '*only identified one issue where we recommend clarification to be obtained from the company – this relates to the provision of "Fixed Price Services"*'. (Note: these were described in the agreement as '*ongoing support and company care in respect of customers*'. The issues which GAD suggest should be raised in relation to these were the exact nature of the services to be provided, and whether the charges for these services (which are specified in the agreement) were reasonable).

After describing the detailed arrangements, GAD welcome the inclusion of a provision that:

> *On termination of the administration agreement (for whatever reason), Clerical Medical shall return to Equitable all "Retained Business data" and all books, records, registers, computer data, documentation and information held by it in relation to the provision of the administrative services, together with copies of all such information held in hard copy ... to the extent to which such data, books, records, registers, computer data, data, documentation and information are not required for it to discharge its obligations under the asset management agreement.*

01/03/2001 [15:26] FSA's Legal Adviser A advises Line Manager E on Regulation 72, following a discussion on the issue the previous day. The Legal Adviser says that he was not aware that any legal advice had been given on this issue prior to it arising in relation to Equitable but, having had a chance to look into the background of the Insurance Companies (Amendment) Regulations 2000 which had introduced Regulations 72(3) to 72(5) into ICR 1994, he was now able to provide such advice.

Legal Adviser A explains the aim of the Regulation as being '*designed to ensure consistency of reserving for unitised with profit policies where there was an option to surrender*'.

After giving a hypothetical example of how a market value adjuster might operate in practice, the Legal Adviser continues by listing three points that arose in the particular context under consideration. These being:

> *First, if the Amendment Regulation 2000 had not been passed, then there would not be any question of reserving having to be made on the basis of retirement at 50. The Consultation Document (so far as is relevant) talked of the general need to establish a sound and consistent standard which is not currently achieved to a consistent degree by the existing regulations. It did not foreshadow any considerable change.*
>
> *Secondly, it was pointed out by* [an official] *who drafted the regulations that the reference to assumptions in 72(3) opened up a gap between regulation 72(2) and 72(3). This was accepted.*
>
> *Thirdly, and more pertinently, I quote from* [GAD's Chief Actuary D] *"There must be a reference to the assumptions adopted for the valuation, else it makes no actuarial sense. Otherwise it would not be acceptable to assume some people die before they get to the option date, for example." If (in the context for which the regulations were designed) it is permissible to make mortality assumptions with respect to the amount of people who can take up the surrender options, I do not see why the regulations should not be interpreted as permitting assumptions as to the date at which people will take retirement.*

Legal Adviser A concludes by stating that he: '*cannot find anything which leads me to assume that the intended interpretation was contrary to that I have suggested*' and that the professional guidance notes: '*do not directly deal with the issue. In so far as they are largely concerned with prudency of assumptions in relation to regulation 72 they, if anything more favour the "Equitable interpretation". I note, at least the Equitable has purported (in part) to rely on them*'.

01/03/2001 [16:14] FSA's Head of Life Insurance writes to the Head of Press Office, referring to Equitable's announcement of the Society's Appointed Actuary as the new Chief Executive. The Head of Life Insurance notes that this was subject to regulatory approval which had not yet been given. He says that FSA had established that Equitable would now seek a new Appointed Actuary to replace him as '*we shared* [the Appointed Actuary's] *view that it would be better not to combine the two roles*'.

02/03/2001 [12:10] FSA's Director of GCD responds to Chief Counsel B (see 01/03/2001 [**17:26**]) with his understanding of the operation of Regulation 72.

05/03/2001 [entry 1] On FSA's files, a copy is held of information dated 5 March 2001 produced by Equitable for their policyholders. The purpose of the information sheet was to give more information about both the deal with Halifax and the possibility of a GAR compromise scheme. The sheet says that:

> *When considering the deal, the Board had many factors to take into account. They received advice from the Society's bankers, lawyers, accountants and actuarial advisers and from the Society's actuaries and others.*

An important benchmark against which to judge a deal is the option of closing the fund and continuing as an independent entity. This is not a simple comparison as the business risks for the closed fund would have been particularly acute. Likely ranges of values were considered for the components of the business. The advantage and disadvantages of the closed fund route in comparison to the Halifax deal were compared for each component.

The results of the analysis were annexed to the sheet. In relation to a possible compromise, the sheet explained:

The consultation document is intended to show how the current value of the GAR liabilities are estimated and to consider the issues which arise regarding how the cost of a GAR compromise scheme could be distributed to the GAR members. Both GAR and non GAR members will need to agree [to] *the scheme for it to be adopted. At this stage there is no specific proposal. The Society is collecting feedback from a wide range of clients and other interested parties. The results of this consultation will be used to inform the design of a proposal which will then be the subject of further consultation.*

05/03/2001 [11:00] FSA hold an Equitable Life Lawyers Group meeting. The Group discuss aspects of the sale process, noting that the transfer to Halifax would be done by reinsurance rather than through a Schedule 2C transfer. It is agreed that the Head of Life Insurance and Line Manager E should be contacted to ensure that they had discussed such reassurance arrangements with Halifax's supervisors.

Chief Counsel A and the Director of GCD note that there were a number of points arising from the Treasury Select Committee hearing and that the Director would prepare a note on whether the Companies Act 1985 required disclosure of contingent liabilities.

The Group discuss the appointment of Equitable's new Managing Director and the fact that FSA had not received notification of this. The Group note that, according to reports in the press, the previous Chief Executive was to head up a services company at Halifax. The Director of GCD says that he would take up with the Director of Insurance the issue of whether FSA should make a complaint concerning the previous Appointed Actuary to the Institute of Actuaries.

The Group consider a revised list of legal issues. On market value adjusters, the minutes of the meeting state that:

... the decline in the FTSE may result in the raising of MVAs. [The Director of GCD] *stated it was important that the Equitable made a public statement setting out the criteria for exercising the MVA. Such a statement would constitute a contractual term.* [Legal Adviser A] *is to pursue this with* [FSA] *to encourage Equitable* [to] *take action.*

With respect to the compromise scheme, it is said that:

... winding-up could be dropped from the list of legal issues and that counterfactuals, compromise and follow up work on accommodation, could be amalgamated as one issue.

It was noted that policyholder approval was still required on the compromise and as such counterfactuals were still required. [The Director of GCD] *noted that the compromise would inevitably be detrimental to a minority of policyholders.* [Chief Counsel A] *advised the group that better argument/explanation was still awaited from the Equitable on this issue.*

Finally, it was noted that:

[FSA's Insolvency Practitioner] *was still in the process of preparing his note on insolvency. The group agreed that he should be invited to the next meeting of the group so that he could provide a review of his findings.*

05/03/2001 [11:12] GAD's Directing Actuary B responds to Legal Adviser A's advice on Regulation 72 (see 27/02/2001 [**14:32**]), saying he feels that the arguments were '*a little tenuous*'.

The Directing Actuary explains that his reasoning for this was that such an interpretation would involve the regulators saying:

> *... that the date on which the option is exercised (ie age retirement) is one of the relevant assumptions. This makes the whole regulation rather circular, and I am not sure that the difference in wording between paragraphs (2) and (3) is really that great.*

The Directing Actuary continues:

> *We also then need to be satisfied that our guidance on reserving for guaranteed annuity options is consistent with this interpretation, and that the regulation still achieves the intended outcome on reserving for accumulated with-profits business.*

[**17:44**] The Director of GCD asks Legal Adviser A to ensure that the Directing Actuary's points were brought out in instructions to Counsel.

05/03/2001 [14:54] GAD advise FSA that Equitable's proposals about new business (see 26/02/2001 [**entry 1**] and 28/02/2001 [**entry 3**]) were not unreasonable and note that they had in fact been reserving for this option.

05/03/2001 [18:31] FSA's Director of GCD writes to Chief Counsel A, following a meeting held that afternoon with Managing Director A. This had been called to consider, among other issues, whether FSA should ask for the Equitable Board papers referred to in an article that had appeared in a national newspaper. The Director says that he had indicated that FSA's powers were very wide and allowed them to call for the relevant Equitable Board papers. The Director of GCD says: '*Before doing so, however, colleagues would like to be clear as to the exact use which we would make of them. I have been asked to commission work from you or* [Legal Adviser A] *on the regulatory functions for which we might use such information*'.

The Director of GCD notes that FSA were to meet Equitable's new Chairman the following day and that the agenda would include: '*its financial situation; the need to ensure that the proposed compromise works for all policyholders, if we are to avoid finding that we are unable to recommend the court to buy out on a compulsory basis those who do not accept; the OFT concern about the ability to impose an MVA, which needs to be resolved by a public statement as to the criteria on which MVAs would be set, certainly before any increase in the MVA is contemplated*'.

The Director of GCD says that he had also mentioned in the meeting that afternoon that he thought that FSA might want to complain to the Institute of Actuaries about Equitable's former Appointed Actuary and that the Director of Insurance had said that there had been '*some movement on this front*'.

06/03/2001 [entry 1] FSA and GAD meet Equitable, at the request of FSA, to get an update on some '*key issues*' facing the Society. FSA's note of the meeting records the issues discussed under the following headings:

<u>Solvency</u>
Equitable's new Chief Executive reports that the £500m from the Halifax sale had given a boost to solvency greater than its value '*because the Society was now invested heavier in gilts and the £500m gave a disproportionate benefit when the effect of this worked through the resilience testing*'. Equitable disclose that the money was at that time still invested in cash but that they intended to invest 61% of the £500m in equities. FSA's note records:

For the year end financial position as demonstrated in the statutory return (due 30 June 2001) solvency cover was likely to be tight with only £300m free assets after [required minimum margin] *coverage. In making this assessment the Society was taking into account the benefit from the "artificial bond" concession that had yet to be formally applied for or given (which itself would be worth c£300m). It was also taking into account the debt from the sale of the Permanent* [Insurance] *to Liverpool Victoria which was not completed until 2001 ...*

As at the end of January (before the £500m injection) the Society believed that it had c£700m of free assets after coverage of the [required minimum margin]*. Solvency was boosted by the sale of £1.8bn of equities and the reduction in the resilience test. It was thought that current solvency cover was of a similar magnitude despite the £500m injection, this was because the FTSE at c5900 was a lot lower than it was at the end of January.* [Equitable's Chief Executive] *disclosed that prior to the end of February with weak equity markets solvency cover was thin.*

The Regulation 72 issue is discussed and Equitable say that they were taking account of the higher reserving standard suggested by GAD, which had a reserving impact of approximately £200m. FSA note that they had not yet decided on the correct approach and say that they would write to Equitable, confirming their position as soon as possible.

Equitable's Chief Executive agrees to provide GAD with information on the sensitivities of their financial position, and:

It was confirmed that the main monitoring triggers were the FTSE and long term interest rates, although knee jerk reacting to these triggers could be damaging and policyholders interests would not benefit if equities were sold at the bottom of the market. It was thought that the Society should now be able to withstand a market slump down to FTSE 5000 before solvency margin cover was jeopardised.

Equitable's equity backing ratio is discussed and they state that, prior to closure, the ratio had been 72%, reducing to 68% at the end of 2000 and to 61% currently. Equitable confirm that, in their ratio, equities included investments in property. The Chief Executive says that he was keen to keep the ratio at 61% until the result of the compromise was known, arguing that this was in the interests of policyholders. Furthermore:

He also felt that even in the unlikely event of technical statutory solvency not being maintained he would still not wish, in the interim, to indulge in a fire sale of equities. [The Head of Life Insurance] *said that both FSA and the Society have continued to state that the Society is solvent whatever definition of solvency is used. There would be a major confidence issue if this statement needed to be qualified.*

Equitable's Chief Executive says that the Society's auditors wished to include a paragraph in the Companies Act report and accounts referring to '*fundamental uncertainty post the House of Lords judgement*' and that the Appointed Actuary's certificate would also need to cover the issue of GAR uncertainty.

<u>Policyholder Compromise</u>
Equitable explain that the purpose of the roadshows was to gain an understanding of policyholder concerns, to lay the ground for the compromise scheme, and to '[take] *the sting out of the annual general meeting*'. FSA note that:

... the Society needed to convince policyholders as to why it needed a scheme. Issues to be addressed also included what the transfer of value should be from non-GAR to GAR ... whether transfer could be done using an age related (or other scale) and what the cut off date for this should be. [Equitable's Chief Executive] *thought that logically it should apply prior to the House of Lords ruling.*

Equitable say that their solicitors were currently working on the structure of policyholder classes for the scheme. FSA stress that they would need to be closely involved in this work, and would want to see the proposals, together with the underpinning information.

Market value adjuster
FSA record: '*It was confirmed that the rationale for the size of the MVA was not to make either surrender losses or profits. The size was determined by the level of the FTSE, the extent to which up front charges/expenses were spread over the duration of the policy and the need to maintain solvency and investment freedom. It was confirmed that for the MVA to be currently neutral it would need to be pegged nearer to 15% as the Society was making surrender losses with the FTSE being so low. However, because the level of surrenders were now modest there was no imperative to increase the MVA which would be very damaging in PR terms*'.

The Chief Executive undertakes to give FSA '*forewarning of any proposed change to the level of the MVA*'.

The OFT
FSA inform Equitable of their understanding of the OFT's thinking on Equitable's application of the market value adjuster. This was that the contract term gave too much discretion to the company and this was unfair. However, they had accepted that, in practice, the term had not operated unfairly. Equitable's Chief Executive argues that Equitable's With Profit Guides had set out the basis for the market value adjuster and says that he thought the OFT had looked at the terms of the contract in isolation. Equitable say that they had written to the OFT on 28 February 2001, offering to make the position clearer in their annual statements. FSA note that: '*The Equitable was now awaiting a response from the OFT but* [the Chief Executive] *argued that if the OFT continued to argue that the contract was "unfair" he would need to get both the regulator and the* [Association of British Insurers] *involved because the issues raised were generic and did not just apply to the Equitable*'.

Bonuses
Equitable confirm that, as had been reported in the press, no guaranteed bonus would be allocated for 2000, except for policies that included a guaranteed interest rate but that a non-guaranteed terminal bonus would be allocated. Equitable say that the 2000 bonus would be reviewed after the result of the compromise vote, '*when guaranteed bonus might be reinstated*'. FSA record that: '*An 8% rate of bonus would be the implied rate used for 2000 (although most policyholders would only get 5 months of this 1 Aug – 31 December = 3.3%). This was much better than the market because of the smoothing reserve. The previous year the Society had declared 4% less than what it had earned*'.

Board Papers
Equitable disclose that a full set of Board papers had gone missing and that it appeared that a courier might have been responsible. Equitable say that, having threatened legal action, the newspaper had returned the papers, after they had used them, and stated that they had destroyed all copies. FSA note: '[The Chief Executive] *was relieved that the broadsheets had not obtained copies of the papers as they could have caused a lot more damage. The statements referred to in the article referring to risk control statements were according to* [the Chief Executive] *fairly innocuous and were connected to the standard type of issues for Boards of Directors to address under Turnbull.* [FSA's Head of Life Insurance] *reserved the right to ask for copies of these papers*'.

Action Points
Under '*Action Points*', it was noted that Equitable were to: provide GAD with information on solvency sensitivities; send FSA their January 2001 solvency statement; apply for a section 68 Order to permit the use of an artificial bond; and liaise with their auditors and FSA on the

valuation at the year end of Permanent Insurance. The action point recorded for FSA is that they would confirm their position on the Regulation 72 issue.

It is agreed that FSA and Equitable would meet weekly or fortnightly to keep each other informed on developments.

06/03/2001 [entry 2] FSA meet Equitable's new Chairman, at FSA's request, to discuss the outstanding issues facing Equitable and the way forward. FSA's note of the meeting records the issues discussed under the following headings:

New Board
Progress on putting together a new Board is discussed and the Society's Chairman reports that a promising start had been made.

Compromise Proposal
The Chairman sets out what he believes are the stages for a compromise. These stages were:

> *... first, the company itself must be satisfied that any proposal was both clear and understandable to policyholders; the advantages and disadvantages would have to be set out clearly, and any recommendation would have to be made separately. The next three stages would require the Independent Actuary, the regulator and finally the Court to be satisfied that the proposals were fair.*

He says that the annual general meeting on 23 May 2001 would be too soon to announce the scheme and his plan was to report briefly on the events of 2000 and to set out in general terms Equitable's current position, including the need for an accommodation between GAR and non-GAR policyholders.

Market value adjuster
FSA record that there was '*agreement on the public relations importance*' of the level of the market value adjuster. FSA say that they would want to be consulted on any proposal to change the level from 10%. FSA also explain '*the importance of the OFT investigation into the MVA; we believed that a satisfactory outcome was achievable, if the Equitable were prepared to indicate in some suitably public way the criteria which they used in exercising their discretion to apply and adjust the MVA*'.

House of Lords' judgment
The Society's Chairman informs FSA that, as a result of '*pressure from a policyholder action group*', they had sought Counsel's opinion on whether the House of Lords' judgment might be challenged. The Chairman says that:

> *It would then be a difficult judgment for the society as to whether or not to spend more money pursuing such a challenge. The financial consequences both for the society and individual policyholders were so great that it would be difficult not to pursue even a small chance.* [Equitable's Chairman] *believed that the House of Lords would be willing to look at the issue "quite quickly". But he would probably want a second legal opinion before making a decision.*

The Chairman notes that in, any further case, both GAR and non-GAR policyholders would have to be separately represented.

Mis-selling
FSA's note records:

> [The Chairman] *said that he saw three primary sources of claims: from mis-selling, against the auditors, and against the previous board. He was inclined to take the view that if there was a prima facie case for a claim, the Equitable would not wish to stand in the way of the claimant pursuing redress.* [FSA's Director of Insurance] *urged caution*

about being too ready to offer redress which might set difficult precedents; the costs would in general have to be met by other policyholders, and there is a need to balance out the interests of all policyholders. The FSA was undertaking some internal work on the principles which might properly be applied to assessing claims for redress, and we were also in discussion with the Financial Services Ombudsman. It would be regrettable if this work was pre-empted by early isolated cases of compensation.

Public Relations
FSA suggest that the Chairman opens a dialogue with The Consumers' Association and that he should brief the FSA Consumer Panel. Equitable's Chairman says that he would be '*very happy to do this*'.

06/03/2001 [09:24] Equitable provide FSA with updated information from 1 March 2001 on the value of payments made on surrenders, transfers and switches and calls to Equitable's helpline.

[**10:54**] Line Manager E circulates a summary of this information, which he has prepared.

06/03/2001 [10:59] FSA's Director of GCD replies to Legal Adviser A's note on Regulation 72 of 01/03/2001 [**15:16**]. The Director of GCD says: '*This fortifies me in the view we should take advice from* [Counsel]. *Also makes me* [uncomfortable] *with use of MVA in reserving – I had seen it as a step to be taken if assets were inadequate, rather than a means to allow reserving requirements* [to] *be reduced to match available assets!*'.

[**11:13**] GAD's Directing Actuary B says: '*There is, I agree, some circularity in that the actuary of the insurer has to determine the appropriate MVA to assume for reserving purposes, taking account of the available assets, but having regard of course to policyholder reasonable expectations. The relevant assumed MVA does though have to be published in the FSA returns*'.

06/03/2001 [12:03] FSA's Legal Adviser A advises the Director of GCD that there were two areas in which FSA might use the information contained in the Equitable Board papers which they were considering requesting. The Legal Adviser says:

First, it might give rise to the exercise of powers under section 45 to require the Society to take action for the purposes of ensuring that the criteria of sound and prudent management are fulfilled. The information might, for example, reveal lack of fitness and properness on the part of the directors or deficiencies in systems of control or records. It is difficult to be more specific but sight of the board papers might give a greater insight into the internal workings of the company which has the potential to reveal a failure to fulfil any of the criteria of sound and prudent management as set out in Schedule 2A which [it] *might be necessary to redress by the use of section 45.*

The second area, which is perhaps more likely given the tone of the article, relates to possible future regulatory action in respect of individuals. It may be the case that information obtained shows a lack of fitness and properness on the part of persons who may be notified to us as notifiable persons in respect of another company at some time in the future.

07/03/2001 [entry 1] Halifax write to FSA's Line Manager E, as lead supervisor, to notify them, as required under PIA and IMRO rules, of Notifiable and Clearance Events in relation to the change of control of Equitable Investment Fund Managers Limited.

07/03/2001 [13:34] The Director of GCD informs Legal Adviser A that Managing Director A was now doubtful about his first point (in his advice of 06/03/2001 [**12:03**]), given that all the Society's existing directors were resigning. The Director also says, on the second point, that he thought FSA would need to get HMT to exercise these powers, as the power to require individuals to produce information under section 44 (2)(a) of ICA 1982 had not been delegated to FSA.

On 8 March 2001, Legal Adviser A says that he took the point on the first argument but adds that there could be systemic problems with Equitable's Board.

On 12 March 2001, the Director of GCD says that, if Legal Adviser A could put a convincing argument on systemic concerns, '*all to the good*'.

07/03/2001 [17:02] GAD prepare a review of the reinsurance agreement between Equitable and Halifax in respect of non-profit business (other than immediate annuities). GAD make several suggestions to FSA, including:

- '*The effect of the reassurance is that the profits from the business will emerge in Halifax Life. Indeed, Halifax Life are paying commission of £300m. to Equitable in respect of this Agreement. However, profits from the non-profits and unit linked business would formerly have been a source of miscellaneous surplus, which would have benefited the with profits policyholders in the form of an enhancement to the return credited to their smoothed asset shares. Now that these profits have been capitalised, this will no longer be so. <u>We suggest the company are asked what enhancements the with profits policyholders formerly enjoyed on this account, and whether the scale of the enhancements projected to be foregone in the future is similar.</u>*'
- that FSA should ask Equitable to clarify how they intended to meet any charges for future expenses as there appeared to be no margins left from which they could meet any such charges.
- that FSA should ask Equitable about the statement in the agreement that '*Halifax Life shall not be required to indemnify Equitable in respect of any guaranteed investment options in respect of Covered [i.e. reassured] Policies*'. GAD say that it was not clear what those options were, how significant they were, or how any costs would be met.
- that FSA should clarify with Equitable what impact the reassurance had on the reasonable expectations of unit-linked policyholders in relation to the deduction of charges.
- that FSA should ask Equitable for further information on the tax consequences of the reassurance on policyholders, as it appeared to be adverse.

08/03/2001 [entry 1] Equitable send FSA a summary of their estimated solvency position as at 31 January 2001. The position is set out as follows:

<u>Solvency position at 31 January 2001</u>

	£m	£m
Value of non-linked assets		*29,715*
Future Profits Implicit Item		*1,000*
		30,715
Mathematical Reserves		
– Basic (including GAR)	*27,145*	
– resilience	*1,640*	
		28,785
		1,930
Required Minimum Margin		*1,215*
Excess Assets		*715*

08/03/2001 [15:00]	FSA (including the supervision teams for Equitable and Halifax), IMRO, PIA and GAD meet with Clerical Medical and Halifax. The issues discussed include personnel, integration of Equitable and Halifax business, the performance of unit-linked funds and training for Equitable sales staff.
09/03/2001 [09:58]	An FSA official writes to Managing Director A's office, following the meeting with Halifax the previous day. The meeting was attended by Clerical Medical who had given a presentation on the key aspects of the transaction, integration issues and future corporate governance – and who answered questions. After setting out some staffing changes, the official writes that: '*Contrary to original expectations, it had been decided to close Equitable's international operations in Dublin, Dubai, Germany and Guernsey. The existing business will remain with the closed fund*'.
09/03/2001 [16:10]	An FSA legal adviser circulates revised minutes of the Equitable Life Lawyers Group's meeting of 05/03/2001, revised legal issues list, and the draft agenda for the next meeting.
09/03/2001 [16:47]	FSA's Director of GCD sends Legal Adviser A a note, dated 8 March 2001, concerning his draft instructions to Counsel on the issue of Regulation 72. In his note, the Director suggests that FSA should consider the position they wanted to take on this issue '*in the new world*' (i.e. under the regulatory regime which was to come into force with FSMA 2000). The Director suggests: '*Since no one has, I think, suggested that the more restrictive view is the right approach from a policy viewpoint, surely we should ensure that the less restrictive view is given clear effect in the new rules*'; adding that: '*This would also, it seems to me, help to make clear that this is not a case of convenient special treatment for a particular company*'. [**16:58**] Line Manager E thanks the Director of GCD for his comments and says: '*Our discussions have really been on two levels – what is the effect of the regulations, and what is the effect we are seeking to achieve in policy terms. I am now fairly clear, and that is consistent with my understanding of the position we reached when discussing the point with GAD, that the correct result is that the actuary should make reasonable assumptions about variables when valuing for the purposes of regulation 72(3)*'.
12/03/2001 [entry 1]	Halifax send FSA a copy of a report which they had commissioned, described as a '*high level Compliance Risk Assessment*' in relation to Equitable. (As promised at the meeting on 08/03/2001.) In relation to PIA activity, the report outlines the following conclusions: • *Significant recent regulatory activity – themed visits from PIA in key areas. May indicate the "risk" considered by the PIA to be posed by ELAS.* • *Compliance failures have been identified in most of the key areas of regulatory risk. In particular, failures in* [pension fund withdrawal] *and* [free-standing AVC] *sales process and subsequent tone of response to PIA's report, may indicate material lack of understanding of regulatory risks and standards.* • *The approach of "delegating" compliance to the business does not appear to have been successful in establishing robust systems and controls.* • *The regulatory relationship appears to have been flawed. Substantive discussion and disagreement followed most regulatory reports.* • *The failures identified, particularly in relation to the repeat breaches identified in* [PIA's visit conducted in June 2000] *may indicate that a strong compliance culture is not embedded throughout ELAS.*

- *A substantial amount of remedial work required to address past issues and significant forward planning to ensure compliance in the future.*

In relation to IMRO issues, it is noted that:

> *Conclusion which may be drawn from the documents covering the supervision of* [Equitable Unit Trust Managers Limited]*:*
>
> - *there is a concern that Senior Management appear to have failed to either recognise or acknowledge the seriousness of front office issues and risks faced as a regulated entity;*
> - *in the light of the history it appears that Senior Management have not developed the role of Compliance to address the issues and mitigates regulatory risk;*
> - *compliance initiatives from Senior Management appear weak;*
> - *at its worst, the front office attitude appears to be resistant to complying with existing procedures and to acknowledging the importance of regulatory compliance.*
>
> *Information from the "compliance" documents give the following perceptions*
>
> *Management appear:*
>
> - *to place over reliance on people doing what they are asked to do without placing sufficient checks on performance;*
> - *to assume that procedures will be followed and yet, when they are not, have underplayed the need for and benefit of checks and compliance monitoring; and*
> - *to have put insufficient preventative and detective controls in place over the fund managers/front office.*

In the conclusions on IMRO issues, it is noted that the information available was '*generally historic*' and that the report did not assess the impact of recent compliance initiatives – in particular, Equitable's new Central Compliance Department.

12/03/2001 [10:35] Equitable send FSA technical information about the terms and conditions applying to investment in the Clerical Medical fund available to existing Equitable group pension policies, where benefits are purchased on a money purchase basis. This information concludes:

> *In the normal course of events it will be possible for an individual member to switch investments between the Equitable's funds and between Equitable and Clerical Medical funds. There is no guarantee that a switch between Equitable and Clerical funds will be allowed in future.*
>
> *There is no guarantee whatsoever of the terms for switching between Equitable and Clerical Medical funds. The terms for these may change at any time or the availability to switch into Clerical Medical funds may be withdrawn at any time. The terms and availability of switching between Equitable funds at any time will not affect the terms or availability of switches between any Clerical Medical funds.*
>
> *There is currently no charge for switching between any Equitable or Clerical Medical funds but the Equitable reserves the right to apply an administration charge in the future.*

12/03/2001 [13:03]	Equitable send FSA a copy of a letter that is '*about to be issued*' to policyholders by Halifax Equitable. The letter concerns the transfer of personal information which Equitable held about policyholders. Amongst other matters, the letter informed policyholders that, while '*Halifax has not acquired existing Equitable Life with-profits policies* [it] *will be administering those policies for Equitable Life in accordance with its instructions*'. Line Manager E records that he had notified PIA that FSA had received the letter.
12/03/2001 [entry 4]	FSA reply to Equitable's letter of 08/03/2001, which included the report on their estimated solvency position at 31 January 2001. FSA point out that Equitable continued to rely on a future profits implicit item of £1bn. FSA ask, '*In view of the changed circumstances at the Equitable, and in particular its closure to new business last December and the subsequent Halifax transaction*', that Equitable should provide an actuarial certificate to confirm that the item was still sustainable prospectively from 31 December 2000. FSA continue: *It should also be supported by a note of the key assumptions, particularly on future investment returns, persistency rates and GAR take-up rates, that are made for the purposes of the certificate. The calculation should of course take into account the effect of any potential payments to be made under the reinsurance treaty.* (Note: it appears that the letter, although dated 12 March 2001, was actually sent on 13 March 2001 after FSA had sought comments on it from GAD.) GAD's Scrutinising Actuary F had noted that Equitable: *... should of course take account of the effect of any potential payments under the* [IRECO] *reinsurance treaty. The GAO take-up rate is itself another key assumption. (We need to be satisfied that there is no double counting as between the future profits implicit item and any obligations under the reinsurance treaty.)* The following day, Chief Actuary C comments that the letter '*should also make it clear that we expect the actuary to take account of the changes that have taken place after the end of 2000*'. The relevant GAD file contains an undated note by Scrutinising Actuary F that was not sent to FSA, as FSA had already issued the letter. The Scrutinising Actuary's note reads: *For the record, the Society's application of 27.06.2000 (for a future profits implicit item of £1.1bn.) showed estimated future profits of £3.3bn. on the retrospective approach (based on projecting past year's profits into future years). However, the Actuary only certified that the profits expected to emerge prospectively were no less than the £1.1bn. applied for (after taking into account the impact of the GAR treaty), so we do not know what margin there was in that calculation.* *It would be worth asking for the results of the prospective calculation, as well as the assumptions used, and what the impact of the existence of the GAR treaty is on the calculations.* *The Halifax deal is unlikely to have any more than a second order effect on the above – the £500m. injection per se does not alter the profit stream from the existing business, but persistency sounds as though it is now reverting to more normal levels, and the changes to the asset mix as between equities/gilts are having a beneficial effect on the valuation interest rates (which may feed through to the assumptions the Actuary makes when assessing the amount of future profits).*

12/03/2001 [16:36]	FSA inform GAD that GAD might be contacted by a trustee of FSA's pension scheme, which contained '*inherited*' elements provided by Equitable. FSA say that they were happy for GAD to talk with him, but that he '*should not be told anything that* [FSA] *would not normally tell a person in the same position elsewhere*'. FSA continue: '*We are only allowing him access to files that contain papers that are in the public domain*'.

[**16:37**] A trustee of the FSA Pension Plan approaches GAD. The trustee explains that FSA had inherited people paying into Equitable AVCs from various organisations – including the Civil Service, the Bank of England, the Securities and Investments Board '*and most of the* [self-regulatory organisations]'. The Trustee says that, while they have now combined those schemes, the trustees were having problems establishing what charges should be applied. The trustee's particular concern was a 2% administration charge that had been referred to in the Civil Service scheme booklet, but was not referred to in the annual returns for 1999, 1998 or 1997. The trustee asks GAD for comments.

13/03/2001 [09:56]	FSA's Head of Life Insurance records that Equitable's Chief Executive had notified FSA that Equitable were seriously considering raising the market value adjuster to 15%, following recent falls in the FTSE 100 Index. The Chief Executive had said that he was going to discuss the issue with the Society's Chairman and would revert to FSA before a decision was taken, although he added that Equitable might need to announce the increase that night. The Head of Life Insurance's note continues:

> [Equitable's Chief Executive] *recognises the PR implications. But the issue is not solvency, but fair value between leavers and stayers. In strictly financial terms,* [he] *is clear that an MVA of 15% is now justified. With surrenders at their current low level, it might be possible to justify not raising the MVA (and accept that the fund is subsidising the leavers). But this is a moot point, and will not be suitable if surrenders run higher, as policyholders seek to "select against" the fund by getting out with a fund value above their asset share. If a rise is announced, requests for surrender/transfer in the pipeline will be dealt with at 10%, with new requests attracting the higher rate.*

The Head of Life Insurance continues that:

> *... this must be a decision for the Equitable. If* [the Chief Executive] *rings back to say they want to raise the MVA, I propose to note that, but agree a public line which stresses that this is a question of fair value between policyholders, and not prompted by solvency considerations. We can expect press and consumer queries.*

[**10:30**] FSA meet to discuss the issue. FSA's note (prepared on 14 March 2001) records:

> *Action:*
>
> - [FSA's Head of Life Insurance] *to contact* [Equitable's Chief Executive/Chairman] *to relay FSA's perception of possible risks (as below) in increasing MVA [Done]. Equitable would need to undertake additional work to minimise expected negative media/policyholder reaction.*
> - *FSA to continue monitoring levels of withdrawals from fund and in addition, to establish the amount of withdrawal that represents over-valuation of individual policies (and consequently detriment to overall fund value) in current circumstances. [*[Action]*:* [The Head of Life Insurance]*.]*

The note then records the key supporting points, as follows:

> *1.* [FSA's Managing Director A] *requested additional information on analysis undertaken by Equitable before concluding that 15% was an appropriate level for the MVA. This was necessary to enable FSA to take a view on whether the company was exercising its*

discretion in a reasonable way. [Subsequently received note from Equitable setting out main factors that would trigger a closer review of the level.]

2. [FSA's Chairman] *noted that there had been no evidence to date of surrender rate increasing following falls in FTSE. The existence of such evidence would provide stronger grounds for increasing the MVA. Otherwise, risk remains that an increase in the MVA would itself precipitate a run on the fund.*

3. [The Director of Insurance] *noted that any increase in the MVA might damage prospect of reaching a compromise between GAR/non-GAR policyholders and equally may damage* [Equitable's Chairman's] *reputation at a critical point in the negotiations.*

4. In considering, Equitable's basis for increasing the MVA, [FSA's Chairman] *asked whether other companies were also considering increasing their MVA as a result of recent stock market movements.* [FSA] *believed that in principle, this would be the case but were not aware of any specific examples. Equally, any action taken by other companies was unlikely to be as transparent as action taken by Equitable* [as] *other companies did not publish detailed information re announced (but not guaranteed) terminal bonuses.*

5. Given the subjective nature of the decision regarding the appropriate level of the MVA, it seemed unlikely that FSA would be able to invoke any statutory powers if Equitable concluded that increasing the MVA was necessary to ensure fairness of treatment between different policyholders.

13/03/2001 [14:26] GAD respond to the trustee of the FSA Pension Plan. GAD agree that there was no obvious reference to the 2% administration charge in Equitable's returns. GAD ask the trustee whether the charge was annual or one-off and whether it was expressed as a proportion of contributions or of the fund. GAD point out that it might be the same thing as another upfront charge described in the trustee's letter (and earlier in their reply), reflecting the combination of an allocation rate and an initial charge, both of which were disclosed in the returns. GAD also suggest that it might be a charge which had been levied by the Principal Civil Service Pension Scheme but not remitted to Equitable. GAD say that if there were a charge that is not being disclosed in the returns, then Equitable's disclosure could be deficient, but that it was premature to conclude that yet. GAD suggest that, if the trustee and GAD were unable to resolve the issue with the information to hand, the trustee should approach Equitable for a response.

13/03/2001 [15:38] FSA's Director of GCD writes to Chief Counsel A about the meeting held that morning. According to the Director of GCD:

On a preliminary analysis, we had no reason to believe that the Equitable were not paying due regard to the interests of policyholders. As a result, it seemed unlikely that we would be able to intervene, one way or the other.

It was noted that the Equitable had not yet made a public statement as to how they would exercise their powers to impose MVAs. This would mean that any early decision would potentially not carry the OFT with it.

I indicated that we needed to consider not only the downside of an increase to the MVA, but also the risks of damage to policyholders from allowing withdrawals to be made at an overvalue, to the detriment of those who remained. It was reported that the level of withdrawals was currently around £1–2mn per day, and, even if the MVA was some 5% out, the reduction in value was not significant.

In contrast, it was also thought relevant to take into account the damaging effect which an FSA mandated increase in the MVA could have on the stability of the company, and the prospects for an accommodation. In any event, the company seemed more likely to increase the MVA than to keep it as now.

13/03/2001 [17:18] Equitable send FSA a copy of Equitable's note '*Application of financial adjuster by Equitable Life*' (see 19/12/2000 [**16:08**]), along with an update as at 13 March 2001. The update states:

Policy values have continued to grow although the interim rate of return from 1 August 2000 was reduced from 9% p.a. to 8% p.a. on 5 March 2001. Final bonus therefore fell on that date as did total policy values.

Volumes of individual surrenders have fallen from 5–7 times normal volumes to less than 2 times normal volumes.

Requests for Group Scheme bulk surrender terms have continued and a few schemes have gone.

[An actuarial consultancy] *have written to the President indicating that they feel the 10% financial adjustment is too low considering the current level of markets and they may feel that the best advice is to surrender in order to protect the current position of schemes. They feel that those who stay in the fund are not sufficiently protected.*

At 9 March 2001 the appropriate Type 1 and Type 2 theoretical adjusters would be:

Level of FTSE-100	*Type 1*	*Type 2*
6,300	*8.5*	*2.0*
6,100	*10.0*	*2.0*
5,900	*11.5*	*2.0*
5,800	*12.25*	*2.0*
5,700	*13.0*	*2.0*

On 13 March the FTSE-100 closed at 5720, a level at which a 10% adjuster is clearly unsustainable.

Levels of surrenders will be closely monitored as will the views of benefit consultants.

[**17:47**] The note and update are forwarded to senior FSA officials.

[**18:36**] Managing Director A asks whether there was any way that Equitable:

... can distinguish in their rules between different kinds of with-profits policy. This could have 2 possible uses:

a) a PR benefit, because it would help to get away from a "there has been a rise from 10% to 15%" or whatever (because actually there would be a variety of rates dependent upon eg length of time policy held). Comment this might not help greatly on the first rise but it could be [particularly] *useful if there had to be more.*

b) more questionably to load the increase into those policies (like the Group Policies) that were most likely to be pulled quickly.

The Managing Director concludes that '*a)*' obviously is possible – because they had a system like it before closing to new business – and asks whether FSA were aware of where the Society's Chairman stood.

[**19:05**] The Director of Insurance reports that FSA had not heard from Equitable's Chief Executive or Chairman and suggests that FSA could assume nothing was going to happen immediately. In response to the Managing Director's suggestion, the Director of Insurance says that Equitable had always dealt differently with group schemes than individual policyholders.

13/03/2001 [18:27] Equitable send FSA information on the calls to Equitable's helpline.

14/03/2001 [10:20] FSA's Head of Life Insurance informs the Director of Insurance of two other '*less urgent*' issues which arose from his conversation with Equitable on 13/03/2001:

1) On the compromise scheme: '*We agreed that FSA should receive all papers for* [the steering group] *… and that in the light of these we might attend some meetings on an ad hoc basis as observers, (depending on the agenda, state of play etc.). But I agreed with* [the Chief Executive] *that we would not want full membership, because we needed to preserve our distance from decisions taken by Equitable, and be free to form our own view. This arrangement is also easier to handle in PR terms (for both FSA and Equitable)*'.

2) The Head of Life Insurance had informed Equitable's Chief Executive that FSA would be requesting further information in relation to his appointment as Managing Director of Equitable.

[**10:23**] Managing Director A comments that he was sure these responses '*have to be right*'. He also warns, in relation to discussion about the market value adjuster, that the FTSE 100 Index had fallen, as of that morning, a further 1% to 5660.

14/03/2001 [13:11] The OFT send FSA copies of correspondence between them and a bank who had complained, on behalf of their staff who were policyholders, about Equitable's use of the market value adjuster. The OFT's response to the bank explains:

> *We have no plans at this time to proceed against the Society in respect of its increase in the financial adjuster imposed on 8th December. This is not least because our powers under the Regulations are to prevent the continued use of unfair terms and do not extend to, for example, requiring the Society to compensate customers for penalty charges applied since December. Our concern lies with the clause in the Equitable's Terms and Conditions which gives it "absolute discretion" in relation to the basis for calculation of the sum paid to policyholders on early withdrawal from the fund. The term is unfair because it has the potential to cause a significant imbalance in the parties' rights and obligations arising under the contract, to the detriment of the consumer. Lack of transparency in consumer contracts is a well established concern among regulators, watchdogs and consumer associations alike.*

The OFT continue, saying that they were:

> *… discussing with the Equitable ways in which the term can be made less opaque and restricted in the discretion granted to the Society. Our main aim is to develop wording which reflects considerations of fairness and equity, including meeting the legitimate expectations of contributors to the fund and reflecting the legitimate interests of both those who decide to leave the fund early (whether in 'draw down' or not) and those who remain until the contracted departures date(s).*

14/03/2001 [16:07] FSA's Legal Adviser A replies to Line Supervisor C's request for advice of 28/02/2001 about Equitable writing new business (see 26/02/2001 [**entry 1**], 28/02/2001 [**entry 3**] and 05/03/2001 [**14:54**]). The Legal Adviser advises that: '*Given the general sympathy for the policyholders concerned and* [Scrutinising Actuary F's] *advice that the company has reserved for this and the fund will not be disadvantaged financially by allowing the switch, it does not seem unreasonable to allow this in the limited circumstances set out in the letter as referred to by* [Scrutinising Actuary F]'.

Legal Adviser A concludes '*that policyholders should be made aware of any implications of exercising the options*'.

14/03/2001 [16:15] FSA's Director of GCD sends Managing Director A a draft of a public statement of the kind that Equitable might consider issuing. It is intended to illustrate what he had in mind because: '*I have been saying for some time that I thought that the Equitable would considerably strengthen its position from the viewpoint of the unfair contract terms legislation by a clear statement as to its approach to imposing market value adjusters*'. The Director of GCD acknowledges that it was not for FSA to draft public statements on behalf of Equitable or to micro-manage their affairs.

The Director of GCD goes on to say: '*But I thought it nevertheless desirable to make clear that what would be needed to ensure that the powers do not amount to an absolute discretion is achievable without needing to attempt an actuarial certainty which could never cover all situations*'.

[**16:25**] The Managing Director says that the statement was helpful and makes some suggestions as to how it could be improved.

14/03/2001 [16:30] FSA's Head of Life Insurance queries with the Director of GCD whether he was saying, in his note of 05/03/2001 [**18:31**] that, if a single policyholder were to be disadvantaged by its terms, the FSA might not be able to recommend the compromise scheme.

[**17:00**] The Director of GCD replies: '*the court will need to decide whether it is fair that the compromise should bind dissentients. If we are to advise that it should do so we will need a basis for assessing whether it is fair to them.* [The] *more the conclusion is that the* [proposal] *is fair to each, the easier to conclude that it is fair to all*'.

15/03/2001 [09:33] FSA's Head of Life Insurance asks all insurance company supervisors to organise '*a quick straw poll of their main life offices to establish the extent of the use of market value adjusters*'. The Head of Life Insurance says that they should: '*explain this as FSA wishing to establish how life offices are responding to the current stock market falls. (An additional, but confidential, reason is that if Equitable Life raise their MVA, we would like to know whether this is part of a more general pattern, or a problem specific to the Equitable.)*' He sets out '*four key questions*' to ask and says that it would be helpful to include five companies on the survey who had been described in a recent press article as being particularly weak.

The four key questions are:

a) Is the company currently imposing an MVA?

b) If so, at what level? (any details about how it is calculated would be helpful but not essential).

c) How long has it been in place, and are there any plans to adjust it up or down?

d) If there is no MVA in place at the moment, are there any plans to introduce one, and what would be the criteria for doing so?

15/03/2001 [entry 2] FSA inform Equitable that they have no objection to them '*honouring the options under the level temporary assurance*' (see 26/02/2001 [**entry 1**]), provided:

> *... that this was responding to a client request and that policyholders are made clear about the implications of exercising the option.*
>
> *We are generally sympathetic to this approach being extended in similar circumstances but could you please give us advance notice of which contracts you intend to take this*

approach with. We would want to ensure that there were no material costs to the Society from allowing non compulsory options.

15/03/2001 [entry 3] FSA write to Equitable to confirm a point that had been discussed on the telephone the previous day about the proposed compromise scheme. FSA say that it had been agreed that Equitable would provide all the papers on the scheme that were going to Equitable's steering group and that someone from FSA might attend meetings of the group as an observer.

FSA note that a round-up meeting with Equitable was planned for the following day and that this would be an opportunity to discuss the proposals further. FSA also suggest the following agenda items for that meeting: feedback on the roadshows; impact of the falling stock market on solvency, asset mix and the market value adjuster; discussions with the OFT; and restructuring/control arrangements within Equitable.

15/03/2001 [entry 4] FSA's Managing Director A reports to the FSA Board on the ongoing supervision of Equitable. His report, dated 7 March 2001, provides an update on various aspects of the position.

The Managing Director's report includes the following statements:

There have been a number of developments on Equitable Life over the last month. Most notably, the sale of the operating business to the <u>Halifax Group plc</u> was announced on 5 February and completed on 1 March. The transaction includes the sale of the infrastructure of the Society (including its administration and marketing staff and IT systems) and the Equitable's fund management subsidiary to Halifax. The Equitable's non-profit and unit-linked businesses will be reinsured into Halifax Life (personal lines) and Clerical Medical (group business). Halifax will provide services back to the with-profits fund, which will remain within Equitable Life. Certain regulatory consents were given before completion and both companies have undertaken to co-operate to address any regulatory concerns that might arise on closer examination of the detailed documentation relating to the transaction.

<u>Solvency</u>
Equitable Life is currently preparing its accounts and statutory returns for the 2000 year end. At this stage, the financial information available is provisional and subject to audit. The free assets of the Society (i.e. those above our conservative statutory minimum requirements) should be of the order of £300 million (compared with total funds of over £30 billion). The figures take into account the more rigorous reserving standards that have been introduced by the Insurance Companies (Amendment) Regulations 2000, but they also rely on certain accounting concessions that have been requested but not yet granted. If those concessions cannot be given, the position will be very tight. We continue to receive monthly reports. Looking forward, there will have been the immediate improvement following the payment of the initial £500 million from Halifax on 1 March 2001; against that, equity prices have fallen since year end. Overall, the fund is reasonably stable, and after an initial rise in December, the rate of surrenders has fallen with the news of the Halifax deal.

<u>Market Value Adjuster</u>
Policyholders had been complaining to the Office of Fair Trading that the adjustments made to the policy values on surrender (which was increased from an average of 5% to 10% after the closure announcement) were contrary to the unfair contract terms legislation. As a matter of policy, we share the concerns that adjustments should not be excessive and serve materially to disadvantage one group of policyholders over another. However, for prudential reasons, it is important that any life office has sufficient flexibility to protect its insurance funds. OFT accepted that a 10% penalty was not unfair but were concerned about the 'absolute discretion' reserved to the Society to determine surrender values. We have worked

closely with both the OFT and Equitable on this and assisted them [to] *reach agreement about a way forward. OFT will not seek to challenge the relevant powers, and in return, Equitable will seek to improve the information about MVAs available to policyholders, including the reasons why they may be applied. The biggest short-term concern is that continuing falls in equity prices may lead Equitable to want to raise the MVA ...*

Policyholder Compromise
At the time of the Halifax announcement, Equitable also announced that it would be looking to put forward proposals for a compromise between policyholders under section 425 of the Companies Act 1985. Any proposal would require the support of a majority of policyholders voting, and be subject to court approval. In substance, Equitable is looking to buy out the guarantees in policies in return for an uplift of around 20 per cent in policy values. This would be funded from the additional reserves set aside to cover the cost of the guarantees. Equitable are already making arrangements for the new President to tour the country to meet policyholders to get support. The field force are also being lined up to explain and canvas the level of support for the proposals. If agreement is achieved, it will attract a payment of up to £500 million more from the Halifax, for goodwill, and improve the financial position by releasing statutory reserves held to cover the guarantees (these reserves are over and above the likely cost of a compromise along the lines set out above).

Equitable will be writing to policyholders soon about bonus rates. They have announced that in present circumstances, the entire annual bonus to be declared in March will be allocated to final bonuses, and none to guaranteed bonuses, because guaranteed bonuses add to the reserving requirement, and thus constrain investment freedom. They have held out the prospect of a guaranteed bonus if a compromise agreement on GARs is achieved, and will review the position later in the year.

In addition, the Managing Director's report deals with changes in Equitable's senior management, PIA review work on advice provided both prior to and after closure to new business, relations with policyholder action groups, and the Treasury Select Committee inquiry.

16/03/2001	GAD's files contain a copy of Equitable's press notice, announcing that they had increased the level of the market value adjuster from 10% to 15%. The notice includes the explanation that: '*Benefits under with profits policies are smoothed and this means that at times the smoothed value of a policy is greater than its underlying value. Life companies can provide this smoothed value as long as the conditions under which it is payable are controlled by the terms of the policies. The smoothed policy value may be reduced on early surrender to protect ongoing policyholders if, for example, market values are depressed*'.
19/03/2001 [10:00]	FSA hold an Equitable Life Lawyers Group meeting. The only issue discussed is the work of the Insolvency Practitioner on secondment to FSA on the implications of a liquidation of Equitable.
19/03/2001 [11:34]	The Insolvency Practitioner provides the Director of Insurance, the Head of Life Insurance and another official with a 12-page analysis of the consequences and conduct of a liquidation of Equitable. The Insolvency Practitioner's report's summary reads: *There are no material benefits in liquidation to policyholders as a whole, or to any particular group of policyholders. Only one minor advantage to non-GAO policyholders arises: the prevention of GAO policyholders topping up their contracts.* *Significant disadvantages arise: the termination of the reinsurance cover for high GAO take-up; a hiatus in any ongoing benefit payments being made whilst the liquidator and* [Policyholders Protection Board] *assess the position; and a short-term investment strategy being adopted.*

A liquidator would seek a transfer or sale of the with-profits fund, but this would be difficult or impossible to achieve. During this period, compensation payments on policies maturing would be met by the [Policyholders Protection Board], *but compensation in respect of terminal bonuses is excluded. This adds pressure for an early move to a "cash liquidation" – where the court makes a stop order and the liquidator ceases to carry on the business. Any transfer of business funded by the* [Policyholders Protection Board] *would also exclude "rights" to terminal bonuses: to the detriment of both GAO and non-GAO policyholders.*

On a cash liquidation, substantial costs arise when all funds must be paid into the ISA and the Halifax administration and fund management contract is terminated with penalties. These costs could be of the order of £500m. These consequences are so severe that a liquidator is likely to explore the support for a [company voluntary arrangement] *as an alternative distribution mechanism.*

The compensation paid by the [Policyholders Protection Board] *would now include PRE (as the compensation is by reference to the valuation of claims in a liquidation which includes PRE at the court's discretion). It would also include the value of GAOs.*

The Insolvency Practitioner says that he was now working on the wider problems with the Insurance Companies (Winding Up) Rules and on what the appropriate test of insolvency might be for an insurance company.

[**18:27**] Line Manager E sends the Insolvency Practitioner his thoughts on the issue. These include:

As a general matter, I thought that a liquidation could have tax implications for policyholders. For example, termination of some policies could as I understood lead to a chargeable event. Also am not clear what would happen to contributions made to pension funds. Presumably they would have to be transferred to another provider in some form or other, even if only on the basis of a new contract being entered into and the historic funds being added into the new pension. (Such matters may be quite important and at least as persuasive to a court and policyholder groups as any other issues).

[With reference] *to GAR options. As a matter of fact, I understand (and this is consistent with my reading of the policy) is that GAR entitlement is actually set out in the policy, and the option under the contract is actually not to take the GAR. I mention this because it seems to me that it could be material in assessing the basis on which a policy would be valued on liquidation.*

[With] *reference to the* [Policyholders Protection Board]. *So far as I am aware, the new arrangements under part XV of* [FSMA 2000] *will not (so far) be materially different from those under the* [Policyholders Protection Act 1975] *and it might be worth recording this in the note for the benefit of other readers who may be less familiar with the schemes.*

... some of the comments that arise later about the prohibitions under the agreements between Equitable and the Halifax Group [are questionable]. *For example, would Clerical Medical, Halifax Life and the service company really insist on withdrawing altogether from their agreements at a time of insolvency, which would simply leave the Equitable policyholders in complete chaos, rather than coming to an arrangement with the liquidator,* [Policyholders Protection Board] *or the court to provide the necessary support and administration? ...*

... there are a number of reasons why we would expect the value of the reinsurance to be lost, but if take up of the GAR had already reached the 60% level, any claims that had already been made, then any amounts due in respect of those policies would presumably still flow through. As I understand it, GAR effective take up would automatically become 100% in insolvency, since that is the only way of establishing a

value of the right, but at least the GAR would apply to lower levels of fund than would have been anticipated.

[With reference to the subordinated loan, if that] *is subordinated to the rights of other creditors, I assume that it would continue to be subordinated in liquidation. That seems quite fundamental to allowing credit to be taken for it in solvency calculations. We (and Equitable) sought Counsel's opinion on the interpretation of Article 4. I am not sure if you have seen the papers, but while we (and Equitable) were unable to obtain a definitive view of what Article 4 does mean, we managed to rule out certain interpretations, including the one that is most obvious from words (and which appears to be the one you are alluding to).*

... what would happen if the contract provided for a further contract to be issued. For example, if a pension plan provided for an annuity to be paid at retirement, does the policyholder get his annuity including a GAR or does the liquidator/[Policyholders Protection Board] *have to give him a cheque and send him out to the open market? As to the last sentence, that possibility is precluded in Equitable's case by the terms of the Halifax agreement, as you mention later.*

[On a future sale] *I see the logic of what you say in sub-paragraph (a) – it is fairly clear that as things stand the Equitable's with-profits fund is not something that anyone is prepared to take on so if the situation were to get worse, there seems little prospect of a company coming forward to take it over. In reality, this is precisely the point when the* [Policyholders Protection Board's] *powers to provide assistance are important since it enables a subsidised transfer of reduced policies to take place. No doubt the costs of ongoing (or not) relationship with Halifax group will be a consideration when assessing who might be the most likely transferee. Even if the transfer were not made to a company in the Halifax group, there are a number of presentational reasons why Halifax might not be difficult about making sensible arrangements. The parties might agree that Halifax should continue to provide services for some time, and Halifax would certainly not wish to be seen to be frustrating arrangements that would be beneficial to policyholders if they can be concluded in a satisfactory way because of the significant reputational damage to the group. There must be questions about whether the Halifax could in any event enforce the contract, or at least some of the penalty clauses, if the company had become insolvent and the court had sanctioned a transfer to a third party ...*

[On a compromise scheme] *I would not rule out at this point even if Equitable's own attempts had been successful. For the time being, some policyholders will think if they hold out there is the prospect of getting a better deal. Once an insolvency has happened and the liabilities have crystallised, people may be keen to find some way of ensuring that their funds can be released quickly and in an orderly way. Interestingly, while it is those closest to retirement who I see as most likely to frustrate the Equitable scheme, they seem to be the most likely to want to sort things out quickly if an insolvency happened.*

Line Manager E also made other, more technical, points.

19/03/2001 [12:22]	Equitable send FSA a copy of an internal paper, dated 13 February 2001, from the Assistant General Manager entitled '*Transfers out from The Equitable Managed Pension*'.
19/03/2001 [19:42]	Equitable send FSA a copy of an internal note, setting out a supplementary memorandum to be submitted to the Treasury Select Committee.

20/03/2001 [entry 1] FSA and GAD meet Equitable to discuss the proposed compromise scheme and other matters. FSA's note of the meeting records discussion under the following headings:

<u>S425 Compromise Arrangements</u>
Equitable's Chief Executive explains that Equitable were examining the compromise proposals under four areas: actuarial, legal, public relations and implementation. FSA repeat the need for them to be kept closely informed on developments. It is agreed that, while FSA '*would not wish to be formally associated with this accommodation*', FSA would nominate someone to attend meetings of Equitable's steering group as an observer. The Chief Executive says that he was concerned about possible strain on the Society's human resources, given the likely work involved if, as he had been advised, it could be '*as difficult as a formal Schedule 2C transfer of business*'. Equitable report that the debate on the numbers of policyholder voting classes was continuing. They also say that the offer to GAR policyholders might be differentiated according to the '*perceived "value" of the option*' and was now unlikely to be a straightforward percentage increase.

<u>Roadshows/PR</u>
Equitable's Chief Executive says that the roadshows had gone well and he thought '*there was 98-99% agreement from those that he spoke to that some form of accommodation should go through*'.

<u>Market Value Adjuster</u>
Equitable's Chief Executive says the announcement to increase the market value adjuster had '*gone down as well as could be expected*' and that: '*He would not have been happy to let existing policyholders subsidise those that were leaving*'. FSA also record:

> *It was confirmed that when calculating an MVA the same principles applied to Group Schemes as individuals. However, when evaluating the Group MVA closer attention is spent on gauging the precise level of markets at the time of surrender and this is one of the reasons that a Group MVA can be different to an individual MVA.*
>
> *The Society had also deterred groups from selecting against the Society on the odd occasion a group provider has sought to surrender non GAR contracts and maintain the GAR contracts. The Society had quoted on these occasions fairly stiff surrender penalties on the non GARs.*

On a copy of the note of the meeting, the Director of Insurance highlights the second paragraph and underlines '*on the non GARs*'. On 23 March 2001, the Director asks Chief Counsel A whether she saw a problem with this.

<u>The OFT</u>
The note records that:

> *Both FSA and the Society had forewarned the OFT about the increases in the MVA but all sides appreciated that this did not really change the rationale and arguments behind this issue. The Equitable had formally responded to the OFT at the end of February and were awaiting OFT's response.*

Equitable's Chief Executive says that he thought the matter with the OFT was largely closed. FSA say that they thought the OFT wanted Equitable to attempt to explain the basis for applying the market value adjuster in their literature.

<u>Solvency/Asset Mix</u>
FSA's note records:

> *The* [equity backing ratio] *was still being maintained at 61% and this was the plan until the compromise plan was voted on. Solvency margin coverage was still relatively safe and could withstand another 10% fall in the markets.*

[FSA's Head of Life Insurance] *said that we were still considering the Regulation 72 reserving issue with our legal team (retirement age assumption on certain contracts) and we would get back to the Society on this.* [The Chief Executive] *confirmed that the Society was currently using the more conservative reserving method so there could be a c£100m release from reserves if we accepted their interpretation.* [An Equitable actuary] *confirmed that the actuarial team were still checking the basis for applying for the synthetic bond Section 68 Order which was needed for the 31/12/2000 Annual Returns.* [Line Manager E] *had already communicated FSA's views on the Permanent* [Insurance] *valuation and the Society needed to sort out any presentational issues with its auditors.* [The Head of Life Insurance] *stressed the need to take care with the presentation of the year end position.*

It was confirmed that the auditors ... will put in a fundamental uncertainty clause in the 2000 accounts and returns. The Directors' statement will elaborate on this issue explaining what the uncertainties are in the balance sheet. It was also confirmed that after 2000 sign off the Society would seek to appoint new auditors as part of its attempt to make a clean break from the past.

Appointments
Equitable report that they were close to appointing a new Appointed Actuary and that the Appointed Actuary would be from an accounting or actuarial firm, but would be '*expected to dedicate his time full time to the Society*'. Equitable say that they had not yet finalised the appointment of the eight new Board members.

Control Arrangements
FSA's note records: '*It does appear that the haste at which the Halifax deal was put together had left a few holes in the arrangements between the two parties. There was no written material available on what the formal control responsibilities were between the Halifax and the Equitable in certain areas. This was an area that the Equitable's audit committee was currently examining and the Halifax were also aware of shortcomings in this area*'.

20/03/2001 [entry 2]	Following the meeting with Equitable earlier that day, the Head of Life Insurance says that Line Manager E would attend the meetings of Equitable's Compromise Scheme Steering Group, and that he would be FSA's co-ordinating point for the work to be carried out by various parts of FSA over the coming months.
20/03/2001 [12:42]	FSA's Managing Director A informs the Director of Insurance of a conversation with an Equitable Director. The Managing Director had offered to provide suggestions on the drafting of Equitable's note to the Treasury Select Committee, which they intended to reproduce in their annual report, '*for improving the clarity of it*'. The Society's Director had reported that the roadshows '*though painful, ... are worthwhile*'. He also expected the annual general meeting to be '*pretty bloody*'.
20/03/2001 [17:28]	PIA seek views from FSA and GAD on the adequacy of Equitable's rectification scheme.
21/03/2001 [16:12]	FSA's Line Manager E attends a meeting of Equitable's steering group on the compromise scheme. The terms of reference of the group were to '*oversee the implementation of the section 425 scheme at a general management level*'. He circulates his notes of the meeting to FSA and GAD, saying that there '*is not much new to report*'. Line Manager E says that it had been noted during the discussion that there was a very heavy workload being placed on some parts of Equitable and that they were trying to buy in resources to cope. The Line Manager says: '*There was already a risk to delivering to their existing timetables for the pensions review work and the GAR rectification scheme. They*

have also been constrained in the progress they have been able to make on the pension fund withdrawal review. I thought it would be helpful to mention this so that PIA colleagues are aware of the problems, and also that Equitable are aware of them and trying to resolve them. It is, I think, also helpful to remind ourselves that corporately we attach importance to the delivery of the compromise and would ask PIA colleagues to take that into account (and talk to me) before taking further action'.

21/03/2001 [17:00]	FSA's Line Manager E reports on a discussion that he had had with Equitable about section 68 Orders, following the meeting of Equitable's Compromise Scheme Steering Goup. The Line Manager says that he had informed Equitable that: *I was concerned that if we were to get things done in time, we would now need to move quickly. This is in part because the Easter recess is not far away, and also because there is still allegedly a significant possibility of a general election being called. We will not get approval from ministers in that period, particularly on something that will be seen as vaguely contentious.* [Equitable] *took the point on board and will chase up work at their end.* The Line Manager records that Equitable had: *... updated me on the valuation of Permanent* [Insurance]. *They have established for Companies Act Accounts, the correct valuation is the sale price, but they have reached the view that it could not be treated as a debt. They will therefore require a concession that will enable them to count the consideration over and above the admissibility limits that normally apply. (Presentationally, I think that one is not too difficult – the contracted sale price is clearly a more useful valuation and I think we can argue that the payment was reasonably secure in this case.) I understand that this is simply a matter of specifying the valuation that should be applied for Form 9, but I would welcome advice on that.* Line Manager E continues: *For consistency, we probably need additionally to have a* [section] *68 order that deals with the presentation of the year end returns. It might be that that would pick up on Permanent* [Insurance] *(if my understanding above is correct), and also the admissibility of* [a company's] *shares at the year end, a section 68 order for which has been granted since the start of the new year. It might also be helpful if the* [synthetic] *bond presentation in the 2000 returns could be dealt with in the same order, so that the general acceptability of their valuation basis and the presentation of the end 2000 returns are dealt with separately. That way Press Office have only to explain once that the 2000 returns have been presented in a way that shows a "proper" valuation that is meaningful, rather than one that is technically correct but misleading. Discussions with* [the Head of Insurance Policy] *and* [Legal Adviser A] *persuade me that there are precedents.* [**18:51**] FSA's Head of Life Insurance responds that he agreed with the overall approach. He says that FSA needed to press on with their view on the interpretation of Regulation 72.
21/03/2001 [19:58]	PIA inform FSA of their understanding of the arrangements for lead supervision of Halifax, Halifax Equitable Clerical Medical and Clerical Medical.
22/03/2001 [09:24]	Further to his note of 21/03/2001 [**17:00**], Line Manager E adds that he had also discussed with Equitable the issue of Regulation 72 and their retirement age assumptions. Equitable had told him that they still believed that retirement at age 55 would be a very prudent assumption and, if FSA conceded this issue, Equitable's solvency position would improve by around £100m. [**11:56**] GAD reply to FSA saying that they supported FSA granting Equitable a concession on the valuation of Permanent Insurance along the lines suggested.

	GAD also say that they were '*surprised*' that Equitable were: '*now saying that moving the personal pensions retirement age from 50 to 55 would only release £100m – in earlier discussions (based on figures from the* [Equitable's Auditor's] *Reports) we had believed that the change would reduce liabilities by £200m – £250m. Or to put it the other way, reserving at 50 has not caused so large a strain as we had anticipated*'.
22/03/2001 [entry 2]	Instructions to Counsel are provided by FSA's Legal Adviser A for advice on Regulation 72.
23/03/2001 [entry 1]	Halifax send FSA details of '*the state of play*' in relation to Equitable's Guernsey operations.
23/03/2001 [entry 2]	Equitable write to FSA to update them on identifying new Directors and to provide further information on the functions to be carried out by the Chief Executive, as part of the application for FSA approval of his appointment.
23/03/2001 [16:51]	Equitable apply to FSA for a section 68 Order in respect of the calculation of the rates of interest on fixed interest assets. Equitable ask for the Order to be granted with effect from 31 December 2000, as originally requested. Line Manager E advises Line Supervisor C that FSA would have to tell Equitable '*again!*' that any Order would have effect from the day it were made but '*you can tell them that we will consider the possibility that we might order them to* <u>*report*</u> *as if the order have been in place. But they need to be clear that it will be tough getting HMT to sign up to this, and presentationally this (as opposed to Permanent +* [the Order in relation to admissibility limits for shares in an individual company]*) will be* [very] *difficult*'.
23/03/2001 [17:41]	FSA's Line Manager E sends Line Supervisor C, Legal Adviser A and GAD a draft letter to Halifax's advisers about the merged services agreement between Equitable and Clerical Medical. He says that he is satisfied with it.
26/03/2001 [entry 1]	FSA's Head of Life Insurance asks Line Manager E to check that Equitable's letter of 23/03/2001 covered all the issues previously raised with them.
26/03/2001 [17:17]	GAD reply to FSA about the draft letter to Halifax's advisers. GAD suggest that there were further points that FSA should question Equitable about and refer them to their analysis of 07/03/2001. GAD point out that the letter refers to reinsurance of the relevant policies into Halifax and Clerical Medical, when their understanding was that this would be into Halifax only. GAD say that the reinsurance agreement was more than the '*very minor point*' which it appears in the letter. GAD say that they assumed FSA would be writing separately to Equitable to raise other points on the reinsurance agreement.
27/03/2001 [entry 1]	FSA reply to Equitable's application for a section 68 Order (see 23/03/2001 [**16:51**]), stating that they could not recommend to HMT that they should issue such an Order with retrospective effect, which '*we believe to be outside their powers*'. However, FSA explain how Equitable could submit an application which would be acceptable. FSA say: *... that it is possible for the Treasury to make an order under section 68 that would require the Society to prepare its annual returns on a particular basis, even though that information would relate to a period that has already ended but has not yet been reported upon.* *... the application that we believe we would be able to consider would be for an order in respect of:*

a) the future calculation of rates of interest on defined segments of fixed interest assets; and

b) the formation to be included in the 2000 year end returns.

However, in order to draft the order we need you to define clearly the different segments of the fixed interest assets. The order would require that this segmentation, and the method of determining the yield, is applied thereafter. Any application would need to explain fully why the Society considers that it should report a valuation other than one determined in accordance with the 1994 Regulations.

FSA continue that their understanding is that:

... the Society would like to obtain a concession that would enable it to show the value of the Permanent Insurance Company Ltd in its 2000 annual returns on the basis of the agreed sale price rather than on a look through basis. I understand from [an Equitable actuary] *that the agreed sale price will be the figure shown in the Companies Act accounts for the period ending 31 December* [2000]. *If you wished to pursue that, we would need you to make an application for that concession as soon as possible. Again the application would need to set out the reasons why you consider that the Society should report a valuation other than as required by the 1994 regulations. You should also specify in an application the statutory provisions that you wish to see disapplied, or the modifications to such provisions that you would wish to see applied.*

FSA conclude that:

... if you would like to proceed on the basis outlined above, I would be grateful if you could provide confirmation as soon as possible. I should make it clear that once such an application has been made, I will need to seek the approval of the FSA's Insurance Supervisory Committee before making recommendations to the Treasury as to whether it should grant such concessions.

27/03/2001 [09:00] FSA and GAD hold a conference with Counsel on Equitable's approach to assumptions on the retirement ages of policyholders. The advice of Counsel was that:

(i) the contracts had to be valued on an <u>individual</u> basis;

(ii) Regulations 65(3) or (4) did not permit any reduction in provisions as these were concerned with circumstances in which an increase, or at least no reduction, was required;

(iii) Regulation 66 was concerned with situations where there was a valuation strain in respect of <u>groups of contracts</u> and was not concerned with the value of individual contracts;

(iv) Regulation 72(3) <u>did</u> permit assumptions to be made as to the age at which the individual would take the benefits.

Counsel further advised that there was scope for amendments to (i) clarify regulation 72(3) so that it is clear that assumptions as to the retirement age can be made and (ii) put in a requirement for reserving so that there was a smooth curve leading to the position where regulation 72(2) took effect. There was also a scope for the issue of helpful guidance on regulation 72(3).

27/03/2001 [11:51] Equitable send FSA information on the calls to Equitable's helpline. Equitable apologise for the gap in providing information, which had been due to an oversight '*due to everything else going on*'.

27/03/2001 [12:19] PIA meet with Halifax to discuss compliance arrangements for the new Halifax Equitable sales force. The note of the meeting is sent to FSA.

27/03/2001 [14:08] GAD provide advice to PIA on the rectification scheme (see 20/03/2001 [**17:28**]). This includes the following:

> *GAD need to be satisfied that the rectification Scheme is fair between policyholders who retire(d) before, during and after the period January 1994 – July 2000, and that the New Bonus Resolution is consistent with the terms offered to policyholders who have taken retirement benefits since bonus rates were revised to take account of the House of Lords judgment. To enable us to reach a view on these matters, it would help if some additional information could be obtained from the Society, as follows ...*
>
> - *What approach was used to determine the new bonus rates under the New Bonus Resolution? Details of the method and basis used would be helpful.*
> - *What criteria were used to determine whether the new rates of bonus were "fair"?*
> - *How are the rates of bonus under the New Bonus Resolution expressed? Do they form an "end-piece" adjustment to the previous year-by-year roll up rates, or have the roll up rates themselves been restated?*
> - *Examples of the application of the New Bonus Resolution to policies maturing over the period, say in each of 1994, 1997 and 2000.*
> - *What proportion of smoothed asset shares do policyholders receive under the New Bonus Resolution for retirements over the period 1994 – 2000, if they exercise/do not exercise the GAR option?*
> - *What proportion of smoothed asset shares have policyholders received on retirement since the House of Lords judgment in July 2000, if they exercise/do not exercise the GAR option?*
> - *The Rectification Scheme booklet states (on* [page 2]*) that retirement benefits since 20 July 2000 have been calculated in line with the judgment. It also says (on* [page 2]*) that revised final bonus rates were set in October 2000, and that these took account of the judgment. Could the Society clarify which changes, in July and in October, are being referred to here?*

27/03/2001 [14:58] FSA's Line Manager E asks Managing Director A and FSA's Chairman whether they were content with a response prepared to claims for compensation from Equitable policyholders. Part of the suggested responses states:

> *In your letter you say that you expect the FSA to compensate you for the losses you consider you have suffered. The FSA considers that it has throughout, acted reasonably and in good faith in performing its regulatory functions in relation to the Equitable. I note too that it is still very early days and, for the vast majority of policyholders, any conclusions about any amount they might have lost over the period of their policy would be premature.*

On 28 March 2001 [**15:39**], the Director of GCD suggests to the Managing Director that, given the recent Bank of Credit and Commerce International case, the wording should be:

> *You suggest that the FSA should compensate you for losses incurred through your investment with the Equitable. We understand why you make this suggestion. But the reality is that regulation cannot provide a guarantee of the performance of every investment product. Our position is that we fully discharged our responsibilities in*

supervision of the Equitable. So I am sorry to say that there can be no question of us offering to pay compensation.

The final version of the response reads:

> *In your letter you say that you expect the FSA to compensate you for the losses you consider you have suffered. The FSA considers that throughout, it has discharged its responsibilities in performing its regulatory functions in relation to the Equitable and that there is no basis on which we could or should offer compensation. I note too that, for the vast majority of policyholders, any conclusions about any amount they might have lost over the period of their policy would be premature.*

27/03/2001 [17:05] FSA write to Equitable about the interpretation of Regulation 72, in order to conclude their scrutiny of the company's 1999 returns. FSA state:

> *Our discussions sought to establish the basis on which the Society should determine the statutory reserves needed to cover the potential cost of policyholders choosing to exercise the option to take early retirement. The latest correspondence on the subject was* [Equitable's] *letter of 21 December 2000 and* [GAD's] *reply of 9 January 2001.*
>
> *I have now had the opportunity to review the relevant provisions with our actuarial and legal advisers. We have concluded that a correct interpretation of Regulation 72(3) is that it requires the appointed actuary to make <u>prudent assumptions</u> (as set out in broad terms in Regulation 72(1)) about additional liabilities that might arise if the option is exercised. We have reached the view that it is appropriate therefore for the Appointed Actuary to make prudent assumptions about the variable factors underlying the calculation, and this would include making assumptions about the age at which the option is exercised. I believe this is consistent with the Society's interpretation of the relevant provisions.*

27/03/2001 [entry 8] FSA (Chief Counsel B) provide advice to PIA on the role of the independent assessor in the GAR rectification review and on policyholders' rights to complain to the Personal Investment Authority Ombudsman.

28/03/2001 [17:37] FSA's Director of Insurance informs Managing Director A that he had received a telephone call from Equitable's Chairman, following a meeting between Managing Director A and the Society's Chairman that afternoon. (Note: I have not seen a record of that meeting.) The Director of Insurance says that they were to announce that their auditors were not being put forward for reappointment and that the Chairman was sorry to see them go, but was '*firm that they will continue to be involved behind the scenes*'. The Director of Insurance also gave updates on the compromise roadshow, possible claims against Directors, auditors and regulators, and the Treasury Select Committee inquiry.

[**17:52**] The Head of Life Insurance adds that Equitable's Chief Executive had telephoned to say that the Board had agreed yesterday that a new company should be proposed as the new auditors at the annual general meeting (the current auditors having indicated that they did not wish to be considered for reappointment) and that they had also approved the appointment of a new Appointed Actuary (a consultant from an actuarial firm), with immediate effect.

28/03/2001 [entry 2] FSA write to Equitable in response to their letter of 23/03/2001, about approval of the appointment of their new Chief Executive. In order to help FSA understand what the role of the Chief Executive involved, they requested a copy of a report that they understood had been submitted to Equitable's audit committee about control arrangements so that they could review those arrangements against the contracts with Halifax.

29/03/2001 [12:15] A GAD actuary sends Scrutinising Actuary F correspondence that he has had with the trustees of an Equitable AVC scheme of a government agency that was due to be privatised. In reply, the Scrutinising Actuary states:

> *The email from Equitable at the foot of this memo states that the absence of a 3.5% guaranteed rate of roll-up on the new policies will make no practical significant difference, since it just affects the apportionment of the declared bonus. However, the declared bonus for 2000 was nil, so those with a 3.5% guarantee received a 3.5% uplift to their guaranteed benefits, whilst policyholders without the 3.5% guarantee would have been credited with nil. On the other hand, final bonus (which applies to the whole fund) was declared at the rate of 9% for the last 5 months of the year, and so policyholders' total funds would have increased by 5/12 of 9%, i.e. 3.75%, regardless of whether the guaranteed benefits were increased by 3.5%. The difference thus becomes one of the extent to which benefits are increased in guaranteed or non-guaranteed form; non-guaranteed benefits are exposed to the possibility that they can subsequently be taken away (via the MVA).*

30/03/2001 [11:53] GAD (Scrutinising Actuary F) write to FSA (Line Manager E and the Head of Life Insurance), setting out '*some aspects of the way in which Equitable is currently managing its affairs which, despite our numerous discussions with the Society, I feel I do not fully understand*'. GAD write:

> *1. The 15% MVA only appears to be being applied to non-contractual surrenders, and is designed to scale back surrender/transfer values to a "fair" amount, taking into account primarily current investment conditions (the "type 1" adjustment) but also other factors such as unrecouped acquisition expenses (types 2 & 3 adjusters). Currently the type 1 adjuster is almost 15% in its own right. However, I understand that the MVA is not applied at all on contractual terminations, and so in these cases the policyholder is receiving about 15% too much (relative to current market levels). I would have thought there was a case for applying the MVA on contractual terminations also, provided it was only used to cut back the final (terminal) bonus and leave the guaranteed benefits intact. (On a non-contractual exit, it is OK for the MVA to eliminate not only the whole of the non-guaranteed bonus, but to erode some of the guaranteed benefits as well.) As things stand, those who leave the fund on contractual exit seem to be getting an unfairly good deal (at the expense of other policyholders).*
>
> *2. If, on a contractual termination, the policyholder exercises the GAR option as well, the situation is exacerbated by the policyholder receiving not only an underlying "fund" 15% above its true value, but also a GAR on top worth perhaps a further 25%.*
>
> *3. Following on from the above, presumably the current "interim" bonus rate of 8% p.a., which is all being added in "final" (non-guaranteed) form, would not be clawed back on contractual terminations either. Given the recent gyrations in the stock market, to allow funds to roll up at a rate of 8% p.a. seems very brave – the premise seems to be "it will be all right in the end"!*
>
> *In essence, these questions are all about the extent to which the Society feels able to cut back final (non-guaranteed) bonus to reflect market conditions on contractual exits. (I raised some similar issues in my note to* [PIA] *on the Rectification Scheme earlier in the week.)*

If my understanding is correct, then I presume that the Society may be taking the view that they do not want to "rock the boat" too much by cutting back benefits on contractual terminations at a time when they are desperately keen to achieve a GAR/non-GAR compromise deal. However, they could not go on paying excessive amounts on contractual terminations indefinitely.

GAD say that they wanted to raise these issues with Equitable at the meeting on 04/04/2001.

30/03/2001 [entry 2] Clerical Medical send FSA information on the progress of the Equitable integration programme.

April 2001

01/04/2001 [evening] Equitable's Chairman telephones FSA's Managing Director A with '*a disturbing resumé of the position*'. The Chairman says that he is increasingly worried by a combination of the hostile atmosphere at the roadshows and in the press. The Chairman also says that relations with the action groups have deteriorated, as those groups were trying to have a say in the approval of the new Board or to get '*one of their "own"*' on to it, to which the Chairman was refusing to accede.

FSA's Managing Director reports to FSA's Chairman that there was a possibility by late May of '*near anarchy on the Board and/or the departure of key members of the remaining executive in the face of policy-holder resentment*'.

Managing Director A comments that FSA needed to be clear about their responsibilities and '*game plan*' for the period prior to Equitable's annual general meeting.

02/04/2001 [entry 1] Halifax write to FSA about an issue raised at the meeting on 08/03/2001 about the potential impact on Equitable's fund of the Minimum Funding Requirement for occupational pension schemes being removed. Halifax say that this was an issue for Equitable, as Clerical Medical were simply managing the assets of Equitable's fund in accordance with the fund management agreement.

02/04/2001 [entry 2] FSA supervisors and management meet to discuss Equitable (and another insurance company). FSA's note of the meeting records:

> *It was noted that the AGM, which was scheduled for 23 May, could prove extremely difficult. It was possible that some or all of the action groups would put up slates of candidates.* [Equitable's Chairman] *might end up with a hostile Board, or alternatively it was possible that a "hung parliament" outcome might occur.* [The Director of Insurance] *would speak to* [the Society's Chairman] *to find out in more detail what his handling plan is.* [Insurance Division] *would also clarify whether there were circumstances in which we would wish to use our (limited) powers in this area.*

02/04/2001 [13:30] FSA hold an Equitable Life Lawyers Group meeting. The Group express concern that Equitable had still not made a public statement on the market value adjuster and Chief Counsel A says that she intended to raise the issue with Equitable at a meeting on 03/04/2001.

Concern is also expressed that FSA had still not been provided with important information on the reinsurance aspect of the sale to Halifax and Legal Adviser A notes that issues on some of the other agreements remained outstanding.

Legal Adviser A says that a request for a section 68 Order relating to the 2000 returns '*had not been received but it would be needed*' and that Line Manager E had written to Equitable about this. (See 27/03/2001 [**entry 1**].)

It is noted that the Regulation 72 issue had been dealt with. Chief Counsel B informs the group that he had advised PIA and FSA that Equitable could not circumvent the Personal Investment Authority Ombudsman complaints procedure. However, the Chief Counsel had subsequently been shown a letter from solicitors which had raised issues about whether his advice had been correct. The group update the status of the items on the legal issues list.

02/04/2001 [14:42] PIA send FSA a copy of correspondence about Equitable's complaints handling arrangements, along with a draft letter which they proposed to send in reply to Equitable.

The draft letter notes that Equitable had asked what impact being a closed fund would have on complaints handling requirements and obligation to contribute to the funding of the Financial Ombudsman Service.

PIA quote a relevant section of their Complainants Sourcebook and say that they hoped that this clarified the position.

02/04/2001 [17:01] PIA send FSA and GAD a copy of a note of a telephone conversation with Equitable about PIA's letter of 29/03/2001 about the rectification scheme.

[**17:05**] GAD confirm that they are happy to discuss actuarial issues with Equitable directly and ask PIA for a copy of their letter.

02/04/2001 [17:19] Halifax inform FSA of three notifiable events relating to the transfer of Equitable Investment Fund Managers Limited.

03/04/2001 [entry 1] The Deputy Director General of Fair Trading writes to FSA's Chairman about Equitable and the Unfair Terms in Consumer Contracts Regulations 1999. The Deputy Director General explains that she is writing in place of the Director General who was prevented by a conflict of interest in dealing with Equitable matters.

The Deputy Director General says that the OFT have already begun enforcement action against Equitable following more than 60 complaints about the way they used the market value adjuster. She explains that the OFT's key concern was not with the amount of the market value adjuster but with Equitable's '*absolute discretion*' clause. She says:

> *Equitable has explained how it exercises this discretion in practice but it is clear that there is no transparency and consumers cannot take an objective view of how it will be used. We think Equitable may be able to meet our concerns by giving an undertaking to limit the exercise of the discretion so that the term is used fairly and in a way that is – within the limitations imposed by varying market conditions – predictable and objectively verifiable by consumers. However, we would need to undertake a good deal of research before we could be confident that the undertaking effectively met our serious consumer protection concerns.*

The Deputy Director General notes the general review of with-profits business announced by FSA on 23 February 2001 and that this would overlap with their work.

She explains that, therefore, the OFT have been considering the best way forward. She suggests that it might be more sensible for FSA to take the lead on this, including the complaints lodged with the OFT, '*given the ambit of the review and your expertise in the area*'.

03/04/2001 [entry 2] FSA send Equitable a suggested outline agenda for the meeting planned for the following day, which includes: with-profits fund experience '*(solvency, withdrawals, MVA)*'; the compromise scheme; Board appointments; the preparation for and handling of the annual general meeting; control arrangements between Equitable and Halifax; and correspondence with the OFT.

03/04/2001 [14:04] PIA send FSA copies of correspondence from Halifax about the initiative (planned for 9 April 2001) to allow Equitable's former sales force to begin to sell Halifax Equitable products.

An enclosed letter from Halifax explained the training and the revision of the sales process that had been carried out. The letter also set out the short and long term arrangements that had been put in place to detect, as far as was possible, cases of mis-selling.

03/04/2001 [16:13]	FSA's Legal Adviser A provides Line Manager E with his thoughts (dated 2 April 2001) on the management agreement with Clerical Medical. Amongst other issues, the Legal Adviser says that he is concerned that a clause provides that the management of the company could be subcontracted, which would mean that FSA had no direct power in relation to the subcontractor, who might not be a regulated entity. Legal Adviser A notes that the agreement might be terminated upon the direction of the regulator. [**18:03**] Line Manager E replies, answering some of the questions raised by the Legal Adviser.
04/04/2001 [entry 1]	FSA's Chairman comments on the Deputy Director of Fair Trading's letter that their proposal looked like a sensible way forward: '*But we will need to be careful, since clearly the OFT will continue to take an interest*'.
04/04/2001 [11:00]	FSA and GAD meet Equitable. FSA's note of the meeting includes the following:

Solvency position
Equitable say that their year-end position was close to being finalised but had not changed materially from that reported previously and that they would provide the information requested about the section 68 Order application shortly. Equitable say that they were clear that their ongoing solvency position would be improved by the Halifax deal.

The issue of whether the relevant certificates in the 2000 returns would be signed off by the Society's former or current auditors and appointed actuaries is discussed.

Market value adjuster
GAD ask about Equitable's approach to payouts on policies at maturity and whether the justification underlying the market value adjuster on non-contractual surrenders meant that there was also a need to reduce levels of terminal bonus on contractual surrenders. FSA note:

> *Whilst* [Equitable's Chief Executive] *conceded that maturity payouts were currently in excess of "smoothed asset shares", he said that they had no plans further to reduce terminal bonus at this stage. The current levels of maturity were in line with predictions, so there were no arguments for making a reduction on the grounds that underlying assets were having to be sold unexpectedly and at disadvantageous prices. He thought it fairly fundamental that the effect of smoothing on a with-profits policy meant that there would be some consistency in the levels of benefits paid even if the markets were unstable.* [An Equitable actuary] *noted also that the interim rate of return (IRR) had already been adjusted down to 8% per annum in February and on the basis of current experience there was no need to adjust this further.* [The Chief Executive] *said it was also a consideration that current maturity values were being met from cash realised when equities were sold earlier in the year when the FTSE 100 was around the 6,200 level.* [The actuary] *confirmed however that the IRR was kept under constant review.*

The possible use of a differential market value adjuster for GAR and non-GAR policyholders so that non-contractual surrenders reflected their asset share is discussed.

Equitable's Chief Executive says that he considered the approach to be reasonable and notes that the House of Lords' ruling related to contractual maturities, the implications for non-contractual withdrawals being unclear.

FSA's Head of Life Insurance notes that the information about Equitable's market value adjuster on FSA's website was being updated to focus on surrender values rather than exit penalties.

Compromise scheme
Equitable suggest that it would be useful if Line Manager E attended the next scheme steering group meeting. FSA say that there had been a '*breakdown in communications*' about meetings on the compromise scheme and that it is important that FSA were kept in touch and were provided with relevant papers.

Board appointments
Equitable say that they were in the process of making offers for Board positions but that no positions were being offered to candidates put forward by the action groups '*since none were considered to have been of sufficient calibre*'.

Control arrangements
FSA raise some concerns over the control and contact arrangements. Equitable hand FSA a copy of an internal submission to their audit committee on corporate governance and the responsibilities and procedures arising from the outsourcing of their administration to Halifax Equitable Clerical Medical.

Other issues
Equitable report that they had been asked by the Personal Investment Authority Ombudsman for copies of Board papers but, as they were not content to accede to the request, they held a meeting to discuss mis-selling issues instead. Equitable say that they had understood that the Personal Investment Authority Ombudsman would continue to deal with some individual complaints, but, for generic mis-selling complaints, would wait for the conclusion of FSA's work on post-Court of Appeal advice.

The Head of Life Insurance states that FSA were strongly resisting demands from policyholders for compensation.

Equitable's Chief Executive says that the Society was awaiting advice from Counsel on possible legal action but that he was '*instinctively ... reluctant to embark on lengthy legal processes where there was little prospect of success*'.

04/04/2001 [13:14] FSA are informed by an Equitable Director that the Society's Chairman was instructing solicitors to test the potential liability to Equitable of directors, former directors and advisers.

05/04/2001 [08:05] PIA send GAD a copy of their letter to Equitable about the rectification scheme of 29 March 2001.

[**11:13**] GAD thank them for this and ask for a copy of the Independent Actuarial Expert's report.

05/04/2001 [08:52] Equitable send FSA a copy of their solicitors' paper on the determination of voting classes for the GAR compromise scheme.

[**10:46**] Line Manager E distributes the note, along with an Equitable progress report as at 4 April 2001. This included an outline timetable and the contents list for the Independent Actuarial Expert's report.

05/04/2001 [10:49] FSA send GAD a copy of Equitable's audit committee paper handed over at the meeting the previous day.

05/04/2001 [11:27] An FSA Legal Adviser (Legal Adviser D) distributes a note (dated 4 April 2001) on Equitable's Memorandum & Articles of Association with regard to the powers of members and directors to table resolutions and to elect directors.

05/04/2001 [entry 5] FSA's Director of Insurance suggests to the Head of Life Insurance that he or Line Manager E should discuss with FSA's Head of Consumer Protection the Deputy Director General of Fair Trading's letter of 03/04/2001 and the handling of the complaints against Equitable.

05/04/2001 [entry 6] FSA attend a meeting of Equitable's Compromise Scheme Steering Group. According to Equitable's minutes of the meeting, the group largely report on progress to date and on the timetable going forward.

05/04/2001 [entry 7] FSA's Director of Insurance seeks advice from Line Manager E on the letter from Halifax of 02/04/2001.

05/04/2001 [entry 8] PIA send FSA a copy of a letter from their Complaints Policy Department sent that day to Equitable about complaints data reporting requirements.

05/04/2001 [entry 9] FSA's Lead Supervisor file includes a copy of a report produced by IMRO of their '*periodic visit*' to Equitable Investment Fund Managers Limited. The visit took place from 26 to 30 March 2001.

The report explains that the aims of such visits were:

> *(a) to identify instances of investor risk; (b) to obtain reasonable assurance that Firms are complying with IMRO's Rules; and (c) to assess whether they continue to meet the fit and proper criteria for authorisation.*

Under 's*ignificant findings*', the report states that IMRO had been unable to satisfy themselves that Equitable Investment Fund Managers Limited's complaints handling procedures and recording systems were correctly identifying, recording and classifying complaints.

05/04/2001 [entry 10] GAD's Equitable file includes a notice from the Civil Service pension scheme, which advises that the deadline for the contributions amnesty (allowing policyholders to transfer any payments into the with-profits fund since 8 December 2000 into the Equitable Life Money Fund without incurring a market value adjuster) had been extended from 31 March to 30 April 2001.

05/04/2001 [20:05] FSA's Director of Insurance informs the Head of Life Insurance (copied to Managing Director A, Head of GCD, Chief Counsel A and a PIA official) of a telephone call he had taken from one of Equitable's proposed new directors. The proposed director was concerned about a PIA investigation into his former employer.

The Director of Insurance records two issues that the proposed director was concerned about:

- *The first concerned his own position. Was it likely that after his appointment we might decide that anything coming out of the PIA work suggested he was inappropriate for the job.*
- *The second concerned possibly "contagion" for the Equitable. Was there any possibility that the PIA might do something spectacular to* [the company] *before (possibly immediately before) the AGM or the vote on the compromise scheme, such that his earlier connection with* [the company] *might embarrass the* [Equitable] *and make it vulnerable to generalised "run by rogues" criticism.*

The Director of Insurance says that he had told the proposed director that he thought both possibilities were unlikely to transpire but that he would revert to the proposed director if, on reflection, he had reason to doubt this view. The Director of Insurance also records that he had told the proposed director that FSA '*could not subordinate proper action in relation to one company to considerations of the interests of another*'.

The Director asks the Head of Life Insurance and PIA for any information that they could give on the current situation with the investigation into the former employer. He says:

> *Notwithstanding what I said to* [the proposed director]*, we probably do have some influence over the timing and presentation of events and should consider whether it would be proper/appropriate to exercise it in the wider interests of policyholders.*

06/04/2001 [entry 1]	Equitable inform FSA that they have appointed a new Appointed Actuary with effect from 28 March 2001.
06/04/2001 [entry 2]	FSA's Head of Consumer Protection provides FSA's Chairman with a draft reply to the Deputy Director General of Fair Trading's letter of 03/04/2001, saying: *I have agreed with* [the Director of Insurance] *(as well as* [the Director of Consumer Relations]*) that there would be advantage in being able to deal with these cases ourselves ...*
06/04/2001 [11:01]	FSA's Chief Counsel A sends Counsel copies of the latest compromise scheme documents, which had been received on 05/04/2001 [**08:52**].
06/04/2001 [11:17]	FSA's Line Manager E circulates a note of the Compromise Scheme Steering Group meeting that he had attended the previous day. The Line Manager sets out the draft outline timetable, the details of the plans for consultation of policyholders, and the possible legal representation of policyholder classes. The Line Manager says that he had had a brief discussion with Equitable's Appointed Actuary after the meeting, during which he had talked about the information and analysis FSA would expect to see to enable them to express a view on the scheme.
06/04/2001 [12:57]	FSA's Line Manager E seeks comments from Legal Adviser A and GAD on a revised draft letter to Halifax's advisers.
06/04/2001 [14:25]	FSA seek advice from GAD on the letter from Halifax of 02/04/2001. [**15:15**] GAD say that, as far as the actuary who attended the meeting could recall, the Director of Insurance: *... asked a fairly general question about the impact of the abolition of the* [Minimum Funding Requirement] *– this abolition had just been announced the day before – on Equitable. The thrust of the question ... was whether the supply of long dated gilts might increase, should pension funds liquidate some of their holdings. Gilt yields might then fall.* GAD agree that it was a matter for Equitable rather than Clerical Medical and suggest that FSA should pursue the matter with Equitable's Chief Executive, should they wish to do so.
06/04/2001 [17:20]	FSA's Director of GCD queries where FSA have got to on '*the coverage of the Equitable by the compensation scheme*'. The Director of GCD says that it would be appropriate now to make HMT aware of the situation, as they were currently considering other aspects of the scheme in the context of another case.
06/04/2001 [17:20]	FSA's Director of GCD writes to FSA's Director of Consumer Relations saying that:

As I understand it, there have been a series of discussions with the OFT, in which it has been plain that they would not seek to take action against the Equitable under their unfair terms in consumer contract powers, if the Equitable made clear in a public statement the criteria they would apply when calculating the MVA.

We have encouraged the Equitable to do this over a fair period, but so far without success.

The Director of GCD suggests that, as her division had lead responsibility for the Unfair Terms in Consumer Contracts Regulations, she and the Director of Insurance, as a fellow regulator in the same field, might want to discuss how to take matters forward.

09/04/2001 [10:52] FSA write to Equitable's solicitors as '*there is concern about the power of the Action Groups to vote for new Directors, engage in spoiling tactics by seeking Special resolutions etc*'.

FSA ask whether Equitable's Memorandum and Articles, reprinted on 19 May 1995, was the current version and whether there had been any amendments made since then.

[**16:05**] Equitable's solicitors reply that they understood that this version was the up to date one but say that they would confirm this with Equitable.

09/04/2001 [12:06] PIA send GAD copies of the Independent Actuarial Expert's and the Independent Legal Expert's reports for the rectification scheme.

09/04/2001 [12:26] FSA's Insolvency Practitioner replies to Line Manager E's note of 06/04/2001 [**11:17**] asking a number of questions, including: about the timing of receipt of the '*Explanatory Statement*'; whether Equitable wish FSA to provide a statement for inclusion in the documentation; and:

Will each policyholder be sent a statement showing the value of his policy now and after the proposed uplift. If this includes a statement of asset shares then, from [Equitable's Chief Executive's] *comments on 4 April, the aggregate asset shares might exceed the present market value of assets. Can they avoid showing any aggregate financial position?*

[**13:29**] Line Manager E provides some comments on these questions. On the last point, he says:

It will be based on some figures that will clearly need to be explained to policyholders. They have not finally settled which "valuation" figure to use, but they are likely to go with a year end valuation.

[**17:57**] GAD comment:

[The Insolvency Practitioner] *asks ... which "value" the Society will quote to policyholders in any statement they receive. From* [Line Manager E's] *reply it looks that they expect to use year-end valuation reserves from the regulatory returns (which exclude terminal bonus). They are unlikely to use aggregate asset shares – even though these represent the policyholders' interest in the fund – because they feature in neither the regulatory returns nor the companies act accounts. However we would wish to keep an eye on what they are proposing, so please can you keep us in the picture.*

GAD also ask to be invited to any meeting with Equitable's Appointed Actuary about the scheme.

09/04/2001 [15:55] Further to FSA's letter of 27/03/2001, Equitable apply for two section 68 Orders to require them to prepare their returns on a particular basis.

The first is to require the proceeds of the sale of Permanent Insurance to be included in the returns as at 31 December 2000, as a binding agreement had been in place at that time (although subject to regulatory approval). Equitable state that the sale had been completed on 16 February 2001.

The second is to require Equitable to use an aggregate rate of interest for the fixed interest assets held.

09/04/2001 [17:01] GAD send FSA two further points from the meeting with Equitable on 04/04/2001 that they say might be worth recording.

The first is that Equitable's Chief Executive had said that Equitable reserved the right to impose a specific surrender penalty to improve the financial position of the fund. GAD say that they had indicated that this would be potentially unfair to departing policyholders, which might raise regulatory issues with FSA and the OFT.

The second point concerned the 2000 returns, as GAD would have concerns if these were solely signed off by the individual who had been Appointed Actuary as at 31 December 2000, as:

> *He has been displaced successfully as finance director, appointed actuary and chief executive, and may yet be the subject of possible action by either the society, its members, or the actuarial profession. Accordingly, we believe that it would be prudent to seek another actuary's signature on these returns.*

09/04/2001 [19:35] FSA's Director of Consumer Relations tells the Director of GCD that her division would take forward, in discussion with the Director of Insurance, the work on the Unfair Terms in Consumer Contracts Regulations 1999 and the complaints about Equitable's use of the market value adjuster.

[**19:56**] The Director of Insurance comments:

> *I have already expressed the view that we should take the lead on responding to complaints against the* [Equitable] *on* [unfair contract terms] *grounds. As I understand it we gain our new powers on 1 May. But that should not inhibit us from taking matters up with the Society before then so that we have a settled position (and hopefully they have done whatever is necessary) by 1 May. We will in any case come under immediate pressure as soon as complainants know that we are in the lead.*
>
> *I understand that OFT have offered to share their expertise with us, at least in the early months. It will be* [the Director of Consumer Relations'] *call whether we accept this, but my instinct is that we should (and that we should gain whatever public advantage/protection we can by so doing). Some people will inevitably complain that we are insufficiently impartial and that we will give insufficient weight to the interest of individual policyholders, given our interest in seeing an outcome that is in the interests of policyholders as a whole. I think this would be unreasonable (and probably to misunderstand the approach we will take to our responsibilities under the* [unfair contract terms] *legislation), but it will not stop people thinking and saying it.*

09/04/2001 [20:12] FSA's Chief Counsel A asks the Director of GCD if they could discuss Line Manager E's note of 06/04/2001 about the compromise scheme, as she was concerned about appointing lawyers to represent each policyholder class.

After an exchange of correspondence, the Director of GCD later agrees (on 11 April 2001) that it would be a good idea to speak with Counsel about the matter.

10/04/2001 [entry 1] FSA's Line Manager E says that Equitable's notification of the appointment of their new Appointed Actuary given on 06/04/2001 appears to comply with section 19(2) of ICA 1982. Next to this Line Supervisor C has written: '*we would like a form*'.

10/04/2001 [09:11]	In reply to 09/04/2001 [**19:56**], FSA's Director of Consumer Relations agrees that it would be a good idea, and in their interests, for FSA to involve the OFT. [**15:50**] The Head of Life Insurance tells Line Manager E that FSA '*will need to reach an agreed view as to what exactly we consider that* [Equitable] *need to do to satisfy us on* [unfair contract terms]'. [**16:02**] Line Manager E sets out his understanding of the position as being: *i) Equitable have replied to the OFT's last letter, offering to go forward on the basis I agreed with OFT;* *ii) we and Equitable are awaiting a response from OFT confirming they continue to hold the view that they had expressed previously;* *iii) when that has been done, or when a suitable opportunity next arises (such as in material about the GAR compromise scheme, or as part of the next with-profits guide), we will work with Equitable to get them to put out material that gives the clarification that we all want to see;* *iv) there is a need to take forward the same issue on an industry wide basis, and the with profits review appears the most sensible place for that work to take place.*
10/04/2001 [09:37]	FSA's Legal Adviser D sends the Director of GCD a copy of her note of 05/04/2001 [**11:27**]. [**11:22**] The Director comments that it is '*important to remember the importance of the board representing the policyholders fully, even though this may look to make it more difficult short term for the management to secure a resolution of the GAR/non GAR issue*'.
10/04/2001 [10:32]	FSA ask GAD for help with a paper for FSA's Insurance Supervisory Committee and how to describe Regulation 69 and Equitable's intended valuation of fixed interest stocks in their 2000 returns.
10/04/2001 [11:24]	FSA ask GAD for assistance in relation to the wording of the draft section 68 Order which they had discussed on 27/03/2001. FSA say: '*There has now been discussion about "segments" and I wondered if something needed to be said to cover the concept of those segments. Do they need to be defined, perhaps by explicit reference to the three categories set out in Equitable's draft letter? Or is "relevant asset portfolio" enough?*'. FSA set out part of the wording of a draft Order that had been prepared in December 2000. [**12:19**] GAD say that they think the section 68 Order should make reference to the three segments as described in Equitable's letter of 23/03/2001. GAD suggest a form of words and ask Legal Adviser A to confirm whether he thinks this is okay.
10/04/2001 [16:37]	FSA's Line Manager E sends the Head of Life Insurance, Legal Adviser A and Line Supervisor C and GAD a draft paper for the Insurance Supervisory Committee and draft section 68 Order for the valuation of Permanent Insurance. The Line Manager explains that: '*I have put that the order expires on 30 December 2001 – since it seems to me that the revised valuation has to apply as at end 2000, up until the cash was paid over, and for* [at] *least until the day on which the returns are submitted*'. The Line Manager also explains that he had tried not to focus on the impact of an Order not being granted and the valuation in the regulatory returns remaining at £25m (rather than £150m), instead focusing on consistency with the Companies Act accounts. [**17:36**] The Head of Life Insurance says '*OK by me*'.

10/04/2001 [17:20] FSA's Line Manager E seeks comments from the Head of Life Insurance, Line Supervisor C and Legal Adviser A and GAD on a draft paper for the Insurance Supervisory Committee, which suggests that they should recommend to HMT that Equitable's section 68 Order for the valuation of fixed interest securities should be granted.

The '*Background*' section of the paper explains:

> *Equitable has identified a problem with the valuation (of liabilities) regulations in that Regulation 69, when applied to a portfolio of fixed interest assets, can produce anomalous results in certain circumstances. The problem arises because the Regulations require the gross redemption yield on fixed interest stocks to be calculated on a stock-by-stock basis. The "average" gross redemption yield on a portfolio of stocks, which are used to match a particular block of liabilities, is then a weighted average of the gross redemption yields of each stock held, where the "weights" are solely the market values of the stocks. In theory, the result should also be weighted by the term (i.e. the outstanding duration) of each stock.*
>
> *In the resilience tests, the assumed changes in yields of fixed interest securities do not necessarily lead to a uniform change in market values of the stocks held (i.e. the market values of some stocks will change by proportionately more than is the case for others, depending on the outstanding duration of the stock).*
>
> *This means that in the resilience scenario, even if the assets and liabilities were matched (by amount and duration) in the first place, the valuation rate of interest which is used to determine the liabilities may be determined inappropriately, and this can lead to a spurious release of reserves, or a strain on the fund.*
>
> *The problem was previously identified by* [an insurance company] *in 1995, and by* [another insurance company] *in 2000, each of whom now have similar section 68 Orders to overcome the problem.*

FSA's paper continues:

> *Whilst the Section 68 Order sought by the Equitable is similar to that granted to the two companies above, it differs in the detail.* [The two insurance companies] *identify a block of assets which is deemed to match a particular liability, and treat that block (which may include different types of fixed interest securities with different characteristics) as one "large" asset when calculating the yield. Equitable, however, wants to divide the fixed interest portfolio into three segments, calculate the yield on each segment as if that segment were one asset, and then bundle together parts of each segment to match a particular liability. Each segment constitutes a "synthetic bond".*
>
> *The three segments are as follows:*
>
> - *approved fixed interest securities;*
> - *other fixed interest securities excluding convertible fixed interest securities; and*
> - *convertible fixed interest securities.*
>
> *Equitable believes that, by calculating the valuation rate of interest on "segments" of assets in this way, artificial strains and releases in the resilience scenarios will be avoided. Indeed, in discussions with Equitable last December, they indicated that the resilience reserve they were then holding was inflated unnecessarily by £300m on account of this feature.*

It continues:

> *As noted above, the effect of concession being sought as an alternative to the methodology required by regulation 69 can vary from year to year depending on economic circumstances. At the moment, the concession would lead to an improvement in the company's financial position by removing an unnecessary strain. However, since the position could move the other way, we have made it clear to the company that a request for a concession would only be considered if the company would also use that valuation basis in future years, when it produced a less favourable result. For that reason, the Order has permanent effect and cannot cease to have effect other than where it is expressly withdrawn by the Treasury. Equitable will not therefore be able to opt out of this valuation basis by failing to make the necessary disclosure in its annual return or failing to notify a material change to the circumstances of the company.*
>
> *GAD believe that, on that basis, it would be reasonable to grant this Order to the Society.*

10/04/2001 [19:43] Equitable's solicitors send FSA confirmation from Equitable that the Memorandum and Articles that they have (i.e. the version reprinted on 19 May 1995) is the current version.

11/04/2001 [11:03] FSA's Legal Adviser A provides Line Manager E with a redrafted section 68 Order for the valuation of Permanent Insurance as '*I am not sure your draft will work*'. The Legal Adviser explains:

> *I think we have a difficulty here. We have agreed that, in principle, we can give a reporting concession in respect of the position at the 2000 year end. That is what my draft is intended to do. However in respect of the position going forward up to the date the agreement was completed, what would be needed would be a substantive concession. However, if we grant this now to cover the period from 1 January or whenever then we would be granting the concession retrospectively which it is generally accepted that we cannot do. For practical purposes, it seems to me that the lack of a concession will only matter if the company in 2001 would be unable to certify that the margin of solvency had been maintained throughout the year.*

[**11:41**] GAD say that they support the alternative approach but advise FSA that:

> *Since ... the reporting concession does not give the Society any benefit over the period from 1 January 2001 to the date the sale was completed, we recommend that the Society are alerted to this. They can then consider what impact (if any) this has on their solvency coverage over the period.*

11/04/2001 [13:06] FSA's Line Manager E sends the Insurance Supervisory Committee and GAD copies of two papers for consideration at the Committee's next meeting on 17/04/2001 [**14:30**].

The Line Manager states:

> *Core members for next week's committee may also wish to note that both papers will also be subject to approval (or otherwise) by* [FSA's Chairman] *and* [Managing Director A] *before a recommendation is made to the Treasury. That will be done in parallel with the committee's consideration.*

[**15:51**] GAD suggest some amendments to the wording of the Order for the valuation rates of interest for fixed interest securities.

11/04/2001 [13:54] GAD write further to their comments of 09/04/2001 [**17:01**], saying:

> *... I believe that we shall need to consider what action maybe appropriate to take over ... the former Appointed Actuary to Equitable Life. Although he has now relinquished this role, I understand from our last meeting with Equitable that he is still the appointed actuary of University Life and of course still retains his practising certificate from the profession.*
>
> *The 2 specific issues on which we have hard evidence that could be referred to the profession in order for them to investigate his conduct, relate to his assessment of the mathematical reserves.*
>
> > *1) He did not hold any reserve for* [guaranteed annuity options] *in the 1997 returns (even though they were then "in the money"), and was opposed to holding any significant reserves in the 1998 returns. However, we know that his argument to support this position was rejected as unsound by a working party of actuaries in 1997.*
> >
> > *2) He included a very odd "Zillmer-type" adjustment for pension policies in the 1997 and subsequent returns, which we believe is likely to be contrary to professional guidance note GN8 (although in mitigation he did hold a hidden margin that largely offset this adjustment).*

GAD continue:

> *There may of course be further issues that emerge from any investigation of Equitable that may take place, regarding for example whether he took reasonable steps to ensure that incoming policyholders were not misled as to their expectations.*
>
> *We had held off any action while he still had a central role in the Court cases and subsequent "sale" of Equitable, but I think we shall now need to decide when would be an opportune time to present any case to the actuarial profession for further investigation.*

11/04/2001 [14:30] FSA's Legal Adviser D sends the Director of GCD (copied to other officials) a paper on FSA's powers of intervention under ICA 1982 in relation to appointments to Equitable's Board of Directors nominated by policyholder action groups.

The Legal Adviser notes that prior approval of the appointment of a director was not required. She then sets out FSA's sound and prudent management powers:

> *Under its delegated powers from HMT, the FSA can intervene under Section 37(2)(aa) Insurance Companies Act 1982 ... if it appears to the FSA "that any of the criteria of sound and prudent management is not or has not been <u>or may not be</u> or may not have been fulfilled with respect to the company". (Emphasis added). I construe this as an anticipatory power of intervention which could be exercised if any Action Group was insistent upon a particular candidate about whom the FSA could be satisfied that he/she was not fit and proper. However it has to be kept in mind that powers of intervention are excisable against the company. In these circumstances it will be difficult to prevent the members electing particular directors.*

Legal Adviser D then highlights some of the criteria of sound and prudent management including:

> *Paragraph 7 of Schedule 2A might also be relevant since it provides "The insurance company shall <u>not</u> be regarded as conducting its business in a sound and prudent manner if it fails to conduct its business with due regard to the interest of policyholders and potential policyholders.*

	Legal Adviser D explains FSA's powers to impose requirements under section 45 of ICA 1982 and that '*there may be scope, for example, to require the company to call an* [emergency general meeting] *with a view to electing further directors with insurance experience or to change its Articles relating to the requirement as to the number of directors ...*'. The paper concludes with an explanation of FSA's ability to petition to wind up the company: *Should Equitable Life end up with a wholly unsuitable board of new directors, then the FSA could in the last resort present a petition for its winding up on the grounds that this was expedient in the public interest. Should the Equitable be ungovernable that might, at the end of the day, be the only solution. However I presume that with the benefit of prior informal consultation it is unlikely that a wholly unsuitable board will be elected and this draconian measure will not be necessary.*
11/04/2001 [15:20]	FSA's Line Manager E seeks confirmation that he should recommend to Managing Director A that FSA should approve the appointment of Equitable's new Chief Executive.
11/04/2001 [15:43]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.
11/04/2001 [15:50]	FSA write to Halifax's advisers for the sale with a number of questions and observations about the Merged Agreement between Equitable and Clerical Medical.
11/04/2001 [16:42]	FSA's Line Manager E prepares a summary of the information supplied by Equitable on the handling of calls and requests for transfers and switches. The Line Manager says that there were still a considerable number of calls from consumers and an analysis of the content of the calls shows: *1.2% wanted to move out of the with profits fund, and 7.6% wanted information about doing so.* [Still] *1 caller in a hundred believed that the society was insolvent. 31% were chasing payments, and 19% were chasing other forms of servicing work. 6% had questions about the recent bonus notices. The balance (about 30%) are recorded as "general enquiries".* On requests for surrenders, the Line Manager reports: *The total level of surrenders since December 2000 has now reached £801 million. This includes leavers from the unit-linked funds and switches from with profits to unit linked. £642 million has been withdrawn from the with-profits fund. The corresponding cumulative figures for the period from closure to end January (roughly 7 weeks) were £427m and £360m, which means* [that] *in the last 10-11 weeks, the amounts have increased by £374m and £282m respectively.*
11/04/2001 [16:49]	FSA's Line Manager E informs the Insurance Supervisory Committee of a mistake in the paper on the valuation of Permanent Insurance. The Line Manager also explains that the Order sought was a '*one off*' reporting concession and not a permanent one, as the paper had suggested.
11/04/2001 [17:09]	FSA's Line Manager E asks Legal Adviser A and GAD to check his understanding of the position in relation to whether Equitable's auditors at 31 December 2000 or their current ones should sign off the auditors' certificate in the returns. This, it is said, was in response to Equitable seeking comfort from FSA about asking their former auditors to do it.
11/04/2001 [18:40]	The Financial Services Consumer Panel send FSA a note explaining the research on Equitable that they proposed to carry out. The Panel say that their aim is to test whether policyholders

'*are suffering an information gap about Equitable Life's situation, and whether there is any consumer detriment as a result*'. The Panel explain that:

> *Such consumer detriment might come about because policyholders are distressed, because they have taken inappropriate action (or are not taking action due to lack of information), or because of a drop in market confidence.*

and say that:

> *The Panel share some of the FSA's concerns that they must not become or be seen to want to become quasi-decision makers for the Equitable, and certainly not prejudice any regulatory action nor the outcome of a vote.*

The Panel also say that: '*This research is not intended to test whether consumers feel that they were mis-sold (*[post-House of Lords'] *ruling) nor whether they understand the GAR compromise deal (not least because it won't be on the table at that stage). Further research may test these things and clearly they are highly sensitive. Following his meeting with* [FSA's Chairman] *on Monday,* [the chairman of the Panel] *is extremely keen to ensure that any research would not jeopardise enforcement action regarding the sale of Equitable Life products post-*[House of Lords'] *ruling*'.

11/04/2001 [entry 12] FSA meet Equitable's Chairman for a brief update on developments.

The points discussed include:

1. that Equitable had heard no more from the OFT in response to their letter. FSA inform Equitable that they were now taking the lead on the Unfair Terms in Consumer Contracts Regulations and would deal with current and future complaints against Equitable;
2. that Equitable had no developments on the market value adjuster to report;
3. that Equitable had suggested that mis-selling complaints might be reviewed by the Centre for Effective Dispute Resolution and that they would welcome FSA's views on this approach;
4. that the preliminary results of an Equitable survey had suggested that both GAR and non-GAR policyholders were keen to settle their claims through a compromise scheme. Work done by Equitable on the compromise suggested that a flat rate uplift to policy values of 20% looked justifiable;
5. that the new Board appointments would be announced on 12 April 2001 but would have to be confirmed through re-election at the annual general meeting;
6. that the old Board had now resigned but had signed off the Companies Act reports and accounts; and
7. that Equitable had been presented with a case for legal action against the former directors and advisers which was '*sufficiently substantial to make it impossible to ignore*'.

12/04/2001 [08:38] FSA's Chairman comments, on the meeting with Equitable's Chairman the previous day, that the position '*sounds a touch more optimistic than we might have feared*'.

[**10:51**] The Director of GCD tells Chief Counsel B that the main legal action point was to think through the proposal to ask the Centre for Effective Dispute Resolution to look at mis-selling claims.

[**11:59**] An FSA official provides advice on how the Centre generally operates.

[**13:50**] Managing Director A relays to the Director of GCD and Chief Counsel B that FSA's Chairman has strong reservations about FSA allowing Equitable to use the Centre for Effective Dispute Resolution and '*most importantly, he feels any investigations of* [mis-selling] *ought to be done by us – this is where the buck stops*'.

[**11:04**] FSA inform PIA of the approach that was being considered.

[**14:00**] PIA update FSA on the timetable for completing their review of Equitable's disclosure of the risk of losing the court case.

12/04/2001 [08:54] FSA's Head of Life Insurance comments that there was to be an investigation undertaken by the actuarial profession into Equitable which would presumably cover the ground suggested by GAD on 11/04/2001 [**13:54**].

[**09:02**] GAD reply that they understood that the actuarial profession's inquiry was to look at the overall circumstances rather than the conduct of particular individuals. GAD add, however, that they had heard confidentially that a complaint had been made to the profession about the former Appointed Actuary in question.

GAD suggest that, as they did not know what evidence had been presented in support of this complaint, there was still the outstanding question of whether FSA, as regulators, should present a case against the former Appointed Actuary.

[**10:40**] The Director of Insurance comments that it might be preferable to wait for the actuarial profession to ask for evidence from FSA, rather than initiating a complaint themselves at a time when FSA's own role was under review. The Director of Insurance asks how FSA could ensure that the actuarial profession sought evidence from FSA.

[**11:14**] GAD explain that the rules of the profession's investigation committee appeared to allow them to require any member of the profession to give evidence in relation to a complaint against another member. GAD explain that FSA could reasonably expect to be contacted for information, although there '*would no doubt then be some legal hurdles that we would need to look at carefully*'.

12/04/2001 [09:45] FSA's Director of GCD writes to Chief Counsel A about FSA's meeting with Equitable on 04/04/2001 [**11:00**]. He raises four queries about the note including, in relation to Board appointments:

> *I do not know Jeremy Lever QC, but it sounds very odd to regard him as of insufficient calibre. This sounds like just an excuse to keep action group members off the Board.*

12/04/2001 [09:50] FSA's Head of Life Insurance tells Line Manager E that he agreed with the substantive conclusion that FSA should approve the appointment of Equitable's new Chief Executive.

12/04/2001 [11:27] FSA's Line Manager E seeks the views of Legal Adviser A and Chief Counsel A on a note to Managing Director A (copied to FSA's Chairman) seeking his agreement for FSA approval of the appointment of Equitable's new Chief Executive.

[**14:51**] Legal Adviser A suggests that, as the only information requested that FSA were yet to receive in relation to the appointment concerned the final composition of the Board, Line Manager E needed to consider whether he was '*satisfied that <u>whatever the composition of the board</u>* [the individual] *is fit and proper to be chief executive*'.

[**15:02**] The Line Manager sends the note to the Managing Director recommending that FSA should not object to the appointment of the Society's new Chief Executive.

FSA's Chairman comments '*I agree*'.

12/04/2001 [12:21]	FSA's Line Manager E suggests to Legal Adviser A and GAD that FSA should not provide any comments to Equitable or Halifax on the few short agreements relating to the transfer of '*things such as real or intellectual property*'. The Line Manager does, however, say that FSA should remind them that FSA were yet to receive the final version of the reinsurance agreements. Later, on 18 April 2001 [**10:09**], the Head of Life Insurance says that he is happy to go with Line Manager E's judgement on this.
12/04/2001 [12:27]	In relation to Equitable's application for a section 68 Order for the valuation rates of interest for fixed interest securities, a member of FSA's Insurance Supervisory Committee advises Line Manager E and the Committee that: *From previous experience I have come to the view that the existing regulations are defective in this respect ... A proper calculation of the yield on the total portfolio, which effectively weights the yield on each stock by its mean term, is required to produce theoretically correct results.*
12/04/2001 [15:45]	FSA's Legal Adviser A advises Line Manager E that there was nothing in the regulations of which he was aware that would prevent Equitable's former auditors from providing the auditors' certificate to the 2000 returns, by reason only that they had ceased to be auditors of the company at a time subsequent to the period to which the returns related.
12/04/2001 [16:01]	FSA's Legal Adviser D provides comments to Chief Counsel A on Equitable's solicitors' timetable for the compromise scheme. She says that it is '*very optimistic indeed*' and she outlines the stages to reach the suggested date for a court hearing to sanction the scheme of 3 November 2001. The Legal Adviser concludes that the: '*... bottom line is that I cannot see Equitable,* [their solicitors] *and FSA between us achieving the outline timetable. There are too many issues still to be resolved*'.
12/04/2001 [entry 10]	The Financial Services Consumer Panel send FSA a copy of a letter from their Chairman to Equitable dated 2 April 2001 and Equitable's response of 9 April 2001. The letters detail the discussions that had taken place at a meeting the previous week about how the Society was communicating with its policyholders.
17/04/2001 [12:32]	FSA's Consumer Panel Secretariat seek comments from Line Manager E on what groups of Equitable policyholder should be used when conducting some consumer research that they proposed to carry out, and also on a draft letter to Equitable about this project.
17/04/2001 [14:30]	FSA's Insurance Supervisory Committee consider Equitable's application for a section 68 Order in respect of the valuation of Permanent Insurance as at 31 December 2000 (Paper 180/2001). The minutes record: *The Committee noted that* [Managing Director A] *would take the FSA's decision on whether to recommend such an order to the Treasury.* [Line Manager E] *opened the discussion by saying that the committee was dealing with events that had already happened, and was a true reporting concession. The sale of the Permanent* [Insurance] *had been agreed before the year end and was conditional only on regulatory approval. Companies Act accounts would properly value the Permanent* [Insurance] *at the sale price.*

The Committee concluded that, although circumstances like this did not arise often, it would be prepared to recommend an Order along these lines for any company in similar circumstances.

<u>The Committee recommended to</u> <u>[the Managing Director]</u> *<u>that he should recommend the Order as proposed.</u>*

The Committee also consider Equitable's application for a section 68 Order in respect of the valuing of the interests rates of fixed interest assets in aggregate.

The minutes record:

<u>Issue:</u> Whether the company should (a) be granted a permanent section 68 Order allowing it to adopt a method of determining the valuation rate of interest that is different from that prescribed by Regulation 69(11) of the Insurance Companies Regulations 1994 and, (b) whether it should be able to report the 2000 year end position as if such a concession had been in place.

The Committee noted that [the Managing Director] *would take the FSA's decision on whether to recommend such an order to the Treasury.*

The Chairman thanked [an actuarial member of the committee] *for circulating a note about the general problems with Regulation 69(11) as drafted. (This note is attached at the end of this minute.)*

The Committee noted that Regulation 69(11) was flawed and that a technically more defensible method of valuation would involve weighting all the securities in the portfolio by duration as well as value. Three major insurance companies had been given concessions allowing them to do this.

The committee noted that it would be desirable to change Regulation 69(11) when we get to the Integrated Prudential Sourcebook. It was pointed out that this was not done in the Interim Prudential Sourcebook.

The Committee noted, however, that the concession sought by Equitable Life was not in the same form as for other companies, but involved "bundling" the assets into three categories. It was explained that this approach had been recommended by GAD. GAD were not able to attend the committee, however, and neither of the actuaries present could immediately explain the rationale for the bundling approach.

<u>The Committee considered that, whilst it would have been prepared to recommend a concession for Equitable Life similar to that granted to other insurance companies, it was not prepared to recommend one in the form proposed without further justification. It invited the supervisory team to give further consideration to the way forward, in consultation with GAD. If urgent action were needed, the issue could be considered by the core members ... by correspondence.</u>

The note by the actuarial member of the Committee demonstrates in a simplified way the perverse results that Regulation 69(11) could produce where a company whose assets were insufficient to cover their liabilities could be demonstrated to be solvent under the Regulations, and insolvent using the proposed approach and vice versa.

17/04/2001 [entry 3] FSA report to GAD the outcome of the Insurance Supervisory Committee's consideration, saying that, while the principle of addressing the deficiencies in the regulations had been supported, the method proposed by Equitable had been questioned. FSA say:

The centre of the issue was whether it was proper to do the calculation on the basis of segments of assets rather than on the portfolio as a whole.

FSA say that they needed to establish whether Equitable's approach was better than that used in the Orders already granted or whether they needed to persuade Equitable to adopt the other approach.

17/04/2001 [14:52] FSA's Managing Director A reminds Equitable's supervisors that care was needed in their current dealings with the company, given that they had instructed solicitors to review the possibility of taking action against '*anyone "responsible" for past losses*'. The Managing Director says:

> *While* [Equitable's Chairman] *has not suggested that the FSA is in the firing line, it is equally true that he has not ruled us out (indeed it is hard to see how he could in the circumstances). It therefore follows that anything said to him or to other Executives (especially put in writing) is more than usually at risk of being used in subsequent litigation. There is particular need (again this probably needs no reminder given that we have seen misuse/ misrepresentation already by the press) to avoid saying anything that implies the regulators in the past have made mistakes.*
>
> *I will speak to* [their Chairman] *next time I see him to point out as politely as possible that – while FSA might in due course be in the firing line – he has to understand that our relationship will inevitably be constrained, especially when it veers into the pre-December 2000 period.*

17/04/2001 [17:56] FSA's Managing Director A advises Line Manager E that, having discussed the issue with FSA's Chairman, FSA should confirm the appointment of Equitable's Chief Executive.

17/04/2001 [entry 6] FSA and PIA meet to discuss Equitable's proposal that they should ask the Centre for Effective Dispute Resolution to consider complaints from policyholders that all non-GAR policies had been mis-sold. Managing Director A and another official provide FSA's Chairman with a note of the items discussed and a number of decisions for FSA.

On mis-selling in the period between the Court of Appeal decision and closure to new business, the note explains that a report on PIA's review of marketing literature, training material and guidance to advisers issued by Equitable would be completed by 30/04/2001.

It was noted that a second stage report on the information FSA would expect to be disclosed would be completed by 31 May 2001. FSA set out two questions:

> *There is a risk that at the end-May, we will be unable to reach a final conclusion about the reasonableness of Equitable's disclosure due to lack of information. For example, at an early stage, we decided not to request copies of Board papers from Equitable. <u>Should we reverse that decision at this stage?</u>*
>
> *Ultimately, the* [Financial Services] *Ombudsman will consider individual claims for compensation. The Ombudsman will be required to review cases in light of Court requirements. <u>Should we seek Counsel's opinion on how a Court might react before finalising Stage II of our review?</u>*

FSA set out the discussion on claims that all non-GAR policies had been mis-sold. They consider seeking a ruling from the Centre for Effective Dispute Resolution not to be an attractive option unless Equitable were satisfied that it fitted with the objective of securing a compromise between policyholders.

FSA say that FSA and PIA needed to fully explore the issues that were within their ambits, '*and any mis-selling* [post-1988] *potentially must be*', before they could take a view on the compromise scheme that was to be put to policyholders. FSA suggest an early meeting to discuss these issues.

17/04/2001 [entry 7] FSA's Chairman replies to the Deputy Director General of Fair Trading's letter of 03/04/2001. The Chairman says:

> *I am sure you are correct to suggest that for OFT to pursue these cases would risk cutting across the review of with-profits business which I announced in February. Since the FSA will shortly gain powers under the* [Unfair Terms in Consumer Contracts] *Regulations I think it does make sense for us to take on these complaints, and we shall be happy to do so.*

17/04/2001 [entry 8] FSA's regulatory supervisor for Halifax sends Line Manager E copies of reports by Halifax on the progress, as at the week ending 23 March 2001, of the programme for the integration of Equitable's assets.

17/04/2001 [entry 9] Halifax inform FSA of the change of name of Equitable Investment Fund Managers Limited to Halifax Investment Fund Management Limited.

18/04/2001 [09:28] FSA write again to GAD's Scrutinising Actuary F about Equitable's proposed method valuing fixed interest securities (see 17/04/2001 [**14:30 and entry 3**]). FSA say that they had spoken to Chief Actuary C, who had seen no difficulty with Equitable's segmented approach. However, FSA note that the actuarial member of the Insurance Supervisory Committee had raised objections (though not strongly) that the approach could be used to '*pick and choose*'.

18/04/2001 [15:06] PIA provide FSA with an update on their work in assessing Equitable's disclosures to investors after the Court of Appeal decision.

PIA say that they are assessing Equitable's written communications in the areas of: advised sales documentation; complaints cases; advertising and promotion material; and training and briefing material for sales staff. PIA say that they hoped to produce a summary of this factual report by 30/04/2001. PIA continue:

> *Assessment of this material makes Equitable's position clear. It did not disclose to potential investors the following risks:*
>
> > *a) the risks (following the Court of Appeal) of an adverse House of Lords ruling that might have a material financial impact.*
> >
> > *b) that (especially after the House of Lords decision) its with profits fund contained a population of GAR investors who, on exercising their rights through further investment, as a result of falling interest rates or otherwise, could reduce the funds available to meet the claims or growth expectations of non-GAR with profits policyholders.*
> >
> > *c) that a purchaser of the business might not* [be] *found, and what the consequences of this could be.*

PIA note that it is Equitable's view that they had not disclosed these risks as they thought them unlikely to occur.

PIA explain that the next stage for them was, by 31 May 2001, to establish the relevant PIA and Adopted LAUTRO Rules standards and whether Equitable were in breach of these standards.

PIA ask for FSA's help so that they could obtain a reasonable and objective view of the probabilities and impact of the risks described above and, in particular, seek FSA's thoughts on:

> *a) The risk position after the Court of Appeal decision, and whether this changed in the period up to the House of Lords ruling.*

> *b) The impact the House of Lords ruling on other investors of GAR holders investing further into their existing policies (or their rights otherwise becoming more costly)? What was a reasonable assessment of the impact of GAR policyholders on non-GAR policyholders' investments?*
>
> *c) The consequences of a purchaser not being found.*

PIA suggest that a meeting is held during the next couple of days.

19/04/2001 [entry 1]	FSA inform Equitable that, after consideration of the notifications and the information available to them, they had decided not to object to the appointment of Equitable's Chief Executive. [**10:43**] Before it is sent, Line Manager E asks for comments on the draft for Legal Adviser A and the Head of Life Insurance, saying that '*it is sensible to have a slightly more technical (and possibly fuller) response than we might normally have given*'.
19/04/2001 [entry 2]	FSA's Managing Director A submits his Managing Director's report to a meeting of the FSA Board, which includes an update on their regulation of Equitable. Among the issues reported, he says that Equitable's financial position was '*much improved*' following the Halifax deal.
19/04/2001 [19:33]	Equitable inform FSA that they had decided to '*remove the potential to write new business from the scope of the Society's proposed agent in Ireland*'. Equitable ask for FSA's approval, by the following day, of the appointment of the agent.
20/04/2001 [entry 1]	A GAD actuary passes Scrutinising Actuary F a copy of the progress report on the integration of Equitable and Halifax/Clerical Medical, noting: *Interesting Risk on the last page: Closed Fund of ELAS may not be getting enough attention/resources.*
20/04/2001 [entry 2]	FSA write to Equitable about the issue of the auditor's report for the 2000 returns. FSA say that it would be desirable for the Society's soon-to-be former auditors to provide the auditors' certificate in the returns as they had been the auditors at 31 December 2000.
20/04/2001 [09:07]	An FSA legal adviser circulates an agenda for an Equitable Life Lawyers Group meeting planned for 23 April 2001. (Note: it appears that the meeting did not take place.)
20/04/2001 [09:18]	FSA's Line Manager E circulates Equitable's minutes of their Compromise Scheme Steering Group meeting on 05/04/2001 (which he had received the previous day). The Line Manager says that there was no news on the whereabouts of the actuarial report that was due to be discussed at the next meeting on 23/04/2001. [**15:36**] Chief Counsel A also sends Counsel copies of Equitable's solicitors' note on the determination of voting classes for the scheme, along with an Equitable progress report as at 4 April 2001. [**15:50**] Chief Counsel A sends the minutes to Counsel.
20/04/2001 [12:30]	FSA's Line Manager E seeks advice from Legal Adviser A on whether Equitable's proposals for their Republic of Ireland branch constituted it continuing or closing.
20/04/2001 [12:49]	FSA's Legal Adviser D circulates a list of issues and action points relating to the compromise scheme. [**14:19**] Chief Counsel A passes the list to the Insolvency Practitioner and to GAD.

20/04/2001 [14:00]	FSA send Equitable a suggested agenda for their meeting to be held on 23/04/2001, being: communications with policyholders; the compromise scheme; Equitable's current financial position as '*the latest position we have seen relates to end January*'; and their 2000 returns and applications for section 68 Orders.
20/04/2001 [14:56]	FSA's Consumer Panel Secretariat write to Equitable to seek policyholder details so that they could carry out some consumer research. The Secretariat send a copy of their letter to Line Manager E.
20/04/2001 [16:36]	Equitable send FSA the latest documents on the compromise scheme ahead of a meeting of the steering group on 23/04/2001 [**14:30**].
20/04/2001 [16:42]	FSA speak to Equitable's solicitors, who say that they were having difficulty finding '*heavyweight*' legal representatives for the GAR and non-GAR policyholder classes. Chief Counsel A also speaks to Counsel.
20/04/2001 [19:23]	FSA's Chief Counsel A asks an FSA official whether FSA or previous insurance regulators had ever appeared before the court in section 425 proceedings. She asks how FSA's views would be made known (to the company and to the court).
22/04/2001 [20:04]	FSA's Chief Counsel A responds to the Director of GCD's queries of 12/04/2001 [**09:45**] about the meeting with Equitable on 04/04/2001 [**11:00**]. The Chief Counsel says that she was happy with Equitable's answer about the market value adjuster applied to group schemes, as: *The Equitable say they have (so far at least) calculated these MVAs on a group basis, applying the same MVA to both GAR and non-GAR policyholders*. On whether FSA needed to request the Equitable Board papers in order to do their review of mis-selling, Chief Counsel A suggests that this was a matter for PIA, noting: *I suggested at the time of the leak of Board papers that we might obtain the papers to consider whether they raised fit and proper concerns. I believe it was considered, but presumably rejected.* Chief Counsel A agrees with the Director's comments about one of the policyholder action group's nominations for appointment to Equitable's Board but points out that: [Equitable's Chairman] *is reported as saying that he will only resist appointments that are made to represent a factional interest, and we said at the meeting that we thought Directors nominated by Action Groups could not be resisted on that ground alone*.
23/04/2001 [09:46]	FSA's Line Manager E notes that the key issue from the compromise scheme documents received on 20/04/2001 [**16:36**] is that Equitable believed they were unlikely to be able to complete the scheme by November and had suggested that the scheme should be put back to February 2002.
23/04/2001 [10:05]	FSA's Legal Adviser D seeks comments on a draft paper on section 425 of the Companies Act and the power to compromise.
23/04/2001 [11:40]	FSA's Chief Counsel A notes, for the record, that the FSA official questioned had informed her that:

... we have never appeared in s 425 proceedings, but we very closely check all schemes in draft (whether solvent or insolvent), and, once content, we write to the company to confirm we have seen the scheme in draft, which letter we assume is put before the Court.

The Chief Counsel comments that '*of course, so far as we are aware, this is the first life scheme ever under s 425*'.

Chief Counsel A later notes that this may not be the first life insurance company to propose a section 425 scheme, referring to a case which had taken place around 20 years ago. She says that FSA were checking their records.

23/04/2001 [12:00] FSA and GAD meet Equitable as part of a regular round of update meetings.

FSA's note of the meeting includes excerpts that deal with the following:

Communication with policyholders
Equitable had acknowledged that there were some backlogs in communicating to individual policyholders and had said that they would look to see if more could be done to improve the position.

Compromise scheme
Equitable had said that they remained encouraged by the progress made towards a scheme that would be simple in structure. GAD had asked to see the terms of reference for the Independent Actuary. In relation to this request, FSA note:

This was not yet prepared but [Equitable's Chief Executive] *was concerned that the Independent Actuary should not get involved in issues surrounding classes of policyholder, as this could further complicate matters, but should concentrate on examining financial fairness.*

Equitable had reported that they were to meet with almost all of the policyholder action groups to discuss the proposed scheme on 26 April 2001 and that it was envisaged that a final draft scheme would be presented at the annual general meeting on 23 May 2001. FSA record:

It was not thought that the scheme could be used to sweep up all of the related issues relating to GARs (such as alleged mis-selling during 2000) as this could over complicate the scheme and lead to more classes of policyholder. [Equitable's Chief Executive] *added that for alleged mis-selling there would not in any case be much of* [an] *amount to claim, (5% for one year only).*

Financial position
FSA record that:

The end of March figures were almost complete and would show the notable improvement in solvency following the £500m injection and the added knock on benefit of the reduction in resilience. Both the end of February and March figures are based on the latest test 2 for resilience, assume the Section 68 Orders for Permanent/equivalent bond but take a more conservative approach than required by the regulations for Regulation 72 (assumed age of retirement). The value of the equivalent bond concession was estimated at c£200m for the end of the year, although this would be reduced over time as the yield curve flattens.

[FSA's Line Manager E] *explained that the FSA would in due course be able to recommend to HMT that the Section 68 Order for the Permanent valuation (which reflects the treatment to be adopted in the Report and Accounts) should be issued. On the equivalent bond Section 68 Order it was well understood by* [FSA] *that Regulation 69 was deficient and other Companies had applied for and received an Order disapplying* *this provision and applying an alternative more accurate measure across the board. However, Equitable had asked to apply a new valuation basis separately to bundles of contracts. This approach was new and we wanted to understand better the rationale behind this.* [An Equitable actuary] *confirmed that the banding approach was crucial to the valuation basis and agreed to supply further justification to us asap.*

The Appointed Actuary was aware of our request that the use of the £1bn implicit item should be revisited and justified. The [Appointed Actuary] *was aware of this and agreed. It was not anticipated that there should be a problem in doing this particularly since linked business (effectively sold to the Halifax) had not been used in the original calculation.*

It was reported that there had been an increase in surrenders when the market fell severely but this activity had now levelled out when the MVA increased. Surrenders were currently running at twice the normal level for the Equitable at £4-5m per day as opposed to £2-£3m.

The current level of GAR top ups was well below what was reserved for (assumed decrement 10% but 5% in the Annual Returns) although there was a noticeable trend of certain policyholders making large additions to GAR policies to try and get what [Equitable's Chief Executive] *described as "a free ride". He had asked for these cases to be investigated. It was in any case possible that if the 425 scheme took effect the effective date might be retrospective and these policyholders would not then benefit.*

The Report and Accounts were now prepared and the auditors' opinion was not qualified. However, the narrative included discussion of "fundamental uncertainty" we would receive a copy of the Report and Accounts by the end of the week.

Under '*Action Points*', Equitable agree to: consider whether someone from FSA could attend the annual general meeting; supply further justification for the section 68 Order on the valuation of fixed interest securities; supply justification for the future profits implicit item; and provide the Companies Act report and accounts for 2000. FSA agree to: consider which Appointed Actuary should sign off the 2000 returns; and provide early feedback on the draft actuarial section of the compromise agreement, if possible by 4 May 2001.

At the meeting, Equitable hand over a summary of their estimated solvency position as at 28 February 2001, which was as follows:

	£m	*£m*
Value of non-linked assets		*28,735*
Future Profits Implicit Item		*1,000*
		29,735
Mathematical Reserves		
– Basic (including GAR)	*26,925*	
– resilience	*1,310*	
		28,235
		1,500
Required Minimum Margin		*1,200*
Excess Assets		*300*

23/04/2001 [14:30] FSA attend a meeting of the Compromise Scheme Steering Group. According to Equitable's minutes of the meeting which were held on FSA's supervisory file, the group mainly discuss progress to date and the timetable going forward.

23/04/2001 [15:46]	FSA's Head of Consumer Protection thanks the Head of Life Insurance for inviting her to the meeting with Equitable that day. She says that '*for reasons you will understand*' she did not mention that FSA were taking over from the OFT the 60 complaints about Equitable's application of the market value adjuster. The Head of Consumer Protection informs him that she expected to meet the OFT the following week and to take over the complaints cases immediately. The Head of Consumer Protection also asks for an update on what was happening with mis-selling complaints against Equitable, as she had responsibility within FSA for '*Ombudsman and Compensation Schemes,* [unfair terms in consumer contracts]*, firms' complaints handling under the Rules, and the Correspondence Unit*'.
24/04/2001 [entry 1]	Equitable write to FSA about the circumstances in which they would issue new policies. Equitable explain that a new situation had arisen, not previously considered, where they felt that they should offer to issue new policies to members of existing group schemes.
24/04/2001 [11:33]	An FSA official writes to Managing Director A in response to the note to the Chairman of 17/04/2001 about involving the Centre for Effective Dispute Resolution with Equitable's mis-selling complaints. The official explains that the Centre would not themselves give an opinion on the dispute but simply arrange for a suitable person to do so. The official suggests that it would be a matter for Equitable to decide how useful this would be.
24/04/2001 [18:08]	FSA's Line Manager E writes to the Director of Insurance about the same subject, saying: *At our recent internal meeting, we concluded that we might wish to recommend to Equitable that it might use the* [Centre for Effective Dispute Resolution] *process to identify cases of misselling that could be remedied within the compromise. But we were concerned that the* [Centre for Effective Dispute Resolution] *process should not derail the compromise.* *We discussed with Equitable yesterday the extent to which they were inclined to use the scheme to do various bits of tidying up.* [Equitable's Chief Executive] *said that he thought it desirable in theory, but in practice they had taken the view that it would be impossible to get agreement to the scheme if it were extended to cover anything other than the simple buyout of guarantees. Their inclination therefore was also to leave any allegations of misselling outside the scope of the scheme. Of course, their thinking on whether to proceed in that way will be materially affected by the conclusions of the work we have been doing separately on post court of appeal sales (and on which a further* [FSA]*/PIA meeting is planned for later this week).*
25/04/2001 [10:17]	PIA send FSA a paper on their review of past sales by Equitable that PIA had prepared for a meeting that day but which had not gone ahead.
25/04/2001 [11:51]	FSA's Line Manager E provides comments to FSA's Consumer Panel on their survey of Equitable policyholders.
25/04/2001 [12:53]	FSA's Chief Counsel A sends legal advisers (copied to others) the note of the meeting with Equitable on 23/04/2001 [**12:00**] and says that she hoped that the note could serve as an update, instead of holding a meeting of the Equitable Life Lawyers Group. Chief Counsel A adds some comments further to the note, including that:

1. the Chief Counsel and GAD had told Equitable that they did not see how the Independent Actuary for the compromise scheme could be prevented from assessing the policyholder classes used;
2. Equitable had said that, although levels of surrender had been high relative to their experience last year, they were about average for the industry; and
3. the Chief Counsel had expressed '*strong scepticism*' about the possibility of ring fencing by year.

25/04/2001 [15:21] FSA's Legal Adviser A advises Line Manager E that, for Equitable's proposals of 19/04/2001 [**19:33**]: '*there is a gap between what the company intends to do "close the branch operation in Ireland" and the power to be vested in the Attorney "to conduct, manage and carry on the authorised insurance business of the Society in the Republic of Ireland"*'. The Legal Adviser says that it was necessary for FSA to know exactly what the Attorney would be doing.

26/04/2001 [entry 1] Actuaries transfer from GAD to FSA.

GAD's formal role in the prudential regulation of insurance companies comes to an end.

26/04/2001 [entry 2] FSA and PIA meet again to discuss Equitable's proposal that they should ask the Centre for Effective Dispute Resolution to consider complaints from policyholders that all non-GAR policies had been mis-sold and the questions raised in the note of 17/04/2001.

FSA's Chairman concludes:

> *... that FSA should consider the issue under the ARROW framework* [FSA's risk assessment framework] *establishing the likely scale of losses to Equitable policyholders and the implications for other companies and the industry more generally to enable us to establish whether a case existed for major review and whether we were able to give the* [PIA] *Ombudsman any guidance for dealing with mis-selling claims*.

It is agreed that FSA should consider taking Counsel's opinion and that Managing Director A would find out from Equitable whether they considered it necessary to bring mis-selling claims within the scope of the compromise scheme.

The Managing Director is also to relay to Equitable FSA's concerns about involving the Centre for Effective Dispute Resolution.

26/04/2001 [11:48] FSA respond to Equitable's correspondence about their intention to stop writing new business in the Republic of Ireland. FSA explain:

> *If the company has no presence in the Irish Republic other than the attorney and (a) the attorney is not effecting any new contracts on behalf of the company and (b) he is not carrying out any contracts (i.e. the payment of benefits etc is all being dealt with from the UK); then it seems reasonable to conclude that the company has ceased to carry on insurance business through the branch. If that is the case (which reflects our understanding of the facts), all Equitable Life needs to do is to give us notification after the closure has taken place under paragraph 8 of Schedule 2G of the Insurance Companies Act 1982.*

26/04/2001 [13:10] Further to Chief Counsel A's note of 25/04/2001 [**12:53**], Directing Actuary B (who has transferred to FSA and has become FSA's Insurance Division's Head of Actuarial Support (the Head of Actuarial Support)) adds that FSA had touched on the fact that the value of guaranteed annuity rates was dependent on the current market annuity rate, which could vary before the scheme was agreed. The Head of Actuarial Support also says that it was unlikely that the Independent Actuary's report would be able to conclude that the scheme was fair to all policyholders.

[**14:17**] Chief Counsel A says that she recalls that:

> *... the court will not be considering whether the scheme is fair to every policyholder within each class (the test is not that high), so presumably the terms of reference of the Independent Actuary will not go that far either.*

[**14:22**] Line Manager E says that he would circulate the final terms of reference for the Independent Actuary when they arrived.

[**15:33**] Legal Adviser D clarifies the legal requirements related to a section 425 scheme and notes that there was no requirement for such a scheme to be fair.

[**18:10**] Line Manager E adds:

> *However, there is also the question whether the FSA needs to intervene by exercising its formal powers to protect the interests of policyholders, and our judgement will be influenced by whether or not the proposed scheme is fair. So in that sense, we will want to be satisfied about fairness, whatever the requirements of section 425. I agree with* [Chief Counsel A's] *point though – and there are going to be difficult issues about the extent to which the fairness to the majority can override the interests of the minority.*

26/04/2001 [14:58] PIA send FSA some background material ahead of a meeting planned for the following day. (Note: it appears that the meeting did not go ahead.)

26/04/2001 [15:03] Legal Adviser A informs Line Manager E that, other than the two matters they had discussed, there was nothing else in relation to the sale agreements (excluding the Merged Administration Agreement) that the Legal Adviser could bring to his attention.

26/04/2001 [15:31] FSA's Line Supervisor C asks Scrutinising Actuary F and Legal Adviser A for their comments on Equitable's letter of 24/04/2001 about the circumstances in which they would issue new policies.

27/04/2001 [11:19] FSA's Legal Adviser A responds to Line Supervisor C, checking that his understanding of the position was correct and advising that, subject to any actuarial comment, it seemed to him:

> *... that any objection on our part would have the effect of disadvantaging the affected Equitable policyholders and it would be subject to considerable criticism if we were to raise an objection.*

[**11:30**] Line Manager E adds that FSA needed to be sure that new Free-Standing AVC contracts were only written on an individual policyholder basis and following a personal request.

27/04/2001 [14:01] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

27/04/2001 [15:06] Equitable write to FSA to clarify their proposed changes to their branch operation in the Republic of Ireland. Equitable explain:

> *In the long term, Equitable wishes to change the nature of its operations in Ireland from a branch basis to a services basis from the UK.*
>
> *However, we are currently awaiting a decision by the Irish Revenue as to what, if any, presence they will require us to maintain in Ireland in order for our Irish policyholders to continue to qualify for income tax relief on premiums paid.*

Our tax advisors have recommended that pending a decision from the Irish Revenue (which we hope to receive within the next couple of weeks), we retain a presence in Ireland.

Interim appointment of a new authorised agent/change to branch structure:

Therefore, for tax reasons, Equitable wishes in the very short term to maintain its branch presence in Ireland. To do so, we are aware that we are required to have an authorised agent there. However, the release of all staff from the Irish branch, including our existing authorised agent, means that we must make an interim appointment ...

We realise that changes to branch structure (release of employees) and the identity of the authorised agent should normally be notified to both the FSA and Irish Department of Enterprise Trade and Employment (DETE) one month in advance of the change. Our Irish advisors have been in contact with DETE, who have given verbal confirmation that they are satisfied that the appointment be made. We apologise for not having given you sufficient notice as is required under the relevant legislation. However, the final member of staff at our Irish branch office leaves today. In order to provide continuity for clients, and for the tax reasons explained above, we will therefore be appointing our new authorised agent today, by means of the Power of Attorney previously forwarded to you.

[**16:26**] Line Manager E informs officials of Equitable's intentions. He notes that Equitable's:

... new arrangements come into immediate effect, even though the necessary one month's notice has not been given ... However, I am prepared to treat this as a change "occasioned by circumstances beyond the insurer's control" and note that notice of the proposed change was given "as soon as practicable" once it was known that it would happen. In such circumstances paragraph 2(3) of Schedule 2G applies, and Equitable appear to have complied with the requirements that apply in that case.

[**17:46**] Legal Adviser A advises:

Certainly paragraph 2(3) seems clear on this. The Society must give notice to [the Treasury] and the supervisory authority of the member state of the branch. A breach of paragraph 2 is a criminal offence so you need to be satisfied on good grounds that (a) the change was occasioned by circumstances beyond the company's control and (b) that they are giving the notice as soon as practicable.

The Legal Adviser also says that FSA would require formal notification of the new manager but did not need to provide prior approval.

FSA reply to Equitable, noting that '*because of circumstances beyond your control*' Equitable had not been able to give the one month's notice that was required for a change of requisite details of an EU branch. FSA say that they would treat the previous correspondence as notice to FSA and that they did not anticipate any further action on this.

27/04/2001 [16:03] Solicitors provide FSA with comments on Equitable's solicitors' draft issues paper and FSA's note of 23/04/2001 [**10:05**] on section 425 of the Companies Act.

27/04/2001 [16:37] Equitable thank FSA for providing comments on their actuarial paper. Equitable explain that they were currently incorporating comments, that they planned to issue an updated version of the document on 30 April 2001 and would meet with the Independent Actuary on 4 May 2001.

27/04/2001 [18:18]	FSA's Line Manager E gives warning to Legal Adviser D that FSA would need to form a view on their role in relation to the compromise scheme. He suggests that this could form part of a paper that she was to prepare on the scheme. [**20:39**] Chief Counsel A agrees.
30/04/2001 [entry 1]	FSA reply to Equitable's letter of 06/04/2001 about notifiable appointments. FSA request a managers' notification form for Equitable's Appointed Actuary and authorised agent for their Republic of Ireland branch. FSA also remind Equitable that they would need to confirm the recent resignations and appointments of directors.
30/04/2001 [14:00]	FSA hold a meeting of the Equitable Life Lawyers Group.
30/04/2001 [14:04]	Equitable send FSA a revised application for a section 68 Order to allow them to calculate the rates of interest on fixed interest equities in aggregate. Chief Actuary C comments to Scrutinising Actuary F: [Equitable's Appointed Actuary's] *request for the year 2000 seems to be a half way house for administrative convenience. His real objective appears to be the paragraph* [which read: '*Going forward we would wish to be able to group fixed interest securities to match major blocks of business and to apply the aggregate yield on those securities as appropriate.*']. *This appears to be more akin to the* [second company's] *approach. It may be worth looking at* [that company's] *order in this respect. I have sympathy with what* [the Appointed Actuary] *is seeking but we will need to ensure that the Order is drafted tightly so as to avoid any possibility of manipulating the result.*
30/04/2001 [16:34]	FSA's Director of GCD writes to PIA (in response to 25/04/2001 [**10:17**]) and, among other things, states that he did not share the view expressed in the paper that FSA could not ask for Equitable Board papers now on the grounds that they would need reasonable belief that serious breaches had occurred before they could do so.
30/04/2001 [17:13]	FSA's Line Manager E points out that Equitable's Companies Act annual reports and accounts for 2000 had been published on their website, along with details of the candidates for election to the Board. The annual reports and accounts include the following information about Equitable's business. In their '*Management Report for 2000*', Equitable set out the main issues from 2000 and the early part of 2001. Under the heading '*Guaranteed annuity rates and the court cases*', they explain the effect of the House of Lords' ruling and the reason for no bonuses being allotted for the first seven months of 2000. Equitable also discuss the negotiations that took place around the attempted sale of the whole of the business and the subsequent sale of parts of it. Under '*Criticism of the Society*', Equitable say that one of the criticisms received had related to their continuing to advertise and sell policies in the periods following the Court of Appeal and the House of Lords' judgments. Equitable state their view that: *It was expected to be in members' interests that the Society should be sold as a going concern, with its sales force and other operations intact. In this way, the greatest value could be achieved for the benefit of members.* Equitable also set out their reasons for applying a financial adjustment to non-contractual surrenders. Equitable say that they were in correspondence with the OFT on this issue.

On '*Investment Performance*', Equitable say that 2000 was a year of '*good relative investment performance*' with a return on the with-profits fund of 2.7% (compared with -1.8% for UK pension funds as a whole). Equitable also state: '*Significant selling of equities took place in December 2000 and early in 2001 to reduce the risks to policyholders of a serious fall in equity markets. In total, these sales realised almost £3.4 billion, of which £2 billion occurred in 2001. This latter sum was slightly in excess of the value of the relevant securities at 31 December 2000*'.

Under '*Overall rates of return for 2000*', the report says:

> *Under the with-profits approach, the directors of the Society determine an appropriate smoothed overall rate of return for each year, taking into account the actual investment experience of current and recent years.*
>
> *The directors decided to allocate an overall rate of return to pension plans for the period from 1 August 2000 to 31 December 2000 at an annual rate of 8%. For existing with-profits pension funds in force for the whole of 2000 this gives an effective return for the year of 3.3%. For pension plans, the ongoing interim rate was set at 8% p.a. so the rate of 8% p.a. applies from 1 August 2000 until further notice.*

Under the heading '*Guaranteed Annuity Rates*', Equitable say that there were a number of aspects relating to the annuity guarantee issue that were frequently misunderstood. Equitable explain the terms used to describe the different costs that could be ascribed to the annuity guarantees. These were:

> *"Best estimate commercial cost" – this is used to describe the impact on policyholder benefits of the future additional cost of GARs. It is calculated on the Society's best estimate of future circumstances that are likely to be experienced, including future interest rates, mortality experience, take-up rate of GARs and future contributions to GAR policies.*
>
> *"Realistically prudent technical provisions" – this is the amount shown in the Companies Act accounts for the additional cost of GARs and incorporates a degree of prudence over and above that included in the "best estimate commercial cost". The assumptions as to future circumstances are made on a more adverse basis, to give that extra degree of prudence, and for this reason the "realistically prudent technical provisions" will be higher than the "best estimate commercial cost".*
>
> *"Statutory reserves" – these are the reserves which need to be shown in the statutory returns to the Financial Services Authority (FSA). They are calculated on extremely prudent assumptions as they are designed to show that guaranteed liabilities could be paid in a range of very adverse future scenarios. The assumptions are governed by regulation and by professional guidance. In such a valuation, it is necessary to assume that almost all GAR policyholders exercise their GAR options. "Statutory reserves" will therefore be considerably higher than the "realistically prudent technical provisions" contained in the Companies Act accounts.*

On '*Statutory reserves compared with the impact of the House of Lords' decision*', Equitable say:

> *It has been suggested that had policyholders been more fully aware of the statutory reserves required for GARs, this would have given them an early indication of the potential impact of the most adverse of the possible outcomes from the House of Lords. This is not the case. There is little or no connection between the statutory reserves and the impact on policyholder benefits of the House of Lords' decision. This misunderstanding may arise from the fact that the figure of £1.6 billion for the statutory reserves (appearing in the regulatory return for the period ending 31 December 1998) is similar to the amount the Society estimated needed to be set aside to deal with the*

consequences of the House of Lords' decision (£1.5 billion). The fact that the two figures are similar is coincidental. They deal with quite different sets of circumstances, which are described below.

In relation to their statutory reserves, Equitable explain:

There are two main elements to the benefits under with-profits policies. These are (a) the guaranteed benefits including the annual or reversionary bonus and (b) the non-guaranteed final bonus. The statutory reserves are required to ensure that all life companies are able to meet their liabilities to pay the guaranteed benefits even in very adverse economic circumstances.

GAR policyholders have the option of taking their guaranteed benefits in either cash form or as an annuity. The statutory reserves were set in line with new regulatory guidance issued in January 1999 by HM Treasury at £1.6 billion as at 31 December 1998 and at £1.7 billion as at 31 December 1999. This regulatory guidance required the Society to assume a very high rate of take up amongst GAR policyholders of the GAR annuity, in preference to the cash option. But even under these new assumptions, the statutory reserves were still concerned only with the guaranteed annuity benefits produced by applying the guaranteed annuity rate to the guaranteed cash form of benefits. The guidance did not require the Society to assume that the rate should be applied to total benefits, including a final bonus or, indeed, to anticipate a final bonus at all.

As at 31 December 2000, the statutory reserves for GARs were £2.6 billion as even more prudent assumptions were required. The large increase in these statutory reserves is due to clarification of earlier guidance and stronger assumptions in the basis on which these reserves are calculated and the decrease in long-term interest rates over the year.

For the statutory reserves to be fully called upon would require there to be not just a significantly adverse set of conditions, but for these conditions to prevail throughout the whole period during which retirement benefits would be drawn. As this is unlikely to apply, it has been possible for the Society to transfer some of the risk via a reassurance policy. This is mentioned further below. The statutory reserves are not, and were never intended to be, a means for providing for the consequences of the eventual decision of the House of Lords.

In relation to the impact of the House of Lords' judgment, Equitable explain:

The litigation on which the Society embarked was designed to establish if it was lawful to pay different final bonuses to GAR policyholders depending on whether or not those holders exercised the right to take their benefits in annuity form at a rate guaranteed by the Society. It related therefore to the treatment of final bonuses, not the guaranteed benefits with which the statutory reserves are concerned.

The Court of Appeal determined by a majority of 2:1 that it was not lawful to differentiate in this way within the group of GAR holders. A GAR policyholder should receive the same proportionate final bonus irrespective of the form of benefits selected. The Court did not, however, rule that it was unacceptable for the Society to differentiate between GAR and non-GAR holders in this respect, so still allowing any cost of the GARS to be "ring fenced" to those policyholders with GARs.

The House of Lords' ruling took matters beyond this by saying that the Society could not apply a different bonus policy to GAR and non-GAR holders dependent on the existence or absence of GAR provisions in their policies.

The effect of this ruling was to bring about an economic transfer from non-GAR holders to GAR holders. The with-profits fund is a single pot of money. The House of Lords' judgement affects the way in which the assets in this fund are allocated between *different categories of policyholder. Following the House of Lords' decision, this necessary reallocation of assets was assessed at £1.3 billion for the future best estimate commercial cost and £200 million for rectification of those policies that had matured since January 1994 (when the differential bonus system was first introduced), making £1.5 billion in total. The estimated commercial cost was based on the Society's understanding of the type of annuity to which GARs apply and assumptions regarding future interest rates, mortality experience, take-up rates and the level of future contributions to GAR policies.*

The House of Lords' ruling did not, and has not since, determined the level of the Society's statutory reserves. Provision for additional statutory reserves would still have had to [be] *made as at the end of 1998, 1999 and 2000, even if the House of Lords' decision had upheld the Society's approach.*

On '*Estimates of the commercial cost and prudent technical provisions*', Equitable explain:

Before the House of Lords' ruling, the Society estimated the commercial cost of GARs as £50 million. This was because its approach of applying different final bonus rates, depending on whether or not benefits were taken in GAR form, meant that there was no commercial cost except where it was not possible to adjust the final bonus sufficiently to reflect fully the cost of the benefits being taken in GAR form. This remained the case, even after the Court of Appeal judgement as the Society believed it remained able to "ring fence" GAR policies as described in the Management Report on pages 2 to 5. Because of this, the Society continued to explain that, if the House of Lords upheld either the High Court judgement or the Court of Appeal judgement, the estimated commercial cost of GARs would not exceed £50 million.

Although, until the House of Lords' ruling, the estimated commercial cost of GARs was £50 million, a realistically prudent technical provision of £200 million was established in the balance sheet in the Report and Accounts for 1999. This provided an allowance for more extreme future changes in financial conditions and mortality experience, in order to give a more prudent provision in the accounts.

It was only as a result of the fact that the House of Lords went further than the Court of Appeal judgement, in that it prohibited "ring fencing" the GAR policies, that the best estimate commercial cost rose to £1.3 billion.

As described above, in ascertaining provisions to be made in the accounts, a degree of prudence is applied over and above that included in the best estimate commercial cost. The future interest rates are assumed to be lower and the take-up rate of GAR options is assumed to be higher than those used for the best estimate commercial cost. For this reason the technical provision included in the accounts is higher than the best estimate commercial cost. The provision included in the 2000 accounts is £1.7 billion as disclosed in note 18 on the accounts.

Equitable also provide an explanation of the '*Reinsurance arrangements*'. Equitable write:

As mentioned above, for the statutory reserves to be fully called upon would require there to be very adverse financial conditions prevailing throughout the whole period during which retirement benefits under GARs are payable. As these very adverse conditions are unlikely to apply, it has been possible for the Society to arrange a reassurance policy under which, if the GAR take-up rate exceeds 60%, the excess cost to the Society is recoverable from the reassurer. The reassurer can recover from the Society any such costs from future surpluses as they emerge. If no such surpluses emerge, the cost is borne by the reassurer. The reassurance is reflected in a reduction from the statutory reserves otherwise required but does not impact on the technical provisions in *these accounts. The premium for this reassurance is small in relation to the reserves released. The reassurance arrangements had to be renegotiated after the House of Lords' decision as the reassurance was originally based on the Society maintaining its pre-House of Lords bonus system. As a consequence there was a reduction in the reserve released by the reassurance which resulted in higher statutory reserves for the Society.*

As explained above, the statutory reserves are based on the assumption of very adverse conditions prevailing. Although these are unlikely to be met in practice, the reserves have to be maintained and can affect the degree of investment freedom of the Society. The higher the reserves, the more that investment freedom is restricted. The reserve for GARs in the Society's statutory reserving requirements as at 31 December 2000 was £1.8 billion allowing for the reassurance rather than £2.6 billion which would otherwise be the case. This enables the Society to invest more freely in the interests of policyholders.

In their '*Directors' Report for 2000*', Equitable note that they had completed the sale of their operating assets and the economic interest in their non-profit and unit-linked business to Halifax on 1 March 2001. They refer readers to note 22 to the accounts for more details.

On '*Financial results*', Equitable state: '*There are a number of uncertainties in respect of this year's accounts*'. Equitable say that these are referred to in the report and in notes 18 and 25 to the accounts. Equitable also refer to the paragraph of the auditor's report entitled '*Fundamental uncertainties*'.

Equitable say that Permanent Insurance had been sold on 16 February 2001.

On '*Valuation and bonus declaration*', Equitable explain:

In arriving at the technical provisions the Society's Appointed Actuary has had to make an assessment of the increased liability to the GAR policyholders following the House of Lords' decision.

There has been little experience since that decision of the intentions of policyholders to take an annuity with the benefit of the GAR in preference to alternative annuity products or policy options. The majority of the Society's GAR policies express the GAR only to apply to a single life level annuity. Some policyholders have lodged complaints with the PIA Ombudsman concerning the restrictive form of GAR annuity. None of these complaints has been upheld by any PIA Ombudsman decision. There is also, against the background of all the recent uncertainty, limited experience of the extent to which GAR policyholders will maintain their recent level of contributions. Whilst the Directors believe that the provision made is realistic, because of the limited experience they recognise that there is significant uncertainty as to the quantum of the additional liability.

In the event that the compromise scheme that the Directors are seeking to promote is adopted, the impact of these uncertainties on the technical provisions and the corresponding impact on the Fund for Future Appropriations will be removed.

In accordance with the Society's Articles of Association and insurance company legislation, the Society's Appointed Actuary carried out a valuation of the assets and liabilities of the Society as at 31 December 2000. Although the Society is still able to meet the exacting standards of solvency as required by the Financial Services Authority, the Directors decided that it would be unwise to add bonuses in declared guaranteed form at this time as this would further restrict future investment freedom.

On '*Final bonus*', Equitable repeat the information provided in their Management Report that the return on the fund was 2.7% and the growth allocated for the year was effectively 3.3%. They explain:

These overall rates of return are used to calculate levels of final bonus which is not guaranteed.

Where a policy has a guaranteed growth rate applied to a guaranteed fund that has, of course, been given.

Final bonus rates may be changed by the Directors at any time.

The reports and accounts include a section on '*Corporate Governance*'. Under the heading '*Going Concern*', Equitable state:

The Society closed to new business on 8 December 2000. The Directors consider that the Society, operating as a closed fund, has adequate resources to continue in business for the foreseeable future. Further, the Society has complied and continues to comply with the appropriate statutory and regulatory requirements. For these reasons, the Board continues to adopt the going concern basis in preparing the accounts.

In Note 25, headed '*Contingent Liabilities*', Equitable state:

Subsequent to the House of Lords' decision, a number of enquiries by various regulatory and professional bodies have been instigated including the Treasury Committee of the House of Commons. In those proceedings and elsewhere certain policyholders have indicated they believe that they have grounds for an action against the Society for mis-selling of business due to the non-disclosure of the guarantees to GAR policyholders. There is the further possibility that other causes of action may arise. It is not possible to assess the impact of the outcome of these matters, if any, on the financial position of the Society and no provisions have been made.

30/04/2001 [17:34] FSA's Chief Counsel B asks the Head of Consumer Protection if they could discuss the complaints that FSA were to take over from the OFT.

[**17:49**] The Head of Consumer Protection says that she now planned to meet the OFT on 4 May 2001, and that: '*I think the first issue will be to sight the work vis-à-vis the* [With Profits] *Review because of "discretion"*'.

30/04/2001 [18:12] FSA's Insolvency Practitioner provides comments in reply to the list of issues for the compromise scheme (see 20/04/2001 [**12:49**]).

30/04/2001 [18:24] FSA's Head of Actuarial Support provides comments on Legal Adviser D's note of 23/04/2001 on the compromise scheme.

30/04/2001 [entry 9] FSA's Legal Adviser D submits to Chief Counsel A a paper entitled '*Section 425 Power to Compromise*', setting out the legal process of a scheme of arrangement under section 425 of the Companies Act 1985.

Legal Adviser D also provides Chief Counsel A with a list of issues on the proposed scheme.

30/04/2001 [20:42] PIA send FSA their '*Stage 1*' report into Equitable's disclosure of risk to potential with-profits investors after the Court of Appeal's ruling. PIA explain that this part of their report gave a factual account of what Equitable had disclosed to potential investors and recommended further action, while '*Stage 2*' would establish what risks should have been disclosed.

May 2001

01/05/2001 [10:55] FSA's Director of GCD outlines to Chief Counsel A some issues to be resolved about Equitable's draft actuarial report (received on 20/04/2001 [**16:36**]) for the compromise scheme. These include:

- Whether it is sufficient that the scheme should be fair to a particular group of policyholders as a whole, even if it was not fair to individual policyholders within that group.
- Whether the claim by Equitable's solicitors is right that an option to purchase additional benefit was not material.
- Whether a single flat rate uplift of 25% for a particular group should be used when the value of their rights had been shown to vary from 14% to 30%.
- Why policyholders in group schemes were not treated as a separate class.
- Why the classes of policyholders had been determined the way they have.

[**14:19**] Line Manager E says to Chief Counsel A and Legal Adviser D that '*it did strike me that* [the Director's] *concerns about "fairness" may be overstated or misplaced, since I am not sure that "fairness" is strictly a relevant test*'. [**20:33**] Chief Counsel A replies that the issue would be addressed in Legal Adviser D's paper on the section 425 process.

[**14:46**] FSA's Head of Actuarial Support notes that he had raised a number of issues with Equitable's Appointed Actuary the previous evening. The Head of Actuarial Support reports that:

> [Equitable's Appointed Actuary] *accepted the point that the assumed take-up proportions meant that those policyholders electing to take full GARs with no cash benefits and no spouses' benefit could be seen as losing out. In practice, though, very few would decline to take the maximum cash benefit available since this could be taken tax-free. Moreover, he considered that their assumed current interest rate of 5.1% was lower than that available in the market for the most competitive current annuity rates (a point that we can look at further). If they assumed a slightly higher interest rate, then the corresponding assumed GAR take-up rate (to produce the same overall figures) would be rather higher.*
>
> *I also suggested to him that they might like to look at applying financial option theory to value (1) the GAR option available at retirement and (2) the 3.5% guaranteed accumulation rate that policyholders are also being asked to renounce.*
>
> *Regarding future movement in interest rates, he thought that this could be hedged by purchasing appropriate fixed-interest rate securities. I think this would protect the overall fund but it does still mean that they should adjust the offer to policyholders in line with the movement in interest rates.*

The Head of Actuarial Support's note continues:

> *Apparently, the take-up rates for group pensions are indeed rather lower than for individual policies (this is not a reflection as first thought of different early withdrawal rates). He believes that this relates mainly to the larger public sector schemes, as the smaller* [schemes] *behave similarly to the individuals. It was not at all clear to me why there should be this difference for larger schemes.*
>
> *On a separate issue, they are looking to purchase a number of long-dated zero coupon bonds to hedge the overall GAR risk against movements in interest rates. I think this would certainly help the financial position of the fund in respect of accrued GAR rights but it still leaves a largely unhedgeable exposure in respect of future top-up premiums*

(the main source of the fundamental uncertainty mentioned in their 2000 report and accounts).

The Head of Actuarial Support then suggests ten points that should be pursued with Equitable, those being:

> *1) How have they determined that 5.1% is the appropriate long-term rate of interest to apply for all policyholders?*
>
> *2) How do they believe that they could justify the assumed 60% proportion in the calculation of a "fair" offer for a policyholder taking all the annuity benefit in GAR form (and either maximum cash or no cash benefit)?*
>
> *3) Have they considered applying financial option theory to value (1) the GAR option available at retirement and (2) the 3.5% guaranteed accumulation rate that policyholders are also being asked to renounce?*
>
> *4) Why is the take-up rate for group schemes apparently much lower than for individuals? Does this relate mainly to larger* [schemes]*? If so, why do they think there is this difference in experience? Does it relate to differences in policy wordings? Is the choice in group schemes made by trustees rather than individuals?*
>
> *5) Even with the assumed lower take-up rate of 40% (rather than 60%) for group schemes, why is the calculated uplift only 13.6% for group schemes rather than around 25% for individuals?*
>
> *6) Will the overall package be affected by movements in the value of equity (and other) investments covering the GAR liability (the answer should I think be in the negative as they are offering a proportionate increase rather than an absolute amount of compensation)?*
>
> *7) What is the reason for the strange pattern of figures (moving up and down) in the first column on page 16?*
>
> *8) On a point of detail, what is the origin of the factor of "ten" for valuing each with-profits annuity in Appendix D?*
>
> *9) Similarly, why are they applying the "MFR liability" to derive the value of certain pension plans on page 42 of Appendix D?*
>
> *10) I could not understand the calculation, or the rationale for the calculation set out in Appendix I.*

01/05/2001 [17:46] FSA write to PIA, with a note entitled '*Equitable – disclosure issues*', following a meeting that morning at which they had discussed whether the disclosure of particular facts was expected under PIA Rules. FSA set out some thoughts on whether certain disclosures should be made and, if so, when.

[**21:36**] PIA agree that they should be looking separately at the two issues indicated by FSA.

02/05/2001 [08:42] PIA thank FSA for their comments on disclosure of the previous day. PIA explain that they would be considering the issue of whether '*potential investors* [should] *have been told about the "problems" because it was an additional Risk factor in entering into the contract*'. PIA say: '*What is of interest is whether the position materially changed financially rather than just legally as a result of each court decision*'.

[**08:54**] FSA say that their concern:

... has been around the question of what the PIA rules could reasonably be construed as requiring. My impression is that for a company adviser (ie one who did not have the freedom to offer products from a range of different companies), the issue is largely one of the suitability of the product type having regard to the circumstances, intentions and attitude to risk of the prospective purchaser. I think we will need to be very clear of our grounds (and of the precedents we will be setting) if we now construe the rules as imposing an obligation on the company adviser to advise on the financial position of his/her employer.

But going on from this, there may well be issues about what the company itself said about its position, or instructed its sales force to say. I wonder if here we are into a more complex area of the relationship between PIA rules and the common law.

[**09:59**] FSA say that they are considering similar issues in relation to another company and thought that '*it would be useful to have a rather different "problem" case to test our thinking on the* [Equitable case]'.

02/05/2001 [18:23] FSA provide instructions to Counsel to advise on whether they had any major concerns about the proposed compromise scheme as set out in the draft actuarial report. FSA state that they and their advisers did not have any major concerns at that stage.

02/05/2001 [18:38] FSA's Line Manager E writes to members of the Insurance Supervisory Committee about Equitable's application for a section 68 Order relating to the calculation of interest rates for fixed interest securities, previously considered by the Committee on 17/04/2001. The Line Manager writes:

In short, the point at issue is the method to be used in determining the valuation rate of interest. The method required by regulation 69, which relies on a weighted average, is quite simplistic and can have some unexpected effects, particularly when companies do the resilience tests. Equitable would like a "concession" that requires a more sophisticated valuation method. Some other companies ... already have broadly similar concessions. However, the [Insurance Supervisory Committee] *questioned why the approach that the Equitable had proposed appeared less sophisticated than that adopted by the other companies.*

Core members will also recall that as well as a change to the requirements on an ongoing basis, there was a need for a reporting concession in relation to the 2000 year end.

I have now taken the matter up with Equitable and the Society has said that, going forward, it would be content to follow a valuation basis that more closely corresponds to that used by the other companies mentioned above. (I should add that neither the Society nor I are entirely convinced that this approach is better, as opposed to different.)

However, it faces a practical difficulty in that it had been doing its calculations for last year on the basis that a concession as described in paper 179/2001 would be granted. It does not believe therefore that it is practicable for it to revisit the old calculations, particularly at a time when the Society is under huge pressures, including in trying to come up with a compromise scheme to deal with its GAR problems.

<u>Conclusions and Recommendations</u>
<u>2000 Year end</u> – I do not think we can require the company to recalculate its solvency going backwards. The choice is therefore one of approving what it has done and recommending a reporting concession on that basis, or requiring it to stick to the Regulations. [Insurance Supervisory Committee] *members should be aware however that if they opt for the latter, it will require the Society to report a [unrealistically] weak financial position. This will be confusing for observers and may not be helpful to anyone. I recommend therefore that we should support the reporting concession.*

<u>Going forward</u> – There are arguments that above all we should be seeking to achieve consistency in the valuation basis – at least in terms of what a company does from year to year – since it may otherwise select the most favourable valuation method at any given point. However, in response to [Insurance Supervisory Committee] *concerns that I reported back, the Society has agreed to move to a basis consistent with that adopted by other firms. I would like more time to evaluate the arguments before deciding to go for one approach rather than another (ie the method proposed in the report concession or the more usual approach used by eg* [an insurance company]*). There are arguments either way, and we have time to look at those more carefully in the coming weeks.*

If the core members agree that we can proceed with the reporting concession, I will come back with a further paper and draft order about what should be done going forward.

I have discussed this with [Scrutinising Actuary F] *and* [the Head of Life Insurance]*, who are both content with this approach.*

[**19:24**] FSA's Director of Insurance comments: '*I look forward to seeing the committee's views on this. To an untutored eye the case appears persuasive, particularly if, as I understand it, the approach the company has taken thus far reflects discussions with us. I certainly hope we can resolve this quickly. We and HMT would rightly be criticised if this got delayed and a negative decision taken by default*'.

03/05/2001 [08:37] FSA's Managing Director A asks the Director of Insurance where FSA were on Equitable's 2000 returns, saying: '*I saw something in the press last week about the end-year GAR allowance but have not seen anything providing an overview nor any commentary/recommendations on outstanding issues* [of] *valuation (which, knowing the Equitable there must be)*'. The Managing Director says that Line Manager E had mentioned '*reporting concessions*', adding: '*I have to say that* [FSA's Chairman] *and I are going to need to be taken through this all in detail and an idea of time and likely complexity would be much appreciated. I can forecast that we are likely to be very interested*'.

[**10:35**] Line Manager E draws the Managing Director's attention to his note of 30/04/2001 [**17:13**] and the fact that Equitable's Companies Act reports and accounts had been published recently. The Line Manager goes on to explain that he is:

... hoping to get a paper together today on the reporting concessions for the statutory returns. The returns are due to be submitted by 30 June and we would normally expect them to be available at Companies House a few weeks after that. There is nothing to prevent the Society submitting their returns earlier or making their returns publicly available when they are submitted.

As to what they will show, the last headline figure reported to us by [Equitable's Chief Executive] *was that the Society had £300 million of surplus assets (ie after covering the solvency margin and resilience reserve). That took into account the benefit of the concessions being sought in relation to the valuation of Permanent Insurance (+ £100 m) and the yield on its fixed interest assets (approx +£200 m). Without the concessions things will clearly be very close.*

However the above numbers ... did not take into account the conclusions of discussions we had about assumptions on retirement age. GAD had been interpreting one of the regulations in a way that Equitable disagreed with. We looked at it further and have taken advice from Leading Counsel, and since concluded that Equitable was right all along. Equitable had in the meantime given up the fight and so had made the adjustment in its solvency calculations that GAD had asked for. The benefit to Equitable of our current position is a reduction in the reserving requirements of the order of at least £100 million. This should be taken into account when they submit the formal returns.

03/05/2001 [11:05] A member of the Committee replies to Line Manager E about Equitable's application for a section 68 Order, in which he states:

I have to say that I am deeply uncomfortable about this. We have not yet seen any arguments justifying the method of calculation put forward in the paper, though I am prepared to accept that they may exist. It is not a method that has been approved for any other company. Without seeing a justification, therefore, we cannot give a concession to Equitable on the basis that it is something we would have given to any comparable insurer that asked for it.

This leaves us considering a concession on a rather different basis: that we have led Equitable to believe that they will get a concession in a particular form, that they have done their calculations on that basis and that, precisely because they are the Equitable, and therefore under huge pressures, we should not now require them to change.

I can just about swallow this, but it clearly does not meet the criterion you previously urged us to use when dealing with Equitable cases, which is that set out in my first paragraph. I'd be much happier if someone from Actuarial Support Department could set down why the "bundling" approach is a sensible way to proceed. If we could get some comfort that this is a reasonable approach in general, then we could take the view that we should be prepared to do this for any other company, and also that we should be content for Equitable to lock themselves into this method in the longer term (thus removing concerns about regulatory arbitrage between years). Would this really take too long to do?

[**11:51**] Another member of the Committee comments:

I generally agree with [the Committee member's] *comments.*

I thought the point was that there were some circumstances where Equitable's proposed treatment would work in their favour and other circumstances where it wouldn't. So, surely this boils down to just two points:

- *are we (FSA) satisfied that what Equitable are proposing is in accordance with the real intention of the regulations? – I gather that we should be but, as* [the Committee Member] *suggests, I think it would be helpful to have some actuarial explanation of why the approach is acceptable;*
- *that if we agree this approach then Equitable must stick to it – ie they can't switch to a more favourable approach if this approach doesn't work in their favour in future years. I think that this is the condition that both* [insurance companies] *had to agree to get approval of their approaches.*

I'm not aware that we've previously said or implied that the solution developed by [the two insurance companies] are the only possible solutions. We presumably therefore think there is room for alternative solutions. As such, and provided actuarial support are happy with the Equitable proposal, I don't see any reason to object to Equitable being granted the concession originally sought. Surely there is a big risk to the FSA if we "force" the company down the [other] route only to find that in a few years time that method has serious repercussions for Equitable solvency that the original proposal wouldn't have had.

Re the last paragraph of the Detail, weren't Equitable being a bit presumptuous in assuming they'd get a concession to do the calculation that way? Do we (or have we already done so) need to say something to them about that?

[**11:54**] Line Manager E replies:

There are two issues here – one of substance and one that is largely presentational.

On the substance, there is the question whether the approach originally suggested by the Equitable was better or worse than the approach used by [one of the two insurance companies]*, for example. From my discussions with our actuarial advisers, my understanding of what they have said is that they do not obviously see one methodology as being better than the other – they are just different. But either approach is preferable to the alternative of following the Regulation 69 method, which takes no account of the duration of the fixed interest assets. At no point in the discussions has the issue of the identity of the applicant influenced our conclusion that the Equitable's methodology was acceptable. I am not in a position to provide the "proof" that you are after. However, I can honestly say that I am not aware of any reason why we should object to their original proposal.*

In any case, that may no longer be an issue because after further discussion with the company, it has said it is perfectly happy to use the alternative [insurance company] *approach if that is what we would like it to do. However there is a consistency issue with what they have been doing in the current year (to which I will return in a moment). As I think I explained, I have not yet been able to reach a view whether consistency with the approach adopted by some other insurance firms or consistency with what the company has done previously would be preferable. I think there are arguments both ways, and I will therefore return to that at a later date.*

The more presentational – or maybe practical – issue is what we do about the 2000 year end. I think there is special pleading for the company about what it should do about its solvency returns for the year, at least to the extent that I am saying that a particular company faces a particular logistical difficulty and I would like us to be able to take that into account. My understanding is that there is no real reason to believe that the two methodologies are going to produce wildly different results. As [the Director of Insurance] *commented, the company has in part been doing what it has on the basis of discussions it had had with us (inc GAD) over recent months.*

In reality, there is a special case because the company is in a difficult financial position and is proposing a major financial reconstruction in order to sort out its difficulties. I think there are very defensible arguments for the FSA to take into account such factors – see for example sections 2(3) and 148(4) of [FSMA 2000]*. If we were to apply a "risk model" to our use of various regulatory tools (as people talk these days) I would have to say that of all the things that we could ask Equitable Life to do at this point, getting them to redo calculations that relate to the past and that are of entirely academic interest comes a very poor second to requiring it to sort things out going forward. But in the meantime, I do not see that it is desirable (from anybody's point of view) to require the company to report on the basis of a regulation that does not work as it was intended to – to do so would simply give a misleading impression about the company's real financial condition in a way that will simply cause unnecessary anxiety for members of the public who are already very confused.*

[**14:52**] The first Committee member explains:

I think that one principle to which we have clung firmly, and rightly, is that firms should not be able to change their valuation principles at whim, because of the risk of regulatory arbitrage this introduces. Consistent with this principle, it seems to me there are three ways forward for Equitable's accounts:

- *Stick with Regulation 69 for 2000, and make a change for 2001 and subsequent years to whichever method on reflection seems best.*
- *Move to the ... method* [used by one of the two companies] *for 2000 and subsequent years.*

- *Move to the "bundling" method for 2000 and subsequent years, subject to the actuaries being able to convince us that this is a sensible method for companies to adopt going forward. (I do think we need to see this justification, given that the two actuaries present at the* [Insurance Supervisory Committee] *meeting were not convinced.)*

I should be prepared to support any one of these three approaches. The fourth option, which I find less palatable, is to allow the "bundling" method for this year only, on the kind of basis set out in my earlier message. But in that case we could not pretend that we were treating Equitable as we would treat any other company.

[**14:59**] Chief Actuary C advises that:

I have noted that a request has been made for a view to be expressed by Actuarial Support on the Equitable's application for a s68 Order. Although I am not fully aware of all of the arguments that have been aired on this matter I am sufficiently familiar with Equitable's application to give our view.

I confirm that we are in agreement with the views expressed by [Line Manager E] *as attached.*

Equitable are seeking a s68 Order that would address an anomaly in Regulation 69 of the ICR94. The anomaly is described in [the paper submitted to the Insurance Supervisory Committee]*. The request is to group the fixed interest assets into two blocks or segments (i.e. approved fixed interest stocks and other fixed interest stocks). The yield on each segment would then be calculated accurately as the rate which equates the discounted value of the aggregate cash flows arising on the assets in each segment to the market value of those assets. The interest rate used to value liabilities would then take account of these yields where approved and other fixed interest assets are hypothecated to match such liabilities.*

Similar orders have been granted to [two insurance companies]*. Those orders sought to address the same anomaly. In those cases the order permitted the company to hypothecate fixed interest assets (both approved and other) to match blocks of business and calculate the yield on the hypothecated assets in the same way as requested by the Equitable. In the* [first company's] *case the order provides for the one block of business that exists (i.e. annuities), whereas in the* [other company's] *case the order enables the actuary to identify more than one block of business and hypothecate assets more appropriately to match liabilities with different characteristics.*

For the 2000 year end, the Equitable order effectively assumes only one block of business exists (i.e. the [first company's] *approach). In practice the Equitable would have been better advised to* [have] *adopted the* [other] *approach in order to address the different types of business that exist. However the Equitable consider that their request for an order that splits the fixed interest assets into the two segments, as described above, is a pragmatic half way house to the theoretically ideal solution (i.e. the* [other] *approach). We have been told by the Actuary that the difference in the liabilities assessed on each basis is not material based on modelling that they have undertaken.*

We recommend that you accept the request made by the Equitable. We are told that Equitable would be prepared to adopt an approach similar to that used by [the other company] *in future but that it is administratively inconvenient to adopt that approach at this stage for the 2000 returns.*

[**15:37**] The Committee member concedes: '*If* [the actuarial member of the Committee] *and* [a special adviser to FSA] *are convinced by these arguments I should be prepared to go along with the bundling approach, but on the basis that Equitable must then stick with it for a period of years*'.

[**15:47**] The special adviser states that: '*Given the two precedents, I am content. Perhaps we should treat it as a priority to change* [Regulation] *69 and our Actuarial Support could start discussing a consultation document for issue later in the year*'.

[**16:12**] Line Manager E distributes a note to Managing Director A on the issues, saying:

> *Thank you to all those who have contributed to the debate. In the meantime I have discussed this further with Equitable Life and – as you will see from the [optimistically drafted] draft memo to* [the Managing Director] *attached – been given information that leads me to conclude that the returns will not be materially different whether they use the Equitable segmented approach or the* [two insurance companies'] *method – either way will reduce the reserving requirement by somewhere in the range £150-200 million (compared with a total of £29 billion).*
>
> *Reporting for 2000 on the* [two insurance companies'] *basis is simply not on. So the first question is do we allow the Equitable to report on a more accurate basis than it would if it complied with regulation 69.* [The special adviser] *and* [Chief Actuary C] *(and* [the Director of Insurance]*) are arguing in favour.*
>
> *There is a separate question about what should happen for the future, and that is of course not one that I had asked. I have noted that, while I fully support the consistency argument, regrettably, whatever we require will produce some consistencies and some inconsistencies. I am not yet in a position to take a view as to whether going forward we should go for consistency between firms or within one of them. There are arguments both ways and I thought I had made it clear that I would want to consider them carefully before making a recommendation to the Committee. I do not therefore think I can proceed with a conditional agreement as proposed by* [the first Committee member] *– namely that the Committee should only give approval provided the same valuation basis is used in future years.*

[**17:15**] The first Committee member adds:

> *I know I'm being difficult on this case, but you did say at the* [Insurance Supervisory Committee] *that a major criterion in considering any request from the Equitable should be whether we would grant that request if it came from any other company. We have also established that our policy in relation to other companies is that they should not have freedom to shift the basis of valuation from year to year.*
>
> *If I were dealing with a company X, therefore, my starting point, following resolution of the technical issues around bundling, would be that they have 3 choices:*
>
> - *They can stick with Regulation 69 (and possibly seek a change at some time in the future).*
> - *They can shift to the* [first company's] *basis now, and stick with it.*
> - *They can shift to the "bundling" basis now, and stick with it.*
>
> *If the request came late in the day, after preparation of the accounts was well advanced, I should say rude things about the company's management, but I might be persuaded to let them use the bundling basis for one year and then switch to the* [first company's] *method, provided that they had no discretion in the matter (so that the question of regulatory arbitrage would not apply). I should not be willing simply to postpone the decision about what would happen after the first year.*
>
> *So much for company X. I recognise that the circumstances of Equitable are special and that both management and supervisors have had other things on their minds. If you want to put your recommendation to* [Managing Director A] *on the basis that Equitable is*

special, and that we are justified in doing (relatively minor) things that we would not do for another company, I shall not die in a ditch. But all concerned will need to be clear that that is indeed the basis of the argument.

[**17:30**] The Director of Insurance responds that: '*Surely the key to this is that it should be FSA, rather than the* [Equitable]*, who should determine which form of consistency is the more important – ie, whether we are more concerned about consistency between years or consistency between companies. The* [Equitable] *will always have the choice as to whether to apply for any form of this concession. Provided that they are aware that we may not be prepared to grant... exactly the same concession next year, and conversely that we might not be prepared to let them move to the other version, then I see no particular problem. And since, in any event, we cannot fetter our discretion, pointing out that we are reserving our discretion in this particular way ought not to cause them, or us, any grief*'.

[**17:32**] The first Committee member says: '*I think this was roughly where* [Line Manager E] *and I had got to in some off-line discussion*'.

[**17:41**] The Director of Insurance says that this is: '*Excellent*'.

[**18:12**] Line Manager E sends Managing Director A a final paper on the two section 68 Orders applied for by Equitable. The Line Manager explains that: '*Achieving internal agreement to the position (on the second of the concessions about yield calculations) has taken some time but I <u>believe</u> we have now reached a position all are comfortable with. The reason for an element of doubt in the last sentence is because I have not had confirmation from the requisite quorum of* [Heads of Department] *and managers. There are however no dissenters and I thought it best not to delay until next week*'.

The paper explains that both concessions had been looked at by FSA's Insurance Supervisory Committee and that this reflected the position agreed by that Committee. On the valuation of Permanent Insurance, Line Manager E sets out the sequence of events of the sale of the company and the conclusion that: '*We consider that as the sale was confirmed, the agreed sale price provides a sensible basis for a valuation of this asset. We believe that equivalent concessions, requiring a proven market valuation to be used, have been given in other similar circumstances. It is also not unusual for a requirement to report on a particular basis to be imposed after the event, provided that the requirement is imposed in advance of the reporting date*'.

On the other section 68 Order, the paper sets out the following:

Regulation 69 of the Insurance Companies Regulations 1994 specifies the basis on which future payments are to be valued. In effect, the requirement is to assume an interest rate no higher than the average yield currently being achieved on the assets supporting the long term business. The regulation specifies how that yield is to be calculated. However, there is a slight defect in the averaging method prescribed in the regulations which means that depending on economic circumstances they can place (and at the moment they are placing) an <u>artificial</u> strain on the company (or lead to an artificial release of reserves). This arises because of the simplistic basis of the calculations for fixed interest assets, which averages the rates interest by value of the underlying investments, but takes no account of their duration. At the time the regulations were made, more sophisticated calculations were not thought possible.

The problems with the valuation method in regulation 69 become evident when doing the calculations for resilience test 2. Many companies just live with the consequences. However some have preferred to report more accurately (including [two insurance companies]*) and have therefore been given section 68 orders requiring them to perform more sophisticated calculations. Equitable Life has asked for a similar concession. Their* *original proposal was to calculate the yield on the basis of two segments of fixed interest securities (approved and non-approved). This is slightly different from the methodology that has been applied by other companies. Following discussion at the* [Insurance Supervisory Committee]*, I have gone back to the company which has since agreed that for future it would be willing to use the approach that has been adopted by other firms. That alternative methodology effectively involves the company seeking to hypothecate blocks of fixed interest assets to particular areas of business in order to calculate the yield.*

For the last financial year, Equitable Life does not believe it is possible to rework its past calculations on the "third" way (or at least it says that the work involved in so doing would be disproportionate). This is unfortunate because ideally we would have liked the reporting concession for the year end 2000 to have been consistent both with what the company was proposing for the future and what certain other companies are already doing. I have discussed the effects of the different approaches and the company has indicated that (at least with current economic conditions) it believes the financial effects of either methodology would be broadly similar, although the "third way" might produce a very slightly less favourable result. If Equitable Life goes ahead on the basis it had proposed the benefit to its solvency position will be of the order of £150-200 million as compared with the regulations. The company's actuary believes that the third way would also have produced a benefit within that range.

After some debate, we have concluded that it would be appropriate to allow the Equitable Life to report the end 2000 position as it has proposed. This produces a more accurate reflection of the financial position than would be the case if it followed the requirements of regulation 69. We have also concluded that it would be unrealistic, and an unnecessary distraction, to require the company to rework its historic calculations. It is worth remembering that Equitable Life's actuarial team [is] *central to the work on the compromise scheme.*

However, that leaves a problem for the future. As noted above, it was our preference that the valuation basis used by Equitable Life was consistent with what is done by other companies. On the other hand, it is normally a requirement when such concessions are granted that a company has to continue to use the same valuation basis in future years, so that it cannot select the method that is most favourable at any given point. The evidence suggests that it will be possible to go for the former, without being overtly inconsistent, in numerical terms, with the Society's track record. There is certainly no question of the Society trying to select the most favourable basis from year to year. I will look further at the issue of the approach for the future valuation basis, which can be the subject of a separate order (or a rule waiver).

At this stage, I therefore would welcome your agreement that we should recommend to the Treasury that a section 68 order should be given to address [only] the 2000 reporting question.

[**19:01**] FSA's Managing Director asks the Director of Insurance and the Head of Life Insurance for a meeting to discuss the applications, saying: '*to me concession (1) is unarguably right (2) more difficult. But more generally I would like before we go snap on anything reassurance that all other solvency/reserving issues between* [Equitable] *and us have been resolved totally as* <u>*we*</u> *would want them. I recall a note from last November that said as that stage there was some £1bn difference between us and them overall on the reserving question. What has happened to all of that?*'.

[**19:10**] In response to Line Manager E's note to the Managing Director, Chief Counsel A says that she would be surprised if there were '*any significant legal issues arising here*' but that she would review the papers the following week.

03/05/2001 [15:47] FSA send Director of GCD's comments of 01/05/2001 [**10:55**] to their legal advisers and to Counsel, for information.

[**16:33**] Chief Counsel A queries with the Director of GCD whether FSA should send the comments to Equitable and inform them that they raised '*major*' issues.

[**18:40**] The Director says that they should be sent to Equitable pretty soon as they were all or nearly all points of substance, while making it plain that FSA had not yet reached concluded views on them.

03/05/2001 [15:53] Equitable's solicitors send FSA some information about their Articles of Association relating to the election and required numbers of directors.

[**16:24**] Legal Adviser D forwards the information to other officials at FSA, saying that the note cleared up some of FSA's knowledge gaps; the important point being that there would continue to be eight directors.

03/05/2001 [16:39] FSA send PIA some documents to help explain how the risk environment might have been perceived by Equitable in the period surrounding the Court of Appeal case. The documents are Equitable's letter to FSA (dated 21/06/1999) and an accompanying note entitled '*Court case scenarios*' (dated 17 June 1999), FSA's note of the meeting with Equitable on 29/06/1999 and FSA's note of the meeting with Equitable on 18/07/2000.

03/05/2001 [18:26] In response to a request for some information for FSA's Board on Equitable's Companies Act reports and accounts, '*particularly as … much has been made of the increase in the reserves figure to* [greater than] *£1.5bn*', Line Manager E provides the following:

> *Equitable published its annual report and accounts in the week beginning 30 April. From a regulatory perspective, they show little of interest since we have much more up to date information about the Society's financial position. However, it is helpful that the report give some useful information about the valuation of a life office's liabilities, and in particular an explanation of the development of the Society's GAR liability during the court process, and subsequently. Equitable is due to submit its regulatory returns for the end of 2000 in June.*

Line Manager E says that: '*Unless* [the Head of Life Insurance] *can think of anything more useful to say. I feel a bit nervous saying that the statutory accounts don't tell us much, but I think in this case it is true!*'.

03/05/2001 [entry 7] Equitable notify FSA of the appointment of four directors.

04/05/2001 [08:46] An FSA official tells Line Manager E that his note for the Board of 03/05/2001 [**18:26**] would not do, as it '*omits to mention* [Managing Director A's] *key concern which I alluded to … i.e. the figure quoted for gross liabilities and why this is different to the number that has previously been quoted i.e. £1.5bn*'.

[**10:36**] The Head of Life Insurance amends the statement to read:

> *Equitable published its annual report and accounts in the week beginning 30 April. From a regulatory perspective, they show little of interest since we have much more up to date information about the Society's financial position. However, it is helpful that the report gives some useful information about the valuation of a life office's liabilities. In particular it explains clearly why the technical provisions in respect of the GAR liability increased from £200m in 1999 to £1.668bn in 2000 (made up of £1.468bn for the GAR provision, and £200m for the GAR rectification scheme). This significant increase in the provision reflects*

the impact of the House of Lords' decision. The provision included at 31st December 1999 was set assuming that either the Court of Appeal or the High Court decision would be upheld. The House of Lords' decision went further than the Court of Appeal's decision and prohibited "ring fencing" of GAR policies. Equitable is due to submit its regulatory returns for the end of 2000 in June.

[**12:36**] The FSA official later confirms that this amendment had addressed the point about which the Managing Director had been concerned.

[**12:46**] FSA's Head of Actuarial Support adds that: '*The report and accounts does also provide some detailed explanation of the derivation of the different figures for the value of the GAR option. For example, the increase in technical provisions from £200 million to £1.67 billion only relates to the figure in the Company Act accounts and not to that in the FSA returns*'. He also adds that: '*There are also some relevant comments about the fundamental uncertainty attaching to this figure. This relates, I believe, primarily to the issue of the level of future premiums that may be payable but also to potential future changes in long-term interest rates (though we understand that* [Equitable's Appointed Actuary] *is recommending to them some form of limited hedging of this latter risk). There is also the uncertainty of the effect of possible future legal actions*'.

04/05/2001 [09:00] FSA's Head of Life Insurance replies to Managing Director A's suggestion of a meeting to discuss Equitable's section 68 Orders, saying:

In brief, Equitable have accepted our position on the £1bn, so although the position is tight (£300m free assets) and subject to two concessions from HMT, there is no outstanding disagreement between us and [Equitable].

[**10:47**] The Managing Director says that he had talked to FSA's Chairman about this and that they had agreed that this would be especially sensitive if:

... giving the disputed concession (he agrees the first is fine) is the difference between solvency/non-solvency or makes a near-zero level look rather better. So by the time we meet early next week can we [please] *(not closer than one or two tens of millions) have an idea of what the position is. My own understanding is that without either concession the outcome is a near "zero" surplus possibly even a deficit, while if the first concession is given but the second one not, the surplus is of the order of £100mn (i.e. very close for comfort)*

On the substance of the 2nd concession, [the Chairman] *feels that my fudge won't do and that the real choice is between no concession or getting them to do it* [properly] *if they are so desperate to have it. He also asks why is it that other firms have bothered to go down this route of greater complexity when they themselves have a sizeable surplus however the numbers are calculated. If there* [were] *a good reason it might help to dissipate the idea (perish the thought) that Equitable are doing this only through desperation.*

[**11:59**] The Director of Insurance expresses concern that the Managing Director was implying that Equitable were not '*doing it properly*'. The Director of Insurance says:

I don't think that this is a fair representation. They are not doing it the way other companies have. But as I understand it, the way they are doing it has come out of a dialogue with our actuarial advisers who advise that, from a technical perspective, the request should be met. Clearly we need to be careful that we do not do favours to the Equitable in the sense that we are not unreasonable in refusing a concession on the basis simply that it is not in the form in which <u>it happens</u> that others have previously sought it.

No doubt [the Head of Actuarial Support] *and/or* [Chief Actuary C] *can advise. But I don't think that there is any major significance to be attached to the fact that other companies have previously adopted a less complicated approach. Perhaps simply a refinement of actuarial thought both here and in the Company?*

[**16:23**] Scrutinising Actuary F writes to the Head of Actuarial Support with a draft response, intended to clear up a number of points. He comments that the section 68 Order sought by Equitable (and given to other companies) was seeking to correct what he explained was a '*flaw*' in Regulation 69.

The Scrutinising Actuary also comments on Equitable's solvency position at 31 December 2000 and the latest position. He says:

The Society have told us that at 31.12.2000 they had excess assets of about £500m., after meeting their required margin of solvency. This anticipated both an Order in respect of the valuation of Permanent (worth about an extra £125m.), and an Order in respect of the treatment of the fixed interest assets (worth about £150m - £200m.). Without these Orders, the excess assets would be about £200m.

Markets have been volatile during the year to date. We understand that at end-January the position was somewhat better than at 31.12.00, and excess assets amounted to around £700m. At end-February, however, the position was somewhat tighter. Then on 01 March the Society received an injection of £500m. from the Halifax, which boosted the position accordingly. (In fact, the Society told us that this injection improved the free assets by more than £500m., because of some secondary benefits elsewhere in the valuation).

To summarise, the position at 31.12.2000 would have been excess assets of the order of £200m., rather than zero, were neither of the Orders granted. Both approaches to the fixed interest stocks (as at 31.12.00 and as at 31.12.01) are acceptable; the Society's proposed approach to 31.12.01 reflects our discussions with them last week, and there really is not time to ask them to rework their calculations at 31.12.00 on the 2001 basis, given the impact this would have on their workload.

04/05/2001 [09:20] FSA's Director of GCD tells Chief Counsel A that FSA should perhaps delay in sending their points on the compromise proposals to Equitable so that FSA could assess them a bit further to '*avoid going off half cocked*'.

04/05/2001 [10:22] Equitable write to FSA about changes to Equitable's German branch operations. Equitable explain that the overall objective was to change the nature of the Society's operations in Germany from a branch basis to a service basis from the United Kingdom, which would eliminate their physical presence in Germany.

04/05/2001 [11:04] Another member of FSA's Insurance Supervisory Committee comments on the discussion the previous day, having discussed the matter with some of the officials. The Committee member says that he is:

... broadly content, but remain concerned about the "consistency" concept. [Equitable] *must tell us their intention. If it were any other company applying for any S68 we would want to know their future strategy (intention). In return we would indicate our intention. I have no problem with the options but it is for* [Equitable] *to say to us what is the most appropriate treatment technically (thus avoiding the problem of switching to most favourable). If they say the* [first company's] *method is technically the most correct but they cant do till next year then fine. Allow bundling this year and expect a switch next year. If bundling is correct then expect this consistently.*

[**11:48**] Scrutinising Actuary F says that Equitable had informed FSA of their intention in their letter of 30/04/2001 [**14:04**], and that this was:

... to group their fixed interest securities into two blocks, or "segments" (one block to comprise gilt-edged securities and the other to comprise other fixed interest stocks, e.g. loan stocks & debentures) for the valuation as at 31.12.2000. For the valuation at 31.12.2001 they will group the securities differently to match specific major blocks of business (e.g. they will allocate one "basket" of assets to support their annuities in payment, and a separate "basket" to support other business. Each "basket" would comprise for example x% gilts, y% other fixed interest, z% cash, where x+y+z=100%).

They are adopting the "segment" approach for the 31.12.2000 valuation, because it builds on how the assets are reported on Forms 48 & 49 of the Returns, and retains the distinction between gilts and non-gilts. [The Chief Actuary's] *e-mail yesterday describes how the Society intend to use these segments in their 31.12.00 valuation. GAD previously reviewed this approach and were content with it.*

However, at a recent meeting at FSA on 23 April ... FSA ... said it would be preferable for the Society to adopt an approach consistent with other companies which already have similar concessions.

Therefore Equitable have said in their 30.04.01 letter, referred to above, that they will change their approach for the future, as described above.

As [Line Manager E] *explained in his first e-mail, it is impractical to ask the Society to rework their calculations in respect of the 31.12.2000 valuation at this late stage. The impact on their internal* [computer] *systems, mainframe systems and reporting systems, timetable for auditing the returns and so on would be more than I believe they could accommodate. Equitable's stated intention to change their approach for the future reflects what FSA have asked them to do.*

The first Committee member notes what the Scrutinising Actuary had said. The Committee member says, however, that he believed that Line Manager E's submission to Managing Director A and his comments the previous day '*makes it clear that we at any rate have not decided what approach we will support going forward, and I had assumed that reaching a decision on this point would be likely to involve some discussion with the company*'.

04/05/2001 [16:25] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

04/05/2001 [entry 7] FSA write to Equitable about the draft actuarial section of the compromise agreement (as previously agreed at the meeting on 23/04/2001). FSA say that they were concerned that Equitable had not provided objective reasons as to the appropriate method of determining the value of GAR rights. FSA state, in particular, that it was not clear, and no argument had been put forward, as to why occupational group pension holders should receive less than individual policyholders. FSA note that Equitable had said that the GAR take-up rates were a key assumption but they had not explained why the rates should be regarded as providing a reliable indication of the value to be placed on GAR rights. FSA ask what the explanation had been for lower take-up rates of GARs by group scheme policyholders. FSA say: '*Even if there is sufficient objective reason to offer less to occupational policyholders, we do not understand why the differential is set at 25% and 14%. Further, if a differential is objectively justified, that fact would seem to us to support an argument that the two groups should be treated as separate classes. If so ... that would suggest a possible 4 classes*'. FSA ask to discuss these issues at the next meeting, arranged for 09/05/2001.

08/05/2001 [entry 1] Equitable notify FSA of the resignations of ten of the Society's directors.

08/05/2001 [11:02] FSA's Scrutinising Actuary F advises Line Supervisor C that Equitable's request of 24/04/2001, for FSA's approval to permit the Society to allow group scheme AVC policyholders to switch to Free-Standing AVC policies, looked reasonable and that FSA should agree to it.

08/05/2001 [entry 3] FSA meet Equitable's Chairman. The Chairman provides FSA with a copy of their Counsel's joint opinion on whether it was possible to change the House of Lords' decision, and on the possibility of mis-selling claims to be made by non-GAR policyholders. (Note: it appears that no note of the meeting was made.)

[**12:40**] Following the meeting, FSA hold a further meeting to discuss the work that they needed to put in hand. The Director of Insurance reports to Managing Director A that:

> *Broadly speaking this fell into the following groups:*
>
> > *a) Was there any reason why Equitable should* <u>*not*</u> *publish a summary of* [their Counsel's] *opinion. It might arguably be inconsistent with the directors duty to act in the best interests of the company. It might prejudice the work* [solicitors] *are doing to investigate the possibility of action against the company's advisers;*
> >
> > *b) What were the implications for the company's solvency under the Companies and the Insurance Companies Act. The former was primarily an issue for the directors. But the latter was an immediate issue for us. Either way we needed to know, on whatever basis, whether the answer to the question "Is the company solvent?" is changed, or called into doubt, by the opinion;*
> >
> > *c) What were the implications for our responsibilities for other companies. If the sense of the opinion was, essentially, that writing non GAR policies in a fund which also contained GAR policies, without disclosing the potential cross-exposure amounted to misselling under LAUTRO and PIA rules (as well as misrepresentation) then the question arose whether other companies were also similarly exposed. The issue for us would be whether other companies had been guilty of misselling and, more importantly, were they still misselling. If the latter we needed to consider what action we might appropriately take to prevent this;*
> >
> > *d) What the reserving implications might be for other companies;*
> >
> > *e) Whether any of this had implications for the application of the MVA (primarily by the Equitable, but perhaps by other companies)*
>
> *We will be seeing* [Equitable's Chief Executive] *tomorrow morning. We needed to address the reserving and solvency issue with him at that meeting.*

The Director of Insurance also reports that:

> *Following this discussion I spoke again to* [Equitable's Chairman]*, primarily to ensure that* [the Society's Chief Executive] *was fully in the loop, but also to discover how firmly committed the Equitable felt to early publication of a summary of* [their Counsel's] *opinion.* [The Chairman] *told me that* [the Chief Executive] *was now fully briefed, had read the conclusions of the* [Society's Counsel's] *opinion but not the opinion in full. He agreed that the reserving and solvency issues needed to be addressed urgently and would warn* [the Chief Executive] *that we would be raising these with him. On early publication he felt that the Equitable had no option on this. They had discussed this with* [their solicitors] *this morning who saw no obstacle of the sort we envisaged. The opinion was already the subject of leaks;* [Counsel] *himself had drafted it in the expectation that it would be published. It was clear that it would have to published at some point and it was not clear that anything was to be gained by delay. Preliminary discussion with some of the directors (there is to be a fuller discussion tomorrow morning) had resulted in*

agreement on this point. In the Equitable's view the opinion raised fundamental issues which would need to be settled in court before progress could be made. In terms of publication the key sensitivity would be what the Equitable themselves said about the opinion. Their present view was that they would say that the opinion raised issues of great complexity, that they were considering these carefully, with a view to testing the conclusions expressed in the opinion in the courts.

On timing, [the Chairman] *said that they would not publish before late tomorrow afternoon, but that they would probably not hold much later than that. They would ensure that we received notice, together with a draft of what they planned to say. But, despite my protestations, he did not promise that we would get much notice. I said that, given our own concerns about early publication, we were bound to ask ourselves whether this was appropriate or whether, if we concluded that it was not, we should take formal action to prevent it. I thought this "very unlikely", but thought in all the circumstances that it was right to let* [the Chairman] *know that the possibility existed.* [Equitable's Chairman] *said that he would assume that we were not minded to do this until such time as we told him otherwise.*

The Director of Insurance then suggests to the Managing Director the action that FSA needed to take, saying:

All of this suggests we will need to get our ducks into a semblance of a row pretty quickly:

We need to decide very quickly indeed if there are grounds for our intervening to prevent early publication and, if so whether we should do so, (bearing in mind that we would almost certainly need to make this action and the reasons for it public). [Managing Director A]*: if immediate action on this is needed it is likely to fall to you to take the decision. You may need to consider whether you should stand aside from the preparatory "investigation" which might lead up to this.*

[FSA's Head of Actuarial Support]*, with legal support, will lead the work on reserving. But this cannot be progressed very far until we have studied the opinion – and we may well need Counsel's advice ourselves;*

[Chief Counsel B] *(with* [PIA]*, to whom I have not yet spoken) will consider the issue of possible misselling by other companies. In practice we should not allow ourselves to be stampeded into anything by an as yet untested opinion. But we will need a holding line at least, and to decide what work we should put in hand. (You had suggested earlier that this raises the issue of whether we should suspend/change our own investigation of possible misselling by the Equitable);*

[Chief Counsel A] *will "warm up"* [Counsel] *on the issues, primarily to take his mind on whether there are other important issues or questions that we have not identified.*

[**13:15**] The Managing Director replies, having spoken to FSA's Chairman. Managing Director A says: '*We do not think there is any basis on which we could seek to prevent/delay publication of this report – a fortiori in the light of the view taken by* [Equitable's solicitors] *that it does not affect their work. We would be grateful if you could pull out of* [an overseas conference of regulators]'.

08/05/2001 [entry 4] FSA's Director of GCD provides the Director of Insurance with a note on the opinion of Counsel for Equitable. The Director of GCD says:

I have not yet read the opinion myself, but on the basis of the description given to us by [Equitable's Chairman] *this morning, its conclusions are that:*

- *attempting to get the House of Lords to change its original decision is "a dead duck";*

- *however, non-GAR holders have alternative causes of action which could be taken to counterbalance the rights of the GAR holders.*

It is suggested that the non-GAR holders have three possible causes of action, that is, for:

- *breach of Lautro rules, which it was said provides absolute liability, under which it is not a defence to show that you misunderstood the position;*
- *misrepresentation in failing to disclose the true position;*
- *breach of an implied warranty that non-GAR holders would receive a certain share of the assets.*

Possible implications we need to consider are:

- *impact on the proposed section 425 scheme: the implication seems to be to support the argument for bringing these liabilities into account into the Section 425 scheme, but it is recognised that further consideration will need to be given to the degree of certainty/ascertain ability that the Court will require for this purpose, particularly the level of impact on different individuals, rather than groups as a whole with implications not least for the scope and timing of the scheme;*
- *the need for provisioning against these liabilities: while in the context of the compromise, they may be seen as counterbalancing the rights of the GAR holders, we need also to consider them as potential claims against the company which could potentially increase its overall liabilities and to determine the approach which needs to be made to provisioning in that light;*
- *the provisioning issue needs to be regarded as urgent both because of the need for the Equitable to produce statutory returns, and because of our own need to respond to questions when the opinion goes on to the Equitable web site later this week;*
- *there are also issues in relation to other companies which have sold GARs: what approach should be taken to provisioning in their accounts, and should any action be taken in relation to ongoing sales which they make?*
- *the analysis in this opinion needs to be factored into the work on duties to disclose on which we have concluded we should seek external counsel ourselves, and also borne in mind in considering the draft PIA disclosure report;*
- *we need to return rapidly to* [Counsel] *for further advice in relation to Article 4 of the Equitable's constitution;*
- *we also need to look at the implied warranty analysis to see whether there is anything in it which affects our approach in relation to the MVA, which colleagues are looking at in the context of our contract terms responsibilities.*

There was one other point which was raised at today's meeting which is worth noting in this context, though it does not arise directly from the opinion. This relates to the work which [Equitable's solicitors] *have been asked to do to look at the claims which the Equitable can make against others. The meeting identified the fact that this work would potentially have an impact on the Section 425 scheme. On a straightforward view, any additional assets recovered in this way would simply be available as additional assets of the company. However, there was a counter argument that duties were owed, and loss suffered, specifically in relation to the non-GAR policyholders. If this was the case, this too would arguably need to be brought into account in the Section 425 scheme. Presumably, this would need to be brought into account by providing in the scheme for any sums received by this route to be allocated to non-GAR policy holders, but even then it would still be tricky to work out exactly how the prospect of such credits would impact on the amount of the settlement overall.*

08/05/2001 [14:00]	FSA hold an Equitable Life Lawyers Group meeting. The Group discuss Counsel's opinion. The Group note that FSA's Chairman and Managing Director had expressed their views that '*there was little the FSA could do to prevent the Equitable publishing the opinion, as they were minded to do – despite the fact that the Equitable were not proposing to say whether they agreed with its conclusions or not on the liability of the Equitable to various classes of policyholder*'. Chief Counsel B says that he '*wondered how the directors of the Equitable could be acting in the best interests of the company by publishing such an opinion*'.

09/05/2001 [11:31] An FSA official distributes a note of a conversation that FSA's Chairman had had with Equitable's Chairman the previous evening, while attending a dinner hosted by a recruitment and management assessment company. The note records:

> [FSA's Chairman] *spoke to* [Equitable's Chairman] *at a dinner last night and asked about whether he had considered disentangling the* [Counsel's] *opinion so that the parts about not being able to challenge the House of Lords could be released but not the sections saying on LAUTRO rules.* [Equitable's Chairman] *had considered it but had found that it would disrupt the logical flow of the argument and that it would all be exposed by the non-GARS the moment the Court considered a proposed arrangement so it was better off getting it out into the open now.* [Counsel] *had put forward a much shorter version but Equitable had felt this had only served to make the issue look much more stark.* [Equitable's Chairman] *expects that Equitable,* [Counsel for the Society]*, and colleagues to do the further work that they recommend.*
>
> *Equitable planned to put out a press release on all of this, probably today. They would send us a copy prior to it being released (which we presume will be handed over by* [Equitable's Chief Executive] *this morning).* [FSA's Chairman] *would like urgent thought to be given to how we would respond, which we presume will be along the lines that we would be studying the opinion carefully [action –* [FSA's Head of Press Office] *and interested parties].*
>
> [FSA's Chairman] *asked what form he would want a Court decision to take.* [Equitable's Chairman] *said that he was looking for a* [declaratory] *judgement, but would like to have an early discussion with us about our views on how they should proceed. We need to give immediate thought to what our line should be. Clearly, there is a risk that a Court might say that the proper course of action was for a policyholder to take a case to the Ombudsman and then, if they wished, to seek judicial review. we need to consider how this relates to complaints the Ombudsman has already received (of which there must be many, one would presume) and also whether we should be considering any action ourselves in this area [action –* [The Director of GCD] *and interested parties]. We also need to give consideration to how the consequences might affect Equitable's solvency (which was not a point* [Equitable's Chairman] *had focused on) [action –* [The Director of Insurance] *and interested parties].*
>
> *He said that he hopes to persuade* [Halifax's Chairman] *to extend the timetable for the Halifax deal, if necessary (*[FSA's Chairman] *is sceptical about the likelihood of this, especially if it is an open-ended commitment).*

FSA's Chairman later (on 21 May 2001) provides a '*Note for Record*' of the conversation.

09/05/2001 [entry 2] FSA meet Equitable to discuss the opinion given by Counsel for Equitable.

Equitable confirm that Counsel '*had been given a fairly wide and open ended brief by the Society to look into the House of Lords ruling*'. On the first part of the opinion, FSA record:

It appeared that the draft opinion ruled out challenging the House of Lords verdict on the basis of process, conflict of interest or lack of representation for non GAR policyholders. The [House of Lords'] *judgement was here to stay, although there was still considerable doubt as to how this ruling could be interpreted.* [Equitable's Chief Executive] *had referred in an early meeting to allocating bonuses on a calendar year basis. This approach could recognise the extent to which pre 1988 policies had GAR options when setting overall bonus levels. Although it could be argued that such an approach was attempting to frustrate the* [House of Lords'] *judgement – but* [the Chief Executive] *thought that other companies operated in this way.*

On the second part of the opinion about non-GAR policyholders, FSA record:

[Counsel] *appeared to advocate that non GARs may have either a contractual right to receive full asset shares or a case for mis-selling ... because of the lack of disclosure on GARs. This part of his opinion needed further work. It was recognised that these interim conclusions could be damaging to the 425 process as they would lead the non GAR pressure groups to press for the halt of the transfer of value to the GARs. If the contractual right argument was valid then this could elevate non GARs rights above those of the GARs. They would be entitled to asset share and would not have to prove financial loss as they would for mis-selling. It was also recognised that the rectification scheme could be under threat if* [Counsel for Equitable's] *arguments were found to have merit.*

FSA note that publication of the opinion is planned for later that day, '*although the conclusion about the inability of challenging the* [House of Lords'] *decision had already been leaked and was in last weekend's press*'. FSA express concern about publishing the opinion before examining it more closely. On implications for the compromise scheme, FSA record:

It was unclear how the Society was going to handle this issue in relation to the 425 scheme. Although it did appear that further work was needed to assess both the basis of [the Society's Counsel's] *arguments and what further work was needed.* [Equitable's Chief Executive] *believed that the majority of policyholders wanted an end to litigation and for example funding test cases on this issue was not immediately an attractive option. There was also the importance of getting a scheme in place by February 2002. It was still unclear as to whether an extension of time for this would be granted by the Halifax.* [The Chief Executive] *estimated that the further work required in unravelling* [Counsel's] *opinion would take at least two months. It was confirmed that the Halifax would be kept up to speed on this issue as Halifax had a right to be informed on matters affecting the 425 scheme.*

On the impact of the opinion on Equitable's financial position, FSA record:

It appeared that the potential balance sheet effect of any mis-selling had yet to be formally considered by the Society. Conceptually it might be possible to perceive that the transfer of value from one set of policyholders to another (non GARs to GARs) that occurred after the [House of Lords] *could either be eliminated or mitigated by a reverse transfer of value. However, as far as balance sheet liabilities are concerned this could also be construed to be an additional liability.* [FSA's Director of Insurance] *reminded the visitors of their obligations as Appointed Actuary and Chief Executive and said that they needed to consider whether or not it was necessary to put up a reserve for this amount.* [Equitable's Chief Executive] *was reminded about the need to ensure that this potential issue was considered vis a vis Directors and Officers Insurance.*

It was also noted that the requirement of Companies Act and [Insurance Companies Act] *were different. The Companies Act accounts could, for example carry this potential liability off balance sheet as a contingent liability (although the accounting treatment in* *the* [Companies Act] *accounts would be subject to* [Financial Reporting System 12] *and relevant accounting standards). However, the more conservative valuation basis required by the* [Insurance Companies Act] *might require the additional reserve to be included in the Annual Return. A significant additional reserve would almost certainly lead to the Society not covering its* [Required Minimum Margin]. *The Appointed Actuary said that if required the Society could find the amount required in the worse case scenario (the £1.5bn) but this would mean that the Society would have to move entirely out of equities and into gilts. The 2000 Annual Return had yet to be submitted (due 30 June) and thought would need to be given as to how this potential liability should be treated.*

FSA's letter of 04/05/2001 which gave some feedback on the actuarial part of the compromise scheme is discussed. FSA note: '[Equitable's Chief Executive] *was concerned about our comments about why less value was being given to occupational pension holders than individual pension holders.* [FSA's Head of Life Insurance] *thought that a lower uplift could be used to different groups of policyholder provided this was borne out by informed behaviour.* [Equitable's Chief Executive] *agreed that further justification was required to explain why the GAR take up rate amongst occupational pension holders was so low and further work was being carried out in this area. This work would also examine whether behaviour was different according to the size of scheme and if necessary uplift rates could be subdivided between large and small schemes*'.

Under '*Action Points*', Equitable agree to let FSA know when they planned to publish their press notice on the opinion and to provide them with a copy prior to issue.

09/05/2001 [14:43] PIA thank FSA for the information provided on 03/05/2001 [**16:39**] about Equitable's perception of risk linked to the court cases and potential mis-selling. PIA say that the material was confirmation of what Equitable thought. However, PIA ask FSA if they had any evidence as to why the Society had thought that way, specifically:

1) Why did Equitable think scenarios 5 and 6 (June 1999) were unlikely and "inconceivable"?

2) Why, on 18th July 2000, did Equitable still feel the eventual outcome was "unlikely"?

3) When did planning for the possibility of no purchaser being found start? It seems not until late [November] *2000 – do we have documentation explaining why there was no planning before this?*

09/05/2001 [14:53] FSA's Press Office inform the Director of GCD and other officials that Equitable were due to issue a press notice on Counsel's opinion the following day, and planned to publish the opinion in full.

[**15:41**] The Director of Insurance says: '*This is bad news – and disappointing given* [the Chief Executive's] *clear recognition this morning that an early release of the whole opinion would create major difficulties for the company*'. The Director notes that Line Manager E was preparing a question and answer briefing paper, but:

... there are particular areas of difficulty:

a) we will clearly not be in a position to cover the "misselling" issue in relation both to ELAS (and more particularly to other companies) in the context of a wider statement about [PIA's] *work (as* [the Director of GCD] *had suggested earlier this week) and we will need some sort of holding line;*

b) we and the company will need to be ready to say something about solvency margin coverage/reserving implications if challenged. Ideally we will need to say things which are not inconsistent;

For the rest I imagine that both we and the company will wish to [emphasise] *the extremely speculative nature of* [Counsel's] *opinion on misselling/contractual warranties (there is a helpful piece in which he draws attention to the fact that he has done no more than identify a theoretical possibility; that substantial work would need to be done to ascertain whether there is any substance to it, and that no-one should rush to the view that it will be possible to establish offsetting rights that might "neutralise" the House of Lords judgement in whole or in part.*

The Director of Insurance adds:

I imagine the company will need to concede that this may delay the presentation of an outline of the s425 scheme, and the scheme itself. But they (and I think we) will need to stick to the line that such a scheme still offers the best way of achieving certainty and stability.

I guess the Halifax may be asked whether they would be prepared to extend their deadline. I imagine that they will be (at best) non-committal, and that we should not get drawn on this.

I will try to touch base with [Equitable's Chief Executive] *to discuss how they will be handling, particularly on the solvency margin issue.*

[**16:07**] The Director of GCD warns that FSA needed to be cautious about describing the opinion as '*speculative*'. He says: '*The analysis of the* [LAUTRO] *rules is serious stuff, and does in my view raise real issues about whether compliant disclosure was made. That does not mean that further work is not needed. But that should be our emphasis, rather than describing the paper as speculative, which we would later regret as too dismissive*'.

[**16:29**] The Director of Insurance writes again, having spoken to Equitable's Chief Executive, recording that:

He was apologetic that he had not carried the day on publication. However he felt that the revised press notice was "incomparably better" than the original version (which we had not seen).

He agreed that we should liaise over the lines we would each use with the press. He was considering what to say [about] *two of the key issues – reserving and the future of the s425 scheme.*

On <u>reserving</u> he thinks the [Equitable's] *line will be that the opinion changes nothing. The possibility of non-GAR policyholders having a right of action against the Society has been a matter of debate for some time. The Society are confident, on the basis of their current understanding of the position, that they continue to meet the statutory solvency margin requirements. Should the further work now put in hand on the non-GAR rights of a action issue put that position in doubt the Society have adequate room for manoeuvre to ensure that the statutory margins remain covered;.*

On the <u>s425 scheme</u> the Society are likely to take the position that this remains the best way forward in the interests of all policyholders. They will express the hope, if asked, that this will not lead to a delay in their bringing forward proposals. (They had not planned to produce an outline plan before the AGM, only to comment on the progress being made, so that there is nothing that had been planned for the immediate future that will be put back).

09/05/2001 [entry 5] Equitable send FSA a summary of their estimated solvency position at 31 March 2001, which showed:

<u>Solvency position at 31 March 2001</u>

	£m	£m
Value of non-linked assets		*28,295*
Future Profits Implicit Item		*1,000*
		29,295
Mathematical Reserves		
Basic (including GAR)	*26,640*	
resilience	*635*	
		27,275
		2,020
Required Minimum Margin		*1,150*
Excess Assets		*870*

Equitable say work was continuing on the production of an actuarial certificate in support of the implicit item and they would let FSA have that as soon as possible.

09/05/2001 [entry 6] Equitable notify FSA of the appointment of two new directors.

09/05/2001 [entry 7] FSA meet to discuss Line Manager E's note of 03/05/2001 about the reporting concessions sought by Equitable. FSA's note of the meeting (which is not written up until 22 May 2001) records:

> *The meeting agreed that the concession relating to the valuation of Permanent Insurance was acceptable.*
>
> *There was some discussion of the concession relating to fixed interest assets. It was noted in discussion that we had not objected to the method originally favoured by Equitable Life when the matter was first raised, and that we considered their approach to be preferable to that under the regulations (which we consider are defective). However, the approach was different from that adopted by certain other companies. The differences were thought to be justifiable because of the different types of business. Equitable Life has said it would move to the other basis for future years for consistency with the methodology used by others, but could not do so in relation to the 2000 year end. The FSA would be able to decide which would be the appropriate basis going forward, not the Society. It was also noted that* [FSA] *would be looking to amend the relevant part of the Integrated Prudential Sourcebook going forward and work on amending the defective regulations was already in hand.*
>
> *It was understood that the Society would be solvent whether or not the concession were granted. However, without it, the position would be very tight and particularly with the* [Counsel for Equitable's] *opinion could lead to concerns about the true solvency position. It was noted that while the concession of itself seemed innocuous, when considered alongside others such as the implicit item for future profits and the subordinated loan, for example, pointed to a tendency for Equitable Life to select the most favourable valuation method in every case. However, it was pointed out that the proposal for the concession arose as part of a review by GAD of the society's reserving basis, with most of the improvements being adopted leading to an uplift in the reserving requirement, with a small number moving the other way. Overall, the Society was faced with an uplift in excess of £1 billion in its reserves. The issue had been live since November 2000 though it had taken some time before Equitable Life had been able to formalise its application.*

> *The meeting considered that the basis on which the FSA was required to assess the application.* [FSA's Director of GCD] *advised that the test under section 68 there was an open discretion but that was constrained by a requirement to act reasonably. He also noted that the decision was ultimately for the Treasury and that the FSA had to advise.*
>
> *The meeting concluded... on balance it supported the application, largely on the basis there were no clear grounds for rejecting it. It was agreed that this should be made clear to the Treasury, along with the points about the impact and reasonableness of Equitable Life's tendency to use the most favourable valuation basis to it.*

FSA also discuss Counsel's opinion and '*It was agreed that the aim was to make as little comment as possible, noting that we would be looking at the opinion carefully, that it was only preliminary in its nature and noting that there was nothing new since we had already said publicly that we were considering some related issues on post court of appeal sales*'.

10/05/2001 [10:04] FSA's Director of GCD says that Legal Adviser D's view relating to Equitable's appointment of directors (see 03/05/2001 [**16:24**]) is not what he understood Equitable's advice to be and, while only eight directors would be appointed at the annual general meeting, Equitable would co-opt additional directors up to the maximum of 15. The Director notes that, according to the Society's Chairman, Equitable were considering doing so.

10/05/2001 [10:07] FSA's Line Manager E seeks comments on some draft press lines for the publication of Counsel's opinion.

[**10:43**] In response to this, the Head of Actuarial Support says:

> *Although we probably do not wish to mention it here, I believe that the Opinion would have much wider implications for insurers if it were accepted. In my view, it is not about GAR's at all but about the question of inadequate representations being made to policyholders about how with-profit funds operate. In particular, it seems to be saying that policyholders were not made sufficiently aware that they would share in all trading profits and losses of the insurers and not just in the investment returns.*
>
> *As such, this issue could affect all insurers that have written with-profit policies that envisage this wider participation in the profits (and losses) of the business. Of course, though, both the actual representations made to policyholders and the practice followed in the distribution of profits (including any contributions from or to the "estate") will vary from company to company.*

10/05/2001 [10:56] PIA send FSA a copy of a draft note on '*the purpose and desired effect of the PIA Disclosure Rules for new business during the periods when the Courts were considering the Equitable's bonus policy in relation to policies with GAR (Guaranteed Annuity Rates) until its closure to new business*'. PIA note that the draft note did not cover '*the discretion given by signing a proposal*'. PIA say that this: '*is one of the fundamental aspects of the with-profits review. I would observe that you must not be misled into signing a proposal. Last November I said that the minimum expectations of a with-profit contract were asset shares on investment after expenses. Some discretion is inherent e.g. smoothing. Financing losses elsewhere is not what the customer will expect*'.

10/05/2001 [entry 4] FSA confirm to Equitable, in reply to their letter of 24/04/2001, that they did not object to their proposal about writing new free-standing additional voluntary contributions business.

10/05/2001 [entry 5] FSA and PIA meet to discuss their review of Equitable's selling practices. FSA note that '*Stage 2*' of PIA's review was due to be completed by the end of May and that they needed to seek their own opinion from Counsel on mis-selling and that this needed to be done in the same time frame as the second part of work being done for Equitable by

Counsel. FSA also agree to consider whether they should make a public statement about their review of the Society's selling practices.

10/05/2001 [entry 6] FSA's supervisory file for Equitable contains a letter from PIA to the Society. The letter is in response to earlier correspondence from Equitable (dated 9 April 2001) about the approach they were taking to dealing with correspondence from policyholders about issues concerning the House of Lords' ruling and Equitable's subsequent closure to new business.

In that letter, Equitable explain that, due to '*exceptional circumstances and levels of work being experienced*', they were not always answering each policyholder letter individually. Instead, Equitable were often answering queries about their corporate approach to these issues by mail shot. Equitable say that, given their approach, it was not possible to guarantee that all specific complaints of an individual nature, which might require investigation, were being answered. Equitable acknowledge, therefore, that there could be instances where they would not have complied with PIA rules on complaint handling.

PIA's reply notes that this: '*does not comply with PIA Rules and as such is unacceptable. However, given the "exceptional circumstances" that you indicate, PIA recognise that, for the immediate future, the most pragmatic approach is to carry on with the adopted process. However, I would request your urgent proposals for rectifying the position, including how you intend to address the potential for regulated complaints to be completely overlooked*'.

10/05/2001 [12:14] FSA's Chief Counsel B informs the Director of Insurance of the '*preliminary observations*' of their Counsel on the opinion of Counsel that Equitable had received. The Chief Counsel says that Counsel had been unsurprised about what was said in the first part of the opinion on the possibility of reopening the House of Lords' decision. Chief Counsel B goes on to record that Counsel:

> *... is, however, unnerved by the second part of the opinion which deals with possible liabilities which Equitable may have occurred in relation to the non-GAR policyholders. He is very concerned that the analysis is superficial and is without any proper or full analysis of what the implications are for Society and policyholders particularly as to how any such rights might be substantiated and its impact upon the process for reaching a compromise. To use his words, the Equitable must be mad if it is to publish the opinion as it stands on their website. He is concerned that the opinion will raise false hopes and or panic amongst policyholders and that it will, in the press and elsewhere, raise instant questions about the solvency of Equitable and conceivably precipitate events leading to a very early liquidation of the company.*
>
> *Looking at the substance of some of* [Counsel for Equitable's] *points,* [Counsel] *thinks that there is a very serious question to be addressed as to whether any of the regulatory rules, including those which on their face imposed strict obligations, have the effect contended for by* [Counsel for Equitable]. *One important issue is whether the disclosure requirements should be read as being subject to an implied term that the company's duty to disclose extended only to those matters of which it had knowledge at the time or which, with reasonable diligence, it could have had knowledge. The analysis does not mention at all the significance of the guidance which had been issued to insurance companies (and later withdrawn) on the treatment of GAR policies in terms of bonus distribution.* [Counsel for FSA] *acknowledges that the Equitable's duty of disclosure may well have changed with the onset of the Hyman litigation although further analysis will be needed to ascertain at what point the Equitable came under a duty to disclose the potential range of risks presented by the litigation and its various potential outcomes.* [The FSA's Counsel] *took the point that the issues raised by* [Counsel for Equitable] *are ones which may also affect other companies which have issued GAR policies.*

	Chief Counsel B says that he would arrange for FSA to meet with Counsel the following day. [**12:30**] The Director of Insurance welcomes the opportunity of a meeting, noting that: '*As* [the Head of Actuarial Support] *has pointed out separately, this has potentially huge implications for the industry generally. If non disclosure of exposure to GAR liabilities amounts to any of the things* [Counsel for Equitable] *suggests then what about non (or non-effective) disclosure in with-profits business of exposure to mortality risk, business risk etc etc*'. The Director also states that FSA had '*discussed briefly whether we should go back to the Equitable to urge them again not to publish the full opinion. You said that* [the Director of GCD] *had discussed this with* [FSA's Chairman] *who took the view that we had done all we could*'.
10/05/2001 [12:32]	Equitable send FSA a copy of a press notice to be issued at 14:00 that day about Counsel's opinion. (Note: the notice did not, in fact, go out that day.)
10/05/2001 [13:11]	FSA's Line Manager E distributes the 'lines to take' for dealing with enquiries about Counsel for Equitable's opinion. In answer to the question '*What does this mean for the solvency of the Society*', FSA state: '*The opinion raises the possibility of certain legal actions. However, it is far from conclusive about the likelihood of success or possible value of claims that might be made. Against that background, it is difficult to reach firm conclusions about the financial effects of possible legal actions. This is something that Equitable Life will need to consider very carefully. We will be keeping very closely in touch with them over this*'.
10/05/2001 [14:14]	FSA's Director of GCD responds to the FSA official's query of 09/05/2001 [**11:31**] with his '*immediate comments*'. The Director identifies two separate contexts in which the issue raised by Counsel could go to court. First, '*as part of the s425 scheme, where the court would need to reach a view on the fairness of the scheme, having regard to the rights being given up*'. Secondly, '*as part of an independent attempt by Equitable to determine the extent of the rights, or by policyholders to enforce them*'. The Director of GCD says that his preference would be for the valuation of the claims as part of the compromise scheme. The Director says that he considered that Equitable should decide how they would want the scheme to take account of the value of the claims and obtain appropriate substantiation to demonstrate to FSA, policyholders and the court that it was a fair basis for a compromise. [**14:16**] The FSA official says that this did not answer the question of whether there was any regulatory action that FSA could take that they should consider.
10/05/2001 [17:07]	FSA write to Counsel ahead of a meeting planned for the following day. [**17:21**] In response to receiving a copy of the letter, the Head of Actuarial Support says: '*If the company end up having to submit a set of returns showing that they have insufficient assets to cover their liabilities, then HMT would seem to have the right to petition for a winding-up, and Section 54(3) of ICA 1982 says that we would then have sufficient evidence that they were unable to pay their debts. This would then seem to allow Section 58 to be applied, namely for a court to reduce the amount of the contracts on such terms and conditions as it considers just. I suppose this might be an alternative to the Section 425 scheme, though I am not sure exactly how it would work procedurally, or how it would be received by policyholders. Is this worth looking at with Counsel as well?*'. [**17:54**] The Director of Insurance replies: '*I'm inclined to think that we need to do rather more analysis (policy as well as legal) before seeking counsel's views. For the present I think we might better focus on the work that might be done to decide whether there is a reasonable likelihood that there might be valid claims, how these might be quantified (if this is necessary) and how this might be factored into a fair s425 scheme. I suspect that petitioning for winding*

	up would still be contrary to policyholders interests, and not something that we should contemplate while the company is still solvent – even if it is below required margins of solvency. After all our natural first step if margins are uncovered is to require the submission of a plan. It would surely only be if the company could not put together a credible plan that we would contemplate a petition. And the company have at least two possible avenues if required to submit a plan: to promote a s425 scheme, and to rebalance their equity/fixed interest investments'.
10/05/2001 [evening]	FSA's Director of GCD attends an Inner Temple guest night, during which he has a '*fairly cautious on* [his] *part*' conversation with Counsel for Equitable about the opinion which had been provided. The Director's note of the conversation (which he circulates on 15 May 2001) includes that: • [Counsel] *recognised that his Opinion was much more comprehensive and detailed on the inability to reopen the House of Lords case than it was on the possibility of parallel rights, but he did not see any particular difficulty with this, even though he recognised that it was the second part which would be seen as more significant;* • [Counsel] *expected to be asked to advise further on the issue of collateral claims, and did not see anything odd in being asked to do so by the Equitable, notwithstanding that their own position might be prejudiced by his conclusions;* • [Counsel] *expected that it would be a couple of months before he was able to complete his work on the second part;* • [Counsel] *recognised that his conclusions would potentially lead to issues about the solvency of the company, and that it was not clear how the rights he had identified could be brought into account in the section 425 scheme, but thought these were points for others to address;* [and] • [Counsel] *also recognised that his work here was likely to make him a focus for controversy, but had no difficulty with this*'.
11/05/2001 [11:00]	FSA hold a conference with their Counsel to consider the draft opinion of Counsel for Equitable. FSA record the headline points from the conference as being: • *he believed that* [Counsel for Equitable] *was wrong to say that the court had implied a term into the policies: rather they had done it into the articles;* • *the significance of this was that it was, in his view, legally impossible for them to imply a contrary term into the policies, namely that GAR policyholders should be entitled to their asset share, less a limited range of specified expenses;* • *this was because if there was an implied term in the articles, it covered everyone, both GAR and non GAR;* • *it cannot be accepted that the court would imply two contradictory implied terms: the true implied term is a single one, that a discretion cannot be exercised to deprive people of their legal rights;* • [the FSA's Counsel] *was also unhappy with the implied assumption in the opinion that the court was requiring the company to act unfairly: this had been the Equitable's traditional view, but the true position was that the premise from which the court would decide fairness was the contractual obligations of the parties;* • *the contractual rights of parties was also the proper foundation for policyholders reasonable expectations;*

- [Counsel for FSA] *noted that the* [Society's Counsel's] *Opinion seemed to be premised on the idea that a non GAR policyholder was entitled to his smoothed asset share less expenses and that anything which might deprive him of this ought to be disclosed, but it was noted that all that non GAR policyholders were entitled to was a smoothed return, "reflecting asset share";*
- *there was a parallel issue raised by the instructions about what access policyholders had to information about their rights;*
- *his view was that, in a mutual, you must be taken to know that all other members have rights, and that the society must comply with all of them;*
- *he was much less sceptical about whether there had been a material non disclosure, but noted that this would only lead to tort damages, not contract damages;*
- *there was an important point on burden of proof according to whether this was common law negligence, or negligent misrepresentation under the misrepresentation act: in the latter case, it was for the misrepresentor to show the innocence of the misrepresentation;*
- *there was an assumption in the* [Counsel for Equitable's] *Opinion that if the risks had been properly disclosed, the policies were unmarketable, but he doubted whether this was the case;*
- *we asked him to consider whether the classification of rights as between contract and tort made any difference to the way in which they would be treated in the section 425 scheme: his initial view was that, if these were not rights of members which were compromisable in that way, they were rights of creditors which could be compromised as such;* [and]
- *overall, his view was that courts below the House of Lords would be very wary of seeking to neutralise the position taken by that court*'.

FSA agree that they should alert Equitable to the fundamental concerns which FSA's Counsel had expressed about the opinion provided by Counsel to Equitable.

11/05/2001 [14:45] Following the conference with Counsel, FSA telephone Equitable to discuss publication of their Counsel's opinion. Equitable tell FSA that Halifax had objected to publication on the grounds that the agreements between the two companies provided for consultation before any action was taken which might affect the possibility of achieving the policyholder compromise. FSA inform Equitable of the advice that FSA had received that morning and FSA raise concerns about Equitable going ahead with publication. Equitable say that it would be inappropriate for them to proceed to publication without having considered the views of Counsel for FSA and agree to give FSA advance warning before publication, whenever that were to happen.

The Director of Insurance distributes his note of the telephone call, along with a draft letter to Equitable, prepared with Counsel that morning, setting out their concerns.

[**15:13**] The Director of GCD informs the Director of Insurance that FSA's Chairman, having made some changes, agrees with the letter to be sent.

[**15:34**] FSA write to Equitable. FSA say that they did not disagree with the conclusions in relation to the first part of the opinion. However, FSA write:

> *We are concerned that the second part of the Opinion, which is in terms much more tentative, might nonetheless risk misleading both non-GAR and GAR policyholders as to the scope for non-GAR policyholders making claims against the Society. This might in turn lead to such policyholders making investment decisions on a false, or at least doubtful, basis.*

In particular, on the basis of our lawyers advice, we have considerable difficulty with [Counsel's] *conclusion that "there are arguments that the non-GAR policyholders have contractual rights to share in profits without the GARs being taken into account" ...*

One premise on which this part of the Opinion appears to be based is that the House of Lords decided that the terms that the article 65 discretion would not be used to undermine the right of policyholders was a term implied in the GAR policies ... As is recognised ... this is not the case, The term is to be implied in the Articles themselves.

Given that all policyholders are subject to the Articles, it seems to us highly improbable that the courts would find there to be any contractual provision inconsistent with, or that would neutralise the effect of, that implied term, whether by way of implied term in the non-GAR policies or by way of implied collateral warranty.

Secondly, another premise on which this part of the Opinion appears to rest is that the House of Lords have required the Society to act "unfairly" towards non-GAR policyholders ... We would be surprised if the courts would take the view that to give effect to policyholders contractual rights could properly be described as unfair. We are therefore concerned that a significant part of [Counsel's] *Opinion may be based on an assumption that is questionable.*

For the avoidance of doubt, I should make clear that we regard the matters raised by the Opinion as very weighty. Even if the particular issues in this letter can be resolved, we would need to term our own views on the approach canvassed by the second part of the Opinion as a whole.

FSA say that they would be happy for both Counsels to meet to discuss this.

[**15:44**] FSA forward a copy of the letter to Counsel saying that Counsel for Equitable might be in touch later that day.

11/05/2001 [15:30] PIA seek advice from FSA on closed funds and their investment proposition for clients. PIA enclose a copy of their '*Stage 1*' report (see 30/04/2001 [**20:42**]).

11/05/2001 [16:00] Equitable telephone FSA following receipt of their letter about the publication of Counsel's opinion. Equitable say that they could not provide FSA with the assurance that Equitable would not publish the opinion until both Counsel had discussed it and that their Chairman '*remained very firmly of the view that the Opinion should be published without delay*'.

11/05/2001 [16:30] FSA's Chairman, Director of Insurance and Director of GCD meet to consider how to respond to the prospect of Equitable publishing Counsel's opinion. FSA record:

In particular, consideration was given to whether the situation would justify the exercise of statutory powers to require them not to put the Opinion on to their website (or otherwise make it public) in its current form.

The statutory power was exercisable for the purpose of ensuring that a company conducts its business in a sound and prudent manner and that a company would not be regarded as conducting business in a sound and prudent manner if it failed to conduct its business with due regard to the interests of policyholders.

It was noted that:

- *the company had committed to publishing the Opinion, and had obtained views from leading and junior counsel;*

- *our concerns about the soundness of the Opinion had been made clear to the Company's counsel, who had an opportunity to revise their views;*
- *the relevant part of the Opinion was expressed to be preliminary and tentative, and there was material emphasising this in the Equitable's draft press release;*
- *if it was concluded that this preliminary and tentative Opinion gave a misleading impression, further clarity could be given through the further advice being sought from* [the Society's Counsel]*, or if necessary by a statement of our own views on the position;*
- *our consistent approach to the use of these legal powers was that they should be used to deal with serious concerns about a company's conduct of its affairs, but not to allow the regulator to micromanage those affairs.*

In these circumstances, it was concluded that it was not appropriate to prevent the Equitable publishing the Opinion in its current form.

However, it was noted that the circumstances did give [rise] *to concern on sound and prudent management grounds since:*

- *the Opinion dealt with issues of great significance for policyholders but was being published at a point when little reliance could be placed on its very tentative conclusions, and without, it seemed, readiness to postpone publication even for the short period necessary to allow Counsel for the Equitable and the FSA to consider the matter together over the weekend: (in the event, such discussions did take place because of a postponement to the publication timetable following an intervention by the Halifax);*
- *in the course of the discussions it had become apparent that this was being done notwithstanding the serious doubts of the company's chief executive;*
- *there was also concern that the Halifax had not been properly consulted about the publication, and that there was a lack of goodwill and mutual trust between the Halifax and the management of the Equitable.*

There were issues which would need to be closely monitored.

11/05/2001 [17:31] Halifax write to FSA about a concern they had regarding Equitable's proposal to publish their Counsel's opinion. Halifax enclose a copy of a letter sent that day to Equitable, which set out their concerns and state that their prior approval had not been obtained for publication. Halifax explain to FSA that the letter '*will give you a flavour of an issue which ..., if not handled properly, could have severe adverse implications for the health of the Closed Fund, and the interests of the Society's members*'. Halifax state that their concern was to ensure that the implications of the issue were considered fully before publication.

11/05/2001 [18:30] Equitable telephone FSA again to inform them that, having received further representations from Halifax, they would not now publish the Opinion before the following week. Equitable say that Halifax had formally notified them that they regarded the Opinion as a compromise scheme document, which required them to be consulted prior to publication. Equitable also say that their Counsel had now read FSA's letter of that day '*and thought* [the FSA's Counsel] *had "missed the point"*'.

14/05/2001 [09:26] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

14/05/2001 [10:15]	FSA's Director of GCD advises the Head of Life Insurance that he believed FSA should not take part in any discussions between Equitable and Halifax in relation to the publication of Counsel's opinion. The Director of GCD does, however, advise that FSA should use this opportunity to reinforce their concerns with Equitable. The Director suggests that FSA should write to Equitable: *... indicating that we would find it helpful if:* • *we could understand what their position is on the issues raised by the* [Society's Counsel's] *opinion;* • *we could also understand how they proposed to deal with those issues, in the context of the planned 425 scheme, for example, whether they wished to have them resolved by separate court action, in advance of the 425 scheme; and* • *what they can do to explain publicly when they publish the* [Counsel for Equitable's] *opinion how the issues raised by the Opinion will be dealt with in the context of the s425 scheme.*
14/05/2001 [11:27]	FSA's Director of GCD informs Managing Director A of a conversation that he had had with Counsel over the weekend, in which Counsel had reported on his discussions with Counsel for Equitable.
14/05/2001 [11:29]	FSA write to Equitable about Counsel's opinion. FSA ask three questions on issues which they would find it helpful to have a clearer understanding of how Equitable proposed to proceed (in line with the Director of GCD's suggestion that morning). FSA write again to Equitable to request the bundle of factual material supplied to Counsel.
14/05/2001 [12:05]	FSA's Director of GCD writes to the Head of Life Insurance further to their conference with Counsel (see 11/05/2001 [**11:00**]), at which it had been said that Equitable were now attempting to take the view that the House of Lords' decision did not prevent the declaration of differential bonuses from year to year. [**12:33**] The Head of Life Insurance asks supervisors to report any cases of companies attempting to neutralise the effect of annuity guarantees, clarifying that: '*The idea is that all policies issued in a given year could form a distinct category for bonus purposes. This is an idea of* [Equitable's Chief Executive's]*, and I know of no evidence that it is more widely held*'.
14/05/2001 [13:41]	FSA's Director of GCD says that he agreed with the Head of Actuarial Support's comments of 10/05/2001 [**10:43**].
14/05/2001 [14:00]	FSA hold an Equitable Life Lawyers Group meeting. The issues discussed by the Group include: <u>Compensation</u> Chief Counsel B informs the Group that, in a meeting with FSA on 10 May 2001, Equitable had '*referred to Article 4 as enabling the capping of liabilities*'. Chief Counsel B expresses concern that the capping of liabilities had been emphasised rather than mutuality and the Group note that Equitable's comments had been made, despite the fact that their Counsel did not support that view. The Group discuss the possibility of common law claims and whether these would be covered by Article 4 and '*It was concluded that such claims would probably be met before payments were made under Article 4*'.

Market value adjuster
Chief Counsel B states that he had concerns in relation to the implications of Counsel for Equitable's opinion '*for the whole matter of the use of MVAs*'. The Group note that FSA had taken '*custody*' of the OFT work, although they were awaiting a note from the Head of Consumer Protection on this. It is agreed that FSA should seek the views of Counsel on this.

'*Legal action against FSA*'
Under the heading '*Legal action against FSA*', the minutes record: '[An FSA legal adviser] *advised the group that the 1st Life Directive imposed a duty on Member States to ensure that firms established adequate technical provisions.* [The adviser] *agreed to prepare a note on the implications of this provision and the nature of any consequential duties imposed upon a Member State*'.

The Group's 'legal issues' list is updated the following day and, under '*Issues arising from the Opinion of* [the Society's Counsel]', the following is included:

(a) Impact of section 425 compromise.

(b) Effect on IC Act reserving requirements.

(c) Companies Act solvency issues.

(d) Whether the opinion should be published.

(e) FSA response to the opinion.

14/05/2001 [15:40] FSA's Chief Counsel B seeks an update from the Head of Consumer Protection on the work that was being transferred from the OFT.

[**17:57**] The Department reports that the cases had not yet been received from the OFT.

14/05/2001 [15:59] Equitable send FSA a copy of the press notice to be issued at 16:30 that day about Counsel's opinion.

[**16:34**] Equitable's advisers also send FSA a copy of their question and answer briefing.

[**17:49**] Equitable also send FSA a copy of Counsel's opinion.

14/05/2001 [entry 10] FSA send HMT their recommendations that Equitable should be granted section 68 Orders for the value of Permanent Insurance and for the calculation of the rates of interest for fixed interest assets. FSA say that '*the valuation of Permanent* [Insurance] *is quite straight forward*'. FSA continue, saying:

The concession relating to rates of interest is more complex. We can provide a more detailed technical explanation if that would help. However, there are two further helpful points I can probably make. First, the concession was originally requested last November, at a time when the FSA, with GAD, had been carefully scrutinising the last returns. The examination identified a number of issues which have led to a modification of the valuation basis used, which overall leads to an increase in the reserving requirement. Second, you will also wish to be aware that because of the defects in Regulation 69, we are proposing that going forward, we should produce a requirement for firms generally to calculate the relevant rates of interest along the lines of [one of] the methodologies described in the paper.

I think it is important to remind you that a number of concessions have been granted to Equitable Life. Some have been fairly routine, such as the increase on the admissibility limits on certain shareholdings, including most notably those in [a named company] *following its merger last December. There are of course some others, including the order* *permitting Equitable to include among its assets an implicit item for future profits and that allowing it to count the subordinated loan. Inevitably, as concessions are disclosed in the annual returns, some commentators will suggest that while individually the concessions may seem reasonable, that collectively it could be argued that the Society has been permitted to elect the most favourable valuation basis on each occasion. Our view is that such criticism would be unfair because we have worked hard with the company to improve the reliability of its financial reporting; and the effect has sometimes been to increase the level of reserves required.*

FSA enclose a note on the two concessions, along with the papers that had been submitted to their Insurance Supervisory Committee and draft Orders to be sent to Equitable, if it were agreed that their applications should be granted.

14/05/2001 [entry 11] FSA's actuarial department provide PIA with advice on the performance of closed with-profit funds, in response to their request of 11/05/2001 [**15:30**]. FSA explain that: '*Closure of a with-profit fund could significantly impact on several factors that affect the level and volatility of maturity payouts. The most important impact is on future investment performance and bonus strategy. Closure can also affect staffing, expense levels and distribution of the estate*'.

One of the points stated is that: '*The initial loss of new business strain may result in a closed fund enjoying improved statutory solvency for the period soon after closure, although this may be partially offset by having to pay closure costs*'.

In conclusion, FSA say:

... it would be fair to say that for weak funds (such as the Equitable's after the House of Lords decision) closing to new business is unlikely to result in a lower level of payouts than remaining open. Payouts may even be higher. This is largely because weak funds would find that staying open to new business would severely affect their investment freedom.

Thus, the fact that policyholders have bought into a fund that subsequently closed would probably not have affected their expected payouts much per se. More importantly is the fact that they bought into a fund that had a weak underlying financial position.

Closure would also affect the pattern of payouts – possibly with more volatile payouts with higher terminal bonus content. The effect of payouts may be different for policies with different terms to maturity.

15/05/2001 [entry 1] Equitable notify FSA of the appointment of an authorised agent in the Republic of Ireland.

15/05/2001 [17:49] Following receipt of FSA's recommendations on Equitable's two section 68 Order applications, an HMT official explains that HMT usually approved such Orders at 'official' level but, given the potential for adverse reaction, questions whether '*we should do anything more formally on this occasion – eg telling Ministers what we plan to do?*'. The HMT official also asks another official to take the matter forward.

16/05/2001 [entry 1] Equitable send FSA notification in respect of their new Appointed Actuary.

16/05/2001 [15:46] FSA's Director of GCD informs the Head of Life Insurance of a conversation with Counsel the previous night, who had then read the final version of Counsel for Equitable's opinion. The Director says that Counsel '*was even more strongly of the opinion than before that it was wrong, and concerned about the society's conduct in publishing it*'. He also reports that Counsel had identified two issues, being:

> *The first was the oddity, as he saw it, of the Society effectively taking sides with the non GAR against the GAR policyholders in trying to neutralise the court decision. This seemed to him to reflect an ongoing unwillingness on the part of the company to accept the court decision. In his view, if the reality was that* [Counsel for Equitable] *had been asked to look after the interests of the non GAR, we should consider requiring the society to instruct someone to look after the interests of the GAR policyholders. Otherwise, the society's funds were being used to support the claims of one group of its members against those of another.*
>
> *The second issue was that he thought that close readers of paragraph 97 of the Opinion will detect in the reference there to resolving the dispute with a view to paying a dividend* [for] *the risk that the company might become insolvent. This suggests that GAR policyholders might wish to bail out.*

[**17:21**] The Head of Life Insurance says that FSA would pursue these points with Equitable at the meeting arranged for 21/05/2001.

16/05/2001 [16:42] An FSA Board member and Chairman of FSA's Pension Plan Trustee Limited informs Managing Director A and FSA's Chairman that the trustees of the scheme intended to cast their vote on the election of Equitable directors. The member says that neither they nor FSA's Company Secretary had taken any part in the discussion.

It was subsequently agreed that FSA should ask their pension scheme to confirm that they had reached their conclusions without input from any Board member or anyone involved in the supervision of Equitable, so as to close off one possible source of criticism.

16/05/2001 [17:03] FSA's Director of GCD writes further to his earlier advice to an official (see 10/05/2001 [**14:14**]), expanding upon the regulatory action FSA could take in this area. The Director says that he thought that FSA's existing strategy '*goes some considerable way in this respect*', which was to:

- *seek advice from* [Counsel] *on the extent of a firm's duties to make disclosures which would be relevant in these circumstances;*
- *with a view to possible publication either of his Opinion, or of an FSA document based on it; and*
- *consideration, on the back of that, and the* [FSA] *misselling review, as to whether, either at the Equitable or other companies, there is a need for a targeted endowment style review to ensure that redress is paid where due*'.

17/05/2001 [08:58] FSA's Chairman asks the Director of Insurance what level the FTSE 100 Index was at when Equitable had increased their market value adjuster to 15%. The Chairman also asks whether Equitable had any plans to reduce the market value adjuster if the stock market continued to rise.

17/05/2001 [11:48] Further to FSA's Director of GCD's note of 16/05/2001 [**15:46**], Chief Counsel A says that she believed Counsel was being '*overly harsh*'. The Chief Counsel says that, in her view: '*The Equitable ... are not taking the side of non-GARs as such, they are trying to get back to the pre-*[House of Lords] *situation which in their view is fairer to all policyholders. They are also trying to resolve all the issues in one "fell swoop" (and clearly there are mis-selling issues to be resolved)*'. Chief Counsel A also states, as she had done previously to the Head of Life Insurance and the Head of Actuarial Support, that she was '*uncomfortable with* [Equitable's] *confidence that the opinion does not (yet) raise significant reserving concerns (Co Act or ICA)*'. The Chief Counsel suggests that the reserving issue should be discussed with Counsel at a meeting '*the week after next*'.

17/05/2001 [14:58]	FSA's Chief Counsel B prepares a statement for possible issue about FSA's progress on their review of mis-selling by Equitable. The statement includes the following '*broad conclusions*' of the factual '*Stage 1*' PIA report: • *The Equitable did not identify a need to disclose directly to potential purchasers any specific risks associated with the outcome of the litigation.* • *The Equitable sales literature and written disclosures did not change materially during this period.* • *The potential uncertainties surrounding the sales process were not mentioned during the period after the company had put itself up for sale.* • *When responding to those few complaints about misselling which were made during this period, the Equitable stated that its communications with consumers had been based upon its best understanding of the position at the time.* [**18:33**] The Head of Life Insurance suggests that issuing such a statement was '*Difficult territory*'.
18/05/2001 [09:29]	FSA's Head of Actuarial Support asks Scrutinising Actuary F, in response to the Chairman's request of 17/05/2001 [**08:58**], to look back through their files for information about how the market value adjuster had been assessed. The Head of Actuarial Support comments: '*I think* [Equitable] *said at one point that in theory it should be around 12.5%*'. [**10:55**] Scrutinising Actuary F explains to the Head of Actuarial Support and the Head of Life Insurance that Equitable had applied a market value adjuster since the House of Lords' ruling in July 2000 and that it had been initially set at 5%, increasing to 10% when they closed to new business on 08/12/2000 and then to 15% on 16/03/2001. The Scrutinising Actuary goes on to say: *In a note dated 19.12.00,* [Equitable] *set out the rationale behind the application of the MVA, and its amount. He said that the level of 10% corresponded to a FTSE level of around 6300. There are three components of the MVA, of which investment market levels was the main factor. (The other factors were an adjustment to recoup the balance of initial expenses still outstanding, and a further adjustment to "protect the future solvency and investment freedom of the fund"). Of the 10% MVA, 7.5% related to the level of the markets.* *In the same note of 19.12.00,* [Equitable] *said that should the market fall to 6100, and stay there, a move in the MVA to 12.5% would be appropriate. (Of this, 10% would be the "investment related" part.)* *In an update from the Society dated 13.03.2001, they said that the theoretical levels of the investment related part of the MVA were 10% at 6100, increasing to 13% at 5700. (A further 2% on top is required in respect of recouping initial expenses.)* *At 13.03.01, when I believe the Society took the decision to increase the MVA to 15% (this was implemented on 16.03), the FTSE closed at 5720.* *If the market were now to stabilise at a FTSE level of around 5900, then the "theoretically correct" MVA would be 11.5% plus 2% expense adjustment = 13.5%.* *Whether the Society have any plans to reduce the MVA is a topic which I suggest is discussed with them at the next meeting on 21st May.* [**11:05**] The Head of Life Insurance forwards the note to FSA's Chairman.

[**12:38**] The Chairman comments: '*I don't think we need be pressing them to make an adjustment if the theoretically correct level is 13.5*[%]*. They've set some kind of precedent by moving in 5s, and I guess there's a greater risk of major outflows at 10*[%] *if they've once been to 15*[%]'.

18/05/2001 [14:02] FSA's Director of GCD responds to Chief Counsel A's note of 17/05/2001 [**11:48**], saying that he would be happier if FSA were to '*progress the reserving issue more rapidly*'.

18/05/2001 [14:41] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

18/05/2001 [entry 4] The Chairman of the Financial Services Consumer Panel writes to Equitable (copied to FSA), in response to letters of 9 and 23 April 2001 about the arrangements for ensuring that policyholders were informed of developments. The Chairman suggests that they should arrange to meet again.

21/05/2001 [entry 1] FSA meet Equitable to get an update on preparation for their annual general meeting, to take place on 23/05/2001, and on the compromise scheme. FSA's note of the meeting records the discussion under the following headings.

Annual general meeting
Equitable explain the planned agenda for the meeting, which would include '*an outline, without much content, of the way forward through the 425 scheme*'. FSA note that the Chief Executive appeared slightly more comfortable about the vote for directors '*mainly because the action groups had diluted their campaign by submitting so many candidates*'. Equitable say that the results of their survey of policyholders' views on a compromise would be released at the meeting and they indicate to FSA that it would show there was an '*overwhelming consensus for a compromise* [but] *when it came down to sorting out the nature of an acceptable deal this consensus disappeared*'. Equitable agree that FSA could send an observer to the meeting.

Counsel for Equitable's opinion and the compromise scheme
Equitable say that Counsel needed to do further work on the rights of non-GAR policyholders and this would take a couple of months to complete. It was noted that a decision would need to be taken as to whether to include mis-selling claims in the compromise scheme and that this would be more likely if it were thought that any such liabilities were significant.

Equitable explain that '*generic mis-selling cases had been rejected by the Society and parked by the PIA Ombudsman pending FSA's exercise to examine generic mis-selling issues*'.

2000 annual return
FSA record that:

> [Equitable's Chief Executive] *and* [Appointed Actuary] *had given further thought to* [Counsel's opinion] *and did not believe that a provision for mis-selling was necessary for the year 2000 Annual Returns.* [The Chief Executive] *said that the 2000 Report and Accounts already referred to fundamental uncertainty which covered the potential legal risks and they were considering what equivalent provision was needed in the Returns.* [The Appointed Actuary] *suggested that they would look to see how much reserves could be released if they switched all their equities into* [fixed interest securities] *(which might indicate the maximum level of claim that could be sustained without them becoming insolvent).*

FSA confirm that they had recommended to HMT that the requested section 68 Orders should be granted, '*but this did not guarantee that they would be issued*'.

Market value adjuster
Equitable explain that the: '*estimate of the "realistic aggregate" MVA was a continually moving target and depended on market movements ... As things stood at FTSE c5900* [Equitable's Chief Executive] *thought an MVA of 15% was quite justifiable*'. Equitable say that, if the FTSE 100 Index settled at a level of around 6400, then they '*might need to consider dropping back to 10%*'.

Under '*Action Points*', Equitable agree to:

- produce the next set of actuarial papers on the compromise scheme by the end of May; and
- ask their solicitors to send the draft legal section of the compromise scheme to FSA.

FSA agree to:

- forward further feedback on the actuarial paper for the compromise scheme; and
- inform the Irish and German regulators about the compromise proposals.

21/05/2001 [14:00] FSA hold an Equitable Life Lawyers Group meeting. The Group discuss the latest positions on the various legal issues currently under consideration.

21/05/2001 [14:14] In response to Chief Counsel B's statement on FSA's progress of their review into mis-selling by Equitable (see 17/05/2001 [**14:58**]), the Director of GCD says that it looked odd to publish it without '*Stage 2*', which would state whether Equitable had been in compliance with PIA Rules. The Director of GCD also says that he would rather FSA wait for the second part of Counsel for Equitable's opinion to be published so that they could take that into account.

21/05/2001 [15:37] PIA circulate, including to FSA, a draft of their '*Stage 2*' report of their assessment of Equitable's disclosure of risks to potential investors after the Court of Appeal decision. They seek comments on it by 25 May 2001.

21/05/2001 [entry 5] In response to FSA's request, solicitors for Equitable send FSA copies of all the instructions and materials supplied to their Counsel, for use by FSA's Counsel.

21/05/2001 [entry 6] HMT reply to FSA's letter of 14/05/2001 about Equitable's applications for section 68 Orders. HMT say that the Order in relation to the valuation of Permanent Insurance is '*non-controversial*'. However, HMT say that the Order in relation to the valuation rates of interest '*raises a few more questions*'. HMT say that their:

> *... concerns centre on consistency and presentation. The* [Insurance Supervisory Committee] *paper you sent me says that you have made it clear to the Equitable "that a request for a concession would only be considered if the company would also use that valuation basis in future years, when it produced a less favourable result." Elsewhere you make the point that you "look to companies to maintain consistency of valuation methods from one year to the next." However, I understand that the Equitable has not used this concession before and is unlikely to be using it next year, since you will be reviewing the effects of Regulation 69 in general and will be developing a new methodology. So the Equitable will in fact use three different ways of calculating the valuation rate of interest in three years.*

HMT note that there were several ways in which they might seek to defend the Order, although:

The argument that this is a method which in future years might result in a less favourable result for the Equitable is weakened if the concession is only for one year and will be changed to a different basis for the 2001 return...

The argument that it is the same as concessions given to other insurers also falls if it is in fact different from the methods used by [the two insurance companies]. *Even if Equitable could conform to the same method of calculation, as they propose to do for future years, you make the point that the nature of these companies' business is different from Equitable's and more thought would be needed as to whether that approach was appropriate.*

HMT continue:

It is therefore not clear whether it would be better to refuse the concession to preserve consistency of valuation with past years, or to grant the concession to ease the pressure on the fund of confirming with the reserving requirements. What makes this particularly difficult of course is the perception that it was a lack of adequate reserves which contributed to the Equitable's closure to new business.

HMT suggest:

Might it not be preferable to develop the correct long-term approach first, and to change to it in 2001, instead of making a one-off concession this year that will then have to be changed in 2001 to a basis that can be sustained in the future?

HMT also note that:

Equitable estimated that not having this concession last year meant that their reserve was inflated by around £300 million. The estimate for the effect of the concession this year is of the order of £150-£200 million. How does this compare to the total value of reserves that they are required to hold?

HMT say that, given the sensitivities surrounding Equitable, they would want to '*inform Ministers that officials are granting these concessions*'. HMT ask for answers to their questions and details of the timetable that FSA were working to.

22/05/2001 [10:35] FSA's Scrutinising Actuary F provides the Head of Life Insurance with an update to his note of 18/05/2001 [**10:55**] about the market value adjuster applied by Equitable. He says:

At yesterday's meeting Equitable pointed out that the FTSE would need to move up to around 6400 before a reduction in the MVA to 10% could be justified. This contrasts with [Equitable] *saying back in December that a 10% MVA corresponded to a FTSE level of 6300. As they explained yesterday, this is because they have been adding interim bonus at the rate of 8% p.a. to policy values, and this requires an element of capital appreciation as well as investment income to support it. In other words, if markets stand still, then policy values – as measured by "smoothed asset shares" – get even further ahead of the value of the underlying investments, and a greater MVA is needed to compensate.*

They also reiterated that the MVA is doing no more than ensuring that outgoing policyholders take no more than their fair share of the fund on a non-contractual exit. (The fact remains that those taking contractual benefits – where no MVA applies – are getting more than their share of the cake. This is the concern I raised with them in an earlier meeting, which they conceded was true, but they reckoned they could live with so long as contractual termination rates did not increase unduly from current levels.)

22/05/2001 [11:23]	Equitable send FSA a copy of the terms of reference for the Independent Actuary in relation to the compromise scheme. [**12:37**] Line Manager E distributes the terms of reference, noting that FSA had decided not to approve them but had proposed to raise any concerns with Equitable. [**12:55**] The Head of Actuarial Support says that he thought the terms of reference were reasonable but notes that they did not cover the fairness within each policyholder class, '*particularly where there may be a separate offer made to different sub-classes within each class*'.
22/05/2001 [18:16]	FSA's Line Manager E circulates the notes of the meeting held on 09/05/2001 to discuss Equitable's section 68 Order applications. The Line Manager says that he saw HMT today and that they were still thinking about the '*more difficult*' concession. The Line Manager says that he thought that they now agreed that it was appropriate. He notes that HMT needed to alert their Ministers but did not expect to require ministerial approval.
23/05/2001 [08:59]	PIA send FSA a copy of their comments on their draft '*Stage 2*' report. [**14:53**] FSA (Head of Actuarial Support) provide some immediate comments on the points raised by PIA which included: 1) In response to a comment that '*Equitable was clearly weak and it knew it. This needs to be stressed*', FSA reply: *I am not at all sure that Equitable would have agreed that they were "weak". They took the view throughout that they were meeting all the requirements of the solvency regulations, and indeed that the thinness of their cover for the margin of solvency was a result of the conservativeness of the regulations rather than a reflection of their true strength. We also know that they persuaded* [Standard & Poor's] *until comparatively recently that they merited a AA rating.* 2) In response to the comment that '*the aim of* [a with-profits policy] *is to deliver asset share …*', it is said that that: '*needs explaining. A minimum expectation for investing in a with-profits policy should be that you can expect a return of premiums less expenses accumulated at the underlying asset performance. Thus getting less than this as a result of financing the GAR of others would not satisfy this. It should not consist of* [knowingly] *contributing to the "operating fortunes" of others*'. FSA reply: *I am not sure why there should be a minimum expectation that a policyholder would receive "asset share". Surely this depends on how this has been presented to policyholders. For example, if they have been told that they will also share in the operating profits or losses of the business, then they might well receive less than these basic asset shares (which would of course need to be defined in any event). This is of course likely to be one of the key issues here, namely whether this sharing in the operating profits and losses was explained sufficiently clearly to potential Equitable policyholders.* 3) In response to the comment that '*Equitable was right to regard the likelihood of not finding a suitable purchaser as unlikely*', it is said that: '*I would severely question this. The problem with the Equitable is that they had an arrogant view of their worth. They alone knew the true state. It was this state that shied off prospective purchasers*'. FSA reply: *There is still much debate over the exact reasons why potential purchasers declined to become involved with Equitable. In my view, the only "asset" of real potential interest which they had to sell was the "goodwill" of the business. In view of the state of*

dissatisfaction among members that had been reached following the [House of Lords'] *judgment, there were I believe significant misgivings among the bidders about the value of this "goodwill", though Equitable did eventually reach an agreement with Halifax. In addition, the fund had been destabilised by the judgment as both the balance sheet position and potential bonuses had become much more sensitive to changes in market fixed-interest yields. There was also the difficulty that the perception by many members, of the Equitable's worth to a purchaser, was probably too high.*

4) In response to the comment that '*with no purchaser it might be forced to close to new business*', it is noted that PIA's:

> *... contention* [is] *that they should have been aware that the only justification of continuing to write new business was that there would be a purchaser and that without one closure was inevitable. There were thus three options:*
>
> *1) close pending a purchaser*
>
> *2) keep open on the assumption of a purchaser, but keep silent of the risk*
>
> *3) keep open on the assumption of a purchaser but enclose a statement setting out the position*,

FSA reply: '*The Equitable was still just covering its margin of solvency following the* [House of Lords'] *judgment. However, the actuary had recognised that they were then unacceptably weak to continue as an ongoing operation. Accordingly, they sought a purchaser for the business. After failing to find a purchaser, they recognised that they had no realistic alternative but to close to new business*'.

5) In response to the comment that '*Equitable's analysis that it was likely to find a purchaser on the terms that it sought was reasonable*', it is said that: '*I am far from convinced that this was the case. What exactly do we know about the analysis? They had concluded that there was a very large hole. We must give evidence of why FSA believes this*'. FSA reply: '*I don't know where this suggestion of a "very large hole" is coming from. Potential purchasers were given a detailed report by* [auditors from the same firm as Equitable's auditors] *... on the prospects for the business. In addition, we know that their end-2000 report has now been signed off, with reference only to two areas of fundamental uncertainty, namely (a) the effect of the* [House of Lords] *judgment (on for example the propensity of GAR policyholders to pay additional premiums) and (b) the risk of further legal cases (eg in relation to mis-selling to Non-GAR policyholders)*'.

[**15:35**] The PIA official clarifies that he was talking in general terms but on the specific points, using the numbering above, he says that:

1) '*... my "weak" was referring to its position in attracting a bid. The strengths included the salesforce and its administration systems. Its main weakness were concerns about the state of the existing portfolio of policies. The fact that a* [House of Lords'] *ruling was immediately followed by putting up for sale meant that there was a real weakness in the perception of the Equitable's portfolio of policies.*'

2) '*An investor who enters a with-profits or mutual fund knows that they are subject to profits and losses but it is very difficult to justify buying a policy if a proportion of one's premiums are going to finance an existing known source of loss. Hence my view that there should be a minimum expectation as stated (without a bias towards financing losses).*'

3) '*... you state "unacceptably weak to continue as an ongoing operation." Closure meant that future potential customers avoid that weakness but while it was on offer, customers entered the fund.*'

4) '"hole" may not be the precise word but there was a very large problem which, I assume, they wanted solved by a purchaser putting money into the company. When this failed they closed.'

PIA conclude by saying: '*The fact remains that they did not attract a bidder. Why was this given the level of interest? Either there was not enough value or something frightened them. The relevant point is "How confident should the Equitable have been when they put themselves up for sale?" I am an outsider to this issue as I have no detailed knowledge of the state of the Equitable but I still, on reflection, state that I cannot recall another case with as high a risk as the Equitable. If anyone can hint a name, I would be pleased to know*'.

[**16:12**] FSA's Head of Actuarial Support concludes the exchange by saying, in relation to point 2) that:

> *I would say that* [Equitable] *introduced the cut in the first 7 months bonuses in 2000 so that new policyholders after the* [House of Lords'] *judgment would not be expected to contribute to the expected loss though they would of course participate in any profits or losses that might arise if the actual experience turned out differently.*
>
> *Before the* [House of Lords'] *judgment, they would no doubt say that they had no reason to believe that the non-GAR policies would be expected to incur significant profits or losses in respect of the GAR experience, and in particular there was not the expected loss of £1.5 billion that arose following that judgment.*
>
> *I should add of course that the above figure, and others in the note, relate of course to the financial position as shown in the company accounts rather than the FSA returns.*

23/05/2001 [09:47] FSA's Head of Life Insurance sends FSA's Chairman a copy of Scrutinising Actuary F's further note on the market value adjuster applied by Equitable (see 22/05/2001 [**10:35**]).

[**10:47**] In reply, the Chairman says: '*I do not recall them making the point about interim bonuses when they last moved the mva. I think they will have great difficultly explaining why they don't move down, if the market gets back to the point it was at before they changed. I'm afraid this is yet another example of their lack of candour*'.

[**11:31**] The Head of Actuarial Support comments:

> *A key problem at the moment for them is how to generate some realistic expectations about the levels of bonus and MVA that the fund can afford. In the last few years, they have been content to pay out higher levels of bonus than have been earned by the fund as part of their smoothing of investment returns. In addition, they paid out full policy values without any MVA to surrendering policyholders even when their actual assets were less than the aggregate of all these policy values.*
>
> *For example, they are currently increasing the policy values (on which both the retirement benefits and also the discretionary surrender values are based) by 8% per annum. This rate of increase is well in excess of the investment returns that they have earned since end-2000 or indeed during the year 2000 as well.*
>
> *Accordingly, they are incurring financial strains at present whenever benefits are taken on retirement. In addition, they believe that they have to set the MVA at 15% so that the departing policyholders do not take more than their fair share of the actual assets held by the Society.*
>
> *The reality therefore is that at present market levels they need to find some way of reducing this rate of interim bonus if they are to restore some measure of stability to the fund, and also to have a reasonable chance of reducing the MVA on surrender.*

If the market does manage to return to end-99 levels, then they may be able to rationalise this interim bonus rate in terms of their actual investment returns, and could even come under pressure to increase it. However, they would then still need to maintain a significant MVA to protect the fund against surrenders. They are caught therefore in [public relations] *terms between a rock and a hard place unless they can find some way of generating more realistic expectations of what the fund can afford.*

23/05/2001 [16:47]	FSA's Line Supervisor C reports on what had happened at Equitable's annual general meeting that day. The Line Supervisor says: '*I think* [the Society's Chairman] *handled it well and carried the meeting with him. Any hostility from the members was directed at other pedantic members hogging the microphone. Most importantly the Chairman's slate was elected with a sound majority*'.
24/05/2001 [11:21]	An HMT official sends a submission to the Economic Secretary to the Treasury, asking her to note that officials intended to approve, on the recommendation of FSA, section 68 Orders which would give two reporting concessions to Equitable for their 2000 returns. The concessions covered the valuation of the subsidiary company (Permanent Insurance), which had been sold on 16 February 2001, and the method of calculating the valuation rates of interest.
24/05/2001 [17:36]	FSA's Director of GCD writes to the Chairman and the Head of Actuarial Support saying that he agreed that the notes of 17/05/2001 [**08:58**], 18/05/2001 [**10:55**], 22/05/2001 [**10:35**] and 23/05/2001 [**11:31**] on the market value adjuster applied by Equitable raised serious concerns. The Director of GCD says: *The first is about PRE. Don't we need to consider whether, by meeting the unreasonable expectations of some policyholders they are depriving other policyholders of their reasonable ones? Is this a decision which has been taken by the Equitable at Board level?* *The second is about exposure to risk.* [Scrutinising Actuary F] *reports the* [Equitable] *as saying that they can live with people taking contractual benefits so long as contractual termination rates do not rise significantly. But what if they do? Is the suggestion that they would then introduce an MVA on contractual termination? But we have not seen an analysis which suggests that they are entitled to do so.* *The third is about the compromise. Has* [Counsel for Equitable] *been asked specifically to advise on how any liabilities should be brought into account in the compromise? Is he instructed for the Equitable on the compromise?* [**20:11**] Chief Counsel A suggests that the Head of Life Insurance should reply in the first instance to the points raised in the first two paragraphs above.
25/05/2001 [11:58]	PIA chase comments on their draft '*Stage 2*' report. PIA suggest getting together for a meeting to discuss. FSA send PIA a note of their comments, which included the following: • On the statement that PIA '*has established the following specific key risks Equitable did not disclose to clients*', FSA question whether '*we*' are only concerned about new policyholders and they ask '*What about people deciding whether to pay additional premiums? Or people who with "adequate" disclosure might have decided to quit the w/p fund while they were ahead?*'. • In response to a request within the draft report that FSA should provide details of where potential investors could find information on the financial strength of companies, FSA say: '*The key first hand data will* [be] *the company's annual report and accounts, the statutory returns and any formal statements issued ... In addition,*

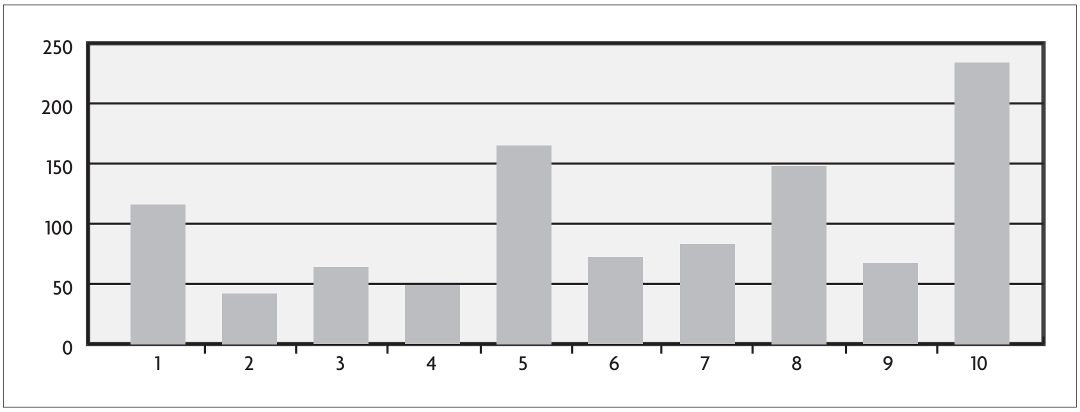
data is available from the rating agencies, which may or may not be based on access to privileged information, and commentaries in the business and trade press (eg Money Management, [the Financial Times]*)*'.

- In response to point 3) of PIA's comments of 23/05/2001 [**08:59**], about whether Equitable had been right to think that not finding a purchaser was unlikely, FSA say that '*... it rather seems to assume that the reason why the sale was not successful was the GAR exposure, but it is far from clear that that was the [main/only] reason. Neither of the two most persistent bidders specifically gave that as one of their reasons for dropping out (although it was clearly a factor in determining the amount they would offer if they went ahead)*'. FSA also state, in response to point 4) of the comments above, that:

  > *... it was likely that the fund would be closed whether a buyer was found or not. The distinction between the outcomes was therefore likely to be about the need to change investment strategy and the likely level of capital support available.*

29/05/2001 [entry 1]	FSA provide PIA with some legal comments on their draft '*Stage 2*' report.
29/05/2001 [entry 2]	FSA and PIA send instructions to Counsel to advise on the common law and regulatory issues raised by the opinion of Counsel for Equitable.
29/05/2001 [14:53]	FSA send Counsel a copy of the terms of reference for the Independent Actuary for the compromise scheme. FSA ask for any comments on it by 31 May 2001. Chief Counsel A notes that she believed it was '*important ... that the terms of reference (or a related letter) make clear that he is to report on the adequacy of the Equitable's actuarial work/conclusions on the impact on the various groups of policyholder in each class of accepting (or not accepting) the GAR compromise, in a way that will assist the Court and policyholders*'.
29/05/2001 [15:21]	FSA's Legal Adviser D provides the Head of Life Insurance with an eight-page paper entitled '*Section 425 – Companies Act 1985 Power to Compromise The Equitable Life Assurance Society Procedures*'.
29/05/2001 [17:41]	FSA's Line Manager E informs Equitable supervisors that the details of Equitable's policyholder survey were now on their website. The Line Manager comments: *Some of the findings are very predictable – younger GAR policyholders do not think that their older colleagues should get paid more; older GAR policyholders think they should. But there are also encouraging signs, such as 91% believe a compromise is important, compared with 3% who do not.* *It is also quite interesting to see the responses to questions such as how concerned are you – on a scale of 1 to 10 [highest] – about the safety of your savings, where it produces a graph something like a cross section of the Alps rather than an exponential curve (rising on the side of very) that you might expect. 10 was the most popular response numerically, followed by 5, 8 then 1.*

The results for all policyholder types to this question were as follows:



30/05/2001 [16:55] FSA's Director of GCD asks Legal Adviser D to clarify what constitutes a liability under a section 425 compromise scheme, explaining:

> *What I have in mind is the distinction that is sometimes drawn between the contractual or guaranteed liabilities of a company to its policyholders, and supposedly non contractual liabilities such as rights to a terminal bonus of a particular amount, or calculated on a particular basis.*
>
> *Am I right to think that this, and perhaps other expectations, do not constitute liabilities which would be brought into account into a section 425 scheme? If they are outside such a scheme, what is their status following the agreement of such a scheme?*

30/05/2001 [16:16] The Economic Secretary to the Treasury, having seen the note on Equitable's applications for the section 68 Orders of 24/05/2001 [**11:21**], asks whether the official was seeking Ministerial approval for the Orders. The Economic Secretary says that, if the official was, then she would need further details and would wish to discuss the matter before granting approval.

[**17:50**] HMT's Director of Financial Regulation and Industry advises an official to seek a clear explanation from FSA as to why they believed the adjustments to the rules would make Equitable's returns more accurate. HMT's Director explains:

> *As I understand it, adjustments (known in the trade as concessions) are regularly agreed by the FSA, and formally endorsed by HMT under current interim arrangements pending implementation of* [FSMA 2000]. *It is not our role to second guess the FSA's regulatory judgement. The only thing different about this case is that* [two HMT officials] *felt the process should be drawn to Ministers attention, for information, as it involved Equitable.*

[**18:06**] HMT ask FSA for a letter, '*in straightforward self-explanatory terms (that we can show the* [Economic Secretary to the Treasury]*)*', setting out: what they were proposing; why FSA believed the proposals to be justified; and some context which explained '*that this is a fairly straightforward procedure/many hundreds are made each year*'.

[**18:18**] In reply, on a question about timing, FSA's Line Manager E explains that things were getting tight, as companies had to go through a sign-off procedure before submitting their returns by the end of June 2001.

31/05/2001 [entry 1] FSA provide HMT with the letter requested about the section 68 Orders sought by Equitable for the value placed on Permanent Insurance and for the rates of interest used in their 2000 returns. FSA's letter includes the following explanation for the justification of granting the latter Order:

... Most companies live with the consequences of the regulation since the amounts involved are not sufficiently material to affect the overall financial position. However, some companies have sought, and been given, permission to calculate the relevant interest rates on a more reliable basis ... While the precise way in which the companies do the calculations varies slightly, they follow similar principles and all produce more reliable figures than the methodology set out in the regulations. For the future, the FSA will be looking to use its rule making powers to replace regulation 69 at an early stage.

The FSA has over the last year or so been looking closely at the way in which Equitable Life prepares its statutory returns and the valuation basis it has used. This has led to some refinements in the calculation of the company's reserves, most of which it should be said work against the company. The concession above, if granted, would work in the company's favour for the time being. The company estimates it will improve the presentation of its financial position by around £150 - 200 million. Once such a concession had been granted, we would not allow the company to switch between different methodologies from year to year. Therefore the company would not be able to opt for the methodology that would produce the most favourable result in any given year. For the longer term, we will be looking to impose appropriate requirements on Equitable Life to achieve this. Before doing so there are certain issues relating to consistency that we wish to explore. Those are not matters that are sufficiently material for us to need to hold off with the granting of a reporting concession for the 2000 year end, which would need to be in place in time for it to prepare its statutory returns that must be submitted in June.

[**17:32**] An HMT official forwards the letter to the Economic Secretary to the Treasury's office, explaining that the original referral had been for information only because of the '*general sensitivity of the Equitable case*'. She says '*... the attached note, as I say, seems to set out a pretty clear FSA view that these adjustments are in order. Indeed, it seems that – given the sorts of adjustments that the FSA regularly agree with a whole spectrum of insurance companies (at a rate of around 10 a week) – the FSA would find it very difficult to justify to the Equitable why the current requests should properly be refused*'.

31/05/2001 [entry 2] FSA write to the Chairman of the Financial Services Consumer Panel, in response to his letter of 18/05/2001 to Equitable. FSA explain the work that they have been doing to monitor the situation at Equitable.

31/05/2001 [19:20] FSA's Chief Counsel A informs Line Manager E that she had now discussed the terms of reference for the Independent Actuary for Equitable's compromise scheme with Counsel and she recommends that FSA should write to Equitable, saying:

> *We are concerned that the* [terms of reference] *for the* [Independent Actuary] *do not clearly spell out that he should consider the following:*
>
> > *1. the present value of GAR rights under policies (possibly by category of policy or policies);*
> >
> > *2. the value of GAR claims for the purposes of the compromise (which will presumably be different from 1);*
> >
> > *3. the value of policies for the purpose of voting;*
> >
> > *4. whether the actuarial work sets out sufficiently and accurately (so the Court can easily take a view) the impact that the acceptance (or non-acceptance) of the offer will have on the various relevant categories of policyholder <u>within</u> each class.*
>
> *While we recognise it is difficult at this early stage to set out with* [exactitude] *or in detail what the* [Independent Actuary] *should consider, not least because some of the actuarial work will be dependent on the legal conclusions on the classes etc, and there will no doubt need to be some adjustment and clarification as you go along, if you agree that the matters listed above are key issues to be addressed by the* [Independent Actuary], *we suggest a letter to the* [Independent Actuary] *supplementing or clarifying paragraph 3 of the* [terms of reference] *might helpfully be sent to him now.*

June 2001

01/06/2001 [entry 1]	FSA meet Equitable's Chairman to discuss general progress following Equitable's annual general meeting. The Chairman reports that the Society's meeting had gone well and all of his candidates for the Board had been elected. The compromise proposals are discussed and the Chairman tells FSA that the Board were going to discuss matters on 25 July 2001, by which time the second stage of their Counsel's opinion would have been delivered. Equitable's Chairman promises to provide FSA with the draft scheme documentation by 5 June 2001, which would give FSA three weeks to review it. FSA note that there had been no substantive discussion of the compromise scheme at the meeting. FSA inform Equitable that they had now taken on formal responsibility of the Unfair Terms in Consumer Contracts Regulations 1999 and would be taking over, from the OFT, the complaints regarding Equitable's application of the market value adjuster. FSA state their view that Equitable needed to make a fresh statement, explaining how the Society exercised its discretion. The Chairman says that he could see no difficulty in doing this.
01/06/2001 [entry 2]	FSA's Chairman thanks Legal Adviser D for her paper on section 425 schemes (see 29/05/2001 [**15:21**]). The Chairman asks whether FSA would see the work of the Independent Actuary, and: '*in addition to making representations in Court, will we send something to all policyholders? I assume there is no precedent for that, but that ELAS are unlikely to resist if we want to*'.
01/06/2001 [09:49]	FSA's Head of Life Insurance tells Chief Counsel A that he would like to discuss the issues raised in her note of 31/05/2001 [**19:20**] about the terms of reference for the Independent Actuary for the compromise scheme. The Head of Life Insurance says that he wondered: '*whether we are putting more weight on the* [Independent Actuary's] *report than it can reasonably bear. I think this report is not actually required under* [section 425 of the Companies Act 1985] *as distinct from a schedule 2c* [of ICA 1982]*? And we have agreed that the* [terms of reference] *should not be subject to our approval, so any suggestions we have need to be put forward in that light*'. [**12:18**] Line Manager E prepares a letter to be sent to Equitable. The Line Manager explains to the Head of Actuarial Support that he did not intend to raise his outstanding points at that time, but intended to do so when the next draft documentation was received. [**12:27**] The Head of Actuarial Support explains that his '*main worry about not including my list of questions at this stage is that there is not enough time to cover these properly at a later stage*'.
01/06/2001 [10:13]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches. Equitable note that they were '*blithely sending these to you on a weekly basis*' and ask if FSA still required this information. Line Manager E asks an official to telephone them to confirm whether FSA needed to continue to receive this type of information.
04/06/2001 [10:47]	FSA's Head of Consumer Protection informs Chief Counsel B and Line Manager E that the OFT had contacted them to say that they would be writing to all of their Equitable market value adjuster complainants that week to let them know that their cases were to be transferred to FSA. The Head of Consumer Protection says that the OFT hoped to provide FSA with the case papers later that week.
04/06/2001 [12:41]	FSA write to Equitable about the terms of reference of the Independent Actuary for the compromise scheme. FSA say they were likely to place considerable reliance on the views of

the Independent Actuary, when deciding whether or not to exercise their intervention powers in relation to the compromise scheme. FSA set out four areas of work that were not expressly referred to in the terms of reference, but which they believed should be specifically considered and reported on, those being:

a) the present value of GAR rights, with any appropriate breakdown by types of policy;

b) the basis of which any uplift would be calculated for the purposes of the compromise;

c) the basis on which policies will be valued for voting purposes; and

d) whether it will be sufficiently clear within the documentation to be put to the Court, what the impact of the scheme would be on various relevant categories of policyholder within each class.

04/06/2001 [15:20] PIA's Free-Standing AVC Review Team inform FSA of the provisional details of a visit to Equitable, planned for 29 and 30 August 2001.

04/06/2001 [16:00] FSA hold an Equitable Life Lawyers Group meeting. The Group note that there were no new developments on the compromise scheme. Chief Counsel B says that the OFT had informed FSA that they would be telling their complainants that their cases were being transferred to FSA and that they would pass over all correspondence when that had been done. The Group note that there was to be a lawyers only meeting on 14/06/2001 [**15:00**] to discuss what work needed to be done on the compromise scheme. Legal Adviser A says that there had been some changes to the reinsurance arrangements with Halifax for the unit-linked business and an up-to-date draft was to be sent to FSA. Under '*Issues arising from the* [Society's Counsel's] *Opinion*' the Group note that: '*Equitable had taken a robust view on* [ICA 1982] *reserving requirements.* [Equitable's Appointed Actuary] *and* [Chief Executive] *at their recent meeting with FSA had indicated that the company would not be increasing reserves although there is scope to increase reserves if necessary*'.

04/06/2001 [17:28] FSA's Line Manager E distributes two documents received from Equitable about the process and timetable for the compromise scheme.

05/06/2001 [15:59] FSA's Insolvency Practitioner attends a meeting of Equitable's Compromise Scheme Steering Group. According to the Insolvency Practitioner's report of the meeting, the items discussed include: the plans for the process of completing the scheme; progress to date on various issues, including that Equitable's actuarial report was not yet finished; and remaining legal issues. It is noted that written instruction had not yet been sent to Counsel but that he had been briefed orally on '*phase II*' of his opinion.

[**16:15**] The Head of Life Insurance says that he hoped FSA would receive the actuarial report within the next day or two and asks whether, in light of the slippage in the timetable, FSA's deadline for comments would be extended.

[**16:26**] FSA's Insolvency Practitioner says that: '[Equitable's Chief Executive] *acknowledges that our comments will be made on an ongoing, iterative, basis. Indeed, there are at least 4 documents to comment on: the actuarial report, the "launch" document, the full explanatory statement, and the legal contract. The last three will not be available until after 26 June. They hope to catch up the week lost in the two week's delay before the road-shows when* [the Chairman] *is away.* [The Chief Executive] *did not explicitly mention the 26 June as a deadline but I got no sense that we were being boxed in*'.

05/06/2001 [19:40] PIA send FSA a revised version of their draft '*Stage 2*' report into Equitable's disclosure to potential with-profits investors after the Court of Appeal decision. The executive summary and findings of the report are as follows:

> *2.1) This report concludes that Equitable's disclosure met regulatory requirements in that, given the nature of the risks it faced, it was not required by the Rules to disclose these risks to potential new investors.*
>
> *2.2) Equitable rightly regarded the* [House of Lords'] *ruling beyond the* [Court of Appeal] *decision as highly unlikely.*
>
> *2.3) The* [House of Lords'] *ruling, which created a population of GAR policyholders who, by investing further into their existing policies, might receive significantly more than asset share in return for their extra investment to the detriment of non-GAR with profits investors was again rightly regarded as highly unlikely.*
>
> *2.3.1) The impact of reserving for this liability was borne by those existing investors who had entered the with profits fund whilst the prospect of the eventual* [House of Lords'] *ruling was rightly regarded as remote.*
>
> *2.3.2) The impact of reserving for the increased GAR liability was not borne by new investors after the* [House of Lords'] *ruling.*
>
> *2.4) The possibility that a purchaser might not be found on the terms Equitable sought and that, without a purchaser, it might need to close to new business was rightly regarded as highly unlikely. It is not clear that the closure to new business will have a negative impact on future investment performance.*
>
> *2.5) The above are regarded as operational risks experienced by Equitable. PIA has no clearly established rules requiring the disclosure of operational risks to potential investors. Moreover, it is clear that PIA has not acted previously to discipline a firm for non-disclosure of such risks or that it has ever acted to force a firm to disclose such risks.*
>
> *2.6) This report recommends no further action to consider Equitable's disclosure to potential investors before or after the* [Court of Appeal] *decision.*

06/06/2001 [14:23] FSA's Legal Adviser D provides the Director of GCD with a note (dated 5 June 2001), in response to his query of 30/05/2001 [**16:55**] about what constitutes a liability under a section 425 scheme. The Legal Adviser says that she had not intended to mislead by using the word '*liability*', but was '*anxious to demonstrate how flexible a section 425 compromise can be*'. Legal Adviser D explains:

> *The word "liability" is not used in s.425 but I consider it right to stress the use of the word "compromise" throughout this section. I also consider it important to note the definition section in s.425(6) which provides:*
>
> > *(a) "company" means any company liable to be wound up under this Act, and*
> >
> > *(b) "arrangement" includes a reorganisation of the company's share capital by the consolidation of shares of different classes or by the division of shares in to shares of different classes, or by both of these methods.*
>
> *To my mind this definition section highlights that a s.425 compromise is a very different animal from a scheme of arrangement and can be a mechanism for achieving considerably more than just a compromise with creditors.*

Legal Adviser D provides some extracts from section 425 cases, in order to emphasise the flexibility of such schemes. The Legal Adviser concludes:

> *I realise I have not answered your question but I believe it to be inherent in the words "compromise" and "arrangement" that what can be compromised are not just contractual claims or guaranteed liabilities in the sense of the guaranteed annuity rates confirmed by the House of Lords in the* [Hyman] *case but could include rights to a terminal bonus both of a particular amount or calculated on a particular basis. Any compromise of these more ephemeral (as opposed to strictly contractual) rights would have to be one to which a reasonable policyholder would agree and thereafter be sanctioned by the court. This I believe to be the break on more fanciful claims or rights attempting to be compromised.*

Legal Adviser D stresses that she had no experience of section 425 schemes or pensions law and says that her note had been prepared simply to save the Director research time. She recommends that he should consult with Counsel on the issue.

06/06/2001 [14:38] FSA's Chief Counsel B circulates a copy of FSA's and PIA's instructions to Counsel, sent the previous week (see 29/05/2001 [**entry 2**]), ahead of a meeting the following day.

06/06/2001 [entry 3] In advance of a conference with Counsel the following day, FSA send Counsel a copy of the draft PIA Stage 2 report.

07/06/2001 [15:53] FSA meet the OFT to look through the complaints cases about Equitable's application of the market value adjuster. FSA explain:

> *In nearly all these cases there is a question or questions relating to the mva and unfair contracts, and for each of these cases OFT will send the standard letter which* [the OFT] *showed us.* [An OFT official] *will sign these letters, which he hopes to send out tomorrow. A copy of this letter will be attached to each file.*
>
> *Some of these cases also raised additional general questions about Equitable Life, for example, one asked about the rights of the GAR holders, another alleged mis-selling by Equitable Life. We will need to consider whether or how we will address these sorts of questions. From a practical point of view I did not feel we could ask OFT to add responses to these points to their standard responses, without considerably delaying the transfer.*
>
> *The cases not raising questions about* [unfair contract terms]*/mva raised issues of a more general nature. In these cases, OFT has already sent a full/final response. These cases are now closed, and probably should not have been in the same pile.* [An OFT official] *has agreed to ensure he does not send the standard letter in these cases, as this would obviously commit FSA to further action. However, OFT will send the files to us for completeness, but separately identified.*
>
> *OFT have already dealt with a number of more general enquiries/complaints about Equitable Life, as mentioned previously by* [the OFT]*, and they have answered these in full. As* [the OFT] *mentioned, they will copy these to us silently. There is no action for FSA.*

FSA take away with them the OFT's main Equitable file, which included their correspondence with the company.

07/06/2001 [18:36] Further to the conference with Counsel that morning (for a record of which see Chief Counsel B's note of 08/06/2001 [**17:19**]), Line Manager E lists some issues on which FSA needed to do some research, which were as follows:

1. [Counsel] *asked about the operation of group and occupational schemes, and* [were] *interested in how they worked. For example, where there were trustees, who had the membership and voting rights and who was the policyholder*[?] *In what circumstances did the employees of companies have direct rights against Equitable. Unless anyone knows the full details of the schemes Equitable runs, I might ask for a note from them.*

2. Did Equitable have any professional indemnity insurance for liabilities arising from mis-selling? (I am fairly sure they do not)

3. What assumptions are made for the purposes of the £1.5billion estimate of the GAR liability made post [House of Lords]*? How sensitive is it to factors such as increased propensity to top up and changes to interest rates?*

4. What kind of economic impacts can affect policyholders in different classes in different ways or by varying degrees Eg does a change in interest rate have the same impact on all policyholders? Are some advantaged/disadvantaged more than others? Does the benefit/detriment all go the same way?

5. What terms of with-profits policies can override other terms so that some policyholders have differential treatment to others? (The most obvious answer is that all contractual rights take precedence over discretionary benefits)

6. How ring fenced are subfunds? Do firms make a virtue of operating a number of subfunds, eg in their marketing? How do they treat subfunds for the purposes of the returns? How effectively are they ring-fenced for business and solvency purposes?

08/06/2001 [08:56]	FSA's Head of Actuarial Support tells Line Manager E that he had not been aware that the meeting with Counsel the previous day was taking place. He says that FSA were still waiting for the next version of the draft actuarial report and '*there are indeed numerous unanswered questions*'. In response to point 3 raised by the Line Manager, the Head of Actuarial Support explains that '*the assumptions are set out in the 2000 annual report and accounts but unfortunately there appears to be some unexplained inconsistency between the figures that we wish to raise with them*'. He also says that point 4 needed to be raised with Equitable and that points 5 and 6 were essentially legal questions.
08/06/2001 [11:08]	FSA's Line Manager E seeks clarification from Scrutinising Actuary F on his understanding of the position of group schemes and occupational pension schemes. [**16:42**] The Scrutinising Actuary explains that it was a complex question and FSA would need to ask Equitable who possessed the membership and voting rights in respect of various types of business, '*but it will be important to ask the right questions to increase the likelihood of getting helpful answers!*'. The Scrutinising Actuary gives an explanation of how group schemes would normally operate.
08/06/2001 [11:20]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.
08/06/2001 [11:21]	An HMT official informs HMT's Director of Financial Regulation and Industry that the Economic Secretary to the Treasury was now content with the recommendation in his note of 24/05/2001 that she should note HMT's intention to approve the section 68 Orders. [**11:39**] The Director confirms that HMT could now give FSA their formal approval.
08/06/2001 [14:11]	HMT grant Equitable the section 68 Order on the rates of interest used for fixed interest stocks and the Order on the value ascribed to Permanent Insurance.

HMT send copies of the Orders to FSA.

08/06/2001 [17:12] Equitable send FSA the latest version of the actuarial report for the compromise scheme (dated 7 June 2001). [**18:08**] Line Manager E circulates the draft to supervisory, legal and actuarial colleagues.

08/06/2001 [17:18] FSA's Line Manager E receives a copy of the earlier correspondence between FSA and the OFT in relation to the transfer of files about complaints made about Equitable's use of the market value adjuster. (See 07/06/2001 [**15:53**].)

08/06/2001 [entry 8] FSA's Chief Counsel B sends the Head of Life Insurance a copy of the note to PIA on the conference with Counsel the previous day, which concerns how PIA should take forward their work on their '*Stage 2*' report. The note records the following:

Chief Counsel B explains the context for PIA's report and notes that, alongside this, Counsel for Equitable had identified '*broader and more extensive issues*'. He notes that, in light of this, FSA and PIA had instructed Counsel to '*track the* [Counsel for Equitable] *issues under consideration and, if need be, to identify any further issues which may be relevant to the claims of GAR and non-GAR policyholders. We do so in order that the FSA can have a well formed view as to whether the Equitable's compromise proposals are appropriate and adequate. There is an expectation that* [Counsel] *will speak with* [Counsel for Equitable] *about how his views are developing*'.

Chief Counsel B continues that: '*Since there is obvious overlap between the issues under consideration by counsel (and by* [Counsel for Equitable]*) and the particular post-Court of Appeal misselling issues addressed in your draft report, we cannot move to finalise your report until the work with our external counsel is concluded*'.

Chief Counsel B says that the rest of his report sets out the points from the conference with Counsel the previous day, but that: '*Generally, counsel acknowledged that the supervisory judgments in the draft report had force. It would be reasonable for the regulator to take account of the extent to which Equitable had been at "fault" in deciding whether disciplinary action should be brought. It is however necessary to consider also whether Equitable has breached any non-fault-based obligations. In reaching a view on what Equitable considered were the risks at any time, the report relies on the firm's explanation as given to us. We should, however, try to look at the original evidence to get verification*'.

Chief Counsel B sets out Counsel's preliminary observations:

> *The starting point is the profound implication of the House of Lords judgment which must be assumed to have been the correct statement of law throughout. From the moment that GAR and non-GAR policyholders co-existed in the same fund the non-GAR policyholders were exposed to the risk that they might inevitably be exposed to disadvantage if the value of the fund had to be used to support the costs of meeting the GAR contracts. This can be expressed as a risk that the non-GAR policyholders would not get their "asset share" in circumstances where the GAR option became valuable. Counsel agreed that the concept of "asset share" is not necessarily something which can be translated into a contractual entitlement. It was also acknowledged that there are, for example, analogous risks, that a life office's mortality experience might be such as to impact upon the value of other classes of policy not affected by such experience, that a life office's exposure to common law misselling claims is an expense which may be wholly or substantially attributed to the fund. Distinctions may, however, be drawn between those risks about which a policyholder might reasonably be taken to be aware and others which should or need to be drawn to his attention.*

Chief Counsel B goes on to set out Counsel's preliminary views on the mis-selling issues identified by Counsel for Equitable, under the headings of '*Implied term*', '*Contractual warranty*', '*Good faith duty in insurance contracts*', '*Other common law actions*' and '*Breach of statutory duty – regulatory misconduct*'. Under the first heading, Chief Counsel B reports that Counsel is:

> *... deeply sceptical as to whether it is feasible, in the light of the House of Lords judgment, to mount a case that the non-GAR policies should be construed on the basis that they contained an implied term that the asset shares for such policies would not be prejudiced by virtue of the Society's exposure to GARs. This is because Lord Steyn held that the Articles of the Society should be read as subject to an implied term that the directors would not exercise the discretion to reduce bonuses for GAR policyholders opting for the guaranteed annuity. Once that is accepted it seems inconceivable that a Court would be persuaded to imply a further term into the Articles or policies which would not be reconcilable with the House of Lords ruling.*

Under '*Contractual warranty*', Chief Counsel B reports Counsel's view to be that:

> *It is possible that the Equitable, through the sales process, made promises to non-GAR policyholders which should be given contractual effect – a collateral promise or collateral warranty to the effect that non-GAR policyholders would not subsidise the costs of meeting the GAR policyholders. This would depend, however, upon the facts of each case. The preliminary reading of the sales literature supplied to counsel suggests that such warranties were not given but this needs to be further investigated particularly by reference to the briefing material given to Equitable salesmen. We should ask to see, if they are available, the records of training and sales briefing given to Equitable salesmen.*

Under '*Good faith duty in insurance contracts*', Chief Counsel B reports:

> *The insurance contracts sold by the Equitable attract the good faith duty of disclosure. This is a duty to disclose all such facts as would be relevant to a policyholder's decision to take out a policy and would include such facts as would have been known to the Equitable on reasonable enquiry. Clearly the Equitable could not have known, at least from 1988 until some stage in the litigation, that the Court would prohibit the exercise of discretion to reduce terminal bonuses for GAR policyholders. There will however be a subsidiary issue here, namely, whether the good faith duty of disclosure required the Equitable to disclose the risks presented by the litigation which the Society faced from 1998 onwards. A breach of the good faith duty of disclosure does <u>not</u> give rise to a claim for damages but merely for rescission of the contract. However, rescission of the contract, return of premiums plus interest, may be a valuable remedy for persons who bought Equitable policies at a late stage, particularly during the course of the litigation. The good faith duty, however, is one which is conditioned by fault i.e. it would be necessary to show that the Equitable knew of a particular risk, or ought reasonably to have known of such a risk, in order to succeed with the claim. On the fact of it, this may confine the issue to such time as the Equitable knew there was a material risk that the Court would condemn its practice of awarding a reduced GAO, or, alternatively, that it could not award a lower bonus to GAOs as a class.*

Under '*Other common law actions*', Chief Counsel B notes that Counsel said: '*It is conceivable that policyholders could seek to frame their claims in negligence or misrepresentation, again both <u>fault</u> based actions*'.

Under '*Breach of statutory duty – regulatory misconduct*', Chief Counsel B records:

This is relevant to the period from 1988 when the Lautro disclosure rules came into force (July 1988) and obviously requires an analysis to be undertaken as to what the rules at any time required. The central issue is whether the rules are to be construed as being fault based or whether they can be construed as giving rise to liability without proof of fault or negligence. Putting the question simply, was the Equitable under a regulatory obligation to provide information (as to the matters which might affect the ultimate value of a policy) which must be construed as including the disclosure of facts as subsequently substantiated by the House of Lords, or, only those matters which it would have been reasonable for the Equitable to have disclosed at the time.

The language of the Lautro rules does, superficially, appear capable of creating strict obligations. Counsel acknowledge however that a Court might be slow to reach such a conclusion if this were to produce extreme or absurd results. A Court might well be persuaded to read the rules subject to the necessary implication that any disclosures which they required were disclosures of matters which were known to the Lautro member or which, with reasonable diligence, could have been discovered by the firm. Persuading a Court that this is the right approach might require the regulators (and/or the Equitable) to show what consequences would follow if strict liability were to be applied. It would be helpful in this context if counsel could be provided with some analogies. At the conference we discussed, for example, the position of a life office which had written a book of policies which, unknown to it at the time, would be likely to expose it (and consequently other policyholders) to severe claims arising as a result of AIDS. Counsel is not suggesting that these questions need to be tested in Court – they are matters they will take into account in reaching a view.

If the regulatory rules (throughout the period) either expressly or, as a matter of construction, are not fault based then the Equitable's potential liability will turn upon whether it failed to disclose matters of which it had knowledge, or, which with reasonable diligence, it could have ascertained. This leads on to particular consideration as to whether the Equitable should have disclosed the risks presented by the litigation. This can be broken down into questions as to whether the Equitable should have disclosed to potential policyholders the fact that it was in litigation as to the treatment of GAR policyholders or more particularly whether there was a risk that it would be unable to meet its liabilities to GAR policyholders without drawing on the value of the fund supporting the entire population of policyholders. At this point it will be necessary for counsel to advise on the extent to which it was reasonable for the Equitable to rely upon their legal advice as to the nature and severity of the risks which were being faced. There is a particular point here in relation to the "ring-fencing" issue. [This] *arises from the Equitable's apparent position, post-Court of Appeal, that the option of treating GAR policyholders as a class and thus ring-fencing the costs of the GARs to that class nevertheless remained open to them.*

It is not clear from the Court of Appeal judgment whether there was argument on this particular point. At what point did the Equitable receive advice that this form of ring-fencing might be challenged and, as it was, struck down in the litigation? Counsel want to see the skeleton arguments presented to the Court of Appeal and the lower Court and, if possible, transcripts of both of those proceedings.

There is a more general point relating to the Equitable's assessment of the risks which it was facing. The [PIA] *report is based upon the Equitable's account of the legal advice which it received and the decisions which it subsequently took. However, in answering questions about the Equitable's state of knowledge and what it would have been reasonable for it to disclose it will be necessary to look further and in particular at the legal advice which it received and the decisions which its board took over the period in question. We cannot* *simply rely upon what the Equitable has told us about this. Accordingly, counsel would like the FSA to examine the Equitable's legal advice in its entirety starting from the point in 1998 when the complaints from GAR policyholders began to emerge and including the advice which it received during the course of the litigation.*

Next steps

Chief Counsel B lists the further material that needed to be sent to Counsel, along with a list of the officials responsible for collation of it. Chief Counsel B also states that Counsel had made it clear that he would not wish to complete his opinion until he had seen at least a draft of Counsel for Equitable's opinion.

[**17:19**] Chief Counsel B also sends a copy of the note to FSA's Chairman, as he understood that he was going to read PIA's report over the coming weekend.

[**17:54**] An official from the Chairman's office notes that, at a meeting with the Chairman earlier that day, it had been agreed that an FSA director would take forward this work. That director had in turn said that he would hold a meeting on it early the following week, to which he would invite Managing Director A and the FSA's Managing Director and Head of Consumer, Investment and Insurance Directorate (Managing Director B).

10/06/2001 FSA's Equitable supervision file includes an article from a newspaper in which FSA's Chairman is quoted as saying, in relation to the compromise scheme, that: '*We certainly think this is the best hope for policyholders. This is not a zero-sum game*'; and '*Halifax will put in additional funds and, if members cap the liabilities through the compromise, there is no reason to think that, going forward, investors in the Equitable Life will do any worse than any others*'.

The Chairman explains that the Tripartite Standing Committee had considered whether there was a case for the government to '*step in and prop up the company*'. FSA's Chairman says: '*We didn't think the case was made for a government bail-out. There are plenty of investors whose investments do not return what they had hoped. Despite everything, Equitable Life has been quite a good performer. There will be other companies where investors have had lower returns*'.

11/06/2001 [15:42] FSA's Head of Actuarial Support sends Scrutinising Actuary F a list of fifteen issues from Equitable's draft actuarial report for the compromise scheme (dated 7 June 2001) which he had identified required clarification.

12/06/2001 [entry 1] FSA's Financial Services Consumer Panel secretariat write to Managing Director B, in advance of a meeting the following day with the Chairman of the Panel. The Panel's secretariat explain the background to the Panel, its membership and processes, along with providing a list of issues that it currently had an interest in, which included Equitable.

12/06/2001 [08:30] FSA's Legal Adviser D replies to the Chairman's questions of 01/06/2001. She says that FSA would see the Independent Actuary's report for the compromise scheme. On the second question about whether FSA would send something to policyholders, the Legal Adviser answers that: '*it depends on whether the FSA broadly approves/agrees with the proposed compromise and how clearly it is explained. The FSA can send out its own missive to policyholders if it was not happy with the substance of the scheme and/or considered that it was not explained sufficiently clearly ... At the moment it is impossible to say whether the FSA will do so or not*'.

The Director of GCD later (on 15 June 2001) advises Legal Adviser D that she should work on the basis that FSA would want to write to policyholders.

12/06/2001 [12:38]	FSA's Line Manager E writes to Chief Counsel B about some remaining legal issues in relation to Equitable's Rectification Scheme.
12/06/2001 [12:41]	FSA's Chief Counsel B sends the Head of Life Insurance, Chief Counsel A and the Director of GCD and PIA a note on '*Equitable – Standards of Disclosure in Product Particulars and Advertising*'. Chief Counsel B says that, at the conference with Counsel the previous week (see 08/06/2001 [**17:19**]), they had discussed '*the nature of the obligations created by the Lautro rules, on product particulars, and whether they were such as to create what counsel referred to as "non-fault based" obligations*'. He explains that such obligations '*might require the disclosure of matters even if they were unknown to the firm at the time or could not, at the time, have been discovered with reasonable diligence*'. Chief Counsel B's note goes on to set out the case for his view that '*the correct approach is to start from the presumption that the earlier Lautro rules were intended to be fault-based*'. The Chief Counsel seeks comments on that stance.
12/06/2001 [18:26]	FSA's Scrutinising Actuary F sends the Head of Actuarial Support some comments on his note of the previous day, along with a further eight issues from the draft actuarial report that needed to be clarified.
13/06/2001 [11:33]	Having seen a copy of Chief Counsel B's note of 08/06/2001 [**17:19**], the Head of Actuarial Support provides an outline of some other types of risk that could be disclosed to potential policyholders. Those being investment risk, mortality risk, expense risk, taxation risk and operational risk. [**11:38**] Line Manager E forwards the note to PIA.
13/06/2001 [13:00]	FSA's Director of GCD is sent a copy of FSA's note of the meeting with Equitable's Chairman of 01/06/2001, as requested. [**15:37**] Having seen the note, the Director of GCD expresses his concern to the Director of Insurance that, as FSA had not yet received the legal documentation for the compromise scheme which had been promised by 5 June 2001, Equitable's Chairman might mistakenly believe that everything was running to time and that FSA would have reviewed the draft documents in time for Equitable's Board meeting on 25 July 2001. The Director of GCD asks the Director of Insurance if he could find out what was going on. [**16:17**] The Head of Life Insurance says that FSA had received Equitable's actuarial paper and suggests that this might have been what their Chairman was referring to. The Head of Life Insurance also informs the Director of GCD that he had spoken to Equitable's Chief Executive, who had admitted that the timetable had slipped but had said that he believed that Equitable had met their target by sending the actuarial paper. The Head of Life Insurance also reports that the Chief Executive had said that the Society's solicitors were concerned that changes to the actuarial paper would have dramatic effects on the legal paper. The Head of Life Insurance tells the Director of GCD, however, that '*our separate requests to see legal advice in relation to potential misselling has made* [Equitable's Chief Executive's] *task more difficult, because their lawyers are now even more nervous about what they show us on the compromise*'. [**17:06**] The Director of Insurance informs the Director of GCD that he too had spoken to Equitable's Chief Executive that day, on other business (see 13/06/2001 [**17:17**]), and had been told that he was not yet satisfied that the actuarial paper was adequate. The Chief Executive had said that Equitable's Chairman was under no illusion on the extent of progress.
13/06/2001 [14:47]	FSA's Director of GCD comments on Chief Counsel B's note of 12/06/2001 [**12:41**] that there appeared to him to be a distinction to be made between two issues:

The first is about the standard of conduct which a rule requires. Does it require an absolute standard, or only that reasonable steps should be taken ...

The second is about how a particular rule should be construed. I believe that it is a principle of interpretation that a rule should be construed in such a way that it is possible to comply with it. The Lautro disclosure rules can be complied with if they are construed to require disclosure of information [which] *the firm knew or could with diligence have known. They cannot be complied with if they are construed to require disclosure of information where this is not the case. Therefore that cannot be the proper construction.*

13/06/2001 [17:17] FSA's Director of Insurance informs Line Manager E that he had telephoned Equitable's Chief Executive earlier that day to find out what he wanted to discuss at a meeting that had been arranged for 19 June 2001. The Director says that the Chief Executive wanted to discuss the extent to which Equitable would need to submit '*non-standard*' returns. The Society's Chief Executive had explained that he thought that there would be a need to refer to '*fundamental uncertainty*' and he would like to follow the formula used in the Companies Act reports and accounts. The Chief Executive had also expressed concern that the new directors '*will need to indicate that the matters which they certify are certified "to the best of their knowledge and belief"*'. The Director of Insurance says that he knew the Chief Executive had raised this issue previously with the Head of Life Insurance and he asks Line Manager E to find out if FSA had reached a view on it or had found any precedents.

[**17:30**] Line Manager E says that FSA were not clear what changes Equitable had in mind but '*as a matter of policy we are inclined to think that honesty is the best policy*'.

[**19:15**] The Head of Life Insurance says that he would let Line Manager E have the responses to his trawl of supervisors for qualifications that had been made to certificates.

14/06/2001 [12:02] FSA's Director of GCD sends Chief Counsel B and Counsel a draft of the proposed section 379 of the Insurers (Winding Up) Rules 2001 which he says is '*Relevant as background to the Equitable accommodation*'.

14/06/2001 [15:00] FSA and their legal advisers hold a conference with Counsel to discuss various issues about the compromise scheme. According to a draft FSA note of the meeting, Counsel advised on the following issues:

<u>Actuarial report</u>
Counsel states: '*that the reasons for the Actuary making a distinction between premium-paying and non-premium paying policyholders and a further distinction between those who paid premium in 2000 were not stated/unclear*'.

It is agreed that the alternatives to a compromise scheme should be spelt out and it is noted that: '*Such explanation might elucidate whether the compromise proposed was fair or not*'. It is recorded that the actuarial report, as drafted, did not do this, nor had it been intended to do so.

It is agreed that the 60% take-up rate for individual and group scheme policyholders required justification and it is queried why the proposed uplifts differed for the two types of policyholder (the uplifts being 23% and 20%, respectively).

FSA note that there was '*general concern because the actuary had first worked out the total cost of paying all GAR policy holders in full, then looked at sharing out the available pot according to the GAR rights, rather than taking as the starting point the value of the GAR rights.* [Chief Counsel A] *noted that Equitable might have no alternative to this approach and if so, the FSA would need to ensure that policyholders were given a very clear explanation of it*'.

Counsel queries whether Equitable's £1.5bn GAR provision had already been discounted by 60% (reflecting the Actuary's take-up rate assumption). Counsel says that, if this was the case, then GAR policyholders were getting less than the full value of their rights. Counsel asks whether this could be justified as being fair. Chief Counsel A notes that there could be a misunderstanding on this point, due to the differences between reserving requirements for the ICA 1982 returns and the Companies Act reports and accounts.

Counsel says that it seems '*non-GARs money was being used to "buy-off" the 700 pre-1975 GAR policyholders*'.

It is agreed that fuller information was needed about group schemes and the role of the actuary in appearing to determine the policyholder voting classes is queried.

<u>Role of FSA</u>
The note records:

> [Counsel] *suggested the FSA's role in a s.425 compromise was to ensure that it was fair to policy holders, to ensure that the voting was fair and that the explanatory statement was clearly written.* [Counsel] *explained that the Court will look to both the independent actuary and the FSA for help.* [Chief Counsel A] *responded that the FSA is also guardian of policyholders' interests and would intervene to protect them.* [Counsel] *stated that maybe Equitable policyholders' reasonable expectations were for full GAR rights.*

<u>Solvent entity</u>
Counsel states that '*the oddity of this proposed compromise was that an apparently solvent insurer was requiring policyholders to give up 40%* [of] *the value of their rights*'. The discussion continues:

> *It was noted that* [the report] *appeared to suggest that those who retired now could do so taking full GAR benefits and thus get £1 in the £1 at the expense of those who had to wait for the compromise who would not get more* [than] *60p in the £1. When was the clock going to stop – a cut-off date be established.* [Chief Counsel A] *replied that there was always an inherent unfairness in such compromises and there had been a similar difficulty in the ... scheme* [of a named company]. *Many policyholders would prefer to get 60% (eg, those who preferred the cash option, those who risked losing all GAR value if the market improved and so on).*
>
> [Counsel] *suggested that if the Equitable was solvent why is the Equitable not treating the with-profits fund as a closed fund and simply waiting to see if all policyholders take up their GAR rights. It was explained that this left open the possibility of top-ups and a deterioration in the market. In addition, investment freedom would continue to be restricted. If this paragraph suggested it was beneficial for some policyholders to retire now on full GAR benefits ahead of the scheme,* [Counsel] *queried whether the FSA should take steps now to ensure policyholders were informed.* [Chief Counsel A] *agreed it would be important to ensure that policyholders were made aware of the options available to them.*
>
> [Counsel] *also queried whether GAR policyholders should simply be required to stop paying further premiums. Surely one solution was to persuade GAR policyholders to give-up their "right" to pay further premiums now.* [Chief Counsel A] *noted that this would still leave Equitable's investment freedom constrained.*

<u>Involvement of the Policyholders Protection Board</u>
FSA's legal advisers query whether the Policyholders Protection Board '*should be invited to pay-in money to Equitable now as they had done in* [a previous] *case. Those present stated that this option was very unlikely to be favoured by the* [Policyholders Protection Board] *in the case of a solvent company*'. Chief Counsel A agrees to inform the Policyholders Protection Board so that they could take their own view.

Under '*<u>Next Steps</u>*', Chief Counsel A states '*on several occasions during the meeting that the FSA had regularly asked for a draft scheme from* [Equitable's solicitors] *and draft explanatory statement without success*'. Counsel note that '*the threat of the FSA being unable to approve the proposed scheme was now real given the short timetable and should be made clear to both Equitable and* [their solicitors]'. Chief Counsel A says that this had been done and would continue to be done.

14/06/2001 [15:14] FSA write to Equitable ahead of the meeting the following day. FSA set out the queries they had identified with the actuarial paper (see 11/06/2001 [**15:42**] and 12/06/2001 [**18:26**]), those being:

> *1) ... does the increase of £1.3 billion in the Society's free assets, if a scheme is adopted, arise from the combined effect of releasing the prudential margins in the GAO reserve (compared with the "best estimate") and also a lower resilience reserve?*
>
> *2) ... one of the assumptions is a smoothing adjustment of 0.55% p.a., compared with 0.3% p.a. previously. Why has this value been increased when the philosophy has not changed? That paragraph also refers to policy values being significantly "less" than asset values but should it not say "more"?*
>
> *3) ... we note that you say that age is not a material factor in the cost and yet this appears to be inconsistent with the figures shown in the table in section 4.4. Are you able to explain the comment?*
>
> *4) There is a reference ... to the Board considering several alternative schemes. This sits rather uneasily with the concept that the present draft represents a fair best estimate of the value of the GAR benefits, that are then apportioned fairly by the scheme as an uplift of benefits across all the relevant policyholders. Can you clarify what elements may be subject to review?*
>
> *5) ... you mention that the benefits under pre 1975 policies are less valuable than those under post 1975 policies. However, is it not also the case that in recent times there will have been a more significant number of people taking retirement benefits from pre 1975 policies than post 1975 policies and that the balance will shift as the older people retire? How have you allowed for this in calculating the GAR value for post 1975 policyholders?*
>
> *6) The report indicates that it is now intended that the scheme should differentiate between premium and non-premium paying policyholders. How will you operate this distinction when in practice all policyholders appear to retain the right to pay additional premiums at any time?*
>
> *7) There is no differentiation made between males and females in the proposed uplift in benefits. From the figures ... this appears plausible for most groups of policyholder, but for retirement annuitants, there might be a differential here of around 2 - 2.5% to consider. A similar (and possibly slightly higher) differential might also appear if we had regard to the present annuity rates available in the market for males and females ...*
>
> *8) The GAR/CAR ratios ... have fallen compared with the figures in the 30 April draft. E.g. for post-1975 Retirement annuities, the ratio for a male retiring at 65 has fallen from 1.436 to 1.377, and for females at 65 from 1.417 to 1.352. Does this reflect an improvement in Equitable's CAR's in the meantime?*
>
> *9) Can you clarify why those examples ... for current annuity rates were selected? For example is there an objective reason why you quote figures for Sun Life annuities for males and Norwich Union annuities for females? Is it your expectation that once the uplift has happened, people taking retirement would or should take an annuity from another provider on the open market? Are you currently encouraging people to do this anyway?*

10) You now appear to be treating group policies in broadly the same way as individual policies. In particular you are now assuming a take-up rate of 60% for both and the proposed enhancement for group policies has increased to 20%. However the figures ... show a lower actual take up rate for group business. This is clearly a difficult issue as your paper acknowledges. However, it seems to us that the group schemes may provide benefits that are more valuable than the GAR which means that the scheme members could benefit twice over – by an enhanced policy value from which they would take further enhanced benefits.

11) You are assuming a long-term interest rate of 5.5% for valuing annuity benefits. This is slightly higher than the current risk-free rate on gilts (on which market rates for this type of swap are likely to be based) but slightly lower than the rate of interest underlying the current annuity rates offered by other insurers as tabulated ... Is your assumption intended to be an average of the implied rates of interest from these two sources? More generally, it would be helpful to have some further description of the sources of material available for the different approaches indicated ... and an explanation of how these approaches have been reconciled.

12) How do you justify the assumed 60% take-up proportion in the calculation of a "fair" offer for a policyholder wishing to take all the annuity benefit in GAR form (and either maximum cash or no cash benefit)? Would this involve having regard at that stage to the difference between current annuity rates in the market, and annuity rates derived from the assumed 5.5% long-term rate of return?

13) Have you considered the application of financial option theory to the value of a GAR benefit that only becomes exercisable after a deferment period (generally equal to the number of years before the policyholder attains age 60)? This might well have an effect on the assessed value of GAR benefits by present age.

14) There is little variation in the value of GAR benefits by age for individual policies ... However, there is considerable variation for group policies. Can you provide further explanation.

15) We shall need to see separate tables for paid-up and premium paying policies, especially if you intend to distinguish the uplifts between these. In particular we would want to see adequate justification for the uplifts of 20 and 24 per cent respectively for non paying and premium paying policyholders with Retirement Annuities.

16) We are having some difficulty in reconciling all these figures for the aggregate value of GAR benefits, and their potential sensitivity to changes in the assumptions with those shown in the annual returns.

17) Paragraph 9.1.3 in appendix E comments on communications with policyholders. It is unlikely that many will understand the benefits of a percentage uplift combined with enhanced investment freedom compared with retaining the GAR. It seems to us vital that some modelling is done to show what the effects are likely to be for real typical policyholders. In any event, we are likely to want to see some information of that kind before taking a final view on the scheme.

18) Some other miscellaneous points are as follows;

> *(a) As indicated at paragraph 12 above, have you considered applying financial option theory to value (1) the GAR option available at retirement and (2) the 3.5% guaranteed accumulation rate that policyholders are also being asked to renounce?*
>
> *(b) Will the overall package be affected by movements in the value of equity (and other) investments covering the GAR liability?*

(c) What is the reason for the strange pattern of figures (moving up and down) in the table in Section 4.4?

(d) Appendix C shows some policyholders aged 83 and 80 who have not yet taken benefits. Is this an error?

(e) On a point of detail, what is the origin of the factor of "ten" for valuing each with-profits annuity in Appendix D? And if that factor is used both to determine the value of the [with-profits] *annuity and the number of votes for* [with-profits] *annuitants, does that not give a disproportionate share of the vote to* [with-profits] *annuitants.*

(f) Similarly, why are you applying the "[Minimum Funding Requirement] *liability" to derive the value of certain pension plans on pages 48, 49 and 53 of Appendix D?*

(g) Appendix E uses uplift figures of 20 and 25 per cent which is inconsistent with the information on page 5.

(h) We could not understand the calculation, or the rationale for the calculation set out for "replacement benefits" in Appendix I. We were also unclear about the calculation of the replacement benefits (page 63), and the interaction between "x %" in those calculations and enhancements of 3, 20, 23 and 24 per cent. mentioned on page 5.

(i) We noted that there was a comment that for 20% of group schemes, data could not be split by age. This seems a significant proportion of missing data and we wondered if you would be looking to fill the gap.

(j) Section 3.3.10 says that the assumptions are that for individual pension benefits are taken at 60 or 65 and that for group schemes that you assume a pattern based around the normal retirement age. Can you explain and justify the differences (if any) in the assumptions?

(k) On page 32 there is a list of GAR policies that are not to be included in the scheme. That is clearly a matter for Equitable Life. However, we would be interested to know why you have proposed excluding those policies. It would also be useful to us to know what implications that has for future reserving since presumably not buying out those guarantees leaves a degree of uncertainty going forward.

14/06/2001 [19:53] FSA's Managing Director A writes to the Director of Insurance about a letter to a Member of Parliament. The Member had written to FSA regarding correspondence that he had received from several of his constituents, who felt that they were not receiving the necessary information to make an informed decision about the proposed reorganisation of the Society. The Member had said that Equitable had not provided an illustration of the value of the GAR in respect of particular policies, but had instead enclosed a table so that clients could calculate this for themselves.

The Managing Director attaches a draft reply to the MP and invites comments. He writes further:

But he raises a perfectly fair question and I think we need to be on the front foot in responding. Personally (though I haven't said this in the letter) I feel that what would be reasonable information to give a GAR holder before he/she votes on the compromise would be either a personalised quote or generic information that was accurate to within a small margin or – a poor third – a self-calculation aid to "do it yourself". The trouble with this is that if it is simple enough for someone to do it themselves, why can't the Society do it? If on the other hand it is too difficult for the Society to do itself how can it produce a comprehensive ready-reckoner?

14/06/2001 [entry 5]	PIA send FSA a copy of their comments on Chief Counsel B's note of 12/06/2001 [**12:41**] on the standards of disclosure expected and the relevant LAUTRO and PIA rules.
15/06/2001 [entry 1]	Equitable send FSA a copy of their draft 2000 returns, ahead of a meeting on 19/06/2001. Equitable say that they would like to consult FSA on the Directors' and Appointed Actuary's certificates '*and in particular the matters to which the reader's attention are drawn in the separate statement preceding these certificates*'.
15/06/2001 [09:08]	FSA's Director of Insurance sends a copy of the draft reply to Chief Counsel A saying: '*... I wonder if saying that we "will need to define and defend" what is reasonable may go a bit too far given the fact that we have no formal locus in s425 schemes. It seems to me that our role is to ensure that what the company proposes is not unreasonable and to stand ready to intervene if we think it is. In practice we will need to explain our role and our views. But this is perhaps a little less onerous than* [the Managing Director] *suggests?*'.
15/06/2001 [10:51]	FSA's Director of GCD reports to Chief Counsel B on a conversation with Managing Director A about FSA's Chairman's concerns about the mis-selling review. Those being: '*Effectively ... he is keen to ensure that no one can say that the report is a white wash. So, for example, even if the conclusion is that there has been no general* [mis-selling], *it will be odd for the report not to recognise the possibility that some individuals might have been* [mis-sold]'.
15/06/2001 [10:55]	FSA's Legal Adviser D prepares some further questions about the compromise scheme to be put to Equitable at their meeting that afternoon. These reflect the points raised by Counsel on 14/06/2001 [**15:00**].
15/06/2001 [11:02]	FSA's Legal Adviser D asks the Insolvency Practitioner for a copy of his paper on '*counterfactuals/worst case scenario*' in the event that a compromise is not achieved. [**11:06**] The Insolvency Practitioner sends her a copy of his paper of 19/03/2001 explaining that it sets out the consequences for Equitable of a liquidation, '*although there are many alternative and better options to consider before liquidation is reached*'. [**12:59**] Line Manager E sets out the possibilities other than the compromise scheme open to Equitable as being: *a) they could go for a winding up, which for reasons established by the paper will have terrible consequences and we would expect to need to intervene to stop it happening; or* *b) they would have to soldier on and look at a much more cautious investment strategy as time goes on with bonus levels getting less and less generous, or even reduced to nil.* The Line Manager does, however, note that there were some other potential '*ways forward*', including that it '*might be possible to do some restricted insurance business transfers to other life offices (assuming there were any prepared to take it on), but (i) that could cause problems about frustrating the GARs and (ii) may not be possible because of the terms of the Halifax deal ... But those are too remote and hypothetical for us to assess at this stage*'. [**13:19**] Chief Counsel A suggests that FSA should hold a short meeting to discuss counterfactuals, as she thought that FSA '*may wish to do a bit more eg on how we might react should the solvency margin be breached*'.
15/06/2001 [11:03]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

15/06/2001 [13:09] FSA's Director of GCD writes to Chief Counsel A (copied to other officials), ahead of the meeting with Equitable that afternoon which she was attending, saying that he was rather worried about the current state of play on the compromise scheme. The Director of GCD says that Equitable's draft actuarial report on the scheme did not make a convincing case for people to give up their GAR rights. The Director says that he believed that a case could be made for this, but it would need to explain that the alternative would be far worse. He says that the report apparently proceeds on the basis that there had been an actuarial valuation of the rights of the GAR holders, and that they were being offered the value of those rights. The Director of GCD says that this might not be a convincing argument. He notes that the amount available to uplift policy values was the required reserve for the guarantees, which was the £1.5bn that Equitable had based on a likely take-up rate in GAR rights of 60%. The Director of GCD says:

> *The difficulty is that the actual value of the rights to each policyholder is not the same as his proportionate share of the expected aggregate take-up. For those policyholders who would have exercised the right, their uplift is worth only 60% of the value of those rights.*
>
> *As far as I can see, there is no way of avoiding this, because the company has no other resources to provide for the uplift. But it is highly relevant to the basis on which the scheme is justified.*

(Note: the Director of GCD had prepared a draft that was to be sent to Managing Director B but the recipient appears to have been changed after comments on it from Chief Counsel B.)

15/06/2001 [13:18] FSA's Chief Counsel B sends the Head of Life Insurance, Chief Counsel A and Director of GCD a copy of his reply to PIA's note of 14/06/2001.

15/06/2001 [15:00] FSA meet Equitable and their solicitors to get an update on the compromise scheme.

<u>Timetable for the compromise scheme</u>
Equitable set out the timetable and having done so: '*it was impressed upon the visitors that this meant that the FSA had to be effectively satisfied that it had no fundamental objections to the 425 scheme by 25th July. There would be little point in the Board sanctioning an approach and consulting members more widely if we were minded to object.* [FSA's Head of Life Insurance] *stressed that the 25 July date was very close and expressed concern that we did not have enough material at this stage to come to a view. Furthermore if more material is forthcoming we needed sufficient time to consider this*'.

In order to be able to give their '*blessing*' for the scheme, FSA explain that they would '*wish to be content that the process was thoroughly prepared and appeared adequate and transparent and that we had no reason to object to it in substance*'. Equitable say they are confident that they will be able to give FSA the reassurance required.

FSA note that '*When pressed as to what "the test" should be on ... deciding whether this scheme was better than other options* [Equitable's Appointed Actuary] *confirmed that ELAS were still grappling with this*'.

FSA highlight that they '*may face difficulties with the scheme if certain groups or even individuals are significantly adversely effected.* [Equitable's Appointed Actuary] *argued that the most extreme group effected would be GAR policyholders past retirement age, however, these policyholders would still have the right to take ... up their full GAR pension provided they did this before the effective date of the compromise. Otherwise* [Equitable's Appointed Actuary] *thought that appropriate differentiation of value issues had been considered and were broadly fair. They did, however, agree to do more analysis on pre 1975 policies*'.

Discussion of FSA's letter dated 14 June 2001
The discussion includes answers to the following questions (following the numbering in FSA's letter):

1) Equitable confirm that the '*bulk*' of the £1.3bn increase in their free assets resulted from the release related to the resilience reserve, but also '*a slightly higher valuation rate of interest could be justified in view of the shorter duration of liabilities*'.

2) On the changes to the '*smoothing adjustment*', Equitable explain that the change '*was deemed necessary because policy values and asset shares moved apart last year (because 2000 was a poor year for investment returns) and needed to be updated. The change will lead to a claw back on smoothing*'.

4) FSA record:

> *It was confirmed that the ability for GAR policyholders to top up policies (at GAR rates) would be curtailed for those policyholders that had not previously topped up their policies in the last 12 months. This change of policy would be made at a Board meeting on 27 June and would be effective from 1 July. FSA thought that the Society had previously received legal advice that they were not able to halt top ups of this nature, since it had been thought that notice needed to be given before making such a change (and the very act of Notice may encourage policyholders unaware of their GAR benefit, to top up). However, ELAS now believed that they were able to do this and will make some kind of public statement relating to the change in policy. ELAS agreed to give us advance copy of any public statement made. It was also possible that a similar benefit available in Final Salary Schemes would also be cut off on this date. Subsequently, we have learned that they are intending to give notice to policyholders of this change, though they may not be aware that the "offer" in the compromise will depend on whether or not they are paying premiums. GCD have flagged this as a potential issue of concern that needs to be understood and addressed.*

5) For the pre-1975 GAR policies, Equitable confirm that '*benefits were much less generous than after this date but because the number of pre 1975 policyholders of this class were so few (about 700, less than 0.5% of GAR policyholders) there was less of a need to consider balancing considerations*'. FSA tell Equitable that they were not yet persuaded that the 3% uplift for these policies was a fair offer.

10) Equitable state '*the GAR option had now been given broadly the same value for groups as it had for individuals*'. FSA say they had not received sufficient justification for the take-up rates used and go on to record:

> *It was still not currently known why Group schemes had a lower level of take up. Anecdotal evidence pointed to many of the policy values being small (and not worth the hassle of taking out the GAR). Furthermore other in house schemes have higher mortality and good investment performance which might make their schemes more attractive, and group policyholders seem more inclined to take cash.*
>
> *The general principle of the scheme is to take into account the economic cost based on the current levels of take up and then divide this up between the GAR policyholders.* [FSA's Chief Counsel A] *expressed some concern that the scheme was based on costs rather than focussing on the value of the individual rights. It was also possible that a Judge might want to focus on compensation for the value of the individual's GAR rights.* [Chief Counsel A] *thought that it would be crucial to be very transparent about how this issue was being dealt with so that policyholders were aware of how much they were being asked to give up.*

> [Equitable's Appointed Actuary] *thought that these type of arguments went to the core of what the scheme was about and it was important to note that the scheme was a compromise. He added that currently there was no certain outcome for GAR policyholders. For example an important variant was interest rates. If they rose significantly the GAR policyholders could be seen to be getting something for nothing (as the GAOs lost value) to the detriment of the non GARs.* [Chief Counsel A] *noted that GAR policyholders who did not intend to take the GAR would also be better off.*

Many of the other points are agreed or further information promised.

Under '*Action Points*', Equitable agree to:

- formally respond to FSA's letter of 14/06/2001;
- complete the actuarial part of the scheme and send it to FSA the following week;
- provide a roadmap or justification for the scheme;
- provide a statement on revoking the guaranteed annuity rates from applying on further premiums paid;
- provide details on the principles for uplift;
- clarify the materiality on pre-1975 policies;
- provide a definition of a group scheme;
- provide an explanation of how certain approaches in one part of the actuarial paper would be reconciled;
- expand a table within the scheme document;
- provide an update on their solicitors' work on policy classes; and
- provide a reconciliation of the different GAR values given in various documents.

FSA agree to give Equitable an indication of what their '*no objection*' or '*fair and reasonable*' test would be.

On a version of the note of the meeting, FSA's Chairman comments to the Director of GCD that: '*Since they expect to go to court on 5/10, and there is a risk that our review may not be published before then, we need to consider just how material non-publication will be to those who face a choice*'.

15/06/2001 [15:41] FSA's Chief Counsel B seeks help from the Head of Actuarial Support in relation to his work on Counsel for Equitable's opinion and PIA's enquiry into mis-selling by Equitable. The Chief Counsel explains that Counsel had advised that '*even if the Equitable has been guilty of a breach of duty of proper disclosure it would need to be established whether or not policyholders have suffered any financial loss as a result of that* [non] *disclosure. It is on that question that I would welcome some information which I can pass on to Counsel*'.

[**17:39**] The Head of Actuarial Support advises Scrutinising Actuary F that they would need to think carefully about how FSA approach this, as FSA had information about conventional regular premium endowment policies but probably did not have readily available information on with-profits bonds or pensions policies.

15/06/2001 [entry 11] The OFT send FSA a copy of a letter that they had sent that day to Equitable about the transfer of their enforcement action under the Unfair Terms in Consumer Contracts Regulations 1999 to FSA. The OFT's letter says:

We have agreed that the FSA is best-placed to take effective industry-wide action in the interests of all investors. It gained powers to enforce the Regulations on 1 May and began the wide-ranging review of with-profits policies. The review includes scrutiny of the fairness of the terms and conditions which concerned us. Moreover, the FSA's review covers the whole industry and not just Equitable Life. Today we transferred the numerous complaints we have received about Equitable Life including those relating to allegations of mis-selling and other matters.

18/06/2001 [09:48] FSA's Chief Counsel B sends the Head of Life Insurance and the Head of Actuarial Support copies of further instructions which had been sent to Counsel on 15 June 2001 as they had, at the conference on 14/06/2001 [**15:00**], asked for '*some clearer indication for the regulator's policy in this area; for background information about the policy intentions which informed conduct of business rules; for a clearer explanation of what rules applied at what time, counsel observed that the rules referred to in the addendum to* [Counsel for Equitable's] *opinion appeared to be very different from those cited by the PIA in their draft report*'. The further instructions contain the information requested and are drawn from the views set out previously at 12/06/2001 [**12:41**] and 13/06/2001 [**14:47**].

18/06/2001 [11:40] Further to Chief Counsel B's request of 15/06/2001 [**15:41**], FSA's Head of Actuarial Support asks an FSA actuary to find out how much information FSA possessed about the market performance of with-profit companies in terms of payouts at both maturity and surrender for different types of contract.

18/06/2001 [15:29] FSA's Line Manager E writes to Scrutinising Actuary F about the draft certificates to the returns supplied by Equitable, having compared them to the requirements of Regulations 28 and 29 of the ICAS Regulations 1996 and to Equitable's previous returns. He explains that there were two changes to the proposed returns, with Equitable making additional statements on '*the historical position of the* [House of Lords'] *judgment and its consequences, including the uncertainty on future GAR take up (and cost), the payment of further consideration by Halifax Group plc and the fact that no-one other than* [Equitable's auditors] *who has to sign a certificate was appointed to the relevant position during that period to which the certificate relates*'. Line Manager E says that the information seemed helpful, was not misleading and its inclusion should be welcomed.

18/06/2001 [16:00] FSA hold an Equitable Life Lawyers Group meeting. Chief Counsel B gives a summary of the discussion with Counsel for FSA about Counsel for Equitable's Opinion on mis-selling of 7 June 2001. He reports that the advice of Counsel was that there needed to be significantly more work done before advice could be given.

Chief Counsel B reports that, at the meeting on 14/06/2001 [**15:00**], only Equitable's draft actuarial report had been discussed, as there had been no update from Equitable's solicitors on the proposals for the different policyholder classes. Chief Counsel B also informs the group of the discussions that had taken place with Equitable and their advisers on 15/06/2001 [**15:00**]. He notes it was clear that Equitable considered their current compromise proposals to be final. Chief Counsel B notes that the Director of GCD had expressed his concerns to the Director of Insurance and Managing Director A (see 15/06/2001 [**13:09**]) and had advised that the case for the compromise scheme had not been made.

18/06/2001 [17:37] FSA's Head of Actuarial Support informs the Head of Life Insurance, Line Manager E and the Director of Insurance of an informal meeting that afternoon with the Independent Actuary for the compromise scheme. The Head of Actuarial Support reports that the Independent Actuary had expressed some concerns about the scheme and had indicated that he was far from being happy with it. In particular, he was not convinced that the deal was reasonable for non-GAR

	policyholders. The Independent Actuary had also mentioned that he had not seen FSA's letter of 14/06/2001 or their comments on the actuarial paper. The Head of Actuarial Support suggests that there was a strong chance that the Independent Actuary would not give his approval to the scheme unless Equitable were able to provide a more substantive rationale for the details of it. [**18:21**] Chief Counsel A suggests to the Director of Insurance that he should ask Equitable's Chief Executive, when they met the following day, whether FSA's letter of 04/06/2001 [**12:41**], (about defects in the Independent Actuary's terms of reference), had been discussed with the Independent Actuary.
18/06/2001 [17:54]	The Personal Investment Authority Ombudsman send FSA a copy of a letter they had sent to Equitable on 15 March 2001 about the Society's Rectification Scheme.
18/06/2001 [18:08]	FSA's Chief Counsel B provides advice to Line Manager E on the Rectification Scheme, in response to his note of 12/06/2001 [**12:38**]. The Chief Counsel explains that his earlier advice '*suggested that it would be inappropriate to agree to an arrangement which effectively deprives the policyholder access to* [the Personal Investment Authority Ombudsman], *but as I see it this is precisely what the scheme will do*'. The Chief Counsel advises that Equitable's explanations '*are very unclear about how they will inform policyholders about the availability of the Ombudsman – I think they should be pressed to make the position clear, and for our part we should make clear the limits we think should be observed in terms of the Equitable's ability to exclude jurisdiction*'. Chief Counsel B also provides some advice in relation to the LAUTRO/PIA Rules on advertising and on '*Product Particulars*' and 'Key Features' documents. [**18:16**] Line Manager E says that he shares Chief Counsel B's '*unease over* [Equitable's] *interpretation of what had been said previously. Intuitively it seemed odd to say "If you disagree with our view you may have it reviewed by one third party. You may choose whether to opt for a third party under our direct control or one who is independent".*' [**21:32**] PIA inform FSA that Equitable had told them that, due to the concerns expressed by PIA and the Personal Investment Authority Ombudsman, the Society now proposed that the arbitrator should act as an adviser and mediator and to permit policyholders who had used this avenue to refer the matter to the Personal Investment Authority Ombudsman, should they remain dissatisfied.
18/06/2001 [19:31]	Equitable's solicitors send FSA a copy of a paper they had prepared on 6 March 2001 on the determination of voting classes.
19/06/2001 [09:54]	FSA's Chief Counsel B informs Managing Director A and the Director of Insurance that he agreed with the thrust of the proposed reply to the Member (see 14/06/2001 [**19:53**]) and that there was no regulatory reason why Equitable should not provide personalised valuations of GAR policies. The Chief Counsel says that he assumed that FSA '*would be concerned if the Table were to give discounted values based upon the actuarial assessment of the take up rate for GARs – or at least if they do so without informing policyholders that this is the case*'.
19/06/2001 [10:01]	FSA's Head of Actuarial Support comments on Equitable's solicitors' paper that he sees: '*very little match between this note (evidently produced in March!) and the recent draft actuarial report. This note suggests that* [Equitable's solicitors] *are looking for a sophisticated distribution of the "substitute benefits" that reflects the different potential interests of policyholders holding around 58 (or more) different types of policy. The actuarial report (dated 7 June) has identified at present less than 10 such sub-groups, I believe, for which different levels or types of benefits might be given*'.

19/06/2001 [16:22]	FSA thank the Personal Investment Authority Ombudsman for the copy of their letter (see 18/06/2001 [**17:54**]) and note that they understood (from Line Manager E) that Equitable might now be '*shifting back to using an independent "assessor" not arbitrator, and acknowledging that policyholders should not be deprived of their right to pursue a complaint with the Ombudsman*'. FSA comment that they thought that was the correct approach.
19/06/2001 [16:28]	Further to 18/06/2001 [**18:08**], Chief Counsel B queries with Line Manager E how the Rectification Scheme fitted with the compromise scheme. [**17:45**] Line Manager E explains that the compromise scheme would buy out GAR rights that had not yet been exercised, rather than the Rectification Scheme which was relevant to GAR policyholders who had not taken an annuity at their guaranteed rate before the House of Lords' decision.
20/06/2001 [09:55]	Following further discussion of the proposed reply to the Member of 14/06/2001 [**19:53**], FSA's Head of Actuarial Support says that he felt '*apprehensive about placing too much emphasis on these "policy values"*'. The Head of Actuarial Support explains that such policy values '*are intended only to be an illustration of the amount that may be available to meet any claim. Indeed, we know from our meeting yesterday that* [Equitable] *are becoming increasingly concerned about the widening gap between these policy values and the actual investments held to cover them. Accordingly, they are looking at contingency plans to cut the final bonuses that have been previously added to these illustrated policy values in the event of any significant fall in equity values, and would also like to be able to make further significant switches in their investments. In particular, they are worried about the possibility of a 10-15% fall in the markets which could leave them technically insolvent on the statutory basis (and could also cause problems then with their financial reinsurance)*'.
20/06/2001 [entry 2]	Equitable send FSA copies of correspondence that they had had with the Guernsey Financial Services Commission about the differential treatment of international policyholders. Equitable's reply to the Commission states: *I'm not sure that I agree that a new angle has been reopened up by the* [Society's Counsel's] *Opinion. The issue of ring fencing was clearly before the House of Lords and, while it is undoubtedly extremely difficult to discern their intentions, there is no doubt whatever that they were aware of the existence of non UK business, and that they appeared content to allow a measure of ring fencing in that case. Whether or not this is consistent with the remainder of their judgement is virtually impossible to say ...* *We are in regular dialogue with the FSA as you may imagine, and we will raise this issue specifically at our next visit ... We have asked* [Counsel] *to undertake further work to see if clarification of some of the more obscure implications of the judgement is achievable.* FSA's Line Supervisor C notes: '*I don't remember this point, do Guernsey want their policies ring fenced and excluded from GAR exposure? Or are they concerned about being ring fenced in some other way?*'.
20/06/2001 [entry 3]	FSA inform Counsel of developments on Equitable, providing copies of the material that Equitable had provided to their Counsel. FSA also refer to other issues.
21/06/2001 [17:40]	Equitable send FSA a copy of a report entitled '*Management Report on the Compromise Scheme Strategic Decisions Group*'. Equitable explain that it detailed the compromise scheme, its principles and the arguments in favour of it. Equitable ask for comments on the paper by 26 June 2001.

21/06/2001 [17:56]	Equitable send FSA written answers to the questions raised in their letter of 14/06/2001. In relation to question 10, Equitable say that:

This is a difficult issue. Our current thinking subsequent to the 7 June Actuarial Report is that the calculation of enhancements should be in two stages.

In the first stage, the total costs of GARs would be calculated on a "best estimate" basis using assumptions based largely on previous experience (other than the interest rate assumption, of course). For Group Pensions business that would mean basing the costs of GARs based on a take-up rate which was closer to 40% rather than being 60% (as in the 7 June report). That would establish a value for the costs of GARs which would be met by non-GAR policyholders.

In the second stage, that calculated total cost of GARs would be allocated on the basis of the relative potential values of the GAR options (by assuming a 100% take-up rate by all policyholders). The enhancements for Group Pensions would be exactly the same as for Individual Pension Plans and would take no account of the fact that the take-up rates for the two groups of policy were significantly different.

This approach is illustrated by the following example calculation using the values tabulated in section 4.4 of the 7 June Actuarial Report. The first column shows the first stage calculation of the total amount to be distributed assuming a 40% take-up rate for Group Pensions and 60% for all other groups of GAR business, which is £1,363m. The second column shows the second stage calculation based on a 100% take-up rate (and the same GAR annuity format for both Group Pensions and Individual Pensions business) to determine the allocation percentages shown in brackets. Those percentages are applied to the £1,363m total value from the first column to calculate the value allocated to each of the three groups of GAR policy which is shown in the third column.

	GAR value – experience	*GAR value – potential*	*GAR value – allocated*
Retirement Annuities	*£939m*	*£1,565m (62%)*	*£845m (62%)*
Individual Pensions	*£217m*	*£362m (14%)*	*£196m (14%)*
Group Pensions	*£207m*	*£597m (24%)*	*£322m (24%)*
Total	*£1,363m*	*£2,525m (100%)*	*£1,363m (100%)*

	Policy Value	*GAR value allocated / Policy Value*
Retirement Annuities	*£4,395m*	*19.2%*
Individual Pensions	*£929m*	*21.0%*
Group Pensions	*£1,532m*	*21.0%*
Total	*£6,856m*	*19.9%*

The fact that members of some group pension schemes can receive very generous annuity rates from their schemes is not the concern of the Society and is something that cannot be measured (i.e. because the Society has no details).

22/06/2001 [10:41]	FSA's Chief Counsel B informs the Head of Actuarial Support that Counsel would like to meet him the following week to discuss the impact of the House of Lords' decision and what Equitable would have done had they previously acted in accordance with it.

22/06/2001 [12:14] FSA's Line Supervisor C informs the Head of Life Insurance and Line Manager E that, in relation to the note of the meeting with Equitable on 15/06/2001, Chief Counsel A: '*felt uncomfortable with subsequent developments relating to the change of policy re top ups. In sum, when relinquishing the right to top up are GAR policyholders going to be made aware that if they have not topped up their policy in the last 12 months they will not fare as well as GAR policyholders that have*'.

25/06/2001 [09:07] Equitable send FSA a summary of the key points and action arising from their meeting about the compromise scheme on 15/06/2001.

25/06/2001 [10:17] Equitable send FSA weekly customer servicing information, which no longer includes data on the amounts leaving the with-profits fund.

25/06/2001 [13:16] Commenting on Equitable's response of 21/06/2001 [**17:56**] to FSA's questions about the compromise scheme, FSA's Head of Actuarial Support says that it was largely as expected but notes that not all the information had been provided. He also says that the answer to a question about how the scheme intended to deal with group scheme policyholders looked '*dubious*' and should be referred to FSA's legal advisers.

25/06/2001 [15:27] FSA's Line Manager E reports on a conference call that he had just had with Equitable about the compromise scheme and the work that Equitable needed to do before a meeting of their Board on 25 July 2001. The Line Manager says that he had agreed to '*come up with a list of* [FSA's] *key criteria for judging the proposals*' and to provide comments on the management paper. Line Manager E had also informed Equitable of the need for a '*properly argued and supported package*' of materials for FSA to consider, which was presently missing.

25/06/2001 [16:00] FSA hold an Equitable Life Lawyers Group meeting. Chief Counsel B notes that, in relation to the compromise scheme, Counsel had expressed the view that '*FSA's interest lay in the fairness of the scheme proposed by Equitable*' and that '*it was probably inappropriate for the FSA to form a view as to the number and make up of the classes of policy holder as this was a matter to be determined at the final hearing and not at interlocutory stage*'.

Chief Counsel B informs the group that a lawyer had been appointed on secondment to look at the complaints under the Unfair Terms in Consumer Contracts Regulations 1999 about Equitable's application of the market value adjuster.

Under '*Any Other Business*', Chief Counsel A notes that Equitable's Board was due to consider the compromise scheme proposals on 25 July 2001 and that this date: '*was now quite close and as yet the FSA had not received fundamental GAR and non-GAR material and some that had been received was not in the correct form …* [Chief Counsel A] *stated that no draft scheme had yet been seen only internal uncompleted actuarial reports plus various pieces of oral information provided at weekly meetings*'.

Chief Counsel B informs the group that: '*it had still not been resolved as to whether the Equitable's legal advice and board minutes could be shown to the FSA. Whilst the company had not yet refused access they probably would do so on the basis of legal advice. It was generally felt that we could not demand the advice as there was no relevant power in* [ICA 1982]'. Legal Adviser A undertakes to confirm the position.

25/06/2001 [16:46] FSA's Line Manager E prepares '*some fairly general propositions*' on the tests that FSA might apply for evaluating the compromise scheme, which are set out under the following headings:

Is it better than any alternatives?
Line Manager E notes that the compromise scheme, by its very nature, involved some kind of loss of rights, and that: '*It would ... seem likely that were the offer a more attractive proposition for policyholders than the rights they currently enjoy, that the Society would not need to go through this process to achieve its objectives*'. He says that, therefore, FSA:

> *... need to consider whether the alternatives are any better. The alternatives appear to be a sale of the business to achieve new capital support (ruled out), a winding up (or similar) process under the Insolvency Act 1986 (undesirable consequences) or continuing without the benefit of the compromise.*

Is it fair?
Line Manager E notes that it would be difficult to achieve fairness to all policyholders where they did not all have the same kind of rights that were being given up, and that FSA:

> *... need also to recognise that may be difficult where there are a range of uncertainties that make it ... impossible to establish the future worth of the rights in any particular case. By implication this means that an averaging process must be used. Our analysis must therefore consider whether the basis for the averaging is fair, so that it does not aim or have the effect of treating one group materially, and deliberately, worse than another.*

Is it reasonable?
Line Manager E notes that the answers to the first two questions were important elements in deciding whether the scheme was reasonable.

What are the justifications?
Line Manager E explains: '*In order to reach a view on these things, we will require some explanation of why a particular methodology was used to decide between different potential choices. This includes having an understanding of the underlying assumptions made to decide on the variables to be used for the calculations, and having evidence to justify those choices*'.

Burden of proof
Line Manager E says: '*Notwithstanding the above, there are difficult choices about the severity of the test. For example, do we have to be satisfied that the scheme is "fair" or "not unfair". To the extent that there is likely to be a material difference between the two, it seems to me that "not unfair" is the more appropriate test on the basis that if there is a grey area, the voting and court process provide adequate additional safeguards to ensure that an unfair (etc) is not adopted, without the FSA needing to be interventionist to the point of preventing individuals exercising their own reasoned choices*'.

26/06/2001 [11:44] FSA's Head of Life Insurance sends Line Manager E a note on the '*Development of FSA's Position*' with regard to the compromise scheme, further to a brief discussion about the issue that morning between the Head of Life Insurance, the Director of Insurance and the Director of GCD. The Head of Life Insurance explains that it had been agreed that it would help to '*concentrate our minds*' to focus on two practical aspects, with the first being:

> *Our response to Equitable's request for an indication of the criteria against which we would judge their compromise. You have already set some work in hand on this. I set out below my attempt at some criteria, taking account of the discussion with* [the Director of Insurance] *and* [the Director of GCD]*:*
>
> *1. The compromise should be as fair as possible to all policyholders, bearing in mind the practical constraints (including the timing constraint imposed by Halifax's deadline for further financial support);*

2. The proposal should leave no policyholder worse off than he or she would be in the absence of a compromise, bearing in mind the likely alternative scenarios;

3. The compromise should be fair enough to enable the Court to enforce it on all policyholders.

The Head of Life Insurance asks Line Manager E for comments on this '*first shot*'. Secondly:

We agreed that it was not too soon to begin to consider what we would wish to put in an FSA information sheet to policyholders, assuming that we decide in due course to issue one. It is likely that there would need to be at least two elements to this:

1. Our comments on the compromise scheme (which we cannot draft yet, as we do not have enough information from Equitable);

2. A description of the alternatives if the scheme is rejected. These would include:

(a) Winding up

(b) The company staggering on. This scenario should be broken down into at least two alternatives, representing "best" and "worst" scenarios. The "best" scenario would be a fund which was still exposed to GAO liabilities, including the risk of further top ups; the "worst" scenario would envisage in-fighting between different groups of policyholders, costly litigation draining the fund, and the departure of the current chairman and chief executive, and possibly other members of the board and management.

The Head of Life Insurance asks Line Manager E to prepare a draft, with contributions from others, including their Insolvency Practitioner, on the winding up alternative, and from their actuaries, on the financial implications of the various scenarios, '*which ... should be quantified as far as possible*'.

[**14:15**] FSA's Managing Director A says that this was going to be '*a hugely important piece of work ...* [and] *it is vital that we get the whole of the FSA's relevant resources in on this*'. On the substance of what FSA needed to do, he writes that he was not clear whether Equitable's proposals involved non-GAR policyholders giving up any rights ('*misselling or whatever*'), and:

... This seems to me to matter enormously, because it will affect what we are able to say. Personally, I hope the compromise covers everything, as I see no other way to clear the ground and let the Society make a fresh start; but if it is to do that, there are more issues for us to cover. What are we to say about the worth of the possible claims for mis-selling especially given the potential conflict seeing that we are one of the parties who would almost certainly be involved in a dispute over whether or not mis-selling had occurred.

FSA's Managing Director raises a second point, that he believed:

... [the Head of Life Insurance's] *criterion "no-one should be worse off than they would be under no compromise" is a highly debateable one. First, is it tenable? It would seem to mean current GAR holders probably being offered more than a compromise in aggregate can "afford" (the capital uplift in return for loss of the income guarantee is obviously pretty unattractive for some sub-sets of the GARs). The only way it might be tenable would be if the compromise were all-inclusive and if the non-GAR holders' chances of undermining the* [House of Lords'] *judgement seemed pretty high (that might be enough to frighten the GAR holders into accepting less) and/?or if the compromise were much more complex than hitherto anticipated. [This would allow a closer correlation between current value of individuals' guarantees and what was offered in the compromise; its great drawback is the likelihood that it would proliferate the number of classes and render acceptance very unlikely].*

Second, there must be other versions of the criterion that might attract more support [in economic jargon this is a welfare maximisation problem and there are numerous different optima that can be postulated. If so we need to have fleshed out how the compromise would look on these different criteria].

Managing Director A raises a final point which is his '*biggest worry (on which we have touched on several times in recent weeks)*', that is:

> ... *what information can reasonably be provided to policyholders.* [The Head of Life Insurance] *has clearly picked up the need to address the counterfactuals – they will be difficult. Where I have* [no] *real feel is over information on the compromise itself.* [Briefly], *most policyholders ... probably feel they are owed nothing less than a "market valuation" – of undoubted veracity (and thus preferably not provided by Equitable) for their own personal situation (in some cases with bells and whistles e.g. "what would my market valuation be if there is no compromise and I put in £x a year for the next 5 years?") Can such things be provided? I rather doubt it. Can people be given a "do-it-yourself" pack? If yes then why can't the Society do it for them? And so on.*
>
> *What I fear we are going to get is some kind of generic representation of the "typical policies for a man aged 40 who has been contributing for 10 years" variety. Surely we are going to have to satisfy ourselves that what is proposed is the best that can reasonably be done in the circumstances.*

FSA's Managing Director A concludes by saying: '*I also fear (I hope someone can prove me wrong) that a terrible* [public relations]*/real quagmire exists for us over the whole issue of the subtle tradeoffs there will be between overall cost, fairness to the individual, simplicity of the scheme, and information that is needed for a proper assessment by the individual*'.

[**16:34**] The Head of Life Insurance says that FSA would involve their Consumer Relations Directorate and others. He says that FSA were pressing ahead with the aspects of the scheme that were not dependent on issues that Equitable were yet to make decisions on.

[**16:58**] Line Manager E provides some further information in response to the Managing Director's comments. On Equitable's timetable, he says that Equitable were expecting FSA to give a '*no fundamental objection clearance*' before their Board meeting on 25 July 2001. On his first point, Line Manager E explains that Equitable's current proposals were for a compromise of GAR rights only but: '[Counsel] *has been commissioned* [by Equitable] *to report back in time to inform the final design, and decisions on what should be done about possible miss-selling claims will be taken once they have received his report. At the moment they are working on the basis that there is no grounds for action, or that if there were the cost would be minimal*'.

On his second point, Line Manager E writes:

> *That "No-one" should be "worse off" is clearly a very high hurdle to clear, and in its strictest terms would make any scheme unattractive because of its cost. I suspect we need to think of people not being worse off in aggregate (against some benchmark yet to be determined – but presumably centred around current experience about the variables on interest rates, annuity rates, mortality, retirement patterns and so on), and that within that generality, no one is being treated in an especially discriminatory and disadvantageous way.*

Line Manager E says that he shared the Managing Director's initial thoughts on the information to be provided to policyholders and that:

> *... I think to the extent our powers (including those of persuasion) allow, we will need to ensure that the Society takes this very seriously ... Presumably the court will not accept the scheme unless it clearly specifies what people will get (and people can be*

demonstrated to have known this at the time they voted). Given the discretionary nature of the benefits under a with-profits contract, there must be a process that will lead to GAR policyholders being given some kind of statement. What is possible or desirable needs thinking through very carefully since, among other things, there will be a trade off between the amount of information and consumer friendly presentation. I had proposed to bring [FSA's Consumer Relations Directorate] *more directly into the loop once the package had been settled sufficiently for us to work up some ideas. That detailed information probably needs to* [be] *ready for the end of the summer when the offer is formally made, but there is clearly a communications job to be done before then.*

26/06/2001 [13:17] FSA's Head of Actuarial Support tells Chief Counsel A that he was uncomfortable with Equitable's response to question 10 raised on 14/06/2001 [**15:14**] and he suggests that FSA should seek the advice of Counsel on it. The Head of Actuarial Support also says that FSA did not yet have enough information '*to feel comfortable with the level of uplift to be offered to each possible sub-group of policyholders, and in particular the extent to which this might vary by age*'.

27/06/2001 [08:56] FSA's Managing Director A thanks Line Manager E for his comments of 26/06/2001 [**16:58**], adding that his own feeling '*is that it is quite impossible for us before 25 July to give them the "no objection in principle" reply that they seek*'.

27/06/2001 [14:30 - 18:30] FSA hold a conference with Counsel with the purpose '*to discuss/decide whether the FSA could approve in principle Equitable's proposal to base s.425 Compromise on a value of GARs discounted by 60%*'. FSA record that:

> [Counsel] *pointed out that if the Equitable was insolvent then there would be a calculation of the just estimate of the full GAR rights.*
>
> *It was agreed that unless the threat of insolvency was more real than presently indicated in Equitable's documents to-date, a s.425 Compromise could not be justified ... the Actuarial Report dated 7 June 2001 did not indicate that the With-profits fund was under any threat of potential insolvency.*
>
> [Chief Counsel A and Scrutinising Actuary F] *explained that Equitable's statutory returns as of 31.12.2000 showed assets of approximately £400m only ie the Equitable was holding £1.6bn to cover £1.2bn for a total fund of approximately £34bn.* [Chief Counsel A] *said that the FSA was satisfied that the Equitable's financial situation was sufficiently uncertain to justify a s.425 Compromise.*
>
> ... [Counsel] *warned that a court would be unlikely to sanction a s.425 Compromise which required policyholders to give up valuable legal rights if it was solvent.* [Counsel] *queried whether a regulator should permit such a use of the s.425 procedure. Further there was some doubt in legal circles as to whether it should be used by solvent insurance companies.* [Chief Counsel A] *said in* [the case of another company] *that s.425 Compromise policyholders were giving-up only the potential right to a future distribution of assets.*

Counsel states that '*FSA could only provide the indicative approval the Equitable sought by its 25th July Board Meeting if it was satisfied that the s.425 Compromise was better than any other alternatives*'.

Counsel agrees that Equitable's answer, in response to question 10 in FSA's letter of 14/06/2001, that '*Equitable would calculate the cost of the GAR at 40% and then distribute on the basis of 60% take-up was highly questionable*'.

Chief Counsel A says that an option that had not yet been explored by Equitable was to buy out GAR top up rights only. It is noted that this would '*deal with the supposed instability of the With-profits fund but would leave the Equitable with the problem of reserving on a prudent basis of full take-up of GAR rights*'. Counsel suggests that FSA might need to require an explanation for why Equitable had based the compromise scheme on a 60% take-up rate of GARs when they had been required to set their reserves on a 90% take-up rate.

Chief Counsel A also reports that Equitable's Board were that day considering whether to '*exercise its contractual right not to allow policyholders to top-up where no premium had been paid in the previous year*'. FSA note that it had been agreed that '*notice to policyholders was an essential requirement*' and that '*Counsel queried whether the Equitable could now enforce this right having not done so for 20 years*'.

Under '*Conclusion*', it is recorded that '*Counsel advised that if s.425 was properly reasoned then there was no legal reason why the Equitable should not put forward a compromise based on the cost of the GARs rather than value and that FSA could properly indicate its approval to such an approach*'.

Under '*Action Points*' it is agreed:

- *GAD to do further work on the value of GAR rights as opposed to the cost.*
- *Equitable to be asked to consider valuing GAR rights by the Financial Option Theory method.*
- *Equitable to be asked to do further work and provide an explanation for the lower take-up rates of GAR rights by group schemes.*
- [Chief Counsel A] *to raise with Equitable/*[their solicitors] *the need for proposed Pre-Directions Hearing on voting classes.*
- *FSA to send a letter to Equitable supporting in principle the cost as opposed to value approach in calculating GAR rights.*

Submission of the 2000 regulatory returns

28/06/2001 [entry 1] **Equitable submit their 2000 regulatory returns to FSA**. Accompanying those returns are copies of the Society's annual report and accounts for 2000, prepared in accordance with the Companies Act 1985 and dated 11 April 2001. (See 30/04/2001 [**17:13**].)

The returns include the following information about Equitable's business and financial position as at 31 December 2000.

The returns
Equitable's returns are submitted in one part covering Schedules 1, 3, 4 and 6 to the ICAS Regulations 1996.

Schedule 1 (Balance sheet and profit and loss account)
Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14, 15 and 17. Form 9 summarises the Society's financial position at 31 December 2000 as follows:

Long term business admissible assets	*£34,257,185,000*
Total mathematical reserves (after distribution of surplus)	*£32,894,405,000*
Other insurance and non-insurance liabilities	*£730,961,000*
Available assets for long term business required minimum margin	*£631,819,000*
Future profits	*£1,000,000,000*
Total of available assets and implicit items	*£1,631,819,000*
Required minimum margin for long term business	*£1,220,923,000*
Explicit required minimum margin	*£203,487,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£428,332,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£410,896,000*

In Form 13, Equitable set out their admissible assets.

In Form 14, Equitable set out their long term business liabilities and margins.

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 45.

In Form 40, Equitable provide a revenue account.

In Form 41, Equitable provide an analysis of premiums and expenses.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
In the 2000 returns, Equitable change the presentation of the report of the valuation of their long term liabilities. Instead of presenting a gross premium valuation in the main part of Schedule 4 and a net premium valuation as an appendix, Equitable present a gross premium valuation only.

As in previous years, the results of the valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 of Equitable's returns provide the information required by paragraphs 1 to 23 of Schedule 4 to the ICAS Regulations 1996 and includes Forms 46 to 49, 51 to 58, 60 and 61.

Schedule 4 (text)
Equitable state that the valuation is made in conformity with Regulation 64 of ICR 1994.

In response to paragraph 4, Equitable provide 11 pages of information about their non-linked contracts. Most of the description provided is identical to that supplied in the previous returns.

In relation to all accumulating with-profits contracts, in paragraph 4(1)(a)(i) Equitable include a slightly expanded description from the previous returns of the circumstances in which – and the methods by which – adjustments could be made to surrender payments. The explanation provided says that:

> *The purpose of the financial adjustment is to protect the interests of policyholders who are not choosing to surrender policies early while still providing those who are surrendering policies with a fair and reasonable value. The current method of adjustment is to pay a proportion of the full policy value but there is no guarantee that that method will be used in future. In particular the Society has set the financial adjustment at a proportion of the final bonus in the past and may do so in the future or may introduce another method.*

In response to paragraph 5 of Schedule 4, Equitable provide 74 pages of information about their linked contracts.

In paragraph 6, Equitable set out the general principles and methods adopted in their main valuation.

Following amendments made to Regulation 72 of ICR 1994, Equitable include a new paragraph in this section on their approach to reserving for surrender values to reflect those amendments. They state:

> *For accumulating with-profits business the reserve for the amount of a cash payment secured by the exercise of an option to surrender the policy has been calculated as the discounted value of future guaranteed benefits. That amount is consistent with that which could reasonably be expected to be paid if the option were exercised having regard to representations to policyholders, in the event of a significant level of policy discontinuances. The bases to be used in the event of surrender or transfer are not guaranteed and, the primary objective when setting the basis is to protect the interests of the continuing with-profits policyholders.*

For with-profit retirement annuity contracts, as in previous years, Equitable state that '*benefits have been valued on the basis that the benefits will be taken at age 60 or, if that age has been attained, at the valuation date*'.

For with-profit personal pension plan contracts, Equitable state that '*benefits have been valued on the basis that the benefits will be taken at age 50 or, if that age has been attained, at the valuation date*'. This is a change from the previous year, where a retirement age of 55 had been assumed (which was itself a change from an assumed age of 60 within the 1998 returns).

Equitable state that a general reserve of £150m was held '*as a provision to ensure that the valuation is, in aggregate, prudent as required by Regulation 64 and includes consideration of issues such as managed pensions review and possible future improvements in mortality*'.

As in previous years, Equitable disclose:

> *The valuation method makes specific allowance for rates of future reversionary bonus additions, the levels of which are consistent with the valuation interest rates employed having regard to the reasonable expectations of policyholders and the Society's established practices for the determination of declared bonus rates. The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met*

> *by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

Unlike in previous years, the paragraph continues:

> *It is assumed that adjustments will be made to final bonus to ensure that this remains the case in the future.*

Equitable state that they have made an explicit provision for their liability for tax on unrealised capital gains (in relation to business other than that linked to their internal funds), which they now estimate as not exceeding £100.6m. The provision made is £110m, which they say is shown in the Appointed Actuary's certificate in Schedule 6 of the returns.

In paragraph 6(1)(g) relating to investment performance guarantees, as in previous years Equitable state that they do not consider it necessary, in current conditions, to hold a reserve for the guarantee they offer on a unit-linked annuity.

In paragraph 6(1)(h), Equitable disclose that they had set up reserves for the annuity guarantees on their '*Pension contracts – old series*' business. They explain the assumptions used in establishing those reserves concerning the take-up rate of the annuity at a guaranteed rate and cash commutations. As in the previous returns, Equitable state that the '*combined effect of the allowances made is that of these policies which survive to retirement date ... the gross reserves are reduced by less than 5%*'.

Equitable strengthen the mortality assumptions used when estimating the expected future annuity rates for males that are used to value the GAR liabilities. Equitable also change the valuation rate of interest for the expected future annuity rates to 5¼% for annuities expected to be taken out in the year following the valuation (from 5¾%), with lower future rates for annuities expected to be taken out in later years. This takes account of Regulation 69(9)(a) of ICR 1994.

As in previous years, in paragraph 6(2) Equitable state that, in determining the provision needed for resilience reserves, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 7(5), Equitable explain that they consider the reserves for future bonus within the valuation to be fully able to withstand any future strains which would arise if there were significant changes in mortality or morbidity experience. They say that, accordingly, the Society does not consider it necessary to establish any additional reserves in this respect.

In paragraph 7(6), Equitable provide a description of the scenarios that have been tested in order to determine the requirement to hold resilience reserves. They state which of the three scenarios tested produces the most onerous result.

Equitable disclose that a resilience reserve of £1,390m was provided for.

In paragraph 7(8)(a), Equitable disclose the changes made to the valuation assumptions and methods in the resilience scenarios. They explain:

> *It was assumed that the valuation has been undertaken using the gross premium method as described in section 6(1) for all business except that for with profits business where the benefits are determined from outset in relation to the total premiums payable where a net premium method has been used. The following changes have been made:*
>
> > *(i) the interest rates are as stated in Form 57.*
> >
> > *(ii) for all accumulating with profits business, an annual loading of 1.5‰ increasing by 4% per annum compound of the basic benefit was reserved. That is considered to be a prudent allowance for ongoing expenses.*

(iii) the mortality table used for accumulating with-profits pensions business was adjusted to AM80 ult- 5 years.

(iv) the reserve in respect of the potential liability to tax on capital gains was reduced to £18.1m.

(v) no future bonus was assumed which is consistent with the reasonable expectations of policyholders having regard to the current rate of bonus and in the event that experience were to follow the valuation basis.

As Equitable have no longer presented a main and an alternative appendix valuation of their long term liabilities, their response to paragraph 8(d) is different to that provided in previous returns.

Paragraph 8(d) of Schedule 4 to the ICAS Regulations 1996 requires, in respect of non-linked contracts: '*where, in valuing contracts falling within the circumstances described in regulation 67(1) of the Insurance Companies Regulations, future premiums brought into account are not in accordance with that regulation, such additional information as is necessary to demonstrate whether the mathematical reserves determined in the aggregate for each of the main categories of contract are greater than an amount for each such category calculated in accordance with regulations 66 to 75 of those Regulations*'.

Instead of the 112 pages of information that made up the appendix valuation report in the last returns, in the 2000 returns Equitable include one page of information in which they disclose:

For with profits contracts where the benefits are determined from the outset in relation to the total premiums payable a further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The mathematical reserves for that business are lower than those calculated on the methods and bases described in this report and are given below:

Life assurance and general annuity business:

Type of insurance or name of contract	*Amount of Mathematical Reserves (£000)*
With Profits	
Whole Life Assurance	*38,010*
Endowment Assurance	*153,619*
Endowment Assurance with guaranteed minimum death benefit	*128,662*
Flexible Savings Plan	*12,151*
Deferred Annuity	*5,525*
Miscellaneous (assurances)	*1,848*
With Minor Profits	
Whole Life Assurance	*142*
Endowment Assurance	*81*
Miscellaneous (deferred annuities)	*6*

Pension business:

Type of insurance or name of contract	*Amount of Mathematical Reserves (£000)*
With Profits	
Endowment Assurance	*108,499*
Deferred annuity with return of premium on death	*62,942*

Equitable go on to state:

> *The mathematical reserves determined in the aggregate for all categories of contracts referred to in sub-paragraph (d) above represent less than 5% of the total mathematical reserves (after deduction of reassurance cessions) for all non-linked contracts. The mathematical reserves for each category of contracts are greater than the mathematical reserves that would be determined on a net premium reserving basis.*

In paragraph 12, Equitable describe the IRECO reinsurance treaty. Equitable disclose that the treaty now comes into effect where the proportion of policyholders taking an annuity at their guaranteed rate exceeds 60% (previously 25%) of total retirements in that year. They also disclose that the premium payable since the last set of returns was £797,675 (previously £850,000).

In paragraph 13, Equitable disclose: '*The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund*'.

In paragraph 14, Equitable set out a statement of their aims with regard to bonus distribution and of how they maintain equity between different generations of policyholders. The information provided on the stated principles underlying their approach is the same as that provided in the 1998 and 1999 returns, with the addition of the following paragraph:

> *... following the House of Lords' judgment guaranteed annuity rates (where applicable) are applied to the full policy value (including any final bonus element). Where those guarantees mean that the value of benefits taken is greater than the asset share then this additional value is paid for by a reduction in the asset share for all with-profit policyholders.*

In paragraph 15, Equitable disclose that (except for German policies) no bonuses have been declared for 2000. They also state that:

> *Although the valuation allows for the declaration of bonuses as set out in 6(1)(e) no declared bonus is currently being declared, and this position is likely to continue throughout 2001 and for some period thereafter.*

In paragraph 16, Equitable set out final bonus rates. Under the heading '*Maintenance of Final Bonus Rates*', Equitable disclose:

> *The directors reserve the right to reconsider the rates of final bonus at any time. In particular directors will need to ensure that the final bonus policy and the level of any financial adjustment are such as to allow the Society to maintain its solvency.*

In paragraph 21(2), Equitable disclose:

> *The rates of interest on fixed interest securities have been determined using the aggregate yield basis, i.e. by calculating the rate of interest as the rate which equates the discounted value of the aggregate cash flows. The fixed interest portfolio (excluding convertible fixed interest securities) has been separated into two segments of securities which have like attributes (being the categories on Forms 48 and 49), i.e.*

- *approved fixed interest securities, and*
- *other fixed interest securities.*

In explaining the description of the method by which the yield on assets other than equity shares and land was adjusted in accordance with regulation 69(7) of ICR 1994, unlike in previous years, when the maximum yield was given, Equitable state:

> *The yields on non-approved fixed interest securities have been reduced having regard to the credit rating of each security. The reduction in yield is calculated according to the following table:*

Credit Rating	*Yield Reduction*
AAA	*0.12%*
AA	*0.19%*
A	*0.34%*
BBB	*0.80%*
BB	*1.50%*
B or less	*4.00%*

> *Where stocks are unrated an appropriate rating was ascribed.*

Schedule 4 (forms)
In Form 46, Equitable provide information on changes to their ordinary long term business.

In Form 47, Equitable provide an analysis of their new ordinary long term business.

Form 48 shows that 51% of Equitable's non-linked assets are invested in equities, 7% in land, 34% in fixed and variable interest securities and the remaining 8% in a variety of other assets.

In Form 51, Equitable set out the mathematical reserves held for various types of non-linked contracts (excluding accumulating with profits contracts) along with information on the number of contracts in force, the benefits valued, and the rates of interest and mortality assumptions used.

In Form 52, Equitable set out the mathematical reserves held for accumulating with-profits policies, along with information on the number of contracts in force, the benefits guaranteed, and the rates of interest and mortality assumptions used in valuing them. The mathematical reserves are not discounted from the current benefit value. The Form 52 for '*Pension business*' discloses that the gross total reserve for '*Options and guarantees other than investment performance guarantees*' (i.e. the reserve for annuity guarantees) is £2,631m. The form also shows that this reserve has been reduced by reinsurance of £808m to a net total reserve of £1,823m.

In Form 53, Equitable set out the mathematical reserves held for the various types of property-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 54, Equitable set out the mathematical reserves held for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

In Form 57, Equitable provide matching rectangles, illustrating the notional allocation of assets to each category of liabilities, showing the valuation rates of interest supported, and the ability of the matching assets to cover the reserves in the resilience scenarios.

In Form 58, Equitable set out the valuation result and composition and distribution of fund surplus.

Supplementary notes to the returns
In the notes to the returns, set out at the end of Schedule 4, Equitable disclose that they have been granted a section 68 Order, which permits them to include in aggregate form details of their '*Personalised Funds*' in Forms 43, 45 and 55.

Equitable disclose that they have been granted a section 68 Order which permits them to take into account a future profits implicit item. The Society states that it had included an item of £1bn and that this was within the maximum amount permitted by the Order.

Equitable disclose that they have been granted a section 68 Order, enabling them to disregard amounts owing under the subordinated loan up to an amount not exceeding 50% of the required solvency margin.

In relation to the admissible assets disclosed in Form 13, Equitable state:

> *The Treasury, on the application of the Society, issued to the Society in February 2001 an Order under section 68 of the Insurance Companies Act 1982. The effect of the Order was to enable the Society to complete Form 13 as if the permitted asset exposure limit for shares and hybrid securities issued by* [a named company] *was 3.25% of the long term business amount.*

Also in relation to Form 13, Equitable state:

> *The Treasury, on the application of the Society, made in June 2001 an Order under Section 68 of the Insurance Companies Act 1982. The effect of the Order was to provide that the value to be ascribed to the Society's holding of shares in Permanent Insurance Company Limited was to be the amount agreed to be paid for the shares by Liverpool Victoria Friendly Society Limited.*

In relation to Form 14 and '*Charges, Contingent Liabilities, Guarantees, Indemnities and Contractual Commitments*', Equitable disclose that they are to undertake a review into whether there had been any mis-selling of Managed Pension policies. They say that, should the review find that mis-selling occurred in all cases, the liability would be up to £200m. Equitable state that any costs would be met from their general expense reserve of £150m.

Also in this section of the returns, Equitable state:

> *Subsequent to the House of Lords' decision in the case of Equitable vs Hyman in July 2000, a number of enquiries by various regulatory and professional bodies and other parties have been instigated including the Treasury Committee of the House of Commons. In those proceedings and elsewhere, certain policyholders have indicated they believe that they have grounds for an action against the Society for mis-selling of business due to the non-disclosure of the guarantees to GAR policyholders. There is the further possibility that other causes of action may arise. It is not possible to assess the impact of the outcome of these matters, if any, on the financial position of the Society and no provisions for contingent liabilities have been made.*
>
> *A fundamental uncertainty exists in respect of the outcome of any actions that may be initiated against the Society as a consequence of matters emerging from the various regulatory and other enquiries in progress, which are noted above.*

Equitable also disclose that:

> *In respect of policies with guaranteed annuity rate options, the House of Lords' decision will have an impact on the decisions of policyholders in the future as to the extent to which they continue to pay future contributions. The reserves have been calculated based on the limited experience to date but are substantially more prudent than this experience would indicate. There is fundamental uncertainty as to whether the future decisions of policyholders will conform to the assumptions made. As a result, the reserves could be either overstated or understated with a corresponding effect on the excess of available assets, and implicit items, over the required minimum margin.*

As in the previous year, Equitable disclose:

> *Under the Society's recurrent single premium contracts, the amount and frequency of contributions can be changed at any time without penalty, including ceasing future contributions completely. Most policyholders take advantage of this flexibility and there is consequently no precisely identifiable annual premium on recurrent single premium contracts. On Form 46 the annual premiums shown for recurrent single premium contracts are those which are not specifically identified as single premiums.*

In relation to the Form 57 matching rectangles and the determination of the rates of interest on fixed interest securities, Equitable provide a supplementary note that:

> *The Treasury, on the application of the Society, made in June 2001 an Order under section 68 of the Insurance Companies Act 1982. The effect of the Order was to require the Society to calculate the rates of interest to be used in determining the present value of future payments for approved fixed interest securities and other fixed interest securities (other than convertible fixed interest securities) on an aggregate yield basis. The aggregate yield equates the discounted value of the aggregate cash flows on such fixed interest securities with the total market value of such securities.*

<u>Schedule 6 (Certificates by directors, actuary and auditors)</u>
Equitable provide an additional statement in the returns on matters relating to the certificates of the Directors and Appointed Actuary. They say:

> *The decision of the House of Lords on 20 July 2000 relating to Guaranteed Annuity Rate policies, had a material impact on the Society's financial position. It substantially reduced the level of free assets held in excess of the margin of solvency required by section 32 of the Insurance Companies Act and led to the closure of the fund to new business.*
>
> *The certificates on the following pages, which should be read in conjunction with this statement, report on the position of the Society following the House of Lords' judgement using the actuarial bases and economic assumptions disclosed in Schedule 4. The bases carry margins of prudence beyond the Society's relevant experience. However, attention is drawn to the fundamental uncertainties in relation to the Guaranteed Annuity Rate "GAR" options and contingent liabilities that may arise from any actions that may be initiated against the Society as a consequence of matters emerging from the various regulatory and other enquiries in progress. These matters are described in supplementary note 1402 to these returns.*
>
> *The closure of the Society to new business will result in an altered pattern of maturity and other claims which will require active management of the assets and liabilities. The successful implementation of the proposed compromise scheme in relation to GAR obligations and the possibility of further payment of consideration by Halifax Plc would also affect this future position.*

Equitable explain that the signatories to the certificates did not work for the Society during any part of the year 2000. Therefore, the certification had been made to their best knowledge and belief.

Three Equitable Directors provide the certification required by Regulation 28(a) of the ICAS Regulations 1996. Equitable's Appointed Actuary provides the certification required by Regulation 28(b) of the ICAS Regulations 1996. Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

28/06/2001 [entry 2] Equitable apply to FSA for a section 68 Order in respect of a future profits implicit item of £1,100m, for possible use in their 2001 returns. Equitable provide the Appointed Actuary's certificate in support of the application, along with an appendix to their letter containing details of some supporting calculations.

28/06/2001 [11:16] FSA's Legal Adviser D asks Scrutinising Actuary F whether Equitable's reserving requirement is based on the assumption of a 90%, 95% or 97% take-up of GARs.

[**11:33**] The Actuary advises that Equitable had assumed an 85% take-up rate in their 1999 returns, which had been increased to 90% for the 2000 returns, following challenge from GAD.

28/06/2001 [11:29] Equitable's Chief Executive writes to FSA about the current level of policy values to available assets. The Chief Executive says:

> *On page 323 of the returns ... there is disclosure of the need for active management of the assets and liabilities of the Society as a result of its closure to new business.*
>
> *The Board recognises that there was an excess of policy values over available assets of approximately 10% at 31 December 2000. In accordance with valuation regulations no allowance is made for final bonus within the mathematical reserves.*
>
> *In 2001 the Society has benefited from the sale proceeds for the partial disposal of its business to Halifax PLC, but investment returns have been poor due to market conditions. When combined with the continued accumulation of bonus at 8% p.a. during the current year, the excess of policy values over available assets has increased. In normal investment conditions the Society intended to reduce the excess over a reasonably short period of time. However, in view of market conditions, and the relatively high level of claims that have been experienced since the Society closed to new business, the Board considers that a more immediate reduction in this excess is required.*
>
> *Further work is being carried out to enable the Board to decide upon the appropriate action in the very near future. We will keep you advised of decisions in relation to this issue.*

On a copy of the letter sent to Legal Adviser A by Chief Counsel A, the 8% bonus rate has been underlined and marked with '*!*'.

In an undated note, Legal Adviser A provides Chief Counsel A with his understanding of what this means, that being:

> *... as far as I can sort out is that the value of the policies exceeds the assets ie they would be insolvent on a realistic basis. However, they would be solvent under the ICA because they do not have to reserve for terminal bonuses.*
>
> *As they* [are] *increasing the value of policies by 8% which is above the investment return the position is worsening. They then have to reduce this 8% but in a way in line with PRE.*
>
> *I don't* [think] *this requires immediate action on our part (they have not reached the* [required minimum margin]*) but we need to know what they are going to do. So yes I think it does sound O.K.*

28/06/2001 [17:41]	FSA's Line Manager E circulates a note on the position that has been reached following '*a number of parallel discussions*' about Equitable's letter and their 2000 returns. The Line Manager says that:

> *Paragraph 16 of Schedule 4 to the Accounts and Statements regs require the returns to include*
>
> > *"a statement of the practice regarding any bonus payments ... to be made on claims arising in the period up to the next investigation ..."*
>
> *From discussions with* [the Head of Actuarial Support] *and* [Scrutinising Actuary F]*, we all think that there is a case for arguing that the drafting of the returns as they stand (ie referring to the interim rate of return at 8%) on the basis that was the rate that applied at the time of the submission and no formal decision to amend the rate had been taken. It is implicit that by being an interim rate, it is subject to revision at any time.*
>
> *That said, we are all of the view that it would be preferable, if it were not logistically difficult to do so, if the wording of the statement could be amended slightly to say something along the lines that "the rate is currently 8% but that it is regularly reviewed to take account of external factors such as market conditions." None of us think there is any need for the returns to be any more explicit about the current position. By extension, I assume that* [FSA's actuarial department] *would share my view that against that background a statement of the kind proposed submitted around the same time as the returns would not cause us difficulty.*
>
> *Perhaps* [Legal Adviser A] *or* [Chief Counsel A] *could let us know before the meeting if they take a different view on any of the above conclusions.*

[**23:03**] In response to this, Chief Counsel A says to Line Manager E: '*We discussed.* [Legal Adviser A] *and I think something should be said about a review. Mentioning external review might be misleading as might a reference to a "regular" review*'.

29/06/2001 [10:19]	Further to Line Manager E's note of 25/06/2001 [**16:46**] and the Head of Life Insurance's note of 26/06/2001 [**11:44**], FSA's Insolvency Practitioner puts forward his thoughts (under the title '*Basis for the FSA's Intervention in Equitable Life's Scheme*') on the test that FSA ought to apply in assessing the compromise scheme. The Head of Life Insurance explains his view that:

> *... it is important to focus on what the FSA's role is in this situation. It is not to decide whether the scheme is fair or unfair, reasonable or unreasonable. The scheme is a compromise between groups of creditors and the company. It is not for the FSA to say that an uplift of 20% or 30% is a fair value of creditors' rights. There are unquantifiable benefits of the scheme that will sway creditors and different creditors will perceive different factors as important. It is therefore futile to try to arrive at a judgement of overall fairness for the scheme. Following this, I believe that the FSA should not be concerned with whether policies are valued in the scheme on the basis that each policyholder will exercise his GAR options so as to maximise the value of the policy in actuarial terms, or whether the policies are valued after making an assumption about the realistic take-up rate of GAR benefits. (The exception to this is the value for voting purposes, which I come to later.)*

The Insolvency Practitioner suggests that there are two parts to FSA's role '*which derive from the principles of consumer protection and treating customers fairly*'. First:

> *The scheme promoted by the directors should have a reasonable prospect of being approved.*

The scheme offers overall benefits in the Halifax consideration and investment freedom. It is right that these benefits are not lost by the directors promoting a scheme so skewed as to stand no chance of general acceptance or so late as to miss the March 2002 deadline. In my view, this is the limit of the "reasonableness test".

The second part suggested by the Insolvency Practitioner is that:

The information available to creditors and the High Court should be adequate to enable each to assess the effect of the scheme on his rights and compare this to the alternatives to the scheme. Because of the safeguards mentioned below, I think this is all that is required for the company to "deal fairly" with policyholders.

The Insolvency Practitioner sets out the aspects of this in relation to policyholders and to the High Court. On the former, he says:

(a) The scheme explanatory statement should state what the alternatives to the scheme are and what the board intends to do if the scheme is not approved. The next best alternative is clearly to continue to run off the closed fund for so long as it is solvent (and also if it is marginally insolvent). The explanatory statement should illustrate (and try to quantify) the benefits which flow from greater investment freedom. The explanatory statement should explain the consequences of liquidation and attempt to quantify this. There should also be a statement as to the prospects of transferring the business to another fund or obtaining other capital support (presumably nil, unless Halifax has a change of heart).

(b) Each policyholder should have a personalised statement showing the value of his policy: for voting purposes, if the scheme is not approved, and if the scheme is approved. This should take into account the benefits of the Halifax consideration and greater investment freedom, and it should give a range of values to illustrate the sensitivity to interest rate assumptions.

We need to specify now for the Society the minimum standard of personalised information we think a policyholder should receive, since it will take time to build the systems to produce the calculations. I think we could accept some generalised illustrations, but there must be enough examples for there to be one appropriate to each policyholders' circumstances, in particular, there must be one for policyholders for whom the scheme is not advantageous compared to carrying on without the scheme.

Under the heading '*Can no-one be worse off than they would be under no compromise?*', the Insolvency Practitioner writes:

It is possible for the scheme to be a win-win for GARs and non-GARs compared to no scheme if the non-GAR's share of the Halifax consideration conditional on the scheme being approved and the greater investment returns possible after removing the uncertainty over the quantum of GAR options is removed exceeds the compensation paid to GAR policyholders for removing the maximum value of their options. However, I think that the sums do not quite work.

Halifax contribution	*= £500m*
Extra, say 1/2 % return on £30bn of funds for, say 7 years	*= £1,050m*
Non-GAR share	*= 80%*
Amount paid to buy-out GARs	*= £1,500m*

80% x {£500m + £1,050m} = £1,240m < £1,500m

A crude calculation obviously, but I think that the Society should make some attempt at quantifying the benefits of increased investment freedom.

[**14:23**] Line Manager E notes the Insolvency Practitioner's views:

> *... on the rigour (or lack of it) with which we should test the proposals and I can see that is justifiable on the basis of our specific statutory role in a case such as this. However, we are empowered more generally to act if we consider there is a reasonable expectation that policyholders reasonable expectations may not be met.*

However, Line Manager E believes that FSA should recognise that '*many policyholders will be either unwilling or unable to* ['*reach a view on the acceptability or otherwise of the proposals*'] *and that they will be expecting some guidance about whether they should sign up, or at least whether it would be reasonable for them to contemplate doing so*'. Line Manager E says that FSA '*must be reasonably testing*' of Equitable's proposals and that their tests should be:

- *a vertical test, comparing the outcome after a scheme with the other possibilities (of which winding up and continuation of the status quo are the most relevant);*
- *a horizontal test, to see how the treatment of groups of policyholders compares and also how the scheme would impact on policyholders within those groups (insofar as that can be predicted);*
- *a general "is it a reasonable scheme for someone to come up with?" test.*

Line Manager E seeks comments on these proposed criteria and asks whether he could give Equitable a general idea of FSA's thinking.

29/06/2001 [10:26] Equitable send FSA a timetable for the sign-off programme to prepare the compromise scheme documentation ready for presentation to Equitable's Board at a meeting on 25 July 2001.

29/06/2001 [before 12:03] FSA meet Equitable to discuss their letter of 28/06/2001. According to FSA's note, Equitable's Chief Executive:

> *... explained that terminal bonus rates were not currently sustainable. The problems in part stemmed from the nature of the society's business which, because it had only a relatively small proportion of annual premium business, meant that putting the business in run off meant that the long term fund went rapidly into decline. (Normally a life office would expect the fund to continue to grow for a period before starting to decline, which enables it to cope better in difficult market conditions.) There was also a problem because of the flexibility in many contracts that meant that pension contracts allowed people to take out their funds during a wide window of opportunity.*

Equitable's Appointed Actuary:

> *... said that they would need an investment return of 2% for the year as a whole (it is currently negative) just to keep their heads above water. They had thought that they would elect for a material reduction in the rates of interim bonus for the time being, but the position was now such that that did not deliver what was needed. Policy values have grown by about 10% too much compared with the underlying assets.*

Equitable inform FSA that their:

> *... Board discussed the issues on Wednesday (27/6) and has resolved to take action. A further board meeting has been called for Monday 2/7 at which a range of options will be considered. As noted above, at one stage, the solution was thought to be ... to cut interim bonus rates from 1 August 2000 onwards, although that was now unlikely to be enough as it would simply produce a cut of about 7% and further action would be needed. Realistically therefore, it was thought that more drastic steps would be needed. One option being considered would be to remove some of the transparency*

from the process by which terminal bonus is added to pension plans from year to year. Effectively the proposition was that they would cease to show the rate of accrual of the non-guaranteed terminal bonus. This would be consistent with the practice for much of the industry and some other types of Equitable Life policy, but it was a clear step back into opacity which would not go down well. It could be seen as a mechanism for frustrating the GAR. The alternative would be to deliver a cut to policy values by some means to bring them more closely back into line with the underlying assets. This could be done by reducing the amount of accrued terminal bonus, or by making a reduction in the overall policy value, but so as not to take the value below the guaranteed value in any individual case. Either approach would be difficult, and in order to sell this course of action they thought that they would have to be explicit that they would look to restore the bonuses if and when financial markets improve.

Equitable's Chief Executive confirms that '*if there were a significant rebalancing of policy values, they would expect to reduce the financial adjuster on non-contractual terminations, perhaps to 5%*'.

How this impacted on Equitable's 2000 returns is discussed and FSA say that they:

... thought some disclosure would be needed because of the requirements under the regulations for the actuary to comment on bonus rates for the current year. We thought that avoiding the issue would be particularly difficult if the board might have met and decided on a course of action by the time the statutory returns were in the public domain. Equitable did not disagree with our view and it was concluded that this could best be dealt by a modification of the appointed actuary's report. However, they did believe that there was a need for some caution if the information was not to be misinterpreted since this could cause panic and simply make the position worse. We agreed to acknowledge receipt of the letter, so that [Equitable's auditors] *could be clear that we had been notified of the position ... Equitable agreed to show us a form of words that might go in the report.*

FSA record that they:

... also discussed briefly the issue of the term in GAR pension plans that allowed the Society to determine the terms on which future premiums would be accepted if a policyholder ceased to pay premiums in a policy year. Previously the Society had allowed policyholders to continue to enjoy GAR benefits for future premiums. However, they took the view that they were now obliged to enforce the contract terms and that this should include not allowing those who had missed premiums to continue to benefit from the GAR in future. We noted our concerns about whether there would be PRE issues. [Equitable's Appointed Actuary] *noted that there were the interests of non-GAR policyholders that needed to be respected. He also noted that there had been no reason for the Society to apply different terms to subsequent premiums prior to the House of Lords judgment. The situation had now changed, so he argued it was acceptable for such steps to be taken. Equitable agreed to provide a copy of their legal advice on the issue. They indicated that any change of this kind would take a couple of months to implement.*

29/06/2001 [entry 4]	As agreed at the meeting that morning, FSA write to Equitable in reply to their letter of 28/06/2001. FSA say: *You explained to us that the Board has resolved to take action to address the position at a very early stage and that it is due to meet again early next week to consider the courses of action available. I should be grateful if we could meet again as soon as your Board is clearer about the precise action it intends to take so that the FSA may satisfy itself that there is no regulatory obstacle to, or indeed need for modification to, that action. In the meantime, we concluded that appropriate disclosure of the position, and of the need for action to address it, ought to be made in the statutory returns that are due to be submitted by 30 June 2001. We agreed that this should be done by way of a statement to be included in the report of the appointed actuary. Since the meeting you have provided a copy of the form of words he proposes to use and I can confirm that the FSA considers that wording acceptable.*
29/06/2001 [entry 5]	Line Manager E informs FSA's Chairman of Equitable's letter of 28/06/2001, the meeting with them that morning, and the subsequent correspondence.
29/06/2001 [16:00]	FSA send Counsel the notes of the meeting with Equitable earlier that day. FSA say that they have been '*nudging* [Equitable] *towards the "adjustment" ... (to bring policy values into line with assets) for some months*'. FSA also inform Counsel that Equitable's Board had approved a decision to prevent GAR policyholders from topping up their policies immediately and without notice. FSA explain that they had been startled to discover this on 28 June 2001, as it had been contrary to what they had been led to believe that the Society's approach would be.
29/06/2001 [19:40]	Equitable's auditors for the 2000 returns write to FSA, stating that they '*consider that in accordance with the Auditors (Insurance Companies Act 1982) Regulations as amended by the Financial Institutions (Prudential Supervision) Regulations 1996 and Statement of Auditing Standards 620, we are obliged to specifically draw to your attention the contents of* [Equitable's letter of 28/06/2001] *in the context of Regulation 22 Schedule 4 Para 5(4)(a)(iv)*'.

July 2001

02/07/2001 [07:35] Equitable send FSA an outline of a paper entitled '*The Business Case for the Section 425 Scheme*' for FSA comment. The content of the paper is set out under six main headings:

1. *Problem*
2. *Options*
3. *Appraisal of the options*
4. *Proposed Solutions*
5. *Details*
6. *Appendix*

[**09:47**] Line Manager E circulates the document within FSA and recipients comment upon it.

[**12:16**] The Head of Life Insurance says that the list of issues looked comprehensive and suggests that the possibility that FSA might produce an information sheet could be flagged under a heading in the '*Details*' section entitled '*What will policyholders receive?*'.

[**14:59**] The Head of Actuarial Support says that he remained unconvinced by the steps set out in the '*Details*' section of the paper, which included the further headings:

5.1 How do we achieve a Section 425 Compromise Scheme?
5.2 Why is the value discounted to [£]*1.37 billion?*
5.3 Why are we allocating the [£]*1.37 billion in the proposed way?*
5.4 Why did we use these factors and not others?
5.5 The scheme
5.6 The scheme procedure
5.7 What will policyholders receive?
5.8 What is the role of the independent actuary?
5.9 What will happen if the scheme is effective?

However, the Head of Actuarial Support recognises that this would be an issue for lawyers to resolve.

[**15:54**] Legal Adviser D raises a number of points, including that made by Counsel on 27/06/2001 [**14:30**] that the use of a section 425 scheme for a solvent insurance company was unusual and '*arguably a questionable use of s.425 at all if the Equitable is solvent*'. The Legal Adviser explains that the Court '*will be required to be satisfied that there is no better alternative to the proposed s.425 compromise since GAR policyholders are being asked to give up valuable legal rights. Unpalatable though it might be for the Equitable it will need to have a section in paragraph 1.2 "What is the problem?" a heading such as Unable to maintain Required Solvency Margin and give an indication of how likely and/or how soon it might breach* [that margin] *without the compromise being approved*'. Legal Adviser D also says that, as Counsel had advised, the proposed scheme should first calculate the value of GAR rights and then decide on the amount to be allocated, rather than the other way round.

[**16:10**] The Insolvency Practitioner advises that there were a reasonable number of solvent section 425 schemes and that he did not think this was questionable as '*after all, it is a Companies Act procedure not an Insolvency Act one*'. The Insolvency Practitioner also comments that he '[does] *think that there is a question whether the scheme should provide for the run-off of the fund on an insolvent basis should the solvency decline further (increase in mis-selling claims or stock market falls). ie it would be drafted with* [a named company] *type provisions which kick in when it becomes insolvent in someone's view. I had assumed that the scheme would not have such provisions because it would be scare-mongering, but perhaps the board should explicitly consider this option*'.

[**16:43**] The Insolvency Practitioner provides some further comments on the detail of the outline paper, including that Equitable could provide policyholders with updated financial statements.

[**19:56**] The Director of Insurance agrees with his view on the use of such a scheme by a solvent company.

02/07/2001 [09:40] FSA's Line Manager E seeks advice from the Director of Insurance on how to acknowledge Equitable's former auditors' letter of 29/06/2001 [**19:40**]. [**13:59**] Line Manager E later suggests some wording, which includes the following:

> *I confirm that the Society had already been in touch with the FSA about the matters raised in your letter. As you say, it has been agreed that the Appointed Actuary's certificate, which forms part of the regulatory returns, would disclose the matters in terms that are acceptable to the FSA. On the basis that* [Equitable's auditors] *have been able to report on the statutory returns for the period ended 31 December 2001, we assume that you also find disclosure in those terms acceptable as the Society's auditors.*

The Line Manager says that the wording was deliberately cautious about what was said in Equitable's Appointed Actuary's certificate as FSA were yet to locate the Society's returns among those received.

02/07/2001 [10:15] FSA's Director of Insurance responds to the Insolvency Practitioner's paper on the tests that FSA ought to apply to the compromise scheme (see 29/06/2001 [**10:19**]). The Director of Insurance says that the paper was helpful, particularly in relation to the possible approaches to quantification. The Director continues: '*However my instinct is that the hurdles which the FSA will wish to see cleared are a little higher than you suggest, given our responsibilities to consider whether "sound and prudent" is met*'. The Director of Insurance suggests meeting to discuss this test before they considered the actual proposals in detail.

[**13:08**] Scrutinising Actuary F provides some thoughts in advance of a meeting the following day to consider the issue. The Scrutinising Actuary says:

> *One of the key issues is whether it is acceptable for any individual to be any worse off under the Scheme.*
>
> *Notes of our meeting with Counsel last Wednesday are awaited, but this was a topic we discussed at length. My understanding is that Counsel's view was that, since the company is not insolvent, no GAR policyholder should be offered less than the value of his/her GAR rights. This is particularly important for those policyholders just coming up to retirement, who in the absence of the Scheme would have the option to exercise their GAR in full.*
>
> *Counsel's view appeared to be that for those about to retire the value of these rights should not be influenced by the behaviour of other policyholders, i.e. the assumed take-up rate. However, for those retiring in 30 years' time, it may be acceptable to incorporate the take-up rate in the calculations. This suggests the need for an age-related scale.*
>
> *The value of these GAR rights changes as interest rates move and the shape of the yield curve changes. I would suggest an appropriate way of determining these rights at a particular point in time is to use financial option theory – as used by those who price derivatives. We asked Equitable whether they had considered this as one of our long list of questions on the S425 Actuarial Report (*[Line Manager E's] *letter of 14 June). Their answer was that they had not considered this yet, but they were "looking at what can be done". Time is running out.*

[**13:41**] Line Manager E says that FSA: '*need to be clear of the basis and reasons for our acting here. It seems to me that we have general powers and we have the ability to put a case before the court at the hearing. However, as* [the Insolvency Practitioner] *has pointed out, we must not forget that the policyholders concerned are being given the opportunity to vote on whether or not they are prepared to accept a deal. If they do so willingly, then it is not, I think, for us to intervene provided we can be clear that the proposals are not totally unreasonable and that we believe that they have voted on the basis of a reasonable understanding of what is on offer. I think our role is to provide suitable safeguards and ensure that the basis on which the scheme is developed is sound, and that people are not asked to sign up to something that is demonstrably unfair or unreasonable*'.

[**15:26**] The Head of Actuarial Support also comments on the Insolvency Practitioner's note, saying that he would: '*doubt the practicality of some of this. In particular, I cannot see how you can provide meaningful information to inform a policyholder about the choice he should make through a single "policy value". Similarly, quantification of "investment freedom" is highly speculative and I would be very dubious about making some arbitrary assumption for this purpose about (a) the future investment policy and (b) the outperformance of equities over gifts. The latter will be very dependent on both the term of the policy and actual market events that may transpire*'.

02/07/2001 [14:32] The Director of GCD provides Chief Counsel A and Counsel with his views in response to Chief Counsel A's note to Counsel of 29/06/2001 [**15:59/16:00**]. The Director of GCD says:

I think they need to consider whether a package along the following lines would be sustainable:

- *make clear this needed for reasons actually needed*
- *point out that existing approach misleading – as per* [the Baird Report]
- *ensure no loss of transparency by establishing a clear policy for future determination of bonus levels*
- *demonstrate fairness by making clear will apply to GAR + non GAR alike*
- *confirm that as per* [House of Lords]*, once declared, terminal bonus benefits from GAR*
- *make clear that cannot affect shares in accommodation, which will abate rateably*
- *note that financial condition is relevant to compromise*
- *make a virtue of MVA reduction.*

02/07/2001 [16:00] FSA hold an Equitable Life Lawyers Group meeting. The minutes of the meeting record discussion on significant developments during the previous week (the Baird review) and progress on outstanding items. Under '*other items*', it is agreed that Chief Counsel B would prepare a note of the issues discussed with Counsel, those being: failure to meet policyholders' reasonable expectations; misrepresentation by Equitable; and application of the Unfair Terms in Consumer Contracts Regulations 1999 to policy values.

02/07/2001 [18:06] Equitable send FSA a suggested agenda for a meeting arranged for 04/07/2001 [**18:30**] on the compromise scheme.

03/07/2001 [entry 1] Equitable send FSA an extract from Counsel's opinion dated 29 June 2000 on the company's ability to refuse to accept further premiums on terms which included guaranteed annuity rates.

03/07/2001 [morning] FSA meet to discuss the criteria by which FSA should judge the compromise scheme.

[**15:53**] Following the meeting, the Director of Insurance sends Chief Counsel A (and others) a note which records that they had agreed to seek Counsel's advice on the issue and which sets out the '*policy instructions*' they had discussed.

[**17:50**] Following the meeting, Scrutinising Actuary F confirms the two issues on which actuarial input was to be sought and discusses how FSA could undertake the necessary work. The first of these is to '*verify that FSA are satisfied with Equitable's statement that their statutory solvency position would improve by £1.3bn. should a Scheme of comparable cost to that currently proposed be implemented*'.

The Actuary sets out a suggested approach that FSA could take to this work:

> *1. We understand that the figure of £1.3bn. represents the difference between (a) the GAR reserve held in the regulatory Returns (after reinsurance) and that part of the resilience reserve which relates to the GAR liabilities, and (b) the value to be ascribed in the regulatory Returns to the uplift to be granted to the GAR policyholders (plus any associated resilience reserve).*
>
> *2. We expect that the Society will already have performed their own calculations which have come to the conclusion above. To gain full comfort as to the reliability of these results, we recommend that it would be necessary to undertake an audit of this work. This would entail sending a team of actuaries to the Society's Offices to review the calculations which have been done, the systems which were used, and the data which was processed. This approach allows a more in-depth analysis than can be achieved by our reviewing a Report from the Society on the subject – although they could no doubt furnish us with this.*
>
> *3. In particular, the audit would need to pay attention to the following aspects:*
>
> - *a breakdown by major groups of the Society's business to which GAR's attach. This would show the amount of the benefits under these policies, the amount of the GAR's attaching, selected retirement dates under the contracts, and the liabilities in respect of both the main benefits and the attaching GAR's;*
> - *details of how the above liabilities would alter as a result of the Scheme – from the release of the GAR reserve & the addition of the uplift on those same policies;*
> - *a sensitivity analysis showing how the results vary (primarily) under different economic conditions, but also on different assumptions re future mortality;*
> - *the results of the resilience tests, how the most onerous resilience scenario was determined, and the amount of the resilience reserve thereby held. The impact of buying out the GAR benefits on the resilience tests. Note that the resilience tests are applied to the total portfolio of the company – a possible consequence of removing the GAR liabilities is that a different resilience test becomes the most onerous.*

Scrutinising Actuary F then explains that the impact of this would be:

> *The benefit of the release of £1.3bn. from the statutory liabilities is an immediate improvement in the free assets of the Society. This permits the adoption of a higher equity backing ratio (EBR) for the with profits business. The Society have reduced this EBR post-*[House of Lords] *from c.72% to c.61% of with profits liabilities. They would be unlikely to want to increase it beyond 75%. Even were they to do this, assuming equities out-perform gilts by 3% p.a. (a typical long term assumption), the impact on the investment return of the fund would be an increase of 14% of 3%, i.e. 0.42%, or say 0.5% p.a. This is*

only a modest improvement on the current position, especially for those close to retirement. There is however a reduced risk of statutory insolvency going forwards. Additionally, of course, the fund would benefit from the further injection of £250m.-£500m. from the Halifax – this though is to be used to benefit investment performance, rather than being credited directly to policy values.

On the second issue that FSA '*assess the value of the GAR rights enjoyed by GAR policyholders (whether individually or collectively). What is the "market value" of these rights?*', the Actuary suggest that FSA's approach should be that:

... these rights be valued by the use of financial option theory, as used in derivative pricing. However, in addition to the economic elements of the calculations (e.g. the assumed 15 year gilt yield 10 years hence), other assumptions would need to be made regarding e.g. the dates on which policyholders choose to exercise their options, the extent to which they would pay future premiums into their contracts, together with actuarial/demographic assumptions regarding the future mortality experience, and so on. The situation is effectively the opposite of that in [a friendly society]*, who you will recall last year invested in a range of swaptions to hedge their GAO liabilities over the next 30 years. Here the GAR policyholders are being asked to swap their future (variable) rights for a fixed amount.*

Scrutinising Actuary F says that, in view of the '*complex and specialist nature of this work*', he had passed it to another actuary at FSA.

[**19:06**] After receiving comments on the note, the Director of Insurance asks Line Manager E to translate the material into a draft letter to Equitable, setting out FSA's views on the relevant criteria.

04/07/2001 [10:48] FSA's Head of Actuarial Support replies to Scrutinising Actuary F's note, advising:

The audit of the resilience reserve suggested here would be very resource intensive and I am not sure of the value that we would obtain from this very detailed examination of this one point. In particular, the release of reserve will improve the statutory solvency position, but it does not affect either the Companies Act solvency position or the aggregate policy values.

We also need to be very cautious about assuming that increased investment in equities will necessarily provide greater value for policyholders (even if we were confident that they would change their investment policy in this fashion). This increased return is in effect the equity risk premium that is "earned" to cover the risk that equities could fall significantly in value. This risk will though be borne entirely by the members of the society. Moreover, many economists would question whether such a "risk premium" exists at all. Accordingly, I would not place any long-term value to policyholders on this potential change in investment policy. In the short term (which will affect those near retirement), the level of investment returns on equities relative to fixed-interest must be quite uncertain.

Regarding the value of the GAR options, we have already requested [Equitable's Appointed Actuary] *to provide some results using financial option theory. When we receive these, we shall need to review this information with the assistance of the Traded Investment team at FSA.*

[**12:42**] FSA's Insolvency Practitioner adds that he is '*very concerned about whether the Equitable can meet the tests if we disregard improved investment returns*'. The Insolvency Practitioner explains:

As I understand [the Director of Insurance's] *first test for GAR policyholders (in aggregate, as a class, are they better off under the scheme than without it?), the calculation we are proposing is:*

	£bn
Maximum value of GAR options	*2.6*
discount for Equitable uncertainty, say 5%	*(0.1)*
Market value of GAR options	*2.5*
Transfer value/policy uplift	*1.3*
GAR share of Halifax consideration 20%x£0.5bn	*0.1*
GAR share of the Increased investment return	*nil*
Total (must be more than 2.5bn)	*1.4*

If I understand [the Head of Actuarial Support's] *first paragraph correctly, I agree with it. The reserving requirements in the FSA returns are irrelevant to policyholders – it does not result in a penny more being paid to policyholders in aggregate. It might allow higher terminal bonuses to be paid to those retiring soon but at the expense of paying lower terminal bonuses to those retiring later unless investment returns also improve to enable later terminal bonuses to be increased.*

If the improved investment return for the Society as a whole amounts to more than £1.1bn (on the above figures) then the scheme works, otherwise it will not pass our tests. Without improved investment returns being taken into account the scope to increase the transfer value is limited to about £1.7bn because of the second test (are non-GAR's better off with the scheme than without):

	£bn
Realistic cost of meeting GAR rights (60% take up)	*1.3*
non-GAR share of Halifax consideration 80%x£0.5bn	*0.4*
non-GAR share of improved investment return	*nil*
Maximum transfer value without the non-GAR being worse off:	*1.7*

One final thought on how the market value of the GAR's should be calculated. These policies are not transferable. There is no open market on which they can be sold or priced. Should therefore the market value be the actual value which could be obtained if GAR's exercised all their rights now – ie a liquidation value?

[**16:06**] The Director of Insurance agrees with the Insolvency Practitioner and, while noting the Head of Actuarial Support's concerns, says that he was '*still firmly of the view that we must be able to assess, and the Society must be able to demonstrate, the fairness of the exchanges which will be involved in the s425 scheme*'. The Director of Insurance continues:

Thus we need something which will give us some measure of the "GAR Value" and the value of the positive gains and the negatives avoided through the scheme.

Against that background, and the background of what we and the company have said about the disbenefits of an unstable fund in which GARs and non GARs are still opposed, and the investment constraints that that imposes, then we surely must believe that resolving that uncertainty is beneficial. If that is so we must find some sort of proxy for the value of that benefit.

But I am, of course, open to suggestions on how we might approach that assessment, recognising always that we will need to reach some sort of publicly defensible view (and methodology) very quickly. In all the circumstances I don't think that cash resource constraints ought to deter us from action which, while it might not strictly add value, could be essential if we are to be able credibly to claim that we have reached a wholly objective and independent view.

[**18:26**] FSA's Head of Actuarial Support responds that he thinks:

... what we are really looking for here is some measure of the reduced probability of insolvency ensuing (as a result of the scheme) to which we shall give some further thought. This will though be quite different from the £1.3Bn resilience test figure to which you referred earlier. A detailed audit of this single figure is not going to help us to resolve that issue, but I shall try to think further about where we could focus our efforts.

As I indicated earlier, I would be very sceptical about placing some assumed value on the ability to invest more heavily in equities. Indeed, the latest informal comments suggest that they are likely to have to move more heavily towards fixed-interest in any event.

The Head of Actuarial Support adds that FSA had also discussed briefly with Equitable's Appointed Actuary the use of financial options. He reports that the Appointed Actuary '*has discussed this with his firm's experts and they are of the view that this is not likely to give us much more insight, given that these options are now so far into the money*'.

04/07/2001 [morning] FSA meet Equitable to discuss the outcome of Equitable's Board meeting the previous day and to get an update on '*a range of issues related to the current situation*'. FSA make a note of the meeting.

<u>Equitable Board meeting</u>
Equitable report that their Board had recognised that there was no easy way to implement the change in bonus policy which would provide financial stability to the with-profits fund. Equitable say that they had identified two realistic options: reducing final bonus or reducing total policy values, and had decided on the latter. Equitable add that there would be serious practical difficulties in implementing the decision.

Equitable's Chief Executive says that, following the Board meeting he had met with Counsel, who had '*radically changed the position*'. FSA's note records:

While [Counsel] *was not yet ready to produce his opinion he was indicating that the chance of successful action for mis-selling from '88 onwards was not negligible (although not probable). On that basis* [Counsel] *had asked whether, given no reserve has been set up for possible compensation costs, the Society were confident that they should make any payments beyond those to which they were contractually committed ...* [Equitable's Chief Executive] *had reflected further on this and considered that the Society now had to consider an alternative to the Board decision. This was to suspend all final bonus, pending resolution of the current uncertainties. In addition, he was considering refusing to allow any surrenders until the position was clearer.*

FSA say that they had made it clear to Equitable that FSA had serious reservations about the reasonableness of refusing surrenders and, subject to further consideration, would be minded to take formal action to prevent Equitable from doing so. FSA's note goes on to record that Equitable had come back to them after the meeting and that Equitable now believed that:

... provided the board decision reported above is implemented, the risks of the [Counsel for Equitable] *opinion can be contained without raising solvency concerns by carefully managing the Society's investments, particularly by moving further into gilts. This will avoid the risk of the more extreme adverse publicity.*

This part of FSA's note is amended by the Director of Insurance the following day to read:

> [Equitable's Chief Executive] *recognised that there were serious problems with this more radical approach. The company would be asked why it had not taken this decision earlier, and might be accused of seeking to bring pressure on policyholders to accept the compromise. The answer to this would be that the new Board had needed time to take a fresh and thorough look at the whole problem. A second difficulty was that this response might be regarded as implying rather greater recognition of possible mis-selling claims than was the case; the decision would have to be presented very carefully to make clear that this was not so.* [The Chief Executive] *planned to keep both options open until the Board could be convened on 12-13th July. (Subsequently the Appointed Actuary told us that he was not convinced that the more radical option was necessary, and that he is in further discussions with* [the Chief Executive]*. We will be seeking further clarification as a matter of urgency). Meanwhile, at our request,* [the Chief Executive] *promised to send us a copy of the Board paper setting out the options for the 3rd July Board meeting together with a copy of the relevant part of the Board Minutes. Although this was now somewhat overtaken, it helpfully sets out the thinking behind the options considered at the 3rd July meeting.*

Subordinated debt
Equitable's right to buy back their subordinated debt is discussed and the Society says that, from its point of view, there were strong reasons for buying back some of the debt now.

Counsel's opinion on mis-selling
It is noted that Counsel for Equitable had advised that the proposed change to bonuses would not undermine the House of Lords' decision. Counsel had raised questions about whether Equitable could afford to meet the costs of any mis-selling claims. FSA's note records:

> [Equitable's Chief Executive] *expressed frustration at the fact that the likely "damage" in respect of which mis-selling damage might be claimed was likely to be, on average, about 5% of policy value; and this was well within the normal variance of returns in a with-profits fund. It was agreed that the likely outcome of the second* [Counsel for Equitable] *Opinion strengthened the argument for seeking to bind the potential for mis-selling claims into a compromise scheme under Section 425 ...*

The compromise scheme
FSA explain that the criteria for them to decide whether the scheme was one to which they should not object was still being worked on but that FSA would send it to Equitable when those criteria were ready.

Top ups
FSA remind Equitable that FSA had significant reservations about the proposal to withdraw GAR top-up rights and that FSA's tentative legal advice was that this might be improper. Equitable agree to send FSA their latest legal advice on this and to give FSA 24 hours' notice of any decision to implement such a change.

[**20:36**] Chief Counsel A sends a copy of the note of the meeting to Counsel.

04/07/2001 [14:00] FSA and their Counsel meet with Equitable and the Independent Actuary to get an update on preparation and progress for the proposed compromise scheme. Equitable provide a pack of documents which forms the basis of the discussion. This includes: a presentation which focuses on the scheme methodology; Equitable's '*The Business Case for the Section 425 Scheme*' paper; an undated paper entitled '*Determining the proposed enhancements to GAR total policy values*'; a note on the calculation of with-profits immediate annuity voting values; further responses to the questions raised in FSA's letter of 14/06/2001; and an initial draft of Equitable's scheme launch letter. FSA explain in principle the two-part test which was likely to form the basis for the criteria on which FSA would judge the compromise scheme.

04/07/2001 [18:30]	FSA's Line Manager E provides an initial brief report on the second meeting with Equitable and records that '*Progress is being made but (for the benefit of those with a wider issue) there are still some fairly fundamental issues that need to be resolved*'. The Line Manager also distributes a copy of a letter for policyholders about the scheme which they aimed to send out in August 2001, which Equitable had provided.
04/07/2001 [entry 5]	FSA's Returns Reception & Validation Unit carry out initial checks of Equitable's 2000 returns.
05/07/2001 [09:57]	In response to Line Manager E's brief report of the meeting with Equitable on the compromise scheme, FSA's Managing Director A asks '*what chance do our lawyers rate a scheme like this being acceptable to the Courts <u>on the basis of there being only 2 classes of policy-holder?</u> It seems to me that there are a lot of interests being lumped into the GAR class?*'. Managing Director A also makes two comments: > *... I can't believe that Equitable believe they can get away with the mickey mouse style of "consider the cases of Jane and Bill and see how their guarantees grow". I still therefore do not see what policy-holder advice it would be reasonable for us to expect to be provided.* > *... the draft currently has nothing about misselling/giving up of other rights etc. While that may be understandable ahead of* [Counsel's opinion] *we all need to remember that in reality the issues and the balancing act for the 2 classes of policyholder will be considerably more complex than suggested in the present draft*. [**10:37**] In response to the question, Chief Counsel A advises that FSA's legal advisers share the Managing Director's concern and that: '*Counsel have not been asked yet what chances they would give this scheme because we are all agreed that two classes will probably not be accepted unless the Equitable can make the uplift (ie, how the pot/cake is to be spread within the GAR class) work more fairly. The two issues (classes and uplift) cannot be viewed separately. If there are more classes, then what happens within each class matters less (for these purposes), but we are all keen to see the number of classes kept to a minimum. To the extent the classes multiply, the scheme will become horribly complex and difficult for policyholders to understand*'. Chief Counsel A also agrees with the Managing Director's comments.
05/07/2001 [10:30]	Further to the discussion the previous day (see 04/07/2001 [**10:48**]), the Director of Insurance says that he: > ... [finds] *it difficult to believe that it is simply reduced chance of insolvency that is the issue: this was certainly not the way the Society themselves have presented it in the past. I recognise however that putting firm quantification on the value of a better* [equity backing ratio] *is difficult and possibly spurious. But we are surely in no doubt that it is better to be in a fund which has greater investment freedom than one which is more constrained. The trick will be to demonstrate that and to include it (however quantified or qualitatively described) in the assessment of the "fair exchange" to be presented to GAR and non GAR policyholders.* > *Again on the "GAR Value" I recognise that this is a complex issue and I do not pretend to know how to go about assessing it. But the plain fact is that GAR policyholders perceive that they have something of value (they may overestimate it since it is currently in the money but won't necessarily be so for ever). They are being asked to give it up. They will surely expect us to have made some assessment of how what they are giving up stacks up with what they are gaining by way of uplift and other less quantifiable aspects of the scheme. And I can't see how the court can be expected to approve it (assuming the necessary majority of policyholders have voted for it) unless it too can get some feel for the "fairness" of the exchange since it is asked to bind in dissenting members who have voted against it.*

The Director of Insurance says that this is '*clearly very complex stuff*' and he suggests that officials should meet to discuss the matter. He also asks whether FSA needed to involve an economist in the discussion.

[**10:46**] Chief Counsel A agrees with the Director's comments.

[**10:53**] FSA's Insolvency Practitioner says that this would mean FSA:

> *... end up quantifying benefits of the scheme which are quite subjective. This makes it difficult for the detailed rationale to be made public, but I suspect we must make an attempt internally.*
>
> *The credit risk factor presumably works along the lines:*
>
> > *Probability of insolvency if there is a scheme = 10%*
> > *Probability of insolvency if there is no scheme = 30%*
> > *Incremental costs of insolvency = £3bn*
> >
> > *Value in having the scheme = (30%-10%)x£3bn = £0.6bn*
>
> *In the same ball-park as the £1.3bn, but numbers I have plucked out of the air. The probability of insolvency is also age-related (the longer someone is tied into the Equitable, the greater the probability that it will go bust whilst they are still in).*
>
> *If we are to be this subjective we might as well make an estimate of the litigation costs avoided through the scheme as well (the benefit of which would be greater if the scheme bought out potential mis-selling claims).*
>
> *I tend to agree that we cannot put too much weight on a better equity return, but I think that we can attach some value given the fund has 20+ years to run.*
>
> *I am not sure* [Equitable's Appointed Actuary's] *idea works. If you offer those of retirement age 60% of full GAR entitlements under the scheme with the option (expectation) that they can retire before the scheme becomes effective and take 100% of their GAR rights, then you may find that many more take up their 100% GAR rights than the 60% assumed so far. There is a risk that the fund will be depleted by more than it can afford if it is to uplift the value to younger policyholders by the amounts promised. How much risk can be taken?*
>
> *I think we must have a sliding scale based on age to retirement with something very close to 100% of GAR value at the top end. There probably cannot be too much science to the shape of the curve given the intangible benefits we are asking younger policyholders to contribute towards older policyholders. All that we need is a credible stab at getting the balance right, and one which policyholders can understand.*

[**11:50**] FSA's Head of Actuarial Support says that he:

> ... [agrees] *with* [the Director of Insurance's] *suggestion that a meeting to discuss this would be useful, and we would certainly welcome some input from an economist about the likely value of the equity risk premium at present (ie by how much equity returns may reasonably be expected to exceed fixed interest returns over the next 10-20 years). I can see that it may be easier presentationally to use this as the proxy for the reduced risk of insolvency, even if we are not convinced that they will actually change their investment policy.*
>
> *I also agree with your penultimate paragraph about the risks from* [the Appointed Actuary's] *proposal. I see that their draft letter to policyholders suggests that they are attempting to offer an uplift that will "ensure" that a GAR policyholder could obtain the same annual income as if they elected to apply 75% of the fund at GAR rates. If we replace the word 'ensure' with something less definite, and then adopt this test with the uplifted*

fund applied on the best current annuity rate in the market, then we might have a suitable benchmark for the level of percentage uplift to offer those at or close to retirement.

It also occurs to me that the proposed cut in policy values will in itself very likely lead to a 1.5-2% increase in the uplift factors. In addition, it might be possible to allocate a part of the £250 million Halifax contribution specifically for the purpose of this uplift, as is half suggested in the draft letter. This combination of devices might well lead us to an uplift that meets the test that I outlined above for those close to retirement.

At younger ages, then I would agree with your point that the "credit risk" must be larger and this would seem to justify some discount factor to be applied to the uplift factor, albeit that this might be offset against the increasing value of the GAR attributable to potential further increases in longevity for younger individuals.

05/07/2001 [13:26] FSA speak to Equitable to clarify their latest thinking on how they would deal with an adverse opinion on mis-selling claims. Equitable confirm they have not reached a firm view on how they would act but had concluded that they could maintain solvency by switching almost the entire fund from equities to bonds.

Equitable also give notice to FSA that they intended not to accept any further premiums on existing terms that included guaranteed annuity rates from policyholders who had not paid premiums in the last policy year. FSA note that Equitable: '*are well aware of the concerns we have raised about them acting on the basis of their current legal advice. On the other hand, the position is very difficult at a time when the Society is concerned about potential challenges from non-GAR policyholders, whose position is further threatened by the current practice, and also because they are increasingly concerned about statutory solvency going forward given current conditions*'.

[**15:26**] FSA's Director of Insurance comments that it is '*intolerable that the Society should be left effectively rudderless* [as the Chief Executive and Chairman are out of the country] *with, it appears, major unresolved differences between the Appointed Actuary and the Chief Executive*'. The Director of Insurance also says that FSA needed to get a better '*handle*' on Counsel for Equitable's opinion on mis-selling compensation and that the sums mentioned of £1bn to £1.5bn sounded very alarmist.

[**16:07**] The Director of GCD reports that he had spoken to Counsel, who would try to find out what Counsel for Equitable's views were and says that the Director had told Counsel that FSA might need to be able to publish his opinion on 20 July 2001.

05/07/2001 [14:47] Equitable send FSA a note prepared by their Appointed Actuary on the terms for premiums paid on policies which included guaranteed annuity rates but where premiums had not been paid for at least one policy year. The Appointed Actuary recommends that revised terms should be offered.

Line Manager E circulates the note, commenting that it showed approximately one third of GAR policyholders still had the contractual right to obtain GAR terms on future premiums, while half had not paid any premiums in the last five years. The Line Manager says: '*Before deciding what we should do, we need to recognise that Equitable are proposing to close the door because they believe it necessary, both for the protection of the vast majority of their policyholders, and as part of a programme of maintaining statutory solvency. We need also to recognise that they do not have much time for the concerns we have expressed and that they are likely to go ahead on some basis, unless we forcefully intervene to stop them*'.

[**15:04**] Chief Counsel A expresses the doubts that she and Counsel shared about the validity of what Equitable were intending.

[**15:16**] The Head of Actuarial Support agrees that this needed careful consideration in the context of the Unfair Terms in Consumer Contracts Regulations and, [**15:28**] in response to a query from the Director of GCD, [**15:50**] clarifies that '*While the contract (at least the example I have seen) says that if a premium is missed, then the Society may accept a subsequent premium at its absolute discretion, an associated leaflet says in effect that policyholders may follow whatever premium pattern they choose, with no mention of the Society's discretion either not to accept premiums or to vary their terms. In addition, I am not sure about the implications of Schedule 3, paragraph 2 of the Unfair Contract Terms Regulations which could be read as requiring reasonable notice to be given of a change in the terms for accepting new premiums*'. He suggests that the answer may be to wait for any complaints and then to examine their merits.

05/07/2001 [14:55] FSA's Head of Actuarial Support writes to Chief Counsel B, further to the meeting with Counsel the previous week, at which:

> *... they asked us whether we could provide an estimate of the reserves that might have been set up by Equitable for guaranteed annuity options at end-93 and end-94. This estimate will of course depend on how we interpret the applicable regulations, in the absence of any specific guidance at that time.*
>
> *I believe that we can make appropriate assumptions for this purpose about both the assumed mortality rates (deemed appropriate at that time) and the assumed long-term rate which is spelt out in some detail in the regulations. However, the main area of doubt would be over the level of take-up of the option that should be assumed for the purpose of determining the reserve to be made for this option.*
>
> *We had a discussion on this latter point with Counsel earlier in the year, albeit in a slightly different context. His view was that we could not insist on an assumption of 100% take-up, but would have to rely on our interpretation of the word "prudent" in Regulation 72 of Insurance Companies Regulations 1994 (and of course this word does not appear at all in the corresponding regulation that applied in 1993).*
>
> *If we were to assume that a take-up rate of somewhere between 10 and 40% would have met this criterion in 1993/4, in an environment where the GAR's were only just better than CAR's (or actually still worse than CAR's in most of 1994), then the mathematical reserve might have been between 0.5 and 2% of total funds (or equivalently around 5 – 25% of published free reserves).*
>
> *I would not have expected this to have had a material impact on bonus declarations at that time, given that they would have had various means to improve their statutory free asset ratios, and were most likely at that time expecting interest rates to remain at moderately high levels.*

05/07/2001 [15:29] FSA's Director of GCD writes to Counsel to express concern about an aspect of the emerging line of thinking on mis-selling.

05/07/2001 [19:12] FSA send Counsel their draft letter to Equitable on FSA's criteria for assessing the compromise scheme.

05/07/2001 [20:51] FSA send Counsel instructions to advise FSA on four issues relating to Equitable's decision, without prior notice, to no longer allow the application of GAR terms to top-ups made from 16 July 2001. Those issues are:

1) the quality of the legal advice on which the Board had based its decision;

2) whether Equitable could validly withdraw the ability to top-up a policy with or without notice;

3) whether GAR policyholders had, in addition to any legal rights, a reasonable expectation that they would continue to have the ability to top-up their policy; and

4) if top-up rights could validly be withdrawn without notice and there was no reasonable expectation, were there nevertheless any implications for the compromise scheme flowing from the withdrawal of such rights.

Chief Counsel A sends a copy of the instructions to other officials at FSA, for information.

06/07/2001 [10:23] FSA's Chief Counsel B thanks the Head of Actuarial Support for his note of the previous day on the estimate of reserves that Equitable would have had to set up for annuity guarantees. The Chief Counsel says that FSA would also '*need to ascertain when the reserving for GARs would have had a material impact on bonus declarations, presumably some time between end 94 and 98?*'. The Chief Counsel asks if the Head of Actuarial Support could give Counsel a view on this, noting that '*time is of course pressing*'.

[**10:55**] The Head of Actuarial Support replies:

> *The issue of when and by how much they might have adjusted bonus rates is very judgmental. We know that they cut the declared bonus in 1998 (from 6.5% to 5% for most pension policies) to reflect current and prospective financial conditions, but it is not clear whether they would have done this anyway even if we had not pressed them to establish a sizeable provision for GAO's at that time.*
>
> *The provision required for GAO's at end-97 and earlier would have been significantly lower than at end-98, since a major fall in interest rates occurred during the course of 1998. In my view, it is doubtful therefore that they would have made a cut in their declared bonuses prior to end-98.*
>
> *Regarding the final bonus rates, we know that they continued until end-99 to base these on smoothed investment returns with no apparent adjustment for the cost of GAO's (as they considered the economic value of these GAO's to be of the order of only around £100-200M). Following the* [House of Lords'] *judgment in mid-2000, the economic cost of the GAO's rose to around* [£1.5] *billion and they therefore decided to eliminate any final bonus for the first 7 months of 2000 in order to offset this cost.*
>
> *If they had followed the* [House of Lords'] *judgment from the start, then they would very probably in my view have reduced final bonuses at an earlier stage. This becomes very judgmental indeed, but this could conceivably have involved a reduction of 1 months final bonus in 1995, a further 2 months final bonus in 1997 and another 3-4 months final bonus in 1998.*

06/07/2001 [11:07] FSA's Line Manager E seeks an update on what was happening with PIA's contribution on mis-selling issues to a report to the FSA Board. The Line Manager asks for confirmation of where things stood, saying that he had been asked to provide a short note about what Equitable would do to cope with any mis-selling liabilities.

[**13:24**] Chief Counsel B replies: '*The position is that I am tasked to review and revise the PIA report on Equitable misselling which has looked at the history post-Court of Appeal. I am also tasked to ensure our counsel deliver a view on the misselling issues as identified by* [the Society's Counsel] *and as we anticipate that will emerge in* [the further opinion that Counsel is to provide to the Society]. *Both these pieces of work are closely related. I think we are now aiming to have counsel's opinion on the ... issues* [identified by the Society's Counsel] *ready by 20 July and I am aiming to have the PIA part of this completed by then also*'.

06/07/2001 [12:33]	FSA's Director of GCD thanks Chief Counsel A for sending instructions to Counsel on the top-ups issue. He suggests two further points to pursue with Counsel.
06/07/2001 [afternoon]	FSA have a conversation with Equitable. According to the Director of Insurance's note: [Equitable's Chief Executive] *called me in response to the message we relayed to him through* [Equitable's Appointed Actuary] *... whom we had met at lunchtime that day. He confirmed that he had discussed matters with* [the Appointed Actuary]*, and was aware of his view (and ours) that the Society should not take precipitate action in response to what it expected* [Counsel] *to advise on misselling. He said that he had been keen that the potential need to take "extreme and radical action" should be recognised, and his purpose in raising this in the terms he had had been to ensure that planning for the eventual arrival of the* [Counsel] *opinion should not be on too optimistic a basis, and also that the Board, in taking decisions on the policy value adjustment we had discussed earlier should do in the clear knowledge that* [Counsel's opinion] *might well lead to the need for further action in fairly short order. However he was clear that there was no question of the Board taking any decision on action that the* [Counsel for Equitable] *opinion might necessitate this week. He confirmed that the Society would discuss with us what such further action might involve before they committed to it.* *We discussed briefly the situation that might arise if the* [Counsel for Equitable's opinion] *meant establishing a provision which meant that Society was unable to meet its* [required minimum margin]*. I said that, if this were to occur we would, of course, look to the Society to bring forward proposals to address the situation. This might well involve a substantial further rebalancing of the Society's funds. But we would not necessarily expect (and might not permit) this to be done over a very short period. The test for us would, of course be, whether the action and its timing was best designed to protect policyholders' interests.* [Equitable's Chief Executive] *said he was reassured that this was likely to be our approach.*
06/07/2001 [18:22]	Having received Counsel's input, Chief Counsel A seeks urgent comments on the amended draft letter to Equitable on FSA's criteria for assessing the compromise scheme. Chief Counsel A highlights the addition, under matters of particular concern to FSA, of '*The risk of insolvency if the scheme does not go ahead (or if the scheme does go ahead without including mis-selling claims)*'. She says '*Everyone will know why I am uncomfortable with it*'. [**18:59**] Chief Counsel A later sends an amended version of the letter back to Counsel to consider over the weekend. She says that FSA were '*uncomfortable only about referring to insolvency as you suggested in a letter which may become public*'.
06/07/2001 [19:35]	Equitable's new auditors telephone FSA to discuss Counsel's opinion given to Equitable, which had suggested that Equitable could face significant mis-selling claims. Equitable were present during the call. According to FSA's note of the conversation: *He said that he felt that the Society were in an extremely invidious position in that they were now aware of this possibility but had received no indication of the basis on which claims might be made or of the classes or cohorts of policies that might be involved. It was accordingly quite impossible to form any view on possible amounts. In these circumstances he thought that it was inappropriate to try to reach a view on the level* [of] *provision that might need to be established or to take precipitate action based on inadequate information. Accordingly his view, which was also the view of the Society, was that the Board at its meeting next week, should address the known problems (ie the fact that notified policy values exceeded available assets, and the need to address "top ups with GARs attached" which were still being accepted in circumstances where there*

appeared to be no contractual obligation to do so). Further action, if it was necessary, to deal with possible misselling should be taken in a considered fashion after full consideration of all the implications and such quantification as was possible.

The auditors say that Equitable were not expecting to receive anything further from Counsel before their next Board meeting. The note continues:

> [The auditors] *told me that the Society were taking legal advice to confirm that this "process" in respect of an opinion of which they had, somewhat oddly, been given a foretaste but not the full details was sound. He asked for my view. I said that we very much agreed that it was important to avoid over-hasty or precipitate action which might damage policyholders. We would, of course, expect to be kept very closely in touch with developments and to be given reasonable opportunity to comment on (and if necessary intervene in) any major decisions. But our basic approach would be to try to work in such a way as to best protect policyholders' interests. Thus, if setting up an appropriate provision to cover possible misselling costs meant that the* [required minimum margin] *was uncovered we would not expect the Society to correct the position overnight (eg by some sudden and major switch from equities to bonds) if a more measured and progressive approach would produce a better result, albeit at the cost of leaving the margin uncovered for a longer period.*

The implications for the compromise scheme are discussed and FSA suggest that Equitable '*could scarcely go forward with the scheme with so much uncertainty*'.

06/07/2001 [entry 7] Counsel telephone FSA to inform them of a three-hour conversation that he had had with Counsel for Equitable about possible mis-selling liabilities and the compromise scheme. FSA's Director of GCD records:

> *Points made* [were] *that:*
>
> - [The Society's Counsel's] *opinion would continue to mention almost all the claims identified in the original, and indicate that they were all possible source of claim, in the sense that they were not negligible;*
> - *the exception was pre-1988 claims, which he could not currently say were not negligible, though he was looking at this further;*
> - [The FSA's Counsel's] *view was that* [Counsel for Equitable] *and his junior did not see themselves as advising Equitable, but as "free spirits giving independent advice";*
> - *it was said to be clear that any figures that had been supplied to us as to the value of the misselling claims had not come from* [Counsel for Equitable], *who had been extremely cagey about what the claims were worth;*
> - *it appeared that* [Counsel for Equitable] *and* [his junior Counsel] *were now less bullish on contractual claims for breach of collateral warranties, but would still not dismiss them out of hand;*
> - *in order to make such a claim work, it would be necessary for the court to imply contrary terms into the contracts of GAR and non-GAR policyholders, and the effect of this would be to increase the overall liabilities of the Equitable, rather than simply to require a different sharing of the same pot;*
> - *there was a stark contrast between the approach which* [Counsel who was advising the Society on mis-selling issues] *was taking and the approach which had been taken by* [junior Counsel], *who was advising the Equitable on the GAR scheme along with* [Counsel]*;*

- *this was because* [the Society's Counsel] *had been under the clear impression that his work was going to be factored into the 425 scheme, while those who were working on the 425 scheme were clearly of the view that misselling would be kept out of it;*
- *in particular, the draft board paper on the 425 scheme had referred to misselling only as a procedural point, indicating that the scheme would not affect misselling claims;*
- *it was clear that* [Counsel for Equitable] *had been surprised at the idea that the misselling claims would not be included in the scheme;*
- *our own Counsel expressed doubt that tortious misselling could be included, given that its value will vary from person to person: on any basis, the effect would need to be explained very carefully;*
- [The Society's Counsel] *and his junior take a more absolute approach to the construction of the regulatory rules than* [Counsel for the FSA] *and* [his junior Counsel]*, but consider that even if some fault on the part of Equitable were required in order to show liability, that fault could be established on the basis of the paper* [*With Profits Without Mystery*] *produced by* [Equitable] *in 1988 and 1989, which in* [Counsel for Equitable's] *view showed that they knew that they had a problem, but ran away from it;*
- *accordingly if it were concluded that the rules simply required disclosure of that risk,* [Counsel for Equitable's] *view would be that there had been a material risk from the time policies had been issued, because he had been told that if the true position had been given, no one would have bought these policies rather than those from another provider;*
- *the view that* [Equitable] *knew the true position in 1988 and 1989 is based both on his published actuarial paper "With Profits Without Mystery" and on a meeting note from that date;*
- *it was clear that* [the Society's Counsel] *was not going to be dissuaded from saying that there had been misselling back to 1988 and 1989;*
- *it was clear that the Equitable had not taken legal advice at the time they introduced their differential bonus policy about the validity of such a policy;*
- *it could not be assumed that if they had taken advice before they had introduced the policy, it would have been the advice given by* [Counsel] *when he was consulted;*
- *in* [Counsel for the FSA's] *view, it was difficult to imagine that the 425 scheme would be sellable without including misselling in the accommodation;*
- *this was because the GAR holders would be asked to give up all their rights, but would know that the rights of the non-GAR would be maintained, and this could only* [lead] *to smaller bonuses for the GAR holders, undermining the value to them of the deal they had accepted;*
- *there were, however, two counter arguments to the view that misselling claims had to be included in the 425 scheme;*
- *the first was that the Halifax deal was conditional only on the compromise of the GAR rights, not on compromise of the misselling claims, which could complicate the deal;*
- *the second was that if* [Counsel for Equitable] *was right to believe that there were contractual claims, their scale might be such that it was practicable for them to be adjustable only by a liquidator or administrator.*

06/07/2001 [entry 8] FSA's Head of Actuarial Support meets with the Independent Actuary for the compromise scheme. Included in the issues arising from the meeting and under the heading '*Principles of Financial Management*', the Head of Actuarial Support records:

> *The scheme should result in an improvement to the Companies Act balance sheet of around £500-600M from removing the value of the GAR and replacing this by an uplift of 17-22% to the guaranteed fund; plus also the Halifax contribution of between £250M and £500M.*
>
> *This will reduce the risk of insolvency, thereby allowing Equitable slightly more investment freedom and the possibility of a slightly higher ratio of guaranteed to non-guaranteed bonuses in the future.*
>
> *There is though no indication as yet by Equitable of how this scheme is expected to affect their investment policy, bonus philosophy (including smoothing), MVAs on surrenders (for both GAR and non-GAR policies) and current annuity rates (the latter may not be too important as long as policyholders retain the right to take the funds elsewhere on retirement without penalty).*
>
> *This information will be important to both a qualitative and quantitative assessment of the scheme by policyholders, the independent actuary (if this is within his terms of reference) and FSA.*
>
> *For example, some assurance is needed that the uplift provided to the non-guaranteed element of policy values for GAR policies cannot be unilaterally removed, other than in the context of some equivalent reduction of final bonus for all policyholders.*
>
> *We would also expect to see both GAR and non-GAR policyholders treated similarly in the event of early surrender.*

09/07/2001 [10:27] FSA's Head of Actuarial Support asks the Director of Insurance if Equitable's auditors or their Appointed Actuary had expressed a view on 06/07/2001 as to whether the company was still solvent, as: '*It is not at all clear to me from the limited information provided at present that there is much margin at all on a Companies Act basis, particularly if they have in due course to make any material provision for mis-selling claims*'.

[**10:31**] The Director of Insurance says that Equitable had told them that they were solvent as at end-June but '*that, I am pretty clear, was before any provision for misselling claims*'. The Director concludes: '*At this stage, before either their counsel or ours has opined, it is very difficult to see on what basis such a provision could be made. But the fact that the Society's auditors are (now) being fully involved gives me some comfort*'.

09/07/2001 [11:45] FSA's Head of Actuarial Support circulates a note of his meeting on 06/07/2001 with the Independent Actuary about the compromise scheme. [**12:05**] The Director of Insurance and [**14:13**] the Insolvency Practitioner comment on some of the scheme issues.

09/07/2001 [13:08] FSA's Insolvency Practitioner prepares a paper entitled '*Equitable Life Counter-factuals/Contingency Planning*', which sets out eight scenarios where difficulties might arise for Equitable policyholders. The scenarios are:

1) Solvency deteriorates.

2) Policyholder petitions for winding up.

3) Society becomes insolvent.

4) Society announces that terminal bonuses are not sustainable.

5) Society removes rights to top-up GAR contracts.

	6) Counsel for Equitable's final opinion supports mis-selling actions. 7) Timetable slips – Scheme cannot be sanctioned before 1 March 2002. 8) Scheme is rejected by creditors or not sanctioned by the Court.
09/07/2001 [15:30]	FSA hold a conference with Counsel on the rights of Equitable policyholders to pay top ups and on Counsel for Equitable's opinion in relation to mis-selling liabilities. Counsel advise that Equitable could seek not to allow further top ups only if they gave notice of this to policyholders, but there was also an argument that they could not now do so at all. On mis-selling, Counsel agrees to provide a '*bullet type opinion*' in response to Counsel for Equitable's '*Stage 2*' opinion. The note records: '*This short opinion was likely to indicate that any claim based on contractual rights by non GARs was weak/unsustainable and that mis-selling was from 1995 and not 1988*'.
09/07/2001 [17:04]	An FSA actuary provides the Director of Insurance and the Head of Actuarial Support with a '*Scoping Paper for GAR Value*'.
09/07/2001 [entry 6]	Equitable's solicitors confirm with FSA the arrangements for a conference with Counsel to take place on 13 July 2001. The agenda items are the termination of top-up rights and the significance of this for the determination of classes in the compromise scheme of premium paying and non-premium paying policyholders.
10/07/2001 [09:24]	FSA's Director of GCD suggests that FSA should consider whether Equitable should soon be seeking advice on trading while insolvent. [**13:43**] The Director of Insurance replies: *Do you mean legal advice? If so I am not entirely sure what value it would add. If you mean advice as to what provision might be required in these circumstances (which is essentially a matter I think of "accepted accounting practice") the advice might best come from their auditors, to whom they are already talking (see my note of my conversation with* [Equitable's new auditors]*).* *Where lawyers might really help would be in advising on the nature of any misselling claims that might arise, what form of compensation might be appropriate, whether the causes of action are broadly similar (so that they might stand or fall together) or whether they are various and dissimilar. It is precisely on these points that the auditors feel the Society are being ill-served by* [Counsel]*. Given this information the company could make a reasonable attempt at deciding what should be provided. But for the present the advice the auditors are giving is that the contingent liability appears to be too difficult to quantify to make it appropriate to provision.* *I think we have to bear in mind that what trading means in the case of the Society is paying out money; annuities, maturity payments, surrenders etc. Deciding to stop trading would mean, in practice, stopping all payments. Is this what you have in mind?*
10/07/2001 [10:00]	HMT and FSA hold their tenth quarterly meeting on insurance regulation issues. FSA update HMT on current issues concerning Equitable, including the planned policy value cuts.
10/07/2001 [12:32]	FSA's Line Manager E seeks comments on a further draft of a letter to be sent to Equitable about FSA's criteria for assessing the compromise scheme. Following comments by Chief Counsel B, the Head of Life Insurance and Line Manager E, [**15:35**] the Director of Insurance says that the letter must be issued by 12 July 2001, and should be again checked by Counsel and shown to FSA's Chairman and Managing Director B immediately for their sign off.

[**16:26**] Line Manager E circulates a revised draft of the letter and says that he would prepare a note to the Chairman and Managing Director B.

10/07/2001 [12:42] Further to the discussion on 29/06/2001 [**10:19**] about the basis for intervention by FSA in relation to the compromise scheme, the Director of GCD asks Line Manager E to put together a draft letter to Equitable on the test that FSA would apply, so that they could seek Counsel's views on it.

10/07/2001 [14:01] Following some of the initial discussion that morning about the draft letter to Equitable on FSA's assessment criteria, in which Chief Counsel B had suggested that FSA should ask for urgent clarification on whether Equitable intended to include mis-selling claims in the compromise scheme, Line Manager E says that Equitable have been:

> *... fairly clear with us that they will take a view on whether mis-selling claims can and should be caught up in the scheme when they have a better idea about the scope, scale and likelihood they have of success. Understandably, Equitable does not want to try and deal with a problem that has yet to prove it exists (though clearly we are getting closer to reaching a view that it probably does to some degree). Accordingly, I would rather put that question once the legal advice has been given, and ideally when we have reached a view, as promised in our memorandum to the Select Committee.*

He also queries a point made in a note from the Director of GCD that both Counsel for Equitable and for FSA did not know how the mis-selling issue was being taken forward by Equitable.

[**15:07**] The Head of Actuarial Support says that his understanding was that:

> [Counsel] *is looking at possible mis-selling claims for all with-profit policies sold from around 1996 as being a possibility (though his view may well differ from* [Counsel for Equitable] *who has so far come at this from a rather different angle). The present policy values in respect of this business are likely to be of the order of £10 Bn, so that if the quantum of claim were say 15% of policy value (and it could be higher on the approach he is looking at), we could have mis-selling liabilities of £1.5 bn or more.*
>
> *In present investment market conditions, this would very likely mean that the company was insolvent. Therefore, the Section 425 Scheme would take on quite a different flavour, as it would be the means to restore overall solvency. I am not sure that it is practicable for us to expect the Society to modify the scheme so fundamentally at this stage unless or until we receive confirmation that there are likely to be mis-selling claims of this magnitude.*

[**15:13**] The Director of GCD suggests that '*the alternative* [is] *even more unattractive – that* [Counsel] *gives his advice and there is no plan to deal with it*'.

[**15:16**] The Director of Insurance says that he thinks FSA '*really do need some harder information before we try to take a firm position. There is a danger that too much speculation (which is all it can be at this stage) however well informed will lead to precipitate action which will not best serve policyholders*'.

[**15:18**] The Director of Insurance says that FSA needed some scenario planning and asks that the Insolvency Practitioner's work (see 09/07/2001 [**13:08**]) should be expanded.

[**15:32**] FSA's Insolvency Practitioner circulates his work to a wider audience in FSA.

[**16:00**] The Head of Actuarial Support comments:

> *In this context, it would be very useful to have a figure from them for the total statutory value of the Society's tangible assets as at 30/6/01 (any admissibility percentage limits could be ignored for this purpose). In one board paper, these are estimated on the assumption of a 0% rate of investment return for 2001, while a second Board paper*

assumes a -4% rate of return. Even this small difference could affect their present solvency and resilience to further market changes.

Another point to consider in this note would be the effect on the society's reinsurance arrangements, and in particular the liabilities that were reinsured to Halifax ... I am not sure what would happen to these in the event of a liquidation.

The value to be placed on the GARs in a liquidation is another area of uncertainty that would need to be raised with Counsel in that event.

In Appendix B, I don't understand how implicit items such as future profits could be included in a test of solvency.

10/07/2001 [14:09] FSA's Director of GCD circulates the key points arising from the conference with Counsel the previous day.

10/07/2001 [17:32] FSA's Head of Actuarial Support prepares an analysis of the two Board papers on bonus declarations supplied by Equitable. This comprises two lists of the advantages and disadvantages of option 1 (reduction of policy values by 15%) and option 2 (eliminate interim bonus from 1 August 2000 (i.e. a reduction of 7.3% in policy value)).

On option 1, the Head of Actuarial Support states:

Advantages

- *Preferred option of management/chief executive*
- *Achieves near balance of Aggregate Assets with Policy Values at present time*
- *Avoids potential losses if large number of policyholders opt to retire now*
- *Financial adjuster on surrenders reduced to 5% (but overall they become 5% worse off?)*

Disadvantages

- *Systems problems with implementation*
- *Possible inconsistency with PRE*
- *Concerns that payouts should be smoothed (why has Board not acted before now?)*
- *Revised policy value is around 5% lower than value shown to policyholders as available for transfer as at 31/12/00*
- *Possible unfairness for policies written since around 1990 relative to others*
- *Adverse PR for society*
- *Loss of confidence in board*
- *Difficulty in getting acceptance by policyholders for S425 scheme*
- *Increased likelihood of mis-selling claims*

On option 2, he states:

Advantages

- *Preferred option of appointed actuary in 21 June Board paper*
- *Looks more plausible in terms of investment returns since January 2000*
- *Allows some degree of smoothing in payouts*

- *Administratively less costly*
- *Policy values still higher than amount shown as available for transfer at 31/12/00*

Disadvantages

- *Society still vulnerable to sudden increase in numbers of retirements (though a cut in final bonus as in option 1 could be implemented at a later date)*
- *Financial adjuster on surrenders likely to remain at significant level, (though probably reduced to around 7.5%)*
- *Some adverse PR though less than for Option 1*
- *Imbalance remains between Aggregate Assets and Policy Values (though may not be necessary to disclose this previously unpublished figure with S425 scheme)*

The Head of Actuarial Support says that he was '*somewhat concerned*' about some significant discrepancies in the figures in the papers. He notes that Equitable's Appointed Actuary had recommended a relatively modest reduction in bonus, whereas the Chief Executive had recommended a '*much more drastic*' cut in bonuses. The Head of Actuarial Support suggests that FSA should talk to the Appointed Actuary in order better to understand the situation and to ascertain whether the Appointed Actuary was content with the more drastic option that was being considered.

[**18:21**] Line Manager E responds:

> *I have had some difficulty getting to grips with the relevant papers, but are the numbers so different? Both the management paper and the appointed actuary's report indicate that policy values exceed asset shares by 15-16%. One paper does not contemplate cutting terminal bonus going other than by a further adjustment of the interim rate of return for the recent past. The other is more radical in that it proposes cutting policy values back to match the assets. But equally, the less radical option acknowledges that it does not actually solve the problem – it just means that ... ongoing it would not be quite as bad as it might otherwise have been and that further measures will be needed over time to keep things under control.*
>
> *Would it help if I asked* [Equitable's Appointed Actuary] *to clarify why/when the relevant papers were prepared and considered? It may be that they were produced for different purposes that is not immediately apparent. For example, we know that before the returns were submitted the board considered the issues but failed to decide how to act. There was then a further paper that we were told contained more analysis on the basis of which the board later took its view. It could be that the* [Appointed Actuary] *signed paper was their first shot, and that it had then to be developed into the more radical option (though less radical than some others that* [the Chief Executive] *has come up with, and which* [the Appointed Actuary] *had been unhappy about!).*

10/07/2001 [entry 8] FSA write to Counsel following the conference held the previous day. FSA say that their Counsel had reported that the Opinion given to Equitable by their Counsel considered that there might have been mis-selling by the Society of non-GAR policies from as early as 1988. FSA set out their understanding of the basis for this view and provide their comments on this.

---

c10/07/2001 Equitable send FSA copies of four papers discussed at their Board meeting held on 3 July 2001, as requested by FSA on 04/07/2001. The four papers are:

- *FSA Returns, Policy Values and Bonus Rates*, dated 21 June 2001, prepared by the Appointed Actuary.

- *Note on Solvency Position at 2000 and Prospects in 2001*, dated 21 June 2001, prepared by the Appointed Actuary.
- *Note on Society's terms for premiums paid into policies which have GAR benefits, but where premiums have not been paid for at least one full policy year*, dated 21 June 2001, prepared by the Appointed Actuary.
- *Bonus Declaration*, dated 29 June 2001, prepared by the Chief Executive.

1) *FSA Returns, Policy Values and Bonus Rates*
In this paper, the Society's Appointed Actuary sets out the broad position as would be revealed by the returns for the year 2000, once submitted, and highlights some issues which arise. The Appointed Actuary says that he believes that:

> *... it is only appropriate to present these Returns in their present form if the Directors address urgent issues, and that the Society is run with tight control. The urgent issues are bonuses credited on with profits policies for 2001, and changing the terms for new premiums on GAR policies where premiums have not been paid in the previous policy year.*

The paper includes the following presentation of Equitable's financial position at the year-ends 1999 and 2000:

> *Form 9 reveals the following position (*[figures] *in £m)*

	2000	*1999*
Long Term Business Admissible Assets	*34257*	*33111*
Mathematical Reserves	*(32894)*	*(29933)*
Other Liabilities	*(731)*	*(241)*
Available Assets	*632*	*(936)*
Future Profits	*1000*	*925*
	1632	*3861*
Required Solvency Margin	*1221*	*1114*
Free Assets	*411*	*2747*

Equitable's Appointed Actuary notes that the Society's financial position had deteriorated over the year, despite no '*significant*' declared bonus being added. He also says:

> *It should be noted the £411m of free assets is after taking credit for the reinsurance benefit (£808m) and future profits (£1000m). It also ignores the value of the subordinated debt liability of £346m.*
>
> *These are all permissible and previously agreed with the FSA. However, their use clearly eats into any conservatism in the basic valuation regulations.*

The Appointed Actuary goes on to explain:

> *In setting and reviewing each element of the valuation basis I have endeavoured to ensure that each assumption is at least prudent and is backed up by a suitable analysis of experience.*
>
> *Compared with the valuation assumptions used at the time of the Report and Accounts the only significant change is to add an additional reserve of £150m. This is in respect of adding some margin to the mortality assumption and also to provide for possible costs and payments on the Managed Pension Review. In addition a resilience reserve is included and the treatment of the GAR reserve is different using conservative assumptions but including the reinsurance.*

In arriving at the valuation, specific assets are hypothecated to particular liabilities, and reallocated in the resilience scenarios. I believe that the process we used is close to the best achievable.

Overall I think that whilst prudent in all respects according to the valuation regulations the Directors should be aware that it would, in my view, not be possible to produce a satisfactory valuation which produced a materially higher net asset position at 31/12/2000.

Under the heading 'Managing the Society in 2001', the Appointed Actuary reports:

In the first 6 months of 2001 investment returns to mid June were broadly zero (or slightly negative). This was particularly true of UK equities (FTSE 100 index at 31/12/2000 was 6222). This will have adversely affected solvency. The passage of time will also have increased guaranteed liabilities where there is a 3½% interest rate guarantee. Against this the Society received £500m (or say £300m net) from Halifax. (The Permanent sale value was already credited in the 2000 returns). The Society also sold some more equities, although the impact of this has been eroded by claims outflow.

Claims (both surrenders and maturity) are running at a much higher level this year compared with last year and with profit premiums are very modest.

When with profits policies mature the final bonus (which is not reserved for) crystallises. On the other hand, resilience reserves are released and unless an annuity is taken with the Society the 4% solvency margin is released. In the case of surrenders the 15% financial adjustment comes off the final bonus.

In the first 3 months of 2001 £1290m of with profit policy value matured or surrendered with a final bonus of £328m. The financial adjuster saved £29m and hence actual payouts were £1261m with a final bonus element of £299m.

The Society's Appointed Actuary continues:

If first quarter experience were repeated then total claims would be £5.0bn with final bonuses of £1.2bn and therefore a release of guaranteed fund of £3.8bn. The release of resilience reserve on the £3.8bn guaranteed fund might be anywhere between say 6% and 33% of the guaranteed fund. The 33% assumes that we are hypothecating 100% equities to the business going off the books. 6% assumes that the resilience reserve reduces pro rata to the with profits fund. This produces a range of resilience reserve release of between £0.2bn and £1.3bn. Therefore, at best the only addition to free assets would be say 4% of £3.8bn or £152m. At worst, there would be a deterioration of around £850m.

In order to mitigate the adverse effect we could reduce the equity backing ratio.

Under the heading '*Policy Values and Asset Shares*', the Appointed Actuary says that '[as] *well as considering the statutory position the realistic position also needs attention*'. He reports:

At this moment (FTSE 1000 at 5700) policy values are around 16% above asset shares. The interim final bonus rate we are using is 8% per annum for 2001. The financial adjuster we are using (of 15%) means that surrenders are at around 99% of asset shares. The figure clearly fluctuates from day to day with investment markets, but policy values are increasing by 8 % p.a. relentlessly.

Given the tight financial position of the Society it seems perverse to be paying out 16% more than asset shares. In addition this rate of increase of 8% is higher than we would reasonably expect the Society to be able to earn net of management expenses, and recouping present overpayments.

An indication of a sustainable rate would be

	%
40% fixed interest @ 5.5%	*2.2*
60% Equity @ 8.0%	*4.8*
less management and smoothing cost	*(1.0)*
	6.0

In practical terms the most we can do in cutting policy values today is to eliminate any interim bonus additions for the year 2001 in effect reducing calculated policy values today by 4%.

Going back further would effectively go back on what was said in respect of 2000. Going forward we do not wish to set the interim rate below a reasonable gross return on a balanced portfolio, as this would encourage people to retire/surrender immediately. Therefore a 6% rate seems appropriate.

The Society's Appointed Actuary goes on to say that:

The effect of 4% reduction would be to "save" some £200m in policy value payment in a full year which is entirely from the final bonus.

This is clearly a modest step but combined with the reduced accumulation rate would reduce the problem, and stop it "running away" on business that remains in force. Incidentally the policy value overpayments are ultimately paid for by continuing policyholders in extra "smoothing" charges.

There is clearly a risk that this move will be seen as a further sign of weakness of the Society. However, it is interesting that S&P are concerned about this issue and think we will not address it.

The Appointed Actuary's paper concludes with the following recommendation:

As a result of the above analysis, I recommend that the Directors reduce the increase in policy values since 31/12/2000 to zero (where possible) and that from 30/6/2001 the interim rate should accrue at 6% per annum. A formal resolution will be tabled which gives details of the proposed changes.

It was agreed at the Investment Committee that the equity backing ratio (including relevant commitments) should be a maximum of 61½% of the with profits fund.

As illustrated above, this may be insufficient to maintain the solvency margin on its own, particularly if investment markets remain depressed. The Society should therefore monitor the position closely and if necessary reduce the equity backing ratio to improve solvency.

In any event it will be essential to ensure that cash movements and asset exposure are tightly controlled in order to avoid "accidental" exposure to falling markets.

I have stated in the FSA returns that I do not believe that it is appropriate for the Society to contemplate any additional reversionary bonuses until the Society's solvency position is significantly stronger. This might be if investment markets have risen significantly and the compromise scheme is concluded. Such a rise in markets would also be the opportunity to eliminate the gap between policy values and asset shares.

Given that even with the 4% interim policy value increase removed the Financial Adjuster only reduces surrender values to 95% of ongoing asset shares I recommend that no change is made to the financial adjuster.

2) *Note on Solvency Position at 2000 and Prospects in 2001*
In his second paper, the Society's Appointed Actuary sets out the principal reasons for the change in Equitable's statutory solvency position during 2000. The Society's solvency position is set out in greater detail than in his first paper (see above), and is as follows:

		31/12/2000		31/12/1999
		£m		£m
Statutory value of assets		*33,526*		*32,870*
Future profits implicit item		*1,000*		*925*
		34,526		*33,795*
– Mathematical reserves				
– basic reserves	*29,371*		*27,869*	
gross GAR reserve	*2,631*		*1,663*	
rectification	*200*		*–*	
reassured GAR reserve	*-808*		*-1,098*	
– net GAR reserve		*2,023*		*565*
– resilience reserve		*1,500*		*1,500*
		32,894		*29,934*
Available assets		*1,632*		*3,861*
– minimum statutory solvency margin		*-1,221*		*-1,114*
"Free assets"		*411*		*2,747*
Available assets/minimum, margin		*1.3*		*3.5*

The Appointed Actuary points out that the largest single factor that had caused the deterioration in the Society's free assets was the impact of the changes in the reserves established in respect of annuity guarantees. He explains that the main changes to the level of these reserves were due to:

> *i. GAD guidance expects the reserves to assume that almost all policyholders exercise their GAR options. In the 1999 returns it was assumed that 85% of policyholders took GARs. With the House of Lords' judgment that has been increased to 90%.*
>
> *ii. ... the reinsurance treaty had to be renegotiated following the House of Lords' judgment and now allows the Society to assume a net take-up rate of 60% (25% at 31 December 1999).*
>
> *iii. Interest rates at the end of 2000 were generally at a lower level than at the end of 1999. That leads to a higher reserve as does the strengthening of the annuitant mortality basis.*
>
> *iv. The assumptions for the level of future premiums to be assumed have been increased.*
>
> *v. New valuation regulations were introduced during the year which reduced the rate of interest for future cashflows again leading to higher reserves.*

The paper sets out an analysis of the changes in the reserves in respect of annuity guarantees. The Appointed Actuary reports that:

> *The above analysis "explains" some £1.7bn of the £2.2bn change in free assets (increase in GAR related reserves of £1.5bn and additional reserves etc of £0.2bn). The rest of the change is for a wide variety of reasons. However, in the rest of this note the impact of the crystallisation of final bonus is highlighted alongside the change in respect of basic liability values.*

The Appointed Actuary's paper then addresses the changes in the value of the Society's assets over the year (which had increased by 3.1%), along with the changes in the basic mathematical reserves (which had increased by 5.3% or, if premiums received in the year less claims made and expenses incurred were taken into account, by 6.7%). He explains:

Essentially therefore, if we assume that the 3.1% asset increase looks reasonable we need to explain why liabilities (including payouts during the year), increased by 6.7% (i.e. 3.6% more than "expected" or £1bn).

This amount could be partly explained by:

- *additional reserve £150m*
- *crystallised final bonus £545m (from Form 58 of the FSA Returns)*

This would leave miscellaneous strengthening etc of £300m. That would be plausible based on mortality changes and possible losses on non profit liabilities.

Broadly we would expect that as basic liabilities (including the GAR reserves) increased compared with assets the resilience reserve would increase. However, this is not the case.

It is believed that this is explained by the s68 order allowing a "pooling" of the fixed income return on the fixed interest holdings and the more sophisticated allocation and reallocation process used at 31/12/2000 but also and importantly, because the release of reserves through maturity payments can have an opposite effect to the final bonus payment.

FSA sideline the final part of the last sentence and mark it with '?'.

In the remainder of his paper, the Appointed Actuary provides estimates of the possible position of the Society as at 30 June 2001 and 31 December 2001. These estimates, based on certain assumptions, showed free assets at those dates of £338m and £511m, respectively.

<u>3) *Note on Society's terms for premiums paid into policies which have GAR benefits, but where premiums have not been paid for at least one full policy year*</u>
The third paper prepared by the Appointed Actuary considers the issue of the contract terms for GAR policyholders. He explains:

Most of the GAR policies clearly state that if premiums are not paid in any policy year future premiums are accepted by the Society on terms which it decides. Until now the Society chose to allow such premiums to be on GAR terms. Prior to the House of Lords Judgment this seemed fairly neutral, and was administratively convenient. Any "anti selection" was, I believe, minimal.

Since the Judgment this ceases to be the case. In view of the Society's position it is clearly important to avoid any unnecessary further liabilities. I therefore recommend that we offer revised terms for new premiums on such policies with immediate effect and reflect this in the Section 425 Scheme.

The Society's Appointed Actuary provides an analysis of the premium paying characteristics of policyholders, which shows the following:

	Retirement Annuity		*Individual Pension*	
	No	*%*	*No*	*%*
Premium Paying in 2000	*37,772*	*35*	*3,259*	*28*
No premium for 1 year	*5,295*	*5*	*635*	*6*
2 years	*4,894*	*4*	*499*	*4*
3 years	*4,493*	*4*	*380*	*3*
4 years	*3,084*	*3*	*261*	*2*
5 years	*52,709*	*49*	*6,566*	*57*
	108,247	*100*	*11,600*	*100*

4) *Bonus Declaration*

The fourth paper considered by the Society's Board, prepared by the Chief Executive, considers the issues of bonus methodology, the relationship between policy values and asset shares, and the Society's smoothing assumptions.

By way of introduction, the Chief Executive says:

> *Policyholders are sent an annual statement ... and accompanying leaflet ... which sets out the guaranteed fund at a certain date, and the policy value at that date. From this and the With Profits Guide it can be seen that it is clear that "maturity" payments are targeted to be asset share (subject to being not less than the guaranteed amount). Whilst it is not specifically stated that maturity payments can be less than a recent policy value quoted on an annual statement, the statement makes it clear Final Bonus is not guaranteed and may vary. It is stated that the actual amount payable will be determined when benefits are taken. This clearly means that the final maturity payment can be less than the amount quoted on the annual statement.*

FSA underline the words '*Whilst it is not specifically stated that maturity payments can be less than a recent policy value quoted on an annual statement*' and write next to them: '*PRE?*'. FSA also underline the final sentence and mark it with '*?*'.

Equitable's Chief Executive highlights the differences between the Society's approach and that of other companies, explaining that:

> *The Society's approach is different to other with profits offices for pensions business (but similar for life business). Typically bonuses are declared in two forms, a reversionary bonus which adds to the guaranteed fund (or sum assured). The Society's declared bonus (nil for the 2000 year) is similar to this reversionary bonus. However nearly all other offices show a "terminal bonus for policies becoming claims in 20XX". No comparative figure is shown for the previous year, and there is no explicit way of finding out how this has been calculated for any particular policy. The policyholder can compare the terminal bonus with the previous years statement and can read the With Profits Guide if he requests such a guide.*

The Chief Executive then explains to the Board the operation of with-profits business and the smoothing of returns. He reports:

> *With-profits business tries to smooth by holding back investment returns when they are very high in order to subsidise them when they are low ... For smoothing to work, there should be at least as much flowing in by holding back investment returns as flows out. The free assets cannot be allowed to run out during the bad times so either smoothing*

must be more tightly controlled (i.e. a trend line which follows the market more closely) or there must be large free assets.

Most companies now express their total payout policy in terms of asset share. Therefore terminal bonus is essentially aimed at paying out asset share. Typically an office would wish to avoid paying out less this year than last year on the same policy, but provided there is sufficient terminal bonus there is no reason why this should not happen ...

The Chief Executive continues:

The difference between payout and guaranteed amount is stated as the terminal bonus applicable to that policy for maturity or claim that year.

The key difference compared with the Society is that the terminal bonus has no "history" of build up over the years and clearly only applies to that year. For all companies however final or terminal bonuses can be reduced and changes can generally be made at any time.

The Board paper then turns to the current position of the Society compared with smoothing assumptions. The Chief Executive reports:

A summary of the position at 31 December 2000 and an estimate of the 30 June 2001 position are shown below. This assumes that the return over the 1st half of 2000 has been about -4% and policy values (PV) have increased by 4%.

	31.12.00		30.06.01 (estimate)
Market value of with-profits fund	25,333		
New business loan	510		
Asset value	25,843	A	24,400
Guaranteed with-profits benefits	21,468		21,350
Final bonus	5,933	a	6,650
Total policy value	27,401	b	28,000
Best estimate GAR cost	1,500		1,500
PV + GAR	28,901	B	29,500
PV + GAR as a% of asset value (A/B)	111.8%		120.7%
Average final bonus as a% of policy value (a/b)	22%		24%

[Note: The usual annual updates of policy values to 31 December 2000 have not yet occurred as the declaration was deferred. Therefore there are more estimates than usual in the policy value totals above which may be up to 2% overstated.]

The Society's Chief Executive advises that:

The worsening of the ratio of policy values to asset shares from 31 December 2000 to 30 June 2001 of 120.7% is due to the continuing roll-up of total policy values at the interim rate of return at 8% p.a. (4% for the year-to-date) and due to the total return on with-profits assets of around -4%.

In another office it would not be surprising to see some payouts compared with asset shares at up to 120% of asset shares, especially for very long policies but the average would be much lower. Also other offices would tend to have more regular premium business and also new business to "dilute" the effect over time.

Lastly they would have an "estate" or excess capital so that this overpayment was, if it came to it, covered by assets. The Society currently represents to policyholders that their *aggregate interest is £30bn when in fact it is only £25bn. Clearly for the Society to be able to smooth returns at all there needs to be some ability to have policy values above the available assets but the amount of the excess seems too great in present conditions.*

Under the heading '*Policyholder options against smoothing*', he also advises the Board that: '*The Society is also unique in having such a large proportion of its liabilities in the form of pension policies where policyholders can retire immediately (and hence take full benefit (in many cases with GAR benefits.)). It is estimated that £6.7bn (40%) of the guaranteed with profit liability is in this position*'.

The paper then covers the discussion that had taken place at a meeting of Equitable's Board on 27 June 2001. At this meeting, the Appointed Actuary had presented his paper '*FSA Returns, Policy Values and Bonus Rates*' (see above). The Chief Executive records the following from that meeting:

> *The Board agreed that the current position was not sustainable. In particular the matters that the Board were concerned about are:*
>
> 1. *Policy values exceeded asset shares by approximately 10% at 31 December, and the position has deteriorated to approximately 20% currently. Although these values include "indicative" final bonuses which are not included for the purpose of FSA returns, the excess needs active management (for the reasons given ... above).*
> 2. *Policyholders who are electing to retire and invoke a maturity claim are generally withdrawing cash in excess of asset shares even before allowing for the cost of any GAR. This results from over allocation of bonuses in the period before 1991 as well as from the poor returns of the past 18 months. Subsequent reductions in bonuses have affected younger policies as well and have not addressed the over allocation to older policies.*
> 3. *The Board believes some disclosure to policyholders of the financial position of the Society will be necessary at the time of launching a* [compromise] *scheme, and disclosure of the current excess would not be acceptable to the Board or to policyholders.*

The Chief Executive notes that no conclusions had been reached by the Board at that time. The paper then sets out some possible alternative bonus declarations in order to correct the problem, those being:

- a change in the interim rate;
- a percentage change in policy values;
- a percentage change in final bonus; or
- to move to a policy value which reflected the asset share build up on a year-by-year basis.

Under the heading '*Financial Impact of Bonus Changes on the Society*', the Chief Executive says:

> *It is helpful to consider the impact on premiums paid at different durations to assess how "fair" any particular basis is to individual policyholders. Due to the flexible nature of the Society's recurrent single premium contracts it is not possible to look at the position of policies taken out in any one year as each policyholder will have paid a completely different pattern of premiums but we can look at the position of a single premium paid in a particular year. A policy will be made up of a series of such premiums.*

The paper continues:

> *The table below shows an estimate of how policy values and asset share (after deduction of the best estimate cost of GARs) compare for premiums paid of a £1,000 investment content on 1 January 1980 through to January 2000. The asset shares calculated here ... do not take account of any profits or losses from running the business including from past smoothing of with-profits payouts. They can therefore only give an indication of the "true" underlying position and the pattern year by year.*

	(A) Estimate of asset share after GAR costs	(B) Guaranteed Fund	(C) Final Bonus	(D) (B) + (C) Policy Value	(E) (C)/(D) Final Bonus %	(F) (D)/(A) PV as % of AS
Single premium paid on

01.01.80	*14228*	*7167*	*11442*	*18609*	*61%*	*131%*

The Chief Executive's paper sets out the potential financial impact of the four options for changes to the bonus declaration, as well as the likely impact of each change on: policyholder behaviour; public relations for the Society; and, the Compromise Scheme.

The paper addresses the practical implications of implementing each of the options, before going on to consider '*Consistency with past statements*'. In this section, the Chief Executive explains:

> *The Society has always made it clear that final bonus is not guaranteed and is only finally set when a policy matures. The Society has had a policy of transparency and policyholders are shown the total accumulating value (including final bonus) on the annual statements. An example annual statement is attached ... with some key paragraphs highlighted. All the options for reducing final bonuses are therefore possible in that final bonus is not guaranteed and may be removed but some options are less consistent with other statements which have been made to policyholders which will have set their expectations.*

For the option of making a change in the interim rate, the Chief Executive says:

> *... the ratio of policy values over asset shares has increased by 10% since 31 December 2000 as there has been a gap of 10% between growth allocated to policies and the returns earned. A change to interim growth rates from either 1 January 2001 or 1 August 2001 should be justifiable to policyholders as they will reduce policy values by 4% and 7.3% respectively.*
>
> *As part of the consultation on the* [compromise] *scheme, we have commented that the fund is now more unstable and so more erratic changes are likely and should be expected.*

For the option of making a change as a proportion of policy value, the Chief Executive says:

> *A deduction from the policy value (at 31 December 2000 or at a later date) of much more than the 10% would be difficult to defend in terms of policyholders' reasonable expectations as the leaflet which accompanied the annual statements ... and the Report and Accounts made no explicit mention of the overdistribution at 31 December 2000. However, the financial adjuster of 10% was clearly explained including reference to the market level of assets.*
>
> [The Society's Chairman and Chief Executive] *have also made strong arguments in defence of the Financial Adjuster to the OFT, FSA, and policyholders. Those arguments have stressed that continuing policyholders are being protected by the Financial Adjuster and that it is possible to pay a smoothed value to maturing policies but not to those surrendering ... To now argue that smoothing on maturity is not possible would put the Chief Executive and Chairman in an extremely vulnerable position.*
>
> *A more drastic cut in policy values should the* [compromise] *scheme fail would be much more consistent with policyholders expectations as the management team has been consistently saying that the* [compromise] *scheme is needed to allow the fund to be run in a less volatile - manner without the scheme the fund is fundamentally unstable. If the scheme was not voted through the policyholders should expect much more drastic action.*

For the option of making a change as a proportion of final bonus, the Chief Executive says that:

> *The method that has been used to produce the current policy values has been in place since 1989 and policyholders have consistently been told that the Society has passed across fair and reasonable values within the constraints of smoothing. As we have made no reference to over distribution by duration, to hit some policies by a much greater proportionate cut in payout values and justify it by saying they had been given too much compared with younger policies would be open to criticism that it was inconsistent with PRE. Although smoothing always means that some cases will be over and some under distributed, past statements have not indicated that this will need to be "corrected".*
>
> *GAR policies have final bonus proportions greater than the average across all policies ... and the lack of past statements that such a change may be introduced would leave the Society open to challenge that the House of Lords' was being undermined.*

For the option of making a change to using a duration related scale, the Chief Executive says that this could appear to run counter to the House of Lords' decision. He also says that to move to a less transparent method of allocating bonuses would be inconsistent with policyholder expectations.

The Chief Executive's paper concludes with the following '*Management Proposal*':

On the basis of the foregoing, and the need to get all the bad news out, the "best financial option" seems to be a cut in policy values of 15%. This is based on a FTSE 100 level of 5600. The interim bonus rate would be set at 6% p.a. ongoing with a clear message to policyholders that the position will be kept under review. On that basis, a 5% financial adjuster would seem to be appropriate. Clearly major policyholder and PR issues need to be overcome but we believe that this is the fairest option in the interest of all policyholders.

11/07/2001 [08:41] FSA's Director of GCD responds to the Head of Actuarial Support's note of 10/07/2001 on the Board papers supplied by Equitable. The Director of GCD says:

This is reassuring if it means that, on likely position as to misselling these two options are still available – less so if not. My only other point relates to PRE. We need to recognise, as [the Director of Insurance] *has recently pointed out, that PRE is not a legal entitlement to a particular asset share, or method of calculation. It is a trigger for regulatory action. May be more helpful to consider interests of policyholders.*

[**11:13**] The Head of Actuarial Support comments:

If a significant liability or contingent liability falls to be recognised on the balance sheet for mis-selling, then this is likely to increase the necessity for such action on bonus rates, and most likely push them towards the more drastic option (for which they could then use the mis-selling issue as part of the rationale for this cut in bonuses).

However, I don't think that potential mis-selling is mentioned as one of the factors to be considered in either of these two papers. Therefore, they would no doubt need to prepare a further paper to look at the wider implications. This would also need to consider the potential impact on their immediate solvency which would not be resolved by simply cutting final bonus rates.

On PRE, I seem to recall that the Scott judgment said that this was a factor but not necessarily the only factor that a company should take into account when exercising its discretion. In this present context, I can well see that there would be a range of issues to weigh up in terms of protecting consumer interests, and that these could also influence FSA when considering the possibility of any regulatory action.

[**12:55**] The Head of Actuarial Support also comments on Line Manager E's response of 10/07/2001, saying:

I think it would be helpful to have a chat with [Equitable's Appointed Actuary] *when he comes here tomorrow, after the S.425 meeting, about the content of these papers, some of which (eg the 40% proportion mentioned in paragraph 1.5, and the table in Section 4) look quite surprising.*

His paper says that policy values exceed assets by around 15-16% but the later [Chief Executive] *paper quotes a figure for this ratio of 21% (which would indicate that the 15% financial adjuster on surrenders is now out of line with underlying asset values). The key difference appears to be in the assumed investment return for the year to date.*

At one stage, I know that Equitable were on monthly financial reporting to us but I have not seen one of these reports for a while. It would certainly be very helpful to have a figure from them for the aggregate value of tangible assets as at 30 June this year.

[**13:01**] Line Manager E adds:

That sounds sensible to me. I think the monthly reporting was an informally agreed arrangement. However they have been falling down on that and if they do not pull their socks up and get back into the habit of providing the information on a timely basis, I *think we should consider exercising formal powers. We will put together a short letter asking for the missing information –* [Line Supervisor C] *can you (get* [another FSA official] *to) check when the last report was received and the period it related to.*

11/07/2001 [10:12] In response to 10/07/2001 [**14:09**], the Director of Insurance says that this did not seem to provide the advice promised and, to save time, he sets out what he imagined the advice should be:

As I understand it FSA may intervene where the criterion of sound and prudent management is not met, and in particular in this case, if it appears that the company is not being managed with "due regard" to policyholder interests. Additionally the FSA may be able to act if it appears to it that the company may be acting in a way inconsistent with fulfilling PRE. These are discretionary powers and we have always taken the view that the test to be applied before using them is quite a high one. They are not designed simply to allow us to substitute our judgement for that of the company (whether on policy or legal matters). In that respect they are to be distinguished from the more absolute requirements of the Act, and the related regulations (eg on reserving standards), where we are entitled (indeed possibly bound) to act if <u>in our opinion</u> a company is not meeting the specific requirements imposed on it.

In the present case it appears that the company take a different view of the risk of legal challenge than we do. We know that, at our insistence, they are going back to counsel to test their original view of the legal position (as we ourselves have done). If their new opinion coincides with our own, and the directors follow it, then the problem disappears. But if counsel for the company take a different view we should not necessarily insist on the company acting on the basis of the advice provided to us rather than on their own. The advice we have been given, and the company's intention to follow their own, and contrary, advice, would not <u>of themselves</u> constitute grounds for intervention action.

However there are a number of things we should do immediately. We should:

a) ensure that the [company] *are aware of the views of our counsel – as a matter of urgency;*

b) draw their attention, in particular, to the dangers we envisage arising in relation to the 425 scheme;

c) ask to see the Society's opinion so that we may satisfy ourselves that it addresses the right questions, and is not obviously defective (as it might be if the instructions on which it was based were inadequate);

d) tell the company that we are reviewing the question of whether we should intervene to prevent them acting as they currently intend, and that we will decide on, and if necessary take, formal action, before their decision is due to be announced on 16 July.

Subject to a), b) and c), and provided we are satisfied that the Board has properly considered the issues in the light of (adequate) advice provided to it, and the full knowledge of our views, my firm view is that we should not insist on taking the decision for the company (which would be the effect of intervention action).

[**10:48**] Chief Counsel B says to the Director of GCD, Chief Counsel A and Legal Adviser D that: '*I think that if an insurance company were to act on the basis of a legal view which we think is wrong, then the ICA intervention powers would be available. I think, however, it would be a reasonable <u>policy</u> decision not to do so*'.

	[**12:04**] The Head of Life Insurance agrees with the steps outlined by the Director and: '*If we are satisfied with the steps they have taken to obtain legal advice, and in the light of all legal advice the company decide to cease applying the GAR rate to top-ups, I agree that we should not intervene to prevent that*'. [**13:06**] Chief Counsel A agrees.
11/07/2001 [10:29]	FSA's Chief Counsel B sends the Insolvency Practitioner a note entitled '*Criteria – Equitable Life Scheme*', which provides some initial thoughts on his scenarios paper (see 09/07/2001 [**13:08**]).
11/07/2001 [14:00]	FSA hold a conference with Counsel to discuss the draft letter circulated by Line Manager E on 10/07/2001. FSA's note of the meeting records that discussion had focused on the detail of the letter and: the FSA's role under ICA 1982; the criteria for how FSA would evaluate the scheme; the extent to which benefits and disbenefits should include elements whose value was difficult to quantify; the role of the independent actuary; and the information to be provided to policyholders. It is agreed that the letter should leave open the possibility of FSA appearing in court and communicating its view on the compromise scheme to policyholders. The letter is to be revised and passed to FSA's Chairman for approval before being sent to Equitable for their comments.
11/07/2001 [15:00]	FSA meet again with Counsel. According to Chief Counsel A's note prepared that evening [**21:22**], the Director of Insurance agrees that FSA should leave until later the decision as to whether they should intervene on Equitable's proposed approach on top-ups. In the meantime, FSA are to ask Equitable for their instructions and advice, which was to be sent to their Counsel, and to inform them of the advice received by FSA.
11/07/2001 [15:33]	Further to the Head of Actuarial Support's comments of 10/07/2001 [**16:00**], FSA's Insolvency Practitioner writes: *I think that we may need to develop our views on when Equitable might become insolvent in Insolvency Act terms and what action the FSA might take at that point (if it arises) and how the FSA might respond if the directors became uncertain about the Society's solvency and whether they were wrongfully trading.* *We might need the Society to report regularly and frequently the "fair" values of assets and liabilities (rather than prudent values as in the FSA returns).* *However, we should not jump to the conclusion that liquidation is in any policyholder's best interests even if the Society were marginally insolvent: ie in the short term, policyholders with benefits falling due some way in the future may be worse off in a liquidation compared to permitting the Society to pay in full benefits now falling due for payment.* *Unfortunately a lot hinges on what value is given to PRE in any solvency test. As bonus rates are cut, policyholders' expectations diminish and the excess of asset shares over guaranteed benefits becomes available to meet other liabilities (eg mis-selling claims). If I understand the latest Equitable board papers correctly there is £1,550m headroom available, after GAR provisions, to meet mis-selling claims on the 30 June 2001 worst-case projected balance sheet. We might need Counsel's help with this issue.* The Insolvency Practitioner goes on to set out the key differences between solvency under ICA 1982 and under the Insolvency Act, these being: • *Policyholders reasonable expectations can be included in the Society's liabilities (the court can require them to be valued in a liquidation) – this would probably result* [in] *policies being valued at the asset share values published to policyholders.*

- *Liabilities could be discounted at a fair estimate of the rate of return on all assets available to meet those liabilities: eg assumed returns on equities need not be limited to the dividend rate.*
- *All assets of the society can be taken into account: not just "admissible" assets.*
- *Resilience reserves are not liabilities which need to be taken into account.*
- *Implicit items in the FSA return are not taken into account, but the key test is whether the total projected cash flows from all assets and liabilities is positive at the end of the projections. These projections can take into account the profit element in gross premiums due to the society – to this extent future profits could be taken into account.*
- *Subordinated loan guarantees are liabilities which need to be included.*
- *Reinsurance cover must be included only at a realistic value (but can assume business continues)*
- *Liabilities arising from top-ups to GAR policies need to be included.*
- *Sales proceeds (the Halifax consideration) can be taken into account if there is a realistic prospect of their being received).*

On liquidation other factors arise (but these need not be taken into account in any going concern solvency test – they do need to be taken into account if the society wished to be pass a members (ie solvent) voluntary winding up resolution (permissible with FSA consent after N2 [i.e. 1 December 2001, when the new regulatory regime came into force]*).*

- *The GAR reinsurance contract terminates.*
- *Administration agreements with Halifax become terminable.*
- *Liquidation costs arise.*
- *Unit linked liabilities are paid by Equitable at the same dividend rate as all Equitable's other creditors face unless (as is likely) Halifax make cut-through payments direct to unit liked policyholders and take an assignment of their rights against Equitable.*
- *GAR options are valued in a liquidation (and need to be similarly valued in the above solvency test).*

[**16:06**] FSA's Head of Actuarial Support responds:

> *The exact solvency margin on a Companies Act accounts basis is unclear at present (the figures in the two recent board papers being rather different). Hence, my recommendation that we should indeed request some up-to-date information on the fair value of (tangible) assets as at 30 June. However, you need to be aware that the Companies Act accounts do not include any provision for final bonuses, so that any cuts in those bonuses will not directly impact on this balance sheet.*
>
> *I think we may need to discuss further the basis on which the liabilities would be determined for the purposes of testing insolvency. In particular, I am not sure about your first 2 indents on this topic. If the liabilities are taken to be the underlying policy values (without allowing for the financial adjuster that may be applied on surrenders), then we would indeed have a problem now. However, the Companies Act basis liabilities would be rather lower, and at end-2000 were I believe essentially taken as equal to the guaranteed fund (plus best estimate value of GAR's) for most of their policies.*

Arguably, as I think you indicate in your second indent, these liabilities might be discounted further at some assumed long-term rate of return (net of the 3.5% guaranteed future investment returns on most GAR policies), but then with the addition presumably of some allowance for PRE (all on the lines I think of the 1985 Winding Up Rules).

11/07/2001 [16:48]	Equitable send FSA a draft of their paper '*The Business Case for the Section 425 Scheme*'. Equitable ask for a response by 16 July 2001 and say: '*Given the tight timescales no response by that date will be taken as acceptance of the content and you have no issues with regards sign off of this document by the 20 July*'. [**16:59**] Line Manager E distributes the paper, commenting that he did not think that it was for FSA to '*sign off*' Equitable's document. He suggests that FSA should make this clear to them at their meeting the following day.
11/07/2001 [20:02]	Equitable send FSA the latest draft of the actuarial report for the compromise scheme business case paper.
12/07/2001 [08:51]	Equitable send FSA a copy of their minutes of the meeting on 04/07/2001 [**14:00**].
12/07/2001 [11:59]	FSA write to Equitable to set out their position on the company's plans to cease to apply annuity rate guarantees on top-ups. FSA explain that they had identified four potential problems, those being: • *There is real ... difficulty in the way of trying to prevent people who have not paid or recently paid a premium from exercising top up "rights", because of representations made when policies were sold (and possibly later);* • *However, these "rights" do not have contractual force, and can be removed or changed by notice indicating that the Society is adopting a different policy, thus allowing those who have been given representations that they can top up at any time to consider whether they wish to top up now, before the policy is changed (taking into account the effect this will have on their possible rights under the GAR/non-GAR scheme);* • *It might not be particularly effective in practice to make this change, because it is possible that the reason for the annual percentage reduction in exercise of top up rights is accounted for by people moving out of self employment and so losing their eligibility to participate under Inland Revenue rules;* • *It is extremely important for eligibility for top up to be got right, because it could affect the votes which could be cast in the 425 scheme, and a mistaken basis for calculating these votes could allow this scheme to be set aside.* FSA say that, in the light of this, they believed that there were significant risks to Equitable in proceeding as planned without providing adequate notice to policyholders.
12/07/2001 [12:54]	FSA's Line Manager E says that he had asked Equitable for copies of their further legal advice on the top up issue. He also reports that Equitable had asked for sight of the marketing information on which FSA's legal advice had been based.
12/07/2001 [13:54]	FSA's Insolvency Practitioner comments on Equitable's business case paper for the compromise scheme. The Insolvency Practitioner makes several points of detail on the '*liquidation option*', along with the following '*General/actuarial*' comments: *The reservations we expressed to the Equitable's project team last week remain: the cost has to be higher than the £1.3bn best estimate if policyholders able to retire now or shortly are not to be worse off.*

We need to know what sort of bonus policy will be followed after the scheme becomes effective; particularly how the £250m to £500m consideration from the Halifax will be distributed in terminal bonuses.

We also need to know what investment strategy the Society will follow after the scheme is effective.

We need also to ask the Society to report monthly their financial position on both an FSA return basis and a realistic basis (policy values vs asset shares). We also need to know about assets and liabilities other than those associated with the with-profits fund and perhaps we should also ask for monthly balance sheets or management accounts prepared on a Companies Act basis.

There has been (or shortly will be) a substantial change in the Society's financial position. The scheme must therefore include an up-to-date revised balance sheet, and I think that it should be audited. I believe that the impact of the scheme on policyholders will be clearest if such a balance sheet is presented in a way which shows aggregate asset-share policy values.

The paper needs to specify how the value of policies will be calculated for voting purposes: eg guaranteed values, asset share values, full rights to GAR options, or something less? What is [Equitable's solicitors'] *advice on this?*

I see a scheme adjudicator has crept in (5.15). Who is this proposed to be? Will he adjudicate mis-selling claims? Are we comfortable with policyholders' recourse to the courts being curtailed?

12/07/2001 [14:56]	Line Manager E circulates a revised list of FSA's comments on Equitable's business case paper, taking account of the Insolvency Practitioner's comments given earlier that day.
12/07/2001 [15:30]	FSA and Counsel for FSA meet Equitable, Equitable's solicitors and Equitable's actuarial advisers to discuss the compromise scheme. According to FSA's minutes, the purpose of the meeting was to: review and comment on Equitable's business case paper; identify any changes to the scheme methodology; and inform Equitable of the final criteria against which FSA would judge the fairness of the scheme. Under '*Action points*', Equitable are to provide FSA with any comments on their assessment criteria. FSA are to identify any further information required to assess the fairness of the scheme and Chief Counsel A is to revert to Equitable's solicitors on the question of privilege. (Note: the minutes of the meeting do not record that there was any discussion of policy value cuts, as suggested on 11/07/2001.)
13/07/2001 [12:37]	FSA's Director of GCD seeks confirmation from the Director of Insurance that a letter could be sent to Counsel, which sets out the results of the work commissioned by FSA (from an actuarial firm) on assessing the relative performance of Equitable with-profits policies and other comparable policies.
13/07/2001 [12:39]	FSA's Director of Insurance informs Managing Director B (copied to others) of a telephone call that he had received from Equitable following a meeting of the Society's Board that morning. The Director of Insurance says that the decision taken by the Board was as they had expected and that Equitable were going to announce on 16/07/2001 that they were adjusting policy values, the interim bonus declared and the market value adjuster. The Director says that he had asked to see the press lines prepared by the Society.

13/07/2001 [15:56] FSA's Insolvency Practitioner sends Chief Counsel A and the Director of Insurance a revised version of his paper entitled '*Equitable Life Counter-factuals/Contingency Planning*'. The paper now includes a ninth scenario: '*The executive directors resign*'.

13/07/2001 [17:21] The Financial Services Consumer Panel send FSA their final brief for their Equitable policyholder research. The Panel explain that '*It is now far less about assessing consumer detriment as a result of lack of information and understanding about Equitable Life and much more about getting a better grasp on consumers' experiences to help inform general work on getting information to consumers*'.

13/07/2001 [17:57] Equitable send FSA a solvency matrix that was part of a paper, dated 11 July 2001, for Equitable's Board.

The matrix sets out the ratios of available assets to minimum required solvency margin in changed conditions. (Note: 'MV' refers to 'market value').

Based on 31.05.01 data but allowing for changes in equity values and fixed interest yields from 31.05.01 to 30.06.01	*Yield on fixed interest decreases by 1.0%*	*Yield on fixed interest decreases by 0.5%*	*Yield on fixed interest as at 30 June 2001*	*Yield on fixed interest increases by 0.5%*	*Yield on fixed interest increases by 1.0%*
MV of equities as at 30/06/01	*2.6*	*1.7*	*1.6*	*1.9*	*2.2*
MV of equities falls by 5%	*2.1*	*1.7*	*1.2*	*1.5*	*1.7*
MV of equities falls by 10%	*1.6*	*1.5*	*0.9*	*0.9*	*1.1*
MV of equities falls by 15%		*1.1*	*0.7*	*0.8*	*0.8*

The notes to the matrix say:

> *The ratio of 1.6 at 30.06.01 is after allowing for the sales of equities during June. It is also unlikely that the Society's assets will have performed exactly in line with the indices.*
>
> *The figures take account of additional reserves in respect of guaranteed annuity rate options at the level which reflects the financial reassurance arrangement and assumes the bringing into account of a "future profits" implicit item equal to 5/6ths of the minimum solvency margin. Such additional reserves will increase as interest rates decrease and so the cover ratio reduces with a fall in yields although the effect is partly offset by the corresponding increase in market values.*

13/07/2001 [entry 6] **FSA complete the A1 Initial Scrutiny check on the Society's 2000 regulatory returns**.

13/07/2001 [entry 7] Equitable send FSA a copy of their press notice, for release on 16/07/2001, which states that they had decided to reduce final bonus, along with a copy of an open letter to all policyholders.

13/07/2001 [entry 8] FSA and their Counsel meet Equitable's solicitors and their Counsel for the compromise scheme to discuss issues of common interest relating to the formulation of the compromise scheme.

16/07/2001 [09:04] FSA's Head of Life Insurance provides their Press Office with two amendments to FSA's public statements:

1. <u>Is the company still solvent?</u>
Yes. We are satisfied, on the basis of the latest figures supplied by the company, that it continues to meet its solvency margin requirements. As the company has made clear in its Annual Report and in its regulatory returns, it continues to face some fundamental uncertainties.

(The point here is that we must put the confirmation of solvency in the context of the fundamental uncertainties – the company themselves do this, but far less clearly)

2. (Supplementary point on the Financial Adjuster):

<u>Is the 7.5% level fair?</u>
As explained above, it is perfectly reasonable to apply a financial adjuster in circumstances such as the Equitable now face. The precise level at any given time is a matter of judgement for the company. We continue to monitor the position closely, and will not [hesitate] *to intervene if this would be justified.*

[**09:25**] The Head of Actuarial Support advises:

Regarding the second point below on the financial adjuster, I believe that the position we reached with [Equitable's Appointed Actuary] *over the weekend (not for publication I would suggest) is that the 7.5% adjuster is an arbitrarily calculated adjuster that is designed to protect the fund against the effect of surrenders. As such though, it has not been reviewed against either the representations made to policyholders at point of sale or the provisions of the Unfair Contract Terms rules. [He also mentioned I believe that his own preference was for a 5% figure while* [Equitable's Chief Executive] *sought 10% and they compromised on 7.5%].*

The qualitative reasons stated for this adjuster (which he said were not for publication) were as follows

(1) To allow some room for manoeuvre in volatile investment conditions (i.e. to avoid frequent changes in this adjuster)

(2) To recover all their initial expenses (i.e. deferred acquisition costs)

(3) To allow for the increase in marginal costs for the remaining policies in the fund as a result of the decline in fund size

(4) To build up a reserve for the fundamental uncertainties (i.e. principally the potential mis-selling costs)

(5) General protection of the fund for remaining policyholders

My understanding is that Items (1) and (2) had previously been allowed for in the 15% MVA, but Items (3) to (5) appear to be new.

I think they will have considerable difficulty in explaining to policyholders the reason for the sharp increase in the financial adjuster from 15% to an effective 27.5% for most policies, even if they do choose to publicise the above factors.

In particular, I am conscious from figures they produced earlier that the payouts in respect of many recent policies are now likely to be less than asset shares, even without the 7.5% financial adjuster, thereby exacerbating potential mis-selling claims.

[**10:05**] The Director of GCD states that the advice already given by FSA's legal department was that, from the viewpoint of the Unfair Terms in Consumer Contracts Regulations 1999, it was necessary for Equitable to establish clear binding public criteria for the level of market value adjuster applied, so that policyholders could not be subject to arbitrary and unilateral changes of approach. The Director of GCD says: '*My worry about these new criteria would be that 5 is* *completely open ended and that the changes in the criteria do not seem to justify the new values given*'.

[**10:30**] The Head of Life Insurance informs the Director of GCD, the Head of Actuarial Support and the Head of Press Office that he had received a separate explanation from Equitable, being:

1. Overarching point; fairness between leavers and stayers. But with the benefit of any doubt ("priority in fairness") given to stayers;

2. Market values; when markets are volatile, there is a need to have bases for both maturity and surrender which can be set for a reasonable period; and a fair level for "market value" should be more conservative for surrenders than for maturities;

3. Expenses; recovery from early surrenders;

4. Uncertainties: Uncertainties have to be allowed for, but should be allowed for on a more conservative basis for surrenders than for maturities (comment; this can perhaps be justified on the basis that surrenderers have discretion over timing of withdrawal, whereas maturing policies do not. This is I think a bit less open ended than point 5 below).

[**10:40**] FSA's Head of Actuarial Support notes that Equitable still had the difficulty of explaining why surrender values had decreased so sharply and suddenly, while FSA had the difficult question to consider as to whether the Society's policy was fair to departing policyholders and consistent with the representations which had been made to them.

16/07/2001 [09:24] Further to the discussion on 11/07/2001 [**15:33**], the Director of GCD tells the Head of Actuarial Support and the Insolvency Practitioner to have regard to his forthcoming note on Counsel's advice on mis-selling liabilities and the relevance of the market value adjuster.

16/07/2001 [09:29] FSA's Head of Life Insurance circulates the lines to take in response to questions about the policy value cuts. The issue of whether a statement should be made on the level of benefits that could be payable in the event of winding up is discussed at length between the Head of Actuarial Support and FSA's Insolvency Practitioner.

16/07/2001 [10:58] FSA's Director of GCD provides the Director of Insurance with details of a discussion that had taken place on 13 July 2001 with Counsel about mis-selling liabilities. This had followed a discussion earlier that day between FSA and Equitable's lawyers.

The Director of GCD reports: '*In short, their view was that the relevant Lautro rule required disclosure of the GAR liabilities from the point at which a policyholder might reasonably expect that they would affect the amount available for distribution by way of bonus*'.

The Director of GCD says that Counsel had considered whether any action by Equitable to mitigate the impact of annuity guarantees (for example by using reinsurance, financial hedging instruments or the differential terminal bonus policy) would affect policyholder expectations. Counsel's view was '*that policyholders would indeed expect that liabilities which should be disclosable, but for mitigation of this kind, would remain disclosable*'.

The Director of GCD says:

The effect of this was that:

- *the GAR liabilities were disclosable from the point at which their size, having regard to the company's assets, were such that policyholders might reasonably expect that they would affect the amount available for distribution by way of bonus;*

- *in determining this, the society's arrangements for mitigation of the size of the liabilities by way of the differential bonus policy should be left out of account;*
- *there was no sense in which this involved interpreting the rule to require people to disclose, retrospectively, what the court subsequently decided.*

My view is that this is a sustainable interpretation of the Lautro rules, and the one which the courts are most likely to adopt.

It remains possible that the actual liabilities of the Equitable for misselling are greater than those which would be produced on this basis. We understand that [Counsel for Equitable] *takes the view that the GAR liabilities were disclosable from the late 1980s, on the basis that the society was aware, even then, of their potential impact. Though we do not accept this as the correct interpretation of the Lautro rule, we cannot discount it without seeing his opinion and the facts on which it is based.*

16/07/2001 [entry 5] Equitable announce that they had decided to cut policy values by 16%; to reduce the interim bonus rate for the period from 1 January to 30 June 2001 from 8% to zero and to set the rate of bonus from 1 July 2001 at 6%; and to reduce the market value adjuster from 15% to 7.5%.

16/07/2001 [14:45] FSA's Chief Counsel B and Legal Adviser C provide advice on the operation of the compensation scheme under the Policyholder Protection Act and under the new rules to come into force on 1 December 2001 with the commencement of the majority of FSMA 2000.

[**15:15**] The Director of Insurance asks whether the position outlined was '*a little more definite than is justified as regards the Equitable*', saying that he was not sure, given the advice they had received, that compensation from the Policyholder Protection Board would be payable. The Director says that FSA should be pretty circumspect in what they said, as he '*would not wish to get into a position where it might be thought that we had promised more than could be delivered*'.

[**15:18**] The Director of GCD agrees with the Director of Insurance's comments.

[**15:35**] FSA's Press Office circulates the advice and [**15:59**] later confirms that the Director of GCD had since clarified that FSA: '*can be quite firm on the negative aspects of the* [Policyholder Protection Board]. *The compensation scheme would not cover terminal bonuses before the company has formally decided to award them, so there can be no question of policyholders being worse off now than if the company had been wound up in December – contrary to what some of the policyholders' groups are suggesting*'.

16/07/2001 [14:49] FSA's Chief Counsel B asks Line Manager E what was happening with regard to correspondence about the market value adjuster issue.

[**16:15**] Line Manager E replies:

At some point I think I will mention to Equitable that we have taken over the files and that as they are aware of our corporate view, which we have exposed publicly (eg via the website), we are not proposing to take the matter further [for the time being]. But I will remind them it is something we are looking at mvas generally in the context of the with profits review. I reached the view that if I tried to press the [unfair terms in consumer contracts] *team to write in response to the Equitable offer to OFT, there was a chance it would reopen the substantive debate.*

Chief Counsel B later forwards the correspondence to the Director of GCD, who comments: '*Not sure this decision will prove to be sustainable*'.

16/07/2001 [15:05] FSA's Scrutinising Actuary F advises Line Manager E that FSA should request from Equitable the details of the Appointed Actuary's prospective calculation for their application for a section 68 Order for a future profits implicit item for possible use in the 2001 returns (see 28/06/2001 [**entry 2**]). The Scrutinising Actuary says that they would need to see details of:

- *the method and the actuarial basis he has used for the prospective calculation, including in particular the assumed rate of future investment return, and*
- *the allocation of the anticipated future profits as between the implicit item sought, any obligations the Society will have under the GAO reassurance treaty with Irish European, its ability in respect of the subordinated loan, and any other call on these monies which is envisaged.*

Scrutinising Actuary F also says that it would be helpful to see these details in respect of the '*number of other calculations*' referred to in Equitable's application. He goes on to say: '*We recall that the Society were asked to supply this information in respect of the implicit item used in the 2000 Returns – we do not recall ever seeing this information, and suggest it is requested again. We can then review both sets of calculations together*'.

16/07/2001 [16:00] FSA hold an Equitable Life Lawyers Group meeting. The Insolvency Practitioner attends. They discuss the Practitioner's counterfactuals report and the list of legal issues.

16/07/2001 [16:20] FSA's Head of Actuarial Support circulates a note on his thoughts on Equitable's draft actuarial report, which he says had been presented to FSA on 8 July 2001.

16/07/2001 [18:03] FSA's Chief Counsel A provides the Director of GCD with a list of the '*big areas*' for the compromise scheme proposals where FSA could not yet be satisfied due to insufficient information or justification, or because they did not believe it to be fair. She states:

> *1. I think we are agreed that the proposed treatment of those reaching retirement age within (say) 3-5 years from the effective date of the scheme is not fair. We might be able to agree to a proposed taper up to 75% of the economic value of the GAR rights (in the case of those reaching 50 very soon after the effective date) on the basis that almost everyone in practice takes the 25% cash lump sum. This is a little uncomfortable because it is to insert into an evaluation of individual rights a value based on the experience of the group, but it is a rough and ready "justice" which we might consider acceptable.*
>
> *2. The calculation of the up-lift for premium and non-premium is still a mess. Some improvement may follow on from whatever the Equitable decides to do on receipt of its legal advice on top-ups. At the moment, apart from the issue of whether the Equitable can include as non-premium paying those whom it is planning to cut off without notice, there is an issue as to whether Equitable can treat as premium paying those whom it has not cut off whom it could have cut off. I am also concerned that the Equitable is valuing top-up rights on the basis of historical experience. This is the accepted actuarial method (as we heard from* [Counsel for Equitable] *on Friday), but I remain to be convinced that we should not be using a different methodology to calculate economic value (and one that does not rely on the experience of the group).*
>
> *3. Finally, although the figures may be around now (and I have just not caught up with them), we have some concerns that the 3% up-lift for pre-1975 policies may be operating unfairly within the group.*

Chief Counsel A concludes that she thinks FSA '*can say now that subject to the up-lift operating fairly (on the basis, mainly, of the value of individual rights, not the experience of the group, and other caveats like misselling and the possibility of submissions from* *policyholders in due course which may cause us to change our mind), calculating the pot on the basis of the cost of the GARs appears to be reasonable. On the up-lift, however, while I think we are heading in the right direction and we have no reason to think Equitable will not find a solution which we can accept, we are not there yet. This message may still be positive enough for the Equitable to be getting on with*'.

17/07/2001 [entry 1]	FSA's Director of Insurance writes to the Director of GCD (copied to others) suggesting that a '*core group*' is established to co-ordinate work on Equitable. The Director identifies a number of issues that FSA needed to address in the following areas: • compromise scheme; • financial position; • mis-selling; • availability of compensation; • contingency planning; and • FSA decision making.
17/07/2001 [entry 2]	HMT ask FSA for answers to some questions raised by the Economic Secretary to the Treasury. The questions are: *1. What did the FSA say at the time the Halifax deal was announced? How did you frame your comments on the wisdom of staying in or leaving the fund? Have you said anything since? What was the basis for commenting on the deal at all?* *2. Do you consider saying anything about yesterday's announcement? Did you consider urging* [Equitable] *to make it sooner, or saying something yourselves beforehand?* *3. What is the basis for your current assessment that* [Equitable] *is solvent? Does yesterday's announcement have any bearing on this? Does it increase the risk of members leaving and thus worsen solvency? And what about the likely publication of Counsel advice on misselling? How great is the risk of insolvency, and what do we do then?* *4. Had Equitable's funds been revalued between December and yesterday's announcement?* *5. How does the size of yesterday's revaluation compare with market movements generally over a directly comparable period?*
17/07/2001 [entry 3]	FSA's Chief Counsel B seeks advice from the Head of Actuarial Support on three issues from a report by an actuarial firm, dated 13 July 2001, on the quantum of mis-selling liabilities.
17/07/2001 [10:00 and 15:12]	Chief Counsel B asks the Director of GCD to confirm his view on the Policyholder Protection Board, as, if that view was as described by FSA's Press Office the previous day, '*it conflicts with the advice I had previously given*'.
17/07/2001 [11:09]	FSA's Scrutinising Actuary F draws the attention of the Director of Insurance, the Head of Life Insurance, Line Manager E, the Head of Actuarial Support, Chief Actuary C and Chief Counsel A to commentary that had appeared in a national newspaper that day which was '*highly critical of the role of FSA in apparently doing nothing in recent months while Equitable behaved "recklessly" in overpaying outgoing policyholders*'. He refers them to the note of the meeting with Equitable on 04/04/2001 '*when I raised these very concerns*' and continues: '*As most of*

you will know, despite the Society's lack of action at that point, my concerns on this continued'.

17/07/2001 [12:17]	Following the Equitable Life Lawyers Group meeting the previous day, Legal Adviser A asks Line Manager E and the Head of Life Insurance whether FSA should impose a notice of requirements on Equitable for the provision of regular updates of their financial position, verified by their auditors. He says that he understood that FSA currently received monthly updates. [**12:50**] Line Manager E says that he was not sure that the monthly reports were '*capable of audit*'. The Line Manager also confirms that FSA '*are supposed to get monthly reports, but they have not been doing very well of late – the last we had was as at end March. I have it on my to-do list to raise this with* [Equitable's Appointed Actuary]'.
17/07/2001 [13:30]	Equitable send FSA a copy of their questions and answers on the policy value cuts.
17/07/2001 [18:21]	FSA's Press Office asks the Head of Life Insurance whether someone had already suggested to Equitable and/or the Society's Chairman that they did not make misleading statements '*such as that their cut in policy values was not done for solvency reasons? Obviously this is stretching the truth somewhat, and* [although] *we can't take away the fact that he said it, he presumably shouldn't be saying it again given what we know is in their annual return? If we say nothing they will probably treat it as acquiescence?*'. The Press Office also suggest that Equitable might be misleading people about the benefits of switching from equities to bonds. The following day, the Head of Life Insurance says that the Press Office's first point was well taken but that he was not sure about the second.
18/07/2001 [09:52]	FSA's Director of GCD replies to Chief Counsel B's note of 17/07/2001 [**15:12**], saying: *I misread your note and believed we were in agreement. As I understand it you conclude that the* [Policyholders Protection Board] *can pay compensation on an amount which includes PRE. If this is right, it applies to the future as well as the past and means that people might indeed be better off on a liquidation than accepting what the* [Equitable] *offers them. It also suggests that this is the answer on* [Article] *4 – ie that you can get back not only the reduced value of your* [liabilities]*, but also 90% of* [policyholders' reasonable expectations] *so perhaps in some scenarios liquidation would give people more back ... we need to evaluate this.* (Note: the Director of GCD replies again to this query on 24/07/2001 [**11:33**].) [**13:04**] The Director of Insurance writes to the Director of GCD and Chief Counsel B saying that, as they had agreed that morning, '*this is of potentially very great significance*'. FSA are to commission advice on how a court might determine policy values having regard to bonus expectations. [**14:12**] FSA's Insolvency Practitioner informs the Director of Insurance, the Director of GCD and Chief Counsel B that the case of another company that had gone into liquidation was not particularly helpful. [**14:18**] The Director of Insurance thanks him and says: '*So at least we know that we are in uncharted waters*'.
18/07/2001 [10:00]	FSA and PIA meet to discuss the regulatory control of Equitable following the Director of Insurance's note of 17/07/2001. FSA's note of the meeting records that no meetings were to take place without the prior knowledge of the supervisory team and, whenever possible, supervisors should be invited to attend. The note summarises the discussions on a number of issues.

Financial position
FSA say that Equitable's Chairman's most recent statement regarding the solvency of Equitable was arguably misleading. It is agreed that FSA should issue a Notice under section 44 of ICA 1982 requiring the Society to provide monthly financial information and to demonstrate that it was solvent under the requirements of both ICA 1982 and the Companies Act 1985. It is also agreed that there should be an independent review of Equitable's financial condition within three to four weeks.

(Note: on this last point, the draft minutes of the meeting read: '*It was agreed to appoint an independent auditor (probably* [Equitable's new auditors]*) to report to the FSA on the solvency of the Equitable within 3-4 weeks*'. On 19 July 2001 (at 15:14), Managing Director B writes that he '*thought we agreed that the independent audit should not be done by the Society's auditors (i.e not* [Equitable's auditors]*)*'. The final minutes are amended to read: '*It was agreed that there should be an independent review of Equitable's financial condition within 3-4 weeks*'.)

Mis-selling
The note records that the following actions were agreed:

- that Counsel should be asked to produce provisional advice on mis-selling.
- that FSA should ask Equitable formally about their strategy for pensions mis-selling claims on publication of their Counsel's opinion.
- that FSA did have powers to stop Equitable publishing their Counsel's opinion but that it was unlikely to be in the interests of policyholders to exercise those powers.
- that FSA should ask Equitable about their ability to reserve for mis-selling claims. It is noted that work would be needed to quantify claims and that Equitable would need adequate contingency planning to cope with a range of possible outcomes.

Compensation – Policyholders Protection Board
FSA note that the Court would probably include policyholders' expectations in calculating policy values in the event of liquidation and the Policyholders Protection Board would pay 90% of policy values after determination by the Court.

Compromise scheme
It is agreed that FSA could not sign off the current proposed compromise scheme until it was clear how those proposals '*measured up*' to their criteria. FSA record that the scheme would be '*arguably unfair ... if it did not include pensions misselling claims*'. FSA also record that Equitable should be asked to justify the advantages of a compromise scheme over the status quo and formal Insolvency Act procedures.

Contingency planning
FSA record that administration, if it were extended to insurance companies, would be preferable to provisional liquidation. The Director of Insurance agrees to talk to HMT about the possibility of an Order being made under section 360 of the FSMA 2000 (Note: this was commenced on 20 July 2001 and gave HMT the power to make an order to allow insurance companies to be placed into administration).

Further action points
The following items were noted for further consideration:

(a) The FSA to require Equitable to freeze payments of terminal bonuses.

(b) The FSA to require the Equitable to move further funds from Equities to Gilts. The ratio was currently 61.5%. (We have now been advised that equity proportion is 48%, 12% property and 40% bonds.)

(c) The FSA to require the Equitable to apply the MVA to terminal bonuses and not guaranteed bonuses.

(d) The FSA to seek Equitable's confirmation that those policyholders who withdrew shortly before the announcement of 16% reduction in terminal bonuses would allow such policyholders to withdraw at the old values.

Of these (a) to (c) should be kept under review. (d) should be actioned.

18/07/2001 [10:07] FSA provide HMT with answers to the questions they had raised the previous day. FSA state:

1. Since the announcement of the closure of Equitable Life to new business, the FSA has been careful in its information to policyholders not to give them encouragement to stay with Equitable Life or to transfer to another provider. We have however encouraged people to consider any action they propose to take carefully and encouraged them to take proper advice where appropriate. We also sought to alert people to the fact that there might be downsides to their transferring, for example because of taxation or if they had GAR policies. Our position has been reflected on the website (copies of the relevant pages attached) and that neutrality has not fundamentally changed in the period since December 2000.

2. We considered carefully whether it would be helpful for the FSA to make an announcement in parallel with that from Equitable Life. We concluded that there was nothing that we wished to say proactively since this was an announcement by the company. However, we prepared lines to take in response to enquiries and were in close touch with the company to review the proposed terms of its statement to ensure that it was appropriately expressed. The announcement was made as soon as practicable after the board had decided on its course of action, so an earlier announcement was never a possibility. It should also be remembered that part of the reason for the need for such extreme action was the continuing decline in the financial markets at a time when Equitable Life policies were continuing to attract notional annual growth of 8 per cent taking the value of the policies and the assets further out of line.

3. We are satisfied, on the basis of the latest figures supplied by the company, that it continues to meet its solvency margin requirements. As the company has made clear in its Annual Report and in its regulatory returns, it continues to face some fundamental uncertainties. It is difficult to judge whether this will increase policyholders propensity to leave. The opportunity of suffering the financial adjuster at the lower rate of 7½ per cent will probably be attractive to some, but others may consider that the damage has already been done and that they would do better sitting tight. There is the likelihood of further announcements about the performance of life funds in the near future and this may discourage people for the time being.

There are however uncertainties, including in relation to the opinion on mis-selling which is due shortly (the FSA is also doing work on this topic). Subject to those uncertainties, at this stage, we do not think insolvency likely and we have been assured by the appointed actuary that there are further steps the company can take to avoid that, such as by cutting terminal bonus further. This is something that the FSA will be investigating further with the appointed actuary as a matter of urgency. If however insolvency was unavoidable, this would trigger the operation of the Policyholders Protection Act where the Policyholders Protection Board would in the first instance seek to secure a transfer of policies to another insurer. It would be able to provide financial assistance to achieve that. Alternatively, the business could be placed in liquidation and policyholders would be paid compensation up to 90 per cent of the guaranteed value of their policy at the point of liquidation.

4. The Regulations require the assets and liabilities of an insurance company to be under constant review. The movement of the value of the assets and liabilities over the first six months of the year has therefore been fairly clear and was reported by Equitable Life to the FSA on a regular basis.

5. The adjustment to policy values, as compared with the year end position, was of 16 per cent. The FTSE 100 closed at about 6220 on 31 December 2000; on 17 July 2001 it closed at 5430, a fall of about 13-14 per cent. However, at the year end, policy values were already some way ahead of the value of the underlying assets because of the continued application of an 8 per cent interim rate of return. The overall effect is to reduce policy values to close to the value of the underlying assets at the present time.

18/07/2001 [14:36] Equitable inform FSA that they were going to look at their Companies Act valuation to see what margin might exist to accommodate a provision for mis-selling. FSA note: '*He seems to think that they might be able in theory to discount their liabilities by up to another £4 billion but I believe this would only be possible in the context of a further substantial increase in the MVA (which could in turn increase the mis-selling costs, and also would bring the surrender values well below the guaranteed fund on retirement) and possibly a further reduction in the final bonus (which would now principally affect GAR policies –* [there] *being little if any potential final bonus remaining now for post-88 policies)*'. Equitable ask whether FSA might be willing to '*offer*' them a further section 68 concession to further discount their liabilities. FSA indicate that they would be quite sceptical about this.

18/07/2001 [entry 5] FSA's Chairman, Managing Director B, Managing Director A, Director of Insurance, Director of GCD, Head of Life Insurance and Head of Press Office meet and agree:

- *That the Society's Board should consider* [Counsel's] *opinion and the strategy for the section 425 compromise before publishing the opinion.*
- *That the FSA should commission a comparison by consulting actuaries of the value of Equitable policies (by type and by year) and the average value of comparable products available from other providers. This would provide, very roughly expressed, the test we anticipate will be proposed by our Counsel to establish loss where misselling is established. The quantums should be calculated against both the* [Counsel for Equitable's] *and* [Counsel for FSA's] *opinions.*
- *That the FSA should require the Society to commission an independent review of its financial position with terms of reference to be agreed with us.*
- *That this work should be taken forward in as timely fashion as possible to minimise further delay to the Society's section 425 proposal (it was noted that the original immediate timetable was clearly now unrealistic). It was further noted that we would find it difficult to advise on the fairness of any section 425 scheme absent this information.*
- *That these points should be communicated to* [Equitable's Chairman] *at a meeting the following morning.*

18/07/2001 [20:21] The Head of Life Insurance provides FSA's Chairman with a speaking note ahead of the meeting with Equitable's Chairman.

19/07/2001 [08:30] FSA meet Equitable's Chairman to discuss their position on mis-selling claims and Counsel for Equitable's opinion, which was to be provided to FSA shortly. The meeting is held at FSA's request. FSA's note of the meeting records that discussion took place on the differences of the provisional views of Counsel for Equitable and Counsel for FSA and the immediate issues that needed to be addressed as a result of the views expressed by Counsel, those issues being:

i. *Should these liabilities be brought within the ambit of the s425 scheme (our current understanding was that the Equitable and its advisers did not plan this)?*

ii. *Did the Society remain solvent so that it was proper for it to continue in operation?*

iii. *Was there a danger that the liabilities attributable to mis-selling might outweigh the value of the GARs and, if so, how did that impact on the proposed scheme?*

It is noted that Equitable were to receive Counsel's draft opinion the following day and that it would be considered by the Board on 25 July 2001. The Director of GCD informs Equitable's Chairman that Counsel's advice on the compromise scheme now suggested that it would be possible to include mis-selling liabilities within the scheme.

FSA anticipate:

a) *That we should commission a report by consulting actuaries which would seek to establish the range of prudent liabilities* [for mis-selling costs] *to which the company might be exposed. This would need to involve, on the basis of what we expected our Counsel to advise, comparison of the value of Equitable policies (by type and by year) against the industry average for comparable products.*

b) *That there should be a rapid independent review of the financial condition of the Society. I explained the basis on which we envisaged this would be carried out – essentially that the emphasis would change from a statutory value under the Insurance Companies Act which was the focus of our normal supervisory attention, to one based more directly on Companies Act requirements.*

It is agreed that there should be further discussion over these two financial reviews.

Equitable's Chairman is '*non-committal*' about the implications of possible mis-selling claims on the stability of the fund. FSA's note records:

> *There must be some danger that policyholders – particularly non GARs – might conclude they had had enough and should leave. But there would be substantial costs to them in this (and to the Society which would need to liquidate assets to meet surrender payments further reducing the value of the Society's assets). Much would depend on the Society's success in marketing the proposed scheme.*

Equitable's Chairman, in response to FSA's Chairman, says that there was no sign that the directors might be unwilling to continue.

19/07/2001 [10:36]	FSA prepare a draft proforma for the financial information that they might ask Equitable to produce each month.
19/07/2001 [12:58]	PIA report to FSA that their Enforcement Department had had no direct contact with Equitable at the time of the Halifax deal and disciplinary action on Pension Fund Withdrawals and pension review failings.
19/07/2001 [14:09]	FSA's Line Supervisor C sends the Director of GCD copies of FSA's letter to Halifax of 31/01/2001 and PIA's letter to Equitable of 31/01/2001. The Line Supervisor says: '*I got this message second hand so I hope this is what you need. I don't think we gave a positive undertaking not to reveal this – but I presume it was implicit that this was confidential communication between the regulator and a regulated firm*'.

[**14:41**] Line Manager E comments: '*I think it was understood that the fact of possible disciplinary action being dropped, and the reasons why it happened, would at some point become known. I think there was also, however, an understanding that we would not reveal the information just for the sake of it. If the reason for the question is connected to the Review, I think that that is precisely the kind of situation where it was envisaged that some form of disclosure would happen*'.

19/07/2001 [15:11] FSA meet Equitable's Appointed Actuary to set out what financial information they would want to receive on a regular basis to enable them to monitor effectively Equitable's ongoing financial position. FSA's Head of Life Insurance's note of the meeting does not state what information was required; however, it does state that Equitable's Appointed Actuary had no problems with the request and that FSA had explained to him that they would want to translate the request into a formal requirement.

FSA also outline the '*additional steps*' they were minded to take (i.e. an independent review of the financial position of the Society), as discussed with Equitable's Chairman that morning. In response to this, the Appointed Actuary says that if this were to happen his position would become untenable and that he would have to resign. The Head of Life Insurance's note goes on: '[The Appointed Actuary] *already has plans to call on the resources of* [his company] *to undertake work to validate the financial position. He would not want to commit to this if FSA were to require another firm to be brought in*'.

The Head of Life Insurance comments:

> *I think this puts a different perspective on our discussions yesterday about the identity of a firm to carry out the work envisaged. For the Society to lose another Appointed Actuary at this delicate stage would be a very serious, and potentially fatal, blow. As regards independence, I think it should be acceptable for the Equitable to commission* [the Appointed Actuary's company]*, if it was made clear that the commission was to the firm, as distinct from* [Equitable's Appointed Actuary]*, and that* [the company] *would have a duty of care to FSA as well as to the Equitable.*

[**15:16**] The Director of Insurance responds to the note of the meeting, saying that he agreed with the Head of Life Insurance that there could be '*awkwardness*' if Equitable's Appointed Actuary resigned, but adds '*I am not sure we should let him use this to prevent us from doing what we think is necessary*'.

[**19:23**] The Head of Life Insurance replies to those comments, reporting that he had received a telephone call from the Appointed Actuary's company and one from Equitable's Chief Executive. The company had expressed concern at what the Appointed Actuary had reported to them and stressed that: '[The company] *had recognised the risks to them as well as to* [the Appointed Actuary] *personally in agreeing to make him available as the Appointed Actuary of the Equitable and saw themselves as standing behind* [the Appointed Actuary] *to provide additional resource and expertise, and independent and objective review of his actions and assessments*'. The Head of Life Insurance says that he explained FSA's reasoning that '*in the special circumstances of the Equitable, it was reasonable for the regulator to take additional steps to satisfy itself about the financial position, including commissioning (or asking the Society to commission) independent work*'. In response to the Appointed Actuary's company arguing that they should be considered as being independent, the Head of Life Insurance states that FSA '*were likely to take the view that these advantages* [regarding efficiency and minimising the strain on Equitable's resources] *were outweighed by the extra independence that would be provided by involving a third party*'.

On the conversation with Equitable's Chief Executive, FSA's Head of Life Insurance says that the Chief Executive had been in an '*emotional mood*' and had said that '*if the FSA wanted to run the Equitable, then they were welcome to do so, and he would join* [Equitable's Appointed

Actuary] *in resigning*'. The Head of Life Insurance says that he had stressed that '*although what we were proposing was unusual by the traditions of DTI/HMT insurance regulation, it was perfectly normal in the context of banking supervision, and as an integrated regulator, it was natural for the FSA to review the full range of supervisory tools available (and familiar) to it*'.

[**15:44**] The Head of Actuarial Support writes separately to the attendees of the meeting, pointing out that the Appointed Actuary was a consultant from an actuarial firm rather than an Equitable employee. The Head of Actuarial Support provides eight key points from the meeting, those being:

1) For the Companies Act accounts at 30 June 2001, Equitable's Appointed Actuary believed assets exceeded liabilities by £1.6bn, '*Therefore, a provision for mis-selling would take them right up to the line*'. He says that he believes that Equitable might be able to justify reducing their liabilities by £400m to £800m but that the Head of Actuarial Support had reminded him of the '*professional responsibility to take particular care in selecting an appropriate actuarial basis when the solvency of an insurer is in doubt*'.

2) Equitable do not appear to have considered the possibility that redress for mis-selling might need to be calculated on the basis suggested by Counsel for FSA.

3) In the event of a provision for mis-selling of £1.5bn being required, the Appointed Actuary's view was that the Board would wish to consider freezing all final bonus payments and further increase the financial adjuster applied to surrenders.

4) Equitable's asset mix is currently 48% equities, 12% property and 40% bonds. They were trying to sell around £600m to £800m of equities each month in order to fund cash outflows and to reduce their holding in equities by 5% over the next three months.

5) Equitable's Appointed Actuary says that he believes that there would be no scope to increase the proportion of assets held in equities as a result of the compromise scheme and '*Accordingly, any such references were being removed from the documentation*'.

6) Work on the compromise scheme was continuing without any modifications to allow for Counsel's opinion on mis-selling.

7) The Appointed Actuary confirms that recent policies where policy value was less than the guaranteed fund would not receive any final bonus. The Head of Actuarial Support asks him to consider '*whether the policyholders were sufficiently aware now of the society's present investment policy and how this might affect their future bonuses in variable investment conditions*'.

8) FSA present the Appointed Actuary with their draft proforma for monthly financial reporting that FSA were likely to make into a formal requirement.

19/07/2001 [17:59] FSA's Head of Actuarial Support sends Chief Counsel B a note summarising his research on the claim values currently being paid by Equitable for pension policies written in 1996, hoping that it would be helpful to Counsel's analysis. The Head of Actuarial Support notes that, while some further work would need to be done to determine the potential redress for individual policyholders, '*we should be able to make some broad estimate of the potential provision that may be required if this is the likely approach, once we have some idea of which generations of policies are likely to be affected. For example, if this were to include all policies written since 1988, then we could be looking at a provision of around £4-5 billion*'.

[**18:26**] The Head of Life Insurance questions why Counsel needed this information.

[**18:42**] FSA's Director of Insurance suggests that it is needed not for quantification, but to form a view of the date from which mis-selling occurred.

19/07/2001 [entry 7] **FSA complete their Initial Scrutiny of the Society's 2000 regulatory returns**.

FSA complete Form A2, which follows a similar format to that used for the 1996 to 1999 returns and includes the following:

Strength of valuation basis
FSA note that the rates of interest used for with-profits business do not appear to make provision for policyholders' reasonable expectations and comment: '*Form 57 @ 4% used in respect of* [pension business] *valued at 3¾%*'. FSA note that other management expenses, at £80m, are material. FSA confirm that Equitable have applied the resilience test in accordance with the latest published guidance (see 15/05/2000). FSA judge the overall interest basis and, taken overall, the valuation basis appears to be '*adequate*' to '*weak*'.

Solvency position
FSA judge the absolute level of cover for the required minimum margin to be '*of concern*'. FSA observe that the trend in the level of cover over recent years has been '*down*' and that the slope of the decline is steepening.

Suitability of assets
FSA note that the level of mismatching by currency is material and comment that there were insufficient sterling assets. FSA also note that linked asset surpluses/deficits were material but were less than 1% of unit values in aggregate.

Operating results
FSA answer '*yes*' to the question '*Is either the absolute level of surplus/deficit emerging or its trend over recent years such as to give current cause for concern?*'. They again note that the amount of reinsurance is material and that there was a material exposure to non-UK authorised reinsurers without deposit back.

PRE issues
FSA identify no issues of concern.

Current issues
FSA note that Equitable have set up an identifiable reserve of £130m (£132m in the 1999 returns) in respect of pensions mis-selling. FSA again state that Equitable were known to have material exposure to annuity guarantees and that either the amount of the additional reserve, or any aspect of the basis used to calculate it, was a cause for concern.

FSA do not make any '*General comments*' and they maintain the priority rating at 2.

FSA also prepare a five-page report on their initial scrutiny.

FSA state that Equitable's solvency position was very weak and, despite strengthening of the valuation basis in the 1999 returns, '*areas of weakness appear still to remain*'. FSA say that the position is obfuscated by Equitable reporting only a bonus reserve valuation without the appendix net premium valuation. Their primary concerns relate to the adequacy of the reserves for accumulating with-profits business and of the provision for future expenses.

FSA produce a table of Equitable's financial position which shows that available assets have fallen from £3.86m for the 1999 returns to £1.63m for the 2000 returns, resulting in a fall in their cover for the required minimum margin from 3.46 to 1.34. FSA say that available assets have fallen dramatically as a result of:

- *increased reserving for GAO's,*
- *changes made to the valuation bases as a result of correspondence with GAD in late* [2000] *following our scrutiny of the 1999 Returns,*
- *the impact of the 2000 (Amendment) Regulations introduced in May 2000, and*

- *the poor investment returns experienced by the fund over the year 2000. (The Report & Accounts quote a total return of +2.7% on the fund over the year, which was in fact quite good relative to the performance of the markets, and the results achieved by competitors.)*

FSA note that the solvency position improved in March 2001 with the sale to Halifax '*although the position remains tight*'.

FSA explain why the reserve for annuity guarantees had increased from the previous year. They set out the level of reserve as being:

(£'000s)	*31.12.2000*	*31.12.1999*
Gross	*2,631,000*	*1,663,000*
(Reassured)	*(808,000)*	*(1,098,000)*
Net	*1,823,000*	*565,000*

FSA say that the higher gross reserve reflects: reductions in the yield on fixed interest securities; the impact of the 2000 (Amendment) Regulations; and a strengthening of the assumed future mortality assumption. FSA explain that the reinsurance offset was lower due to renegotiation of the treaty following the House of Lords' decision.

FSA set out the changes to the valuation basis resulting from their scrutiny of the 1999 returns, which were:

- An increase in the assumed GAR take-up rate from 85% to 90%. (FSA note that information on the assumed take-up rate had not been specified in the returns but had been advised in Equitable's letter of 16/11/2000.)
- A reduction in the rate of decrement assumed for future premiums paid on policies containing guaranteed annuity rates.
- A reduction in the assumed retirement age from 55 to 50.
- The effects of the synthetic bond which required Equitable to aggregate the rates of interest on fixed interest securities.
- Discontinuation of the use by Equitable of a zillmer type adjustment in the resilience scenario. FSA note that, while this issue appeared to have been resolved, '*the overall approach to reserving in the resilience scenario at this valuation appears to be weak, and we are questioning this in our letter*'.

FSA highlight the additional statements of uncertainties included in the 2000 returns. Those were made regarding:

- The review of the sale of Managed Pension policies; the unknown outcome of enquiries by regulatory and professional bodies and any actions which might result from these; no provisions for contingent liabilities had been made; and the future premium pattern of in-force policies.
- Matters relating to the certificates of the Directors and Appointed Actuary.
- The Appointed Actuary's certificate which had been signed '*subject to the uncertainties and limitation set out*' and which mentioned the need to adjust policy values and '*take action on*' bonus policy.
- The Auditors' report, which also mentioned the '*fundamental uncertainties*'. FSA note: '*although their opinion is "not qualified in respect of the above matters"*'.

FSA explain that Equitable had on this occasion only presented a bonus reserve valuation but had (at paragraph 8(d) of the returns) demonstrated that the reserves held were at least as great as a net premium valuation would require.

FSA note that the resilience reserve required had increased from £1,350m for the 1999 returns to £1,390m for the 2000 returns.

FSA explain that the amount of resilience reserve held in this set of returns is not directly comparable to the reserve held last year in either the gross premium or net premium valuations. They state: '*This is because the underlying valuation this year is a bonus reserve valuation, but the resilience reserve held in last year's* [bonus reserve valuation] *was a balancing item such that the total reserves held in both the* [bonus reserve valuation] *and the* [net premium valuation] *were the same*'. They go on to say that the resilience reserve '*looks low*' and '*an initial examination of Forms 57 in the 2000 Return indicates that on some of the classes of accumulating with profits business, reserves are being released in the resilience scenario, and this suggests that reserves in that scenario may be less than PRE surrender values*'.

FSA note that reserves for expenses were up sharply but that it was not clear that the total reserve would be sufficient.

FSA state that Equitable's sterling denominated assets were now less than their sterling denominated liabilities, by around £2.5bn.

FSA say that it was not clear where the reserves for the rectification scheme were held.

FSA say that an area of strength in the valuation was the general reserve of £150m, but FSA add that: '*Whether this is sufficient remains to be seen!*'.

FSA attach a copy of their letter to Equitable (see below).

19/07/2001 [entry 8] FSA write to Equitable's Appointed Actuary with some questions about their 2000 returns which had arisen as a result of FSA's initial scrutiny of those returns. They ask:

1) How the reserves held for accumulating with-profits contracts compared with the smoothed asset shares. They ask for separate figures for products with and without guarantees (being both guaranteed investment returns and guaranteed annuity rates).

2) What amounts were generated by the valuation to cover expenses for future years.

3) To advise on any allowance made for mismatching by currency.

4) To confirm the provision held in respect of the GAR rectification scheme.

5) To provide details of the calculations to support the use of the section 68 Order for a future profits implicit item. FSA note that they did not appear to have received a reply to their letter of 12/03/2001 on this issue.

6) To explain their preferred approach to dealing with the synthetic bond, as: '*It seems to us that there is a choice for the future – either to proceed on a basis that is consistent with the year end 2000 or to move to the alternative method you had proposed in your application that would bring Equitable into line with other companies*'.

19/07/2001 [entry 9] FSA seek advice from the Policyholder Protection Board's solicitors about the Policyholder Protection Act 1975.

20/07/2001 [13:53] FSA's Insolvency Practitioner asks Legal Adviser A and the Head of Actuarial Support to check two draft letters concerning requiring Equitable to commission investigating accountants to quantify potential mis-selling liabilities.

20/07/2001 [14:28]	FSA's Press Office writes to the Director of Insurance and Managing Director B, saying: '*Apparently, the Equitable Policyholders' Action Group is asking HMT for £2.6bn to compensate them for regulatory failures re Equitable. HMT are trying to work out how to* [pour] *cold water on this without pre-empting our review etc. They will let us know what they come up with – unless anyone would like to offer suggestions?*'.
20/07/2001 [14:44]	FSA's Chief Counsel B sends the Insolvency Practitioner a note of the advice on policyholders' reasonable expectations, insolvency and the market value adjuster that he and the Head of Press Office had given orally. The Chief Counsel advises that they had thought that it would not be possible for a court to grant a winding up petition where the evidence of insolvency rested in part on the insufficiency of assets to meet non-contractual benefits to which policyholders' reasonable expectations attached.
20/07/2001 [15:51]	Counsel send FSA a copy of their draft opinion, saying that they look forward to receiving comments on it next week.

20/07/2001 [17:46] Equitable reply to FSA's letter of 19/07/2001 about their 2000 returns. Equitable provide the following responses, as per the numbering used by FSA:

1) Equitable attach a table setting out the data on the reserves held for accumulating with-profits business (in the base and resilience scenario) and the smoothed asset share as at 31 December 2000.

	Mathematical reserves, normal conditions	*Smoothed asset share*	*Mathematical reserves in changed conditions*
	£m	*£m*	*£m*
UK Life and General Annuity	*2,198*	*2,664*	*2,031*
UK Pensions 0% guarantee	*2,660*	*3,071*	*2,415*
UK Pensions 3.5% guarantee (including GAR reserve)	*14,882*	*18,276*	*13,476*
Overseas	*567*	*649*	*531*
Total	*20,307*	*24,660*	*18,456*

Equitable say that there had been a degree of estimation in the figures for smoothed asset shares and that they would supply a breakdown of those with and without annuity guarantees next week.

2) Equitable explain their approach to the reserves established for expenses.

3) Equitable say that they had assumed that the fall in value of equities in the resilience test contained an element for mismatching by currency.

4) They provide information about where in the returns they had made provision for the rectification scheme.

5) Equitable enclose a copy of their letter and calculations dated 28/06/2001 for the future profits implicit item.

6) Equitable say that this needed to be discussed and some further work carried out. They ask to defer this item for a short period.

Equitable enclose their estimated solvency positions for April, May and June 2001 and apologise for not sending them earlier. These show:

Solvency position at 30 April 2001

	£m	£m
Value of non-linked assets		*28,350*
Future Profits Implicit Item		*1,000*
		29,350
Mathematical Reserves		
– Basic (including GAR)	*26,405*	
– resilience	*940*	
		27,345
		2,005
Required Minimum Margin		*1,155*
Excess Assets		*850*

Solvency position at 31 May 2001

	£m	£m
Value of non-linked assets		*27,780*
Future Profits Implicit Item		*1,000*
		28,780
Mathematical Reserves		
– Basic (including GAR)	*26,200*	
– resilience	*790*	
		26,990
		1,790
Required Minimum Margin		*1,140*
Excess Assets		*650*

Solvency position at 30 June 2001

	£m	£m
Value of non-linked assets		*27,255*
Future Profits Implicit Item		*1,000*
		28,255
Mathematical Reserves		
– Basic (including GAR)	*26,030*	
– resilience	*445*	
		26,475
		1,780
Required Minimum Margin		*1,120*
Excess Assets		*660*

Equitable conclude by saying:

> *Last week I sent you our "ready reckoner solvency" matrix. Using this type of methodology we estimate the statutory solvency position daily and at the low point of*

the market at around lunchtime on 19 July 2001 when the FTSE 100 stood at 5320 it is likely that the cover ratio was about 1.0, i.e. just covering the required minimum margin. As discussed, and is clear from the matrix further equity market falls could lead to the required minimum margin being breached.

20/07/2001 [18:16] Following a request from the Chancellor, FSA send HMT a note on Equitable, which reads:

1. Since the House of Lords' judgement and the Equitable's decision to put itself up for sale, the FSA's aim has been to achieve the best result for Equitable policyholders in a difficult set of circumstances.

2. Following the Society's failure to find a buyer and the closure to new business in December 2000, our strategy has been to:

- *assist the sale of the underlying business to secure the highest possible value for policyholders;*
- *see new directors and new management in place;*
- *ensure that the Society remains solvent;*
- *ensure that policyholders were kept informed, both by encouraging the Society to improve its communication and by putting out our own messages through the press and on our website;*
- *promote a resolution of the outstanding difficulties through a compromise between the various groups of policyholders which would cap the outstanding GAR liabilities, and allow the Society to revert to a more normal investment strategy going forward; and*
- *address potential regulatory issues, principally whether there was mis-selling which might require compensation.*

3. This strategy remains in place. The Halifax deal produced additional funds of £500m with a further £500m potentially available in the event of a successful resolution of the GAR/non GAR problem. A strong new Board is in place – albeit with thin management support. The Society continues just – to meet its margin requirements but has had to take and announce difficult decisions on the adjustment of policy values. Policyholders have been provided with relevant information, although the Society struggles to deal with the volume of enquiries and its handling of public communications has failed to win policyholders' confidence.

4. However, the future remains uncertain.

- *The Society's solvency position remains tight and current market conditions are unhelpful.*
- *The compromise scheme is being worked on; the main outstanding issue is whether and if so how to incorporate the potential liability for mis-selling. Equitable have commissioned* [Counsel] *to advise them; his opinion is likely to be that mis-selling took place from 1988 onwards. The FSA has commissioned its own advice which is not so extreme, but is expected to be that there are significant liabilities for mis-selling, dating broadly from the point at which the annuity rate guarantees became valuable, as long term interest rates fell.*

5. Against this background, the strategy is still feasible, but will be difficult to achieve. [Counsel] *is briefing the Society's directors today but his final Opinion is two weeks away. Meanwhile the Board will consider its response, and the implications for a compromise scheme. We are liaising closely with the Society over this. We believe that the best* *solution would be to include any mis-selling liabilities within the compromise. This will be a complex task. It may not be possible to meet the 1st March 2002 deadline set by the Halifax as a condition for putting up to £500m extra into the Equitable's fund.*

6. It is for the Society to bring forward proposals for a compromise; but the FSA needs to be in a position to take its own view on the fairness of any proposal (we need to satisfy ourselves that we should not intervene to prevent it on the grounds that the Society is not acting in the interests of policyholders) and we will wish to make our position clear to the Court, which will have to decide on the acceptability of the proposal.

7. We have therefore set in hand some contingency planning. We plan to:

- *Commission consulting actuaries to quantify the probable liability for mis-selling, by comparing the value of Equitable's policies with the average value of comparable products from other providers (this is the test which we anticipate Counsel will propose to quantify the loss to policyholders of mis-selling);*
- *Commission an independent review of its financial position.*

8. In the worst case scenario, we may need to consider liquidation of the Society. This could take a number of forms but each of them would involve the Policyholders Protection Board becoming involved, either to seek a transfer of the business to new ownership (highly unlikely, given the history), or to pay out to policyholders 90% of their benefits. Putting the company into administration, which would be a preferable alternative, is currently not permitted by law. We understand that the relevant provisions of [FSMA 2000] *which enable appropriate regulations to be made which would allow this have been commenced, but the regulations themselves (which will be complex) have not yet been drafted.*

9. A further factor in all this is the outcome of the Review of the FSA's supervision of the Equitable since 1 January 1999. The report is almost complete, but some maxwellisation of former members of the Equitable is still required. Our best estimate is that the report will be ready for publication by the Treasury in September or October.

23/07/2001 [entry 1] Equitable return to FSA their completed response to a survey on the tax treatment of derivative assets.

23/07/2001 [entry 2] FSA meet the National Association of Pension Funds, at their request, to discuss the position regarding Equitable.

23/07/2001 [11:34] Counsel send FSA their thoughts on the second draft of Counsel for Equitable's opinion.

23/07/2001 [12:24] FSA's Head of Actuarial Support writes to Chief Counsel B about Counsel's opinion (received on 20/07/2001 [**15:51**]). The Head of Actuarial Support writes:

This draft appears to say that all policies sold since 1988 (and any pre-88 policies on which premiums have increased by 10% since 1995?) may have been mis-sold, and that the quantum of any loss may have to be determined by comparison with a similar policy sold by a "median" insurer.

However, there is some suggestion, which seems quite surprising really given that policyholders would only recently have been aware of this omission by Equitable (perhaps in 1998), that the Limitations Act could rule out claims for policies sold more than 6 years ago (or perhaps only in respect of premiums paid more than 6 years ago).

Nevertheless, even if claims could only be submitted for premiums paid on non-GAR policies since mid-1995, the potential liability could still be around £2-3 billion.

> *Do we know if* [Counsel for Equitable] *is likely to reach a similar view?*

23/07/2001 [14:28] Equitable send FSA a note entitled '*A Comparison for Retirement Annuity of proposed policy enhancements with the value of GARs using Open Market CARs*'.

23/07/2001 [16:00] FSA hold an Equitable Life Lawyers Group meeting.

23/07/2001 [16:47] An official from FSA's Press Office informs the Head of Life Insurance that Equitable's website says: '*The FSA is responsible for safeguarding the interests of policyholders*'. The official says: '*I'm not at all sure that's right. Are they over-promising what a regulator can deliver as much as they over-promised their fund?*'.

The following day [**at 09:15**], the Head of Life Insurance says that he did not have any problems with the wording as '*it is what we aim to do*'.

On 25 July 2001 [**16:21**], the Director of GCD agrees with the Head of Life Insurance's comments.

[**16:37**] The official explains that her concern was that '*it implies a guarantee that we can always safeguard their interests – which many consumers would no doubt take to mean that we are safeguarding the value of their investments ...*'.

23/07/2001 [17:31] FSA's Director of GCD circulates copies of the two Counsel's opinions on mis-selling. The Director later circulates a note summarising the opinions.

[**17:54**] The Head of Actuarial Support says that the financial implications look quite bleak:

> *If, for example, they are likely to incur mis-selling claims on all post-1993 policies, then the liability could be around £3–4 billion, which would be well beyond their current free reserves on a Companies Act basis of around £1½ billion. If the potential claims extend back to 1988 or even earlier, then the situation is clearly even worse.*
>
> *Even if the Limitations Act applies (which seems very odd to me as a layman given that it was not the fault of the policyholders that they could only have been likely to have become aware of the alleged non-disclosure in 1998 or even later), then the liability could be around £2½ to £3½ billion, assuming that there would be a liability in respect of all premiums paid in the last 6 years. The result is still then likely to be insolvency.*

Managing Director B, the Director of Insurance and the Director of GCD meet to discuss the position and to agree the immediate action to be taken.

[**20:23**] Following the meeting, the Director of Insurance comments:

> *It seems to me that the analysis in the two opinions raises the possibility that other companies which wrote GAR business might face similar claims. This might arise where Companies are paying GAR liabilities but their ability to do so (as falls in equity markets reduce their free assets) comes to be at the expense of asset shares for policyholders generally. In such cases it seems possible, at least in theory, that the "*[Counsel for FSA] *test" of the quantum to be attached to any misselling claims, as the difference in value between affected policies and policies issued by companies which did not sell GAR policies, could potentially produce substantial additional liabilities.*
>
> *The work I have asked* [the Head of Actuarial Support] *to do, in fairly rough form, is to look at the companies which we know have written significant volumes of GAR business, and to provide such assessment as he can, by reference to what we know of their free asset position, of the point at which they would be likely to deliver (or may already be delivering) less than asset shares to policyholders because of the need to meet GAR liabilities.*

When we have this assessment, I think we will need to take a view on:

a) whether such misselling claims, if they are likely to arise, could imperil further companies.

b) whether it is possible to make any assessment of the possible impact on the industry generally through the compensation schemes and of the ability of the industry to absorb this impact.

Depending on the results of this work we may need to consider briefing the Bank/HMT/FSA standing committee. I am mindful that we have said publicly that we briefed the committee in December on the Equitable situation, and that at that time the Committee's view was that there was no threat to financial stability. While this may still be, and probably is, the correct view it might do no harm to reconsider the position.

23/07/2001 [18:11] FSA's Chief Counsel B distributes a note confirming the position of policyholders who had mis-selling claims.

23/07/2001 [19:17] FSA's Chairman asks for a meeting on 26 July 2001 to discuss '*the interplay between solvency and the GAR scheme and raise the issue (even if only to dismiss it) of whether policy-holders would be best served by activating the compensation scheme now*'. The Chairman says that he also thinks that FSA needed to think through their rationale for:

- *Why we did not do anything about the misselling liability at the time?*
- *What, if anything, should we do about it now?*

23/07/2001 [22:04] FSA's Insolvency Practitioner circulates two draft letters, the first to Equitable requiring them to instruct investigating accountants and the second to the investigating accountants. He comments that he thinks Counsel's advice to FSA becomes discoverable if they shared it with the investigating accountants '*unless* [the Director of GCD] *can find a way around this*'.

The following morning, Managing Director B circulates an amended version of one of the letters.

24/07/2001 [09:17] FSA's Chief Counsel B advises that there might be two issues relating to tax on any mis-selling compensation.

24/07/2001 [11:25] FSA's Insolvency Practitioner sends the Director of Insurance, the Director of GCD and an FSA Legal Adviser (Legal Adviser E), copies of correspondence between FSA and HMT on the difficulties with making administration available to insurance companies, so that they were aware of those difficulties.

24/07/2001 [11:33] Further to Chief Counsel B's query of 17/07/2001 [**10:00 and 15:12**], the Director of GCD replies again (see 18/07/2001 [**09:52**]), confirming his understanding of the advice to be that '*compensation could be paid on an amount set by the court to represent undeclared terminal bonus*'. The Director of GCD continues:

I think there's a difference between this and paying compensation on what a company itself estimates as intended future bonus. But is the conclusion that policyholders would have been better putting the company into liquidation before? Or would the same exercise take place whenever the company went into liquidation? And if so, isn't that the answer to our article 4 concerns? And surely this could mean that liquidation could be better than a 425 scheme, depending on the impact of that scheme on PRE? We also need to consider whether we should be advising policyholders to stay in rather than go, because PRE will be compensatable – subject only to a 10% penalty – on liquidation.

24/07/2001 [15:30] FSA meet Equitable to review the position of the Society. FSA's note of the meeting records discussion on the following issues:

<u>Independent review of Equitable's financial position and likely mis-selling costs</u>
FSA explain why they thought the reviews were necessary and hand over draft instructions for investigating accountants and investigating actuaries. Equitable's Chief Executive accepts the reasoning behind the review of the financial position but '*was less sure*' about the review of mis-selling costs. The note records: '*In this context, the impact of Article 4 of Equitable's Articles became important. We reminded him that both FSA and the Society had legal opinions which suggested that Article 4 would not protect the Society from insolvency*'. It is agreed that both sides would revisit the issue.

<u>Subordinated loan</u>
Equitable's Chief Executive reports that the annual payment on the subordinated loan, of about £28m, becomes due on 6 August 2001. The Chief Executive notes that, if the required minimum margin were not met, then the payment could be passed, but this could lead to policyholder panic and a run on the fund. He confirms that bondholders could not petition for winding up. However, FSA comment that they thought any six policyholders could petition for winding up on just and equitable grounds. FSA agree to research the position further.

<u>Top-ups to GAR policies</u>
Equitable hand over Counsel's further opinion, which advised that four weeks' notice should be given of any cancellation of top-up rights. FSA and Equitable agree to consider how much notice would be required.

<u>Press criticism</u>
FSA ask for Equitable's Chief Executive's reaction to press criticism that policy values had exceeded fund value for an excessive period. The note records:

> [The Chief Executive] *said that his view was that at the end of 1999, policy values were too high and could have been corrected by a 1% reduction of bonus rates in at least some years during the 1990s. The divergence had become significant over the last eighteen months, with the emergence of the GAR problems. For a normal fund, even this divergence need not have been a problem; but the Equitable had an unusually high proportion of policyholders approaching maturity, so that the over payments were particularly costly. Nevertheless, the company's policy had been reasonable; it was* [defensible] *to regard the divergence as consistent with normal smoothing as* [late as] *spring 2001, when the new board undertook its financial review.*

On 27 July 2001, Equitable send FSA a copy of their notes of the meeting. FSA provide their comments on the notes on 3 August 2001. According to Equitable's notes of the meeting, on the proposed reviews:

> [Equitable's Chief Executive] *commented that solvency in general tends not to be a concern, however, meeting* [the required minimum margin of solvency] *is an issue particularly given the well-known fundamental uncertainties faced by the Society. He was happy for investigations to be undertaken. The range of numbers regarding the quantum of mis-selling claims is potentially very large, including values higher than the cost of the House of Lords' ruling which would threaten the solvency.*

FSA change the final word '*solvency*' to '*RMM*', (i.e. required minimum margin).

24/07/2001 [16:16] Equitable's solicitors telephone FSA to ask whether they planned to publish their Counsel's opinion and, if so, to request sight of it. FSA say that, if they were to publish anything at all, then it would be after Equitable had published their own opinion and that FSA would give Equitable notice.

[**16:23**] Line Manager E says that it would be unusual for FSA to publish their opinion but says that FSA might want to draw upon it in any report on mis-selling.

[**21:26**] The Director of Insurance agrees and informs them that FSA's Chairman's view was that FSA should express their view on mis-selling at the same time as Equitable.

The following morning (at 08:29), the Director of GCD also informs them that FSA's Chairman had made it clear to Equitable's Chairman that FSA would not want a gap between publications.

24/07/2001 [16:23] FSA thank Counsel for sending them the latest version of Counsel for Equitable's opinion and FSA send them a copy of their summary of the opinions (see 23/07/2001 [**17:31**]). FSA say that, from a preliminary review of the latest version of the opinion, they did not believe that the summary needed to be changed but ask for Counsel's views on this.

24/07/2001 [16:53] FSA's Director of GCD suggests to Chief Counsel B that FSA should determine what approach they would take if FSA were to set up a redress mechanism to require Equitable to provide redress for generic mis-selling. The Director sets out his view of the position that FSA should take on the information and advice that policyholders were entitled to receive from Equitable and as to what they had actually been told.

24/07/2001 [17:35] FSA's Director of GCD sends the Insolvency Practitioner the comments of Counsel on draft letters to Equitable requiring them to commission independent reports into their financial position and estimate of mis-selling liabilities.

[**17:41**] The Head of Actuarial Support queries two points.

25/07/2001 [09:42] FSA's Director of GCD provides revised advice to the Director of Insurance on the weight that could be attached to Article 4 of Equitable's Articles of Association.

25/07/2001 [10:31] FSA's Insolvency Practitioner sends the Director of Insurance the final version of the letter to Equitable requiring them, pursuant to sections 44(2)(B) and 45(1) of ICA 1982, to commission a report from their Appointed Actuary's company providing an analysis of Equitable's financial position as at 30 June 2001.

The Insolvency Practitioner also sends a further draft of a letter to a different firm of actuarial consultants, commissioning an estimate of the extent of mis-selling liabilities.

25/07/2001 [12:26] FSA's Director of GCD writes to his Chairman, in response to a request for advice on how FSA might respond to queries about their role in relation to mis-selling. The Director of GCD provides the following draft questions and answers, highlighting that the material would need to be checked before finalisation:

Q *You tell us now that your rules mean that the Equitable has been required, since at least 1993, to disclose to potential policyholders the existence of the GARs. What disclosure should the company have made?*

A

- *The advice we have had is that the company should have disclosed the fact that it had GAR liabilities which a reasonable policyholder could think might affect the amount available for distribution by way of bonus.*
- *These liabilities would not have been disclosable if the company had put in place arrangements to mitigate them, for example by reinsuring them, or taking out an interest rate swap.*

- *Nor would they have been disclosable while the company had robust and unchallenged legal advice that its differential bonus policy was valid.*
- *But in fact it never had such advice. From 1988 to 1998, it was operating without the benefit of legal advice. The advice it received in 1998 was only given in the context of the challenge made, which the company concluded needed to be taken to court in order to provide clarification of the position.*

Q Why was no action taken about it at the time?

A Determining whether to make this disclosure was, in the first instance, a judgement for the company to make, with its own knowledge of its commitments, and the assets available to meet them.

- *This issue first came to the attention of the FSA at the beginning of 1999. [Is this true?] By that stage, the company had had legal advice that its bonus policy was valid, but had also decided that the issue needed to be tested through the courts.*
- *In the circumstances, no action was taken to insist on a disclosure, given that the true position remained a matter of dispute before the courts. That is not to say that we now take the view that no appropriate disclosure could have been made.*

Q What action will you now take on the basis of this conclusion?

A We will:

- *ensure that proper redress is provided from the assets of Equitable Life either by requiring Equitable Life to pay redress to these policyholders, or by satisfying ourselves that proper provision is made for credit to be given through the proposed compromise between the different class of policyholders;*
- *consider whether any action is required personally against those at Equitable Life responsible for its action;*
- *consider whether there are other companies in a similar position, where similar action is required.*

But we do not intend to take action to fine the Equitable Life itself. This would only penalise the policyholders, by reducing the assets available to them.

Q Can policyholders sue you for failing to ensure that proper disclosure was made?

A We believe that we have acted reasonably throughout. The proper source of redress for misselling is the company which missold the investments concerned.

25/07/2001 [12:40] FSA's Director of GCD provides advice to the Director of Insurance on Counsel's opinion on top-up rights and on '*whether it would be possible for FSA to express the view to the society that we would not take action against it on PRE grounds if it were to give 6 weeks notice, instead of 4 months*'. The Director of GCD advises that this would depend on whether, in all the relevant circumstances, six weeks would be sufficient to enable policyholders to determine whether or not to make a top up.

25/07/2001 [14:30] A PIA legal file on Equitable includes a '*Note for Record*' of a meeting of FSA (Managing Director B, Director of Insurance, Chief Counsel B, Legal Adviser D, Head of Actuarial Support, Head of Life Insurance, Insolvency Practitioner, Line Manager E and another official) and Counsel to discuss the draft opinions of both Counsels. (Note: a copy of this note does not appear to be held on any of FSA's files.)

The two-page note records:

Key Points

1. [Counsel] *agreed that the FSA could send* [Equitable] *a copy of his draft opinion with the caveat that it was likely to change significantly before being finalised and also that it was provided in confidence and therefore should not be published. Final version of opinion expected to be delivered* [by close of business on] *30/7.*

2. [Counsel's] *draft opinion implied that* [Equitable] *was insolvent (and had been for some years). This conclusion was based on three points (require clarification!)*

- *If full disclosure had been required non-GAR policies would have been unsaleable.*
- *? s459 of Act – limitation period?*
- *Non-GAR contracts prevent* [Equitable] *using profits to discharge GAR liabilities.*

3. If, as expected, [Equitable] *publish* [Counsel's] *opinion, others would be free to draw the same conclusions.*

4. [Counsel] *noted that* [the Counsel for Equitable] *opinion requires an initial judgement that the policy documentation effectively promised non-GAR policy holders "fair" share of the profits. It is, however, very improbable that* [Equitable] *believed that they were operating under such an arrangement.* [Counsel] *thought it arguable that, on the basis of the documentation, non-GAR policy-holders were unlikely to expect a smoothed share of profits. Indeed, the policy documentation makes no reference to asset sharing.*

5. [Counsel] *noted that the 1994 Lautro rules required disclosure of any risk which may have had an adverse effect on performance or was otherwise material to an investors decision to invest. Attendees discussed whether it was reasonable to assume that the GAR risk should have been disclosed to non-GAR policyholders.*

6. It was agreed that if the GAR risk had been recognised by [Equitable] *management it potentially should have been disclosed to policyholders. However, given the economic environment during the late 80s/early 90s, the probability of the GAR risk materialising was minimal. In addition, because* [Equitable] *did not take legal advice on whether they were mis-selling the non-GAR policies at the time, they were unable to form a view of the probability and impact of the risk materialising. Ultimately* [Equitable's] *management had failed to consider the implications of what was then a highly improbable potential risk, but they should have recognised the potential legal uncertainty and sought a legal opinion.*

7. [Managing Director B] *noted that the policies included options which were at the time so far out of the money that* [Equitable] *may not have ... considered* [them to be] *a disclosable risk. However, the inclusion of the options could reasonably have been expected to be disclosed in the product literature.*

8. Attendees then discussed at what point [Equitable's] *management could have reasonably anticipated the full impact of the risk materialising.* [Paragraph] *3 of the* [Counsel for FSA's] *opinion noted that it was unclear when the full implications of the risks were appreciated.*

9. It was noted that the regulatory implication of the [Counsel for Equitable's] *opinion was that mis-selling liabilities across the insurance industry could amount to a systemic level.*

10. [The Director of Insurance] *asked* [Counsel] *to consider the arguments about likely quantum (noting that as late as 1999,* [Equitable's] *auditors considered the quantum of the potential risk to be much smaller than current estimates) and materiality factors in his final opinion.*

11. [The Director of Insurance] *asked whether Article 4 of* [Equitable's] *constitution could be interpreted as enabling liabilities to be reduced proportionately to assets available to meet them, thereby reducing both GAR and mis-selling claims. If so it would, in effect, transform these liabilities from cumulative liabilities to offsetting liabilities which could be reduced/compromised without threatening solvency.* [Counsel] *confirmed that he thought this interpretation was unlikely:*

- *his interpretation of the principle aim of the provision was to ensure that members could not sue other individual members of the society;*
- *Article 4 refers only to policy claims and is therefore not applicable to mis-selling claims.*

[Counsel] *concluded that Article 4 offered no comfort to* [Equitable's] *Directors in relation to wrongful trading (whilst insolvent).*

12. All parties agreed that a s425 scheme achieved through administration, rather than liquidation, was the most sensible way forward. This would enable [Equitable] *to continue operating but provide Directors with the protection of the courts. The alternative of liquidation would be very disruptive. Another option was for the Board to seek financial assistance from the industry. It was agreed that the FSA should raise this issue with the* [Investors Compensation Scheme].

13. [Line Manager E] *noted that* [Equitable] *had received advice that mis-selling claims should be included in the 425 scheme. However, there were obvious doubts over the extent to which claims could be accurately estimated within the tight timescale dictated by the Halifax deal. A pragmatic solution would need to be agreed.*

25/07/2001 [15:04] Ahead of a meeting the following day with the Association of British Insurers, FSA's Director of GCD provides FSA's Chairman with his immediate views on the financial limits which might apply to compensation. The Director of GCD notes that the maximum amount that could be levied on the insurance industry in any one year was 1% of the previous year's premium income from long term business and the Policyholder Protection Board's borrowing powers were limited to £10m.

25/07/2001 [entry 7] FSA meet with HMT and the Bank of England to discuss Equitable before attending an emergency meeting of the Tripartite Standing Committee (Deputies). HMT's note records the discussion that took place under the following headings:

<u>Latest situation</u>
FSA's Chairman reports that Equitable's Board had met earlier that day and had decided that it was possible for the company to carry on for a short period '*although it was not clear how long that would be*'. It was assumed that the Board had concluded that they were still solvent in Companies Act terms.

It is noted that Equitable had to make an interest payment on the subordinated loan of £30m, due on 3 August 2001 (rather than on 6 August 2001, as had been previously thought). Equitable thought they could meet the payment, if FSA granted a waiver in respect of regulatory capital requirements. It is noted that FSA were yet to decide whether they would grant this.

FSA's Chairman explains that he had had discussions with the industry, without the knowledge of Equitable or HMT, about possible support for the company. He says that the industry would require a lot of persuasion to make any contribution and, even if they would be willing to do so, '*would say that this could not be organised in the time available before Equitable had to go into provisional liquidation*'. FSA note that they consider that the best way forward was to make administration available for insurance companies.

Statutory compensation schemes
The operation of the Policyholder Protection Act 1975 and the Investor Compensation Scheme are explained by FSA.

Liquidation vs. S.425 scheme
The different features of provisional and full liquidation and schemes under section 425 of the Companies Act 1985 are considered.

Administration
The possibility of introducing an administration procedure for insurance companies is discussed but: '*It was uncertain if everything could be done before the end of next week*'. FSA's chairman acknowledges the constraints of getting this in place but says FSA would want HMT to see if a scheme could be brought in within the time available. It is noted that administration '*represented the best current card in a weak hand*'.

In concluding the discussion: '[An HMT Director] *noted that perceptional factors together with the likely availability of the Halifax funding favoured administration over provisional liquidation. However, the feasibility and safety of getting the necessary legislation to provide for administration for insurance companies through in the required timescale needed further consideration*'. It is agreed that '*experts*' should meet on 26 July 2001 to discuss this further.

25/07/2001 [entry 8] All of the same officials from FSA, HMT and the Bank of England then attend an emergency meeting of the Tripartite Standing Committee (Deputies) '*to consider whether Equitable Life's difficulties represented any systemic risk and, if so, what the response might be*'. HMT's note records the discussion that took place *inter alia* under the following headings.

Misselling
The Bank of England say that Counsel's opinion seems very important. The note records:

> [FSA's Director of GCD] *said that* [Counsel] *had been appointed by* [Equitable] *to investigate the extent of their policyholders claims against them, and to produce an opinion for publication. An initial opinion had been produced in May and a final opinion was expected to be published at the end of July. The opinion looked at* [Equitable] *contracts both against background of the ordinary laws on mis-statement and the LAUTRO and PIA rules. These rules required disclosure of any information that would affect the amount available for distribution to policy holders. There were three relevant factors: the size of the GAR liabilities; the size of the company's overall assets; and the existence or not of hedging contracts. In* [Equitable's] *case there were low assets, high liabilities and lack of hedging.*

Case for Intervention by the Authorities
The issue of whether there were arguments for an injection of public funds into Equitable is discussed. The note records:

> [FSA's Chairman] *said that something between £3*[bn] *and £5bn would make* [Equitable] *solvent.* [FSA's Director of Insurance] *said that it was difficult to assess what additional contribution to the pot might be necessary to make a s.425 scheme attractive to* [Equitable] *policyholders. But while the insurance industry would probably not be keen on a rescue, it might be readier to consider this if the government was involved.* [FSA's Chairman] *said that if the government put money into the company, it would be interpreted as a problem with the past regulatory regime.*

Moral Hazard
Moral hazard issues are also discussed:

> [FSA's Chairman] *said that it was possible to contemplate basing support on a change in the environment. This kind of intervention would fall somewhere in between ameliorating systemic risk and admitting that the regulatory system had not worked perfectly. He thought this circumstance could be distinguished from regulatory negligence.*

Next Steps
It is noted that FSA were to review the situation with Equitable on 27 July 2001 and that there was an Equitable Board meeting planned for 30 July 2001 (Note: this was later brought forward to 29/07/2001). Discussion goes on to note:

> *The* [Equitable] *were due to make a payment on 3 August that would focus their attention on Insurance Act solvency requirements. They could only make the payment if their required margin was intact or if they received consent from the regulator. It would be difficult for the FSA to consent to this if there were no clear way forward for the company but permission could be given if FSA were satisfied the company did have a good plan in place. It was noted that, if* [Equitable] *failed to make the interest payment, it would be recognised that it could not meet its commitments and liquidation of the company would be precipitated.*
>
> [An HMT Director] *asked whether the company should be allowed to continue in business until Friday on the basis of what was known now.* [FSA's Director of Insurance] *said ... that there were high hurdles for FSA intervention. It was also the case that the misselling liabilities had not been quantified and might possibly be small.* [FSA's Director of GCD] *said the legal position was that the FSA could intervene if they thought* [Equitable] *was insolvent or if they thought that they could not meet the reasonable expectations of their policy holders. They believed the right course at this stage was to get more information.*
>
> [FSA's Chairman] *said that the FSA did not have grounds to overturn the Board's view that* [Equitable] *was still solvent in Companies Act terms. But the FSA would only consider granting* [Equitable] *the waiver for regulatory capital purposes that would be necessary to pay the interest on their debt if they could see a plan for putting the policy holders in a better position than they would be if* [Equitable] *was liquidated immediately. The FSA would need to able to see that by next Friday when the payment was due to be made. The Treasury would have to make a judgement about the probability of an administration scheme's being in place in time. If the Treasury felt that the necessary steps could be taken to allow the* [Equitable] *to go into administration, the FSA would feel comfortable about advising Ministers that they should be allowed to make the payment. If administration was not likely, then it would be better to move to liquidation quickly rather than waiting until after the interest payment had been made.*

In summing up: '[HMT] *said that the FSA should put advice to Ministers on the issue of what should be done in respect of the interest payment if* [Equitable] *fell below its regulatory capital requirements. Treasury officials would advise on the administration scheme issue ...* [HMT] *would brief the Chancellor*'.

On 30 July 2001, the Director of Insurance sends HMT's notes of the meetings to Line Manager E, copied to the Head of Life Insurance and the Insolvency Practitioner. He says to them: '*I think we should keep only one file copy of this. I should be grateful if* [the Insolvency Practitioner] *could destroy his copy when read*'.

25/07/2001 [entry 9] FSA's Insolvency Practitioner writes to the Director of Insurance following the meeting of the Tripartite Standing Committee. He says that he had three points to add to what had been discussed. First, that it was important to involve the people who might be asked to act in the event of liquidation/administration. Secondly, he sets out the timing and funding of potential mis-selling compensation from a liquidator and the Investor Compensation Scheme. Thirdly, reiterating a point he had made outside the meeting, he says that he believed '*the best way for the directors to be comforted that they may continue trading and paying claims in full whilst the GAR and misselling liabilities are uncertain, might be if they receive a written undertaking from the* [Investor's Compensation Scheme] *that the* [Investor's Compensation Scheme] *will contribute to a s.425 scheme up to the amount that it would have to pay by way of compensation in a liquidation*'.

He continues:

> *This does not necessarily mean that creditors will be no worse* [off] *if the scheme fails and liquidation ensues; and therefore the directors remain exposed for wrongful trading liabilities to the extent that the society pays terminal bonuses and subordinated debt interest meanwhile. However, the test the directors face is whether there was no reasonable prospect that the society would avoid going into insolvent liquidation* [under section 214 of the Insolvency Act 1986]. *If the scheme could be sweetened by up to £5bn (say) then there remains a realistic prospect of such a scheme succeeding.*
>
> - *this does not mean that a view need be taken now on whether £5bn is indeed the amount of the misselling liabilities.*
> - *The* [Investor's Compensation Scheme], *I presume, has power to provide "financial assistance" along the lines of the* [Policyholders Protection Board], *but extended to situations where there is merely a prospect of the society being unable to pay its debts.* [Chief Counsel B] *should advise.*
> - *If so, this commitment can be made immediately (if* [the Investor Compensation Scheme] *board concur) without the need to obtain agreement from the* [Association of British Insurers] *or industry generally.*
>
> *The directors will still need to be robust and have robust advice, but I believe that such an arrangement will strengthen their position significantly.*
>
> *I think the FSA could apply the same criteria when considering whether to intervene in policyholders' interests.*

The Insolvency Practitioner also prepares an '*Illustration of the possible cost to the industry of funding compensation through the Policyholders Protection Board and the Investors Compensation Scheme*'. The illustration is presented as follows:

Present financial position of the Society's with-profit fund		*Reduction by 16%*	*Position on liquidation*		*Compensation*	
	30-Jun-01	*15-Jul-01*				
	£'m	*£'m*	*£'m*	*Note*		*£'m*
Assets in the fund						
(current market value)	*24,400*	*24,400*	*23,668*	*a*		
			(500)	*b*		
			23,168			
Liabilities of the fund						
Guaranteed benefits	*21,350*	*21,350*	*21,350*		*90%*	*19,215*
Best estimate GAR cost	*1,256*	*1,055*	*2,400*	*c*	*90%*	*2,160*
Possible mis-selling liability	*?*	*?*	*5,000*	*d*		*4,987*
Total liabilities	*22,606*	*22,405*	*28,750*			*26,362*
Contractual surplus/(deficit)	*1,794*	*1,995*	*(5,082)*			
Non-contractual expected terminal bonus	*6,650*	*2,170*	*2,170*		*90%*	*1,953*
Compensation schemes will be able to recover from the liquidation (23,168)						
Net cost to the industry						*5,147*

The notes to the illustration are:

It is assumed that the Society would go into liquidation and a stop order made since a transfer of the business to another insurer could not be achieved. Only on such a liquidation would policyholders have any prospect of the [Policyholder Protection Board] *paying compensation in respect of undeclared terminal bonuses.*

The obligations of the Halifax to the Society in respect of unit linked business and of the Society to unit linked policyholders have been ignored on the assumption that Halifax would pay such policyholders directly and assume their rights against the Society.

a It is assumed that the market value of the Society's investments have fallen in proportion to the FTSE 100 between 5,700 at 30 June and as at 24 July 5,320 with an asset backing 45%.

b Liquidation costs are estimated to comprise:

	£m
Liquidators professional fees	*10*
Legal and litigation costs	*10*
Halifax penalties capable of arising	*250*
ISA fees	*230*
	500

c On liquidation a policyholder can prove for the full value of his GAR rights irrespective of whether he would actually have exercised them: £2,400m.

d The [Investor's Compensation Scheme] *limits compensation to £48,000 for each claimant.*

- *Assume that the total misselling claims are tortious and total £5,000m.*
- *Assume that there are 300,000 non-GAR policyholders who were sold policies after 1988 and who are eligible for compensation.*

- *Assume that the damages each policyholder is entitled to claim falls in a normal distribution about the average of £16,667 per policyholder with a standard deviation of £10,000.*
- *Then only 0.086% of policyholders will have their claims capped.*
- *Thus, compensation payable by the* [Investor's Compensation Scheme] *will be approximately £4,987m.*

25/07/2001 [entry 10] FSA's Chief Counsel B circulates a draft report entitled '*PIA misselling report*'. The Chief Counsel explains:

> *The report adopts and explains the reasons behind the conclusions reached by counsel about the nature and the extent of misselling by the Equitable; it also deals with an issue not currently in the draft* [counsel] *opinion, namely, the sale of new policies after the Court of Appeal judgement and following the House of Lords ruling. My conclusion is that the disclosures given by the Equitable during both of these periods were inadequate but I hope that I have dealt with* [the] *closure to new business point in a way which colleagues will find comfortable.*

The report states:

> *The basic proposition underlying the regulatory requirements which apply to the Equitable throughout the period is that potential policyholders were entitled to:*
>
> - *be told the nature of investments they are being sold;*
> - *have proper care taken in the information and advice given to them;*
> - *be given information about any special features of the liabilities of the Society which a reasonable policyholder would expect might affect that amount available (then or in the future) for distribution by way of bonus.*

and goes on to find that:

> *... no policyholder could have been reasonably satisfied that the GAR risk was immaterial and therefore something which did not need to be disclosed as part of a process by which potential policyholders were able to take informed decisions. On this basis the regulators agree with the conclusion reached by counsel ... that the Equitable failed, in a generic way, to comply with the disclosure requirements to which it was subject both under the initial Lautro rules and the later PIA Key Features rules. This was a failure which commenced when, on an objective basis, an investor would have reasonably concluded that the Equitable's exposure to GARs was a material risk. Given the Equitable's own assessment that, on a proper assessment of the GAR contracts, non-GAR policies supported in the same with profits fund were un-saleable, the risk to policyholders was material from the out set – [July 1988] – and hence the Equitable breached the disclosure rules from that date.*
>
> *This conclusion is one which, on the basis of the material considered by the regulators and by counsel, affects the sale of all Equitable policies up to the publication of the House of Lords decision on 20 July 2000.*

The report discusses the sales of policies during the Hyman litigation finding that correspondence from Equitable to policyholders during that period had not properly reflected the range of possible outcomes. However, it concludes: '*The Equitable's failure to properly disclose the range of outcomes presented by the litigation is however of secondary significance given the more fundamental failure identified in relation to the sale of Equitable policies from July 1988*'.

On the sale of policies after the House of Lords' decision, the report states:

> *The material on which sales representatives were encouraged to answer questions lacked balance and in the regulators view does not conform with the duty to provide investors with adequate information. This therefore gives rise to a further category of potential missales.*

25/07/2001 [18:32]	FSA's Line Manager E sends Managing Director B a short note summarising the points they had discussed about arrangements for financial support from the industry. The note covers how the Policyholders Protection Act 1975, the Policyholders Protection Board and voluntary arrangements might work.
25/07/2001 [19:54]	Equitable inform FSA that the Board had decided that it would not be irresponsible for them to continue on the current basis for a brief period.
26/07/2001 [10:20]	PIA inform FSA of the steps that Equitable were taking to address the Pensions Review implications of the 16 July policy value cuts.

26/07/2001 [morning] FSA meet the Association of British Insurers to discuss a possible industry response to the Equitable situation. FSA's '*Note for File*' records that:

> *The position of the Society was very delicate. A leak could prove extremely damaging. The company's financial position was finely balanced.* [FSA's Chairman] *explained the legal opinions which the Society and the FSA expected to receive shortly in respect of possible mis-selling. It was clear that these opinions had potential consequences for a number of companies but these could be very variable. The test which Counsel were likely to suggest for quantifying possible losses arising from mis-selling was essentially that where a policyholder, properly informed of relevant and material risks would not have bought a policy from the company but would have bought one from another provider, then the measure of damage was the difference between the value of the policy actually bought and the industry average for comparable products supplied by other providers. In the case of the Equitable the consequences looked severe, although no systematic quantification had yet been done.*

FSA inform the Association that '*while the* [Society's] *directors had concluded that they could properly continue the operation for the time being the situation might change very quickly*'.

The possibility of industry support for the compromise scheme is discussed. FSA record that their Chairman had explained:

> *In our view such a compromise still offered the best prospects of a reasonable outcome for policyholders and was still achievable if the Society was in administration or provisional liquidation. However, it now seemed likely that for it to be attractive to policyholders it would need to be "sweetened" with some additional finance.*

FSA's note continues:

> [FSA's Chairman] *explained that on the basis of some initial and somewhat tentative calculations, it seemed to the FSA that the amount needed to make such a compromise attractive to policyholders (and thus likely to succeed) would be considerably smaller than the cost that the industry would be likely to incur if the company went into full liquidation with compensation being payable to policyholders both through the Policyholders Protection Board (in respect of policy liabilities) and through the investors compensation scheme (in relation to mis-selling claims). He suggested that further discussions might take place, without commitment on the part of the industry, between*

technical experts to explore both the relative costs and the processes that would be involved.

The response of the Association to FSA's suggestion is recorded by FSA, as follows:

> *The* [Association of British Insurers'] *representatives expressed considerable doubts about the proposition. It was not clear why policyholders who had chosen to invest in well managed companies should be expected to bail out those who had invested in a company which was less prudently managed. They were concerned too that the legal opinion seemed unbalanced and potentially hugely damaging. They were concerned that the reasoning might extend not only to guaranteed annuity rates but to all forms of guarantee and potentially to all risks inherent in with-profits policies. Publication of these opinions could lead to a clamour for a major review of mis-selling beyond even the size and scale of the pensions review.*

FSA also record that the Association of British Insurers were:

> *... concerned in particular about the quantification test likely to be suggested by Counsel. This raised the spectre that any policyholder in a fund performing below the industry average would be given an incentive to complain that he had been exposed to some undisclosed risk and to insist that his policy value was brought up to the industry average.*

FSA's Chairman expressed the hope that the Association would not take an immediate decision not to explore the possibilities. The Association of British Insurers' representatives '*reluctantly agreed that some initial work should be done*'.

26/07/2001 [11:33] FSA's Director of GCD reports to Managing Director B on his discussion with Counsel for FSA about the appropriateness of the measure of mis-selling liabilities identified in the two Counsels' opinions. This discussion had followed comments made by FSA's Chairman the previous day. FSA suggest to their Counsel that it might be possible to conclude that the usual tortious measure of damages was not appropriate in this case. The Director of GCD explains:

> *This is on the basis that it would produce an over recovery, by compensating people not only for what they have lost as a result of the effect of the GARs on bonus distributions, but also because of the fact that, coincidentally, particular Equitable policies may have under performed the market.*

[**12:53**] Managing Director B thinks that this is a logical approach and '*avoids the concerns discussed at this mornings meeting with the* [Association of British Insurers] *about averaging-up and the potentially very damaging consequences for the industry as a whole*'.

[**13:12**] The Head of Actuarial Support adds that this would tie in better with Counsel for Equitable's opinion, which had said that the mis-selling liabilities would have to be met from the fund prior to establishing the surplus available for distribution as bonus. The Head of Actuarial Support continues: '*It could therefore achieve the outcome that they were seeking, namely to restore the balance between GAR and non-GAR to roughly where it was prior to the* [House of Lords'] *judgment*'.

On the commissioning of an independent assessment of Equitable's potential mis-selling liabilities, the Head of Actuarial Support goes on to say:

> *Meanwhile,* [a firm of actuarial consultants] *have declined to take on the assignment that we offered them as they did not wish to be associated with the view that mis-selling had taken place (when this could have implications for other insurers) and would therefore be not in their commercial interests (on which we may have our own private views!). I can try to talk with* [another actuarial consultancy] *(or failing them some other smaller firms) to*

see whether they would take on this assignment, but if [the Director of GCD] *is right, this may not be quite so pressing now.*

[**14:10**] The Head of Life Insurance says that he thought FSA still need an independent assessment of quantum '*so as we agreed, please contact* [the actuarial consultancy] *to explore the position*'.

[**15:03**] The Director of GCD provides some further comments following an update from Counsel.

26/07/2001 [15:58] Equitable provide FSA with information on the distribution of assets of the with-profits fund as at end-June 2001. Equitable explain that, since then, they had sold around £1.4bn of equities, of which £1bn were 'overseas'.

'Equitable Life – Asset mix'

FSA's Head of Life Insurance forwards the information to Managing Director A saying '*I hope this is enough to meet* [the Bank of England's] *needs at present*'.

26/07/2001 [16:56] FSA's Chairman meets with the Economic Secretary to the Treasury to provide an update on events.

An FSA official relays a report from FSA's Chairman giving feedback from a meeting with the Economic Secretary to the Treasury. The feedback includes that:

- An HMT Director was convinced that making administration available was the best option but the Economic Secretary '*has not quite got there*' and was concerned that some policyholders might be disadvantaged by this.
- HMT '*recognise that it is quite possible that the Board will decide on Monday that it cannot make the interest payment and will choose to put the Society into provisional liquidation or, if available, administration*'.

[**19:33**] The Insolvency Practitioner replies with three observations on the subordinated loan, including: '*For a test of wrongful trading or a Companies Act solvency test it is irrelevant that* *the debt is subordinated to policyholders' claims (if that is the effect of subordination). A company must be able to foresee its ability to pay all its liabilities of whatever nature*'.

26/07/2001 [16:59] Equitable provide FSA with an update on their attitude to the interest payment on the subordinated loan. FSA record:

> *1. On the basis of the 2000 regulatory returns, submitted at the end of June 2001, and reflecting the valuation as at end 2000 (the "traditional" basis for assessing a life office's financial position for the purposes of such matters) the payment could properly be made, as the* [required minimum margin] *would remain intact after the interest payment. But* [the Chief Executive] *implicitly recognised that in the Equitable's current circumstances, this test lacked some credibility.*
>
> *2. Therefore the directors were giving thought to whether it would be appropriate for them to make the interest payment if the company was insolvent in Companies Act terms. They might decide to do so, on the basis that a £28m payment was justifiable if it could sustain the Society through the period until an orderly administration could be arranged. But* [Equitable's Chief Executive] *recognised that this would be a brave decision.*
>
> *3. They were clearer now (but still not crystal clear) that 1st August was the date by which irrevocable instructions had to be issued to make the payment due on 6 August.* [The Chief Executive] *thought that it might be helpful if by that date, FSA had not received firm advice on the likely quantum of misselling liability.*
>
> *We are considering what attitude to recommend the Treasury should take on possible consent to this payment even if the* [required minimum margin] *is breached. The issue will be on the agenda for tomorrow's meeting with Equitable.*

FSA's Head of Life Insurance relays this information to supervisors and also tells them that this issue might be overtaken by reports that a stockbroker had suspended a credit facility for Equitable on the grounds that they were insolvent.

The following morning [**at 09:46**], the Director of GCD comments that, in relation to paragraph 3 above, '*there can be no question of it being "helpful" for us not to have received advice on quantification by the key date*'.

26/07/2001 [c17:15] FSA meet Halifax following a rumour that had been circulated on the wire press that a stockbroker had stopped a foreign exchange line of credit to Clerical Medical on the grounds that Equitable was insolvent.

FSA contact the stockbroker to establish whether there was any truth in the rumour. The stockbroker says that the credit facility was due to end on 27 July 2001 and their credit committee had decided that they would require collateral of $5m as assurance in order for them to be able to renew the line of credit. Equitable had refused the terms and the line of credit had not been renewed.

FSA's Managing Director A sends FSA's Chairman, Managing Director B and the Director of Insurance his note of the meeting with Halifax's Chief Executive and also a note of a one-to-one conversation with him. The Managing Director says:

> *We discussed this briefly with* [the Chief Executive] *who has undoubtedly (as a result) gone away to think hard about how Halifax would respond to a problem with Equitable if one did emerge ...*
>
> *At* [the Chief Executive's] *request I also talked to him one-to-one.* [He] *stressed how much Halifax had riding on the Equitable and I decided to tell him something of what was in hand, given that they may have some useful influence with Equitable and, importantly*

> *from a supervisory perspective, it is important that they are not destabilised by for example not being able to explain properly what Halifax exposures are if a problem did emerge.*

I explained that the water had been made deeper and muddier by [Counsel's] *Opinion (the creation of which he is, of course, only too aware of) and by the difficulty of knowing what it might mean to Equitable's solvency. I said that further information was being gathered (but this would take time) and in the meantime we were vulnerable to a loss of confidence by the Equitable Board who might decide they could not go on. I said we were exploring every route to find a breathing space of the kind administration brings if the circumstances justified it.*

26/07/2001 [19:08] FSA's Line Manager E prepares a note on Equitable's subordinated loan. He explains that the only view he could reach is that Equitable should go ahead with the interest payment on the loan if the solvency cover was intact but not if their cover for the required minimum margin had been breached. The Line Manager says that: '*In the time scale, I cannot see that there would be an* [required minimum margin] *breach that would not be tied in with other things that would make allowing the payment to be made preferable to not consenting*'. The '*Detail*' section of Line Manager E's note states:

> *We need to decide whether or not supervisory consent should be given to the Society and* [Equitable Life Finance] *to proceed with the next interest payment on 6 August 2001 in the event that the position on the potential mis-selling issue is clearer and the Society declares that it is no longer able to cover its* [required minimum margin].
>
> *In simple terms, the downside of not giving consent is that the terms of the bond backing the loan are public and indeed, as the debenture is* [London Stock Exchange] *listed, it seems likely that a formal statement would need to be made acknowledging the Society's [potential] financial difficulties. That would have serious consequences for confidence among policyholders, and could also be damaging to markets that would expect the Society to be forced to begin making urgent disposals of its equity holdings (approx £8 billion including indirect holdings). This would be anticipated either as part of a switching strategy to move to gilts and other fixed interest, or as part of a formal insolvency procedure.*
>
> *On the other hand, the loan arrangements were consented to and have been acceptable for solvency purposes on the basis that the loan debt was subordinated to the other liabilities of the Society, and in particular the insurance liabilities. If at a time when the Society is unable, or likely to be unable, to meet its obligations to its policyholders in full, it seems somewhat implausible that the regulator should wish to undermine the protections that have been put in place for relevant policyholders. It is though important to recognise that the interest due (at £28 million) is fairly small scale compared with the overall reserves (£25 billion for the with-profits liability).*
>
> *It would seem, therefore, that the decision to consent or not is finely balanced and depends ultimately on the position at the time the payment is due. Neither outcome is entirely desirable. However, provided there is a realistic prospect that the difficulties may be avoided, the negative consequences of a default would probably be sufficiently material that we would wish the Society to proceed to pay the interest as it falls due, particularly following the recent speculation. However, in such circumstances, the* [required minimum margin] *would probably not have been breached and the issue of consent would not arise.*
>
> *Conversely, if the* [required minimum margin] *has been breached on 6 August 2001, it is almost certain that that breach will be accompanied by a solvency breach for company law purposes. In those circumstances, it seems unconceivable that the directors would not have concluded that they needed to initiate formal procedures and that a market statement of the position would have to have been made by* [Equitable Life Finance]. *In*

	such circumstances, it would seem entirely appropriate for the interest payment not to be made at that point. It would be open to the Society, after a satisfactory compromise of its liabilities, to resume payments at any point in the future. [**22:20**] The Director of Insurance forwards the note to the Director of GCD and Managing Director B, saying that he suspected that, at the meeting with Equitable the following day, FSA would not be able to say more than the decision as to whether to provide regulatory consent to the payment was one reserved to HMT. The Director of Insurance says that he thought that '*much may depend on what confidence we may have in the alternative approach to valuing potential misselling claims which seems to me to be quite crucial to an assessment of the Society's financial position*'.
26/07/2001 [entry 9]	HMT inform FSA that the Chancellor of the Exchequer holds a policy with a company linked to Equitable (University Life) and so might be conflicted from taking decisions on the company.
27/07/2001 [08:40]	Halifax telephone FSA further to the discussions the previous day. Halifax say that Equitable's Board had informed them that they had received an oral briefing from Counsel on their opinion and the thrust of Equitable's message was that there was a realistic chance of a claim by non-GAR policyholders, but the potential liability could not yet be quantified. FSA reiterate that the key issue is to quantify the potential liabilities and say: '*If these could be shown to be small then life would clearly be much easier*'. Halifax say that they had seen legal advice which stated that any liability was negligible and other advice stating otherwise. Halifax ask about the possibility of administration and the process of liquidation.
27/07/2001 [09:34]	FSA's Director of GCD asks that the Head of Actuarial Support and the Insolvency Practitioner attend the meeting with Equitable that day so that FSA could be clear on what was said by Equitable about their financial position. [**09:37**] The Director agrees with the views in Line Manager E's note of the previous day on the interest payment on the subordinated loan.
27/07/2001 [10:06]	The Director of GCD writes to FSA's Chairman (copied to supervisors, legal and Counsel) setting out some views on the points that were relevant to FSA's decision making on Equitable's financial position. The Director of GCD says: '*The key point is that we should not in my view allow it to get into a position where "the value of the company's assets is less than the amount of its liabilities, taking into account its contingent and prospective liabilities."*'.
27/07/2001 [10:16]	FSA send HMT their response to three further questions which had been asked the previous night about administration orders.
27/07/2001 [lunchtime]	FSA's Chairman reports to the Managing Director of HMT's Financial Regulation and Industry directorate on a meeting that had just been held with Equitable. FSA's file note records that: [FSA's Chairman noted] *that the situation remained uncertain (and further legal and actuarial advice was being sought) but the following points had emerged:* • *EL's Board would be presented on Monday with a range of possibilities for the costs of the misselling liabilities arising from* [the Society's Counsel's] *opinion. Some of these possibilities would make EL insolvent. EL had indicated that this would lead them either to stop paying non-contractual bonuses or to seek liquidation.* • *EL had received advice from* [their lawyers] *that, in liquidation, the liquidator might suspend payments of pensions.*

- [FSA's Chairman] *had, as agreed with* [HMT's Managing Director] *the previous night, said that there was a chance that HMT might be able to make administration available although no decision to do this had yet been taken. EL had been attracted by this possibility and had agreed to work up a document saying why this would be a better option for policyholders. One possible technical difficulty was identified in that it was possible that the Equitable would not be able to prove to a Court that it was insolvent and would have to risk having the application thrown out. Work would be done to assess the extent of this risk.*

FSA's file note continues:

> [FSA's Chairman] *said to* [HMT's Managing Director] *that this situation meant that there was a strong possibility that administration was the best option and our strong advice was that they should make it available as soon as was possible.* [The Managing Director] *said that he accepted that the arguments were very strong but that ministers were not yet convinced. He asked that* [the Chairman] *set out this recommendation in a letter addressed to* [HMT's Managing Director]*, which should highlight the point that pensions might not be paid in liquidation.* [FSA's Chairman] *undertook to provide a letter this afternoon.*
>
> [HMT's Managing Director] *asked whether it might be possible that administration would be required before the tentatively agreed date of 1 August.* [FSA's Chairman] *noted that the market situation was fragile and a number of rumours had been circulating. It would therefore be possible that Equitable could be pushed into taking action before that date and conceivably as early as Monday.* [The Managing Director] *said that it would be practically difficult to make administration available on that timetable but he would see what could be done.*

FSA's note also records that the Chairman had updated the Governor of the Bank of England on the situation, and that: '*The Governor said that the Bank would stay attuned to whether this was causing any wider impact in the market and would let us know if they heard anything*'.

27/07/2001 [15:09]	Equitable send FSA the weekly customer servicing reports.
27/07/2001 [15:13]	FSA's Managing Director A circulates a note to record FSA's contingency planning, the meetings planned for the coming weekend, and the actions and responsibilities of officers.
27/07/2001 [15:44]	PIA seek advice as they were receiving requests from independent financial advisers for further guidance as to how they should be advising Equitable policyholders and asking about FSA's attitude to previous advice given. PIA send a copy of their note to FSA. PIA note that it had been suggested in the press that their stance (note: as set out in their '*Regulatory Update 82*', issued in December 2000) was no longer sustainable. PIA suggest elaborating on the previous guidance and provide a draft question and answer briefing setting out what they had in mind for use by their contact centre. [**16:47**] FSA say that they should not deviate from their current line and should refer to the statement issued on 16 July 2001.
27/07/2001 [16:00]	FSA's Chairman telephones HMT to say that complications had emerged related to their work on the benefits of administration. HMT say that they wanted FSA's views before Equitable's Board meeting on 29/07/2001. It is agreed that FSA should stress to Equitable that they should plan on the basis that administration was unlikely to be available.
27/07/2001 [17:00]	FSA supervisors meet to discuss Equitable. The note of the meeting records:

[Managing Director B] *reported that he had spoken to* [Equitable's Chief Executive] *who had realised himself that administration might not be as good an option as it had appeared in the meeting that morning.* [He] *had reinforced that view.* [He] *had also spoken to* [Equitable's Chairman] *to say that we thought that they should not rely on administration.* [The Chairman] *had taken the point but said that his major concern remained whether the Board would be able to sanction the interest payment on the subordinated debt. It was reported that* [Equitable] *had contacted* [a firm of insolvency consultants] *and it was likely that they would be providing advice to the meeting on Sunday.*

The action points arising from the meeting were:

- *A clear and agreed view was needed by the 4pm meeting on Saturday as to what we saw the pros and cons of administration and provisional liquidation to be in order that we could advise HMT. In particular, this would need to highlight what we might realistically expect to happen to annuities payments under each option so we, and ministers, are aware of the likely impact when considering the issue. We should also consider the relative flexibility available to a provisional liquidator versus an administrator – and to ascertain if possible what an administrator's approach might be in practice.*
- *We need to consider what the contingency plan would be if* [Equitable] *goes to court to apply for administration/provisional liquidation and the Court finds that Article 4 of its constitution prevents it from doing so.*
- [Equitable's Appointed Actuary] *would be advising the Equitable Board of a ballpark figure for the misselling liabilities on Monday. It was agreed that* [the Head of Actuarial Support] *would stay close to this work in order to be able to advise us on it.*
- *A Press Office presence would be arranged for Sunday afternoon. External advisors were on call to test external lines when needed.* [The Head of Press Office] *would seek to ensure maximum co-ordination of all parties for any announcement.*
- *Contingency planning would take place over the weekend to prepare press material and consumer help material in case of a possible announcement.*
- *Consideration needs to be given by the Sunday meeting to whether there are any actions that can be taken to influence the* [Policyholder Protection Board].
- *The question was raised as to whether any party might be able to provide a letter of comfort to guarantee the interest payment. It was agreed that further thought should be given to how this might work but we should not approach external parties about this until the overall situation could be considered at the Sunday meeting.*

27/07/2001 [18:06] The Financial Services Compensation Scheme send FSA comments, following a meeting the previous day, on compensation.

27/07/2001 [entry 12] FSA give Notice to Equitable under sections 44(2B) of ICA 1982 that they require the Society to commission a report from its Appointed Actuary's company into the financial position of the Company as at 30 June 2001.

27/07/2001 [entry 13] FSA send Equitable an extract from their Counsel's opinion on the calculation of the quantum of liability for possible mis-selling as, although the opinion was provisional, they believed that it might be significant to Equitable's consideration of the issue. On this, an official has written:

Damages only by reference to loss caused by misinformation, not fund performance ⇨ £1.2bn

27/07/2001 [22:31]	The Association of British Insurers call FSA. Amongst other things, they explain that, earlier that day, HMT had raised the possibility that the Association of British Insurers provide financial assistance to the compromise scheme, and had suggested that the industry should give serious thought to it '*since this was "another misselling case" in which the industry was involved*'. The Association said that they had responded that their members would '*respond "with outrage" to such pressure*'.
27/07/2001 [23:26]	Equitable and their auditors telephone FSA to let them know the advice that they were being given and to check FSA's understanding of the position.
28/07/2001 [12:34]	FSA's Insolvency Practitioner suggests to the Head of Actuarial Support that he should discuss with Equitable whether mis-selling liabilities could be discounted for the probability as to whether they might arise. The Insolvency Practitioner explains: *Looking at* [Counsel for FSA's] *further opinion, he says that a claimant would be entitled to claim compensation for a consequential loss <u>if</u> he can demonstrate that he would have followed an alternative course but for the misrepresentation ... It seems to me that policyholders each have their own tolerance for risk. Equitable was regarded (perhaps wrongly) as a highly performing fund but there is a genuine risk <u>and</u> reward assessment that a policyholder could make. Therefore there will be within the mix of all non-GARs some policyholders who have a high enough appetite for risk that they would still have bought Equitable policies. This means that if misselling claims were presented to the society piecemeal and adjudged each on their merits then not all would succeed. There is therefore a basis on which the "realistic cost" of misselling liabilities might be evaluated at less than the "full legal rights" cost.* *There is unfortunately, and unlike the GAR take-up rate, no empirical evidence as to the range of risk profiles amongst Equitable policyholders.*
28/07/2001 [16:00]	FSA meet with a firm of consultants '*who Equitable were likely to appoint as Administrator or Liquidator if either of those routes were followed*'. The key points identified include: that the differences between provisional liquidation and administration were very small; that the risk of rushing an administration order was considered material; that, under provisional liquidation, it was probably possible to make payments to policyholders, but that this might be harder under administration; that Article 4 of Equitable's Articles of Association could prevent the Policyholder Protection Act 1975 from having effect; that FSA/HMT could put in place measures to mitigate risk by making changes to the Policyholder Protection Act 1975 and could issue a section 45 Order to prevent Equitable from reducing policy values further; and that FSA's Director of Insurance had spoken to Equitable, who had reported a more optimistic position with regard to mis-selling liabilities, and that the required minimum margin would remain intact. The action points resulting from the meeting are: that a meeting with HMT would be arranged for 29/07/2001; that FSA's Director of GCD would speak to HMT to bring them up to speed; '[The Director of GCD] *to draft outline of argument for*' (Note: this sentence was incomplete); and that the Director of Insurance would speak to Equitable to request a copy of their legal advice.
28/07/2001 [after 16:00]	FSA's Chairman informs a HMT Director of the outcome of the discussions with the firm of consultants. He says that they had agreed that '*the top priority was to find a way to allow the Society to continue ... making annuity payments and as a contingency ensuring that policyholders would have access to* [Policyholder Protection Board] *in the event of either an administration or provisional liquidation, therefore guaranteeing that policyholders would receive a minimum of 90%*'.

The Chairman says that '*there appeared to be increasing tension between the Equitable Board* – [the Society's Chairman] *in particular appeared to be keen to* [throw] *in the towel*'.

The HMT Director notes that the Association of British Insurers had been clear that it was not the responsibility of their members to contribute to '*a sweetener of a* [compromise] *scheme – the issue was to do with regulatory failure*'. He also notes that Treasury Ministers were becoming increasingly nervous and the Association's comments had not helped.

28/07/2001 [18:30] FSA speak to Equitable to try to obtain a copy of the legal advice that Equitable had received from their solicitors on the mechanisms for winding up the Society.

28/07/2001 [19:51] Counsel for FSA send FSA the latest version of their opinion on mis-selling.

28/07/2001 [20:44] FSA's Chairman writes to HMT, following their telephone conversation, to update them in writing on FSA's discussions about the Society's options that had taken place with Equitable and with their advisers. The Chairman first emphasises that FSA's top priority was to find a way to allow Equitable to continue to meet their commitments while remaining solvent. Having set out the situation with regard to administration and provisional liquidation, the Chairman turns to Article 4 of Equitable's Articles of Association:

> *In brief, if the article has the effect which the Equitable canvass, the amount of its liabilities would reduce with its assets, so it could never become insolvent, and there would be no liabilities to policyholders on which the* [Policyholder Protection Board] *could pay compensation. We believe that this would be the wrong interpretation of the article. We also believe that this would be a perverse outcome, which would seriously undermine the Policyholders Protection Scheme as a source of confidence for policyholders.*
>
> *Fortunately, we think that there is action which the government could take to avoid this result. This is because the* [Policyholders Protection Board] *must take policy values at the amount set by the Insurance (winding up) rules, and there is a community obligation, in the Insurance Winding Up Directive, which would in our view require those rules to operate on the basis that policyholders are entitled to preference over other creditors, rather than on the Society's interpretation of article 4. There is also action which we need to consider under s45 of the Insurance Companies Act 1982. This might be used, for example, to prevent the Society* [exercising] *powers under article 4 to reduce policy values below policyholders contractual entitlements.*

28/07/2001 [20:52] FSA's Director of Insurance prepares a '*rough draft*' of a paper on a proposed section 45 Order to prevent Equitable using powers under Article 4 to reduce guaranteed amounts payable under their contracts.

FSA's Head of Prudential Policy amends the paper.

The following day, the Director thanks the official for his '*much better*' paper.

29/07/2001 [11:00] FSA meet with HMT to discuss Equitable. FSA's note of the meeting records that the key points of the discussion were:

- that HMT would brief ministers on 30 July 2001;
- that there was little difference between provisional liquidation and administration;
- that Equitable's latest assessment of mis-selling liabilities was £250-500m;
- that, if Equitable proposed cuts in guaranteed values, then FSA would consider intervention under section 45;

- that it was not possible to bring the European Insurance Winding-up Directive into force at present;
- that it would be preferable if publication of the Society's Counsel's opinion were deferred.

The actions resulting for FSA are:

- [Head of Actuarial Support] *to seek further information about the Society's estimate of the cost of misselling and the basis on which it had been calculated.*
- [Head of Actuarial Support] *to provide HMT with some background figures on Equitable annuitants.*
- [The Director of GCD] *(through* [Counsel]*) to ascertain if* [Counsel for Equitable] *supported* [his] *revised line on how misselling liabilities should be calculated.*
- [FSA's Chairman] *to inform* [Equitable's Chairman] *before the Equitable Board meeting at 3pm that:*
  - *The differences between provisional liquidations and administration did not appear to us to be significant, unless the Halifax point proved significant.*
  - *That we would have significant concerns about any course of action that reduced liabilities to policyholders in a way that would affect the compensation they would receive from the* [Policyholders Protection Board].
  - *That we feel it would be unwise to publish the* [Society's Counsel's] *opinion without greater clarity about the Society's financial position (including the results of the* [Appointed Actuary's company's] *work).*
  - [FSA's Chairman] *to send a letter to HMT outlining our view of the situation following the meeting with representatives of the Equitable at 5pm this afternoon.*
  - [Managing Director A] *to send HMT some material on the potential wider market impact arising from provisional liquidation or administration.*

The actions resulting for HMT are:

- *To advise whether FSA presence was needed (either at the meeting or on call), for the meeting with ministers tomorrow morning.*
- *To give further consideration to the interaction between Section 4 and the* [Policyholders Protection Act 1975] *and what action could be taken to ensure a satisfactory outcome, if necessary.*

29/07/2001 [11:05] FSA's Head of Press Office asks the Director of GCD and Legal Adviser E if there was any reason why the section 45 Order did not simply require Equitable to take steps with a view to removing Article 4. He says that that would put the issue to Equitable members, who would be likely to vote against it '*since the alternative is that* [their] *rights get written down without their active input through a 425 scheme (if* [Equitable's solicitors/Counsel] *are right)*'.

29/07/2001 [14:00] FSA and Counsel meet to '*take stock*' on Equitable. Counsel says that he had revised his opinion and that he was now saying that mis-selling liabilities should not exceed the impact on policy values caused by the existence of GARs. It is agreed that, if this calculation were used, then mis-selling liabilities should not exceed Equitable's free assets at that moment in time. It is noted that, should the market value adjuster be increased to over 10%, policyholders who took benefits at a non-contractual time could be worse off than if a liquidation took place. FSA state: '*In the event of the Society proposing an increase in the MVA, we would need to give serious consideration to whether this was cause for us to intervene*'.

	[**15:00**] FSA's Chairman speaks to Equitable's Chairman to, among other things, highlight FSA's concerns over any reductions in policy values to below the amounts that would be available from the Policyholders' Protection Board. FSA's Chairman reports that Equitable had accepted FSA's points.
29/07/2001 [15:51]	FSA provide HMT with some information on the numbers of Equitable policyholders, the '*balance sheet liability*' and the amount of annuity income in payment.
29/07/2001 [16:51]	FSA's Managing Director A sends FSA's Chairman and Managing Director B a copy of a letter to HMT about the wider equity market impact of Equitable going into administration or provisional liquidation. (Note: this letter appears to have been sent by the Chairman to HMT later that day).
29/07/2001 [18:00]	FSA meet Equitable, their auditors, solicitors and Counsel to hear the results of an Equitable Board meeting to consider the way forward for the Society. FSA's note of the meeting records the discussion. Equitable's Chairman summarises the Board's conclusions: *The Society appeared to be solvent on every basis for calculating solvency.* *The Board had been informed of various difficulties which would arise in any of the possible mechanisms for dealing with a potential insolvency. Both provisional liquidation and administration (if that were to be available) would lead to greater loss to creditors than if the Board continued with its current plans.* *The Board had concluded that there was no difficulty in paying the interest on the subordinated debt which falls due on 6th August, and would therefore pay it.* *The second opinion of* [the Society's Counsel] *and the two opinions of* [Counsel for FSA], *do not entirely agree on the potential for liabilities for mis-selling.* [The Counsel who was advising Equitable on the compromise scheme] *had offered some useful ideas. The Board was content for all the Counsel involved ... together with supporting solicitors, to get together to seek a consensus view on this question. They recognised that it could take until August 20th before* [the Society's Counsels] *were in a position to sign an opinion.* *Equitable Life would need to do more work to get a better idea of the quantification of mis-selling liabilities. They had received a spectrum of views from* [the Society's Appointed Actuary and its auditors]. *The Board had taken a rational, worst case basis for assessing mis-selling liabilities in reaching their decision on the way forward. (*[Equitable's] *had indicated to the FSA privately in advance of this meeting that in the Board's view, this figure was £900m). The Board hoped that further work would show that a better position could be sustained.* *The Equitable would press ahead with a Section 425 compromise scheme. The Board wanted to stop "inwards litigation" from policyholder action groups and others. Such litigation could be expected in the period between publication of* [Equitable's Counsel's second opinion] *and a compromise arrangement.* [The Counsel who was advising Equitable on the compromise scheme] *had advised that there were procedures for dealing with these litigation risks, and that they should ask the Court for them to be stayed pending the 425 scheme.* *There would be more regular meetings of the Board, and meetings with their advisers. On occasion, Board representatives might wish to meet with the FSA.*

FSA's Chairman asks several questions, including: if Equitable would prefer administration or provisional liquidation, should things go wrong; whether there was a risk of further policy value cuts; what Equitable would be saying publicly; the effect of surrender levels on cash flow; and about the sensitivity of Equitable's financial position to stock market movements.

29/07/2001 [18:38] FSA's Managing Director A informs his Chairman that, after the meeting, he had talked to one of Equitable's non-executive directors with whom he had used to work at the Bank of England. The Managing Director records:

> *He is particularly concerned about the following:*
>
> > *a) the terms of Equitable policies* [are] *so flexible that some two-thirds of the money currently flowing out is not paying the MVA (or financial adjustment as it is now called).*
> >
> > *b) this* [plus] *the impact of equity price falls worries him – he thinks a 5% fall in equity prices would put real strain on their solvency position.*
> >
> > *c) he will go on pressing for a significant further reduction of equity holdings. He personally puts the likely outflow in the next 12 months as high as £7bn. So while their short-term cash position is fine, this is going to require continuing positive action in selling equities.*

29/07/2001 [entry 8] FSA report to HMT on the meeting with Equitable.

29/07/2001 [18:57] HMT prepare initial drafts of possible Government statements on the situation.

29/07/2001 [22:02] An HMT Director writes to the head of the Chancellor's private office (copied to other Ministers' private offices and senior officials). The HMT Director says:

> *In advance of our meeting with* [the Chancellor] *tomorrow, I attach* [FSA's Chairman's] *letter to me of this evening and the various notes we prepared today. The notes are unpolished and the exact situation for which they were intended will not now occur. But they serve as useful background for a discussion of the issues. They cover:*
>
> - *the meeting at the FSA today;*
> - *the article 4 problem and its effect on policy holder protection;*
> - *the effects on policy holders of the various options the* [Equitable] *Board were considering;*
> - *the pros and cons of introducing an administration scheme;*
> - *a draft statement and possible options for the government's stance;*
> - *draft Q and As; a note of systemic risk and possible government support;*
> - *a letter* [from] *the FSA on systemic risk.*

HMT's Director suggests that, at the meeting, the Chancellor considers:

- *the current situation.* [FSA's Chairman's] *letter;*
- *policy holder protection, article 4 and options;*
- *administration and options;*
- *the review (*[an official's] *submission of* [27 July 2001]*);*
- *the case for government support;*

- *the "package" which should accompany the* [Counsel for Equitable's] *opinion's publication on 20 August;*
- *in the light of the above, the government's "stance" and priorities on Equitable.*

30/07/2001 [10:32]	FSA's Director of Insurance informs his Chairman that, as agreed, he had spoken to the Association of British Insurers last night to postpone the meeting that had been arranged.
30/07/2001 [12:32]	FSA's Chairman sends Managing Director B a provisional checklist of things to be done by 20 August 2001.
30/07/2001 [entry 3]	The Policyholder Protection Board's solicitors write to FSA to record and expand on the advice given in a telephone conversation on 23 July 2001, in response to FSA's letter of 19/07/2001.
30/07/2001 [entry 4]	FSA's Insolvency Practitioner provides FSA officials with a note about the extension of administrators' powers in relation to insurers.
30/07/2001 [17:31]	FSA agree with Equitable that they would have weekly meetings with their Chief Executive and Finance Director. FSA also inform Equitable that Managing Director B or Managing Director A would want to keep in regular contact with the Society's Chairman.
30/07/2001 [18:03]	Equitable send FSA a copy of the proformas for use in the half year accounts and which were to be used in the compromise scheme documentation. Equitable ask that FSA should confirm whether the information was acceptable. [**18:23**] Line Manager E seeks comments on whether it is acceptable. The Line Manager says that, following a conversation with Equitable that afternoon, Equitable had been working on mis-selling and had devised a scheme that they would be looking at with their solicitors, and possibly with Counsel, the following day. He says that Equitable planned to put their outline proposals on mis-selling to FSA on 2 August 2001 and to meet on 3 August 2001 to talk them through those proposals.
30/07/2001 [18:20]	Counsel send FSA a revised version of their opinion.
30/07/2001 [18:30]	FSA's Chief Counsel B informs supervisors and legal advisers of a conversation with Counsel who had said that he had had a discussion with Counsel for Equitable. The Chief Counsel says that there appeared to be little scope for bringing the two opinions together.
30/07/2001 [entry 9]	Equitable respond to FSA's With-Profits Review paper.
31/07/2001 [08:25]	FSA's Managing Director A responds to Chief Counsel B's note of the conversation with Counsel. The Managing Director says that: '*this is clearly bad news and together with all the noises coming out of the Action Groups strengthens my own feeling that (a) this is all going to have to get tested in Court and (b) there will have to be some process (probably administration) to allow time for that*'. Managing Director A also says that: '*there is 1 bit in your write-up which seems to me to be surreal and that is where there has been "aggressive selling" or a "positive recommendation to buy a policy." What on earth is this supposed to mean? Are we now heading for a world in which salesmen for a single company have to hand over a policy saying "I really can't recommend this policy but if you must have it here it is"?*'. [**14:47**] Chief Counsel B advises: '*The problem is that the courts have identified two measures of recoverable loss, one where the advice actually caused the claimant to enter into the*

transaction, the second (more restricted) where the claimant merely got some information. What [Counsel for Equitable] *appear to be saying is that because Equitable employed salesmen and because most of their sales were as a result of advice it may well be possible for claimants to argue that* [Equitable] *is responsible for all of the "loss" which is consequential upon the advice to acquire a policy i.e including the loss attributable to lower investment performance. There is no suggestion that salesmen cannot advise or recommend*'.

31/07/2001 [09:42] FSA's Head of Actuarial Support says that he did not understand a part of FSA's Chairman's letter to HMT of 29/07/2001. The Head of Actuarial Support says:

> [Equitable] *have made, I understand, and agreed with their advisers and auditors, a best estimate of the liability, taking account of the range of possibilities. It would not in my view be correct to suggest that they would remain solvent in the worst case scenario and I believe that a number of their advisers are aware of this. Indeed,* [the Society's Chairman] *did explain to us after their board meeting that the mis-selling provision was being assessed taking account of the basis of quantifying redress as argued in* [Counsel for FSA's second opinion]*, and not on the basis originally promulgated by* [Counsel for Equitable].

[**10:08**] The Head of Life Insurance points out that the phrase used by Equitable's Chairman had been '*rational worst case basis*' and that he had not said on which of the opinions those assumptions had been based.

[**10:15**] The Head of Actuarial Support asserts that Equitable's Chairman had said that the Society's provision (which was less than £900m) had been assessed on the assumption that Counsel for FSA's second opinion was the appropriate way forward. He agrees that the independent review of mis-selling liabilities would have to produce figures on the two alternative opinions.

[**16:27**] FSA's Chairman says that the sentence had been considered carefully but that, if the Head of Actuarial Support had any doubts, FSA must proceed urgently to resolve them.

31/07/2001 [11:05] Further to Chief Counsel B's note of 30/07/2001 [**18:30**], Managing Director B says:

> *What I infer from this is that the "rational worst case basis" referred to by* [Equitable's Chairman] *on Sunday afternoon (which enabled the Board to feel comfortable about meeting the various solvency requirements) may not be the correct position – i.e being restricted to* [the FSA's Counsel's second] *basis. As we discussed yesterday we must move as quickly as possible to form our own assessment of the potential range of liability on the* [Counsel for Equitable] *basis as well as the* [Counsel for FSA] *basis so we see an "absolute worst case basis".*

31/07/2001 [12:14] FSA's Insolvency Practitioner circulates a revised draft Notice to Equitable to instruct the Appointed Actuary's company to assess the quantum of mis-selling liabilities. The Insolvency Practitioner says that the aim was to agree the bases of the assessment internally that day and to discuss them with Equitable and the company the following day.

The Insolvency Practitioner also circulates a draft Notice to Equitable to report certain information monthly and weekly, with the intention of discussing these with Equitable the following day.

[**13:08**] The Head of Life Insurance identifies two questions which might arise for FSA to consider before the meeting with Equitable.

[**14:06**] The Head of Actuarial Support provides some suggested changes to the draft letter.

[**14:57**] The Head of Actuarial Support also says: '*If we are to monitor their financial condition to the level of comfort being sought at our recent internal meetings here, then I believe that we need the detailed analysis of information on a Companies Act basis as suggested in* [the Insolvency Practitioner's] *draft letter. However, given the lesser significance now being attached to the statutory position, then a less detailed summary of the results on the statutory basis could be added to the above requirement*'.

31/07/2001 [12:33] FSA's Head of Insurance Policy writes to the Director of GCD about Article 4.

[**16:34**] The Head of Insurance Policy later writes to Legal Adviser E about Article 4 and the permitted links regime.

31/07/2001 [entry 6] The Tripartite Standing Committee (Deputies), hold an extraordinary meeting to discuss the latest news and prospects concerning Equitable. HMT record the discussion under the following headings.

<u>Mis-selling liabilities</u>
FSA tell the Committee that:

> *... the Equitable Board had convinced both themselves and the FSA that they could go on making payments and were not insolvent and the FSA had no basis for challenging that.*

FSA also report that Counsel for Equitable and Counsel for FSA could not yet reach agreement on the '*"quantum for redress" ie the basis on which Equitable's liabilities for misselling should be calculated*'.

FSA explain that work was '*progressing*' on quantifying Equitable's mis-selling liabilities and that they had required Equitable to commission '*an independent reporting accountant ... to carry out a full analysis of the liabilities on various legal bases*'.

HMT's note records:

> [An HMT Director] *questioned the statement in* [FSA's Chairman's] *letter of 29 July to him that the FSA had not worked through the quantification of the liabilities with the Equitable. While the regulator was not responsible for Companies Act solvency, in Equitable's case it was surely worth looking closely at the basis on which the Board had reached its view.*

To which FSA reply:

> *... that it was impossible for the FSA on Sunday to have done anything further to clarify the extent of the liabilities – they could not reach a firm view on this themselves. However, all Equitable's advisers were satisfied that it was reasonable for the company to continue in business.*

FSA also confirmed that '*the reporting* [accountants] *... would report on the figures to the FSA as work on clarifying the liabilities on both the* [Counsel for Equitable] *and* [Counsel for FSA] *bases progressed*'.

FSA add that '*the Equitable Life Board had looked at the liabilities on both bases on Sunday. The cost on a* [Counsel for Equitable] *market average comparator basis, was apparently not as great as originally feared. The £3.0-5.0 billion first estimate had been very much a cockshy*'.

<u>Fall in equity markets</u>
On the risks to Equitable's solvency position of further stock market falls, FSA:

> *... reported that, as of 6 July the Equitable had a Companies Act surplus of just under £2 billion, not taking account of non-GAR misselling liabilities. Some aspects of this valuation might reflect an unduly prudent view but others could reflect an optimistic view.* [FSA's

> Managing Director A] *thought that a further 5% (or 250 point) fall in the FTSE 100 index from current levels could well cause difficulties for the company. If the prices of a major chunk of its assets went down by this amount, the company would be paying out in benefits more than they could afford to do so. They would then have to increase the level of the MVA or take some other steps to rectify the position – which could risk bringing the company down. (It should be noted that because of the flexibility of the terms of Equitable's policies, MVAs could not be applied in many cases.) The Equitable might also face liquidity problems if the number of policyholders withdrawing their funds was so large that the company had to sell big amounts of securities in difficult market conditions.*

The effect of market conditions on the positions of other companies is discussed.

<u>Handling of the publication of the Society's Counsel's opinion</u>
Publication of the Society's and FSA's Counsels' opinions is discussed, along with possible FSA guidance on the industry issues.

<u>Options for the way forward</u>
HMT's note records:

> [FSA's Director of Insurance] *said that Equitable believed that, if their proposals for the s.425 scheme of arrangement could be published with the* [Counsel for Equitable's] *Opinion, they could secure a stay on litigation until the s.425 scheme had been voted on. There was the possibility under this scenario that policyholders might see the misselling issue as a problem particular to the Equitable rather than a general one. On this basis it could be worth considering what the authorities could do to make it more likely that Equitable could proceed with its scheme of arrangement.*

FSA continue:

> *This broke down into two aspects: ensuring that the company did not become insolvent before the scheme could be voted on; and helping to make the scheme sufficiently attractive to policyholders that they would vote for it. On the former, he wondered whether the government could underpin the company with some guarantee to keep it going – there was a precedent for the government's doing so in the Pool Re (terrorism insurance) case.*

HMT respond that they '*thought the provision of government funding was a remote prospect. It might in theory be possible for the government to guarantee the Equitable's liabilities* [but] *this would raise major moral hazard and other risks and would be very difficult to justify*'.

The Bank of England '*agreed that the question was why Equitable should be underwritten by the government*' and '*noted that the company itself could hedge itself against further market falls through the use of FTSE put options*'.

HMT inform the Committee of their present thinking on the next steps, which was as follows:

- *Treasury officials would continue to explore the option of introducing an administration scheme for insurance companies with the Insolvency Service and possibly the* [Association of British Insurers] *but the Order should be limited to life companies and no public consultation should be undertaken.*
- *If the Equitable, the Halifax and the FSA were all in favour of administration, the Treasury would probably be inclined to proceed. It would be important however that the FSA should give a clearer view on this ...*
- *The position on Article 4 of Equitable's Articles of Association remained of concern. We were currently considering what Ministers might say if Equitable did get into the situation where it was proposing to make payments to policyholders*

lower than they would receive under the [Policyholder Protection Act 1975] *scheme arrangements. We needed to establish more clearly what the legal position was and what levers we had at our disposal to ensure the safety net would apply. Discussions with the Lord Chancellor's Department and the Insolvency Service were ongoing but there looked to be no prospect of changing the Insolvency Rules before 20 August. Indeed, primary legislation might be required, although use of an Order under section 45 of the Insurance Companies Act was being considered.*

On this last point, FSA say '*the risk was that an administrator or provisional liquidator would either not make payments or only do so on a payment on account basis (ie that he reserved the right to recover the payments)*'. FSA undertake to provide a note on the issue and '*any thoughts ... on remedies*'.

HMT's note concludes by recording that:

> *... it was agreed it would be helpful if publication of the* [Counsel for Equitable's] *Opinion could be delayed until more work could be carried out. The FSA could have a power to prevent Equitable from publishing the Opinion, although they would need to consult Ministers on its use.* [Director of Insurance] *observed that, post N2, the Financial Services Compensation Scheme could take the view that a s.425 scheme offered better prospects for Equitable policyholders than statutory compensation and could make arrangements for such a scheme. If Equitable could be kept going until N2 it could be possible to bring off a s.425 scheme. In conclusion* [an HMT Director] *said that nothing was being ruled out at this stage.*

31/07/2001 [13:09] FSA's Managing Director A informs the Chairman, Managing Director B and [**14:42**] Director of GCD of the discussion at, and the key action points arising from, the standing committee meeting.

31/07/2001 [14:08] In response to Line Manager E's request for comments as to whether the proformas for use in the half-year accounts were acceptable (see 30/07/2001 [**18:23**]), FSA's Insolvency Practitioner says that he was not sure that Equitable's proformas for use in the half-year accounts and compromise scheme documentation told policyholders what they needed to know about Equitable's financial position. The Insolvency Practitioner explains:

> *The essence of the compromise scheme is that there is a pot of free assets out of which the cost of meeting GAR liabilities must be paid and the cost of misselling compensation must be paid. Whatever is left in the pot must then remain big enough for the society to have some stability. The "deal" is then how these costs should be borne as between GARs and non-GARs and those missold* [and] *those not. The costs paid out of the pot reduce expectations of terminal bonuses.*
>
> *I feel very strongly, that policyholders should know not only the size of this pot (which is the "fund for future appropriations" in the statutory format attached) <u>but also</u>:*
>
> - *how much of the pot they already expect to get in terminal bonuses (ie the aggregate of the published policy values each policyholder receives);*
> - *how much of the pot GARs and non-GARs (and pre-93/post-93) policyholders could expect to receive before the deal;*
> - *how much is not presently allocated – ie the buffer to provide financial stability.*
>
> *I think this calls for another pro-forma balance sheet which necessarily will not be in a Companies Act format, and it should show the position before and after the proposed deal. It is likely that after deducting non-guaranteed expectations the society will look insolvent, but this is not necessarily a bad presentation.*

The Insolvency Practitioner provides an example of what he had in mind.

31/07/2001 [16:53]	FSA's Line Manager E sends Equitable FSA's '*collection of odd points*' about the compromise scheme, on which FSA would like further information. [**16:58**] Line Manager E informs other officials that he had done so, saying that most of the points had arisen from FSA's internal meeting held about a week earlier. [**17:30**] The Insolvency Practitioner asks if FSA could agree what information they expected from Equitable and circulates two suggested proformas. He describes the first as being the '*big picture*' explanation, showing how asset shares were being redistributed under the compromise scheme. The second is a statement for each individual policyholder. On the fairness of a scheme that also compromises mis-selling claims, he says '*the overall equation should work much more easily since we are back to merely a redistribution of PRE between GAR and non-GAR; however, pre-93 non-GARs close to retirement will still be losers*'.
31/07/2001 [entry 10]	The Policyholder Protection Board's solicitors write to FSA setting out their views on the scope of the Board's powers and duties in the event of '*a pre N2 "default"*'. FSA's Director of GCD asks Chief Counsel B to take this forward with the Policyholder Protection Board's solicitors and HMT. The Director of GCD notes that the Board's solicitors had not given a final view on Article 4 of Equitable's Articles of Association '*but note that its effect is that the Board "may not be empowered or required to exercise its powers ..."*'.
31/07/2001 [entry 11]	FSA write to Guernsey Financial Services Commission about whether the policy value cuts by Equitable had been known to FSA before the decision was announced; ring fencing international policyholders; and, other issues not relevant to Equitable.

August 2001

01/08/2001 [entry 1] FSA's Director of Insurance sends the Head of Life Insurance a paper that had been drafted on 28/07/2001 [**20:52**], which sets out the action that might be necessary to prevent Equitable reducing guaranteed amounts payable under their policies. Attached is a Notice under section 45 of ICA 1982. The Director notes that the paper and accompanying section 45 Order had been '*in the event not used. But you may need for your files*'.

01/08/2001 [10:36] Line Manager E writes to FSA officials about outstanding issues. The Line Manager informs officials that Scrutinising Actuary F had written to Equitable on 19/07/2001, and the Society had replied on 20/07/2001 [**17:46**]. He attaches Equitable's reply, split into three documents, named '*solvency statements*', '*future profits*' and '*general*'. The Line Manager says:

> *Also in the package is the application for the renewal of the section 68 order for future profits, which Equitable are asking to be increased to £1.1 billion for 31 December 2001. We received that application at the time the last returns were submitted, but had not previously received the actuarial certificate of 28 June that is now included in the package. I have to say I am not entirely persuaded that it is reasonable to rely on the historic profits that arose in a trading company as opposed to the likely future profits that will arise in the company in its current state. Perhaps* [Scrutinising Actuary F] *could* [advise] *on his return about the likely technical acceptability of the continued use of the implicit item in 2001, taking into account what we consider the position might look like by the year end.*

Line Manager E goes on:

> *We have also received in the package the outstanding monthly solvency reports, covering April, May and June, showing a surplus over the* [required minimum margin] *of £850m, £650m and £660m respectively. However, the covering letter mentions that when the markets fell to 5320 on 19 July, they thought that the surplus had just about been eliminated. Since then of course the FTSE 100 fell slightly further, hitting a low around 25 July of 5220.*

[**10:54**] The Head of Actuarial Support says that Scrutinising Actuary F would look at this in more detail on his return. The Head of Actuarial Support also comments: '*As you say, there are no obvious showstoppers, but the cover for the margin of solvency looks very thin at present, (after making a resilience provision but before allowing for potential mis-selling costs)*'.

[**18:29**] Line Manager E thanks the Head of Actuarial Support and says that he had not been trying to chase a reply as he '*thought there were some things in the response that needed to be aired, though I did try to circulate the letters in a way that suggested the routine regulatory team already had things in hand. The lack of interest suggests I was probably successful!*'.

At some point, the Director of Insurance replies to Line Manager E saying:

> *Between* [19 and 25 July] *the Society was selling equities – including, I think £1bn of overseas equities. We will need to see whether this kept them the right side of the line. I think it must have done since the* [Appointed Actuary] *was able to advise the Board, and the Chairman to advise us on 29/7 that its margin was intact, even taking into account potential misselling claims.*

01/08/2001 [15:00] FSA meet Equitable. (Note: FSA's files do not contain any note which they had themselves prepared of this meeting. Also, it is unclear which documents were handed to Equitable at the meeting and which were the subject of the discussion.) According to Equitable's note of the meeting (which was sent to FSA on 7 August 2001 and subsequently confirmed, on 14 August 2001, to be an accurate record), at the meeting:

- FSA handed over a draft of a letter requiring Equitable to commission their Appointed Actuary's company to investigate the amount of mis-selling liabilities. Equitable record that: '*the objective is to deal with the problem that the FSA is unable to obtain independent actuarial support. FSA will obtain the information they need by having access to the work* [the Appointed Actuary's company] *are to do for ELAS*'. FSA note that they were seeking the data so that they could undertake their own analysis.
- FSA provided a draft of the monthly financial reporting that they would like to receive from Equitable. Equitable note that no insurance company carried out a full data analysis more than once or twice a year and so the quality of more regular data would be limited. FSA say that they were seeking the information that Equitable used to inform their decisions to '*continue the business*'.
- Equitable record:

> [FSA's Insolvency Practitioner] *said they would like to have an end of June position confirmed by* [the Appointed Actuary's company] *together with a monthly "roll forward". He wants to see Balance Sheets on Companies Act and Insurance Act basis showing the level of free assets. He provided some draft schedules to help explain his proposal.*
>
> [Equitable's Chief Executive] *noted that the proposed Question 9 was very sensitive information which could be very damaging to members' interests if it leaked. There was general agreement that an indication ("thin" or "very thin" etc) could be given orally instead.*
>
> [FSA's Line Manager E] *said that the FSA are open to suggestions as to what data is provided formally and informally.*

When confirming the notes of the meeting as accurate, the one point that FSA raised about Equitable's notes of the meeting was that FSA thought '*the words in brackets* [*"thin" or "very thin" etc*] *are too specific and restrictive as a description of the sort of oral indications which we will expect to receive*'. FSA suggest that the words should be deleted.

- It was agreed that the draft proformas of the information that FSA wanted represented proposals and that FSA and Equitable should aim to agree the reporting requirements by 3 August 2001.
- FSA asked whether mis-selling claims would fit into the compromise scheme. Equitable say that they would either be part of the scheme or run parallel to it. Equitable say that they would report further on this in the following week.

02/08/2001 [entry 1]	Equitable give notice to FSA of the appointment of a new manager at the company.
02/08/2001 [entry 2]	HMT thank FSA's Chairman for his letter of 29/07/2001 and provide an update on their work on administration and the possible impact of Article 4 of Equitable's Articles of Association on policyholder protection.
02/08/2001 [09:40]	FSA's Director of Insurance sends the Director of GCD a draft of a letter, on the implications for the continuity of payments to annuitants in the event of provisional liquidation or administration, that he proposes to send to HMT.
02/08/2001 [10:42]	FSA's Insolvency Practitioner prepares a paper regarding who should meet the costs of mis-selling compensation and whether those costs should be borne by GAR and non-GAR policyholders in proportion to their asset share, or whether no one should have to pay for their own mis-selling costs. The Insolvency Practitioner suggests that FSA needed clarification on this issue, probably from Counsel, so that they were able to properly assess the fairness of the scheme compromising both GAR rights and mis-selling claims.

02/08/2001 [before 11:00]	HMT inform FSA that a firm of actuarial consultants had issued a report to public sector pension schemes that recommended people to stop paying into Equitable policies and that trustees should ask for bulk withdrawal terms. HMT say that they were concerned that this might cause reputational or cash flow damage to Equitable. FSA say that the withdrawals of funds that had taken place '*shouldn't leave those left behind worse off - indeed probably the reverse*'.
02/08/2001 [14:48]	Further to the Insolvency Practitioner's note of 28/07/2001 [**12:34**] on mis-selling quantification, Chief Counsel A asks the Director of GCD if anyone had considered the negative effect of bringing forward the liabilities: '*eg including them in a GAR/non-GAR scheme or otherwise crystallising them now by some other legal mechanism*'. [**16:36**] The Insolvency Practitioner explains that FSA had brought in a tax expert who would consider the issue. [**18:09**] Chief Counsel A questions whether it should be assumed that the tax expert would be considering the issue. The Chief Counsel says that she would raise the issue up with Chief Counsel B. (Note: Chief Counsel A later (on 6 August 2001 [**at 20:43**]) suggests to Chief Counsel B that they should leave the issue, as it would '*come out in the wash*'.)
02/08/2001 [14:54]	FSA's Chief Counsel B writes to the Head of Actuarial Support about a calculation that he had provided regarding Equitable's mis-selling provision in a '*Rational Worst Case Scenario*'. FSA's Head of Actuarial Support's calculation concludes: *There is of course still considerable uncertainty about a number of these assumptions and the value that can be placed on the different elements of the calculation. It does though seem that a "rational worst case" scenario could result in a provision of around £1.5-2.5 billion, though we could not rule out the possibility of the Courts taking an even worse interpretation (eg on assumption (4) above which could add another £500m-£1Bn, or on assumption (10) which could add a further £1 billion).* *The implication would be that even if they could find just enough free reserves to cover this, they would have to make substantial cuts in the bonuses for* [GARs] *which could conceivably result in counterclaims from this block of policyholders which would be even more difficult to meet.* Chief Counsel B says that there was much that needed to be explained about the calculation and asks for a meeting to discuss the matter. [**15:05**] Chief Counsel A says: '*I suggest I attend any meeting. Looks like* [the Head of Actuarial Support] *and I might helpfully agree a short note which could iron out some of these issues*'. [**15:35**] The Head of Actuarial Support replies: *Let me hasten to reassure you all that these very tentative figures (on a note headed "Draft") were based on an initial analysis of what the worst case on* [the Society's Counsel's initial basis] *might imply, ie the higher basis of quantification that he proposed in his draft opinion, and not the lower basis which* [the FSA's Counsel] *has now suggested may apply. This has necessarily included a long list of assumptions that would need to be refined.* [**17:39**] Chief Counsel A writes: [Head of Actuarial Support], *We had a quick chat. It may be helpful to copy recipients to know the following:* *1. As you say below, you were doing no more than beginning to think about the figures at one end of the continuum (best case to worst case scenario for Companies Act reserving). A lot more work is needed (with input from others) before ELAS (or FSA) can come to a view.*

2. You were assuming that compensation would be based on an industry comparator (not the cost of GARs).

3. Many of your worst case scenario assumptions are highly debatable.

4. In any event, Companies Act reserving is not required to be on a worst case scenario basis.

5. Finally, even if the worst case scenario was eventually accepted to be as you have outlined (in draft!) and ELAS were to reserve on that basis, there are options available to ELAS to maintain solvency (eg, further reducing bonus or shifting into gilts).

[**18:04**] FSA's Head of Actuarial Support concedes that he agreed but notes that FSA '*would of course need in that hypothetical worst case eventuality to talk through the possibilities in paragraph 5 in more detail, and see to what extent their solvency position could be improved and policyholder expectations fulfilled. (There is insufficient information at this stage to make a proper assessment on this, given the wide range of uncertainties)*'.

02/08/2001 [18:26] FSA's Line Manager E informs colleagues that a meeting with Equitable to discuss the Compromise Scheme and how they would use it to deal with mis-selling planned for the following day - had been postponed until the following week. The Line Manager explains that Equitable were not yet in a position to discuss mis-selling, and that therefore the meeting had had to be postponed.

[**18:52**] The Director of Insurance writes to the Head of Life Insurance in reply, expressing his concern that Equitable were '*slipping again*' on the Compromise Scheme. The Director of Insurance suggests that they should meet, along with other officials, at the end of each day to discuss progress and priorities and to agree action for the following day.

The Director says that he would also like to discuss with the Director of GCD how FSA should progress the Article 4 issues in his absence.

02/08/2001 [entry 9] HMT's Head of Financial Stability and Markets sends the Chancellor of the Exchequer the minutes of the Tripartite Standing Committee (Deputies) meeting held on 31/07/2001.

02/08/2001 [entry 10] In response to the query of 31/07/2001 [16:34], Legal Adviser E provides a note on Article 4 of Equitable's Articles of Association and its interaction with the permitted links regime in ICR 1994. The advice given, in summary, was that:

a) it is not clear that [Article] *4 is caught by* [Regulation] *43;*

b) if [Article] *4 is caught, however, the conclusion must be that, since it determines policyholder benefits, it is a core term of the relevant contracts;*

c) illegality in respect of a core term of the contract renders the contract as a whole illegal and unenforceable by either party;

d) in relation to a core term tainted by illegality, the scope for severance of the illegal term and the enforcement of the balance of the contract without it is limited;

e) the better conclusion, in my view, is that Article 4 is not amenable to challenge as a prohibited link, is not a core term and remains amenable to possible challenge on other grounds, for example as an unfair contract term.

02/08/2001 [entry 11] FSA's Chief Counsel B draws attention to the Policyholders Protection Board's solicitor's letter of 30/07/2001 and that:

... what [they] *say in relation to the question we asked them concerning the valuation of policy benefits in a liquidation and in particular the valuation of a policyholder's expectation of a future benefit.*

The simple point made by [the solicitors]*, and I think this has some force, is that where the valuation rules are being applied in a liquidation of an insolvent company the policyholder's future expectations should probably fall to be treated as having a nil value at least to the extent that any future benefit is dependent upon distributions from profits. The position would be different however were the Equitable to be wound up on a solvent basis and where there were assets attributable to the payment of future bonuses. This would suggest, that if the Equitable were wound up on an insolvent basis then the* [Policyholders Protection Board] *would be looking to pay 90% of the guaranteed contractual benefits but probably no more.*

03/08/2001 [entry 1] FSA's Legal Adviser A provides advice on Equitable's reserving requirements in relation to their assumptions on annuity guarantee take-up rates. The advice given was as follows:

1. In 1998 [Chief Counsel A] *gave some preliminary comments on the application of Part IX of the Insurance Companies Regulations. In particular on the proposition that the regulations require Equitable to reserve as though 100% of its policy holders will choose to take the guaranteed annuity offered under the relevant policies. Much water having passed under many bridges,* [Chief Counsel A] *has asked me to look again at the matter.*

2. In suggesting that Equitable should reserve on the basis of a 100% take up rate, reliance was placed on regulation 64 of the 1994 Regulations. Regulation 64 sets out a general principle. The amount of the liabilities shall be made on actuarial principles and shall include appropriate margin for adverse deviation of the relevant factors. The liabilities must be determined in compliance with each of regulations 65 to 75.

3. It is not clear that any of the other regulations are relevant. In particular, regulation 72 provides that provision shall be made on prudent assumptions to cover any <u>increase</u> in liabilities caused by the exercise of options. In this case, the exercise of the option will not serve to increase the liabilities.

4. As I understand the present position, take-up rates are in the region of 60% by value but c. 90% by number. The present reserving is on the basis of just under 100% take up with the reduction below 100% taking into account certain mortality assumptions.

5. We recently took the advice of [Counsel] *as to whether it was necessary to reserve on the basis that policyholders took benefits at age 50. Although in the end this was determined by the construction of regulation 72(3),* [Counsel's] *advice was effectively that reserving on a worse case scenario was not required.*

6. In these circumstances, it is not clear to me that there is anything in the regulations that <u>require</u> the present level of reserving and that a lower level of reserving is permissible if that is prudent. I shall be happy to reconsider in the light of any comments.

03/08/2001 [entry 2] FSA write to HMT on Article 4 and '*the steps which might be taken to ensure that it does not cause any uncertainty as to the availability of compensation, or other financial support, to the Equitable or its policyholders*'. FSA set out their understanding of the position, which included that, like HMT, FSA '*continue to believe that Article 4 should not be construed as meaning that the Equitable cannot become insolvent, or that, if it did, financial assistance could not be provided and its policyholders could not be paid compensation*'.

03/08/2001 [entry 3] An HMT Director writes to an HMT official (copied to the Chancellor of the Exchequer's Private Secretary and others) about advice which had been given by the Civil Service pension scheme advisers that group schemes should consider stopping paying new money into Equitable and should ask for bulk surrender values. The Director says that the Civil Service pension scheme wanted to send their members a copy of the report, along with the latest guidance from the National Association of Pension Funds. The HMT Director writes:

My clear view was that (i) we could not give public service pension schemes any information which was not generally available; (ii) the managers of public service pension schemes had to take whatever action they believed appropriate in the light of their statutory and contractual duties.

... However, this news clearly has implications for Equitable. I have discussed these with [Managing Director A] *at the FSA. His view is that there should not be an immediate problem. Asking for a bulk surrender value will take* [some time]*, and, within their rights, Equitable would be likely to make such a transfer pretty unattractive. It was not therefore "today's problem". The publicity which might follow wider circulation of the* [adviser's] *report would not be good but there were many reports of this sort floating around. He did not know the value of the* [Principal Civil Service Pension Scheme] *stake but thought it would be pretty large. FSA were any way keeping an eye on withdrawals.*

03/08/2001 [10:59] FSA's Director of GCD asks Chief Counsel A, following a query from his Chairman some time ago, to advise on whether there was any material in the Baird Report that might influence policyholder decisions on the compromise scheme. [**15:20**] Chief Counsel A says that she was happy to do so but needed a copy of the report.

03/08/2001 [12:31] FSA's Director of GCD provides Chief Counsel B with comments on his draft guidance about Counsel's opinions on mis-selling liabilities.

[**13:03**] In response to a point raised about the existence of separate funds or sub-funds, the Head of Life Insurance asks the Head of Actuarial Support to produce a definitive note on the actuarial complexities of the management of a long term fund.

[**14:33**] The Head of Actuarial Support points out that he was not an expert in insolvency law for insurers but offers his understanding that '*Section 55 of ICA 82, in conjunction with the 1985 Winding-Up rules, disapplies the normal rules for the operation of a long-term fund in the event of a winding-up*'. He goes on to explain the issue in more detail.

03/08/2001 [16:33] The Treasury Solicitor's Department send FSA a note on the scope for using powers under section 45 of ICA 1982 to require Equitable to act on HMT's/FSA's interpretation of Article 4 of Equitable's Articles of Association. HMT attach an amended draft Notice that could be used. The advice provided included the following:

In my view, section 45 could be used to require [Equitable] *not to rely on the wider interpretation of Article 4 – or strictly, of any provision made in accordance with that Article in a policy granted under those Articles – but only on the basis of section 45(1)(b) and on the ground in section 37(2)(aa), coupled with paragraphs 5 and 7 of Schedule 2A to the Act. I do not consider that section 45(1)(a) and the ground in section 37(2)(a) could be relied on, as suggested in last weekend's draft. My reasons for this view are as follows.*

Sections 45(1)(b) and 37(2)(aa) allow a requirement to be imposed on a UK company "for the purpose of ensuring that the criteria of sound and prudent management are fulfilled with respect to the company" on the ground that any of those criteria "is not or has not been or may not be or may not have been fulfilled". Those criteria are defined in section 5(4) as the criteria set out in schedule 2A; paragraph 5 of Schedule 2A specifies one of the criteria – somewhat tautologically – as that the company "conducts its business in a sound [and] *prudent manner", and paragraph 7 then states that a company is not to be regarded as fulfilling this criterion "if it fails to conduct its business with due regard to the interests of policy holders".*

It seems to me that HMT/FSA could properly take that view that it would not be in the interests of policy holders for [Equitable] *to cease to meet in full the contractual* *entitlements of its policy holders, or to act on an interpretation of Article 4 and provisions made under it according to which* [Equitable's] *liabilities to those policy holders were regarded as reducing in line with its net assets.*

It follows that if [Equitable] *were to act on such an interpretation or to cease to meet those entitlements in full, under paragraph 7 of Schedule 2A HMT/FSA could properly consider that the criterion in paragraph 5 of that Schedule "is not fulfilled" with respect to* [Equitable]. *That would mean that the ground in section 37(2)(aa) was established. Equally, if it appeared to HMT/FSA that* [Equitable] *may be going to act on such an interpretation or to cease paying out in full, the ground in section 37(2)(aa) would be established on the basis that the criterion in paragraph 5 "may not be ... fulfilled" with respect to* [Equitable]. *In either of those circumstances, imposing a requirement on* [Equitable] *not to act on interpretation, or to continue to meet its contractual obligations so far as possible, would clearly be "for the purpose of ensuring that the [criterion in paragraph 5 of the Schedule is] fulfilled with respect to the company" within section 45(1)(b).*

Sections 45(1)(a) and 37(2)(a) are about protecting policy holders against the risk of a company being "unable" to fulfil their reasonable expectations. That might include, for example, obliging a company to invest differently (or not to change certain investments) if its current investment policy (or such a change) would be likely to leave it with too small a fund to meet those expectations. Those sections do not seem to me to enable a requirement to be imposed which does not affect an insurer's <u>*ability*</u> *to meet policy holders' reasonable expectations, but merely obliges the insurer* <u>*actually*</u> *to meet those expectations.*

The requirements being proposed here fall in my view into the latter category. A requirement to meet contractual entitlements in full or to act on an interpretation of Article 4 under which more is paid out will do nothing to improve [Equitable's] <u>*ability*</u> *to meet policy holders' expectations: it will not lead to any increase in the fund available for that purpose. Indeed, if anything such a requirement might reduce* [Equitable's] *ability to meet those expectations, since it will lead to* [Equitable] *having less money than it would otherwise and might even precipitate an insolvency. This is why I do not consider that requirements of this sort can be imposed under sections 45(1)(a) and 37(2)(a).*

03/08/2001 [17:50]	FSA's Director of GCD responds to the Insolvency Practitioner's note of 02/08/2001 [**10:42**], saying that his understanding was that both GAR and mis-selling costs were liabilities of the company. Therefore, they '*come off the top*' and the Insolvency Practitioner's first approach was the relevant one.
06/08/2001 [entry 1]	FSA write to HMT, following the Tripartite Standing Committee meeting on 31/07/2001, to confirm FSA's understanding of what would happen if Equitable went into administration or liquidation.
06/08/2001 [entry 2]	An HMT official provides the Economic Secretary to the Treasury with an update on possible legal solutions to the Article 4 problem.
06/08/2001 [10:19]	FSA's Director of GCD thanks Chief Counsel B for providing him with a copy of PIA's draft mis-selling report and gives his thoughts on PIA's handling and the report itself. On handling, the Director of GCD writes:

... my main concern is whether there is any need for the report to be maxwellised. Given that it reaches conclusions that the company had engaged in misselling, and that it is to be published, it seems to me that there is a serious issue about maxwellisation. If you agree, it would be sensible to put this in hand as soon as possible, so that it can be complete before the report is needed for publication.

The second handling point relates to the possibility of disciplinary proceedings. I myself [am] *particularly concerned about a statement which was made in a letter to all members at a late stage of the court proceedings indicating that the maximum exposure of the society was only £50 million. From memory, the papers I have seen call into question whether this was a sustainable statement at the time it was made. We need to consider it not only from a viewpoint of disciplinary action by the PIA, but also in the context of section 47 of the Financial Services Act.* [The Director of Insurance] *will be sending a paper to Enforcement on these aspects, so that we are in a position to say what we have in mind to do when this document is published.*

On the report, the points of detail made by the Director of GCD include:

- that it might be helpful to '*deal not only with customers who bought non-GAR policies from the relevant date, but also those who topped them up from that date*';
- that the report should mention that the transitional arrangements for the implementation of the new regulatory regime permited FSA to initiate new disciplinary proceedings against a company on the basis of past contravention;
- that a part of the report is: '*a key paragraph in indicating that we agree with the conclusion reached by counsel that the Equitable failed, in a generic way, to comply with the disclosure requirements to which it was subject. I think we need to be clear about the status of this finding, given that it is not made in the course of disciplinary proceedings. We need to find a way of expressing this so that it does not appear to prejudge the outcome of any disciplinary proceedings which we may subsequently take, and also so that it does not appear to be reaching a disciplinary decision without proper due process. For example, perhaps we need to make it clear that the conclusion can only be reached without due process in a way that does not prejudice the outcome on any eventual proceedings. But I am not only convinced that this would be adequate and would be glad if you could give it some further thought*'; and
- that, as the report concludes that there had been mis-selling up to the date of publication of the House of Lords' decision, it raised the question of whether there had been mis-selling after that date. The Director of GCD explains: '*Presumably, this would be the case, because although policyholders would be aware of the decision, they might still not be aware of its potential financial consequences for them. Indeed, as my note indicated earlier, the company may have given them greater reassurance on this point than was properly justifiable*'.

06/08/2001 [10:32]	FSA's Director of GCD asks Chief Counsel B to lead on work on the Financial Services Compensation Scheme, in his absence. The Director asks that the Scheme rules should be able to deal with the legal issues that FSA expected could arise in relation to Equitable.
06/08/2001 [10:44]	FSA's Director of GCD informs FSA's Chairman and Managing Director A of the results of his review of the Baird Report's comments on mis-selling to non-GAR policyholders.
06/08/2001 [11:15]	The Director of GCD provides Chief Counsel A with a report on events of the weekend of 28 and 29/07/2001.
06/08/2001 [13:18]	Equitable send FSA two documents from their compromise scheme launch pack. [**14:41**] FSA's Head of Actuarial Support says that there were a number of features of these documents that '*leave me feeling uncomfortable*'. He explains:

1) The effect on the balance sheet is likely to be fairly small, given that the value of the new guarantees being offered (to GAR's and non-GAR's) appear to be fairly close in value to the provision for GAR's and the small provision being made for mis-selling costs (though they would of course avoid the potentially larger figure for mis-selling costs could arise in a worst case scenario). Consequently, the supposed advantages (if indeed they exist anyway) of a less restricted bonus and investment policy may not be readily available.

2) It is unclear whether Equitable will be able to pay any guaranteed bonus this year as a result of the low investment returns. They should not be raising expectations of what the scheme can achieve too far.

3) An investment return increased by 1% per annum as a result of the scheme may be rather optimistic, though of course policyholders will not have any clear benchmark to see whether or not this has been achieved (as they will not know what investment policy would have been followed if the scheme were not approved).

4) I do not see how their proposals "ensure" that policyholders electing for 25% cash could buy an annuity that would replace at least 75% of their maximum GAR rights. This must depend inter alia on the current annuity rates at the time of retirement.

5) On a point of detail, the maximum cash for the policyholder in their example would be three times the annuity purchased by the "rest of fund".

6) The commentary on the other options looks very sparse.

7) In the accompanying letter, are we content for them to write that the Scheme "will be approved by FSA"? Surely, this should say "will need to be approved".

Finally, all the numbers will of course need to be checked against the latest version of the schema in due course.

06/08/2001 [15:25] FSA's Legal Adviser E asks Line Manager E what work Equitable were doing to quantify their mis-selling liabilities, who was doing it and what work they were doing to quantify their future liabilities '*if there is no 425 scheme*'.

[**16:44**] Line Manager E replies that the '*actuarial team (which in practice means the appointed actuary, who is a consulting actuary ... and the Equitable's old actuarial department, now part of* [Halifax Equitable Clerical Medical]*) will be advising the Society on this. They will also be supported by* [the Appointed Actuary's company] *who will provide comparative information for other providers and validate the work being done by the Appointed Actuary*'. Line Manager E says that he did not believe that the conclusions reached on the liability that existed would be any different if there were no compromise scheme, as Equitable '*need to work out the liability, and then work out the basis on which it might be compromised and at what price*'.

Line Manager E also explains that FSA would see this information as: '*What Equitable will be doing for its own purposes is to be the subject of a formal requirement imposed under s.44(2B) ICA for an expert review*'.

06/08/2001 [15:37] FSA's Director of GCD writes to Managing Director A, further to the information supplied by HMT about public sector pension schemes. The Director of GCD says that Equitable's freedom to '*toughen*' terms for withdrawals was subject to the Unfair Terms in Consumer Contracts Regulations 1999 and that their position would be stronger if they were to publish the criteria on which they exercised their discretion to set the market value adjuster. He also says: '*As enforcement authority, this would also improve our position, as well as helping policyholders know where they stand*'.

06/08/2001 [16:00]	FSA hold an Equitable Life Lawyers Group meeting. The Group discuss: significant developments over last fortnight; progress on outstanding points; new items; and matters arising from the Insolvency Practitioner's counterfactuals paper.
06/08/2001 [16:41]	FSA seek advice from Counsel in relation to assessing Equitable's exposure to mis-selling claims. [**17:56**] In response, Line Manager E says that he and Chief Counsel A thought that it would be useful for him to be aware, and to mention to Counsel, that Equitable's market value adjuster was not always applied to policy surrenders. The Line Manager explains that this was because of the flexible nature of some of the Society's policies. Line Manager E says that, because of this, the market value adjuster had only applied to about one third of the £2bn of withdrawals made since December 2000. The following day [**at 14:05**], Chief Counsel B says that he would draw this to Counsel's attention. The Chief Counsel also says: '*The point about flexibility is that it might materially reduce the costs to Equitable of compensation paid to those who take their benefits early rather than surrender, transfer and suffer an mva*'.
07/08/2001 [09:21]	Having discussed the issue the previous night, FSA's Head of Actuarial Support sends Managing Director A a note outlining his concerns about Equitable's latest compromise scheme documentation. [**12:07**] The Managing Director says that he too had '*a good deal of discomfort*' with the policyholder communication. Focusing on the first point, the Managing Director also concludes: *... that the promised uplifts account for much/all of the Halifax* [£250m] *+ the no longer needed provisions for GARs (say* [£1.3bn]*) and for misselling. The Society therefore potentially continues after a compromise with less uncertainty about the future but with very little initial room for manoeuvre. (For example a 10% fall in share prices just after the compromise would spark another round of policy value reductions - and such risks need to be spelled out.)* [**13:36**] The Head of Actuarial Support agrees with the Managing Director's analysis and expands that there: *... are two separate sets of calculations to look at. First, the Companies Act balance sheet and secondly the effect on bonuses.* *For the Companies Act balance sheet, we understand that they had around £1.6 billion free reserves at end-June before making any provision for mis-selling. After the scheme is agreed, the GAR provision of £1.3 billion should be removed, the mis-selling provision should also be removed, and a Halifax contribution of £250 million should be received but instead, there are likely to be additional guarantees given to GAR's of around £1 billion along with any guarantee that may be offered to non-GAR's (no details of this have been given to us so far).* *Accordingly, I would conclude that the free reserves are still likely to be of a similar magnitude of around £1.5 - £2 billion. As you say, they would still therefore be vulnerable to a fall in equity values if they aim to maintain a significant level of equity investments.*

On the second set of calculations, the policy values for GAR's are likely to be increased by around £1.3 billion, and the policy values of non-GAR's by around £700 million (assuming a 4-5% uplift) as a result of the scheme. This will be funded by the removal of the £1.3 billion provision for GAR's and the Halifax contribution of £250 million, leaving a potential shortfall of up to around £500 million. It is not clear to me whether they have sufficient margins available to fund this without making a further small cut in bonuses for everyone.

In any event, I am not sure how acceptable the scheme will be if Equitable reserve the right to remove the uplifts (on a proportionate basis of course for everyone) at any time in the future.

07/08/2001 [09:30] HMT send FSA a copy of the report regarding the Civil Service pension scheme.

[**11:57**] FSA's Managing Director A gives his immediate reaction to the report, saying that:

a) it is somewhat less alarmist than HMT originally implied but pretty gloomy for all that;

b) we are clearly likely to get drawn into a row about transparency over the terms of bulk surrenders. Personally I have every sympathy with those who think that there should be transparency in the process by which surrender values are calculated. perhaps we could put this on the agenda for the next evening "wrap-up" meeting.

07/08/2001 [09:53] Equitable send FSA the weekly customer servicing reports.

07/08/2001 [entry 4] FSA issue Equitable with a Notice pursuant to section 44 of ICA 1982 requiring the Society to instruct the Appointed Actuary's company to assess possible mis-selling liabilities. FSA explain that they:

... had intended to instruct another firm to carry out work in relation to such possible misselling. The Society will, naturally, be carrying out its own estimation of such potential liabilities and will, I assume, be supported in this by the Appointed Actuary and staff from his firm ... The FSA will also need to have sufficiently detailed information to form its own assessment of the possible liabilities.

In order that there is no duplication of effort and undue disruption to the Society's work towards a compromise scheme, I am writing to require the Society to further instruct [the Appointed Actuary's company] *to address the estimation of possible misselling liabilities on, at least, the assumptions which the FSA will need to evaluate. You may wish to evaluate other bases yourself or with* [the company's] *help.*

FSA continue:

We are not asking that [the Appointed Actuary's company] *form a view as to whether misselling has occurred or, if it has, what the basis of compensation should be. Rather, we are providing a range of assumptions to be made, and are asking only that* [the company] *carry out the computations necessary to quantify possible liabilities on these assumptions. We then need* [the Appointed Actuary's company] *to provide the FSA with details of these computations in sufficient detail that we can review them, understand how they are derived and overlay our own analysis as legal opinions develop.*

07/08/2001 [entry 5] Equitable's Appointed Actuary writes to FSA's Head of Actuarial Support about the reinsurance treaty and, in particular, the issue of the renegotiation clause if claims reached £100m, the issue having been raised by the Society's new auditors. The Appointed Actuary says:

> *From the Society's point of view I believe that the attached extracts show that the matter was discussed with you, changes made, the final Treaty sent to you, and the Treaty used for 1998, 1999 and 2000 Returns.*
>
> *The purpose of this letter is therefore to ask you to confirm for the benefit of myself as new Appointed Actuary and ... the Auditors, that the attached describes the position from your point of view and that you have nothing to add.*

The Appointed Actuary encloses a note, dated 2 August 2001, from a former Appointed Actuary to which he attaches four documents, with the following description:

> *A – The relevant extract from the draft treaty submitted to FSA/GAD in advance of a meeting held on 28.1.99 plus the relevant notes from that meeting. Those notes show the people present and at 8 record the views which FSA/GAD expressed on the clause in question.*
>
> *B – Copy of our note of 1.2.99 to* [IRECO] *requesting the various changes indicated by FSA/GAD (point 3 deals with the clause in question) together with our suggested rewording of the clause.*
>
> *C – Relevant extract from the updated treaty submitted to FSA/GAD in advance of a further meeting on 19.2.99. This is unchanged from what we had suggested to* [IRECO] *in B above and was not discussed further at the 19.2.99 meeting.*
>
> *D – Letter dated 22.2.99 from* [Head of Actuarial Support] *recording the points they had asked us to negotiate on further at the 19.2.99 meeting. You will note that the £100m renegotiation point clause is not mentioned as a matter needing further attention and the statement on page 2 confirming that, subject to the specific points mentioned, the treaty would have the intended reserving effect.*

In the note, the former Appointed Actuary says that he thought:

> *... it is also pertinent to remember that no query was raised in connection with the credit taken for the treaty in either the 1998 or 1999 returns and I assume the same is also true for the 2000 returns*.

07/08/2001 [entry 6] FSA host a conference call with Equitable. According to FSA's note of the call, the following issues were discussed.

Equitable's Chairman said that he was spending a significant proportion of his time dealing with the press, whose focus was on what would happen if the compromise scheme failed. FSA record that he:

> *... continued to emphasise that the Board had not considered this, but were focussing solely on getting the compromise scheme to work. He was however concerned that the compromise scheme could be defeated by GAR policyholders, in value rather than number. He was clear that if this scenario materialised the Society would be in a severe state of instability and the govt would come under renewed pressure to intervene.*

It is noted that press attention had not '*majored*' on the review of Equitable's financial position.

On Equitable's solvency position:

> [FSA's Managing Director A] *noted that the FSA continued to adopt a cautious line on the Society's solvency position and pointed to the fundamental uncertainties referred to in*

the annual report. [Equitable's Chairman's] *line was that he was happy the Society was, and will continue to be solvent. He noted that he refers to the fact that ELAS remains in close contact with the FSA and this appears to provide some reassurance.* [FSA's Director of Insurance] *noted that the FSA could not adopt a more positive stance as we had not yet seen the figures on which ELAS were basing their statements.* [The Chairman] *said that the FSA should do whatever they can to reassure themselves – if information was required to verify the Society's stated position, the FSA should not hesitate to request it.*

The timing of the publication of Counsels' opinion and the compromise scheme are discussed, along with progress on that scheme.

Equitable's Chairman acknowledges that relations between the company and Halifax '*could be closer and better*'.

FSA note that they were aware that the Appointed Actuary's company were advising public sector schemes to '*get out wherever possible*' and that this was likely to hit the press within the next few days. FSA suggest that Equitable should be ready to publish figures on outflows from the with-profits fund if, for example, the adviser's report caused concerns. Equitable's Chief Executive acknowledges FSA's view, '*although the outflow figure was higher than he would like to have to announce*'.

07/08/2001 [entry 7] FSA write to the solicitors for the Policyholders Protection Board about the opinion on Article 4 from Equitable's Counsel in relation to the operation of the Policyholders Protection Act 1975.

07/08/2001 [entry 8] FSA talk to Equitable about the proposals for dealing with Counsel's opinions and claims for mis-selling within the compromise scheme. Line Manager E circulates a note of the discussion the following day. The Line Manager records that Equitable's initial thinking had been to:

... follow their approach to buying out the GAR, namely follow a two stage process that first identified the overall loss (ie the aggregate cost to the Society of meeting claims) and then devise a mechanism for sharing that amount among qualifying policyholders.

In terms of the aggregate cost, they were coming to the view that the loss was the effective reduction in policy values from the suspension of bonus for 7 months in 2000 to pay for the House of Lords, which in effect reduced policy values by 4.7%. There was also a cut in reversionary bonus as they estimate, had it not been for the [House of Lords'] *judgment, they would have applied a reversionary bonus 4% higher for 2000. In fact this amount has to be adjusted for some policies because policies between 1988 and 1996 have a 3.5% income guarantee and have already received the bulk of their 4%, and so would be compensated at a lower level.*

In terms of the amount allocated as compensation to individuals, they thought there were two possible ways forward. One was to have a points system so that they could assess the different basis of claims against the society and weight the claims depending on the chances of success and the likely form of damages. They could then allocate points to each policyholder to reflect the claims that they would have and allocate the compensation according to individual scores. The alternative was a less scientific approach that would work on the basis that either a person had the basis for a claim or they did not, and make no distinction between the basis of the claim (or its value or probability of success). I got the impression that they are inclined to favour the latter since it is easier to understand and arguably no less fair that the more sophisticated approach which could have the effect of compensating a person for the same loss several times over because of the number of bases on which they could bring a claim.

They are of the view that the compensation cost is additional, and therefore a charge on the with-profits fund as a whole (and ranks ahead of any "liability" to pay discretionary *benefits.) As it is a charge against the fund as a whole, this means it has effectively to be met by all policyholders, and therefore is paid for substantially by the non-GARs.*

Line Manager E goes on to comment that this:

> *... raises an issue that is largely presentation, but quite critical in terms of handling. Namely, should the cost be covered by making a transparent cut in policy values to free up sufficient assets to cover the compensation costs to non-GARs (and if so should that be done before or as part of the scheme); or should the amount of uplift of GARs and non-GARs be scaled back to put them in the position they would have ended up in had they been put through each stage of the adjustment. In other words, should they be offered (say) a 20% and 4% up lift for GAR and non-GAR policyholders respectively, with policy values simultaneously being cut back by 3%, or should the uplift simply be reduced to say 15% and 1% (with an explanation as to why those are the right numbers).*

The Line Manager adds that FSA:

> *... also need to think about this point from a technical viewpoint because it may be that there are situations where the iterative approach to calculating revised policy values would produce a different outcome to the application of a simple uplift factor. For example, it may vary depending on the extent to which a policy value includes enough terminal bonus to cover the "loss" in value.*

07/08/2001 [17:36]	FSA's Legal Adviser E provides a note on whether group scheme policyholders should receive the same benefits under the Policyholders Protection Act 1975 as any other policyholder. The Legal Adviser concludes that such group scheme policyholders should do so. [**18:58**] Legal Adviser C agrees and confirms that it was the same under the Financial Services Compensation Scheme rules.
07/08/2001 [18:50]	Line Manager E distributes some notes setting out his thinking on the compromise scheme, ahead of a meeting later that week to discuss what view FSA should take as to whether to intervene to stop the scheme proposed being put to the Society's members.
08/08/2001 [13:21]	In response to Line Manager E's note of the meeting held the previous day with Equitable, FSA's Managing Director A comments that, on handling, Equitable would be '*crazy to go for the first of the 2 options you describe (the transparent one)*'. The Managing Director notes, however, that '*whatever they do the furore will surely be about the assumption that this is a charge off the top and that therefore the non-GARs end up paying for most of it, despite the fact that the source of the loss comes from GARs getting a bigger slice of the pie, largely at the non-GARs expense in the original* [House of Lords] *judgment*'. The Managing Director asks officials to think hard about the rationale for this and whether FSA '*buy it*'. [**13:26**] Chief Counsel B advises that FSA's shared legal view was that any mis-selling compensation was a charge to be borne by all with-profits policyholders '*with the result that Non Gars as a class bear a substantial part of the misselling costs*'. [**13:31**] The Head of Insurance Policy queries whether '*it is only under the* [Counsel for FSA's basis] *that non-GAR's in effect pay for most of their own compensation. Under* [the Society's Counsel's basis] *the compensation is to top up the Equitable policy values so that they equal the industry average. If payment of the compensation itself reduces the policy values this in turn means that the amount of compensation must increase. The total amount that non-GAR policyholders receive remains constant (equal to the industry average). It is merely the split between policy value and compensation which changes*'. [**13:36**] The Head of Actuarial Support suggests that there was an issue that needs to be discussed. He explains that:

The effect of their proposal is that non-GAR's will be offered a net uplift of only around 1-1.5% of their policy value and will therefore still be around 3-4% worse off than if the GAR problem had not arisen (largely as a result of the non-GAR's representing around 75-80% of all the policies by value and therefore having to meet the bulk of all the costs).

An alternative would be to offer the non-GAR's a 4-5% net uplift but this would result in the GAR's having to take a cut of around 15% in their policy values which is unlikely to be palatable. There may of course be other intermediate offers that could be made between these two positions.

[**15:28**] Chief Counsel B explains that he thinks that '*the approach is the same for* [the FSA's Counsel's opinion] *and* [the Society's Counsel's opinion] *– to the extent that both support claims for damages based upon a tort (inadequate disclosure (s62); misrepresentation; negligent misrepresentation). The position would be different if the claims were contractual in nature and Equitable acted to give effect to what would be enhanced policy rights and values*'.

[**15:56**] The Head of Actuarial Support says that he was:

... a little puzzled by this. Does this mean that the possible basis of redress mentioned by [Chief Counsel A] *whereby Equitable is asked to guarantee to provide benefits in future at the average industry level for a comparable policy, is no longer required?*

Incidentally, I believe that as part of the pensions mis-selling review, we did allow some insurers to provide redress by way of a guarantee that they would be no worse off than if they had remained a member of their previous occupational pension scheme. Perhaps, though, there was deemed to be some form of contractual warranty involved?

[**21:18**] The Head of Prudential Policy asks Chief Counsel B to confirm that '*under* [the Counsel for Equitable's opinion] *non-GAR policyholders would <u>not</u> effectively be placed in the same position they would have been in had they effected a policy with another insurer (industry average) instead of Equitable?*'

08/08/2001 [16:03] PIA write to FSA in response to discussion earlier that day about advice provided by independent financial advisers. PIA send them the question and answer briefing prepared on 27/07/2001 [**15:44**] and ask FSA to consider if they had now decided to elaborate on the guidance previously given. PIA say that they agreed with FSA that independent financial advisers were looking for more information but note that '*feedback from the consumer helpline indicated that many* [Independent Financial Advisers] *were reluctant to give advice*'.

[**16:37**] FSA clarify that:

1) I'm <u>not</u> suggesting that we necessarily put anything new out to [Independent Financial Advisers] *and if you are not getting that many calls that seems to argue against putting anything new out.*

2) The text you've got below looks OK to me but there is a quite separate worry that [Independent Financial Advisers] *have been expressing and I'd like us to agree a line on that too. The worry is that where an* [Independent Financial Adviser] *doesn't want to give advice that we will somehow insist or discipline them for not giving advice. I presume our answer to this is "Where an* [Independent Financial Adviser] *feels that they lack sufficient information on the Equitable to be comfortable giving advice they should make that clear to their client" ...*

08/08/2001 [entry 3]	FSA meet Equitable for a weekly round-up. FSA's note of the meeting includes the following. <u>Reporting requirements</u> It is noted that the independent review by reporting accountants of Equitable's financial position was under way but that the review by actuaries to assess the potential mis-selling liabilities would now proceed on a different basis, as neither FSA or Equitable had been successful in appointing someone to do the work. On the regular financial reporting requested by FSA, Equitable '*expressed some concerns ... because he thought the Society did not have all the information that we were asking for*'. The issue is discussed further and it was established that the reporting could largely be provided in the format requested. FSA record that they: '*did not propose to make that subject to a formal notice of requirements. This would give us greater flexibility to update the form and content of the information to reflect concerns at any particular time*'. <u>Compromise scheme</u> Equitable provide an update on the compromise scheme following a meeting of their steering group the previous day. Equitable's Chief Executive also mentions that they would be seeking FSA's consent to buy back up to 10% of the subordinated loan and says that he thought that '*following the interest payment and the recent announcement, the earlier difficulties had largely gone away*'.
08/08/2001 [entry 4]	FSA's Chief Counsel B sends the Director of GCD, the Director of Insurance and Chief Counsel A a copy of a note to two PIA Enforcement Heads of Departments which was intended to bring them up to date on the current position on mis-selling of non-GAR policies by Equitable.
08/08/2001 [entry 5]	FSA's actuarial scrutiny file includes pages from Equitable's website regarding the timing of and reasons for the changes to policy values.
09/08/2001 [10:20]	Equitable send FSA a copy of their '*Ready Reckoner*', which had been sent to their policyholders on 6 August 2001.
09/08/2001 [10:38]	Chief Counsel B answers the FSA's Head of Prudential Policy's question of the previous day, confirming that: *1. No, the particular distinction between* [Counsel for Equitable] *and* [Counsel for FSA] *(there are others of course) is that they part company on the extent of the recoverable loss.* [The Society's Counsel] *says all the consequential loss is recoverable including loss attributable to poorer investment performance.* [Counsel for FSA] *is prepared to apply a more restricted approach (although he concedes that on the facts an investor who was positively <u>advised</u> to take out an endowment policy may be entitled to damages on the potentially more generous basis – actually I suspect most Equitable policyholders purchased on advice given by a sales representative – this is something I consider I need to mention to counsel, we did not accept an argument from the Equitable and others in the context of the pensions review that policies had merely been sold in response to the provision of "information".* *2. To the extent that the <u>Society</u> has incurred a civil liability to compensate for tort, this is a liability of the Society generally and is to be met out of the Society's assets.*
09/08/2001 [14:51]	An FSA legal adviser circulates the draft minutes of the Equitable Life Lawyers Group meeting on 06/08/2001, along with the legal issues paper of 25/06/2001, which he suggests is in need of updating.

09/08/2001 [15:39]	HMT send FSA a note on Article 4. HMT say that the note '*represents the collective views of Treasury lawyers but it has no official status*' and that: '*If the note seems a bit inconclusive it is because there are tactical and political questions which will need to be (and are being) considered first*'. HMT's position on Article 4 is that they '*strongly share the FSA's view (and that of* [Counsel]*) of article 4*'. HMT comment on the various suggested solutions.
09/08/2001 [16:16]	FSA send Counsel two substantive comments on the latest version of their opinion (draft 2).
09/08/2001 [entry 6]	FSA's Head of Actuarial Support replies to Equitable's Appointed Actuary's letter of 07/08/2001, saying that: *Our understanding of this paragraph is that the treaty would not be cancelled but that negotiations would take place with the aim of restructuring the treaty in a mutually agreeable manner. In particular, the "Adjustment Premium" would be redefined in respect of future years. However, our understanding from these meetings in early 1999 was that Equitable would not agree, and could not be forced to agree, to a restructuring that had a materially adverse effect on the value of the reinsurance offset that could be included in the FSA returns. You have no doubt come to a view yourself and if differs materially from ours, I would be grateful if you would let me know.*
09/08/2001 [entry 7]	PIA send FSA a procedural note on what the conduct of business regulators would be doing and when.
09/08/2001 [entry 8]	HMT's Director of Financial Regulation and Industry updates the Economic Secretary to the Treasury on Equitable in relation to: administration and Article 4; advice on response to the Treasury Select Committee; a possible Government statement; and dealing with related correspondence. The Director notes that the delay in publication of Counsel's opinion '*potentially provides a bit more time/expands the range of options for announcing an enquiry*'.
10/08/2001 [13:56]	An FSA legal adviser (Legal Adviser F) provides advice on the powers of an administrator to continue payments to annuitants and on the giving of such powers to a provisional liquidator.
10/08/2001 [entry 2]	FSA write to Equitable to request some additional information along with the underlying data for the quantification of potential mis-selling liabilities. FSA ask for this by 17 August 2001.
10/08/2001 [entry 3]	FSA send HMT a draft Order under section 45 of ICA 1982 that would require Equitable not to publish Counsel's opinion.
10/08/2001 [entry 4]	PIA write to FSA about guidance to the industry in the light of Counsel for Equitable's opinion on mis-selling.
13/08/2001 [09:15]	Equitable send FSA the weekly customer servicing reports.
13/08/2001 [entry 2]	FSA write to Equitable about the compromise scheme. FSA say that they were yet to reach a view on the scheme and ask Equitable for the outstanding information, along with the further information to be supplied. FSA formally set out their concerns about the proposed scheme.

13/08/2001 [16:54]	FSA's Chief Counsel B sends officials a note (dated 10/08/2001) on Article 4 of Equitable's Articles of Association and where FSA should go now. The suggested ways forward are: *a) Continue to ask HMT to make changes to relevant subordinate legislation pointing out in particular the scope which exists for the* [Policyholders Protection Board and the Financial Services Compensation Scheme] *to be seized of a matter even without a formal decision on whether the company is solvent* *b) Carry out preparation necessary for a possible judicial review application of* [the Policyholders Protection Board] *– particularly locus for FSA to bring an application and how we might otherwise sponsor an application by an affected policyholder.* *c) Proceed with proposed changes to* [the Financial Services Compensation Scheme] *Rules on the basis that this ought to mitigate the problem post N2 but acknowledging that the rule might fall away in the face of a contrary ruling by the court.* *d) Develop further the scenario planning for how the Article 4 point might best be resolved by the Court in the context of insolvency proceeding.*
13/08/2001 [entry 4]	FSA's files include an internal Equitable paper, dated 10 August 2001, entitled '*Mis-selling and the S425 Scheme*'. On this, an official has written that it had been received from Equitable on 13 August 2001. By way of introduction, the paper explained that: [Counsel] *has opined (although only in draft form at present) that at least some categories of non-GAR policies have a strong claim for mis-selling. This increases the uncertainty as to the future financial position of the Society and individual with-profits policyholders. GAR policyholders are uncertain as to the total cost they may have to bear in the future for mis-selling compensation claims to non-GARs, and the non-GARs are uncertain as to the likelihood of success of any individual claims they may bring and the timescale in which they might receive any compensation due.* *As the main driving force for undertaking a S425 scheme was to bring back a level of certainty to the Society's with-profits fund, it seems necessary to consider how the uncertainty brought about by* [Counsel's] *opinion can be factored into the current plans for a compromise scheme between GAR and non-GAR policyholders.* Equitable say that the main options to solve the problem were: • *Mis-selling claims are dealt with on an individual basis either through the Courts, by bilateral agreement or through an Ombudsman.* • *The FSA may instigate a review on an individual policy basis of a similar nature to that used for personal pensions mis-selling.* • *Undertake a second S425 compromise scheme for mis-selling of non-GAR policies.* • *Incorporate mis-selling of non-GAR policies in the current S425 scheme.* *In both of the last two options the non-GARs would be offered compensation for giving up their legal rights to pursue a mis-selling claim.* The paper then sets out the appraisal methodology used; an appraisal of the main options; conclusion of the main options; and the ways that mis-selling claims could be included in the existing compromise scheme proposals. In conclusion, the recommendation was that the best way forward would be to bring mis-selling claims within the GAR compromise scheme.
14/08/2001 [10:14]	FSA's Head of Life Insurance seeks advice on how to respond to an invitation from the Institute of Actuaries to give evidence to their Investigating Committee, who were looking into a complaint of alleged misconduct against a former Chief Executive of Equitable.

	[**10:28**] Managing Director A comments that FSA's Chairman most definitely wanted to leave open the possibility of FSA taking action against previous Equitable officers.
14/08/2001 [14:23]	In the light of Equitable's letter of 07/08/2001, Line Manager E tells Chief Counsel A and the Head of Actuarial Support that he had just looked at the correspondence about the reinsurance treaty. The Line Manager says that he was happy for the reply to be sent, if the head of Actuarial Support had not already done so. However: '*I did ... wonder for a moment about the wisdom of sending a letter in which we were happy to advance a view on the legal interpretation of a contract, but then refuse to express a view on the interpretation of comments made by us (in a corporate sense)*'.
14/08/2001 [15:44]	PIA write to FSA about consulting on proposed guidance to the industry in the light of Counsels' opinions on mis-selling. PIA set out three options (in light of Counsel's advice) which were: first, to make use of section 155(7) of FSMA 2000, which allowed PIA to publish rules without consultation if delay would prejudice the interests of consumers; secondly, to publish a formal FSA consultation paper; or thirdly, to send individual guidance to firms which undertook GAR and non-GAR business.
14/08/2001 [16:24]	Chief Counsel B circulates some further thoughts on the Article 4 issue, after having been shown a professional paper ('*Review of the Law Relating to Insolvent Life Insurance Companies and Proposals for Reform*', dated January 1984) presented to the Institute of Actuaries. [**21:56**] The Head of Insurance Policy says that he suspected that the paper was not accurate and sets out what he understood to be the correct historical context for Article 4.
14/08/2001 [16:26]	In response to Chief Counsel B's note of 10/08/2001, the Director of Insurance comments that FSA should increase pressure on HMT to do what they could to resolve the problem.
14/08/2001 [entry 6]	Following discussion the previous day, the Director of Insurance writes to FSA's Director of Regulatory Strategy and Risk setting out what he believed to be the potential enforcement issues arising from the Equitable case. On FSA's powers under ICA 1982, the Director of Insurance writes that the Act: *... is generally directed more at the maintenance of prudential standards and does not generally provide for action against individuals or companies except for the purpose of safeguarding policyholders or potential policyholders (in other words it does not generally provide an apt remedy in relation to <u>past</u> events except where this is appropriate to protect present and future policyholders). The most likely avenues would appear to be:* *a) "Fit and proper" action – but note this is only available against people who occupy, or who propose to take "notifiable" positions.* *b) The Insurance Companies Act makes a number of actions and failures criminal offences (and the directors may be held criminally liable for offences committed by an insurance company). The most relevant are likely to be in relation to the submission of regulatory returns between 1988 and 97 with inadequate disclosure of the contingent liability represented by the GAR policies. The relevant prosecution authority is HMT. I am not aware of any prosecution of this sort and I think this possibility should be regarded as theoretical.*

The Director says that it seemed to him that:

> ... [FSA's] *next steps on the Equitable should be determined by references to our statutory objectives and our aim should be to select the optimum mix of tools to address these. Our focus thus far has been very heavily towards the prudential issues and mitigating risk of loss to policyholders by close monitoring of the Society's financial position; by working to ensure that a failure, if one occurs, can be handled in such a way as to cause least disruption to payments and that appropriate compensation is available; and working with the Society to ensure that the scheme of arrangement which it intends to put to policyholders represents a better option for them than the alternative and is fair as between different groups of policyholders. Intervention Action, under Insurance Companies Act powers (which given the profile of the case would need to be approved by HMT Ministers) is planned, on a contingency basis, to require the Society to handle this process in an orderly way. Enforcement action, particularly in the form of disciplinary action against culpable individuals might, on further enquiry, prove to be appropriate, although (it seems to me at least) is likely to be a secondary issue as compared with our main prudential objectives. Nonetheless it must be right to consider the full range of tools, available to us.*

14/08/2001 [entry 7] FSA meet to discuss their views on Equitable's compromise scheme proposals. Line Manager E's note (dated 16 August 2001 and including comments by Chief Counsel A) includes the following record of the discussion. By way of introduction, the Line Manager explains that FSA's:

> *... discussion was on the basis of the information provided so far, and subject to further supporting material being provided in due course. It was also in the knowledge that a further layer of compromise has to be built on top of the GAR scheme. We did not seek to reach a view on that (other than that it was unthinkable that the GAR scheme could feasibly go ahead without it once* [the opinion of either or both of Counsel for the Society or the FSA] *had been published). The net effect the second part scheme will be to scale back the compensation under the GAR/non-GAR part, but this will happen proportionately and so does not affect the analysis of the GAR/non-GAR component. (Once the legal opinions are published, absent a scheme, effectively the value of policies would have to be scaled back which would reduce the value of the GAR rights by an amount that corresponds to the adjustment that would have to made to the uplift under the scheme.)*
>
> *Our consideration, consistent with the draft criteria letter, was on the two components of the GAR scheme – the method for determining the aggregate amount of money available to buy out the GAR rights and the methodology for distributing that pot among the GAR policyholders.*

On '*The size of the pot*', FSA say that Equitable's proposal (for a 'pot' based on the current best estimate of the cost of providing annuities at the guaranteed rates specified in the policy) was '*arguably a perfectly reasonable and justifiable approach to setting the pot since in a sense it reflects the current costs of the GARs to the non-GARs*'. FSA note that work was being undertaken by both FSA and Equitable on an alternative approach, which would look at the value that the annuity guarantees would have on the open market. The note goes on to record that:

> *One of our proposed criteria was that the value being paid was a fair value for the rights being given up. It is not proposed by Equitable Life or the FSA that the transaction should result in one side making a profit at the expense of the other. It seems to us that an amount higher than that derived by either of these methodologies would advantage GAR policyholders to the detriment of non-GARS; and a lower value would unfairly advantage the non-GARs. This view was subject though to fairness being achieved in the division of the pot ...*

FSA note that their second criterion of '*Dividing the pot*', '*addressed the fair distribution of the pot to policyholders so that individual groups would not suffer a material detriment (or increase) compared with the rest*'. FSA record:

> *There has always been a presumption, that we have never challenged, that the GARs would be bought out in exchange for an uplift in policy value. The idea of some other mechanism, such as the offer of a windfall single cash payment, has never been seriously considered. The proposition is that the uplift would operate on both the guaranteed and non-guaranteed amounts. This would appear a logical position to reach since if all the uplift were added to the guaranteed amount, it would not achieve the wider objective of the scheme of releasing statutory reserves and stabilising the fund. It is my understanding that we all accept that approach.*
>
> *The key factors that have been identified in placing a value on the rights of individual GAR policyholders are:*
>
> *a) policy value;*
>
> *b) the type of policy;*
>
> *c) age;*
>
> *d) time to retirement;*
>
> *e) sex;*
>
> *f) marital status;*
>
> *g) whether they will take tax free cash; and*
>
> *h) whether or not they are paying (or can pay) future premiums.*
>
> *I do not believe that we have identified further factors that need to be considered, nor subject to the issue on future premiums, do we object to the approach they have taken.*

FSA then examine the detail of each of the key factors. In conclusion, they say that they: '*will wish to undertake further verification of the information on which this assessment is based. We also wish to resolve the subsidiary issue of future premiums. Any conclusions on the acceptability of the GAR scheme will also depend on progress on the mis-selling scheme and the review of financial data. However, in principle, I believe those of us present at the meeting have concluded that we do not object to the proposals put to us*'.

14/08/2001 [entry 8] FSA write to PIA's Chairman in response to a letter of 10 August 2001. FSA say that they had not been discouraging independent financial advisers from advising clients on Equitable.

14/08/2001 [18:48] The Economic Secretary to the Treasury holds a meeting about Equitable. The action points from the meeting include issues in relation to the establishment of the Penrose Inquiry and '[administration] *v* [provisional liquidation] *v winding up etc*'. On the latter, the action points are:

> *a)* [The Economic Secretary to the Treasury] *would like categorical advice from the FSA on the admin v provisional liquidation issue in the form of a submission with a firm recommendation (not an exchange of letters) ...*
>
> *b)* [The Economic Secretary to the Treasury] *understands that it is now hoped that* [Equitable] *will remain solvent but would like to see a grid that compares the various other scenarios for the future of* [Equitable] *including*
>
> *administration*
> *provisional liquidation*
> *full liquidation*

voluntary winding up
compulsory winding up

and draws out the implications for policy holders under each scenario including:–

i) likely impact on policy values, any distributional effects, and any Article 4 issues

ii) likelihood of continued pension/annuity payments to policyholders in [solvent run-off]*, interim and long term*

iii) the likelihood of a successful Halifax deal

[iv)] *the* [Policyholders Protection Board's/Investors Compensation Scheme's] *commitments to pay compensation (90% of what?)*

v) likely calls for Govt compensation

vi) likely calls for any other Government action (eg tax angles)

c) HMT to seek the views of Halifax and the [Equitable] *itself on which of the above options they would favour. Also to ask* [Equitable's] *own interpretation of Article 4.* [The Economic Secretary to the Treasury] *to see FSA's latest advice on article 4.*

d) [The Economic Secretary to the Treasury] *would be grateful for further advice on whether there are any downside risks to putting a generalised consultation document on the administration order out soon ahead of* [the publication of the opinions of Counsel for Equitable and Counsel for FSA] *(as part of a package of other* [FSMA 2000] *orders).*

14/08/2001 [19:54] HMT's Director of Financial Regulation and Industry asks two HMT officials what the Policyholders Protection Board would pay in the event of insolvency. The Director explains his reason for asking:

... is that in my simple minded way I said to myself:

- *the question of insolvency revolves around whether the society has assets to cover 100% of its liabilities, plus the regulatory margin. Liabilities would need to rise further by over 10% therefore, or assets fall further by over 10% (ie c £2.5bn plus the size of the margin), compared to the changes needed to trigger insolvency, for the 90% threshold to be passed. ie insolvency (were it to occur) would be unlikely to be so bad as to trigger* [Policyholders Protection Board]*, or* [if an insolvency occurred after the new regulatory regime had come into force, Financial Services Compensation Scheme]*, payments.*

15/08/2001 [09:26] HMT forward their query on what the Policyholders Protection Board would pay to FSA.

[**09:58**] FSA set out their understanding of the position, which was as follows:

The 90 per cent is (and I paraphrase given that the precise wording in the [Policyholders Protection Act] *1975 may be different in any event from the future* [the Financial Services Compensation Scheme] *rules) the percentage of the benefits that would be paid based on the value of the contract at the time of the winding up, determined in accordance with the insurance company winding up rules (which will have to be remade by the Treasury with the DTI's consent under* [FSMA 2000]*).*

The interpretation of the relevant provisions has not been fully tested. We believe in the case of eg an endowment it would be based on the current guaranteed value of the policy. In the case of a pension fund, it would probably be the same (ie on the basis of the guaranteed fund) except that in the case of a pension plan that provided a GAR, the liability that would have to be met would be the annuity at a guaranteed rate at the *future point on the basis of a guaranteed fund, which would therefore translate into an obligation to provide (or fund) an annuity which provide 90% of the benefits that would have been payable on the basis of the GAR that could be purchased with the guaranteed fund. We would expect an annuitant in payment to get 90% of their income.*

There are however (or so I believe) references in the regulations to [expectations] *of policyholders. That may not mean that policyholders are automatically entitled to receive their full share of terminal bonus, but it may be that they can claim for more than the guaranteed amounts referred to above. So the position is not entirely clear.*

Compensation for mis-selling payable pursuant to section 62 of the FS Act 1986 is not a contractual right under the policy and would not therefore be compensated by the [Policyholders Protection Board]. *It would instead fall to either the PIA indemnity scheme or the* [Investors Compensation Scheme] *(but I am not entirely sure which of the two). The normal payout rules would apply (90 per cent up to the relevant caps).*

Solvency can be defined in a number of ways. For the insolvency act purposes, terminal bonus which is not guaranteed is not taken into account, so the trigger is at a lower level then aggregate policy values. The solvency margin is relevant to our supervisory arrangements and its breach provides a trigger for intervention powers. However, it is not relevant for determining whether a company is solvent in a company law sense. [ie an insolvent insurer would already have gone through the solvency margin. NB. The companies act and ICA valuations are done on different bases anyway, so you cannot compare insolvency and regulatory concepts directly.] In addition, although slipping below the 100 per cent may in theory mean there will be plenty of money left and could well cover more than 90 per cent of the policy values, in practice that will probably not happen because i) lots of money gets taken up by the insolvency practitioners, ii) non-cash assets could have to be disposed of at distressed prices and therefore below book value and iii) certain [liabilities] *(eg the GAR rights) will increase in value since they would be valued on the basis of 100 per cent take up rather than the current 60 per cent.*

15/08/2001 [entry 2] Equitable write to FSA in response to various letters. First, in response to FSA's letter of 10/08/2001, Equitable confirm that they expected to be able to give the Appointed Actuary's company all of the information requested to enable them to meet FSA's deadline for the reviews.

In response to FSA's letter of 31/07/2001, Equitable provide a report of the Society's financial position under a Companies Act basis, as at 30 June 2001. Equitable also enclose the proposed format for the monthly reporting of its financial position and weekly reporting on the processing of claims.

In response to FSA's letter of 13/08/2001, Equitable say that the Society's Chief Executive would reply more completely to this.

Equitable also repeat their concerns about the compromise scheme that '*the sign-off process for the FSA is very unclear to us and that there seem to be many parties involved who appear to revisit issues which on occasion we thought had been closed*'. Equitable also complain that there were multiple points of contact with FSA and ask them to nominate a project co-ordinator.

15/08/2001 [entry 3] Equitable send FSA a copy of a letter sent that day to the Guernsey Financial Services Commission about international policyholders.

15/08/2001 [entry 4] FSA write to Equitable about the possibility of them undertaking a visit to see what progress was being made regarding complaints and enquiry handling arrangements. FSA say that they envisaged the visit being over three days and suggest 5 to 7 September 2001 as preferable dates.

15/08/2001 [10:33]	FSA's Head of Life Insurance prepares a list of what he saw as the potential '*show-stoppers*' to the compromise scheme, which he sets out in the form of a draft letter to Equitable. Having received comments, the letter is revised and handed over to Equitable at the meeting later that day. The Head of Life Insurance's letter reads:

1. ... the FSA is not yet in a position to take a view on the proposed Section 425. However, we agreed that it would be useful if I could set out for you, on the basis of our present understanding, what we at working level see as outstanding issues, and the weight we attach to them (without prejudice to FSA's final view).

2. I start from the proposition that before the Equitable announce any proposals for a scheme, it needs some reassurance from FSA that we see no "show stoppers" (that is to say, any aspects which are so significant that our inability to support them (or at least indicate no objection) would be fatal to the success of the scheme).

3. At present, there are a number of aspects on which we do not have enough information to give that kind of assurance. These are:

3.1. The treatment of mis-selling liability. This covers:

(a) The legal basis for assessing liability (in the light of [the opinions of Counsel for Equitable and for FSA]*);*

(b) The method of quantification (in the light of the work being done by [Equitable's Appointed Actuary and his company]*).*

3.2. The financial position of the Equitable, where we should want to see the results of the work commissioned from [the Appointed Actuary's company].

4. As regard the GAR/non-GAR element of the scheme, we have asked for extra information, which we shall need before we can take a considered view; but this relates to aspects which we do not anticipate will give us significant difficulty provided that the information which we have asked for does not contradict or undermine the approach which Equitable has set out in its Business Case. We have already asked for some work on financial option theory to test the justification for the cost based approach to assessing the aggregate amount to be made available to buy out the GAR rights; and we have asked for some additional figures to show the effects of the scheme on holders of flexible GAR policies (equivalent to the information supplied in respect of retirement annuity holders at a meeting with [Equitable's] *team on 13th August).*

5. A further point to flag up at this stage is that the latest version of the Business Case appears not to deal with the distinction between premium and non-premium paying policyholders. This issue is I think linked to the question of whether or not you cease to apply the GAR to top-ups (after due notice). We need to understand what approach you are taking, and why. More specifically, we note that a substantial number of policyholders can no longer make top-ups (for example under the tax rules which prevent top-ups if self-employment has ceased). It is not clear why this group should receive compensation for giving up the ability to make top-ups.

15/08/2001 [14:00]	FSA meet Equitable for a weekly review. FSA's note of the meeting records discussion of the following issues:

<u>Compromise scheme</u>

Equitable's Chief Executive says that he had become increasingly concerned about Equitable's lack of project management and that many of the delays experienced were due to Halifax Equitable Clerical Medical. FSA's Director of Insurance notes '*we were on the same side in* *that we both wanted to find a solution to the Society's current difficulties*' and that FSA had formalised their requests in response to the concerns expressed by them (see 15/08/2001 **[10:33]**).

Mis-selling
Equitable report that they had raised with Counsel a question about their original instructions (namely, that those instructions had suggested that Counsel should take certain unproven facts as given when providing his advice. This had had the effect that any mis-selling, if it had happened, had done so from 1988) and that he had requested further information. The Director of Insurance notes that, while the proposed compromise scheme was effectively an out of court settlement:

> *... the mis-selling elements were also of direct relevance to the FSA's role since they related to a possible breach of Lautro (and so PIA) rules. The fact that the FSA had powers to require a process for giving redress meant that we also needed to be satisfied that the offer being made was a fair one.*

Possible legal action against former Equitable directors and auditors and the regulators
Equitable say that their solicitors were still considering the position.

Premium paying/paid up policyholders
FSA ask why the compromise proposals included compensation to policyholders for giving up rights to pay further premiums, an option which in some cases they did not have. Equitable say that they would look into the issue.

Subordinated debt
FSA say that they had been unable to take a view on the proposal that Equitable should buy back some of the subordinated loan until more progress had been made on the independent reviews on the Society's financial position and on mis-selling. Equitable express regret at this, as they believed it would be in policyholders' interests to buy back the debt while the market price was favourable.

15/08/2001 [14:48] HMT's Director of Financial Regulation and Industry speaks to Halifax '*primarily to say lines are open which he welcomed*'. Halifax say that they would prefer administration to provisional liquidation and raise a concern that Equitable's public relations efforts were poor and that they needed to get '*more "pace and grit" into the timetable and confront policyholders with a "stark choice" over the future. Hmm*'.

[**17:27**] The Director also speaks to Equitable's Chief Executive. He records, among other things, that '*On insolvency he was confident; only litigation could make* [Equitable] *insolvent in companies act terms; he was also pretty confident they could meet the regulatory margin requirements although a fall in markets would pose risks*'.

15/08/2001 [entry 8] FSA hold a regular 'wash up' meeting on Equitable.

15/08/2001 [entry 9] HMT talk to FSA and receive an update on the position.

15/08/2001 [entry 10] PIA's Pension Review Monitoring Department provide FSA with a note on Equitable's provisioning for the Pensions Review1

16/08/2001 [entry 1] FSA receive a telephone call from Clerical Medical's Chief Executive who wanted to have '*an "informal" talk about relations with Equitable*'. Clerical Medical say that they had been given no notice of Equitable's decision to cut policy values and, therefore, had not been able to prepare for the increased communications that had resulted. FSA note the difficult position in which Clerical Medical had been placed.

16/08/2001 [13:31]	Equitable send FSA three documents for the compromise scheme launch pack, being: '*Consultation Document*'; '*Background to the Compromise Agreement*'; and a letter to policyholders. [**14:00**] Line Manager E circulates the papers and suggests discussing them at their end of day meeting. [**17:00**] An official says that the letter to policyholders needed amendments as it was too long and '*does not even begin to address the policy holders needs as in "what's in it for me"*'. The official also says that more emphasis on the effect on policyholders, as opposed to the benefits to Equitable, would be desirable. [**18:36**] The Head of Actuarial Support comments on some points of detail.
16/08/2001 [15:47]	Line Manager E sends round the notes of the meeting on 14/08/2001 and asks the Director of Insurance and Managing Director A for their views on the conclusions and on how to take the matter forward. [**22:17**] Chief Counsel A says that she was happy with the broad structure and the '*bottom line*' but suggests that they should meet the following day to discuss.

17/08/2001 [entry 1] FSA's Managing Director A provides FSA's Chairman and Managing Director B with a state of play report on Equitable before going on leave. Managing Director A begins by saying:

> *Other than the Equitable, there isn't much to report, you'll be pleased to know that can't await your coming in/other contacts.* [FSA's Director of Regulatory Strategy and Risk] *is struggling manfully with* [an insurance company]*; Argentina continues to hover on the edge; markets are weak but not yet (at time of writing I hasten to add as things are volatile!) at new lows.*

The Managing Director sets out the overall picture and progress on Counsel for Equitable's opinion and on the compromise scheme. The progress report says that FSA:

> *... have had some quite hot debates with Equitable over presentation. However you cut it, there is no new money (other than the Halifax £250 mn). Equitable's likely offer has touches of Alice-in-Wonderland (everyone gets "prizes" in the form of some sort of uplift). And this will be seen through very quickly. We have therefore urged Equitable not to oversell the results of a vote in favour. In particular, the Scheme will <u>not</u> produce sizeable free reserves and will not immediately restore full freedom of investment (though it will, of course, remove the constraint imposed by the current uncapped GAR liabilities). Rather, it seems to me, successful completion of the Scheme is bound to be followed by a period of relatively cautious investment policy (*[on account of] *lack of free reserves) and the desire to build up reserves through a careful bonus policy. Originally, the Society were describing the benefits of a vote in favour in glowing terms but more recently have become more circumspect.*

On Equitable's solvency position, the Managing Director reports that there had been no signs yet of problems but he suggests that FSA's Chairman and Managing Director B would '*want to press hard on at least 2 issues, even if there appears to be a relatively clean bill of health*'. These were:

> *Any positive value ascribed to <u>implicit future profits</u>. (Even on the most positive scenario, the business will contract rapidly and we know that, to the extent people get out without paying an MVA they are not paying an up-front sum that could be regarded as making good the loss of future profits on this business.)*

> *Our old friend* <u>*reinsurance*</u>*. There appears to be something in the current arrangements that require a mutually acceptable renegotiation of the reinsurance contract if payments under it get to £100mn. Any reliance* [the Appointed Actuary's company] *place on this reinsurance has got to be fully realistic.*

Managing Director A says that the work on estimating potential mis-selling liabilities had gone more slowly than desired and he explains the current position on possible FSA guidance on mis-selling.

Under '*Enforcement*', the Managing Director says:

> *We believe (but Equitable won't confirm) that* [solicitors] *have advised Equitable that they can go after at least some past Officers and Directors. Equitable intend to cover that with the other material they put out.*
>
> *For our part,* [the Director of Regulatory Strategy and Risk] *has been talking to Enforcement about what we might do – things are made more difficult here by the fact that* [three Enforcement Heads of Departments] *all have substantial exposure to Equitable and will wish to rule themselves out. A note from* [the Director of Insurance] *is attached at Annex 5 but,* [Chairman]*, you will need to give direction to this on return.*

The Managing Director reports on FSA's discussions with HMT regarding '*gagging*' Equitable from publishing their Counsel's opinion on mis-selling claims; the merits of administration and provisional liquidation; and the correct interpretation of Article 4 of Equitable's Articles of Association. He says:

> *HMT are clearly expecting options in this whole area to be put to the* [Economic Secretary to the Treasury] *for resolution... However much this jars, given their powers to help or hinder and the risks if it all goes wrong, then the fact that they want to take the decisions may have a silver lining.*

17/08/2001 [entry 2] FSA provide HMT with their thoughts about Article 4 of Equitable's Articles of Association.

17/08/2001 [10:40] Chief Counsel B writes to an official with a suggestion for a proposed rule amendment to the Financial Services Compensation Scheme to deal with Equitable's Article 4 issue.

17/08/2001 [16:41] FSA's Director of Regulatory Strategy and Risk informs FSA's Company Secretary that '[her] *3 most experienced* [heads of department] *in Enforcement are all seriously conflicted and I did not know this until something landed on their desk ... They* [sensibly] *immediately told me and handed the material to me*'.

On 20 August 2001 [**09:23**], the Company Secretary asks the Director of GCD how they should handle this, as FSA had not explored conflict of interest issues beyond Board members and front line insurance staff.

On 22 August 2001 [**09:36**], the Company Secretary responds to the Director:

> *I guess* [potential conflicts] *must arise with relative frequency and the individuals concerned appear to have acted quite properly in accordance with the Code ... requires staff to declare a conflict to the line manager whenever it arises in the course of their work.*
>
> *The Code does not itself require specific disclosure of insurance products, so I have no information on those. Within Insurance division they do have such a requirement which is superimposed on the Code. There is no such an add-on in Enforcement, so far as I know; they rely on the general provisions relating to conflict handling.*

If you think this is not secure enough, then there are a number of options to consider:

1. *You could superimpose a requirement for Enforcement folk to disclose insurance products they hold; but that would still leave you with the problem of how to handle the conflicts;*

2. *You could ask those whose conflicts have been disclosed (assuming you wanted to keep them on the* [Equitable] *case) to undertake not to deal in their* [Equitable] *policies for the time being (which is what the* [Chairman] *asked the Board to undertake) or you could move them to other work;*

3. *I could send out a general reminder to staff to be vigilant about the need to disclose conflicts whenever they arise.*

[**18:36**] The Director says that the Chairman's committee should state the position that should be taken.

17/08/2001 [17:10]	FSA's Chief Counsel B circulates a revised version of PIA's mis-selling report.
17/08/2001 [18:02]	FSA's Chief Counsel B also circulates revised guidance to the industry on reviewing guaranteed annuity business and with-profit disclosure.
17/08/2001 [19:18]	FSA's Chief Counsel B writes to PIA (copied to the Director of Insurance and the Director of GCD) about the possible publication of their mis-selling report into Equitable and/or guidance on mis-selling.
17/08/2001 [entry 8]	FSA's Chief Counsel B provides the Director of GCD with handover notes before going on leave, giving details of the status of work in hand.
17/08/2001 [entry 9]	An HMT official sends the Economic Secretary to the Treasury a note on the tax implications to policyholders of the insolvency of a life insurance company.
20/08/2001 [09:09]	Equitable send FSA the weekly customer servicing reports.
20/08/2001 [12:16]	FSA's Head of Life Insurance provides supervisors with an outline timetable for the compromise scheme, based on the latest information from Equitable and FSA's own internal planning.
20/08/2001 [15:40]	Legal Adviser E informs FSA's Equitable Life Lawyers Group that meetings of the Group had been suspended until further notice. This was because FSA now held round-up meetings at 17:00 each day, along with the 'steady stream' of ad hoc meetings about Equitable.
20/08/2001 [15:54]	FSA's Legal Adviser C checks if any officials had comments on Chief Counsel B's note of 17/08/2001 [**10:40**].
20/08/2001 [afternoon]	FSA hold a 'wash up' meeting. The Director of Insurance circulates the action points arising from the meeting regarding the: financial position; compromise scheme; Counsel's opinions; Article 4 and provisional liquidation v administration; communications; enforcement; external reviews; compensation rules; timetable and process; and origins of LAUTRO disclosure rules and related issues.
20/08/2001 [17:01]	FSA telephone HMT for an update on the work on making administration available for insurance companies and are informed that the Economic Secretary to the Treasury wished to go ahead with a consultation process along normal lines.

	The following day, FSA's Director of Insurance comments that he hoped that this would not complicate an emergency introduction of administration for insurers, should that prove necessary.
20/08/2001 [entry 7]	FSA's Head of Life Insurance writes to the Director of Insurance to record the outcome of a '*first cut review*' of the latest launch material, with the objective of identifying any material inadequacies or omissions in the documentation. The main points identified include: that there was insufficient justification for the numbers used in the scheme; and that Equitable needed to have a plan to deal with policyholders who had left before the scheme was effective, but who retained potential mis-selling claims.
20/08/2001 [entry 8]	Equitable ask the Economic Secretary to the Treasury for a meeting to explain the consultation exercise that they were undertaking '*to achieve the best possible outcome for existing policyholders and to ensure the future stability of the fund*'.
21/08/2001 [morning]	FSA's Chairman meets the Association of British Insurers to discuss issues arising or likely to arise from the Equitable situation.
21/08/2001 [09:30]	Equitable's Chief Executive faxes FSA a letter (dated 17 August 2001) which puts in writing a number of concerns he had about FSA's handling of the compromise scheme. The Chief Executive asks that a clear FSA project should be put in place, as without such a project '*there will remain a serious risk that FSA issues may delay the timetable*'. The Chief Executive expresses surprise at the points FSA had raised in relation to the pricing of options, the 'best estimate' compensation figures and the treatment of policyholders close to retirement. The Chief Executive asks that FSA should concentrate on the principles of the scheme proposals as, if those could be agreed '*then the methodology and calculations should follow automatically from them and avoid needless questioning on legal or actuarial issues which is most unlikely to be productive*'. He concludes by quoting his dictionary definition of 'compromise' (being '*the settlement of a dispute by mutual concession*'), saying '*I do feel that that needs to be remembered by those who are attempting to put up further hurdles*'. FSA's Director of Insurance circulates the letter, commenting: *1. This strikes me as a letter which is neither helpful nor sensible. I think however that we should respond to* [the request for a clear FSA project to be put in place] [unclear] *meeting – though in practice we have had regular meetings with the project team. I assume you have the right liaison point for this. In terms of project planning we are,* [unclear], *largely responsive to the Equitable.* *2.* [The concerns on the three issues raised] *simply retort genuine concerns without any reasoned argument. But the guts of the letter* [suggesting that FSA concentrate on principles] *which, in practice, is what we are doing.* *3. Let us discuss what, if anything, I should say in reply.*
21/08/2001 [10:49]	FSA's Insolvency Practitioner provides comments to Legal Adviser C on Article 4 and the Financial Services Compensation Scheme, including that the approach suggested 'strikes me as remedying a very specific ambiguity in the wording of Equitable's articles which might not fit with the wordings in other mutuals' articles of association'. He suggests an alternative approach which would '*include PRE in the* [Financial Services Compensation Scheme] *quantification of claim rules and then to state that any restriction in the company's liability to its members or policyholders designed to prevent a company becoming insolvent should not be taken into account when calculating the PRE value*'. [**13:48**] Legal Adviser E says that he and Chief Counsel A had some difficulty with that approach and suggests a meeting to discuss the issue.

21/08/2001 [12:28]	Equitable send FSA weekly reporting on claims advised and processed up to and including 17 August 2001.
21/08/2001 [14:03]	Equitable send FSA some draft consultation documents for the compromise scheme. [**14:58**] FSA's Head of Life Insurance circulates the documents.
21/08/2001 [14:07]	FSA's Line Manager E circulates a revised draft letter to Equitable on FSA's assessment criteria for the compromise scheme. He notes that the original draft had been handed over to Equitable for comments but had never formally been sent. Line Manager E says that he has had a further thought, which was that: *... the role of the FSA is set out very narrowly in* [ICA 1982] *terms. However, it seems to me that with the recent proposal to extend the scheme to deal with potential mis-selling, on the basis of a breach of PIA rules, and in relation to which we might require rectification, we need to widen this considerably. I am not sure to what extent there are powers of the Secretary of State that are directly delegated to the FSA that might be relevant, but I find it hard to imagine that there are none. Also am fairly sure that there must be a corresponding role for the PIA which it derives from the rule book. I would welcome advice on that. It is important I think that we set out all the legal basis on which we would have powers to intervene or in relation to which we would wish to make representations to the court.* [**14:44**] The Head of Life Insurance says that this should be updated and issued.
21/08/2001 [15:07]	FSA's Actuarial Risk Review Team send the Head of Actuarial Support three papers: '*Annuity Options*' dated 16 August 2001; '*Swaptions Versus Annuity Options*' dated 15 August 2001; and '*Valuation of Annuities: Technical Note*', which appears to have been produced on 14 August 2001. [**18:32**] The Head of Actuarial Support queries one of the assumptions used.
21/08/2001 [entry 8]	FSA meet Equitable. According to FSA's note of the meeting, Equitable had decided not to publish their Counsel's second opinion ahead of their proposals for the compromise scheme. The Appointed Actuary's company were due to present findings on the financial position of Equitable to FSA on 24 August 2001; Equitable would be present. FSA hope that the meeting would also cover the results of their work on mis-selling liabilities. It was noted that FSA had received the six-monthly and weekly financial reporting and that the monthly figures were to follow the next day. Equitable's Chief Executive undertook to respond to the Head of Actuarial Support's letter of 10/08/2001. A number of aspects of the compromise scheme are discussed, including: the plans for dealing with the mis-selling liabilities of non-GAR policyholders who had left the fund; whether Equitable had received legal advice that non-GARs had to pay for 75% of their own compensation; GARs on top-ups; the new version of the launch document; and any problems that could delay the process.
21/08/2001 [entry 9]	FSA write to Equitable about their 2000 returns. FSA say that Equitable's letter of 20/07/2001 had given rise to a number of further questions. In response to question 1, FSA say that they were awaiting outstanding figures on the reserves held against smoothed asset shares and FSA:

a) ask how Equitable reserved for accumulating with-profits business in the resilience scenario and whether the reserves held were sufficient to meet policyholders' reasonable expectation surrender values.

b) ask Equitable to explain why they believed the reserves held in the resilience scenario were consistent with policyholders' reasonable expectations in that scenario. FSA also ask for comment on whether there was any implied cross-subsidy in the resilience reserves of different product groups.

c) ask what level of market value adjuster was implied by the reserves in the resilience scenario and to advise how the current adjuster of 7.5% was spread across the three components of the market value adjuster articulated in their letter of 29/11/2000.

In response to question 2, FSA ask:

a) how expense reserves were consistent with Regulation 66.

b) why different approaches were being used in the base and resilience scenarios to reserve for expenses on accumulating with-profits business.

The answers to question 3 and 4 are noted.

In response to question 5, FSA ask for more information so that they could properly consider the application for a section 68 Order.

The answers to questions 6 and 7 are noted.

21/08/2001 [entry 10] An HMT official writes to the Economic Secretary to the Treasury regarding whether to proceed with a consultation on making administration available for insurers.

22/08/2001 [09:27] FSA's Director of GCD gives his immediate thoughts on FSA's revised assessment criteria letter circulated the previous day, saying that:

> ... *the criteria should reflect the* [House of Lords'] *decision that everyone should get their legal rights before anyone gets a bonus. This is relevant to the concern that people can take misselling rights with them – a concern only if the compromise doesn't give these rights their full value. Of course it could be said that the scheme must be capable of compromising these claims. But that misses the point. Legal claims for misselling can be compromised – but we need to recognize that people can only be expected to compromise them in a way that reflects their value. In the case of misselling rights the value includes the fact that as legal claims they have priority over bonus expectations.*

[**09:46**] The Director of Insurance says that he:

> ... [thought] *that the present version of the scheme should achieve this. The reduction in the misselling claim reflects the fact that the total pot is diminished by the value of the total misselling claim and that the portion available to fund non gar benefits is reduced proportionately, to the extent that reduction is possible consistent with guaranteed values. But perhaps we should meet to discuss: I'm nervous about too much speculative e-mail traffic, (of which this immediate response to* [the Director of GCD] *is an egregious example).*
>
> *But I should like also to talk about the "window of opportunity issue".* [The Director of GCD] *has commissioned some work from* [Legal Adviser F]*, but it is not clear that this will necessarily resolve matters and I understand that it was not clear at yesterday's meeting that the Society has any very clear way forward either. This is a potentially big issue on which I think we, as FSA, need a clear line before anything in the scheme is settled. And self-evidently, it isn't a detail that can be fixed following consultation.*

	[**09:53**] The Director of GCD agrees with a suggestion that they should discuss the issue at their daily meeting later that day.
22/08/2001 [entry 2]	The Appointed Actuary's company write to FSA about the reports to be prepared under section 44(2)(B) of ICA 1982 on Equitable's solvency and to estimate the amount of contingent liabilities to which the company was exposed as at 30 June 2001. The company enclose a copy of their engagement letter, sent to Equitable the same day.
22/08/2001 [entry 3]	FSA's Head of Life Insurance circulates Equitable's letter of 15/08/2001. He asks the Head of Actuarial Support to consider whether the material provided was acceptable.
22/08/2001 [19:45]	FSA's Legal Adviser F tells the Director of GCD that Halifax have asked to see FSA's Counsel's opinion. [**21:43**] Chief Counsel A relays the views of Counsel in relation to this.
22/08/2001 [16:45]	FSA's Director of Insurance circulates a 'Dear Managing Director' letter for possible issue at the time that Counsels' opinions on mis-selling were published. [**18:29**] The Head of Actuarial Support provides comments.
23/08/2001 [11:37]	FSA's Director of GCD, [**11:58**] the Head of Actuarial Support and [**12:45**] the Director of Insurance discuss further the drafting of the 'Dear Managing Director' letter. [**15:30**] The Director of Insurance prepares a revised version.
23/08/2001 [morning]	FSA attend a meeting of the Society's Compromise Scheme Steering Group. Line Manager E reports that the key issue arising was that Equitable's Board had signed up to sending out the launch packs to policyholders by 19 September 2001. He suggests that this would require FSA '*to have settled our position*' by 7 September 2001.
23/08/2001 [16:05]	Equitable provide FSA with balance sheets and profit and loss statements for 30 June and 31 July 2001.

Balance sheet as at 30 June 2001:

	Insurance Act Basis	
	£m	*£m*
Assets		
Investments		
Property	*2,091.0*	
Equities	*10,744.8*	
Fixed Interest Securities	*11,750.5*	
Unquoted Investments	*2,180.2*	
		26,766.5
Reinsurers share of technical provisions		
GAR liabilities	*664.0*	
Unit linked liabilities	*3,688.3*	
Other liabilities	*345.8*	
		4,698.1
Current assets		*715.6*
Tangible assets		*0.0*
Implicit items		
Future profits	*901.0*	
Other s68 concession	*0.0*	
Total assets		*33,081.2*
Liabilities		
Guaranteed fund on accumulating with profits policies	*16,978.8*	
Less discount applied to liabilities (see notes)	*(438.0)*	
		16,540.8
Other with-profits liabilities	*2,951.4*	
GAR provision	*2,170.0*	
GAR rectification	*200*	
Non-profit liabilities	*4,204.9*	
Misselling liabilities (estimate) ([for potential non-GAR mis-selling claims]*)*	*0.0*	
Other misselling liabilities (eg Pension Review)	*124.0*	
Linked liabilities (reinsured to Halifax)	*3,688.3*	
Outstanding Claims	*0.0*	
Resilience reserve	*759.0*	
Subordinated loans	*0.0*	
Provision for other risks and charges	*18.0*	
Other current liabilities	*586.6*	
Total liabilities		*31,243.0*
Required Minimum Margin		*1,081.0*
Excess over [required minimum margin]		*757.2*

Balance sheet as at 31 July 2001:

	Insurance Act Basis £m	£m
Assets		
Investments		
Property	*2,080.0*	
Equities	*8,957.1*	
Fixed Interest Securities	*12,326.6*	
Unquoted Investments	*3,330.2*	
		26,693.9
Reinsurers share of technical provisions		
GAR liabilities	*674.0*	
Unit linked liabilities	*3,577.0*	
Other liabilities	*348.9*	
		4,599.9
Current assets		*584.3*
Tangible assets		*0.0*
Implicit items		
Future profits	*882.0*	
Other s68 concession	*0.0*	
Total assets		*32,760.1*
Liabilities		
Guaranteed fund on accumulating with profits policies	*16,627.7*	
Less discount applied to liabilities (see notes)	*(430.0)*	
		16,197.7
Other with-profits liabilities	*2,934.8*	
GAR provision	*2,201.0*	
GAR rectification	*200*	
Non-profit liabilities	*4,364.7*	
Misselling liabilities (estimate) ([for potential non-GAR mis-selling claims]*)*	*0.0*	
Other misselling liabilities (eg Pension Review)	*124.0*	
Linked liabilities (reinsured to Halifax)	*3,577.0*	
Outstanding Claims	*250.0*	
Resilience reserve	*72.1*	
Subordinated loans	*0.0*	
Provision for other risks and charges	*18.0*	
Other current liabilities	*711.0*	
Total liabilities		*30,650.3*
Required Minimum Margin		*1,059.0*
Excess over [required minimum margin]		*1,050.8*

23/08/2001 [entry 4] Equitable ask FSA for help in relation to directors and officers insurance cover. They explain that half of their £10m cover was due for renewal on 30 September 2001 and that the insurers had decided that they were not prepared to renew the policy. Equitable enclose a letter from one of their directors which expressed concern over both the amount and possible lack of cover.

23/08/2001 [entry 5] An HMT solicitor sends the Director of Financial Regulation and Industry a note on what the Policyholders Protection Board would pay if Equitable were to be wound up.

23/08/2001 [entry 6] HMT's Director of Financial Regulation and Industry briefs the Economic Secretary to the Treasury ahead of a meeting that is to take place with Equitable's Chief Executive.

The Director attaches a note of a conversation with the Chief Executive that had taken place on 15/08/2001 [**17:27**].

23/08/2001 [entry 7] FSA's Chairman provides the FSA Board with a written explanation as to why it had been decided not to prevent Equitable from '*seeking*' new business after the House of Lords' ruling. The statement reads:

> *As the review shows, staff met Equitable Life management before the House of Lords judgement was issued, to discuss the company's options in the event that the judgement was highly unfavourable to the society.*
>
> *The society's management told us at that time that they would take immediate steps to provide for the new liability to guaranteed annuity policyholders, mainly by removing bonuses for the first 7 months of the year. And they would put the society up for sale immediately. They would also have to adopt a more defensive investment posture, with a lower proportion of equities in their portfolio to protect their solvency. This seemed to us to be an appropriate course of action in the circumstances.*
>
> *They, and we, expected that the value of Equitable Life as a brand, together with the value of its sales force and administration systems, would be sufficient to attract a buyer. Over 15 companies quickly expressed an initial interest. The society believed that the sums available from a sale should be sufficient to allow the company to adopt a "normal" investment strategy going forward, by providing stronger backing to the fund, or perhaps even large enough to fill in the "hole" created by the House of Lords judgement and to allow the foregone bonuses to be reinstated.*
>
> *In the circumstances, therefore, allowing the company to continue to write new business did not seem to be particularly risky for new policyholders. Their interests did not depend on a sale achieving the higher estimate, since the foregone bonuses applied only to policyholders with the company before the House of Lords judgement. The state of the society was well known, and particularly the fact that it was up for sale.*
>
> *By contrast, to close the society to new business would have significantly reduced its value. We would have been exposed to criticism that we had damaged the prospect of a successful sale, and therefore the prospect of "putting right" the existing policyholders. Furthermore, the grounds on which the company might have been closed to new business are highly doubtful. It continued to meet its solvency requirements, and we did not think that the company's management could be considered unfit and improper, or that they were not meeting the basic criteria of sound and prudent management.*
>
> *There is, of course, a separate question as to whether the extent of disclosure of the company's financial position to prospective new policyholders was, in the event, adequate to ensure compliant sales.*

24/08/2001 [entry 1] Equitable write to FSA confirming their answers to issues raised by FSA on the compromise scheme.

24/08/2001 [10:10] FSA's Legal Adviser E asks Legal Adviser F to undertake 'the critical legal task' identified at a meeting the previous day to assess the basis on which Equitable proposed that mis-selling liabilities should be quantified. He notes that meeting Equitable's timetable would require 'FSA signoff' of the compromise scheme documents by 7 September 2001.

[**11:58**] Legal Adviser F replies:

> *I don't think that a "signoff" from the FSA side depends on* [the Society's Counsel's opinion] *being finalised or the principles he comes up with as much as identifying the principles which Equitable actually* <u>*use*</u> *in their calculations/estimates. One of the questions we may need to ask ourselves is whether they are following* [the Counsel for Equitable's] *approach (or* [FSA's Counsel's]*), but what* [the Society's Counsel] *says is not the prime question we have to address.*
>
> *I think we also need to make up our mind on this aspect whether we are assessing whether Equitable's approach is reasonable (having regard to the advice available to us and any calculations done on quantification) or whether we are suggesting a different number. I believe the approach contemplated in your report of yesterday's meeting is the former, but if* [Counsel for FSA] *and we are being asked to give a view, it is only fair and reasonable for those seeking it to indicate what they want a view on.*
>
> *Currently the scheme documentation is thin on how they reach their number – notably the justifications for their "calculation". That raises the question of when sufficient information will become available – it is unrealistic to expect a view if relevant information is not available until a day or two before the deadline. It is also unreasonable to ask for a view on something which will change.*
>
> *Is there yet any additional information about how/why the scheme documentation reaches the approach it does?*

On 29 August 2001 [**09:31**], the Director of GCD says that he agrees.

24/08/2001 [11:24] PIA provide FSA's Chairman with a paper on guidance in the light of their Counsel's opinion, updating the advice given on 17 August 2001. The paper considers what FSA might publish by way of interpretation and guidance at the time that they published their Counsel's opinion.

24/08/2001 [13:22] Equitable send FSA a copy of Counsel's opinion on the reasonableness of the proposed compromise scheme.

24/08/2001 [16:11] FSA's Line Manager E sends FSA's Chairman a note on a meeting that had taken place earlier that day with the Appointed Actuary's company about Equitable's financial position. The note reads:

> [The company] *gave us a presentation of their findings this morning. At this stage, the conclusions are in draft, and do not take account of potential liabilities for mis-selling on which work is continuing. A copy of their slides is attached.*
>
> *We asked Equitable Life to appoint* [the company] *to report upon its financial position on three different statutory bases - the Insurance Companies Act basis, the Companies Act basis and the Insolvency Act basis. Each of these three bases, at least in theory, includes an element of prudence. The Insurance Companies Act basis is the most prudent (though it does allow an implicit item for future profits and disregards the subordinated loan liability) and the Insolvency Act basis is the closest to realistic best estimate. On all three*

bases, [the Appointed Actuary's company] *report a surplus of assets over liabilities. At one extreme, on the Insurance Companies Act basis,* [the Appointed Actuary's company] *report that Equitable covered its required minimum margin by £758 million at the end of June 2001 (£1,025m at the end of July). At the other extreme, on the Insolvency Act basis, they report that Equitable had a surplus of £2,200m. These figures do not take into account any explicit liability for future discretionary bonuses or for compensation to non-GARs. In effect, on all three bases,* [the company] *have quantified the surplus assets that are available to pay the mis-selling and, after that has been paid, to fund future (non-contractual) bonuses. In advance of the finalisation of the work quantifying the mis-selling claims it is not possible to reach a definitive conclusion on Equitable Life's ability to fund those claims. However, based on the preliminary work that has been done the level of surplus assets reported by* [the Appointed Actuary's company] *as being available to meet those claims does not give us any cause for concern.*

The reason for the improvement on the statutory basis between June and July is that the Society sold significant volumes of equities, switching to cash and fixed interest, which has a marked impact on the resilience reserves that are required.

The difference between the Companies Act and Insolvency Act basis is accounted for, in particular, because a degree of prudence is released from the former, by using more realistic interest rate assumptions. [The Appointed Actuary's company] *have suggested that there is likely to be scope to increase the free assets to around £3 billion on a realistic basis (although this would mean making no allowance for discretionary bonuses or the effect of large surrenders).*

The work on the quantification of the potential mis-selling analysis cannot be completed until the legal position has been settled, so certain assumptions are having to be made for the time being. They are continuing the comparisons with the rest of the industry. There are already some potentially helpful signs, although the information should be treated with caution at this stage. [The Appointed Actuary's company] *have said that overall, investment returns achieved by Equitable Life (on the periods since 1988 and 1993 to the present) have been in line with the industry average, but costs are lower. This means that the position is more favourable than the average. In terms of amounts distributed, Equitable Life was around the industry average, though following the suspension in bonus allocation since the House of Lords and the recent policy value cuts, this pushes Equitable into the third quartile. The position if smoothing is taken into account apparently brings Equitable back towards the average.*

The Society has provided us with a copy of an opinion by [Counsel] *(which we are considering) on the reasonableness of the Society's approach to the compromise scheme. They have also undertaken to provide us, on Tuesday, with the comparisons* [the Appointed Actuary's company] *have undertaken of the relative position of Equitable's products (broken down by type and inception year) with the market.*

We are due to receive a full report on quantification next week, but the information so far would appear to support the Society's planning assumptions in relation to the cost (subject to the legal advice on the basis of calculation).

The Appointed Actuary's company report the financial position under ICA 1982 as at 30 June 2001 as follows:

Assets	*£m*	*£m*
Investments		
Property	*2,091.0*	
Equities	*10,744.8*	
Fixed interest securities	*11,750.5*	
Unquoted investments	*2,180.2*	
		26,766.5
Reinsurers' share of technical provisions		
GAR	*664.0*	
[Halifax Equitable Clerical Medical] *reinsurance*	*4,034.1*	
		4,698.1
Current assets		*715.6*
Implicit items		*901.0*
Total assets		*33,081.2*
Liabilities	*£m*	*£m*
Guaranteed fund on accumulating with-profits	*16,978.8*	
Less discount applied	*-438.0*	
		16,540.8
Other with-profits liabilities		*2,951.4*
GAR provision		*2,170.0*
GAR rectification		*200.0*
Non-profit liabilities		*4,204.9*
Mis-selling (eg GAR)		*0.0*
Other mis-selling (eg Pensions Review)		*124.0*
Linked liabilities (reinsured to [Halifax Equitable Clerical Medical]*)*		*3,688.3*
Resilience reserve		*759.0*
Provision for other risks		*18.0*
Other current liabilities		*586.6*
Total liabilities		*31,243.0*
Required minimum margin		*1,081.0*
Excess over [required minimum margin]		*758.0*

24/08/2001 [17:55] FSA's Actuarial Risk Review Department provide the Head of Actuarial Support with some preliminary observations on a discussion document entitled '*Realistic GAR Costs – Allowing for Optionality*' (dated 23 August 2001) that he had received that morning from the Appointed Actuary's company. The introduction to the document explains that:

> [The Society] *has prepared some calculations on the expected realistic cost of GAR options on in-force policies. This is a vital input to the GAR/Non-GAR compromise vote. Those calculations were prepared using deterministic assumptions. In this note we explore how one might allow for possible variations in interest rates, and we produce some example calculations to illustrate the potential effect.*

The Risk Review Department's key observations are:

- that the results of the Appointed Actuary's company confirmed FSA's earlier point (see 21/08/2001 [**15:07**]) that '*optionality (i.e. time value) can be a material component of the total value of a GAR option, particularly when the GAR option has a long time to maturity and is not very far in-the-money ...*'; and
- that the Appointed Actuary's company's approach to valuation was very similar to that used by FSA.

24/08/2001 [19:14] FSA's Director of Insurance sends the Head of Life Insurance a note of a conversation he had had with Equitable about Counsel's opinion on mis-selling liabilities. The note records:

> [Equitable's Finance Director] *said that he had now seen a further draft of the Opinion from* [their Counsel]. *It had been drafted by* [his] *junior and was significantly different from what they had understood* [Counsel for Equitable's] *current view to be from a conversation they had had with him yesterday. It was not clear whether it would be where he would finally end up, but they were not confident that it would change.* [Counsel, who were advising the Society on the Compromise Scheme,] *(and they understood* [Counsel for FSA]*) thought it was seriously flawed. But if he stuck by it, and it therefore entered the public domain, it would be a material factor in their efforts to secure agreement to a reasonable and fair scheme.*
>
> *In short* [the Society's Counsel's opinion] *was "becoming more aggressive on misselling". He was tending to the view that all cases should be treated as advice cases; and that the full cost had to be borne by the GAR policyholders rather than the non-GARs, the effect of which was to require that misselling costs should be grossed up to take account of damage to future bonus prospects.*
>
> *Given the strength of* [Counsel advising the Society on the Compromise Scheme's] *contrary opinion he said that the directors were likely to treat this position as "one of a number of disparate legal views". They would not be inclined to try to give full effect to it in the scheme. It appeared that* [Counsel for Equitable's] *intention was simply to reverse the effect of the House of Lords' judgement and achieve ring fencing by a different route. They were not convinced that* [he] *had fully understood the implications or, indeed, the way that the fund operated. They would try to get him to understand but were not optimistic.* [FSA's Chief Counsel A] *confirmed that* [Counsel for FSA] *would be prepared to talk to* [the Society's Counsel] *if the latter approached him.*
>
> [Equitable's Finance Director] *asked whether we envisaged publishing the* [Counsel for FSA's] *Opinion – he had understood that we did not. We said that we did intend to do so, together with some more general indication to the industry that they should consider the implications.* [He] *said that this would be helpful, especially if they needed to distance themselves from* [the Society's Counsel]. *He said that they were rethinking their strategy on publication of the scheme. They were now absolutely clear that they would not publish* [their Counsel's opinion] *ahead of the scheme. They were toying with the idea that they might publish the scheme with an opinion from* [Counsel for Equitable] *endorsing it as fair, taking account of a range of legal opinions including* [Counsel's own opinion] *(and if possible* [the opinion of Counsel for FSA]*).* [The Society's Counsel] *might then be published a day or so later. However this was far from certain.*
>
> *We asked about the implications for solvency.* [The Finance Director] *said that since they had no Opinion from* [their Counsel] *at this stage it was difficult to know what weight to give it.* [Counsel advising the Society on the Compromise Scheme's] *advice was clear and the directors would not be justified in taking any precipitate action at this point: they had in any case a reasonable prospect of resolving matters effectively through the*

scheme. He accepted however that the Insurance Companies Act position might prove more problematic, and could present us with some difficult decisions.

27/08/2001 [15:44] FSA's Chief Counsel A writes to the Director of GCD further to Line Manager E's note of 24/08/2001 [**16:11**] and the Appointed Actuary's company's presentation on Equitable's solvency position. She says that this '*interim*' report was broadly '*good news*' but that she needed to draw his attention to three issues: Article 4; the market value adjuster; and the Society's retirement age assumptions. On the first issue, Chief Counsel A writes:

> ... [the Appointed Actuary's company] *say they understand the Equitable Board has been advised that they cannot become insolvent because of* [Article] *4 (and therefore wrongful trading cannot arise). If this is so (I have not checked), this is a change of position and it is not obvious to me how we can in the face of it justify continuing to assert that the* [Policyholders Protection Act 1975] *will apply without (at a minimum) making clear there is a contrary view. I think this is probably so even if the* [Policyholders Protection Board's] *position is the same as ours (so far as I am aware their Counsel has still not opined). In addition, we do not know and have not considered what the implications are for the presentation of the GAR/non-GAR scheme. I think the first thing to do is ask* [Line Manager E] *to ascertain the position from the Equitable. Then we can take it from there.*

On the market value adjuster, Chief Counsel A says:

> ... [the Appointed Actuary's company] *say GAD (presumably our Actuarial Support team) accept that the MVA can be* [used] *to prevent prejudice to remaining policyholders in the event of mass surrender. This suggests the ability to use the MVA actually to discourage (or penalise) surrenders where this is appropriate to protect remaining policyholders, rather than merely to ensure that policyholders do not take away more than asset share. Our actuaries may have that view (I have not checked) and that is my preliminary view, but I am not aware that legal advice has been requested or given on this issue. Perhaps* [Legal Adviser C] *can comment.*

On the final issue, Chief Counsel A notes that '[the Appointed Actuary's company] *says that assuming GARs retire at the earliest date is generally prudent, but they have not checked that it is prudent in all cases.* [Legal Adviser A] *has I think instructed Counsel on the regulatory requirements in this area and I ask him to remind us what that advice is. As* [the company] *says, this is a second order issue*'.

28/08/2001 [entry 1] FSA's Director of Insurance responds to a note from the Director of GCD of 24 August 2001, following a policyholder complaint about Equitable's income drawdown policies. He says that, as FSA had already required Equitable to review mis-selling issues for this type of policy, and as provision had been made for the cost of redress, there appeared to be nothing new for FSA to do.

28/08/2001 [10:42] FSA's Head of Life Insurance asks that any comments on the compromise scheme consultation documents, circulated on 21/08/2001 [**14:03**], should be passed to Line Manager E by the end of that day.

[**14:38**] The Insolvency Practitioner provides detailed comments on the letter to policyholders, which include:

- *The emphasis remains on the society investing more freely for growth and adopting a more generous bonus policy if the compromise is agreed. Are we satisfied that this is not a misleading statement? The society has not said how their investment policy would change, and it is unlikely that it would change. Equally, there is no indication as to what bonus policy the society would follow after the scheme*;

- *In the "what next" section there is no mention of the pre-hearing to determine classes. Neither is there mention in the "how do I know it is fair" section that each group of policyholders will be represented at that hearing*; and:
- *... they say that the scheme document will be sent with exact details of how it will affect each policy, but we want the society to send each policyholder an actuarial estimate of the value of the GAR rights being given up, not just the uplift offered in return. It would be helpful to extract this commitment from the society now.*

On the consultation document, his comments include:

- *... I think that the statement "Policies will be much safer and are likely to grow faster after a compromise" is misleading and at the least requires the society to state how its investment policy will change if the scheme is approved. Same comment re the penultimate sentence on page 5: "The restrictive investment policy and cautions bonus policy is likely to lead to significantly lower growth on all policies."*;
- *... I wonder whether it is true that* [the Society's auditors] *"have verified" that the calculations are "correct"? I would be surprised if they expressed anything in this form and wonder whether their work will be directed at the figures in the explanatory statement rather than any of the calculations in the launch papers*;
- *... The GAR cost is estimated at £1.2bn but the non-GAR misselling claims are estimated at £1.0bn – why the difference? The first sentence on page 11 suggests that* [the Society's Counsel] *has put a £1.0bn value on claims and I doubt he has mentioned any figures*; and:
- *... I agree that "after a compromise" ... "bonuses will have to be prudent to ensure strength is maintained" and this should be the consistent tone throughout.*

[**15:23**] An official from FSA's Press Office comments that Equitable: '*need to explain clearly to people where the money is coming from. There has already been press coverage suggesting that people had 16% knocked off their policy values and are now having some of it given back, so where is the money to come from? Equitable need to come up with an understandable answer to this fundamental question or face constant policyholder and press suspicion over the whole deal*'.

[**15:37**] Chief Counsel A agrees with the Insolvency Practitioner that Equitable should say something about the convening hearing.

28/08/2001 [13:00] Chief Counsel A informs FSA's Director of GCD that the Appointed Actuary's company's slides were wrong in saying that Equitable's Board had been advised that Article 4 prevented them from becoming insolvent.

28/08/2001 [13:58] FSA's Director of Regulatory Strategy and Risk writes to the Director of GCD to express her concerns about the publication of PIA's mis-selling report and the implications that this might have for any enforcement action taken by FSA.

28/08/2001 [14:33] FSA's Chief Counsel A responds to the Director of GCD's request of 03/08/2001 [**10:59**] that she should examine whether the Baird Report might impact on the compromise scheme. From a very quick review of the report, the Chief Counsel notes two issues:

> *1. There are some very occasional factual errors which might cause the press and policyholders to misunderstand the position or raise doubts about what they are being told by the Equitable. For example ... it is said that in 1998 GARs were approx. 30% higher than CARs. This may be true on average (I do not know), but the range of GARs is considerable and the 30% figure may therefore tend to mislead (and raise expectations).*

2. [The report] *recommends ... that GARs be valued stochastically and consistently with traded option prices in the market. We are doing that for our own purposes internally (to establish the value of GAR rights given up, against which the fairness of the uplift should be judged), but I am not aware that Equitable are doing it. So the publication of the Review Report might tend to support arguments that the uplift has not been shown to be fair.*

But both these matters do not seem to me to be significant. I do think though that someone ought to go through the Report line by line in due course with the GAR/non-GAR scheme in mind. I am sorry but I am not able to perform that task due to pressure of other work.

As an aside presumably the very publication of the Review Report will give Equitable policyholders an opportunity to get angry all over again, so there is reason to delay publication if possible by a couple of weeks after publication of the GAR/non-GAR launch document and the misselling opinions.

28/08/2001 [14:41] Equitable send FSA their weekly customer servicing reports.

28/08/2001 [14:46] FSA's Legal Adviser F provides Chief Counsel A and the Director of GCD with his concerns about the mis-selling aspects of the compromise scheme documentation. The Legal Adviser explains:

The description of the scheme suggests that it deals with the whole of the company's assets, and that the whole of its assets are currently attributable to its current policyholders. It then goes on to describe the way in which the cake has to be cut differently to how it is at present, taking account of the various kinds of liabilities which exist. Thus it goes on to describe that the misselling liabilities have to be borne as to 73% by the non-GARs.

If this is truly what is going on – ie showing how the entire cake is to be divided up among the existing policyholders – then I am concerned that the company is not allowing properly for its other actual and contingent liabilities. I suspected that this was not the case, but the various balance sheets put together by [the Appointed Actuary's company] *reinforces that.*

Thus I think what is going on is that the company is telling the relevant policyholders that ultimately the net assets belong to them as opposed to everyone else. Thus it is appropriate to tell them how their asset share (much of which will be a contingent share not a current one) will change as a result of the scheme. This leaves out the middle step of saying that the actual payment for misselling claims is from the current free assets (ie which have not been allocated to bonuses) and (presumably) the same for the GAR buyout sums there is presumably also some provisioning for other creditors, actual and contingent against the same free assets. Leaving out this middle step exposes the company (and FSA) to later allegations that policyholders are having their policy values reduced as a result of payments made to former members to compensate for misselling etc. I would not discount the possibility that someone might seek to attack the scheme on those grounds.

I do think that this middle step is vital to the misselling (and probably other) aspects of the scheme, and that leaving it out potentially prevents a proper understanding by a lay member of what is truly going on (assuming I understand it correctly), and thus could preclude its meeting a "fair, clear and not misleading" test.

[**15:39**] Chief Counsel A asks Legal Adviser F if she could have '*a quick word about this*'.

28/08/2001 [19:29]	FSA send Equitable their comments on the compromise scheme documentation.
28/08/2001 [20:03]	FSA hold a 'wrap-up' meeting. The Director of Insurance circulates the key points of the meeting later that day which include, under '*Financial Position*': *No points of clarification or doubt on the* [Appointed Actuary's company's] *presentation. Not clear when we would receive final report - presumably not before misselling work by* [the Appointed Actuary's company] *was complete. We needed to consider whether, and if so what and when, we should make public about the fact that we had required this work and what the results were. NB the work was expressly confidential to the Society. We had no gateway to allow publication. (*<u>[Chief Counsel A]</u>*: to confirm?). But presumably we could disclose that we had required an independent review of the financial position which did not give rise to any doubts about the Society's statements. NB too that the half yearly results will be published with a statement from the auditors (the auditors will want to talk to us first to ensure both that we understand the uncertainties and to make sure that we do not know anything they do not!).* <u>*Action:* [Head of Life Insurance]</u>*. We should discuss further with* [the Society's Chief Executive] *tomorrow to find out when they will publish their half year figures and what, if anything, they will say at the time of the launch.*
28/08/2001 [21:02]	Equitable send FSA an updated version of the actuarial report for the compromise scheme, which now included mis-selling.
28/08/2001 [entry 11]	FSA write to Equitable in response to their letter of 15/08/2001. FSA confirm that the proposed format for Equitable's monthly reporting on their financial position was acceptable to FSA, subject to two minor refinements.
29/08/2001 [09:46]	FSA's Director of Insurance writes to Chief Counsel A, after a discussion the previous night, about what FSA should do in the light of Counsels' opinions on mis-selling by Equitable and whether they should require Equitable and/or the industry to undertake a review and, if necessary, implement a rectification scheme. The Director of Insurance seeks the advice on the legal implications of what he had in mind, which was: *a) The FSA has made no final determination as to whether misselling took place or loss was suffered in respect of the non disclosure of GAR exposure. However in the light of legal advice provided to the Society and to the FSA it seems clear that policyholders are likely to be able to bring successful claims for compensation.* *b) The FSA is aware that the Society is seeking to resolve these claims by offering* [compensation] *as an essential part of the proposed compromise scheme under s425. The FSA considers that this is an appropriate way to proceed, and does not intend to take further action until the results of the vote on the scheme is known and the issue has been considered at the court.* *c) However, in considering whether or not to vote for the* [scheme]*, policyholders are entitled to know what the FSA would be likely to do if the scheme is not endorsed by policyholders and by the court. In these* [circumstances] *the FSA, consistent with the advice provided to it by leading counsel, would be minded to require Equitable to review policies sold by it to non GAR policyholders and, where appropriate, to offer redress. Where it was reasonably clear that policyholders, had they known of the GAR exposure, would not have bought a policy from the Equitable then the redress payable would be the difference between the value of the policy they actually bought and the value of an average performing* [comparable] *product bought from another provider. Such redress would however be subject to two important limitations:*

(1) The total cost of redress falling on the Society should be limited, as a maximum, to the cost which it may reasonably be estimated to have to in meeting its GAR liabilities;

(2) Since the cost of meeting misselling costs falls on the with profits fund, of which non GAR policyholders are 75% owners, the redress payable to such policyholders should be reduced by that proportion.

[**16:51**] Following a meeting with the Director of Insurance and Chief Counsel A, Legal Adviser F writes to the Director of GCD to provide guidance. He explains that they:

Broadly ... agreed that FSA ought to prepare itself to take appropriate lines about reviews and rectifications, and that the sort of matters which [the Director of Insurance's] *email identifies are broadly the right ones. However we all agreed that the drafting would need some attention in tone and wording – given that it is important for* [Conduct of Business] *Standards to be content (with appropriate input from Enforcement and Consumer Relations) and its obvious links to the misselling lines more generally we wondered if the drafting might be led from* [Conduct of Business] *Standards assisted by* [the General Counsel's Division]*. This is something which may be discussed at the wrap up meeting.*

We did however identify that there may be a number of other aspects which might need to be covered – such as the difficulties in proving a case and assessing damages (the fraught legal issues), the ongoing right to seek redress by individual policyholders pending any FSA imposed review etc, the potential involvement of PIA's areas (given that the s425 consultation documents may trigger the need to have lines, and we expect their publication ahead of [FSMA 2000 coming into force]*).*

29/08/2001 [10:15] FSA's Line Manager E reports that he had co-ordinated and passed on to Equitable (on 28/08/2001 [**19:29**]) FSA's comments on the latest draft of the compromise scheme consultation document. The Line Manager says that a revised draft was due later that day and asks that any further structural or presentational issues should be raised as soon as possible.

29/08/2001 [morning] FSA's Chairman is informed by the Economic Secretary to the Treasury that HMT have decided to commission an inquiry into Equitable (the Penrose Inquiry) and that HMT intended to make the announcement of this on 31 August 2001. FSA's file note records:

> [HMT's] *primary handling concern was to minimise the possibility that the compromise scheme would be disrupted and, to this end, they were extremely concerned not to give the impression that government support would be forthcoming as a result of the review. Therefore, they planned to emphasise the extremely high hurdles that would need to be met before the possibility of any government* [support] *in the statement and background briefing that would accompany the announcement. The* [Economic Secretary to the Treasury] *asked if we would be able to support this in public.* [FSA's Chairman] *noted that it would be difficult for us to do so as it is not for us to say whether there might be a government liability. He noted that it would look odd for us to comment on the principle when, under* [FSMA 2000]*, any awards assessed against the FSA by the Complaints Commissioner would be payable from industry fees.*
>
> [The Chairman] *asked at what point in time the remit of the inquiry would stop. The* [Economic Secretary to the Treasury] *said that it might well need to go beyond the close of the Equitable to new business and it was hard to see a definitive stop point after that.* [The Chairman] *expressed concern that this could lead to the inquiry reviewing work as it was happening, which would hinder the compromise scheme. It was agreed that HMT would look for a form of words to say that the initial work of the inquiry would be to look at the origins of the problem and that the inquiry will not be influencing the compromise scheme, although it may cover issues relating to it in its final report.*

> *The* [Economic Secretary to the Treasury] *saw it as an advantage that HMT were announcing this ahead of having received* [the Baird Report]. *The briefing would emphasise that HMT had full confidence in the Baird review but the public interest was so strong that the narrow remit of* [the Baird Report] *could no longer be sufficient.* [FSA's Chairman] *asked whether this would effect the publication of the Baird review. The* [Economic Secretary to the Treasury] *said this would need to be discussed with Penrose when HMT received it.* [The Chairman] *emphasised that any delay would put the FSA in a very difficult position, both in terms of our position in front of the* [Treasury Select Committee] *on 16 October and not being able to take forward the recommendations for the future, which would require public consultation. The* [Economic Secretary to the Treasury] *said that HMT were still committed to its publication but would need to consider the timing.*

FSA also speak to HMT to clarify a number of points and it is agreed that a meeting would take place on 29 August 2001, after HMT had sent FSA the draft terms of reference and associated material.

29/08/2001 [11:28] FSA's Legal Adviser C tells Chief Counsel A, in response to her note of 27/08/2001 [**15:44**], that neither he nor another legal adviser had been asked to advise on '*using the MVA as a sword rather than a shield*'. However, the legal advisers were in the process of seeking advice from Counsel on the market value adjuster and this point could be included, if that was thought appropriate.

[**21:26**] Chief Counsel A agrees that it would be right to ask for Counsel's views, but says that '*any instructions would require careful actuarial input, and I do not think that can be provided to your timescale*'.

29/08/2001 [14:51] FSA meet Equitable to discuss the various ongoing issues, including: the legal opinions; the solvency implications of the Society's Counsel's opinion; the data on mis-selling; timetable for GAR compromise scheme; directors' and officers' liability insurance; and repurchasing some of the subordinated loan.

29/08/2001 [15:51] Equitable send FSA final draft documents for the compromise scheme.

[**17:05**] Line Manager E circulates the documents within FSA, saying that he would attend an all-day review meeting about these on 31 August 2001.

29/08/2001 [15:56] FSA's Director of Insurance circulates a '*Skeleton Submission on Equitable*' about the compromise scheme for discussion at a meeting that evening. The submission sets out the '*Issues for Decision*' by FSA as follows:

> *a) Should FSA intervene in relation to consultation on the proposed S425 scheme*
>
> - *To require the Society not to proceed;*
> - *To require any modification to the proposals themselves;*
> - *To require any modification to the presentation of the proposals, the background, or the reasons for/alternative to them.*
>
> *b) What should the FSA say*
>
> - *About the proposals;*
> - *About FSA's role in relation to them - (including the criteria by which we will evaluate them?);*

- *About mis-selling, and possible regulatory action in relation to mis-selling;*
- *About the financial position of the Society and/or the independent review of this.*

c) What should FSA say about wider implications for the insurance industry?

The recommendations put forward in the submission were:

S425 scheme
a) Subject to resolving continuing uncertainties over mis-selling liabilities, the Society's proposals are not such that we should seek to prevent their presentation to policyholders as a basis for consultation.

b) There are no major unresolved issues (mis-selling quantification apart) which should lead us to require more modification to the proposals.

c) Presentation remains an issue. We should work with the Society to improve the drafting. The only issues where we may need to require change are:

- *Reference to the position of the FSA and its legal advisers*
- *Exaggerated reference to the uncertainty of litigation in relation to mis-selling claims.*

FSA Position
- *In relation to the proposals, we should note these as an important step towards a compromise scheme, which FSA believes is likely to be the most appropriate way to resolve the Society's difficulties. We await the results of the consultation exercise.*
- *On the role of the FSA, we should give a factual account of our responsibilities; say that we will continue to monitor the financial position of the Society very closely; will work closely with the Society as they develop their proposals in the light of policyholders comments; will wish to satisfy ourselves that their final proposals meet our criteria, will ensure that they are fairly and clearly presented, and will set out an analysis of the evidence to the Court.*
- *On mis-selling we should say that we have not reached any formal view on mis-selling, but note the legal advice given by* [Counsel for Equitable] *and* [Counsel for FSA]*; that we note the intention to include mis-selling claims in the compromise scheme and accept that there is an appropriate way to proceed; explain what we would do by way of review/redress in the event that the scheme is not endorsed by policyholders or the court.*

The Skeleton Submission also discusses timing issues, regarding which it is stated that FSA should aim to communicate their decision to Equitable by 6 September 2001, while noting that they could intervene to prevent the launch later than this if necessary.

29/08/2001 [entry 8] Legal Adviser F provides the Director of GCD (copied to others) with advice on the potential liability of former members of an unlimited company. The summary of his advice is that:

Two potential sources of liability occur to me (looking only at their position as former members of a body corporate rather than in any other capacity):

a) the potential for being required to contribute to the company's assets so that it can meet its liabilities; and

b) the possibility that they may have received distributions from the company which were unlawful (akin to dividends paid when there are no accumulated profits to distribute).

Having looked into these I do not think that either are of practical benefit in the current situation: the former because of the timing, and the latter because of the speculative nature of the claims.

30/08/2001 [09:26] FSA's Director of GCD responds to Legal Adviser F's request for guidance of the previous day (see 29/08/2001 [**16:50**]). The Director of GCD writes that he:

> ... [thinks the Director of Insurance] *is looking for advice on the substance of the proposal that we would limit the amount we would mandate to what-effectively-people would get under the 425 scheme. Can you focus on this? Would probably need to be done by own initiative variation, as an executive procedure decision, subject to review by the tribunal, would arguably mean giving less than court or ombudsman would award, and less than on any other misselling. Would be criticized as subordinating interests of misselling victims to desire to see 425 scheme agreed. Legally sustainable? May depend on reasons, which* [the Director's] *note doesn't articulate but related to desire to avoid regulator mandated redress offering an apparently better deal for leavers to that available under the 425 for stayers. Also – need to get view from* [Counsel for FSA] *when issues identified.*

[**09:45**] Legal Adviser F says that he agreed: '*but our comments immediately re-raise a major concern I have about the 425 scheme (hopefully a presentational one). If the scheme is massively out of kilter (lower) with what the court/ombudsman would award (on our best guess/advice etc) then how can FSA possibly stand by and be seen to endorse it as fair? If it is fair under the 425 scheme, then why would FSA be under attack for the matters you mention?*'.

[**09:52**] The Director of Insurance replies to the Director of GCD (having not seen Legal Adviser F's comments) saying:

> *As to policy reasons underlying the approach to discounting it is partly as* [the Director of GCD] *suggests. But as we discussed I think it is as, if not more, important that we recognise that "grossing up" (to put it the other way) could produce a level of claims by individuals which, if granted to all, would damage the fund, perhaps ultimately to the point of insolvency. We could not allow payments to be made to early birds at levels which would damage others later in the queue. We would, depending on what amount we required by way of reserves have either to petition for winding up (if the Society did not do so), apply to the court for a reduction in policy values (if preferable to a winding up) or, at the very least, require to the company to reduce/suspend non contractual payments. The net effect on the "missold" policyholders would be likely to be at least as bad, if not worse, than the approach I have suggested which, in effect, mirrors the approach which* [Counsel for FSA] *advises is appropriate in the context of the scheme – and for much the same reasons.*
>
> *Even though it seems to me defensible on grounds of common sense and fairness, I recognise that it may be legally difficult although I was encouraged that at our discussion yesterday there appeared no obvious problem. But as we agreed it will be very important that we have explored all the angles and that* [the FSA's Counsel] *provides supportive advice.*

30/08/2001 [10:34] The Economic Secretary to the Treasury asks that the timing of the consultation on administration for insurers should be agreed with her.

30/08/2001 [10:38] Further to the discussion on Equitable's draft compromise scheme documentation on 28/08/2001 [**10:42**], FSA's Insolvency Practitioner says that he agreed with the official and says that he thought that: '*some basic explanation of how a with profit fund works and in particular how policy value (and guaranteed value) relate to asset share is vital. The essence* *of the "deal" is how to carve up the remaining free assets of the Society: there is no new money. If the Society does not explain it in these terms then we should. However, I don't think we can provide such supplementary information until the final scheme is published (ie October)*'.

[**11:47**] The official agrees with the Insolvency Practitioner and notes the Director of Consumer Relations' view that FSA should not be forced into doing Equitable's job for them and that Equitable should properly explain this point, and others, to their policyholders.

30/08/2001 [11:46] FSA's Insolvency Practitioner comments on the issue of Equitable repurchasing the subordinated loan, following the meeting with Equitable held the previous day. He says that: '*Such a repurchase would not amount to a preference since the society is solvent at the time of the transaction*'.

[**13:02**] In reply, the Director of Insurance adds:

> *Solvent, but subject to fundamental uncertainty as to the quantum of misselling claims from policyholders. And the debt is <u>subordinated</u>. I don't think we should risk giving our consent in these circumstances. We should indicate that we need to see the uncertainty reduced before we could allow money to be paid out to those whose interests are subordinated to those of policyholders.*

30/08/2001 [12:41] PIA provide FSA with a draft statement of what FSA might say on 19 September 2008 at the time of the launch of the compromise scheme consultation, about a review of redress for mis-selling by Equitable required by the regulators. PIA's note takes account of the discussions which had taken place about this on 29/08/2001 [**09:46**] and earlier that day (see [**09:26**]). PIA explain:

> *The underlying concerns expressed in* [the exchanges that morning] *were reflected in my comments yesterday evening on your draft submission. That is, what is our desired outcome/result of the compromise agreement. If, for example, we believe that it is in everyone's interest for the package to be accepted (including on the grounds of the greater good) then, in the circumstances of the time, it can only be regarded as fair and reasonable.*
>
> *If, on the other hand we take the view that such fairness and reasonableness is dependent upon maximising the opportunities for non-GAR policyholders to get the maximum compensation, then manifestly we can only advise that they should leave their options open. To head this one off we would have to get the* [Financial Ombudsman Service] *to sign up to our position (which I would have thought they could do without compromising their freedom to look at each case individually). That would leave the courts as the only alternative avenue still open.*
>
> *The attached could be laced with more explicit warnings that the society can/could stand only so much financial strain before insolvency beckoned, including as a result of any "better deal" from the* [Financial Ombudsman Service]. *The problem here is that attention could turn to an industry (or even Government) bail out.*
>
> *We can only decide what to say and how far to go once we have* [crystallised] *the outcome we want from the compromise agreement and whether or not we have a chance of getting the* [Financial Ombudsman Service] *to buy-in to our position as set out in the attached.*

[**16:41**] The Director of Insurance thanks PIA and returns the statement with some suggested amendments. In reply to what FSA's policy objectives were, the Director says that he saw them as twofold:

a) I think that policyholders do need to know the probable consequences of not approving the scheme, whether good or bad. This is the approach we have insisted the Society take in presenting the scheme – hence the detail on winding up etc in the documentation. It is also consistent with the criteria we are applying to our attitude to the scheme that in its component parts and across the piece that it should represent a fair exchange between what policyholders are gaining and what they are giving up, and that this should be clearly explained. In giving up misselling rights policyholders are giving up whatever review/redress scheme might give them, and they need to understand what this might involve and what it might mean for them.

b) I believe that to ensure that policyholders understand the alternatives, and in particular what might be involved in a review/redress scheme, it is not enough that we should make the Society cover this in their literature. The Society cannot know how we would approach this. It is reasonable that policyholders should look to us for this. If we are to provide information on this, we need to be clear how we would handle such a scheme in the particular circumstances of the Equitable and what the practical constraints might be. An essential part of this is to determine, in principle, whether a redress programme would follow a "grossing up" approach (in which case we would probably need to intervene to avert some of the undesirable consequences) or whether it would not.

An incidental benefit of this is that what, on the legal advice we have received, we would regard as unrealistic expectations by non GAR policyholders as to the potential value of misselling claims does not distort the vote. But I don't think our objective is to give the scheme the best chance of success. It would be inconsistent with our overall approach to do other than to ensure that policyholders have the clearest and most reliable information that can be provided (in a very uncertain world) on the issues which are relevant to the decisions they have to make.

30/08/2001 [12:46]	FSA's Head of Life Insurance sends Managing Director B a draft letter to be sent to Equitable, setting out the criteria on which FSA would assess the compromise scheme.
30/08/2001 [15:24]	FSA's Head of Actuarial Support circulates a draft note of his conclusions on the actuarial report which accompanies the compromise scheme documentation.
30/08/2001 [20:32]	FSA's Director of Insurance sends the Director of GCD a draft letter about FSA's considered views on the relative advantages and disadvantages of administration against provisional liquidation, which he proposed to send to HMT.
31/08/2001 [entry 1]	Equitable reply to FSA's letter of 15/08/2001, saying that they believed that Equitable had provided FSA with all of the information previously requested. Equitable ask FSA to confirm that they had no further information requests outstanding.
31/08/2001 [entry 2]	Legal Adviser E writes to an FSA legal adviser about the impact on the industry of guaranteed annuity options and the need for FSA to quantify the issue and about the possible need to issue guidance.
31/08/2001 [17:04]	FSA's Director of Insurance provides his Chairman with a draft submission on the compromise scheme, dated 30 August 2001, which had been prepared by Line Manager E. The Director of Insurance explains that the submission represented work in progress and he highlights some '*significant uncertainties*' which remained. These include: mis-selling and the finalisation of Counsel for Equitable's opinion; calculation of the GAR and non-GAR uplifts which '*depends crucially on the misselling quantification*'; and what information FSA should publish alongside the scheme and Counsels' opinions.

31/08/2001 [17:07]	Legal Adviser F sends the Director of GCD, Chief Counsel A and Legal Adviser E a copy of the possible statement by FSA on the review and redress (see 30/08/2001 [**16:41**]). The Legal Adviser says that he was '*not happy with it in this form, but am content that it is heading in vaguely the right direction*', although he had one major reservation as to whether some of the content was appropriate for the general public. [**21:31**] Chief Counsel A agrees with Legal Adviser F that the drafting needed work and that the underlying policy had not yet been sufficiently well thought through.
31/08/2001 [21:00]	Equitable's solicitors send FSA an actuarial summary document to be included in the compromise scheme documentation.

September 2001

02/09/2001 [20:19]	Equitable's solicitors send FSA revised drafts of the launch documents, comprising a letter to policyholders, letter to trustees, consultation document and background document.
03/09/2001 [09:41]	Equitable send FSA the weekly customer servicing reports.
03/09/2001 [10:24]	FSA's Line Manager E circulates the latest version of the launch documents for the compromise scheme.
03/09/2001 [10:29]	FSA's Line Manager E circulates the actuarial summary document received on 31/08/2001 [**21:00**]. The Line Manager explains that this was intended to be included as an annex to the background document and contained the technical information on how the compromise scheme had been put together and the assumptions used. The Line Manager notes that, because of this, it was aimed at commentators and advisers rather than ordinary policyholders. [**10:57**] The Head of Actuarial Support says that he still had reservations about: *(1) The description of the comparison of fund performance and payouts for non-GAR policies in paragraphs 2 and 3 where I have not been able to reconcile their figures with those from other sources ... and where I also believe that they should be looking at single premium* [policies] *and not just those with monthly premiums.* *(2) There is no explanation of where the comparison figure of £250 million in paragraph 5 has come from.* *(3) The proposed uplift for pre-75 policies looks rather too high, though the cost of this and hence the effect on other policyholders should not be significant.*
03/09/2001 [entry 4]	Equitable write to FSA setting out their continuing concerns in relation to the planning process for the compromise scheme and fundamental concerns in relation to Counsel's opinion on mis-selling liabilities. Equitable's Chief Executive says that he was: *... deeply concerned by your suggested approach to the forthcoming legal opinions. We do not intend to admit liability for several very fundamental reasons:–* *1. There is no legal certainty arising from the views of* [Counsel for FSA and Counsels advising the Society on mis-selling claims and on the compromise scheme] *2.* [Counsel] *is our QC for the scheme and, if he is content that what we are proposing is fair, we will go ahead with it.* *3. There is continuing uncertainty over quantum.* *4. The position of ex-policyholders should not be high on the priority list.* [Equitable's Finance Director] *thought he had your agreement that this point could be considered later, if appropriate.* *Our purpose is to deal with the uncertainties by the compromise proposal and we would have to be strongly opposed to any FSA action which put this at risk.* *The potential mis-selling claims are a consequence of the House of Lords decision. I remain disturbed that the FSA, when asked the direct question, refused to say that it found the House of Lords judgement perverse.* FSA's Director of Insurance forwards the letter to the Head of Life Insurance, commenting: *I think this letter reflects grave lack of understanding ... as I have reiterated to* [the Chief Executive], *our position is that we have <u>not</u> yet determined that there has been misselling. But we are concerned about what we and the Society should do <u>if</u> it is found.*

We would expect to give some indication of this on the 18th. The Society should be prepared for the consequences retrospectively as well as prospectively. I will try to distribute a response this pm.

03/09/2001 [11:47]	FSA's Head of Life Insurance circulates a revised version of FSA's information sheet '*Questions and answers about Equitable Life*', last revised on 16 August 2001. The answer to the question '*Is Equitable Life solvent?*' has been amended and the answer '*Yes*' removed. The paragraph continues: '*Equitable Life made clear in its annual accounts and in its regulatory return (a report that it must make to us), that it continues to face some fundamental uncertainties – for example, in relation to the cost of its liabilities to the Guaranteed Annuity Rate (GAR) policyholders*'. The word '*regulatory*' is also inserted into the following sentence: '*However, the latest figures we have received from Equitable Life show that it continues to meet its regulatory solvency margin requirements*'. The word '*projected*' is added before '*policy values*', where it is mentioned.
03/09/2001 [12:19]	FSA's Insolvency Practitioner provides Line Manager E with some brief comments on the drafting of the insolvency aspects of the latest launch documents.
03/09/2001 [12:30]	FSA send Counsel a copy of the actuarial summary document received on 31/08/2001 [**21:00**].
03/09/2001 [16:26]	FSA write to Equitable to confirm the points that had been discussed over the past several weeks about how FSA saw their role in relation to the compromise scheme. FSA set out their powers of intervention under sections 38 to 45 of ICA 1982 and state: *The FSA will need to consider from time to time throughout the process leading up to the final hearing of the section 425 scheme whether it would be appropriate to exercise any intervention powers. It will wish to consider whether it should convey its views on the scheme to policyholders. It will also wish to consider whether it would be appropriate to appear in Court either to make representations relative to its own role to protect the interests of policyholders, or to assist the Court where it can in assessing the effect of the scheme (and the alternatives to a scheme) on policyholders and by explaining the FSA's own approach in assessing the scheme.* FSA explain their criteria for assessing the compromise scheme: *In considering the scheme, we envisage a two part analysis. The first part would look at, for each relevant group of policyholders, the proposal put to them and whether it represents a "fair exchange" for the rights they are being asked to give up. In this part of the analysis, we would also look to make a comparison between the benefits and disbenefits of the scheme to each group of policyholders taking into account the benefits and disbenefits that could arise if the scheme did not go ahead, and the uncertainties surrounding the alternatives to a scheme.* *In the second part of the analysis, which would only become relevant if the first test were passed, we would look to make an assessment of whether the scheme gives disproportionately greater benefits to some policyholders compared with others and whether the disbenefits fall disproportionately on some.* *In order to make the assessments referred to above, we will need to consider the proposals for valuing and buying out GAR rights and rights that might arise in relation to mis-selling claims and in doing so, take into account any likely outcomes in the event the scheme did not proceed.* *In relation to the buyout of the GAR rights, we will be considering:*

- *<u>For those with GAR policies:</u> whether the proposed uplift, taken with other prospective benefits, is a fair exchange for surrendering the GAR.*
- *<u>For those with non-GAR policies:</u> whether the cost of funding the GAR uplift is a fair exchange for the benefit associated with avoiding the continuing (but variable) exposure to GARs.*

We will also need to undertake an equivalent analysis in relation to the mis-selling claims (having regard to the responsibilities and powers of the FSA and PIA under the Financial Services Act 1986, and, in due course, the similar provisions under the Financial Services and Markets Act 2000) to take a view as to

- *<u>For those with non-GAR policies:</u> whether the redress offered under the scheme is a fair exchange for giving up possible mis-selling claims, taking into account the amount of redress that might be obtained by other methods, including through the Courts, the ombudsman or compensation required by the regulator to be paid by Equitable Life, and the likelihood of success of such claims.*
- *<u>For those with GAR policies:</u> whether the cost of funding the buyout is a fair exchange for avoiding the continued (and uncertain) exposure to potential mis-selling claims.*

We do not believe that it would be practicable or appropriate to consider those points in relation to each individual policy or policyholder. However, we will wish to assess, in relation to each question, whether there is any group of policies or policyholders within the relevant categories for which the answer would be significantly different than for the generality of that category, and if so whether such a group would be unfairly advantaged or disadvantaged.

Lastly, FSA set out their views on the information to be provided to policyholders:

We attach considerable importance to the timely provision of relevant information to policyholders in a form that will enable them properly to understand and assess the proposals they are being asked to support. We see the information being on two levels: an assessment of the overall consequences of the proposed scheme and alternatives to it (including continuing the run-off or liquidation), and the information policyholders will receive illustrating the range of consequences for them under the scheme compared to the alternatives.

03/09/2001 [21:19] Equitable send FSA the weekly reports on customer servicing.

04/09/2001 [04:09] Equitable's solicitors send FSA the latest versions of the compromise scheme launch documentation.

[**10:45**] Line Manager E circulates the latest versions of the launch documents received that morning. He later [**18:14**] says that the information had been revised where Equitable had realised that they had made a mistake in relation to the treatment of pre-1975 GAR policies.

04/09/2001 [10:03] FSA's Head of Life Insurance provides some comments on a draft letter to Equitable about the compromise scheme. The Head of Life Insurance tells Chief Counsel A that her detailed drafting comments on mis-selling and the legal position had not been included.

[**11:32**] Chief Counsel A notes that the wording she had provided had been cleared by Counsel.

[**12:35**] Having reviewed the letter on behalf of Chief Counsel A, Legal Adviser F says that he would be: '*uncomfortable in not putting the sort of wording which* [Chief Counsel A] *put forward in this letter, given that we have had counsel's advice as strong as this (particularly* *since it reinforces the internal concerns). As it stands the letter could be read as indicating a lowish level of discomfort on the issue, whereas the truth is rather stronger. Surely ELAS would be extremely annoyed with us if the letter glossed over something we see as one of our main outstanding concerns?*'.

04/09/2001 [entry 3] FSA reply to Equitable's letter of 03/09/2001. FSA confirm that they had received the information from Equitable's Appointed Actuary to enable them to review the assumptions and calculations underlying the Society's quantification of potential mis-selling claims. This assessment had been based on a comparison with an industry average of comparable products. FSA say that they had set out some areas of concern and were to meet with the Appointed Actuary on 5 September 2001 to go through those concerns.

FSA say that their legal team had '*some serious reservations about the way the legal analysis on which the quantification of potential mis-selling claims is explained in the launch documents* [for the compromise scheme]'. Those concerns related to the explanation of whether all non-GAR policyholders had suffered loss which '*has so far not been demonstrated*'. FSA understand that Counsel had now discussed this, as had been agreed previously.

FSA set out their views, following Equitable's letter of 03/09/2001:

> *I should confirm that I had not suggested that you should admit liability to mis-selling or that any claims in respect of mis-selling should be treated, for the purposes of the proposed compromise scheme, as other than "potential". However I was, and remain, concerned that, at least in the latest version of the documentation that I have seen, much is made of the uncertainties of litigation as justifying the discount which you propose should be applied to the quantification of potential claims. As you know, my view is that since litigation is not the only basis on which policyholders might expect to see such claims pursued, such discount factor as is applied should reflect the full range of possibilities. This should include claims resolution via the ombudsman and the possibility that, if mis-selling were to be found, the FSA might require the Society to review and offer redress for affected policies. I should emphasise that this latter is not a foregone conclusion: we have, in fact, reached no view on this one way or the other. But equally, it does not seem to me to be something which can simply be ignored. Indeed, this possibility makes it all the more important that the FSA should be able to come to the view that the scheme which you are putting forward is fair in respect of potential mis-selling claims. If we are able so to satisfy ourselves, then we may be able to indicate, at least in response to any questions put to us, that policyholders should not expect that any review/redress process, which we might mandate, would produce a better outcome for them than they would achieve under the scheme.*

On reserving for potential mis-selling liabilities, FSA say:

> *You will recognise too that, as we have pointed out in earlier discussions, the Society will need to be able to meet any costs that might arise from mis-selling claims by non-GAR policyholders who have surrendered their policies, or whose policies have matured, before the scheme is promoted and whose potential claims will accordingly not be compromised under it. For that reason some quantification of this potential liability is also necessary. Such quantification should also factor in the possibility of FSA mandated review/redress.*

On the House of Lords' ruling, FSA say:

> *I do not believe it would be possible for the FSA to characterise a ruling by the House of Lords as "perverse". On the issue of guidance, the FSA gave very careful thought to whether it could offer guidance on the implications of the House of Lords judgement for*

> *life offices generally, but it concluded that the implications were so closely related to the facts of the particular case that generic guidance to the industry was at best unlikely to be helpful, and at worst could be misleading.*

FSA take the opportunity to reply to Equitable's letters of 17/08/2001 and 24/08/2001 about the compromise scheme, noting that a number of discussions on this issue had taken place since then and that they had set out FSA's criteria for assessing the fairness of the scheme in their letter of 03/09/2001. FSA say: '*At a more detailed level, we are now more comfortable on most points where we had raised questions or concerns, subject to the points I have made above, and the fact that the scheme itself is not yet finally settled*'.

04/09/2001 [11:06] FSA write to Equitable before the meeting that afternoon to say that the agenda had been largely set by their letter of 03/09/2001. FSA list the specific topics that FSA would like to discuss as: legal analysis of mis-selling claims; treatment of mis-selling claims for people who had left, or might leave, the fund before the compromise scheme was in place; and uniform uplift for non-GAR policies.

[**11:33**] Equitable telephone FSA before the meeting to relay a request from their Chief Executive that FSA should confirm that the mis-selling issues were the only outstanding issues they had. Line Manager E informs the Head of Life Insurance that he: '*explained that we are not in a position to do that since there are others in the organisation who will need to express a view (eg the Chairman) and that we have not been able to consult him properly when we* [are] *still dealing with some of the fundamentals (and waiting for information that we had asked for weeks ago)*'.

[**11:40**] FSA's Head of Actuarial Support comments that there was still '*the relatively minor issue of pre-75 policies*', that he had alerted Equitable's Appointed Actuary to it, and '*would be prepared to let this go if necessary (on the basis that they are being well treated and the cost to others should not be material)*'.

[**11:56**] Chief Counsel A says that she did not think that FSA could give up the issue of the pre-1975 policies but suggests that it was a point that could be resolved during the consultation.

[**14:39**] Line Manager E informs Chief Counsel A, Head of Actuarial Support and the Head of Life Insurance that Equitable's Appointed Actuary had just telephoned, having realised that they had made a mistake in relation to the uplift for pre-1975 GAR policies. Line Manager E reports that the proposed uplifts were now in the range of 3% to 7%, which '*seem much closer to the kind of range that I think* [the Head of Actuarial Support] *had expected, and should put us firmly back into "best estimate cost" territory*'.

04/09/2001 [14:30] FSA write to Equitable, in response to a letter of 13 August 2001, '*requesting FSA consent for the Society to buy back part of its subordinated debt on a basis that would not require disclosure to the market*'. FSA say:

> *We do not believe that we could justify giving consent for such a buy-back at the present time. As the Society has made clear in its published accounts, there is a fundamental uncertainty surrounding the financial position at the moment. We shall wish to see this uncertainty significantly reduced before giving consent for money to be paid out to those whose interests are subordinated to those of policyholders.*

04/09/2001 [14:54] Counsel inform FSA of a discussion with Counsel for Equitable about an objection that had been raised by a policyholder action group.

[**20:03**] FSA's Director of Insurance later suggests to the Director of GCD that they should delay questioning Equitable about the issue until the following week as he did not want to distract them from the other very high priority issues that had already been raised with them.

04/09/2001 [15:00] FSA meet Equitable.

According to FSA's note of the meeting, the agenda was largely driven by the Director of Insurance's letter of the same day on the issues remaining to be resolved on the compromise scheme before the FSA could decide not to intervene. The points discussed include:

- that Equitable needed to review the presentation of the quantification of mis-selling liabilities to make clear what the legal assessment was and to explain the basis for the calculation that was being used;
- that FSA questioned Equitable's approach to discounting the potential liability. However, it was noted that this question might be overtaken when FSA received further information from the independent assessment that was being carried out;
- that FSA seek confirmation that the solicitors acting for the non-GARs would not be recommending that the group should be separated into more than one class because of their different legal rights; and
- that: '*There was a continued concern about the potential difficulties of policyholders seeking to leave the society and bring claims in parallel to the scheme, in a way that would mean that they could avoid meeting part of the cost themselves, although the Society indicated it thought that the risks were unlikely to be sufficiently great (given quantum and uncertainty) to justify the PR difficulties of trying to address the problem by cutting policy values (either by increasing the financial adjuster or reducing terminal bonus further)*'.

FSA hope to be able to give a clearer indication of their position by 6 September 2001.

04/09/2001 [16:46] Equitable send FSA revised figures on pre-1975 policies for the compromise scheme documentation.

04/09/2001 [18:49] FSA send Counsel a brief analysis of why FSA thought that grossing up was not relevant to mis-selling claims.

04/09/2001 [entry 10] FSA's main supervisory file includes a note from the Appointed Actuary's company to Equitable about a question raised by FSA in relation to a draft paper that they had prepared, entitled '*Assessing Potential Cost if Non-GAR Policyholders Are Deemed to Have Been Mis-sold*' (dated 29 August 2001).

(Note: the paper dated 29 August 2001 was not held on any of FSA's files.)

The note explains that the draft paper:

> *... included a table on page 5 comparing asset shares and policy values. This estimated that accumulated Policy Values as at end 2000 were about 95% of Asset Shares looking back across policies sold in the period 1988-2001.*
>
> [FSA's Head of Actuarial Support] *subsequently asked for more information, comparing policy values and asset shares year by year.* [Equitable] *responded on 3 September with the information shown in Appendix A. The ratio of Policy Values to Asset Shares from* [Equitable's] *work averages about 88%, compared to the 95% above.* [The Head of Actuarial Support] *has queried the consistency of these figures.*

The Explanation

- [Equitable's] *figures were for single premiums, not regular premiums, and covered only pensions business, whereas the figures in* [the Appointed Actuary's company's] *note included* [with-profits] *annuities and Life business (ie all* [with-profits] *Non-GARs, as requested). To eliminate these differences, we have carried out an analysis which looks specifically at regular premium pensions business, and the results are shown overleaf. By inspection, the average ratio is about 89%, which is very close to the figures provided by* [Equitable].

	(A) Estimate of asset share after GAR costs	(B) Guaranteed Fund	(C) Final Bonus	(D) (B) + (C) Policy Value	(E) (C)/(D) Final Bonus %	(F) (D)/(A) PV as % of AS
Annual Premium commenced on - (Assumes this year's premiums are exposed for whole [year to date].)						
01/01/2000	1,485	1,649	-193	1,455	-13%	98%
01/01/1999	2,555	2,758	-326	2,431	-13%	95%
01/01/1998	3,762	3,923	-418	3,505	-12%	93%
01/01/1997	5,171	5,166	-447	4,719	-9%	91%
01/01/1996	6,724	6,503	-450	6,053	-7%	90%
01/01/1995	8,526	7,942	-421	7,522	-6%	88%
01/01/1994	10,243	9,492	-355	9,137	-4%	89%
01/01/1993	12,447	11,160	-198	10,962	-2%	88%
01/01/1992	15,045	12,972	34	13,006	0%	86%
01/01/1991	18,004	14,970	284	15,254	2%	85%
01/01/1990	20,641	17,193	579	17,772	3%	86%
01/01/1989	23,950	19,666	1,128	20,794	5%	87%
01/01/1988	27,742	22,418	1,797	24,215	7%	87%
01/01/1987	31,853	25,479	2,788	28,268	10%	89%
01/01/1986	36,790	28,917	4,639	33,556	14%	91%
01/01/1985	42,388	32,805	7,161	39,966	18%	94%
01/01/1984	48,961	37,201	10,554	47,755	22%	98%
01/01/1983	56,953	42,172	15,608	57,779	27%	101%
01/01/1982	67,519	47,792	22,031	69,823	32%	103%
01/01/1981	79,173	54,147	28,478	82,625	34%	104%
01/01/1980	93,403	61,334	38,978	100,312	39%	107%

- *We have also established that the class of* [with-profits] *annuity business exhibits different characteristics from the other life and pensions business. For* [with-profits] *Annuities, the policy value calculations in* [the Appointed Actuary's company's] *note make no cuts in policy values as at 16 July 2001 (compared to cuts of 16% and 14% for pensions and life). We understand this is consistent with what has happened in practice. Because of this, the* [with-profits] *annuity policy values are actually higher than asset shares. Hence, the aggregate ratio of policy values to asset share increases significantly when this class is included – as evidenced by* [the company's] *comparison. (We understand from the Society that it is intended to limit future additions to* [with-profits] *Annuity policy values in order to achieve a similar effect to the cuts already implemented for the other classes of business.)*

- *There are other smaller differences in the approach taken between the two sets of figures, but the explanations above are the most significant, and we believe they provide a suitable reconciliation.*
- *Please note that whichever set of figures is used has little bearing on the rest of* [the company's] *paper. That paper concentrated primarily on comparisons of ELAS against its peers. In particular, the comparisons of payouts used an entirely different data source. The paper did not make any market comparisons for* [with-profits] *annuities, as we have not seen any reliable data to do so.*

04/09/2001 [entry 11]	Legal Adviser F advises the Director of Insurance and the Director of GCD as to whether there were alternative sources of directors' and officers' cover for Equitable's Board (see 23/08/2001 [**entry 4**]). The Director of Insurance comments to the Head of Life Insurance '*Not much help here!*'.
04/09/2001 [entry 12]	An HMT official sends the Economic Secretary to the Treasury a note on the policyholder groups that she should meet and attaches draft letters inviting them to send representatives to a meeting.
04/09/2001 [22:09]	FSA's Chief Counsel A provides Line Manager E and the Head of Actuarial Support with comments on the latest launch documentation and actuarial report. The Chief Counsel's comments include that, where Equitable had said '*a reserve "would have to" be set aside to meet potential claims for misselling*', '*Presumably this should read "must" be set aside*'.
04/09/2001 [entry 14]	Equitable provide FSA with the timetable for the initial external review of the creditors' pack documents.
05/09/2001 [09:36]	Equitable's solicitors send FSA the latest versions of the documents and guidance for pension fund trustees.
05/09/2001 [entry 2]	FSA write to HMT, further to their letter of 17/08/2001, setting out their views on the relative advantages and disadvantages of administration and provisional liquidation of Equitable should the company consider that they could no longer continue without seeking the protection of the court. FSA say that their view, supported by Halifax and Equitable, was that there was significant advantage in administration and that the arrangements should be put in place, at least on a contingency basis. FSA explain that insurance companies could not currently be placed into administration and, as a result, the practice of provisional liquidation had developed instead. FSA say that there were significant presentational and substantive disadvantages in provisional liquidation, with the presentational factor being the most compelling. On the presentational advantages of administration, FSA say: *In the situation faced by the Equitable a compromise scheme under S425 of the Companies Act seems clearly to offer the best outcome for policyholders. While this could be promoted by either an Administrator or a Provisional Liquidator, there can be little doubt that promotion of such a scheme by an Administrator, whose very purpose is to achieve the continuation of the business, would be perceived very differently by policyholders than the appointment of a provisional liquidator, notwithstanding that he could also promote such a scheme.* On the substantive advantages of administration, under the heading '*Continuity of annuity payments*', FSA say:

There are some 139,000 Equitable life annuities in payment at present. Continuity of these payments, which for many pensioners will represent a significant proportion if not all, of their income, is therefore a significant issue. While, absent resolution of the Article 4 issue, there must be significant doubt as to whether either an Administrator or a Provisional Liquidator would be able to continue such payments without the explicit leave of the Court the position of an Administrator is likely to be somewhat more flexible in this respect since the current draft Order under FSMA 2000 s.360 specifically empowers the Administrator to make payments falling due as distributions on account of the policyholder's anticipated distribution in any eventual insolvency.

FSA argue that there are procedural and cost advantages in using administration. The third substantive advantage given is that administration was reversible. FSA state:

The solvency of a company carrying on long-term assurance business is a matter of judgement about future events rather than an empirical fact.

The Equitable is subject to the uncertain costs of providing GAR benefits and of compensating non-GAR policyholders, who might have been entitled to better warning of the GAR risks. If excessively cautious views are taken of these costs now, and if a s425 scheme cannot be put in place liquidation might be unavoidable, with very significant damage, disruption and cost. However, in the longer term these costs might prove less than feared. If so, the company could be restored to solvency. In practice, it is very difficult to see winding up proceedings, once commenced, being reversed. Administration, by contrast, is designed to provide temporary protection and is intentionally reversible.

FSA outline what they saw as the presentational and substantive disadvantages of administration, both of which were linked to not undertaking a period of public consultation on the legislation before it was made. FSA say that these disadvantages did not outweigh the advantages.

05/09/2001 [entry 3] FSA speak to Equitable and put the question to them: '*Have you been advised that you can legally calculate uplift not merely on contractual entitlement but also on the non contractual element of policy values, even if this could mean that uplift is not based evenly on legal entitlements? eg two people with the same legal entitlement get different uplifts because policy values have different non contractual elements?*'.

The question emanated from an objection to the compromise proposals from one of the policyholder action groups.

05/09/2001 [13:13] PIA inform FSA that the Association of Independent Financial Advisers had commented that FSA's factsheet about Equitable, issued the previous month, had been very useful but that it had not addressed the question raised by Managing Director A on 08/08/2001 [**16:44**].

05/09/2001 [entry 5] Line Manager E provides FSA's Chairman and Managing Director B with a paper on the compromise scheme. The paper states that FSA needed to consider:

a) whether to exercise formal powers to intervene

i) to stop the Society going ahead;

ii) to require it to modify its proposals

iii) requiring it to modify the presentation of its proposals,

b) the FSA's public position about the scheme and the issues arising,

c) what the FSA should publish at the time of the launch on possible mis-selling by Equitable and on the wider implications for the industry.

The paper continues under the following headings.

<u>Objectives</u>
It is noted that FSA had said publicly that they saw a compromise scheme as being '*a positive way for the Society to resolve its difficulties*' and, therefore, that they were keen to see a '*decent*' scheme adopted. Line Manager E says that FSA needed to ensure that their approach '*best meets the interests of policyholders, the Society and the wider industry in a way consistent with the FSA's statutory objectives*'.

<u>Timing</u>
It is noted that FSA needed to indicate their position to Equitable before the Board meeting planned for 7 September 2001, while noting that '*In deciding what to do now, we need to bear in mind the stance we may take later*'.

<u>Recommendations</u>
Line Manager E writes:

> *If we considered that the scheme being proposed was unfair or unreasonable, we would need to consider intervening to stop the consultation. However, subject to the satisfactory resolution of the outstanding issues relating to mis-selling liabilities, which are fundamental to the whole package, we do not consider that there are any substantially unreasonable elements of the proposed scheme to which we ought to object. We should not therefore use our powers to prevent the Society going ahead with the consultation, or at this stage to require it to modify the proposals on which it will consult. (N.B. we do not need to determine that there <u>has</u> been mis-selling. The mere fact that leading Counsel will have opined that there is a substantial risk of successful claims is enough to make it reasonable for the Society to compromise these.)*

The paper continues:

> *The only circumstances in which we believe that it would be appropriate to compel changes to the documents would be:*
>
> > *a) if they were misrepresenting the position of the FSA or its legal advisers; or*
> >
> > *b) if they gave a misleading picture about the scheme or the position of the society (for example by overstating the legal uncertainties on mis-selling or giving a misleading impression about the financial position before or after the scheme, or simply by omission).*

FSA state that they did not consider the information to be misleading or that it misrepresented their position. They set out the public line that should be taken:

> *It is not the FSA's role to design the scheme, but rather to consider whether the scheme devised by the Society is acceptable to the FSA and whether it is appropriate to exercise any of the powers available to us, including seeking to make representations before the court.*

<u>Basis of FSA's powers</u>
The paper sets out the powers under which FSA could intervene in the compromise scheme deriving from ICA 1982, FS Act 1986 and the PIA rulebook. FSA state that the basis on which they would be likely to intervene would be that: (a) the launch of the consultation, whether because of the substance or the presentation, would of itself be damaging (or potentially damaging) to the interests of policyholders; or (b) the scheme had little prospect of success and that the launch of such a scheme could itself be damaging.

Our position
The paper reiterates FSA's stated view that such a scheme was the best way for the Society to overcome its difficulties, noting:

> *The FSA's support for a scheme on this basis would provide a degree of confidence that may well encourage policyholders to vote in favour. However, that could be undermined if we were seen to have been too ready to accept the Society's approach or if we were to change our position in the future, which we might in the light of the consultation. Such a course of action could also cause wider damage to confidence in the FSA and the system generally.*

The scheme proposals
The paper explains the proposals for the scheme that had been put forward under the sections 'The GAR Scheme', 'The non-GAR scheme' and 'The combined scheme'.

Other views
The paper notes that Halifax and the independent actuary for the scheme had had similar concerns to those expressed by FSA, particularly on presentational issues.

05/09/2001 [18:55] FSA's Chief Counsel A asks the Head of Life Insurance if he would be passing on to Equitable comments on the drafting of the compromise scheme documents that had been made at the meeting with FSA's Chairman. Chief Counsel A suggests two points to raise.

05/09/2001 [19:13] FSA's Chief Counsel A informs the Head of Actuarial Support that Counsel was happy to meet with the Independent Actuary for the compromise scheme to answer any questions about his and Counsel for Equitable's opinions. The Chief Counsel asks him to let the actuary know.

The following morning [at **08:58**], the Head of Actuarial Support says that he would be interested in attending such a meeting '*so that we can begin to make some sort of sensible quantification of the balance sheet provision*'. [**12:17**] Chief Counsel A says that he saw no reason why the Head of Actuarial Support should not attend a meeting.

06/09/2001 [09:52] FSA write to Equitable stating, as had been discussed the previous evening, that '*it is essential (and could be a cause for us to exercise formal intervention powers if not dealt with) that you remove the reference ... to endorsement by the FSA's legal advisers of the Society proposal ... to determine the loss potentially attributable to misselling*'. FSA raise two further drafting points that they wanted to see amended.

06/09/2001 [10:18] FSA write to Equitable's advisers about the timing of publication of Counsels' opinions on mis-selling. FSA say that they expected to publish their Counsel's opinion at the same time as the launch documents for the compromise scheme were published '*to ensure a coherent and comprehensive FSA public position in response to the launch*'. FSA also state that they were satisfied that consultation had taken place in a way which had maintained the independence of Counsel.

06/09/2001 [14:35] HMT offer some comments on FSA's question and answer briefing.

06/09/2001 [15:37] The actuaries conducting the mis-selling review send FSA's Head of Actuarial Support an updated paper.

(Note: the paper that was sent was not held on any of FSA's files.)

06/09/2001 [15:55] FSA's Chief Counsel B circulates a draft statement, '*Equitable Review and Redress: Comparing the Compromise Scheme and Individual Redress*', further to the one prepared on 30/08/2001 [**16:41**]. Chief Counsel B says that he thought that such a statement: '*needs to be quite explicit about what is involved and needs to acknowledge the point that in any individual claim* *brought by way of litigation or, perhaps through the Ombudsman, there would be no discount to reflect the uncertainties of litigation. This is something which I think goes to the reasonableness of the compromise*'. The Chief Counsel suggests that the statement could be discussed at the daily round-up meeting.

The statement reads:

> *The FSA is aware that policyholders assessing the merits of the Society's compromise proposals may wish to gauge what their position might be if, instead, the FSA were to take action with a view to ensuring that ... the Society paid compensation to all those to whom it may be due in consequence of the mis-selling of non-gar policies. One option available to the FSA would be to require the Society proactively to review the sale of all policies to non-gar policyholders. This would involve examining in each case the probability of there having been a failure to provide the policyholder with information or advice sufficient to meet the regulatory standards in force at the time and whether the investor would have been likely to have acted differently had adequate information and advice been provided. It would also be necessary for the Society to examine in each case whether the policyholder has as a result suffered financial loss. Such a proactive review would not necessarily result in compensation or significant compensation being paid to all non-gar policyholders.*
>
> *In the FSA's view, based upon the legal advice which it has received, the amount of compensation which is likely to be due in the majority of cases would be based upon a comparison between the current value of the Society's policy and the value of a comparable policy from another provider. This comparison could conveniently and appropriately be made by reference to a suitable industry average return. The FSA's advice is that in most cases it would be likely to be necessary to restrict compensation to an amount which is no greater than that attributable to the impact of the Society meeting the full cost of the GAR policies in accordance with the decision of the House of Lords'.*
>
> *It appears that the Society has broadly followed these principles in its compromise scheme proposals. However the scheme also proceeds on the footing that, rather than cash compensation, policyholders should accept an adjustment to their policy value in return for giving up mis-selling claims relating to the cost of meeting the gar policies. The value of the proposed adjustment is discounted to take account of an estimate of the chances of mis-selling claims succeeding and also the probability that the economic impact of compensation would in any event fall to be borne (to the extent of 73%) by non-gar policyholders collectively. On the basis of the present proposals this leads to the Society placing an overall value on the potential mis-selling claims of [£846m] which after applying the discounting factors is reduced to [£400m]. This sum would then be applied to produce an uplift of 2.5% across all non-gar policy values.*
>
> *If instead the Society were to examine individual cases and pay compensation where it is due, on the same principles, the compensation amount would not be substantially different but would obviously not fall to be adjusted by reference to the chances of the claim being successful and nor would there be a deduction to reflect the economic impact that non-gar policyholders as a class will have to bear (being a significant proportion of the costs incurred by the Society in meeting such claims). There would however be some commensurate economic effects on non-gar policyholders. For example, the institution of a systematic review of policies would be very likely to lead to a reduction in current policy values and the amounts which in the future would be available to the Society to distribute by way of discretionary bonus. Both would be reduced by the amounts paid out by way of compensation and by the provisions which the Society would be obliged to make.*

Policyholders would therefore be wrong to conclude that the compromise proposals would necessarily involve them being treated in a significantly less advantageous way than if their cases were individually considered as part of a proactive review of individual cases. In particular policyholders should not view the proposed discount to reflect the fact that non-gar policyholders could pay 73% of the claims as being inconsistent with the overall result if they were successful in pursuing an individual claim. As is explained elsewhere, the FSA acknowledges that in any compromise of this kind there will inevitably be trade off between the potential and uncertain value of claims which might otherwise be successfully pursued and the amount available by way of compromise. In the opinion of the FSA the proposal in the scheme to discount the value of the policy uplift by a further factor to reflect the uncertainties of litigation is a factor which falls within what is a reasonable range of possibilities and is a figure on which it is appropriate for the Society to consult.

06/09/2001 [17:04] Equitable's advisers for the compromise scheme send FSA the latest versions of the compromise scheme documentation.

[**18:30**] Following FSA's daily round-up meeting [at **17:00**], FSA's Head of Life Insurance says that it had been agreed that there remained an issue regarding claims from policyholders who had left, or who might leave, before the compromise scheme came into effect. The Head of Life Insurance notes that it had also been agreed that they would review the relevant parts of Counsel for Equitable's opinion over the weekend and would meet on Monday to discuss, before putting the issue to Equitable at the meeting planned for 11/09/2001.

[**22:09**] In reply, Chief Counsel A writes:

Unfortunately (and sorry if I am stepping on your toes [Chief Counsel B]*) it rather looks as though we will need to be ready (at a minimum) to say that we disagree with the basic principles for compensation outlined at pages 13 and 20 of the Background* [document]*, while acknowledging that it is possible that nevertheless, on the* [Counsel for FSA's] *theory, we could end up at the same point or near it (or could we – see paras 5.2.1 and 5.3?). Or does anyone think we should recommend to* [FSA's Chairman] *that we should intervene? My first instinct is to say not, because the issue will be clear to many once the Opinions are published (and accordingly transparent for the purposes of the consultation). Should we go back to* [the Chairman] *in any event?*

06/09/2001 [18:42] FSA's Head of Actuarial Support writes to Counsel, having given some further thought, following their discussion that afternoon, to the issue of redress for non-GAR policyholders. The Head of Actuarial Support sets out his understanding of the position to be:

1) If a Court were to award damages to the non-GARs, then this would most likely take the form of a cash payment equivalent to the loss in "policy value" sustained by the non-GAR policies. This would have a potential aggregate value of around £850 million if it were based on the "loss" of final bonus last year, or around £200 million if it only took account of the "loss" of the 4% declared bonus that might have been awarded in the absence of the [House of Lords'] *judgment.*

2) This cash payment would reduce the amount of assets available to fund the potential final bonuses to non-GAR policyholders. This means that in principle, all policy values might be cut by around 4% (though I acknowledge that there is a separate issue lurking around about whether it is justifiable to base these reductions on the total policy value and thereby for example have "policy values" for more recent policies that are below the guaranteed funds). Accordingly, the non-GAR policies would gain an immediate cash payment but lose some potential final bonus.

3) Another consequence would be that the "free reserves" on the balance sheet would be reduced as well by the £850 million cash payment. Therefore, there would be an increased risk of insolvency which would of course have an adverse effect on all continuing policyholders.

4) Under the proposed compromise scheme, the non-GAR policyholders will instead receive a combination of a 4% guaranteed bonus addition to their basic benefits (or 0.5% for those who have already received a 3.5% "guaranteed investment return"), together with a 1.5% increase in policy values (plus a further 1% in respect of the Halifax money). The effect on the balance sheet for in-force policies (ie before considering the more difficult issue of those who have left or may leave before the compromise scheme is agreed) is expected to be a reduction in free reserves of around £200 million in respect of mis-selling costs (ie the value of the above guaranteed bonus).

5) It is very difficult then to make a direct comparison of these two alternatives (namely the cash payment or the compromise scheme) as they have a slightly different effect on (a) the guaranteed benefits, (b) the potential final bonus (and hence payouts) and (c) the balance sheet (and hence the risk of insolvency).

6) This does all though highlight the problem that a significant number of policyholders may elect to leave before the scheme is approved, either on a contractual date (if available) or by taking early surrender (when they would be subject to the financial adjuster). These policyholders would then have the possibility of obtaining a cash payment by way of damages without suffering a loss in their benefits (unless the society now reduces either the final bonus or the financial adjuster and the policyholder cannot then claim for additional damages as a result of this change).

06/09/2001 [22:20]	Equitable inform FSA that they have had no further meetings or discussions with the Appointed Actuary's company following their presentation on 24/08/2001. Equitable say that they had treated the presentation as final and believed that FSA should be entitled to do the same.
07/09/2001 [entry 1]	Equitable write to FSA regarding changes to the Board of University Life.
07/09/2001 [09:22]	Further to Chief Counsel A's comments of 06/09/2001 [**22:09**], FSA's Head of Life Insurance says that he thought Equitable were '*quite clear and transparent about the legal advice, and how they had reached their basis for compensation; and that on this basis we would not be justified in intervening*'. He arranges a meeting with Managing Director B at 11:30 to discuss this.

[**11:32**] Chief Counsel B provides a summary of the outcome of a discussion between legal advisers, which was subsequently agreed by Counsel. The Chief Counsel says:

We doubt very much whether there is a fundamental problem which should cause us to object to the publication of the document. But it is [a] *great pity that the Equitable has expressed itself in this way.*

The problem is that the drafting leaves room for the gars to conclude that the non-gars have not suffered any financial loss. On this basis the gars might well question the basis for offering any compromise to the [non] *gars.*

It would be preferable if, notwithstanding the qualifications the Society were to say in plainer terms that ... on the basis of Option 3 it is satisfied that the non gars have suffered a degree of loss which is at least as great as the transfer of value. This is we understand (but could [FSA's Head of Actuarial Support] *please confirm) where the* [Appointed Actuary's company's] *analysis leads and is in any event supportable by comparing the option 1 finding with option 3 (the with profit fund has in general terms performed as well as competitors but pay outs for non gars are materially less than for comparables (subject to the qualifications)).*

07/09/2001 [09:25] FSA's Head of Life Insurance informs other officials that Equitable had confirmed the previous evening that no further work had been done on the independent report into their financial position, commenting that: '*This is Equitable's response to my request for a final version of the "draft" notes left with us by* [the Appointed Actuary's company] *on Equitable's financial position. We can take those notes as now final*'.

[**11:58**] The Insolvency Practitioner suggests: '*I think we should ask for a copy of the report without "draft" stamped all over it but should accept that it might come with a covering letter from* [the Appointed Actuary's company] *saying that the work we asked for on sensitivities has not been done (and any other caveats* [that the Appointed Actuary's company] *think appropriate). In other words, we will not put the Society to the expense of more work on sensitivities since although that would be useful it is not essential; but we do need something which can be held up to scrutiny as the basis for the FSA saying that it relied on it as comfort that the Society was solvent*'.

07/09/2001 [19:26] FSA's Insolvency Practitioner provides the following comments on the updated paper on mis-selling quantification (see 06/09/2001 [**15:37**]):

> *(1) I would still like to capture enough information to work out how much non-GAR misselling claims might be limited by the £48,000 cap under the PIA indemnity scheme. Can we follow this up once the launch document is out and things are less frantic. Better to have information available should the stock market falls leave the Society exposed to solvency issues.*
>
> *(2) It's still difficult to get a grip on the quantum of misselling liabilities without knowing how much is paid in premiums year by year: ie what weighting do you give the % shortfalls for investments made at different times? However, this seems a second-order consideration.*
>
> *(3) I think they might have double discounted the presumed over-declaration of bonuses in the industry: ie ... they illustrate a reduction in the Society's policy values of 10% (presumably the 16% reduction on 16 July less a presumed 6% reduction yet to filter through in the industry). This produces % differences for monthly premiums of -4%, -8% and -11% for 5, 10 and 13 year terms. The table at the bottom of page 11 then produces a weighted average of these % differences combined with single premium % differences. The result is -6%, -11% and -12%. However, they then go on to discount the effect again on page 12 producing weighted averages of -2%, -6% and -7%.*
>
> *Thus, I think the true position is that the misselling liabilities are significantly above the GAR cost (of 5%).*
>
> *(4) We then need to consider what value to give the "unique flexibility" of the Society's policies. The way I see this, the flexibility is the ability to retire between a wide range of dates. For some policyholders, retirement flexibility will be irrelevant to their circumstances and therefore they would attach no value to this option. For others, particularly the self employed I would suggest, this would be a crucial feature – so much so that they would be likely to remain with the Society even if they knew of the GAR risks if there truly is no comparable product on the market. In which case they would be hard-pushed to demonstrate a loss because they would not have followed a different course of action. I think policyholders will fall into one extreme or the other – at which the "flexibility" of the product has little value. Thus, I do not think that there should be much discounting of the misselling liabilities because of this product feature. ie the misselling liabilities will remain above the GAR cost and the "*[Counsel for FSA] *cap".*

My conclusion is therefore that the [Appointed Actuary's company's] *work supports the approach taken by* [Chief Counsel B] *in his excellent note of 6 September: a draft statement which the FSA could make following the launch document to the effect that policyholders should not expect more or less than is offered under the scheme were they to seek individual redress, (predicated on the assumption that compensation would be capped by reference to the GAR cost).*

07/09/2001 [21:01] FSA write to Equitable following discussion that morning to express their concern about one aspect of the drafting of the latest compromise scheme documentation.

07/09/2001 [entry 6] FSA provide Equitable with a '*comfort*' letter for them to show to Halifax. The letter confirms that FSA do not object to Equitable proceeding with the proposed consultation on the compromise scheme, subject to the points raised in their earlier letter of that day being satisfactorily addressed.

10/09/2001 [entry 1] FSA meet the Financial Ombudsman Service to '*bring them up to speed on the issues surrounding Equitable Life*'. FSA's note records:

[The Financial Ombudsman Service] *said that they had just over 400 complaints about misselling by Equitable (these were "converted" cases, which had been accepted as complaints for* [the Financial Ombudsman Service] *to deal with). Most complaints related to a period during and after the litigation, and were from non-GAR policy holders who complained that their potential exposure had not been disclosed.* [The Financial Ombudsman Service] *had "parked" these complaints, on the basis that it was not sensible to deal with them while other enquiries (such as the FSA's independent enquiry) were proceeding. They were keen to continue to put on hold applications in the pipeline, and to dissuade new claimants coming forward, until there was a clearer basis on which to decide on how to proceed.*

FSA also record that:

[The Financial Ombudsman Service] *suggested that the normal basis for compensation should be repayment of premiums plus interest. We commented that this may be a possible appropriate remedy for those who had taken out policies very recently; but it was not appropriate for longer term policies, and therefore would not be suitable as a basis for an across the board settlement.*

10/09/2001 [09:54] FSA's Head of Life Insurance asks Chief Counsel B if he could send Equitable the latest part of Counsel's opinion on grossing up. The Head of Life Insurance explains that Equitable were worried by what their Counsel had said on this point and that they were hoping to get a different opinion from other Counsel.

The Head of Life Insurance says that a change to the compromise scheme launch documentation requested by Equitable had been accurate, but asks whether it went far enough to meet FSA's concerns. He says that the point in question was to the effect of: '*The starting point for fair value compensation for non-GAR policyholders as a group, is a comparison to industry payouts. There are practical difficulties with this approach, and these are discussed in section [5] (of the background document)*'.

[**16:14**] Chief Counsel B replies that he believed FSA could '*live with*' Equitable's description of the principles for compensation.

[**19:41**] FSA inform Equitable that they did not regard the statement as ideal but note that it was factually accurate. FSA also confirm that they had no issue with two other amendments to the documentation.

10/09/2001 [10:07]	Equitable send FSA the weekly reports on customer servicing.
10/09/2001 [10:59]	FSA's Chief Counsel B writes to the Head of Life Insurance about a request from the Guernsey regulators on 7 September 2001 to have sight of Counsel for FSA's opinion on mis-selling. [**11:03**] Line Manager E tells Chief Counsel B that he had been '*thinking about what we needed to do about alerting other regulatory bodies. To a degree,* [Counsel for Equitable/Counsel for FSA] *may not be very relevant to them – since they relate to issues that do not directly affect Guernsey, Germany or Ireland*'. The Line Manager notes, however, that there were wider issues relating to the compromise scheme and suggests that the best approach might be for Equitable to provide advance copies of the advice to their regulatory supervisor in those countries. Line Manager E also suggests that FSA could provide the other regulatory bodies with a copy of their question and answer briefing note.
10/09/2001 [16:56]	An FSA official circulates the latest version of FSA's information sheet '*Questions and answers about Equitable Life*'. The official explains that amendments had been made to paragraphs 7 ('*What has the FSA done to regulate Equitable Life and to protect policyholders?*') and 11 ('*Is the Government going to step in if Equitable Life becomes insolvent?*'), and that paragraph 9 ('*What about the Independent Inquiry?*') had been added. The official asks for comments. The Head of Life Insurance suggests some amendments the following day.
10/09/2001 [19:30]	FSA's Director of Insurance writes to the Head of Life Insurance about guidance from FSA to accompany the publication of Counsels' opinions. The Director of Insurance says that the guidance produced by Chief Counsel B on 17/08/2001 [**18:02**] could be published subject to a few minor amendments.
10/09/2001 [23:24]	FSA's Press Office seek comments on a draft question and answer briefing note on the compromise scheme.
11/09/2001 [10:34]	FSA send Equitable a suggested agenda for their meeting later that day. The items are: grossing up; policyholders who leave with their claim for mis-selling uncompromised; premiums plus interest as a method of compensation; and advice versus information as a basis for compensation claims.
11/09/2001 [13:52]	FSA's Chief Counsel B circulates '*what is probably*' the penultimate draft of Counsel's opinion.
11/09/2001 [14:00]	FSA and Equitable get together for their weekly meeting to discuss latest developments. FSA's record of the meeting includes the following. Quantification of mis-selling liabilities is discussed and it was '*noted that much turned on whether Equitable's salesforce had given advice*' and it is '*accepted that the "advice" given by the tied sales force ... was probably not "advice" in the sense used by our respective Counsel, although the intention was that advice claims (if any) would be bound within the terms of the scheme*'. FSA question whether Equitable's approach was reasonable when there was no clear statement of the value that was being given up in exchange for the right to pursue mis-selling claims. Equitable say that they, and their Counsel, were '*comfortable that the offer was a commercial judgement within what they had calculated to be a reasonable range for compensation if it went to litigation*'. Equitable recognise that they would have to deal with the potential liabilities in their Companies Act half-year accounts and in their regulatory returns. FSA record that Equitable had '*discussed with the audit partner and they were minded to include a figure based on the*

	amount taken as the starting point for the scheme (ie £850 million), with appropriate notes to explain the uncertainty'. FSA raise the question of whether return of premiums plus interest could be used as a basis for compensation for more recent sales. Equitable express doubts about the validity of such an approach, but agree that the issue should be considered by their Counsel. FSA ask '*if the Society had any further thoughts about the possibility of seeking to prevent policyholders leaving the with-profits fund and taking their mis-selling claims intact*'. Equitable's Chief Executive '*noted the difficulties, and said that they had not seen a way to solve the problem. He had been advised that it was not possible to ask policyholders to waive all their rights if they surrendered because of the Unfair Contract Terms regulations. He agreed that an increase in the MVA was a possibility, but that was unfair in that it attacked those surrendering early while those with maturing policies got away without penalty. They agreed to consider this further, but they thought the risk of taking action were likely to be too great compared with sitting tight. (They noted that with markets falling below 5,000, the cover currently provided by the 7.5% adjustment was thin)*'. FSA say that they would expect Equitable to speak to the Guernsey, German and Republic of Ireland regulators. FSA ask if Equitable could '*arrange for the presentation from* [the Appointed Actuary's company] *to be finalised*', to which they agree. Equitable mention that Standard & Poor's had announced an intention to issue a temporary downgrade of their rating for the company when the compromise scheme documentation was published. FSA '*made it clear that we were not in a position to influence* [Standard & Poor's] *but agreed that the announcement would not be helpful*'.
11/09/2001 [14:28]	PIA provide FSA's Press Office with some comments on the draft question and answer briefing note about the compromise scheme.
11/09/2001 [entry 5]	FSA meet the Association of British Insurers to brief them about Equitable's progress on the compromise scheme and about the legal analysis of Counsel for FSA's opinion on mis-selling by Equitable. The Association express alarm at '*very wide and severe*' consequences of the legal analysis for the industry.
11/09/2001 [17:21]	FSA's Chief Counsel B responds to the Director of Insurance's note of the previous day about the publication of FSA guidance on mis-selling. The Chief Counsel puts forward suggestions as to how this could be done. PIA also offer some comments.
11/09/2001 [18:50]	FSA hold a round-up meeting and agree the work that needed to be carried out on the compromise scheme. The work planned includes publishing: a press notice giving FSA comment and preparing a related Q&A; guidance to the industry on mis-selling in the light of Counsels' opinions; a letter to Chief Executives; and Counsel for FSA's opinion.
12/09/2001 [12:10]	FSA's Head of Life Insurance circulates various documents about the compromise scheme ahead of a meeting of FSA planned for the following day.
12/09/2001 [12:17]	While prioritising his work, Line Manager E uncovers a message about Equitable's request for a future profits implicit item for possible use in their 2001 returns. The Line Manager asks Scrutinising Actuary F whether either of them had asked Equitable some of the questions and whether the '*ball is currently in their court*'.

[**17:22**] Scrutinising Actuary F explains that he had asked the question on 19/07/2001 and had received a reply on 20/07/2001 and, as the reply had not been sufficient to give FSA the comfort they required, he had written again on 21/08/2001. He suggests that one of them should chase Equitable for a reply.

[**17:31**] Line Manager E says that he thought that the Scrutinising Actuary was on the case, and that:

> *As for chasing, I am not inclined to do much – there will not be much enthusiasm on 7th floor for approving the recommendation to the Treasury (or for FSA to sign off on a waiver post* [FSMA 2000 coming into force]*) just at the moment, and lets face it, if the Society does not provide the information, we cannot process the application. I am not around after this week, until 3rd October, so perhaps we can take it up then if you have not heard in the meantime.*

12/09/2001 [14:59]	An FSA actuary sends the Head of Actuarial Support his thoughts on the industry guidance that was to be issued with the publication of the opinions of Counsel both for the Society and for FSA.
12/09/2001 [15:27]	FSA's Head of Actuarial Support informs officials of a telephone call from Equitable, saying: *I have just spoken with* [Equitable's Appointed Actuary] *who tells me that Equitable are about to increase their financial adjuster from 7.5% to 10% in view of recent market moves ...* *Regarding their overall solvency,* [he] *believes that their margin of solvency will remain covered (albeit with a fairly low mis-selling provision) as long as the FTSE 100 remains above 4500. (I understand that Companies Act solvency would similarly be maintained down to around an index level of 4000).* [**15:39**] In response to Line Manager E, the Head of Actuarial Support understands that '*about to*' meant mid-afternoon that day. [**16:18**] Line Manager E reports that the announcement had been made at 16:00. The Line Manager says that he had checked FSA's fact sheet, which did not mention the market value adjuster, and he suggests that FSA's website might be in need of updating.
12/09/2001 [15:46]	In response to the notes of the meeting with the Financial Ombudsman Service on 10/09/2001, Chief Counsel A says: '*Just to note for the record that we discussed later (at an Equitable Wrap-up meeting) that the remedy of premiums plus interest might not be appropriate even for relatively new policyholders*'.
12/09/2001 [16:58]	FSA's Chief Counsel B writes to Counsel seeking to clarify some parts of his opinion.
12/09/2001 [17:07]	FSA's Chief Counsel B tells the Head of Life Insurance that FSA needed to ask Equitable formally for their consent to publish Counsel's opinion. He provides the possible wording to use.
12/09/2001 [17:40]	The Economic Secretary to the Treasury seeks an update on a number of issues, including the timing of the publication of the compromise deal and the impact of the FTSE 100 Index fall on Equitable's solvency position. On the latter, the advice sought is on '*how far the FTSE has to fall before the* [Equitable's] *solvency looks questionable – and on the sensitivity to further changes*'.

13/09/2001 [entry 1]	FSA's Head of Insurance Policy circulates a report by a tax expert on major tax issues related to Equitable going into administration, liquidation or being wound up. The conclusions reached by the report are: *The likely options for* [Equitable] *can be broadly divided between those which fall short of a "stop order" on a winding up, and following such an order. Up to that cut off point, the tax impact is low key. Following a stop order there would be a significant tax impact on both* [Equitable] *and most policyholders (who would be creditors at that point).* *The Revenue do not appear willing to offer any concessions with the policyholders' tax position on a winding up, which seems unduly harsh.* *Winding up a mutual life office is untested in tax terms, and certainty cannot be achieved. However, the conclusions are likely some 95% certain post a stop order, and somewhat less at some 75% certain prior to that point.*
13/09/2001 [10:01]	FSA write to Equitable to finalise the formalisation of the monthly reporting requirements. FSA query whether they had received an answer to one suggested change. [**21:54**] Equitable confirm that they would make the change going forward and promise to get back to FSA on whether they would be able to provide certain separate information on GAR and non-GAR policies.
13/09/2001 [13:33]	FSA's Head of Actuarial Support forwards the actuary's comments of 12/09/2001 [**14:59**] about guidance to the Director of Insurance, Line Manager E and the Head of Life Insurance.
13/09/2001 [17:01]	FSA speak to Equitable, who provide them with a copy of Counsel's opinion, dated 21 August 2001, on: *... a point relating to damages for alleged mis-selling.* *The following assumptions are not apparently in dispute:* • *A is a non-GAR who has a claim for 100.* • *The Society ... is liable to A for 100.* • [Equitable] *can recover 100 from members as a whole, including GARs and non-GARs.* • *Such recovery can take the form of withholding bonuses and in the case of mis-selling litigation is likely to do so.* • *A very large number of policyholders, being all the non-GARs, have similar claims to A.* *The question in dispute is whether each of the non-GAR members from whom bonus is withheld can claim the amount of such withheld bonus as further damages from* [Equitable]. The opinion given is that '[A non-GAR policyholder] *cannot claim as part of his damages the loss suffered by him as a result of mis-selling to the other non-GARs*' (subject to some possible exceptions). FSA note that Equitable had also just received Counsel's opinion on the proposed compromise scheme and that Equitable promised to send FSA a copy, which Equitable subsequently do.

The opinion, marked '*draft 13 Sept 2001*', includes Counsel's view on whether the classes of creditor to be summoned to vote in meetings on the proposed scheme had been correctly constituted. In relation to GAR policyholders, the opinion states:

> *Each GAR policyholder has different rights under his policy. But there are groups of GAR policyholders with similar GAR rights. These groups are those with GAR rights calculated on a similar interest rate basis and those with the ability to choose a flexible form of GAR annuity. The value of GAR rights will vary depending on which group the policyholder falls in and it is proposed to vary the uplift for each group accordingly. The value of the GAR rights will further vary with the age of the policyholder and the uplift within certain of the groups will also vary accordingly. The result is that GAR policyholders will receive* [an] *uplift in an amount which equals an actuarially justifiable estimate of his GAR rights.*
>
> *On* [that] *basis we are of the opinion that there is a reasonable prospect that the Court will be satisfied that GAR policyholders form a single class.*

In relation to non-GAR policyholders, the opinion states:

> *We have previously expressed the view that, in relation to non-GAR policyholders, the issue of class determination is more difficult ...*
>
> *In particular, as appears from* [the Society's Counsel's opinion]*, non-GAR policyholders have several different potential mis-selling claims with a very wide range of merits. We anticipate that a credible challenge to the constitution of the non-GAR class could be made by a dissenting non-GAR policyholder who presented evidence to the Court that he had a claim against the Society with a very high likelihood of success. The policyholder would argue that he is not in the same class as, for example, a non-GAR policyholder whose policy was purchased before 1980 and whose claim had virtually no prospect of success.*
>
> *On this basis we initially expressed the view that it would be preferable to offer a percentage uplift to all non-GAR policyholders which varied with certain important aspects of their claims. This would be similar to the variable uplift proposed for GAR policyholders. We were subsequently informed that a scheme which sought to offer differential percentage uplifts to non-GAR policyholders is not likely to be supported by the requisite majority of creditors. In view of the fact, and considering a number of other matters relating to the reasonableness or otherwise of a flat percentage uplift to non-GAR policyholders* [*As set out in paragraph 7 of the Joint Note*]*, we expressed the view and continue to be of the view that the court is likely to be satisfied that the classes have been correctly constituted.*

13/09/2001 [17:36] FSA's Chief Counsel B provides FSA's Press Office with some comments on the draft question and answer briefing on the compromise scheme.

13/09/2001 [17:51] FSA's Press Office circulate the latest drafts of a press statement to be made by FSA on the proposed compromise scheme and the question and answer briefing.

[**21:33**] Chief Counsel A suggests some amendments.

14/09/2001 [11:57] FSA's Insolvency Practitioner suggests to Line Manager E, the Head of Life Insurance and the Head of Actuarial Support that FSA should '*emphasise, and enforce*' their need for information on policy values and terminal bonus to be properly provided by Equitable in the monthly financial reporting. The Insolvency Practitioner notes that Equitable had not provided the required information in June and July and were thus in breach of the section 45 Notice issued.

The Insolvency Practitioner estimates that policy values were currently 10% too high.

14/09/2001 [12:57] FSA's Director of Insurance circulates a proposed FSA statement '*Reviewing Guaranteed Annuity Business and With-Profit Disclosure*'.

[**13:41**] Chief Counsel A provides drafting comments.

14/09/2001 [16:35] Line Manager E sends FSA's Chairman copies of FSA's proposed statements, press lines, guidance and question and answer briefing on the compromise scheme.

[**20:09**] Chief Counsel A provides a revision to the suggested answer to the question: '*How could you have allowed mis-selling to go on for so long without doing anything about it?*'. The suggested answer reads:

> *It has only been possible now (following the clarification of the Equitable's legal position by the House of Lords) to form a provisional view about whether policies sold to non-GAR policyholders have been missold. Some 6000 out of [26,000?] policies were sold following the* [House of Lords'] *judgement. Those non-GAR policyholders are included in the compromise scheme. The regulators judged at the time that the closure of the Equitable to new business immediately following the* [House of Lords'] *judgement would have prejudiced its chances of finding a buyer – where a sale would, of course, have injected money into the fund.*

14/09/2001 [19:31] Equitable confirm that they would make the amendments requested to the monthly reporting requirements.

14/09/2001 [entry 5] Equitable's Appointed Actuary sends a letter to FSA's Head of Actuarial Support (copied to their auditors), informing them of the existence of a side letter to the reinsurance treaty. The Appointed Actuary explains that Equitable had:

> *... sought legal* [advice] *on implications of this side letter, and they are unclear, although we are advised that the side letter is arguably of no effect.*
>
> *So shortly after the terrible events in America, you will appreciate that the reinsurance parent company is fully stretched managing its exposure. We have received a written indication that the Irish European Reinsurance Co Ltd and its parent want to find out clarification that removes any doubt as to the implications of the side letter.*

14/09/2001 [entry 6] FSA's Head of Life Insurance sends Chief Counsel B a note about a telephone conversation that he had had with Equitable. The Society had told him that it could find no evidence that Equitable had modified their sales literature after the House of Lords' ruling. The Head of Life Insurance records:

> [Equitable's Finance Director] *was concerned about this; but he also remarked that he could find no evidence that the FSA had required any modification to the sales literature. He asked me what the FSA had done in this regard. I said that I did not believe that the FSA had put any specific requirements on Equitable Life with respect to its sales literature after the House of Lords' judgement ...*

The Head of Life Insurance tells Chief Counsel B that he had spoken to PIA about this who:

> *... confirmed my recollections. PIA had visited Equitable just before the House of Lords' judgement in June, and did not raise the question of the consequences of the House of Lords' judgement, as they understood that Equitable were working on that themselves. After the judgement, the view was that the Equitable was solvent, that they were likely to succeed in securing a buyer, and that therefore there was no reason why they should not go on selling. But it was the Equitable's responsibility to ensure compliance with the PIA rules at all times.*

The Head of Life Insurance says:

> *I do not know why* [the Finance Director] *asked about the FSA's position but I am inclined to be cautious in responding to him. My inclination is to go back to him in writing to say that insurance companies are responsible at all times for ensuring that they are compliant with PIA rules; this applied to the Equitable after the House of Lords' judgement just as much as any other time; and that companies should not expect the FSA to tell them when they need to modify their sales literature.*

The Head of Life Insurance later notes that he had replied to Equitable along the lines set out in the paragraph above at a meeting on 17 September 2001.

14/09/2001 [entry 7] An HMT official provides advice to the Economic Secretary to the Treasury on the advantages and disadvantages of proceeding with the consultation on administration for insurers, in the light of recent events. The advice includes that HMT:

> *... do not believe that recent events have altered the pros and cons of proceeding with the consultation. Although* [Equitable] *raised the financial adjustment penalty on with profits policies surrendered early from 7.5% to 10% on Wednesday, its financial position has not been weakened in a substantial way by the events of this week.*

16/09/2001 [17:38] FSA's Chief Counsel A sends Chief Counsel B some comments on Counsel for FSA's opinion.

16/09/2001 [21:00] Further to Chief Counsel A's comments the previous day, an official from FSA's Press Office makes some suggestions regarding FSA's question and answer briefing.

17/09/2001 [entry 1] An HMT official sends the Economic Secretary to the Treasury a briefing on FSA's views on the relative advantages and disadvantages for Equitable of administration as against provisional liquidation.

17/09/2001 [10:40] FSA send Guernsey Financial Services Commission's solicitors a copy of their draft Counsel's opinion.

17/09/2001 [15:09] Equitable send FSA the weekly reports on customer servicing.

17/09/2001 [16:03] FSA's Chief Counsel B circulates the latest version of Counsel's opinion.

17/09/2001 [16:16] Following a meeting that day with Equitable, at which FSA had said that they were awaiting a response to a request that Equitable should consent to the publication of legal advice within the Baird Report, Chief Counsel B alerts the Director of Insurance and the Head of Life Insurance to the fact that their Counsel's opinion also referred to legal advice received by the company.

17/09/2001 [entry 6] FSA's Director of GCD sends Line Manager E a copy of a letter from a policyholder that had appeared in a national newspaper on 14 September 2001. The Director of GCD says that FSA needed to be clear whether the legal analysis put forward by the policyholder (about the ability of Equitable to reduce bonuses at their discretion) was correct.

17/09/2001 [20:07] FSA's Chief Counsel A notes that the Head of Life Insurance had mentioned that, in their meeting earlier that day, Equitable had hinted that they might consider suing FSA for letting them '*missell*' post-House of Lords. The Chief Counsel informs FSA's Press Office that it had been agreed that FSA would send Equitable a copy of their question and answer briefing but without the question discussed on 14/09/2001 [**16:35**].

18/09/2001 [10:24]	FSA send Equitable a copy of their draft question and answer briefing paper and ask for their consent to provide it in advance to the Financial Ombudsman Service and to the Guernsey regulator. FSA also ask for consent to publish Counsel's opinion, for the reasons discussed at their meeting the previous day. FSA's Head of Life Insurance later [at **11:03** and **18:13**] circulates internally the draft briefing, noting that there remained particular sensitivity over questions about sales after the House of Lords' decision and on solvency. [**22:05**] FSA's Head of Press Office asks the Head of Life Insurance if FSA knew what the Independent Actuary would say on 20 September 2001.
18/09/2001 [10:46]	FSA's Chief Counsel B asks the Head of Life Insurance and the Press Office that it should be made clear in FSA's press statement that FSA were publishing Counsel's opinion pursuant to section 206 of the FS Act 1986. [**12:00**] The Head of Life Insurance asks, if FSA published under the powers of that Act, whether they still needed Equitable's consent to do so. [**17:09**] Chief Counsel A highlights several '*awkwardnesses*' with this. She explains that some of the information contained in the opinion had been acquired under ICA 1982 and some while HMT had still been the direct regulator. Chief Counsel A says that the gateway for disclosure was limited and it would be better if Equitable consented to the publication of the relevant material.
18/09/2001 [13:48]	FSA's Director of Insurance provides a report about Equitable (largely on the compromise scheme) to FSA's Board, ahead of a meeting on 20 September 2001.
18/09/2001 [14:00]	An official from FSA's Press Office outlines the timetable of announcements to be made by Equitable over the coming days and suggests what FSA needed to do in response. [**14:24**] In reply, FSA's Chairman offers some '*cautionary thoughts*', arguing for less media exposure for FSA. The Chairman says: *1) The Equitable may have made mistakes in the scheme of which we are unaware. They always have before.* *2) They may come out with statements/announcements which surprise us. They regularly do.* *3) The scheme may change before it goes final. We can't be seen strongly to back one, then strongly back another which has changed significantly.* *4) There may well be stories to the effect that ELAS want to sue us/our predecessors. We know* [Equitable's legal advisers] *are briefing policyholders and they won't tell us what they will say, though I can't believe they don't know. So it would look odd if we were too close to them.* *5) We will be asked questions about other firms, which we don't want to stimulate, and to which we have no good answers.* *6) We will be asked about our report, about which we can say nothing useful at this stage.* The following day Chief Counsel A comments: '*Sage advice*'.
18/09/2001 [15:27]	FSA send Counsel their views on whether the market value adjuster applied by Equitable could be said to constitute a penalty.

18/09/2001 [17:12]	Further to 05/09/2001 [**13:13**], PIA query with FSA whether there had been any developments on the guidance provided to independent financial advisers. PIA say: *There was an article in the press last week which reported that* [Independent Financial Advisers] *are refusing to give advice because they are unsure of the stance we are taking. They are effectively saying to consumers that the policyholder has to make up their own mind about what to do. This reaction is causing concern among some policyholders because we are directing them to* [Independent Financial Advisers] *for advice but they are then being told that they can't have that advice.* PIA say that they: *... think this is a tricky position for us to be in. Your comments would be appreciated. And you may remember that* [Managing Director A] *was keen to issue something.*
19/09/2001 [entry 1]	Equitable seek confirmation from FSA that they could write new business in relation to pension funds which had been split due to divorce.
19/09/2001 [08:45]	FSA's Chief Counsel B provides FSA's Consumer Relations Department with a copy of the latest version of Counsel's opinion and says that, if the Department thought it appropriate, the Department could send it to the Financial Ombudsman Service and the Financial Services Compensation Scheme subject to certain conditions.
19/09/2001 [09:15]	Further to their reminder the previous day (see 18/09/2001 [**17:12**]), PIA say that the unanswered correspondence to them from the Association of Independent Financial Advisers was now '*embarrassingly stale*'. PIA continue: '*Given that the compromise proposals land on policyholders' doormats tomorrow we really must, I think, have something coherent to say to* [the Association of Independent Financial Advisers and the Independent Financial Adviser] *community on the contact centre etc. – they will be calling!*'. [**10:21**] FSA ask for the question and answer material to be recirculated so that it could be agreed and used by both FSA and PIA in response to queries from advisers. [**19:22**] PIA recirculate the briefing with an added question in relation to the compromise scheme.
19/09/2001 [09:16]	FSA's Head of Life Insurance informs officials that Equitable were still working on whether they would give their consent to FSA for publication of their legal advice. [**09:24**] Chief Counsel B adds that he had been speaking with Equitable's solicitors, who had provided a form of words designed to allow Equitable to maintain their legal privilege.
19/09/2001 [10:41]	Further to a telephone conversation that had taken place, Equitable write to FSA seeking confirmation that they had no objection to the Society buying back 10% of the £350m subordinated loan at the current price of between 51p and 55p per £1 nominal. Equitable say that FSA: *... had asked that we defer until the* [Appointed Actuary's company's] *work was available. That has been completed and we continue to more than meet the* [required minimum margin]. *At a cost of say £20m it is not material and repurchase if announced might improve policyholder confidence.* [**14:10**] The Head of Life Insurance forwards this on to the Director of Insurance, saying that he had: *... told* [Equitable's Finance Director] *that we would look again at this when the compromise scheme was out.* [FSA's Insolvency Practitioner's] *initial view is that the key issue is whether*

Equitable is likely to become insolvent before the scheme is completed. If not, the buyback is likely to be in policyholder's interests. Only if insolvency intervenes might policyholders lose as they would no longer get preference over the bondholders for the portion of the debt bought back. Otherwise, the current price makes this a good deal for policyholders.

The Head of Life Insurance says that the issue would need to be considered by FSA's Insurance Supervisory Committee and he asks the Director of Insurance whether he was content for the case to be put to the Committee.

19/09/2001 [10:51] FSA's Head of Life Insurance tells the Head of Press Office that FSA did not know what the Independent Actuary would say at the time of the launch of the compromise scheme and that any statement might therefore have to be dropped.

[**11:59**] The Head of Press Office says that, if the Head of Life Insurance was saying that the Independent Actuary was not going to say anything then '*there is a problem*'. The Head of Press Office explains that he: '*thought as part of the compromise, the independent actuary was going to offer a "view" as to the overall fairness of the proposals put forward for consultation. Other than the financial press and rent-a-quote financial advisers, this view was about the only steer policyholders would get at this stage to help them determine how to respond to the consultation (we are saying: "sensible basis on which to consult", but we won't offer a formal view till the final proposals are put together for the vote)*'. He continues that: '*If there is no such "view" from the independent actuary at this point ... how do policyholders start to gauge fairness in order to feedback? Plus I think there is an expectation that the independent actuary will actually say something tomorrow*'.

19/09/2001 [13:29] Counsel provide FSA with the latest version of their draft opinion.

19/09/2001 [13:41] An official circulates '*what is hopefully*' the final version of FSA's press notice.

[**15:54**] Chief Counsel A says that she remained '*a bit uncomfortable with the first sentence of the press release which I know does not literally promise a stable fund following a successful compromise, but it does stray towards it*'.

[**16:44**] The Head of Life Insurance says that he believed the reference to '*stability ... is OK in this context, and can be interpreted as referring to the removal of the uncertainty created by the uncapped liabilities*'.

19/09/2001 [15:03] FSA's Chief Counsel B checks with the Head of Life Insurance, Chief Counsel A and the Head of Prudential Policy that they were happy with an extract from Counsel's opinion about non-GAR policyholders who surrender their policies, and the operation of the market value adjuster.

[**15:12**] Chief Counsel A and [**16:25**] the Head of Life Insurance say that they are happy with it.

19/09/2001 [15:23] FSA send the Independent Actuary a copy of Counsel's '*very near final*' opinion.

19/09/2001 [15:23] Chief Counsel B provides a two page summary of Counsel's opinion.

19/09/2001 [15:31] FSA's Insolvency Practitioner raises a point with the Head of Life Insurance, being that '*the Society's Q&As include the statement that they are publishing all the relevant Counsel's opinions. Yet* [Counsel's] *opinion (which I do not believe they intend to publish) contains some highly relevant views on the strength (or lack of strength) of potential misselling claims*'.

[**15:39**] The Head of Life Insurance understands that Equitable hoped to publish the opinion but that '*like so much else!*' it was not yet finalised.

19/09/2001 [15:45]	FSA's Head of Life Insurance sends to 13 FSA officials electronic copies of documents delivered that morning from Equitable. Those documents were: • Equitable's question and answer paper on the compromise scheme. • Equitable's media timetable. • A document entitled '[the Appointed Actuary's company's] *Papers – Realistic G…*'. • A document entitled '[the Appointed Actuary's company's] *Papers – Assessing P…*'. • The final report from the Appointed Actuary's company of their independent review of Equitable's financial position (requested by FSA on 11/09/2001 [**14:00**]). On the last document, the Head of Life Insurance explains '*the substance was given to us several weeks ago, but was marked "draft" – we asked them to give us a final version, even though there has been no additional work since then*'.
19/09/2001 [15:47]	Equitable send FSA their question and answer briefing for the compromise scheme proposals. [**16:13**] The Head of Life Insurance circulates the briefing and notes that the Independent Actuary would not be making any statement on the compromise but that he had told Equitable that he regarded the principles underlying the scheme to be appropriate and applied fairly.
19/09/2001 [15:48]	An FSA official seeks comments on an amended version of FSA's information sheet on Equitable and on the contents of their web page. [**20:57**] Chief Counsel A provides comments on the web page.
19/09/2001 [17:15]	Equitable send FSA a copy of their press notice to be released the following day. Under the heading '*The Society's financial position*', the press release states: '*Not only is the Society solvent but it satisfies the requirements of the insurance regulations, which are stricter than a simple solvency test*'.
19/09/2001 [19:27]	An official distributes within FSA the final version of FSA's press notice, to be issued the following day.
20/09/2001 [morning]	FSA issue a press notice on the proposed compromise scheme and publish their Counsel's opinion on mis-selling by Equitable.
20/09/2001 [11:22]	FSA's Head of Life Insurance informs the Head of Press Office that, if asked, the Independent Actuary for the compromise scheme would say '*he considers the principles underlying the compromise are appropriate and have been applied fairly in developing the proposals sent to policyholders; and that he believes the current proposals should be the subject of consultation with policyholders*'.
20/09/2001 [11:36]	Equitable's advisers inform FSA of the procedure for production of the Creditors' Pack. [**14:39**] FSA's Insolvency Practitioner suggests that FSA should now turn their minds to what they would say at the convening hearing. The Head of Life Insurance and, the following day, Chief Counsel A comment on the Insolvency Practitioner's suggestion. Chief Counsel A concludes that FSA would have little of substance to say at the convening hearing, as opposed to the substantive hearing. She makes some proposals as to how FSA should prepare to handle that process.
20/09/2001 [12:30]	FSA's Head of Life Insurance distributes FSA's final agreed question and answer briefing note.

20/09/2001 [13:20]	FSA send the German, Guernsey and Republic of Ireland regulators copies of the compromise scheme launch document and FSA's press notice of that morning. [**14:06**] FSA inform Equitable of this.
20/09/2001 [16:39]	FSA's Head of Life Insurance suggests that the question and answer briefing material for responses to independent financial advisers was '*getting over complicated*'. The Head of Life Insurance suggests: *... a couple of short sharp responses, focusing on the publication of the compromise proposals on the following lines:* *Question: Does the FSA expect* [Independent Financial Advisers] *to give advice to Equitable Policyholders, even though the* [Independent Financial Adviser] *does not want to?* [Answer]*: This is entirely for each* [Independent Financial Adviser] *to decide (subject to any obligations they may have to existing clients who are Equitable policyholders). The FSA neither requires nor prohibits* [Independent Financial Advisers] *from giving advice in particular cases.* *Question: How should an* [Independent Financial Adviser] *determine what advice to give an Equitable policyholder, as to whether or not to accept the compromise scheme?* [Answer]*:* [Independent Financial Advisers] *who advise Equitable policyholders on the Compromise Scheme should apply their professional judgement within the existing PIA rules. The Equitable has published a great deal of information about the Compromise Scheme itself; but it will be important that* [Independent Financial Advisers] *take fully into account the individual circumstances of the client.* [**16:43**] FSA's Press Office say that they are happy with the proposed line to take, while noting that '*If* [Independent Financial Advisers] *can't give advice, who can!*'. They also say that it is '[worth] *remembering, to counter any suggestion that we* [are] *warning* [Independent Financial Advisers] *off advising Equitable customers, that we and our website consistently advise people to take advice*'.
20/09/2001 [entry 6]	According to FSA's later account of events (see 11/10/2001 [**14:30**]), the Head of Actuarial Support returns to the office and reads Equitable's letter of 14/09/2001 about the side letter to the reinsurance treaty. It appears that, at this time, he sends copies of the letter to the Head of Life Insurance, Chief Counsel A and Scrutinising Actuary F, suggesting that FSA ought to ask for a copy of the side letter.
20/09/2001 [entry 7]	Baird provides his report to a meeting of FSA's Board.
20/09/2001 [entry 8]	FSA's Director of GCD provides a report to FSA's Board on legal issues relating to the Baird Report.
21/09/2001 [09:41]	FSA's Head of Life Insurance says that, now the compromise scheme had been launched, FSA needed to plan their input into the next phase. He suggests that a meeting should be held the following week.
21/09/2001 [14:00]	According to an electronic diary record (held on FSA's file about the compromise scheme), Chief Counsel A is informed by solicitors acting for FSA on the compromise scheme that they were also advising IRECO and its parent company on the reinsurance treaty with Equitable.

Chief Counsel A says that the Head of Actuarial Support had told her that he had been made aware of the existence of the side letter to the treaty but that he needed to make further enquiries as to the details. Chief Counsel A checks with Equitable that they had no problem with the solicitors acting both for FSA and IRECO.

21/09/2001 [19:57] Equitable send FSA a balance sheet and profit and loss statement for 31 August 2001. The figures are presented as follows:

	Insurance Act Basis	
	£m	*£m*
Assets		
Investments		
Property	*2,067.3*	
Equities	*8,231.8*	
Fixed Interest Securities	*12,428.5*	
Short Term Deposits	*2,428.1*	
Unquoted Investments	*1,030.9*	
		26,186.6
Reinsurers share of technical provisions		
GAR liabilities	*685.0*	
Unit linked liabilities	*3,516.1*	
Other liabilities	*352.7*	
		4,553.8
Current assets		*776.3*
Tangible assets		*0.0*
Implicit items		
Future profits	*877.0*	
Other s68 concession	*0.0*	
		877.0
Total assets		*32,393.7*
Liabilities		
Guaranteed fund on accumulating with profits policies – GAR	*4,303.7*	
Guaranteed fund on accumulating with profits policies – non-GAR	*11,695.4*	
Less discount applied to liabilities (see notes)	*(423.0)*	
		15,576.1
*Other with-profits liabilities**		*2,911.9*
GAR provision		*2,233.0*
GAR rectification		*200.0*
Non-profit liabilities		*4,425.0*
Misselling liabilities (estimate) ([for potential non-GAR mis-selling claims]*)*		*220.0*
Other misselling liabilities (eg Pension Review)		*118.5*
Linked liabilities (reinsured to Halifax)		*3,516.1*
Outstanding Claims		*575.0*
Resilience reserve		*21.0*
Subordinated loans		*0.0*
Provision for other risks and charges		*4.6*
Other current liabilities		*859.6*
Total liabilities		*30,660.8*
Required Minimum Margin		*1,052.7*
Excess over [required minimum margin]		*680.2*

22/09/2001	An FSA legal file on Equitable contains a copy of Equitable's letter of 14/09/2001 that had been forwarded to Chief Counsel A by the Head of Actuarial Support. The letter has been stamped with the date 22 September 2001.
24/09/2001 [09:00]	FSA officials meet to discuss Equitable's Creditors' Pack.
24/09/2001 [09:35]	Equitable send FSA an initial external review of the Creditors' Pack. [**10:31**] The Head of Life Insurance circulates the information.
24/09/2001 [11:17]	FSA's Head of Life Insurance sends the Insolvency Practitioner and the Head of Actuarial Support the financial information received from Equitable on 21/09/2001. The Head of Life Insurance asks whether the information complied with their requirements. [**11:48**] The Head of Actuarial Support replies: *My understanding is that they now consider they need to hold around £850 million for mis-selling, and that they are not including any provision for those non-GAR policyholders who have already left.* *In addition, we know that markets have fallen substantially since end-August though correspondingly they have increased the financial adjuster on surrenders (and may therefore be able to discount their guaranteed funds rather more).* *I think therefore that we should ask the actuary for an urgent update of their financial position taking account of all these factors.* [**12:47**] The Insolvency Practitioner comments: *There is, as yet, no s.45 requirement. However, what has been supplied does not comply with the draft requirements. The Policy Value information ... has, once again, not been completed.* *The Society has shown a provision of £220m for non-GAR misselling costs. This is the wrong figure to use as a matter of principle. They should use the gross "realistic estimate" cost of £850m. If they did this, then the Society would exceed its required solvency margin by a mere £50m. Given stock market falls since 30 August, the Society must surely be in breach of its* [required minimum margin] *now. If so, the statements that it is making about solvency in the course of consultation need to be tempered.*
24/09/2001 [17:34]	FSA's Chief Counsel B writes to the Head of Life Insurance about the meeting that morning about Equitable's Creditors' Pack. The Chief Counsel says that, had he attended the meeting, he would have agreed with the view that FSA needed to have a reliable means of knowing what policyholders were saying in response to the consultation. Chief Counsel B also says that he understood that the Head of Actuarial Support was undertaking an analysis of which classes of policyholder were likely to be better off with compensation by return of premiums plus interest, rather than by reference to the impact of the GARs. He says that, when that analysis was complete, FSA could consider instructing Counsel. The Head of Actuarial Support replies: *At the present time, I would estimate that all policies written since around 1997 would be in the position that a refund of premiums plus interest at 5% (Is this the judgment rate?) would be greater than the underlying policy value. This should include all policies written since 1995 if we allow for the policy values being around 8-10% too high at the present time (ie they are not supported by the underlying value of assets).* *For regular premium policies, the cutover date would be around 1995 or 1993 respectively.*

This indicates that we are talking about around 100,000 individuals, plus perhaps 200,000 members of group schemes, who could be better off with a recission of their contract if this option were available to them (though I am not sure what form of contract exists for members of group schemes). I would expect this to cover all types of policy, including retirement annuities, with-profit immediate annuities, endowments, single premium bonds etc.

If we were to allow for the effect of the application of a financial adjuster on surrender, then even more policies would need to be included.

24/09/2001 [17:47] Equitable send FSA the weekly reports of the amounts of claims advised and processed. The information provided included that, for the week ending 21 September, there had been £50m of claims at maturity and £58.9m of claims for surrenders. The information also showed that the backlog of unprocessed claims had increased from around £100m at the end of July 2001 to around £500m at the end of August 2001, the backlog then remaining at between £400m and £500m.

FSA's Head of Life Insurance distributes the information the following day (at **10:28**).

24/09/2001 [18:41] Equitable send FSA a copy of the side letter to the reinsurance treaty, dated 1 April 1999. They explain: '*We are seeking clarification of the side letter and we have had legal advice that it is unclear as to what it means. However* [IRECO] *is extremely preoccupied with the World Trade Centre disaster*'.

(Note: the fax is dated 14 September 2001; however, the fax transmission records that it had been sent from Equitable on 24 September 2001 at 18:41.)

25/09/2001 [entry 1] FSA's Head of Life Insurance comments to the Head of Actuarial Support (copied to others) about the side letter, that: '*I think we will need to consider with GCD what this means. It is not a legally binding document: and it fails to achieve its stated aim of "clarifying" the position. But paragraph 2 appears to cast some doubt on the effectiveness of the treaty in certain circumstances*'.

On another version of Equitable's fax of 24/09/2001, the Head of Actuarial Support writes to the Head of Life Insurance (copied to Chief Counsel A and Scrutinising Actuary F) expressing his concerns that: the side letter had not been disclosed to FSA or GAD; the second paragraph was completely at variance with what they had been told by the then Appointed Actuary at the meeting in February 1999; and the third paragraph could very well invalidate the reinsurance offset shown in the returns.

(Note: the Head of Actuarial Support's note is undated; however, it was written on a version of Equitable's fax of 24/09/2001 that had been date-stamped 25 September 2001.)

25/09/2001 [10:32] FSA's Head of Actuarial Support responds to the Insolvency Practitioner's note on the financial information received from Equitable (see 21/09/2001 [**19:53**] and 24/09/2001 [**11:17**]). The Head of Actuarial Support says that he agreed with his assessment and adds that the policy value information would be likely to show policy values 8-10% higher than underlying assets.

[**14:32**] The Head of Actuarial Support comments further, having now received a copy of the side letter to the reinsurance treaty, saying:

We have a further problem that has emerged. Apparently, [Equitable's Appointed Actuary] *signed a side-letter on behalf of Equitable which was not disclosed to us, but calls into serious question the validity of the reinsurance offset of £700 million for which they are taking credit. This would of course mean that they are now well below their required margin of solvency.*

The Head of Life Insurance adds: '*This would not have been known either to Baird et al but should be an interesting topic for Penrose to pursue!*'.

25/09/2001 [entry 3] FSA write to Equitable, saying that FSA were extremely concerned at the possible implications of the side letter. FSA say that the existence of the side letter appeared to raise questions about the value of the reinsurance offset shown in the Society's annual returns and that FSA would like to discuss the implications of this with Equitable '*at the earliest opportunity*'. FSA say that they would be in touch to arrange a meeting later that week, at which they could review the issue along with financial reporting arrangements and the process for scrutiny of the compromise scheme.

26/09/2001 [11:26] FSA's Director of Insurance informs Managing Director B of the disclosure by Equitable of the side letter. He notes that, although the letter had been explicitly expressed as not being legally binding, it '*would appear to cast doubt on the reinsurance treaty on which the Equitable relied to cover the reserves which we insisted the Equitable set up to cover their GAR liabilities*'. The Director refers to his letter to the Society of the previous day. He says that, in addition, he had also spoken to Equitable's Chief Executive and had stressed that the Society must take immediate steps to put the issue beyond doubt, '*if need be by negotiating a further amendment to the Treaty or by securing a formal and binding acceptance by Ireco that they would not seek to rely on the side letter*'.

The Director goes on: '*Our immediate concern must be to assess the implications of the letter and to ensure that the Equitable does whatever is necessary to put its financial position (at least in this respect) beyond doubt*'. He says that FSA would need to consider whether to investigate the matter, inform the Serious Fraud Office, and review which other life companies had any exposure to IRECO. The Director of Insurance also states that:

> *Ireco is an Irish reinsurance company (a subsidiary of* [Prospective Bidder F]*). As such it is not supervised by the Irish Insurance authorities. However if, as may be the case, Ireco has specialised in assisting companies to disguise their true financial position by entering into "bogus" (or at least doubtful) reinsurance treaties then this may fall foul of other requirements of Irish law. Subject to comments from enforcement I should like to discuss this urgently with the Irish supervisory authority (who do maintain a somewhat distant watching brief over the reinsurance sector). It may also be appropriate for there to be contact with Irish company and/or criminal investigation authorities.*

[**11:57**] FSA's Head of Actuarial Support comments:

> *There is clearly a serious issue here over the conduct of* [the individual] *who was the appointed actuary and finance director when he wrote this letter in April 1999. This letter was never disclosed to us. Moreover, its contents are at variance with what we were led to believe in discussions with him in January and February 1999. Thirdly, if the side-letter is legally binding, then I believe it would also seriously call into question the value of the reinsurance offset for which he* [has] *claimed credit in his valuation of the liabilities in both the 1998 and 1999 financial returns.*
>
> *These points alone would in my view be sufficient to warrant a formal complaint about his conduct to the actuarial profession.*
>
> *There are also of course a series of possible issues relating to the financial management of the Equitable, including whether policyholders were misled as to their expectations, on which a complaint to the profession against* [the former Appointed Actuary] *and others at Equitable Life could be mounted. We had held off on these broader issues while the various other enquiries were continuing.*

26/09/2001 [12:08]	FSA's Director of Insurance informs Managing Director B of the position in relation to Equitable's directors' and officers' cover.
26/09/2001 [16:36]	FSA's Chief Counsel A prepares instructions for Counsel to advise on the status of the side letter and asks for comments on them from the Head of Insurance Policy. [**17:34** and **17:59**] The Head of Insurance Policy provides some comments, including: *You also correctly point out that even if the side-letter is not legally binding it raises serious questions as to the legitimacy of its use to support provisioning. You will recall that* [Regulation] *64(3) of the 1994* [Regulations] *makes this depend upon actuarial principles. I have remembered that we have given guidance (which in fact I wrote) on how these principles are to be applied. See Guidance 1998/1 (para 5.5.(6) of Guidance Note 9.1 in the* [Interim Prudential Sourcebook]*). This makes reliance upon such reinsurance dependent upon both the legal form and economic substance. I have not copied this paragraph of guidance out as I assume you have easy access to it.* [**17:53**] Chief Counsel A sends the instructions to Counsel. [**19:33**] Chief Counsel A sends the Director of GCD a copy of the instructions to Counsel. The following day, he suggests a further point to ask Counsel.
26/09/2001 [20:11]	Chief Counsel A passes the Director of Insurance's note on the side letter to Chief Counsel B and Legal Adviser F, informing them that she had sent instructions to Counsel on the issue. She goes on to say: '*We also have concerns about Equitable's reserving for misselling (as disclosed in the August monthly returns) and* [the Head of Life Insurance] *and* [Head of Actuarial Support] *will I hope be speaking to* [Counsel] *about that on Thursday*'.
27/09/2001 [09:05]	FSA's Director of Insurance asks the Head of Actuarial Support to consider what could be done to enable FSA to monitor and model Equitable's financial position. [**14:09**] The Head of Actuarial Support replies: *I would certainly agree that we need to have the up-to-date financial position from* [Equitable's Appointed Actuary]*, along with their current thinking on bonus rates and the financial adjuster on the surrenders. I propose to modify the generic* [Chief Executive Officer] *letter slightly for them, and tailor this to their specific circumstances. In particular, we shall wish to discuss in more detail how they intend to provide for potential mis-selling costs.* *They have also in the past provided us with a matrix showing how this would alter in the event of changes in equity values or in fixed interest yields. I would certainly like to request this again, as we do not have the data ourselves to construct reliably such a model.*
27/09/2001 [11:28]	In response to the instructions sent to Counsel on the side letter (see 26/09/2001 [**16:36**]), the Head of Actuarial Support says: *I would be doubtful about allowing even a value of £100 million in view of the intent expressed that they would never wish to make any "cash" claim on the reinsurer!* *Another aspect, but I think for later, might be the role of* [the Appointed Actuary's company] *(were they aware of the August correspondence?) and the auditors ... who are required by regulation to report events of "material significance".*

27/09/2001 [15:55]	Equitable ask FSA for an idea of their '*success criteria*' for Equitable's consideration of policyholders' comments and feedback on the compromise scheme proposals. [**16:23**] FSA's Head of Life Insurance replies: '*I think the Society needs to demonstrate that it has taken account of all representations and comments, and that any changes to the scheme (or decisions not to change it as the case may be) are fully explained and supported by reasoned argument*'.
27/09/2001 [entry 4]	FSA write to Equitable about the reinsurance treaty, further to their letter of 25/09/2001. FSA note that a meeting has been arranged for the following day. FSA request: a copy of addendum 1 to the treaty which they do not have on their files; any relevant information about the status of the side letter; and the fullest possible update on the legal advice Equitable had received about the status of the side letter. FSA also say that they would want to discuss at the planned meeting Equitable's current financial position '*taking account of the implications of the side letter, and also other recent and current developments (notably recent stockmarket falls, the provisioning which you need to hold for mis-selling, and provisioning for non-GAR policyholders who have already left or may leave the fund with their mis-selling claims intact)*'.
27/09/2001 [17:24]	Equitable send FSA a copy of addendum 1 to the reinsurance treaty.
27/09/2001 [entry 6]	HMT reply to FSA's letters of 06/03/2001, 10/08/2001 and 17/08/2001. HMT agree that it would be desirable to achieve some certainty on the meaning of Article 4 of Equitable's Articles of Association, without the need for it to be determined by the courts. HMT say: '*In particular this would help avoid the possibility that the continuity of payments could be disrupted if Equitable Life were to be placed in administration or provisional liquidation. The difficulty we continue to have is that, in our view, both solutions proposed in* [the Director of Insurance's] *letter would not solve the problem*'. FSA's Director of Insurance comments on the letter: '*I see little point in going back on this*'.
28/09/2001 [13:17]	FSA have a discussion with Counsel about the side letter and their instructions of 26/09/2001. According to Chief Counsel A's summary, which recorded Counsel's preliminary comments (prepared to assist with FSA's meeting with Equitable later that day and not cleared by Counsel), the legal questions were: • *Must Equitable cancel the reinsurance when the £100m limit is reached?* • *If not, can it nevertheless use the reinsurance agreement to offset its provisioning? Or to offset it in the amount of £700m?* • *Can Equitable only draw cash if the conditions in the side* [letter] *are met?* • *If so, does this matter only for reserving?* Chief Counsel A records that good legal arguments existed to the effect that the side letter should have no legal effect or could be withdrawn by Equitable. However: '*in the interim unless Equitable has very confident and credible legal advice, the FSA will need to consider urgently whether, in view of the legal uncertainty, it would be prudent for the Equitable to claim the full £700m (ICR 1994)*'. Chief Counsel A also records the following under '*Other questions*': • *Did present management of the Equitable (breach of criteria of sound and prudent management?), its audits (breach of* [Regulation] *3 of the Auditors (Insurance Companies Act 1982) Regulations 1994?) or its appointed actuary (breach of professional guidance?) know about the side letter in August when* [Equitable's

Appointed Actuary] *wrote to* [FSA's Head of Actuarial Support] *on 7 August? Before publication of the Launch Document?*

- *Did* [Equitable's then Chief Executive] *know about the side letter (almost certainly yes) (breach of professional guidance?).*

28/09/2001 [15:28] FSA's Head of Actuarial Support informs Chief Counsel A that Equitable '*wrote to us about the side-letter on 14 September, so they must have known about this before the launch document came out the following week? Is this relevant though to the launch of their consultation?*'.

28/09/2001 [15:30] FSA meet Equitable and their auditors.

According to FSA's note of the meeting, on the side letter:

> [Equitable's Finance Director] *said that on 7 August, after* [Equitable's Appointed Actuary] *had sent his letter of that date to* [FSA's Head of Actuarial Support], [the former Appointed Actuary] *(who had been consulted on the terms of that letter, and had agreed with them) had reverted to* [the Appointed Actuary] *with a copy of the side letter saying that he ought to be aware of it. Equitable Life then made further enquiries. They had found no reference to the side letter in the minutes of board meetings. They held discussions with the reinsurers, with their lawyers and with* [the former Appointed Actuary].
>
> *The reinsurer (IRECO), had described the side letter as providing clarification of what would happen if the £100 million trigger level was reached; but these discussions left Equitable Life unclear on how the side letter related to the treaty. In late August, IRECO told* [Equitable's Finance Director] *that the letter represented "best endeavours" to achieve a satisfactory resolution in these circumstances. However, on 27 September IRECO gave Equitable their view that the side letter gave IRECO the option to terminate the Treaty. Equitable Life have told IRECO that they do not accept that interpretation. But they have disclosed the position to their* [directors and officers] *insurer, and* [the Finance Director] *is meeting the general counsel of* [IRECO] *this week.*
>
> *The advice of* [the Society's solicitors] *to date is that the side letter is not necessary to interpret the Treaty; that the Treaty allows for arbitration, and that although a court might not take account of the side letter, an arbitrator might. Arbitration would be under the jurisdiction of the country of the counterparty, namely Irish jurisdiction.*

On Equitable's financial position:

> [Equitable's Appointed Actuary] *said that the Equitable continued to meet its required margin of solvency. The assumptions which he made in reaching this view were that the Equitable would be granted a Section 68 order to take credit for the changes to the valuation rate of interest being brought in* [when FSMA 2000 comes into force]*; that the resilience test would not impose any additional liability; that the provision for non-GAR mis-selling was £220 million; that only £100 million credit could be taken for the Reinsurance Treaty; that the GAR takeup rate was assumed to be 85% rather than 90% as at present; and no provision had been made for those leaving the funds. On this basis, there would be an excess of about £400 million over the* [required minimum margin].
>
> *A discussion followed on the basis for calculating the liability for mis-selling. The FSA argued that the liability must be higher than £220 million, since this was the figure assumed under the scheme, where a discount was allowed for the fact that non-GAR policyholders would be paying for about 75% of their own compensation. However, a reserve needed to be sufficient to cover the possibility that the scheme did not go through, and in that circumstance the FSA believed that it would not be appropriate to allow a discount for policyholders having to meet most of their own compensation.*

In response to this, the argument was put forward that even if the scheme did not go ahead, and policyholders went to the Ombudsman, the Ombudsman would have to consider the effect of any compensation award paid to an individual policyholder, on all other policyholders, and that since there was likely to be a very large number of claims, this would result in compensation awards being adjusted to take account of the total size of the mutual fund: so that the effect would be the same as the discount under the scheme.

The FSA were not entirely convinced by this argument, and Equitable Life agreed to write to the FSA addressing this point in a more considered way.

Equitable's auditor '*wished to draw the FSA's attention to the importance of the topics under discussion, for the purposes of the notification requirements placed on the auditor*'.

28/09/2001 [17:51] FSA's Head of Actuarial Support writes to Chief Counsel A after the meeting, saying:

> *The* [Appointed Actuary's company's] *letter of engagement understandably includes the usual set of disclaimers and caveats. However, it does place certain requirements on the directors, including*
>
> > *"The Directors will provide to us appropriate confirmation that all the information, explanations and documentation provided to us are true, accurate, complete and not misleading and that we are entitled to rely on them".*
>
> *In the slides for the presentation to FSA,* [the Appointed Actuary's company] *included the sentence*
>
> > *"Renegotiation or withdrawal of the GAR reinsurance treaty could have a significant impact on solvency. We note that in most circumstances, change is subject to* [Equitable's] *agreement, but this is a dependency (a successful Compromise Scheme vote would eliminate the risk)"*
>
> *Nevertheless, the balance sheet that they included in their presentation allowed for a value of £674 Million to be ascribed to this reinsurance agreement.*
>
> *No mention was made of the existence of this side-letter by either* [the Appointed Actuary's company] *or Equitable at the presentation itself.*

[**20:00**] Chief Counsel A replies that FSA would need to bring this to the attention of '*the investigator*' in due course.

Behind this note on the regulators' files is a briefing note by a legal firm on company law reform and a review carried out by the Company Law Review Steering Group. The following paragraph has been highlighted:

> *The Final Report also recommends an extension to the duties of directors and employees to assist auditors in the execution of their statutory duties. It is already a criminal act for a director or officer of a company knowingly or recklessly to provide misleading, false or deceptive information.*

28/09/2001 [entry 5] An HMT official provides the Economic Secretary to the Treasury with a note on the Corley Report which had been published that day.

October 2001

01/10/2001 [10:14]	FSA's Director of Insurance writes to the Head of Life Insurance to record '*a number of conversations*' which had taken place about the difficulties Equitable were experiencing in obtaining adequate directors and officers cover.
01/10/2001 [10:16]	Equitable send FSA an update on the Creditors' Pack drafting and review process.
01/10/2001 [10:53]	Chief Counsel A responds to the Head of Actuarial Support's query of 28/09/2001 [**15:28**], saying: '*I think we were unclear until Friday whether the stated date of 14 Sept (on the fax to us with the side letter) was correct and just when* [Equitable's Appointed Actuary] *and others had actually received it. It is relevant yes because arguably there is a material misleading relevant to the consultation. Luckily for them, the Launch is for consultation and is not the formal scheme or the matter would be more serious*'.
01/10/2001 [18:03]	FSA's Chief Counsel A comments on a draft paper for FSA's Board. The Chief Counsel queries whether FSA: '*should ... mention too the debate we are having with Equitable about the misselling provision? It is almost certainly not big enough*'.
01/10/2001 [19:37]	FSA's Director of Insurance writes further on the issue of Equitable's directors' and officers' cover saying that Equitable had informed him that adequate cover had been put in place. The Director of Insurance says: '*The cover excludes liability relating to any solvency problems flowing from the side letter to the reinsurance treaty, but is apparently acceptable to the Society. As we know the Society are confident that the side letter does not undermine their solvency position and that, even if – which they do not believe to be the case – it were to be interpreted as allowing the reinsurer to cancel at £100m of claim, their solvency margin remains intact*'.
01/10/2001 [entry 6]	FSA's Director of GCD asks Chief Counsel A whether he was correct to assume that no legal advice had been sought or given on a particular clause in the reinsurance treaty. Chief Counsel A replies that only preliminary advice had been given, as was summarised in her note of 28/09/2001 recording her discussion with Counsel, which she attached. The Chief Counsel says that: '*We await a copy of Equitable's final advice. Not much hangs on it in the sense that they will have to persuade us that the reinsurance will count for more than £100m*'.
02/10/2001 [entry 1]	FSA arrange to meet Equitable later that week. FSA say that they believed that a meeting was necessary to review Equitable's financial position in the light of: *(1) the responses that your colleagues promised to points raised at last Friday's meeting, namely:–* • *the update on the status of the Reinsurance Treaty; and* • *a more considered analysis of the liability for potential mis-selling (taking account of the liability to those who leave before a scheme is in place, and the fact that in the absence of a scheme it is difficult to see how the same discount can be allowed as under the scheme, where non-GAR policyholders would be paying for about 75% of their own compensation); and* *(2) in the light of your responses to the questions in my letter of 26 September about the impact of stockmarket falls.*

02/10/2001 [entry 2]	FSA seek advice from Counsel on the possibility of compensation by means of return of premium plus interest to non-GAR policyholders.

02/10/2001 [10:00] FSA's Chairman thanks the Director of Insurance for his note of 01/10/2001 [**19:37**] but says that he assumed that FSA were still pursuing with Equitable the solvency implications of the existence of the side letter to the reinsurance treaty.

[**10:13**] The Director of Insurance confirms that this was the case. The Director explains that FSA were awaiting a detailed justification from Equitable of their own assessment. The Director says that he understood that the Society's assessment '*indicates that they continue to meet their* [required minimum margin] *even on "worst case" assumptions about the impact of the side letter*'. The Director of Insurance continues by saying that Equitable's ability to continue to meet their required margin of solvency:

> *... depends, among other things, on the reserve to be set up to cover misselling costs absent a compromise, on which* [the Head of Actuarial Support] *has been working with* [Legal Adviser F]. *On the Society's figures there is some room for increasing the reserve from what they believe appropriate, but it is quite tight.*

The Director of Insurance also raises an issue of separate concern that payouts on maturity might still be greater than asset share. He notes that Equitable '*naturally, are not keen to announce a further reduction in policy values at this point since they judge that this would damage, probably fatally, their chance of gaining agreement to the compromise*'.

[**12:03**] In reply (but not to the Chairman), the Head of Actuarial Support circulates his estimate of mis-selling liabilities, which is dated 1 October 2001. The Head of Actuarial Support says it was:

> *... likely that the Society is still solvent, and it may still just be covering its margin of solvency, but there remains fundamental uncertainty relating to the amount of these mis-selling claims, the proportion of the claim that would be guaranteed, the number of potential leavers (for whom all the claim would have to be paid in cash), and the possibility of sizeable claims arising instead under the heading of recission of contracts.*

On current payouts, the Head of Actuarial Support says:

> *... I would estimate that the claim values paid on contractual events are around 5-7% too high at present. The free reserves in the balance sheet seem to be falling by around £200 million every month, mainly as a result I believe of the payment of final bonuses on claims for which there is no provision on the balance sheet.*

The Head of Actuarial Support's note of an estimate of Equitable's mis-selling provision at 30 September 2001 states that the required provision should be:

Policies written since January 1996	*£180m*
Policies written between 1988 and 1995	*£200m-£400m*
Leavers between June 2000 and 16 July 2001	*£20m-£60m*
Leavers since 16 July 2001	*£40m plus a further £50m-£100m*
Claims for recission of contract	*£100m*

The Head of Actuarial Support's note concludes:

> *The overall accounting provision for the above headings, after taking account of the probability of success could then be around £300-550 million, with a best estimate likely to be in the range of £400-£500 million. For the FSA returns, we would expect to see a greater margin for prudence, and probably a contingent liability for potential recission claims, which might indicate a provision of between £600 and £700 million.*

02/10/2001 [10:38]	FSA write to Equitable following their meeting on 28/09/2001, at which Equitable had said that they were assuming credit for a concession under section 68 of ICA 1982 in relation to the valuation regulations. FSA say that they had not yet received any application for such a concession and that Equitable should submit one as soon as possible, should they need the concession.
02/10/2001 [12:18]	FSA's Director of Insurance sends Managing Director B and the Head of Life Insurance the notes of a speech by a trade union official about Equitable, made at the Labour Party Conference, saying that it was: '*Relevant to the* [Treasury Select Committee] *briefing*'.
02/10/2001 [14:51]	Equitable send FSA the latest draft versions of the Combined Scheme Document, Indicative Statement of Value and Proxy Forms, ahead of a Creditors' Pack drafting meeting on 5 October 2001. [**16:19**] The Head of Life Insurance circulates the documents and asks for comments by 4 October 2001. [**18:46**] FSA's Insolvency Practitioner says that there were three key pieces of information which had been missing from the Combined Scheme Document, those being: aggregate policy values; background to the policy value reductions; and value of GAR rights being given up. He also says that it was to be welcomed that: '*The Article 4 issues are explicitly addressed and it is made clear that there is no certainty that the* [Policyholders Protection Board] *would respond if the Society were wound up*'. [**19:28**] An official from FSA's Consumer Relations Department endorses the points made by the Insolvency Practitioner. [**20:11**] The Director of Insurance says that he was not sure that the information on Article 4, and there being no certainty of compensation from the Policyholder Protection Board, was to be welcomed. The Director says that he would be concerned if the uncertainty were to be overstated.
03/10/2001 [09:09]	Further to 02/10/2001 [**20:11**], FSA's Head of Life Insurance explains that the Article 4 point had been included to meet FSA's earlier comment that the implications of the alternatives should be clearly spelt out, although: '*I'm not sure that Article 4 was what we had in mind!*'. [**13:15**] A Press Office official says that she had mixed feelings about the Article 4 information: *On the one hand, some openness about the possible non-applicability of the* [Policyholder Protection Board] *is, in principle, to be welcomed.* *On the other hand, it will make us,* [Policyholder Protection Board], [the Financial Services Compensation Scheme] *et al appear disingenuous for not previously drawing attention to it.* *Our defence has to be that HMT intends to correct this. Provided this is true, then it might be best not to flag it. – Not least because, in the current environment, it might just cause panic in the meantime re other insurers if people fear that they would also not be covered by* [Policyholder Protection Board]/[the Financial Services Compensation Scheme] *if other insurers should collapse if the equity market were to shoot down further.* *So there might be a market confidence argument for not drawing attention to it.* *But if* [Policyholder Protection Board]/[the Financial Services Compensation Scheme] *could say something helpful about how most companies <u>would</u> be covered by their schemes (even* [though] *they don't customarily comment at all on general cases, but treat applications for compensation on a case-by-case basis), that might help square the circle.*

> *It would mean that Equitable could disclose the Art 4 issue; we could say that we were aware but that HMT intended to resolve the issue; HMT would endorse this; and if anyone asked about the general applicability of* [the Financial Services Compensation Scheme] *etc, they would reassure people re their general coverage of* <u>*other*</u> *insurers in the meantime.*
>
> *If we could arrange this, I think I would tend to favour disclosure in the interests of transparency. If any of those pieces of the jigsaw don't fall into place, I would be inclined, on market confidence grounds, to discourage Equitable from disclosing the issue until HMT does something about it.*

	[**14:24**] The Head of Actuarial Support provides various comments on the Creditors Pack documentation, including that: '*there are numerous inconsistencies in the drafts about the value to be attributed to the Halifax payment for GAR's and non-GAR's. I still do not understand why proportionately more of this (as a percentage) is being given to the GAR's than to the non-GAR's!*'. [**19:46**] Chief Counsel A replies to the Press Office official, saying that: '[Article] *4 is difficult. In terms of principle it is hard to argue against letting the* [Equitable] *say something about it. But the public reaction to just about anything they say will be astronomically out of proportion. Unfortunately I do not think we can say that HMT intends to correct the problem ... I recall HMT think the issue would need to be resolved by the Courts and have said they would not do anything in advance of that. I do not think however there is a market confidence issue (if things are handled properly) because it seems almost certain that the* [Equitable] *is the only one affected by the* [Article] *4 problem*'. [**21:40**] The Director of Insurance reports that he had spoken to the Chairman of the Policyholder Protection Board who had told him that the Board would not wish to argue that Article 4 was an impediment to compensation, but that they would probably want to invoke the excessive benefit provision of the Act.
03/10/2001 [15:14]	FSA's Chief Counsel B sends the Head of Life Insurance, Line Manager E and an official from their Consumer Relations Department some documents about waivers from PIA rules for Equitable complaints.
03/10/2001 [15:32]	Equitable's Finance Director replies to FSA's note of 02/10/2001 [**10:38**]: '*I have not spoken to* [the Appointed Actuary] *since your email, but the comment was in the context of what would our position be if the reinsurance treaty is not available. Our lawyers still assert that we can probably rely on the treaty. We are seeking clarification urgently and will apply for a s 68 concession if necessary*'. [**19:18**] The Head of Life Insurance forwards the response to the Director of Insurance (copied to others) with the comment: '*So there!*'.
04/10/2001 [10:25]	Further to Equitable's reply of 03/10/2001 [**15:32**], the Head of Actuarial Support comments that: *In view of the letter apparently received from IRECO saying that they would intend the treaty to be cancelled if the claim ever exceeded £100 million, I think it would be very difficult for Equitable to take credit for more than this amount in a "prudent" statutory valuation, where the actuary has to take account of both the credit and legal risk under this reinsurance agreement.* [**10:29**] Chief Counsel A agrees with the Head of Actuarial Support, subject to seeing the advice from Equitable's solicitors.

04/10/2001 [17:08] FSA send Equitable's advisers their high level comments from a preliminary scrutiny of the latest drafts of the compromise scheme documents. FSA say that there were three important pieces of information which policyholders should have but which did not appear to have been included, those being:

> 1. *Aggregate Policy Values*
>
> *The launch document stated that "since the policy value reductions in July 2001 ... aggregate policy values and the value of the investments underlying policies are now broadly in line. Information in respect of this and other financial matters will be available in the interim financial statements for the six months to 30th June 2001". Will this include aggregate policy value information? The financial position of the society, and material movements since 30th June, will need to be adequately disclosed. In assessing the value of their uplifts to policy values, policyholders need to know what the Society's position is on further possible cuts to policy values.*
>
> 2. *Background to the 16th July Policy Value Reductions*
>
> *The launch document said that the Society intends to issue a booklet containing the background to the policy value reductions when revised policy value statements are sent out in October. Will this be sent out separately from the Creditor Pack? We should like to see a draft of this booklet please.*
>
> 3. *Value of GAR rights being given up*
>
> *We think that policyholders need to understand the difference between GAR rates and CAR rates, in order to be able to assess the value to them to the proposed policy value uplift. (In doing this, they will of course need to take into account the value to them of greater stability, greater flexibility in the terms of annuities available, etc – but they need to be able to start from the value of the GAR rights being given up).*

FSA also say that they were looking forward to seeing the draft of the Appointed Actuary's report and the financial information described in the documents. FSA say that they were still thinking about the material on Article 4.

05/10/2001 [11:08] An FSA official writes to the Head of Actuarial Support, the Director of Insurance, the Head of Life Insurance and Line Manager E about a proposal from Equitable to write new business (see 19/09/2001 [**entry 1**]) where a policy had been split due to divorce. [**11:30**] The Head of Actuarial Support, [**12:08**] Line Manager E and [**13:16**] the Head of Life Insurance agree that the proposal seems reasonable.

On 07/10/2001 [**16:28**], Chief Counsel A says that she does not intend to provide advice on this issue unless she had to, adding: '*I doubt it is necessary, assuming you are content as a matter of policy that Equitable be "permitted" to do what it suggests ...*'.

05/10/2001 [14:06] PIA say that they agree with Chief Counsel B's analysis of 03/10/2001 [**15:14**].

05/10/2001 [15:19] Equitable write to FSA saying that they would need FSA to provide a formal statement on the compromise scheme to the convening hearing planned for 1 and 2 November 2001. Equitable ask FSA to confirm that the provision of such a statement appeared feasible.

[**19:50**] The Head of Life Insurance says to Chief Counsel A that he presumed that this was not a requirement of the scheme but believed that FSA would in principle be willing to express a view to the court at that stage.

05/10/2001 [18:08] FSA's Line Manager E sends the Head of Life Insurance, the Director of Insurance and the Head of Actuarial Support a list of points to raise with Equitable at the meeting on 08/10/2001, including:

- to ask for a reply to FSA's letter of 21/08/2001 about Equitable's 2000 returns and also on their request for a future profits implicit item;
- the 'synthetic bond' as FSA '*had to return to the question of whether going forward we would look for consistency with 2000 or the rest of the industry*';
- in relation to the FSA's Consultation Paper 84 and the proposals in the Interim Prudential Sourcebook to update requirements on the methods and assumptions to be used in actuarial valuation of long term insurance business, FSA should be '*mindful that it could impact on the value of the implicit item for future profits, we should ask whether they intend to ask for a section 68 order for this or not*'; and
- in relation to 'Policy statements', Line Manager E says that he: '*spoke briefly to* [an Equitable actuary] *who said that they were still expecting to be able to issue policy value statements "this month". Back in June/July they said that the systems would be interrupted for 6 weeks, though 10 have already passed and we are now getting a lot of complaints. The media have also picked up on this. We need to urge them to get on with this, and also find out what the position is with online and telephone valuation requests – ie are they now available, and if not when will they be back on stream*'.

05/10/2001 [19:01] Equitable provide FSA with an update on Equitable's solvency position on three different bases, in response to their letter of 27/09/2001. The information is provided at the request of Equitable's Appointed Actuary. The information is based on the estimated position at the end of 24 September 2001. Equitable explain:

The three bases of presentation are:

1. Our normal presentation assuming a full resilience test based on "test 2" of the GAD letter dated 14 May 2000 and taking no account of any measures that that might improve the free assets in the short term. This takes into account the full effect of the reinsurance treaty for GAR liabilities.

2. A presentation which assumes no resilience falls in the value of equities or property and also makes some estimate for the improvement for the N2 yields on equities. Again the full effect of the reinsurance treaty for GAR liabilities is taken. Please note that in such a circumstance the future profits implicit item would reduce to close to zero.

3. The same as 2. above but showing the effect were the reinsurance to only be valid up to £100m.

	1	*2*	*3*
	£m	*£m*	*£m*
Value of non-linked assets	*24,850*	*24,850*	*24,850*
Future profits implicit item	*635*	*0*	*0*
	25,485	*24,850*	*24,850*
Mathematical reserves (including resilience)	*24,330*	*23,505*	*23,890*
	1,150	*1,345*	*960*
Required Minimum Margin	*1,000*	*945*	*960*
Excess Assets	*150*	*400*	*0*

Equitable state that the figures include a provision for mis-selling of non-GAR policies of £220m. Equitable explain their rationale for this level of provision is as follows:

> *The Society has received legal advice from* [Counsel] *that non-GAR policyholders may have claims against the Society because they were not warned of the extra potential costs of GARs when they bought their policies. The total amount of all potential claims has been estimated on an aggregate basis to be £850m (following the bonus changes at 16 July 2001).*
>
> *However, not all these claims are likely to be successful. The range of probability of success of those potential claims, when taken as a whole, has been estimated by the Society's legal advisers to vary widely from perhaps 20% to 70%.*
>
> *Around 75% by value of the Society's with-profits funds is owned by non-GAR policyholders. Successful claims would mainly have to be met out of the with-profits fund. Consequently around 75% of non-GAR policyholders' claims could end up being paid for by non-GAR policyholders themselves. There are differing legal views on whether, if claims were able to be framed in a certain way, this would still be the case. The extent of the claims that would in effect be paid for by non-GAR policyholders themselves would be up to 75% depending on which legal opinions were followed.*
>
> *The provision for potential claims has been determined assuming that in the absence of a successful compromise scheme under s425 of the Companies Act (as proposed by the Society) that the claims will be resolved through a review instigated by the Pensions Ombudsman or the FSA under PIA rules. It is assumed that such a review would have a defined basis of assessing the damages for any individual case which would take into account all relevant factors including the extent to which non-GAR policyholders would pay for the claims themselves.*
>
> *The total estimated value of potential claims on an aggregate basis of £850 million has been discounted to reflect the probability of success (between 20% and 70%) and because non-GAR policyholders would bear part of the cost of the claims themselves (between 0% and 75% but estimate to be between 25% and 65%). The Board has taken the view that the likely value for potential claims lies in the range of £100 million to £300 million. A provision for the cost of potential claims from non-GARs has been set at £220m.*

07/10/2001 [15:16] FSA's Chief Counsel A suggests to the Head of Life Insurance that FSA needed to be cautious in responding to Equitable's request for a statement to be provided to the compromise scheme convening hearing. The Chief Counsel suggests that, until FSA better understood what Equitable hoped to achieve at that hearing, what they were expecting from FSA, and had some idea of the consultation responses, FSA should be as non-committal as they reasonably could be. Chief Counsel A asks if FSA knew what the Independent Actuary would be saying at the hearing.

08/10/2001 [09:08] FSA's Director of Insurance says that he agreed with Chief Counsel A's comments of the previous day, saying that he imagined:

> *... the Equitable may want us to express support for the "two classes only" approach, with which we may have some difficulty. I doubt whether at this stage we can commit to much more than the view that the promotion of "a" compromise scheme is an appropriate way forward. I guess the court may also be interested in establishing a view on solvency where I guess we are still in the "fundamental uncertainty" position.*

[**18:51**] The Head of Life Insurance later responds that, on reflection, he had got '*cold feet*' over the weekend and that FSA covered this issue on very non-committal lines at their meeting with Equitable that morning (see below).

08/10/2001 [morning]	FSA meet Equitable for a weekly review meeting. According to FSA's note of the meeting, discussion largely focused on Equitable's letter of 05/10/2001 and the issues arising from it. Equitable give an update on the position with regard to the reinsurance treaty: IRECO had indicated that they would provide a revised agreement by 11 October 2001; and Equitable had made it clear that the issues needed to be resolved by 18 October 2001, in time for the compromise scheme. Equitable agree to provide FSA with a copy of their legal advice on the effect of the side letter. FSA note that, under scenario 3 of the solvency information supplied by Equitable, there were no free assets over the required minimum margin and that no resilience reserve had been provided for, having assumed that a section 68 Order for a '*CP84 concession*' had been granted (although an application had not yet been made). FSA ask for justification for the provision of £220m for mis-selling and for further information on the quantification, provisioning and extent to which such claims could be recovered from policyholders. On the financial condition of the Society, Equitable say that they were working with their auditors on a half-yearly financial statement for use with the compromise scheme. Equitable take FSA through the solvency presentations set out in their letter of 05/10/2001. FSA say that, if Equitable wanted a section 68 Order, they should submit an application as a matter of urgency. Equitable say that policy values were not significantly out of line, reporting to FSA that: '*At the stock market lows, aggregate values stood at about 105% of the value of the with-profits fund, but they were now back to around 102% following the modest improvements*'. Equitable's Appointed Actuary '*said he was clear of the need to act if policy values became excessive once again, though he was alive to the sensitivity of this and also the need not to give any public indication of the kinds of level at which he thought action would be needed as this would enable policyholders to select against the fund*'. On Article 4 of Equitable's Articles of Association, FSA invite the Society to provide a copy of the advice received from Counsel so that the arguments could be properly tested. FSA also suggest that Equitable should discuss with the Policyholder Protection Board and/or the Financial Services Compensation Scheme '*as their approach to compensation could be very relevant*'. Equitable inform FSA that the court convening hearing for the compromise scheme had been set for 1 and 2 November 2001. They undertake to provide further details on a query about the weighting arrangements for the policyholder classes which had been raised by solicitors acting on behalf of non-GAR policyholders.
08/10/2001 [entry 3]	FSA's Head of Life Insurance writes to Managing Director B, following the meeting with Equitable that morning, about the public line that FSA should be taking as the '*ability of Equitable Life to meet its required minimum margin of solvency is now seriously in doubt*'. The Head of Life Insurance sets out their latest understanding of Equitable's financial position, following their letter of 05/10/2001 and the meeting earlier that day. He says that FSA proposed to seek Counsel's opinion on what a reasonable range for mis-selling provision would be. The Head of Life Insurance says that: *In these circumstances, we need to consider carefully what the FSA's public position should be. At present in answer to the question "is the Equitable solvent?" press office have been giving the answer (and the same answer is contained on the FSA website):–*

> *"We have been monitoring Equitable Life's financial position closely, and on the basis of the information available to us, we are satisfied that it continues to meet its regulatory solvency margin requirements. Nevertheless, Equitable Life made clear in its annual accounts and in its regulatory return (a report that* [they] *must make to us), that it continues to face some fundamental uncertainties – for example, in relation to the cost of its liabilities to the Guaranteed Annuity Rate (GAR) policyholders. The proposed compromise scheme is designed to address those uncertainties."*

The Equitable's solvency is not in question. But there is now a serious question over whether it continues to meet its required minimum margin of solvency.

FSA's Head of Life Insurance says that there was a case for leaving the line unchanged until the position on the reinsurance treaty and quantification of mis-selling liabilities had been clarified. He notes that any change was '*bound to attract attention, and could undermine confidence in the Society at a delicate stage in its attempt to secure a compromise scheme which we believe will be in the best interests of all policyholders*'; however: '*It is not clear that the required minimum margin has been* [breached]'. The Head of Life Insurance continues: '*On the other hand, there is sufficient doubt about the position to make the present line difficult to sustain. What is new is that we now have (confidential) information which throws doubt on the credit for £700 million claimed under the Reinsurance Treaty. We are not yet in a position to reach a view on this*'.

The Head of Life Insurance suggests that FSA should think seriously about removing the relevant page from their website as an interim measure until the position had been clarified (noting that '*This can be explained as being for updating*'). He also suggests reviewing the line taken in response to press queries.

08/10/2001 [17:19] Line Manager E asks the Head of Life Insurance, the Head of Actuarial Support and Chief Counsel A for comments on a draft letter to be sent to Equitable requiring them to submit a plan for the restoration of a sound financial position. The Line Manager says:

Since our discussion earlier, I am becoming more dubious about whether or not we have the powers to require the production of a plan. I also think that by asking for a plan, we will as [Chief Counsel A] *pointed out cause some irritation that might be counterproductive, and lead to the resending of the draft s.425 scheme documents.*

So instead I have tried an approach that says that there may well have been a breach; that we are aware that the plan is under development, but we need to keep [an] *eye on the position until the plan is adopted, or in case it is not adopted at all. And that approach is to confirm the information that we have requested and they agreed to provide.*

[**22:07**] Chief Counsel A comments:

Just to be clear, I think we do have the power now to require a plan. ELAS are almost certainly underprovisioning for both misselling and resilience.

The following day [**at 09:55**], FSA's Head of Actuarial Support adds:

I would concur with this view based on the information as set out in the letter of 5 October from [Equitable] *with which* [Equitable's Appointed Actuary] *appeared to concur at his meeting with us yesterday (though in relation to scenario 1, there was a resilience provision but no allowance for the legal risk on the reinsurance agreement).*

	[**12:38**] Line Manager E says that the: '*position on 24 September seems clearer than the position today, given that my back of the envelope calculation suggest that the value of their equities is currently £1 billion higher. Is it right though that the test is whether there has (at any time) been a breach of the* [required minimum margin] *rather than whether the breach is continuing?*'. [**12:56**] Chief Counsel A suggests that: '*the power applies to past or current failures, but discretion must then be exercised by FSA as to whether a plan ought to be requested. It would eg arguably be disproportionate if there had been only a "technical" breach which was quickly rectified*'.
08/10/2001 [19:18]	Equitable send FSA copies of the latest progress report on the production of Equitable's Creditors' Pack. Line Manager E circulates the report the following day [at **09:42**].
08/10/2001 [15:38]	An FSA official circulates documentation in relation to the compromise scheme. Over the following two days, FSA officials discuss some of the terminology used in the documentation (including the term 'policy value') which they regard as potentially ambiguous.

FSA's exercise of powers pursuant to ICA 1982

09/10/2001 [entry 1] **FSA exercise the power, delegated to them under the Contracting Out (Functions in Relation to Insurance) Order 1998, to require Equitable pursuant to section 32(4) of ICA 1982 to produce a plan for the restoration of a sound financial position, as FSA were not satisfied that the Society had maintained the prescribed margin of solvency**. FSA say:

> [Your] *letter makes clear that the Society faces considerable uncertainty as to its ability to cover its required margin of solvency. Indeed, it appears that on 24 September 2001, which is the date used for the presentation of the figures quoted in the letter, on the basis of the scenario in which credit for reinsurance would be restricted to £100 million and mis-selling liabilities of £220 million are assumed, the Society would only just be able to cover its solvency margin, but with no free assets. However, in this scenario, credit is assumed for a concession under section 68 of the Insurance Companies Act 1982 ("the 1982 Act") for a modification of regulation 69(5), for which an application has been made only today. At the same time no provision is made for a resilience reserve. On the basis of that scenario, and in the light of our present dialogue on reserving for mis-selling, the FSA believes that the Society must have been in breach of its solvency margin requirement on that day. While markets have improved slightly in the last week, the FSA can have no confidence that this unsatisfactory position does not continue.*
>
> *Section 32(4) of the 1982 Act gives the FSA power to require the production of a plan for the restoration of a sound financial position in the event that a company has failed to maintain the prescribed margin of solvency. In present circumstances the FSA must now formally ask for the submission of such a plan within 2 weeks of the date of this letter.*

FSA recognise that Equitable intended to resolve some of the uncertainties they faced through the compromise scheme but state that Equitable must recognise their obligations to fulfil their regulatory requirements, whether or not the scheme were accepted. FSA say that the plan submitted should address the uncertainties concerning the reinsurance treaty. FSA say that they would process Equitable's application for a section 68 Order as a matter of urgency and ask the Society to stand ready to respond quickly to any requests FSA might have for clarification, or further explanations in relation to the application.

FSA say that they remain to be persuaded that £220m was adequate provision for mis-selling liabilities but note that Equitable had agreed to provide further information on this. FSA point out that they would attach importance to full disclosure by Equitable to their members of any unresolved issues, particularly those which might bear on the Society's financial position, in any communication to policyholders about the scheme.

FSA's Head of Life Insurance seeks comment on the draft, as amended by the Director of Insurance and Managing Director B, from Chief Counsel A, Line Manager E and the Head of Actuarial Support prior to issue.

09/10/2001 [11:25] Equitable send FSA the weekly financial reporting information on claims processed. [**19:21**] FSA's Head of Life Insurance circulates the information.

09/10/2001 [12:58] Equitable inform FSA that the convening hearing for the compromise scheme had been set for 1 and 2 November 2001.

09/10/2001 [entry 4] Equitable submit an application for a section 68 Order to allow the maximum yield on equity shares and collective investment schemes to be calculated in accordance with Regulation 69 as described in Consultation Paper 84 issued by FSA (see discussion about this at the meeting on 08/10/2001).

[**16:37**] FSA's new line supervisor with regulatory responsibility for Equitable (Line Supervisor D) circulates the application to officials.

[**16:42**] The Head of Actuarial Support says that FSA would not be able to proceed further with the application until Equitable provided further information on the level of future profits that they reasonably expected after taking account of the new concession.

09/10/2001 [17:24] FSA's Head of Life Insurance provides Managing Director B and FSA's Chairman with a note about the compromise scheme and the timetable for decisions that FSA would need to take. The Head of Life Insurance says that FSA needed to decide their position on:

1) '*What we say to Equitable about their scheme documentation*'.
2) '*Publication of FSA Views on the Scheme*'.
3) '*Contingency Planning*'.

10/10/2001 [12:37] FSA's Public Affairs and Accountability Department requests further information in preparation for the FSA's appearance before the Treasury Select Committee on 16 October.

10/10/2001 [15:45] FSA's Chief Counsel B circulates a note following discussion with Counsel, who had provided an informal and preliminary response to the instruction of 02/10/2001.

10/10/2001 [16:31] FSA comment on Equitable's application for a section 68 Order of 09/10/2001, including:

> [Equitable's Appointed Actuary] *states that "A provisional estimate of the effect of the change to the equity yield calculation is an improvement in the Society's free assets of broadly £200m." We are not sure quite how this relates to the figures in* [Equitable's] *letter of 05 October. We suggest that you ask the Society to confirm whether he is in fact referring to the figures on Basis 2 of* [Equitable's] *letter, and if so, whether no resilience reserve is included, and what assumption is being made about the implicit item for future profits (*[Equitable] *say this item would reduce to close to zero).*

10/10/2001 [16:52] Scrutinising Actuary F asks Line Manager E whether he had asked Equitable, during the meeting held on 08/10/2001, about the outstanding reply to his letter of 21/08/2001. The Scrutinising Actuary also says that the questions he had asked about the future profits implicit item were now out of date, as Equitable had applied for a concession under Consultation Paper 84 but '*in any event we need to be content that whatever implicit item they are applying for as at 31.12.01 is supported prospectively*'.

[**17:19**] Line Manager E confirms that he had asked about the reply and had made the point about the implicit item.

10/10/2001 [entry 5] Equitable reply to FSA's letter of 21/08/2001 on their 2000 returns. The responses follow the numbering in that entry.

In response to question 1, Equitable say that they have attached a table of smoothed asset shares. (Note: this was not attached and was sent later – see 12/10/2001.)

a) Equitable argue that:

> *It has always been made clear to policyholders that no particular surrender basis is guaranteed and that financial adjustments will be applied to protect the interests of continuing policyholders. This does not give rise to "unlimited discretion" but has been the driver behind surrender bases and* [statements] *to policyholders.*

Equitable go on to explain:

The practical implementation of that driving principle has been to consider that the accumulated policy values (smoothed asset shares) may be reduced on early surrender for three main reasons to protect ongoing policyholders:

1. There may be a reduction due to the current level of markets. As the policy value reflects smoothed returns it may be above the level justified by the earnings on the underlying assets.

2. There may be an adjustment to reflect initial expense which may not be recouped due to the policy's early surrender.

3. There may be a further adjustment to protect the future solvency and investment freedom of the fund.

Equitable say that this had been explained to GAD in their letter of 29/11/2000 and note of 19/12/2000. Equitable then set out in detail the three types of adjustment used.

b) Equitable explain why they considered the reduced reserves in the resilience scenario to be consistent with policyholders' reasonable expectations of surrender values.

c) Equitable state:

I have covered fully how the financial adjustment in resilience conditions is made up of the three types of reduction ... above. In summary, type 1 is dependent on the market levels implied by the test, type 2 recoups lost future loadings and would be related to the ½% p.a. fund charge and type 3 is based on the discounted guaranteed amounts.

The 7½% financial adjustment current when you wrote in August was made up of 5% for type 1 and 2 and 2½% for type 3. This was not set in mass discontinuance conditions. The current 10% financial adjustment is set at 7½% for type 1 and 2 and 2½% for type 3. As markets move the level for type 1 and type 3 will balance out unless the financial adjuster is reset (as it was on 12 September 2001).

In response to questions 2 a) and b), Equitable say that, as from the June 2001 figures, they had included an explicit reserve for exceptional expenses and had brought the different approaches used for expense reserving into line.

On question 5, Equitable say that they were currently working through the issues and would respond fully when the work was complete.

10/10/2001 [entry 6] FSA confirm to Equitable that they have no objection to the writing of new business where a pension had been split in the event of divorce (see 19/09/2001 [**entry 1**] and 05/10/2001 [**11:08**]).

An FSA official seeks comments from Line Manager E on the draft before it is issued.

10/10/2001 [entry 7] FSA meet with representatives of several action groups. The discussion covers: FSA review and past regulation; transfers; financial condition and administration; with-profits annuitants; and compromise.

11/10/2001 [entry 1] FSA ask Equitable to confirm an aspect of the calculation used for their application for a section 68 Order on the calculation of the valuation interest rate (see 09/10/2001 [**entry 4**]).

11/10/2001 [14:30] The Head of Life Insurance provides FSA's Chairman with a chronology of events relating to the disclosure by Equitable of the existence of the side letter to the reinsurance treaty. The Head of Life Insurance says that it had been mainly the work of the Head of Actuarial Support.

This chronology records that Equitable's letter, dated 14/09/2001, informing FSA of the side letter, had been marked '*private and confidential*' and that it had been opened by the Head of Actuarial Support on his return to the office on 20 September 2001.

11/10/2001 [16:25] Equitable's public relations advisers send FSA a copy of '*A Plain English Guide to With-Profits*'.

[16:54] Line Manager E forwards it to other officials at FSA.

On this, Chief Counsel A has written:

> *Not very good.*
>
> - *how will* [terminal] *bonus be applied? Is there a lower bonus where GIRs apply?*
> - *doesn't answer all questions* [policyholders] *have raised*

11/10/2001 [entry 4] FSA's scrutiny file includes pages from Equitable's website on the timing and changes to policy values. It also includes other pages on financial adjustments for early surrenders and reduction in final bonus.

12/10/2001 [14:12] Equitable send FSA the missing appendix to their letter of 10/10/2001 on comparison of reserves to smoothed asset shares for accumulating with-profits policies as at 31 December 2000. The information in the appendix was as follows:

	Mathematical reserves, normal conditions	*Smoothed asset share*	*Mathematical reserves in changed conditions*
	£m	*£m*	*£m*
UK Life and General Annuity	*2,198*	*2,664*	*2,031*
UK Pensions 0% guarantee	*2,660*	*3,071*	*2,415*
UK Pensions 3.5% guarantee non-GAR	*8,271*	*9,920*	*7,420*
UK Pensions 3.5% with GAR option (including GAR reserve)	*6,611*	*8,356*	*6,059*
Overseas	*567*	*649*	*531*
Total	*20,307*	*24,660*	*18,456*

12/10/2001 [16:42] FSA's Line Manager E circulates a note, following a meeting with Equitable about the compromise scheme documentation, of the urgent points arising in relation to: classes; voting rights; reference to FSA role; and application of PIA rules. He seeks the views of Chief Counsel A, Chief Counsel B and the Director of Insurance on the points to be resolved.

12/10/2001 [entry 3] FSA issue an information sheet entitled '*Questions and answers about Equitable Life*'.

15/10/2001 [10:53] FSA's Chief Counsel A provides advice to the Chairman's office, in response to a request from a pension scheme trustee that FSA should intervene to secure a change to the voting procedure for the compromise scheme. The trustee argues that non-profit annuitants should be allowed a vote in the scheme and says that he believes that, if permitted to do so, such policyholders would vote for the compromise proposals. The Chief Counsel advises that this class of policyholders could not vote in the compromise scheme as they were not being asked to compromise any of their rights. However, Chief Counsel A goes on to note that this '*doesn't mean of course that more couldn't be said by FSA or Equitable (or the annuitants)*

	about the positive impact on these policyholders of a fair scheme being approved, and I think it is something we too might reasonably take into account at the margins in considering fairness'.
15/10/2001 [11:47]	FSA's Director of GCD asks Chief Counsel A whether Counsel's provisional note about the status of the side letter was all the advice that they needed. [**12:44**] Chief Counsel A replies, saying that the note was all they needed for now '*since the important bit of it was to confirm that we should not let ELAS use more than £100m from the reinsurance until the legal uncertainty is resolved*'. Chief Counsel A says that she understood that Equitable were not contesting the position that FSA had taken and that Equitable were negotiating with IRECO to '*make the uncertainty go away*'.
15/10/2001 [12:20]	Line Manager E distributes the latest versions of the compromise scheme documents.
15/10/2001 [14:20]	Line Manager E informs FSA's Director of Insurance, Chief Counsel A, the Head of Actuarial Support and Chief Counsel B that the Guernsey Financial Services Commission had told him that some international policyholders had instructed solicitors to challenge the classes for the compromise scheme. [**22:02**] Chief Counsel A sends Line Manager E's note on to Counsel and asks for his thoughts.
15/10/2001 [17:51]	Line Manager E provides FSA's Chairman with advice, ahead of a Treasury Select Committee hearing, on two letters from policyholders that had been sent to FSA by a Member of Parliament.
16/10/2001 [10:21]	Line Manager E circulates the notes of the meeting with Equitable on 08/10/2001. [**14:46**] In response to this, FSA's Insolvency Practitioner comments: '[Equitable's Appointed Actuary] *also made some comments about the future operation of the fund: that he would not expect to pay further terminal bonuses until the fund had built up somewhat and the guaranteed amounts for non-3½% guaranteed policies had been built up to an equivalent extent. I think this policy should be disclosed before the vote as well, although we did not express a view on this at the meeting*'. [**15:31**] The Head of Actuarial Support says that he did not understand the comment and that he understood '*their intention is not to declare any further guaranteed bonuses for the time being, and in the meantime to add a final bonus to reflect any positive difference between the policy value and the guaranteed fund*'.
16/10/2001 [15:26]	Equitable's solicitors inform FSA that Equitable had decided, subject to it being feasible from an IT perspective, to have three policyholder classes for the compromise scheme: GARs; non-GARs voting on their policy values; and non-GARs voting on their mis-selling claims.
16/10/2001 [16:37]	FSA write to Equitable about their 2000 returns because FSA: '*are still not comfortable with your basis of reserving for the accumulating with profits business. Since this is potentially very material, we raise some further questions below*'. FSA recognise that Equitable had explained the three elements of the market value adjustment to them on several occasions but believed that they had only informed policyholders of the 'type 1' adjustment, which reflected market movements. FSA give examples taken from Equitable's communications which supported their view. FSA ask Equitable to: • *... confirm where you have told policyholders explicitly that should the Society's experience deteriorate further, then surrender/transfer values may decline by more than any falls in the market, in order to protect the future solvency of the fund, and that they should therefore adapt their expectations accordingly. In other words, where has the type 3 component of the financial adjuster been explained to policyholders?*

- *... confirm at what point the Society would expect to have to make such a change and base future surrender values on the discounted value of guaranteed benefits. We would have thought that the Society were in a "mass discontinuance" situation already.*
- *... explain how you would reconcile this alternative prospective approach to determining surrender values with the above representations to policyholders.*
- *We presume that if surrender/transfer values were to be determined prospectively, based on the discounted value of guaranteed benefits, instead of retrospectively, based on adjusting policy values, then in some cases the surrender/transfer values may increase, whereas in other cases they may fall. For example, they may rise where the term to retirement is short, but fall for longer terms to retirement. Please could you comment on whether this view is correct, and indicate the effect, both across the portfolio as a whole, and for major blocks of business, of allowing for the present retrospective approach in assessing the PRE surrender values for reserving purposes.*

FSA present the following further questions:

Paragraph 3.8.6 of GN8 says that "when considering reasonable expectations with regard to discontinuance values, the Appointed Actuary must take account of representations made by the company to policyholders ... and also the practice of the company in determining discontinuance values, with particular regard to (a) the relationship between the discontinuance values and the value of the underlying assets, and (b) any circumstances of which the policyholder can reasonably be expected to be aware in which discontinuance values might be reduced due to losses not directly related to the investment return earned by the company on those assets." It seems to us that unless policyholders' expectations already recognise the potential impact of the type 3 adjustment, it is inappropriate to anticipate this in the valuation. As a consequence, the PRE surrender values reserved for in the valuation would be no lower than current surrender values.

- *Please can you explain how your valuation approach is consistent with paragraph 3.8.6 (b) of GN8.*

We are also uncomfortable with what you say in your letter (on page 2) about the Type 2 component of the financial adjuster. You say that this is designed to recoup future charges on business surrendered, in order that remaining policyholders are not left bearing an unfair level of fixed overheads. This appears to be a fairly general statement, of potentially wider application than the more restrictive statement made on page 1 of your letter (and in [Equitable's] *29 November letter), which limits the adjustment to recovering any, as yet unrecovered, new business costs on that business.*

- *Please could you also comment on this.*

We asked in ... our 21 August letter for you to comment on whether there was any implied cross-subsidy in the resilience reserves of different product groups, but you do not appear to have addressed this point. We were referring to the different valuation rates of interest used in the resilience scenario for different blocks of business. For example, we referred to page 257 of the Returns, where the valuation interest rate used in the resilience scenario is 6.26%. You explained that this is effectively 2.7%. However, the valuation interest rate used in the resilience scenario for the business reported on page 256 is 4.25%. On page 258 a rate of 4.80% is used. These varying rates appear to be a consequence of using different mixes of assets to back different lines of business. The question we were asking was essentially as follows, on which we invite your comments.

- *It seems that, on mass discontinuance, the discounted values of guaranteed benefits, which are based on different valuation rates of interest for different blocks of business, as described above, will represent a different proportion of "smoothed asset shares" for these different blocks of business. If our hypothesis is correct, how would you explain to policyholders (even with policies of similar outstanding term) that different financial adjusters were effectively being applied to different groups of contracts on non-contractual terminations in these circumstances?*

> *We asked in ... our previous letter what level of MVA is implied by the reserves in the resilience scenario. You say you have covered this fully, but it seems to us that you have only answered this part of our question in general terms. To get to the heart of what we were asking, we will ask the following:*

- *Please explain the implied level of each of the three components of the financial adjuster in the reserves you are holding, for each major product type, in each of the base and resilience scenarios. Please reconcile this with the breakdowns shown on Forms 52 and Forms 57.*
- *Please also compare the above adjustments with the current level of adjustments and, unless you have already done so, explain why the assumptions used in setting reserves should differ from those currently used.*

	On question 2 of the previous correspondence, FSA acknowledge that Equitable had changed their approach to reserving for expenses '*so that this is not a problem, so we will not pursue this further at this time*'. FSA are content to defer further dialogue about question 5, on the future profits implicit item, '*until the Society's requirements are clearer*'. FSA's Scrutinising Actuary F clears the letter with the Head of Actuarial Support, and discusses it with Line Manager E, before it is sent. [**16:37**] Scrutinising Actuary F circulates his letter within FSA, saying: '*The main issue is the level of reserves* [Equitable] *are setting for their accumulating with profits business ... At this stage we cannot quantify the extent of any under-reserving*'. [**16:53**] The Head of Actuarial Support replies: *I believe we should add "potential" before "under-reserving". They appear to have adopted a different method of reserving, under the resilience scenario, to that which we would expect to see under the new 2000 regulations. However, it is not clear how these reserves would compare to those that might have been calculated if they had followed the approach that we would have expected to see.*
16/10/2001 [19:58]	FSA's Director of Insurance asks the Head of Actuarial Support and another official whether he was right in thinking that it had not yet been possible to reach an agreed position within FSA on the evaluation of Equitable's 'best estimate' approach of valuing GAR policies.
16/10/2001 [entry 5]	Equitable send FSA a copy of their Policyholder Comment Analysis report.
17/10/2001 [10:45]	Further to 16/10/2001 [**16:53**], FSA's Scrutinising Actuary F says that he had intended that '*"potential" was implicit in the phrase "any under-reserving"*' and clarifies his concerns: *Also, I am not only concerned about the resilience scenario. It seems that the Society are limiting surrender values to the discount value of guaranteed benefits in the main valuation as well.*

[**11:16**] The Head of Actuarial Support adds:

At end-2000, the reserves held were broadly equal to the guaranteed fund without any discounting. Therefore, the surrender value test was not relevant in the base scenario at that stage. However, I would agree that in view of the fall in equity markets since then, and the discounting of the guaranteed benefits that is now being applied, we do need to be satisfied that these reserves take account of the underlying current PRE surrender value.

17/10/2001 [15:21] Equitable reply to FSA's letter of 11/10/2001 about their application for a section 68 Order. Equitable detail the changes that they wished to make when applying Regulation 69.

Equitable also provide their solvency position, on two bases, as at 24 September 2001 when the FTSE 100 Index stood at 4614:

	Basis 1	*Basis 2*
	£m	*£m*
Value of non-linked assets	*24,850*	*24,850*
Future profits implicit item	*635*	*635*
	25,485	*25,485*
Mathematical reserves (including resilience)	*24,330*	*24,130*
	1,150	*1,350*
Required Minimum Margin	*1,000*	*1,000*
Excess Assets	*150*	*350*

Equitable explain that:

Basis 1 is consistent with basis 1 detailed in [Equitable's] *letter dated 5 October 2001. This* [includes] *a full resilience test based on "test 2" of the GAD letter dated 14 May 2001 and excludes any measures that might improve the free assets in the short term.*

Basis 2 is a broad estimate of the effect of calculating equity yields in accordance with the changes to regulation 69 detailed above. All other aspects of the position remain the same.

17/10/2001 [16:43] In response to 16/10/2001 [**19:58**], Chief Counsel A says that she was concerned that FSA should have some sort of objective support for their own evaluation of the value of GAR rights and that it would be '*pretty drastic*' to ask Equitable to backtrack unless FSA's evaluation showed that there was some unfairness in the scheme.

18/10/2001 [10:06] FSA's Director of Insurance informs Managing Director B of a conversation he had had with Equitable about the latest position on the side letter. The Director reports that they had discussed the solvency implications if Equitable were unable to do a deal with IRECO. Equitable had said that they were moving further out of equities to protect their solvency position against the possibility that the reinsurance issue would not be resolved or could be resolved only partially.

18/10/2001 [13:01] FSA's Scrutinising Actuary F writes to Line Manager E about Equitable's letter of 17/10/2001, which stated that the effect of the change to the calculation was an increase in free assets of £200m. The Scrutinising Actuary says:

We are puzzled by the figures in his letter which show, on both "Basis 1" & "Basis 2", a future profits implicit item of £635m. In [Equitable's] *letter of 05 October to* [the Head of Life Insurance], *she said that if allowance were made for the improvement in assumed* *equity yields post* [FSMA 2000 coming into force], *the implicit item would reduce to close to zero. We are not satisfied that the implicit item of £635m would still be supported once the concession were granted, and this would need to be pursued with* [Equitable's Appointed Actuary] *before granting the Society any implicit item at 31.12.2001.*

18/10/2001 [18:11] FSA send Equitable a note on the outstanding information about the compromise scheme that they were expecting to receive.

[**18:54**] FSA also send Equitable drafting comments on the compromise scheme documents. The comments include:

- *... do you really want to say that the value of policies is "seriously at risk". This will be taken to mean something much more worrying than I think you intend it to mean. As it is a statement that could well be misleading, this could be taken as being in breach of section 47 of the FS Act 1986 and contrary to PIA rules. If it is not misleading, it means that the Society may have withheld important information about its financial condition!*
- *I am a bit concerned that* [a certain paragraph] *says that the Society will have to establish a provision to cover mis-selling claims if a compromise is not accepted. The reality is that* [as a matter of law] *the provision is needed now, although it would be released if a scheme were adopted. It may seem a technical point, but people may think that the current financial position* [we] *are all assuming takes no account of mis-selling, which is clearly not the case.*

[**19:05**] Line Manager E circulates internally within FSA his correspondence with Equitable.

19/10/2001 [entry 1] FSA's Line Manager E submits a paper to Managing Director B on Equitable's application for a '*CP84 concession*'. The Line Manager explains that the issue was:

Whether to recommend to the Treasury that they should issue to Equitable Life an order under section 68 of the Insurance Companies Act 1982 permitting the firm to accelerate the introduction of Rule 5.11(5) of the Interim Prudential Sourcebook: Insurers. This concession is commonly referred to as a CP84 concession, and has already been given to many other life offices.

The Line Manager recommends that FSA should recommend to HMT that the Order should be granted. On timing, Line Manager E states that it was: '*Urgent. Equitable Life's ability to cover its solvency margin may depend on the concession being in place*'. Line Manager E sets out the background to such concessions and under '*Why concession are sought now*' explains:

The effect of the change described ... above is generally to reduce the liabilities of life funds which hold equities. For companies whose solvency is tight, the relief could be material to their maintaining statutory solvency in a falling equities market. In current market conditions it is desirable to allow companies in this position to take the benefit of the relaxation now, in order to reduce pressure on them to sell equities for technical reasons (ie to maintain statutory solvency on the current valuation basis), as such technical selling would further depress equity values, and thus compound the problem across the industry. This can be done on a case by case basis by means of a section 68 Order.

Line Manager E says that Equitable estimated that the effect of this would be an improvement in their '*free assets*' of about £200m.

19/10/2001 [13:20] Equitable send FSA an explanation of the '*split Non-GAR Class issue*'. The document explains the reasons why Equitable had been advised that a third class of creditor consisting of non-

GAR policyholders having GAR-related claims was required; and why, within the class of GAR policyholders and the new class referred to above, voting values should be weighted according to the strength of the claims.

[**14:14**] Line Manager E circulates the note but says that it did not go far enough for FSA's needs.

22/10/2001 [morning] FSA meet Equitable, their auditors and their solicitors (who are acting for Equitable in relation to the reinsurance treaty) for a weekly review meeting. According to FSA's note of the meeting, the issues discussed included:

Plan for the restoration of a sound financial position
Equitable say that their key response would be that they were seeking to clarify the reinsurance treaty and were pressing ahead with the compromise scheme. They ask if FSA could be flexible on the deadline for submission of a plan as it was unlikely that negotiations on the treaty would be completed by the deadline set. FSA say that they wanted a formal response by the original deadline, but a holding reply would be acceptable.

Reinsurance
Equitable say that, until the issue was resolved, they were working on the assumption that the reinsurance was worth no more than £100m. They provide an update on the discussions with IRECO's parent company. Equitable say that, if the position could not be resolved quickly, it could delay the start of the compromise scheme. Equitable suggest that FSA have a discussion with IRECO's parent company so that they '*understand that we regard this a serious regulatory issue*'.

Mis-selling provision
Equitable had decided that there was an inconsistency with their approach to the provision for GAR mis-selling in the Companies Act accounts and proposed to establish a further provision of £50m to cover litigation and costs. Equitable say that they were expecting to make a provision for this in the region of £270–£300m in the returns. FSA question whether this was sufficiently prudent. Equitable's auditors say that they were content with this approach.

Equitable say, in the light of Counsel's opinion, that they believed it would be acceptable to use the market value adjuster to recover each policyholder's share of the costs of compensation on surrender and to make arrangements to settle individual claims with them when they withdrew their funds. The note continues:

> [FSA's Director of Insurance] *noted that there could be potential issues on the Unfair Contract Terms legislation and suggested that the Society might need to think this through further.* [Equitable] *suggested that there might be a need in future to review policy values.* [Chief Counsel A] *noted that using the MVA seemed the wrong way round. Provision should be made, then the MVA used accordingly or policy values reviewed.*

FSA repeat that Equitable must write to them with their analysis supporting their proposed provision for mis-selling.

Policy values
Equitable report that, as at 12 September 2001, aggregate policy values were 105% of available assets, but had since moved to around 102%.

22/10/2001 [11:03] FSA's Director of GCD writes to Line Manager E having seen his comments, made on 18/10/2001, about the compromise scheme. He says that the comments seemed to him to risk the real issues about the fairness of the scheme being lost among drafting points. He continues: '*I was however particularly concerned to see you urging that the Equitable should not suggest that, without the scheme, the value of policies would be seriously at risk. Isn't this the reality? It surely would be if they became insolvent*'.

[**11:29**] Line Manager E says that his comments had been detailed drafting points which FSA had been asked to provide in advance of a drafting meeting. On the Director of GCD's particular concern, the Line Manager says that the point of his comment had been to ask Equitable to be more precise, as the relevant wording had been ambiguous.

22/10/2001 [11:34]	FSA's Director of Insurance tells Chief Counsel A that, following the meeting with Equitable that morning, he had spoken to IRECO's parent company's solicitors to ask for a meeting later that day. The Director of Insurance says that he had briefed them on the issues that they would want to cover, which included: *... that, quite apart from the implications for Equitable I had some misgivings about the propriety of the side letter. And while Ireco was not subject to our supervision, it was part of a wider group, substantial parts were within our supervisory responsibilities.* [**14:30**] The Director of Insurance later reports that IRECO's parent company's solicitors would not be in a position to talk meaningfully about this for a few days, as they were still making enquiries. [**15:16**] Chief Counsel A passes the note to a manager in PIA's Enforcement Law and Policy Department and to Legal Adviser A.
22/10/2001 [14:00]	FSA's Chief Counsel A updates Legal Adviser F on what Equitable had said at the meeting that morning about provision for mis-selling. She reports that Equitable proposed to increase the provision in the returns to £300m-£325m, which she had said was not obviously prudent to her. Chief Counsel A asks the Head of Actuarial Support whether FSA needed to keep in mind the alleged mis-selling of transfers from GAR to non-GAR policies. [**14:14**] The Head of Actuarial Support admits that he had '*rather lost track of all the potential categories of policyholder that might be able to make a claim for the different types of mis-selling*'.
22/10/2001 [17:19]	GAD ask FSA's Scrutinising Actuary F for information on the key issues on which GAD had given advice in relation to Equitable in the period from January to April 2001. GAD explain that they had to produce a briefing for the Economic Secretary to the Treasury ahead of her appearance before the Treasury Select Committee.
22/10/2001 [17:37]	Line Manager E writes to all officials involved with Equitable following the meeting with the Society. He explains that Equitable would not now be able to meet their timetable for the compromise scheme and that the convening hearing is being put back from 1 and 2 November 2001 to later in that month.
22/10/2001 [entry 7]	FSA's Chief Counsel A provides Line Manager E with some comments on Equitable's draft letter to policyholders about the compromise scheme.
23/10/2001 [09:35]	FSA's Director of GCD writes to Chief Counsel A and the Director of Insurance, setting out the main legal issues remaining related to whether FSA could approve the compromise scheme. [**10:24**] The Director of Insurance says that this reinforced an earlier suggestion from the Director of GCD that FSA should prepare a draft witness statement for them to put to the court. [**12:09**] Chief Counsel A agrees with the points made.
23/10/2001 [13:34]	FSA's Line Manager E circulates a note following several telephone calls with an Equitable policyholder about Equitable's unit-linked business.

24/10/2001 [10:29] Equitable send FSA a copy of a letter dated 19 October 2001, entitled '*Policyholders' response to the proposed compromise*'.

Line Manager E circulates the letter to all officials involved with Equitable the following day.

24/10/2001 [10:38] Equitable send FSA a report on feedback from policyholders on the consultation exercise about the compromise scheme.

[**11:28**] Line Manager E circulates the report.

[**13:45**] FSA's Head of Actuarial Support provides some comments and suggests that FSA should discuss whether the scheme needed to be amended. His comments include:

> *... my feeling would be that policyholders joining over the last few years are being treated harshly, as they are having to bear the cost of the overallocation of bonus to pre-1990 policies, which Equitable has been reluctant to address (as this could be seen as challenging the "rights" of GAR policyholders).*

The Director of Insurance agrees that it would be useful to discuss these points.

24/10/2001 [13:21] FSA's Line Manager E prepares a draft briefing for FSA's appearance before the Treasury Select Committee.

[**13:58**] FSA's Head of Press Office says that the Committee might ask if FSA or Equitable had asked Halifax whether they would be willing to be flexible on the deadline for a compromise of GAR rights, with reference to the final payment arising from the sale. He asks if there were anything that FSA could say about this.

[**14:04**] Line Manager E says that this was all quite sensitive and ought not to be raised.

[**14:44**] The Head of Press Office argues that: '*No comment*', was not an option for FSA if they were questioned about this.

24/10/2001 [22:01] Equitable send FSA a copy of a draft letter (dated 23/10/2001), in response to FSA's requirement that they should submit a plan for the restoration of a sound financial position (see 09/10/2001 [**entry 1**]). Equitable's Chief Executive formally responds to FSA's requirement on 26/10/2001 [**09:57**]. (Note: the Chief Executive's letter has been reproduced in full within that entry.) Equitable's draft plan, which was substantially the same as that set out in the formal response, consists of:

> 1) renegotiating the reinsurance treaty with a view to being able to take credit in the returns of £750m.
>
> 2) as protection against a situation in which Equitable could not take credit for the reinsurance treaty of more than £100m, undertaking a '*special programme*' of switching their assets from equities into UK Gilts. Equitable say that £790m of assets had been switched during October to date, which should reduce liabilities by £400m.
>
> 3) achieving the policyholder compromise which, if sanctioned, would provide an improvement in free assets of about £1.3bn, comprising:
>
> - *the release of the difference between the non-GAR mis-selling reserve of £300m and the additions to guarantees of around £230m;*
> - *the release of the difference between the net GAR reserve of £1454*[m] *and the additions to guarantees of around £680*[m]*;*
> - *the related resilience reserves;* [and]
> - *the £250m Halifax monies (net of any tax payable).*

25/10/2001 [09:47] FSA's Line Manager E remarks that Equitable's plan to restore a sound financial position was more detailed than he had expected, noting, however, that it had been put forward as a draft plan. He says: '*I think it is not unhelpful that the letter questions whether the breach has in fact occurred, since it provokes a discussion of the Society's financial position which I found useful. That said ...* [Equitable do] *not challenge our authority to request a plan*'. Line Manager E says that it was unlikely that FSA could take any immediate follow-up action, due to individuals from both sides being unavailable for the remainder of the week. He asks the Head of Actuarial Support to consider the response.

[**14:13**] The Head of Actuarial Support says that he believes that, on the basis of Equitable's letter, there remained a number of fundamental uncertainties about Equitable's present financial position. Those were:

> *1) I am not convinced on the basis of the information presented that it would be prudent to assume that credit can be taken for more than £100 million of reinsurance cover. Professional guidance requires the actuary to have regard to the possibility that a reinsurance contract may prove unenforceable in certain circumstance, and I believe that such an eventuality must be a significant risk in this present case.*
>
> *2) I am surprised to see that they believe that liabilities can be reduced by around £400 million as a result of switching from equities to gilts. They have also told us that the effect of the* [FSMA 2000] *concession for assumed interest rates on equities is only worth around £200 million, and these figures do not really seem to be consistent.*
>
> *3) The figures ... suggest that a resilience reserve of around £200 million is held at present although this provision did not appear to be included in the scenarios.*
>
> *4) They mention that they could reduce policy values on some older policies where they still exceed asset shares. However, I would think they should be looking at this anyway in order to ensure a reasonable level of fairness between classes of policyholders, albeit that this could be difficult to present publicly.*
>
> *5) We are already in separate correspondence with* [Equitable's Appointed Actuary] *about our doubts over the suggested extension of the financial adjuster to include discounting of guaranteed amounts.*
>
> *6) The suggested resilience reserve based on a 10% equity fall is lower than the standard set out in our present guidance which suggests testing for a fall of around 20% in current market conditions.*
>
> *7) I hope that GCD will be able to advise on the reasonableness of the legal advice ... about the potential claims for mis-selling, and we can then look further at some of the figures that they quote for the likely cost of these claims. (I believe that* [Counsel] *was sceptical at one stage about their assumption that the redress payable to a leaver could be netted down for the overall "cost" of redress in respect of all non-GAR policyholders.)*

25/10/2001 [14:00] Equitable send FSA a balance sheet and profit and loss statement for 30 September 2001. The information is presented as follows:

	Insurance Act Basis	
	£m	*£m*
Assets		
Investments		
Property	*2,107.6*	
Equities	*6,884.1*	
Fixed Interest Securities	*12,265.0*	
Short Term Deposits	*2,467.1*	
Unquoted Investments	*984.8*	
		24,708.6
Reinsurers share of technical provisions		
GAR liabilities	*645.0*	
Unit linked liabilities	*3,232.1*	
Other liabilities	*356.9*	
		4,243.0
Current assets		*726.2*
Tangible assets		*0.0*
Implicit items		
Future profits	*774.0*	
Other s68 concession	*0.0*	
		774.0
Total assets		*30,451.8*
Liabilities		
Guaranteed fund on accumulating with profits policies – GAR	*4,221.2*	
Guaranteed fund on accumulating with profits policies – non-GAR	*11,343.8*	
Less discount applied to liabilities (see notes)	*(1,492.0)*	
		14,073.0
*Other with-profits liabilities**		*3,021.9*
GAR provision		*2,149.0*
GAR rectification		*250.0*
Non-profit liabilities		*4,581.3*
Misselling liabilities (estimate) ([for potential non-GAR mis-selling claims]*)*		*270.0*
Other misselling liabilities (eg Pension Review)		*205.0*
Linked liabilities (reinsured to Halifax)		*3,232.1*
Outstanding Claims		*400.0*
Resilience reserve		*0.0*
Subordinated loans		*0.0*
Provision for other risks and charges		*1.0*
Other current liabilities		*928.5*
Total liabilities		*29,111.8*
Required Minimum Margin		*1,006.0*
Excess over [required minimum margin]		*334.0*

	Equitable also enclose a comparison between policy values and allocated assets. (Note: this document does not appear to have been held on the regulator's files. However, see 07/11/2001 [**14:50**].) [**18:22**] Line Manager E circulates the information. [**18:40**] The Head of Actuarial Support comments that the report confirmed the weakness of Equitable's financial position on both the statutory and Companies Act bases.
25/10/2001 [17:46]	Line Manager E informs Chief Counsel A, the Head of Life Insurance and the Head of Actuarial Support that he had arranged a meeting with Equitable's solicitors to discuss how the Society proposed to deal with the non-GAR classes issues. (Note: the meeting did not go ahead (see 29/10/2001 [**20:56**]).)
c25/10/2001	FSA's Equitable supervisory file includes a comparative table of payouts on personal pension policies for 36 companies.

26/10/2001 [09:57] Equitable's Chief Executive formally responds to FSA's request under section 32(4) of ICA 1982 for the submission of a plan for the restoration of a sound financial position. Equitable say that their letter constituted a draft plan. This reads:

> *The Reinsurance Treaty with Irish European Reinsurance Company (IRECO) has been evaluated by our lawyers ... A copy of their initial assessment, which was supported by opinion of Counsel, has already been forwarded to you. Their view is that the side letter is probably not legally binding but is likely to influence arbitrators should an arbitration process be entered into regarding the way forward if the claims balance exceeds £100 million. There is a good reason to believe we can rely on the treaty for the credit taken in our regulatory returns, though we accept the position is not beyond doubt.*
>
> *Scenario three in the letter of 5 October from* [the Society] *is a stress test scenario and assumes the IRECO treaty is valid only up to £100 million. We understand your conclusion that £220 million for non-GAR mis-selling provision is not sufficiently prudent, but believe that there are grounds for us to rely on the treaty. It should also be pointed out that* [Equitable] *did not include any future profits implicit item but it is likely that some allowance would be made (at least up to around £100 million).*
>
> *As you are aware we are discussing with management of IRECO and its parent Employers Reinsurance Corporation a clarification to the reinsurance treaty. The nature of the clarification will be to specify the terms under which reinsurance cover remains in force if the claims balance exceeds £100 million. Negotiations are structured around the limit of liability to be accepted (initially proposed at £1,000 million), the premium to be payable if claims balances exceed £100 million, the rate at which claims are recovered, the use of swaptions by the Society to provide further protection of the GAR liability if interest rates fall, and reassurances regarding the Society's current financial position. We are near to agreement on terms and would hope to be in a position to finalise an agreement by 31 October 2001. In this circumstance we believe we will be able to take credit for up to £750 million currently. When agreement of the clarification has been achieved we will discuss the matter more fully with you.*
>
> *To provide protection against circumstances where it becomes clear that the IRECO treaty cannot be relied upon for balances in excess of £100 million, the Society commenced a special programme of switching out of equities into UK Gilts. £790 million of switching has occurred during October to date, which should enable us to reduce liabilities by about £400 million.*

The final point of our plan for restoration of solvency is the GAR compromise scheme. You have been kept well abreast of its development so I shall not elaborate on the detail here. We hope to launch the voting process, with the posting of documents to policyholders at the end of November. The meeting for voting is now tentatively set for 11 January 2001 with Court sanction in early February.

If the scheme is sanctioned by the Court there will be an improvement in free assets of about £1.3 billion, [comprising]*:*

- *the release of the difference between the non-GAR mis-selling reserve of £300 million and the additions to guarantees of around £230 million*
- *the release of the difference between the net GAR reserve of £*[1,454 million] *and the additions to guarantees of around £680 million*
- *the related resilience reserves*
- *the £250 million Halifax monies (net of any tax payable)*

We anticipate that all three elements of our plan will succeed. However if we can only rely on the disposal of equities there are two other possible actions we will consider, in extremis; further reductions in terminal bonuses would be considered thereby reducing payouts on certain older policies where policy values continue to exceed asset shares; extension of the financial adjuster on surrender values to include discounting of guaranteed amounts (as might be considered appropriate in circumstances of mass discontinuance or the high level of guaranteed amounts).

Finally I should comment that we have applied formally for an order under Section 68 of The Insurance Companies Act 1982 to allow the maximum allowable yield on equity shares and collective investment schemes to be calculated in accordance with Regulation 69 as described in Consultation Paper 84 issued by the Financial Services Authority.

It is our intent that these actions should at current market levels provide sufficient margin for a resilience reserve based upon an equity fall of around 10% by value. This work will be confirmed in due course.

We believe these measures maintain the required minimum margin and that the implementation of the Scheme, and the reliance on IRECO until such time that a Scheme is effective, will provide free assets sufficient to protect the Society from falls in UK equity markets. We are still evaluating the degree of protection it will provide and will advise you shortly. However if equity markets were to weaken significantly then we might need to adjust down further the equity backing ratio.

Equitable then go on to discuss the level of provision for non-GAR mis-selling liabilities, saying that:

The outline above takes account of a provision for non-GAR mis-selling of £300 million, being £80 million higher than that proposed in the Compromise Scheme.

We have discussed the judicial approach to non-GAR compensation, assuming the S425 scheme is unsuccessful. [Counsel] *has expressed the view that the Society needs to be mindful of the position of a departing policyholder seeking compensation as opposed to a remaining policyholder seeking compensation. Should a scheme not be agreed exiting policyholders might claim for settlement first leaving the cost to be borne by remaining policyholders. This would prove inequitable when the process continued to the point where assets remaining were depleted and insufficient to meet the claims of remaining policyholders.* [Counsel] *was confident that the Court would be sympathetic to an increase in the financial adjuster to reflect the reduction in assets available for* *distribution as a result of the need to provide for non-GAR mis-selling. It is most likely that in the absence of a compromise the non-GAR claims would be settled by a "group" compensation process such as the Ombudsman. We consider it unlikely that such a process, affecting 75% of the members, would not have regard to the need for the members to bear their fair share of the costs.*

To address this issue the most appropriate action in the absence of a compromise would be for the Society to reserve for the fair cost of compensation, which we estimate to be £220 million, and additional costs of administration, estimated at £50 million. In order to ensure all policyholders bear their fair share of such compensation policy values could be reduced to ensure that assets were sufficient to meet the policy values in aggregate.

Accordingly we consider there is a robust basis for regulatory purposes with a non-GAR mis-selling provision of something in excess of £270 million. We have used £300 million to allow a ten percent margin for prudence. We are happy to [discuss] *this concept further with you.*

Equitable continue:

As regards non-GARs who leave after the scheme is published or who have already left, our view is that most if not all will have left as a result of the current uncertainty regarding the position of the Society. We have received opinion from Counsel that the decision to leave as a result of uncertainty is very remotely connected with the failure to disclose the existence of GARs when they took out their policy. Accordingly it is unlikely that a policyholder can seek to recover a financial adjuster as an element of loss. Non-GARs who left prior to 16th July 2001 would we believe find it difficult to demonstrate any loss when assessed against an average of similar policies. Subsequent to 16th July it might be possible for individuals to demonstrate loss, but they need to demonstrate both causation and reliance. If all such non-GARs who left up to end of August did suffer loss and were compensated on the same basis as the compromise proposals (without the Halifax money) then the cost would be around £10 million. This amount will grow until the vote, but we consider it unlikely to become a financially material problem for the Society.

As regards non-GARs compensation, our proposal is to restore their guarantees to the position they would have been in had the House of Lords not ruled as it did, i.e. we wish to restore the declared reversionary bonus that would have been allocated for 2000. The declared rate for 1999 was based on 5% for the years 1998 and 1999 when the overall rate of return allocated to policy values were 10% and 12% respectively. The Society had been bringing down declared rates to reflect falling yields on assets and falling returns. In a low return environment it would not expect to pay more than half the average overall rate of return in guaranteed form. For 2000 the overall rate of return was 8% and so it would have been expected to declare guaranteed returns at 4% for 2000. Since many policies had 3½% GIR, they only suffered ½% reduction. This approach seems to us fair. We cannot see how they sustain a claim to be in a better position than they would have been in had bonus not been suspended.

26/10/2001 [13:09] Equitable telephone FSA to inform them that progress was being made on the renegotiation of the reinsurance treaty and that a deal would be done, although not all of the problems had yet been resolved. Equitable say that IRECO's parent company were coming to London to conclude the negotiations and suggest that FSA's Chairman or Managing Director B should attend and: '*If that could be done, he thought there would be significant advantages to Equitable if they could have the use of a room here for the bilateral discussions with* [IRECO's parent company] *– he thinks the scale of the building would help get over the message that the FSA is an important body that* [IRECO's parent company] *would want to keep on side*'.

	Line Manager E says that the Director of Insurance thinks that FSA '*ought to be able to oblige*'. [**17:32**] Chief Counsel A expresses the concern that there could be any possible appearance that FSA were being used as '*a big stick*' in commercial negotiations '*although obviously we have a strong message to give about an apparent attempt to mislead the regulator and the downsides if a deal isn't struck*'. Chief Counsel A suggests that a tripartite meeting should be held, and that it should not be chaired by FSA's Chairman or Managing Director B.
26/10/2001 [entry 3]	Line Manager E writes to two FSA officials about the rectification scheme.
29/10/2001 [entry 1]	FSA, as lead supervisor, meet Equitable at their request in order to be briefed on the current situation in relation to various conduct of business issues.
29/10/2001 [entry 2]	Line Manager E provides FSA's Public Affairs and Accountability Division with some further briefing for the Select Committee hearing to be held on 30 October 2001.
29/10/2001 [entry 3]	The Financial Services Consumer Panel present the results of their Equitable Life Survey.
29/10/2001 [17:12]	FSA write to the Financial Ombudsman Service seeking confirmation that the Financial Ombudsman's jurisdiction to handle complaints relied on where the point of sale of the product had been, rather than where the policyholder was now resident.
29/10/2001 [20:56]	FSA's Chief Counsel A writes to Line Manager E, the Head of Life Insurance and the Head of Actuarial Support, noting that the planned meeting with Equitable's solicitors had not gone ahead. She explains the plans for FSA to review the compromise scheme documents over the coming weekend.
30/10/2001 [15:52]	FSA circulate an updated version of their information sheet as the last one '*became out of date very quickly when the Baird report came out*' and ask for comments.
30/10/2001 [16:30]	Equitable send FSA a revised timetable for the external review of Equitable's Creditors' Pack. [**17:19**] Line Manager E circulates the timetable to all officials involved with Equitable.
30/10/2001 [17:37]	The Financial Ombudsman Service respond to FSA's queries about jurisdiction (see 29/10/2001 [**17:12**]). They confirm that, where a policy had been sold in the UK, '*the current residential status of the policyholder is not a relevant consideration in assessing jurisdiction*'. In relation to policies sold through a branch operation (e.g. the Society's branches in Guernsey or Germany), the Financial Ombudsman Service explain that: *1) under Compulsory Jurisdiction, the residential status of the policy holder at the time of sale and the actual location of the sale is immaterial to the assessment of jurisdiction. What is important is whether the complaint relates to the carrying out of investment business in the UK and whether the activity was regulated by the PIA (post-A-day and about advice at point of sale).* *2) under Voluntary Jurisdiction, the residential status is a material consideration. Under the Ombudsman's Terms of Reference, section 6.4 (b) provides that the Ombudsman shall have no power to consider a complaint if the person bringing the complaint does not have, or did not have at the time of the events giving rise to the complaint, their main or principal residence in the UK, Isle of Man or Channel Islands.*

The Financial Ombudsman Service add that:

> *Under the new* [Financial Ombudsman Service] *rules DISP 2.7 deals with the territorial scope of the service. Briefly, this provides that the residential status of the complainant is irrelevant. The emphasis is more on the permanent place of business of the firm concerned. The territorial scope covers firms operating from a permanent place of business in the UK. Complaints relating to business conducted by branches of firms or Voluntary Jurisdiction participants outside the UK, or by firms operating in the UK on a service basis from outside the UK, are not subject to the Ombudsman's jurisdiction.*

31/10/2001 [09:49] FSA's Head of Actuarial Support writes to Line Manager E (copied to others) about the compromise scheme. The Head of Actuarial Support says:

> *Some further evidence of the lack of openness and co-operation from the Equitable team – apparently, the independent actuary has already seen a series of drafts of the report by the appointed actuary,* [Equitable's Appointed Actuary], *on this scheme. He has now written his own draft report including references to* [his] *report, and was therefore quite surprised to hear that we had not received any copies of* [the Appointed Actuary's] *report.*
>
> *I have considerable misgivings about the way that Equitable seem to be trying to bounce us here into accepting that this scheme is fair and reasonable.*

[**10:15**] Line Manager E replies: '*Indeed, and that is why I keep making the point that if they do not get their act together, we will need to consider what steps to take*'.

31/10/2001 [12:14] FSA's Line Manager E circulates a note of FSA's concerns about the timetable for the compromise scheme and the timescales in which they were expected to take a decision on their position. The Line Manager says:

> *As things stand, not only is it becoming certain that we will not have been able to satisfy ourselves that the Scheme is one we can sign up to, but it seems to me we may even be in the territory of having to make comments that will be so feeble or negative that we could bring the project down. (Indeed, until we know what they are now proposing, we cannot rule out the possibility that we might need to intervene to stop the Society going ahead.)*

The Line Manager sets out the issues to be resolved and the areas on which FSA should be focusing their efforts.

[**17:04**] The Head of Actuarial Support replies to this note, saying that:

> *I have also seen the letter of 26 October in which they argue in favour of netting down compensation, giving only a small proportion in the form of guaranteed benefits, and avoiding most of the potential claims from those who have left or may leave the society before the scheme is implemented. This really needs some advice from* [General Counsel's Division] *here on the reasonableness of their position.*
>
> *On the quantum of the non-GAR mis-selling losses, I believe that if we do not accept the above legal arguments from Equitable, then it could be argued that this loss varies from around 10 to 30% of policy value (the precise amount depending on exactly when premiums were paid in the period between 1988 and 2000) if policyholders were able to claim in full for redress to bring them up to the industry average. It is arguable of course that not all this is a direct result of the GAR problem. A significant part of this "loss" may relate to other issues, such as the risk that bonuses payable to the older policies (which happen to be largely GAR policies) may be or have been too high relative to the amount of profits that the society has earned.*

If we do though accept their legal arguments, then the redress offered of 1.5% for all non-GAR policies would seem (subject of course to seeing a copy of their actuarial report) to reflect the netted-down (and discounted for equal probability of success of all claims) value of the loss directly attributable to the existence of GARs (and ignoring for this purpose the potentially inequitable apportionment of bonuses across different generations of policies). Of this amount, there would be included an increase of 0.5% to the guaranteed benefits for those with GIRs and 3.5% to guaranteed benefits for those without GIRs.

31/10/2001 [14:27] FSA receive a query from The Consumers' Association about the security of Equitable's unit-linked policies in the light of a passage in the Baird Report.

[**17:10**] Line Manager E circulates a suggested response.

31/10/2001 [20:15] Equitable write to FSA about the information requests made at their last meeting.

Equitable set out approximate data on with-profits claims (excluding annuities):

	GAR policies	*Non-GAR policies*
August 2000 – end July 2001	*£850m*	*£2,300m*
August 2001 – end September 2001	*£150m*	*£950m*
Total	*£1,000m*	*£3,250m*

The following day FSA's Line Manager E comments '*I assume we asked for this in order to form a view about the likely scale of mis-selling claims for those who left the with profits fund after the sale announcement, and after the policy value cut*'.

November 2001

01/11/2001 [09:47] FSA's Director of GCD asks Chief Counsel A what advice, if any, had been given in response to Equitable's plan for the restoration of a sound financial position (see entry for 26/10/2001 [**09:57**]).

[**10:21**] Chief Counsel A replies that, on point 1 of the Head of Actuarial Support's list of fundamental uncertainties (see 25/10/2001 [**14:13**]), the clear advice had been that credit could not be taken in the returns for the reinsurance of more than £100m, until the uncertainty was removed. She says that point 7 was to be considered by Legal Adviser F and Chief Counsel B, who were on leave.

01/11/2001 [10:12] FSA's Head of Actuarial Support, in response to Line Manager E (see 31/10/2001 [**17:10**]), asks whether FSA had a copy of one of the Society's unit-linked policies. Line Manager E asks Scrutinising Actuary F if he had sample wording from these policies.

01/11/2001 [10:47] Further to the Director of GCD's comments on 23/10/2001 [**09:35**] about the remaining issues for FSA in relation to '*approval of the scheme*', the Director of Insurance explains that FSA were meeting Equitable the following day and, in the light of that meeting and '*sight of the scheme papers over the weekend*', FSA would discuss on 5 November 2001 what the key outstanding issues were and what FSA's attitude to them should be. He notes that: '*One of the key issues – which I suspect will affect a number of others, is how Equitable propose to resolve the voting class issues: we have not yet seen their proposals on this*'. The Director of Insurance also reports that he had made clear to Equitable's Chief Executive the previous day that Equitable '*should not rely on the tactic of bouncing us to get their way*'.

01/11/2001 [11:08] A policyholder action group send FSA a '*technical response*' to the proposed compromise scheme. [**12:41**] Line Manager E circulates the response.

[**14:42**] The Head of Actuarial Support comments that it does not seem to be a very well-informed paper '*but does include some useful pointers*', which he goes on to describe. Under the heading '*Accounting for GARs*', he says '*the accounting rules do not require explicit provision to be made for future discretionary bonuses, though some implicit provision is still made through discounting the liabilities at a very low rate of interest*'.

01/11/2001 [17:45] Equitable inform FSA that they would be unable to attend the regular review meeting planned for 2 November 2001, as Equitable were still '*deep in discussion*' with their reinsurer. The second part of the meeting, on the compromise scheme, still goes ahead.

01/11/2001 [entry 6] FSA meet a delegation from IRECO's parent company to discuss the negotiations that were taking place with Equitable on the reinsurance treaty. FSA say that the discussion had to be on a hypothetical basis, as FSA '*could not talk about the financial condition of a regulated company nor could the FSA be involved in commercial negotiations*'. FSA give an overview of the position of the compromise scheme. In response to a question as to what FSA thought their role was in terms of approving the amended treaty, FSA's note, prepared the following day, records:

> [FSA's Director of Insurance] *replied that there was no formal approval role. Our locus was that we would need to be satisfied about the integrity of the treaty when assessing the credit taken for it in the solvency calculations. For the same credit to be taken we would need to see that after the negotiations it provided the kind of protection that we had always understood that it provided.* [IRECO's parent company] *said that the treaty was always intended to be a riskless transaction.* [The Director] *said that that was very*

definitely not our view at the time, on the basis of the information we were given, since there was a clear risk for Ireco on the terms we had seen in the event the [projected] *surplus did not emerge. Had there been no risk transfer, the treaty could not* [have] *been taken into account in the solvency calculations.*

On disclosure of any amendments to the treaty, the note records:

[FSA's Director of Insurance] *noted that if the result of the revised terms was a substantial change in the terms of the treaty, we believed that proper disclosure of the facts by the Society of the changes and the surrounding circumstances would be required by us and probably by the Society's auditors.* [He] *added that if the changes were less dramatic, and amounted to little more than a clarification of the terms, then there might be less need for disclosure.*

01/11/2001 [entry 7] FSA send HMT a draft section 68 Order to allow Equitable to take account of the earnings yield (in addition to the dividend yield) on equity investments in calculating their valuation rates of interest. FSA explain:

The effect of the change described ... is generally to reduce the liabilities of life funds which hold equities. For companies whose solvency is tight, the relief could be material to their maintaining statutory solvency in a falling equities market. In current market conditions it is desirable to allow companies in this position to take the benefit of the relaxation now, in order to reduce pressure on them to sell equities for technical reasons (ie to maintain statutory solvency on the current valuation basis), as such technical selling would further depress equity values, and thus compound the problem across the industry ...

Equitable Life estimates the effect of the change to the equity yield calculation will result in an improvement in the Society's free assets of about £200 million.

FSA recommend that the section 68 Order, which they say '*is consistent with the other equivalent Orders granted for other life offices*', should be granted.

02/11/2001 [12:30] FSA meet Equitable to discuss the compromise scheme.

Following the meeting, Equitable's solicitors send FSA the text of the provision in the agreement with Halifax which said that, for the further payment of £250m to be made, requires FSA to have '*confirmed that it has no objection to the Proposed Scheme or to the draft Scheme Documents being issued to creditors entitled to vote thereon*'.

02/11/2001 [16:59] Line Manager E circulates a note of the meeting with IRECO's parent company on 01/11/2001. He says that he has spoken to Equitable about progress and had been told that the delegation had agreed to stay for as long as it took to find an agreement. He notes: '*There are indications of some progress, albeit rather slow*'.

02/11/2001 [20:54] FSA's Director of Insurance informs the Head of Life Insurance of two telephone conversations with Equitable (at 17:30 and 18:30) about the negotiations on the reinsurance treaty. He sets out, in broad terms, his understanding of the revised terms of the treaty, as they currently stood in the negotiation process:

Ireco accept that the side letter is to be treated as if it had never been issued, and could at no time have been relied on ... by them.

An addition to the Treaty is to be made as from 1/12/01. This will deal with the (arguably improbable) situation where claims under the Treaty exceed £100m, where at present the Treaty simply provides for "renegotiation".

The addition will provide that protection will be provided up to a defined limit (of around the £700m for which credit is taken for reserving purposes +20 -20% of that amount). The intention is that the limit should be sufficient to satisfy us that the full £700m credit can be taken.

The Director reports that he had told Equitable that:

... [he] *was pleased that it appeared that a satisfactory solution might be in sight. But they had to understand that we would have to scrutinise the proposal very carefully before we could confirm that it could be allowed to "count" for solvency purposes.*

02/11/2001 [entry 4] An HMT official provides the Economic Secretary to the Treasury with briefing and a draft reply to the Treasury Select Committee on the section 68 Orders granted to Equitable. As background, the official says:

Equitable Life has applied for two concessions relating to the valuation of certain of its assets. Such concessions are granted by the Treasury under section 68 of the Insurance Companies Act 1982, taking into account the advice of the FSA. Both issues have been looked at by the Insurance Supervisory Committee and senior management of the FSA. This paper reflects the FSA's view. We recommend that the appropriate section 68 order[s] be made.

On the section 68 Order relating to Permanent Insurance, the official says:

The normal approach taken when valuing a shareholding in a private subsidiary company is to use the "look through" value. That produces a very conservative valuation. On that basis, the then subsidiary of Equitable Life would be valued at around £30 million. However, Equitable Life agreed on 22 December 2000 to sell Permanent to Liverpool Victoria for £150 million. The deal was unconditional, other than for regulatory approval, and was completed on 16 February 2001. Equitable Life believes that for the purposes of the 2000 year end returns, it should report the value of the subsidiary on the basis of the agreed sale price.

We consider that as the sale was confirmed, the agreed sale price provides a sensible basis for a valuation of this asset and is consistent with the treatment in the Companies Act accounts. We believe that the equivalent concessions, requiring a proven market valuation to be used, have been given in other similar circumstances. It is also not unusual for a requirement to report on a particular basis to be imposed after the event, provided that the requirement is imposed in advance of the reporting date.

On the section 68 Order relating to rates of interest, the official explains:

Regulation 69 of the Insurance Companies Regulations 1994 specifies the basis on which future payments are to be valued. In effect, the requirement is to assume an interest rate no higher than the average yield currently being achieved on the assets supporting the long term business. The regulation specifies how that yield is to be calculated. However, there is a slight defect in the averaging method prescribed in the regulations which means that depending on economical circumstances they can place (and at the moment they are placing) an artificial strain on the company. In other economic circumstances it can lead to an artificial release of reserves. This arises because of the simplistic basis of the calculations for fixed interest assets, which averages the rates [of] *interest by* [the] *value of the underlying investments, but takes no account of ... their duration. At the time the regulations were made, more sophisticated calculations were not thought necessary.*

The problems with the valuation method in regulation 69 become evident when doing the calculations for resilience tests. Many companies just live with the consequences. However some (including [two named companies]*) have preferred to report more* *accurately and have therefore sought and been given section 68 orders requiring them to perform more sophisticated calculations. Equitable Life has asked for a similar concession. The proposal is to calculate the yield on the basis of two segments of fixed interest securities (approved and non-approved). We consider this approach to be perfectly valid and would support other companies wishing to adopt it. However, the methodology is slightly different from that which has been applied by other companies. The alternative effectively involves the company seeking to hypothecate blocks of fixed interest assets to particular areas of business in order to calculate the yield.*

There will be a need for a continued concession under section 68 (or a waiver to the equivalent FSA rule) going forward. At this stage however we are recommending that the concession granted should deal only with the reporting of the end 2000 position. This produces a more accurate reflection of the financial position than would be the case if it followed the requirements of regulation 69 and granting the order will enable the Society to complete its annual returns for 2000.

We will wish to discuss the future arrangements further with the Society. This is because the Equitable has now concluded that in future it would be able to do the calculations on the basis followed by [the two named companies]. *It is not possible for them to produce the 2000 year end figures on that alternative basis because of the complexity of the calculations involved. However, there are issues we will want to consider more carefully before agreeing to that because the nature of the business of those companies is different and we also look to companies to maintain consistency of valuation methods from one year to the next. We have not yet reached a firm view on the appropriate treatment going forward.*

However, as background, we have discussed the effects of the alternative valuation methods to that required by regulation 69. Equitable has indicated that (at least with current economic conditions) the financial effects of either methodology would be broadly similar, although the method adopted by [one of the named companies] *might produce a very slightly less favourable result. If Equitable Life goes ahead on the basis it had proposed the benefit to its solvency position will be of the order of £150-200 million as compared with the regulations. The company's actuary believes that the ... method* [adopted by one of the named companies] *would also have produced a benefit within that range.*

03/11/2001 [19:37] FSA's Chief Counsel A provides the Director of GCD with a note on the issues within the compromise scheme proposals concerning uplifts to the policyholders of both GAR and non-GAR policyholders, which she hopes '*can form a starting point first for instructing Counsel ... and then for the matters which the FSA will need to address to the Court (and perhaps before then to policyholders)*'. Chief Counsel A sets out the issues as follows:

In relation to the GAR policyholder uplifts, the Chief Counsel says:

From page 83 of Draft 4A (15.10.01) of the Scheme of Arrangement ... examples of how the scheme will affect policyholders are set out. Examples 1 and 2 illustrate that the same uplift will attach to the GAR guaranteed value (basically premiums minus costs etc plus annual bonus) and GAR policy value (which should be very close to asset share). Thus the uplift will attach proportionately to the guaranteed and non-guaranteed parts of the policy value which seems appropriate. The Halifax uplift of 1.3% attaches only to the policy value since it is not guaranteed. This seems fair even in cases where those whose guaranteed amount is higher than policy value will potentially lose out because Equitable paid out too much to them in previous years by way of guaranteed annual bonus.

In relation to the non-GAR policyholder uplifts, she says:

> *Examples 5 and 6 on page 86 show the addition of the non-GAR uplift. Those who have GIRs of 3.5% get an uplift of .5% to the non-GAR guaranteed value for a total return of 4% and those without GIRs who would not otherwise have received any annual bonus at all, get an uplift of 4%. (I assume this works out to 1.4% overall.) The uplift on the non-GAR policy value is 1.4%. This seems right on Equitable's theory since compensation is for (guaranteed) annual bonus forgone due to the GAR risk. Again the Halifax uplift is not guaranteed with the potential result that those whose guaranteed value is higher than policy value will lose out.*

Chief Counsel A also says:

> *On page 129/130 the "after the uplift" percentage without the Halifax £250m is lower than the "before the uplift" percentage. I do not know why (and see also page 132).*
>
> *We need to confirm that Equitable are proposing to calculate policy value for voting purposes by taking either the guaranteed amount or policy value (whichever is higher), and in the case of GARs, adding the uplift (as a proxy for the value of the GAR). The draft creditors pack is not clear.*
>
> *We have already indicated that the FSA is content with the size of the pot for the GAR uplift, but more work is needed on the analysis of the impact of the uplift for relevant groups of GAR policyholders. More work is needed too on the size of the non-GAR misselling pot and whether a uniform uplift is fair.*

04/11/2001 [16:43] HMT's Director of Financial Regulation and Industry informs an HMT official of a conversation with FSA (the Director of Insurance, as Managing Director B had not been available). The HMT Director's note records that the FSA Director had:

> *... said that FSA had written to* [Equitable] *shortly after* [September] *11 to ask them for a recovery plan as they appeared to have breached their solvency margin. (This did not amount to insolvency.) The letter you've just seen is presumably this.* [Equitable] *disputed the position. The FSA's view assumed the "side letter" to the reinsurance agreement meant the reinsurance was worth a max of £100m.*
>
> [FSA's Director of Insurance] *also said that* [Equitable] *had subsequently negotiated an additional premium they would pay if claims covered by the reinsurance agreement exceeded £100m. On this basis the side letter was regarded as "never having existed". (I commented that* [Equitable] *had in effect bought their way out of the side letter;* [he] *disagreed although acknowledged he was perhaps making a distinction without a difference.)* [He] *felt that on this basis* [Equitable] *had never breached its margin, and was certainly not currently breaching its margin, although he added there remained uncertainties about provisioning for mis-selling. When pressed, he also added that FSA had not yet seen the* [revision] *of the reinsurance agreement.*
>
> *Lets discuss on Monday. Regarding Baird I'm re-inforced in the view that we must look to the FSA for advice on s68 orders as they cannot be judged in isolation, but* [especially] *given* [the Baird Report] *I'm equally sure we need to be crystal clear what the FSA advice is and that they've considered the situation properly before giving it. We'll probably need a session with FSA early next week on this.*

05/11/2001 [10:31] FSA's Director of GCD comments on the reinsurance treaty: '*Don't think it helps much to put in place a riskless deal for the future-hope that's not what's intended*'. He asks whether FSA should write to other companies, seeking confirmation that there were no side letters to their reinsurance agreements.

[**10:41**] In reply, the Head of Actuarial Support says that FSA were about to write to another insurance company which had an almost identical reinsurance treaty with the same reinsurer to ask '*some searching questions*'. On other companies with similar reinsurance agreements, he goes on to say: '*Most of these though include Ireco as a partner with other reinsurers ... in these arrangements, and generally* [they] *seem to be documented rather more fully*'.

05/11/2001 [16:21]	FSA's Director of Insurance informs Line Manager E of a telephone conversation with the Guernsey Financial Services Commission, who wanted their help on two jurisdictional issues. These were the powers of the Financial Ombudsman Service and the legal position in other jurisdictions.
05/11/2001 [17:06]	FSA thank the Financial Ombudsman Service for the advice provide on 30/10/2001 [**17:37**]. FSA seek clarification of the jurisdiction of the Financial Ombudsman Service in relation to overseas residents.

06/11/2001 [entry 1] FSA meet Equitable for a regular review meeting. According to FSA's note of the meeting, issues discussed include the following:

Reinsurance
Equitable report that a verbal agreement had been reached and say that they would, in due course confirm the full details of the proposals. The note records:

> [FSA's Director of Insurance] *asked about their proposals for disclosing the recent events, suggesting that it might be wise to be reasonably open about what had happened and setting out what the Society had done when it had identified the problem.* [The Director] *pointed out that this was bound to come out at some point and failure to give adequate and managed disclosure now might lead to accusations later. We also discussed what effect the proposed treatment of the side letter might have when assessing whether or not* [there] *had been a breach of the solvency margin.* [Equitable's Finance Director] *acknowledged that this was awkward and said he would consider it further for the purposes of the statutory returns and the accounts. He noted that the Society no longer referred to compliance with the regulatory requirements and now only talked of being solvent.*

Financial condition
In response to FSA's Head of Actuarial Support, Equitable say that they agreed that the end-October solvency position appeared tight. Equitable comment that they had sold £1bn of equities in October, reducing the equity backing ratio of the with-profits fund to 49% (including property).

In response to a question by FSA about the ratio of policy values to asset values, the note records that:

> [Equitable] *said that this was last reviewed at the end of October when the FTSE 100 was at 5050. At the time, maturity payouts were at about 103-4%, and early surrenders at about 93%. This meant that overall, departures were taking about 98% of their share of the assets. He said that* [they] *would review the position if aggregate policy values reached 105% of the asset value.* [FSA's Director of Insurance] *said we had a particular concern ... to ensure that policyholders would not be asked to vote on the scheme on the basis of misleading information about the value of the company.*

Halifax Equitable Clerical Medical
The note records that Equitable had informed the FSA of '*serious problems*' in their relationship with Halifax Equitable Clerical Medical, and '*that there was even a risk that the compromise would have to be either delayed or abandoned*'.

Section 425 scheme
Equitable provide an update on progress on the compromise scheme and confirm that the court hearing was set for 26 and 27 November 2001. Equitable explain their thinking behind the different uplift and voting values being given to non-GAR policyholders.

06/11/2001 [entry 2] An HMT official seeks advice from HMT's Director of Financial Regulation and Industry concerning FSA's recommendation that HMT should approve Equitable's application for a section 68 Order. He says that '*FSA were in touch with me this morning to urge us to make a quick decision ...*'. The official explains:

> *The concession that has been asked for relates to the rate of interest used to discount future liabilities. Under the Insurance Companies Regulations 1994, this effectively requires the dividend yield to be used. One of the side-effects of this is that a company such as Equitable, which has few free assets, is forced into holding a high level of fixed interest securities because they have a relatively high yield compared to equities. The more assets with high discount rates the company has the quicker it can cover its liabilities, then any surplus income not utilised in discounting can be used to declare reversionary bonuses. This was recognised as a possible distortion to investment behaviour by the Myners review, since it leads to a bias away from equities and towards fixed interest securities which may act against policy holders' long term interests.*
>
> *The FSA has been consulting on a revised method of discounting which incorporates an element of earnings yield. This will be introduced at N2. Rule 5.11(5) of the Interim Prudential Sourcebook allows a company's post-tax profit to be taken into account. Essentially companies will be able to use the average of the dividend and earnings yields where this is higher than the dividend yield itself, subject to a limit of twice the dividend yield.*
>
> *The FSA argues that the terms of the Section 68 order are consistent with similar orders given to other insurers and allows Equitable Life to take into account now changes which will in any event be available from 1 December. Equitable's free assets will increase by around £200 million and the amount of any future profits that the society might want to take advantage of under previous Section 68 orders will be reduced. According to the 26 October letter from* [Equitable to FSA]*, it is also one of the actions identified by Equitable Life as being necessary to "provide sufficient margin for a resilience reserve based upon an equity fall of around 10% by value".*
>
> *Taken in isolation, the FSA's recommendation is reasonable and we would normally accept it. However, the circumstances surrounding Equitable Life make this request exceptional. The order could have a direct impact on the company's ability to meet its required minimum margin and I assume that Ministers will also have to be told that a new Section 68 order has been requested/granted.*

07/11/2001 [14:39] The Financial Ombudsman Service provide FSA with answers to their queries of 05/11/2001 [**17:06**].

07/11/2001 [14:50] Equitable send FSA details of policy values compared to allocated assets, which are as follows:

	31 July 2001 £m	*30 August 2001 £m*	*30 September 2001 £m*	*22 October 2001 £m*
With-profits available assets	*22500*	*22475*	*21589*	*21974*
Cost of GARs	*(1257)*	*(1257)*	*(1257)*	*(1257)*
Available assets to pay policy values	*21243*	*21218*	*20332*	*20717*
Aggregate policy values	*20643*	*20745*	*20846*	*20923*
PV/AS	*97.2%*	*97.8%*	*102.5%*	*101.0%*

07/11/2001 [entry 3]	FSA's Chairman asks for comments on a statement in which he would disclose the existence of the side letter and of the renegotiation of the reinsurance treaty. The Chairman says that he proposed to make that statement to the Treasury Select Committee when giving evidence on 13 November 2001. [**20:31**] The Director of Insurance says that he believed that it would be appropriate to make the statement proposed but suggests informing Equitable of this, in order '*to put pressure on them to ensure that the documentation is finalised before the* [Treasury Select Committee] *hearing*'. The following day (at 08:51), FSA's Chairman agrees that FSA should warn Equitable. [**19:07**] The Director of Insurance informs Equitable, who '*did not protest*'.
08/11/2001 [10:16]	FSA's Line Manager E sends officials a risk assessment entitled '*Appendix B*', which gives a description of risks or problems in relation to Equitable and the statutory objectives of FSA that those risks would impact on. The note states that Equitable's '*Impact Rating of Firm*' is '*A*' (although it did not describe what this rating signified). Under the heading '*Description of risk or problem (including likelihood of crystallisation and time horizon)*', the assessment states: *1. Movements (downwards) in long term interest rates.* *2. Potential claims for mis-selling of policies on the grounds that GAR risks were not adequately disclosed.* *3. Continued volatility in equity markets. This is unpredictable, however equities have stabilised somewhat in recent weeks.* *4. Policyholders withdrawing funds from the Society, whether by way of contractual or early terminations, at rates higher than their asset share.* Under the heading '*Description of potential impact of the risk or problem*', the assessment states: *1. GAR costs will ultimately be determined by the long term interest rates at the time of the retirement of GAR policyholders. The lower interest rates fall, the higher the realistic cost and the reserving requirements.* *2. The precise value of claims is not known, although estimates suggest their value to be manageable, particularly if they can in effect be met by a reduction in the policy values of all investors in the with-profits fund, including those claiming. However there is uncertainty.* *3. Further equity falls could reduce the value of the Society's assets, thus impacting on the Society's solvency position and ability to meet future liabilities. This could result in future uncertainty and policyholders being disadvantaged. The Society's equity backing ratio is however significantly reduced after managed disposals through 2001 so the risk is now less than it has been historically.* *4. Equitable has been paying contractual terminations at the full notional policy value (effectively smoothed asset share) at a time when aggregate policy values are slightly higher than the available assets. Non-contractual terminations are subject to a financial adjuster, which means that they are currently being paid at slightly less than asset share. If payments get out of line with the value of the assets, this has the effect of reducing the value of the investments of those staying in the fund.*

Under the heading '*Which statutory objectives will it impact on?*', the assessment states:

- *Maintain confidence in the UK financial system. The financial weakness of a significant participant in the financial system (particularly the oldest Life Assurer in the world) is causing widespread lack of consumer faith and negative publicity. A further deterioration in the position will aggravate matters.*
- *Secure the appropriate degree of protection for consumers. A further weakening in the financial position of an institution could result in policyholders being disadvantaged.*

Under the heading '*What are you doing about the risk or problem?*', the assessment states:

> *The FSA are actively liaising with the Society, the policyholders and various action groups to ensure that active communication and dialogue is taking place between the relevant parties. FSA are holding regular meetings with the Society's board to review its proposed action. In addition, the financial position is being closely monitored, for example by requiring the Society to submit monthly returns.*
>
> *The FSA is also working closely with the Society on its proposals for a compromise scheme under section 425 of the Companies Act which it is hoped will compromise both the rights of certain policyholders to take an annuity at a guaranteed rate and the potential claims that some policyholders may have if they can demonstrate that the risks of the GAR costs were not adequately disclosed to them and they have a loss as a result. This would remove some of the most significant uncertainties facing the with-profits fund and enable it to be managed more strategically.*

Under the final heading '*What is the desired outcome (including time horizon for mitigating the risk or addressing the problem)?*', the assessment states:

> *The FSA has made clear that it believes an appropriate compromise along the lines described above will be the best way for the Society to deal with its problems in the interests of all its policyholders. General improvements in market conditions, and steady (or rising) interest rates will also help the Society manage its financial position.*

08/11/2001 [11:15] Equitable send FSA an amended copy of the proposed addendum 3 to the reinsurance treaty.

[**12:24**] Line Manager E circulates the addendum and asks for comments from the Head of Actuarial Support and Scrutinising Actuary F.

08/11/2001 [11:34] FSA's Head of Actuarial Support says that he was not sure how the policy value figures supplied by Equitable the previous day reconciled with ones supplied earlier. He notes that an earlier balance sheet had showed with-profit assets of £23.2bn (excluding reinsurance and future profits) as at 31 July 2001, whereas the latest figures state assets of £22.5bn at that date.

08/11/2001 [12:11] FSA's Line Manager E circulates a note of a conversation he had had the previous day with Equitable, in which he had sought to check the basis on which '*values would be assessed for voting purposes*' in the compromise scheme. He acknowledges that: '*Clearly, it is very late in the day for us to be asking for further changes to their approach, but it would be better to raise concerns now rather than wait for the court to throw the scheme out!*'.

Line Manager E records that Equitable's intention was now that:

> *GARs will have their voting values assessed on the basis of policy value or guaranteed value (whichever is the higher) after the uplift. This will mean that the value of the GARs under the individual contracts will be reflected in the voting value ... I discussed this with* [Chief Counsel A] *before she went away and she agreed that the method they are now using is the right one.*

For the purposes of agreeing the GAR uplift, non-GAR votes will be weighted according to the higher of policy value and guaranteed value, ignoring any uplift. This would appear to be justified on the basis that any claims individuals might have are not contractual and therefore outside their relationship with the Society on the basis of which they vote. Instinctively I find that logical, but I wondered if the distinction between the different rights (contractual and rights of action under s.62 or common law) might be artificial ... Working on the basis of uplifted values makes no difference because everyone is being uplifted by the same amount.

For the purpose [of] *compromising mis-selling claims, non-GAR votes would be weighted by the size of the claims ie policy value multiplied by 0.71% or 1.42% depending on whether the policy was taken out pre or post 3 October 1988. That seems sensible to me.*

Line Manager E asks if anyone had any '*violent objections*' to these current proposals.

08/11/2001 [12:44] FSA's Director of GCD provides the Director of Insurance with a detailed note of the meeting with Equitable on 02/11/2001 about the compromise scheme and on the follow-up to the issues raised. The Director of GCD says that he understood there to have been '*a very constructive meeting on 7 November at which a process was agreed for addressing the issues necessary to be able to give Equitable the view it needs on its documentation by 19 November*'. The Director of GCD sets out the issues discussed at the meeting as follows.

On '*Weighted voting*', the Director of GCD explains that Equitable's proposals '*would operate on a date basis, so that policies bought after a particular date in 1988 would carry twice the votes in the compromise as policies bought before that date*'. He says that FSA had raised four concerns about Equitable's proposals.

First:

... why if such an arrangement was needed to reflect the view that post-1988 policyholders had a better prospect of a successful claim, there should not be an increase in the uplift, as well as an increase in the number of votes. We also asked whether there should be further break points in 1993, on the basis of the ... advice [from Counsel for FSA], *and for the most recent purchases, where the claim would arguably be strongest of all.*

In response, the Equitable and their advisers said that:

- *their systems would accommodate not more than one breakpoint;*
- *their systems would not accommodate a variation in uplift, only in votes;*
- *the number of non-GAR policyholders who had bought before 1988 was small, and would not justify reducing their uplift.*

Overall, we were not quite convinced, and asked for them to verify these points particularly in light of further discussion.

We asked why it was appropriate to have differential voting rights in that, as we recalled, part of the justification for a flat rate uplift had always been said to be to those who had been policyholders for the longest period would have weaker claims, but for larger amounts. The response on this was that they had calculated that these policyholders would have proportionately the same claim, of 4.5%.

Secondly:

... [FSA] *asked whether they were satisfied that operating a differential voting system here, and not in other areas of the scheme, was consistent. They said that they currently thought it was. We should ask them to satisfy themselves thoroughly on this point.*

Thirdly:

> [FSA] *then asked about another point relating to consistency in their approach. It appeared that they were working on the basis, for the purposes of the compromise, that all purchasers after 1988 had a claim. Was this consistent with their approach to valuing the aggregate of their misselling liabilities, if that was based on the ... view* [of Counsel for FSA]*that the disclosure obligation bit only after 1993? They said that they believed that their approach was consistent. They had calculated the overall loss not on the basis that liability started in 1993, but on the basis that it was limited to the transfer of value made when they provisioned fully for the liabilities to GAR policyholders. This caused us to ask what provision had been made in their accounts for those who had purchased after the House of Lords decision. It was not clear that provision had been made for these purchases, either in the accounts, or in the calculation of the amount available for compensation. In response, the Equitable indicated that they thought that it was right to keep these claims in the scheme, but that the amounts involved were likely to be small.*

FSA's Director of GCD asks the Director of Insurance whether FSA were content with this.

Fourthly:

> [FSA] *then asked for clarification of how the dateline operated for those who purchased a series of single premium policies, or topped up existing policies. We were told that the relevant date for top-ups was the date on which the original policy was purchased. We noted that this helped to justify providing a flat rate uplift, since many of those who purchased pre-1988 would have topped up their policies subsequently, in circumstances where they might be entitled to redress as if they had bought a new policy. But we thought that this argument would be equally valid as a justification for flat rate voting rights. In sum, we thought that it would be important for the Equitable to be able to explain to the Court why it made sense to operate variable voting rights, but a flat rate uplift. But the advice from* [Counsel]*, which we accepted, was that so long as we were happy with the fairness of the uplift, the issue of the voting rights was a matter for the Court.*

On the '*Structure of voting arrangements*', the Director of GCD records:

> *Their papers indicated that policyholders would have votes in different capacities. There would be one calculation of votes on whether to agree the uplift for the GARs, and another on giving up rights to claim for misselling. Would the effect be that it was possible for a non-GAR to vote in favour for an uplift for misselling, but against an uplift to compensate the GARs? In response, it was said that each policyholder would be asked to vote either for or against the scheme as a whole. However, the value attributed to their votes would depend on the capacity in which the vote was being counted.*
>
> *This led us to ask whether there would be guidance to policyholders on the exercise of their voting rights. It was confirmed that there would be such guidance. In this context, it was also mentioned by the Equitable that policyholders would be entitled to an uplift in respect of misselling rights only if they were prepared to confirm that they believed that they had been missold. We thought that this might cause people to worry, and in particular, cause trustees to be concerned about their position, and what due diligence they needed to undertake before giving such a confirmation. In discussion, it was thought possible that it was not necessary to require a specific confirmation along these lines.*
>
> *At this point, we asked about the arrangements for trustees generally. The Equitable indicated that trustees would be able to split their votes according to value. In order to assist them to do this, they would be told the value of the votes they are able to exercise, and the proportion by value of their beneficiaries who were GAR or non-GAR policyholders. No issues were raised on this account.*

On '<u>*Those who had lost GAR rights*</u>', the Director of GCD records:

> *It was then mentioned by* [Counsel] *that he was aware of someone who believed that he had been misadvised by the Equitable to transfer from a GAR to a non-GAR policy. This individual was concerned that his rights might be forfeited if the scheme were to go through. If that was indeed the effect, it was a vulnerability of the scheme because someone could appear in court and argue that he should not be asked to give up such rights without any compensation, which would be the effect of the scheme as described.*
>
> *In response, the Equitable said that anyone in this situation would be able to get the uplift payable to a GAR policyholder on showing that he had given up his GAR rights as a result of misselling by the Equitable. Such an individual would not be treated as a GAR holder for purposes of the vote, because the position would not be established at the time of the vote. But he would be treated as a GAR holder for purposes of the uplift, assuming a successful vote.*
>
> *We said that it was important that this mechanism should be created by a legally binding means. This could be by incorporation into the scheme itself, or by an undertaking to the Court. But it should be dealt with formally in advance, rather than depending on a policyholder making representations at the Court. It was agreed that this mechanism was only to be provided for those who had been persuaded to give up GAR rights. It was not appropriate for those* [who for] *example, whose GAR rights had lapsed.*

On '<u>*International policyholders*</u>', Equitable reported that '*in their view international policyholders had the same rights to claim for misselling as anyone else*'. FSA '*expressed surprise that 1988 should be a key day for them, as well as for UK policyholders, but were told in response that no or virtually no overseas policies had been sold before 1988*'.

On '<u>*Retirements after vote but before implementation*</u>', FSA's Director of GCD records that there had been:

> *... a discussion initiated by the Equitable of the position of those who wished to retire after the announcement of the result of the vote. It was suggested that these people would be in a position to exercise their guarantee rights in the knowledge of the outcome of the vote, but before the compromise took effect. The suggestion was that this would be a drain on the resources of the company. In response, colleagues said that we thought that this was a problem only if the policy values were not properly aligned. We also had difficulty in seeing by what authority the company would suspend people's rights to retire.*

FSA's Director of GCD says that, following on from this, Equitable's use of a market value adjuster had been discussed and records that:

> *I said that we had been advised that the MVA was vulnerable to challenge in its present form because of lack of public clarity as to the basis on which it would be exercised. Our understanding of the position was that it would be possible for them to make the MVA robust, if they were to clearly commit to exercising it on limited grounds. The confirmation they had given us so far about the basis on which the MVA would be operated did not achieve this result, because it did not constitute a public commitment which would bind the company. It would be in our view wise for them to consider again making such a public statement.*

(Note: this view had been previously expressed by the Director of GCD on 14/03/2001 [**16:15**].)

08/11/2001 [17:08] FSA's Line Manager E distributes an amended copy of the note of the meeting with Equitable held on 06/11/2001.

[**18:29**] The Director of GCD thanks him for the note and says that Legal Adviser E would prepare a summary of the revised reinsurance treaty. The Director of GCD also comments that:

> [The IRECO] *agreement cannot have effect of changing the past for purposes of determining whether capital requirements were met on a particular date*;

and the Director asks:

> *Is it publicly understood that the misselling uplift will be even lower if no money from Halifax? What happens if deal delayed so that* [Halifax] *money not paid – must not end up* ***needing a new vote because this not properly clear.***

09/11/2001 [10:47] Further to his request of 08/11/2001 [12:24], Line Manager E seeks actuarial advice from the Head of Actuarial Support and legal advice from Legal Adviser E on the revised terms of the reinsurance treaty. The Line Manager says:

> *One issue on which Equitable are seeking our views is the provision in article IV that limits the cover available. It is done on the basis that there is a ratchet that means the amount claimed can only ever go down, and the amount available is restricted to the lower of 120% of the reduction of reserves needed because of the Treaty or the amount shown in the schedule.*

To the Head of Actuarial Support, he says:

> *As far as I can see (and I assume the reduction in the reserves means the full amount rather than the amount in excess of £100m), that means there is from the outset a cap of £840m (1.2 x £700m) on the amount that can be claimed, so the amounts shown in the Schedule for the first ten years are meaningless.* [Head of Actuarial Support], *I would welcome your advice on what we would find acceptable.*

To Legal Adviser E, he says:

> *... I notice that there is provision in Article VI that says in effect the treaty is only valid so long as there is no change in the policy of paying GARs, and that Ireco has the sole discretion in deciding whether there has been a change. I was worried by that – and how it relates to the arbitration provision, if at all.* [Legal Adviser E], *I would be grateful for your advice on whether, if Ireco were to use some obscure issue to determine that there had been a material change, there is any effective mechanism for Equitable to challenge what otherwise appears to be an absolute discretion of the reinsurer. If there is not, I think we would have to reject that term.*

09/11/2001 [15:43] FSA's Head of Actuarial Support provides comments on the amended reinsurance treaty, having discussed the issue with Equitable. The Head of Actuarial Support says that they had mainly discussed Article IV '*Cover and Limit*' of the treaty, 'although I also made the key point to them that they will need to consider carefully the value that may be placed on this reinsurance, taking full account of all the various premiums and fees that may be payable to the reinsurer'. He says that he told Equitable that FSA would have no objection to the amended agreement but Equitable would need to consider carefully the value that could be placed on it.

09/11/2001 [16:20] FSA's Legal Adviser E sends the Director of GCD, the Director of Insurance, Line Manager E and the Head of Actuarial Support a document setting out his understanding of each clause of the addendum to the reinsurance agreement and initial comments on the drafting.

[**17:29**] The Director of GCD says that Adviser E's note: '*indicates that the net effect is formally to limit the amount payable to £100m in the first year. On that basis surely its real effect is not that the side letter will have no effect, but that it will have full effect, so not desirable that they should sign it*'.

	[**17:33**] Line Manager E disagrees because: '*the GAR liabilities will arise over time, not all in the first year. Therefore, if the maximum funding available under the treaty is £1000 million, and that needs to cover a period of at least 30 years, I do not think we would expect more than 10% of the total to be due in any particular year*'.
09/11/2001 [16:26]	Line Manager E provides officials with a revised brief for FSA's appearance before the Treasury Select Committee on the line to take on the guidance about reserving for annuity guarantees issued on 18/12/1998. A part of the response includes the statement: *The Equitable Life's position was that it had significant exposure to GARs, but it was dealing with that exposure by adjusting bonus payments to minimise the impact. It considered that was an appropriate practice and that it was a lawful practice. With the benefit of hindsight, we – and indeed the High Court that endorsed the policy – now know that view to be incorrect. It seemed therefore, at least until the Court of Appeal, and indeed until the House of Lords gave its judgment, that there was no need for the company to consider demutualisation (or any other such strategy) because of the GARs. That said, it was clear the Society was fundamentally weakened and would need to consider its position in the medium term.* *It is certainly true that notwithstanding the position in the Courts, Equitable Life was having to set aside significant reserves to comply with the Insurance Company Regulations. By definition, that reduced the surplus assets but it certainly did not eliminate them (the 1999 year end returns show a surplus over the statutory requirements of about £3 billion).* *The guidance by the Treasury, which in effect was inherited by the FSA which subsequently withdrew it, was issued to give practical advice to companies about how the cost of GARs should be met and highlighting the potential impact on the reasonable expectations of policyholders. It was not directed at any particular company and was not intended to endorse the approach adopted by any particular company. It was given on the basis of our understanding of the legal position – and clearly we acted immediately* [when] *we realised our understanding was incomplete. We have no evidence to suggest that the guidance encouraged or discouraged any demutualisations or sales.*
12/11/2001 [08:28]	FSA's Director of GCD gives the Head of Actuarial Support, Scrutinising Actuary F, Line Manager E and the Director of Insurance his comments on the maximum benefit which he believed Equitable could claim in their returns for the reinsurance treaty, based on the interpretation he and Legal Adviser E shared as to the revised addendum. The Director of GCD says that the maximum benefit that Equitable could receive on a claim of £1bn would be a loan of £250m, for which Equitable would have to pay back £375m. He adds: '*Sounds of doubtful benefit to me, though these figures have not benefited from actuarial input*'. [**10:02**] The Head of Actuarial Support comments: '*I am not sure how the £250 million is derived, but I think it must depend on the interpretation of the limit in article IV. We have already advised* [Equitable's Finance Director] *and* [Appointed Actuary] *that the wording of this article is dubious and should in our view be amended*'. [**10:29**] The Director of GCD explains that he had derived the £250m figure from Article IV '*which allows for up to 10 per cent pa of aggregate of claims outstanding and payments made*'. He says that FSA's Chairman would like the Head of Actuarial Support to pursue with Equitable how their advisers saw the position.
12/11/2001 [09:57]	FSA's Head of Actuarial Support sends Chief Counsel B and Legal Adviser F a copy of his note of their discussion the previous week about the comments on mis-selling liabilities made in Equitable's letter of 26/10/2001 [**09:57**].

The Head of Actuarial Support records that they had reached the following conclusions in four areas. First, FSA note that:

> *Equitable are arguing that a discount needs to be applied to the gross value of the claims for mis-selling to allow for (a) the strength of the various individual claims and (b) the contribution that all policyholders would have to make towards meeting these claims.*

The conclusion reached by FSA was that they:

> *... accept that a discount for (a) is correct in principle. For (b), the effect is also acceptable in principle.*

The Head of Actuarial Support states:

> *The reason for the conclusion in (b) is that arguably they should really have set aside through provision an amount for the gross cost of mis-selling which would have impacted at that stage on policy values – non-GARs would thus have "contributed" to that provision. An uplift would then be offered as a second step for the mis-selling – which would act as a release of the provision for bonuses and the general fund. However, we accept that in practice, it is acceptable to combine these two steps and offer a single net uplift to the non-GAR policyholders with mis-selling claims. This approach is only appropriate for non-GAR policyholders who remain with the Society.*

Secondly, FSA note that:

> *Equitable are offering an uplift (before discounting) on policy values corresponding to the adjustment made in 2000 to policy values to cover the cost of GARs (ie the withholding of any final bonus in respect of the first 7 months of 2000).*

The conclusion reached by FSA on this point was:

> *Since part of the loss sustained by non-GAR policyholders relates to their expected benefits rather than the guaranteed benefits, it seems reasonable that part of the compensation offered should likewise take this form. In addition, though, Equitable suggest that in the absence of the GAR issue, they might have declared a 4% bonus addition to the guaranteed benefits in 2000. Therefore, they are also offering alongside the uplift to the policy value a 4% (or 0.5% for those pre-96 policyholders who have already received the contractual minimum 3.5% increase) to the underlying guaranteed part of their benefits, and this seems appropriate.*

Thirdly, FSA note:

> *Equitable have not specifically answered the question that we asked about the rights of policyholders who leave before the scheme becomes effective (though the latest scheme documents suggest that they do now accept that they would have possible claims).*

The conclusion reached by FSA on this point was that they:

> *... would concur with them that such policyholders are unlikely to be able to claim for recovery of any financial adjuster as such (the question is whether the policyholder received less than the "comparable policy", but subject to not compensating for market conditions). However, it does seem likely that they could recover the gross value (without discounting) of their GAR-related loss, and they will then need to provide accordingly for mis-selling claims by all those policyholders who leave the Society before the scheme becomes effective. For most pre-16th July leavers, we accept that there may not be any loss to be recovered when measured against an industry comparator, but for subsequent leavers, it is likely that a loss can be identified – though the loss by reference to an industry average comparator is likely to be larger than the direct GAR-related loss, and*

the latter should therefore be the sum recoverable on a successful claim (all else being equal) to avoid compensating for market conditions.

Fourthly, FSA's Head of Actuarial Support records:

There is a potential presentational issue arising out of [the issue]. *Policyholders ought to be made aware of the nature of what they are giving up and what they are receiving in return. The misselling claims are rights which are subject to proof (their value is also uncertain and in some cases may be zero). In return for giving up those rights the policyholders are asked to take a combination of rights (the reversionary bonuses being "reinstated") and of hope/expectation (the "uplift" in the policy values). The references to uplifting policy values might be misleading as suggesting that policyholders are swapping one type of right for another.*

[**21:39**] Legal Adviser F gives comments to the Head of Actuarial Support on his note, having discussed the matter with Chief Counsel B.

12/11/2001 [11:40] Further to a telephone conversation that morning, the Financial Ombudsman Service write to FSA setting out further details about their jurisdiction in relation to complaints made about policies sold, and written, in Guernsey.

12/11/2001 [14:06] FSA's Director of Insurance informs Line Manager E of a conversation he had had with Equitable about: reinsurance; the cover for the required minimum margin; disclosure of the initial hearing date for the compromise scheme; and the financial position set out in Equitable's Chairman's letter to policyholders about the compromise scheme. This is copied to Managing Director B, the Director of GCD, the Head of Actuarial Support, the Head of Life Insurance and Legal Adviser E. On the cover for the required minimum margin, the Director of Insurance records:

[Equitable] *thought that without more than £100m* [reduced reserving from the reinsurance treaty] *it would be "very thin at best".*

On the financial position set out in the Chairman's letter, Equitable had: '*said that the latest draft ... had two paragraphs on this. He would consider what more could be done, but said that there was a limit to what was practical*'. The Director suggests that FSA should ask for a copy and discuss this further.

The Director of Insurance also informs the Line Manager of a conversation that he had had with HMT:

... to ask whether HMT had made progress on the s68 order allowing the Society to apply the post N2 valuation rules. [HMT's Director of Financial Regulation and Insurance] *said that it had not. It was pretty clear HMT have no appetite for taking a decision on this.* [The Director] *said that they would need more information before they could consider it. In particular how many other companies had applied; would the new rules apply to the Equitable "in toto" and would they be compliant with them; was there any interaction with other s68 order extent. He could not say that the application would be processed this afternoon if we could supply this information (it would depend on what else "turned up"). Equally he did not say that they would not deal with it.*

[**14:47**] In response, the Head of Actuarial Support informs recipients of the note of a further concern about the revised reinsurance treaty which he had. This was:

In addition to the points raised by [Legal Adviser E] *(and my earlier concerns expressed to Equitable on article IV), I am puzzled by Articles II and XII. This appears to make Equitable liable in the event of cancellation of the agreement to payment in cash of the balance of the Additional Fee and Risk Amount, but the reinsurer does not seem to have any liability in that event to Equitable. I could understand the reinsurer wishing to use this mechanism to recover any cash advanced under Article V, but otherwise, this does look potentially quite onerous.*

12/11/2001 [14:06]	FSA's Head of Press Office asks the Director of GCD and the Director of Insurance for comments on what FSA could say about Equitable's reinsurance treaty and the side letter. [15:18] The Director of GCD provides some comments but says that he believed that most of this would need to come from the Director of Insurance and his team. [**16:40**] The Head of Life Insurance provides some of the responses to the Head of Press Office's questions but explains that they were waiting for further information from Equitable and further analysis on the solvency cover from the Head of Actuarial Support.
12/11/2001 [14:23]	HMT's Director of Financial Regulation and Insurance informs an HMT official that FSA's Director of Insurance had telephoned him about Equitable's section 68 Order. The FSA Director had said that the Order would simply mean that Equitable were complying with the new rules to come into effect from 1 December 2001. HMT's Director says that he had asked FSA how many other insurance companies had been given similar concessions and whether this meant that Equitable were complying with the post-1 December 2001 regime completely or were being given an opportunity to '*pick and choose*' from the two regimes. The HMT Director says that FSA's Director of Insurance had agreed to get back to him as he did not know the answers and comments that: '*The subtext here seems to be* [FSA's Chairman's] *appearance tomorrow before the* [Treasury Select Committee]*, & further doubts about the reinsurance agreement which (in the absence of the s68 order) could/might mean* [Equitable] *are below their regulatory solvency margin, at least under the old rules*'.
12/11/2001 [15:15]	FSA's Scrutinising Actuary F lists for the Head of Actuarial Support some of the possible problems with the reinsurance treaty which had been identified so far. The Scrutinising Actuary points out that his review was not complete and says that he was providing the comments so that Line Manager E could give some preliminary feedback to Equitable that afternoon. The list of possible problems includes: • *There appear to be 2 caps which limit the overall potential exposure of the reinsurer. One is a "Limit of Cover" schedule which decreases from year to year, starting at £1,000m. for calendar year 2001. The other is that the limit in any year will not exceed 120% of the reassurance offset which applied in the previous year. It seems to me that the treaty therefore provides very limited protection against falling long term gilt yields, and that* [Equitable] *remain exposed to the risk of a further sustained increase in GAO costs. I therefore question what allowance* [Equitable] *can make in their Returns for this sort of arrangement.* • *Article 4 refers to the Reinsurer being liable for any Reinsurance Claims Amount as at 31 December each year. Is it not liable at any other time during the year?* [Equitable] *needs continuous protection, and needs to meet solvency requirements throughout the year. What is the Reinsurer's liability during the year if at that point the GAR take-up rate over the year to date has been less than 60%, but the Actuary would set a valuation assumption well in excess of 60%?* • *In Appendix 1, there are conflicting definitions of the "Reinsurer's Liability". Under the subheading "Reinsurance Claim", the first and last sentences give different definitions.* • *Also in Appendix 1, I do not understand what the re-definition of "Current Annuity Rate" (when the £100m. threshold is passed) is seeking to achieve. It refers to a 15 year gilt yield – at what date? What is the impact of this clause on the reserves held in the resilience test?*

- *Also in Appendix 1, the "Claims Recovery Premium" is defined. This is due for simultaneous payment by the Reinsured to the Reinsurer should a Reinsurance Claim event occur. In this case, shouldn't* [Equitable] *reduce the reinsurance offset on Form 52 by the amount of the Claims Recovery Premium? This could depress the Reinsurer's overall limit and potentially lead to the collapse of the treaty?*
- *What is the rationale for* [Equitable] *agreeing to purchase £40m of hedging instruments should the compromise scheme fail?*
- [Legal Adviser E] *has identified, in his earlier note, several areas where the "Termination" Clauses may be unsatisfactory, as well as many other points which need to be worked through.*

Scrutinising Actuary F concludes that his: '*overall reaction is that this arrangement is little more than "window dressing" and the reinsurer has no intention of assuming any serious risk at all*'.

[**15:42**] The Head of Actuarial Support replies:

> *In reply to your first indent, we would expect to see* [Equitable] *make provision for a reduction in interest rates to the regulation 69(9) level with possibly a further fall in the resilience test, so that along with the 120% ratio, there would be some modest protection against further falls in interest rates.*
>
> *I think the Claims Recovery Premium is designed so that in the event of no final bonus being paid, as is likely to occur if the compromise is rejected, the full cost of the GAR would be included in the reinsurer's liability.*

12/11/2001 [23:49] FSA's Director of GCD informs officials of a telephone conversation with Equitable's solicitors about his concern that the only value from the reinsurance treaty should be the cash payment available. The Director of GCD says:

> *They indicated, and I agree, that the agreement provides for benefit over and above the cash payments, in the sense that it creates an entry to the credit of the reinsured in the books of the reinsurer. This never becomes payable to the insured. On liquidation of the insured, for example, it is automatically extinguished. But if this is sufficient to create an actuarial benefit, it is there.*

The following day [**at 08:35**], the Director of Insurance thanks him for the '*helpful*' comments. The Director of Insurance sets out his understanding of the reinsurance treaty, saying that:

> *... the revisions to the Treaty now proposed would reduce the effect of the various limitations in the version we saw last week. While the annual cash limit remains the overall benefit of the asset held by the reinsurer on the reinsured's account (net of the various payments that would have to be reserved for)* [that] *would be of significant benefit to the reinsured. It would, in this respect, be consistent with the original treaty (absent the side letter) which we accepted for reserving purposes at the time. The main difference, if the amendments are accepted, is that it sets out in definite terms how the treaty operates above the £100m level and what payments from the reinsured have to be made in those circumstances.*

13/11/2001 [09:25] FSA's Head of Actuarial Support thanks Legal Adviser F for his comments of 12/11/2001 [**21:39**]. The Head of Actuarial Support points out, however, that: '*There is no requirement for companies to make any provision for final bonuses. Therefore, I am not quite sure if we are saying that they should though have made a provision for the gross mis-selling claims, but then allowed this to be reduced because a significant part of the compensation is being added as an increase in their discretionary (ie non-guaranteed ...) bonuses rather than as an increase to their guaranteed benefits*'.

Legal Adviser F replies that he thought he had: '*meant that they would have provisioned for the whole (gross) misselling liability which inevitably impacted on the ability to pay final bonuses across the board. That provision would be released by compromising the misselling claims – again across the board. They are reinstating what they would have done – ie declaring reversionary bonuses, which takes up some of what is released, leaving the rest in the "pot", which impacts on the "policy value"*'.

The Head of Actuarial Support asks:

> *Does that then mean that they would have to provide for the full gross mis-selling costs if the compromise were not to succeed?*

The Legal Adviser replies: '*I suspect yes*', although adding that '*the discounts for probability of success could still be applied*'. Legal Adviser F states that:

> *This is only a reflection of the comments I made when we met that (with the benefit of hindsight) one might reasonably have expected the Society to have done this for some time now.*

The Legal Adviser adds, however, that: '*I'm afraid I don't know enough about life company accounting to know whether they could achieve the same result differently. (But in favour of that approach is that the impact of the provisioning must be that leavers also "pay" for a share of their misselling claim – which is part of my rationale for agreeing that the effect is appropriate in the scheme.)*'.

[**12:46**] The Head of Actuarial Support sends Line Manager E a copy of his note on the conclusions that had been reached about the comments on mis-selling liabilities made in Equitable's letter of 26/10/2001 [**09:57**]. (See 12/11/2001 [**09:57**].) The Head of Actuarial Support also send him the record of his discussions with Legal Adviser F of that morning. He also sends copies of all of this correspondence to the Head of Life Insurance, Scrutinising Actuary F, the Director of Insurance, Chief Counsel A and Legal Adviser F.

The Head of Actuarial Support explains:

> *This is where we have now reached here on the subject of the provisioning for mis-selling claims and hence the reasonableness of the compensation offer being made as part of the compromise scheme. I think this means that we would expect to see a rather larger provision of closer to £500 million (as opposed to their suggested figure of £300 million) for mis-selling claims.*
>
> *However, we would not object in principle to their proposed offer of compensation for giving up their "GAR-related rights" in the compromise being discounted for both the probability of success of the claims and also the payment by all policyholders of a proportionate share of the cost of this compensation so that an average uplift of 25% of policy value (including the Halifax money) would seem to be defensible.*

13/11/2001 [17:57] Equitable's solicitors send FSA some amended text concerning the reinsurance agreement.

The following day [**at 17:29**], the Director of GCD circulates the text, saying that it aimed to meet the points made by the Head of Actuarial Support.

14/11/2001 [entry 1] The Head of Life Insurance sends FSA's Chairman a paper on '*What view FSA should take on the Compromise Scheme and how and when that view should be promulgated*'.

The paper sets out the '*Background*', including '*Recent Developments*' and the latest '*Scheme Timetable*', the latter being:

21 November 2001	*Equitable Board meets to approve the Scheme documents*
26/27 November 2001	*Court hearing on application to convene Scheme meetings*
From beginning of December 2001	*Receipt by Policyholders of Scheme documents*
11 January 2002	*Scheme meetings and vote counting*
Feb 2002	*Substantive court hearing, and registration of Scheme at Companies House (Scheme becomes effective)*
1 March 2002	*Deadline for Halifax money*

The Head of Life Insurance says that the decisions FSA needed to make were:

1) By 21 November, two related decisions are needed:

(i) We need to be able to indicate to the Equitable Board whether we see any "Show Stoppers" or whether there are any aspects of the Scheme which we might need to criticise publicly.

(ii) As a condition of Halifax's approval of the Scheme, Halifax want confirmation that the FSA has no objection to the proposed Scheme or to the draft Scheme documents being issued to those entitled to vote. A form of words is needed for inclusion in the Scheme documents. This will be needed in time for the 21 November Board Meeting.

2) The FSA could be represented at the convening hearing, either to make a statement, or to be ready to respond to any questions the court may have.

3) We are publicly committed to making our views known to policyholders before they vote. Although the voting meetings will not be held until January, voting papers will go out from the beginning of December and we believe we need to be ready with our statement at the beginning of this period.

4) FSA may wish to be represented at the substantive court hearing in February 2002, and submit a witness statement. The substance of any such statement would have to be the same as in any statement to policyholders before the vote, but the argumentation may need to be fuller.

FSA's Head of Life Insurance explains that FSA had been in regular contact with Equitable over the development of the scheme and that the latest version took account of most of their concerns and questions. He says that '*Equitable have explained that some of our suggestions cannot be met fully (eg there are constraints on their ability to provide updated financial information)*'.

Under '*Assessment*', the Head of Life Insurance says that FSA were still reviewing the scheme documentation as it was received from Equitable and that this '*is not yet final, but on the basis of the drafts seen to date, we have assessed the proposals under two broad headings*', these being the fairness of the scheme and the clarity and accuracy of its communication.

Under '*Fairness*', the Head of Life Insurance writes:

Policyholders are divided into three classes for voting purposes. The classes are primarily a matter for the court to adjudicate and are not strictly an issue for the FSA. But we have reviewed the reasoning behind the creation of three classes and see no reason to object to it.

We set out the criteria against which we would assess any Scheme in a letter to the Equitable of 3 September 2001 ... using these criteria as a basis, we have considered whether what policyholders are being offered is a fair exchange for what they are being asked to give up, and whether within each group of policyholders, the distribution of sacrifice and reward is broadly fair.

For GAR policyholders, the Head of Life Insurance says that FSA:

... believe that the uplift, which they are being offered, is a fair exchange for giving up their rights to GARs. We also believe that the variation in uplift is a fair reflection of the differences in value of different GAR policies. We had some concerns that those close to retirement were not receiving a sufficient uplift to reflect the value of their GARs; but we believe that the latest uplift figures, combined with the other less tangible benefits flowing from the Scheme (such as greater flexibility in the types of annuity available) mean that this group are being treated fairly.

For non-GAR policyholders, FSA's Head of Life Insurance writes:

Following representations by [lawyers appointed to act] *on behalf of the non-GAR policyholders, non-GARs will be divided into two voting classes:*

- *In respect of the uplifts offered to GAR policyholders; and*
- *In respect of the uplifts offered to non-GAR policyholders in return for giving up any mis-selling claims they may have.*

As regards the proposals for non-GAR policy uplifts we applied the same analysis as for the GARs. We believe that the 2.5% uplift offered represents a fair exchange for the surrender for any GAR related mis-selling claims; taking into account the uncertainty involved and the fact that non-GAR policies represent 75% of the with-profits fund, so that effectively they must meet 75% of their own compensation. The flat distribution of the uplift is more difficult: it can be argued that the strength, nature and hence quantum of claims varies according to the date and circumstances of the sale. However, there are two arguments for accepting a flat uplift. First, and most powerful, is that the costs of constructing a more refined mechanism for uplift (in terms of resource devoted to detailed research, delay and consequent loss of the Halifax money) was so great that policyholders would lose more than they gained. Secondly, the most significant difference is the strength of claims as between pre 1988 and post 1988 policies (which became subject to the FS Act & LAUTRO rules): and this is recognised by giving different voting weights to pre and post-1988 policies.

FSA's Head of Life Insurance says that FSA had considered the position of policyholders who had already left or who left before the scheme became effective and had mis-selling claims, noting that their rights to pursue any claim were unaffected by the scheme. He also explains that FSA had:

... discussed with Equitable the financial implications of claims for mis-selling by policyholders who have left the fund, and the possibility that awards by the court or the Ombudsman could be higher than the 2.5% uplift provided for in the Scheme. Equitable explicitly disclose in the Interim Report that should each policyholder (instead of accepting the Scheme) choose to pursue a claim and succeed in claiming compensation, then the costs of the Society could be substantially higher than the aggregate £850 million which they have estimated as a starting point (before discounting) for calculating uplifts in the Scheme. However, Equitable have confirmed that they consider that the aggregate cost of claims by policyholders who have left the fund or who may leave before the Scheme becomes effective, would not be material, and they have made no provision for these claims.

The Head of Life Insurance also explains that FSA had:

... considered with the Equitable whether the fund could withstand large scale departures after the conclusion of a successful Compromise Scheme. At present, policy values are sufficiently close to asset shares to mean that the fund is not currently being damaged by departures (payouts on maturity are approximately 102% of asset shares and policies on surrender approximately 92% of asset share; the average of all payouts is about 98% of asset share). However, in the event of large scale departures final bonus rates may need to be cut across the board.

Lastly, FSA's Head of Life Insurance states that FSA had considered whether the scope of the rights being compromised was fair and clear, which FSA believed was the case.

Under the heading '*Communications*', the Head of Life Insurance sets out FSA's assessment of '*the overall clarity and intelligibility*' of the scheme documentation. He says that the documentation was thorough and comprised:

- a letter from Equitable's Chairman to policyholders;
- '*The Scheme Document*';
- question and answer material, including frequently asked questions and directions to where more detailed information could be found within '*The Scheme Document*';
- Equitable's '*Interim Report for the Half Year ended 30 June 2001*';
- a report by Equitable's Appointed Actuary; and
- a report by the Independent Actuary.

The Head of Life Insurance continues:

Our basic approach has been that the Equitable's material should be sufficient to give policyholders a clear and balanced picture, and that the FSA should not need to put out any supplementary statement of its own to achieve that clarity and balance. Specific issues which we have discussed with Equitable are:

(i) Adjustments to the summary of the Scheme, to present a fair and balanced summary.

(ii) Presentation of the financial position. We are concerned that policyholders should have enough financial information to be able to make an informed decision when they vote. There is an Interim Director's Report for six months to 30 June 2001, which stresses the fundamental circumstances. In addition the Scheme document will contain a proforma balance sheet (based on 30 June 2001 figures) which will show in broad terms the effect of the Scheme on these figures: and the Chairman's letter contains additional financial information (size of fund, value of surrenders, proportion of the fund invested in equities) as at the end of September 2001. We discussed with Equitable whether a balance sheet as at 30 September could be produced. However, their view is that the Directors have an obligation to verify any information included in the Scheme documents, and they would want the auditors to review it. This could not be done in the time available before the launch of the Scheme. This issue remains under discussion.

We have been particularly concerned that the policy values quoted to policyholders in connection with the Scheme should not give a misleading impression (for example, if aggregate policy values were significantly higher than asset shares, there must be a serious prospect of a future cut in policy values (by way of a reduction in final bonus); and policyholders would need to understand this when they voted on the Scheme).

The Head of Life Insurance sets out a fuller analysis of these issues in an annex to the paper. This analysis is largely the same as that produced as a result of the meeting held on 14/08/2001.

The Head of Life Insurance then turns to '*Contingency Planning*' saying that, should the scheme fail for any reason, FSA:

> *... would need to monitor the ongoing financial position even more closely than at present. We would also need to decide how to deal with claims for mis-selling by non-GAR policyholders in the absence of a Compromise Scheme. Rather than leave individual policyholders to seek redress through the courts or through the Ombudsman, we envisage requiring the Equitable to set up a process for review and redress, in consultation with* [the Financial Ombudsman Service].
>
> *We are also reviewing the options for Equitable if the Scheme were to fail (the immediate fallback is to soldier on, but this will need to be kept under review against the possible alternatives (eg administration or provisional liquidation).*

He lists the '*Outstanding Points*' for FSA as:

- *We need to take a view on whether to press (or require) Equitable to publish more financial information as at 30 September, despite their arguments against this.*
- *The Reinsurance Treaty has been renegotiated, but is not yet signed. We have been asked to provide a "comfort letter" to IRECO that we do not object to the revised terms.*
- *Equitable are resisting our request that they make known publicly the date of the Convening Hearing.*
- *Our assessment has been made on the basis of rapidly changing draft texts. We are still reviewing the latest draft (received today), but we have taken account of the significant changes.*

Finally, the Head of Life Insurance gives the '*Issues for decision, and recommendations*' as:

1. *Statement of FSA's view on the Scheme documentation*

   Subject to resolution of the outstanding points listed above, I recommend a short and low key form of words, [such] *as*

   "FSA has been kept informed as the Scheme has developed. FSA has powers to intervene to object if it believes that the Society is acting without due regard to the interests of policyholders. It sees no need to exercise these powers, and considers that the proposed Scheme is a reasonable one for the Society to put to policyholders to vote on."

2. *Representations at the convening hearing on 26 November*

   I recommend that FSA should not be represented. There is nothing further we need to say: and Counsel has advised that the judge in this case would be likely not to welcome any representations from the regulator.

3. *Statement of FSA's views before policyholders Vote*

   I recommend that this should draw on the analysis given above, and should be put out in the form of a statement to the press and on the FSA website. (An alternative would be to seek to put an information sheet in the material which the Equitable themselves put out; but this would have the presentations disadvantage of appearing to link the FSA too closely with the Equitable's Scheme. There would also be severe practical difficulties over timing.) If you agree with the approach we will submit a draft for approval by the end of November.

14/11/2001 [entry 2] FSA provide HMT with further information on the extent to which Equitable would continue to require waivers from requirements under the new regulatory regime coming into force on 1 December 2001. FSA set out the concessions which had been granted to Equitable.

14/11/2001 [16:01] Equitable send FSA a draft copy of their '*Interim Report for the Half Year ended 30 June 2001*' prepared under the Companies Act 1985. [**16:42**] FSA's Head of Life Insurance circulates the draft accounts.

14/11/2001 [20:16] Equitable send FSA what IRECO had said they believed was the final wording of the reinsurance treaty.

15/11/2001 [09:23] FSA's Director of Insurance writes to the Head of Life Insurance, Line Manager E and the Head of Actuarial Support about Equitable's solvency margin, ahead of a meeting with FSA's Chairman the following day to discuss FSA's views on the compromise scheme. The Director of Insurance notes that the Chairman was also due to meet Equitable to discuss FSA's outstanding concerns on both the reinsurance treaty and the compromise scheme.

The Director says that, against this background: '[Managing Director B] *feels that we must be able to give* [FSA's Chairman] *definitive advice on the Society's solvency position with which we are all content. He recognises that this is* [inevitably] *a matter of uncertainty and judgement rather than demonstrable fact, but feels, quite responsibly, that we must have a united position on which we would, if necessary stand publicly*'.

The Director suggests '*something like*':

> *The Society's financial position is subject to considerable uncertainty. It depends critically on assumptions about:*
>
> - *the amount which should be reserved for misselling claims, only some of which would be resolved through the compromise scheme*
> - *outflows of cash (and liabilities) since the most recent figures provided to us*
> - *the reliance which may reasonably be placed (beyond the £100m initial limit), on the Ireco Treaty.*
>
> *We understand that the view of the Society's appointed actuary is that the Society's position is likely to be "just the right side of the line". There is some justification for this. In particular advice provided to the Society and (separately) to us is that there are arguments for believing that the "letter of understanding" may not be relied on by the reinsurer to avoid liability under the treaty above the £100m initial limit. The Appointed Actuary also believes, based on his work on comparative performance of Equitable and "industry average" products, that the quantum of misselling claims that would not be settled through the compromise is likely to be relatively small.*
>
> *In our view, this assessment does not apply the degree of prudence which, consistent with the regulations, we would expect. In particular we think it would be imprudent (notwithstanding the legal advice) to make any allowance for reinsurance above the £100m initial limit. We also believe that more allowance should be made for misselling claims than the Appointed Actuary does. On this basis we believe that a prudent assessment of the Society's financial position would indicate that, while its assets continue to exceed its liabilities (subject to the fundamental uncertainty to which we and the Society have consistently drawn attention), the Society currently fails to meet its required margin of solvency by some £xxxxx. We note however that the position will be improved by some £yyyy on 1 December 2001, when new valuation rules come into force, or earlier if HMT make an order under s68, in response to an application which the*

Society has made (and which we have recommended should be granted) allowing the Society to value its liabilities in accordance with the new rules.

The Director of Insurance seeks comments on this and asks the Head of Actuarial Support to provide the missing figures.

15/11/2001 [09:50] FSA's Head of Life Insurance asks the Head of Actuarial Support and the Director of GCD whether they were content with the revised reinsurance treaty received from Equitable the previous day.

[**10:01**] The Director of GCD says that it was necessary to meet the Head of Actuarial Support's concerns and so it was for him to comment, unless he needed advice.

[**10:16**] The Head of Actuarial Support does not say whether or not he is content but outlines an outstanding concern. This is:

The wording of the agreement, including Article IV is still very convoluted, so there must be some legal risk of potential dispute over its interpretation. However, my understanding continues to be that the Equitable could claim an amount of cash each year equal to 10% of the cumulative Reinsurance Claims Amount, as calculated under Appendix I (ignoring any earlier cash payments), subject to the overall limit in article IV. This aggregate limit would then apply to the sum of the Reinsurance Claims Amount (whether withheld by the reinsurer or advanced in cash) and the amount described at paragraph (1) of Article IV.

If so, then I think this would allow a reasonable value to be placed on this reinsurance agreement as I indicated earlier. I note though that the reinsurer does seem to have considerable discretion in Article VI to determine whether Equitable has altered its practice in relation to GAOs.

15/11/2001 [11:28] Equitable send FSA the final wording of the renegotiated reinsurance treaty.

15/11/2001 [12:55] FSA's Director of Insurance sends FSA's Chairman a draft letter for him to consider sending to the Economic Secretary to the Treasury about Equitable's application for a section 68 Order.

The Director highlights three points to note, which were:

- *the draft indicates that we believe the Society to be £200m below its margin requirement. This is* [the Head of Actuarial Support's] *latest estimate this morning. He is doing further work so that we may give you a definitive view at our meeting tomorrow. It does not include allowance for the s68 order concession or for the reinsurance treaty beyond the £100m initial limit.*
- *the effect of the s68 order, if granted, would just about restore the Society's margin. (It follows that this will happen at N2 anyway, subject to any developments between now and then).*
- *we received last night further documentation from the Society on the renegotiated reinsurance treaty which they tell us is what the Reinsurer believes to be the "final wording". After review by* [the Head of Actuarial Support] *and* [the Director of GCD] *we have now told them that ... we have no further objection to it ...*

[**14:02**] FSA's Chairman writes to the Economic Secretary to the Treasury along the lines suggested. The Chairman's letter reads:

As you will be aware Equitable Life expect shortly to present their formal proposal for a compromise agreement between the Society and its members. The vote on the scheme is expected to be in early January with a court hearing in February. If the scheme is in place by 1 March 2002 Halifax will put in an additional £250m by "forgiving" repayment of £250m already put in by way of loan.

Meanwhile the Society's financial position is very tight. Information which has recently come to light about a "letter of understanding" sent by their previous appointed actuary to their reinsurers, Ireco, makes it imprudent in our view, for the Society to rely on their reinsurance Treaty to the extent they have done previously. The Society are seeking to resolve their position with ... Ireco's parent [company], *but the matter is not yet settled. Meanwhile the effect on their regulatory reserving position is, in our view, to reduce their admissible assets by some £500m.*

This problem, together with the effect of various market movements, and the need to reserve for potential mis-selling claims following delivery of the Opinions of [Counsel for Equitable and Counsel for FSA], *result, on our assessment, that the Society could be in breach of its solvency margin requirement by some £200m.*

This position would be ameliorated, at least in part, if the Society were able to value its liabilities under the rules which will apply from 1 December, rather than under current rules. The Society have applied for a concession under s68 to allow this. You will recall that, with HMT agreement, the FSA announced in September that it would support such applications. The Society's application was passed to your Department on 1 November, with advice from this Authority, which I had personally endorsed, that it be granted. I understand that your officials have asked my staff for various supporting information which they have supplied.

While it is, of course, for your Department to determine whether the application should be granted, it seems to me that it would be unfortunate if a decision was delayed. May I ask therefore that a decision be taken on this as soon as is reasonably possible.

15/11/2001 [13:19] Equitable also send FSA a draft '*comfort letter*', which IRECO had requested that FSA should send.

[**14:26**] FSA's Head of Life Insurance seeks confirmation from the Director of GCD that he was content for FSA to indicate that they have no objections to the reinsurance treaty.

[**17:55**] The Director of GCD says that he had no objections.

FSA write to IRECO to confirm that they did not object to Equitable entering into the renegotiated reinsurance treaty.

15/11/2001 [13:20] Following the Director of Insurance's note, FSA's Head of Actuarial Support sends the Director of Insurance and FSA's Chairman his latest assessment of Equitable's solvency position. This takes into account information received from Equitable that morning. It is presented as follows:

	FSA Estimate £ Million	*Equitable Estimate £ Million*
Estimated Free Reserves at 30 September	*330*	*330*
Reduce Credit for Reinsurance	*-550*	*-100*
Allow for Post-N2 yield on Equities	*0*	*175*
Reduction in Future Profits	*-450*	*-450*
Additional Mis-Selling Provision for Leavers	*-200*	*-100*
Effect on Liabilities of Reduction in Interest Rates in October	*-400*	}
Increase in Value of Bonds	*600*	} *750*
Switch of £1 billion from Equities to Gilts	*500*	}
Estimated Free Reserves at 31 October 2001	*-170*	*605*

The notes to the assessment were:

> *1) Estimated Position at 30 September comes from Society's last reported full monthly figures.*
>
> *2) Reinsurance credit is reduced from £650 million to £100 million on the FSA estimate to reflect uncertainties over the application of side-letter, but on the Equitable estimate, this is reduced to around £600 million on the assumption that the renegotiation of the agreement is completed shortly.*
>
> *3) Adjustment is made by Equitable for an FSA rule change from N2 on the assumed equity yields that may be taken into account in valuing the liabilities. The FSA figures do not allow for this as we have not yet reached N2 and Equitable have not yet received a concession to allow this item in advance of N2.*
>
> *4) Future Profits item is reduced as a result of (a) anticipation of higher equity yields and (b) the lower yields on fixed-interest securities.*
>
> *5) An increase in the mis-selling provision (mainly in respect of the notional £10 million set aside for leavers), from £275 million to £375 million is assumed by Equitable. The FSA estimate includes a further £100 million as a result of the fundamental uncertainties involved.*
>
> *6) Allowance is made approximately for the effect on both assets and liabilities of the reduction of around 0.5% in yields on fixed-interest securities.*
>
> *7) Equitable also allow for a substantial reduction in the liabilities as a result of switching £1 billion from equities to fixed-interest securities.*
>
> *8) The combined effect of items (6) and (7) above is believed by Equitable to be around £750 million. We are not entirely convinced by this figure given that the assumed yields on equities and fixed-interest securities are now much closer so that the effect of (7) should be fairly low, but have allowed this adjustment for the present.*

15/11/2001 [13:33] FSA's Head of Actuarial Support informs Line Manager E and the Head of Life Insurance that he had asked Equitable to send FSA a letter that afternoon, setting out their understanding of the reinsurance treaty and the credit that could be taken for it in the returns. He says: '*We shall then need to consider carefully the terms in which we respond*'.

15/11/2001 [14:18] Line Manager E asks the Head of Actuarial Support for '*a paragraph*' on the quantification of mis-selling liabilities.

[**16:06**] The Head of Actuarial Support provides the following:

> *For the principal part of their business which comprises pension policies, published survey data indicates that Equitable's performance relative to the market has been gradually declining over the last 10 years.*
>
> *For regular premium policies, the payouts have declined from around 110% of industry average in 1990 to 98% in 2000 and 78% in August this year. For single premium policies, the position has declined from around 115% of industry average in 1990 to 98% in 1999 and 93% in 2000 and 71% in August this year. (The figures for August 2001 come from our own unpublished survey and include estimates for the Equitable policies.)*
>
> *A report was also commissioned by Equitable from* [the Appointed Actuary's company] *into their recent payouts. This report suggests that for policies becoming claims before 16 July, the Equitable payouts were likely to have been close to the market average for regular premium policies (slightly higher for shorter terms but slightly lower for longer terms) and around 5 to 12% lower for single premium policies than the market average. This is in line with the above findings from market surveys.*

In addition, the [company's] *report suggests that the Equitable payouts since 16 July this year for policies with terms of up to 15 years are between 4 and 13% lower for regular premium policies, and between 13 and 21% lower for single premium policies than the market average. They therefore conclude that payouts on all policies (which they would regard for this purpose as being a blend between single and regular premium) would be at least 5% lower than the market average. This is slightly more flattering than our figures since it assumes that most insurers will be reducing their payouts by a further 5-10% to reflect recent investment market movements.*

It may be noted though that none of the above figures make any allowance for the flexibility of these Equitable contracts on retirement, though Equitable have always claimed to be offering this flexibility at no additional cost to policyholders.

In practice, Equitable propose to offer an uplift of 2.5% to policy values. This appears to be rationalised by them roughly as follows:

Loss in policy value as a result of cost of meeting GAR claims	*5%*
Discount for variable strength of mis-selling claims	*-1.5* [to] *-2%*
Discount to allow for self-funding of claim	*-1.5* [to] *-2%*
Add Halifax money	*1%*
Net uplift	*2.5%*

If all non-GAR policyholders were able to sustain a claim for compensation to the level required to bring their payouts up to the present industry average, then this could result in a total provision of as much as £3 billion being required. This would clearly then have to be offset by a significant reduction in the policy values attributed to all policyholders. The net effect could be that non-GAR policies were offered an uplift of around 6-7% of their policy values and GAR policies a similar amount of uplift to replace their GAR benefits.

15/11/2001 [14:21] FSA's Insolvency Practitioner provides comments on Equitable's draft interim report and accounts (see 14/11/2001 [**16:01**]). Those comments include:

- that the fund for future appropriations was £1,114m, rather than £1,511m reported to the FSA in the Society's monthly reporting;
- whether it was true that no actuarial valuation had been carried out since 31 December 2000;
- that there was an important disclosure in the notes that: '*Should each policyholder choose to pursue a [misselling] claim and succeed in claiming compensation, then the sums payable by the Society, including associated legal costs could be substantially higher than this amount [£850m].*';
- that no provision had been made for mis-selling claims of former policyholders; and
- that no mention had been made of the problems with the reinsurance treaty, but '*the auditor's conclusion is draft pending resolution of the issue*'.

[**18:08**] Scrutinising Actuary F adds:

The main thing to strike me was the repeated reference throughout the Report to fundamental uncertainties (essentially on GAR liabilities, non-GAR mis-selling claims and other potential mis-selling costs), the possible resulting understatement of technical provisions and therefore overstatement of the fund for future appropriations (effectively *the "free assets" in Companies Act Accounts terminology), and the differing legal opinions on Article 4, which were also explained ... No reader of the Accounts could be left in any doubt as to the seriousness of these issues.*

The Scrutinising Actuary also comments on some of the points made by the Insolvency Practitioner:

The fund for future appropriations has declined further, and significantly so, over the 3rd Quarter 2001. Presumably the difference between the figures at 30.06 (£1,511m. as previously advised, and £1,114m. in the Accounts) is due to the greater rigour which would have been applied to determining the figures in the Accounts. It is difficult to say what it is now, but we understand the Society believed it to be of the order of £300m. at 30.09 ...

... It is conceivable that no further "full" actuarial valuation will have been carried out since last [December]. *The reduction in policy values is likely to have been driven by a comparison of "aggregate asset shares" with the total value of assets. These "aggregate asset shares" are likely to be modelled and tracked on internal spreadsheets (with an element of approximation), whereas a "full" valuation involves downloading data on a policy-by-policy basis from the policy administration systems, and valuing each policy individually.*

... The reduction in GAR liability from £1,668m. (at 31.12.00) to £1,454m. (30.06.01) will reflect retirements/surrenders over the period. Had gilt yields remained stable over the 3rd Quarter, the figure would no doubt have been lower still at 30.09. Unfortunately for the Society, recent falling gilt yields will have led to an increase in the GAR liability, but we understand that the Society now believe it is too late for them to rework the figures underlying the compromise scheme.

He concludes that there were '*some helpful numbers in these Accounts. Apart from anything else, they serve to reinforce the dire situation the Society is in*'.

15/11/2001 [17:08] FSA send Counsel a copy of Equitable's draft interim accounts for comment.

16/11/2001 [09:07] Counsel provide FSA with advice on Equitable's draft interim accounts.

16/11/2001 [10:58] Equitable write to FSA to explain their understanding of the effect of the reinsurance treaty (see 15/11/2001 [**13:33**]). In relation to the credit they believed could be taken for it in the returns, Equitable say that they estimated that '*if this draft Addendum 3 had applied on 31 October 2001, the Society's reassurance reserves for the Business Covered would have been about £600m after a reduction in those reserves of about £100m for future Deposit Premiums, the Additional Premium, and the Additional Fee as described ... above*'.

Equitable ask for confirmation that FSA agreed with this interpretation of the draft addendum and the effect that it would have on Equitable's reserves.

16/11/2001 [15:20] An FSA official circulates a revised version of FSA's information sheet on Equitable which had been substantially overhauled by the Plain Language Commission. She seeks comments by 10:00 on 19 November 2001.

[**15:41**] The Head of Life Insurance says that one paragraph would need to be amended but this could only be done on 19 November 2001, after FSA had decided their substantive position on the compromise scheme.

16/11/2001 [15:36] FSA's Director of GCD writes to Legal Adviser F and Legal Adviser E (copied to Line Manager E and Chief Counsel A), following a meeting that morning where FSA's Chairman had indicated that, in relation to the compromise scheme, he thought FSA's website should include material on:

- *compensation issues, which I understand to include the impact of the compromise on the scope for claiming compensation under the* [Financial Services Compensation Scheme] *and the way in which the* [Financial Services Compensation Scheme] *would work in the absence of a compromise: this will need to include a treatment of the position under the Equitable's Article 4;*
- *the impact of the scheme on the scope for claiming redress from third parties: for example, would the amount that could be claimed from the government in relation to any maladministration be affected by the compromise, either in a claim by the company, or by the policyholder.*

The Director of GCD asks them to ensure that the legal issues are considered.

16/11/2001 [15:48]	FSA's Head of Actuarial Support drafts a letter to Equitable in response to theirs of 16/11/2001, to be sent out under his name by Scrutinising Actuary F.
16/11/2001 [17:13]	Equitable send FSA information comparing guaranteed annuity rate benefits to current annuity rate benefits with the proposed uplift in total policy fund. Equitable provide two comparisons, the first of which does not take account of the cost of non-GAR mis-selling liabilities.
16/11/2001 [18:11]	FSA write to Equitable (the letter is dated 15 November 2001) in advance of a meeting planned for 19/11/2001. FSA outline the outstanding issues in relation to the compromise scheme. (Note: see FSA's letter of 19/11/2001 for details of the outstanding actions required if no objections were to be raised by FSA.)
19/11/2001 [entry 1]	Equitable reply to FSA's letter of 08/11/2001 about the implications of the side letter. Equitable say that, now the uncertainty over the status of the reinsurance treaty had been resolved, their attention had turned to investigating the circumstance in which the side letter had been conceived and issued. Equitable say that the preliminary and unaided response from the two actuaries involved to the question: '*"Why did you not disclose the side letter to anyone else?" has been to the effect that, since it was not legally binding, it did not form part of the agreement about the Treaty and therefore did not require disclosure*'. On 22 November 2001, the Director of Insurance comments to FSA's Head of Regulatory Enforcement Department: '*This doesn't take us very far. Could we discuss next steps please*'.
19/11/2001 [entry 2]	FSA meet Equitable at FSA's request to discuss outstanding issues on the compromise scheme. The discussion largely follows the issues set out in the Head of Life Insurance's letter of 16/11/2001 [**18:11**]. <u>Non-GAR uplifts and voting rights</u> FSA note that the drafting changes to deal with their concerns had been agreed. Equitable say that their approach had been driven largely by commercial and practical considerations. However, they had been advised that: '*the reality was that a more scientific approach to valuing mis-selling claims would not be possible until there had been a reasonable number of test cases to establish some precedents*'. <u>Financial information</u> FSA repeat their view that Equitable needed to disclose information relevant to the compromise scheme. Equitable say that they believed that information about the current value of the with-profits fund would be of little use to policyholders. FSA point out that their criteria for evaluating the scheme '*referred to fairness and an important part of that was that policyholders should have the information they needed to be able to form a judgement*'. Equitable's Chairman says that he was sympathetic to the point FSA were making, '*felt sure the Society could do better*', and agreed to take the matter up with the Society's advisers.

GAR costs
FSA raise concerns about the calculations for compensating GAR policyholders, as the position had changed since June, when the '*best estimate*' of the cost of annuity guarantees had been made. FSA's Director of GCD: '*invited the Society to consider whether it would be possible to include in the scheme some provision that would require the directors to certify to the Court that there had been no material change to the financial position at the time of the sanction hearing.* [Equitable] *agreed to consider it but thought it would be problematic (and they subsequently confirmed that they could not do this)*'.

Scope of claims being compromised
FSA raise concerns about the treatment of cases where GAR policyholders had been wrongly advised to transfer to non-GAR policies as these seemed to be different from the generic mis-selling claims. FSA say that they believed that such cases should not be caught by the compromise scheme. Equitable say that it would be difficult to '*carve those claims out*' but agreed that, if the wording of the scheme could not be clarified, they would give an undertaking to the court and ensure that the position was made clear to policyholders.

Court hearing
Equitable's Chief Executive undertakes to provide FSA with a copy of his witness statement to the court.

IRECO
Equitable say that the revised terms of the reinsurance agreement had been agreed by the boards of Equitable and IRECO's parent company and would be considered by IRECO that morning. FSA express their concern that the position should be clearly explained to avoid potential misunderstandings.

Other
Managing Director B notes that both FSA and Equitable had been '*focusing very much on getting things in place so that the scheme could be issued*'. It is agreed that some contingency planning should be done concerning a scenario where the scheme did not go ahead.

19/11/2001 [entry 3] FSA write to Equitable, following their meeting earlier that day, to give Equitable their view on what the Society needed to do if the FSA were not to object to the compromise scheme. The actions required included:

- the inclusion of additional information about Equitable's financial position to '*enable policyholders to judge both the fairness of the offer made for their rights, and what the Society's financial position might be if the Scheme does not go through*'. FSA envisage two elements to this. First, a statement from Equitable that they were satisfied that changes to their financial position and the economic environment did not affect the fairness of the offer made based on information as at 30 June. Secondly, a statement that their overall financial position '*remains adequately reflected by the 30 June figures; or if this is not the case, indicating significant respects in which it is different*'.
- under '*Scope of Claims Being Compromised*', FSA state:

> *We discussed the treatment under the Scheme of those who had been mis-sold out of their GAR rights into a non-GAR policy. You said that you wanted to "carve them out" of the Scheme. We believe that the Scheme as currently drafted does compromise their rights; and that in order to achieve your objective, it is necessary either to change the Scheme, or to put in place a parallel binding undertaking to the court, under which they will be able to claim redress for any such mis-selling on the same basis as if the Scheme had not become effective.*

FSA say that they were happy with this approach, so long as: this was a small number of policyholders; it did not affect the Halifax agreement; and any approach adopted was adequately disclosed.

- that Equitable, contrary to advice they had received that there was no need to allow policyholders to be represented at the convening court hearing, in answer to enquiries, should tell people the date of the hearing. FSA say that it would then be for the court to decide whether to hear any representations.
- that Equitable, as indicated: '*introduce wording into the interim accounts and the Scheme circular to the effect that there had been some scope for doubt about the effect of the Treaty which has now been clarified, and to summarise the effect of the new Treaty*'.

FSA provide the wording of a statement of their position to be used in the documentation, should their points be addressed.

19/11/2001 [entry 4]	FSA's Head of Life Insurance asks Scrutinising Actuary F to advise on Equitable's letter of 16/11/2001 and on how much credit FSA believe Equitable could prudently take for the revised reinsurance treaty.
19/11/2001 [entry 5]	The Economic Secretary to the Treasury writes to FSA's Chairman to inform him she had agreed FSA's recommendation that Equitable's section 68 Order should be granted.
19/11/2001 [11:14]	FSA's Legal Adviser E writes to the Head of Life Insurance, Line Manager E, the Head of Actuarial Support, the Director of GCD and Chief Counsel A, having been passed a copy of the final reinsurance treaty on 16 November 2001. The Legal Adviser says that: *This email is to record for our files my understanding that GCD has not been asked to advise on either the final version of the IRECO treaty as attached to this message, or (as yet) on any legal issues arising out of the credit to be taken for the agreement (as signed) in the Equitable's returns. I understand that the reinsurance agreement is now in place.*
19/11/2001 [12:41]	Line Manager E circulates information received from Equitable on 16/11/2001 [**17:13**] on the value of the proposed uplift for GAR policyholders relative to the current value of the annuity guarantees being given up, following recent falls in current annuity rates. Line Manager E says that: *There are two presentations – one before mis-selling claims are taken into account, and one after they have been built into the uplift factor. In my view the relevant numbers are those before mis-selling since mis-selling liabilities have not yet been factored into policy values and there could well be a* [policy value] *cut if the scheme is not successful.* *While I think we accept that there has to be cut off somewhere, and that there may well be other factors that would also have to change if the issues were to be reopened to deal with falling annuity rates, it is helpful to see what the current offer means in practice.* Line Manager E explains that the comparisons show: *The worst case illustrated is a person aged 65 with a retirement annuity. Post scheme, if they wanted to take 100% GAR, their income would be 86.8% of what it would otherwise have been. If they took maximum tax free cash, this would increase to 91.6%. The position is only very slightly better for a male of 60, where the numbers are 87.8% and 92.1%. For women with the same policies, they would be a bit better off. As a rule of thumb, add 2½ to the percentages above.*

For flexible GARs, the position is better for men, with the value of the market option at around 90-92% GAR if the fund is taken entirely in annuity form, and 96-98% if maximum tax free cash is taken. For women, the corresponding figures are again plus 2-2½.

From the information we have about people who could retire now, only where the policyholder would have taken a joint life annuity would they be better off without the GAR. (Of course, those who would not have exercised the GAR at all are clearly in the money.)

Line Manager E concludes by pointing out that:

Previously when we have undertaken this analysis, it was essentially the case that only those with retirement annuities and who would have taken 100% GAR would be any worse off (give or take 1 or 2%). Those with flexible products would have been slightly better off.

19/11/2001 [15:35] FSA's Head of Life Insurance provides some revised wording for FSA's information sheet on Equitable.

19/11/2001 [17:01] Equitable send FSA proposed wording on the reinsurance treaty to be included in their Interim Report and compromise scheme documentation. The wording is:

The Society entered into a reinsurance contract with Irish European Reinsurance Company ("IRECO") in 1998. The treaty provided relief from the full solvency cost of Guaranteed Annuity Options in circumstances where GAR take-up rates exceeded 25% of the maximum exposure (subsequently amended to 60%). The effect of the treaty was to provide additional capital from the Reinsurer for the purpose of regulatory capital adequacy, which is reimbursed to the reinsurer out of future surplus.

The new Board became aware of a side letter in August 2001, which cast doubt as to the reliance that could be placed on the GAR reinsurance contract (notwithstanding the side-letter purported to be of no legal effect). An agreement has been reached with IRECO whereby the uncertainty has been removed and the GAR reinsurance contract remains in full force and effect. The Financial Services Authority was kept informed of the negotiations which resulted in the agreement.

[**18:04**] FSA's Head of Life Insurance circulates the proposed wording, saying he thought it met FSA's request and fitted with FSA's Chairman's '*game plan*' for informing the Treasury Select Committee of events before the convening hearing takes place.

20/11/2001 [entry 1] HMT send Equitable a section 68 Order to permit the calculation of the valuation interest rate in accordance with the approach in the Interim Prudential Sourcebook rather than the requirements of Regulation 69 of ICR 1994.

20/11/2001 [09:56] FSA write to Equitable to highlight a concern about what they had said in the scheme documentation about the Financial Services Compensation Scheme. FSA say that they thought that the policyholder documentation needed to refer to Consultation Paper 108 on the draft transitional rules of the compensation scheme, which:

... makes it (relatively) clear that the FSA view is firmly that the [Financial Services Compensation Scheme] *would be required to exercise its jurisdiction. As* [the documentation] *is presently drafted we are in no doubt that chapter IX inappropriately makes too much of the contrary argument and as such could mislead investors (and I am told could fall foul of Part XIII of the Companies Act 1985).*

FSA set out the amendments that Equitable should make and note that there should be no contradictory statements made elsewhere in the compromise scheme documents. FSA's amendments include the insertion of the following text:

> *The* [Financial Services Compensation Scheme] *may be challenged in the courts on this and other issues by eg other creditors or other life companies (who are liable to fund the* [Financial Services Compensation Scheme] *through a levy). However, although there can be no legal certainty, the FSA considers that the operation of the* [Financial Services Compensation Scheme] *would not be negatively affected by* [Article] *4.*

20/11/2001 [13:39] FSA's Head of Life Insurance sends Scrutinising Actuary F the comments made by the Director of GCD on the reinsurance treaty (see 12/11/2001 [**08:28**]).

20/11/2001 [13:47] In response to the Head of Life Insurance's request of 19/11/2001, Scrutinising Actuary F sends the Head of Life Insurance and Legal Adviser E a draft response to Equitable's letter of 16/11/2001, which the Head of Actuarial Support had drafted.

20/11/2001 [14:41] Equitable respond to FSA's list of issues on the compromise scheme which needed to be addressed. (See 16/11/2001 [**18:11**].)

On '*Financial Information*', Equitable enclose a revised version of their Chairman's letter.

On the other issues, Equitable repeat what they had said in an email to Managing Director B the previous day, which was:

> *Scope of Claims being Compromised. Page 47 of the Circular has been amended to retain rights for GAR uplift if any Non-GAR can exert a claim that he was missold to switch. Such person will not retain the right to a GAR, but to the Scheme uplift. Thus they do not fall to be* [a] *separate class. An understanding is to be given to the Court.*
>
> *Convening Hearing. The Society fully accepts the FSA's position with regards to the publication of the Convening Hearing. I understand from your lunchtime call with* [Equitable] *that if questioned the FSA will refer the issue to the Society, though expressing your regrets at the lack of public disclosure. You will appreciate that the Society will not share your sentiment in expressing regret.*
>
> *GAR Uplifts. The two actuarial reports will contain words referring to the interest rates used. A draft of the* [Appointed Actuary's] *words can be with you later today.* [Equitable's solicitors] *and I have discussed the fundamental change issue, as it appeared in* [a named] *case.* [Equitable's solicitors'] *view is that this would be a hostage to fortune and though the realistic estimate might change the true economic value is unlikely to alter fundamentally in a manner that results in greater uplift. At this very late stage the inclusion of a directors' review process of economic factors is not considered feasible by* [Equitable's solicitors]. *We will insert a Q & A on changes in interest rates.*
>
> *Overseas Policyholders. I am advised that the wording of 5.1 of the Scheme is legally correct. It is standard practice to attempt to exert worldwide rights. However the Circular makes it clear that rights under local laws remain intact.*

Equitable also say that the wording to be included about the reinsurance treaty would be sent to FSA that afternoon. Equitable thank FSA for the statement of their position, which was to be included in the scheme documentation.

[**16:47**] Line Manager E circulates Equitable's response and the Chairman's letter. The Line Manager says that, other than the issue of Equitable informing policyholders of the date of the convening hearing, '*I believe our points are dealt with*'.

Line Manager E goes on to say that, on the Chairman's letter:

> *... they have tried to be constructive. I thought the tone and effect of the letter was quite good and met its objectives very well. However, since this arrived, I have taken a call from* [Equitable's Appointed Actuary] *who is* [concerned] *about the inclusion of estimates of the fund for future appropriates, since the numbers are incorrect and he does not believe that they can be disclosed. He is talking to* [Equitable] *now. I did not comment on the substance of his concerns, but warned him that* [Equitable's Finance Director] *had been seeking to respond to the concerns of the FSA by including "estimates" of key information of relevance to policyholders.*

Line Manager E asks for any comments on this, and notes that: '*At some point today, we were due to give comfort to Halifax. That is looking increasingly difficult at the moment, so we might need to suggest to Equitable that their board might have to take a decision subject to confirmation being received from us and Halifax*'. He says that he would inform Halifax that they were making progress but '*are not yet there*'.

20/11/2001 [18:53] Line Manager E informs Chief Counsel A, Scrutinising Actuary F, Chief Actuary C and the Head of Life Insurance of a further telephone conversation held with Equitable about the reinsurance treaty. Equitable's solicitors had confirmed to the Society that, while there had been a change to the wording to reflect the different structure of the payment arrangements, the economic effect of the treaty '*is as before*'. Line Manager E notes that: '*It would seem therefore that if we are to raise objections to the current effect of the Treaty, we are in effect saying we have changed our view*'.

20/11/2001 [20:29] FSA have a telephone conversation with Equitable's solicitors about the termination provisions in the revised reinsurance treaty. Following that discussion, Equitable's solicitors provide FSA and Equitable with their observations:

> *1. Unless and until the Reinsurance Claims Amount at any 31 December exceeds £100 million, the rights of long-term policyholders in the event of the insolvency of the Society take priority over those of IRECO. This is exactly as before.*
>
> *2. If the Reinsurance Claims Amount at any 31 December exceeds £100 million, then as part of the additional amounts payable to IRECO, a one-off Additional Premium of 12% of the credit taken by the Society at that 31 December is payable. This is available to IRECO as security in the event of the Society's insolvency against:*
>
> *(a) any outstanding basic annual premiums (likely to be no more than £700,000 adjusted for* [the Retail Prices Index]*);*
>
> *(b) any cash payments advanced (no more than 10% in any one year); and*
>
> *(c) any outstanding Reinsurance Claims Amount (already the subject of set-off in the original).*
>
> *Any balance must be returned to the Society – see the penultimate paragraph of Article XII.*
>
> *In every other respect apart from the security over items (a) and (b), which we suggest is an entirely reasonable and foreseeable element of the renegotiation, the rights of long-term policyholders are as before.*
>
> *In any event, we suggest that the existence of the security is no reason to alter the credit which the Society is entitled to take for the reinsurance, for the following reasons:*
>
> *1. The "security" nature of the Additional Premium means that appropriate provision will presumably be required (by the FSA if by nobody else) to be made for its non-return in the Society's accounts as soon as it becomes payable. If that is done, and any*

> *loss likely to result to long-term policyholders is factored in, there is no reason for any reduction in the credit taken, because no further detriment will result on insolvency.*
>
> *2. At most, the detriment* [to] *long-term policyholders from the provision will be the extent of the one-off Additional Premium, and no greater reduction in the credit permitted can be justified. The absolute maximum would be 12% of the sum for which credit is sought to be taken. Given that the FSA has already required the Treaty to cover 120% of the amounts for which credit is to be taken (there was no such provision before), even this would seem hard to justify.*

We are confident that the point was understood by those at the FSA who looked at the revised treaty before it was signed, particularly given some of the changes that we asked to make, but we appreciate that you have been required to look at this afresh, and it is a complex arrangement.

[**23:40**] FSA's Head of Actuarial Support informs Chief Counsel A that he believed that there was only one Additional Premium payable under the contract and it did not recur every year.

20/11/2001 [23:19] Further to Line Manager E's note of [**18:53**] about the credit that could be taken for the reinsurance treaty, Chief Counsel A writes:

[FSA's Head of Actuarial Support] *has reviewed the ... note* [by Equitable's solicitors of 20/11/2001] *and confirmed to me that he is happy that we tell Equitable that we will accept a provision. We cannot yet say what amount we will accept, but can say it will be at least £250m (although probably no more than £600m). Because the analysis is not yet complete, we cannot be more definitive. If you are content to accept this for the purposes of the Equitable's Board meeting tomorrow at 10am, you would also be accepting reliance on* [the solicitors'] *legal view of the meaning of the Treaty. We do not know whether Equitable management would be prepared to recommend to the Board that it decide to proceed to the convening hearing on this basis. Their position so far is that the need to disclose any negative information concerning the Treaty (including reduced provision) will mean that the Scheme cannot go forward. This seems to* [the Head of Life Insurance] *and me unreasonable, but we cannot be sure to what extent this is a bargaining position. Clearly it would be undesirable in the extreme to be labelled as having brought the scheme down, but on the other hand we have told the Equitable repeatedly that we will not be bounced.* [Equitable's Appointed Actuary] *first wrote to FSA about the amount of provision which could be taken by letter dated 16 November to* [the Head of Actuarial Support]. *I do not know when the letter was received by FSA, but it appears it may not have come in (or been seen) until 19th.*

21/11/2001 [08:43] In response to Chief Counsel A's last note of the previous evening, the Head of Life Insurance says that the relevant issue for FSA was whether they should let their non-objection to the compromise scheme stand, despite their remaining doubts about the credit that could be taken, or whether this was sufficiently important to justify FSA being the cause of the failure of the scheme.

[**09:09**] Chief Counsel A prepares a draft Notice to deal with the possibility that Equitable decided not to proceed with the compromise scheme until the matter was resolved in a situation in which FSA wished to require them to do so.

21/11/2001 [10:35] PIA write to FSA's Scrutinising Actuary F, saying that: '*I don't know if you recall but back in March you raised a number of queries following a review of the original offer documentation produced by Equitable (copy attached for easy reference). The firm responded in April saying that they would liaise with you directly on these points. Can you confirm whether these queries were satisfactorily concluded?*'.

21/11/2001 [10:47]	FSA's Head of Life Insurance writes to Managing Director B, following an internal meeting and subsequent conversation with Equitable about the current position on the documentation for the compromise scheme.

The Head of Life Insurance records:

> *We said that the FSA stood by my letter of the 19th November to* [Equitable's Chief Executive]*; if the Board was satisfied that the Society had met the points set out in that letter, then the documentation could include the statement of the FSA position set out in that letter but we had not yet seen the revisions to the documentation which reflected those changes, so the onus would be on the Board to satisfy itself that our points had been met. We ourselves could not confirm that until we had sight of the revised documentation.*

The Head of Life Insurance continues:

> *The most difficult issue was the terms in which the amended Reinsurance treaty was described. We believed that the wording proposed by the Equitable was misleading, since they implied that the amount of credit which could be taken for the reinsurance was exactly the same as under the original version. The wording needed to describe accurately the effect of the Treaty.* [Equitable's Finance Director] *said that he believed their latest formulation did this, but we had not yet seen it. We said that it was important for us to reach a firm view on the quantum of credit which could be taken; we asked, and* [Equitable's Finance Director] *agreed, that* [Equitable's Appointed Actuary] *would come to FSA as soon as possible after the Board Meeting to discuss this with our actuaries and lawyers, with the aim of reaching agreement today. We added that it was our view that it was not necessary for the wording on the Reinsurance Treaty to be in the documentation which went to the convening hearing provided that it was made clear to the court that additional information on this point would be made available in the documentation before it was sent to policyholders.* [Equitable] *took note of that suggestion; but added that a letter of non-objection from the FSA to the Halifax would still need to be sent before the court hearing, otherwise Halifax's Agreement (and with it the extra £250 million) would not be obtained.*

21/11/2001 [11:27]	Equitable send FSA the latest version of the compromise scheme circular on which approval was sought that day.

[**15:08**] Line Manager E replies with fourteen comments.

[**18:46**] FSA's Insolvency Practitioner provides observations and comments, which included the following:

> *Financial position: I think there is just about adequate disclosure although it would help if three facts were pulled together in one place. The Society says ... that there is no material change in financial position since June (ie the fund for future appropriations is still about £1bn); the Appointed Actuary says that the GAR costs increase by £350m for each 1% fall in interest rates ...; and the Interim Accounts disclose that misselling costs could be in excess of £850m. Taken together I think policyholders can adequately assess the risks of "struggling on" compared to voting for the scheme.*';
>
> *... do you think that your/the Society's calculations of how much worse off GAR policyholders close to retirement might be (87% to 92%) If no cash is taken (10% of GARs) will be disclosed to the court at either the convening hearing or the sanctioning hearing either by us or the Society. I think it should be*.;
>
> and,

Finally, I wondered whether there is another class of misselling ...

I had not appreciated until now that about 75% of policyholders have a 3.5% guaranteed return. As policy values have been or are at risk of being cut to fund these guarantees (since on maturity it is the higher of the guaranteed sum and policy value which the Society pays) there is an argument that the 25% of policyholders without such a guarantee have been missold because they were not informed that 75% of other policyholders had such rights. ie another example of mixed bathing. The quantum of such a "loss" might fall away as solvency improves, but this might be an issue if it does not.

21/11/2001 [11:35] FSA's Director of GCD provides comments to Chief Counsel A about set-off rights in relation to the reinsurance treaty. (Note: set-off rights, in general terms, was a defence which could be asserted by a party to resist an action for payment by a claimant.)

[**12:17**] Chief Counsel A passes the Director of GCD's note about set-off rights to Counsel.

[**12:42**] Counsel sends Chief Counsel A his own note on the issue of set-off rights.

21/11/2001 [11:36] Equitable send FSA a draft paper by their Chief Executive on the risks arising from different investment approaches. The paper includes an analysis of those risks, followed by an assessment under four scenarios, those being:

- scenario 1 – exiting equities at £1bn per month;
- scenario 2 – exiting equities at £0.5bn per month;
- scenario 3 – maintaining equities in current proportion; and
- scenario 4 – following current investment call.

In conclusion, the Society's Chief Executive says:

i. PRE has been shaped in recent months by the proposed compromise pack, the roadshow and statements to the media. These do not flag up a declining proportion in equities – rather the reverse.

ii. Because of (i) above, the possible investment scenarios are 2, 3 and 4. Scenario 1 would require a significant restatement of investment intentions.

iii. The recommended central route is scenario 3 with scenarios 2 and 4 available to the Investment Committee depending on their conviction of the accuracy of the current investment call.

iv. The Board needs to be aware that this investment stance is not appropriate unless they believe the market to be relatively low, with a greater upside than downside potential. The degree of risk would be inappropriate for a long term insurer in normal markets. By contrast, this or a greater degree of risk would have been entirely appropriate in 1974.

v. If scenario 1 is followed, the fund will be locked into, effectively, a weak non-profit style. Guaranteed bonuses may be secure and it may be possible to pay final bonus up to nearly 5%. The downside and upside potential of equities would be reduced. If the next equity upturn is missed, it is likely that the fund will be permanently under-performing in the way alleged by [a named Member of Parliament], *(presumably having been briefed by* [Independent Financial Advisers]*). The rate of exit through legitimate churning in those circumstances would lead to high exit rates. There is also an increased risk that the Society could not cope if litigation and mis-selling risks increase still further.*

vi. A negative FFA (Fund for Future Appropriation) does not constitute insolvency [This needs to be checked] but it is clearly highly undesirable unless it is for a very brief period.

21/11/2001 [15:03]	FSA's Chief Actuary C informs the Head of Life Insurance and Managing Director B that he had completed his review of the reinsurance treaty and had also received a telephone call from Equitable's Appointed Actuary about the treaty. He sets out two ways in which the treaty differed materially from the original one and states that: *In summary we believe that it is reasonable to assume that the amended treaty has a slightly reduced effect (about 12% reduction currently) compared with the original treaty but the effect could be greater in future, depending upon the future course of investment conditions, as a result of the cap* [to the reinsurer's liability should the cost of providing GAR benefits increase]. *Equitable have told us that they believe that they can take £600m credit for the amended treaty and, in the light of our review and the discussions, we have no reason to challenge that.*
21/11/2001 [17:08]	FSA's Scrutinising Actuary F sends Chief Counsel A and Legal Adviser E a revised draft of the response to Equitable's letter of 16/11/2001, amended in the light of Chief Actuary C's and Scrutinising Actuary F's further review of the treaty and their telephone conversations that afternoon with Equitable. The Scrutinising Actuary says that the draft now took account of the Chief Actuary's concerns (expressed in an email earlier that day) that the detailed calculations carried out by Equitable did not appear particularly robust. Scrutinising Actuary F asks for legal clearance of the draft.
21/11/2001 [17:57]	Equitable's solicitors send FSA a note on set-off and subordination of the reinsurance treaty, as had been promised in a conversation earlier that day. The solicitors say that they remained of the view that there was no justification for any disallowance in the credit taken by Equitable for the treaty up to the self-imposed limit of £833.3m. [**18:55**] FSA send Counsel a copy of the note.
21/11/2001 [19:10]	FSA's Chief Counsel A tells Scrutinising Actuary F that the letter to be sent to Equitable could not be cleared by legal advisers that night, as they were not going to hear from Counsel about the treaty until the following day.
21/11/2001 [19:35]	FSA write to Equitable, in advance of a formal reply to Equitable's letter of 16/11/2001, to explore in more depth the effect of Article 4 of addendum 3 on the credit that could be taken for the reinsurance.
21/11/2001 [19:37]	Chief Counsel A sends Scrutinising Actuary F a copy of Equitable's solicitor's note on set-off and subordination of the reinsurance treaty. She suggests that he would wish to take into account the material on the Additional Premium in his analysis of the credit that could properly be taken for the treaty.
22/11/2001 [09:56]	In response to Scrutinising Actuary F's note of 21/11/2001 [**17:08**], the Director of GCD says that he found it hard to see why FSA proposed that no account should be taken of the future liabilities to IRECO '*but must accept your statement that this is consistent* [with] *established actuarial practice*'.
22/11/2001 [14:37]	Equitable send FSA a draft version of their interim report for the half-year ended 30 June 2001, prepared under the Companies Act.

22/11/2001 [15:13]	Further to his comments the previous day, Chief Counsel B sends the Insolvency Practitioner a note which sets out FSA's views on whether there was scope for mis-selling claims from policyholders without guaranteed investment returns. [**15:44**] The Insolvency Practitioner agrees that: '*any "loss" will only really arise if the Society becomes insolvent or stops paying bonuses (perhaps because of a "No" vote) in the sense that it must then raid the fund to pay GIRs at the expense of non-GIRs' reasonable expectations. It is therefore a future loss rather than one which has already crystallised*'.
22/11/2001 [entry 4]	FSA hold a telephone conference with Counsel to receive his preliminary oral opinion on the reinsurance treaty. Scrutinising Actuary F's handwritten notes of the conversation include the following: • *Purpose of* [the original] *treaty was to enable* [Equitable] *to meet* [the solvency requirements] *but not to provide cash ... cash only expected to be needed to meet reserving* [requirement] *but such cash* [would] *need to be repaid from future surplus.* • [Counsel's] *view: that side-letter adds nothing to* [Article] *XIII as was; there was no need to* [renegotiate] *if* [the Reinsurance Claims Amount exceeded] *£100m; if IRECO got awkward when* [the Reinsurance Claims Amount exceeded] *£100m, could end up in arbitration in Ireland. Likely outcome unknown.* • *Could* [Equitable] *call* [in the Reinsurance Claims Amount] *in cash?* [Equitable's solicitors] *said no.* [Chief Actuary C] *said makes treaty worthless then.* [Counsel] *agreed.* • *Need clarity that* [the Reinsurance Claims Amount would] *be* [payable] *in cash by IRECO on* [liquidation, otherwise] *only thing you can take credit for is the 10%.*
22/11/2001 [entry 5]	FSA (Chairman, Managing Director B, Director of GCD, Director of Insurance, Chief Counsel A, Head of Life Insurance, Scrutinising Actuary F and Chief Actuary C) meet to discuss the preliminary opinion received from Counsel, which had cast doubt on the amount of credit that could be claimed by Equitable for the renegotiated reinsurance treaty. It is agreed that some credit could be claimed and that FSA should decide on how this should be calculated. It is also agreed that FSA should suggest that Equitable needed to amend the compromise scheme documentation so that it was not misleading. FSA state that '*the value ascribed to the reinsurance treaty for statutory reserving purposes did not weaken the arguments in favour of the compromise scheme*'.
22/11/2001 [afternoon]	FSA telephone Equitable and leave a message about the reinsurance treaty.
22/11/2001 [18:15]	Equitable complain that FSA had changed their view on the effectiveness of the reinsurance treaty, after giving their consent for the compromise scheme documentation to be approved by Equitable's Board. Equitable say: *For us to proceed with the Scheme we require clear guidance as to what amendments are needed to the Scheme to enable the FSA to withdraw today's objections. We need this in writing as a matter of considerable urgency. We need the FSA's concerns in writing no later than close of business today.* *From the telephone message received from* [The Head of Life Insurance] *this afternoon are we right to conclude that the attached letter* [the 'no objection' letter sent to IRECO on 15/11/2001] *was sent before the FSA completed its internal sign off procedures?*

22/11/2001 [19:01]	Scrutinising Actuary F provides FSA's Chairman and Managing Director B with a '*ball park*' indication of the amount that Equitable could claim for the reinsurance within their returns. The Scrutinising Actuary explains that the calculation '*is based on the cash amounts which Equitable can request from IRECO under the treaty*'. The Scrutinising Actuary then explains: *We have assumed that the value of the liability passed to IRECO is £700m, and that the value of the premiums due from Equitable under the treaty is £100m.* *On the assumption that the cash amounts are drawn down evenly over a 10 year period and discounted at 7.5% p.a. representing a valuation rate of interest of 4% + the interest "turn" of 3.5% on the amounts drawn down (i.e. assuming that LIBOR can be earned on the cash drawn) then the £700m. is only worth 68% of its face value i.e. £480m.* *The maximum amount that we believe can be taken credit for is therefore £380m. (i.e. £480m. less the premiums due of £100m.).* On a copy of his note, Scrutinising Actuary F writes: *We concluded during the* [telephone conference] *with* [Counsel] *et al that no credit could be taken for* [the] *Reassurance Claim Amount itself for reserving purposes because that was always held back by IRECO and never paid across, even on termination.* *The only thing for which credit can be taken for provisioning purposes is the cash which can be drawn down, even though the treaty wording is poor.*
22/11/2001 [21:23]	FSA's Director of GCD seeks clarification from Scrutinising Actuary F, asking: *... you explained that the* [£]*700m was your calculation of the amounts that could be claimed in cash under* [clause] *4. I take it that in reaching your view on provisioning, you were happy that no account needs to be taken of the points made by counsel that:* • [clause] *9b means that on termination these amounts are to be repaid, and* • *post termination, no future amounts can be claimed.*
22/11/2001 [evening]	FSA reply to Equitable, saying that they had informed IRECO that FSA had no objection to Equitable entering into the renegotiated treaty and that this remained their position. However, FSA say that they had not committed themselves to the level of credit that could be taken. FSA state that Equitable should not take credit in their returns of more than £350m for the reinsurance arrangement. FSA provide a form of words for describing the situation, that FSA would be happy with, while noting that it would be a matter for Equitable to decide how to present the issue. FSA say: *The FSA believes the treaty does not call into question the promotion of the Scheme by the Board, but recognises that proper disclosure of the issue should be made so that members are not misled as to the financial position of the Society for regulatory purposes.*
23/11/2001 [10:01]	Line Manager E sends Chief Counsel A a copy of the note prepared by the Head of Actuarial Support on 12/11/2001 [**09:57**], setting out where FSA had got to in their assessment of potential mis-selling liabilities. [**12:25**] Chief Counsel A forwards to Legal Adviser E the note received from Line Manager E earlier that day on mis-selling. She says: '*I have now started "screaming" about the need to get this work done, but nothing can happen now until* [the Head of Actuarial Support] *is back from leave*'.

23/11/2001 [11:08]	Chief Actuary C writes to FSA's Chairman, Managing Director B and Director of Insurance about Equitable's current financial position, following discussion with Scrutinising Actuary F and Equitable. The Chief Actuary says:

We were told that the financial position at the end of October 2001 had been estimated to be £605m of assets in excess of the required minimum margin. Since making that estimate the Society had undertaken a more detailed analysis of the position and as a result the £605m had reduced to £410m. This figure assumes £695m credit for the IRECO treaty and £800m credit for the Implicit Item.

Since the end of October the position has changed as follows:

End October 2001	*£410m*
Reduction in IRECO value	*£(345m)*
Increase in resilience reserve as a result of [reduction] *in IRECO value*	*£(100m)*
Adjusted end October free assets	*£(35m)*
Effect of market movements in [November]	*£200m*
Effect of sale of £500m equities (see below)	*£200m*
Estimated current financial position	*£365m*

We were told that the Board had decided to sell £500m of equities over today and Monday. This would reduce their equity backing ratio from 35% to 31%.

We explained to [Equitable's Appointed Actuary] *the underlying basis that we had adopted in assessing the revised value of the treaty and he did not appear to have any problem with the principle.*

23/11/2001 [11:52] In response to the Director of GCD's queries (of 22/11/2001 [**21:23**]), Scrutinising Actuary F explains:

£700m. was calculated by Equitable and represents the amount of the liability removed from Equitable's balance sheet and passed to the reassurer. This is the present value of the Reassurance Claims Amount. Our understanding of the treaty is that this £700m. could all be drawn down in cash. However because only 10% of the withheld reassurance claims amount can be drawn down in any year, there is an additional time lag of up to 10 years before the cash can be fully extracted. Allowing for this, the discounted value of the cash payments is £480m. Against this amount needs to be offset the premiums payable by Equitable to IRECO.

I confirm that we have disregarded the obligation of Equitable on termination to repay the amounts drawn down. The actuarial valuation does not address the position on insolvency since it is done on a going concern basis and presumes that insolvency will not arise.

I also accept that post termination no future amounts can be claimed. This does not affect our calculations because termination is not expected to take place on the actuarial basis used.

[**12:04**] Chief Counsel A asks the Actuary whether, by premiums payable, he had meant the Adjustment Premium and the Deposit Premium.

[**12:27**] Scrutinising Actuary F informs Chief Counsel A that he had been referring to the Deposit Premiums, which were not dependent on future surplus, and the parts of the Adjustment Premiums which were also not contingent on future surplus, those being the Additional Premium and the Additional Fee.

[**14:47**] Scrutinising Actuary F also tells Chief Counsel A that the Additional Premium was payable only once.

23/11/2001 [12:23] FSA's Head of Life Insurance seeks comments on a draft letter from FSA's Chairman to the Treasury Select Committee about Equitable and the reinsurance issue.

[**14:28**] Chief Counsel A comments that:

> *There is a further matter for all to think about. This letter does not mention that as* [a] *result of further advice from Counsel, the actuarial advice has been revised (possibly subject to further input from Equitable on the underlying numbers) and provisioning taken at a lower level. Does that make this letter misleading? Perhaps not. Arguably the first reinsurance agreement was worth (and always was worth) only £100m as a result of the uncertainty raised by the side letter. And in any event we have still not come to a final view on the implications of* [Counsels'] *further advice. But the further legal advice and its implications will undoubtedly become public at some point so we should think about how others may view this letter in the light of that now.*

[**14:57**] Chief Actuary C says: '*It is true that as a result of further advice from Counsel we now believe that the treaty is worth less than we previously believed to be the case (prior to disclosure of the side letter). If you wish to disclose this change of view then it would fit most naturally in the paragraph on page 2 that begins "The Equitable has now advised ..."*'.

23/11/2001 [15:31] FSA inform PIA that they did not believe that their questions had ever been answered and suggest that PIA should chase Equitable. (See 21/11/2001 [**10:35**].)

23/11/2001 [16:27] FSA's Head of Life Insurance sends his Chairman a draft letter to the Treasury Select Committee.

23/11/2001 [17:01] Counsel send FSA a draft joint opinion regarding the IRECO reinsurance treaty.

(Note: the opinion was finalised by Counsel on 3 December 2001 and sent to FSA the following day. I have seen that final version. I am satisfied that the final version of the opinion does not differ substantively from either the preliminary oral opinion provided by Counsel to FSA on 22/11/2001 (see entry 4 for that date) or from this version.)

The draft says that the scope of the opinion sought by FSA was as follows:

> *We have been asked to advise as to the meaning of the provisions in the new treaty with the rights and obligations of IRECO and the Society on termination of the agreement. In particular we have been asked to consider whether the provisions in the new treaty are the same or materially different from the corresponding provisions in the original treaty.*
>
> *We have been asked not to advise on the general effectiveness of the original or the new treaty, either as between the Society and IRECO, or in relation to the reserving obligations imposed upon the Society under the Insurance Companies Act and associated regulations. We have also been asked not to consider in any detail the meaning and effect of the provisions of the new treaty which apply in the event that the cumulative Reinsurance Claims Amount for which IRECO is liable under the new treaty exceeds £100 million.*

Under the heading '*Summary of the original treaty provisions*', the draft includes that:

> *The effect of termination of the original treaty under paragraph 2 of Article X would have been that for the future IRECO would be under no further obligation to make any annual cash payments to the Society under Article IV. Moreover, no further Reinsurance Claims Events would occur and IRECO would not be "liable" for any further increase to the Reinsurance Claims Amount.*
>
> *So far as any Reinsurance Claims Amount outstanding as at the date of termination is concerned, we believe that notwithstanding the use of the word "liable" in the first sentence of Article IV, there is no basis under that Article for concluding that IRECO could be called upon to pay any such amount to the Society, either during the lifetime of the original treaty, still less after its termination. This is because Article IV also states that the Reinsurance Claims Amount will be "withheld" by IRECO.*
>
> *IRECO's only payment obligation under Article IV was to pay on request on any 31 December what was described as an "interest amount" or a cash payment of up to 10% of the Reinsurance Claims Amount. This obligation could not be triggered by any requests for payment made after the contract had come to an end.*

The draft opinion says that:

> *In short, the true analysis of Article IV is that whilst the original treaty remained in existence, it contained a mechanism for calculating an annual liability of IRECO to pay cash to the Society, which was expressed either as an interest amount or as a cash payment of up to 10% of the Reinsurance Claims Amount. It did not create any obligation on IRECO, either during the life of the treaty or after its termination, to pay to the Society the larger amount, namely the Reinsurance Claims Amount.*
>
> *The provisions of Article X as to termination do not affect this analysis.*

On what would happen in the event of a liquidation, the draft opinion says:

> *... the term of Article X providing for the subordination of IRECO's right to a refund from the Society only applied in the case of termination following a <u>liquidation</u> of the Society. The effect of the subordination provision in that event was that IRECO's rights to claim a refund of the interest/cash payments which it had made to the Society would be subordinated to the claims of the Society's long-term policyholders in the liquidation. In other words a liquidator of the Society could resist a claim by IRECO for payment of such amounts (or for a distribution in respect of them) until after the Society had discharged its liabilities to its long-term policyholders.*
>
> *The drafting of the original treaty is obscure and these key provisions are difficult to interpret. We are, however, confident that if it had been intended that termination of the original treaty following liquidation of the Society would result in the liquidator being able to demand payment of the Reinsurance Claims Amount from IRECO to meet the claims of the Society's long-term policyholders, the treaty could and would have said so in terms.*

Turning to the renegotiated reinsurance treaty, Counsel note that '*the new treaty contains a number of new provisions designed to deal with the situation which will apply in the event that the cumulative Reinsurance Claims Amount exceeds £100 million*'. The draft opinion says that:

... it seems to us that paragraphs (a) to (f) of Article XII have the following effect:-

1. under the first sentence of paragraph (a), upon termination of the new treaty, the Society will be obliged immediately to pay to IRECO in cash any unpaid Deposit Premium and Risk Amount;

2. under the first sentence of paragraph (b), upon termination of the new treaty, the Society will be obliged immediately to repay to IRECO in cash any cash payments which were made to the Society under Article IV and to pay any accrued fee interest thereon under Article V;

3. any other rights and obligations existing as at the date of termination between the Society and IRECO will be immediately subjected to the creation of equal and opposite obligations under paragraph (d) which will be set off against each other under paragraph (e). This will have the effect that except for the Society's obligations under (a) and (b), no other sums will be owing between the Society and IRECO following termination; and

4. paragraph (f) expressly confirms that following termination of the new treaty, apart from the Society's debts to IRECO created under paragraphs (a) and (b), the Society and IRECO will be mutually released and discharged from any further rights and liabilities under the new treaty.

Accordingly, leaving aside the proviso, upon termination of the new treaty, IRECO will be discharged from any liability to the Society in respect of the Reinsurance Claims Amount, but the Society will be obliged to make payment of any arrears of premium owed and to repay any cash received under the treaty.

This means that the provisions of the new treaty do not differ from those of the original treaty if termination occurs on the giving of notice following the occurrence of any of the events set out in paragraphs 3, 4, 5 or 6 of Article XII.

Counsels' draft opinion then sets out their views on what would happen if the reinsurance treaty were terminated following the insolvency of Equitable. The opinion concludes, in summary, that:

Under the original treaty, IRECO could not claim payment or a distribution on account of arrears of premium or refunds of any amounts which it had actually paid to the Society on request under Article IV unless or until the Society had paid its liabilities to the holders of its long-term policies in a liquidation.

However, under the new treaty, its seems to us that there is no such subordination, and in a winding up of the Society, IRECO could claim such amounts in competition with the claims of the Society's long-term policyholders.

The draft opinion also concludes that:

In our view, the entire Reinsurance Claims Amount never became due and owing by IRECO to the Society under the original treaty. The position is the same under the new treaty. The situation after termination of either treaty following the insolvency of the Society would be no different.

26/11/2001 [09:06] FSA's Chairman's Office circulates the final version of the letter from FSA's Chairman to the Chairman of the Treasury Select Committee, which had been sent on 23/11/2001, along with a press notice to be issued later that day.

26/11/2001 [09:42]	Further to Scrutinising Actuary F's comments on reinsurance of 23/11/2001, the Director of GCD states that Counsel had advised that the Reinsurance Claims Amount did not constitute a liability and so must be left out of account and that only the income stream could have a value in the returns. [**10:45**] The Director of Insurance says that he did not see the difference between the two positions and that: '*I had thought that what was being valued was an annual income stream of 10% of £700m. The actuaries are prudently (over prudently?) assuming that this should be calculated by reference to £700m rather than £1bn, which is the maximum permissible under the treaty because presumably £700m is 100% of the amount for which credit was previously taken*'. [**10:56**] Chief Actuary C explains that the £1bn represented the maximum claim against the reinsurer should economic conditions vary adversely in future and that it would not, therefore, be appropriate to place a value on this amount unless and until the adverse condition arose.
26/11/2001 [10:26]	Equitable send FSA a copy of the revised text of part 11 of the scheme documentation, showing changes in relation to the reinsurance treaty.
26/11/2001 [10:48]	FSA's Scrutinising Actuary F informs the Head of Life Insurance that the Chairman's letter to the Treasury Select Committee might not have been correct on one point, being that the reinsurance treaty did not have any impact on the value of the with-profits fund. The Scrutinising Actuary agrees that the treaty had not added any value to the fund but points out that it did have a negative impact on the fund in the premiums that had to be paid. He suggests that the letter should have said that the treaty has '*no beneficial impact*' on the fund. The Scrutinising Actuary points out that this statement had not been included in the version of the draft that he and Chief Actuary C had reviewed. [**11:45**] The Head of Life Insurance thanks him for the explanation.
26/11/2001 [11:00]	FSA issue a press statement about the disclosure of the side letter to the reinsurance treaty. The statement says that FSA: *... took the view that the contents of the letter raised questions about the true value of the reinsurance contract that Equitable Life had entered into in early 1999 and which was shown in its regulatory returns. The FSA concluded that, had it been aware of the letter at the earlier stage, it would not have been prepared to accept the reinsurance arrangements as providing as much security for reserving purposes as was in fact taken.* The statement goes on to say that FSA: *... has seen and reviewed the terms of a renegotiated reinsurance agreement and has confirmed that it has no objection to them.* However: *... in the light of advice from leading Counsel, the FSA has taken the view that the value that Equitable Life should reasonably ascribe to the reinsurance contract is lower than it previously took. The FSA has made clear to Equitable Life that it must properly disclose the effect of the revised agreement, so that policyholders are made aware of the impact on Equitable* [Life's] *financial position for regulatory purposes.*

	FSA state: *On the basis of the information received by the FSA, Equitable Life continues to meet its regulatory solvency requirements even taking account of the lower credit for the revised reinsurance policy.* [**11:26**] FSA's Press Office circulates Q & A notes, setting out the line to take on the announcement.
26/11/2001 [11:28]	Equitable send FSA the revised text of section 11 of the compromise scheme documentation on the reinsurance treaty.
26/11/2001 [11:48]	FSA's Chairman's Office asks Chief Actuary C, in response to his note of 23/11/2001 [**11:08**], to clarify whether the section 68 Order added anything to Equitable's financial position. [**12:16**] Scrutinising Actuary F replies, having spoken to Equitable's Appointed Actuary, saying that the figures already anticipated the effect of the section 68 Order and included the benefit estimated at £200m. He adds: '*The effect of the S68 Order is that credit is now taken in the main valuation result for profits which would have emerged in the future. I therefore asked* [Equitable's Appointed Actuary] *whether the implicit item for future profits (estimated below to be currently worth £800m.) has been reduced accordingly.* [The Appointed Actuary] *is checking that out, and will confirm the position a.s.a.p. He did say though that he thought there were margins present in the implicit item*'.
26/11/2001 [18:11]	Equitable's solicitors send FSA a copy of a statement by the Society's Chief Executive, which had been filed with the court. [**21:02**] Chief Counsel A comments that the changes which FSA had requested on Article 4 in relation to the policyholders' compensation schemes had not been made.

26/11/2001 [19:08] Equitable send FSA a balance sheet, profit and loss statement and a comparison of policy values to allocated assets as at 31 October 2001. This provides the following information:

	Insurance Act Basis

26/11/2001 [17:53] Following a request from Chief Counsel A, Chief Actuary C provides comments on Counsel's opinion on the renegotiated reinsurance treaty. Having checked the opinion with Scrutinising Actuary F, he says that the opinion did not conflict with their recollection of the advice that had been given over the telephone last week and that FSA would not change their view on the credit that could be taken in the returns for the treaty. Chief Actuary C continues:

> *We have one comment to make on the draft Opinion in paragraphs 19 and 20. Those paragraphs refer to the Society being required to repay any interest amount or cash which the Society had earlier been paid. We are surprised that this obligation requires the Society to repay interest amounts based on the construction of Articles IV and X. In Article IV cash payments appear to be defined as the 10% amounts and Article X appears to refer explicitly to the cash balance. Why therefore do interest payments fall to be repaid under Article X? I believe that this point is less ambiguous under the new treaty wording of Articles IV and XII(b), where the latter Article refers explicitly to cash payments.*
>
> *An issue that we would prefer to see within the Opinion is whether or not there is any obligation for the Society to repay cash payments received, other than under Termination Article. We are relying upon the fact that no other obligation for repayment exists.*

[**18:13**] Chief Counsel A thanks him for the comments and says she would forward them to Counsel.

The following day [**at 14:14**], Chief Actuary C sends the correspondence to the Head of Life Insurance.

27/11/2001 [06:57] FSA's Head of Press Office provides Managing Director B with information on the press coverage of the disclosure of the side letter. The Head of Press Office says: '*From their reaction yesterday, the bit the Equitable will be most fussed about is the possible creation of a new class of "missold" policyholder to make claims on them – ie anyone after 1 April 1999 – on the grounds that we are bound to have closed Equitable earlier had we known of the impaired reinsurance*'.

[**09:32**] The Head of Life Insurance adds: '[Equitable's Chief Executive] *told me last night that he was surprised and (by implication) upset at the sentence in our* [press notice] *about not allowing so much credit had we been aware of the letter at the time – for exactly the reason that it might open a line of claim for misselling by late joiners. He seemed to think that this sentence was a "toughening up" of the* [press notice] *from the version they had seen. I said I was not aware of that; indeed, we had removed another sentence to meet concerns expressed by* [Equitable's Finance Director] *over the weekend*'.

	[**09:35**] Managing Director B states that this was his understanding. [**10:37**] The Director of GCD comments that '*the risk of claims is inherent in the underlying reality*'. He explains that there had in fact been a small change to the final text, which '*was needed to ensure* [it] *was not misleading given advice from counsel*'. The Director of GCD concludes that he did not think this made any difference to the press coverage.
27/11/2001 [10:01]	FSA's Head of Actuarial Support comments on the balance sheet provided by the Society on 26/11/2001, saying: *I see this includes an amount of £695 million for the reinsurance asset, rather higher than I would have expected. It also includes an implicit item for £805 million of future profits for which they do not have a waiver under* [FSMA 2000]*, I assume. Against this, the actuary claims that they could discount the guaranteed liabilities rather further, though this has not been demonstrated.*
28/11/2001 [13:22]	FSA's Head of Life Insurance relays to Line Manager E the details of a telephone conversation with Equitable earlier that day, about the possibility of the Halifax deal details becoming public and also information about the Financial Ombudsman's consideration of complaints that fell outside the compromise scheme.
28/11/2001 [14:28]	FSA's Chief Actuary C informs Chief Counsel A that: *We have identified a further material change to the IRECO Life Reinsurance Agreement that does not appear to have been covered by the Opinion.* *Under the original treaty, the interest payable on cash drawn down under Article IV appears to be payable by Equitable to IRECO as part of the Adjustment Premium, as set out in Appendix II. The Adjustment Premium, and hence the interest payable on the cash draw downs, is payable out of emerging surplus and hence the Appointed Actuary needed to make no provision for the interest payments in setting his mathematical reserves.* *Under the new treaty, the interest payable on cash draw downs is separated out from the Adjustment Premium and is shown in Article V under the Heading "Fee if interest or cash paid by the Reinsurer under Article IV". It appears that this fee is payable in cash each year whether or not surplus emerges to cover it.* *This change is significant and could have a further adverse effect on the amount that Equitable could claim for the treaty in their regulatory returns because full provision for the future interest payment cost may be necessary until the eventual termination of the treaty. In assessing the £350m provision we had provided for the interest cost for a 10 year period.* [Scrutinising Actuary F] *is trying to assess the effect of this but it may result in the treaty being of little value.* [**15:22**] Chief Counsel A says that she: '[does] *not read the fee of LIBOR plus 3.5% as forming part of the Adjustment Premium under Appendix II of the original agreement. I can see however that there is a contrary argument which arises primarily as a result of the placement of the fee obligation in the middle of* [Appendix] *II. I will run this by Counsel*'.
28/11/2001 [16:21]	FSA's Scrutinising Actuary F sends the Head of Actuarial Support a spreadsheet which tracks how the reinsurance treaty might operate in practice. The Scrutinising Actuary says: '*The value of the treaty to Equitable would be represented by the entries in the final column. However, as these figures decrease to zero over years 15 – 30, I wonder whether any value can be ascribed to the treaty in the first place*'.

	The Scrutinising Actuary also attaches a draft letter to Equitable in response to theirs of 16/11/2001.
29/11/2001 [11:47]	FSA's Line Manager E circulates a short note on the proceedings in court which had occurred on 26 November 2001.
29/11/2001 [13:45]	FSA's Chief Counsel A sends the Head of Press Office a copy of the Insolvency Practitioner's comments about the compromise scheme of 21/11/2001 [**18:46**]. She says: *The two issues which seem to me most likely to arise now on the section 425 scheme (for press office) are the risk posed by* [Article] *4 for compensation of Equitable policyholders in the event of insolvency and the risk to solvency of GIRs (75% of policyholders have them) and of misselling claims by non-GIRs.*
29/11/2001 [15:21]	FSA's Scrutinising Actuary F asks Chief Counsel A and the Head of Life Insurance to review a revised draft of the letter to Equitable, in response to his letter of 16/11/2001 in relation to the credit to be taken for the reinsurance treaty. The Scrutinising Actuary explains that he had: '*worked up a draft response ... last week, but we felt unable to issue it at that time. I have now adapted the response to explain our view that credit can only be taken for the cash payments available under the treaty, and attach a copy herewith*'. The opening section of the draft letter reads: *We have consulted with leading Counsel on the legal interpretation of the treaty, and have concluded that no credit can be taken for the Reinsurance Claims Amount itself when determining the amount of the Reinsurer's Liability for the purposes of the regulatory Returns. This is because, under Article IV, all Reinsurance Claims Amounts will be withheld by the Reinsurer, and never paid to the Society. Indeed, on Termination under Article XII, paragraph (d) of that Article would have the effect that an equal and opposite obligation to the Reinsurance Claims Amount would be created, and the two would then be set off against each other under paragraph (e) of that Article. So no sums would be owing between the Society and IRECO following termination.* *It is therefore our view that the only benefit under the treaty for which credit can be taken for reserving purposes is the stream of cash payments of up to 10% of the outstanding (withheld) Reinsurance Claims Amount which can be drawn down under Article IV. It would be necessary though to allow for any premiums payable by the Society and any interest payments which are not subject to surplus emerging...* [**19:35**] Chief Counsel A says that officials should meet the following day to discuss the matter.
30/11/2001 [11:50]	FSA's Scrutinising Actuary F informs senior FSA officials that, in reply to his query to Equitable of 26/11/2001, Equitable's Appointed Actuary had confirmed that the figure for the future profits implicit item of £800m took account of the use of post-N2 equity yields in the valuation.
30/11/2001 [16:56]	FSA's Head of Life Insurance asks Chief Counsel B to examine the possibility of a 'Restitution Scheme' in the event of the compromise scheme failing.
30/11/2001 [17:25]	Scrutinising Actuary F sends Managing Director B a revised draft of a response to Equitable's Appointed Actuary regarding the IRECO reinsurance treaty. The Scrutinising Actuary explains that this version of the draft incorporated the comments of Chief Counsel A. The opening section of the revised draft letter reads:

> *It seems to us that the only benefit under the treaty for which credit can be taken for reserving purposes is the stream of cash payments of up to 10% of the outstanding (withheld) Reinsurance Claims Amount which can be taken under Article IV. It would be necessary though to allow for any premiums actually payable by the Society, and fees and any interest payment which are not subject to surplus emerging ...*

The draft letter also sets out a number of technical questions about the treaty. These include the comment that:

> *Your interpretation appears to be based on the assumption that credit could be taken in the valuation for the future Reinsurance Claims Amounts. As indicated above, we do not accept this.*

(Note: the final version of this letter, which I have seen did not differ substantively from this draft, was sent by FSA to the Society on 13 December 2001.

Equitable responded to FSA on 9 January 2002. In response to FSA's question above, Equitable says:

> *The Society's interpretation is based on the assumption that credit can be taken in the valuation for the future Reinsurance Claims Amounts. I am not persuaded that the basis you set out in your letter, which is based on the stream of possible cash payments, is the only appropriate basis for valuating the reinsurance claims.*
>
> *The Reinsurance Claims Amounts have been valued in full as shown in Form 52 of the Society's statutory returns for the years 1998, 1999 and 2000. This basis was agreed at meetings of the Society with the FSA and the GAD in the first quarter of 1999 (where the GAD was represented by* [the Head of Actuarial Support (who had at that time been GAD's Directing Actuary B), Chief Actuary C and Scrutinising Actuary E] *when the final terms of the Reinsurance Agreement were being agreed with IRECO to provide the required reserving credit for the reassurance. Apart from the level of GAR take-up required for a reinsurance claim, which was amended to 60% (from 25%) following the House of Lords' ruling on 20 July* [2000]*, the basis on which reinsurance claims arise under the Agreement has not been changed since the Agreement came into force and, in particular, nothing has been changed in this respect by Addendum 3 to the Reinsurance Agreement. It is clear from the Society's statutory returns that it is this interpretation which has been used.*
>
> *I therefore cannot see that Addendum 3 should require any change in the interpretation of the credit that can be taken for future Reinsurance Claims Amounts from that used in previous returns to the FSA and, that being the case, it is on this established basis that I should prepare the 2001 returns.*

It appears that FSA conclude the correspondence on this matter with a letter, dated 19 February 2002, in which they state that: '*For the record, we would mention that we do not agree with your contention that the basis that you describe in your letter, of taking credit in the valuation for future "Reinsurance Claims Amounts" rather than cash payments under the treaty, was agreed with us in early 1999*'. However, FSA conclude: '*now that the High Court have approved the Section 425 Compromise Scheme, we assume that the above reinsurance arrangement has been cancelled by Equitable. In addition we understand that the 2001 Returns are being prepared taking account of post-balance sheet adjustments in respect of the S425 Scheme. We do not therefore intend to pursue the matter of the value to be placed on the reinsurance any further*'.)

30/11/2001 [entry 4] FSA write to Equitable about complaint and enquiry monitoring, as they had not received information for some weeks.

30/11/2001 [entry 5]	FSA write to every insurance company, setting out details of their policy in relation to future profits implicit items.
30/11/2001 [entry 6]	FSA write to Equitable about their outstanding application for a section 68 Order for a future profits implicit item.
30/11/2001 [entry 7]	FSA meet the Financial Ombudsman Service to discuss the handling of complaints from former Equitable policyholders.

01/12/2001 [entry 1] Equitable's Chairman and Chief Executive send out to the Society's policyholders the final compromise scheme documents, which include:

- a booklet entitled 'Your questions answered';
- a '*Scheme Circular*', setting out in full detail the compromise scheme proposals;
- the Society's Interim Accounts for the half-year 30 June 2001, prepared under the Companies Act 1985.

In their letter, the Chairman and Chief Executive discuss the Society's financial position. They write:

> *Interim Accounts for the half year ended 30 June are enclosed and are the first ever published by your Society. They provide you with financial information relevant to your voting decision. In the time available it has not been possible to produce third quarter interim accounts, but we should draw to your attention the financial impact on your Society during the third quarter of policyholder claims and the aftermath of September's terrorist attacks in America which saw interest rates and stock markets fall.*
>
> *Your Society is and remains solvent. This has in part been achieved by reducing our investments in the stock market and increasing holdings in lower-risk investments. At 30 June, some 48% of the with-profits fund was invested in the stock market. At 30 September that had reduced to 35%.*
>
> *Since 30 June we have experienced an increase in policyholder maturities and surrenders as a result of the painful but necessary reductions in policy values. In the three months to 30 September these claims were £1.7 billion, though the rate of new claims has fallen since then. At 30 September, the with-profits fund was estimated to stand at £20.1 billion against £22.8 billion at 30 June 2001. This reduction was due to the claims and the decline in stock market values over the quarter exacerbated by the 11 September attacks.*
>
> *At the end of September the Fund for Future Appropriations (which is available to pay bonuses) had fallen to an estimated £300m, but the total policy value for all with-profits policies compared to the value of the with-profits fund was within the 5% bounds set by the Appointed Actuary for the financial management of the Society.*
>
> *The low level of free assets makes your Society financially unstable and vulnerable to market risks.*
>
> *Your Board believes that adopting the compromise scheme is essential to make the Society more stable and place it on a stronger financial footing.*

On '*The benefits of compromise for policyholders*', the Chairman and Chief Executive say:

> *The adoption of the compromise scheme will see your current policy value increased in exchange for you giving up some of your rights. An indication of the uplifts are in your indicative statements of value, contained in your Voting Documents.*

The successful completion of the compromise agreement by 1 March 2002 sees the Halifax £250 million used to uplift your policy funds. We believe that the compromise is still preferable to continuing as we are, even if this deadline is missed and uplifts are lower.

The compromise scheme will reduce uncertainty and worry for all policyholders and means we can invest the with-profits fund without the current abnormal constraints. The resulting improved financial position of the Society should ultimately lead to a less constrained bonus policy.

A successful compromise will not stop us from pursuing those who caused the Society's problems, if that is in policyholders' interest. However, any compensation is years away. We cannot wait – we must solve the Society's problems now.

On '*The dangers of no compromise*', the Chairman and Chief Executive say:

We have examined all the alternatives to a compromise. Either they do not work or would greatly reduce the value of your policy.

Liquidation would be very bad. All non-guaranteed bonuses could be lost. There is a risk that guaranteed benefits could be scaled back. Annuity payments including GAR pensions would be suspended and the competing claims of GARs and non-GARs might well delay payments for years.

No compromise means we do not gain the Halifax £250 million.

Without a compromise the Society would have to maintain a very restrictive investment policy, investing much less in stocks and shares. Bonus policy would need to be very cautious; payments might not include any non-guaranteed bonuses. A bleak outlook for policyholders.

The Government is clear that there will be no lifeboat for us and compensation for policyholders, if any arises, is years away. We cannot afford to wait. We must sort out our own problems now.

Finally, without a compromise the instability, uncertainty and worry will continue, and may well get worse for everyone, whatever their policy, whatever their age. We have listened to and read the views of many policyholders and know that this is rightly unacceptable to the vast majority.

Equitable's Chairman and Chief Executive, on behalf of the Society's Board, urge policyholders to vote for the compromise scheme.

01/12/2001 [entry 2] FSMA 2000 comes into effect, changing the system of the regulation of insurance companies. The actions of the prudential regulators of insurance companies no longer fall within the jurisdiction of the Parliamentary Ombudsman.

Fourth report

Session 2007-2008
Presented to Parliament pursuant to
Section 10(4) of the Parliamentary Commissioner Act 1967

Ordered by
The House of Commons
to be printed on
16 July 2008

HC 815-IV

London: The Stationery Office
£206.00

Not to be sold separately

This report contains references to, and extracts from, legal opinions and advice and their contents obtained by the Equitable Life Assurance Society and provided by it to -

(a) the public bodies responsible for the prudential regulation of insurance companies in the course of normal exchanges between a regulated body and its regulators for the specific purpose of allowing those regulators to fulfil their regulatory functions; and

(b) Lord Penrose in the course of normal exchanges between the Society and Lord Penrose and his Inquiry team for the specific purpose of allowing Lord Penrose to fulfil his terms of reference.

After the House of Commons had ordered the report of Lord Penrose to be published on 8 March 2004, all the documents obtained by Lord Penrose were retained by the Treasury.

In turn, I obtained this material from the Treasury for the specific purpose of carrying out my investigation into the prudential regulation of the Society, following my decision to carry out such an investigation which was reported to Parliament on 19 July 2004.

I acknowledge that the Society has waived privilege in this material only for the above specific purposes and that the Society does not intend any wider or general waiver of privilege by not objecting to the inclusion of, or extracts from or references to, this material in this report as published.

Contents

Section 1

Introduction

Introduction

In this Part of my report, I have reproduced or included certain documents which are relevant to the subject matter of the investigation which led to this report.

The primary and secondary documents which are reproduced or included are grouped in six sections other than this introduction. Those sections contain:

- documents related to the investigation process, including the terms of reference for the investigation and the initial response of the bodies whose actions were under investigation to the heads of complaint which were set out in those terms of reference – these are set out in Section 2;
- information regarding complainants and direct contacts, produced as a result of a survey we conducted of those whose interest in our investigation we had registered – this is set out in Section 3;
- the responses, in whole or in part, of certain parties to my report, including those from an individual former GAD actuary and from action groups representing the lead complainants – these are set out in Section 4;
- documents, such as service level agreements between, and internal and public guidance produced by, the prudential regulators and/or GAD, which help to explain the statutory and administrative context for the discharge of their functions which existed at the time covered by this report – these are set out in Section 5;
- reports produced by those responsible for the scrutiny of the Society's regulatory returns, setting out the results of that scrutiny – these are set out in Section 6; and
- other primary documents which are either relevant to specific heads of complaint or which otherwise provide context for the subject matter of the investigation – these are set out in Section 7.

The purpose of the reproduction and inclusion of these documents is to assist the reader by placing before them material which may add to their understanding of the context in which I have reached the conclusions contained in this report.

The reader should be aware that, within some of the documents reproduced in this Part of my report, reference is made to annexes or appendices. Not all of those have been reproduced here, with only those directly relevant to the subject matter of the report being included.

Section 2

Key documents related to the investigation process

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

Assessing whether I can and should investigate

12. When considering whether I should investigate a complaint referred to me by a Member of Parliament, I make four assessments.

13. First, I determine whether the body (or bodies) complained about are **within my jurisdiction** and, if so, whether the actions that form the subject of the complaint are ones within my remit. While I understand why a perception might have arisen that I have jurisdiction over anything done by any government or other public body, that is not the case. I may only investigate the administrative actions of those bodies listed in Schedule 2 to the Parliamentary Commissioner Act 1967 (the 1967 Act) – or those acting on behalf of such a body, if those actions are taken in the exercise of the listed body's administrative functions. Furthermore, I may not consider complaints about the actions of bodies within my jurisdiction where such actions are of a type specifically excluded from my remit, principally by Schedule 3 to the 1967 Act. Neither can I consider complaints where I believe that an alternative remedy is available to the complainant through the courts or a statutory tribunal, unless I am satisfied that in the particular circumstances it is not reasonable to expect the complainant to resort or have resorted to that alternative remedy.

14. Secondly, assuming that both the bodies and matters complained about are ones that I have the legal power to investigate, I then assess whether I have been shown any **prima facie evidence of maladministration** by the relevant body or bodies. Many people come to my Office with a profound sense of outrage at the content of government policy or by the effects on them of the relevant legislative framework. However, I am not empowered to question the merits of legislation or of government policy formulated without maladministration or to question the merits of a decision taken without maladministration by a government department or other body in the exercise of a discretion vested in that department or body.

15. Thirdly, if it appears to me that there is evidence pointing to administrative fault on the part of the body or bodies complained about, I consider whether it appears that any such maladministration, if established, may have **caused an unremedied injustice** to the person making the complaint. However strongly felt a sense of outrage or injustice may be as a result of what appears to be administrative error, if other factors have caused the injustice complained about, then it is not for me to investigate such complaints.

16. Finally, I consider whether an investigation by my Office may produce a **worthwhile outcome** to the complainant. This might be achieved by the production of a suitable remedy, which can comprise an apology, improvements to administrative systems, or financial redress, or by the provision of an authoritative explanation of past events or the resolution of outstanding issues.

17. There are three important principles underpinning the work of my Office should I decide, on the basis of the tests described above, that a statutory investigation of a complaint, or of part of a complaint, is appropriate.

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?*
(19 July 2004 – HC 910)

18. I consider that it is particularly important on this occasion for me to set these principles out as clearly as possible:

- first, my Office is **impartial** between the parties to a complaint: I am neither advocate for the complainant nor apologist for those under investigation. I always seek to conduct a rigorous and independent scrutiny of the relevant events in the light of all of the available evidence. If injustice caused by maladministration is found, I consider it the role of my Office to pursue appropriate redress vigorously;

- secondly, my approach to any investigation **cannot benefit from the use of hindsight** or be influenced by my personal opinion – or that of my staff – on what should have been the relevant statutory or policy frameworks. I cannot substitute my view as to what would have been an appropriate policy or consider the merits of a decision taken without maladministration. Instead, I assess whether the relevant public body did what it ought to have done; whether it did anything that it should not have done; and whether it otherwise acted without maladministration; and

- thirdly, a decision to conduct an investigation does **not mean that I have prejudged the outcome** of that investigation. My initial assessment is based on the often limited material available when the complaint is put to me and on whether such material discloses indications that maladministration might have occurred. A decision that a complaint is worthy of investigation does not mean that a finding of maladministration causing injustice will follow. The outcome of a detailed investigation by my Office may be that I do not uphold the complaint.

Decision

19. In the light of the evidence before me and, having applied the tests described above to that evidence, **I have decided, subject to what I say in paragraph 20 below, to conduct a statutory investigation of the prudential regulation of Equitable Life in the period prior to 2 December 2001.**

20. That investigation will focus on the actions (including failures to act) of the government departments responsible under the relevant legislation for the prudential regulation of Equitable Life. My investigation will, subject to approval of a request I have made of the Government (Annex C), also include the actions of GAD, for reasons that I explain below. **However, should approval of my request not be forthcoming, I will, in the absence of the ability to consider the actions of GAD, review my decision to investigate.**

21. The rest of this report deals with the scope of my decision – the bodies whose actions I propose to investigate and the time period to be covered by my investigation – and the reasons for my decision. The report will also outline the next steps that I propose to take.

Scope of my decision

Jurisdiction

22. It is evident to me – from the substance of many of the complaints about Equitable Life

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

referred to me, from many of the representations I received during the consultation process and from press and public comment – that my jurisdiction in relation to the events at Equitable Life is not understood by many people.

23. Many of the complaints and representations I have received concern the actions of Equitable Life itself, the actions of its salesforce and directors, or are about the Society's auditors or accountants. I must make it very clear again that I have no role in considering complaints about mis-selling of policies or about the conduct of the Society. Neither do I have the power to investigate the actions of the FSA, except where it acted on behalf of the Treasury from 1 January 1999 to 2 December 2001, as it is not listed in Schedule 2 to the 1967 Act (paragraph 13). Nor are the actions and judgment of the House of Lords, which I have been asked by some people to 'review', within my remit.

24. My staff will, over the coming weeks, identify those complaints on file and those representations made in the consultation process which raise issues outside my jurisdiction. We will then write to those individuals to ensure that they are aware of the extent of my remit and, where appropriate, we will identify which other bodies might assist them.

25. I will now outline my current jurisdiction in relation to the regulators of Equitable Life and the reasons why I have asked the Government to empower me to investigate the actions of GAD in relation to the prudential regulation of Equitable Life. I will also deal with the request that has been made to me that I should consider asking that the conduct of business regulators – that is, those responsible for overseeing the sale of policies to individuals and for sales communications between Equitable Life and its potential and existing policyholders – are brought within my jurisdiction.

The prudential regulator

26. I have jurisdiction to investigate the administrative actions of those government departments – the Department of Trade and Industry and the Treasury and their Ministers – responsible in law for the prudential regulation of life assurance companies before 2 December 2001. Both of these bodies were at all the relevant times listed in Schedule 2 to the 1967 Act. The focus of my further investigation will include the actions of those Departments.

The Government Actuary's Department

27. I consider, and am advised, that GAD is not within my jurisdiction. It is not listed in Schedule 2 to the 1967 Act and, indeed, the Notes on Clauses on the Act, prepared at the time of its passage through Parliament, clearly demonstrate an intention to put GAD outside my jurisdiction.

28. That said, it has been put to me in some of the key representations I have received that any future investigation by my Office should include the actions of GAD. Indeed, EMAG put it to me in their written submission (Annex B) that 'any further investigation would be meaningless without such jurisdiction'.

29. My decision to ask for the inclusion of GAD within my jurisdiction has been informed by the assessments of the role and performance of

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

GAD, made with the benefit of hindsight, in the Penrose report. These assessments may or may not be correct but they provide material that makes it arguable that there was maladministration by GAD. Examples include:

- the 'key finding' of Lord Penrose that 'there was a general failure on behalf of the regulators and the GAD to follow up issues that arose in the course of their regulation of the Society' (paragraph 240 (11) of chapter 19); and
- Lord Penrose's specific assessment that 'although GAD brought in a more detailed style of scrutiny in the early 1990s, the standards of scrutiny still impress me as complacent, lacking challenge and hesitant in criticism and in following up on any criticism made. This was, indirectly, reflected in a lack of robustness in the regulatory process' (paragraph 160 of chapter 19).

30. These observations by Lord Penrose seem to me to indicate that the advice provided by GAD, and the actions it took in support of that advice, may have been important to the way in which the prudential regulator undertook its functions. In addition, Lord Penrose's criticisms of GAD might indicate that GAD was, at least arguably, maladministrative in performing its functions.

31. I recognise – as does Lord Penrose himself – that Lord Penrose was applying different tests in relation to GAD to the ones that I must apply, and that his approach was informed by hindsight. I also recognise that the role of GAD has changed substantially since 26 April 2001, when its role in relation to advising the regulators of the insurance industry was transferred to the FSA. I am also aware that some of the current work of GAD is not of the type normally subject to my scrutiny.

32. However, I consider that there is sufficient initial evidence to suggest that the actions of GAD are key to an assessment of whether maladministration by the prudential regulator caused an unremedied injustice to complainants. I believe therefore that GAD's actions must be brought within my jurisdiction if my investigation is to be meaningful.

33. I consider that the recent change in GAD's responsibilities does not constitute an insurmountable problem. As explained in my letter requesting the addition of GAD to my jurisdiction (Annex C), if it is considered that such an addition by Order in Council would be undesirable in relation to GAD's current responsibilities, the relevant entry in Schedule 2 to the 1967 Act could be accompanied by a Note to that Schedule. This Note could limit my jurisdiction to GAD's actions before 26 April 2001.

Conduct of business regulation

34. It has been put to me – not least by EMAG – that I should also consider whether my jurisdiction should be extended to include those bodies responsible prior to December 2001 for the regulation of the conduct of life insurance companies' business.

35. I understand why this is considered important. Many of the representations I received during the consultation exercise – and the referred complaints we hold on file – focus on conduct of business issues. Such complaints particularly

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

concern alleged mis-selling, alleged failures to provide clear information to existing and prospective policyholders, and the performance of the regulatory bodies in exercising their responsibility to oversee such matters.

36. However, I am advised that the relevant regulatory bodies – the Designated Agency to which the Secretary of State transferred his responsibilities, the Securities and Investments Board (SIB – now renamed the FSA), and the self-regulatory organisations (particularly the Personal Investment Authority) – are not bodies which can be brought within my jurisdiction by Order in Council.

37. Section 4(3) of the 1967 Act provides that only public bodies that meet certain criteria can be added to my jurisdiction by Order in Council. Bodies not meeting these criteria – which include the SIB-FSA and the nowdefunct self-regulatory bodies – could only be added to my jurisdiction by primary legislation.

38. While the Government has said that it will consider a request from me for the addition of GAD to my jurisdiction, it has made no such statement in relation to the conduct of business regulators. Moreover, I do not think that it would be in the public interest – or in the interest of policyholders – to delay my investigation with the aim of bringing the conduct of business regulators within my jurisdiction.

39. Furthermore, while many people have suggested that it would be desirable for me to have jurisdiction over those bodies historically responsible for regulating conduct of business matters, it does not appear to be a widely-held view that the absence of such powers would render worthless any investigation conducted by me.

40. In any case, my powers to obtain evidence, under sections 8 and 9 of the 1967 Act, are wide. I would use those powers to interview witnesses and examine documents related to conduct of business matters should I consider that that would assist my investigation.

Timeframe of investigation

41. Respondents to the consultation suggested a number of timeframes for any future investigation:

- most Members of Parliament and many policyholders suggested that any further investigation by me should cover the same period as that covered by the Penrose report;
- the action group representing with-profits annuitants suggested that any investigation should start ‘at least from 1973’ as this was the time they allege that ‘Equitable’s estate began to be dispersed’;
- EMAG suggested ‘at least from 1987’; and
- some MPs and individual policyholders suggested that ‘no artificial limits’ should be placed on the timeframe for any investigation.

42. I recognise that all of the timeframes outlined above are based on an assessment of when Lord Penrose suggests that Equitable Life’s problems originated. I am minded to focus on events

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?*
(19 July 2004 – HC 910)

relevant to the closure of Equitable Life to new business. I propose to invite further representations on this point. In the interests of fairness I shall keep in the forefront of my mind the impairment of recollection – which is the inevitable consequence of the passage of time since the material events – and the extent of the availability of material documentation.

43. That said, I have no jurisdiction over the actions of the prudential regulators on or after 2 December 2001 and therefore my investigation must conclude at the latest with that date. I will revisit the findings of my first report in the light of the inclusion of GAD within my jurisdiction, should approval of my request be forthcoming, and in the light of the evidence disclosed by my proposed second investigation.

Prima facie evidence of maladministration

44. As explained in paragraphs 1 and 2 of Part I of my first report to Parliament, The Prudential Regulation of Equitable Life, many of the complaints about Equitable Life referred to me or my predecessor by Members of Parliament were about matters that were not within my jurisdiction.

45. In addition, many complaints, understandably, disclosed more information about the perceived injustice suffered by complainants than about any alleged maladministration, by bodies in my jurisdiction, which may have caused this injustice.

46. When seeking to identify whether there is sufficient material before me to indicate that there may have been maladministration on the part of the prudential regulator and GAD, I have sought to focus my attention on two principal sources: the Penrose report and the representations made to me in the consultation exercise.

Penrose

47. I do not intend to repeat here all of the criticisms of the regulators contained in the Penrose report – or begin to assess whether these were directed at the adequacy of the regulatory system or towards operational failures by regulators. I will consider all of the relevant material in that report as part of my investigation.

48. However, I consider that the general criticisms of prudential regulation made by Penrose (in addition to those mentioned above at paragraph 29), which can be viewed as prima facie evidence of maladministration, include:

- **that the regulators were not adequately resourced to fulfil their obligations:** the 'DTI insurance division was ill-equipped to participate in the regulatory process. It had inadequate staff, and those involved at the supervisor level in particular were not qualified to make any significant contribution to the process... were not individually equipped with specific relevant skills or experience to assess independently the Society's position' (paragraph 158 of chapter 19);

- **that the regulators as a result did not properly undertake their functions:** 'it is difficult to avoid the view that regulation was falling between two stools, the major player in discussions having no regulatory power and the empowered regulator having little part in the processes that would have

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

instructed regulatory action' (paragraph 252 of chapter 16);

- **that on several specific occasions information that might have led to regulatory action was ignored or not actioned by the regulators or GAD** (examples throughout the report);

- **that the regulators and GAD allowed the chief executive of Equitable Life also to hold the post of appointed actuary:** 'regulation was based on an overreliance on the appointed actuary who... was also the chief executive over the critical period from 1991 to 1997, despite a recognition for the potential for conflict of interest inherent in this position' (paragraph 240 (7) of chapter 19);

- **that the regulators and GAD did not keep pace with developments in the industry** and that thus 'regulatory solvency became an increasingly irrelevant measure of the realistic financial position of the Society';

- **that the regulators and GAD did not properly assess the impact and adequacy of measures being used to improve Equitable Life's solvency position:** 'the regulators... failed to give sufficient consideration to the fact that a number of the various measures used to bolster the Society's solvency position were predicated on the emergence of future surplus' (paragraph 240 (10) of chapter 19); and

- **that the regulators and GAD failed to assess the reasonable expectations of policyholders in terms of the effect of these on Equitable Life's ability to meet its liabilities or to assess properly the impact of the House of Lords' judgment:** 'there was... no consistent or persistent attempt to establish how [Policyholders' Reasonable Expectations] should affect the acknowledged liabilities of the Society' (paragraph 240 (9) of chapter 19) and 'it appears that the regulators proceeded on the assumption that, if anyone were disadvantaged by the [Court's] decision, compensation would be available' (paragraph 115 of chapter 18).

Other criticisms

49. EMAG, in their formal submission and in the template letters prepared for their members and supporters, also made the following specific criticisms of the regulators and GAD:

- 'Equitable were permitted by the various Government regulators to publish financial results and projections that were grossly misleading to its members and to prospective new customers';

- that the regulators were aware of the true, weak financial position of the Society – for example, it is alleged that GAD knew about the 'practices of dubious actuarial merit' employed by the Society as far back as 1990 – and 'did nothing about it and by their silence connived in the Equitable Board's misleading representation of its finances';

- that the regulators permitted over-bonusing 'which was a contributory factor in the Society's demise and in the losses sustained by those who held policies on 16 July 2001'

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

and 'did not identify that guaranteed annuity rates would become a problem'; and

- other 'questions raised by Lord Penrose's report', as set out in Part IV of EMAG's written submission (Annex B).

50. Andrew Tyrie MP, in his submission on behalf of the Official Opposition (Annex B), concurred with much of the above, as did the Liberal Democrats in their submission. Mr Tyrie also said that the regulators 'failed to recognise the inadequacy of the reinsurance policy negotiated to cover reversionary bonuses for [Guaranteed Annuity Rates] in late 1998 and early 1999'.

51. In my view, the criticisms contained in the Penrose report and the evidence put forward by the action groups and by opposition spokespeople constitute sufficient material to warrant an investigation into the way in which the prudential regulators and GAD discharged their responsibilities.

Unremedied injustice

52. It is very clear to me that many thousands of policyholders and former policyholders feel greatly aggrieved by events at Equitable Life. When reading the 1,603 representations from individual policyholders, I could not but be struck by the considerable distress caused by these events to many people from very diverse backgrounds, not all of whom have other sources of income.

53. The representations I received cited significant financial hardship and loss caused, in particular, by cuts in annuity rates and in the value of individual policies and pension funds. One respondent said that he had lost almost 40% of his savings; another that more than 35% of her income had been lost as a result of the cuts progressively imposed since July 2001 on Equitable Life annuities. These individual stories are not by any means unique. The consultation process gave me a valuable opportunity to hear directly from the many people most acutely affected by the situation at Equitable Life.

54. I have received many representations, describing the situations in which individual policyholders now find themselves – whether suffering reduced current income, a likely reduction in future retirement income, or uncertainty and financial instability – and the outrage felt by many at the events that precipitated these situations. Most of these share a sense of anger that government bodies did not protect them from the unfolding events.

55. Section 5 of the 1967 Act allows me to consider complaints in cases where a member of the public claims to have suffered an injustice in consequence of maladministration by a body in my jurisdiction. It is clear to me, from the individual representations I have received, that a large number of people claim to have suffered such an injustice, which they believe has been caused by maladministration on the part of the prudential regulators and GAD.

Worthwhile outcome

56. I now turn to the arguments about whether a further investigation by my Office would be likely to provide a worthwhile outcome.

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

Arguments for my intervention

57. During the consultation process, there were broadly five arguments put forward in favour of my conducting a further investigation:

- first, it was suggested to me that only the Parliamentary Ombudsman has sufficient standing and expertise to adjudicate on whether maladministration by government bodies has caused an injustice to individual citizens. Therefore, a further investigation by me was necessary to resolve this question;

- secondly, it was put to me that, even were this not the case, Lord Penrose either could not, or chose not to, address questions of maladministration and of redress for any such maladministration, although he had identified instances of regulatory failure – and that, accordingly, only I could now recommend compensation from public bodies;

- thirdly, it was submitted that, although my remit might be limited to certain government bodies, there were no alternative remedies available to policyholders for regulatory failure. It was unreasonable to expect them to pursue the one potential alternative course of action – uncertain and costly litigation against the Government or the regulators;

- fourthly, it was argued that, unless finality was brought to the Equitable Life affair, public confidence in the financial services industry would continue to be eroded and younger generations would be dissuaded from investing in pension provision; and

- finally, it was put to me that a failure to act would lead to a loss of public confidence in, and respect for, my Office and that this would reflect badly more generally on the wider reputation of Parliamentary oversight of government bodies and of the protection afforded to consumers by Parliament.

Arguments against my intervention

58. Six broad arguments were put to me as reasons for not conducting a further investigation:

- first, it was suggested that to conduct a full investigation would be costly to the public purse, involve complex matters about which my Office was not best placed to make judgments, and would take many years to complete;

- secondly, it was argued that other bodies – principally the courts or the Financial Ombudsman Service (and the Financial Services Compensation Scheme) – were more appropriate channels for resolving individual claims or complaints;

- thirdly, it was put to me that my jurisdiction was so limited as to make any worthwhile outcome impossible and that I would only be raising expectations falsely were I to conduct a further investigation;

- fourthly, it was suggested that there was no evidence of operational regulatory failure but rather failure of an inadequate system established by Parliament – matters about which it was said that I could not comment, or on which I could not adjudicate;

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

- fifthly, it was put to me that to conduct a further investigation would be 'oppressive' to the staff and former staff of regulatory bodies who would have to undergo a fourth scrutiny of the same matters (the Baird report, my first investigation, and the Penrose inquiry being the other three) and would, for the FSA in particular, be a distraction from its current core business; and

- finally, it was suggested that, by conducting a further investigation, I would be 'opening the floodgates' to a range of other complaints about failures in the financial services industry and allied sectors, which would divert my Office from its core business.

The Penrose report as the basis for my investigation

59. Before detailing my assessment of each of the principal arguments put to me as outlined above, I wish to deal with one related aspect of some of the representations I have received – namely, the degree to which the Penrose report provides a factual basis on which to draw upon in my investigation.

60. The choice before me is either to conduct a further statutory investigation of the relevant events or not to conduct any such investigation. Where Government Departments or officials accept findings of fact by Lord Penrose, this may shorten my process of investigation. However, I cannot, as has been suggested by some, simply take the Penrose report as 'findings of fact' and then apply an assessment of whether those 'findings' disclose maladministration on the part of the prudential regulators and GAD.

61. Lord Penrose, when introducing his conclusions in paragraph 2 of chapter 19 of his report, said:

> *As throughout this report, I have not qualified my comments by reference to professional standards current at the time events occurred: that is a matter for the courts and the professional bodies exercising disciplinary functions. Further, I have the benefit of hindsight, and I have not restricted the comments made to those matters that can be shown to have been within the knowledge or contemplation of individuals or groups at material times. In seeking material from which lessons can be learnt for the future it would be impossible to restrict oneself to what individuals knew or ought to have known at any time in the past.*

62. However, that is exactly what I must do: abandon hindsight and assess whether the actions of the bodies under investigation complied with the relevant statutory and regulatory provisions current at the time. In his letter to me (Annex B), Lord Penrose himself recognises this critical difference:

> *In carrying out your function you will, I think inevitably, have access to different evidence from the evidence I had available, and the issues you will have to consider, within the terms of your remit, will, equally inevitably, be different from those that engaged my attention as reporter. It would have been, and remains, outside the scope*

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

of my remit as reporter to form and express views on the issues you have to consider.

63. In addition, the representations I have received make it clear that key parties to the relevant events do not accept that Lord Penrose's narrative is correct in important respects and/or represents an undisputed understanding of events.

64. Thus, while I would have regard to all relevant evidence, including the papers of the Penrose inquiry, I have to conduct a full, statutory investigation based on the approach I have outlined in paragraph 18 above.

Assessment

65. Turning first to the arguments put forward in favour of a further investigation by my Office, as set out in paragraph 57 above, it is clear to me, with respect to the first two arguments, that the Penrose report did not – for whatever reason – deal with questions of maladministration or of redress. Given my statutory function, I find the arguments that only the Parliamentary Ombudsman can now address such complaints, and deliver a verdict on whether maladministration has occurred, highly persuasive.

66. I recognise that there are other potential remedies available to policyholders with respect to the other actors central to events at Equitable Life. For example, there is legal action by Equitable Life pending against the Society's former directors and auditors and the Financial Ombudsman Service is dealing with thousands of complaints about mis-selling by the Society's staff. I also understand that action groups are considering legal action against the Society in relation to the position in which with-profits annuitants find themselves. However, it does not seem to me reasonable to suggest that individual policyholders, often now in straitened financial circumstances, should be expected to take uncertain and expensive legal action against the prudential regulators or GAD. My Office was created to provide access to administrative justice that is free to those seeking it and I can see no reason why the existence of courts, whether domestic or European, should preclude me from assisting citizens whose complaints are ones that I can investigate. Moreover, I am not persuaded that an alternative remedy exists in those courts to which it would have been reasonable, in these particular circumstances, to expect the complainants to resort or to have resorted. The legal advice to me, in relation to the prudential regulators, is that those with a claim to have suffered an injustice in consequence of maladministration are unlikely to have any legal remedy available to them.

67. In relation to the arguments about public confidence both in my Office and in the financial services industry and about the protection afforded to consumers by Parliament, I have some sympathy with the latter arguments. However, I do not think that it is necessary to deal with them in detail here as the other arguments I have already discussed are, in my view, sufficient in their own right. I would say two things about these arguments. First, it is a matter of speculation as to what effect any decision I might make will have on the stability of Equitable Life and of the wider financial services sector. Secondly, with respect to the standing of my Office, while I recognise the strength of feeling that underpins such

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

matters, as Parliamentary Ombudsman my role is to discharge my statutory responsibilities having regard both to the circumstances of each case and to the wider public interest. It would be entirely inappropriate for me to be influenced by current or prospective press comment or indeed by any other form of external 'pressure'. Such factors have had, and will continue to have, no influence on my judgment.

68. I now turn to the arguments put forward for my not conducting a further investigation into the regulation of Equitable Life, as set out in paragraph 58 above.

69. I accept that any further investigation by my Office will have a cost to the public purse. However, administrative justice, like any other kind, has a cost. I will address issues about the costs that will inevitably be involved when asking Parliament via the Treasury to provide the resources necessary to conduct my investigation.

70. Similarly, I do not find persuasive the argument that I should not conduct a further investigation purely because the matters which would be the subject of that investigation are complex or controversial. Resolving complex and controversial complaints is at the core of the role of all Ombudsmen. I also recognise that any investigation I conduct will take some time. However, that is not in my view a compelling reason for not conducting it.

71. I have already explained in paragraph 66 above why I do not think that alternative remedies exist to which it would have been reasonable to expect complainants to resort to seek redress for any alleged maladministration on the part of prudential regulators or GAD.

72. I am acutely aware that, among the relevant players, I have jurisdiction only over the prudential regulators and, subject to approval of my request for it to be included in my jurisdiction, over GAD. I also would not wish to raise the expectations of complainants that I will inevitably find in their favour – that is only one of a range of possible outcomes.

73. I recognise that it may be more difficult to assess questions of causality and redress, should I find maladministration, without being able to judge the actions of other key players. However, I have already explained that I consider that I should not avoid involvement in issues purely because they are complex. Furthermore, I am not persuaded by these arguments that a worthwhile outcome to a further investigation by me is impossible.

74. The question of whether there may have been regulatory system failure, as has been argued, rather than operational failure is something that I can only determine by conducting a full investigation. In my view such arguments only serve to reinforce the desirability of such an investigation.

75. I recognise that staff and former staff of regulatory bodies will not welcome another inquiry into events at Equitable Life. However, I must balance the interests of individual public servants against the wider public interest and the interests of the hundreds of thousands of people affected by the events at Equitable Life. I will take reasonable steps to mitigate the effects of any further investigation on the staff

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

involved and will have regard to the passage of time since the relevant events took place. While I recognise that time will be required by FSA staff to respond to enquiries from my Office and that this will have resource implications for the FSA, I consider that such implications do not outweigh the public interest arguments underpinning my decision to conduct a further investigation.

76. Finally, I am not persuaded by the argument that, in deciding to conduct a further investigation into the regulation of Equitable Life, I would somehow be 'opening the floodgates' to many more similar classes of complaint. First, I have no jurisdiction over any of the bodies responsible for financial services regulation after 2 December 2001. Secondly, although I have discretion to investigate complaints put to the referring Member of Parliament more than twelve months after the complainant first had notice of the matters complained about, there need to be compelling reasons for such delay before I will exercise that discretion. It therefore does not strike me as likely in this context that I will receive considerable numbers of complaints about other financial services issues that I could be persuaded to investigate. Even were this to happen, it is not a persuasive argument that I should refrain from undertaking an investigation into one situation because I might be asked to conduct another investigation into other situations. I must treat each complaint on its merits.

77. Furthermore, it is clear to me that Equitable Life is a 'special case' in relation to complaints about regulatory failure – a position recognised by the Treasury when it commissioned the Penrose inquiry to look at these significant and exceptional events. That inquiry, as I have explained, did not address questions of maladministration and redress. My investigation will address these important questions.

Next steps

78. I have explained why I consider that there is sufficient material before me to indicate that there may have been maladministration and sufficient indications of unremedied injustice to merit a further investigation of the prudential regulation of Equitable Life. I have also considered the arguments about whether such an investigation is in the public interest or is likely to produce a worthwhile outcome. In the light of that, I have decided, subject to agreement that GAD is brought within my jurisdiction, to conduct a further investigation.

79. In conducting that investigation, my aim is to be as transparent and flexible as possible, given the legislative framework within which I work. Although I am required by section 7(2) of the 1967 Act to conduct my investigations in private, I intend that, where possible, all relevant parties will be invited to produce evidence to assist me in the process of establishing the facts. I will consider the degree to which I can publish background information and other evidence in due course and will involve those submitting such evidence in that consideration.

80. In the coming weeks, as indicated above, my staff will write to those individual complainants with issues outstanding from their representations or on their current complaint file. I will also engage in discussions with Government over the extension of my jurisdiction to cover GAD and on the additional

Excerpts from *A Further Investigation of the Prudential Regulation of Equitable Life?* (19 July 2004 – HC 910)

resources I will need to support my investigation. I will also invite further representations on the timeframe to be covered by my investigation (paragraph 42).

81. I intend to establish a full, designated team of experienced investigators, supported, where appropriate, by expert actuarial, accounting, legal, regulatory and insurance advisers.

82. I will consult MPs and policyholder action groups on the selection of individual policyholders as lead complainants, representing the principal different classes of Equitable Life policyholder, and will inform all interested parties of the process for conducting the investigation, once it has been determined.

83. I cannot at this stage be specific about how long my investigation will take. While much can be done to prepare for an investigation immediately, the central question of whether GAD will be brought into my jurisdiction will undoubtedly take some time to resolve.

84. However, I hope that this investigation can be conducted within a reasonable timetable, as I am conscious that significant numbers of people – many of them elderly – are in difficult financial circumstances now.

85. To that end, I do not intend to produce a wide-ranging, academic survey of the performance of the broader regulatory system within which Equitable Life sold and managed its policies. My investigation will be focused instead on assessing the validity or otherwise of what I consider to be the key criticisms of the prudential regulators and GAD against the evidence contained in the Penrose papers and in the other evidence submitted to me.

86. This I will do with a view to determining whether maladministration by those bodies caused policyholders and former policyholders of Equitable Life an unremedied injustice.

87. I will keep Parliament informed of progress.

Ann Abraham
Parliamentary and Health Service Ombudsman
19 July 2004

Statement of complaint and terms of reference for the investigation

Parliamentary Commissioner Act 1967
Terms of Reference and Statement of Complaint
for the Equitable Life Investigation
December 2004

Investigation terms of reference

The terms of reference for the investigation are:

> *To determine whether individuals were caused an injustice through maladministration in the period prior to December 2001 on the part of the public bodies responsible for the prudential regulation of the Equitable Life Assurance Society and/or the Government Actuary's Department; and to recommend appropriate redress for any injustice so caused.*

Statement of complaint

Summary of complaint

The complainants complain that the public bodies responsible for the prudential regulation of insurance companies (successively the Department of Trade and Industry, Her Majesty's Treasury and the Financial Services Authority, collectively referred to in the rest of this statement as 'the regulators') and the Government Actuary's Department (GAD) failed for considerably longer than a decade properly to exercise their regulatory functions in respect of the Equitable Life Assurance Society (ELAS) and were therefore guilty of maladministration.

Specific complaints

1. Organisational issues

   a. The regulators were not sufficiently resourced, and did not all possess the necessary skills, to contribute effectively to the overall regulatory process and to responsibly exercise their discretionary powers as intended by Parliament and by the European Community (now the European Union). Administrative decisions as to resourcing, priorities and methods contributed to a position in which the regulators did not properly undertake their functions as prudential regulator of ELAS.

Statement of complaint and terms of reference for the investigation

b. The regulators failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by insurance companies. In particular, they failed to ensure that proper assessments were made of ELAS's individual practices and its communications with policyholders, and of the expectations that these generated, in the light of the information that was, or should have been, known to the prudential regulators.

2. General operational issues

c. The prudential regulators did not operate the regulatory regime as it was intended to be implemented by Parliament and in conformity with EC Directives. The regulators instead chose to regulate ELAS with a 'light touch' – a concept not evident from or provided for under the Insurance Companies Act 1982 and the EC Third Life Directive nor one consistent with these statutory provisions. The approach to the regulation of ELAS was exceptionally and unjustifiably lenient when compared to that adopted with other companies, with inadequate investigative site visits and lack of liaison with conduct of business regulators. Much more rigorous standards of supervision and better co-operation with conduct of business regulators were adopted for smaller and unit-linked companies. This demonstrated that the regulators applied a two-tier standard of regulation.

d. The regulators and GAD allowed successive chief executives or managing directors of ELAS also to hold the post of appointed actuary, despite recognising the potential for conflict of interest in this position. These decisions were not consistent with the basis of the regulatory regime.

e. The regulators and GAD failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments. This was particularly critical in a situation in which narrow, technical interpretations of regulatory solvency were becoming an increasingly irrelevant measure of any insurer's realistic financial position as the industry moved more and more towards non-guaranteed bonus declarations.

f. GAD had recommended ELAS as a pension plan or additional voluntary contribution scheme provider in its advice to the administrators of the Principal Civil Service Pension Scheme and to other public sector pension schemes. This led to a lack of proper separation of its responsibilities and to a clear conflict of interest between GAD's role in providing advice to government bodies in relation to public sector pensions and in assisting the prudential regulators of ELAS. This conflict of interest compromised the proper discharge of GAD's regulatory functions.

3. <u>Supervision of regulatory solvency</u>

g. From the mid 1980s until 1997, the regulators failed to evaluate the potential effect of Guaranteed Annuity Rates (GARs) on the solvency of ELAS in a context where current annuity rates were falling steadily, in line with the Bank of England's base rate, to below contracted GARs. The regulators learned explicitly in November 1993 of the degree of ELAS's exposure to risks associated both with the GAR issue and with ELAS's lack of prudent reserves. The regulators' failure to take action then or to impose reserving until 1999 played a direct part in the closure of ELAS to new business and to subsequent cuts in policy and annuity values. The regulators did not prepare a study on the extent of GARs in the industry until 1997: a decade too late.

h. From about 1990 onwards, the regulators and GAD failed to give sufficient consideration to the fact that some of the measures used to bolster ELAS's solvency position were predicated on the emergence of a future surplus. As a consequence, they did not properly assess the overall impact and adequacy of those measures. The regulators also allowed ELAS to mis-use the term 'surplus' and failed to consider the use of that word in the context of policyholders' reasonable expectations.

i. Over this same period, the regulators allowed ELAS to publish financial results and projections that were misleading in that they did not reflect the Society's true position. In particular, ELAS was allowed to habitually report growth rates alongside bonus rates, which gave the impression of a prudent margin for error, whereas the true position was that:

- assets were consistently less than policy values so that higher rates of growth were needed to cover any given rate of bonus; and
- as part of the growth was needed to cover expenses and the contractual liability for conventional annuities, the growth available to meet with-profits bonuses was always materially less than the rate quoted in ELAS literature. This was never made clear.

j. During this period, the regulators and GAD failed to act when ELAS adopted what Lord Penrose described as practices of *'dubious actuarial merit'*. These included valuing future liabilities at an inappropriate rate of interest between 1990 and 1996; treating selling costs as an asset; making no provision for GARs until much too late; valuing a financial re-insurance policy (which proved to be of no value) at over £800 million; allowing credit for 'aspirational' (i.e. effectively unrealisable) assets; responding too slowly to widely evidenced changes to mortality expectations; and the issuing of a subordinated debt worth £346 million which did not count as a liability.

k. On several specific occasions, as set out in the Penrose report, the regulators and GAD ignored or failed to act on information that might have led to formal or informal regulatory action against ELAS, thus also failing to alert new investors to the risks of investing. These include when ELAS board papers were sent to GAD by the appointed actuary on 11 June 1991, and when information was provided to GAD on 10 September 1992 which showed that, for the years 1989 to 1991, the aggregate policy values very significantly exceeded the value of the underlying assets.

4. Payment of excess bonuses

l. Over a period of many years the regulators and GAD permitted ELAS to operate an unsound business model, of which they were aware. ELAS had made public its policy of reliance on 'goodwill' in a 1989 actuarial paper *With Profits Without*

Mystery, but the regulators never addressed the issue or challenged ELAS about it or about the consequences of the model. Instead, they allowed ELAS to operate the model, which entailed declaring bonuses in excess of admissible assets, while at the same time operating without a significant estate and with a smoothing fund persistently in deficit. These were major contributory factors to ELAS's development of what Lord Penrose quantified as a £3 billion asset deficit at the time of closure to new business and to the losses incurred by all those who held policies on 16 July 2001.

m. The regulators failed to ensure any satisfactory correlation between the total of declared policy values and ELAS's admissible assets in a context where ELAS, uniquely in the industry, had declared total policy values that included terminal bonuses and had, without exception, always paid all claims (both contractual and non-contractual) in accordance with these declarations.

5. Policyholders' reasonable expectations (PRE)

n. Ministers and officials decided that regulatory activities in relation to safeguarding PRE should be based solely on the regulatory returns, but failed to put in place adequate procedures and Regulations to enable this to be achieved. This failure was particularly critical in respect of ELAS, which had unique practices that elicited PRE.

o. As a result, the regulators and GAD failed over many years properly to monitor and assess ELAS's asset position and its practices in the light of PRE. The regulators and GAD did not properly determine PRE or act to protect them as intended by Parliament and to the standards set by EC Directives.

p. During the course of the *Hyman* litigation, the regulators failed in their duty to all policyholders in respect of PRE and postponed consideration of issues related to assets and reasonable expectations, both for GAR and non-GAR policyholders, until after the House of Lords judgment (20 July 2000). In addition, the regulators totally failed to assess properly either the impact or the scope of the judgment and to evaluate the range of scenarios for ELAS following it. They failed to take appropriate action to mitigate the adverse affect of the judgment on the majority, non-GAR policyholders, and on new investors into the same with-profits fund. Their judgement that there was a 99.9% probability that ELAS would be sold demonstrated that, despite the extensive information that they possessed, the regulators failed to understand the parlous state of ELAS which was apparent to all prospective bidders.

q. In March 2001, the regulators permitted ELAS to declare a bonus for 2000 and an interim bonus for 2001 that were both inappropriate and unjustifiable given the then state of ELAS's finances, thus raising misleading expectations about the true state of ELAS just prior to significant across-the-board cuts that were imposed only four months later. Instead, ELAS's asset deficit of 13% at year-end 2000 in a closed fund should have precipitated regulatory intervention at that time.

r. In July 2001, the regulators failed to protect PRE by permitting policy value adjustments worth more than £4,000 million in the form of an inequitable uniform percentage cut across all with-profits policies, rather than the fairer alternative of reducing policy values by cutting only non-guaranteed bonuses. The regulators also refused to comment meaningfully on this to policyholders while discouraging independent financial advisers from giving proper advice to policyholders.

Remedy sought

The complainants seek full financial redress for the losses they have incurred in consequence of the maladministration outlined above.

Responses to the statement of complaint:

Joint response from Her Majesty's Treasury (the Treasury), the Financial Services Authority (the FSA) and the Government Actuary's Department (GAD) – maladministration

THE PARLIAMENTARY COMMISSIONER FOR ADMINISTRATION'S INVESTIGATION INTO THE PRUDENTIAL REGULATION OF THE EQUITABLE LIFE ASSURANCE SOCIETY LTD

RESPONSE OF HM TREASURY, THE FINANCIAL SERVICES AUTHORITY AND THE GOVERNMENT ACTUARY'S DEPARTMENT TO THE STATEMENT OF COMPLAINT

INTRODUCTION

1. In her report to Parliament on 19 July 2004, the Parliamentary Commissioner announced her decision to conduct a second investigation into the prudential regulation of the Equitable Life Assurance Society Ltd ("ELAS").

2. The terms of reference of this investigation, together with a statement of the complaints made by certain ELAS policyholders which are the subject of the investigation, have been set out in a document enclosed with a letter from the Parliamentary Commissioner dated 9 December 2004 ("the Statement of Complaint").

3. During the period prior to 1 December 2001 to which the investigation relates, three different public bodies were involved in the prudential regulation of insurance companies. Until the end of 1997, the prudential regulator was the Department of Trade and Industry ("DTI"). In January 1998, responsibility was transferred from DTI to HM Treasury ("HMT"). With effect from January 1999

1

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

until 1 December 2001 (when the Financial Services and Markets Act 2000 came into force), HMT contracted out its role to the Financial Services Authority ("FSA"). Throughout the relevant period actuarial advice and assistance was provided to the prudential regulator by the Government Actuary's Department ("GAD").

4. This is the formal response of HMT[1], FSA and GAD to the Statement of Complaint.

<u>The Statement of Complaint</u>

5. The complainants complain that DTI, HMT, FSA (collectively "the regulators") and GAD "*failed for considerably longer than a decade*" properly to exercise their functions in respect of ELAS and were therefore guilty of maladministration.

6. In brief summary, the response of HMT, FSA and GAD to the complaints is that:

(1) There was no failure on the part of any of the regulators or GAD properly to exercise their functions in respect of ELAS. At all times the regulators and GAD acted reasonably and properly, in the context of and having regard to the regulatory regime as it was at the relevant time.

(2) The nature and scope of that regime were determined by legislation and by regulatory policies which informed and were adopted under the applicable legislation. At all times the policies adopted were proper ones and were the result of choices which Parliament and Ministers were fully entitled to make.

[1] DTI has not responded directly to the complaints because the function of prudential regulation of insurance companies (and responsibility for actions previously taken under the regulatory regime) was transferred to HMT in 1998 by means of the Transfer of Functions (Insurance) Order 1997 (SI 1997 No 2781).

2

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(3) None of the complaints made by the complainants discloses reasonable grounds for concluding that any of the public bodies responsible for the prudential regulation of ELAS or GAD was guilty of maladministration.

7. Each of the specific complaints made in the Statement of Complaint is answered individually below using the headings specified in it. Before setting out the response to each individual complaint, however, there are two topics on which it may be helpful to make some initial general observations. They are:

(1) The regulatory context; and

(2) The relevance to this investigation of the Penrose Report.

<u>The Regulatory Context</u>

8. In a situation where policyholders' interests are alleged to have been harmed or put at risk, it is unsurprising that some policyholders will believe that they have been "let down" by the prudential regulator. But no system of prudential regulation can prevent, nor should it be designed to prevent, all financial difficulties that may be experienced by insurance companies operating in a competitive market economy.

9. Prudential regulation of insurance companies requires a balance to be struck between protecting policyholders against the risk that a company will act imprudently on the one hand and, on the other, allowing the maximum freedom to the company and its management to pursue their chosen commercial strategy in the way they consider best.

10. The way in which that balance is struck is a matter of policy for Parliament in enacting the applicable legislation, and, within the statutory framework laid down by Parliament, for the Government of the day to decide, reflecting values and priorities as set by Ministers. It follows that any assessment of whether the

3

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

regulators and GAD properly exercised their functions can only be made by reference to the statutory framework of powers and duties which governed the prudential regulation of insurance companies during the period covered by the investigation and to the policy context in which prudential regulation took place - especially as regards the degree of intrusiveness seen as appropriate and the level of public resources allocated to such regulation.

11. Submitted with this Response is a paper ("the Regulatory Paper") which describes in detail the regime for the prudential regulation of life insurance companies pursuant to which Equitable Life was regulated during the period under investigation.

The Penrose Report

12. Almost all of the complaints made in the Statement of Complaint are derived from the Report of the Equitable Life Inquiry by the Right Honourable Lord Penrose ("the Penrose Report"). However, the Penrose Report cannot be used to support a case of maladministration. There are two basic reasons for this.

13. The first reason is that the observations and criticisms made by Lord Penrose were made with the benefit of hindsight. By contrast, in carrying out the present investigation the Parliamentary Commissioner must consider the relevant events and actions solely in light of the circumstances and knowledge of those involved at the relevant time. This is a critical difference between the nature of the exercise which Lord Penrose carried out and the investigation now being conducted.

14. The adoption of hindsight was permitted by the terms of reference of the Penrose Inquiry, which was asked to discover what had led to the situation of ELAS at 31 August 2001 and to identify any lessons to be learnt. In the Foreword to the Report, Lord Penrose said:

4

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

> *"It was inevitable that hindsight would instruct much of the inquiry's work and many of its findings."*

As Lord Penrose further explained:[2]

> *"I have not qualified my comments by reference to professional standards current at the time events occurred……Further, I have the benefit of hindsight, and I have not restricted the comments made to those matters that can be shown to have been within the knowledge or contemplation of individuals or groups at material times…The lack of knowledge may itself be an important source of material pointing to lessons for the future."*

15. As mentioned below, the criticisms made in the Penrose Report of particular decisions and actions alleged to have been taken, or omitted to be taken, by the regulators and GAD in exercising their functions are in fact few. The PCA will wish to form her own view of whether these criticisms are both well founded and relevant to her investigation. Whether those criticisms are accepted or not, HMT, FSA and GAD take the view that they are dependent on the use of hindsight. If hindsight is disregarded, there is no reasonable basis for a finding of fault.[3]

16. The second reason why the Penrose Report cannot be used to support a case of maladministration is that, although the Report is on occasion critical (with the benefit of hindsight) of the performance of the regulators and GAD, its criticisms are essentially directed at the regulatory regime which was in force at the relevant time rather than at particular decisions and actions taken, or not taken, in operating that regime. The gist of these criticisms is not that the regulators and GAD failed properly to discharge their functions under the regime as it stood; it is rather that the regulatory regime as it stood was, in the view of Lord Penrose, unsatisfactory in various respects and required to be changed.

17. Thus, near the end of the Report, Lord Penrose said:[4]

2 See Penrose Report, Chapter 19, paragraph 2.
3 See in particular the Responses below to Complaints G and J (ii).
4 See Penrose Report, Chapter 20, paragraph 69; and see also paragraph 83.

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

> *"In this report I have been critical of the regulatory system, and on occasion critical of the performance of regulators and their advisers. But the thrust of my criticism is that for the most part it was the system that failed to provide the regulation that changing circumstances in the industry required, not that there was failure to implement what was fundamentally a satisfactory system".*

18. It is evident from the Report that the regulatory approach advocated by Lord Penrose would have required a much greater degree of intervention and intrusion by the prudential regulator than obtained, or was seen as politically desirable or appropriate, at the relevant time.

19. However, criticism of the regulatory regime as it stood is not material for present purposes. In judging whether maladministration has occurred, the present investigation is not concerned with whether the regulatory regime that existed was the optimum one, or with the merits or demerits of the policies adopted. Rather, the issue is whether, given the regime that existed, and the policy choices made, there was a culpable failure on the part of the prudential regulator or its advisers to apply the provisions and policy of the regime.

20. It is apparent that the Parliamentary Commissioner is already aware of these important differences and recognises that in her investigation she must not use hindsight but instead assess whether the actions of the regulators and GAD complied with the relevant statutory provisions and regulatory policies current at the relevant time.[5]

<u>Injustice alleged by the Complainants</u>

21. This response is submitted without seeing a finalised copy of the statement of injustice alleged by the complainants. HMT, FSA and GAD may wish to make representations on the finalised statement of injustice at a later date.

---

6

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Conclusion

22. For the reasons indicated above, and developed in detail below in the response to the individual complaints, the regulators and GAD wholly reject the allegation that during the period under investigation they were guilty of maladministration.

7

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

RESPONSE TO INDIVIDUAL COMPLAINTS

1. Organisational Issues

Complaint A

"*The regulators were not sufficiently resourced, and did not all possess the necessary skills, to contribute effectively to the overall regulatory process and to responsibly exercise their discretionary powers as intended by Parliament and by the European Community (now the European Union). Administrative decisions as to resourcing, priorities and methods contributed to a position in which the regulators did not properly undertake their functions as prudential regulator of ELAS.*"

23. Two broad allegations are made by this complaint: (i) that the prudential regulators were not sufficiently resourced and (ii) that they lacked the necessary skills to enable them properly to exercise their powers. Neither assertion is justified.

The Resources available to DTI and HMT

24. Given that Government resources are finite, there is always scope for debate about their allocation. A decision to make more resources available for a particular function of Government is, of its nature, a policy decision, which reflects an assessment of the relative importance of competing needs, priorities and values. If at any relevant time more resources had been allocated to the prudential regulation of insurance companies than were in fact allocated, that would necessarily have had implications for other areas of Government. Ministers took the view, reasonably, that the balance of resources was correct.

25. As with all Government departments, the level of resources allocated to DTI and HMT was determined by Parliamentary vote (under annual Appropriation Acts). Within DTI and HMT, the level of resources allocated to prudential insurance regulation was a decision that was influenced by competing departmental priorities, budgetary constraints and the regulatory climate of the day.

8

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

26. Running cost budgets in DTI were determined from December 1992 by a priority cost management system known as MINIS. Each Management Unit used MINIS to describe how its local objectives and targets would support the department's objectives, how it intended to improve its efficiency and effectiveness and what resources it judged necessary to support these proposals. After detailed discussions with Ministers, Directors General and Heads of Management Units and Finance and Resource Management Directorate, the Departmental Management Group submitted proposals to the President of the Board of Trade who decided on the budgets and output measures for the coming financial year.

27. Statistics on the cost of prudential insurance regulation and the level of fees charged were reported to Parliament in the Insurance Annual Reports (made in accordance with section 98 of the Insurance Companies Act 1982 ("the 1982 Act")), following the implementation of the Insurance (Fees) Act 1985.[6] Table 1 below shows that between 1986-87 and 2000-01 the cost of carrying out relevant functions[7] increased by over 240% in real terms. This was against a backdrop of efficiency savings and pressure to reduce running costs and manpower.

Table 1 – Prudential Insurance Regulation Costs 1986 - 2001

Year	Costs (nominal)	Costs (2000-2001 prices)[8]
1986-87	£2,652,000	£4,350,675
1987-88	£2,782,000	£4,761,623
1988-89	£3,011,000	£4,761,448
1989-90	£3,303,000	£4,986,404
1990-91	£4,277,000	£6,023,423
1991-92	N/A	N/A
1992-93	£6,846,000	£8,432,766

6 The Insurance (Fees) Act 1985 enabled the Secretary of State to recover from authorised insurance companies certain costs incurred in exercising relevant functions connected with insurance supervision. However, these costs were limited, and deliberately so, in order not to impose too high a burden on the regulated sector (and therefore, indirectly, on consumers).

7 "Relevant functions" include the costs of EC and UK regulatory policy work together with the associated overheads, legal and actuarial costs, but excludes costs associated with the authorisation of new companies.

8 Calculated using the RPI All Items Index.

9

Responses to the statement of complaint:

1999-00	£12,318,000	£12,576,678
2000-01	£14,984,000	£14,984,000

28. Statistics were also quoted in the Insurance Annual Reports to Parliament as to staff levels. A review of these statistics shows that, although the total number of long-term business (i.e. life insurance) companies fell by 25% during the period 1981 – 2001 (see Table 2), the number of staff employed within DTI's Insurance Directorate increased modestly by about 15% over the same period (see Table 3), notwithstanding the prevailing political climate of deregulation. GAD staff levels also increased (see paragraph 30 below).

Table 2 – Number of authorised insurance companies

Year (at 31/12)	Long term business	Composites	General business	Total
1981	213	79	560	852
1982	212	77	560	849

29. As further discussed below, during the relevant period certain services were 'outsourced' by DTI and HMT to GAD. Until April 1989, the level of GAD's resources was determined by Parliament (under annual Appropriation Acts), without any recovery of costs from GAD's client departments. From the 1989 – 1990 financial year onwards, GAD's clients were required to pay for the actuarial services they received. GAD agreed a budget with DTI for its insurance related work in each financial year. The amount of this budget was a policy decision, influenced by the competing priorities within DTI[9], budgetary constraints, and the regulatory climate of the day. There is annexed a version of a memorandum from the GAD Directing Actuary to an official at DTI in October 1994, as an illustration of this process.[10]

[9] This would have included regulatory priorities. For example in the early/mid 1990's emphasis was required on problems with the Lloyds market.
[10] See pages 346 – 347 of the Annex.

11

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

30. The number of GAD staff assigned to life insurance work increased significantly from two actuaries at the beginning of the 1970s to 10 actuaries, 2 trainee actuaries and 2 support staff by the time of the transfer of GAD staff to FSA in 2001 (with additional actuarial resources available to support the regulation of general insurance companies).

31. Although Lord Penrose expressed the view in his report that the prudential regulators were under-resourced,[11] this opinion needs to be seen in the context of his advocacy of a more interventionist regulatory regime – for example the faster scrutiny of regulatory returns, and calling for the production of more information from life insurance companies in the regulated sector. Further, at no point does Lord Penrose consider the resource implications of such increased regulation and the additional costs that it would have imposed, both on Government and on businesses within the regulated sector.

32. While there is inevitably room for argument about whether it would have been desirable to allocate more resources to prudential regulation, there is no objective basis for concluding that the decisions taken at the time were improper or that there was any reason at the time to believe that the resources allocated were inadequate.

33. The Complaint also refers to decisions as to "*priorities and methods*".[12] Again there is no objective basis for considering that any such decisions were improperly taken. The system of priority ratings, which was used to prioritise resources for the detailed scrutiny of regulatory returns, is described in the response to Complaint C below.

[11] See in particular Penrose Report, Chapter 19, paragraphs 157 – 163.

[12] Such decisions are wrongly described as "*administrative*". In fact, they involved policy choices as to the relative importance of different policy objectives and as to the optimum level and manner of government intervention to seek to achieve those objectives.

12

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

The Skills available to DTI and HMT

34. In addition to the skills available within DTI and HMT themselves, throughout the period under review the prudential regulators also were able to look to GAD for expert actuarial advice and assistance.

35. Given that the legislature had decided to make the Appointed Actuary system the cornerstone of prudential insurance regulation, it was inevitable that DTI and HMT would have to work closely alongside the UK actuarial profession. The Government of the day was faced with a choice: either it could try to incorporate the necessary actuarial expertise within the prudential regulator (as now happens with FSA); or it could obtain the benefit of such expertise by 'outsourcing' certain functions.

36. From an early stage, a policy decision was taken within Government that 'outsourcing' to GAD was the more attractive option; and this was confirmed by subsequent reviews. In particular it was seen to be the most cost-effective way to ensure that the skills and resources of leading actuarial professionals were made available to the prudential regulator without incurring substantially greater levels of cost.

37. Thus, in 1978 DTI's Common Services carried out a review of the Insurance Division.[13] This review involved an in-depth study of the process of regulating insurance companies, leading to a general study of the relationships between regulation and the other activities of the division. The review concluded that the supervisors within the Insurance Division must continue to rely heavily on GAD in most aspects of their work in relation to life insurance companies, and that there could be no simple division of responsibility between the two organisations. It highlighted a need to clarify the respective responsibilities of the Insurance Division and GAD to avoid duplication of effort.

13 A copy of the review can be found at pages 97 – 179 of the Annex.

13

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

38. In 1983 an efficiency scrutiny of the regulation of insurance companies took place, as part of the then Government's programme of Rayner efficiency exercises.[14] The 1983 efficiency scrutiny considered whether DTI's regulation of insurance companies could be carried out more effectively by fewer staff if a greater number of them had professional qualifications. Its overall conclusion was that most of the work undertaken in the Insurance Division should continue to be carried out by generalist civil servants, though in smaller numbers, with the help of additional specialist advisers.

39. The efficiency scrutiny also recommended that GAD should take the major share of responsibility for the examination of regulatory returns submitted by life insurance companies, with an obligation to provide DTI's Insurance Division with a full report, involving solvency and compliance, on the returns as a whole. It also suggested that GAD should be permitted to deal directly with companies in order to clarify points of uncertainty affecting solvency before reporting back to DTI's Insurance Division which, as prudential regulator, retained sole responsibility for taking formal action.

40. The efficiency scrutiny also recommended that a clear and detailed statement of the respective roles of the two organisations should be drawn up. This led to the 1984 Service Level Agreement (SLA) between DTI Insurance Division and GAD, which was followed by further SLAs concluded in 1995 and 1998[15].

41. These 'outsourcing' arrangements did not result in any improper delegation of prudential regulation to GAD. At all times (pursuant to the SLAs) both DTI and HMT were careful to maintain control of the prudential regulation of the insurance industry and retained the necessary expertise for that purpose. The same

14 A copy of the efficiency scrutiny can be found at pages 209 – 297 of the Annex.
15 Copies of the SLA's are annexed to the Regulatory Paper (annexes 13, 14 and 15).

14

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

was true when subsequently HMT outsourced various functions to FSA. As the Parliamentary Commissioner has already concluded in her first report:[16]

> *"Although they had contracted out their prudential regulatory functions to FSA, the Treasury remained responsible to Parliament for prudential regulation throughout the period investigated. I was satisfied that the Treasury retained sufficient in-house expertise in order for them to be able properly to monitor FSA's effectiveness in carrying out these functions to the standards set in the service level agreement. I was also satisfied that, although there was little documentary evidence of their routine contacts with FSA during this period, the Treasury had kept abreast of the developing Equitable situation and had had regular discussions with FSA about the prudential regulator's position."*

42. As Lord Penrose recognised in his report, although there were arguably some disadvantages, there were also a number of positive advantages arising from the decision to 'outsource' certain technical functions to GAD. As he put it:[17]

> *"...[GAD] had access to current and developing thought within the profession. They participated in discussions, and in particular took part in professional committees reviewing practice and recommending future policy. Individual members of the department participated in professional projects aimed at developing actuarial methodologies appropriate to changing circumstances."*

43. In addition to the skills sourced from GAD, steps were taken throughout the relevant period to improve the skills and resources that were available within DTI and HMT. Thus, accountants and individuals on secondment from the insurance industry were brought into the department; and postings to the Insurance Division were frequently for longer than would be typical in DTI, in recognition of the need to develop experience to work effectively as a supervisor.

16 See "*The Prudential Regulation of Equitable Life*", Part I, Appendix, paragraph 23.
17 See Penrose Report, Chapter 19, paragraph 159.

15

Conclusion

44. The allegations that during the period under review the prudential regulators were insufficiently resourced or lacked necessary skills to contribute effectively to the regulatory process and responsibly exercise their discretionary powers under the regulatory regime as it then stood are rejected by HMT, FSA and GAD. In any event the decisions taken during the period as to "*resourcing, priorities and methods*" were themselves discretionary policy decisions;[18] and whilst there is inevitably scope for argument about whether the decisions taken represented the optimum policy, there is no ground for suggesting that any such decisions were taken in an improper manner.

Complaint B

"*The regulators failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by insurance companies. In particular, they failed to ensure that proper assessments were made of ELAS's individual practices and its communications with policyholders, and of the expectations these generated, in the light of the information that was, or should have been, known to the prudential regulators.*"

45. This Complaint is expressed in entirely general terms, without specifying any concrete instance in which there was supposedly a failure of liaison or co-operation by the prudential regulator with the conduct of business regulator or any particular steps which (according to the complainants) the prudential regulator ought to have taken at any particular time but did not take.

46. It is also not clear even what general allegation the second sentence of this complaint is intended to make. There appear to be two possibilities: (i) that the prudential regulator failed to acquire information from the conduct of business regulator which might have been relevant to PRE; or (ii) that the prudential

---

18 Contrary to the suggestion in the Complaint, such decisions were policy decisions not merely "*administrative*".

16

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

regulator failed to pass on information to the conduct of business regulator which might have been relevant to the latter's functions.

47. The issue of PRE is considered below, in the response to Complaints N and O. The second point is considered here.

48. The regime did not require extensive co-ordination between the prudential and conduct of business regulators as appears to be envisaged by the complainants and it is not accepted that the prudential regulator was under any obligation to pass on information to the conduct of business regulator. The two regulators were addressing separate issues, and had their own areas of focus and policy approach. It would be wrong to say that there was a failure of necessary liaison between the prudential and conduct of business regulators.

49. As Lord Penrose recognised in his report, there was a routine exchange of information at a junior level between the two regulators during the 1980s; communications were not considered to be bad; and the interaction between the prudential and conduct of business regulators was put on a more formal footing from 1992 onwards. He said:[19]

> *"Interaction between the regulatory bodies seems to have been relatively limited in the 1980s. [redacted] told the inquiry that during his period as head of the life side his contact with the conduct of business regulators tended to be on policy issues, and only occasionally over concerns about individual businesses, but there was also routine exchange of information at more junior level. Although more might have been done to improve communications more quickly, [redacted] did not consider that communications were bad, especially considering the fact that the regulators operated under separate legislation and in separate buildings. Spencer also told the inquiry that he did not think that there were significant areas that fell between the two sets of regulators.*
>
> *From 1992 there was some additional formalisation of the interaction through the mechanism known as a 'college of regulators'; regular meetings between various financial services regulatory bodies, hosted and chaired by the body perceived as the 'lead regulator' for a certain type of*

19 See Penrose Report, Chapter 15, paragraphs 28 – 29.

17

firm. For life insurers, this was DTI. [redacted] told the inquiry that the stimulus for these meetings mainly came from the banking and insurance supervisors, but other regulators were involved and did contribute."

50. In May 1997 the Chancellor of the Exchequer announced that a single regulator for financial services would be put in place; and in due course it was confirmed that the single regulator would have responsibility both for prudential regulation and conduct of business regulation of insurance companies.

51. This marked a major change in financial services regulation, and could not be achieved overnight. The FSA was launched in October 1997, and pending enactment of the new legislation (which was only brought into force from 1 December 2001) FSA assumed day-to-day responsibility for conduct of business regulation. Responsibility for prudential regulation of insurance companies was transferred from DTI to HMT on 5 January 1998, and FSA assumed day-to-day responsibility from HMT on the basis of a contracting-out order with effect from 1 January 1999.

52. As noted in the Baird Report, after 1 January 1999 reporting arrangements were put in place so as to encourage bilateral interaction between the prudential and conduct of business regulators.[20] These included "ChairCo" meetings, "ExCo" meetings, meetings of the Firms and Markets Committee, Bilateral Liaison Meetings, Financial Supervision and Management meetings, and Supervisory Co-Ordination Meetings. In addition, a system of "lead supervision", which included "college meetings" between the regulators, was implemented and led to a regular and formalised exchange of information between the team in FSA's Investment Business Division responsible for carrying out the functions of the PIA (IB-PIA) and FSA's Insurance and Friendly Societies Division (IFSD).

---

20 See Baird Report, paragraphs 2.33 – 2.34.

18

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

53. The result was that, as the Parliamentary Commissioner has already found in her first report, there was a considerable amount of communication between the two regulators from 1 January 1999 onwards, in which the prudential regulator kept the conduct of business regulator adequately informed of the position of ELAS.[21]

54. In three short paragraphs in his report,[22] Lord Penrose expresses the view in general terms that (viewed with the benefit of hindsight) there was insufficient liaison between the prudential and conduct of business regulators. It is not clear to what period of time Lord Penrose is referring in this passage of his report: the only example he mentions is an (unspecified) occasion "*in the autumn of 1999*".[23]

55. This seems to be a reference back to an earlier passage of his report, where Lord Penrose considered communications that took place between the two regulators in September 1999 in relation to ELAS's bonus notices.[24] As there described, the prudential regulator had a concern that ELAS's bonus notices were potentially misleading, and drew this to the attention of the conduct of business regulator. The response received was that the bonus notice for 1998 was not poorly presented or inaccurate, and that the conduct of business regulator would have to have serious concerns about the bonus notices before it took action, which it did not. The prudential regulator accepted the conduct of business view.

56. This particular episode has already been considered carefully by the Parliamentary Commissioner in her first report. She said:[25]

> *"Another issue which surfaced during this period (from 1 January 1999 to January 2000) was the role of the conduct of business regulator in relation to the continuing information provided to policyholders after the sales process had been completed. As I have already indicated, the prudential division raised the matter with their conduct of business colleagues in*

22 See Penrose Report, Chapter 19, paragraphs 229 – 231.

23 Ibid, paragraph 231.

24 See Penrose Report, Chapter 18, paragraphs 29 – 30.

25 See "*The Prudential Regulation of Equitable Life*", Part II, paragraph 186.

19

> *connection with bonus notices, which they considered might have given policyholders unrealistically high expectations of the terminal bonus pay-outs they could expect. Subsequent exchanges between the prudential and conduct of business regulators indicated that, while the prudential division clearly believed the content of post-sales information to individual policyholders to be a matter for their conduct of business colleagues... the latter for their part did not consider that such matters 'fitted comfortably within their remit' and said that they would therefore have to have serious concerns about a document before taking action...That suggested a potential gap in the regulatory framework, and it might be argued that (given the importance of the issue in question, not least for policyholders and their reasonable expectations), both the prudential and conduct of business regulators could have done more to clarify their respective responsibilities. In the event, at this point the prudential division appear to have accepted conduct of business colleagues' view that, from a PIA perspective, the notices were not misleading, and taken that as a sign that no further action was necessary. I do not consider that that was a wholly unreasonable decision in itself for the prudential regulator to have reached, given the advice they had received..."*

57. This episode does not reveal any failure of liaison between the prudential regulator and the conduct of business regulator. To the contrary, they did liaise with each other, and there was an exchange of views. The most that can be said is that this episode indicates that there may have been a potential gap in the regulatory framework. However, that was not a result of any improper decision by the prudential regulator but a function of the framework in which the two sets of regulators were required to operate, prior to their merger under the Financial Services and Markets Act 2000. At the time of this exchange the regulatory regime to be implemented under that legislation was being actively considered.

2. General Operational Issues

Complaint C

"*The prudential regulators did not operate the regulatory regime as it was intended to be implemented by Parliament and in conformity with EC Directives. The regulators*

20

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

instead chose to regulate ELAS with a 'light touch' – a concept not evident from or provided for under the Insurance Companies Act 1982 and the EC Third Life Directive nor one consistent with these statutory provisions. The approach to the regulation of ELAS was exceptionally and unjustifiably lenient when compared to that adopted with other companies, with inadequate investigative site visits and lack of liaison with conduct of business regulators. Much more rigorous standards of supervision and better co-operation with conduct of business regulators were adopted for smaller and unit-linked companies. This demonstrated that the regulators applied a two-tier standard of regulation."

58. This Complaint makes two allegations: (i) that the prudential regulators operated the regulatory regime in a way that was contrary to the relevant provisions of UK statute and of the EC Life Insurance Directives, by choosing to regulate ELAS with a 'light touch'; and (ii) that a different approach was adopted to the regulation of ELAS compared to that adopted with other companies – being one which was "*exceptionally and unjustifiably lenient*".

59. Neither allegation is well founded.

<u>"Light touch" Regulation</u>

60. The regulatory regime applied by the prudential regulator to ELAS was precisely that which informed, and was enabled by, the relevant statutory provisions. Furthermore, the relevant UK legislation at all times complied with the EC Life Insurance Directives. The regime, and the philosophy which underpinned it, are described in detail in the Regulatory Paper submitted with this Response.

61. As there described, the guiding policy of the regime was the doctrine of "freedom with publicity". The concept was that, provided that accurate and sufficient information was made available in the public domain to enable consumers to make informed choices, consumers' needs would be best met by the operation of market forces.

21

62. The description of this approach as a 'light touch' approach is not one that was generally used by the prudential regulators (in relation to the regulation of ELAS or otherwise) at the time of the events under review. HMT, FSA and GAD believe, however, that that description is a proper one and that the nature of the regime was fairly described by the Parliamentary Commissioner in her first report, as follows:[26]

> *"The principal actuarial and accounting provisions of the regulatory framework, including the key statutory requirements, are described in paragraphs 8 to 37 of Part II of my report. These clearly demonstrate that the requirements placed on the prudential regulator were firmly grounded in a 'light touch' approach to regulation. The philosophy underpinning the regime was that market forces would provide the best means of ensuring that an industry met the needs of its customers. The detailed regulatory provisions were framed to reflect that approach and to avoid over-interference in a company's affairs. It was never envisaged that that regime would provide complete protection for all policyholders. ...*
>
> *It is not for me to comment on whether or not the statutory provisions (as set out in the Insurance Companies Act 1982 and the Financial Services Act 1986), in establishing such a regulatory regime, are or were appropriate. That was, and is, a matter for Parliament itself. However, it is important to recognise that the nature of the regime established to protect policyholders determined what the FSA could and could not do in relation to Equitable. It is clear to me from my investigation that the framework within which the prudential regulator was required to work simply did not envisage or allow for the sort of intervention into a company's affairs which complainants have contended should have happened in this case."*

63. Whether others agree with the description of the regulatory requirements as reflecting a "*light touch*" approach is not for present purposes material. Nothing turns on the choice of label. What matters is that the prudential regulators operated precisely the regulatory regime of "freedom with publicity" that underlay the UK statutes, which was permitted by, and in full compliance with, the EC Life Insurance Directives. The criticism that the regulators did not operate the regulatory regime as it was intended, by Parliament or the European Union, is therefore wholly inconsistent with the facts.

---

26 See "*The Prudential Regulation of Equitable Life*", Part I, paragraphs 11-12.

22

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Alleged Double Standard

64. The prudential regulators adopted exactly the same approach to the regulation of ELAS as they did to the regulation of other life insurance companies. They did not, as the second element of this head of complaint suggests, adopt a "*two-tier standard of regulation*".

65. Any regulatory regime needs to target its resources and to afford a higher priority to cases perceived to be of greater or more urgent concern. During the period under consideration, the prudential regulator sought to achieve this through a system of priority rating. Under this system, every life insurance company was assigned a priority rating, based on an initial scrutiny performed by GAD each year of the regulatory returns.[27] There were originally 4, and later 5, levels of priority rating, ranging from Priority 1 (Urgent) to Priority 4 or 5 (Low Priority). The rating assigned to a company determined the speed and frequency with which the company was targeted for detailed scrutiny by the regulator and GAD.

66. In most years during the relevant period ELAS was assigned a priority rating of 3.[28] This rating denoted companies where there were sufficient concerns to warrant early attention or other reasons to require scrutiny early in the cycle.

67. Priority ratings were assigned by GAD on the basis of objective criteria set out in its Service Level Agreement and took account of a number of indicators. A key performance indicator was the level of cover for the required solvency margin[29] disclosed by analysis of the regulatory returns.

68. During the 1990s ELAS's required solvency margin remained reasonably well covered, as Table 4 (and the explanation of the figures it contains accompanying

27 See GAD paper on priority ratings at pages 355 – 358 of the Annex.

28 Under the descriptions introduced in 1995, this rating was classified as "Medium Priority".

29 In essence, this was a measure of the extent to which the company's assets exceeded its liabilities, compared with the minimum margin of such assets over liabilities required by regulations: see paragraph 57 of the Regulatory Paper.

23

it) below shows. This was reflected in ELAS's priority ratings. As also shown by Table 4, these ratings were in line with those given to other companies with similar reported levels of cover. Thus, there was no exceptional or different treatment accorded to ELAS, as compared to other life insurance companies, in determining when and to what extent it should be the subject to detailed scrutiny.

Table 4 – Priority ratings of ELAS as compared with other life companies, 1992 - 2000

Priority	1		2		3		4		5		Total	ELAS	
Year	*Number of companies and average cover for required solvency margin*										Number of companies	Priority and cover for required solvency margin	
1992	8	3.4x	45	2.0x	80	3.1x	87	4.3x	48	5.6x	268	3	2.4x
1993	5	0.2x	30	3.3x	89	3.5x	88	5.2x	53	7.6x	265	3	3.8x
1994	2	1.1x	39	2.2x	78	2.3x	129	4.1x	6	3.4x	254	3	2.4x
1995	1	3.8x	24	2.4x	60	3.9x	111	4.7x	50	5.3x	246	4	2.9x
1996	3	1.5x	20	2.0x	68	3.5x	125	4.9x	35	5.7x	251	3	2.5x
1997	2	4.0x	22	1.2x	86	4.3x	121	4.6x	28	5.4x	259	-	2.5x
1998	5	1.0x	27	1.9x	74	4.6x	113	4.3x	29	4.9x	248	2	2.5x
1999	3	-1.7x	23	3.0x	62	3.7x	119	5.3x	41	2.4x	248	2	3.5x
2000	1	0.6x	20	1.5x	84	3.0x	106	4.2x	32	4.2x	243	2	1.3x

The cover shown is that reported by companies with in force life business, including those closed to new business and composites. It also includes friendly societies with in force life business – which is the reason for the somewhat greater numbers in this table compared with the total life companies and composites shown in Table 2 in the Response to Complaint A. The higher level of cover for some years for the small number of priority 1 companies reflects the fact that the reported level of cover was misleading, e.g. calculated on a basis not in compliance with the regulations. The average level of cover quoted for each priority is in fact not the arithmetic average of the individual companies' levels of cover but rather the sum of the available assets (i.e. assets in excess of liabilities) of those companies over the sum of their required solvency margins. The priority rating was set having regard to GAD's assessment of actual cover if the regulations were properly followed; however, there was a considerable degree of variation in the level of cover reported by individual companies within a priority by comparison to the average level of cover for that priority. The table shows that ELAS was but one of about 250 life insurance companies that were subject to regulation during this period. In terms of long-term business assets ELAS accounted for an average of about 3% of the industry total.

69. Furthermore, the supervision of ELAS was not limited to the scrutiny of the regulatory returns alone. As is clear from the departmental files, there was much ongoing contact between the prudential regulator, GAD and ELAS outside the

24

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

formal scrutiny process in most years referred to in the table, and this increased markedly from around 1998 (when the regulator raised issues in relation to ELAS's reserving practice and GAR liabilities).

70. An important part of this contact was the system of company site visits. These were not prescribed by the statutory framework, but were introduced by DTI from the end of 1991. They were intended to follow a 3-year cycle. The visits provided an opportunity for discussions with members of the senior management team about the strategic direction of the company and, where appropriate, about specific aspects of its operations. They also allowed the prudential regulator to provide the company with information on regulatory issues, including any impending changes in the regulations or associated guidance. The meetings usually lasted one day and tended to have a fairly standardised and wide-ranging agenda, covering governance, business and financial issues. Both GAD and DTI attended the meetings.

71. There was some sensitivity in the life assurance industry when site visits were first introduced, with a number of companies expressing opposition to them. This partly reflected fears over confidentiality, but also concern over the perceived increase in the level of supervision of companies which the introduction of such visits represented.

72. Against this background, the visits were deliberately designed to be relatively low key. Whilst they had a set agenda, the style of visits was to gather information in an informal way and not to be inquisitorial. They were not, and were not seen as, an inspection visit of any kind. They relied on the voluntary cooperation of the companies concerned, as they were not carried out in exercise of statutory powers. It is therefore wrong to describe the purpose of the site visits (as the Complaint does) as "*investigative*"[30].

---

30 The prudential regulator's only specific investigative powers were in relation to the sound and prudent management criteria, from 1994 onwards (pursuant to section 43A of the 1982 Act). There

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

73. ELAS was one of the first companies to be visited pursuant to this system, with the first site visit being made on 19 May 1992. Subsequent site visits were made to ELAS on 9 December 1994 and on 8 November 1996. The frequency of these visits was in line with that for life insurance companies generally in this period, with both the second and third visits taking place well within the 3 year cycle. These site visits were in addition to other meetings that were held with ELAS during the period (with the frequency of meetings increasing from around 1998, as indicated above).

74. Thus, with regard to both the prioritisation given to the scrutiny of its regulatory returns and the frequency with which it was visited by the prudential regulator and GAD, ELAS was treated no differently from other companies. If anything, the intensity of exchanges between GAD and the regulator and between the regulator and the company, as well as the frequency of meetings, was higher than for other companies of a comparable priority level during the 1990s.

75. There was also liaison with the conduct of business regulators to the extent necessary throughout the relevant period.[31] No different approach or standard was applied to ELAS in this regard than to other life insurance companies.

76. It follows that the allegation that the prudential regulator applied a "*two-tier standard of regulation*", and adopted an approach to ELAS that was "*exceptionally and unjustifiably lenient*", is simply not supported by the facts.

were in addition powers to compel production of documents and to obtain them via search warrant if necessary (sections 44 and 44A).

31 See further as to this the response to Complaint B above.

26

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Complaint D

"The regulators and GAD allowed successive chief executives or managing directors of ELAS also to hold the post of appointed actuary, despite recognising the potential for conflict of interest in this position. These decisions were not consistent with the basis of the regulatory regime."

77. It is not true, as alleged in this Complaint, that during the period under review "*successive*" Chief Executives or Managing Directors of ELAS also held the post of Appointed Actuary. During the period from 1982 to 1991, [redacted] was the Appointed Actuary of ELAS, and the Chief Executive was [redacted]. In 1991, [redacted] succeeded [redacted] as Chief Executive while remaining the Appointed Actuary. It was said by [redacted] that this arrangement would be temporary, but in the event it continued until 1997, when [redacted] became the Appointed Actuary of ELAS and [redacted] succeeded [redacted] as Chief Executive.

78. Although the regulator regarded the dual role of [redacted] as undesirable and sought to discourage it, the combination of roles was not contrary to established industry norms at the time, nor was it prohibited by the regulatory regime.

Industry Perspective

79. It was not unusual in the early days of the Appointed Actuary system, in mutual life insurance companies in particular, for the same individual to be both Chief Executive and Appointed Actuary. Indeed, in a number of cases this arrangement effectively represented a continuation of existing practice at that time.[32] Specific examples included:

[32] The title of "General Manager and Actuary" was commonplace amongst such companies in earlier years.

27

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(1) [redacted] the first Appointed Actuary in 1973 was the Chief Executive, and the same individual continued to hold both posts until his retirement 1988;

(2) [redacted] the first Appointed Actuary in 1973 was the Chief Executive, and the same individual continued to hold both posts until his retirement in 1975;

(3) [redacted] the same person held the posts of Chief Executive and Appointed Actuary from September 1977 to December 1978.

80. More recent examples include the following:

(1) [redacted] the same person held the posts of both Appointed Actuary and Chief Executive from March 1983 to 1988;

(2) [redacted] the same person held the two posts from 12 December 1994 to 1 January 1998;

(3) [redacted] the same person held the posts of Appointed Actuary and Chief Executive from 19 November 1997 to 30 April 2001;

(4) [redacted] the same person held both posts from January 2000 to January 2002;

(5) [redacted] the same person held the posts of Appointed Actuary and Chief Executive from January 2000 to January 2002.

81. These examples demonstrate that the dual role seen in ELAS in the case of [redacted] was far from being unique in the industry.

82. Furthermore, from an industry perspective there were arguments both for and against allowing an Appointed Actuary concurrently to hold office as Chief

28

Executive.[33] With his background and professional training as an actuary, a "General Manager and Actuary" could be a force for good prudential management, and a powerful voice to act as a restraining influence on the Board. Moreover, in the case of mutual companies such as ELAS, there could be no conflict between shareholders' and policyholders' interests – so that the potential for any conflict of interest to arise was significantly less than in the case of a proprietary insurance company.

Absence of Prohibition

83. It is important to note that, reflecting the position in the UK insurance industry, under the 1982 Act the holding of both offices of Chief Executive and Appointed Actuary was not expressly prohibited (by contrast to the prohibition against the Chief Executive also being an auditor - or a partner or an employee of an auditor - of the accounts of any insurance business carried on by the life insurance company[34]).

84. Under the 1982 Act, life insurance companies had to appoint an actuary as the Appointed Actuary within one month of commencing life insurance business, and notify the prudential regulator of the same pursuant to section 19 of the Act; but the regulator had no statutory power to oppose the appointment of an Appointed Actuary.

85. Pursuant to section 60 of the 1982 Act, the prudential regulator was given the power to object to the appointment of a person as chief executive – but only on the ground that the proposed chief executive was not a "*fit and proper*" person (see section 60(3) of the 1982 Act). Although the 1982 Act did not provide any definition of this phrase, it was commonly understood that an objection on this ground was required to be based on factors such as dishonest conduct,

33 The arguments on each side were rehearsed in a paper presented by Sir Edward Johnston to the Institute of Actuaries on 28 November 1988: his own opinion in this debate was in favour of keeping the two roles separate.

34 See section 10(4) of the 1982 Act.

29

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

commission of a serious criminal offence, former bankruptcy or financial mismanagement, or age or inexperience.[35] As [redacted] pointed out in correspondence with the regulator, in terms of fitness and propriety he was amply qualified for the post of Chief Executive; and there was therefore no legal basis on which the regulator could refuse his appointment, or seek to impose conditions on it.

Appointment of [redacted]

86. In the case of ELAS, there were particular circumstances that were relevant. There was no person of suitable maturity, seniority and stature to take over the role of Appointed Actuary from [redacted] when it was proposed that he become Chief Executive following the retirement of [redacted] in 1991. [redacted] explained at that time that it was intended that he should remain the Appointed Actuary only for 12 months or so until one of ELAS's in-house actuaries had acquired sufficient experience to replace him in that position. The DTI expressed the view that it was undesirable that the same person should hold both positions, but was compelled to accept that it could not impose a condition on his appointment that [redacted] would relinquish the role of Appointed Actuary at the end of this period.

87. By the same token, the prudential regulator had no power in law to bring the dual appointment to an end once it persisted longer than the regulator had first understood it would. Nevertheless, DTI and GAD continued to express their concern about [redacted] holding both roles, even though they could not require him to step aside as Appointed Actuary. Examples of this include the following:

35 See the extract from the 1993 DTI Guidance Notes, Guideline 4.4, for example, pages 322 – 327 of the Annex.

30

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(1) GAD's note dated 14 May 1992 sent to the prudential regulator in preparation for the first site visit to ELAS on 19 May 1992, in which GAD suggested that the issue of the dual role be raised;[36]

(2) The concerns on this issue expressed to [redacted] by both the regulator and GAD at that visit on 19 May 1992;[37]

(3) The reference to this issue in the briefing note dated 6 December 1994, prepared by the regulator in preparation for the second site visit to ELAS on 9 December 1994;[38]

(4) The references to this issue in GAD's detailed scrutiny reports for 1993, 1994 and 1995;[39] the 1995 report also formed background material as part of GAD's briefing for the regulator for the third site visit to ELAS on 8 November 1996.

88. [redacted] response was that he did not perceive any conflict of interest arising from his dual role but undertook to drop one of the roles if such a conflict were to arise. He also continued to present his holding of both roles as a temporary expedient, and reiterated that there was not currently anyone suitable in ELAS to take over from him as Appointed Actuary.[40]

89. To criticise the prudential regulator, as Complaint D seeks to do, for "*allowing*" [redacted] to hold the post of Appointed Actuary implies that it was within the regulator's discretion to prohibit his appointment to, or to remove him from, that post. It was not. The criticism is accordingly misplaced.

90. It should be added, even with the benefit of hindsight, that it is not clear what the advantage of avoiding the dual role would have been in practice; or that [redacted]

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

[redacted] replacement as Appointed Actuary by [redacted] in 1997 resulted in a significant change in the strategic thinking of, or the actions taken by, ELAS from that date.

<u>Complaint E</u>

"The regulators and GAD failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments. This was particularly critical in a situation in which narrow, technical interpretations of regulatory solvency were becoming an increasingly irrelevant measure of any insurer's realistic financial position as the industry moved more and more towards non-guaranteed bonus declarations."

<u>Alleged failure to keep pace with developments</u>

91. It is wrong to suggest that, in the period under consideration, the regulatory regime remained static, or that the prudential regulator did not take steps to adapt to developments in the pensions and life insurance industry.

92. The prudential regulator was actively involved in keeping abreast with the latest actuarial thinking and developments within the regulated sector, and in promoting changes to the regulatory regime. The changes made during this period are set out more fully in the Regulatory Paper submitted with this Response. In summary:

(1) Throughout the period from 1974 to 2001 successive legislative changes were made which progressively strengthened the regime.

(2) For example, the valuation of life insurance companies' assets and liabilities was subject to ongoing consideration, and changes were made which strengthened the applicable regulations and increased the amount of information and level of detail required in the regulatory returns.[41]

[41] See paragraphs 92 – 96 of the Regulatory paper.

32

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(3) In 1990 DTI consulted on proposals to strengthen the Appointed Actuary system in the light of policy concerns as to whether such an important part of the regulatory regime should continue to rest largely on non-statutory professional rules, custom and practice. This led to the introduction of requirements that the Appointed Actuary should specifically certify certain facts in the regulatory returns.

(4) A rolling programme of site visits to life insurance companies within the regulated sector was introduced by DTI from the end of 1991.

(5) In 1994 the requirement for "*sound and prudent management*" was introduced which brought corporate governance issues under the remit of the prudential regulator.[42] Following these reforms the regulator issued new guidance notes setting out performance standards which companies' systems were expected to achieve.

(6) In 1995 a new Service Level Agreement between GAD and DTI was put in place following an initiative to improve the regulatory process generally. The initiative was driven through a GAD internal working party, which included a representative from DTI. The SLA extended the scope of the services which GAD was required to provide to DTI, and contained revised provisions relating to the scrutiny process. The 1998 SLA which replaced the 1995 SLA further enhanced this process[43].

(7) From 1995 GAD began to prepare an annual report for DTI on the life insurance industry. The purpose of the report was to act as an internal reference document for both DTI and GAD, providing commentary on significant developments within the industry during the year and an indication of likely future developments. The report provided detailed

[42] See paragraph 94 of the Regulatory Paper.
[43] The 1995 and 1998 SLA's are annexed to the Regulatory Paper (as annexes 14 and 15).

33

comparative information between insurance companies and groups to allow potentially weak companies to be identified, and to attempt to identify any significant variations between different sectors of the industry.

(8) GAD also responded proactively to emerging regulatory issues: for example by arranging the 1993 survey of bonus distributions[44] and the 1998 GAR survey.[45] Three working parties were set up at the instigation of the Joint Actuarial Working Party ("JAWP") in the 1990s and they reported, respectively, on the meaning of PRE; the net premium method of valuation; and the impact of GARs on the industry.[46]

(9) There were also successive changes to the mandatory guidance issued by the UK actuarial profession to Appointed Actuaries during the material period, in part due to pressure exerted by GAD through JAWP. These included, for example, the introduction of GN2, which established as best practice the production of financial condition reports and the use of dynamic financial analysis.[47]

(10) From time to time GAD issued additional guidance in the form of 'Dear Appointed Actuary' letters to Appointed Actuaries to supplement the regulations and professional guidance, for example relating to the resilience test.

93. Thus, as a result of a number of initiatives taken by DTI, GAD, HMT and FSA, throughout the 1980s and 1990s, steps were taken to keep the regulatory system up to date with developments in the pensions and life insurance industry. Furthermore, the level of regulation increased considerably, notwithstanding the policy of deregulation which prevailed throughout that period.

44 See Penrose Report, Chapter 16, paragraphs 105 – 106.
45 See paragraph 130 below.
46 See paragraphs 77, 98 and 99 of the Regulatory Paper, along with its annexes 6, 11 and 12.
47 See paragraph 97 and annex 10 of the Regulatory Paper.

34

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Regulatory solvency

94. As already noted, and described more fully in the Regulatory Paper submitted with this Response, regulatory solvency was a crucial yardstick by which the balance was struck in the governing legislation (both at the UK and European level) between policyholder protection on the one hand and the freedom for businesses to compete and develop new products on the other. Whatever view is taken about the merits or demerits of the legislative approach, the prudential regulator cannot fairly be criticised for applying and scrutinising regulatory returns by reference to the criteria for solvency prescribed by the statutory provisions. Nor is it accepted that the interpretations of regulatory solvency applied by the regulator and GAD were "*narrow*" or unduly "*technical*".

95. The real complaint appears to be that, in the context of a life insurance industry that was moving increasingly towards non-guaranteed terminal bonus declarations, the prudential regulator should have required ELAS explicitly to reserve for terminal bonus. But it was not open to the regulator to require ELAS to do this under the regime in force and the legislation which it was required to apply:

(1) The Third Life Directive gave Member States a discretion whether to require explicit or implicit reserves to be set aside for bonuses: see Article 17(1)(D). The circumstances in which it was decided, at a European level, to make explicit reserving for bonuses optional rather than mandatory are set out in some detail in the Penrose Report.[48]

(2) Having consulted with the industry prior to implementing the Third Life Directive, the UK Government decided not to adopt the option of requiring explicit reserving for terminal bonuses. The view was taken that implementation of this option would have constrained the ability of life

48 See Penrose Report, Chapter 10, paragraphs 21–33.

35

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

insurance companies to invest in equities, and therefore have led to consumer detriment in the form of potentially lower overall long term investment returns and a reduction of consumer choice.[49] This was a reasonable decision for the UK Government to make; and one that it was fully entitled to make in accordance with the discretion granted to it under European law.

(3) Instead, the preferred approach was that an implicit allowance for terminal bonus should be made, through a deliberately prudent and cautious approach to valuation of both assets and liabilities, which would create implicit margins to provide for future bonuses. This was achieved in particular by: (i) requiring the use of conservative valuation assumptions (including not taking any credit for future capital appreciation on equity investments[50]); and (ii) using a net premium method of valuation in the regulatory returns.

(4) In circumstances where the UK Government had made the decision not to require explicit reserving for terminal bonus, it was not open to the prudential regulator to introduce a similar requirement by the back-door, by reference to PRE and threatening to use powers of intervention under section 45 of the 1982 Act if the company in question failed to set up explicit reserves for terminal bonus. Had the regulator sought to do this:

(i) It would have been flying in the face of a policy decision already taken by the UK Government; and

(ii) The regulator would also have been using section 45 powers impermissibly (contrary to both section 45(2) of the 1982 Act and Article 21 of the Third Life Directive) to prevent a company from

49 See also Penrose Report, Chapter 10, paragraphs 34 – 38.

50 This was the case until the amendment of the relevant regulations in 2000 from which date some limited allowance was permitted within the assumed investment return on equities.

36

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

disposing of its assets even though the test of regulatory solvency had been met.

96. Lord Penrose did not have regard to most of the above points when criticising the treatment of ELAS's terminal bonus in his report. Whilst Lord Penrose did address the effect of section 45(2) (but only that point) in his Report,[51] his arguments overlooked the facts that:

(1) The restriction on the prudential regulator's powers of intervention was imposed at a European level, and therefore all the regulator's powers of intervention under the 1982 Act (and not just its section 45 powers) were impliedly subject to the Article 21 limits (so as not to contradict the Directive);

(2) Given that the UK Government had decided against explicit reserving for terminal bonuses, requiring ELAS to reserve for terminal bonuses would have impermissibly restricted a freedom to dispose of its assets that it would otherwise have enjoyed under UK law; and

(3) Although the prudential regulator might from time to time have acted as though it were entitled to investigate PRE with a view to taking action, quite correctly (in the light of the foregoing) the prudential regulator never did require ELAS to reserve for terminal bonus on the grounds of PRE[52].

97. Moreover, the argument advanced by Lord Penrose in this regard makes the assumption that, if ELAS's policyholders had a reasonable expectation that they would be paid their discretionary terminal bonuses, ELAS's policyholders also had a reasonable expectation that ELAS would set aside explicit reserves for them. It is not clear from what particular communication with policyholders the

---

51 See Penrose Report, Chapter 15, paragraphs 15 – 19.

52 See Penrose Report, Chapter 10, paragraph 88, where he concluded: "In my view, the Society was not required by statute, nor by recognised accounting or actuarial principle or practice, to value and to set up reserves for accrued terminal bonus payments that were likely to be made in the future, notwithstanding the accrual of those future benefits in is office valuation".

37

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

latter expectation (as to the setting aside of additional reserves) could be said to be derived. Most of the ELAS literature that was sent to policyholders made it clear that ELAS had a policy of "full distribution", and of not reserving beyond what was technically necessary to meet the UK statutory requirements. Given that those statutory requirements did not include a requirement of explicit reserves for terminal bonuses, it is hard to see how ELAS policyholders could have had a reasonable expectation that nonetheless ELAS would set up explicit reserves for its terminal bonuses. Indeed, given its much vaunted policy of "full distribution", had ELAS gone further than UK statutory requirements and set up explicit reserves for terminal bonus, arguably it would have been acting contrary to the reasonable expectations of with-profits policyholders who would have then not received their "full distribution".

98. On analysis, the complaint must be, not that the prudential regulator failed properly to administer the regulatory regime as it existed, but rather that the regime itself needed to be reformed in the light of developments in the insurance industry (in particular the increased use of non-guaranteed terminal bonus declarations). Whatever can be said for or against this argument, it is not an argument that discloses any case of maladministration on the part of the regulator.

99. It is also noteworthy that, even now, under the regulatory regime operated by FSA, the approach to realistic balance sheets does not change the way that terminal bonus works: the changes are more about the transparency of the position rather than the substance. Where the 'realistic peak' in the new regulatory regime exceeds the 'regulatory peak', the excess only results in an additional *capital* requirement, and not an additional *reserving* requirement, of that amount for the company. So even now, there is no requirement to reserve for future awards of discretionary terminal bonus. This further undermines the suggestion that the failure to adopt an approach of requiring explicit reserves for terminal bonus in the past was a policy decision that was wrong, let alone one that constituted maladministration on the part of the prudential regulator.

38

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Complaint F

"GAD had recommended ELAS as a pension plan or additional voluntary contribution scheme provider in its advice to the administrators of the Principal Civil Service Pension Scheme and to other public sector pension schemes. This led to a lack of proper separation of its responsibilities and to a clear conflict of interest between GAD's role in providing advice to government bodies in relation to public sector pensions and in assisting the prudential regulators of ELAS. This conflict of interest compromised the proper discharge of GAD's regulatory functions."

100. It is correct that the Government Actuary's Department advised the Principal Civil Service Pension Scheme ("PCSPS") and a number of other public sector pension schemes[53]. But it is wrong to suggest, as the Complaint does, that there was a lack of proper separation of GAD's responsibilities or that there was a conflict of interest between GAD's role in advising public sector pension schemes and its role in assisting the prudential regulator of ELAS.

101. In GAD's capacity as adviser to the PCSPS, it fell to actuaries of GAD to recommend possible providers for the in-house additional voluntary contribution (AVC) pension scheme.[54] The selection process took place in 1988. Expressions of interest were elicited by advertisement. GAD analysed the responses and provided HMT (who were the managers of the PCSPS) with a short list of possible candidates. Selection from this short list was carried out by means of an interview panel, which included a senior GAD actuary, as well as other members from HMT (which made the decision). ELAS was one of two life insurance companies selected as AVC providers by HMT.

102. GAD was subsequently involved in carrying out three paper reviews of the appointed providers. The first such review was carried out in 1992, with more

[53] These included those covering the NHS, teachers, police, firemen, judges and members of parliament as well as the PCSPS. GAD provided actuarial advice on all aspects of these schemes, including scheme and benefits design; employer contribution rates; actuarial tables for transfer payments and other things. Advising on possible AVC providers was only a very small part of this work.

[54] This was subject to a requirement that the providers should offer with-profits, managed funds and building society linked pensions and also death-in-service provision.

39

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

substantive reviews in 1993 and 1995. The review process involved comparing the performance of the two appointed providers, both with each other and with a wider population of AVC providers, as analysed in available market surveys. Comments were also obtained from the scheme administrators regarding the standards of service of the appointed providers.

103. From January 1996, GAD ceased to be involved in this activity, following a market test by the Cabinet Office which resulted in [redacted] being appointed to give advice on AVC providers for the PCSPS. GAD has no knowledge of the advice given subsequently by [redacted] but it can be assumed that the new advisers did not recommend the removal of ELAS from the panel, at least until ELAS ceased to take on new business. It is understood that a third company was added to the panel.

104. It is not accepted that GAD's role in advising on the suitability of ELAS as an AVC provider (or any other aspect of its advisory role) gave rise to any conflict of interest in performing its functions in assisting the prudential regulator of ELAS – still less that the former role in any way compromised the proper discharge of GAD's insurance regulatory advice function.

105. Plainly, any AVC provider for the PCSPS would be an authorised life insurance company whose financial affairs were subject to scrutiny by another division of GAD in the course of assisting the prudential regulator. It was accordingly recognised by GAD that it was essential to keep the two functions separate so as to ensure that no use was inadvertently made of any confidential information. To remove any such risk there was a strict "Chinese wall" separation between the carrying out of the insurance regulatory advice function and the discharge of GAD's other functions to Ministers, government departments and the managers or trustees of public sector pension schemes.

40

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

106. Thus there was no exchange of confidential information about the affairs of individual insurance companies between GAD actuaries advising the prudential regulator and those advising pension schemes. The actuaries advising the PCSPS had to rely solely on publicly available information about life insurance companies and on their own independent analysis of the products, the performance and the standards of service of AVC providers.

107. No professionally improper conduct took place, and the Complaint is without substance.

<u>Complaint G</u>

"From the mid 1980s until 1997, the regulators failed to evaluate the potential effect of Guaranteed Annuity Rates (GARs) on the solvency of ELAS in a context where current annuity rates were falling steadily, in line with the Bank of England's base rate, to below contracted GARs. The regulators learned explicitly in November 1993 of the degree of ELAS's exposure to risks associated both with the GAR issue and with ELAS's lack of prudent reserves. The regulators' failure to take action then or to impose reserving until 1999 played a direct part in the closure of ELAS to new business and to subsequent cuts in policy and annuity values. The regulators did not prepare a study on the extent of GARs in the industry until 1997: a decade too late."

<u>ELAS's GAR liabilities</u>

108. The Guaranteed Annuity Rates ("GARs") provided for under ELAS's with-profits policies varied depending on the type of policy as well as the age and sex of the policyholder. After June 1988 GARs were not included in policies sold by ELAS, but policies with GARs sold before that date remained in force, and policyholders could continue to pay recurrent single premiums into those policies.

109. The statutory regulations required GARs to be valued on prudent assumptions. The value placed on them depended on whether, and to what extent, the GARs would be "in the money" (i.e. have a clear value) if the mortality and interest rate assumptions used in the valuation were borne out, and on the assumed take-up

41

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

rate of the GARs.[55] Otherwise, the GARs represented only a contingent liability and, as such, were a matter which the Appointed Actuary was expected to take into account in analysing the overall future financial condition of the company with regard to his or her professional advice to the Board.[56]

110. GAR liabilities were not explicitly reserved for by ELAS, after GARs began to exceed current annuity rates (as happened first in 1993 and then again from May 1995). As subsequently emerged, the Board of ELAS adopted a policy whereby they decided to award a different level of terminal bonus to a policyholder who elected to take an annuity at the guaranteed rate from that which would otherwise have been awarded, calculated so as to ensure that the total benefits received were the same in each case. On the basis of this policy ELAS took the view that it was unnecessary to set up a reserve for the cost of meeting GAR liabilities even where these were "in the money".

111. It was the professional duty of the Appointed Actuary to disclose, in the regulatory returns, his company's liabilities and to justify how they were reserved for. The regulatory regime relied on him to carry out this function properly - this was the essence of the philosophy of "freedom with publicity", referred to above.[57]

Non-disclosure by ELAS

112. Regrettably, ELAS's regulatory returns simply did not disclose its exposure to GARs or the policy adopted in relation to terminal bonus in anything approaching a satisfactory way. The prudential regulator could not reasonably have been expected to identify the extent of the problem which GARs potentially

55 There was no guidance to Appointed Actuaries regarding the take-up rate assumption before January 1999; but take-up, in principle, depended on the extent to which the GARs were in the money on the valuation basis as well as the relative attraction of other benefits that might be more flexible or have some tax or other advantage over the GARs.

56 This point is recognised in paragraph 163 of the Parliamentary Commissioner's first report.

57 See the response to Complaint C.

42

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

represented for ELAS from the information provided (nor, given the lack of any proper indication in the regulatory returns that there was a potential issue, the time and resources available, and the prevailing policy approach towards prudential regulation, described in the response to Complaint C above, could there be any reasonable expectation that the regulator or GAD would have sought additional information which would have brought the situation to light).

113. Lord Penrose's report provides powerful support for this view. In his conclusions, Lord Penrose expressly found:[58]

> *"...the Society's regulatory returns failed to identify and value the growing guaranteed obligations that resulted from a combination of falling interest rates and lightening mortality experience. Such references as were made to these guarantees in and after 1994 (relative to the 1993 return) failed properly to disclose their nature and extent to the regulators."*

114. Lord Penrose went on to refer to the "*obscurity of the references*" in ELAS's regulatory returns.[59] In short:[60]

> *"The returns were opaque and uncommunicative."*

This is to be contrasted with the response to the prudential regulator in September 1998, when ELAS claimed that it had disclosed its differential terminal bonus policy in its regulatory returns since 1993.

The November 1993 meeting

115. It is not right that (as the Complaint asserts) the prudential regulator "*learned explicitly in November 1993 of the degree of ELAS's exposure to risks associated both with the GAR issue and with ELAS's lack of prudent reserves.*" It is assumed that this assertion has its genesis in Lord Penrose's conclusion that:[61]

58 See Penrose Report, Chapter 19, paragraph 128.
59 Ibid, paragraph 129.
60 Ibid.
61 Ibid, paragraph 189.

43

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

> *"...regulators and GAD were told in November 1993 that the Society did not reserve for its guarantees, considering that they did not "bite". The information was not followed through ..."*

116. It is this November 1993 meeting which provides the only detectable basis for criticising the prudential regulator for having "*no insight*" into the impact of the GAR issue on ELAS until 1998.[62] HMT and GAD do not accept that the regulator's reaction to what was said at this meeting forms any proper basis for complaint.

117. The meeting in November 1993 was attended by GAD, DTI and [redacted]. The nature and purpose of such meetings has been described above. They were not confrontational or inquisitorial occasions. Their purpose was to inform the prudential regulator's approach to the next scrutiny report, which would of course be based on the next regulatory returns.

118. As the note of the meeting demonstrates,[63] there was not in any way a clear disclosure of ELAS's differential terminal bonus policy, nor the extent of its exposure to GARs. The note of the meeting records [redacted] as remarking that the GAR in ELAS's old policies was not as onerous as it appeared because "*it would be reasonable (in his view) for the allocation of final bonus to be conditional on the waiving of this guarantee*".

119. It is important to put the reference to GARs which was made by [redacted] at the November 1993 meeting into its proper context. The reference was made in the context of the *resilience test*, which required a life company to assume (for the purpose of testing the resilience of its reserves) a further 3% reduction in interest rates. Resilience reserves were identified as the fourth item on GAD's agenda for the meeting.[64] The clear inference from the fact that GARs were mentioned in this

---

62 See Penrose Report, Chapter 16, paragraph 132.
63 A copy of the note can be found at pages 328 – 329 of the Annex.
64 See Penrose Report, chapter 16 paragraph 114.

44

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

context is that while they may have been "biting" in the resilience test (i.e. in the reduced interest rate scenario assumed for that purpose), they were not biting in the base valuation. There was no reason, therefore, for any conclusion that a GAR reserve was needed in the base valuation.

120. The impression given by [redacted] was misleading. The regulator's principal concern would have been that the GARs were being reserved for in accordance with the regulations. It is important to appreciate that the position as presented by ELAS was quite different from ELAS suggesting that while, prima facie, a GAR base valuation reserve *was* needed, such a reserve was not in fact being held due to the differential terminal bonus policy (i.e. that the GARs were regarded as being covered by a first charge against terminal bonus). That this had in fact been ELAS's position emerged only in 1998, as explained below.

121. The subsequent lack of disclosure in respect of the GARs in the 1993 (and indeed subsequent) regulatory returns was consistent with, and reinforced, the false impression given by [redacted] at the November 1993 meeting that the GARs were not biting in the base valuation. In these circumstances, the criticism made in Chapter 19, paragraph 235 of the Penrose Report is misplaced: the fact that the impression given by [redacted] at the meeting was false is known only with hindsight following the 1998 GAD survey (see below).

<u>The study on the extent of GARs in the industry</u>

122. HMT, FSA and GAD do not accept that there is any justification for the claim made in Complaint G that the study of the extent of GARs in the industry was prepared "*a decade too late*". The genesis of that study is explained below.

123. The existence of contracts with GARs within the life insurance industry generally was well known. However, it was not until the late 1990s that, because of falling interest rates and improving mortality, such guarantees became of significant value to policyholders. GAD and the prudential regulator were keen to obtain

45

information on the implications of this new development for life insurance companies.

124. In these circumstances, JAWP (at the suggestion of GAD) considered that the problem was important enough to merit specific study; and this led to the setting up of the Working Party of the Life Board of the Faculty and Institute on Annuity Guarantees.

125. The Working Party was established in January 1997 to consider the issue of annuity guarantees. The Working Party's terms of reference noted that there was "*no accepted practice for reserving for these guarantees*" and that there was "*no published research to guide Appointed Actuaries in setting reserves*".

126. The Working Party's report was published in November 1997[65]. The Working Party reported that it had found considerable variations in practice among companies as to reserving for annuity guarantees. This was not surprising given that the falling interest rates and improving mortality that had led to the GAR problem were relatively recent phenomena and given the extent of the variation which existed between companies both as to the level of interest rates underlying their respective guarantees (i.e. their relative generosity) and the volumes of the contracts carrying these guarantees which had been sold by each company.

127. The Working Party did not provide definitive recommendations as to the correct approach to reserving for the guarantees. The report concluded, among other things, that there was no industry consensus on reserving for guarantees, and that current practice was very varied. The report identified a number of possible approaches to reserving and set out three approaches "*for consideration*", albeit that none was considered "*entirely satisfactory*". One of the approaches was:

> "*Review whether and to what extent the guarantee will be covered by terminal bonus adjustments. Providing that terminal bonus adjustments will*

65 A copy of the report can be found at annex 12 to the Regulatory Paper.

46

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

be used and are sufficient to cover guarantees in all circumstances, there is an argument for not reserving for such guarantees – no explicit provision is made for terminal bonuses and hence the provision for guarantees is simply part of this implicit provision subject to the existence of appropriate terminal bonus margins."

The Working Party commented that this approach "*could be viewed as unsound because terminal bonus was not reserved for explicitly and hence no explicit provision would be made for an explicit guarantee*". However, the Working Party also made criticisms of the other two approaches put forward for consideration and did not recommend that this approach should be banned.

128. The report concluded that, because of falling interest rates and improving life expectancy, companies would need to work out how to reserve for guarantees. The Working Party's conclusions reflected the fact that, once the GAR issue had come to prominence as a result of rises in current market annuity prices beginning to make the GARs more attractive options, there simply was no straightforward solution for life insurance companies - especially for a mutual such as ELAS which had no shareholders to call on and had limited free assets.

129. The Working Party report was published at a meeting in the spring of 1998. Companies which had taken part in the Working Party's survey were not identified (having been promised anonymity). GAD, however, was keen to learn more about the position of individual companies.

130. Although GAD had been represented on the Working Party, it was not in a position to provide the Working Party's confidential working papers to the prudential regulator, or otherwise to go behind the confidence and anonymity of the Working Party's procedure. GAD therefore initiated its own survey of life insurance companies' approach to reserving for annuity guarantees, in order to determine the level of exposure of different companies to the problem. This survey was carried out in June 1998. The reason for this date was that most insurance companies were obliged to submit regulatory returns by 30 June. So

47

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

June 1998 was the most sensible time to conduct the survey, since 1997 regulatory returns would have been finalised or almost finalised by then, and so the information received back by GAD in response to the survey was likely to be as up to date as possible and could be considered by GAD along with the information set out in the 1997 regulatory returns.

131. There was nothing in any way inappropriate about the timing of this survey. It was an appropriate follow-up to the report of the Working Party, which was itself a sensible response to the emergence of the GAR issue through the combination of falling interest rates and improving mortality position in the 1990s. There is no reasonable basis for the suggestion that the study made at that time ought to have been carried out a decade sooner.

Disclosure of ELAS's exposure

132. The extent of ELAS's exposure to GARs and its lack of reserves to meet that exposure became evident in consequence of its response of 29 July 1998 to GAD's survey. ELAS's Appointed Actuary now explained the differential terminal bonus policy in clear terms. He said:

> *"For any policy for which the annuity guarantee is biting, the amount of terminal bonus is reduced to pay for the cost of the guarantee. For all but a few small policies, the "cost" of the annuity guarantee is covered by this adjustment."*

133. This response showed that ELAS had made no explicit provision for annuity guarantees in setting its reserves. The problem for ELAS was that it had significantly more exposure than any other life insurance company because of the amount of GAR business written. It had also not separated the business from non-GAR policies, so that there was no separate fund or even a separate series of policies for bonus purposes.

48

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

134. By contrast, for most other companies GARs were not a major issue, because their scale was either substantially smaller or because the companies had written this business in a separate bonus series from the business without guarantees, and they were therefore free (even after the *Hyman* judgment) to apply different bonus policies to the contracts with guarantees compared to those without guarantees. Some companies had an "estate" to which the GAR cost could be charged (which ELAS did not). Some companies were already reserving for their guarantees on a proper basis.

135. The prudential regulator and GAD reacted swiftly and firmly to the information provided by ELAS in July 1998. In November 1998 GAD sent to HMT a preliminary report on the survey results. This identified ELAS as particularly vulnerable on account of its exposure to GARs because the relevant business was a substantial part of its total book.

136. As soon as the prudential regulator had identified this problem, it took steps to ensure that there was proper reserving on a sufficiently prudent basis. It took the view that the policy that had been adopted by ELAS of not reserving for the guarantees on the basis that these could be covered by a first charge against terminal bonus was unsound, for the reason which had been indicated in the Working Party's report.

137. The regulator's response began with correspondence in September 1998. Subsequent events are recounted in the Baird Report, from paragraph 4.14.1 onwards.

138. As is clear from the narrative set out in the Baird and Penrose Reports, ELAS resisted the approach urged by the prudential regulator. ELAS doggedly maintained that it would be excessively and unnecessarily prudent to reserve for close to 100% of policyholders deciding to exercise the guarantees to which they might be entitled, because of the highly restrictive nature of the guarantee option

49

and the experience they had had so far of very few policyholders exercising the guarantee. ELAS was persistently very reluctant indeed to accept the regulator's view of the reserving that was required, as demonstrated, for example, by its threat of judicial review proceedings at a meeting on 3 December 1998,[66] and the events of January 1999.[67]

139. ELAS even tried to persuade the Economic Secretary to the Treasury to intervene on its behalf on the reserving question. This attempt failed.[68]

140. Correspondence and debate continued between the prudential regulator and ELAS until the judgment of the House of Lords was given on 20 July 2000, which conclusively resolved the issue of whether the differential terminal bonus policy adopted by ELAS was lawful.

141. It should be noted that what led to ELAS's problems after the House of Lords judgment was primarily the cost of the honouring the GARs on the *non-guaranteed* (i.e. terminal bonus) part of maturity values. This was because the effect of the judgment was that ELAS was not allowed to reduce the terminal bonus to offset this cost if and when the GAR option was exercised. This cost was determined by the prevailing investment conditions (as reflected in the valuation assumptions used in the base valuation) at the time, and *not* in any way by the reduced interest rate scenario provided for by the resilience test. It was quite separate from the cost of honouring GARs on the *guaranteed* part of maturity values, which had already been fully reserved for by ELAS, at the insistence of the regulator, by the time of the House of Lords judgment (subject to part of this reserve being offset by the GAR reinsurance treaty, which had to be renegotiated as a result of the judgment).

68 Ibid, paragraphs 130-132.

50

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

142. No maladministration is disclosed by these events. GAD and the prudential regulator acted promptly once the problem in relation to ELAS became known. GAD and the regulator took an appropriately firm line with ELAS on reserving, as evidenced, for example, by [redacted] memo to [redacted] of 3 November 1998 which stated, by reference to ELAS's position, that:[69]

> *"It is not acceptable....to regard these guarantees as covered by a "first charge" against a final bonus for which no provision is made. This has clearly not yet been recognised by Equitable Life (and they have not even attempted as we requested at the meeting to quantify the reserves on this basis)."*

143. It is one thing to say now, with the benefit of hindsight, that ELAS could have been quizzed about its approach to guaranteed annuities at an earlier stage. But in each of the 1993 – 1996 regulatory returns, received each following June (i.e. 1994 – 1997), ELAS's presentation of its methodology did not disclose that they were not setting up reserves for guarantees. Nor was there anything in these regulatory returns to indicate that the level or extent of the guaranteed annuities was significant. Relevant references in the regulatory returns were brief in the extreme, and did not disclose the reserving method, the rate of guarantee or the volume of business affected.

<u>Alleged Effect</u>

144. It is suggested by the complainants that the prudential regulator's failure to impose reserving until 1999 played a direct part in ELAS's closure to new business and the subsequent cut in policy values. This suggestion is also refuted by the regulator and GAD.

145. In early January 1999 FSA prepared draft guidance, to be sent out by the Government Actuary to all Appointed Actuaries of companies authorised to carry out life insurance business, relating to reserving requirements for guaranteed

[69] See Penrose Report, Chapter 17 paragraph 35.

51

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

annuity options ("GAOs"). The guidance asked Appointed Actuaries to reserve for the guarantees on prudent assumptions. This guidance was published, as a "Dear Appointed Actuary" letter, on 13 January 1999. The letter was copied to Managing Directors who were reminded that it was they who bore ultimate responsibility for establishing proper reserves. As the discussion above, and the account set out in the Baird Report,[70] explains, ELAS was very reluctant to accept that any significant reserve was needed for GARs.

146. It is important to understand that the result of the *Hyman* litigation did not impact on ELAS's gross reserving requirements: it had been required to reserve for GARs regardless of the outcome of the litigation.[71]

147. Once the House of Lords' judgment was delivered, the most commercially attractive option in order to fund the GAR costs, as ELAS saw it, was to seek to raise outside capital by putting itself up for sale. If the sale proved impossible, closure to new business was inevitable. In the event, for various reasons (not all related to the financial state of ELAS[72]), the sale did not succeed and ELAS had to cut policy values anyway.

148. The circumstances which led to ELAS closing to new business were therefore the result of a complex chain of events and it is far from clear what role, if any, ELAS's delayed introduction of full reserving for GARs played. Setting up additional reserves at an earlier point would most likely have been at the expense of showing a weaker reported statutory solvency position or of slimming down

---

70 See e.g. paragraph 4.15.3 and especially paragraph 4.15.9. See also Penrose Report, Chapter 17 paragraph 44, recording ELAS's view that reserving for what was payable under the contract, as regulators were demanding, was "unrealistic" and "excessive"; and Penrose's Report, Chapter 17, paragraph 50.

71 The judgment did, however, have an indirect effect on ELAS' net reserves because of the GAR reinsurance treaty. This had to be renegotiated as a result of the judgment, leading to a reduction in the reinsurance offset and hence an increase in ELAS' net reserves. However, this renegotiation was completed smoothly (within a month of the judgment) and ELAS' required solvency margin remained covered throughout.

72 See *The Prudential Regulation of Equitable Life*, paragraph 213.

52

margins elsewhere in the valuation basis, so it is not clear that it would have forced ELAS significantly to change its bonus policy.

149. The cuts in policy values made in July 2001 were largely attributable to the low or negative rates of investment return earned by ELAS during 2000 and 2001, against the background of (i) substantial falls in equity markets at that time and (ii) the well publicised commercial policy which ELAS had pursued of distributing investment returns to current policyholders and not maintaining an estate. The absence of an estate had the necessary consequence that in the event of adverse investment conditions policy values might need to be cut, unless additional capital could be raised. There is no clear, let alone direct, link between the cuts in policy values and the GAR issue.

Complaint H

"From about 1990 onwards, the regulators and GAD failed to give sufficient consideration to the fact that some of the measures used to bolster ELAS's solvency position were predicated on the emergence of a future surplus. As a consequence, they did not properly assess the overall impact and adequacy of those measures. The regulators also allowed ELAS to mis-use the term 'surplus' and failed to consider the use of that word in the context of policyholders' reasonable expectations."

150. The "*measures*" criticised in this Complaint are not specified. It is assumed, however, from the description of the measures as "*predicated on the emergence of a future surplus*" that the measures referred to are the taking of credit by ELAS in its regulatory returns for 'future profits implicit items' for the purpose of demonstrating cover for its required solvency margin during this period. The credit taken for such items is considered here. It may be that the complainants also intend to refer to other steps taken by ELAS such as the arrangement of a subordinated loan in 1997 and of reinsurance at the end of 1998.[73] However, those

[73] The subordinated loan and reinsurance agreement gave rise to future liabilities, but the credit taken for them in calculating ELAS's solvency position was not "*predicated on the emergence of a future surplus*".

53

matters are specifically referred to in Complaint J and are accordingly addressed in response to that complaint.

Future profits implicit items

151. Throughout the relevant period (and still) both European and UK legislation permitted a value to be placed on the projected future surplus of a life insurance company for the purpose of demonstrating cover for its required solvency margin. This value was referred to as a "future profits implicit item". The term "future profits" in this context did not refer to "profits" in the conventionally understood sense, but to future surplus which could be expected to be disclosed in subsequent actuarial valuations, arising from the prudential margins contained in the assumptions used for the current actuarial valuation.

152. Regulation 22(3) of the 1994 Regulations[74] (and its equivalent under the 1981 Regulations[75]) required that, of the items covering a life insurance company's required solvency margin, at least 50% of the "guarantee fund"[76] had to be covered by "explicit items". For most life insurance companies, including ELAS, the guarantee fund was equivalent to one-third of the required solvency margin. In other words, one-sixth of the required solvency margin had to be covered by explicit items. The remaining five-sixths of the required solvency margin could, in principle, be covered by implicit items.

153. Thus, the regulations made it quite plain that implicit items, including future profits implicit items, could play a very substantial role in the valuation of a life

[74] The Insurance Companies Regulations 1994 (SI 1994 No 1516).
[75] The Insurance Companies Regulations 1981 (SI 1981 No 1654).
[76] Defined in regulation 22 of the 1994 Regulations as one-third of the required solvency margin, subject to a minimum of the minimum guarantee fund as defined in Schedule 4 to those Regulations (and equivalently under the 1981 Regulations).

54

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

insurance company's assets for the purpose of demonstrating cover for its required solvency margin[77].

154. These provisions derived from the First Life Directive[78], which provided that, at the discretion of the prudential regulator of the relevant Member State, a life insurance company could count implicit items, including future profits implicit items, against five-sixths of its required margin of solvency[79].

155. There was a sound economic rationale for such provision, since the valuation regulations specified that, in calculating liabilities, the Appointed Actuary had to make a prudent assumption about future rates of investment return, so it was sensible to permit some of this future return to be brought into account as an item available to cover the required solvency margin.

156. In order to include implicit items towards cover for the required solvency margin, an order under section 68 of the 1982 Act (and its equivalent under the Insurance Companies Act 1974) had first to be obtained[80]. This section permitted the prudential regulator to disapply, or modify the operation of, certain provisions of the Act and to grant an order for this purpose (a "section 68 order"). In some cases, it was the regulator's practice (as set out in prudential guidance to companies) to require that an application for a section 68 order be supported by a certificate from the Appointed Actuary. An application for an order in respect of a future profits implicit item fell into this category.

157. The value of future profits implicit items for which such an application could be made was limited by law. Pursuant to the First Life Directive and the regulations, a future profits implicit item could take account only of profits expected to arise

---

77 It should further be appreciated that the requirement for one-sixth of the required solvency margin to be covered by explicit items did not restrict the amount of implicit items that was permitted to be shown in the regulatory returns to five-sixths of the required solvency margin.

78 See paragraphs 42 – 49 of the Regulatory Paper.

79 Articles 18(3)(a) and 20

80 Regulation 23(5) of the 1994 Regulations (and its equivalent under the 1981 Regulations).

55

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

on business that was already in force, and the maximum value of such an item could not exceed one half of the expected full amount of those profits. The regulations provided that the level of future profits should be determined by multiplying the estimated annual profit by the average number of years – to a maximum of ten – remaining to run on policies. For this purpose, the estimated annual profit was to be taken as the average annual profit achieved over the preceding five years (known as the retrospective calculation)[81].

158. In fact the UK's approach to future profits implicit items was more cautious than the regime demanded by the Directive. The requirements for calculation prescribed by the Directive, which as explained above were largely retrospective, were supplemented in the UK by an additional prospective requirement that the amount applied for was less than the present value of profits expected to arise on the in force business. This was in order to ensure the robustness of the approach, especially in cases where the composition of the business might be changing or where there was a significant proportion of single (or recurrent single) premium business (as was the case with ELAS), and to ensure that any future profits implicit item granted was truly justifiable in terms of the margins contained within the valuation of the liabilities at the valuation date.

159. The UK's approach to this issue was set out in guidance on applying for implicit items, which was issued by DTI in 1984[82]. The guidance emphasised the requirement for a certificate signed by the Appointed Actuary to the effect that the amount claimed did not exceed the lower of the amount calculated in accordance with the requirements prescribed by the Directive and the "*present value of the profits that may be expected to arise in the future on the long term business in force on the valuation date*". The Actuary's assessment of the latter was required to be, as the guidance made plain, based on "*cautious assumptions in regard to the future experience, in many respects similar to those required for the minimum*

[81] Article 18(3)(a) of the Directive and regulation 24 of the 1994 Regulations (and its equivalent under the 1981 Regulations).

[82] A copy of the guidance is at pages 298 – 313 of the Annex.

56

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

basis for calculating mathematical reserves." The guidance explicitly stated that the future profits taken into account for the purpose of the certificate must be assessed only by reference to the business in force at the valuation date, and must not extend to potential future profits in respect of new business after that date. Some account was allowed to be taken for future premiums payable under policies in force at the valuation date where a company had the contractual right to receive them. However, this was not the case for the bulk of ELAS' business, which was recurrent single premium business, and consequently future premiums were not taken into account in the calculations made in support of its future profits implicit items.

160. The policy at the material time towards section 68 orders was set out in the guidance, which stated that section 68 orders in respect of future profits implicit items "*will be readily available, provided that the relevant requirements set out in this Guidance Note have been satisfied*".

161. The prudential regulator's role was, on the advice of GAD, to determine whether the application for a section 68 order could be justified under the relevant regulations and guidance. In exercising this function, the regulator placed, and was entitled to place, considerable weight on the certificate of the Appointed Actuary, both because of its source and of the expressly cautious basis on which it was required to be given.

162. In practical terms, if the Appointed Actuary's calculations were justifiable, the applicant company had, especially in the light of the terms of the guidance referred to above, a legitimate expectation that the section 68 Order would be granted. A refusal to grant such an order would have been highly unusual and, absent very good reason, may well have been vulnerable to successful legal challenge.

57

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

163. Moreover, as Lord Penrose noted, when the First Life Directive was implemented, there was positive encouragement from the Government Actuary and from the prudential regulator for the use of the future profits item.[83] Given such past encouragements, the rejection of a section 68 application to permit the use of such an item would have been all the more difficult to justify.

164. It is also important to note that the granting of a section 68 order was, in itself, of little or no consequence. It was the duty of the Appointed Actuary, once the order had been granted, to judge whether and to what extent it was appropriate to take account of the benefit of the section 68 order when preparing the company's regulatory returns and when considering the future financial condition of the company and, indeed, when considering its continuing ability to meet its contractual liabilities and its PRE.

165. The 1984 guidance allowed, but did not require, the prudential regulator to request details of the assumptions used in the Appointed Actuary's certificate. Given that regulation of insurance companies at that time was based predominantly on information provided in the regulatory returns, it would not have been proportionate for the regulator (or GAD) to request details of the Appointed Actuary's calculations, except where there was clear evidence from information provided in the regulatory returns (and particularly in the "matching rectangle", Form 57) to suggest that the application might not be adequately supported. That was not the case for any of the applications made by ELAS.

<u>Section 68 orders granted to ELAS</u>

166. There is no evidence that the prudential regulator at any time wrongly granted any application made by ELAS for a section 68 order to permit it to take credit for a future profits implicit item. Lord Penrose in his report expressly accepted that the

[83] See Penrose Report, Chapter 10, paragraph 10.

58

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

section 68 order made in September 2000 (and by implication each earlier order) "*was proper and in accordance with the regulations*".[84]

167. The criticisms made by Lord Penrose in his report appear principally to focus on the regulatory regime itself for allowing the use of such measures, at least on the basis then prevailing. But that was the policy of the time, reflected in the EC Life Insurance Directives, and, as explained above, it was a rational and defensible policy.[85] The only basis for an allegation of maladministration would be if the prudential regulator had improperly granted any section 68 order and thereby allowed improper credit to be taken in ELAS's regulatory returns as a result. No section 68 order was improperly granted.

168. Lord Penrose commented, rightly, that "*future profits implicit items were there to be used: the regulations provided for them.*"[86] However, he went on to say that "*... the second aspect of the certificate* [i.e. to the effect that the amount claimed was less than the present value of projected future surplus] *was not supported by the kind of extensive or penetrating analysis and projections of future trends that might have been expected.*" At the time in question, under the regulatory regime in force, such supporting material would not have been expected. The thrust of regulatory policy was antithetical to such an approach. It is a matter for argument whether a different policy would or would not have been preferable, but there is no reasonable basis, given the policy then in operation, for suggesting that such supporting material ought to have been demanded by the prudential regulator.

---

84 See Penrose Report, Chapter 19, paragraph 179.

85 It appears that part of Lord Penrose's concern was that when these surpluses were released as policies matured they in part funded the terminal bonus payouts. It is correct that some of the surplus which could be expected to emerge in subsequent actuarial valuations could, and in practice likely would, be used to finance terminal bonus payments. But this fact was not altered by the granting of a section 68 order in respect of a future profits implicit item. The amount of bonus (both reversionary and terminal) that could be declared by the company was constrained by the surplus emerging in the statutory valuation. But the surplus emerging in any year was unaffected by the implicit item, which was not an asset of the company and had no bearing on the valuation result reported in Form 58. Nor did the implicit item have any impact on the company's realistic solvency position, because this item was used only as an allowable item towards cover for the required margin of solvency in the regulatory returns, and so was relevant only to the statutory solvency position.

86 See Penrose Report, Chapter 7, paragraph 12.

59

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

169. So far as the period after 1 January 1999 is concerned, the Parliamentary Commissioner concluded in her first report (at paragraph 177) that it was difficult to see on what grounds FSA could reasonably have refused ELAS's applications, and that had they done so ELAS may have had strong grounds for complaint that they were being singled out unfairly for action which would almost inevitably have put them in jeopardy of failing to cover the required margin of solvency. It is suggested that this analysis is absolutely correct, and that its logic applies throughout the material period covered by the current complaints.

Alleged failure to assess overall impact

170. It is alleged by the complainants that the prudential regulators and GAD "*did not properly assess the overall impact and adequacy of those measures*". There is no justification for this allegation, as the regulators and GAD fully took into account the overall impact and adequacy of the measures and properly decided that there was no reason at the time to be concerned[87].

171. First, ELAS on all occasions until 2000 applied for and used less (and generally substantially less) by way of credit for future profits implicit items than they were entitled to under the regulations.

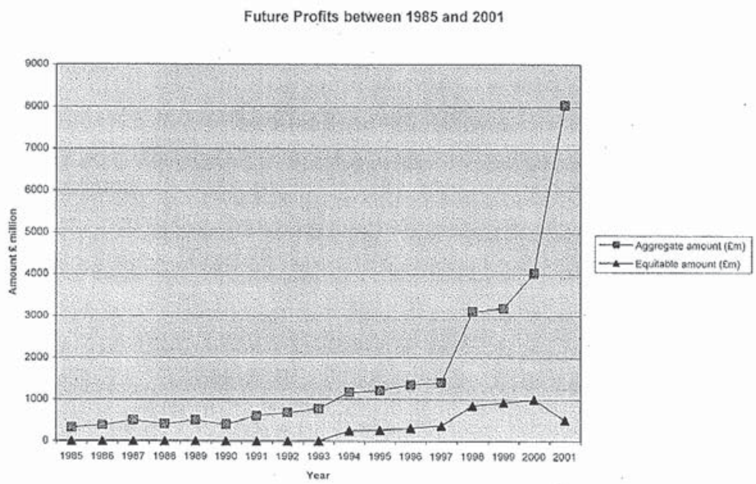
172. Second, the taking of credit for such items was not a matter unique to ELAS. Far from it. Figure 1 below shows that significant use of future profits implicit items was made by life companies during the period between 1985 and 2001. The aggregate value of these items increased markedly during this period. ELAS was by no means the first company to take credit for such an item, and the significant increase in its use of such items in the period 1995-2000 was not out of line with the increase in the aggregate amount for the industry. There was accordingly

87 In addition to the points made in the response to this Complaint, see also the response to Complaint J.

60

nothing untoward or surprising in the applications for section 68 orders made by ELAS in respect of these items.

Figure 1



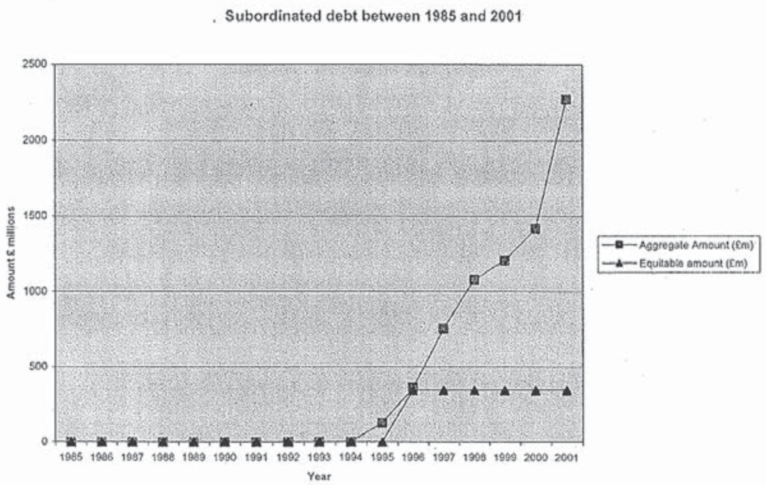
Source: GAD Synthesis database

173. Similar considerations apply to the use of subordinated debt in 1997, if this is included in the measures to which the complainants intend to refer.

174. Figure 2 below shows that subordinated debt liabilities were left out of account by a significant and increasing number of life insurance companies from 1995. The aggregate value of these excluded liabilities increased markedly during the period 1995-2001. ELAS was not the first company to leave such a liability out of account, and its excluded liability, whilst initially a high proportion of the aggregate amount for the industry in 1996, reduced to only some 15% of this amount by 2001.

61

Figure 2



Source: GAD Synthesis database

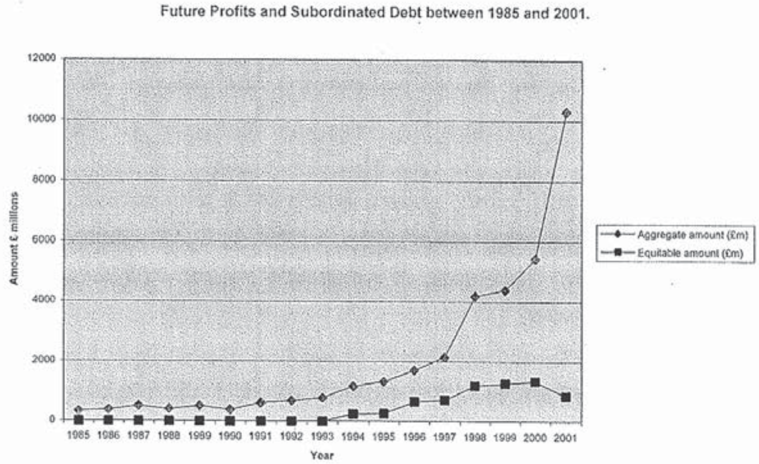
As is clear from Figure 3, the combined value of the use of these measures by ELAS was not out of line with trends in the industry generally.

62

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Figure 3



Source: Combined figures from Figure 1 and Figure 2

Use of the term 'surplus'

175. Complaint H also contains an allegation that the prudential regulators "*allowed ELAS to mis-use the term 'surplus'*". This allegation is not understood. 'Surplus' is a standard term used by life insurance companies, which takes its meaning from the relevant legislation; and there is no evidence of which the regulator is aware that ELAS used the term in any different sense from the standard sense or from the rest of the industry.

Complaint I

"Over this same period, the regulators allowed ELAS to publish financial results and projections that were misleading in that they did not reflect the Society's true position. In particular, ELAS was allowed to habitually report growth rates alongside bonus rates, which gave the impression of a prudent margin for error, whereas the true position was that:

63

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

- *assets were consistently less than policy values so that higher rates of growth were needed to cover any given rate of bonus; and*
- *as part of the growth was needed to cover expenses and the contractual liability for conventional annuities, the growth available to meet with-profits bonuses was always materially less than the rate quoted in ELAS literature. This was never made clear.*"

176. The complainants' primary concern, as reflected in this Complaint, appears to relate to financial results and projections included by ELAS in literature supplied to its customers. The accuracy of such material was not within the remit of the prudential regulator.[88]

177. ELAS reported growth on its with-profits policies in the form of a guaranteed reversionary bonus and a non-guaranteed terminal bonus. The aggregate "growth", being the total of these amounts, was sometimes higher and sometimes lower than the rate of return on the fund.[89] This reflected a deliberate policy which the management of ELAS and its Appointed Actuary elected, and were entitled, to adopt. It was not for the prudential regulator to prescribe or restrict the approach to be followed, provided it complied with statutory requirements.

178. In characterising what they say was ELAS's "*true position*", the complainants assert that "*assets were consistently less than policy values*". It is not clear on what the complainants base this assertion; but it may be based on calculations which were carried out by Lord Penrose by reference to ELAS's internal office valuation accounts. Those accounts were not seen at the time by the prudential regulator or GAD. Moreover, it is unclear from the presentation of these results in the Penrose Report, or from similar calculations carried out by Burgess Hodgson, how these calculations ensure proper consistency of assets and liabilities, since

---

88 When the prudential regulator had concerns that bonus notices issued by ELAS might be misleading, those concerns were communicated to the conduct of business regulator: see the response to Complaint B above.

89 This was illustrated in the with-profits guide for policyholders, which showed how, on average and over time, policy values grew in line with the value of the fund.

64

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

the issue is confused by different methods of assessing the value of the assets, including factors which are not permitted to be taken into account for statutory purposes but which could reasonably be taken into account on a realistic basis. The value of policies was also dynamic, since terminal bonus, even if regarded as an entitlement, is only paid out when a policy becomes a claim and a proper analysis would therefore need to take the form of a full future financial condition report.

179. Comparison of policy values against asset values is of course a complex actuarial exercise where different professional opinions are possible and which depends on the methodologies and assumptions underlying the calculations[90]. However, it is not necessary to expand further on this for two reasons:

(1) The prudential regulator approached the issue on the basis of the valuation requirements set out in the regulations. Under these requirements ELAS's coverage of the required solvency margin (as shown by its regulatory returns) never dropped below 1.34 (i.e. still a third more than the required level) between 1989 and 2000.

(2) In the absence of a breach of these requirements, the relationship between asset values and policy values in "realistic solvency" terms was a matter for the professional judgment of the Appointed Actuary and the commercial judgment of ELAS's Board.

180. No instances have been identified in which the prudential regulator or GAD allowed any financial results or projections to be disclosed in the regulatory returns, or any bonuses to be declared, that were contrary to the statutory regulations.

[90] Smoothing policy is also a relevant factor – as to which please see further discussion under Complaint L below.

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

181. The only potential relevance of literature supplied to customers for the prudential regulation of ELAS was in relation to PRE: as to which see the Response to Complaints N and O below. It was recognised by the regulator that ELAS's practice of presenting total policy values to with-profit policyholders in bonus notices, which included an accrued terminal bonus element, potentially raised PRE issues. The key issue was the extent, if any, to which this presentation gave with-profits policyholders a reasonable expectation that the accrued terminal bonus element, and thus potentially their total policy value, would not go down in future years. Because the bonus notices clearly stated that the terminal bonus element of the total policy value was not guaranteed it was reasonably open to the prudential regulator to conclude that this was not a reasonable expectation[91]. Nevertheless concerns about the risk of expectations being created were discussed with ELAS, for example on the 1996 regulatory returns[92].

Complaint J

"During this period, the regulators and GAD failed to act when ELAS adopted what Lord Penrose described as practices of 'dubious actuarial merit'. These included valuing future liabilities at an inappropriate rate of interest between 1990 and 1996; treating selling costs as an asset; making no provision for GARs until much too late; valuing a financial re-insurance policy (which proved to be of no value) at over £800 million; allowing credit for 'aspirational' (i.e. effectively unrealisable) assets; responding too slowly to widely evidenced changes to mortality expectations; and the issuing of a subordinated debt worth £346 million which did not count as a liability."

Actuarial practices adopted by ELAS

182. Lord Penrose was critical in his report of the merits of certain actuarial practices adopted by ELAS, and (with the benefit of hindsight) expressed concern about the regulatory response to six such practices.[93] At the same time Lord Penrose

---

91 It is worth noting that Lord Penrose felt that there would be no constructive obligation either – see Chapter 10 paragraph 83 of his Report.

92 See Penrose Report, Chapter 16, paragraph 242.

93 See Penrose Report, Chapter 19, paragraph 166.

66

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

acknowledged that most of the steps taken by ELAS were "*within the limits allowed in the valuation regulations and published guidance*".[94]

183. The prudential regulators' reaction to ELAS's use of these actuarial practices must be seen in the context of the relevant requirements of the statutory regulatory framework and the reliance that the system placed on the role of the Appointed Actuary. Fundamentally, the actuarial practices employed by ELAS were a matter for the professional judgment of the Appointed Actuary, acting of course within the limits allowed in the regulations. Provided the practices adopted were within these permitted limits, the regulators and GAD cannot properly be criticised for not taking regulatory action.

184. Having said that, as explained below, not all of the actuarial practices adopted by ELAS were permissible, and when practices which were impermissible came to the regulator's attention, they were dealt with. See, in particular, the discussion below of ELAS's use of the 'quasi-Zillmer adjustment'.

185. The seven actuarial practices specified in Complaint J (which include five of the six areas of concern identified by Lord Penrose[95]) are discussed in turn below.

(i) Valuing future liabilities at an inappropriate interest rate

186. Lord Penrose criticised the practice adopted by ELAS, between 1990 and 1996, of using different interest rates for projecting gross bonus rates and for discounting liabilities, with the result that "*the liabilities in respect of recurrent single premium business were valued at less than face value*".[96]

187. The prudential regulator was appropriately concerned at all times to ensure that the interest rates used by ELAS for its statutory valuation were permissible under

[94] Ibid, paragraph 167.

[95] The other area of concern identified by Lord Penrose was the use of future profits implicit items, which has been addressed in the response to Complaint H above.

[96] See for example Penrose Report, Chapter 19, paragraph 102.

67

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

the statutory regulations. They were. In particular, regulation 69 of the 1994 Regulations (and its equivalent under the 1981 Regulations) was complied with at all times. There was also no breach of regulation 65(5) of the 1994 Regulations.[97]

188. What is more, there were potentially good reasons for making valuation assumptions which valued liabilities at the lower end of the permitted range. Such a valuation enhanced investment flexibility and obtained increased investment freedom, which was a legitimate commercial objective.

189. Lord Penrose objected to ELAS's practice of using an interest rate in its bonus reserve valuation which was greater than the projected future rate of bonus, on the ground that this was contrary to "*best actuarial practice*" and to "*the accepted actuarial opinions expressed by GAD officials*".[98] In fact, there was no established best actuarial practice on this point at the time, and there was no GAD view that had been externally expressed or accepted at that time.

190. The prudential regulators and GAD were aware of the interest rate differential adopted by ELAS in its bonus reserve valuation, and considered its appropriateness at the relevant time. However, what was of prime importance from the regulator's perspective was the *net premium valuation*. The interest rate assumptions with which Lord Penrose took issue related to the *bonus reserve* valuation, in which explicit allowance had to be made for future bonuses, and *not* to the net premium valuation, which did not require any assumption regarding

---

[97] This was introduced for the first time in 1994, and required that the calculation of the amount of liabilities and the assumptions used must not be subject to discontinuities from year to year arising from arbitrary changes and must be such as to recognise the distribution of profits in an appropriate way over the duration of each policy. This requirement was sometimes used by the regulator to challenge inappropriate trading off of prudential margins in demographic and economic assumptions. But given that the valuation interest rates used by ELAS evidently remained close to the supporting asset yields throughout, it would not have been possible or appropriate to argue that the changes being made were arbitrary, as they were clearly related to the actual experience of the underlying assets. There was also no breach of the requirement in regulation 65(5) to "*recognise the distribution of profits in an appropriate way over the duration of each policy*" because of the net premium test that needed to be satisfied in the valuations – this constrained the amount of surplus that could be declared in each year.

[98] See Penrose Report, Chapter 19, paragraphs 51 and 169.

68

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

future bonus levels. Crucially, the aggregate reserves in the bonus reserve valuation were required to be no less than those in the net premium valuation, which had to comply fully with the regulations and which therefore constrained the amount of surplus reported each year. It was on the net premium valuation that the regulators and GAD necessarily had to focus to discharge their central obligation of ensuring that ELAS's reported solvency position met the statutory requirements.

191. The margins in the valuation interest rates used by ELAS in the net premium valuation were understandably modest given the adverse investment conditions prevailing at the time. However, at no time did the interest rate assumptions used contravene the regulations.

192. Lord Penrose does not dissent from the judgment reached at the time, but suggests that it is clear (with hindsight), on a review of ELAS's realistic position, that "*the contemporary view reflected a concentration on the global position of the Society that gave inadequate weight to inter-generational implications of decisions*".[99] This is not a valid ground for criticism of the prudential regulators. The focus of regulation at the time was, properly, on the "*global position of the Society*". Inter-generational effects on different cohorts of policyholder were principally a matter for ELAS's Board rather than for the regulator (subject to PRE considerations – as to which see Complaints N and O below).

193. Lord Penrose also commented that this practice "*generated surplus available for allocation by mathematical means that were inconsistent with an intuitive view of the Society's ability to pay.*"[100] In fact, the practice did not generate surplus available for allocation because, as explained above, the amount of surplus available for allocation each year was constrained by the net premium valuation. In any event regulation was not, and ought not to have been, carried out on the

99 See Penrose Report, Chapter 19, paragraph 170.
100 Ibid, paragraph 51.

69

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

basis of an "*intuitive view*". It was carried out in accordance with the statutory regulations in force from time to time.

(ii) Treating selling costs as an asset (the 'quasi-Zillmer adjustment')

194. A 'Zillmer adjustment' allows for the uneven incidence of expenses incurred by a life insurance company writing new regular premium policies and effectively spreads the costs of writing the policy over its future life. Regulation 68 of the 1994 Regulations (and regulation 58 of the 1981 Regulations) provided for an adjustment of this nature, in recognition of the fact that where future premiums were being valued in terms of regulation 67, the maximum annual premium to be valued would not take account of the reality that the life insurance company would have priced the product on the basis that un-recouped initial or acquisition expenses would be recovered from future premiums. The adjustment was permitted, subject to applicable limits, to increase the permissible future premium by annuitising the un-recouped expenses over the remaining period during which the regular premiums were payable.

195. A 'Zillmer adjustment' is not, however, appropriate for recurrent single premium policies where the policyholder has a right but not an obligation to make further premium payments.[101] That is why the 'quasi-Zillmer adjustment' made by ELAS in respect of recurrent single premium policies in its resilience reserve calculations was inappropriate and why the regulator clamped down on the use of such an adjustment as soon as its use came to its attention.

196. Lord Penrose rightly commented that the quasi-Zillmer adjustment adopted by ELAS in calculating its resilience reserve was not "*consistent with sound and prudent actuarial practice*".[102]

[101] The adjustment was permitted where "*further specified premiums are payable by the policy holder under a contract...*": see regulation 67 of the 1994 Regulations.

[102] See Penrose Report, Chapter 19, paragraph 52.

70

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

197. The use by ELAS of this quasi-Zillmer adjustment was not disclosed to the prudential regulators by the Appointed Actuary, as his professional obligations required him to do. In consequence, the true nature of the adjustment was not identified by GAD until its detailed scrutiny of the 1999 regulatory returns. Such previous references as had been made to the adjustment were scattered and opaque and fell well short of the disclosure required. There is one alleged exception that is disputed, as explained below.

198. There is no doubt about the failure of ELAS properly to disclose the use of this impermissible actuarial technique. Indeed, even after his exhaustive inquiry, Lord Penrose was still unable to date when it began to be used more precisely than "*some point in the 1990s*."[103] He said: "*The year in which ELAS first made use of a quasi-Zillmer adjustment in the form that ultimately became controversial is not known.*"[104] Nor could he say how the sum of £950m, which was the ultimate gross value of the adjustment when it came to light (before adjusting for other factors – see paragraph 191 below), was built up.[105]

199. The adjustment was the subject of a brief aside in the regulatory returns from 1994 onwards but its nature was not made apparent. Prior to that, there was no mention at all of any such adjustment in ELAS's regulatory returns. Lord Penrose recognised that the regulatory returns, which were the key regulatory tool, did not disclose the quasi-Zillmer adjustment in anything like appropriately clear terms. As he said in Chapter 7 of his report:[106]

> *"References were included in the regulatory returns for 1994 onwards, but not in clear terms that would have alerted the scrutinising actuary.....The only way to have identified the adjustment at that stage would have been to have examined in detail the Society's resilience calculations...."*

---

103 See Penrose Report, Chapter 19, paragraph 123.
104 See Penrose Report, Chapter 7, paragraph 21.
105 Ibid, paragraph 26.
106 Ibid, paragraphs 24 and 33.

71

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

> *"The disclosure in the 1996 returns has been generously described…as 'cryptic'. One could say no less about the 1994 and 1995 returns. Given the confused state of the information provided, it was perhaps understandable that GAD failed immediately to detect the true meaning of the disclosures."*

200. The adjustment was presented in a way that suggested (incorrectly), even to an experienced reader, that it related to an allowance for future expenses, which increased the reserve. In the circumstances, the assumption that the adjustment related to ongoing expenses was a perfectly logical one.

201. Not only was the adjustment not disclosed as it should have been, but the 1994 regulatory returns, in which an opaque reference to it first appeared, followed a meeting in December 1994 at which [redacted] had told DTI and GAD, in terms, that ELAS "*took no account that 90% of the recurrent single premiums would be renewed*"[107].

202. If that statement were true, it is very difficult to see how it could be reconciled with any Zillmer adjustment in the resilience reserve for recurrent single premium business. The prudential regulator was entitled to take [redacted] at his word and proceed on the basis that he had told the truth. It now appears that what [redacted] told the regulator was false, and that [redacted] may well have known this.

203. Use of the adjustment in the way that ELAS's Appointed Actuary turned out to be using it was completely unknown. The Zillmer adjustment had never been considered in the actuarial literature for the purpose for which the Appointed Actuary was using it and no other company had sought to use such an adjustment for this purpose. This was a further reason for GAD not to suspect that the nature of the adjustment was such as ultimately emerged.

107 See Penrose Report, Chapter 7, paragraph 30.

72

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

204. Given the novelty and obscurity of the adjustment, and given the finite time that was available for the completion of each detailed scrutiny, it cannot be regarded as maladministrative for this opaque detail in a document of several hundred pages to have been accepted at face value and not made subject to specific follow-up. As soon as the true nature of the adjustment was discovered, it was swiftly identified as inappropriate and required by the regulator and GAD to be removed.

205. On analysis, the only basis advanced by Lord Penrose for possible criticism of regulators on this issue is a letter from ELAS of 6 November 1992 which did not form part of the regulatory return. Lord Penrose said:[108]

> *"The information provided by the Society to GAD, apart from the letter of 6 November 1992, was not clear until* [redacted] *was challenged on the 1999 return."*

206. The letter of 6 November 1992[109] included the following words:

> *"……new business did not produce a strain during 1991. This was due mainly to the fact that the valuation bases for recurrent single premium business released monies at the outset in a similar way to the release produced by a zillmer adjustment."*

It is this brief remark on which Lord Penrose founds his observation at Chapter 19, paragraph 130 of his report that "*the intimation of a quasi-Zillmer adjustment to the regulator in November 1992, affecting the valuation bases at the time, was clear, and should have caused comment.*"

207. The HMT, FSA and GAD do not accept that the remark can possibly bear the weight which Lord Penrose, applying the benefit of hindsight, attributed to it. It was very far from clear that what was being referred to in the letter of 6 November 1992 was a Zillmer adjustment to ELAS's statutory valuation basis. Indeed, there were several good reasons for naturally understanding otherwise.

---

108 See Penrose Report, Chapter 19, paragraph 173.
109 A copy of which can be found at pages 319 – 321 of the Annex.

73

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

208. In the first place, such an adjustment did not appear anywhere in ELAS's 1991 regulatory returns, which were the immediate catalyst of the correspondence of which [redacted] 6 November 1992 letter formed a part.

209. Secondly, the reference to releasing monies in a way similar to a Zillmer adjustment was made in the context of a reference to generic "*valuation bases*". There was only one statutory valuation basis. Other valuation bases would include ELAS's own internal office valuation. It was not apparent from the letter that the adjustment was relevant to the former rather than the latter.

210. ELAS's response to the 1993 bonus survey, shortly after the letter of November 1992, showed that a similar adjustment was indeed used by ELAS in the asset share calculations made for its internal office valuation. In contrast, no mention was again made of such an adjustment in the 1992 regulatory returns, which was the next return to be supplied after the 6 November 1992 letter. The subsequent 1993 return also made no mention of the quasi-Zillmer adjustment.

211. Finally, and importantly, at the time the November 1992 letter was received GAD was already aware from [redacted] letter of 12 May 1992,[110] that ELAS appreciated that there was "*no accepted method of "Zillmerising" recurrent single premium business.*" Given this clear, and entirely accurate, statement in May 1992, it is hardly surprising that the reference in the November 1992 letter, which was not reflected in any adjustment disclosed in the previous or next two following regulatory returns, was not picked up as being precisely that which [redacted] had so recently acknowledged was not possible.

212. In such circumstances, it is not surprising that GAD, charged as it was with a review of the regulatory returns, did not follow up the passing reference in this one letter to a release of monies in a similar way to a Zillmer adjustment. Lord

110 See Penrose Report, Chapter 16, paragraph 60.

74

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Penrose no doubt chooses his words carefully when he says that GAD had "*intimation*" of the practice in November 1992.[111] With the benefit of hindsight, of course, it is easy to say that there could have been further follow-up of the point in November 1992. But in the context at the time, GAD cannot reasonably be criticised for failing to appreciate its significance. Furthermore, given the complete non-disclosure of the adjustment in the next two regulatory returns, and given the misleading presentation by [redacted] at the 1994 meeting, it must be seriously doubted whether any further correspondence following that of 6 November 1992 would have borne any recognisable fruit.

213. It should be added that it is not accepted that the impact of the quasi-Zillmer adjustment was significant in the context of ELAS's subsequent difficulties. The adjustment was used only in the determination of the resilience reserve, and not in the calculation of policy liabilities. It may also be noted that the quasi-Zillmer adjustment, while relevant for statutory purposes, had no effect on ELAS's realistic solvency position.

214. The size of the impact on the resilience reserve is known only with hindsight. The increase in that reserve which resulted from the removal of the adjustment in the 1999 regulatory returns was £200m, made up of a £950m gross cost, offset by a saving of £750m resulting from other ways in which the Appointed Actuary was able legitimately to reduce the resilience reserve, and which had not been called upon when the adjustment had been in use.

215. Until that time, the Appointed Actuary had chosen not to take advantage, to the full extent that was permissible, of the option to hypothecate particular assets to match particular groups of liabilities under regulation 69(12) of the 1994 Regulations (and its equivalent under the 1981 Regulations) in calculating the resilience reserve. This meant that there was an implicit prudential margin in the reserve, which the Appointed Actuary was entitled to reduce.

---

111 See Penrose Report, Chapter 19, paragraph 173.

75

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

216. The figure of £200m should be viewed in the context of available assets of £3.9bn (which sum allows for the above net increase in the resilience reserve) covering the required solvency margin of £1.1bn reported by ELAS in 1999, and of the £1.6bn gross GAR reserve (reduced to a net reserve of just over £0.5bn on account of the GAR reinsurance treaty) held by ELAS in that year.

217. There is also the more general point that the various complaints relating to ELAS's regulatory solvency position – including the quasi-Zillmer adjustment – are only as important as ELAS's regulatory solvency position itself. Yet it is also complained that regulatory solvency, at least in the later years, was of increasing irrelevance and that the prudential regulator should have been focussing its attention on ELAS's realistic solvency position. There is a clear tension between these two complaints.

(iii) Failure to make provision for GARs

218. This point has been addressed in the response to Complaint G above.

(iv) The financial reinsurance policy

219. With effect from 31 December 1998, ELAS entered into a financial reinsurance treaty agreement with Irish European Reinsurance Company Limited ("IERC"). The purpose of the reinsurance treaty was, as ELAS put it in its 1998 regulatory returns, to "*provide surplus cover for the costs arising from the exercise of guaranteed annuity rates in respect of Retirement Annuity Policies, Individual Pension Plans and Transfer Plans issued before 1 July 1988.*"

220. Under the reinsurance treaty, IERC agreed to pay for the additional costs of GAOs should they be exercised on more than 25% of the funds retiring in any one year. If that were to happen, IERC would be liable to pay ELAS an amount which

76

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

equalled the additional cost of providing an annuity at the GAR compared with the cost of an annuity at current market rates. IERC would, in return, then have a "call" on surplus emerging after the date of claim under the reinsurance treaty.

221. Taking credit for rights under reinsurance contracts did not require a section 68 order, because it was already expressly permitted under the valuation of liabilities provisions of the 1994 Regulations.

222. ELAS made proper disclosure of the reinsurance treaty in its 1998 regulatory returns, following a firm stance taken by the regulator at a meeting of 28 January 1999, when the regulator had emphasised:

> *"...any presentation [in regulatory returns] which did not show separately the gross liability and reinsurance cover would be artificial and hence potentially misleading. In view of the significance of the reinsurance agreement to the company's solvency position it was important that the level of dependence on the reinsurance was clear to readers of the returns."*

223. The reinsurance agreement was conditional on there being no change to ELAS's terminal bonus practice. This was a point which the prudential regulator was fully alive to, and had cautioned ELAS about, as recorded at paragraph 4.28.7 of the Baird Report. Following the House of Lords' judgment, such a change was indeed necessary, and the reinsurance treaty was renegotiated with the "take up" assumption rate increased from 25% to 60%.

224. It was not for the prudential regulator to decide whether or not to accept a reinsurance agreement entered into by a life insurance company as a means of complying with its statutory reserving requirements. It was the Appointed Actuary's responsibility to decide on the level of credit that could be taken in the regulatory returns for the treaty, taking into account the risk that it might be cancelled and its effect on ELAS's solvency when combined with other measures used in the solvency calculations.

77

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

225. The Parliamentary Commissioner has dealt with these issues in her first report. She concluded that:[112]

(1) Given that reinsurance was an accounting practice which was accepted as legitimate by the profession and the industry, and backed by FSA's own professional advisers, FSA could not reasonably have refused to accept its use in ELAS's case;

(2) The FSA, with GAD's advice, took an active interest in the terms of the agreement and suggested a number of amendments in order to protect policyholders' interests;

(3) The fact that the reinsurance agreement only stood as long as the differential terminal bonus policy remained unchanged did not render the agreement imprudent or make it worthless if the policy changed, but only meant that the agreement had to be renegotiated in that eventuality – which it was.

(4) She was satisfied that FSA's acceptance of the reinsurance agreement was not maladministration.

226. These conclusions were all entirely correct.

227. Lord Penrose took the view that the reinsurance treaty did not, in fact, transfer material risk to the reinsurer and was not, in his view, a contract of reinsurance at all. His view was that in reality the transaction was a financing arrangement that established a contingent right to draw down funds, and that to treat such a right as an asset was not permitted by the regulations.[113]

---

112 See "*The Prudential Regulation of Equitable Life*", Part II, paragraphs 172-173.

113 See Penrose Report, Chapter 7, paragraphs 104-5 and Chapter 19, paragraph 194. Lord Penrose felt that the premium payable was evidence that the amount of risk transferred was small. However, the premium to which Lord Penrose refers was not the totality of ELAS's obligation under the treaty. There was also included within the treaty an obligation for ELAS to pay the reinsurer a "risk amount" each year of 2% of the cumulative amount of claims made by ELAS under the treaty out of surplus emerging subsequently, which additional payments were potentially very significant.

78

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

228. HMT, FSA and GAD disagree fundamentally with this view. FSA have sought fresh advice on this, and are satisfied – as they were at that time – that both European and domestic legislation permitted contracts in this form to be given a value in determining the regulatory solvency position of insurance companies. In acting as it did, the prudential regulator acted in accordance with the Statement of Recommended Practice subsequently issued by the Association of British Insurers in 2003.[114] Whether a contract between an insurance company and a reinsurer is properly to be regarded as a contract of reinsurance is sometimes not an easy question. Even if Lord Penrose's view is right, however, (and it is emphasised that this is disputed), the view taken by the regulator cannot be said to have been an improper one at the time.

229. Lord Penrose also thought that the contingency of ELAS losing the *Hyman* case was not reflected in the value that was taken into account.[115] HMT, FSA and GAD disagree. The risk of the treaty being cancelled if ELAS lost its court case was fully appreciated by GAD and the prudential regulator when considering the credit that was taken. The legal advice obtained by the regulator before the *Hyman* litigation was that it would be difficult to take issue with the view of ELAS's counsel that on balance its practices were valid in terms of contract and trust law. ELAS was of course successful in the High Court, so at that stage there certainly was no reason to believe that there was a high risk that the treaty would be cancelled. The amount of credit that could be taken was re-considered after the judgment of the Court of Appeal. At that stage the ring-fencing of the relevant liabilities appeared to be a potential option. Had ring-fencing been allowed by the

---

This structure of payments was consistent with the nature of the treaty, which was covering a financial timing risk. The regulator considered that ELAS's *aggregate* obligation under the treaty, *including* the "risk amounts", reflected the reinsurer's perception of the risk that it was assuming under the treaty (which itself will have depended on the reinsurer's assessment of the merits of ELAS's differential terminal bonus policy). The regulator had no way of knowing that the operation of the treaty was subject to potential modification as a result of a "side letter" the existence of which was concealed from it.

114 This is quoted at Chapter 7, paragraph 66 of the Penrose Report.

115 See Penrose Report, Chapter 19, paragraph 195.

79

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

House of Lords, the re-insurance treaty would not need to have been re-negotiated.

(v) Allowing credit for aspirational assets

230. It is not understood what actuarial practice this allegation is intended to describe.

231. There is no basis for suggesting that credit for any assets of an intangible nature was improperly taken in the course of demonstrating statutory solvency in the regulatory returns submitted by ELAS. Regulation 45(3) of the 1994 Regulations (and its equivalent under the 1981 Regulations) specifically required that any asset for whose valuation no provision was made in Part XIII of the 1994 Regulations (and its equivalent under the 1981 Regulations) had to be left out of account. Such excluded assets included intangible assets of all kinds. There is no evidence that the asset valuation regulations were not complied with fully by ELAS at all times.

(vi) Responding too slowly to changes to mortality expectations

232. The claim that the prudential regulator and GAD "*respond[ed] too slowly to widely evidenced changes to mortality expectations*" does not reflect a concern expressed by Lord Penrose about the regulatory response to ELAS's actuarial practices, but appears to be based on a comment on mortality assumptions made by Lord Penrose in relation to the conduct of the Board of ELAS.[116]

233. It is not the case that GAD or the prudential regulator failed to keep track of changes in mortality expectations. On the contrary, before the start of each scrutiny year, GAD issued internal guidelines to its actuaries as to the strength of the mortality assumptions that should be looked for in the regulatory returns,

[116] See Penrose Report, Chapter 19, paragraph 102. This comment is stated in a footnote to be based on material contained in Chapters 6, 16 and 17 of the report but no specific cross-references are provided.

80

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

taking into account the need for these to be prudent as required by regulation 70 of the 1994 Regulations (and its equivalent under the 1981 Regulations). The purpose of these guidelines was to provide an indicator of when these assumptions should be challenged. They were set following a detailed analysis of the most recently available pooled mortality experience of life insurance companies, as collated and reported annually by the Continuous Mortality Investigation Bureau, a research body established by the UK actuarial profession and funded by the participating life companies.[117] The guidelines made allowance for future mortality improvements for annuitants.

234. These guidelines, however, were not intended to be prescriptive. GAD and the prudential regulator always recognised that each life insurance company faces unique mortality and morbidity experience according to the profile of risks on its books. It is a matter for individual firms to adapt the standard mortality tables to meet these individual risks, which only they are in a realistic position to assess. The role of the regulator, through GAD, was to ensure that relevant factors had been taken into account and that conclusions reached were reasonable. GAD was frequently at the forefront of challenging commonly held assumptions of the profession, including those relating to mortality, and seeking to ensure a prudent interpretation of the regulations.

235. This approach is illustrated by the close watch which GAD kept on ELAS's use of mortality expectations. For example, GAD specifically requested information from ELAS about the use of mortality rates that "*looked light*" as part of the process of scrutiny of the 1993 regulatory returns.[118] The following year, it challenged the mortality assumption used by ELAS's Appointed Actuary for general annuity contracts in its detailed scrutiny of ELAS's 1994 regulatory

117 GAD was represented on the Steering Committee and Mortality Subcommittee of the Bureau. The reports were received by the Government Actuary as a member of the Committee and passed on to C Directorate of GAD.

118 See Penrose Report, Chapter 16, paragraph 144; and also paragraph 145.

81

returns.[119] GAD continued to have regard to the need to press ELAS to strengthen its mortality assumption for such contracts appropriately as annuitant longevity improved.[120] These consistent efforts did achieve results (see, for example, [redacted] on 22 November 1994 and 21 February 1996, accepting that strengthening of mortality assumptions was appropriate[121]).

236. It is simply not true that the prudential regulator/GAD responded too slowly to "*widely evidenced changes*" to mortality expectations. GAD always required companies to make prudent allowance for mortality, including, in the case of annuities, prudent allowance for future improvements in mortality. What is true is that the acceleration in the improvement of such expectations during the 1990s was unprecedented. The regulator cannot be blamed for not fully anticipating the extent of these changes. However, GAD reacted appropriately to what was a moving target as the progressive inadequacy of the allowance already made for mortality expectations became "*widely evidenced*".

(vii) The Subordinated Loan

237. Under the 1994 Regulations, loan capital could not generally be counted as cover for the required solvency margin, because the value of the money received was offset by a corresponding liability to repay the loan with interest. However, those same regulations provided that loan capital could be counted if the obligation to repay the loan was subordinated to the rights of policyholders and a section 68 order was obtained.[122]

119 Ibid, paragraph 184.
120 Ibid, paragraphs 199 and 201.
121 See Penrose Report, Chapter 16, paragraphs 148 and 185.
122 These provisions gave effect to mandatory requirements of Article 25(1) of the Third Life Directive, which set out the relevant criteria to be met in order for a subordinated loan to be included within capital (see also paragraph 89 of the Regulatory Paper).

82

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

238. A £350m loan was treated as subordinated by ELAS in calculating its solvency position in its regulatory returns for 1997 and later years. This treatment was properly authorised by the regulator. As Lord Penrose concluded:[123]

> *"The Society was authorised to ignore subordinated debt in calculating its form 9 solvency position. The authorisation was within the scope of the relevant regulations and guidance. I do not criticise any of the formal steps taken or the propriety of the order granted".*

The relevant guidance note was Prudential Guidance note PGN 1994/1.

239. Lord Penrose suggests that ELAS's interest in raising this form of debt should have alerted regulators to its weakening position.[124] Putting the point at its highest, it could perhaps be said that the fact that ELAS obtained the subordinated loan *could* have been an indication that ELAS itself saw difficulties ahead. But that was not how the measure was represented by ELAS to the prudential regulator, whether in its regulatory returns or otherwise, as explained below.

240. On the contrary, it seems that when the Board of ELAS first considered subordinated loan capital, in 1993, it did so pursuant to an interest in raising capital from members on an ongoing basis, and giving members of ELAS an additional vehicle for investing on favourable terms.

241. It was in this context that [redacted] first approached DTI in 1993 about a proposal for the issue of up to £100m of redeemable individual bonds. In doing so, [redacted] told DTI that ELAS was not short of capital for its business expansion and presented a strengthening of the solvency position as a "*by-product*" of offering an attractive new investment opportunity to policyholders.[125]

123 See Penrose Report, Chapter 19, paragraph 183.
124 Ibid, paragraphs 184 and 187.
125 See Penrose Report, Chapter 16, paragraph 110.

83

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

242. When the matter was revived with DTI in March 1997, [redacted] again expressly represented that the proposed loan was "*essentially for investment purposes*".[126] A section 68 order was issued in August 1997.

243. Nor did the market perceive the subordinated loan to be a sign of actual or impending weakness on the part of ELAS. As Lord Penrose acknowledged, the loan issue was successful.[127]

244. Although he accepted that the subordinated debt authorisation was within the regulations, Lord Penrose's criticism was that there was "*considerable difficulty in justifying the transaction on a broader basis*" on the ground that it added to the demands created by the financial reinsurance treaty and the use of future profits implicit items, thereby accelerating the benefit taken for future profits and reducing the resilience of ELAS to future events.[128]

245. It is true that subordinated debt has to be repaid out of future surplus (provided there is such surplus) and that there was an interest cost to ELAS of servicing the loan. But the relevant provisions in the regulatory regime allowed its use, and this was an accepted means for a mutual life insurance company (which did not have shareholders on whom to call for funds) to raise external capital. It should also be remembered that the calculations of future profits implicit items explicitly took account of the effect of other measures such as financial reinsurance and subordinated debt, so that the projected cost of such measures reduced the amount of future surplus available and in respect of which credit might be taken by way of future profits implicit items[129].

126 Ibid, paragraph 209.
127 See Penrose Report, Chapter 7, paragraph 58.
128 See Penrose Report, Chapter 16, paragraph 219.
129 See, for example, Chapter 18, paragraph 26 of Lord Penrose's Report, which shows that GAD explicitly required certification from ELAS's Appointed Actuary on the effect of the GAR reinsurance treaty in this respect when advising the regulator on ELAS's application for a future profits implicit item to be included in its 1998 regulatory returns.

84

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Complaint K

"On several specific occasions, as set out in the Penrose report, the regulators and GAD ignored or failed to act on information that might have led to formal or informal regulatory action against ELAS, thus also failing to alert new investors to the risks of investing. These include when ELAS board papers were sent to GAD by the appointed actuary on 11 June 1991, and when information was provided to GAD on 10 September 1992 which showed that, for the years 1989 to 1991, the aggregate policy values very significantly exceeded the value of the underlying assets."

246. Complaint K refers to "*several specific occasions*" when, so it is alleged, the regulators and GAD ignored or failed to act on information that might have led to regulatory action against ELAS. Two such alleged occasions are identified. They are dealt with in turn below. It is not possible to address any other occasions (if there are any) to which the complainants intend to refer, unless these are specified.

11 June 1991

247. In Chapter 16 of his report (at paragraphs 40-46), Lord Penrose refers to the provision by [redacted] to [redacted], on an expressly confidential basis, of certain Board papers relating to ELAS's 1990 valuation and bonus declaration together with a paper on investment for the March 1991 Board. These papers were provided under cover of a letter dated 11 June 1991.

248. Lord Penrose commented that:[130]

> "[redacted] *had been put in possession of critical information that disclosed the Society's precarious position, and the extreme nature of the steps taken to maintain bonus allocation in a year of severe losses."*

249. It is not accepted that the information was "*critical information*" or that it revealed any "*extreme*" steps. The adjustment to the liability valuation which

[130] See Penrose Report, Chapter 16, paragraph 42.

85

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

ELAS had made was legitimate and well within the applicable regulations. As he explained to Lord Penrose, [redacted] saw no problem with the adjustment. Moreover, GAD was, quite reasonably, fortified in this conclusion by subsequent correspondence with [redacted] in November 1991.[131]

250. Lord Penrose was critical of [redacted] decision not to pass these papers on to DTI. He said that [redacted] was "*in error in allowing a private understanding with* [redacted] *to cloud his duties to regulators*".[132] [redacted] had, certainly, been placed in a difficult situation by the terms on which the material had been provided to him by [redacted]. But, viewed at the time, the documents did not, in fact, disclose any grounds for anyone reading them to have any significant concerns about the solvency of ELAS, which was the key focus of the regulatory regime. Lord Penrose's criticisms of [redacted] decision not to pass the documents on are made with the benefit of hindsight. It is only in the light of subsequent events and their consequences that Lord Penrose concludes that these papers may have carried clues to the future. [redacted] actions were entirely professional and understandable given the circumstances then existing and the nature of the documents he had received. It is not therefore accepted in any way that [redacted] decision was an error of judgment, nor that the information provided by [redacted] could or should have led to regulatory action against ELAS.

<u>10 September 1992</u>

251. The second occasion identified in Complaint K is the provision to GAD on 10 September 1992 of information which showed that, for the years 1989 to 1991, the present value of all bonuses which had been declared on policies in force (including terminal bonuses "*at the rates then current*") exceeded the value of the underlying assets.[133]

---

131 See, in particular, Penrose Report, Chapter 16, paragraph 48.
132 Ibid, paragraph 45.
133 See Penrose Report, Chapter 16, paragraph 77.

86

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

252. It is not accepted that this information ought reasonably to have led to any formal regulatory action. At the meeting which followed a few days later on 15 September 1992, GAD clearly expressed its view to [redacted] (recorded in the minutes of the meeting) that ELAS had "*over-distributed in the last few years, compared with the return on investments*". This had "*eroded the level of free assets available in the society, which are needed to provide for market changes in the value of assets*".[134]

253. GAD did therefore directly raise with ELAS the question of over-distribution, which was the cause of bonuses declared being in excess of asset shares at that time. [redacted] letter of 10 September 1992 was also passed to DTI.

254. Shortly after the meeting, [redacted] wrote to GAD, on 17 September 1992, acknowledging that "*the implications for bonuses would have to be considered carefully*". [redacted] was saying, in effect, that he took the point. Lord Penrose commented that GAD's minutes of the meeting of 15 September 1992 "*did not record any explanation of, or comment about the specific figures in the 10 September letter for excess of policy values over asset share*".[135] But there was no need for any such specific comment. In any case, [redacted] letter showed that the excess had fallen by 20% from 1990 to 1991, following a large rise between 1989 and 1990, when market conditions had been notoriously difficult.

255. The scrutiny report of the 1991 regulatory returns raised appropriate cautions about the recent reduction in available assets and weakening of the valuation basis. The scrutiny report was, rightly, the cause for some concern at DTI, as reflected in [redacted] note of 4 November 1992, in which he commented that the scrutiny report "*paints a worrying picture*" and recorded his decision to ask GAD for a fuller analysis of the position of ELAS.

134 Ibid, paragraph 78.
135 Ibid, paragraph 80.

87

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

256. In response, in a memo of 3 March 1993, GAD advised that it suspected that ELAS could survive a short term fall in market levels as well as most companies, but recorded, as was the case, that its portfolio left "*room for concern*". But by this time, the 1992 regulatory returns were almost due, and so GAD, sensibly, asked [redacted] for an advance indication of the 1992 position. [redacted] reply, of 9 March 1993, indicated that the position had much improved, and this was passed to DTI immediately on receipt. As a result, and perfectly naturally, the level of concern about ELAS's excess of policy values over assets ebbed away.

257. Thus, the scrutiny report on the 1992 regulatory returns, completed in early 1994, referred to the previous concern about over-distribution and weakening of reserves, but indicated that there had been an improvement since December 1991, and that a further improvement was expected in the 1993 regulatory returns. There was indeed such an improvement. As Lord Penrose records, in his discussion of the 1993 scrutiny report:[136]

> *"The Society had experienced an exceptional year on the market [in 1993] with an investment return on the with-profits fund of 28.8%...The residual unallocated return went some way to lessening the excess of aggregate policy values over assets, which reduced from 116% on with-profits at year end 1992 to 102% at year end 1993."*

258. Furthermore, a fallacy underlying the Complaint is that it assumes that it was necessarily unacceptable for policy values to exceed the value of assets at a particular time. This is not the case.

259. It is worth remembering that, at a later stage, ELAS specifically told GAD, when quizzed on the point, that the "*normal range*" for the relationship between policy values and underlying assets was "*plus or minus 10% although there could be*

136 See Penrose Report, Chapter 16, paragraph 161.

88

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

circumstances in which the relationship would need to move outside of that range temporarily."[137]

260. There is no reason to doubt this, nor to be concerned by it. ELAS's business model entailed that the with-profits fund would go into overdraft when smoothing during times of adverse market performance. The lack of an estate (free assets) also meant that in very unfavourable market conditions (e.g. a sudden and sharp downturn in the equity market, as was the case in the early 1990s), ELAS would be less able to smooth than some other rivals. Given how well publicised ELAS's approach was, it would be very difficult to argue that the approach which it adopted was inconsistent with its policyholders' reasonable expectations.

261. As regards the allegation of "*failing to alert new investors of the risks of investing*", it was not for the prudential regulator to alert potential policyholders to the risks of purchasing policies from a particular insurance company. The regulator and GAD strictly adhered to a policy of not giving indications of such views as they might have held about the financial strength of companies, or the wisdom or otherwise of investing in them, beyond indicating that the statutory requirements continued to be met.

4. Payment of Excess Bonuses

Complaint L

"*Over a period of many years the regulators and GAD permitted ELAS to operate an unsound business model, of which they were aware. ELAS had made public its policy of reliance on 'goodwill' in a 1989 actuarial paper With Profits Without Mystery, but the regulators never addressed the issue or challenged ELAS about it or about the consequences of the model. Instead, they allowed ELAS to operate the model, which entailed declaring bonuses in excess of admissible assets, while at the same time*

---

137 See [redacted] note of a meeting with GAD on 28 May 1998 set out in the Penrose Report, Chapter 16, paragraph 244.

89

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

operating without a significant estate and with a smoothing fund persistently in deficit. These were major contributory factors to ELAS's development of what Lord Penrose quantified as a £3 billion asset deficit at the time of closure to new business and to the losses incurred by all those who held policies on 16 July 2001."

262. The complaint that the prudential regulators and GAD "*permitted*" or "*allowed*" ELAS to operate an "*unsound business model*" is founded on a false premise. It was not the function of the regulator to judge the soundness of a company's business model, let alone to substitute its judgment for that of the Board and the Appointed Actuary. To have sought to do so would have constituted substantial interference with the normal course of competition in the market, have exceeded the regulator's legal powers and, besides, would have run wholly contrary to the policy of "freedom with disclosure" which underlay the regulatory regime.

ELAS's business model

263. Key features of ELAS's model were that it did not maintain a significant estate and that the profits of the with-profits fund were in very large part immediately transmitted to present policyholders in annual bonuses, subject to a smoothing policy. This necessarily meant that ELAS was inherently weaker in balance sheet solvency terms than its competitors with access to shareholder funds or inherited estates, and that it effectively went into overdraft when 'smoothing up'. Such a model, plainly, had its commercial risks. However, ELAS's policy was no secret. Indeed, it was well publicised and was well known throughout the financial services industry. It was, moreover, a major part of ELAS's sales strategy in marketing its policies to potential policyholders.[138] The risks therefore ought to have been appreciated by policyholders, and their advisers, when taking investment decisions.

[138] This fact was expressly recognised by the Parliamentary Commissioner in her first report: see "*The Prudential Regulation of Equitable Life*", Part II, paragraphs 187-188.

90

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

264. ELAS characterised its own policy in respect of the distribution of surplus as one of "*full and fair*" distribution to with-profits policyholders. Indeed, ELAS made a virtue of the absence of any substantial 'estate'. Its publicly stated position, quoted at paragraph 3.11.3 of the Baird Report was that:

> *"...if part of the surplus otherwise available for distribution to policyholders was set aside for future emergencies, this would have been at the expense of policyholders whose policies were in force or maturing when those surpluses arose. In the view of the Board, such an approach would have been inconsistent with full and fair distribution."*

265. This approach provided increased present benefits for policyholders compared to other approaches, albeit at the obvious price of a concomitant lesser ability to withstand future shocks, other than by adjusting non-guaranteed terminal bonus rates.

<u>The role of the Prudential Regulator</u>

266. HMT and FSA categorically reject the suggestion that the prudential regulator should have sought to prevent or dissuade ELAS from following its chosen business model.

267. The prudential regulator did not operate a zero failure regime (and still does not to the present day) and it was not (and still is not under the current regime) for the regulator to challenge a business model on the ground that it was riskier than the market norm. It was a policy which it was open to ELAS to adopt. There was no secret about the approach. Provided that the applicable regulations were complied with, the regulator had no power to interfere, and there would rightly have been astonishment at any attempt by the regulator to seek to deter ELAS from following the business model which its Board, advised by the Appointed Actuary, had chosen to follow since the 1980s.

91

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

<u>ELAS's smoothing policy</u>

268. Complaint L also contains an allegation that it was part of ELAS's business model to operate "*with a smoothing fund persistently in deficit*". It is not accepted that this was part of ELAS's business model, nor that this was how it did in fact operate.

269. Lord Penrose took the view (with reference to the figures in table 6.3 of his report derived from ELAS's internal office valuation accounts) that it did not seem that ELAS adopted a consistent smoothing policy.[139] Although 1998 stands out as showing an upward spike in Lord Penrose's table, it has been pointed out that his figures were inaccurate by £1 billion for that year (see [redacted] letter of 22 November 2004, forwarded to the Parliamentary Commissioner on 14 January 2005). If this were to be accepted, the period 1995 – 1999 shows a smooth decline to virtual balance.

270. ELAS had explained its approach to smoothing in 1993, in response to GAD's survey on bonus distribution. ELAS explained that in normal circumstances the smoothing cycle should be about 3–5 years. Assuming the 1998 adjustment to be a correct one, it seems that, contrary to Lord Penrose's conclusion, ELAS's smoothing policy over the period he considered was consistent.

271. A life insurance company's smoothing policy is a highly technical issue. There is no "right approach" to smoothing. It is quintessentially a field in which there will inevitably be a range of approaches of arguably equal actuarial merit. There was no basis on which the prudential regulator should, or could, have sought to induce ELAS to change its smoothing policy.

139 As explained in the response to Complaint I above, these accounts were not seen at the time by the regulator.

92

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

Complaint M

"The regulators failed to ensure any satisfactory correlation between the total of declared policy values and the Society's admissible assets in a context where the Society, uniquely in the industry, had declared total policy values that included terminal bonuses and had, without exception, always paid all claims (both contractual and non-contractual) in accordance with these declarations."

272. This Complaint adds little to other complaints. The essential points are:

(1) The prudential regulator's central focus, as demanded by statute, was whether ELAS was meeting its statutory solvency requirements.

(2) ELAS at all times did indeed meet these requirements.

(3) Terminal bonus was a non-guaranteed element of policy values. The regulations did not require it to be reserved for.

(4) The future health of ELAS in realistic solvency terms (i.e. allowing for future bonuses, including terminal bonus) was a matter for the commercial judgment of the Board and for the professional judgment of the Appointed Actuary, and was not within the scope of statutory regulation.

(5) It was legitimate for ELAS to operate a business model which had the consequence that policy values exceeded the value of assets during times of adverse market performance.

(6) Whilst it is accepted that PRE was a relevant issue,[140] this was an area in which, inevitably, the Appointed Actuary's role was even more important than in other areas. It was not, and could not sensibly have been, a part of the role of the prudential regulator to monitor and make its own independent assessment of what, at any given point in time, were the reasonable expectations of the various classes of policyholders of the many life insurance companies.

[140] As to this, see the Response to Complaints N and O below.

93

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(7) There is nothing to suggest that the prudential regulator at any time failed to ensure that ELAS was meeting the obligations imposed upon it by the regulatory regime.

5. *Policyholders Reasonable Expectations (PRE)*

Complaints N and O

"*N.* *Ministers and officials decided that regulatory activities in relation to safeguarding PRE should be based solely on the regulatory returns, but failed to put in place adequate procedures and Regulations to enable this to be achieved. This failure was particularly critical in respect of ELAS, which had unique practices that elicited PRE.*

O. *As a result, the regulators and GAD failed over many years properly to monitor and assess ELAS's asset position and its practices in the light of PRE. The regulators and GAD did not properly determine PRE or act to protect them as intended by Parliament and to the standards set by EC Directives.*"

273. As these Complaints are connected, it is convenient to address them together. The criticism made is that Ministers and officials failed to put in place adequate procedures and regulations to enable the prudential regulator and GAD properly to determine or protect policyholders' reasonable expectations (PRE).

The Concept of PRE

274. The background to the concept of PRE, and how it was introduced and developed in the UK, is considered more fully in the Regulatory Paper submitted with this response.

275. As there set out, the concept of PRE was first introduced to UK law by the 1973 Act, which gave the prudential regulator power to intervene in the affairs of a

94

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

company if there were grounds to believe that the company might be unable to fulfil PRE. The concept did not appear in any EU Directive.

276. One of the policy aims of the 1973 Act was to strengthen the degree of protection afforded to policyholders; but at the same time (in accordance with the doctrine of "freedom with publicity") Ministers were concerned to make it clear that the new powers should not be used as a means to curtail business freedoms within the insurance industry.

277. One of the Government's main policy concerns when considering the 1973 legislation was that the Boards of proprietary life insurance companies might favour the interests of shareholders over and above the interests of policyholders by "milking" the surplus accruing in the long-term business fund for the shareholders' benefit. Part at least, therefore, of the reason for introducing the concept of PRE was to ensure that the interests of policyholders were protected beyond their strict contractual entitlements.[141] PRE was not seen as a mechanism by which the expectations of different cohorts of policyholder interests within a mutual life insurance company might be the subject of detailed scrutiny.

278. When the concept of PRE was first being debated, GAD made it clear that the new power of intervention would potentially require a dramatic step-change in the level of scrutiny, and one that was potentially inconsistent with the doctrine of "freedom with publicity". Thus [redacted] reaction in 1972 to the proposed power to intervene on grounds of PRE was as follows[142]:

> *"This gives a very wide discretion and would, it seems to me, be likely to lead to a large measure of controversy if it were to be invoked other than rarely. It would certainly mean that the scrutiny procedure carried out in GAD would be very different in nature; would we not have to address ourselves to advising you, in the case of every company, whether or not the*

141 See: minute 3 November 1971 [redacted] pages 5 - 8 of the Annex; instructions dated 29 September 1972 [redacted] pages 27 – 51 of the Annex; and paragraphs 18 and 19 of the instructions to Parliamentary Counsel, pages 68 - 70 of the Annex.

142 See letter 5 November 1971 [redacted] pages 9 - 10 of the Annex.

95

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

> *reasonable expectations of the long-term policyholders were being prejudiced? It would be a much bigger job for us, [involving] a very thorough examination of a company's affairs – very thorough indeed – to determine what we would regard as a 'reasonable' expectation for the policyholders in general, and for particular groups of policyholders."*

279. The Government took these concerns on board. Thus, when the Bill was introduced, the notes on clauses explained that the powers of intervention would only be exercised where it was "*obvious*" that the reasonable expectations of policyholders were not going to be fulfilled, and that this would "*stop well short of seeking to ensure that with profits policyholders received 'value for money' under their contracts or a particular level of bonus ... regardless of the amount of surplus revealed by the periodic actuarial investigation*"[143].

280. The Government also decided that the best way to strike a balance between increased policyholder protection and continued freedom for businesses was to ensure that PRE would be safeguarded solely by reference to regulatory returns. This was noted in a paper circulated across Government in September 1972.[144] The justification for this was that any other method was thought to involve too great a degree of control over management decisions.

281. That was a policy decision that was taken by Government, and one that it was entitled to take. In particular it was a lawful way of determining how they would normally exercise the statutory powers. It was entirely consistent with the doctrine of "freedom with publicity", and a desire to reduce the regulatory burden on business; furthermore, any wider form of evidence-gathering would have had huge resource implications, as noted by [redacted]. Throughout the period under review, there were on average around 250 companies with in force life insurance business. For the prudential regulator to have undertaken a comprehensive review of the companies' commercial communications with each of their different classes

143 See notes on clauses, pages 92 – 96 of the Annex.
144 See Penrose Report, Chapter 13, paragraph 26.

96

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

of policyholder would have required a substantial increase in the regulator's resources (at the cost of competing Government priorities). It would also have greatly increased the regulatory burden on life insurance companies, to their cost, and the overall detriment of consumers.

282. Subsequently, the 1982 Act also made it clear (consistently again with the doctrine of "freedom with publicity") that powers of intervention on the grounds of PRE were to be extremely limited. In particular, this was spelled out by section 37(6) of the 1982 Act which made it clear that the power to take action for the purpose of protecting PRE under section 45 was a merely residual power, only to be used by the prudential regulator when other powers of intervention could not achieve the necessary goals.

283. Furthermore, in order properly to implement Article 21 of the First Life Directive, a further limitation on the power to take action to protect PRE was laid down by section 45(2), which only allowed the prudential regulator to impose a restriction on disposal of assets for this purpose if regulatory solvency was breached, or if the company was to be closed to new business.

284. Consistent with this approach, from 1994 onwards (with the introduction of the 1994 Regulations) the primary responsibility for monitoring PRE was placed on the Appointed Actuary, who was expressly required to determine and reserve for life insurance business liabilities, and to have "*due regard*" in doing so to PRE. In addition to this, the UK actuarial profession issued and kept under review guidance to Appointed Actuaries as to what PRE was, and how it should be catered for, in the form of GN1. GN1 provided, among other matters, that:

> *"It is incumbent upon all Appointed Actuaries to ensure, so far as it is within their authority, that the long term business of the company is operated on sound financial lines and with regard to its policyholders' reasonable expectations."*

97

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

285. Hence, the structure and history of the regulatory regime shows that, from the outset, a policy decision was taken that the power to intervene on the grounds of PRE was only to be used by the prudential regulator sparingly, as a long-stop power; that it would not be used by the regulator to trespass unduly on management's discretion as to how best to run a company's life insurance business; and a legal restriction added that (unless regulatory solvency was breached) it could not be used so as to prohibit the disposal of a life insurance company's assets.

286. The prudential regulator always exercised its powers in relation to PRE in accordance with this policy. The policy was a reasonable one for Government to adopt. There can be no reasonable basis for criticising the regulator for operating the regulatory regime as it was.

Complaint P

"*During the course of the Hyman litigation, the regulators failed in their duty to all policyholders in respect of PRE and postponed consideration of issues related to assets and reasonable expectations, both for GAR and non-GAR policyholders, until after the House of Lords judgment (20 July 2000). In addition, the regulators totally failed to assess properly either the impact or the scope of the judgment and to evaluate the range of scenarios for ELAS following it. They failed to take appropriate action to mitigate the adverse effect of the judgment on the majority, non-GAR policyholders, and on new investors into the same with-profits fund. Their judgment that there was a 99.9% probability that ELAS would be sold demonstrated that, despite the extensive information that they possessed, the regulators failed to understand the parlous state of ELAS which was apparent to all prospective bidders.*"

287. In her letter of 9 December 2004 to HMT, the Parliamentary Commissioner noted that this Complaint raises issues covered in her first investigation, and that it has been included to enable her to fulfil her commitment (in her July 2004 report to Parliament) that she would revisit her findings in the light of the inclusion of GAD within her jurisdiction.

98

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

288. HMT, FSA and GAD do not believe that the inclusion of GAD within her remit in any way affects the findings which the Parliamentary Commissioner has already made on the issues raised by the complainants. Throughout the period in question, GAD continued to provide actuarial advice to FSA, who in turn provided advice to HMT (where necessary in discharging its responsibilities as HMT's agent). However, Complaint P is not directed at such actuarial advice, but at decisions made and actions which ought allegedly to have been taken by the regulators (i.e. HMT and FSA) during this period.

289. Furthermore, taking each element of Complaint P in turn, for the reasons already set out carefully by the Parliamentary Commissioner in her earlier report, none discloses any case of maladministration. In short:

(1) *Postponement of consideration of PRE until after the outcome of the House of Lords judgment.* As the Parliamentary Commissioner has already concluded: (i) FSA's decision to await the court judgment was influenced by its view that there were legitimate arguments in support of a differential terminal bonus policy, which was a reasonable view to take, as evidenced by the decision of the Court of first instance; and (ii) given the potential significance of the anticipated court ruling to the question of PRE, and in the light of the other discussions FSA were having with ELAS at the time, it was also reasonable not to rush to a firm view in advance of the final judgment on appeal to the House of Lords.[145] Moreover, whilst awaiting the court ruling, FSA pressed ELAS hard on the issue of reserving for GAR liabilities, and referred bonus notices which they thought might be misleading to the conduct of business regulator to determine whether they provided grounds for intervention by them.[146]

145 "*The Prudential Regulation of Equitable Life*", Part I, Appendix, paragraph 14; Part II, paragraph 181.
146 Ibid, Appendix, paragraph 15; Part II, paragraphs 182–192.

99

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(2) *Failure to assess the impact and scope of the judgment.* As the Parliamentary Commissioner has already concluded, the fact that FSA did not consider the eventual ruling as a strong possibility did not indicate that they were not carrying out their role effectively. It would be wrong to say that FSA were totally surprised by the House of Lords judgment or ill-prepared for it. The ruling was unexpected, as it went against much accepted actuarial and industry practice, but that was not in itself a sign of poor judgment, especially in view of the legal advice previously received and the decisions of the two lower Courts; and the possibility had featured in FSA's and ELAS's scenario planning. Even if the differential terminal bonus policy were to be found not to be permissible, there was every expectation, especially in the light of the judgment of the Court of Appeal, that ring-fencing of the policies with guarantees would prove to be a satisfactory alternative. It is not accepted that earlier serious consideration by FSA of the scenario which eventually unfolded would have influenced events in any way.[147]

(3) *Failure to mitigate the adverse effect of the judgment on some policyholders.* After the House of Lords judgment, FSA had to decide whether to close ELAS to new business, or to allow its management to pursue their preferred option of trying to sell ELAS as a going concern.[148] As the Parliamentary Commissioner has already concluded, FSA's decision to allow ELAS to put itself up for sale was reasonable in the circumstances: in particular, there was no evidence to suggest that FSA should have considered from the outset that the prospect of sale was unlikely, or that it should have recognised significantly sooner that the sale process would fail.[149] Further, the decision to allow ELAS to continue taking on new business while the attempt to sell the company was made was a reasonable response to the need to balance the interests of new and existing

147 Ibid, Appendix, paragraph 16; Part II, paragraphs 199–201.
148 Ibid, Appendix, paragraph 17; Part II, paragraph 202.
149 Ibid, Appendix, paragraph 18; Part II, paragraphs 203 – 213.

100

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

policyholders, not least as all policyholders – new and old – would have benefited from a successful sale.[150] The prudential regulator's response to ELAS's advertising campaign was also reasonable, as was its decision not to impose a "health warning" on ELAS's products[151], since ELAS continued to meet solvency and other statutory requirements and it would not have been acceptable under the regulatory regime at the time (or fair relative to other companies) to have imposed additional health warning requirements on ELAS. The prudential regulator kept the conduct of business regulator adequately informed of ELAS's position.[152]

290. The Parliamentary Commissioner's first investigation therefore fully considered all the issues raised by this head of complaint, and rightly concluded that there was no maladministration throughout this period on the part of the prudential regulator. The inclusion of GAD within her remit now does not give any cause to alter these findings.

<u>**Complaints Q and R**</u>

"*Q.* *In March 2001, the regulators permitted ELAS to declare a bonus for 2000 and an interim bonus for 2001 that were both inappropriate and unjustifiable given the then state of ELAS's finances, thus raising misleading expectations about the true state of ELAS just prior to significant across-the-board cuts that were imposed only four months later. Instead, ELAS's asset deficit of 13% at year-end 2000 in a closed fund should have precipitated regulatory intervention at that time.*

R. *In July 2001, the regulators failed to protect PRE by permitting policy value adjustments worth more than £4,000 million in the form of an inequitable uniform percentage cut across all with-profits policies, rather than the fairer alternative of reducing policy values by cutting only non-guaranteed bonuses. The regulators also refused to comment meaningfully on this to policyholders, while discouraging independent financial advisers from giving proper advice to policyholders.*"

101

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

291. In her letter of 9 December 2004 to HMT, the Parliamentary Commissioner pointed out that, as explained in her July 2004 report to Parliament, the focus of this investigation will be on events relevant to the closure of ELAS to new business, and not therefore on subsequent events. Complaints Q and R relate to subsequent events.

292. Accordingly, it is not proposed to respond to these heads of complaint, save to make the following limited observations:-

(1) The complaint suggests that the prudential regulator allowed ELAS to declare a bonus in 2001 in respect of 2000, despite the developments during the course of that year. In fact the Board of ELAS decided not to declare a bonus for 2000 so the issue of the regulator intervening to prevent the declaration did not arise. Such a bonus, if it had been declared, would have added to ELAS's liabilities for which reserves would have had to be held and reported in the regulatory returns.

(2) If the complaint is referring to the development of policy values (by the addition of a notional "interim bonus") during the period after the House of Lords judgment, that relates to the allocation of terminal bonuses which, as is explained previously, is not something that a life insurance company was required to report to the regulator because there was no statutory requirement to reserve for terminal bonus[153].

[153] The complaint suggests that a decision was taken to uplift policy values in March by a particular amount. Policy values were disclosed in the annual statements but they were constantly developing by the addition of the interim bonus throughout the year. This meant that policy values changed from day to day so that they could be used as a starting point for calculating the benefits that would be payable in the event of a claim (contractual or otherwise) on any particular day during the year. The amount of interim bonus being added was kept under review and was changed from time to time. Whereas the complaint implies that ELAS was increasing the amount of the interim bonus, the reality was that it actually was reducing the rate of bonus that would apply going forward.

102

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

(3) Even though this was not within the formal scope of the regulatory framework, the regulator had become aware of ELAS's realistic solvency position as a result of discussion about the GAR costs and because of information that came to light during the sales process. However, in judging what happened at ELAS in the period after it closed to new business, and more specifically the regulator's response to what happened, it is necessary to consider the entire context. An important part of this context is that this period coincided with substantial falls in equity markets. Between the end of 1999 and 2003, the FTSE 100 dropped from a high of 6930 to below 3300.

(4) As a significant part of ELAS's with-profits fund was invested in equities, these falls in the value of equities raised obvious concerns for the management of ELAS (and indeed for all insurance companies) and for the prudential regulator. However, provided regulatory solvency was maintained, it always remained for the Board of ELAS to decide on bonus allocations to policyholders.

(5) After the House of Lords judgment, in order to protect the with-profits fund from policyholders seeking to select against it (by terminating their policies so as to receive a surrender value in excess of the underlying value of the policies), ELAS introduced a financial adjuster which meant that policyholders cashing in their policies early would receive a payout that was broadly in line with the underlying performance of the fund and the "asset shares". The amount of the financial adjuster was increased after the fund closed to new business, and again early in 2001 in response to further market falls.

(6) Throughout this time, the prudential regulator kept a close watch over what ELAS was doing to manage its fund and took the view that the decisions that it was taking (including decisions as to bonus allocations) were

103

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

reasonable[154], sound and prudent and that there was no basis for intervention.

(7) However, by the summer of 2001 it had become clear that ELAS's existing practices were no longer sustainable. The two driving factors were: (i) the continuing poor performance of the investment markets; and (ii) the fact that significant numbers of policyholders were taking benefits on a contractual basis (where no financial adjuster was applied).

(8) It was against this background that ELAS decided that the expectations of ongoing policyholders needed to be addressed, and more significantly that a financial adjustment needed to be introduced for those policyholders leaving the fund on a contractual basis. It achieved both these things by reducing policy values in July 2001.

(9) The cut in policy values had the effect of reducing the terminal bonuses being paid on maturing policies so that they more closely reflected the underlying asset shares while sending clear signals to other policyholders about the impact of market falls on the true value of their investments. All other with profits companies have also had to reduce the amount of terminal bonuses paid, although the reduction was perhaps more transparent at ELAS because of its disclosure of total policy values. Policyholders of unit-linked companies (and direct investors in unit trusts and in shares) also suffered comparable losses directly as a result of the falling stock market.

(10) There has been much debate about the approach ELAS adopted to cutting policy values. However, provided the decision taken was reasonable, the approach chosen was a matter for the management of ELAS. In particular, it was for the management of ELAS to decide what approach it considered

154 Although FSA did not allow a reversionary bonus to be declared after 2000.

104

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – maladministration

to be fairest as between different classes of policyholder (having regard to their different, and at times conflicting, expectations). It was not for the prudential regulator to design or approve the approach chosen for applying the cuts; nor could it have objected if the management of ELAS chose an approach which the regulator did not think was best.

(11) All of these issues were, of course, issues of judgment, where decisions sometimes had to be taken in a short time frame. It is clear that the prudential regulator considered these issues and connected issues, and discussed them with ELAS at the relevant times.

(12) The prudential regulator also strongly refutes the suggestion that it "*refused to comment meaningfully*" to policyholders, or "*discouraged independent financial advisers from giving proper advice to policyholders*". On the contrary, FSA at all times sought to keep policyholders informed of the situation, and to operate a transparent system. At the time of the policy value cuts, FSA prepared a statement with information for policyholders which was made available on its website and via its consumer contact centre. Even now, FSA continues to publish information for ELAS's policyholders on its website and keeps this information constantly updated.

(13) In the circumstances these complaints disclose no grounds on which an allegation of maladministration can properly be maintained.

105

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – Injustice

Government response on injustice

1. …

2. The statement of injustice contends:

   > "As a direct consequence of regulatory failure each complainant lost 16% (or 14% for life policies) of their policy values on 16 July 2001 and in some cases they lost more in market value adjustments and other costs and penalties upon subsequent departure. Had the regulators effectively undertaken their responsibilities, the crisis at Equitable Life would have been prevented by earlier intervention and appropriate remedial action."

3. For all the reasons [we have] set out … we do not accept that there was regulatory failure, in the sense of a failure adequately to operate the regulatory regime in place at the material time.

4. Moreover, the assertion that the cuts and market value adjustments were a "direct consequence" of regulatory failure is ill-founded, for the reasons set out below.

5. Paragraph 87 of Chapter 6 of the Penrose Report does not set out a clear derivation of the relative proportions of the 16% cut in policy values attributable to the adverse investment conditions prevailing in 2000 and the first half of 2001 on the one hand and to the alleged past over-distribution (and in particular overpayment of past claims) on the other. However, the reader might reasonably infer from this paragraph, and from paragraph 75 of Chapter 6 and Table 6.14, taken together, that of the £4.9bn total cut in policy values, all but £1.5bn was attributable to events before the end of 1999. This impression is reinforced by the wording in paragraph 89 of Chapter 6 that:

> "apart from the losses attributable to market movements by June/July 2001, [the 16% cut in policy values] was the result of sustained over-allocation and sustained over-distribution on claims".

6. For the reasons set out in the following paragraphs, we do not accept that the 16% cut in policy values required in July 2001 was due to any material extent to any past over-distribution. Rather, the cut demonstrably reflected the adverse investment conditions prevailing in 2000 and the first half of 2001. Nor do we accept that any past over-distribution was a material factor contributing to the lack of a sale of ELAS, which as noted in the Response, arose for a variety of reasons, not all related to the financial strength of the with-profit fund.

ELAS's 2004 paper

7. Under the stewardship of its new Board, in October 2004 ELAS published a paper entitled "The Penrose Report: Policy value reductions and alleged 'over-bonusing'". The paper explains, rightly, that more than 14% of the 16% cut in policy values made in July 2001 was in fact attributable to:

   (1) adverse investment conditions prevailing between 1 January 2000 and that date;

   (2) adjustments made to the valuation of ELAS's liabilities (on a realistic basis) by the new Appointed Actuary; and

   (3) a decision (taken by the new Board on the advice of the new Appointed Actuary) to create as at 31 July 2001 an excess in the with-profit fund of available assets over aggregate with-profit policy values of £0.6bn as a prudential measure given the uncertain outlook for the future, broken down as follows:

1. approximately 11% due to the adverse investment conditions, reflecting the difference between the actual return on the fund during that period of minus 7.9%, net of expenses and allowing for the additional cost of the GARs (including the rectification scheme) incurred by the company following the House of Lords judgment in July 2000, and the rate of growth allocated to policy values during that period of 3.3%;

2. approximately 1% due to the adjustments made to the valuation (on a realistic basis) of liabilities[1], including reflecting a continued improvement in annuitant mortality, the effect of which was to increase those liabilities by some £0.2bn;

3. some 2.4% due to the decision to create the £0.6bn excess of available assets over policy values in the fund.

8. In fact, ELAS's figures are largely reflected in Chapter 6 of the Penrose Report itself:

(1) The £0.6bn excess of available assets over policy values is the £600m item referred to in paragraphs 75 and 87 of Chapter 6 and reflected in Tables 6.15[2] and 6.17[3] and financial table H4[4]. This represented a percentage excess of available assets over policy values (following the 16% cut) of some 3%, as reflected in financial table H4, which figure is within the tolerance range

[1] See Table 6.17 of the Penrose Report at page 226.
[2] See page 224 of the Penrose Report.
[3] Ibid. page 226.
[4] Page 32 of the Financial Tables to the Penrose Report.

of plus and minus 5% quoted by [redacted] on page 4 of Appendix F to the EMAG submissions.

(2) The net investment return of (7.9%) is close to the 2.7% gross return in 2000 shown in financial table D4[5] and quoted in paragraph 69 of Chapter 6, less the estimated 4.0% negative return in the first 6 months of 2001 quoted in that paragraph, less expenses of 0.8% (calculated as an annual rate of 0.5% multiplied by 1.5 to allow for the 18 month period to 30 June 2001) less the additional cost of the GARs following the House of Lords judgment of 4.7% (calculated as 7/12 * 8%, representing the value of the allocated growth rate of 8% for 2000 suspended during the first 7 months of that year, which was almost exactly equal to the additional GAR cost: see above). The difference of 1.1% can be explained by further investment losses (and expenses) incurred by ELAS during July 2001: the FTSE fell by a further 2% in that month and close to half of the assets of the fund were invested in equities at that time. (Differences between actual claims payments made during this period and the corresponding (unsmoothed) asset shares are also relevant to the precise reconciliation, but paragraph 69 of Chapter 6 of the Penrose Report indicates that these were not very significant.)

(3) The 3.3% allocated growth rate is the annual allocated growth rate of 8% for 2000 multiplied by 5/12 because the bonus was suspended for the first 7 months of that year.

9. No growth was allocated to policy values during the first 6 months of 2001[6]. An annual rate of growth of 6% was allocated to policy

[5] Ibid. page 16.
[6] See paragraph 149 of Chapter 5 of the Penrose Report.

values from 1 July 2001[7] so that 0.5% would have been allocated during July 2001. This growth has apparently not been allowed for in ELAS's calculations, but if this is the case then an even greater proportion of the 16% cut in policy values is in fact explained than presented in the October 2004 ELAS paper.

10. The only material difference between ELAS's figures in its October 2004 paper and Chapter 6 of the Penrose Report relates to the increase in liabilities, for which paragraph 80 of Chapter 6 suggests a figure of £400m rather than some £200m. However, the latter figure relates just to the annuitant mortality adjustment and it may well be that other adjustments were also made that decreased the liabilities. In particular, it is possible that the difference of £200m reflects the consequential reduction in the GAR provision resulting from the cut in policy values of £243m reflected in the difference between the two figures for this provision shown towards the bottom of Table 6.14[8]. But this minor point does not in any way affect the thrust of our submission. On the contrary, if the correct figure is in fact £400m, then an even greater proportion of the 16% cut in policy values can be sourced than is set out in the October 2004 ELAS paper.

11. So, it can be seen that only the modest balance of 1.6% of the total 16% cut in policy values is capable of being attributed to events which took place before the end of 1999. This is consistent with the fact that, even based on the figures in Chapter 6 of the Penrose Report without any adjustment, there was only a modest excess of policy values over available assets in the with-profit

[7] Ibid.
[8] Page 223 of the Penrose Report.

fund of some 3% (in fact 2.8% based on Table 6.3) at the end of 1999[9].

Critique of Lord Penrose's analysis of the July 2001 policy value cut

12. In our view the analysis presented in paragraph 65 *et seq*. of Chapter 6 of the Penrose Report relating to the 16% cut in policy values is far from clear, especially as regards the assets side of ELAS's realistic balance sheet. It seems that Lord Penrose was unable to obtain all the information he would have liked relating to this period. In addition, Lord Penrose's analysis seems to reflect misinterpretation of certain of the figures appearing in papers to which he had access produced by the new Appointed Actuary of ELAS. In particular:

(1) The reference in paragraph 80 of chapter 6 to a £1bn reduction in assets in respect of estimated overpayments is very difficult to comprehend. The description of the £1bn assets adjustment provided in paragraph 83 of Chapter 6 is unclear. It seems likely that the point was not fully grasped by the Penrose inquiry. It is illogical in principle to make a deduction from the assets in respect of any past overpayment of claims because the assets will already have been reduced as a result of this. What is more, the adjustments presented in paragraph 80 only produce the revised "surplus of…under £400m" to which Lord Penrose refers in the last sentence if the £1bn reduction in assets claimed to have been made in respect of past overpayment of claims is in fact <u>not</u> made: opening

[9] The reason the 1.6% is 1.2% smaller than the 2.8% seems likely to be mainly attributable to the adjustments on the assets side of the realistic balance sheet of (£400m) relating to the write off of the new business loan and £590m relating to miscellaneous profits arising from disposal of parts of ELAS's business referred to in paragraph 80 of Chapter 6 of the Penrose Report, which together produced an increase in available assets of £190m or some 0.7% of policy values before the 16% cut. The 0.5% balance of the 1.2% difference is within the margins of rounding adjustments, it not being clear that the various percentages quoted in the different documents are in fact all applied to the exactly same quantum of policy values at the same dates.

surplus £600m - £400m new business loan write off + £590m miscellaneous profits from sales - £400m increase in liabilities = revised surplus £390m.

(2) For the same reasons, the accuracy of the adjustments shown in the top half of Table 6.17[10] is also very doubtful.

(3) Moreover, the revised surplus of some £400m quoted in paragraph 80 does not appear to be reflected anywhere else. Tables 6.15[11] and 6.17[12] and financial table H4[13] all show a surplus of £600m; and whilst the liabilities shown in Table 6.17 are £400m greater than those shown in Table 6.15, as expected from the increase in liabilities quoted in paragraph 80 of Chapter 6, it is wholly unclear why the assets shown in that table are also £400m higher (£22,900m compared with £22,500m). So too, the provenance of the net assets figure shown in Table 6.17 before the adjustments described above (a figure of £23,710m) is unclear. So far as we are aware, it does not appear anywhere else in the Penrose Report and no justification for it is made.

(4) The description of the aggregate figure of £4.3bn shown in paragraph 75 of Chapter 6 as the "value written off" is confusing because the total reduction in policy values was in fact the higher sum of £4.9bn quoted in that paragraph. The £4.3bn figure represents the amount by which policy values would have had to be reduced to produce an exactly balanced fund rather than the 3% excess of available assets over policy values that was in fact decided upon.

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – Injustice

(5) It is not immediately clear why the revised policy values after the 16% cut shown in Table 6.16[14] are not 16% lower than those shown in Table 6.13[15] (in fact they are all some 18.8% lower), although it is possible that there is a valid explanation for this.

(6) It is far from clear that the adjustments made towards the bottom of Table 6.14[16] make sense:

1. It is correct that the GAR provision should logically be 16% lower after the cut in policy values and hence an adjustment of £243m (= 16% of the pre-cut provision of £1.5bn) is appropriate. However, it is not clear that this has not already been allowed for implicitly in the Table given that the 16% cut is applied to the total policy values including the £1.5bn original GAR provision. The adjustment in respect of the suspended bonus is similarly counter-intuitive.

2. It is unclear why, if the aggregate policy values at the bottom of Table 6.14 are as at 31 July 2001, as claimed, no allowance appears to have been made for growth allocated during July 2001. As explained above, an annual allocated growth rate of 6% was applied from 1 July 2001 following the first 6 months of 2001 in which no growth was allocated.

Further points on the July 2001 policy value cut

13. We make three further key points on the July 2001 policy value cut in the context of the statement of alleged injustice… :

(1) First, it is very important to note that, even to the very modest extent (see above) to which the 16% cut in policy values did relate to events before the end of 1999, those policyholders as at 31 July 2001 who had also been policyholders throughout the period covered by Table 6.3 were no worse off overall. This is because they would also have benefited from any net over-distribution that took place in that period. The fact that such a policyholder was in a "near balanced position in cash terms" after the cut in policy values in July 2001 is acknowledged by Penrose in paragraph 57 of Chapter 6 of his Report. This is plainly a very important factor so far as the causation of any loss is concerned. The same is not necessarily the case for policyholders entering the fund in later years but, given that the aggregate deficit in available assets at the end of 1999 was only 3%, the bulk of the 16% cut in policy values for these policyholders also reflected events after and not before the end of 1999, as the above analysis demonstrates.

(2) Second, it is essential to appreciate that other companies were also making significant cuts in the values of their with-profit contracts during 2000 and 2001 as a result of the adverse investment conditions prevailing in those years. This is illustrated by the figures shown in the Appendix, which are taken from with-profit surveys published in *Money Management*. These show the actual maturity payments made by other major with-profit companies for sample 10 and 25 year regular premium life endowment contracts on 1 February

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – Injustice

in each of the years 2000, 2001 and 2002. These contracts are of course not directly comparable to the recurrent single premium pension contracts comprising the bulk ELAS's with-profit business, and neither are amounts paid on maturity directly comparable to the aggregate policy values intimated to ELAS' policyholders in their individual bonus notices. However, the percentage changes in these maturity payouts during this period nevertheless do provide a broad indicator of the impact of the adverse investment conditions prevailing at that time, which, as explained above, made the primary contribution to the July 2001 cut in policy values. The figures show that maturity payouts fell on average by 12% and 18% for 10 and 25 year contracts respectively between 1 February 2000 and 1 February 2002 (a proxy for the period between the end of 1999 and the end of 2001), the bulk of these reductions being attributable to the year 2001, and that the largest reductions for these contracts over that period among the companies shown were as high as 18% and 23% respectively. These figures are in line with the 16% cut in policy values made by ELAS in July 2001. Again, the point is self-evidently of great importance to any analysis of the causation of any loss suffered by [complainants]. What is clear is that policyholders with funds elsewhere than in ELAS were exposed to broadly similar policy value cuts in 2001. The figures also demonstrate the extent of variation between companies: for example, for 25 year contracts maturing on 1 February 2002, the highest maturity value shown is as much as 63% greater than the lowest.

(3) Third, it should be noted that some 2.4% of the total cut was attributable to the creation of the £600m excess of available assets over policy values decided upon by the new ELAS Board. On the basis of the tolerance range of plus and minus 5% for

the relative level of these items quoted by [redacted] on page 4 of Appendix F to the EMAG submission, it would have been possible in principle for the cut to have been reduced to a level such that a deficit of available assets of 5% existed in the fund. This would have reduced the cut in policy values by approximately 7% to just 9%. The fact that ELAS chose instead to make the larger cut of 16% is not surprising. This provided a prudential margin given the uncertain outlook for the future, and to cover the additional cost to ELAS in respect of those policyholders who could take a contractual exit with a guaranteed fund higher than the policy value (as reduced by the cut). It was also sensible, given that making any cut would be unpopular, to make the cut large enough to avoid the need to make a further material cut in the foreseeable future having regard *inter alia* to the revised investment strategy, heavily biased towards the holding of fixed interest securities, being adopted by ELAS around that time and the need for future bonus declarations to be adjusted in a way that was compatible with the likely implications (including lower investment returns) of that changed strategy.

14. For all these reasons, … we believe that:

(1) the prudential regulator and GAD undertook effectively their responsibilities;

(2) it is wrong to say that the July 2001 policy value cut was in any material respect a consequence of “sustained over-allocation and sustained over-distribution on claims” as alleged by Lord Penrose;

(3) on the contrary, more than 14% of the 16% cut in policy values made in July 2001 was in fact attributable to:

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – Injustice

1. adverse investment conditions prevailing between 1 January 2000 and that date;

2. adjustments made to the valuation of ELAS's liabilities (on a realistic basis) by the new Appointed Actuary; and

3. a decision (taken by the new Board on the advice of the new Appointed Actuary) to create as at 31 July 2001 an excess in the with-profit fund of available assets over aggregate with-profit policy values of £0.6bn as a prudential measure given the uncertain outlook for the future;

(4) it is not correct to say that even to the very modest extent to which the 16% cut in policy values did relate to events before the end of 1999, those policyholders as at 31 July 2001 who had also been policyholders throughout the period covered by Table 6.3 were any worse off overall;

(5) ELAS's policy value cut was not out of line with those imposed by other life insurance companies at about the same time. [Complainants] cannot demonstrate with any degree of certainty that sums invested elsewhere than ELAS would have fared better; and

(6) that there is no basis to the statement of alleged injustice.

Responses to the statement of complaint:

Joint response from the Treasury, the FSA and GAD – Injustice

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

ARTICULATING AN APPROPRIATE STANDARD OF PRUDENTIAL REGULATION

A discussion paper (May 2005)

Introduction

1. This paper seeks to initiate discussion about what might constitute an appropriate standard of regulation in the context of the regime for the prudential regulation of insurance companies that was in place at the time relevant to the Parliamentary Ombudsman's current investigation into the prudential regulation of the Equitable Life Assurance Society.

2. The paper outlines that regulatory regime, with particular emphasis on the statutory powers of intervention available to the prudential regulator and on the circumstances in which it was open to the regulator to exercise those powers. It then goes on to suggest, with regard to this regime, in what way the Ombudsman is minded to make an objective assessment of the reasonableness of the actions (or omissions to act) of those operating the regime.

3. The outline of the regime provided here is necessarily only that - it does not purport to be a comprehensive or detailed description of the prudential regulatory regime. That will be provided elsewhere.

4. This paper is not intended for circulation at this stage beyond those to whom the Ombudsman deems it appropriate to circulate it. Those persons are listed in the annex to the paper. However, once the comments of those persons have been considered (and, if appropriate, incorporated) it is intended that this paper, suitably amended, will be placed in the public domain. At this stage, it is distributed solely for the purpose outlined in paragraph 1 of the paper. It should not be further distributed without the express permission of the Ombudsman's office. Nor should it be quoted in whole or in part for other purposes without such permission.

The structure of the regulatory regime relevant to insurance companies

5. The regulatory regime in place at the relevant time has been characterised as one based on the doctrine of 'freedom with publicity' - i.e. life insurance companies were free, so long as they otherwise acted

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

lawfully, to develop their services and products, subject only to requirements to make certain aspects of their affairs public and to comply with supervision of two areas of their activities by regulatory bodies that were part of, or were created on the initiative of, central government.

6. The first area of regulation was broadly aimed at protecting customers against investing in financially unsound or unfit insurance companies - requiring a company to demonstrate that it met certain solvency standards that would enable it to meet its contractual commitments and empowering the regulator to take action if it were concerned that a company might be unable to do so or if it had concerns that other 'reasonable expectations' of its policyholders or potential policyholders might not be fulfilled.

7. The second area of regulation required honesty and clarity in the basis on which insurance companies offered their services and products to customers and was broadly aimed at ensuring that customers were not misled and did not invest unknowingly in products which were unsuitable for their needs.

8. Supervision of insurance companies' compliance with the former requirement was the responsibility of a 'prudential' regulator and the supervision of compliance with the latter requirement lay with a 'conduct of business' regulator.

9. By the end of the period under consideration by the Ombudsman's investigation, the key underpinning legislation was the Insurance Companies Act 1982 (ICA 1982) for prudential regulation and the Financial Services Act 1986 (and part III of the ICA 1982) for conduct of business regulation. Until their repeal on 1 December 2001, both Acts were subject to amendment by primary and secondary legislation; in addition, secondary legislation was made under both Acts, giving greater detail to the regulatory regimes. Legislative change was in part to give effect to EC legislation.

10. The prudential and conduct of business regimes gave the regulators a number of powers of intervention should they be concerned that the relevant requirements, outlined above, were not being met. The

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

legislation also specified the circumstances in which these powers of intervention were available to the regulators.

11. This paper - and the Ombudsman's investigation - is solely concerned with the regime relevant to prudential regulation, for reasons given elsewhere on a number of occasions.

The objective of prudential regulation

12. The regime that existed under the ICA 1982 had its roots in legislation enacted in the 1970s, which had strengthened the regulatory regime that had existed before then. When the new regulatory regime governing prudential regulation was introduced in 1973, the objective of the enabling legislation was stated by the then Minister to be:

> *Not primarily to penalise* post facto *dishonest or incompetent managements, but to protect policyholders by taking or requiring suitable corrective action in time to avert the consequences of imprudent or misguided policies...* [the intention was to] *strike a proper balance between, on the one hand, allowing the industry so much freedom that it can be exploited by rogues, and on the other hand, creating for the industry such shackles that it cannot give efficient, competitive and forward looking service to consumers here and abroad* (Hansard, House of Commons, 21 May 1973, column 118).

13. In introducing the 1981 Bill, which updated the regime to take into account developments in EC legislation, the then Minister said:

> *A phrase often used to describe the United Kingdom approach to regulation by the Government of its insurance industry is 'freedom with publicity'. The phrase serves to bring out some clear and continuing features of that regulation over the past century. In general there has been no Government control of premiums or other conditions of contract between insurers and policyholders; there has not been Government direction of the investment of insurance companies; there has been a wish to see the insurance industry expand the range and volume of its business in the United Kingdom and in other countries; but there have been requirements for insurance companies to make substantial returns to the Department of Trade and its predecessors, for those returns to give details of*

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

companies' business in a form allowing position and performance to be assessed, and for those returns to be available to policyholders and to the public at large.

Quite properly, the freedom I have referred to has its limits; the Secretary of State has a clear duty to intervene if it appears that all is not well. The need for supervision of the insurance industry is one of record. There have been cases in the past where failures of insurance companies have done policyholders and interested third parties great harm, and, indeed, done the industry no good. Although no system of supervision can avoid completely all risks of difficulty or failure of an insurance company, Government responsibility for a systematic approach is to be found not just in the United Kingdom, but throughout the countries of the developed world and in many others [Hansard, House of Commons, 2 February 1981, column 103].

The process of regulation

14. Section 19 of ICA 1982 continued the requirement (dating from the 1973 legislation) that each life insurance company appoint an actuary, who became known as the Appointed Actuary. The identity of this person, who was required to hold prescribed qualifications, had to be notified to the regulator within fourteen days of appointment and each Appointed Actuary was normally invited on first appointment to meet the Government Actuary in person to discuss their role in the regulation of insurance companies.

15. Section 18 of ICA 1982 required the Appointed Actuary to make an annual investigation of the company's financial position and the company was then required to cause an abstract of the Actuary's report to be published in a prescribed form. That investigation had to include a valuation of the liabilities of the company attributable to its life assurance business and a determination of any excess over those liabilities of its assets representing the fund or funds maintained by the company in respect of that business. The valuation of assets and the amount of liabilities were to be determined in accordance with Regulations made for the purposes of these provisions.

16. Section 32 of ICA 1982 required companies to hold assets which exceeded their liabilities by at least the margin prescribed in the Insurance

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

Companies Regulations 1981 and thereafter in the 1994 Regulations which replaced them. This requirement - known as meeting the required minimum margin of solvency - had to be maintained throughout every year although, in general, it was only required to be demonstrated to the regulator at each year-end.

17. The way in which the calculation of technical reserves was to be undertaken was prescribed in the 1981 Regulations and later in the 1994 Regulations. The responsibility for undertaking this calculation lay with the Appointed Actuary who, from 1 July 1994, was required to use actuarial principles that had due regard to policyholders' reasonable expectations (and appropriate margins for adverse deviations of relevant factors) when determining the amount of the company's long term liabilities (regulation 64(1) of the 1994 Regulations).

18. Each insurance company was required by section 22 of ICA 1982 to submit to the prudential regulator, within six months after the close of the period to which the documents related:

   a. a copy of its annual accounts and balance sheet, prepared under section 17 of the Act;

   b. the abstract of the Appointed Actuary's report and any statement of its long term business, prepared under section 18 of the Act;

   c. its annual statement of business, prepared under section 20 of the Act; and

   d. any auditor's report on the accounts, prepared under section 21 of the Act

19. The format and content of these submissions were prescribed in great detail in secondary legislation. For the purposes of this paper, these provisions are not important; however, they will be covered in detail elsewhere.

20. The annual regulatory returns were the main source of information from which the prudential regulator (which for our purposes was the Department of Trade and Industry, then Her Majesty's Treasury, then the Financial Services Authority on behalf of the Treasury), each acting on the advice of the Government Actuary's Department (GAD), formed a

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

view as to whether a company met the statutory requirements applicable to all authorised life insurance companies, and whether or not the regulator should exercise any of its statutory powers of intervention or should take any other action. However, the regulator and/or GAD were not restricted to considering information made available through the annual returns. They could seek their own information and, in November 1990, the regulator announced that site visits would be introduced as part of the regulatory process. The first of these visits took place in late 1991.

21. In addition, the following formed part of the context for, and complemented, the statutory regime:

(a) policy and prudential guidance notes and letters issued by the prudential regulator and GAD to assist officials to undertake their regulatory responsibilities appropriately, to outline to Appointed Actuaries and to insurance companies their responsibilities in complying with the regulatory regime and to inform the insurance industry as to the approach that would be adopted by the regulators and/or GAD;

(b) agreements made between the prudential regulator and GAD to govern the provision of services and advice to the regulator by GAD and, in the latter years relevant to the investigation, between the then prudential regulator and the Financial Services Authority to govern the exercise of contractual duties on the latter to undertake the day-to-day supervision of insurance companies on behalf of the regulator; and

(c) guidance developed by the actuarial profession for the Appointed Actuaries of insurance companies on the discharge of the key role which Appointed Actuaries played in the prudential regime.

22. These guidance notes, letters and agreements fulfilled various functions but in general embodied then current professional standards and accepted good practice, were aimed at giving effect to the provisions of the statutory regime and in certain respects supplemented that regime. The guidance notes, letters and agreements will be considered by the Ombudsman as being relevant, as appropriate, to the discharge of administrative functions relating to that regime - and as explanatory

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

material and standards set for themselves and others by the regulator, GAD and the actuarial profession. However, the guidance, letters and agreements cannot be seen as replacing or amending the legislative provisions. If guidance or advice issued by the prudential regulator or GAD, or agreements entered into between them, were inconsistent with the statutory regime, that itself may be capable of constituting maladministration. However, such guidance notes, letters and agreements were considerations to which the regulator and GAD should have had regard.

<u>The powers of the prudential regulator</u>

23. The powers of intervention available to the prudential regulator were set out in statute and included:

- powers to withdraw authorisation from a company to conduct new business if it appeared that the company was not fulfilling its statutory obligations under ICA 1982 (e.g. to maintain a specified margin of solvency) or if it no longer met the criteria necessary for the authorisation of companies to carry out insurance business (section 11, ICA 1982);
- powers, in the event that a company failed to meet its statutory solvency margin, to require the company to submit a plan for the restoration of a sound financial position and to require modifications to that plan if it was inadequate, which the company was then required to implement (section 32, ICA 1982);
- powers, if the margin of solvency fell below the 'guarantee fund' of one third of the required margin of solvency (or below £400,000 if that sum were the greater), to require the submission of a short-term financial scheme and to require modifications to that scheme if it was inadequate, which the company was then required to implement (section 33, ICA 1982; and the Insurance Companies Regulations 1981 and 1994);
- powers to intervene in the affairs of a company in specified circumstances in the form of:

    a. a requirement for the company not to make, or to realise, certain investments (section 38, ICA 1982);

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

b. a requirement for the company to maintain certain assets within the UK and to require that all or part of those assets be placed in the custody of an independent trustee (sections 39 and 40, ICA 1982);

c. a requirement for the company to limit its aggregate premium income (i.e. the amount of money paid into a company by its customers) (section 41, ICA 1982);

d. a requirement for the company to arrange for its Appointed Actuary to investigate all or part of the affairs of the company and to deposit an abstract of the Actuary's report with the regulator (which was then sent to the Registrar of Companies and which was open to public inspection) (sections 42 and 65, ICA 1982);

e. a requirement for the company to accelerate the deposit of its regulatory returns with the regulator (section 43, ICA 1982);

f. a requirement for the company to produce specified information or documents, verified in any way specified by the regulator (section 44, ICA 1982); and

g. a residual power to take such other action as appeared to be appropriate for the purpose of protecting policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities or otherwise to fulfil their reasonable expectations (section 45, ICA 1982).

24. The power in g. above could not be used in such a way as to restrict a company's freedom to dispose of its assets (e.g. by preventing the distribution of assets to policyholders through bonuses) unless authorisation to conduct new business had first been withdrawn from the company; or unless the regulator believed that the company did not meet the statutory solvency margin; or unless the regulatory returns by the company showed the company's liabilities had been determined otherwise than in accordance with the valuation regulations or generally accepted accounting practices (section 45(2), ICA 1982).

25. In addition, the power under section 45 was only to be used in the event that protecting policyholders (or potential policyholders) from the risk

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

that their reasonable expectations might not be fulfilled could not be appropriately achieved by the exercise of the regulator's other powers, the most important of which are summarised in sub-paragraphs a. to f. of paragraph 23 above (section 37(6), ICA 1982).

<u>The circumstances in which intervention was permitted</u>

26. The prudential regulator was empowered to use its powers of intervention in the following circumstances (section 37, ICA 1982):

a. where the regulator considered that intervention was desirable for protecting policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities;

b. in the case of long-term business, where the regulator considered that intervention was desirable for protecting policyholders or potential policyholders against the risk that the company might be unable to fulfil their reasonable expectations;

c. (with effect from 1 July 1994) where it appeared to the regulator that any of the criteria of sound and prudent management of an insurance company (see below) was not or might not be fulfilled by the company (or had not or might not have been fulfilled in the past);

d. if the company failed to satisfy an obligation to which it was subject by the terms of the ICA 1982 (e.g. the maintenance of an appropriate solvency margin);

e. if the company furnished misleading or inaccurate information to the regulator;

f. if the regulator was not satisfied that adequate arrangements were in force or would be made for the reinsurance by the company of any risks that the regulator considered should be reinsured;

g. if there were grounds on which, were the company a new company, the regulator would not have granted it authorisation to carry on insurance business;

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

h. if it appeared to the regulator that the company had substantially departed from any business proposal or financial forecast submitted at the time of its authorisation; and

i. in relation to non-UK based companies, if the company had lost authorisation in its 'home country'.

27. Other powers granted to the regulator from 1 July 1994 included the power to appoint one or more 'competent persons' to conduct a general investigation and to report to the regulator on two matters: first, whether the criteria of sound and prudent management were being fulfilled by the company; and secondly, whether those criteria would be fulfilled if an intended new controller of the company were to become such a controller (section 43A, ICA 1982).

28. The criteria for sound and prudent management were set out in Schedule 2A to the ICA 1982 (having been inserted by the Insurance Companies (Third Insurance Directives) Regulations 1994). These criteria included:

- that the business of the company was carried on with integrity, due care and the professional skills appropriate to the nature and scale of its activities;

- that each director, controller, manager or main agent of the company was a fit and proper person to hold that position;

- that the company was directed and managed by a sufficient number of persons who were fit and proper persons to hold the positions they held; and

- that the company conducted its business in a sound and prudent manner.

29. A company was not to be regarded as conducting its business in a sound and prudent manner:

(i) unless the company maintained adequate accounting and other records of its business and maintained adequate systems of control of its business and records (and those arrangements were not to be considered adequate unless they were such as to enable the business to be prudently managed);

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

(ii) if the company failed to conduct its business with due regard to the interests of policyholders and potential policyholders;

(iii) if the company failed to satisfy any obligation under the ICA 1982; or

(iv) if the company failed to supervise the activities of any subsidiary undertaking with due care and diligence and without detriment to the company's business.

30. These statutory provisions (as amended from time to time) were in place until the replacement of this statutory regime on 1 December 2001.

<u>Maladministration and the purpose of the Ombudsman's investigation</u>

31. The purpose of our investigation is:

> *To determine whether individuals were caused an injustice through maladministration in the period prior to December 2001 on the part of the public bodies responsible for the prudential regulation of the Equitable Life Assurance Society and/or the Government Actuary's Department; and to recommend appropriate redress for any injustice so caused.*

32. No definition of maladministration was provided in the Parliamentary Commissioner Act 1967, from which the Ombudsman derives her powers. Indeed, successive Ombudsmen have resisted attempts to define rigidly the concept, as they believed that this might lead to an overly restrictive view of the types of complaint that they might consider.

33. However, in the Second Reading debate on the Bill on 18 October 1966, Richard Crossman, the then Leader of the House of Commons, said that an attempt to list the characteristics that might constitute maladministration would include *bias, neglect, inattention, delay, incompetence, inaptitude, perversity, turpitude, arbitrariness and so on.*

34. A former Ombudsman also added to this list in what he said was more 'modern' language in his Annual Report to Parliament for the year 1993. The additional characteristics he listed were: rudeness; unwillingness to treat a complainant as a person with rights; refusal to answer reasonable

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

questions; neglecting to inform a complainant on request of his or her rights or entitlements; knowingly giving advice which was misleading or inadequate; ignoring valid advice or overruling considerations which would produce an uncomfortable result for the overruler; offering no redress or manifestly disproportionate redress; showing bias whether because of colour, sex, or any other grounds; omission to notify those who thereby lost a right of appeal; refusal to inform adequately of any right of appeal; faulty procedures; failure by management to monitor compliance with adequate procedures; cavalier disregard of guidance which was intended to be followed in the interest of the equitable treatment of those who used a service; partiality; and failure to mitigate the effects of rigid adherence to the letter of the law where that produced manifestly inequitable treatment.

35. In R v Local Commissioner *ex parte* Bradford Metropolitan City Council [1979] QB 289, Eveleigh LJ referred with approval to the definition of maladministration in the then current Shorter Oxford English Dictionary as being *faulty administration* or *inefficient or improper management of affairs*. Other relevant judicial determinations have relied on or otherwise quoted the 'Crossman catalogue'.

36. In addition to the characteristics outlined in the preceding paragraphs, therefore, maladministration may occur when the following are demonstrated: a failure to follow a public body's own policies and procedures; a failure to comply with recognised good practice; an omission to keep adequate records; a failure to investigate when given information that should lead to investigative action; a lack of corporate action or proper liaison when such was due; and a failure to give proper consideration to available courses of action. This list is not exhaustive.

37. What is to be regarded as maladministration is for the Ombudsman to determine provided only that her decision is one that is within the range of meaning that this term can bear in its statutory context. Section 12(3) of the 1967 Act makes it plain, however, that nothing in the 1967 Act authorises the Ombudsman to question the merits of a decision taken without maladministration by a government department or other authority in the exercise of a discretion vested in that department or authority. Nor is the Ombudsman empowered to investigate the actions of bodies in her jurisdiction if those actions were taken not in the

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

exercise of the administrative functions of those bodies but in the exercise of their judicial or legislative functions.

38. Within this context, most of the complaints set out in the statement of complaint relate to actions (or omissions to act) by the regulator and/or GAD in respect of matters which relate to the exercise of administrative functions. Some complaints, however, appear at first sight to relate to ministerial policy decisions. While policy decisions are for Ministers to make, the way that such decisions are taken - for example, whether they were taken without regard to relevant considerations or whether they were taken with regard to irrelevant considerations - is capable of constituting maladministration. However, as explained above, it is not for the Ombudsman to question the merits of such decisions if they were taken without maladministration.

What might reasonably have been expected of the prudential regulator?

39. In order to determine whether the prudential regulator and/or GAD were guilty of maladministration in the performance by them of regulatory actions in respect of Equitable Life, the Ombudsman must first reach an understanding, based on the evidence available to her, of what the regulators did or did not do. She must then make an objective assessment of these actions (or omissions to act) based on the standard of regulation that reasonably could be expected from the regulators at the relevant time in the light of the then prevailing legislation, guidance and accepted good practice. Her assessment is not therefore informed by hindsight or by her opinion of what should have been the regulatory regime in place at the relevant time.

40. It should also be recognised that, while the regulator had a duty to consider their powers of intervention, they had discretion over whether and how to exercise those powers.

41. In considering the actions of the regulators and/or GAD, the Ombudsman's objective assessment will have two strands:

- the first will focus on whether the prudential regulator and/or GAD acted - or omitted to act - in a way that was inconsistent with the statutory regime that the prudential regulator was responsible

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

for operating with advice and assistance from GAD and which is summarised in earlier sections of this paper; and

- the second will focus on whether, in the exercise of the discretion afforded to them within that regime, the prudential regulator and/or GAD acted within the bounds of reasonable behaviour or otherwise in accordance with a standard that could be expected of anyone exercising the ordinary skill and care of a competent person charged with the discharge of such regulatory functions - or with giving advice in relation to the discharge of such regulatory functions.

In assessing the regulator's actions, the Ombudsman will also have regard to the information that was made available to them and to the information that, in the light of the then prevailing regulatory regime, it would be reasonable to expect the regulator to have sought and to have obtained.

<u>A framework for determining whether maladministration occurred</u>

42. It is proposed that the Ombudsman will, in this context, ask the following questions:

a. Did the prudential regulator and/or GAD assess appropriately Equitable Life's annual regulatory returns, in the light of the then prevailing legislation, guidance and accepted good practice? In particular, on each occasion:

- were the assessments timely and comprehensive?
- did the regulator and/or GAD seek and obtain from Equitable Life (or from any other relevant source) any clarification or additional information that was needed to appropriately consider the returns?
- did the regulator and/or GAD consider appropriately whether Equitable Life was complying with the then regulatory regime?
- in the light of the information the regulator and/or GAD had, and their assessment of this information, did the regulator and/or GAD consider appropriately

Standard of regulation discussion paper issued by the Ombudsman to explain her approach to the investigation (May 2005)

what action (by way of seeking further information, exercising any of their powers of statutory intervention or otherwise), if any, should be taken?

- did the regulator and/or GAD then pursue appropriately any action they deemed necessary?

b. Did the regulator and/or GAD consider appropriately whether the information they possessed from sources other than the regulatory returns indicated anything of significance to the prudential regulation of Equitable Life and did the regulator and/or GAD consider appropriately whether and how to seek and to obtain anything further that was needed to ascertain and analyse the implications of such information? In particular:

- did the regulator and/or GAD assess appropriately the additional information in their possession and/or any further information that they sought and obtained, or consider whether they should have sought or have obtained further information, in the light of the then prevailing legislation, guidance and accepted good practice?
- did the regulator and/or GAD consider appropriately what action (by way of statutory intervention or otherwise), if any, should be taken in the light of this information?
- did the .regulator and/or GAD then pursue appropriately any action they deemed necessary?

c. In relation to each head of complaint set out in the terms of reference for the investigation, did the regulator and/or GAD act:

- in a way that was consistent with the statutory regulatory regime and with then prevailing guidance and accepted good practice?
- otherwise with the skill and care that could reasonably be expected from such a regulator and/or such a professional adviser in all the circumstances?

Response by the Treasury to standard of regulation discussion paper (July and November 2005)

GOVERNMENT RESPONSE TO THE OMBUDSMAN'S DISCUSSION PAPER ARTICULATING AN APPROPRIATE STANDARD OF PRUDENTIAL REGULATION

Paragraphs 37 and 38

Principles
We agree with the three fundamental principles identified in paragraph 37, i.e. that the Ombudsman may only scrutinise *administrativ*e actions; that the Ombudsman may not question the merits of a discretionary decision taken without maladministration; and that what is to be regarded as maladministration is (subject to the ultimate scrutiny of the court) for the Ombudsman to decide. 'Traditionally', maladministration has focussed upon the *manner* in which decisions are reached and the *manner* in which they are or are not implemented – an interpretation that has been consistently adopted by the courts.

In a very complicated investigation like the present, there are potentially in issue a variety of administrative acts that were performed over a considerable period of time – spanning some 30 years in fact. We are not sure, looking at the Discussion Paper, whether it is the Ombudsman's intention to apply the tests for maladministration to individual instances, or whether she will apply them in the context of an overall assessment of the standard of regulation. This is important because individual instances of maladministration, if found, may have had little bearing on the overall standard of regulation to which ELAS was subject and so, in a broader sense, were not maladministrative.

Perhaps the real issue is injustice – in circumstances like this case, not all instances of maladministration would, even remotely, have caused injustice. In our view it makes sense, in the circumstances of this particular investigation, if maladministration were only addressed in the context of a demonstrable causative link with an identifiable injustice suffered. Where this is lacking, our view is that any finding of maladministration would serve no purpose, because the regime under scrutiny has now been replaced – and there has already been a comprehensive Inquiry conducted by Lord Penrose which looked at the lessons to be learnt.

Scrutiny of Ministerial Policy Decisions
Paragraph 38 mentions that ministerial policy decisions will be subject to scrutiny. This assumes, of course, that the Ombudsman views these decisions as 'administrative functions'. Naturally, as this paragraph recognises, many of the regulator's and GAD's actions at issue in this investigation were administrative in nature. However, we think that the line can be much more difficult to draw in the case of ministerial policy decisions. In practice, there is often a chain of interrelated decisions at different levels, each linked to the other; for example, decisions by civil servants in line with policy decisions of ministers, who in turn act consistently with high level policy determined by the government of the day on the basis of its electoral mandate and the will of Parliament. Logically each of these is a separate decision, and those lower down the hierarchy are determined by and have to be understood in the light of those above it. The higher up the chain, the less administrative in nature the decisions are. The then government's policy of *"freedom with disclosure"*, and the resourcing policy formulated in parallel, is a good illustration of this.

The question is how far up the chain the Ombudsman, in her discretion, chooses to go.

Response by the Treasury to standard of regulation discussion paper (July and November 2005)

A comparison of the Ombudsman's process and judicial review may be a useful means of illustrating the difficulties involved. Indeed this is a particularly appropriate comparison because the language of paragraph 38 suggests a similar scrutiny process to that which the courts would adopt in judicial review.

As already noted, the orthodox meaning of maladministration focuses on the manner in which a decision is taken or executed. As such, it has something in common with the test of procedural fairness applied by the court in exercise of its discretion in judicial review. But there is a very significant difference. Where the court quashes a decision on the grounds of procedural unfairness, it will then remit the matter to the decision maker for reconsideration. The court cannot dictate to the decision maker what decision he or she should make. As such, having considered the matter again, and having followed a fair procedure, the decision maker may quite lawfully *come to exactly the same conclusion as before*. The Ombudsman, on the other hand, does not have the power to quash a decision and refer it back, not least because her investigations are of necessity conducted some time after the relevant events have occurred; and therefore there is no way of knowing whether, absent the maladministration, the decision maker would nevertheless have reached exactly the same policy decision. The higher level the decision, and/or the more policy based it is, and/or the older it is, the more insuperable these difficulties become because there will be an ever-increasing chain of related decisions. The courts do not encounter this problem because of the 3-month time limit to bring a claim in judicial review imposed for this very reason by Parliament to avoid undermining certainty in public administration.

We accept, of course, that there is no absolute legal bar upon the Ombudsman from finding that a policy decision was defective and therefore maladministrative, even in the case of decisions made many years ago. The more significant question is whether it is appropriate for her to do so in practice. In particular, what would she do having made such a finding? It is of course open to her to make a recommendation to pay compensation in any case. However, such a recommendation in the situation contemplated would of necessity be premised upon a conclusion as to what the outcome would have been had the defect been absent. Unless it is quite obvious what the outcome would have been, this must involve some sort of assessment of the merits of the original decision – which is territory in which the Ombudsman cannot go. We suggest that the correct approach is that when decisions are looked at – whenever and by whomever they were made – no maladministration should be found unless it is *obvious* that, had the defect not occurred, a different conclusion *would* have been reached, *and* what that conclusion would have been. Without this, no sensible quantum could be determined in respect of any recommendation to pay compensation. And, if no quantifiable recommendation can be made, there is no practical purpose in making a finding of maladministration.

In relation to the JR-like test that is proposed in paragraph 38, we would also wish to urge caution in treating the traditional grounds of judicial review as grounds for a finding of maladministration. There can't be a simple read-across. For example, a rationality test[1] involves an assessment of the merits of the decision, and the Ombudsman cannot determine what the correct interpretation of the law ought to have been. Even in the example of

[1] In other words, was the decision within the range of responses reasonably open to the decision maker?

whether relevant or irrelevant considerations were taken into account, there cannot be blanket read-across. Discretionary decisions sometimes involve giving different weight to a range of very complex factors. In practice, decision makers acting in good faith have got it wrong and have been judicially reviewed; yet it seems contrary to a common sense understanding of the concept to suggest that on all these occasions there was maladministration. We note the helpful emphasis in paragraph 38, perhaps in recognition of these points, that process flaws are *capable* of constituting maladministration.

Paragraphs 39, 41 and 42

Paragraph 39 recognises that the actions of the regulator and/or GAD cannot be viewed with hindsight or in the light of the Ombudsman's opinion of what the regulatory regime ought to have been at the relevant time. We agree with this.

In relation to the references in paragraphs 39 and 42 to the actions of the prudential regulator/GAD being measured in the light of "the then prevailing legislation, guidance and accepted good practice": we completely agree that the Ombudsman must assess the actions of the prudential regulator and/or GAD in the light of the then prevailing regulatory regime. By "regulatory regime" we refer to the then prevailing legislation and government policy adopted pursuant to it, as embodied in the guidance and accepted best practice that went with them. We feel that "regulatory regime", cross-referenced as necessary to the detailed description of it that will be published, is a better descriptor of what the prudential regulator/GAD ought to be measured against, because "guidance and accepted good practice" does not clearly convey the central role that government policy played in the regime[2]

We are not clear as to what is proposed by the second strand of the Ombudsman's assessment referred to in paragraph 41 (and which similarly appears in paragraph 42(c)). It appears to be an application, in the context of the Ombudsman's jurisdiction over maladministration, of legal concepts of a duty of care and its breach – in effect, negligence. We would urge caution against borrowing from the law of negligence, with the considerable complications that this will entail.

Firstly, is it the Ombudsman's intention to focus on negligence as to *manner*, or negligence as to *outcome*? If the former, we do not think that this adds anything to the first strand of the Ombudsman's assessment, and wonder, therefore, whether the second strand is necessary. If the latter, this would represent a move from the traditional test with its focus on *manner* to a broader substantive inquiry focused upon the result of the decision. This would be problematic. In the case of policy or discretionary decisions in particular, this approach would risk crossing the line drawn at assessing the merits of such decisions. For example, a discretionary decision correctly taken in line with a properly formulated policy may simply be an inadequate response and negligent for that reason. How would such a finding not represent an assessment of the merits of the decision?

Secondly, reliance on concepts borrowed from the law of negligence, like 'duty of care', risks the Ombudsman becoming mired in the same legal complexities that vex the courts. In particular, before imposing a negligence standard on the prudential regulator, the Ombudsman would need to consider the following issues: (i) what would bethe practical consequences of imposing a duty of care on prudential regulators? (ii) what standards

[2] It tends to assume that government policy *was* the guidance and accepted good practice, when in fact guidance and accepted good practice would have been developed *pursuant to or in the light of* government policy.

should be applied when trying to assess whether or not any such duty has been breached? (iii) what tests of causation or remoteness should be applied to any loss said to have been suffered by the investing public? For present purposes, we would simply like to observe that each of these questions has, in the past, given rise to considerable legal debate, which we think cannot be ignored by the Ombudsman before utilising a "negligence" test to determine whether or not there has been maladministration.

(i) Consequences

There are three broad concerns:

Firstly, we assume that the Ombudsman intends to apply the duty of care test to all discretionary decisions, including ministerial policy decisions. If this is so, this would cut across the tendency of the courts (in England and Wales at least) against applying a test of negligence in these circumstances. The courts have drawn a distinction between policy or discretionary decisions, which involve the assessment of different choices of courses of action, and operational decisions, which involve the carrying out or implementation of policy or discretionary decisions[3]. The line of course is difficult to draw, but the principle is that the more policy orientated a decision may be, the less inclined are the courts to impose a duty of care.

Secondly, regarding the position with regulators in particular, on a number of recent occasions the courts (the Privy Council and the House of Lords) have for policy reasons refused to impose a duty of care on prudential regulators in favour of the investing public.[4] The Courts have consistently taken the view that, where prudential regulators are concerned, a number of different factors arise which militate strongly against the imposition of a duty of care. These include the following:

i. There is a serious risk that imposing such liability would result in over-cautious or otherwise risk-averse regulation. This dead hand would not be in the interests of the wider economy, which lie in sectoral innovation, enterprise and thus growth.

ii. In acting, or not acting, regulators are required to consider and balance a range of different matters including the allocation of scarce resources; they have a wide discretion and the issues involved are not readily justiciable.

iii. The imposition of a duty of care on the regulator would involve making it liable for the defaults of a regulated entity. As a matter of principle, a person should not be made liable for the wrongdoings of another unless it can exercise a high degree of

[3] See, for example, *Barrett v Enfield London Borough Council* [2001] 2 AC 550, where Lord Hutton said: "...I consider that where a plaintiff claims damages for personal injuries which he alleges have been caused by decisions negligently taken in the exercise of a statutory discretion, and provided that the decisions do not involve issues of policy which the courts are ill-equipped to adjudicate upon, it is preferable for the courts to decide the validity of the plaintiff's claim by applying directly the common law concept of negligence than by applying as a preliminary test the public law concept of *Wednesbury* unreasonableness (see *Associated Provincial Picture Houses Ltd v Wednesbury Corpn* [1948] 1 KB 223) to determine if the decision fell outside the ambit of the statutory discretion. I further consider that in each case the court's resolution of the question whether the decision or decisions taken by the defendant in exercise of the statutory discretion are unsuitable for judicial determination will require, as Lord Keith stated in the *Takaro* case [1988] AC 473, 501, a careful analysis and weighing of the relevant circumstances."

[4] See in particular *Yuen Kun Yeu v AG for HK* [1988] AC 175; *Davis v Radcliffe* [1990] 2 All ER 536; and *Three Rivers District Council v Governor and Company of Bank of England* [2003] 2 AC 1.

control over the latter. A regulator does not have day to day control over the management of the regulated entity; its role is much more limited.

iv. It is not reasonable for the customers, or potential customers, of a regulated body to expect the regulator to guarantee its soundness. No system of regulation can guarantee that outcome – and all investment carries with it risk.

v. Regulation is conducted in the wider public interest, not for particular groups of investors, either within a particular sector or within a particular company. Different members of the public may have differing and potentially conflicting interests that a regulator is obliged to balance (for example an expectation that regulation would not be too interventionist, so that the costs to industry and therefore the public are kept to a minimum; or, in the present context, the differing PREs of differing classes of policyholder within ELAS).

vi. The potential width of the class of individuals to whom a duty of care would be owed gives rise to a risk of "floodgate" claims, if a prudential regulator is held to owe a duty of care to the investing public.

All of these policy considerations would apply with equal force to preclude a recommendation being made by the Ombudsman for compensation to be paid by a prudential regulator on the grounds of a finding of negligence based upon a breach of a duty of care.

Thirdly, the Ombudsman may be aware of the recent policy initiatives by the government to streamline the regulatory burden on the business sector. The recent Hampton Review recommended that regulators should take a risk-based approach across all of their enforcement activities. In the Chancellor's Budget report the Government accepted the Review's recommendations and undertook to bring forward legislation to implement them. An approach by the Ombudsman which, we believe, potentially could give rise to the prospect of over-cautious or risk-averse regulation would cut right across these policy developments.

(ii) Standard

Aside from assessing whether a duty of care should be imposed, how will the Ombudsman assess whether or not it has been breached? Will she, for example, apply the test in law for judging breach in a professional context – i.e. against what the generality of professional opinion would be (the *Bolam* test)[5]? In other words, will she look to see what other regulators or professional advisers would have done in similar circumstances with the knowledge (and constraints) the regulator actually had at the prevailing time? Or will she consider what skill and care a hypothetical regulator ought to have had and then what a regulator with that skill and care would have done in similar circumstances with the knowledge (and constraints) the regulator actually had (or ought to have had) at the prevailing time? Or will she apply a test more analogous to the test applied by the Courts in a judicial review

[5] See the direction to the jury of McNair J in *Bolam v Friern Hospital Management Committee* [1957] 1 WLR 586 – 587. The test is "...not the test of the man on top of the Clapham omnibus, because he has not got this special skill. The test is the standard of the ordinary skilled man exercising and professing to have that special skill. A man need not possess the highest expert skill at the risk of being found negligent. It is well established law that it is sufficient if he exercise the ordinary skill of an ordinary competent man exercising that particular art..."

context: and consider, when assessing an alleged breach of any duty, whether the regulator conducted itself in a way that no reasonable regulator, in similar circumstances and with the knowledge (and constraints) of the regulator, would have done?

(iii) Causation

Certain questions arise to which we wish to draw the Ombudsman's attention: How will the ombudsman deal with questions of causation and remoteness? In particular, would a mere "but for" test be applied to determine the issues of causation? Or would the Ombudsman consider, as is done in the case of auditors' professional negligence cases, whether the negligence was the effective cause of the investors' loss, as opposed to simply giving rise to the opportunity for the investors to suffer that loss at the hands of fraudulent or incompetent management (and for which the auditor should not be held liable)?[6] What losses break the chain of causation and/or are too remote (for example the fall in the stock market; the outcome of the *Hyman* litigation; the fact that the ELAS sale fell through)?

Conclusion on negligence

Although we recognise that it is a matter for the Ombudsman to decide whether to do so, we wonder whether it would be wise or practical for her to adopt the language of negligence and to try to adapt it as part of the concept of "maladministration". In our view there are real and substantial difficulties with this approach. It risks the Ombudsman's process becoming burdened with the considerable legal baggage that goes with it; and it cuts across the wider public interest that judicial and government policy has sought to address.

We therefore suggest the following wording for paragraph 41:

> *In considering the actions and decisions of the regulators and/or GAD, the Ombudsman's objective assessment will focus on whether the prudential regulator acted – or in omitting to act, behaved – outside the bounds of, or inconsistently with, the regulatory regime that the prudential regulator was responsible for operating with advice and assistance from GAD.*

...

[6] See *Galoo v Bright Grahame Murray* [1994] 1 WLR 1360.

ANNEX A

EXCERPTS FROM: COMMENTS ON THE "FRAMEWORK FOR DETERMINING WHETHER MALADMINISTRATION OCCURRED"

Paragraphs 42 (a) and (b)
We agree that the starting point in the Ombudsman's factual inquiry should be the regulator's assessment of Equitable Life's annual returns. This was, of course, the starting point by which the regulator determined whether life insurance companies were complying with the statutory solvency requirements, supplemented by appropriate questioning of this information, and appraisal of the replies, during the scrutiny process.

...

... [W]e think that it would make sense in this particular investigation if maladministration were only addressed in the context of a demonstrable causative link with an identifiable injustice suffered. We remain of the view that where this is lacking, any finding of maladministration would serve no purpose, because the regime under scrutiny has now been replaced, and because there has already been a comprehensive inquiry conducted by Lord Penrose which looked at lessons to be learnt.

... [M]aladministration has 'traditionally' focused upon the *manner* in which decisions are reached and the *manner* in which they are or are not implemented – an interpretation that has been consistently adopted by the courts. Our view is that this principle ought to be central in any assessment of the "appropriateness" of the regulator/GAD's behaviour. The assessment of whether any behaviour was "appropriate" should not involve questions of whether what was done was "reasonable" or "rational" (see below).

We also wish to comment on your proposal to assess whether behaviour was "appropriate" in the light of "accepted good practice". Unlike the position with legislation and guidance, it is not clear what administrative standards the regulator/GAD are to be measured against if the benchmark is "good practice". This is a flexible concept which could encompass a range of standards from acceptable to best practice. We do not accept that a failure to follow "accepted good practice" would be maladministration. By definition, good practice is of a higher standard than (for example) acceptable practice.

Paragraph 42(c)
We suggest that the primary question for the Ombudsman to consider in her analysis of the facts is whether the prudential regulator acted – or in omitting to act, behaved – outside the bounds of, or inconsistently with, the regulatory regime that it was responsible for operating with advice and assistance from GAD.

This is in part reflected in the first bullet point of paragraph 42(c), but the second bullet point seems to indicate a separate objective test going beyond the requirements of the regulatory regime itself, in particular a duty of care test (hence the comments in our draft response in relation to negligence). In the light of your assurances, we are assuming that the second bullet point will be deleted.

Taking all the above points together, could not paragraph 42(c) be expressed as follows:

Did the regulator and/or GAD, with maladministration, fail to act in accordance with the statutory regulatory regime and the policies adopted in implementing that regime?

Where this involved a discretionary decision or the exercise of judgment, did the process by which the decision was reached or the judgment determined, or its implementation involve maladministration?

In relation to (b), our view is that the question before the Ombudsman ought to relate solely to process, or *manner*. As we mention above, we don't agree that it can involve any assessment of "reasonableness" or "rationality", which would represent in our view an assessment of the merits of the decision. Section 12(3) of the 1967 Act states that "nothing in this Act authorises or requires the Commissioner to question the merits of a decision taken without maladministration...in the exercise of a discretion vested in that department or authority". In our view "decision taken without maladministration" refers to the how the decision was made, not its outcome, which is what an assessment of its reasonableness would refer to.

This view is consistent with the *Bradford* judgment quoted in the discussion paper, where Lord Denning, in considering the meaning of "maladministration", said, *"It would be a long and interesting list, clearly open-ended, covering the manner in which a decision is reached or discretion is exercised: but excluding the merits of the decision itself or of the discretion itself. It follows that a 'discretionary decision, properly exercised, which the complainant dislikes but cannot fault the manner in which it was taken, is excluded'."*

You have of course given us assurances that it is not the Ombudsman's intention to assess the merits of discretionary decisions, for which we are grateful.

ANNEX B

FREEDOM WITH PUBLICITY

We have been requested to provide a 'positive' statement of what the Government believe could have been expected – by individual policyholders and by regulated entities such as Equitable – from those operating the regulatory regime as guided by the policy of freedom with publicity.

Background
The governments of the day had two primary objectives in life insurance regulation: commercial freedom and innovation on the one hand and policyholder protection on the other.
The doctrine of freedom with publicity was seen as providing an appropriate balance between these two competing objectives.

By the time the Insurance Companies Act 1973 was enacted, the doctrine of "freedom with publicity" had been government policy in regulating the insurance sector for almost a century. Its form had of course evolved considerably over this time, but the essence of the doctrine remained the same: provided that life insurance companies complied with certain requirements, they were free to pursue their business as chosen without government interference[1].

In limiting interference in the affairs of insurance companies the doctrine sought to facilitate effective competition, promote growth and expansion in the industry and to reduce the administrative cost of regulation upon the regulated sector. In other words, in applying the doctrine the prudential regulator was pursuing the government's publicly stated objective of an efficient, competitive and innovative market[2].

Freedom with publicity was not so much a " 'benchmark' against which the regulators should or could be judged" as a guiding principle which generated certain expectations in the regulated sector and in the investing public. Provided certain conditions were fulfilled it was fundamentally a policy of "not doing things", as opposed to "doing things", although that does not mean that there weren't positive obligations.

What the industry could expect under Freedom with Publicity
The primary expectation of any government is that it will exercise its discretionary powers consistently and in accordance with its stated policies.

When it came to the prudential regulation of the insurance sector, whilst the industry was of course obliged to comply with the statutory controls placed upon it, there was a clear expectation that the prudential regulator would not otherwise seek to interfere in the affairs of a company.

[1] In an address before the House of Lords on 8 February 1973 the Parliamentary Under Secretary of State, Department of Trade and Industry, said, *"The form and extent of supervision designed to reduce the risk of insurance failures has changed through the years, but a modified form of the caveat emptor doctrine has been the guiding principle throughout. This has usually been referred to as "freedom with publicity", meaning that the insurer normally has more or less complete freedom to run his business as he thinks fit, but must make available certain prescribed information to help the policy holder take a view as to his likely ability to pay up if and when the occasion for indemnity arises."*

[2] On 21 May 1973 the Minister for Trade and Consumer Affairs, in an address to the House of Lords, said, *"The aim in legislation in these matters is to strike a proper balance between, on the one hand, allowing the industry so much freedom that it can be exploited by rogues and, on the other hand, creating for the industry such shackles that it cannot give an efficient, competitive and forward-looking service to consumers here and abroad."*

Provided that they were complying with statutory requirements, authorised insurance companies could legitimately expect to have the freedom to design their own products, set their own premiums and conditions of contract with customers, to determine their own investment and bonus distribution strategy, and to pursue their chosen business models[3].

The obligation upon the prudential regulator was to regulate consistently with these expectations. The approach adopted in practice was characterised as regulating with a "light touch"[4].

"Publicity" as a pre-requisite for "Freedom"
The "price" of the freedom that insurance companies could expect was that they were required to make certain aspects of their affairs public and to comply with certain other safeguards built into the regulatory system[5].

In this the doctrine sought to fulfil the government's other objective of protecting policyholders by enabling them, with input from market analysts, journalists, and brokers, to make informed investment choices. If this was to be effectively achieved, **it naturally entailed an obligation upon the prudential regulator (within the extent of its remit) to ensure that the "publicity" element of the doctrine was properly discharged by the regulated sector.** However the doctrine of freedom with publicity had informed the very design of the prudential regulatory framework to achieve this. Primary and secondary legislation prescribed in detail the nature and form of disclosure required; and this was supplemented by additional guidance. Section 65 of the Insurance Companies Act 1982 obliged the prudential regulator to deposit with the registrar of companies copies of the returns made by insurance companies.

The investing public's expectations
Although not the primary "recipient" of the exercise of executive power pursuant to the doctrine of freedom with publicity, members of the public had expectations deriving from the doctrine's design to best balance their interests as consumers. The public would have had expectations in relation to both the behaviour of the companies they invested in and the prudential regulator's exercise of its statutory powers.

In relation to the companies themselves, the public had an expectation that they would provide honest and proper disclosure to the prudential regulator in accordance with their statutory obligations. In turn their expectation of the prudential regulator was that it would monitor life insurance companies' compliance with regulatory requirements, in particular statutory solvency on the basis of the information disclosed in the regulatory returns.

There was an expectation of the prudential regulator that it would not regulate in a way so as to damage consumers' interests by distorting the market, reducing the amount of choice available or by making insurance products more expensive through failure to minimise the cost-burden of

[3] During the passage of the Insurance Companies Bill through Parliament in 1981, the Under-Secretary of State for Trade said, *"In general, there has been no Government control of premiums or other conditions of contract between insurers and policyholders; there has not been Government direction of the investment of insurance companies; there has been a wish to see the insurance industry expand the range and volume of its business in the United Kingdom and in other countries..."*
[4] As the PCA noted in paragraph 35 of her first report, *"The style adopted by the prudential regulators was variously described by them to my staff at interview as "passive", 'light touch' and 'like negative vetting'...".*
[5] See again paragraph 140 of the PCA's first report.

Response by the Treasury to standard of regulation discussion paper (July and November 2005)

regulation[6]. Powers of intervention were broad and draconian and the intention was that the regulator would be able to use influence and persuasion under threat of their use[7]. **Consumers could legitimately expect that the regulator would not use its powers lightly or capriciously.**

Having highlighted what consumers could expect under the doctrine of freedom with publicity, it is equally relevant and important to highlight what they could not expect.

Firstly, there were limits to the extent to which the prudential regulator could be expected to fulfil the role of policeman or detective in addition to its monitoring role. The investing public did not have an expectation that the prudential regulator would second-guess or challenge the management of a company, or its Appointed Actuary, unless there was clear evidence[8] that it was acting in a way that was contrary to regulatory requirements.

The actuarial practices adopted by a company were a matter for the professional judgment of its Appointed Actuary, acting within the limits permitted by the regulations and guidance issued by the actuarial profession, and there was a range of possible actuarial approaches satisfying this criterion. The Appointed Actuary was professionally bound to provide full and accurate disclosure in the returns and to certify compliance with the regulations, and, consistent with the concept of freedom with publicity, the regulator and GAD could reasonably be expected to rely on the information provided by the company when monitoring compliance with the regulations.

Secondly, there was no expectation that the regulator would prevent all company failures or underwrite their losses when failures occurred. Clear public statements were made to the contrary[9] and this would not have been consistent with an expectation not to distort the market. Where things did go wrong, the government had enacted the Policyholders Protection Act in 1975 to provide some safeguards for the consumer.

[6] As the Ombudsman recognised in paragraph 35 of her first report, "*The philosophy of the regime, in contrast to those that had applied in some of the other financial sector regulatory regimes, such as banking, which concentrated on product and tariff control, was to allow consumers to benefit from competition between insurers through downward pressure on prices and greater choice of products*".

[7] As the PCA found at paragraph 24 of her first report, "*I do not dissent from [the] view that the prudential regulator could only intervene formally if a company breached the statutory requirements and that, otherwise, their role was to identify problems and issues, and through informal pressure, encourage the company to take the necessary action to get back to a sound financial base*".

[8] From the Returns or from replies to questions put to the company by the regulator/GAD

[9] The Under-Secretary of State for Trade, on 2 February 1981, said to Parliament, "*There have been cases in the past where failures of insurance companies have done policyholders and interested third parties great harm, and, indeed done the industry no good. Although no system of supervision can avoid completely the risks of difficulty or failure of an insurance company, Government responsibility for a systematic approach is to be found not just in the United Kingdom, but throughout the countries of the developed world and in many others.*".

Conclusion

The doctrine of freedom with publicity entailed both positive and negative obligations upon the prudential regulator. It was fundamentally a policy of restraint (provided that certain conditions were met) in pursuance of positive market related objectives.

The doctrine of freedom with publicity informed the design and operational implementation of the statutory framework. In other words, a description of the positive obligations under the doctrine of freedom with publicity involves a description of the statutory requirements themselves as they from time to time existed, having been designed to implement the doctrine as it was then interpreted.

When it came to the exercise of discretion, the prudential regulator was obliged to act consistently with the expectations that the doctrine created in terms of its stated objectives. In practice the approach adopted was described as regulating with a "light touch".

Section 3

Information regarding complainants and direct contacts

Results of survey of complainants and direct contacts

Introduction

In August 2006, we conducted a survey of everyone who had registered an interest with the investigation in order to establish up-to-date information about them, their relationship with Equitable Life, and the financial and other effects on them of the circumstances which led them to contact us.

The questionnaire process

A total of 1,873 questionnaires were sent to those people for which we had up-to-date postal or email addresses. 1,213 questionnaires were completed and returned to us. This represented a 64.8% response rate. However, 24 of those responses were deemed to be new contacts, in that those people had not previously had contact with us prior to the questionnaire being sent out. As the primary purpose of the questionnaire was to collect enhanced information on existing complainants and direct contacts, those 24 responses have been excluded from the following reports. Therefore, the number of questionnaires on which the following information is based is 1,189.

Information about respondents

The questionnaire asked respondents to provide us with up-to-date personal information about themselves. The information they provided was as follows:

Chart 1: Gender

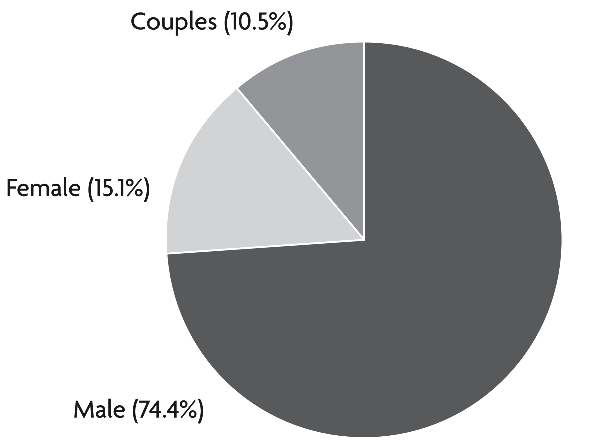

Chart 2: Retirement status

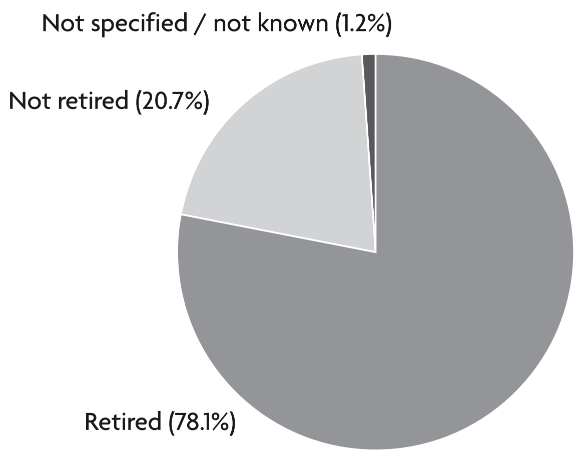

Chart 3: Age range

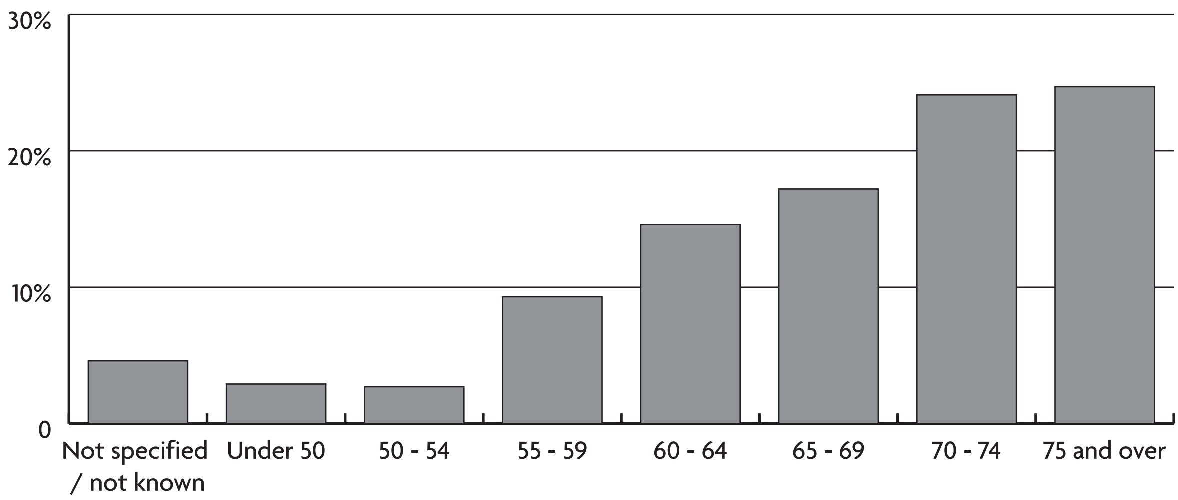
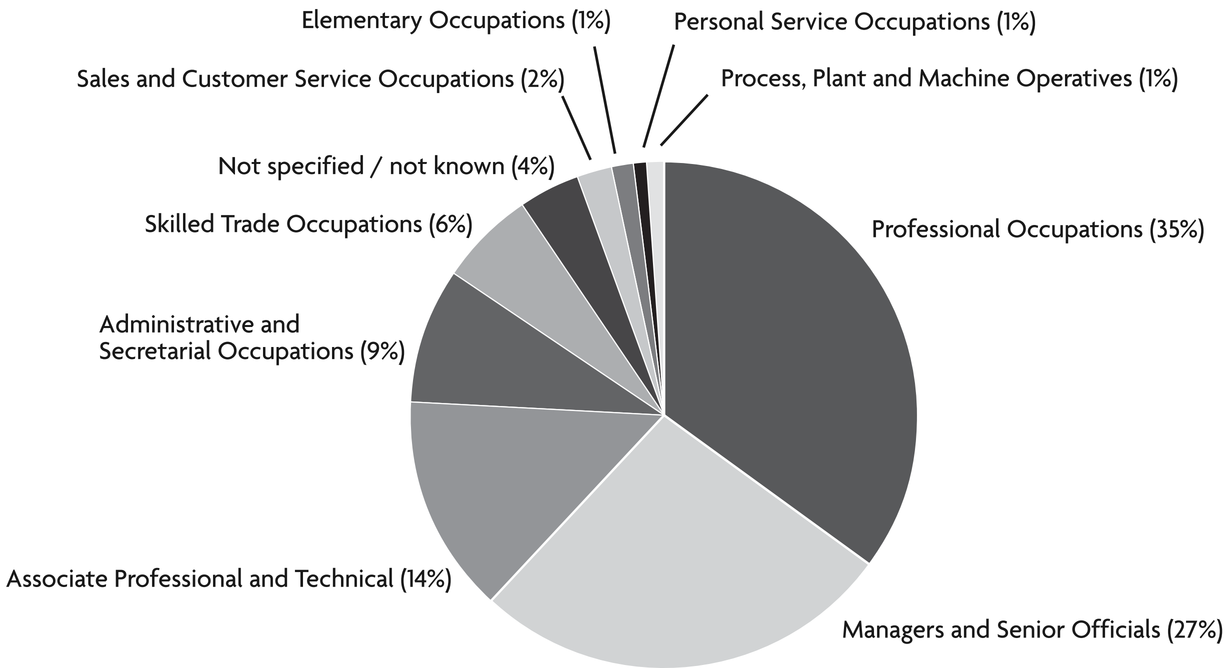


Results of survey of complainants and direct contacts

Chart 4: Occupation type



(Note: occupations were classified according to categories used in the 2001 Census. Those categories are explained on the website of the Office for National Statistics, at http://www.statistics.gov.uk/methods_quality/ns_sec/soc2000.asp .)

Information about contact with my Office

Throughout the investigation, a range of people contacted us concerning Equitable Life. The questionnaire sought to clarify how many people believed that their complaint had been referred by an MP, and how many had contacted us directly. We also sought to establish during what time period respondents thought that they had first made such direct contact.

In the 'First contact' question, 47.7% of complaints (567 people) indicated that their complaint had not been referred by a MP and a further 1.1% of complainants (13 people) were not sure if their complaint had been so referred. Those 580 respondents said that they thought that they had first contacted the office directly.

In a number of cases, the respondent's belief proved to be incorrect. We have verified each complaint or direct contact and the true position is set out on Chart 16.

Chart 5: Referred complaints?

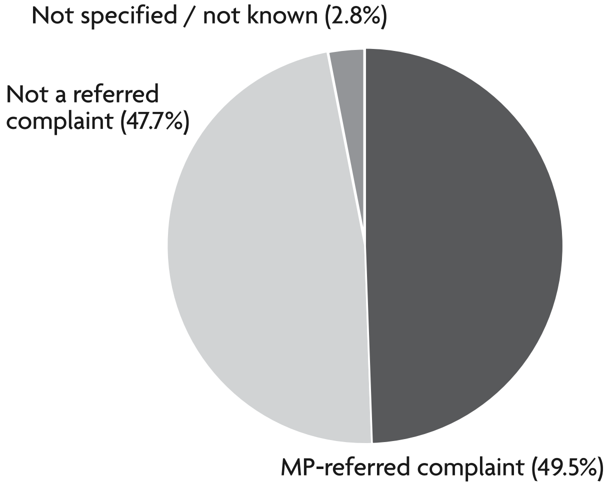


Chart 6: First contact with my Office?

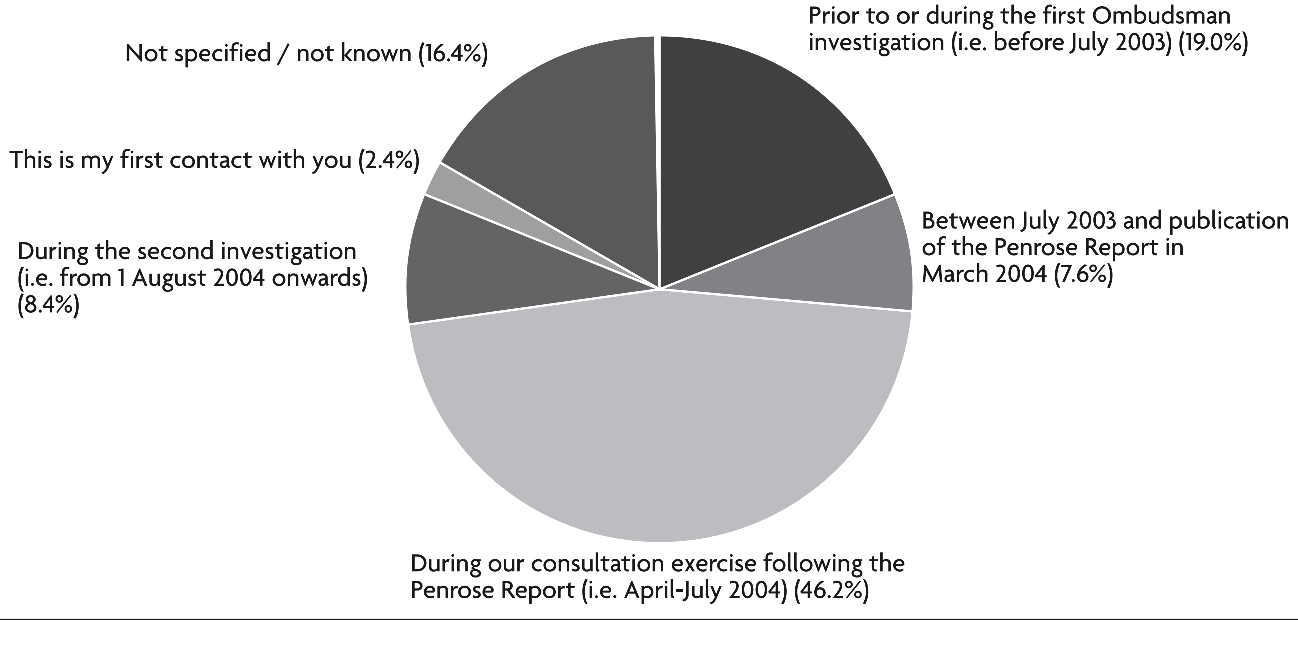

Information about relationship with Equitable Life

The questionnaire sought to obtain information about the types of savings or investments that respondents had made with Equitable Life and also some other information about their relationship with the Society.

The 1,189 questionnaire responses contained information regarding 2,989 policies.

Number of policies
Respondents were asked to specify how many policies they had with Equitable Life. The responses are shown in Chart 7.

With-profits policy?
Respondents were asked to indicate whether their policy/policies were with-profits policies. The responses provided the information depicted in Chart 8.

Guaranteed annuity rate (GAR) status
Respondents were asked to indicate whether their policy/policies contained guaranteed annuity rates. The responses provided the information depicted in Chart 9.

Guaranteed investment return (GIR) status
Respondents were asked to indicate whether their policy/policies contained guaranteed investment return. The responses provided the information in Chart 10.

Was the policy a current investment with the Society?
For each policy identified by respondents, we sought to understand which of those policies were current investments with the Society. The reponses are shown in Chart 12.

Receiving benefits
Where people responded that they were currently receiving benefits (40.6%), respondents categorised those benefits in the ways depicted in Chart 13.

Taking benefits
Where people advised that their policy was no longer with the Society (43.7%), respondents said that they had taken their benefits in ways shown in Chart 14.

Exit charges?
Respondents with such non-current policies (43.7%) identified whether or not they had incurred exit charges. They gave us the information shown in Chart 11.

Operation type
Respondents were asked from which Equitable operation they had bought their policy/policies. We were told that:

- 97.2% of respondents had dealt with the Society's United Kingdom operation
- 0.8% of respondents had dealt exclusively or in part with one of the Society's overseas operations
- 2% of respondents did not answer or did not know.

The overseas responses came from people who said that they had dealt with:

- Guernsey & the United Kingdom (4 people)
- Guernsey (2 people)
- Ireland (2 people)
- Kuwait & the United Kingdom (1 person).

Results of survey of complainants and direct contacts

Chart 13: Receiving benefits

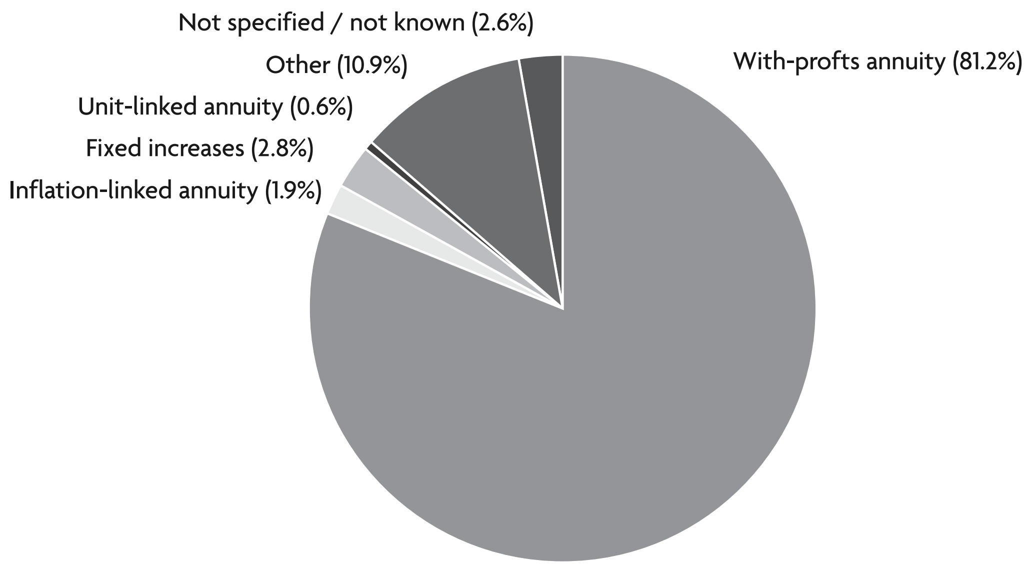

Chart 14: Taking benefits

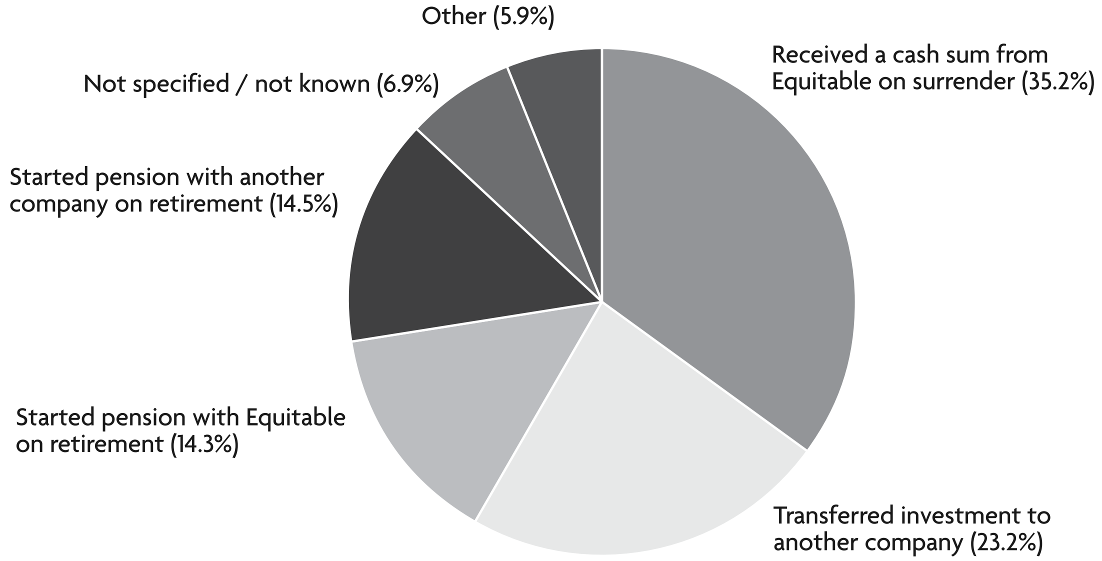


Information about how respondents had been affected

We sought to understand more about the effects of the Equitable affair on respondents.

Highest and lowest financial losses claimed

The highest claimed losses were:

- *£750,000*
- *I estimate taking into account benefits received and continuing inflation £1,000,000 is the minimum sum required to compensate me and my wife for our anticipated future loss.*

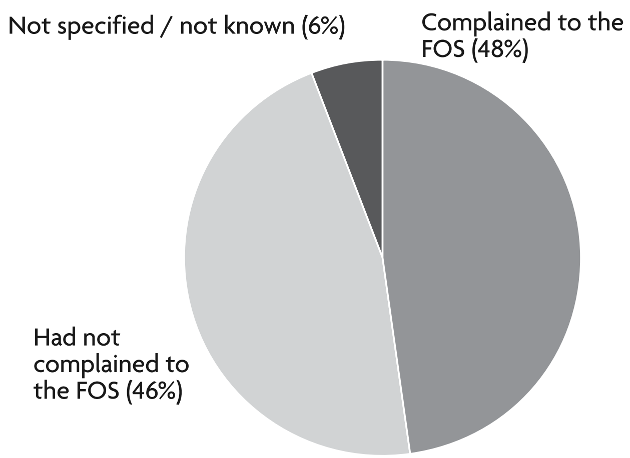
The smallest claimed losses were:

- *£11 p.w.*
- *Paid in £800 received £631.47 loss = £168.53. This loss takes no account of the lump sum and monthly payments made from 03/09/1999. Surrender losing growth or interest for 2+ years.*
- *£236 and up to 12 years' growth in a raging bull market.*

The Financial Ombudsman Service (FOS)

We asked respondents to indicate whether they had also complained to the Financial Ombudsman Service. They gave us the information shown in the chart below.

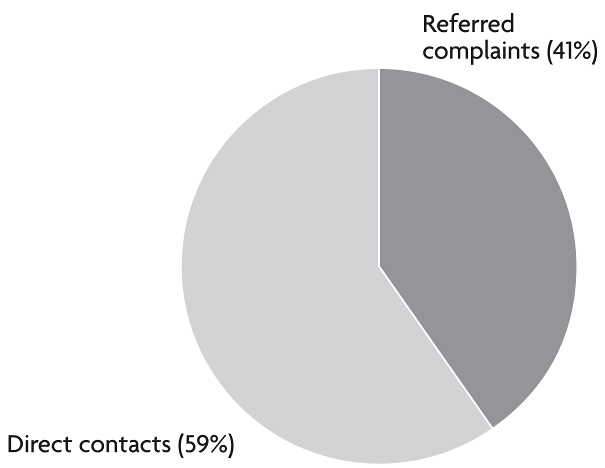
Chart 15: FOS complaints?



Information about those with referred complaints

Of the 1,189 responses, 481 were returned from those who had had complaints referred by their MP. 708 were returned from those who had contacted us directly. Their responses are shown in Chart 16.

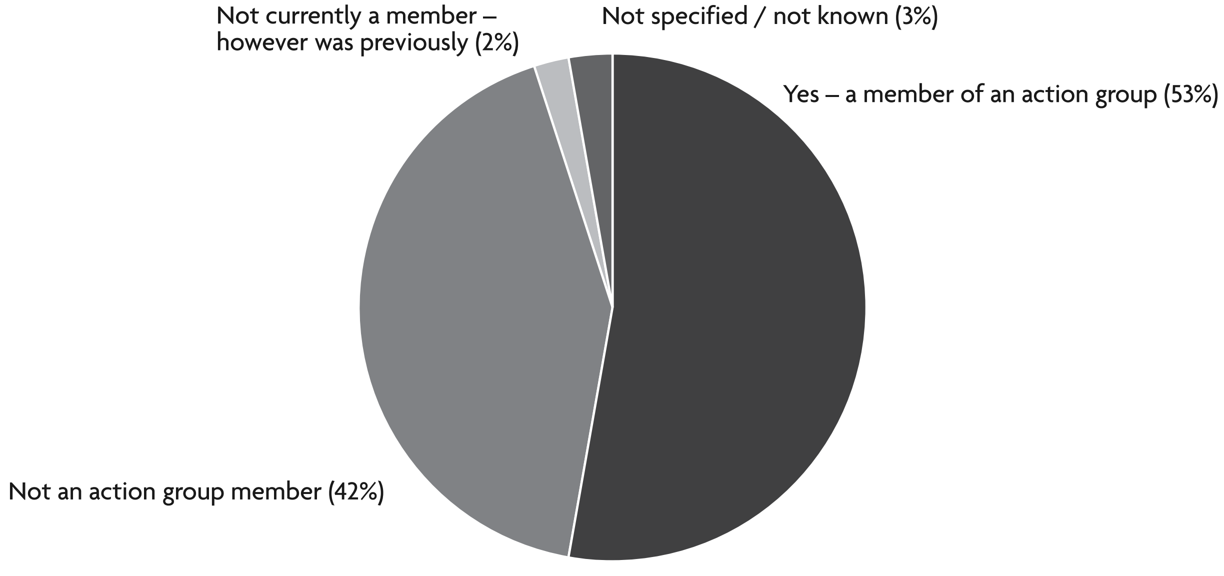
Chart 16: Referred complaints?



Action group

When those with referred complaints were asked if they were members of an action group, they replied as depicted in the chart below.

Chart 17: Action group?

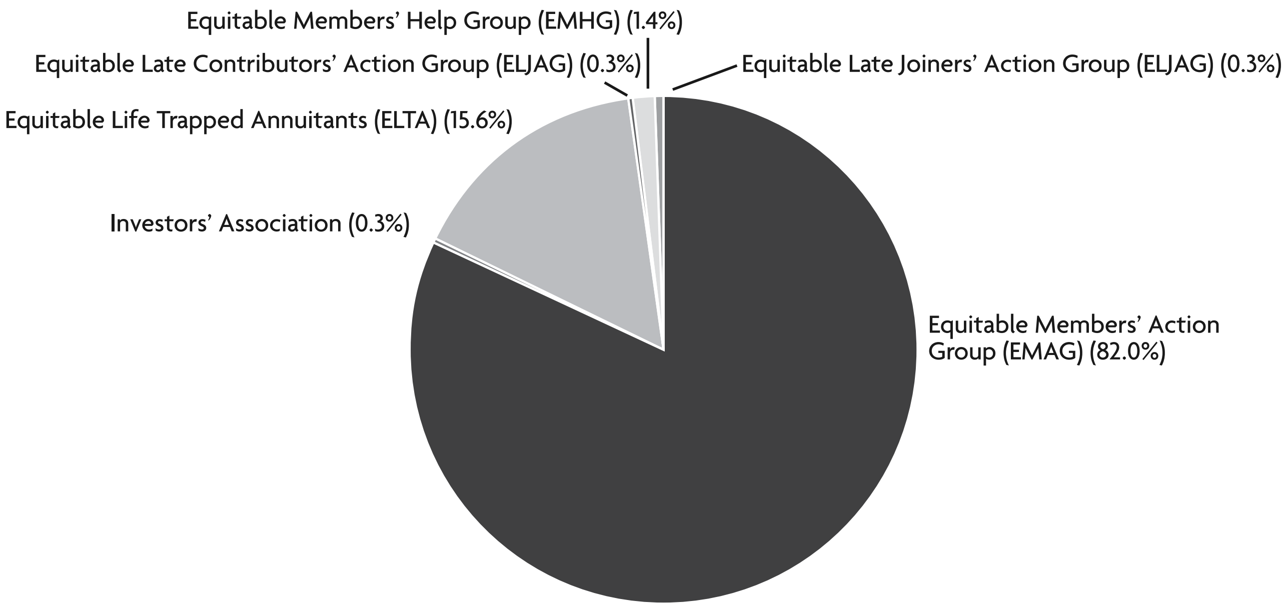


Results of survey of complainants and direct contacts

Action group membership type
When those 53% of referred complaints who, in Chart 17, specified that they were action group members were asked to identify which action group(s) they were members of, they replied:

(Note: some respondents told us that they were members of more than one action group.)

Chart 18: Action group membership type



Deceased complainants

Information held by us shows that 12 complainants are now deceased, and that their complaint is no longer being actively pursued.

A further 19 complainants are now deceased, but their complaints continue to be pursued by others on their behalf.

Section 4

Documents setting out responses to the report

Responses from individual regulators/actuaries

Scrutinising Actuary E

Memorandum of Scrutinising Actuary E to the Parliamentary Commissioner for Administration

1. I am a retired actuary. In the latter part of my career I was a member of the Government Actuary's Department ("GAD"), and from 1996 to 2000 I was closely involved in the supervision of the affairs of the Equitable Life Assurance Society ("Equitable"). In that connection I was interviewed by representatives of the Penrose Inquiry into Equitable, and I made a lengthy statement for that Inquiry. I refer to that statement (which I presume is available to the Parliamentary Commissioner for Administration – "PCA") and I shall not repeat its contents in this Memorandum. I do however wish to draw to the attention of the PCA, and expand a little upon, certain observations that I made towards the end of that statement ... headed – "The Law Lords Verdict".

2. I remain of the view that the arguments and themes that I presented in that passage are worthy of proper consideration, and I am of the opinion that these points have not received the full consideration that they deserve. In presenting these arguments and themes I should emphasise that these are my own personal views, and are not presented on behalf of the GAD or any other Government Department.

3. I recognise that it is no part of the PCA's brief to revisit the judgment of the Law Lords, but in my view it has to be acknowledged that it was the unexpected financial impact of their judgment that brought about the demise of Equitable. Even with full knowledge of the events which have happened since the demise of Equitable and the matters which have been investigated, I remain convinced that had the judgment of Lord Justice Scott been supported on appeal, Equitable would still now be open for business and serving its members fairly.

4. I also realise that the underlying pension contracts issued by Equitable, that were the basis of the Court Hearing, were not happily drafted, but I am confident that the bonus policy being applied to them by the Board of Equitable, acting on the advice of their Appointed Actuary, was fair and equitable. That policy was in line with insurance legislation and actuarial and regulatory guidance, and to the best of my knowledge was properly operated under the terms of the Articles of Equitable. These Articles naturally supported the idea that bonuses should be allocated by the Board on the advice of Equitable's Actuary in the light of the surplus shown as emerging. The bonus policy ultimately insisted upon by the Law Lords took no account of the emerging surplus, but involved the payment of enhanced benefits to one major group of policyholders (i.e. those with GARs) in excess of their "asset shares", to the inevitable detriment of the Reasonable Expectations of all the other participating members of Equitable. Following this judgment, no other business could fairly be written and closure necessarily followed.

5. In order better to illustrate the dramatic financial impact of this bonus judgment, I offer the following simplified example:–

   A policyholder may have contributed, say, £60,000 to his pension contract. In the 1990s his notional accumulated fund (his asset share) might have risen in value to £100,000, at a time

Responses from individual regulators/actuaries

Scrutinising Actuary E

when long Gilt yields were in the region of 7%. This yield might be found adequate to support the prospective lifetime payment of an annuity to the policyholder at the minimum rate guaranteed in the contract. At this point Equitable might have notified the member that his guaranteed fund had accumulated to £80,000, but that there was also an accrued non-guaranteed terminal bonus of a further £20,000.

Without further contributions, the stock-market moved up sharply to a level where the notional asset share of the policyholder had grown to £140,000 – but long Gilt yields were now only 5%. At this point Equitable told the policyholder that his non-guaranteed terminal bonus had risen to £60,000, but that it would be reduced if he elected to take advantage of the GAR.

In practice, a fixed annuity for life as offered by the GAR is not considered to be very attractive unless health is poor, so most policyholders would happily elect to take the enhanced lump sum benefit of £140,000 and buy either an index-linked or a with-profit annuity with the proceeds.

6. A situation similar to this example prevailed for several years during the 1990s. Operating a two-tier bonus policy in this way was consistent with all industry practice at this time.

7. The judgment of the Law Lords that effectively required Equitable to pay a life annuity at the minimum guaranteed rate based on the enhanced lump sum benefit of £140,000, actually required Equitable to find about £196,000 to secure a yield of 7% on £140,000. (An income of 7% of £140,000 is £9,800, and, with gilt yields now only 5%, to obtain this income required the investment of the much larger figure.) Thus, an additional £56,000 had to be found, inevitably by taking it away from the "asset shares" of other policyholders.

8. The Penrose team ignored the fact that this judgment had dramatically changed the financial situation of Equitable - in a way that was unpredicted and unpredictable. The worst court judgment that I had anticipated was that Equitable had failed to explain adequately its bonus policy to members in the past. Management might then be admonished and some compensation might have needed to be paid to certain policyholders. The existing bonus policy would be sustained, but better explained. In the event, the changed bonus policy actually insisted upon by the Law Lords was inequitable and financially unsupportable.

9. By ignoring this fundamental factor behind the financial distress of the Society, and by constructing instead an explanation based upon alleged inadequate reserving and over-bonusing by Equitable and its Actuaries in the 1990s, the Penrose team in my view grossly misrepresented the true position.

10. It seems to me that the PCA is now in danger of repeating this flawed process, with detailed research into the supervision process conducted by GAD during the 1990's. Having seen the evidence collected by the PCA, I do not consider that any significant shortcomings are disclosed, and certainly none which affected in any way the ultimate outcome of events.

Responses from individual regulators/actuaries

Scrutinising Actuary E

11. As with the Penrose team, the persons carrying out the current investigation demonstrate little appreciation or understanding of the nature of a with-profit life assurance operation. Since a with-profit fund should be virtually immune from potential insolvency, the reserving process involves essentially a judgment about timing the emergence and distribution of surplus. The Valuation Regulations were largely drawn up by the team at GAD and I believe that their operation was handled by a very professional group. It was not the job of GAD or the supervising authority to manage companies under their care, but we always did our utmost to encourage good practice.

12. I do not consider that it would have been open to us or reasonable for us at any time to have insisted that additional reserves be established to meet what turned out to be required by the ultimate Law Lords' Judgment. The actual tight balancing act being sustained by the Actuaries at Equitable was fully understood by GAD and the regulator, Equitable's policyholders and the market as a whole. Equitable was always extremely open about, and indeed proud of, its desire not to carry forward a large estate to the detriment of payouts under maturing contracts. I firmly believe that, prior to the final judgment of the Law Lords, all informed observers would have thought it improper and inequitable to establish reserves for such a remote and unlikely contingency.

13. The change in industry practice which has followed from Penrose, to require the holding of stronger reserves by with-profit life funds, has had the inevitable effect of virtually killing off participating life assurance business. The previously existing careful balancing act has been replaced by new reserving requirements, that are in my view unnecessary and unrealistic. These reserves, with the additional minimum solvency margin also required, result in it being very difficult for a with-profit fund to invest in lower yielding equities or property - so that very limited sources now exist for future surplus to emerge from growing asset values.

14. I stress again that these are my personal views, though I know that they are shared by others.

Further Note by Scrutinising Actuary E

I consider it necessary to expose the judgment of the Law Lords' as financially illiterate and partial, and to speak out in defence of the sound and effective appointed actuary system historically adopted in the UK to control the operation of Life Assurance Funds.

With profit funds in the UK were able to invest effectively to achieve maximum long term investment returns precisely because the contracts contained minimum guarantees regarding the benefits being promised. The Law Lords chose to overlook this long established and accepted position, (as embodied in the Articles of the Society - that all bonus additions are at the discretion of the Board acting on the advice of the Actuary), and effectively revised the terms of these contracts by reading into them wider guarantees than had been previously understood and recognised. The contracts certainly never included any premium loadings to cover promises to the extent that the Law Lords deemed were included in the GAR policies.

Equitable Members Action Group (EMAG)

Excerpts from EMAG's response to the report

EXECUTIVE SUMMARY

Equitable Life
Equitable Life Assurance Society is the world's oldest life assurance company and was famous for not paying commission, low operating costs and (it claimed) fair distribution of profits. The Government Actuary recommended it for public servants including health workers and judges.

However, it made no provision for the guarantees against low interest rates contained in all policies issued before 1986 (the guaranteed annuity rate or GAR) and it declared bonuses out of all proportion to profits and assets, so far out, that the Institute of Actuaries has (in 2007) expelled its Appointed Actuary for it.

Over the 1990s its with-profit fund expanded six fold to £27,000m involving more than one and a half million people.

Equitable Life's attempt to renege upon its guarantees failed in the House of Lords in July 2000 at an estimated cost of £1,500 million. But the Society had been so weakened by over-bonusing that it could not pay. Indeed it was so weak that no-one would buy its with-profit business at any price. It closed its doors in December 2000 and its directors resigned.

In July 2001 the new board of directors slashed policy values by 16% (about £4,000 million) and proceeded to affect a compromise scheme to deal with the GAR problem. More cuts followed. However Equitable Life's problems were too deep-seated. The Society is now being both run down and broken up.

Treasury Cover-up
EMAG has no doubt whatever that Equitable Life policyholders have been the subject of a cover up and delaying action by the Treasury/FSA. It was not until July 2004 that the matter was finally taken up by the Parliamentary Ombudsman with power to rule on maladministration and to recommend redress. The Treasury/FSA delaying tactics continued. They will claim that they have co-operated fully, but observers can draw their own conclusions from the seven years that have elapsed from the time that Equitable Life Members' policy values were slashed to the publication of the PO's Report.

Policyholders
Nine tenths of policyholders were saving for their retirement or had retired. As a result of the Treasury/FSA cover-up and delaying action, most of those who suffered the big policy value cuts are now in their sixties and many in their seventies and eighties, many are infirm and some have died. The 500,000 direct savers had an average investment of £46,000 in Equitable Life, the million people whose retirement investment was via group schemes had an average of only £4,000.

Responses from those representing complainants

EMAG

The principal complaint

'That the public bodies responsible for the prudential regulation of insurance companies (successively the Department of Trade and Industry, Her Majesty's Treasury and the Financial Services Authority…) and the Government Actuary's Department (GAD) failed for considerably longer than a decade properly to exercise their regulatory functions in respect of the Equitable Life Assurance Society and were therefore guilty of maladministration.'

Losses & Compensation

EMAG calculates losses incurred by policyholders investing after 1990 at £3.2bn if they would have remained with Equitable or £4.6bn if they would have invested elsewhere.

Elderly policyholders, having suffered 'outrageous' treatment at the hands of the Treasury, deserve a redress package that is rapid in payment, simple to administer, is not administered by either the Treasury, the FSA or any of their offshoots or by Equitable Life and does not require a complicated claims system. EMAG has explained how such a package could be constructed. Its estimate of the Compensation 'Pot' including interest to date is £4.5bn.

As EMAG's Actuary has pointed out, an FSA-style compensation scheme, such as applied to various forms of mis-selling, could take another eight years. In eight years most Equitable Life policyholders will be beyond caring. They need and deserve, having suffered 'outrageous' treatment at the hands of the Treasury and the regulators, a redress package that:

1. Is rapid in payment.

2. Is simple to administer.

3 Is not administered by either the Treasury, or the FSA or any of their offshoots or by Equitable Life.

4. Does not require an extensive and complicated claims system.

Fat Cats

Nine tenths of policyholders were saving for their retirement or had retired. The 500,000 direct savers had an average investment of £46,000 in Equitable Life, the million people whose retirement investment was via group schemes had an average of only £4,000. The story that Equitable Life was a place where 'fat cats' risked their money to get above average returns is not supported by the facts.

Responses from those representing complainants

EMAG

REDRESS

The With Profit Fund

We estimate that the With Profit fund at 31 December 2000 comprised:

With Profit Fund at 31 Dec 2000	Regulatory Returns £m	Estimated Total Value £m	% of Fund
Pension Investment Policies			
GAR Pensions	5,030	7,085	25.9%
Non GAR Group Pensions	3,341	4,074	14.9%
Non-GAR Individual & Personal Pensions	5,730	6,988	25.5%
	14,101	18,147	66.2%
Pensions in Payment Policies			
Drawdown Policies	1,860	2,268	8.3%
With Profit Annuities	3,222	3,929	14.3%
			88.8%
Life & Investment Policies	2,524	3,057	11.2%
	21,707	**27,401**	**100%**

It will be observed that two thirds of the fund was represented by the Society's mainstream Pension Policies and after adding Drawdown and WP annuities, almost 90% of the fund was represented by some form of pension policy.

Responses from those representing complainants

EMAG

Below is our estimate of the make up of the fund, by premium year.

Investment	Remaining Premium £m	Contractual Value £m	Terminal Bonus £m	Total Value £m
Pre 1990	N/A	1,682	2,959	4,641
1991	470	864	290	1,154
1992	656	1,112	344	1,456
1993	868	1,357	376	1,733
1994	1,016	1,472	353	1,825
1995	1,406	1,896	406	2,302
1996	1,913	2,402	453	2,855
1997	2,437	2,861	413	3,274
1998	2,649	2,944	256	3,200
1999	2,581	2,734	85	2,819
2000	2,109	2,144	-2	2,142
	16,105	**21,468**	**5,933**	**27,401**

Although the above figures are derived from the Regulatory Returns and Accounts the division of total value and the allocation between premium years has been estimated by EMAG's accountants. Actual figures should be available from the Society and we recommend that the PO obtains them.

Approach to Redress

It will be appreciated from the above that there are issues upon which it would be unreasonable to expect policyholders to prove their individual case, e.g. whether they were influenced by the returns and whether, if they had known Equitable Life's true financial position, they would have removed their investment or invested elsewhere.

It would also be unreasonable to inflict the sort of compensation scheme traditionally applied by the FSA to mis-selling, which could take another 8 years, to policyholders who are now in their 60s, 70s and 80s and who have already suffered 'outrageous' treatment at the hands of the Treasury and the regulators.

The approach EMAG suggests to the PO is as follows:

1. Take the areas where she has found maladministration leading to injustice and make a broad brush estimate of the total loss arising to policyholders at 16 July 2001.

Responses from those representing complainants

EMAG

2. Add an estimate of the 'removal costs' in respect of those that have subsequently moved their funds elsewhere. This would include Market Value Adjustments, other penalties and re-investment charges.

3. Apply a series of appropriate discounts for things like the proportion who were not influenced by published data and those who would not have invested elsewhere and apply those percentages to the total to arrive at a compensation sub-total as at that date.

4. Add something for outrage and interest to the resulting sum to arrive at a current compensation 'pot', which the Treasury should pay immediately to an appropriate independent scheme administrator.

5. Distribute that compensation 'pot' upon a policy by policy basis in accordance with a sliding scale based upon values immediately before the big cut of the 16 July 2001.

The benefit of this approach is that once the compensation pot is agreed and transferred to the scheme administrators, calculation could be handled mechanically from the information held upon Equitable Life's computers, now in the possession of Halifax Financial Services. The downside is a lack of sophistication to deal with all possibilities.

EMAG sees it as vital for the fair treatment of Equitable Life policy holders as a whole that compensation can be calculated, apportioned and distributed without undue delay, even if it involves the acceptance of some rough edges to the calculations.

The Amounts
The table below illustrates the principle of calculating the 'pot'.

	Financial Loss Staying with Equitable		**Opportunity Loss** Not moving to a competitor	
	£m	£m	£m	£m
The loss incurred through staying with Equitable was crystallised with the 16% policy value cut on 16 July 2001 on the then fund of about £24bn		3,846		
Part could not be recovered by the Society as relating to Contractual Values		(570)		
Part related to excessive bonuses voted in the early 1990s but still reflected in continuing policy values		(1,100)		
		2,176		
A rough estimate of the loss in investment value to 2001 of not moving to a competitor might be				3,600
Removal Costs				
Loss of 16% policy value cut from contractual values	400			
Re-investment costs on about £15bn at say 4%	650			
		1,050		1,050
Losses Incurred by policyholders		3,226		4,650
Discounts				
For those not being influenced in any way by the Returns, Accounts, Newspaper reports etc	5%	(161)		
For those who would not have invested in / moved to another provider, even if they had known Equitable Life's true state			30%	(1,395)
				3,255
For the difficulty in proving that the alternative provider would have done better			10%	(326)
		3,065		2,929
Most Losses relate to Lost Opportunities – take an intermediate figure (say)		3,000		
Discount for the fact that [redacted] and the Directors were primarily responsible. However the regulators allowed a problem with a small company to escalate six-fold over a decade, then adopted cover-up and delay.	10%	(300)		
		2,700		
		500		
Outrage – at say £500 for individual policyholders and £250 for group scheme members.		3,200		
Interest		1,300		
Compensation 'Pot'		**4,500**		

Responses from those representing complainants

EMAG

The estimate of loss in investment value of £3,600m is derived from an examination of the published results of competitor companies by EMAG's accountants. A similar estimate produced by/for the FSA in 2001 produced an estimate of £5,000m. EMAG has found estimates based upon FSA internal information to be unsatisfactory, since they are always alleged to be 'confidential' and therefore cannot be independently scrutinised. The percentage discount in respect of the responsibility of [redacted] and the Directors is based upon EMAG's Counsel's opinion.

Special Cases

In view of the PO's strong findings on the Financial Re-insurance Contract, there are good grounds for adding back some of the discounts in respect of monies invested after 1 May 1999 (about £3,500m) and assuming a higher rate of interest.

With Profit annuitants have been particularly badly hit. They are not able to move their investments to other providers and have been stuck with Equitable Life until 2007. Their underlying funds were cut in July 2001 in the same way as other policyholders. This resulted in pension cuts in subsequent years. Also during those years the Equitable Life fund was invested in fixed interest stocks, which could not support the assumed growth rates. Finally they missed out on the Stock Market rise from 2003-2007 and have been transferred to the Prudential, which has Stock Market exposure, just in time for markets to fall. A special addition will be needed to reflect these matters.

Pivotal Date

The obvious date up to which to calculate compensation is 16 July 2001 when policy values were cut by about £4 billion. This was the action taken by the new board of directors to restore the balance between assets and policy values. It is the most convenient point at which to identify those who lost and to quantify by how much. The records of the policy values themselves, the terminal bonus element and the amount by which they were cut should be readily available from Halifax.

Lost Opportunities

It is imperative that whatever formula is used to assess losses from not moving to alternative providers should be based on public information, not from FSA confidential sources. EMAG members have suffered at the hands of the FOS and the FSA in producing computations of loss which cannot be checked.

Regulatory Contribution

EMAG is advised that in cases of maladministration it is traditional for those found guilty to meet the whole cost of the loss, even though others were partly responsible. However, in a case such as that of Equitable Life where the amounts are very substantial indeed and where the primary responsibility for the Society's demise rested with its actuaries, notably [redacted] and its directors, the matter of whether it is reasonable for the public purse to bear the whole cost does need to be considered.

Lord Penrose demonstrated that in the early 1990s the directors voted bonuses substantially out of proportion to the Society's profits and assets. This was done in order to maintain the Society's marketing advantage. The responsibility for this must lie primarily with [redacted] and the directors. It must, however, be pointed out that at this stage the Society was relatively small in size and with total funds of about £5 billion.

The financial weakness that excess bonuses created made it difficult for the Society to show the necessary degree of financial strength on its regulatory returns and accounts. The PO has found that the regulators were mal-administrative in failing to identify the devices used to conceal that weakness from public knowledge. This failure was not just an isolated incident, but as the PO's report shows, continued for the subsequent nine years.

The initial regulatory failure was taken by [redacted] as a green light to carry on expanding the Society's with profit business based upon imprudent bonuses and a fictitious marketing track record. The regulators carried on failing to deal properly with the Society's Returns for the following nine years, during which time its size expanded six fold from £5 billion to £30 billion. During this time it drew in 500,000 individual and one million group investors, mostly people saving for their retirement.

The regulators cannot reasonably claim that they didn't know what was going on. Both Lord Penrose and the PO demonstrate that they were well aware that bonuses were too high and the Society had insufficient assets to support them. They had opportunity after opportunity to take a stronger line but failed to do so. In EMAG's view, the Treasury, the FSA and GAD's approval of the worthless financial reinsurance contract as an asset valued at £800 - £1,000 million amounted to connivance with Equitable Life to cover up its appalling financial state.

In EMAG's view, supported by Counsel, the thousands of millions of pounds involved, the time over which the fault was allowed to continue, their connivance with the cover up and subsequent delaying action require that the regulators should bear a heavy percentage of the blame and the cost.

Interest

The PO in her publication 'Principles for Remedy' requires simple interest to be added at a reasonable rate to the date of payment. EMAG believes that because of the nature of the loss, the amounts involved and the long Treasury inspired delay, compound interest would be more appropriate.

Computation of Compensation

a) Pension Investment Policies (two thirds of the WP Fund)

   The most accurate approach would be to apply a compensation factor to each premium paid since 1990. This however depends upon the availability of premium payment data. If this is not available or would involve undue delay, then the terminal bonus content of any policy provides a reasonable indication of the 'vintage' of policies generally and should be used.

Responses from those representing complainants

EMAG

It is a feature of Equitable Life's bonus methodology that the policies with the largest terminal bonus content did best from the over-bonusing and those with the smallest suffered worst from the policy value cut. It would be possible to work out a sliding scale of compensation to counteract these effects. This could then be applied directly to each policy based on its value in July 2001 and its terminal bonus content.

b) Pensions in Payment Policies (about 23% of the WP Fund)

These were single premium policies made by policyholders upon their retirement, in order to provide a pension for life (or in the case of Drawdown) to age 75. The vast majority were taken out after 1990 and did not benefit from the over-bonusing. Compensation would be based upon the amount of that premium and the date of payment.

c) Investment Policies (most of the rest)

Compensation would be based upon the policy value before the big cut and the terminal bonus content, in a similar fashion to Pension Investment Policies

Distribution

The above would enable compensation to be apportioned and distributed primarily from the information available on Halifax's computers and without the need for anyone to make a particular claim and without policyholder input.

The main features of distribution should be:

a) The money and the administration should be in the hands of a suitable body, independent of the Treasury the FSA and Equitable Life.

b) The data required for apportionment between policies should be contained on Halifax's computers.

c) No claim or other input should be required of policyholders

d) The formula should be a simple arithmetic one, open to inspection.

Responses from those representing complainants

EMAG

As regards payment, we suggest the following:

1) Continuing With Profit Annuities

   That part of the compensation representing lost income since 2001 should be paid to policyholders direct. The balance should be passed to Prudential for addition to the appropriate fund and policies.

2) Continuing Policies Generally

   The share of the compensation pot should be passed to Equitable Life for addition to the appropriate fund and policies.

3) Pension Policies transferred to other Providers

   The policyholder should have the option of having the relevant compensation share transferred to his new provider or paid to him as cash.

4) Encashed Policies, Deceased Investors

   The relevant compensation share should be paid to the policyholder or his estate as cash.

5) Group Schemes

   These should be dealt with on a group basis. Distribution to individual members should left to the respective trustees.

Recipients and Tax

Where compensation is paid into an ongoing pension fund there should be no question of tax being deducted or of any policy holder being able to claim tax relief in respect of the payment. Eventually the policy holder will benefit in the form of a higher pension and HMRC will of course assess tax thereon in the normal way.

As regards payments in cash to individuals or their beneficiaries, we recommend that some notional tax be deducted on an average basis and that the resulting compensation be made tax free.

The Treasury should ensure that any necessary changes to the tax laws are put in place to enable this to happen. Elderly and much wronged Equitable Life policyholders should not be burdened with future battles with the tax man.

Responses from those representing complainants

EMAG

Conclusion

EMAG is pleased to approve the PO's Report generally and to acknowledge her courage and integrity and her team's industry and dedication.

EMAG believes that in view of the delays that have already occurred and the age of the complainants, any scheme for Redress needs to be open, simple and capable of rapid implementation from existing readily available information. Its proposals are designed to achieve this objective. It will be pleased to provide further details if required.

Responses from those representing complainants

Equitable Life Trapped Annuitants – summary

Summary of submission by Equitable Life Trapped Annuitants

1) The With-Profits annuity was a particularly complex financial product, poorly understood by the vast majority, if not all, the annuitants who purchased it, and predicated on the belief that the Equitable Life Assurance Society was a blue chip, properly regulated institution of sound financial standing. Annuitants would not have purchased the product had they believed otherwise.

2) Three core issues differentiate With-Profits Annuitants being:-

   a. Their inability to surrender the policy or transfer it to another provider;

   b. The importance of the purchase in the context of providing a safe and reliable income, when the individual's abilities to find replacement income were increasingly remote; and

   c. The fundamental role of the increasing terminal bonus that was required to maintain their retirement income.

3) The With-Profits Annuity was deeply flawed and arguably could never have delivered what it promised. Annuitants were invited to "take a risk" in the market, but it was a risk that could not have paid any more than any other annuity type and, in addition, exposed the annuitant to an ever increasing amount of the total annuity that was "not guaranteed", and that could be, and was, removed. In effect, the risk was not "the market", but the financial status of "the Society". This made the WPA a quite unsuitable product for the consumer trying to create a life time's income.

4) It was the responsibility of the Official Regulator to ensure that the products on the market were in fact capable of delivering what they were offering, since annuitants are reliant on the regulator to carry out the sort of tests that lie beyond the competence of the general public.

5) The Ombudsman's findings that the information on financial standing was incomplete, that liabilities were understated and that the solvency position was not appropriately verified leading to a misleading picture of the financial health of Equitable, mean that the clear injustice sustained by With-Profits policyholders was the purchase of a product, which, **without this maladministration**, they would not have purchased.

6) The purpose of compulsory annuity purchase is to require individuals to secure a safe and reliable income for retirement when, crucially, they will be unable to supplement their income from alternative sources. Since this is a key statutory requirement, that an individual MUST buy an annuity, it follows that the regulating authorities have an ***absolute*** obligation to ensure that the products offered on the market can meet that statutory objective. Any failure to do so must inevitably result in a justified claim for maladministration.

7) The ever increasing gap between the "guaranteed" annuity and the total annuity was not covered by reserves, nor was it accrued for in the accounts and could therefore only be met by an ever increasing sales effort so that new

Responses from those representing complainants

Equitable Life Trapped Annuitants – summary

investments were required to meet the obligations of the old, creating in effect a pyramid scheme.

8) The inter-generational transfer that Equitable sought to avoid, where excess investment returns in the past subsidised current policyholders, was replaced save that now future policyholders subsidize the current. This is an inevitable consequence of the Society's flawed financial and business model.

9) It is clear that 50,000 With-Profits Annuitants have suffered significant financial loss as a direct result of the maladministration found. As a result, any redress should be to provide direct financial compensation to them for their losses. Clearly, payment into the fund will not assist them as their policies have been transferred to the Prudential and as explained above, there is no prospect of their policies recovering sufficiently to avoid loss despite that transfer.

10) With-Profits Annuitants are a unique group with unique and more complicated elements to any calculation. The preference should be for individual calculations against their individual alternative transactions. In the absence of that, a standardised scheme should be capable of formulation.

Responses from those representing complainants

Equitable Late Contributors Action Group

Dear Ms Abraham

It has sometimes been suggested (notably by Ruth Kelly MP on 17 June 2004, following publication of the Penrose report) that Equitable policyholders have not suffered undue hardship as a result of the reduction in their funds caused by Equitable. It has been suggested that they have other pensions, are wealthy, have other sources of income and so on.

Extract from Hansard 17 Jun 2004: Column 906 Ruth Kelly: However, people who invested in Equitable Life did so of their own free choice. Investors in Equitable Life tend to have supplementary pension provision, and many members have large pension pots, though others have smaller pots. It is largely their expectations that have been disappointed.

Notwithstanding that the average policy holding was probably somewhere in the region of just £18,000 per person and that the 1.5 million policyholders included people from all stations in society - civil servants, teachers, nurses and other people with modest amounts invested in AVCs (Additional Voluntary Contributions), I sought to find some examples of how the cuts are affecting real people. (I understand that for members of group schemes the average policy size was even lower at just £4,000 per head).

With the assistance of EMAG I sent an inquiry to a random selection of their members in April 2008 to ask whether they had suffered as a result of the cuts to their Equitable Life pensions and policies.

Sadly, I also received many from people who still blame themselves for their “stupidity” and feel ashamed to admit in public that they ever put money into Equitable Life. Additionally there were those who by my reckoning have suffered greatly, but stoically refuse to see themselves as victims.

I have compiled a small selection (with the names removed) which helps remind us about the human cost of the Equitable Life scandal.

Yours sincerely

Paul Weir

Letter B
Our problems started from the time my husband and I took our pensions at the same time. (My husband) had transferred his occupational pension to them when he no longer had a company pension to pay into. I paid my pension with Pru and we both topped up payments each year to the maximum we could pay.

Pru were impossible in that the could never add my additional payments to my regular ones in their annual statement I. became so fed up with them that I paid the extra each year into a small pension with Equitable.

Our Rep (name redacted) convinced me to transfer all my funds to Equitable which regrettably I did. Then just before we signed on the dotted line I asked him about problems with Equitable which I had read in the Telegraph about a possible Court case. He assured us that Equitable had sufficient funds put by whatever the outcome. When all the problems came up I tried to claim mis-selling but that was declined. We have always been in a low income bracket and therefore knew we would not receive a good pension so we also gave up the idea of holidays abroad and similar luxuries so that we could save so that we would be able to supplement our pension to do the things we always wanted when we retired But because of the reduced pension (My husband) has had to continue to work and at almost 74 he is working as a driver taking people to airports and the trips can be anything from leaving home at 4am or arriving home at midnight.

My husband has always distanced himself from financial matters and left me to do all the facts and figures and as a result thanks to the Disappearing pensions and all the worries and stress my health has suffered. The first problem I picked up was when I was going through figures about the pension reductions on (my husband's) pension involving protected rights and I realised the deductions on the state pension for the contracted out period of employment was far greater than we were receiving from Equitable as protected rights. I had months of correspondence with the D.SS and Equitable and had to go back through all (my husband's) P60s for years to check that, at the DSS request there had not been an error on their part. Still I could get nowhere with Equitable and in addition was the problem of the reducing pension. By this time I was very unwell and suffering many infections not sleeping, tearful and irritable so had to resort to sedatives tranquillizers and antidepressants over the ensuing years and all this is on my medical records as stress caused by Equitable In fact I am still suffering the sleep problems and get stressed so

Responses from those representing complainants

Equitable Late Contributors Action Group

easily I am not the person I Was before the Equitable saga. To return to the protected rights problem it was only by writing to [Equitable's Chairman] that I got the answer that they had not included the protected rights (my husband) had paid with them, only the part from earlier Employment. I insisted that this was corrected as at least that small part of (my husband's) minimal pension was hopefully safe and they finally corrected it going back to when the pension was first paid. They had the audacity to ask for the small amount back they had overpaid which they admitted was their error. However when I complained about all the costs of letters and phone calls they did relent.

Each year as the new pension statements become due I find myself waking in the middle of the night worrying about it and with facts and figures going round in my head. The current worry is what will happen this year with our annuities being with Pru.

Now thanks to Gordon Brown we have another worry. (My husband) is only paid minimum wage but that added to his state and Equitable pension means he looses the over 65 tax allowance and now with the 10% allowance removal he is going to be even worse off. Because we have saved we can get no help from the State.

We have felt it is especially important for us to save as due to a brain tumour as a child my daughter became registered blind and is totally kept alive on drugs. She is working as a music teacher but we do not know what the future holds for her. She has already had a further brain tumour due to radiotherapy 30plus years ago and is also at risk of contracting CJD thanks to the NHS blunder with infected growth hormone so naturally we hope that should she have further problems and have to give up work there will be help with money from us

Kind regards,

Thank you for your efforts.

Letter C
I will be brief as to the effect on me.

1. I had at the time of Equitable failure £243,000 in the pension pot and had until that time put in £25,000 PER YEAR AS A CATCH UP.

2. On the demise of Equitable due to charges by Equitable and the service provider I transferred to together with the requirement to withdraw 25% to keep in line with the tax at that time my holding went down to 47.3% of the original.

3. As a result of the situation I cannot afford to retire, I am 67 years - 68 in November. I also have Prostate cancer, and cannot afford to stop work given that with a state pension of £4,500- £5,000 per year I would have to go cap in hand to the state for credits.

4. My original intention was to save enough to retire on £24,000 per year at the rate I was saving. However that stopped due to Equitable as any faith in private pension providers

Responses from those representing complainants

Letter D
I find it difficult to claim that I have suffered hardship as a result of the Equitable situation. I have just had to manage on a decreasing income since I retired in 1998 on a "with profits annuity" that was planned to increase in line with inflation. I am fortunate in that I have some other income including DSS pension with SERPS and some other investments; my wife has substantial investments, not connected to Equitable and I have to rely on her rather more than I might have liked.

The figures below are monthly pensions received from Equitable before tax. As you see, they decrease rather than increase in line with inflation as expected.

- 1999 £2,062.95
- 2000 £2,143.46
- 2001 £2,266.34
- 2002 £2,243.68
- 2003 £2,230.73
- 2004 £1,772.04
- 2005 £1,676.22
- 2006 £1,659.27
- 2007 £1,640.19
- 2008 £1,640.83

Hi. My name is (name removed). My late husband lost approx £16,000 through Equitable. When he was alive, he worked hard, putting away savings for his retirement, he died at 56, knowing that what was left which would come to me, was a pittance, instead of a comfortable pension for me after he was gone.

On his early death, I was “awarded” £44 a month for life! I am 60 now, so given that I might see another 10 years health permitting, not much for all his hard work of saving for old age. How do you survive on a state pension and the miserly “offering” from Equitable?

This government has a lot to answer for! Not least turning their backs on the likes of my late husband who tried to do his “bit”. We are told to/encouraged to take out private pensions to take the strain off the state as well are all living longer – what’s the bloody point?

If corporations like Equitable can get away with ripping us all off our hard earned cash and getting away with it, all power to the people of this country who don’t bother.

“Disgusted”

Letter E
Although I have never suffered true hardship I did lose about £120k of pension value and suffer 5 years of zero growth. I was also trapped in the with-profits fund by dint of the GN11 changes (another stealth tax dear Gordon managed to pass).

I have suffered extreme stress levels which haven't helped my health and I have to say I made my wife and family suffer too. All of my future planning was severely damaged. Some of the replies from ELAS would make a vicar swear.

I have spent thousands of pounds and hundreds of hours trying to take a case against ELAS via my own claims, via the Bristol/Bath solicitors (forgotten their name but they have been a leading light in the claims) via several IFAs and actuaries and via the Pensions Ombudsman. I still have all of this documented in several lever arch folders.

The end result was the FOS ordered ELAS to pay me a £500 cheque for stress!! Still the FOS did state in writing that the pension valuations I received from ELAS were not real and in truth it was never my money so I couldn't claim it back!!!! – a very interesting argument.

I know there are hundreds of more deserving cases than mine (particularly retired people who must be compensated first - although I am 57 myself).

Please note I wrote to all relevant MEPs prior to the European debate.

To all at EMAG who have done so much over these years my usual thanks and keep up the good work.

Further to my email this morning re Equitable Life difficulties. A very brief summary of my story is as follows, if it interests you and you want more please contact me again. I am prepared to follow your lead on this situation.

1. 1997 "persuaded" by an Equitable Life rep to transfer all bar one of my policies to a managed fund (drawdown).

2. 2003 I was badly advised by an IFA, as a result my pension fund was frozen in a non-interest bearing account by Equitable.

3. There followed debate between Equitable, the FOS and myself, following a complaint made to the FOS in 2003. This has not yet been finalised.

4. At first the FOS found nothing wrong with my case then Equitable agreed I had been mis-sold the managed policy. Since then we have been arguing about what the correction should be to my fund.

Responses from those representing complainants

Equitable Late Contributors Action Group

5. Last November/December I appointed an actuary to advise on the complicated calculations received from Equitable. He could not understand them and asked for further explanation. We are still waiting for a reply.

6. Along the way my MP has referred the matter to the Government's independent reviewer who advised the FOS to re-visit the complaint, finding that there had been mistakes made by a number of individuals at the FOS including the service review team.

7. It is about 5 years since my complaint was put to the FOS and the matter has not yet been resolved. I am now 65 years old and still without my pension.

I have several binders full of letters, faxes etc, too much to cover here. I hope I can be of help, please let me know.

Name removed

Letter G
Fortunately my investments in Equitable were not life threatening, but the following three policies of mine give some idea of the depths into which some investors pensions have fallen.

Policy 1 paid gross per month in 2001 £76.29 - in 2007 down to £46.59
Policy 2 paid gross per month in 2001 £64.34 - in 2007 down to £34.04
Policy 3 paid gross per month in 2001 £69.45 - in 2007 down to £34.61

Gives some idea of the scale of Pension reductions. I am now getting three small sums from the PRU!

Name removed

Letter H
Yes I have been seriously affected by the Equitable scandal, to the extent that even now at nearly 70 I am still working to try to make up the shortfall of over 25% in my pension. Though I have complained bitterly both to Equitable, the Financial Services Ombudsman and the Parliamentary Ombudsman, to date I have not received any recompense. I had a GAR, but was manoeuvred out of it into a Draw-Down Managed Pension, and also a With Profits Pension which I was fraudulently sold, which has been reduced by a third and is still falling. Yes I have been seriously disadvantaged by the lack of proper financial control of Equitable by the Treasury at the time ie. Gordon Brown. He indeed was the cause of the pension collapse by thieving £5billion a year, and should be made to pay for damage he has caused.

It is offensive that Politicians have awarded themselves generous pensions and expense allowances at the tax payers expense ie. Me and you, and yet the Government chooses to ignore all the facts that have come to light, showing that they were guilty of negligent financial control of Equitable Life leading up to year 2000, the year I was to start drawing my pension.

Responses from those representing complainants

Name removed

Letter I
I funded an Equitable pension during my working life which was intended to increase annually to reflect the growth of their equity fund. For this I forfeited 2% annually.

I started to draw my pension in 1997 and in the first two years, the mean increase after the 2% forfeit was 5.47%. Instead of this, my actual pension was reduced in 2003 by 25.4% and since then, has reduced annually by the 2% forfeit as the equity fund was extinguished by Equitable.

The result of this is that my pension each year is less than expected by an increasing sum, rising from 37% in 2003 to 52% in 2007 and each year the position gets worse.

In the current year I would have expected in excess of £21,000 whereas I will receive less than half viz £10,200.

The Equitable pension was supposed to be the major part of my retirement income. As it has reduced so dramatically, I have had to economise considerably on my outgoings of everyday living, quite apart from holidays which have necessarily been much restricted for myself and my wife. Furthermore I have had to downsize on my house in order to make ends meet.

I suspect that the majority of Equitable pensioners have a similar experience as I have, thanks to the ineptitude of both the Equitable and the FSA regulatory authorities and I trust that some compensation will be forthcoming from the government.

Yours faithfully,

Name removed

Letter J
Both my wife and I have with profit annuities ex Equitable Life now with Prudential. I have two policies and my wife has one. We have seen our pension payments go steadily down to approximately half of the initial payments. We have lost, so far, approximately £14,000 of income each year. We own our home and we do not go hungry but we have nothing like the life we expected and had planned.

We were led to believe by Equitable Life that we could expect our income to go up at least in line with inflation. We had both worked very hard all our lives and had saved all we could for our retirement. We now struggle to keep our home and maintain it as costs constantly rise and our income falls. Our holidays now consist of visiting one or other of our children.

Responses from those representing complainants

Equitable Late Contributors Action Group

I drive an old car and have no prospect of replacing it. The enormous rise in the cost of petrol means that we only use the car when absolutely necessary. We have no access to public transport as we live in a village at the bottom of a very steep hill which neither of us are fit enough to climb.

I am divorced and have to pay my ex wife, who became an alcoholic, £12000 per annum. One of Gordon Browns first action as chancellor was to withdraw tax relief on maintenance payments. This Cost me 3 to 4 thousand pounds a year which I could cope with when I was receiving my full annuity but now, of course it is another story. The payment awarded to my ex wife by the Court naturally was based on my anticipated pension. That pension has been cut in half.

We were anticipating a retirement free from financial worries and looked forward to being able to give our children some financial help if necessary and give treats to our nine grandchildren. We now have to live a very quiet life and watch every penny and it is now our children who give us the occasional treat rather than the other way round.

All in all our life bears little or no relationship to what we planned and worked and saved for

Yours sincerely,

I hope that indeed the findings of the Ombudsman will meet your and my hopes. I also agree that Mr. Brown is highly unlikely to give in without a fight. But I would certainly like to put my story at your disposal.

After 40 years my very tough but quite successful business career came to an end through some medical condition. With the help of my wife I recovered fortunately quite well during 1992 - 2000. We were looking forward to a relaxed and comfortable retirement based on a good pension invested with a highly recommended pension provider Equitable Life as required by Government regulations. We wanted to be able to spend every year as long as possible during the winter some months in warmer climates; we wanted to help our children with financing the university education of our grandchildren; we wanted to partially refurbish and extend our house; and we wanted to have some cushion against the ravages of inflation.

With horror did we hear of the collapse of Equitable in summer 2001. Suddenly our certainties were gone and we had to adjust our retired life to a substantially reduced pension. Out went our plan for some month in the sun; out went our plan to refurbish our kitchen and add a second bathroom to our house; out went our hope to have a buffer against inflation. However we did not want our grandchildren to suffer and continued to help in full. Today we have to grin and bear it and make the best out what is left of our pension. However we are worried that in time inflation will see to it that we may not be able to cover our needs - a cover that we expected to have based on the original with-profit investment with Equitable. My wife and I feel cheated by a Government that forced us to take out an annuity without making sure that it was in the position to supervise and regulate the pension industry.

I also advised my daughter to invest her savings and company pension contribution with Equitable. A large amount of this money has been lost and the consequences on her future pension will be tough. All this caused by an incompetent Government boasting about pension security without doing anything to supervise and regulate reliably the pension industry.

Letter L
I originally had my main pension which was a GAR but switched to WP in 1998 when about to retire without realising the full implications. However about a year or so later I was given the choice to rectify the situation by Equitable Life and return to GAR. Understandably I jumped at chance. I do still have a small WP annuity which used to pay about £100 per month and has now dropped to just over £50 pm. This has now been transferred to the Pru. I find it rather surprising that those annuitants that have suffered so terribly because of this situation are reluctant to come forward. Although my loss is small compared to many annuitants. I still support EMAG as a matter of principle and will continue to do so. If I can be of any help at any time please do not hesitate to contact me.

With warmest regards,

Name removed

Letter M
My father had an Equitable Pension which served him well, so when, as impecunious self-employed architects with four children, we at last had some money to put into a pension The Equitable was our immediate choice. Later, my husband took out another pension from them, and then I was able to take out another, always reciprocal. Now my husband has died and I am 79 and all we depended on has been vastly reduced. I still work to give myself a decent standard of life, but I cannot expect to be able to do this much longer.

I think that the Lord's decision to give precedence to the GAR pensions was unjust, because we relied on the statement that once a bonus was awarded it would be permanent. As a result, our small pensions have been dramatically reduced.

Please keep fighting.

Yours sincerely,

Equitable Late Contributors Action Group

Letter N
On my retirement in 1994 my capital with Equitable Life was £40,000 which presumably they invested to give me a pension of £306 a month. (now £176 with the Pru).

When the crash came I lost £140 per month which although small by some standards would have given me a chance to travel on holiday about twice a year, my savings were only about £6,000 at the time.

My question to my MP was when I ran a small consultancy for testing welding operatives, which I started on my retirement to boost my pension and savings I had to have Insurance for Professional Indemnity and Public Liability. Why did they not have the same? - after all they were professionals in the investing of money etc.

Thanks for your efforts,

Name removed

Letter O
I'd be happy to help but I suspect my story isn't of a sort to wring the Ombudsman's withers. My pension has been substantially reduced (by £1,000/month, tax-paid) but I am still able to do what I want - having modest needs and other resources to satisfy them. The people who have suffered are my children, for whom this money is/was earmarked. My gripe (and why I started this letter) has more to do with the misrepresentation of EL's fund management policies. Had I been honestly told, I'd have taken different decisions.

Regards,

Name removed

Letter P
The following is a very brief account of my suffering at the hands of the Equitable. I do realise that there will be many others who have suffered more, but here is my story for what it is worth.

I was senior partner in a small legal firm, so self-employed, and retired from work at the end of 1996 having built up a reasonably substantial pension fund spread among several companies. On retirement I was persuaded by the Equitable representative to transfer all the money into the Equitable as at that stage it was the only company offering a drawdown policy, which I found very attractive. The previous generation of partners in my firm had had to convert their pension funds into annuities on retirement and had subsequently been badly hit by the rampant inflation of the 1970s and I was keen to avoid a similar fate.

During the first few years of retirement I was able to live quite comfortably on the income from my drawdown policy, though I was visited by a representative of the Equitable, I think some time in 2000, who tried to persuade me to convert the policy into an annuity. At this time the legal action in which the Equitable was involved was in the news and I asked his opinion of it. He told me that the company was confident of success in the action but in any case the funds in my drawdown policy were "ring-fenced" so that they were safe even if the Equitable lost the case.

When they did lose the case in late 2000, I enquired about transferring my drawdown policy to another company but was told that that was not possible - the only choice was to convert it into an annuity. By the time this rule was relaxed in early 2001, the Equitable had slashed the value of all its policies, including mine, by 25%, the effect of which was that it was now not producing sufficient income for my needs and if I supplemented my income by drawing on the capital, the fund would almost certainly be exhausted well before my death.

I therefore had no alternative but to use the fund to buy an annuity, which I duly did with the Norwich Union. I am therefore now in precisely the situation which I wanted to avoid, getting a fixed income from the annuity which is extremely vulnerable to inflation.

Before the reduction in value my drawdown policy was worth £254,178; this was reduced to £216,051 by the Equitable. I was drawing £1,500 per month from the policy up to then and it was still increasing in value; my annuity with the Norwich produces only £1,121 per month after tax. This covers most normal living expenses though I am not sure how long this will continue to be the case; any one-off expenses, including holidays, are paid for out of capital which of course will not last for ever. I am now aged 72 and my wife is 70.

I did apply to the Equitable for some relief under the scheme which they were running, particularly in view of their representative's words to me in 2000, but as I had no documentary proof of what was said and indeed had destroyed all the correspondence which took place at the time of my retirement, my claim was rejected.

Yours sincerely,

Name removed

Letter Q
I think you should also include people who have a very clear view of how much Equitable have stolen from their investors. I can provide you all of the detailed information you might wish as an example of how investors of 10 or more years standing were conned out of their pension fund entitlement (earned from the early 1990's) including the period starting in the mid 1990s when the Government regulators were in control.

1. Pension fund estimated value: £116k in July 2001
2. Request for conversion of this fund to an Annuity dated 09 July 2001 ignored by Equitable Life management.
3. Actual Received: £86k for Annuity in 2002
4. Lost Funds: £30k in bonuses + interest

I have not signed acceptance of any Equitable Life management activities and wrote to Senior Equitable finance Director, Thomson in September 2002 to indicate that I was prepared to take legal action to resolve the issues.

Responses from those representing complainants

Equitable Late Contributors Action Group

Kind regards,

Letter R
For the last 8 years before retirement I "salary sacrificed " all of my annual sales bonuses and the company paid them into my pension fund with ELAS so as to build up my pension as I had agreed with ELAS the capital sum required at retirement to produce the pension my wife required to live on. During this period we did without overseas holidays and many other capital items for the home so as to maintain the annual amount entering the fund.

<u>My Policy No.1 With-Profits pension policy</u> was in September 2002 paying about one-third percent of the total annuity as FINAL BONUS. In September 2005 the final bonus was dropped altogether and the total annuity payable dropped by approx. **£500 per annum**

<u>My Policy No. 2 With-profits pension policy</u> in September 2002 the final bonus payable was 25% of the total gross annuity. By September 2004 the final bonus was discontinued so the annual pension dropped by some **£4000 per annum.**

My total loss 2004 - 2008 is approximately £19,000 when you take into account that in the year 2003 the final bonus was greatly reduced on both policies.

Many of the dreams we had have no longer been affordable and my wife and I wanted to take ocean cruises to ports where I visited in the navy in WW11. Many important changes like changing my car was no longer possible and with such a huge reduction in the overall annual pension many of our retirement hopes were dashed. I have and still am subject to anxiety and fearful we shall not be able to pay bills with increased living costs in our retirement with such an enormous reduction in our ELAS pension. We find it such a worry with living expenses all round escalating at present.

Our private pension with ELAS is the only one we have ever had and as they were such an old established company I trusted them completely. How wrong I was in hindsight.

My wife and I are both in our early 80's now and we feel bitter about the whole debacle particularly as the ELAS sales and financial advisers persuaded me to go into the with-profits policies and they stated they were sound and financially beneficial.

Yours truly,

Section 5

Primary documents – the statutory and administrative context

Service level agreements

1984 – between the Department of Trade and Industry (the DTI) and GAD

Arrangement made between Insurance Division and the Government Actuary's Department for the examination of insurance companies returns.

PRELIMINARY

1 This statement sets out the respective roles of the Insurance Division of the Department of Trade and Industry (I Division) and of the Government Actuary's Department (GAD) in respect of the examination of annual and quarterly returns received from insurance companies authorised to carry on long term business under the Insurance Companies Act 1982 (the Act). The statement deals in detail with the arrangements for and in support of the examination and matters directly relating thereto. The underlying approach is that formal action on behalf of the Secretary of State should always be taken by I Division but enquiries to companies (but not to auditors nor, in the first instance, to appointed actuaries) may be made direct by GAD.

2 Within the above framework, GAD is given the major share of the responsibility for the examination of returns relating to long term business and for pursuing technical questions arising directly therefrom with insurance companies. Upon completion of the detailed examination of each return, GAD will provide I Division with a report on solvency and on any other significant matters which have emerged as a result of the examination. GAD will report further when any outstanding matters have been clarified with the company or, where appropriate, its appointed actuary. For priority 4 companies (see paragraph 30) when a full detailed scrutiny of the returns is unlikely to be carried out, a brief report will be made to I Division after the initial examination of the return has been completed.

3. References in this statement to companies are to companies which carry on only long term business and to composite companies in respect of their long term business.

ACTIVITIES TO BE CARRIED OUT BY INSURANCE DIVISION

Applications for Authorisation	4	I Division will provide GAD with a copy of any new authorisation issued in respect of long term business.
Company Profiles	5	I Division will ~~be~~ provide GAD with an up to date copy of the profile (computer Format A) for each company.
Directions, Requirements, Concessions and Undertakings	6	I Division will be responsible for issuing directions and notices of requirements, for granting concessionary orders and for obtaining voluntary undertakings from companies. The views of GAD will be sought as appropriate.
	7	I Division will provide GAD with a copy of any direction, notice of requirements or concessionary order issued to any company on authorisation or subsequently or of any voluntary undertaking given by any company.
Business Plans and Policy documents etc	8	I Division will provide GAD with a copy of any business plan, policy document or reinsurance contract received from a company in support of an application for authorisation or subsequently, and of

MAN|N|BRI|2|6.88

Service level agreements

1984 – between the DTI and GAD

any correspondence or other document which is relevant to an examination of a company's return in respect of its long term business.

<u>Change of ownership or control etc</u>

9 I Division will be responsible for considering any changes or proposed changes in a company's controller, managing director etc which have to be notified to the Department.

10 I Division will scrutinise the Company's annual reports and accounts to shareholders and check that the necessary notifications and approvals have been made.

<u>Appointed actuary</u>

11 GAD will be advised of all appointments notified under section 19 of the Act.

<u>Change of financial year of a company</u>

12 I Division will be responsible for approving any change of financial year of a company but will consult GAD before any change is approved. I Division will notify GAD when any change is approved.

<u>Extension of time for submitting of annual returns</u>

13 I Division will advise GAD when any extension is granted.

<u>Distribution of Annual Returns</u>

14 I Division will be responsible for distributing annual returns received from companies. GAD will be sent a copy of each such return (including documents relating to the general business of a composite company) together with a copy of the shareholders' accounts and of any report issued to the company's policyholders or shareholders.

<u>Initial action on the annual returns by I Division</u>

15 Upon receipt of a company's annual return, I Division will carry out an initial check that the main documents, including the directors', actuary's and auditors' certificates, are present.

16 I Division will arrange for the relevant forms to be submitted for computer processing and will examine all messages shown on the validation and compliance reports. Any significant errors or omissions will be notified to GAD.

17 I Division will ask GAD whether, as a result of their initial examination of the returns (see paragraphs 26 to 29), they have identified any serious omissions or other matters which need to be taken up urgently with the company.

18 I Division will pursue immediately with the company any errors, omissions or matters of serious concern identified as a result of the initial examination of the returns carried out by I Division or by GAD.

19 GAD will be provided with a copy of Formats B to K (ie including general business formats in respect of composite companies) produced by the computer.

MAN | N | BRI / 3 | 6.88

Service level agreements

1984 – between the DTI and GAD

20 I Division will check information on each company's profile (computer Format A) with the returns and wi the annual report to shareholders to make sure that the profile is up to date.

Quarterly returns

21 I Division will send GAD copies of all quarterly returns and supporting documents (such as lapse triangles) relevant to a company's long term business.

Other matters

22 I Division will notify GAD if they consider that a company should be given a higher priority rating tha that suggested by GAD (see paragraph 31).

23 I Division will notify GAD of any other matters which arise and which appear relevant to the examination of a company's return in respect of its long term business.

ACTIVITIES TO BE CARRIED OUT BY GAD

Initial action on the annual returns by GAD

24 GAD will advise I Division if the annual return of a company has not been received by GAD within six weeks of the due date (allowing for any extension granted to the company).

25 As soon as possible after the receipt of the annual return of a company from I Division, GAD will carry out an initial scrutiny of the return with a view to advising I Division of any serious solvency or compliance problems in respect of the company's long term business and to determine an order of priority for GAD's main examination of the returns. This will be carried out in accordance with the following paragraphs.

26 GAD will advise I Division immediately if the return suggests that a company has failed to meet the long term business solvency margin requirements or is otherwise in financial difficulty.

27 GAD will examine the directors', actuary's and auditors' certificates to ensure that they have been properly completed in accordance with the regulations in respect of long term business. GAD will advise I Division immediately of any serious cases of non-compliance, which will require amended certificates to be submitted. GAD will draw attention at the same time to any significant qualifications in any of the certificates.

28 GAD will make an initial examination of those parts of the return relating to long term business which are not subject to computerisation (Form 43-51 of Schedule 3 and Schedules 4 and 5) and check that they appear to have been properly completed. GAD will advise I Division immediately if it appears that any significant information has not been provided or that

MAN | N | BRI | 4 | 6.88

Service level agreements

1984 – between the DTI and GAD

there are significant errors in the information which will require revised or additional information to be submitted by the company.

29 GAD will make an initial examination of Form 58 (Valuation result and distribution of surplus) to determine whether it suggests that there has been a breach of Section 30 of the Act (allocation of surplus to with-profits policyholders). GAD will advise I Division immediately if any such breach appears to have occurred.

Classification of companies by priority

30 As a result of their initial scrutiny of the annual returns, including consideration of the actuary's valuation basis, GAD will give each company a priority rating for the purpose of carrying out the main examination of the returns. There will be four categories of priority rating determined in accordance with criteria set out at Annex A.

31 At the end of each quarter, GAD will provide I Division with a list of current and previous priority ratings for all companies taking into account any special cases notified to them by I Division (see paragraph 22).

Detailed examination of the annual returns by GAD

32 Except in the case of Priority 4 companies in those years when a detailed examination is not to be carried out (see paragraph 39) GAD will:

i carry out on behalf of I Division detailed examinations of the returns submitted by insurance companies in respect of their long term business, and

ii report to I Division any significant matters which emerge as the result of detailed examinations of those returns and, subsequently, from any correspondence or discussions with companies or the actuaries.

33 The primary objectives of each examination will be

i to form a view about the solvency position of the company in respect of its long term business and to determine whether, at the date of the return, the company had and whether, in the foreseeable future, it seems likely to continue to have the margin of solvency required in respect of that business,

ii to determine whether the return in respect of long term business appears to comply with relevant statutory requirements (whether arising from legislation, directions, notices of requirements or conditions contained in concessionary orders) or with undertakings given by the company, and

MAN | N | BRI | 5 | 6.88

Service level agreements

1984 – between the DTI and GAD

iii to determine as far as possible from the return whether the company appears to have complied with other statutory requirements (however arising) or with other undertakings given relating to its long term business.

34 GAD may raise with the company or, with the latter's agreement, its appointed actuary any points on the return and relating to long term business which GAD consider require clarification. If I Division has already contacted the company following the initial examination of the company's return (see paragraph 18), GAD will agree with I Division which Department should correspond with the company on further questions arising. GAD will recommend to I Division any action which GAD consider should be taken in respect of any matters arising on the return. GAD will not initiate any such action nor, in their discussions with a company or its appointed actuary, will they commit I Division to any particular decision.

35 If any points arise on the return which require explanation from a company's auditors, GAD will not approach the auditors direct but will refer the matter to I Division.

<u>Correspondence and Meetings</u>

36 Any correspondence between GAD and an insurance company or its advisers and notes of any meetings held with them will be copied at the time to I Division.

<u>Report to be made by GAD to I Division following the main examination of the annual returns</u>

37 Upon completion of their detailed examination of the annual return of an insurance company GAD will send I Division a report on any significant matters which have emerged as a result of the examination drawing attention to matters of importance being raised with the company. When such matters have been clarified or when GAD feel that some form of formal action is required GAD will further advise I Division.

38 Each report shall include the following information as appropriate:

i A general description of any identifiable major developments or changes during the period covered by the report and relating to the company's long term business. This should include any significant changes in the philosophy or business approach of the company, possibly resulting from a change in ownership or control or in the attitude of the company's shareholders; any significant change in the volume, type or mix of the long term business written by the company; and any internal or external factors which may have had a special effect on the company.

MAN | N | BRI | 6/6.88

Service level agreements

1984 – between the DTI and GAD

ii A general commentary on the present and prospective financial position of the company. GAD will draw attention to any major weaknesses in the basis of valuation adopted by the appointed actuary in his (Schedule 4) Valuation Report and to any significant changes (including changes in reinsurance arrangements) in the company's financial affairs since the time of GAD's previous report.

iii If the company provides quarterly returns, attention shall be drawn to any significant differences between the figures in the annual return and those in the corresponding quarterly return and to any significant developments since the date of the last annual return which have been revealed by quarterly returns.

iv If the company has provided a business plan, attention should be drawn to any significant deviations from the plan.

v Details of any breaches or possible breaches f statutory requirements (however arising) (including sections 28 to 31 of the Act) or of undertakings given by the company revealed as a result of the examination of the company's return.

vi Details of any significant errors or omissions in the return (including the directors', actuary's and auditors' certificates) or of any other significant instances of non-compliance noted during the course of the examination. If the company has already rectified the position (as the result, for example, of action taken under paragraph 18) this shall be stated in the report. In other cases, the report shall explain whether or not GAD is drawing the company's attention to the defects.

vii Details of any qualifications contained in any certificate given by the directors, actuary or auditors. If amended certificates have already been provided by the company (following, for example, action taken under paragraph 18) this shall be stated in the report. In other cases, the report shall state whether GAD is raising the matter with the company.

viii An indication if the lapse experience of the company appears to be high for the type of business and whether information available in the return suggests that it may be deteriorating.

x Reference to any correspondence in respect of the examination between GAD and the company or

MAN | N | BRE | 7 | 6.88

Service level agreements

1984 – between the DTI and GAD

its actuary. A copy should be appended to the report if it has not already been provided to I Division (see paragraph 36).

<u>Dispensing with a detailed examination of the annual returns</u>

39 In the case of Priority 4 companies a detailed examination of the annual returns will be carried out at least once in every three years. Before allocating priority 4 to a company, a sufficiently thorough initial scrutiny will be carried out to ensure that there is no evidence in the return of any impending financial problems. This will involve an examination of the following matters in addition to those considered during the normal initial scrutiny of the return: adequacy of valuation basis; possibility of any adverse trends; adequacy of information provided where net premium valuation has not been used; any obvious problems of compliance. GAD will indicate on the list of priority ratings (see paragraph 31) those Priority 4 companies for which annual returns have been received by GAD and which are due to be given a detailed examination.

<u>Quarterly returns</u>

40 GAD will examine all quarterly returns and supporting documents which they receive from I Division.

41 GAD will check that the company appears to have complied with any requirements imposed on it under the Act, including any requirements imposed under Section 40 (trusteeship requirements) or Section 41 (premium limitations). GAD will report immediately to I Division if there appears to have been a breach of any such requirement.

42 GAD will report to I Division any other significant matters noted as a result of their examination of the quarterly returns. GAD will report in particular any significant changes in the volume or type of business being written; any marked deterioration in a company's financial performance; or any major variations from any current business plan submitted by the company.

<u>Progress on the examination of annual returns</u>

43 GAD will provide I Division with a monthly report of progress made in the examination of the annual returns, as regards completion of initial checks, detailed examinations and final reports on outstanding issues. A separate report shall be made to each of the supervisory sections of I Division in respect of the companies supervised by that section. The report shall be in the format set out at Annex B.

<u>Commencement and Review</u>

44 The arrangement will come into effect on 1 July 1984 and will apply to all annual and quarterly returns of companies received by I Division after that date.

PRIORITY RATINGS TO BE ADOPTED BY GAD

ANNEX A

PRIORITY	CRITERIA	EXAMINATION PROGRAMME
1 Urgent	i) Company has failed to maintain its required solvency margin (RSM); or	Detailed examination to be carried out within days of receipt of the company's return by GAD
	ii) apparent weaknesses in the valuation basis suggest that the RSM might not be covered.	
2 High Priority	i) Company has maintained its RSM but its declared solvency margin is less than 125% of RSM and there is no reason to suppose that significant hidden margins exist; or	Detailed examination to be carried out as soon as possible. Even less urgent companies in this category would normally all be examined within four months of the due date for submission of the returns to I Division.
	ii) Company appears to have failed to comply with the regulations in material respects.	
3 Medium Priority	i) Company has a declared solvency margin of between 125% and 200% of RSM or lesser declared cover but with significant hidden margins; or	Detailed examination normally to be carried out within ten months of the due date for submission of the returns to I Division.
	ii) Company has higher solvency margin cover but doubts exist over certain aspects of the returns.	
4 Low Priority	i) Company appears to have a solvency margin of at least 200% of RSM having regard to the likely level of hidden margins and has no obvious problems of compliance; or	Detailed examination to be carried out at least once in every three years (see paragraph 39). Detailed examinations will be carried out within twelve months of the due date for submission of the returns to I Division.
	ii) Business of company is inherently low risk and solvency margin appears adequately covered.

1995 – between the DTI and GAD

Agreement between Insurance Division (I Division) and the Government Actuary's Department (GAD) setting out the level of service to be provided by the GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

INTRODUCTION

This agreement sets out the level of service to be provided by the Government Actuary's Department (GAD) to Insurance Division of the DTI (I Division) in respect of the supervision of all companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 ("the Act") to carry on long term business. This agreement covers the long term business of composite companies as well as companies which transact only long term business.

MAIN PRINCIPLES

1. I Division's primary role, as set out in its mission statement, is to regulate the insurance industry effectively (within its duties and powers set out in the Act) so that policyholders can have confidence in the ability of UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations. In fulfilling these aims I Division has sole responsibility for all executive decisions taken in the exercise of the Secretary of State's powers under the Act.

2. One of GAD's primary functions is to advise I Division in the fulfilment of these aims. In carrying out this role, GAD recognises that its function is advisory and that it has no responsibility for the exercise of the Secretary of State's powers under the Act.

3. In order to enable I Division and GAD to carry out their primary roles, a close working relationship between the two is necessary, in which both sides keep each other fully informed. I Division will copy to the GAD all relevant correspondence received from companies. ("Relevant correspondence" for this purpose does not include letters of complaint from policyholders, unless there are actuarial issues involved, and notifications of management changes.) I Division will also notify the GAD of all changes of control affecting the company, including changes of Managing Director and Appointed Actuary. Unless special circumstances arise, GAD will accompany I Division on all visits to companies, and be given the opportunity to attend all meetings held by I Division with companies. GAD may hold meetings with companies on actuarial issues at GAD. The GAD will notify I Division of, and offer the Division the opportunity to attend, all such meetings.

1995 – between the DTI and GAD

Payment by DTI for services provided by the GAD

4. The level of fees to be paid by I Division to the GAD for the provision of services under this agreement will be subject to a separate agreement between the two parties negotiated annually.

DETAILED ACTIVITIES

5. The following sets out the detailed services provided by the GAD to the DTI. It is not an exhaustive list. In particular, as section B and C make clear, GAD will stand ready to comment and advise where appropriate on all issues when asked to do so by the DTI.

A. **Examination (or scrutiny) of annual returns**

A1. The returns submitted to I Division under Section 22 of the Act are the principal tool enabling the Secretary of State to form a view on an insurance company's present and future solvency. GAD have the main role in the detailed scrutiny of these returns, and in providing advice to I Division on what action needs to be taken in following up points arising from the scrutiny.

A2. The following paragraphs are written on the basis that most company year ends are 31 December. However, when the year end of any company is different from 31 December, the same principles will apply.

The scrutiny programme

A3. The scrutiny programme (the order in which the returns are examined in detail by the GAD) for each year is to be agreed between I Division and GAD by **mid September** on the following basis. Where it is known that a company will be visited during the course of the scrutiny year in question GAD will make every effort to carry out the scrutiny and report to I Division before the visit. I Division and the GAD will also agree before the start of each scrutiny cycle whether there are any special topical issues affecting the life assurance industry in the next twelve months which need to be addressed during the course of the scrutinies.

Initial action by I Division

A4. The **role of I Division** initially is to ensure that the GAD receives the DTI returns and shareholders' accounts needed to complete its part of the process. In particular, I Division will aim to provide GAD with appropriate copies within four working days of receipt. I Division will also notify GAD, by end

GADCONC.DOC

Service level agreements

1995 – between the DTI and GAD

June and end December each year of the company visits to be carried out in the next twelve months.

A5. I Division will notify GAD when an extension has been granted to a life office under the terms of Section 22(1) of the Act.

A6. Chasing of late returns is the responsibility of the I Division supervisor who will answer any queries on when a return is expected.

Initial Action by GAD

A7. The role of the GAD in the initial process is to provide I Division with a clear overview of the scrutiny programme by mid September. The main elements of the initial process will be:

a. GAD will report to DTI immediately if the initial scrutiny of any company raises serious concern. The main examples of where serious concerns arise are when:

i. a company has failed to meet its solvency margin, or is in financial difficulties;

ii. a company has failed to provide the necessary directors', actuary's and auditors' certificates, or any of the certificates is significantly qualified;

iii. significant data errors or omissions exist;

iv. a breach of section 30 (allocation of surplus to with profit policyholders) appears to have taken place;

v. a company appears not to be complying with its Notice of Requirements, or with undertakings it has given to the DTI.

vi. there appear to be any other clear breaches of the Act and regulations.

b. GAD will send to DTI by the end of August a report covering all initial scrutinies which will consist of:

i. a priority rating for each company, based on GAD's views of its financial strength;

ii. an indication of solvency cover for each company.

iii. a target date for full scrutiny of each company's returns.

1995 – between the DTI and GAD

c. I Division and GAD will use their best endeavours to agree the scrutiny programme, both as regards time - tabling and allocation of priority rating **by mid September.** However, GAD does not need to wait for the scrutiny programme to be agreed before starting its detailed scrutinies of what it perceives to be the most urgent cases. Generally speaking, these will be the priority 1 cases.

Progressing the scrutiny programme

A8. The role of GAD in the detailed scrutiny process is to provide I Division, in the form of a report, with a means of identifying those companies which:

a. are not complying with statutory requirements;

b. are failing to meet the statutory requirements, or are in danger of failing to meet them in the near future;

c. appear not to be meeting policyholders' reasonable expectations.

A9. In addition the scrutiny report will contain:

- a basis for action in relation to individual companies if any of the fundamental requirements above are not being met, or if trends in the returns point to problems with these in the near future;
- a basis for informed longer term discussion with individual companies on problems which may arise in future if current trends in key performance indicators continue;
- key indicators include:

a. cover for the solvency margin and trends in free asset ratios

b. actuarial issues, e.g change in strength of valuation basis, matching.

c. type of new business being written, by volume and mix

d. trends in expense ratios

e. trends in lapse rates

f. assets; worrying exposures, investment strategy, impact on bonus strategy

g. significant developments during year

1995 – between the DTI and GAD

A10. **Detailed scrutiny reports for all companies will follow the format set out in Annex A** unless a different format is agreed between GAD and I Division for individual cases.

A11. Detailed scrutiny reports will be provided to DTI in accordance with the scrutiny programme. Broadly, the aim will be to provide detailed reports for all companies with priority ratings 1 to 3 by the end of March the following year. Within that period, priority 1 and 2 cases will be given priority.

A12. Detailed scrutiny reports on priority 4 cases will be submitted by the end of May.

A13. Priority 5 cases will not be given a full scrutiny in the year in question but will receive a fuller initial scrutiny.

A14. It may be necessary to amend the programme of detailed scrutinies, as both the priority ratings and the target date for a full scrutiny may be subject to some fine tuning e.g. due to the level of the Stock Market at the balance sheet date. I Division and GAD will agree revised target dates where it is necessary to make amendments to the programme.

Action arising from the detailed scrutiny

A15. Points arising from the detailed scrutiny of the returns which require clarification will normally be taken up with the company, or with its Actuary, by GAD. However, GAD will always consider whether the point to be taken up is more appropriate for I Division and will recommend accordingly. Where GAD has written to the company, it will be for GAD to chase the reply. This should be done within six weeks of the letter issuing. Points arising from the company reply should be dealt with within 2 weeks.

A17. If GAD considers that I Division might need to exercise the Secretary of State's powers, or take any course of action, it will make appropriate recommendations. **GAD will not, however, initiate any such action nor commit I Division to any particular decision or course of action.**

Monitoring the progress of the scrutiny programme

A18. GAD will circulate to I Division at the end of each month a report of the progress of the scrutiny programme.

B. Authorisation of new life offices

B1. The purpose of the authorisation procedure is to form a judgement on whether, on the basis of the application submitted and on the initial starting

GADCONC.DOC

Service level agreements

1995 – between the DTI and GAD

capital, the company will remain solvent until its fourth year of operation, and will be managed and controlled by fit and proper persons. GAD's main role in this process is to evaluate the financial projections and related matters, and provide advice to I Division as to whether, in their view, the solvency requirements will be met.

B2. In the initial stages, GAD will attend the meetings with companies who are considering making an application for authorisation. They will also attend any subsequent meetings as the authorisation progresses.
