B3. When the written applications are submitted to I Division by the company, GAD will comment on the draft (of which there may be several over time) and final versions. GAD's main role will be to advise I Division on the proposals as they affect the solvency and financial viability of the company. In the case of companies transacting only long term business GAD will have the main responsibility for commenting on the Scheme of operations, projections, type of investments representing the insurance funds, reinsurance treaties and actuarial certificates (typically paras 10 - 20 and 23 of part 1 of schedule I of the Insurance Companies Regulations 1994). However, they will not be restricted to these matters if they consider that other parts of the application require comment or give rise to concern. In the case of "health composites" which may now be authorised following the implementation of the 3rd EC Directives, I Division will decide whether GAD input is appropriate in respect of the general business Classes 1 and 2.

B4. GAD may also deal direct with the applicant or its advisers in order to clarify any unclear point in the application.

B5. In order to enable I Division to meet its own targets, GAD will provide I Division with comments on the first draft application within four working weeks of receipt. On each subsequent draft of the application, GAD will provide comments within a time - frame agreed between it and I Division.

C. Other supervisory matters

C1. Aside from the scrutiny of returns and authorisation processes, GAD will also provide advice on all areas which impact on a life office's solvency. It is not possible in a document of this nature to anticipate all of the instances in future where GAD's advice will be sought. However, as outlined in paragraph 3 above, to enable GAD to carry out its duties effectively, all documents received by I Division from the life office will be copied to GAD. I Division will request advice from the GAD when there are issues which might affect, for example, the financial security of a life office, policyholders' reasonable expectations, or where the issues raised are actuarial or professional. However, GAD are always free to comment on any document if it believes that there are

GADCONC.DOC

Service level agreements

1995 – between the DTI and GAD

issues that should be brought to I Division's attention. These other areas of responsibility include:

C2. **Transfers of portfolio** - These are transfers of engagements (assets and liabilities) from one company to another under the terms of Schedule 2C of the Act. The main issues to be considered are whether the transfer will adversely affect the security of policyholders or their reasonable expectations. GAD will:

- attend the meeting with the Independent Actuary, and be given the opportunity to attend any meetings held by I Division with the company;

- provide advice on the draft Scheme documents to enable I Division to form a view on the proposals and to comment to the company within the time scales set by the court procedure, and in good time to influence events if necessary

C3. **Requests by companies for concessions under Section 68** - GAD will endeavour to respond to I Division within two weeks of receipt in GAD of such requests in 90% of these cases.

C4. **Other miscellaneous correspondence** - e.g. requests for interpretation of legislation - GAD will endeavour to respond to I Division within two weeks of receipt in GAD of such requests in 90% of these cases.

C5. **Quarterly returns** - GAD will aim to comment on quarterly returns within three weeks of their receipt in the GAD. When there are no substantive issues to raise, the report will be in the form of a "nil return".

C6. **Company visits** - as mentioned above GAD will normally accompany I Division on all company visits according to the agreed visits programme.

C7. **Other issues** - GAD will provide I Division with other services from time to time as agreed. Such other services to include representation at meetings, for example with the Institute and Faculty of Actuaries, European Union etc., and input to policy development as appropriate.

SCRUTINY STRATEGY WORKING PARTY

PROFORMA SCRUTINY REPORT,

WITH NOTES ON CONTENT

XYZ LIFE ASSURANCE COMPANY plc

RETURNS AS AT 31 DECEMBER 1993

DETAILED SCRUTINY REPORT

The following pages list the 'standard' section and subsection headings. Notes of likely items to be covered are given in italics. It is suggested that the Sections should remain unchanged from one company report to another, to facilitate finding the desired part of any report, even if an occasional 'not applicable' entry is called for. Subsections should remain in the order shown where possible, but may be amended or omitted more freely.

1 SUMMARY

1.1 Key Features *Key features arising from the scrutiny should be presented, perhaps in the form of 'bullet points'. A possible approach is to extract one item from most Sections of the report. An example list of topics is shown below, but it should not be adhered to rigidly.*

In addition to the specific key points arising from the scrutiny, we should express a view as to the soundness of the company in the short and longer term. Reference to the cover for the solvency margin (8.4 below) should be made, as this is a key DTI supervisory responsibility. The priority rating of the company should be clearly stated. Where there is any doubt as to whether the valuation basis used is in accordance with the Regulations (8.1 below), this should be also be clearly stated.

- *Size and type of office (e.g. medium-sized with profits mutual), and primary source of business (e.g. IFAs).*
- *Ownership issues.*
- *Our view as to its soundness.*
- *Most important types of business, and recent new business trends.*
- *Expense control.*
- *Recent trends in financial results, especially if adverse.*
- *Asset allocation for with profits business, and changes therein.*
- *Approach to valuation, and a general view as to its strength.*
- *Supportability of bonuses, and recent trends in bonus declarations.*
- *Likely impact of the SIB compensation requirements for mis-selling of personal pensions.*

DSNOTESU.DOC 17 Mar 95

1995 – between the DTI and GAD
Annex A

1.2 Action Points *The list of Action Points should include items of as many of the following types as apply:*

(a) *Points needing immediate action by DTI;*

(b) *Points raised by GAD with the actuary in a letter (which should be enclosed);*

(c) *Points to be recorded for raising at a suitable opportunity, e.g. the next company visit.*

2 BACKGROUND

This should be a 'potted history' of the company, covering such things as its size and ownership, and the type(s) of business it writes. Comments on the corporate structure, and particularly of any insurance subsidiaries, should be made. A brief note of the senior management, and particularly the chief executive and the Appointed Actuary, should be given, with information on their experience, recent changes, etc. Any Section 68 Orders in force should be recorded.

The background should also cover significant developments during the year, e.g. acquisitions, disposals, S49 transfers, changes of ownership, and also such things as new types of business or distribution channels, new admin./computer systems, and LAUTRO/PIA regulatory problems, as recorded in the Chairman's statement, for example.

Reference should be made to any recent company visit, including a brief description of its outcome. If there are any issues outstanding with the company they should be mentioned.

[It is intended that the 'Background' section should be in essay form rather than as bullet points; it will form an important part of any briefing note on the company. However, most of it should be self-standing, and may well therefore be carried forward from year to year largely unaltered.]

BUSINESS DEVELOPMENTS DURING THE YEAR

3 NEW BUSINESS

3.1 New products *Any significant new products introduced during the year should be described.*

3.2 Source(s) of new business *The proportion coming from IFAs, direct sales forces, tied agents etc. (and if relevant the amount from overseas), and any significant changes during the year. [If not available from internal information such as the Report & Accounts, this may be obtained from surveys such as that in Planned Savings.]*

DSNOTESU.DOC 17 Mar 95 Page 2

Service level agreements

1995 – between the DTI and GAD
Annex A

3.3 Recent history:

Regular premiums

Class	1989 £000s	1990 £000s	1991 £000s	1992 £000s	1993 £000s
Total					
Year on year percentage increase					

Single premiums

Class	1989 £m	1990 £m	1991 £m	1992 £m	1993 £m
Total					
Year on year percentage increase					

New Business Index (Regular premiums plus 10% of single premiums)

New Business Index (£m)					
Year on year percentage increase					

Note that the classes to be shown in the new business tables must be selected individually to be appropriate to the company concerned. Some examples of likely categories are shown in the list below. One or more rows for overseas business should be shown if appropriate, and if such business is of sufficient significance it should be split by major territories too. There will normally be a row called 'Other' so that the totals reflect the Form 44 totals. Figures should be shown gross of reinsurance but a footnote may be added if, for example, some classes are (almost) wholly reinsured.

Life with profits
Life non profit
Unit linked life
Immediate Annuities
Pensions with profits
Pensions non profit
Unit linked pensions
Group pensions
Critical illness
Permanent Health

For large companies all the above figures, and the expense figures below, may be shown in £millions if this is more appropriate.

DSNOTESU DOC 17 Mar 95

Page 3

Service level agreements

1995 – between the DTI and GAD
Annex A

4 EXPENSES

4.1 Recent history of expenses:

Expense	1989 £000s	1990 £000s	1991 £000s	1992 £000s	1993 £000s
Initial commission					
Acquisition expenses					
Renewal commission					
Renewal expenses					
Total expenses					
Year on year percentage increase					

Expense ratios: Acquisition					
Renewal					

Expenses should be shown gross of reinsurance. The expense ratios are:

Acquisition (IC + AE) / New Business Index

Renewal (RC + RE) / Regular premium income in force [from Form 41, col. 1, lines 2 + 4 + 6 + 7 + 8]

The definitions of these ratios should be explicitly stated in the text of the report.

4.2 Commentary — *To include comment on the trends in the expense ratios.*

4.3 Exceptional items — *Refer to any exceptional items of expenditure, e.g. fines and compensation payments. Also comment on any references in the Report & Accounts to DP or sales distribution developments.*

5 CLAIMS AND WITHDRAWALS

5.1 Claims experience — *Include reference to Gross Death Claims as a percentage of Gross Sums Assured. Comment, if relevant, on ratio of PHI claims to PHI premiums received.*

5.2 Persistency experience — *As reported to PIA (when we can obtain this information). Also, make reference to any features identified from Form 43, e.g. large increases in maturities or surrenders.*

DSNOTESU.DOC 17 Mar 95 Page 4

Service level agreements

1995 – between the DTI and GAD
Annex A

SITUATION AT THE YEAR END

6 NON-LINKED ASSETS

6.1 Mix of assets at year end — *Use With-profit Guide information to identify asset mix and performance of WP Fund. Include comment on any significant changes in mix, redirection of investment of new moneys, or use of derivatives.*

6.2 Investment performance

7 UNIT-LINKED FUNDS

7.1 New funds introduced

7.2 Investment performance — *Of the most important funds only (e.g. the managed fund).*

7.3 Fund Management Charges to policyholders — *With particular reference to any changes.*

8 VALUATION & SOLVENCY

8.1 Strengths and/or weaknesses — *An explicit statement as to whether the basis is, or might not be, in accordance with the Regulations must be made. Include a general statement about the relative strength or weakness of the basis overall compared with that used by other similar companies. Add comment to highlight the types of risk to which the company is particularly vulnerable.*

8.2 Changes since previous year

8.3 Summary of results for main classes

[The entries shown in the next two tables are examples only - see note below.]

Liabilities for non-linked business:

Class	1989 £m	1990 £m	1991 £m	1992 £m	1993 £m
Life with profits					
Pensions with profits					
Non profit					
Annuities in payment					
Permanent Health					
Additional reserves					
Less reinsurance					
Total non-linked liability (Form 55)					

DSNOTESU.DOC 17 Mar 95

Page 5

Service level agreements

1995 – between the DTI and GAD
Annex A

Liabilities for linked business:

Class	1989 £m	1990 £m	1991 £m	1992 £m	1993 £m
Life regular premium					
Pensions regular premium					
Life single premium					
Pensions single premium					
Additional reserves					
Less reinsurance					
Total linked liability (Form 56)					

Note that, as with the new business tables, the entries for classes should be adjusted to suit the particular company. If Unitised With Profits business is significant it should be shown separately from conventional with profits. Where there are additional reserves (e.g. mismatching or contingency) then these should be identified in the tables or in a note thereto.

OTHER ISSUES

12 COMPLIANCE

12.1 DTI compliance problems

12.2 PIA and other compliance problems

13 MISCELLANEOUS

Possible topics for inclusion here might include press comment about the company, changes in senior staff or directors, etc.

APPENDIX

In certain circumstances, it may not be appropriate to complete a full detailed scrutiny report for each member of a group of companies, although it is usually sensible to consider all the member companies of a group at the same time. Where a full report is not called for, the subsidiary company may be dealt with in an abbreviated report forming an appendix to the parent company report. Examples of where this might be appropriate include pensions management subsidiaries, captive reinsurers and closed fund subsidiaries.

DSNOTESU.DOC 17 Mar 95 Page 8

Service level agreements

1996 – detailed scrutiny programme for the 1995 returns

The priorities for DTI for the 1995 scrutinies are to be

Priority	Description	**Other Indicators** *(note: these indicators are subordinate to the description, and are merely to give some broad assistance. They are no substitute for judgement, both where a higher or lower priority may be justified)*	Target
1	As at present, the allocation of priority 1 will denote a company which either is not demonstrating that it holds the required minimum margin or else where there are significant problems which lead GAD to believe that it does not meet the requirements under proper bases.		Within two weeks
2	This priority denotes those companies where there are significant and substantial concerns.	1. The cover for the RMM is less than 1.25x 2. There is evidence of material non-compliance with the valuation regulations	Within four months
3	This priority denotes companies where there are sufficient concerns to warrant early attention, or there are other reasons to require scrutiny early in the cycle.	1. The cover for the RMM is less than 1.5x 2. There is evidence of a non-trivial, but not material non-compliance with the valuation regulations 3. The company was in priority 1 or 2 for the previous year 4. A company visit is scheduled for October to January (or equivalent for non-December companies) 5. The company had commenced trading, but was authorised for less than eighteen months at the valuation date	Within six months
4	Companies which warrant a scrutiny for any reason, but would otherwise not fall within a category to ensure this.	1. The cover for the RMM is less than 2x 2. The company was in priority 3 in the previous year 3. There is evidence of non-compliance with less important regulations 4. The company did not receive a scrutiny in either of the previous two years 5. A company visit is scheduled for February to September (or equivalent for non-December companies)	Within nine months
5	Companies which do not qualify for priority 4 after the initial scrutiny, but for which decisions will be taken later in the year.	Scrutiny within the last two years	No target date initially
6	Companies which, at the review, are determined to be omitted from the scrutiny process.		None

Service level agreements

1998 – between the Treasury and GAD

Agreement between Insurance Directorate (I Directorate) of Her Majesty's Treasury (HMT) and the Government Actuary's Department (GAD) setting out the level of service to be provided by the GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

INTRODUCTION

This agreement sets out the level of service to be provided by the Government Actuary's Department (GAD) to Insurance Directorate (I Directorate) of HMT in respect of the supervision of all companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 ("the Act") to carry on long term business. This agreement covers the long term business of composite companies as well as companies which transact only long term business.

MAIN PRINCIPLES

1. I Directorate's primary role, as set out in its mission statement, is to regulate the insurance industry effectively (within its duties and powers set out in the Act) so that policyholders can have confidence in the ability of UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations. In fulfilling these aims I Directorate has sole responsibility for all executive decisions taken in the exercise of the Secretary of State's powers under the Act.

2. One of GAD's primary functions is to advise I Directorate in the fulfilment of these aims. In carrying out this role, GAD recognises that its function is advisory and that it has no responsibility for the exercise of the Secretary of State's powers under the Act.

3. In order to enable I Directorate and GAD to carry out their primary roles, a close working relationship between the two is necessary, in which both sides keep each other fully informed. I Directorate will copy to the GAD all relevant correspondence received from companies. ("Relevant correspondence" for this purpose does not include letters of complaint from policyholders, unless there are actuarial issues involved, and notifications of management changes.) I Directorate will also notify the GAD of all changes of control affecting the company, including changes of Managing Director and Appointed Actuary. Unless special circumstances arise, GAD will accompany I Directorate on all visits to companies, and be given the opportunity to attend all meetings held by I Directorate with companies. GAD may hold meetings with companies on actuarial issues at GAD. The GAD will notify I Directorate of, and offer the Directorate the opportunity to attend, all such meetings.

Payment by HMT for services provided by the GAD

4. The level of fees to be paid by I Directorate to the GAD for the provision of services under this agreement will be subject to a separate agreement between the two parties negotiated annually.

DETAILED ACTIVITIES

5. The following sets out the detailed services provided by the GAD to I Directorate. It is not an exhaustive list. In particular, as section B and C make clear, GAD will stand ready to comment and advise where appropriate on all issues when asked to do so by I Directorate.

A. Examination (or scrutiny) of annual returns

A1. The returns submitted to I Directorate under Section 22 of the Act are the principal tool enabling HMT to form a view on an insurance company's present and future solvency. GAD have the main role in the detailed scrutiny of these returns, and in providing advice to I Directorate on what action needs to be taken in following up points arising from the scrutiny.

A2. The following paragraphs are written on the basis that most company year ends are 31 December. However, when the year end of any company is different from 31 December, the same principles will apply.

The scrutiny programme

A3. The scrutiny programme (the order in which the returns are examined in detail by the GAD) for each year is to be agreed between I Directorate and GAD by **mid September** on the following basis. Where it is known that a company will be visited during the course of the scrutiny year in question GAD will make every effort to carry out the scrutiny and report to I Directorate before the visit. I Directorate and the GAD will also agree before the start of each scrutiny cycle whether there are any special topical issues affecting the life assurance industry in the next twelve months which need to be addressed during the course of the scrutinies.

<u>Initial action by I Directorate</u>

A4. The **role of I Directorate** initially is to ensure that the GAD receives the insurance annual returns and shareholders' accounts needed to complete its part of the process. In particular, I Directorate will aim to provide GAD with appropriate copies within four working days of receipt. I Directorate will also notify GAD, by end June and end December each year of the company visits to be carried out in the next twelve months.

Service level agreements

1998 – between the Treasury and GAD

A5. I Directorate will notify GAD when an extension has been granted to a life office under the terms of Section 22(1) of the Act.

A6. Chasing of late returns is the responsibility of the I Directorate supervisor who will answer any queries on when a return is expected.

Initial Action by GAD

A7. The **role of the GAD** in the initial process is to provide I Directorate with a clear overview of the scrutiny programme by mid September. The **main elements of the initial process** will be:

a. GAD will report to HMT immediately if the initial scrutiny of any company raises **serious concern**. The main examples of where serious concerns arise are when:

i. a company has failed to meet its solvency margin, or is in financial difficulties;

ii. a company has failed to provide the necessary directors', actuary's and auditors' certificates, or any of the certificates is significantly qualified;

iii. significant data errors or omissions exist;

iv. a breach of section 30 (allocation of surplus to with profit policyholders) appears to have taken place;

v. a company appears not to be complying with its Notice of Requirements, or with undertakings it has given to the HMT.

vi. there appear to be any other clear breaches of the Act and regulations.

b. GAD will send to HMT **by the end of August** a report covering all initial scrutinies which will consist of:

i. a priority rating for each company, based on GAD's views of its financial strength and taking account of the indicators set out in Annex A.

ii. an indication of solvency cover for each company.

iii. a target date for full scrutiny of each company's returns.

c. I Directorate and GAD will use their best endeavours to agree the scrutiny programme, both as regards time - tabling and allocation of priority rating **by**

mid September. However, GAD does not need to wait for the scrutiny programme to be agreed before starting its detailed scrutinies of what it perceives to be the most urgent cases. Generally speaking, these will be the priority 1 cases.

Progressing the scrutiny programme

A8. The role of GAD in the detailed scrutiny process is to provide I Directorate, in the form of a report, with a means of identifying those companies which:

a. are not complying with statutory requirements;

b. are failing to meet the statutory requirements, or are in danger of failing to meet them in the near future;

c. appear not to be meeting policyholders' reasonable expectations.

A9. In addition the scrutiny report will contain:

- a basis for action in relation to individual companies if any of the fundamental requirements above are not being met, or if trends in the returns point to problems with these in the near future;
- a basis for informed longer term discussion with individual companies on problems which may arise in future if current trends in key performance indicators continue;
- key indicators include:

a. cover for the solvency margin and trends in free asset ratios

b. actuarial issues, e.g. change in strength of valuation basis, matching.

c. type of new business being written, by volume and mix

d. trends in expense ratios

e. trends in lapse rates

f. assets; worrying exposures, investment strategy, impact on bonus strategy

g. significant developments during year

A10. **Detailed scrutiny reports for all companies will follow the format set out in Annex B** but modified for companies that are less important subsidiaries within an insurance group or where a different format is agreed between GAD and I Directorate for individual cases.

A11. Detailed scrutiny reports will be provided to HMT in accordance with the scrutiny programme. Broadly for companies with December year-ends, (and therefore with returns to be submitted to HMT by end-June), the aim will be to provide detailed reports for all companies with priority ratings 1 to 3 by the end of December in the year they are received. Within that period, priority 1 and 2 cases will be given priority, and will be completed by the end of October.

A12. Detailed scrutiny reports on priority 4 cases will be submitted by the end of March the following year.

A13. GAD will endeavour to complete a scrutiny by the end of May for the remaining Priority 5 cases.

A14. Companies with year ends other than December will have detailed reports provided within a comparable timescale, according to the priority awarded to them (as indicated in Annex A).

A15. It may be necessary to amend the programme of detailed scrutinies, as both the priority ratings and the target date for a full scrutiny may be subject to some fine tuning e.g. due to some restructuring of an insurance company being planned. I Directorate and GAD will agree revised target dates where it is necessary to make amendments to the programme.

Action arising from the detailed scrutiny

A16. Points arising from the detailed scrutiny of the returns which require clarification will normally be taken up with the company, or with its Actuary, by GAD. However, GAD will always consider whether the point to be taken up is more appropriate for I Directorate and will recommend accordingly. Where GAD has written to the company, it will be for GAD to chase the reply. This should be done within six weeks of the letter issuing. Points arising from the company reply should be dealt with within 2 weeks.

A17. If GAD considers that I Directorate might need to exercise HMT's powers of intervention, or take any course of action, it will make appropriate recommendations. **GAD will not, however, initiate any such action nor commit I Directorate to any particular decision or course of action.**

A18. GAD actuaries will be available on request to discuss with supervisors any issues concerning individual companies, or arising out of their detailed scrutiny.

Monitoring the progress of the scrutiny programme

Service level agreements

1998 – between the Treasury and GAD

A19. GAD will circulate to I Directorate at the end of each month a report of the progress of the scrutiny programme.

B. Authorisation of new life offices

B1. The purpose of the authorisation procedure is to form a judgement on whether, on the basis of the application submitted and on the initial starting capital, the company will remain solvent until its fourth year of operation, and will be managed and controlled by fit and proper persons. GAD's main role in this process is to evaluate the financial projections and related matters, and provide advice to I Directorate as to whether, in their view, the solvency requirements will be met.

B2. In the initial stages, GAD will attend the meetings with companies who are considering making an application for authorisation. They will also attend any subsequent meetings as the authorisation progresses.

B3. When the written applications are submitted to I Directorate by the company, GAD will comment on the draft (of which there may be several over time) and final versions. GAD's main role will be to advise I Directorate on the proposals as they affect the solvency and financial viability of the company. In the case of companies transacting only long term business GAD will have the main responsibility for commenting on the Scheme of operations, projections, type of investments representing the insurance funds, reinsurance treaties and actuarial certificates (typically paras 10 - 20 and 23 of part 1 of schedule I of the Insurance Companies Regulations 1994). However, they will not be restricted to these matters if they consider that other parts of the application require comment or give rise to concern. In the case of "health composites" which may now be authorised following the implementation of the 3rd EC Directives, I Directorate will decide whether GAD input is appropriate in respect of the general business Classes 1 and 2.

B4. GAD may also deal direct with the applicant or its advisers in order to clarify any unclear point in the application.

B5. In order to enable I Directorate to meet its own targets, GAD will provide I Directorate with comments on the first draft application within four working weeks of receipt. On each subsequent draft of the application, GAD will provide comments within a time-frame agreed between it and I Directorate.

C. Other supervisory matters

C1. I Directorate will notify GAD of any changes of appointed actuary that have been advised to them. GAD will liaise with I Directorate over any action that is needed where there is any concern about the reasons for the change of appointed actuary. All new appointed actuaries (who have not previously held

Service level agreements

1998 – between the Treasury and GAD

such a position) will be interviewed by the Government Actuary and a note of this meeting will be forwarded to I Directorate.

C2. Aside from the scrutiny of returns and authorisation processes, GAD will also provide advice on all areas which impact on a life office's solvency or the reasonable expectations of policyholders. It is not possible in a document of this nature to anticipate all of the instances in future where GAD's advice will be sought. However, as outlined in paragraph 3 above, to enable GAD to carry out its duties effectively, all documents received by I Directorate from the life office will be copied to GAD. I Directorate will request advice from the GAD when there are issues which might affect, for example, the financial security of a life office, policyholders' reasonable expectations, or where the issues raised are actuarial or professional. However, GAD are always free to comment on any document if it believes that there are issues that should be brought to I Directorate's attention. These other areas of responsibility include:

C3. **Transfers of portfolio** - These are transfers of engagements (assets and liabilities) from one company to another under the terms of Schedule 2C of the Act. The main issues to be considered are whether the transfer will adversely affect the security of policyholders or their reasonable expectations. GAD will:

- attend the meeting with the Independent Actuary, and be given the opportunity to attend any meetings held by I Directorate with the company;

- provide advice on the draft Scheme documents to enable I Directorate to form a view on the proposals and to comment to the company within the time scales set by the court procedure, and in good time to influence events if necessary

C4. **Requests by companies for concessions under Section 68** - GAD will endeavour to respond to I Directorate within two weeks of receipt in GAD of such requests in 90% of these cases.

C5. **Other miscellaneous correspondence** - e.g. requests for interpretation of legislation - GAD will endeavour to respond to I Directorate within two weeks of receipt in GAD of such requests in 90% of these cases.

C6. **Quarterly returns** - GAD will aim to comment on quarterly returns within three weeks of their receipt in the GAD. When there are no substantive issues to raise, the report will be in the form of a "nil return".

C7. **Company visits** - as mentioned above GAD will normally accompany I Directorate on all company visits according to the agreed visits programme.

Service level agreements

1998 – between the Treasury and GAD

C8. **Training seminars** – GAD will provide appropriate training on specified insurance issues for supervisors as requested.

C9. **Other issues** - GAD will provide I Directorate with other services from time to time as agreed. Such other services to include representation at meetings, for example with the Institute and Faculty of Actuaries, European Union etc., and input to policy development as appropriate.

Annex A

Annex A - Allocation of Priorities for Detailed Scrutiny of Life Insurers

Priority	Description	Other indicators (note: these indicators are subordinate to the description, and are merely to give some broad assistance. They are no substitute for judgement, both where a higher or lower priority may be justified)	Target
1	As at present, the allocation of priority 1 will denote a company which either is not demonstrating that it holds the required minimum margin or else where there are significant problems which lead GAD to believe that it does not meet the requirements under proper bases.		Within two weeks
2	This priority denotes those companies that there are significant and substantial concerns.	1. The cover for the RMM is less than 1.25x 2. There is evidence of material non-compliance with the valuation regulations	Within four months
3	This priority denotes companies where there are sufficient concerns to warrant early attention, or there are other reasons to require scrutiny early in the cycle.	1. The cover for the RMM is less than 1.5x 2. There is evidence of a non-trivial, but not material non-compliance with the valuation regulations 3. The company was in priority 1 or 2 for the previous year 4. A company visit is scheduled for September to January (or equivalent for non-December companies) 5. The company had commenced trading, but was authorised for less than eighteen months at the valuation date.	Within six months
4	Companies which warrant a full scrutiny for any reason, but would otherwise not fall within a category to ensure this.	1. The cover for the RMM is less than 2 x 2. The company was in priority 3 in the previous year 3. There is evidence of non-compliance with less important regulations 4. The company did not receive a full scrutiny in either of the previous two years 5. A company visit is scheduled for February to August (or equivalent for non-December companies).	Within nine months
5	Companies which do not qualify for priority 4 or higher after the initial scrutiny	Cover for the RMM is more than 2 x, and scrutiny within the last two years	Within eleven months

Service level agreements

1998 – between the Treasury and GAD
Annex B

XYZ LIFE ASSURANCE COMPANY
RETURNS AS AT 31 DECEMBER 1997
DETAILED SCRUTINY REPORT
GAD PRIORITY RATING:

To: **[HMT Supervisor], Her Majesty's Treasury**
From: **[GAD Actuary], Government Actuary's Department**

This report conforms fully with the professional requirements of the Institute and Faculty of Actuaries, details of which are set out in section [16] of this report.

[The following pages list the 'standard' section and subsection headings. Edit the items in square brackets in the opening sentence above and in the final section (Professional Requirements), but otherwise these must be left unchanged. Notes of likely items to be covered in other sections are given in italics. It is suggested that these sections should remain unchanged from one company report to another, to facilitate finding the desired part of any report, even if an occasional 'not applicable' entry is called for. Subsections should remain in the order shown where possible, but may be amended or omitted more freely. It is essential that the whole of sections 1 and 2 fit onto just page 1 of the report.]

1. KEY FEATURES

Type of company:	*(mutual/proprietary, UK/overseas owned, etc)*	
Type of business:	*(with-profit, credit life, unit-linked, etc)*	
Last visit date:		
Key Financial Statistics:	1995	**1996**
New Business Index:		
Long Term Assets:		
Assets Available:		
RMM		

[The key statistics table must be completed for all companies, and its format and position in the report left unaltered. HMT have requested this specifically. If company has any implicit items and/or subordinated loans, then these will be shown in an extra line in the table.]

2. ACTION POINTS

[This should (a) clearly identify any points needing immediate action by HMT; (b) give a very brief summary of the most important points raised by GAD with the company and/or Appointed Actuary in a letter (stating that this letter can

Service level agreements

1998 – between the Treasury and GAD
Annex B

be found in the Appendix); (c) identify any points to be recorded for raising at a suitable opportunity, e.g. the next company visit. It is essential that all points requiring action by HMT are highlighted clearly in this section of the report, and an indication given as to their relative importance/priority.

***When there are no points for immediate action, this fact should be highlighted in boldface**.]*

3. EXECUTIVE SUMMARY

[This section should be kept <u>fairly concise but still draw out all salient features on a company</u>. It should express a view as to the soundness of the company in the short and longer term, comment on its general competitive position and likely long term viability, and indicate whether it presents any particular difficulties for HMT. Where there is any doubt as to whether the valuation basis used is in accordance with the regulations (section 10 below), this should be clearly stated. Summaries on companies with no concerns will be more concise than those on rogue ones. The features drawn out in this part of the report should link to the action points.

Topics from which these might be drawn include:

- *significant changes in types of business written*
- *recent trends in new business and/or sources of business*
- *ownership issues (e.g. changes of control)*
- *recent trends in expenses*
- *recent trends in financial results, especially if adverse*
- *likely impact of compensation for pensions mis-selling*
- *reinsurance treaties or other financing.]*

4. BACKGROUND

[This should be a 'potted history' of the company, covering such things as its size and ownership, and the type(s) of business it writes. Comments should be made on the corporate structure, and particularly any insurance subsidiaries, all past Sch 2C transfers, and any history of significant HMT or PIA regulatory problems. A brief note of the senior management, and particularly the Chief Executive and the Appointed Actuary, should be given, with information on their experience, recent changes, etc. Any section 68 orders in force should be recorded.

This section should also cover any <u>significant</u> developments during the year, e.g. acquisitions, disposals, Sch 2C transfers in that year, changes of ownership, and also such things as new types of business or distribution channels, new admin/computer systems and PIA regulatory problems, as recorded in the Chairman's statement, for example.

Service level agreements

1998 – between the Treasury and GAD
Annex B

Reference should be made to any recent company visit, including a brief description of its outcome. If there are any issues outstanding with the company they, should be mentioned.

It is intended that this section should be in essay form; it will form an important part of any briefing note on the company. Most of it should be self-standing, and may well therefore be carried forward from year to year largely unaltered, but items which are no longer of interest should be deleted. It would be helpful in this regard if items which are of short term interest are separately identified from those of more enduring interest.

Particular care should be taken to ensure that this section is historically sound and as complete as possible.]

BUSINESS DEVELOPMENTS DURING THE YEAR

5. NEW BUSINESS

5.1 New and altered products
[Any significant new products introduced during the year should be described. Reference should also be made in this subsection to any significant changes in existing product terms, such as increases in policy charges.]

5.2 Source(s) of new business
[Give the proportion of new business coming from IFAs, direct sales forces, tied agents etc. and, where relevant, from the UK and overseas. If not available from internal documents such as the Report & Accounts, this information should be obtained from surveys such as those in Money Management and Planned Savings. Highlight any significant recent trends or other changes in sales direction, presenting the data in a table where possible.]

5.3 Recent history:

New regular premiums

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Life and general annuity: - accumulating with-profit					
- other with-profit					
- non-profit					
- property-linked					
- index-linked					
Pensions:

1998 – between the Treasury and GAD
Annex B

[Note that the classes to be shown in the new business tables should be selected individually to be appropriate to the company concerned. One or more rows for overseas business should be shown if appropriate, and if such business is of sufficient significance, it should be split by major territories too. Where the 'Other' rows contain only rounding entries, absorb these appropriately but ensure that the totals reflect the Form 47 totals.

Figures should be shown gross of reinsurance but a footnote may be added if, for example, some classes are (almost) wholly reinsured. Directly written business and reinsurance accepted should be separately identified, where both are material. For large companies, all the above figures, and the expense figures below, may be shown in £m if this is more appropriate.

For companies writing new industrial business, separate tables should be produced for OB and IB, with separate NBI figures being shown for these two classes, clearly labelled.

5.4 Commentary
Comment on any atypical features and on recent new business trends. Retain the ABI comparatives in the NBI table in subsection 5.3 above, but comment additionally in this subsection on the company's relative new business performance compared with its peer group of companies (chosen appropriately), using data from the annual report or elsewhere.

Make specific reference to any material discontinuities or distortions in the figures caused by changes in the way in which recurrent single premium contracts are reported, or due to the inclusion of increases to premiums on existing contracts in new business figures from 1996.]

6. CHANGES IN BUSINESS IN FORCE

6.1 Recent history of regular premiums received

Life non-linked					
Life linked					
Pensions non-linked					
Pensions linked					

Note: The combined surrender, lapse and paid-up conversion rates are:
Form 46, UK business, annual premiums, lines (24+25+26) / [½*lines (11+39+24+25+26)]

[Make reference to any features identified from these figures, e.g. large increases in surrenders. Where it is felt necessary, draw attention to the differences between these two sets of persistency rates, in particular that the PIA statistics are based on policy not accounting year and are to some extent

1998 – between the Treasury and GAD
Annex B

out of date, and that the Form 46 figures relate to the company's total portfolio.]

7. EXPENSES

7.1 Recent history of expenses:

Expense	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Initial commission					
Acquisition expenses					
Renewal commission					
Maintenance expenses					
Other management expenses					
Total expenses					
Year on year % increase					

Source: Form 41

Expense ratios:	1992	1993	1994	1995	**1996**
Acquisition					
[Sector] average acquisition					
Renewal					
[Sector] average renewal					
Renewal as % of total fund					
[Sector] average renewal as % of total fund					

Notes: 1. The expense ratios are:
Acquisition: (IC+AE+OME)/New Business Index
Renewal: (RC+ME)/Gross earned regular premiums [F41.29.1]
Renewal as % of total fund: (RC+ME)/Average total fund [½*(F40.49 + F14.51.1 + F40.59 + F 14.51.2)]

2. The trend in the acquisition expense ratio is subject to distortion from the reclassification of recurrent single premiums as regular premiums from 1996, and also from the inclusion of other management expenses in this ratio.

[Expenses should be shown gross of reinsurance, but a footnote may be added if these are substantially reinsured. Only the version of the renewal expense ratio most appropriate to the company should be retained, the other and its accompanying note being deleted.

For making comparisons, choose the sector appropriate to the company, and enter its name in the tables, extracting the data from the annual report.

Service level agreements

1998 – between the Treasury and GAD
Annex B

Where there is industrial business, separate tables of expenses should be created for OB and IB, and the above table of expense ratios substituted with the following table:

Expense ratios:	*1992*	*1993*	*1994*	*1995*	***1996***
OB acquisition					
[Sector] average OB acquisition					
OB renewal					
[Sector] average OB renewal					
IB combined					
Industry average IB combined					

Notes: 1. The expense ratios are:

OB Acquisition: OB(IC+AE+OME)/OB New Business Index
OB Renewal: OB(RC+ME)/OB Gross earned regular premiums [OB F41.29.1]
IB combined: IB(Total expenses)/IB Gross earned total premiums [IB (F41.19.1 + F41.29. 1)]

2. The acquisition expense ratio is subject to distortion from the reclassification of recurrent single premiums as regular premiums from 1996, and also from the inclusion of other management expenses in this ratio.

Separate tables and appropriately modified expense ratios should also be created where there is any other major and continuing subdivision of the fund — such as between with-profit and non-profit business.

Mention should be made of discontinuities arising from the 1996 A&S Regulations, expanding in particular on the fact that recurrent single premium business is now treated as regular, with a knock-on effect to the acquisition (and, to a lesser extent renewal) expense ratio, and also that other management expenses, which are treated as wholly acquisition expenses above, may also in fact include some renewal expenses.]

7.2 Commentary
[To include comment on the trends in the expense ratios, and their relative level compared with the relevant sector average, where appropriate.

The service company arrangements disclosed under note 5 on page 96 of the A&S Regulations (note to the returns coded 4008) should be mentioned and, if known, a statement as to whether expense charges from the service company are at cost should be made.

Note any sub-fund divisions where expenses are determined specially, e.g. under a Sch 2C scheme, and comment with cross reference to the controlling document. Comment also where expenses are shared with other companies within the same group.

Comment on where investment expenses are shown — in expenses or as an offset to investment income]

7.3 Exceptional items
[Refer to any exceptional items of expenditure, e.g. fines and compensation payments. Also comment on any references in the Report & Accounts to sales distribution developments and/or computer upgrades to illuminate the progression of expenses and in particular those shown as other management expenses.]

SITUATION AT THE YEAR END

8. NON-LINKED ASSETS

8.1 Make-up of portfolio

Total					

Source: Form 48

[Yields to be shown without % signs, and to 1 d.p.

Comment on any significant changes in asset mix and redirection of investment of new moneys.

Make reference as to whether Form 49 reveals any significant spread of yields (columns 3 and 6), i.e. if a typical average yield above hides some very low and some high yielders.

Make specific reference to any discontinuities or distortions caused by the change in definition of the assets included in Form 48 from 1996 compared to those included in the old Form 45, in particular that excess linked assets are now included, and that assets matching index-linked liabilities (many of which may be derivatives) are now definitely excluded.

Make reference to any material holdings of inadmissible assets, and any significant reconciliation items to the Companies Act assets as per lines 94 and 95 of Form 13.

Comment on the balance between non-income producing assets above and the non-interest demanding other insurance liabilities, and whether the yield on net assets would be markedly different to the above yield on gross assets due to high other insurance liabilities, including loans. Comment if a separate investment house exists rather than an in-house team, and whether any performance bonus arrangements or penalties apply to our knowledge.

Make reference to any significant debts/loans or contingent liabilities relating to connected companies (see line 100 of Form 13 and note to the returns coded 1404 respectively).

Comment also on any material counterparty exposures disclosed under paragraph 11 of Schedule 1 (note to the returns coded 1306).

For making comparisons, compare with data from Annual Report.]

<u>8.2 Derivatives</u>

Service level agreements

1998 – between the Treasury and GAD
Annex B

[Include this subsection only for companies with a material exposure to derivatives.

Comment on any significant amendment to the asset distribution shown in section 8.1 from the impact of derivatives (see Regulation 23(1)(d) statement), and whether such usage is long-standing or new. Comment on margining arrangements in force.]

<u>8.3 Investment performance</u>
[Estimate the investment return on the total non-linked assets from Form 40 and the template below. The result of the calculation should be quoted, but the actual table may be hidden in the report <u>after</u> it has been reviewed by the chief actuary (but preferably not deleted), unless desired to be shown.

	£000s	£000s
1. Total investment income (F 40.12)		
2. *less* estimated investment income on assets matching property linked liabilities *		
3. *less* estimated investment income on non-linked assets matching index-linked liabilities ‡		
4. Investment income on Form 48 assets		
5. Increase in non-linked assets brought into account (F 40.13)		
6. *less* increase in non-linked assets matching index-linked liabilities brought into account ‡		
7. Increase in Form 48 assets brought into account		
8. Investment reserve carried forward (F 14.51.1)		
9. Investment reserve brought forward (F 14.51.2)		
10. Increase in investment reserve		
11. Investment return		
12. Opening Form 48 assets		
13. Closing Form 48 assets		
14. Mean fund excluding investment return [=½x(12+13-11)]		
15. Rate of return from investment [=11/14]		%
16. Expected investment return †		

* calculated as F44.12/average F55 internal linked col 7*average F55 total cols (8-9)
‡ estimated figures based on Form 56
† based on overall market performance applied to asset mix shown in section 8.1

Given the problems of subdividing the index-linked assets and the resulting approximations above, it is recognised that the estimated investment return is subject to distortion. Clear health warnings should therefore be included where the volume of index-linked business is significant.

Where there is a separate with-profit sub-fund, the investment return should be calculated for this separately, where possible (i.e. when the split of the total investment reserve is known). Supplementary information on the with-profit sub-fund should be obtained from the with-profit guide, which will be requested for all major with-profit companies as a matter of course at the end of August each year.

Where there is a marked disparity between the crude actual investment return calculated above and that shown in line 16 expected from the mix of assets held and market performance during the reporting period, this should be commented upon. Where there is no such disparity, and the table is being retained, the line 16 figure may be deleted.

Draw attention also to any marked disparity between the crude actual investment return calculated above and that seen for a typical office (again separately for the with-profit fund where possible). Indicate whether this appears to be driven purely from differences in asset mix and comment on its possible implications for the company's long term competitiveness.]

9. ASSETS HELD TO MATCH LINKED LIABILITIES

<u>9.1 Internal linked funds</u>

9.1.1 New and altered funds
[Give details of any new funds introduced during the year, and of any fund mergers or rationalisations, including the terms on which these were made.]

9.1.2 Investment performance
[Comment on the relative investment performance of the most important funds only (e.g. the managed fund) compared both with the performance expected given the stated investment objectives of the funds and overall market performance during the reporting period, and with the performance of funds with similar investment objectives operated by other companies in the industry based on the results of magazine surveys.]

9.1.3 Fund Management Charges to policyholders
[Make reference to any changes in particular.]

9.1.4 Principles of unit pricing
[Give a brief description of the basis on which assets are valued and how this is selected, including the timing of the asset valuation used in respect of unit creations and cancellations in relation to the time at which both the operation is decided upon and effected. If there is any evidence that the procedures adopted may result in incoming, outgoing and continuing policyholders being treated inequitably, a specific statement to this effect should be included.

Where unit trust principles are adopted, this may be stated in lieu of a description. Reference should also be made to the allowance made for CGT (see paragraph 5(5) of Schedule 4). Draw attention to any apparent inconsistencies between this information and the accounting data shown in Form 45.]

9.1.5 Liquidity and gearing
[Include this subsection only where there are any liquidity or gearing issues arising from Forms 43 and 45, adding appropriate commentary.]

9.2 Other assets matching property-linked liabilities
[Include brief details of any directly held assets shown in Form 55, where relevant.]

9.3 Mismatching to property-linked liabilities
[Indicate the degree to which linked assets (be they in internal linked funds or directly held) exceed or fall short of the corresponding property-linked liabilities they are held to match. Emphasise that such surplus or shortfall is included in section 8.1 above.]

9.4 Assets matching index-linked liabilities
[Include brief details of these assets, with particular reference to derivatives, and of the liabilities they are matching. If there is a material mismatch, this fact should be specifically noted. Comment also on counterparty exposure and margining arrangements in force in respect of such derivatives.]

9.5 PRE (issues on linked funds)
[Include reference in this subsection to any possible implications for PRE not covered in earlier subsections, for example arising from internal linked fund mergers/rationalisations, lacklustre investment performance or increases in fund management charges or any other policy fees. Comment also on rebates from unit trusts, and in particular the extent to which policyholders benefit from such rebates.]

10. VALUATION BASIS

[An explicit statement as to whether each element of the basis (interest, mortality, morbidity (if relevant), expenses and any other relevant factors) is, or might not be, in accordance with the Regulations should be made, together with a comment on the company's matching position, under the separate headings set out below. Changes since the previous year should be clearly described within each relevant section. Specific reference should be made both to trends in the basis caused by successive small changes over recent years, and to any apparently arbitrary changes.]

10.1 Overall strength

Service level agreements

1998 – between the Treasury and GAD
Annex B

[Include here a general statement about the relative strength or weakness of the basis overall compared with that used by other similar companies. Add comment to highlight the types of risk to which the company is particularly vulnerable.]

<u>10.2 Interest</u>
[Comment on the supportability of, and the degree of margin apparent in, the interest rate used for each group of liabilities shown in Form 57. Check that allowance has been made for the change to asset classes brought about by derivatives (Regulation 23(d) statement and paragraph 6(1)(a) of Schedule 4). Comment on whether the with-profit interest rates appear to make adequate provision for PRE. The method by which regard has been given to PRE, and account taken of the custom and practice of the company in the manner and timing of the distribution of profits or the grant of discretionary additions over the duration of the policy should be described briefly.]

<u>10.3 Mortality</u>
[Make specific reference to any concerns over the mortality assumptions used, including in particular the allowance made for future improvements in annuitant mortality. Consider also the reasonableness of any other adjustments made to the assumptions, for example for changes in incidence of disease, medical developments and the State of the commitment, and of the allowance for AIDS.

Provide a commentary on the recent history of the mortality assumptions used for the most important liability classes, perhaps by means of a table if desired.]

<u>10.4 Morbidity</u>
[Include this subsection only for companies for which morbidity is material, making specific is reference to any concerns over the assumptions used.]

<u>10.5 Expenses</u>
[Comment on the amount and adequacy of the aggregate allowance made in the valuation for expenses in the year following the valuation date (paragraph 10(2) of Schedule 4) compared with the level of expenses in connection with maintenance of business shown in Form 41, qualifying these remarks appropriately if there are material other management expenses shown in Form 41 with the possibility that these may in fact more properly be classified as in connection with maintenance of business.

Comment also on the information provided in paragraphs 10(1), (3) and (4) of Schedule 4 on the assumed level of expense inflation and the bases used to allow for such inflation, the reserve for expenses of continuing to transact new business during the 12 months following the valuation date, and the subsequent close-down reserve.

Service level agreements

1998 – between the Treasury and GAD
Annex B

It is recommended that a 5-year history of the per policy expense assumptions used for the most important linked liability classes is given in a table.]

10.6 Mismatching and Resilience
[Comment on the suitability of the assets hypothecated to each group of liabilities shown in Form 57, and whether these still look reasonable after the change to asset classes brought about by derivatives (see Regulation 23(d) statement). Comment on the size and method of calculation of the Regulation 75(b) resilience reserve, and also on any material mismatching by currency. Highlight any apparent inconsistencies between the information given in the Schedule 4 narrative on either of these two issues and the data on these shown in Form 57. Comment also on the size and method of calculation of any Regulation 75(a) reserve required in respect of cashflow mismatching.]

10.7 Other factors
[Comment on the adequacy of aspects of the valuation basis adopted for linked contracts not already covered in earlier subsections, including in particular the differential between the rate of unit growth, gross of tax and management charges, and expense inflation, and the extent to which account has been taken of any increases in management charges which are allowed under policy terms.

Highlight any concerns over the allowance made for tax, where relevant, including in particular the adjustments made to the gross interest rates in Form 57, and the aggregate provision made for CGT.

Where additional reserves are held, these should normally be described.

Make specific reference where relevant to the provision made for pensions mis-selling, including a comment as to its likely adequacy and whether it has been increased since last year.]

10.8 Options and Guarantees
[Include details only if material, making particular reference to annuity guarantees, including information on reserving and implications.]

11. FINANCIAL RESULTS

11.1 Overview
[Comment on recent trends in the level of cover for the RMM and any implicit items. Where shareholders' assets are allocated to the RMM, comment on the quality and suitability of the assets held for this purpose.

1998 – between the Treasury and GAD
Annex B

Reference should be made as to where any mismatching reserves, CGT reserves or pensions mis-selling reserves are located in the returns, and in the tables in sections 11.2 and 11.3 below.

Include comments on subordinated loans, where applicable.

Provide, if possible, a brief history of policyholders' shares shown in section 11.4 below over a long period to enable the 5 years shown to be judged in context.

Include also a general comment on the apparent current and future financial viability of the company.]

11.2 Summary of results for main classes

11.2.1 Liabilities for non-linked business

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**

% of distributed surplus allocated to policyholders					

1998 – between the Treasury and GAD
Annex B

Investment Reserves: *[Include in this memo item the amount of the investment reserves]*
Source: Form 58

[Subdivide for separate sub funds with differing policyholders' shares.]

11.5 Movement in shareholders' assets allocated to RMM

£000s	1992	1993	1994	1995	**1996**
Brought forward					
Transfer from (to) LT fund					
Other net income after tax					
less dividends paid					
Total brought forward plus retained profit/loss					
New capital injected					
Change in inadmissible assets					
Other movements					
Carried forward					

[Delete this subsection for mutuals and (genuine) composites. Where total brought forward plus retained profit/loss equals carried forward, the former and intermediate lines should be deleted. Where the balancing item other net income after tax is material, it should be subdivided as appropriate, identifying in particular dividends received from subsidiary companies.]

12. BONUSES

12.1 Cost of bonuses declared

£000s	1992	1993	1994	1995	**1996**
Bonus payments made in anticipation of a surplus					
Reversionary bonuses					
Other bonuses					
Total					

Source: Form 58

[Subdivide for the separate sub funds shown in section 11.4 above. Note any valuation basis changes or cuts in bonus rates that have driven any significant changes in the table.]

12.2 Recent history of key bonus rates

	1992	1993	1994	1995	**1996**

Service level agreements

1998 – between the Treasury and GAD
Annex B

Life: - accumulating with-profit					
- other (specify)					
Pension: - accumulating with-profit					
- other (specify)					

Source: Schedule 4, Paragraph 15

[Note any initial guaranteed rates on accumulating with-profit contracts from with-profit bond launches etc. Ensure that any guarantees are included in the bonus rates shown where the company quotes a minimum guaranteed bonus or increases benefits automatically and quotes bonuses on top. Comment should be made where accumulating with-profit bonus rates look difficult to sustain, and in particular where these exceed the tax adjusted yield on gilts.]

<u>12.3 PRE (issues on with-profit business)</u>
[Include details of the principles on which the distribution of profits among policyholders and shareholders (where relevant) is based, the company's aims in relation to the distribution of profits among policyholders, and of the methods used in order to ensure that these aims are achieved. Make particular reference to any changes of practice.

Note how rights are specified, by sub-fund if necessary, by Sch 2C transfer scheme, Articles, etc., as described in paragraph 14(1) of Schedule 4. Cross reference to documents held on file and any commitments given to HMT in addition to published documents.

Draw attention to the split between reversionary and terminal bonuses, including where possible a brief history of the percentage of total payout for key contracts represented by terminal bonus. Highlight any significant trends in this percentage and/or marked differences with the industry average.

Comment on other bonus or quasi bonus series such as deposit administration business.]

<u>12.4 Recent history of maturity payouts</u>

£000s	1992	1993	1994	1995	**1996**
25 yr endowment

Pensions: £200p.m., maturing 1 Jul. in year
Source: Money Management 10/96

[Comment on the company's relative competitive position, the significance of individual maturity years, etc.

Warnings should be included if the method of calculation is over or under estimating the actual amount of the base asset share.]

13. REASSURANCE AND FINANCING

13.1 Overview of reassurance treaties
[Highlight in particular deals with associated companies, looking at the total risk involved overall and any other implications; significant exposures to individual reinsurers, especially ones not authorised in the UK; and new (for that company) and imaginative uses of reinsurance. The names of significant individual reinsurers should be stated, and any changes in the company's reinsurance arrangements since the previous year should be highlighted. Make reference to any deposit back arrangements in force, and comment on the issue of tax deductibility of interest payments under such arrangements, where relevant.]

13.2 Financing arrangements
[Include details of the nature of, and risks involved for the company in, any financing arrangements, apart from subordinated loans entered into, including in particular the amounts of any undischarged obligations of the company, the conditions for their discharge, and how these have been taken into account in the valuation.]

OTHER ISSUES

14. COMPLIANCE

14.1 HMT compliance problems
[Watch in particular for likely errors in completing Forms 55-57, the assets which have been included in Form 48, the treatment of recurrent single premium contracts, the possible misclassification as non-linked of certain contracts which are now classified as linked, and Section 35A issues.

1998 – between the Treasury and GAD
Annex B

Also comment on Form 48/57 comparisons, if problems arise.]

14.2 PIA and other compliance problems

15. MISCELLANEOUS
[Possible topics for inclusion here might include press comment about the company, changes in senior staff or directors, etc. Delete this section if not applicable.]

16. PROFESSIONAL REQUIREMENTS

This report conforms fully with the requirements of the Institute and Faculty of Actuaries as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct.

This report had been prepared under the terms of the Agreement between Insurance Directorate of the Her Majesty's Treasury (HMT) and the Government Actuary's Department (GAD) dated March 1995 ("the service agreement") setting out the level of service to be provided by GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

The purpose of this report is to enable HMT to fulfil its duties under the Third Life Directive and the Insurance Companies Act 1982.

The scope of this report is:

- to advise on the statutory solvency position of the company;
- to identify any issues relevant to the duties of HMT;
- to describe the development of the company over the previous 12 months;
- to provide historical background to the company.

[This report is limited to a minor degree because certain questions need to be put to the company and/or the Appointed Actuary. Under the service agreement, GAD has written to the company directly on these. A copy of our letter is included in Appendix [B] to this report.]

The advice and information contained in this report are solely for the use of HMT in fulfilling its statutory duties and should not be transmitted to third parties, including the company concerned, without the prior consent of GAD.

[GAD Actuary], [FIA/FFA]
Government Actuary's Department
[DD] [Month] 199[Y]

Service level agreements

1998 – between the Treasury and GAD
Annex B

APPENDIX A

[In certain circumstances, it may not be appropriate to complete a full detailed scrutiny report for each member of a group of companies, although it is usually sensible to consider all the member companies of a group at the same time. Where a full report is not called for, the subsidiary company may be dealt with in an abbreviated report forming an appendix to the parent company report. Examples of where this might be appropriate include pensions management subsidiaries, captive reinsurers and small closed fund subsidiaries.]

APPENDIX B

[Include here a copy of the letter (if any) sent to the company and/or Appointed Actuary on the returns.]

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

AUTHORISATION

1. Pursuant to the provisions of Part II of the Deregulation and Contracting Out Act 1994 ("the Act") and the Contracting Out (Functions in Relation to Insurance) Order 1998 Her Majesty's Treasury ("the Treasury") hereby authorise the functions listed in the Schedule to this authorisation to be exercised in that behalf by the Financial Services Authority ("FSA") or by employees of the FSA subject to, and to the extent provided in, the Act and in the Contract.

2. The authorisation shall be for a period of 2 years from 1 January 1999.

3. This authorisation is subject to the provisions of section 69(5)(b) and (c) of the Act.

4. In this authorisation the reference to "the Contract" means the Agreement for the Provision of Services made between the Treasury and the FSA on 18 December 1998.

Signed by for and on behalf of Her Majesty's Treasury	[signature] Dated 18th day of December 1998

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

SCHEDULE

PART I

INSURANCE COMPANIES ACT 1982(c.50)

1. Functions conferred by or under any of the provisions of the Insurance Companies Act 1982 as follows.

2. Section 3 (authorisation by Treasury).

3. Section 5 (submission of proposals etc.).

4. Section 6 (combination of long term and general business).

5. Section 7 (United Kingdom applicants).

6. Section 8 (applicants from other member States).

7. Section 9 except subsection (7) (applicants from outside the Community).

8. Section 11 (withdrawal of authorisation in respect of new business).

9. Section 12 (notices of withdrawal under section 11).

10. Section 12A (suspension of authorisation in urgent cases).

11. Section 13 (final withdrawal of authorisation).

12. Section 19(2) (appointment of actuary by company with long term business).

13. Section 21A(1), (2), (3), and (5) (communication by auditor with Treasury) except insofar as it relates to the making of regulations by the Treasury applying to any auditor or class of auditor and specifying circumstances in which matters are to be communicated to the Treasury.

14. Section 22 (deposit of accounts etc. with Treasury).

15. Section 23 (rights of shareholders and policyholders to receive copies of deposited documents).

16. Section 24(1) (deposit of accounts etc. by registered society).

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

17. Section 25(4) and (5) (periodic statements by company with prescribed class of business) except insofar as it relates to prescribing such period within which copies of any statement must be deposited with the Treasury.

18. Section 26 (statements of transactions of prescribed class or description) except insofar as it relates to prescribing the classes or descriptions of agreements or arrangements appearing to the Treasury as likely to be undesirable in the interests of policyholders.

19. Section 29(3) (application of assets of company with long term business).

20. Section 30(3) (allocations to policyholders).

21. Section 32(4) (margins of solvency).

22. Section 33 (1) and (2) (failure to maintain minimum margin).

23. Section 37 (grounds on which powers are exercisable) except insofar as it relates to the functions under sections 43A, 44(2)(b) and (4A) and 44A.

24. Section 38 (requirements about investments).

25. Section 39 (maintenance of assets in the United Kingdom).

26. Section 40 (custody of assets).

27. Section 40A (prohibition on disposal of assets).

28. Section 41 (limitation of premium income).

29. Section 42 (actuarial investigations).

30. Section 43 (acceleration of information required by accounting provisions).

31. Section 44(1), (2)(a), (2A), (2B), (3) and (4) (power to obtain information and require production of documents) except insofar as the exercise of any of those functions would require any individual to produce any documents at such time and place as may be specified.

32. Section 45 (residual power to impose requirements for protection of policyholders).

33. Section 46 (notice of proposed exercise of powers on ground of unfitness of certain persons) except insofar as it relates to the functions under sections 43A, 44(2)(b) and (4A) and 44A.

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

34. Section 47(1) and (3) (rescission, variation and publication of requirements) except insofar as it relates to a requirement imposed under sections 43A and 44(2)(b).

35. Section 48(2A) (power of Treasury to bring civil proceedings on behalf of insurance company).

36. Section 52A (issue of certificates by Treasury).

37. Section 52B (effect of transfers authorised in other EEA States).

38. Section 54 (winding up on petition of Treasury).

39. Section 56(6) (continuation of long term business of insurance companies in liquidation).

40. Section 60 (approval of proposed managing director or chief executive of insurance company).

41. Section 61 (approval of person proposing to become controller of insurance company where section 60 does not apply).

42. Section 61A (approval of acquisition of notifiable holding in UK company).

43. Section 62(2) (duty to notify change of director, controller or manager).

44. Section 63 (change of manager etc of company from outside United Kingdom).

45. Section 64(1) (duty to notify change of main agent).

46. Section 65(1) (documents deposited with Treasury).

47. Section 69 (power to alter insurance company's financial year).

48. Section 70(3) (service of notices).

49. Section 75(3) (statutory notice by insurer in relation to long term policy).

50. Section 78(4) (linked long term policies).

51. Section 83 (requirements to be complied with by Lloyd's underwriters).

52. Section 83A (Lloyd's underwriters - insurance Directives) except insofar as it relates to the functions under section 44(2)(b) and (4A).

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

53. Section 84 (Lloyd's underwriters - financial resources) except insofar as it relates to such modifications as may be prescribed by the Treasury and to the functions under section 44(2)(b) and (4A).

54. Section 85 (Lloyd's underwriters - transfer of business).

55. Section 86(1) (statement of business by Committee of Lloyd's).

56. Schedule 2A (criteria of sound and prudent management).

57. Schedule 2B (restriction on disclosure of information).

58. Schedule 2C (transfers of insurance business).

59. Schedule 2D (further provisions with respect to controllers of UK companies).

60. Schedule 2F (recognition in the United Kingdom of EC and EFTA companies) except insofar as it relates to the functions under section 44(2)(b) and (4A).

61. Schedule 2G (recognition in other EEA States of UK insurers).

PART II

OTHER ENACTMENTS

Lloyd's Act 1871 (34 Vict.c.xxi)

62. Functions conferred by or under any of the following provisions of the Lloyd's Act 1871:

(a) section 35 (salvage operations as to wreck of Lutine); and
(b) section 39 (agreements for incorporation of other Societies etc).

Policyholders Protection Act 1975 (c.75)

63. Functions conferred by or under any of the following provisions of the Policyholders Protection Act 1975:

(a) section 21(2A) (levies on authorised insurance companies);
(b) section 26 (overseas companies);
(c) section 29 (disclosure of documents and information to insurance advisers appointed by the Treasury);

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

(d) Schedule 1 (additional provisions with respect to the Policyholders Protection Board) other than the functions under paragraphs 5 and 6 of that Schedule; and
(e) Schedule 3 (additional provisions with respect to levies on authorised insurance companies).

Financial Services Act 1986 (c.60)

64. Functions mentioned in any of the following provisions of the Transfer of Functions (Financial Services) Order 1992:

(a) paragraph 6, 7, 8(a) and 10 of Schedule 1 (certain functions under the 1986 Act retained by the Secretary of State); and
(b) paragraph 1(a), 2 and 6 of Schedule 2 (functions under the 1986 Act exercisable by the Secretary of State jointly with the Treasury).

Friendly Societies Act 1992 (c.40)

65. Functions conferred by or under paragraph 13(2) of Schedule 15 to the Friendly Societies Act 1992 (power to certify that a person possesses the margin of solvency required by Part II of the 1982 Act).

Policyholders Protection Act 1997 (c.18)

66. Functions conferred under or by virtue of section 6(1) of the Policyholders Protection Act 1997 (schemes of arrangement etc; power of Treasury to intervene).

PART III

SUBORDINATE LEGISLATION

Insurance (Lloyd's) Regulations 1983

67. Functions conferred under or by virtue of any of the following provisions of the insurance (Lloyd's) Regulations 1983:

(a) regulation 3(4) (financial resources);
(b) regulation 5(1A) (statement of business);
(c) paragraph 2 of Schedule 1 (modifications to Schedules 3 and 4 to the Insurance Companies Regulations 1994); and
(d) paragraphs 4(1)(a), 6, 10 and 11 of Schedule 1A (calculation of prescribed surplus).

Insurance Companies Regulations 1994

Service level agreements

1998 – authorisation for prudential regulation functions to be contracted out to the FSA

68. Functions conferred under any of the following provisions of the Insurance Companies Regulations 1994:

(a) regulation 9 (direction etc by the Treasury);
(b) regulation 12 (disposal of surplus);
(c) regulation 13 (cessation of business etc);
(d) regulation 14 (effect of direction etc);
(e) regulation 80 (insurance statistics: EFTA States and EFTA companies); and
(f) regulation 81 (insurance statistics: other member States).

Financial Institutions (Prudential Supervision) Regulations 1996

69. Functions conferred under regulation 21(2) of the Financial Institutions (Prudential Supervision) Regulations 1996 (duty to notify close links to the Treasury).

Service level agreements

1998 – between the Treasury and the FSA

THIS AGREEMENT is made on the 18th day of December 1998

BETWEEN:

(1) **THE FINANCIAL SERVICES AUTHORITY** ("the FSA") registered as a limited company in England and Wales (No. 1920623) whose registered office is situated at 25 The North Colonnade, London, E14 5HS.

(2) **HER MAJESTY'S TREASURY** ("the Treasury") whose office is situated at Parliament Street, London SWIP 3AG.

WHEREAS:

1. The FSA has functions under the Financial Services Act 1986 and the Banking Act 1987 both as amended by the Bank of England Act 1998.

2. The Treasury has functions under the Insurance Companies Act 1982 and other legislation relating to insurance business.

3. The Treasury, in the exercise of powers conferred on them by section 69 of the Deregulation and Contracting Out Act 1994, has made the Contracting Out (Functions in Relation to Insurance) Order 1998 (SI 1998 No. 2842) ("the Order").

4. Any function of the Treasury which is listed in the Schedule to the Order may be exercised by, or by employees of, such persons as may be authorised in that behalf by the Treasury.

5. Pursuant to the Order the Treasury proposes to authorise the FSA and its employees to exercise the functions to be listed in the Schedule to the authorisation a draft of which is annexed hereto ("the authorisation").

6. The authorisation will be for a period of 2 years and is subject to the provisions of section 69(5)(b) and (c) of the Deregulation and Contracting Out Act 1994.

The FSA and HM Treasury **HEREBY AGREE** as follows:

1. **Interpretation**

(1) In this Agreement including its recitals the following definitions apply unless the context requires otherwise:

> "**Effective Date**" means 1 January 1999;

Service level agreements

1998 – between the Treasury and the FSA

"**the functions**" means the functions listed in the schedule to the authorisation;

"**parties**" means HM Treasury and the FSA;

"**policyholders**" in Schedule 1 to this Agreement shall where appropriate include potential policyholders;

"**services**" means the services to be provided by the FSA to HM Treasury as set out in clause 2 herein and "**service standards**" means the standards set out in Schedule 1 to this Agreement;

"**the transitional period**" means the period from the Effective Date until such time as the FSA ceases to provide services and facilities to HM Treasury following the coming into effect of the proposed financial services legislation.

(2) The headings in this agreement do not affect its interpretation.

2. **The Services**

2.1 The FSA will from the Effective Date subject to the terms herein exercise the functions and will use best endeavours to ensure that in doing so it meets the relevant service standards set out in Schedule 1 hereto.

2.2 The FSA and the Treasury may from time to time agree in writing to amend or supplement a particular service standard.

2.3 Schedule 1 may be amended at any time in simple form by mutual agreement in writing.

2.4 The FSA will provide the Treasury with a quarterly written report on the exercise of the functions during each preceding period and such other reports as may be from time to time specified in the service standards.

2.5 Without prejudice to any of the above the FSA shall upon being given reasonable notice provide the Treasury with any information relating to the exercise of the functions as the Treasury may reasonably require.

3. **Charges**

3.1 In consideration of the FSA exercising the functions, the Treasury will pay to FSA a service charge in accordance with the following clauses.

3.2 For the period 1 January 1999 to 31 March 1999 the charge shall, subject to clauses 3.5 to 3.8 below amount to £2,960,000 exclusive of VAT if payable.

Service level agreements

1998 – between the Treasury and the FSA

3.3 For the financial year 1 April 1999 to 31 March 2000 (and for each further financial year thereafter or any part thereof) the FSA will agree with the Treasury prior to the start of each financial year a forecast of FSA's expenditure in relation to the exercise of the functions. Without prejudice to the generality of the foregoing such forecasts shall include for this purpose heads of expenditure and overheads as follows:

(i) salaries

(ii) other employment costs

(iii) secondments

(iv) accommodation (including rent, rates, water and sewage charges, service charges, utility charges, cleaning, maintenance and insurance)

(v) IT (including telecoms)

(vi) personnel/financial administration

(vii) legal and actuarial services

(viii) depreciation charge on transferred assets.

And the forecast of such expenditure will, subject to clauses 3.4 to 3.8 below, be the amount of the charges to be paid by the Treasury to FSA during the relevant period.

3.4 For the financial year 1 April 1999 to 31 March 2000 (and for each further financial year or any part thereof *thereafter*) the Treasury and FSA will by the end of January in each year review the actual cost of services provided. If the estimate of the actual cost of providing services during the preceding period shows an excess or shortfall from budgeted expenditure as determined under clause 3.3 the FSA shall propose a revised budget for the year which once agreed by the Treasury will form the basis on which the FSA will levy charges for services under the contract for the remainder of the financial year concerned. A revised budget may take into account any issue which the parties agree is material in delivering the cost of services provided under the Service Agreements during the remainder of the year.

3.5 The FSA shall within 3 months following the end of each financial year calculate in accordance with the provisions of clause 3.6 the actual cost incurred during the financial year which is properly attributable to the exercise of the functions. If the actual cost shows an excess over or shortfall from the forecast of expenditure agreed under clauses 3.2, 3.3 and 3.4 the amount of

Service level agreements

1998 – between the Treasury and the FSA

such shortfall or excess shall be credited or debited against the charges levied by FSA in the subsequent financial year. In relation to the period from the Effective Date until 31 March 1999 the amount of any shortfall or excess determined under this clause shall be reflected in an adjustment to the charges levied by FSA for the remainder of the financial year 1 April 1999 to 31 March 2000. In relation to the financial year in which the FSA ceases to exercise the functions the amount of any shortfall or excess will result in a balancing payment between the parties. The determination of any shortfall or excess from the budgeted expenditure in accordance with this clause shall not be made until the FSA's auditors have reported on the FSA's statutory accounts for the relevant financial year.

3.6 In determining whether the costs incurred by FSA are properly attributable to the exercise of the functions the following principles shall be applied:

(i) staff costs shall be attributed according to the proportion of the working time of the relevant staff members that has been spent in the exercise of the functions;

(ii) where assets and facilities available to the FSA or goods and services provided to the FSA are used by it in the course of exercising the functions the Treasury shall be charged a due proportion of the costs attributable to such assets, facilities, goods or services (including charges for depreciation in accordance with FSA's published accounting policy) such due proportion being calculated by reference to the usage of the assets, goods or services or by reference to such other factors as may be relevant to the particular asset, facility, goods or service or class thereof as shall be mutually agreed between the parties;

(iii) in default of agreement the matter in dispute shall be referred to an independent firm of auditors agreed by the parties or in default of agreement an independent firm nominated by the President of the Institute of Chartered Accountants in England and Wales. In any such reference the independent firm shall act as an expert and not as an arbitrator and its decision shall be final and binding on both parties.

3.7 FSA shall procure that in respect of the period between the Effective Date and 31 March 1999 and in respect of each subsequent financial year (or part thereof) its auditors issue a report addressed to and in a form approved by the Treasury, stating that in their opinion the costs attributed in accordance with clause 3.5 have been properly attributed in accordance with the principles laid down in clause 3.6. The issue of such a report shall not affect any rights or obligations of the parties under this Agreement.

3.8 If during any financial year the FSA and the Treasury agree to alter the level or standard of the services the parties shall also agree the level of

1998 – between the Treasury and the FSA

budgeted expenditure which will be involved and make such adjustment to the charges to be paid by the Treasury to the FSA in that period as the parties agree to be appropriate.

3.9 The Treasury shall pay the FSA the charges monthly in advance by cleared funds by not later than 2 business days before the FSA's payroll dates which shall for each financial year (or part thereof) be specified in advance by the FSA against the invoices rendered by the FSA, or on the 10th working day following the Treasury's receipt of the invoice if later. There shall be attached to each invoice a schedule containing a breakdown of the amount covered by the invoice in such form as may be reasonably required by the Treasury.

3.10 The FSA will for each financial year (or part thereof) provide the Treasury with information about its activities in relation to the functions so as to enable the Treasury to determine the amount of fees to be levied upon insurance companies and upon the Council of Lloyds under the Insurance Companies Act 1982.

4. **Inspection and Retention of Records**

4.1 The FSA shall procure that at all reasonable times and upon giving reasonable notice all books, records and systems relating to the exercise of the functions by FSA are open to inspection by the Treasury or by its agents and such persons may at their expense take copies of such books and records relating to the exercise of the functions as they may require.

4.2 The FSA shall take all reasonable steps to keep secure and maintain full and accurate records of the services provided under this Agreement, of all expenditure reimbursed by the Treasury and such records shall be kept until 2 years after the final payment of all sums under this Agreement or for such longer period as may be agreed between the parties.

5. **Asset Transfers**

5.1 In return for a consideration of £3,272,769 payable by 31 January 1999 the Treasury agrees to transfer on the Effective Date to the FSA the assets listed in Schedule 2 to this Agreement.

6. **Termination**

6.1 This Agreement will be terminated with immediate effect if the authorisation is revoked.

6.2 This Agreement will be terminable by either party giving to the other 3 months written notice to that effect.

Service level agreements

1998 – between the Treasury and the FSA

6.3 This Agreement shall be terminable with immediate effect if the Treasury gives notice in writing to the FSA to that effect upon the occurrence of an act of insolvency in relation to the FSA which for this purpose shall mean:

(i) the FSA making a general assignment for the benefit of, or entering into a reorganisation, arrangement, or composition with creditors, or

(ii) the FSA admitting in writing its inability to pay its debts as they become due, or

(iii) the FSA seeking, consenting to or acquiescing in the appointment of any trustee, administrator, receiver or liquidator or analogous officer of it or any material part of its property, or

(iv) the presentation or filing of a petition in respect of the FSA in any Court or before any agency alleging its bankruptcy, winding up or other insolvency (or any analogous proceeding) or seeking any reorganisation, arrangement, composition, readjustment, administration, receivership, liquidation, dissolution or similar relief under present or future statue law or regulation, such petition not having been stayed or dismissed within 30 days of its filing, or

(v) the appointment of a trustee, administrator, receiver or liquidator or trustee or analogous officer over all or any material part of the FSA's property.

7. **Litigation**

7.1 Subject to clause 7.2, in the event of the FSA being the subject of any legal action by a third party for anything done or omitted to be done in connection with or arising from the exercise or purported exercise of the functions, the Treasury will take all reasonable steps to ensure that such litigation becomes the responsibility of the Treasury without unreasonable cost to the FSA. For the avoidance of doubt this will include any legal action which relates to alleged misfeasance or a breach of European Community law or of the Human Rights Act 1998.

7.2 Clause 7.1 above shall not apply to any claim (in particular in negligence or breach of contract) which is not directly related to the exercise or purported exercise of the functions.

7.3 Clauses 7.1 and 7.2 above are without prejudice to the Treasury's right to seek a contribution from the FSA in respect of any claims for compensation made against the Treasury which are attributable to any negligence, misfeasance or breach of contract or breach of the Human Rights Act 1998 (arising out of the exercise of the functions) on the part of the FSA.

7.4 If the Treasury is or becomes a party to any litigation arising out of the exercise of the functions:

(a) neither the FSA nor its employees or contractors shall make any written or oral admission, denial, statement or other communication to any person making such a claim against it without the prior approval of the Treasury; and

(b) the FSA shall provide such advice and assistance as the Treasury may reasonably request including the provision of evidence, witnesses, documents and information.

7.5 Subject to clause 7.2 above the Treasury shall be responsible for any costs reasonably incurred by the FSA in connection with or for the purposes of any litigation arising out of the exercise of the functions.

7.6 The Treasury may apply to intervene in any private litigation which raises issues of public interest in relation to the functions and the FSA may also apply to intervene in such litigation with the prior consent of the Treasury.

7.7 Nothing in the foregoing shall affect the FSA's responsibility for legal proceedings arising under sections 40A, 48(2A), 54 and Schedules 2C and 2F of the Insurance Companies Act 1982 and the functions mentioned in paragraphs 7, 8(a) and 10 of Schedule 1 to the Transfer of Functions (Financial Services) Order 1992 (SI 1992 No. 1315).

8. **General**

8.1 Except as may be provided by the authorisation nothing in this Agreement shall in any way affect the status, powers and obligations of the FSA under the Financial Services Act 1986.

8.2 This Agreement may not be assigned by either party.

8.3 Any notice to be served on either of the parties to this Agreement by the other will be deemed to be duly served two business days after the day on which it is posted if sent to the registered office of the FSA or to the address of the Treasury shown in this Agreement by pre-paid first class post, or on the date received if given by telex, facsimile or personal delivery to either of the said offices within business hours.

8.4 This Agreement will be governed by and construed in accordance with the law of England and Wales.

AS WITNESS the hands of the duly authorised representatives of the parties the day and year first above written.

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

SCHEDULE 1

This Schedule sets out the aims and objectives which the FSA is to adopt in respect of the functions which the FSA is authorised to exercise on behalf of the Treasury, and defines the standards and performance measures which the FSA will use it best endeavours to achieve.

SERVICE STANDARD SPECIFICATION

AIMS AND OBJECTIVES

1. In May 1997 the Chancellor of the Exchequer announced the Government's intention to create a unified financial services regulatory body. The draft legislation, published on 30 July 1998, specifies the FSA's objectives:

- maintaining confidence in the UK financial system;
- promoting public understanding of the financial system, including awareness of the benefits and risks associated with different kinds of investment or other financial dealing;
- securing the appropriate degree of protection for consumers, having regard to the differing degrees of risk involved in different kinds of investment or other transaction, the differing degrees of experience and expertise which different consumers may have, and the general principle that consumers should take responsibility for their decisions; and
- reducing the extent to which it is possible for a business to be carried on by a regulated person to be used for a purpose connected with financial crime.

2. The new legislation will require the FSA, in pursuing these objectives, to have regard to:

- the need to use its resources in the most efficient and economic way;
- the responsibilities of those who manage the affairs of authorised persons;
- the principle that a burden or restriction which is placed on a person, or on the carrying on of a regulated activity, should be proportionate to the benefit intended to be conferred in general by that provision;
- the desirability of facilitating innovation in connection with regulated activities;

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

- the international character of financial services and markets and the desirability of maintaining the competitive position of the United Kingdom; and

- the principle that competition between authorised persons should not be impeded or distorted unnecessarily.

3. While these objectives are not yet enacted and may be amended during the passage of the legislation they serve to inform the general approach the FSA proposes to take during the period prior to the new legislation coming into force ("N2"). This will include the FSA's approach to carrying out the functions which it will exercise on behalf of the Treasury for insurance supervision.

The FSA's aim will be effectively to regulate the insurance industry so that policyholders can have confidence in the ability of UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations. UK insurance legislation is now significantly affected by EC Directives and there is increasing co-operation between international regulators, within the EC and more widely. The FSA will, in conjunction with the Treasury, play its part in maintaining and improving this international co-operation.

4. The FSA's key supporting objectives shall be:

- to ensure that persons or companies who are not fit and proper or appropriately resourced or otherwise not able to satisfy the criteria for authorisation do not carry on business in the UK;

- to carry out the regulation of insurance companies and Lloyds efficiently and effectively;

- to meet the insurance industry's reasonable requests for prompt and clear responses to their requests for information and advice and to keep the cost and inconvenience of regulation for insurers as low as is commensurate with effective protection of the consumer;

- to co-operate with the Treasury in seeking to deliver efficient operation of the single market, including assistance in EU negotiations to secure that EC law develops to maximise an open and competitive market in the EU.

INSURANCE SUPERVISION WORK PROGRAMME

5. The key areas of work on which resources are to be deployed in 1999 fall into the following categories:

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

- conduct of on-going regulatory, and related, work to specified standards;

- initiatives to support the development of more effective and efficient regulatory procedures;

- preparation for the coming into effect of the new regulatory regime.

Conduct of on-going regulatory, and related, work to current standards

Authorisation, fit and proper checking, perimeter

6. *General responsibilities*

- In response to demand and subject to their achieving adequate standards, the authorisation each year of around 25-30 non-life and life insurance companies and for undertaking in the order of 4,500 fitness and properness checks on controllers, directors and managers, around half of which are on behalf of other regulators. The FSA will operate a rigorous authorisation process to ensure that as far as possible companies or persons who are not financially sound or fit and proper or otherwise not able to satisfy the criteria for authorisation do not operate in the insurance market.

- Following up promptly, in conjunction where appropriate with DTI's Companies Investigation Branch, the 50-60 new cases of alleged illegal insurance business brought to the FSA's attention each year. Where appropriate to achieve a resolution bilaterally with the parties concerned; other cases may result in formal investigation, and some in prosecutions or winding up applications.

7. *Performance Measures*

Functions and *Performance Measures(*)*	Targets
– **Authorisation of insurance companies**	
** First draft of application for authorisation % responded to in 25 working days*	60% (remaining 40% within 3 months)
** Formal applications for authorisation % decided in 3 (general business) or 4 (life business) months as appropriate*	90% (remaining 10% within 6 months)

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

– **Prevention of unauthorised carrying on of insurance business and determining questions about the definition of insurance activity**	
** % of unlawful insurance cases actioned within 10 working days*	100%
– **Carrying out fitness checks on controllers, directors and managers of authorised insurance companies and maintaining fit and proper database**	
** Number of notifiable persons listed for fitness checking within 6 working days*	100% of notifications received
** Number of notifiable persons checked within 5 weeks*	100% of notifications received

<u>Supervision</u>

8. <u>*General responsibilities*</u>

- The prudential supervision of around 350 non-life companies, 200 life companies and 40 composite insurance groups. In addition, the FSA will be responsible for the supervision of Lloyd's, Equitas and some 80 companies in the London Market.

- Protecting policyholders against the risk of company failure and, more specifically, to protect them against the risk that UK authorised insurers might be unable to pay valid claims. In the case of life insurance companies this includes the risk that they will be unable to meet policyholders' reasonable expectations. The Treasury and FSA agree that it is neither realistic nor necessarily desirable in a climate which seeks to encourage competition, innovation and consumer choice, to seek to achieve 100% success in avoiding company failure. The FSA will therefore pursue its supervisory objectives by aiming to minimise, but not eliminate, the risk of company failure by identifying early signs of trouble, and taking preventative action.

<u>*Key Tasks*</u>

9. Supervisory resource will be focused on the following key tasks:

- monitoring the financial soundness of insurers to see that they are run in a sound and prudent manner by fit and proper people, based mainly on the scrutiny of financial returns and other information (with the assistance of the Government Actuary's Department particularly in the case of life companies), and site visits;

- monitoring of companies' preparedness for Year 2000 in respect of both the compliance of their own systems, and their assessment of and reserving for potential liabilities, taking further regulatory action as necessary.

Performance Measures

10. The supervisory process is in an ongoing state of development. Some changes have been made to the examination procedure in the past six months and further changes can be expected in the context of the initiatives to support the development of more effective and efficient regulatory procedures described in paragraphs 13 and 14 below. The performance measures set out in Annex A relate to the supervisory process as it is expected to be conducted for the 1998/99 supervisory year. The measures will be kept under review and amended from time to time as agreed between the Treasury and the FSA.

International

11. *General responsibilities*

- To co-operate with the Treasury so that regulation keeps pace with market developments, remains in line with EU obligations, and is effective without imposing an undue burden on the industry. To achieve this the FSA will play an active role in the various international fora where supervisory standards are discussed and developed, in particular:

  - Co-operating with the Treasury, to achieve UK objectives within the EU, in particular in negotiations on proposals for EC legislation.

  - Through the EC Insurance Supervisors' Conference where regular contact will be maintained with other insurance supervisors in the European Economic Area with the view to seeing that the single market in insurance operates efficiently.

  - Through the International Association of Insurance Supervisors (IAIS) which has commenced an ambitious programme to develop international standards of insurance supervision. Discussions are underway on solvency issues, reinsurance supervision, electronic commerce and the internet, investments and accounting standards.

- Through the Joint Forum on Financial Conglomerates which brings together banking, investment and insurance supervisors with the aim of developing regulatory co-operation and suitable methodologies to deal with the new supervisory challenges posed by the increasing number of financial conglomerates and complex groups operating on a global basis.

12. <u>*Performance Measures*</u>

Functions and *Performance Measures(*)*	Targets
– **To play an active role in the various international fora where supervisory standards are discussed and developed.**	
* *Increase UK participation in international work on supervision standards*	On-going
* *Ensure adequate contribution to work of Joint Forum*	On-going

<u>Policy issues and casework</u>

13. This section deals with arrangements to secure co-operation on insurance policy issues and casework. By drawing on FSA expertise, Treasury officials will enhance their understanding of insurance market capabilities and practices; FSA officials will improve their awareness of trends in policy-making.

General policy issues

14. The FSA will provide the Treasury, on request or at its own initiative, with timely advice on, inter alia:

- the development of Government policy initiatives which bear on the insurance industry including mortgage payment protection insurance; unisex annuities; the use of genetic information; disability discrimination and equal opportunities; the application of funds held as part of inherited estates; and the means of calculating damages due in settlement of personal injury claims;
- the proposed content of draft speeches or statements prepared for the Treasury, other ministers and senior officials;
- Parliamentary business, including debates, early day motions and Parliamentary Questions;

1998 – between the Treasury and the FSA
Schedule 1

- meetings with other supervisors, whether held in the United Kingdom or overseas, at which policy issues are to be or have been discussed, in particular policyholder protection and insurance intermediary regulation;

- matters relating to the implementation of the Policyholders Protection Act 1997 and the operation of the 1975 Act as amended;

- matters relating to insurance law and financial services and markets regulation where that impacts on insurance - but without prejudice to FSA use of other channels;

- the undertaking of specified tasks of investigation and enforcement;

- any contentious or novel regulatory policy issues which bear on the insurance industry before any statement is made by FSA;

- other relevant subjects, raised either by the Treasury or the FSA.

15. Whilst the FSA will have the day-to-day responsibility for supervising insurance companies, certain of the powers required to carry out this function will remain with the Treasury until the coming into force of the proposed relevant provisions of the Financial Services and Markets Bill.

S 68 Orders

16. The Treasury needs to be satisfied about the appropriateness of such measures before it issues formal approval. Therefore, after the FSA has considered and approved the measure, FSA will provide the Treasury (Financial Services team and Treasury Solicitors) with:

- a draft order;

- advice giving background, recommendation and timing for the Order; and

- a draft letter for the Treasury to send to the insurer to accompany the Order. This should be addressed to a named contact at the insurance company; explain why the Order has been made; and provide a designated FSA contact to whom all enquiries on the matter can be addressed.

17. The Treasury will then consider the Order; clarify any points as necessary with FSA and/or Treasury Solicitors; and if satisfied, make the Order. The

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

Treasury will then send the Order to the insurance company; advise FSA of dispatch by telephone; and follow-up this up with a copy of the Order.

18. The Treasury will maintain a separate record of Orders and letters issued and advise FSA at the end of each month of that month's correspondence.

Other Orders

19. Other supervisory Orders bearing on specific companies, and of a kind which after N2 would be within the authority of the FSA but which until N2 cannot be made by FSA, will be taken forward by the Treasury using the same the principles of co-operation, consultation, and good administration which are to apply to s68 Orders. Statutory instruments of more general applicability are dealt with below.

Treasury functions under paragraphs 6(3) to 6(5) and 10 of Schedule 10 to the Financial Services Act.

20. Paragraphs 6(3) to 6(5) of Schedule 10 to the Financial Services Act 1986 make provision for the giving of notice to the Treasury by a designated agency or self regulating organisation and the serving of a notice by the Treasury on the said designated agency or organisation.

21. There is no need for change in the existing arrangements. Where FSA is the designated agency, it shall give the Treasury notice as required in the Act; and the Treasury may in turn serve the FSA with a notice. Where an organisation which is a recognised self-regulating organisation under the Financial Services Act 1986, proposes to exercise in the case of a member of that organisation which is a regulated insurance company as defined in s129 of the Financial Services Act, any powers of the self regulating organisation corresponding to those of Chapter VI of Part 1 of that Act, and the FSA is acting on behalf of such a self regulating organisation, the FSA shall ensure that notice is given to the Treasury as required in the Act, and advise the Treasury to whom in the self regulatory organisation notice by the Treasury may in turn be given.

22. In order that the requirements of paragraph 10 (1) to Schedule 10 of the Financial Services Act may be complied with, where the appropriate authorisation section of the FSA is, under the terms of the Contracting Out Order considering issuing an authorisation under s3 of the Insurance Companies Act 1982 to an applicant who proposes to carry on in the United Kingdom insurance business which is investment business, then that section shall consult all other relevant sections of the FSA on any matters which are relevant to the FSA and relate to the applicant in accordance with paragraph 10(1)(a) and, in accordance with paragraph 10(1)(b), take into account any advice that the authorisation section may receive from other sections of FSA.

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

23. In order to meet the requirements of paragraph 10(2) of Schedule 10, the appropriate authorisation section of the FSA may furnish other FSA sections with any information obtained from an applicant for authorisation.

24. If the FSA has reasonable grounds for believing that a regulated insurance company, that is one which is within the definition given in s129 of the Financial Services Act 1986, has failed to comply with obligations imposed upon it by that Act, then the FSA shall forthwith give notice to the Treasury. However, FSA need not give notice in respect of any matter unless it considers that the matter in question, whether considered alone or in conjunction with other matters, is sufficient to justify the withdrawal of the authorisation to carry on investment business. The notice will comply with the requirements of s10(4) of Schedule 10 of the Financial Services Act 1986.

25. The Treasury will decide whether to give a direction or serve a notice in respect of that company under s11 or 12 of the Insurance Companies Act 1982 or s33 of the Financial Services Act 1986. If the Treasury decides that a direction should be given using powers under s11, or a notice served under s12 of the Insurance Companies Act, then the FSA may make such a direction or give such a notice, once it has obtained the agreement in writing of the Treasury.

Fees Order

26. The Treasury will produce the annual statutory instrument which sets fees under the Insurance Companies Act. In addition to providing the financial information required by the Agreement, the FSA will also give advice on the way in which such recovery of costs might be made in the instrument having regard to the size of the business on which fees are charged.

Proposed secondary legislation on insurance matters

27. The FSA will advise the Treasury on how legislation may keep pace with market developments while remaining effective without imposing an undue burden on the insurance industry. Where subordinate legislation is required, the FSA will provide to the Treasury a statement or statements of the policy to be achieved. Similarly, the FSA will support the preparation of legislation needed to implement European Directives through secondary legislation made under the European Communities Act, Insurance Companies Act or both (e.g. implementing Groups Directive).

28. The FSA will assist in deliberations leading up to negotiation of European legislation and will provide information, advice and assistance to the Treasury in order to progress successful negotiations.

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

Policyholders Protection Act 1975

29. In addition to the PPA functions contracted to the FSA, the FSA will undertake an annual exercise to ascertain the amount of income earned by authorised insurers in the previous underwriting year which is leviable under the Policyholders Protection Act 1975 and inform the Policyholders Protection Board accordingly.

Correspondence and Casework

30. Casework on insurance matters can cover a wide range of issues. It is not possible to set out arrangements of every case or even every category of case, although correspondence referred by MPs and MEPs will be channelled differently from cases referred directly by the public, as set out below. The list below covers the main categories. It assumes that FSA Public Enquiries will have a role to play in dealing with many enquiries including providing information about access to the Insurance Ombudsman.

31. The following arrangements will apply:

- letters about routine insurance matters which are received by the Treasury, whether sent directly to officials or to Ministers, will be answered in full by the Treasury when they contain an issue relating to the Government's policy on regulating insurance: the objectives of such policy being to secure protection for consumers and clean markets;

- letters from or on behalf of policyholders which focus on refusal to provide cover, terms and conditions, or allege unfair or incompetent complaints-handling will be sent to the FSA Chairman if they are from an MP or MEP, and to FSA Public Enquiries if they are direct from the public;

- letters requiring an explanation of market practice will be answered and sent to the FSA Chairman if they are from an MP or MEP, and to FSA Public Enquiries if they are direct from the public;

- letters sent to the Treasury concerning FSA practice will be answered and sent to the FSA Chairman if they are from an MP or MEP, and to FSA Public Enquiries if they are direct from the public;

- letters calling for changes to the future regulation of Lloyd's will be answered in full by the Treasury if they are from an MP or MEP, and to FSA Public Enquiries if they are direct from the public;

- letters about past Lloyd's regulatory issues and on-going correspondence will be sent to the FSA Chairman if they are from an MP or MEP, and to FSA Public Enquiries if they are direct from the public;

- issues which achieve significant prominence and require a statement of regulatory principle or practice to be made public (e.g. guaranteed annuities) will be handled by the FSA after consultation with the Treasury.

32. These arrangements are without prejudice to other working arrangements which may need to be made either by the Treasury or the FSA.

Initiatives to support the development of more effective and efficient regulatory procedures

33. *Key Tasks*

- The FSA will be committed to developing the means to achieve improved efficiency and effectiveness of its regulatory procedures. The following activities will be undertaken during the course of 1999:

  - review and, where necessary, undertake an interim update of non-life and life insurance supervisory procedures and internal guidance to ensure a consistent and properly documented approach;

  - the preparation of sectoral and market analyses to improve understanding of the context in which insurance companies operate;

  - undertaking specific projects in response to market developments;

  - the enhancement of a risk-based approach to supervision. As part of its work on procedures, the FSA will further develop a risk-based approach to insurance supervision against the FSA's broader canvas of financial regulation with a view to aligning the methodology and categorisation, to the extent possible whilst taking account of the particular complexity of assessing insurance companies, with the practice in relation to other sectors of the financial industry. A particular focus of this work will be the identification of the key elements, and the development of a risk rating system which could be implemented within 2 years of N2, if appropriate;

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

- as part of the FSA's wider training and development responsibilities, the implementation of a comprehensive Training and Development Programme to develop the skills and competencies of insurance and friendly society supervisors and specialists.

34. *Performance Measures*

Functions and *Performance Measures (*)*	Targets
– **To achieve improved efficiency and effectiveness of regulatory procedures.**	
** Complete review and interim update of non-life and life insurance supervisory procedures and internal guidance*	April 1999
** Development of a risk rating system*	1 year after N2
** Delivery of Training and Development Programme for insurance and friendly society supervisors etc.*	On-going

Preparation for the coming into effect of the new regulatory regime

35. *Key Areas of Responsibility*

- The oversight and co-ordination of the FSA's insurance regulatory policy.
- Ensuring that FSA's draft principles and other statements of policy upon which the FSA intend to consult reflect the needs of insurance regulation and sufficiently implement Community law obligations arising from the Insurance Directives.
- Securing the development of practical and effective arrangements for the supervision of Lloyd's.
- Integrating the supervisory regimes for insurance companies and friendly societies.
- Providing input on insurance aspects of the Financial Services and Markets Bill to the Treasury Bill Team through the FSA's usual mechanisms.

36. *Performance Measures*

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1

Functions and *Performance Measures (*)*	Targets
– **To ensure that FSA's draft principles and other statements of policy reflect the needs of insurance regulation**	
* *To ensure FSA handbook properly reflects the needs of the insurance industry and its customers, including the preparation of insurance specific chapters*	By deadlines set out Appendix 3 to the FSA document "Meeting Our Responsibilities"
– **Lloyd's Supervision**	
* *To secure the development of practical and effective arrangements for the supervision of Lloyd's.*	By N2
– **To input to the Treasury Bill Team on Financial Services and Markets Bill through the FSA's usual mechanisms**	
* *To ensure Bill takes proper account of issues specific to the insurance industry and its customers.*	Prior to introduction of the Bill

Schedule 1 – Annex A

ANNEX A: SUPERVISION PERFORMANCE MEASURES

Functions, and *Performance Measures*	Targets
• **Returns receipt and processing**	
– To send returns for keypunching within 1 day of receipt from returns unit (2 days between 28 June & 28 July).	90% (remainder within one further day)
– To make QST extract available on IDIS within 1 day of receipt back from bureau	90% (remainder within one further day)
– To run validation and take up absolute errors with company:	
within 6 weeks of receipt from keypunching	all priority 1
within 9 weeks of receipt from keypunching	all priority 2
within 15 weeks of receipt from keypunching	all priority 3
within 18 weeks of receipt from keypunching	all priority 4
within 23 weeks of receipt from keypunching	all priority 5
– To have fully validated return available on IRIS (i.e. fit to run solvency tests)#	
within 3 months of receipt from keypunching	all priority 1
within 5 months of receipt from keypunching	all priority 2
within 7 months of receipt from keypunching	all priority 3
within 9 months of receipt from keypunching	all priority 4 & 5
[# the total number of fully validated returns available within 9 months of keypunching to be >99% of all returns received]	
• **Supervision of general business and composite insurers**	
– Complete initial scrutiny/planning document:	
* *For companies writing new business, within 2 months of receipt of return (3 months when return received between 15 June and 30 July)*	80% (remainder within one further month)

Service level agreements

1998 – between the Treasury and the FSA
Schedule 1 – Annex A

** For companies not writing new business, within 6 months of receipt of return*	100%
– Conduct balance of annual examination process and document action taken against plan in a "completion memorandum":	
** Within 9 months of receipt of return*	75%
** Within 12 months of receipt of return*	100%
– Complete examination of quarterly returns within 4 weeks of receipt	90% (remaining 10% within 8 weeks)
• **Supervision of life companies**	
– To decide on and where necessary commence follow up action within 2 weeks of completion and review of the GAD scrutiny report	90% (remaining 10% within 6 weeks)
– Secure the timely and satisfactory outcomes to on-going and future proposals for life industry restructuring and inherited estates.	100%
• **Supervision of London Market companies**	
– Complete initial scrutiny/planning document within 3 months of receipt of return	80%(remainder within one further month)
– Conduct balance of annual examination# process:	
** Within 9 months of receipt of return*	75%
** Within 12 months of receipt of return*	100%
[# work involved in change of control constitutes full examination of company]	
• **Supervision of all companies**

1998 – between the Treasury and the FSA
Schedule 1 – Annex A

– Carry out visit programme to improve understanding and risk assessment of companies supervised	60 p.a. (general/composite) 30 p.a. (life) 50 p.a. (London Market)
– Process changes in companies' business requiring specific action under legislation to statutory time limits. These vary, but main ones include:	
* *change of control (3 months)*	100%
* *EU branch applications (3 months)*	100%
* *EU service applications (1 month)*	100%
• **Monitoring of companies' preparedness for Year 2000 in respect of both the compliance of their own systems, and their assessment of and reserving for potential liabilities**	
– Conduct review with all companies identified as high priority	By April 1999

DTI's policy guidance notes (1991)

General Introduction

DTI Insurance Division

Policy Guidance Notes

The Guidelines

General Introduction

1. The Department should operate, and be seen to operate, a firm but fair regulatory regime in respect of UK authorised insurance companies. The "message" to the Industry and to the public should be that the Department is watching very carefully and is likely to err on the side of caution rather than to adopt a relaxed attitude, particularly toward companies in difficulties.

2. The Insurance Division Guidelines, now being issued under cover of a new series of Policy Guidance Notes (PGNs) and forming this Manual, help to ensure that these aims inform our approach to supervision. Where appropriate, each Guideline will contain paragraphs covering "Best Practice". They will help individual supervisors to adopt a firm but fair, and effective, regulatory approach toward their own portfolio of companies. Adherence to the Guidelines by all supervisory staff in the Division will also help to achieve a consistent regulatory regime for all insurance companies in the UK.

3. In 1990, at our request, [redacted] carried out the "DTI Insurance Division Business Review and Information Systems Strategy Study". On the subject of guidelines, [redacted] Management Summary, which was distributed to all staff in the Division at the time it was published, suggested:

"drawing up guidelines to help staff in areas of supervision where significant judgemental decisions are required"

4. Their two recommendations on the subject were:

"We recommend that guidelines are drawn up to help staff in areas of supervision where important and publicly visible decisions are required, in particular, the issue and withdrawal of concessions and requirements, decisions on the admissibility of certain types of assets, etc.

We recommend that such guidelines are introduced because of the perceived need for greater consistency in decisions made which may affect individual companies' operations."

5. The new Guidelines are the tangible result of the acceptance of these recommendations. It is intended that they will, in due course, cover most procedures involved in the supervision of UK authorised insurance companies. They are not limited to just those of the type specifically referred to by [redacted] However, they stop short of providing instruction and guidance on the examination of returns, which is provided in other ways.

[redacted]
Head of Insurance Division
September 1991

Issued September 1991 General Introduction

DTI's policy guidance notes (1991)

Guideline 1.4: obtaining advice from GAD on long term business

Guideline 1.4

Obtaining advice from GAD on long term business

Synopsis
1. Guidance on when and how to obtain advice on long term business from the Government Actuary's Department (GAD).

The Legislation
2. Although there is no statutory obligation for Insurance Division to consult GAD, the conduct of relations between the Division and GAD, and their respective roles, are set out in a "Concordat" signed between the Head of Insurance Division and the Government Actuary in 1984. A copy of the concordat is attached as Annex A to this guideline. There have been no amendments to it. Until there are any changes, both parties are bound by its terms.

Exercise of the Secretary of State's Functions
3. As made plain in the concordat, formal action on behalf of the Secretary of State should always be taken by Insurance Division (but enquiries to companies - but not to auditors nor, in the first instance, to external appointed actuaries - may be made direct by GAD).

Insurance Division Objectives
4. In the first instance, to ensure a sound working relationship with the GAD, to the mutual benefit of both parties, in:

(a) the examination of the solvency position and ongoing financial strength of life assurance companies;

(b) consideration of applications for the authorisation of new life insurance companies;

(c) assessment of proposals for company structures including in particular Section 49 transfers (see Guideline 12.1);

(d) participation in the regular visits to insurance companies in order to understand better the structure, dynamics and future prospects of each company; and

(e) resolution of other miscellaneous questions relating to the finances of long-term insurers, and the interests and reasonable expectations of policyholders.

Best Practice
5. To adhere as closely as possible to the concordat and to pay particular attention to the terms of paragraphs 4 to 23 thereto which set out the activities to be carried out by Insurance Division. It will be necessary from time to time to review procedures to ensure that they enable the proper operation of the concordat. As with any framework agreement, there will be occasions when it is necessary to depart from the terms of the concordat. However, GAD should always be consulted and their agreement sought to any departure.

Implications for our Understanding of a Company's Position
6. The proper operation of the concordat by both Insurance Division and the GAD is essential to our understanding of the company's position.

Standard Draft Letters
7. Not applicable in the context of this Guideline.

Conditions to be Attached
8. Not applicable in the context of this Guideline.

Legal Advice
9. Not directly relevant to this guideline, but it should be borne in mind that any advice provided by the GAD which has legal implications should be referred to Solicitor's Office for advice. (See Guideline 1.5). This applies particularly to advice given by GAD on the application of the insurance companies legislation which may need an additional input from Solicitor's office.

EC Aspects
10. Not applicable in the context of this Guideline.

Issued July 1992 Guideline 1.4

DTI's policy guidance notes (1991)

Guideline 1.4: obtaining advice from GAD on long term business

On the Record Statements
11. Not applicable in the context of this Guideline.

The Precedent Register
12. Advice from the GAD which is considered to have a general effect or which may guide future cases should be copied to the register.

Compliance Costs for Companies
13. Not applicable in the context of this Guideline.

Insurance Annual Report
14. Not applicable in the context of this Guideline.

Policy responsibility
15. Policy responsibility for the concordat and its operation rests at Grade 5 level in I2 and at Chief Actuary level in the GAD. However, should any amendments to the concordat become necessary it is envisaged that they will form part of a formal agreement signed by the Head of Division and the Government Actuary.

Issued July 1992 **Guideline 1.4**

DTI's policy guidance notes (1991)

Guideline 2.2: Carrying on Insurance Business in the UK

Guideline 2.2

Carrying on Insurance Business in the UK

Synopsis

1. Some general guidance on interpreting what constitutes the carrying on of insurance business in the UK.

The legislation

2. Section 2 of the Insurance Companies Act 1982 ("the Act") provides that, with certain exceptions, no person shall carry on any insurance business in the United Kingdom unless authorised to do so under Section 3 or 4. However, under Part IIIA of the Act, an insurance company authorised in another EC member state can provide direct business in the UK without breach of section 3 or 4 if it has first furnished to the Secretary of State the particulars specified in Section 81B of the Act.

3. It is an offence under Section 14 of the Act to carry on business in contravention of Part I and, under Section 81J, to provide insurance in the United Kingdom in contravention of Section 81B.

Exercise of Secretary of State's functions

4. Where a company appears to be carrying on insurance business without authorisation, the operation may require formal investigation. An investigation will normally be done under section 447 of the Companies Act. Investigations Division will decide whether or not to investigate upon our notification of the case to them. On occasions, and particularly if the operation is being conducted by an unincorporated body, an investigation may be requested under section 44 of the Insurance Companies Act. An Insurance Division officer of at least Grade 5 level should take the decision to request any such investigation under s44, ICA 1982 and will sign the ensuing authorisation of the officers appointed to conduct it.

Insurance Division objective

5. The protection of policyholders and potential policyholders is paramount. Where a body has written unauthorised insurance business, our aim is to stop the unlawfulness. This may be achieved by (i) the operation being properly underwritten by a company which can legitimately write the business, (ii) the body voluntarily ceasing the operation and making arrangements to safeguard the interests of those whom it has insured, or (iii) the Department winding up the body.

Best practice

6. There are two elements to take into account when considering whether insurance business is being carried on in the UK:

i. whether the activity is insurance business;

ii. where the business is being carried on.

Both questions are often difficult to answer and the answers can be determined authoritatively only by the courts. However, it is necessary for Insurance Division to form a view in order to decide whether further action should be taken.

7. Because of this, the notes below are intended as no more than an indicator as to whether or not you should take advice.

DTI's policy guidance notes (1991)

Guideline 2.2: Carrying on Insurance Business in the UK

You should consult I1A who will either take over responsibility for your query or provide you with paragraphs to include in your own response.

Whether an activity is insurance business

8. Elements usually present in a contract of insurance are:

a **consideration** (monetary or otherwise) is paid,in return for which there is

a **requirement to provide** money or its equivalent by means of a service

on a **non-discretionary** basis

on the **happening** in the future of an event

the likelihood or timing of which is **uncertain** at the moment of contracting and

the provider **cannot influence** the likely timing or occurrence of the event and

the other party has an **interest** in the event.

9. The following points may be relevant:

i) the provider's degree of control over the occurrence event. Product of the insured guarantees and service and repair contracts may well not be insurance contracts if they are guaranteeing the provider's own product;

ii) is there a necessary causal connection between the providers of other business and the providers of the insurance. If so, then it may not be insurance business. The mere fact that the insurance is only a small part of the total business of the provider will not, of itself, stop the business being insurance business;

iii) whether a professed power of discretion in the provision of benefit is in fact illusory. If it is, authorisation is probably needed.

What constitutes the carrying on of insurance business in the United Kingdom?

10. The Department is likely to take the view that authorisation is required where the insurer, or its agent to whom it has devolved effective decision-making power, will

- have a place of business in the UK which is more than temporary **and**

- decide in the UK to accept risks **and/or**

- decide in the UK to pay claims where those liabilities were entered into in the UK.

Reference offshore of the final decision or its ratification is not enough to escape from the authorisation requirement.

11. The Department would probably take the view that authorisation is not required if **only one** of the following takes place in the UK, **without any other UK - based involvement of either the insurer or its agent:**

- An insurer advertises its existence and kind of business.

- The transmission of premiums to outside the UK.

12. A plethora of related insurance activities has not been mentioned, deliberately. In addition to the actual conclusion of contracts or payment of claims, any other activities in the UK relating to the effecting or carrying out of contracts of insurance need to be considered as a whole and a judgement reached as to whether in combination they amount to effecting and/or carrying out contracts to any substantial extent. It

Isssued August 1993 Guideline 2.2

DTI's policy guidance notes (1991)

Guideline 2.2: Carrying on Insurance Business in the UK

is not possible simply to disregard activities of any given kind.

Implications for our understanding of a company's position

13. A company which is carrying on any type of insurance business without having formal authorisation is not supervised and is putting its "policyholders" at risk.

Standard drafts

14. An example is attached (at Annex A) of the standard text incorporated into letters to individuals or companies which the Department has reason to believe may be carrying on unauthorised insurance business. However, each case needs to be considered individually to determine whether the sending of a letter, or alternative action, is appropriate in the particular circumstances; and, if a letter is sent, whether all or only some of the standard paragraphs should be included.

Conditions to be attached

15. Not applicable.

Legal advice

16. To reach a view in cases where there is doubt about a company carrying on insurance business, particularly when we remain unconvinced about the arguments that may have been put to us, the advice of Solicitors should normally be obtained.

GAD

17. In some cases it might be appropriate or desirable to consult GAD. I1A could offer advice as to whether GAD should be approached.

EC aspects

18. Special consideration applies to the provision of insurance services in the UK. Section 81(A)(5) of the ICA 1982 provides that an EC insurer will not be regarded, for the purposes inter alia of Section 2, as carrying on insurance business in the UK by reason only of the fact that it provides insurance in the UK. Under Part IIIA of the Act, an insurance company authorised in another EC member state can provide direct business in the UK without breach of Section 3 or 4 if it has first furnished to the Secretary of State the particulars specified in Section 81B of the Act. Where the insurer has its head office outside the community, the advice set out in paragraphs 10 and 11 above would apply.

On the record statements

19. As to whether insurance business is being carried on in the UK, there have been three Court judgements which have had far-reaching implications for the insurance industry and the Department:-

Bedford Insurance Co Ltd v Instituto de Ressaguros do Brasil [1984](1 Lloyd's Rep 210; decided 10 November 1983)

B A Stewart & Others v Oriental Fire & Marine Insurance Co Ltd [1984] (2 Lloyd's Rep 109; decided 18 April 1984)

Phoenix General Insurance Co of Greece v Administratia Asiguraliror de Stat [1985] (2 Lloyd's Rep 599; decided 9 October 1986)

Ackman & Others and Scher & Others v The Policyholders' Protection Board and Others and the Secretary of State (not fully reported and subject to appeal).

20. These decisions created considerable doubt for the Department and the insurance industry over the basis for distinguishing between circumstances

DTI's policy guidance notes (1991)

Guideline 2.2: Carrying on Insurance Business in the UK

which required, and those which did not require, authorisation to carry on insurance business in the United Kingdom. So far as the Department is concerned, the main significance lies in the Ackman & Others judgment given by Leggatt, J that the test of whether authorisation is required is whether the relevant operations (not simply those on which the Department had focused hitherto) occur here to any substantial extent. The decision is relevant both to the way offshore insurers conduct their business and to the activities of different kinds of intermediaries, agents and providers of specialist services.

Precedent register

21. When legal advice has been obtained or decisions taken which may have relevance for consideration of future cases, then the papers should be copied to I1B for inclusion on the Precedent Register.

Compliance cost for companies

22. There are obviously cost implications for companies in satisfying the authorisation requirements and being liable for the appropriate supervisory fee but these are statutory and are clearly legitimate.

Insurance annual report

23. The Report contains a list of all companies authorised to carry on insurance business in the UK, which includes the particular classes for which each has been authorised. Supervisors must maintain accurate records on their companies from which the information in the Report is compiled.

Policy responsibility

24. Divisional policy on this issue rests with I1A.

Isssued August 1993 Guideline 2.2

DTI's policy guidance notes (1991)

Guideline 2.5: Withdrawals of Authorisation

Guideline 2.5

Withdrawals of Authorisation

Synopsis

1. Guidance on the withdrawal of authorisation, whether in respect of only new business or for carrying on any insurance business.

The Legislation

2. Sections 11-13 of the Insurance Companies Act 1982 relate to the withdrawal of authorisation. **S11** withdrawals prevent companies from accepting **new** business, while **S13** withdrawals mean that companies are no longer authorised under the Act and may not carry on **any** insurance business, or business relating to a particular class.

3. In the majority of cases, the withdrawal of authorisation pursuant to S11 will be at the company's own request, or with their agreement. However, there are circumstances where the Secretary of State may under the provisions of S11 direct that a company shall cease to be authorised to effect contracts of insurance. The grounds on which the SoS may take such action are:

(1) that it appears to the SoS that the company has failed to satisfy an obligation to which it is subject by virtue of the Act or the Financial Services Act 1986 or the rules of any self-regulating organisation of which it is a member;

(2) that it appears to the Secretary of State that the company has failed to satisfy an obligation to which it is subject by the law of another member State giving effect to the general insurance Directives;

(3) that there exists a ground on which he would be prohibited (by S7, S8 or S9 of the Act) from issuing an authorisation to the company; or

(4) that the company has ceased to be authorised in a Member State where it has its head office, or where under S9(2) it has made a deposit.

4. Before issuing a direction under S11, **other than at the request of the company concerned**, the SoS must serve a written notice stating that he is considering giving a direction and the ground on which he is considering it and that the company may within one month make written representations to the Secretary of State and, if it so requests, make oral representations to an officer of the Department appointed for this purpose. Similarly, before giving a direction on the ground that any director, controller, manager or main agent of the company is not a fit and proper person to hold the position, a written notice must be served on the person whose fitness is in question.

5. It should be noted that a direction under S11 does not prevent a company from effecting a contract of insurance in pursuance of a term of a subsisting contract. So, if under the terms of a contract, the company subject to the direction is obliged to renew, the company is permitted to do this as well as continue to pay claims on its contracts.

6. With the exception of a direction given in respect of a company which has its head office, or has made a deposit, in another member State, a direction under S11 cannot be revoked or varied. However, further authorisation can be granted, in which case the direction will cease to have effect.

7. S13 relates to final withdrawal of authorisation. Where an insurance company ceases to carry on in the UK any insurance business, or business of any class, the SoS may direct that it shall cease to be authorised. It is not necessary to have taken action under S11 before instituting procedures for final withdrawal under S13. On the other hand, consideration of the use of S13 powers does not preclude the prior use of S11. Directions issued under both S11 and S13 can of course be in respect of particular, and not necessarily all, classes for which a company may have been authorised.

Exercise of Secretary of State's Functions

8. No decisions about withdrawal of a company's authorisation should be taken at a level below Grade 7. If a company disputes the grounds for withdrawal under S13 the matter should be referred to the appropriate Grade 5. Similarly, if withdrawal of

DTI's policy guidance notes (1991)

Guideline 2.5: Withdrawals of Authorisation

authorisation is on any of the grounds referred to in S11(2), the prior approval of the Grade 5 must be sought. S11 procedures are actioned by the supervisory section; S13 withdrawals are formally handled by I1A, at the instigation of the appropriate supervisor who should state that there are no outstanding liabilities and make available all relevant supporting documentation.

Insurance Division Objectives

9. Not to allow authorisations to remain unused for an indefinite period. This restriction on unused authorisations is imposed so that companies cannot suddenly reactivate lines of business which may have remained dormant for some years without providing prior notification and justification to DTI. It also prevents a market developing in shell insurance companies. By withdrawing a company's authorisation in respect of new business (under S11) if we have serious concerns about their solvency position, we would be able to limit the risk to potential policyholders.

Best Practice

10. As part of the process of examining annual returns, supervisors must check that the insurance company is carrying on all classes of business for which it is authorised. If an insurance company which carries on direct insurance business does not show in its returns a class of business for which it is authorised and the matter is not covered by a concession, or otherwise explained, the supervisor should write to the company to ask the reason and enquire about their intentions. Our general policy is that if a company has an authorisation for any class of business which it is not using then it should be persuaded to relinquish that authorisation. That line should be conveyed to the company at the time we send our enquiry letter.

11. S13(2) allows the SoS to direct that a company shall cease to be authorised to carry on business of any class if they have not at any time carried on business in that class, and at least 12 months have elapsed since the issue of the authorisation (NB authorisation cannot be withdrawn under S13 for pre-1966 companies which have never written business of the particular class). Before an authorisation is withdrawn it is the Department's practice to notify the company concerned that we are intending to withdraw the authorisation and to give them an opportunity to object if they so wish. This is a sensible approach because without some investigation, we cannot be sure that business is not currently being carried on, or that it is not about to be carried on in the near future. The intention is to get the company's agreement to withdrawal if this is at all possible. It may be that a company has legitimate reasons why a particular authorisation has remained unused but if not made known these reasons should be probed.

12. For instance, it is possible that in some cases where no business is reported in a particular class such risks may in fact be written as ancillary risks to business falling within other classes. In such circumstances it is acceptable that the authorisation for an unused class should be retained.

13. For companies operating entirely as reinsurers, it is likely that they are incurring liabilities by way of retrocession which relate to all authorisation classes of general insurance business, possibly without even being aware of it, through, for example, involvement in non-proportional account treaties. For this reason, it has been divisional policy for reinsurance companies in this position to be authorised for all classes of general insurance business in order to avoid the possibility that they are carrying on insurance business unlawfully.

14. The basis for our policy of withdrawing unused authorisations is that it is necessary to restrict companies so that their authorisation relates to business which they actually carry out, not only so that those consulting records can be sure whether a company is authorised and is carrying out that particular class of business but, more importantly, because our financial over-view of the company must take into account the business which they are writing. An unused authorisation could mean that a company would be able, through reactivation, to greatly increase its business during a year without us knowing about it for 12 months or more.

15. In the event that a company which is not carrying on business in a particular class opposes withdrawal of authorisation for

Issued October 1992 **Guideline 2.5**

DTI's policy guidance notes (1991)

Guideline 2.5: Withdrawals of Authorisation

reasons which are not considered valid then the Grade 7 should be consulted about follow-up action, with a view to deciding, with appropriate referral to the Grade 5, whether we should ask the company for a proper long term plan for the activities covered by the authorisation or, if we are satisfied that there are no outstanding liabilities, proceed to institute withdrawal procedures under the provisions of S13(1). We should bear in mind that there are no simple procedures for reinstating authorisations which have been revoked. If a company wishes to recommence business in a class for which its authorisation has previously been withdrawn, then it is required to apply to be re-authorised in **all** of the classes of business it currently writes and intends to write.

16. The majority of cases for withdrawal of authorisation are non-contentious and will be by agreement with the company. They are likely to be either when a company has ceased to carry on business in a particular class, to follow a S51 transfer of business, or perhaps in the case of a UK branch, where liabilities have been run off and business is now being written through a UK subsidiary.

17. Where a company decides to cease writing business entirely or only in a particular class, it is more than likely that for some time after, claims will be made in respect of previous contracts accepted. It would be appropriate, therefore, to seek to withdraw authorisations for such classes under S11. The Department takes the view that insurance business is carried on even if the only activity is the settlement of claims by the company which originally wrote the business. Consequently, while a company is running off liabilities the final authorisation cannot be withdrawn. A run off can take years to complete and in the later years outstanding liabilities may be minimal. But if a company still has outstanding claims, or possible outstanding claims, however small, then it still has contracts of insurance to carry out and a S13 withdrawal of authorisation cannot be effected.

18. This really means that unless a company can state categorically that it has no outstanding liabilities, then a transfer of business under S51 of the Act will normally have to take place before an authorisation can be finally withdrawn. (There has been one case where the transfer of insurance obligations was undertaken by means of novation but this was exceptional; as most insurance companies have thousands of policyholders novation is not a practical option so a S51 transfer is the more normal route.) However, in reaching a decision as to whether a company has outstanding liabilities, the directors, in consultation with their professional advisers, can properly consider whether the possibility of further claims arising is so minimal as to be properly disregarded in reaching this decision. If the possibility of a further claim is fanciful then this should not necessarily inhibit the withdrawal of authorisation.

19. When an insurance company transfers business to another company under the provisions of S51 of the Act, the Department's policy is to use S13 to withdraw authorisation as soon as the transfer is complete, unless the company is to be sold immediately after transfer of the business and the purchaser intends to start business within the relevant class within 3 months.

20. There may be circumstances where an insurance company has authorisations for various classes of business, eg by virtue of S4 of the Act, but has never carried out any business in those classes. In such cases, withdrawal of authorisations could only be achieved under S11 since it would, by definition, be in respect of new business. Where an authorised company has never actually carried on any insurance business there is no question of them having ceased to carry on that business. It must be noted, however, that withdrawal of authorisation under S11 can only be at the request of the company unless one or more of the grounds set out in S11(2) exist.

21. The Department publishes information relating to the use of the SoS's powers under S11 and S13. When withdrawal of authorisation occurs under S11, it is the responsibility of the supervisor to take all necessary action, which includes notifying Information Division and requesting them to arrange for a notice to be published in the London, Edinburgh and Belfast Gazettes. The minute to Information Division must be

Issued October 1992 — Guideline 2.5

DTI's policy guidance notes (1991)

Guideline 2.5: Withdrawals of Authorisation

copied to I1A, as well as to I4, so that records may be noted (see Annex C). In the case of withdrawal of authorisation under S13, the supervisor will initiate the action but must instruct I1A to undertake the formal withdrawal procedures, which will include notifying Companies House and the Inland Revenue (as well as GAD and Land Registry for long term business, and the Motor Insurers Bureau, if appropriate). I1A also issues a standard monthly press notice publicising withdrawals of authorisation.

Implications for our Understanding of a Company's Position

22. A company which, through lack of action on our part, has been allowed to retain its authorisations for classes which have remained unused, perhaps for some years, would be able to recommence writing business in those classes without having to obtain DTI approval. This may result in an expansion of business which could have a significant and adverse impact on their overall solvency position and this would not be detected until the examination of their next returns which may be more than a year after they have recommenced that business.

Standard Drafts

23. Standard drafts (for adaption as appropriate) are attached of (1) the formal Direction of withdrawal of authorisation under S11, (2) a covering letter to the company, (3) a minute to Information Division, and (4) a typical notice for publication are attached at Annexes A to D.

Conditions to be Attached

24. None applicable.

Legal Advice

25. Legal opinion has been sought from time to time in respect of individual cases and some of that advice has been taken into account in compiling this guideline. Sols have said that in general terms there is little scope for flexibility in interpreting S13 of the Act and we should be cautious about adopting a pragmatic approach in deciding at what stage a company has ceased carrying on insurance business. The advice of solicitors should be taken in cases where there is a doubt whether the company has ceased to carry on business.

26. The case of Ackman and Others v The Policyholders Protection Board and Others provides some authority for the proposition that payment of claims under a policy of insurance effected in the United Kingdom will always constitute the carrying on of insurance business in the United Kingdom wherever the claims are paid. If this is so, then a company running off its business must retain its authorisation and continue to be supervised even if its business is run off overseas. The judicial comments were obiter and, at the time of writing this guideline, the judgement was under appeal. If reliance is placed on this judgement, then reference should first be made to Sols.

GAD

27. GAD should be involved in decisions about withdrawals of authorisation in respect of long term business or cases concerning life companies.

EC Aspects

28. There are no particular EC aspects in the context of this guideline.

On The Record Statements

29. None.

The Precedent Register

30. Supervisors who may be involved in cases in which unusual features are raised or where legal advice may have been provided which is likely to be of wider interest, should consider copying relevant documents to I1B for inclusion in the Precedent Register.

Compliance Costs for Companies

31. There are no compliance cost considerations directly arising from this guideline.

Insurance Annual Report

32. To enable publication of details of the exercise of the Secretary of State's powers, a central record of the number of occasions on which the powers contained in S11 and S13 have been used is maintained by I1A. This is checked for accuracy with supervisors before publication and hence all HEO supervisors should maintain their own separate records.

Policy Responsibility

33. Divisional policy on S13 withdrawals rests with I1A.

DTI's policy guidance notes (1991)

Guideline 4.2: Change of Control

Guideline 4.2

Change of Control

Synopsis

1. Guidance to I Division staff on the procedures to be followed in respect of an application for the Secretary of State's consent to a proposed change of control of an insurance company.

The legislation

2. The legislative framework for changes of control is set out in Sections 60 to 62 of the Insurance Companies Act 1982 ("the Act"). Section 60 deals with Managing Directors and Chief Executives of insurance companies. Section 61 deals with other controllers. Controller is defined in Section 7(4) of the Act and guidance on interpretation of Section 7(4) is given in Guideline 4.1. Both Section 60 and 61 require notification of proposed new controllers to be given to the Secretary of State together with their prescribed particulars.

3. The prescribed particulars are set out in Schedule 6 to the Insurance Companies Regulations 1981 ("the 1981 Regulations"). For a proposed Managing Director or Chief Executive of an insurance companies the particulars are prescribed in Form A. For any other individual who proposes to become a controller Form B applies and for a body corporate proposing to become a controller Form C applies.

4. Both Section 60 and 61 provide that before a person or company can become a controller the Secretary of State must either indicate in writing that he has no objection to the proposal or a period of three months must elapse from the date of notification without the Secretary of State having served on the company a written notice of objection to the appointment.

5. If the Secretary of State, having enquired into the fitness of the person or body corporate proposed as controller, decides that he wants to object to the proposal, he has first to serve a written notice of intent to object on the person or body corporate concerned. If the appointment proposed is that of a managing director or chief executive of an insurance company a notice of intent to object has to be served both on the proposed controller and on the company proposing to appoint him/her. It should be noted that while the Secretary of State is not obliged to give particulars of the grounds on which he is considering objecting, in practice such grounds have to be disclosed to allow representations to be made.

6. The proposed controller (and the company if the proposal is to appoint a managing director or chief executive) then have one month in which he/they may make written and/or oral representations to the Secretary of State on the matters raised in the notice of intent. The Secretary of State then has to consider the representations and take a final decision on the matter and, if he is so minded serve a formal notice of objection within a period of three months from the date on which the original notice and prescribed particulars were served on the Secretary of State.

7. In the event that the proposed change of control goes ahead (not all proposed changes of control to which consent is given or to which no objection is made actually happen) Section 62 requires the insurance company to be notified in writing within 7 days of that fact and of the matters prescribed in Form D of Schedule 6 to the 1981 Regulations. The insurance company is then required to notify the Secretary of State within 14 days.

Issued August 1993 Guideline 4.2

DTI's policy guidance notes (1991)

Guideline 4.2: Change of Control

8. Section 71(3)(a) and (b) make it an offence to fail to comply respectively with the obligations imposed by Sections 60 and 61. However Section 71(5) provides a defence if the person subject to those duties is able to prove that he did not know that he had become or ceased to be a controller.

Exercise of Secretary of State's functions

9. The day to day work on change of control applications is appropriate to the HEO grade but indications of non-objection to a proposed change of control should always be cleared in advance with the supervisory Grade 7. The Secretary of State's power to object (including intent to object) should not be exercised at a level below G5 and, depending on the contentiousness of the case, reference to Ministers may be appropriate.

Insurance Division objective

10. To prevent persons or companies that appear to the Secretary of State not to be "fit and proper" to be controllers of insurance companies from assuming such positions.

Best Practice

Timing

11. All applications for change of control consent must be dealt with as quickly as possible. Sections 60 and 61 allow the Secretary of State three months only in which to object, during which period:

(a) the fitness of the person or company concerned has to be investigated by I1A and those findings considered;

(b) a preliminary notice of intent to object has to be drafted and served on the proposed controller;

(c) a month has to be allowed for the making of written and the hearing of oral representations by the proposed controller, and

(d) consideration of those representations and drafting and service of a formal notice of objection.

12. The three month period starts to run the day that a properly completed form is received by us. In effect there are only six weeks from the date the application is received to investigate and decide to issue a notice of intent to object. The fitness checks will take about half that time (more if an individual is resident overseas or if a company is registered overseas).

Confidentiality

13. Proposed corporate changes of control are frequently market sensitive in that the prior knowledge that we have of acquisition plans could be used by the unscrupulous unlawfully to obtain an unfair advantage and distort the normal workings of the market. Although the insurance company that is to be the subject of the acquisition may sometimes be aware of what is planned this is often not the case. It is therefore essential that proposed changes of control are kept confidential (with the exception of notification to the Office of Fair Trading - see paragraph 17) even from the insurance company which is the subject of the application. This requirement extends beyond the giving of consent to the moment when we are informed that the change of control has actually taken place.

14. The only occasions on which the insurance company will definitely be aware of a proposed change of control are when it is itself proposing to appoint a new managing director or chief executive

Issued August 1993 Guideline 4.2

DTI's policy guidance notes (1991)

Guideline 4.2: Change of Control

or where the change of control is purely a technical one resulting from a corporate restructuring initiated by the insurance company or group itself.

Acknowledgement

15. All changes of control that involve a body corporate proposing to become a controller of a UK authorised insurance company (and therefore the submission of one or more Forms C) must be acknowledged by the supervisor of the target company by standard letter. This is at Annex A and alerts the originator of the application to the need to contact the Office of Fair Trading ("OFT") if the transaction gives rise to a qualifying merger situation under the Fair Trading legislation or the European Commission if the merger is one which would come within the jurisdiction of that body.

Notification to OFT

16. The Fair Trading Act 1973 requires the Director General of Fair Trading to consider whether a proposed acquisition constitutes a merger for the purposes of that Act and if so, whether he should recommend the Secretary of State to refer the proposed merger to the Monopolies and Mergers Commission for investigation and report. The powers of the European Commission are set out in the European Community Merger Control Regulations 1989 (SI 4069/1989).

17. It is therefore the practice to send to the OFT's Mergers Secretariat a copy of the acknowledgement letter referred to in paragraph 15 above together with a covering letter indicating who is the appropriate contact point in Insurance Division. A draft covering letter is at Annex B. The contact point should normally be the HEO responsible for supervising the target insurance company.

Checking the application

18. This task is the responsibility of the supervisor. Changes of control frequently involve the submission of a number of forms. Each form represents a separate application for consent. Each form submitted should be checked carefully for completeness. If any of the prescribed particulars have not been provided the application represented by the form is defective and is deemed not to have been submitted. It should be remembered that the forms are multi-purpose and need to be specifically tailored to the situation in hand.

19. It is also necessary to check that all forms that should be submitted have been submitted. Acquiring companies and their legal advisors do not always interpret Section 7(4) correctly and it may be necessary to call for more or different forms to be submitted. If one of a batch of forms is missing or defective the clock starts to run for the forms that are present and correct but not for any that are defective or missing.

20. Deficiencies should be rectified and missing forms supplied as quickly as possible. Processing of forms that are present and correct should not be held up and if possible processing of forms that are deficient should be started. I1A should be consulted as to whether this is possible. If it is an individual and his/her full name, address and date and place of birth are given then fitness enquiries can be started.

The fitness enquiries

21. These are carried out for supervisors by I1A. That section should therefore be sent a photocopy of all correctly completed forms as quickly as possible (and of any defective forms where sufficient information exists for fitness

DTI's policy guidance notes (1991)

Guideline 4.2: Change of Control

checking to be started). The original copies should be retained by the supervisor and placed on the notifiable persons file relating to the target insurance company with a suitable indication of the date that the three month period ends.

22. The checks on fitness carried out by I1A consist, inter alia, of consulting the Stock Exchange and checking records of bankruptcy, adverse court judgments, company investigations etc. They are initiated once a week when a list of persons and companies to be checked is prepared. The list is dispatched on Fridays. To ensure that the individuals or companies you are considering are included on the current week's list I1A need to be given their copies of the forms as early as possible during the week.

23. In addition I1A will be prepared, in cases where there appears to be good reason to do so, to check out the criminal record of an individual with the Criminal Records Office at New Scotland Yard. It should be noted that we have an exemption from the Rehabilitation of Offenders Act 1974 which provides that convictions that might otherwise not be required to be disclosed have to be disclosed on the Forms. A note to this effect is in Form A and Form B beneath item 7.

24. If any individual is or has recently been resident overseas I1A's checks will include an enquiry to the nearest UK diplomatic representative (ie Embassy or Consulate) (known as the "Post"). Companies incorporated overseas will also be checked out with the nearest Post in the same way.

25. Standard checks on companies and other bodies corporate proposed as controllers are somewhat different. They are designed to indicate whether the accounts of the proposed controller show a satisfactory financial position, bearing in mind the porposed acquisition, and nothing more than that. I1A will consult the supervisory Grade 7 Accountant responsible for supervising the target insurance company. If the supervisory Grade 7 is not an accountant or if the accountant is a secondee from a firm that audits the proposed controllers accounts then I1A will arrange to consult another Grade 7 accountant.

26. In addition I1A will also check their records and those of Investigations Division to see whether anything adverse is known about any of the directors of the proposed corporate controller as that might render the proposed corporate controller unfit.

27. I1A carries out the fitness checks using their own company files specifically dedicated to this task and the results of their investigations are reported back to Supervisors on those files.

28. It should be noted that if the fitness of an individual or a company has been checked with no adverse finding within the previous 12 months they will be deemed to be still fit and proper unless any information suggesting or indicating the contrary has since been brought to the attention of I1A.

29. Supervisors should consider whether the normal fitness checks are sufficient or whether some other check or investigation is desirable. An example where this would be necessary is that of an overseas insurance company that is proposing to become a controller of a UK incorporated insurance company. I1A should be asked to ask the Post to consult the insurance supervisor in the country where the overseas insurance company is incorporated or carries on business. A similar procedure should be followed in

DTI's policy guidance notes (1991)

Guideline 4.2: Change of Control

respect of any individuals who hold or who have in the recent past held senior positions in overseas insurance companies.

Considering fitness

30. Consideration of the fitness of an individual or company to be a controller of an insurance company is fraught with difficulty. The purpose of our fitness powers is to protect policyholders and potential policyholders from the dishonest, the insolvent, the inexperienced and the incompetent. They should not be used to make wider moral judgements. For example incest may be morally repugnant but a conviction for it does not in itself make a person unfit. However failure to disclose such a conviction is prima facie evidence of dishonesty. Whether or not a person or a company is unfit is frequently a matter of subjective judgement but there are certain ground rules that should always be followed.

31. The fitness of the individual or company must always be considered in the light of the position that they are proposing to take up. For example an individual may well be perfectly fit and proper to act as a notifiable manager of an insurance company but may not necessarily be fit and proper to act as the company's managing director of chief executive. A misdemeanour that might disqualify a proposed controller might not necessarily disqualify a manager. Where the proposed controller is a body corporate the results of our internal checks on adverse information held about its directors must also be taken into account. An unfit person holding a position as director of a proposed corporate controller can render the proposed corporate controller unfit.

32. Proposed controllers who will be controllers by virtue of the fact that they are proposed as managing director of chief executive of an insurance company must have the relevant experience. By this we mean five years experience gained over the last 10 years at a similar level or the next step down in a UK authorised insurance company that has carried on similar business. Nationality or ethnic origin is irrelevant in this regard. Location is however relevant. It would be wrong for us to approve or let go by default a proposed appointment of a managing director of chief executive of an insurance company where the individual concerned is not resident in the UK. Effective management of a UK insurance companies cannot be carried out by remote control by an absentee. If that is the only reason for wishing to object to the proposed appointment, the circumstances should be first explained to the originator of the application and its withdrawal invited.

33. If there is any doubt as to a person's or a company's fitness to be a controller the case should always be put up to senior officers for a second opinion. In the event that fitness action is to be considered Solicitors should always be consulted for their views as to whether or not, if it came to a judicial review, the Court would be likely to take the view that a finding of unfitness was reasonable. It is the usual practice to ask at the same time that Solicitors draft a Notice of Intent to Object if they are of the opinion that objection is sustainable.

Giving approval

34. It is not a legal requirement that approval (in the form of an indication that the Secretary of State does not intend to object) be given before a change of control can take place. It can take place without our approval provided that three months have elapsed since the date the notification was received by us and the Secretary of State has not subsequently indicated that he is objects to the proposed change. It is however Divisional

Issued August 1993 Guideline 4.2

DTI's policy guidance notes (1991)

Guideline 4.2: Change of Control

policy, where no fitness issues arise from our enquiries, always to issue such a letter. Failure is issue a letter of non-objection is construed by the industry as indicating that the Department is less than completely happy about a proposed change of control. There may be the occasional case in which it would be appropriate neither to indicate non-objection nor to object. This is likely to be where there is suspicion of unfitness but useable evidence that would enable a charge of unfitness to be sustained cannot be obtained or cannot be obtained within the time limit set by the Act. However these are few and far between and should be agreed at G5 level.

35. In cases where no adverse information has been uncovered during fitness enquiries letters of non-objection may be issued by the HEO supervisor of the target company. These must be formal letters and a standard draft is at Annex C.

Notification of change of control

36. Indicating that the Department does not object to a proposed change of control does not in any way commit the proposed acquirer actually to make the acquisition. However it is imperative that we are advised if a change of control has actually taken place. Section 62 of the Act therefore requires all persons or companies who have become controllers of an insurance company to notify us of that fact. Similarly persons or companies who have ceased to be controllers of an authorised insurance company are required by Section 62 to notify us of that fact also.

37. Form D of Annex 6 to the Insurance Companies Regulations 1981 is prescribed for this purpose. All persons or companies that have become controllers of an insurance company are required by Section 62 to notify the insurance company within 7 days. The insurance company in turn is required to notify us within 14 days. Therefore notification of a change of control should be received by us within 3 weeks of the event. However this is a duty that controllers, both past and present, their advisors and the insurance companies themselves frequently forget about. If Forms D are not received within two months of the date of the letter of non-objection the originator of the change of control application should be asked what the position is. Sometimes regular checks on the position are necessary for longer before it is resolved one way or another.

38. It is an offence under Section 71(1)(a) for an individual to fail to notify the company of a change of control in accordance with Section 62 and under Section 71(3)(a) it is an offence for the copany to fail to notify the Secretary of State in accordance with Section 62. However Section 71(5) provides a defence if the person under the obligation to notify is able to prove that he did not know that there had been a change of control.

Implications of change of control

39. Once the Forms D have been received the change of control is complete. This does not mean that supervisors can then put the file away. The implications for supervisors of a change of control need to be considered. These are set out in Guideline 4.5.

Guideline 4.4: Notices of Objection and Representations

Guideline 4.4

Notices of Objection and Representations

Synopsis
1 Guidance on serving notices of objection on persons holding or proposed for notifiable positions (eg managing director, chief executive, controller) in an insurance company and on considering any representations which might be made to the Department.

The Legislation
2 The Insurance Companies Act 1982 gives the Secretary of State the following responsibilities in respect of persons whom he considers are not fit and proper to hold given positions in an insurance company.

(a) Authorisation

3 Under sections 7,8 and 9 the Secretary of State shall not issue an authorisation under section 3 if it appears to him that any director, controller, manager or main agent (for EC companies any relevant executive and in the case of any other overseas company the general and individual representative) is not a fit and proper person to hold his position.

(b) Withdrawal

4 Under section 11, the Secretary of State may direct that an authorised insurance company shall cease to be authorised to effect contracts of insurance, **inter alia** where he would be prohibited by sections 7,8 or 9 from issuing an authorisation.

(c) Changes of director, controller or manager etc

5 Section 60 prohibits an insurance company from appointing a new managing director or chief executive if, within three months of being notified of the proposed appointment, the Secretary of State serves on the company a written notice of objection on the ground that it appears to him that the person proposed to be appointed is not a fit and proper person for the position in question. (Section 63 modifies this provision so that in respect of companies whose head office is outside the UK it applies only to the principal UK executive.)

6 In addition, Section 61 prohibits a person from becoming a controller (otherwise than by virtue of Section 60) of an insurance company if, within three months of being notified of the proposed change, the Secretary of State serves on the person concerned a written notice of objection on the ground that it appears to him that the person is not a fit and proper person to be a controller of the company. (Section 63 disapplies this section in relation to direct insurers with their head office in another EC country.)

(d) Intervention powers

7 Under section 37(1)(2), the Secretary of State's intervention powers under sections 38 and 41 to 45 are exercisable **inter alia** on the ground that he would be prohibited by section 7,8 or 9 from issuing an authorisation with respect to the company were it applied for. Nor, where any adverse information on a person comes to light, is the Secretary of State precluded from taking action because he may have expressly or implicitly accepted the person as being fit and proper at some previous time eg by authorising a company or by approving a change of control involving the person concerned. (However, should we wish in such a case to consider taking action against the company, eg to withdraw its authorisation, the need for administrative consistency should be taken into account.)

8 Action may be taken, as appropriate, whenever it appears to the Secretary of State that a person is not fit and proper; it is not dependent on a change of a notifiable officer or on the submission of the Forms A-D prescribed by Schedule 6 to the Insurance Companies Regulations.

Serving Notices of Objection

(a) Authorisation

9 The Act contains no provision for the service of notices and making of representations in respect of fitness issues arising from applications for authorisation. In practice, however, the Department normally informs the applicant and the person concerned and, on an extra-statutory basis,

DTI's policy guidance notes (1991)

Guideline 4.4: Notices of Objection and Representations

affords them the same opportunities for making oral and written representations, as those required by section 12.

(b) Withdrawal of authorisation

10 Section 12 lays down the procedure to be followed in all cases in which the Secretary of State envisages issuing a direction under Section 11. When this arises from fitness considerations, the procedure varies according to the person involved. In the case of a person who is not a controller or principal UK executive written notice must be served on that person stating that issue of a direction to the company is under consideration, the ground for its issue, and particulars of that ground. One month is allowed for written and oral representations. If the intention is reaffirmed having considered any representations, a similar notice is served on the company, which in turn may make representations. Where the person whose fitness is in question is a controller or principal UK executive, notices may be issued simultaneously to the individual and the company.

(c) Changes of director, controller or manager etc

11 When it is intended to object to the appointment of a proposed managing director or chief executive under section 60, the Secretary of State serves preliminary written notice of intended objection on both the person concerned and on the company. In the case of a person seeking to become a controller (section 61), the Secretary of State is required to serve the preliminary notice only on the person concerned (the insurance company might not be aware of the proposal). The recipient(s) may then, within one month from the date of service of the preliminary notice, make written representations to the Secretary of State and, if they request, oral representations to a DTI officer appointed for the purpose by the Secretary of State. Where representations are made, the Secretary of State is obliged to take them into consideration before deciding whether to serve the notice of objection. The Secretary of State is not obliged to give particulars of the ground on which he is considering objecting under sections 60 and 61. However, in practice, he will normally disclose the ground in such cases so far as he reasonably can to enable the person or company to respond to the Secretary of State's concerns.

(d) Intervention powers

12 Where the unfitness is intended to be dealt with by any of the intervention powers in sections 38 and 41-45, the procedure in section 46 must be followed. If the person in question is not a controller, a two stage procedure corresponding to that described in paragraph 10 above applies. If the person in question is a controller, notice is served on the company only, and the company may make representations, written and oral, within one month. Notices served under section 46 are required to state the ground for action and the powers intended to be used.

Exercise of Secretary of State's Functions

13 A decision to serve a notice or preliminary notice of objection may not be taken at a level below Grade 5. It may be appropriate to involve the head of Division or even the Minister, depending on the nature of the particular case. Recommendations about the level of approval to obtain should be made by the Grade 7 in a submission to the Grade 5. In all cases, the views of Solicitors should be sought prior to service of a preliminary notice of objection.

Insurance Division Objective

14 To ensure that persons holding key positions in insurance companies are to the best of our knowledge competent, suitably experienced and trustworthy, and in cases where we are aware of information which casts doubts on their fitness for the particular post, we should be prepared to serve notice of objection.

Best Practice

15 An integral and important part of the regulation and supervision of insurance companies in the UK is the consideration of whether persons appear not to be fit and proper to hold certain positions in those companies. The fitness provisions of the ICA 1982 reflect the desirability of high standards and competence and integrity among persons running insurance companies.

16 The acceptability of an individual may need close consideration because of what is disclosed in their notification, or because of

Issued January 1993 **Guideline 4.4**

DTI's policy guidance notes (1991)

Guideline 4.4: Notices of Objection and Representations

what is found during I1A's routine enquiries (outlined in another chapter of this section of the Guidance notes), or because of what is known separately to the Department. In deciding a person's fitness, it is legitimate for the Department to have regard for any views which may have been formed at any time in its dealings with the person concerned.

17 Financial unfitness - where the Department has any doubts about the ability of a proposed new controller, it will be necessary to enter into an early dialogue and, if necessary, serve a notice of objection in the normal time scale. Indications that a proposed new controller is financially unfit are that, for example, the acquisition of the target company is being funded by an unacceptably high level of borrowings which will put pressure on the insurance company to yield up dividends. Acquisitions by private individuals and new companies which cannot submit accounts for three previous years must always be looked at with great care. Advice on financial fitness should always be sought, from GAD in the case of life companies.

18 The term "fit and proper" is not defined in the legislation; and it is not possible and probably not desirable to give an exhaustive list of the kinds of conduct which could lead to a finding of unfitness against an individual. However, the information required by the Insurance Companies Regulations provides some pointers to the relevant issues. These are principally the honesty, integrity, knowledge and experience of an individual. By way of illustration, the following considerations may be relevant to decisions on fitness cases:

1 **Non-disclosure** – this alone may not necessarily be sufficient reason for formal action, but there can be dishonest concealment which would make the individual unsuitable for many positions. Where our enquiries reveal an omission from a notification (e.g. of a conviction or bankruptcy) the supervisory section should always ask the individual whether its information is correct, and for comment on the omission and the circumstances of the matter. Such enquiries should be made discreetly and usually to the home address of the person concerned (an example is provided at paragraph 4 of Annex B). It may be appropriate subsequently to require the individual, irrespective of the embarrassment it may cause, to inform the company of the matter omitted, followed by the sending to the Department of an accurately completed form or of a letter from a person of suitable standing in the company confirming awareness of the matter in question.

2 **Offences** – the significance of any offence known to the Department should be considered on its merits, taking full account of all available information concerning the surrounding circumstances. Relevant considerations would be: the nature of the offence (those involving dishonesty would probably be regarded more seriously than a speeding conviction), the period of time since the offence (the more recent, the more seriously it may be regarded), and the age at the time of the offence (some allowance for youthful folly might be appropriate).

3 **Bankruptcies** – we should take account of the surrounding circumstances, particularly the nature of the individual's role and degree of culpability.

4 **Experience** – in considering proposed appointments of chief executives and managing directors it is reasonable to expect such people to have had 5 years experience in the preceding 10 years at a similar level or the next step down in a UK-authorised insurance company that has carried on similar business. With regard to the experience of a new director, it has usually been considered sufficient if at least one third of the directors have been directors of a UK-authorised insurance company for at least 5 of the previous 10 years. The absence of professional qualifications has not been regarded a bar to the holding of senior positions in authorised insurance companies.

5 **Other considerations** – examples would be (a) age of directors (the age and composition of the board as a whole should be considered); (b) irresponsible behaviour (e.g. investing the assets of an insurance company in unsuitable speculative directions, or delegating the management of the company to an agent whose fitness and properness is itself in

Issued January 1993 **Guideline 4.4**

DTI's policy guidance notes (1991)

Guideline 4.4: Notices of Objection and Representations

doubt); (c) character weakness (such as failure to resist a dominating management recognised as being engaged in doubtful or worse practices.

19 It is important to bear in mind that the fitness of a person must always be considered in the light of the particular position that he holds or is proposing to take up. An individual who may well be perfectly fit and proper to act as a notifiable manager of an insurance company may not necessarily be fit and proper to act as the company's managing director or chief executive.

20 The time scale for taking action in the case of changes of director, controller or manager is an extremely tight one. Sections 60 and 61 of the ICA 1982 enable the Secretary of State after completing the statutory procedures to object to, and thus prevent, the proposed appointments. A 3 month period is allowed for the Secretary of State to serve on the company a formal notice of objection to the proposed appointment. But within this period, I1A's enquiries must be completed and 5 weeks must be pencilled in for the making and consideration of representations. In order to invoke the statutory process, therefore, a preliminary written notice indicating that the Secretary of State is considering objecting to the person concerned must in practical terms be served within **6 weeks** of his particulars being received in the Department. The provisions of the Act relating to the refusal or withdrawal of authorisation and the exercise of intervention powers contain no corresponding time limits. However, where the Secretary of State may wish to exercise these powers on fitness grounds on the basis of notifications under, for example, section 62 or section 64, our policy is to try to operate within a similar time scale.

21 Once a decision has been taken, at the appropriate level (see paragraph 13), to serve a preliminary notice of objection the advice of Solicitors should be sought on the precise drafting of the statutory notice and the accompanying letter(s). They should already have been involved in evaluating the case. It is also important that I1A are advised of the action being taken by the supervisory section, including notification of the eventual outcome of the case. A covering letter is then sent to the individual concerned (and if necessary to the company - see paragraphs 9-12) enclosing the preliminary written notice of objection to the company. As indicated above, it is Department policy normally to disclose the particulars of the ground on which the Secretary of State is considering the service of a notice of objection, even though we are not obliged in all cases to do so.

22 The letter and notice bring to the attention of the individual (and if appropriate the company) that they may submit written, and make oral, representations within one month from the date of service of the preliminary notice. If receipt of the letter(s) is not acknowledged or an indication is not given fairly quickly that representations will be made, we should send a reminder letter or enquire by telephone. However, it should be noted that -

(a) under sections 12(7) and 70(3) of the Act a notice served on any person by the Secretary of State under section 12(1) or (2), 46, 60 or 61 may be served by post and a letter containing the notice shall be deemed to be properly addressed if it is addressed to that person at his last known residence or last known place of business in the United Kingdom; and

(b) by virtue of section 7 of the Interpretation Act 1978, in the case of service by post service is deemed to be effected by properly addressing, pre-paying and posting the letter and, unless the contrary is proved, to have been effected at the time at which the letter would be delivered in the ordinary course of post.

Receipt of any written representations should be formally acknowledged.

23 If oral representations are requested, satisfactory arrangements about time and place should be made expeditiously with the person concerned. Some practical advice about arrangements for the oral representations is provided at Annex A. There is advantage in the officials involved having had an opportunity to consider the written representations before any oral representations are heard, so they should be requested in advance of the hearing. The interval between the receipt of written, and hearing of oral, representations will usually be very short.

Issued January 1993 **Guideline 4.4**

DTI's policy guidance notes (1991)

Guideline 4.4: Notices of Objection and Representations

24 The officer appointed to hear any oral representations should be a Grade 5 or above. The appointment should be made in writing by an officer of higher rank (see Annex C) . Normally the officer appointed will be the head of Branch responsible for supervising the company involved. It is important that the person concerned should have no reason to think that the appointed officer has any pre-conceived views on the matters at issue. It may not be appropriate, therefore, for the head of Branch concerned to hear oral representations if he/she has been closely involved in discussions with the person concerned relating to the subject which gave rise to the fitness issue.

25 The appointed officer will be accompanied at the oral representations by a representative from Solicitors Division. Other members of staff may be present, but the number should be kept to a minimum. Arrangements should be made for a verbatim record of the hearing. This will subsequently be copied to the person concerned to confirm the accuracy of the record.

26 Once the representations (written and, if requested, oral) are complete the appointed officer will arrange for a submission to be prepared recommending what further action, if any, should be taken. It is likely that the submission will be referred to Ministers and it should be cleared in draft with Solicitors. It should set out the statutory and company background, summarise the grounds on which the Department doubts the person's fitness and the representations to the contrary, and give an evaluation of the representations. If no representations have been made, it can be taken that the grounds for the action are uncontested and this should be reflected in the submission.

27 The Secretary of State must be seen to have acted fairly, particularly by taking into account the representations made by the person/insurance company concerned. A particular difficulty in the operation of the legislation is that the Department appears as both prosecutor and judge. This makes it vulnerable to the criticism that it has acted unfairly. Particular care is necessary to avoid this criticism. Statutory action should only be recommended when, in the light of all the circumstances, it appears that the person concerned is not a fit and proper person to hold the appointment in question and action is desirable for the purpose of protecting the policyholders or prospective policyholders.

28 If our decision is that, after considering the representations made, we still find the person concerned to be not fit and proper to hold the particular position, we can refuse authorisation, withdraw the company's authorisation, serve a notice of objection or issue a notice of requirements, as the case may be.

29 Should we, on the other hand, decide not to object on grounds of fitness we should confirm in writing to the person(s) concerned that in the light of the representations made, we have no objection to the (proposed) appointment.

30 It may well be the case that following service of the preliminary written notice, the individual decides to resign from the company. In that event, further action is unnecessary; the grounds for the exercise of the powers cease to exist if the office holder ceases to hold his position.

31 There is always the possibility of taking action otherwise than under the Act, eg by reporting a professional to his disciplinary body or reporting evidence of crime to the police, or taking some lesser action in less serious cases or where there is a doubt about the culpability of the individual concerned, eg a warning letter or a letter indicating to a company that the Secretary of State would be content to see the person concerned appointed to a different position.

32 In cases where a person has been found not fit and proper (and in some cases where a finding has not been made, eg because the person concerned resigned or the evidence was not clear) it may be desirable in any event to notify other regulators (including overseas regulators).

Implications for our Understanding of a Company's Position

33 The Department ought to be able to have reasonable confidence in the competence, integrity and experience of those in positions of authority in insurance companies. If we consider we have valid reasons to question that a person is fit and proper to hold certain notifiable posts, we should be prepared to

Issued January 1993 **Guideline 4.4**

DTI's policy guidance notes (1991)

Guideline 4.4: Notices of Objection and Representations

take action as outlined in this Guideline. Failure to carry out vigilant checks and to act in cases where we have reason to doubt a person's fitness could allow less than scrupulous people to remain in charge of the affairs of a company with the possibility that through either incompetent, negligent, reckless or even fraudulent dealings they could affect the viability of the company and put policyholders at risk.

Standard Drafts
34 Some specimen notices and letters are attached at Annex B which should be adapted carefully as appropriate, taking account of legal advice obtained. A draft minute arranging for authorisation of the appointed officer for the hearing is at Annex C.

Conditions to be Attached
35 None applicable.

Legal Advice
36 This Guideline is based on procedures which have been agreed with Solicitors. In any event, it will be necessary to consult Solicitors during the course of evaluating all cases where fitness action is being considered.

GAD
37 It is for Insurance Division to decide whether to initiate fitness action, but in cases involving companies conducting long-term business the advice of GAD should be sought.

EC Aspects
38 Not applicable at present (although the provisions for EC companies referred to in paragraphs 3 and 6 take account of the responsibilities of home State supervisors). However, the Third Insurance Directives contain, in addition to the "single passport" rules, provisions about the suitability of directors, managers and controllers which may require amendments to be made to the Act, notably to enable the Secretary of State to act directly against unfit controllers.

On the Record Statements
39 The Parliamentary Commissioner for Administration has commented on the handling of fitness cases:

> "It is not improper for (the Department) to have regard for any views which may have been formed at any time in their dealings with (that) person, but when actually making a case for action under the very broad and far reaching powers which Parliament has conferred on them, they should be scrupulous in their dealing with the individual or individuals concerned to make sure that they are being fairly treated, that they understand the case that is being made against them and that they have an opportunity to answer the case. Finally, on putting the issue for decision to Ministers **the Department should be scrupulous in seeing that the case for the (absent person) is fully and fairly deployed."**

[Parliamentary Papers : House of Commons : Session 1976-77, Volume XXXVIII, page 49]

The Precedent Register
40 A separate database on fit and proper cases is maintained by [redacted] in I1B. It is important in order to keep the database up to date that supervisors supply [redacted] with relevant information in the required format (see Annex to Guideline 1.2) for all cases where fitness action is started. Supervisors may also find it useful to consult the database for precedents when considering taking fitness action.

Compliance Costs for Companies
41 There will be some cost implications for individuals and companies in preparing information in defence of fitness cases but this should not inhibit us from taking action in the interests of policyholders where we have reasonable grounds for doing so.

Insurance Annual Report
42 Relevant in so far as the number of times intervention powers under sections 38-45 have been used must be recorded in the Report, and of these sections 38 and 41-45 can be triggered by fitness considerations following action under section 46. If there have been instances where this has occurred, the HEO supervisor must keep note for eventual publication in the Report.

Policy Responsibility
43 Divisional policy on this issue has not been specifically allocated (but note that I1A has responsibility for carrying out "routine" fitness checks, as opposed to a subjective evaluation).

Issued January 1993 **Guideline 4.4**

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies

Guideline 5.4

Correction of Inaccuracies and Supply of Deficiencies

Synopsis

1. Guidance on action to be taken if it appears that any document forming part of a company's annual return is inaccurate or incomplete in any respect.

The Legislation

2. Section 22(5) ICA 1982 requires the Secretary of State to "consider the documents deposited" under both s22(1) and s22(2), ie the annual return and statement of connected intermediaries. It also requires the Secretary of State, "if any such document appears to him to be inaccurate or incomplete in any respect", to "communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies".

Exercise of Secretary of State's Functions

3. Letters to a company, on behalf of the Secretary of State, requiring the correction of inaccuracies and the supply of deficiencies, should be signed at a level not below EO.

Insurance Division Objective

4. To secure the correction of material errors and the supply of deficiencies in annual returns, or in statements of connected intermediaries, in order that neither the Department nor the public, including shareholders and actual or potential policyholders, form a view of the company based on inaccurate or incomplete information.

Best Practice

5. Supervisors should have few reservations about formally requesting companies to correct inaccuracies and/or to supply deficiencies.

6. Errors in and omissions from a company's annual return may be discovered at any stage during the examination process. They may be discovered on first receipt of a return by supervisors, by the Central Reception and Progressing Unit ("CRPU"), by the Validation and Compliance Unit ("VCU") or subsequently by supervisors or by GAD.

7. In the case of I1 companies, the CRPU will draw the supervisor's attention to any errors or omissions identified by the Unit in the course of its work. Also in respect of I1 companies, the VCU will, in most cases, take up with the company concerned, using section 22(5) powers, material absolute errors identified in computer-generated validation and compliance reports on any return. At present, these Units do not process returns from companies supervised by I2. Therefore, supervisors in I2A and I2B must themselves execute all the checks which fall to I Division staff.

8. Insurance Division staff are responsible for checking in detail the returns of a general business company and for checking those parts of a return of a composite company which relate to its general business. A more limited examination of returns, or parts of returns, relating to long term business is carried out in the Division (see paragraph 22 below).

9. Supervisors should make a note of any errors or omissions which emerge during the examination process, and which have not been the subject of follow up action by the VCU, with a view to writing to the company as soon as the examination is complete. The timing of such a letter must be left to individual judgement but the aim must be to write sooner rather than later, whilst endeavouring to ensure that no further errors or omissions are likely to be discovered. However, depending on the significance of any error or deficiency, there may be occasions when it will be necessary to seek

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies

corrections or the supply of deficiencies before further examination continues; in extreme cases it may be that resubmission of the whole return should be sought.

10. A draft "section 22(5) letter" is at Annex A (see also paragraphs 11 and 16 below). This may need to be amended slightly to suit particular cases but it is essential that most of the draft remains in any revised version.

11. There may be occasions when it is not entirely clear whether there is an inaccuracy in a return although one may be suspected. Whilst it only has to "appear" to the Secretary of State that there is an inaccuracy or a deficiency it may be necessary to query the point with the company before concluding there is definitely an error. In such cases the draft at Annex B should be used.

12. When five copies of the amended material are received they should be checked. If they are not in an acceptable form the company should be requested to resubmit them. In particular, supervisors should check that any corrected or new material which is part of the return subject to audit has been endorsed by the auditor. Supervisors should also ensure that the form of the document is such that members of the public examining the return will be able to understand it (see paragraph 5 of the draft letter at Annex A). If necessary, marginal notes should be added in order to identify to which parts of the original return the corrections refer. Copies will be distributed by the CRPU in the case of I1 companies, and should be distributed by supervisors in other cases, on the same basis as the original return.

Despatch of Documents Received to Companies House

13. A copy of the new or revised material must be sent to Companies House under cover of a minute suggesting, if necessary, how the original return should be marked in order to show that particular parts have been amended or replaced. Suggestions for marking original returns must be kept to a minimum. Companies House cannot remove documents from the original return on public record nor can new or replacement parts of the return be inserted at the appropriate place in the original return; they will be filed in "date of receipt" order.

14. If any inaccuracies or deficiencies in returns for any earlier year are identified, which were not at the time taken up with the company, attention should be drawn to them during the process of examining and reporting on the current year's return. There may be practical considerations which suggest that past uncorrected inaccuracies or deficiencies should not be taken up, but supervisors should be aware of the legal advice at paragraph 20 below.

Implications for our Understanding of a Company's Position

15. Clearly, any return may be misleading if it contains material inaccuracies or is deficient. It is important that any inaccuracies or deficiencies be rectified as soon as possible. The materiality of an inaccuracy depends, inter alia, on the extent to which it affects the validity of the conclusions which may be drawn about the company.

Standard Drafts

16. The draft letter at Annex A should be used when it is clear that there are inaccuracies and/or deficiencies, subject to any adaptation necessary in particular cases (see also paragraph 10 above), whereas the draft at Annex B should be used if it is not entirely free from doubt that there is an inaccuracy in a particular case (see paragraph 11 above).

Legal Advice

17. Section 22(5) imposes on the Secretary of State a duty to "police" the documents rather than merely to act as a depository for them. This contrasts, for example, with documents deposited by a company with the Registrar of Companies under the Companies Act.

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies

18. Notwithstanding the use in s22(5) of the expression "inaccurate or incomplete in any respect", this can be interpreted in a common sense way to mean "in any material respect". Materiality must, however, be judged not only from the point of view of the supervisor acting on behalf of the Secretary of State but also from the point of view of a shareholder or policyholder who either applies to the company for a copy (section 23 ICA 1982) or inspects the copy on the public record at Companies House (section 65 ICA 1982). Therefore, the Department must communicate with the company to secure the correction of inaccuracies and/or the supply of deficiencies. This must be the case, even though the supervisor, because of his skill and experience, may be able to see through the inaccuracy or deficiency and ascertain the true meaning if there is any risk that a policyholder or shareholder will not be able to do so.

19. There is no legal obligation to take up every trivial error in an annual return, provided we are satisfied that it is indeed trivial and does not hide serious compensating errors. If there is a material inaccuracy or deficiency this must be taken up with the company. All errors in items which are used in solvency tests should be regarded as material unless, or until, the supervisor is satisfied that either they will not affect the results of the solvency test in the current or future years, or effective supervision is possible without the test.

20. Should there be material inaccuracies or deficiencies in a company's returns for earlier years, which were not at the time taken up with the company with a view to them being rectified, we would be in breach of the duty under s22(5). However, an action by a shareholder or policyholder is unlikely to succeed in the absence of damage.

21. The requirement to deposit with the return, in accordance with s22(6), a copy of any report to shareholders or policyholders is not covered by s22(5).

GAD

22. Whilst Insurance Division staff carry out a limited examination of the returns of a long term business company, and of the long term business part of a composite company's return, the detailed examination of long term business returns will be carried out by GAD in accordance with the Concordat which sets out the arrangements made between Insurance Division and GAD (see Appendix 9 of the Examination Manual and Guideline 1.4).

23. Any significant errors or omissions discovered in Insurance Division in relation to long term business must be notified to GAD. Following their initial scrutiny of a return, GAD will advise Insurance Division if it appears that any significant information has not been provided, or if there are significant errors in the information, in order that supervisors may take action under s22(5). If, on detailed examination, GAD identifies further inaccuracies or deficiencies they will agree with Insurance Division who should correspond with the company.

24. A copy of any amended or new material received by Insurance Division in response to a s22(5) request must be sent to GAD if it relates to long term business or to a general business return already sent to GAD. Similarly, GAD will copy to Insurance Division any such material received by them.

EC Aspects

25. None.

On the Record Statements

26. None.

The Precedent Register

27. Provided this Guideline is adhered to, there is unlikely to be a need to take account of any specific precedents, nor is there likely to be a need to copy anything for inclusion in the Register, but do not rule out the possibility in either case.

Issued September 1991 | Guideline 5.4

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies

Compliance Costs for Companies

28. The need for a company to submit revised or additional material in accordance with section 22(5) is bound to increase its compliance costs. However, an insurance company has an obligation to deposit accurate and complete returns and statements which are required by legislation. Nevertheless, we should only take s22(5) action in respect of material inaccuracies and deficiencies (see paragraph 18 above) and should not abuse our powers in order to "score points" against a company.

Insurance Annual Report

29. To enable publication of details of the exercise of the Secretary of States powers, a record must be kept of the number of occasions on which the power in s22(5) is exercised. Therefore, a central record must be kept in each HEO supervisory unit of each occasion the power is exercised by that unit and a separate record must be kept by the VCU of the occasions on which they exercise the power.

30. For the purpose of recording, and in fact, each approach to a company is a separate exercise of the s22(5) power. This means that where it is necessary to approach a company more than once about the same return, but about different inaccuracies and/or deficiencies, each approach should be recorded as a separate exercise of the s22(5) power. However, if it is necessary to write more than once about the same issue(s), eg to send a reminder or to seek clarification of an earlier response, the subsequent letters should be regarded as part of the original exercise of the s22(5) power and should not be separately counted.

Policy Responsibility

31. Divisional Policy on this issue has not been allocated, but Branch 1 policy issues on s22(5) rest with I1B1 ([redacted]).

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies – Annex A

H1FRI1.126

DRAFT SECTION 22(5) LETTER **ANNEX A**

I have considered the return deposited by the above named company under the Insurance Companies Act 1982 in respect of the financial year ended +............ It appears that it suffers from the inaccuracies and/or deficiencies listed in the Annex to this letter.

2. I am writing, therefore, to ask you, in accordance with Section 22(5) of the Act, to correct the inaccuracies and/or to make good the deficiencies by submitting five copies of amended or new forms as necessary.

3. Amended or extra forms deposited in response to this letter must be signed in accordance with Section 22(3) of the Act. Moreover, it will be necessary for the documents to be endorsed by the auditors and signed by them in accordance with Section 22(4) of the Act. You will, therefore, wish to ask the auditors to report on the amended material either by issuing a completely new report under Regulation 27 of The Insurance Companies (Accounts and Statements) Regulations 1983, or a report on the amended material only. If the auditors prefer the former option, their report should, of course, make the position quite clear and include a nullification of their earlier report. If they prefer the latter option, they should include a reference to their earlier report so that the latest one can be read in conjunction with it.

4. I would remind you that the documents constituting the company's response to this letter -

a. will be deposited with the Registrar of Companies pursuant to Section 65(1)(a) of the Act, and,

b. should be supplied to any shareholder or policy holder pursuant to Section 23(1)(b) of the Act.

5. It follows that such documents should be self explanatory at least to the extent of -

a. bearing the name of the company,

b. indicating the fact that they form part of the company's return under the Act,

c. indicating the financial year to which they relate,

d. indicating they are amending/additional documents furnished pursuant to Section 22(5) of the Act, and,

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies – Annex A

e. where appropriate, identifying the original documents which are being replaced.

6. Please comply with this letter urgently so that your reply is received by [date 3 weeks after date of letter.]

7. Should you have any queries regarding this letter or the enclosed Annex, please contact the undersigned at the address shown at the head of this letter. *[Any other queries on regulatory matters should continue to be referred to your company's usual contact within Insurance Division].

*[8. Finally, I should make clear that examination of the returns to which this letter relates is not yet complete and the Department may find it necessary to raise other points at a later stage.]

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies – Annex B

DRAFT.SEC

ANNEX B

DRAFT SECTION 22(5) LETTER (WHERE THERE IS DOUBT)

I have considered the return deposited by the above named company under the Insurance Companies Act 1982 in respect of the financial year ended + ...

2. Whilst it is not entirely free from doubt, it appears that the return may suffer from the inaccuracies and/or deficiencies listed in the Annex to this letter. If you agree, I ask you, in accordance with Section 22(5) of the Act, to correct the inaccuracies and/or make good the deficiencies by submitting five copies of amended or new forms as necessary should you not agree I would appreciate a letter of explanation from you.

3. Amended or extra forms deposited in response to this letter must be signed in accordance with Section 22(3) of the Act. Moreover, it will be necessary for the documents to be endorsed by the auditors and signed by them in accordance with Section 22(4) of the Act. You will, therefore, wish to ask the auditors to report on the amended material either by issuing a completely new report under Regulation 27 of The Insurance Companies (Accounts and Statements) Regulations 1983, or a report on the amended material only. If the auditors prefer the former option, their report should, of course, make the position quite clear and include a nullification of their earlier report. If they prefer the latter option, they should include a reference to their earlier report so that the latest one can be read in conjunction with it.

4. Any documents constituting the company's response to this letter in cases where it is accepted that there are inaccuracies and/or discrepancies -

a. will be deposited with the Registrar of Companies pursuant to Section 65(1)(a) of the Act, and,

b. should be supplied to any shareholder or policy holder pursuant to Section 23(1)(b) of the Act.

5. It follows that such documents should be self explanatory at least to the extent of -

a. bearing the name of the company,

b. indicating the fact that they form part of the company's return under the Act,

c. indicating the financial year to which they relate,

DTI's policy guidance notes (1991)

Guideline 5.4: Correction of Inaccuracies and Supply of Deficiencies – Annex B

d. indicating they are amending/additional documents furnished pursuant to Section 22(5) of the Act, and,

e. where appropriate, identifying the original documents which are being replaced.

6. Please comply with this letter urgently so that your reply is received by [date 3 weeks after date of letter.]

7. Should you have any queries regarding this letter or the enclosed Annex, please contact the undersigned at the address shown at the head of this letter. *[Any other queries on regulatory matters should continue to be referred to your company's usual contact within Insurance Division].

*[8. Finally, I should make clear that examination of the returns to which this letter relates is not yet complete and the Department may find it necessary to raise other points at a later stage.]

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities

Guideline 6.2

Valuation of Long-term Liabilities

Synopsis

1. Guidance, in very broad terms, on the valuation of long-term liabilities.

The legislation

2. Section 19 of the 1982 Act requires every company carrying on long-term business to appoint an actuary, within one month of commencing business in respect of a new company and as soon as possible after termination of the previous appointment in respect of an existing company; and to notify the Secretary of State of the appointment, within fourteen days. This post is known as that of the "Appointed Actuary", and is one of the key features of our supervision of life assurance companies.

3. Section 18(1) of the 1982 Act requires the Appointed Actuary to carry out an actuarial valuation of the long-term liabilities of the company every twelve months. When the annual valuation has been carried out, and at other times - that is, when the company has carried out a valuation with a view to making a distribution to its shareholders, or when the results of such valuation are to be made public - an abstract of the actuary's report of his valuation must be made available in the prescribed form.

4. Section 18(3) requires a more detailed statement of a company's long-term business once every five years at the same time as the annual valuation of liabilities for that year is being carried out.

5. The prescribed form for the abstract of the actuary's report is required by Regulation 24 of the Insurance Companies (Accounts and Statements) Regulations 1983 ("the 1983 Regulations") which in turn requires the abstract to follow the form set out in Schedule 4 to the 1983 Regulations -together with Schedule 5 in the case of a five yearly statement required by Section 18(3) of the 1982 Act.

6. Very broadly speaking, the valuation of long-term liabilities involves placing a present day value on the future liabilities of a long-term business company. Under the terms of the 1982 Act, the Appointed Actuary is responsible for this. In carrying out his duties the Appointed Actuary must follow the broad requirements set out in Part VI (Regulations 50 - 64) of the Insurance Companies Regulations 1981 ("the 1981 Regulations"). This part of the 1981 Regulations is couched in very broad terms requiring the Appointed Actuary, inter alia, to determine the long term liabilities "on actuarial principles and to make proper provision for all liabilities "on actuarial principles and to make proper provision for all liabilities on prudent assumptions" [Regulation 54], "to take into account the nature and term of the assets representing the long term fund and to include appropriate provision against the effects of possible future changes in the value of assets" [Regulation 55], and to make provision for meeting the expenses likely to be incurred in future. A brief, but more detailed summary of the principles that have to be observed in the calculation of the technical provisions held for life insurance business by authorised UK companies in their statutory returns has been prepared by the Government Actuary's Department and is at Annex 1.

7. In other words, the regulations do not prescribe precise ways of valuing long term liabilities. The actual amounts to be placed on a company's long term business, therefore, is for the judgement of the Appointed Actuary in the light of his professional knowledge and skills, subject to the criteria set out in the 1981 Regulations and further guided by the professional guidance notes issued by the Institute and Faculty of Actuaries (Guidance Notes GN 1 and GN 8). Copies of these professional guidance notes are attached at Annex 2.

8. In separate letters issued by the Government Actuary to Appointed Actuaries guidance has been given as to the benchmarks against which their individual provisions against AIDS and Resilience will be examined. The former was originally in a letter dated 14 November 1988, which was subsequently updated on 7 December 1989.

Issued November 1992 **Guideline 6.2**

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities

The latter was originally set out in a letter dated 13 November 1985, but has recently been updated in the communication dated 31 July 1992, to which reference is made in paragraph 20 of Annex 1.

9. When he has completed his valuation of long term liabilities the Appointed Actuary must certify, under Regulation 26 of the 1983 Regulations and as specified in Schedule 6 to those Regulations, that proper records have been kept by the company adequate for the purposes of the valuation, that the mathematical reserves shown in the returns (Form 14) constitute proper provision for the long term liabilities, and that the liabilities have been assessed in accordance with Part VI of the 1981 Regulations. He is also required to confirm in his certificate the amount of the required minimum margin applicable to the company's long-term business at the end of the year, as calculated in Form 60.

Exercise of Secretary of State's Functions
10. Advice on the valuation of long-term liabilities must be obtained from GAD by the relevant HEO supervisor. Formal action on behalf of the Secretary of State should always be taken by Insurance Division (based on GAD's advice).

Insurance Division Objective
11. To be satisfied that the valuation of long-term liabilities is in accordance with the 1981 Regulations and is correctly reported in Schedule 4 (together with Schedule 5 where appropriate) of the 1983 regulations. In addition, to be satisfied that the required minimum margin of solvency is covered at all times and that it appears likely that the company will be able to continue to maintain adequate cover for its solvency margin in the future. Advice on this is provided by GAD under the "concordat". However, if GAD advise that the valuation does not meet the provisions of Part VI, action to require the company to take corrective action will ultimately rest with the Department.

Best practice
12. The GAD will advise on best practice, and all matters connected with the determination of long term liabilities must be referred to them.

Implications for our understanding of a company's position
13. The appropriate valuation of a company's long term liabilities is essential to our understanding of its financial position.

Standard Drafts
14. Not applicable in the context of this Guideline.

Conditions to be attached
15. Not applicable.

Legal Advice
16. Although legal advice may be sought on certain aspects, eg enforcement in rare cases where the valuation has been wrongly carried out, the judgement on whether the company is complying with their terms of the Regulations is normally a matter for the GAD.

The Government Actuary's Department
17. GAD's role in advising on the valuation of long term liabilities is paramount.

EC Aspects
18. The 3rd Life Framework Directive sets out broad principles for the determination of long term liabilities. When the Directive is implemented, this Guidance will require to be amended.

On the Record Statements
19. None.

The Precedent Register
20. Not applicable.

Compliance Costs for Companies
21. Clearly there are compliance costs for companies in carrying out actuarial valuations of long-term liabilities but this is a legislative requirement under the terms of the ICA 1982.

Insurance Annual Report
22. Not applicable in the context of this Guideline.

Policy Responsibility
23. With I2, in conjunction with the advice received from the GAD.

Issued November 1992 **Guideline 6.2**

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

ANNEX 1

Life Insurance Technical Provisions

1. This note has been prepared as a brief summary of the principles that have to be observed in the calculation of the technical provisions held for life insurance business by UK authorised companies in their statutory returns. These provisions must be assessed by a suitably qualified actuary as prescribed by regulations.

2. Although Part VI of the Insurance Companies Regulations 1981 (attached) governs the valuation of the liabilities of insurance undertakings, these regulations are buttressed by Guidance Notes issued by the two actuarial professions in the UK, which are mandatory on the actuary. A departure from those guidance notes can lead to disciplinary action against the actuary, including dismissal from his profession. (The Guidance Notes GN1 and GN8 are also attached).

3. The overriding requirement of the legislation in regard to the determination of the mathematical reserves is that they should be made on actuarial principles making proper provision for all liabilities on prudent assumptions in regard to the relevant factors (ie mortality rates, technical interest rates, expenses, options, morbidity, etc). Please see Regulation 54.

4. There are also certain minimum reserving standards set out in the regulations for most relevant factors. Please see Regulations 55 to 64. However, the fundamental and overriding actuarial principle that requires a prudent assessment of the technical provisions applies to every significant category of business and may impose a higher level of technical provisions on a company than the minimum requirements may imply.

5. It is convenient to analyse separately the following major types of business for which different considerations under the valuation rules are

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

required.

1) Class I (non-linked) business and Class IV business with regular premiums.

2) Class I (non-linked) non-profit business with single premiums

3) Class III (linked) business.

1) Non-linked regular premium business

6. The statutory valuation regulations prescribe that a net premium method of valuation shall be adopted for almost all regular premium business in Class I or Class IV. (The exceptions are broadly where the premiums paid in future increase the benefits under a contract by an equivalent amount.) Please see Regulation 57.

7. This means that the actuary will calculate a net premium on the same mortality rates and technical interest rates as adopted for the valuation of each contract. The value of each contract is then taken to be the present value of future benefits less the present value of future net premiums.

Mortality and Disability Bases

8. The mortality and disability rates used for valuation purposes are usually determined on the basis of appropriate mortality and disability tables (eg for assured lives or annuitants, where different considerations apply) based on investigations of the insured lives' experience collected from a large number of UK life offices in recent years, with regard also to the relevant experience of the office writing the business. Some offices are large enough to derive appropriate mortality or disability rates from their own experience, but whether offices are large or small, margins are built into the basis used for reserving purposes. Please see Regulation 60.

9. Actuarial principles require that mortality rates must be adjusted to allow for future improvement of mortality for annuitants and pensioners. For assured lives insured for death or disability benefits, allowance must also be made for the future AIDS risks at a projected level assessed on a

Issued November 1992 Guideline 6.2

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

prudent basis. The Government Actuary has written to appointed actuaries on behalf of the Department of Trade and Industry to indicate the Working Rule which would be applied when analysing the valuations of life insurance companies.

Technical interest rates

10. In the UK, regulations require companies to value their assets largely on a market value basis, and when considering the value of a company's liabilities, the technical interest rate must be assessed with regard to the current yield (in a market value context) on the assets which the company possesses that are deemed to cover each category of business (and, to the extent appropriate, to the yield which it is expected can be earned on sums to be invested in the future). Please see Regulation 59(1).

11. The current yield on the existing assets is taken to be the redemption yield for fixed interest securities (ie including allowance for any amortisation or appreciation of the capital payable on redemption) but otherwise is taken as the running yield eg on equities and properties. Therefore, no allowance can be taken for possible future dividend growth on equities or rental growth on property, or potential increases in the values of those assets, which have represented the major component of their overall investment return in the past. Please see Regulation 59(3) to 59(6). This current yield on existing assets must then be reduced by a 7½% general contingency margin and an appropriate deduction for taxation on future investment income. Please see Regulation 59(2).

12. For regular premium business, there will of course be future premiums and interest income on existing assets to be invested in later years and the rate of return that may be earned on these future investments is uncertain. The statutory regulations, therefore, set a restriction on the maximum rate of future investment return that may be anticipated for investments to be made more than 3 years after the valuation date.

13. After due consideration of the rates of investment return that have been available on UK investments in the past including fixed interest securities and short term deposits, it was decided to set a limit of 7.2% per annum (gross) for this purpose. (In the UK, the yield on Government securities

Issued November 1992 — Guideline 6.2

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

has never been below 7.2% for over 20 years). Please see Regulation 59(7).

14. Thus, where sums are to be invested in future, the technical interest rate which can be used for a particular contract will be a weighted blend of the yield on existing assets and the yield which the actuary considers can be earned on future sums invested from three years hence, with the latter limited to 7.2% gross. However, there is a further restriction on the maximum technical interest rate which can be used, and this is the current yield on the existing assets less the 7½% contingency margin and the appropriate deduction for future taxation in investment income. Thus, if current yields, as defined, are lower than 7.2%, no account can be taken of the higher figure in the blended yield when determining the technical interest rate to be used. Please see Regulation 59(8).

15. The restriction on the maximum technical interest rate referred to in para 14 has an important effect on the valuation of with-profits business sold in the UK. Premiums for with-profit business can be significantly higher than their non-profit equivalents, and so insurance companies can invest the premiums with long term considerations of the investment return in mind, with the objective of covering the guaranteed benefits at the maturity date specified in the policy or on earlier death, and also seeking to generate a level of surplus which provides competitive levels of bonuses to with-profit policyholders.

16. Equities, and property investment, have outperformed fixed interest investments significantly in the UK over the recent past, and so insurance companies have matched large proportions of their with-profit business with such investment. However, as only the running yields can be used (see para 11 above) on these investments, this severely restricts the technical rate of interest which can be used. (At the time of writing the yield on the Financial Times Actuaries All Share index is about 5.2%, so if a company were to invest only in equities to match its with-profits business, the maximum technical interest rate which it could use for that business would be about 4.75% for its pensions (gross) business and 3.5% for its life (net) business. In practice, nearly all companies have a mixture of gilts, equities and properties to cover their with-profit business).

Issued November 1992 Guideline 6.2

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

17. Additionally, for with-profit policies (which might account for some 80-90% of the regular premium Class I policies, other than pure term assurances in many offices), the actuary is required to satisfy himself as to the pace of the emergence of surplus, (see GN8 para 2.1.3) and in this he would also take into account the nature of the expected bonus distributions, ie the extent to which the company should declare reversionary or terminal bonuses. This would generally mean valuing the with-profit policies at a relatively lower (ie stronger) technical rate of interest than without-profit policies. (The increase in companies' investment in equities and properties has led to an increasing proportion of a policyholders' final maturity proceeds arising from terminal bonus which is only declared as a final addition to the policy to reflect, broadly, current market conditions at the time).

18. Finally, in regard to technical interest rates, it is appropriate to return to the question of the overriding need for prudence in Regulation 54. In the context of the overseas business of a UK authorised life company, where the policy benefits are specified in the foreign currency, and the liabilities are matched by assets of that country and denominated in that currency, the actuary and the UK supervisor would need to consider afresh the suitability of the 7.2% maximum yield for future investment. This maximum has been set in the context of investment conditions in the UK, and is inappropriate for those countries with lower investment returns. (For countries where investment returns have been higher than in the UK in the past, and where they can be expected to continue higher in the future, the 7.2% maximum yield might be too conservative and need to be reconsidered.)

<u>Mismatching reserves</u>

19. As a further fundamental statutory requirement, the actuary must also take into account the nature and term of the assets and include appropriate provision in his mathematical reserves against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities. For matching purposes it is very important to consider not only matching by term, but also whether the types of assets

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

held (eg equities rather than fixed interest) and their currency are appropriate for the liabilities of the company. Please see Regulation 55.

20. Furthermore, in 1985, the Government Actuary circulated a letter to all appointed actuaries on mismatching and resilience testing indicating the standards, or Working Rule, which he would be applying to the latter in considering the suitability of actuaries' statutory valuations when advising the Department of Trade and Industry on the solvency position of each insurance company. Later, in May 1986, the actuarial profession issued a Temporary Practice Note which supported the Working Rule, which requires consideration to be given to a rise or fall of 25% in the value of equities (and property) and a change of 3% in the yield on fixed interest securities. The Temporary Practice Note has been consolidated into a revised GN8 and whilst the benchmark remains, the onus is now placed on the Appointed Actuary to use his professional judgement in the particular circumstances of his own office and the economic conditions prevailing at the time when the valuation is effected. The Government Actuary issued a letter to Appointed Actuaries in this connection dated 31 July 1992.

21. These additional mismatching reserves reflect the effect of a greater resilience to change in the value of the liabilities compared to the value of the assets when recalculating the net premium valuation reserves in the alternative investment conditions tested against (caused largely because the net premium itself changes when interest rates vary) and has led to increasing pressure from UK insurance companies who feel that the combination of Regulation 59 and Regulation 55 has led to a seriously overstrong reserving basis overall. The actuarial profession is currently researching this point.

<u>Zillmerisation</u>

22. Zillmerisation is a technique (named after a Dr. Zillmer) whereby an addition is made to the valuation net premium in order to represent the initial expenses of writing the policy. Essentially this has the effect of

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

spreading (or deferring) acquisition costs over a longer period which might extend to the expected lifetime of each policy.

23. The reserves may be zillmerised to take into account the recovery of the balance of initial expenses from future premiums payable by the policyholder. The value of the zillmer must not be greater than 3½% of the relevant capital sum (normally the sum assured on death) or the total acquisition costs for which allowance is made in the premiums if this is lower. There is also a restriction that the zillmerised net premium must be no greater than the actual premium payable by the policyholder. Please see Regulation 58.

<u>Expenses</u>

24. Under the net premium method of valuation, allowance for future policy maintenance expenses comes mainly from the margin between the actual gross premiums receivable and the assumed valuation net premium. The actuary is required to investigate whether this margin is likely to be adequate to cover the expenses likely to be incurred in fulfilling the existing contracts including the effect of inflation on those expenses. For this purpose, he must have regard to the company's actual expenses in the previous 12 months, and examine the position should the office cease to write new business from the valuation date. As para 3.5 of GN8 states, the transition from a going concern to a closed fund basis can be costly (it may need to include redundancy payments and well as expense overruns while the company closes branch offices etc.) and an additional expense reserve may then be required to supplement the margins in future premiums and any other margins available for expenses. Please see Regulation 61.

<u>Surrenders, options etc.</u>

25. No allowance may be made for future voluntary cessations of policies except where there is an option for policyholders to take some guaranteed cash surrender value or paid-up policy terms. In the case of such options and all other possible options that may be selected by policyholders, provision must be made against any increase in liability that would result

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

from policyholders' exercising options under their contracts.

26. In particular, the technical provision must never be less than zero and must be adequate to cover any guaranteed cash payment that could be secured by the policyholder within the next 12 months.

27. In this context, it should be noted that most UK Class I with-profits life insurance policies do not include any guaranteed payment terms on early surrender of the policy. (Policyholders are given illustration at the point of sale of projections of surrender values for their contract type at specified durations, but these do not constitute a guarantee.) The lack of guaranteed surrender values reflects the investment practice of insurance companies for with-profit contracts, as described in para 16. Clearly, if guaranteed surrender values were given, companies would need to invest proportionately more of their assets in deposits and short-term fixed interest securities, at the expense of the long term investment return. Please see Regulations 62 to 64.

2) <u>Non-linked non-profit single premium business</u>

28. For non-profit single premium contracts, a net premium method of valuation is inappropriate as no further premiums are payable. The technical provision is then assessed as the present value of future benefits including allowance for the expenses of fulfilling the contract and any options that may be exercisable by policyholders.

29. The considerations in relation to mortality rates are similar to those for regular premium contracts. For annuities and pensions in payment, an allowance for future improvement in mortality is particularly important.

30. Technical interest rates are assessed in relation to the current yield obtainable from the assets covering each category of business less a 7½% contingency margin. Where some reinvestment of future income may be required (due, perhaps, to the term of assets being shorter than the term of liabilities), the maximum rate of return that may be assumed is 7.2% per annum gross for investment made more than 3 years after the valuation date.

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

31. A mismatching test is also applied on this business. In particular, there is a resilience test to ensure that adequate provision is made to cover any shortfall that might occur in the amount of assets available relative to liabilities following a 25% rise or fall in the value of equities or a 3% change in the yield on fixed interest securities. Of course, if the nature and term of the assets are properly matched to the liabilities, then little additional provision would be required for this purpose.

32. Where fully appropriate assets are held to cover single premium liabilities, then the technical rate of interest may be quite close to the current yield on these assets. For example, if the redemption yield on the assets is 12% per annum, then a technical interest rate of almost 12(1 - 0.075) = 11.1% may be adopted, provided that the assets are fully matched to the liabilities. Otherwise , a rather lower technical rate of interest would be required to cover any potential losses arising from mismatching, or from holding investments that include an element of risk that the income from, or the capital value of, the asset may not be received as they fall due. See Regulation 59(6).

33. Deferment of acquisition costs on single premium business would be inappropriate. The required provisions for future maintenance expenses expected to be incurred in fulfilling the contracts and also for options exercisable by policyholders need to be considered in a similar manner to regular premiums business.

3) <u>Class III Linked contracts</u>

34. Under linked contracts issued by life insurance companies, the benefits payable are directly linked to the value of certain assets held by the insurance company including interest income derived therefrom, or to some specified external unit trust or an index of stocks. In each case, it is important for the insurance company to minimise its own investment risk by holding the appropriate assets to which policyholder benefits are linked.

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

35. Therefore, the main risk borne by the insurer are those of covering future mortality costs and the expenses associated with fulfilling these contracts, along with any potential liability arising from the exercise of particular options to policyholders or investment performance guarantees that may be included in the contract.

36. As, essentially, all the interest income derived from the assets held by the company to meet these liabilities is applied to increase the policy benefits, and any change in the value of assets is directly reflected in the value of liabilities, there is no particular merit in adopting a net premium method of valuation.

37. Consequently, the technical provisions are calculated as being equal to the unit liability (ie the amount that would normally be paid on encashment of the policy) plus a non-unit reserve often referred to as a 'sterling reserve' assessed as being equal to the present value of future administrative expenses and mortality costs less the margins available to the office from future premiums and fund management charges. The sterling reserve is calculated on discounted cash flow principles on methods and procedures which are well-established in the UK actuarial profession through discussion and papers presented to the professional bodies.

38. The fund management charges are calculated as a proportion (typically 3/4 to 1½ per annum) of the value of assets held in respect of linked contracts. They are intended to cover some of the future expenses of fulfilling these contracts and part of the mortality costs, and broadly represent a hedge against inflation of expenses.

39. There are no detailed regulations at present about the assumptions that should be made in assessing the technical provisions for linked contracts, although an appropriate set of regulations has recently been drafted. Nevertheless, there are now well established actuarial principles governing the valuation of linked contracts, and a general consensus about the parameters to be used in the calculations.

Issued November 1992 Guideline 6.2

DTI's policy guidance notes (1991)

Guideline 6.2: Valuation of Long-term Liabilities – Annex 1

40. In particular, prudent assumptions must be made about the increase in the value of assets relative to the rate of inflation on future expenses; also consideration must be given to the relative sizes of individual contracts as a large proportion of the expenses incurred will be independent of the size of policy although the margins available for expenses are related to the premiums paid or payable.

Government Actuary's Department

1 October 1992

Issued November 1992 Guideline 6.2

DTI's policy guidance notes (1991)

Guideline 8.1: Intervention Powers, General

Guideline 8.1

Intervention Powers, General

Synopsis

1. A summary of the Secretary of State's powers to intervene in the affairs of insurance companies together with details of the grounds on which these powers may be exercised.

The Legislation

2. The powers of the Secretary of State to intervene in the affairs of insurance companies are contained in Sections 38 to 45 ICA 1982. These are considered in detail in the succeeding parts of this chapter but they may be summarised as follows:

S. 38 - power to require a company to refrain from making, or to realise, specified investments.

S. 39 - power to require a company to maintain assets in the United Kingdom.

S. 40 - power to require assets to be placed in trust.

S. 41 - power to limit a company's premium income.

S. 42 - power to order an actuarial investigation (for a company which carries on long term business).

S. 43 - power to require early provision of accounting information.

S. 44 - power to obtain information and require production of documents.

S. 45 - residual power to impose requirements for the protection of policyholders.

3. The powers are exercisable in respect of companies to which Part 11 of the Act applies, for which see S. 15 ICA 1982. It includes anyone carrying on insurance business in the UK, whether authorised or not, and whether an incorporated body or not. The grounds are set out in S. 37(2) and (3) ICA 1982. A summary of these is as follows:

S. 37(2) - the desirability of protecting policyholders or potential policyholders against the risk that the company will be unable to meet its liabilities or meet the reasonable expectation of long term policyholders.

- failure of the company (or in certain circumstances its parent or a subordinate) to satisfy an obligation under the insurance legislation or an obligation under the law of a Member State giving effect to the general insurance Directives (i.e. the EC Directives making provision in respect of non-life insurance - see S. 96A(1) ICA 1982).

- the provision of misleading or inaccurate information for the purposes of the insurance legislation.

- failure to make adequate reinsurance arrangements.

- the existence of a ground which would prohibit the Secretary of State from authorising the company.

- that there has been a substantial departure from a proposal or forecast submitted by the company in accordance with S. 5 ICA 1982.

- that the company has ceased to be authorised to effect contracts of insurance in a Member State where it has its head office or has made a deposit in accordance with S. 9(2) ICA 1982.

S. 37(3) - the Secretary of State has given and not revoked a direction under S. 11 ICA 1982.

- the company has failed to satisfy an obligation under S. 33, 34 or 35 ICA 1982.

- an account or statement has been submitted which specifies the amount of any liabilities of the company determined otherwise than in accordance with valuation regulations or generally accepted accounting concepts.

Issued October 1992 | Guideline 8.1

DTI's policy guidance notes (1991)

Guideline 8.1: Intervention Powers, General

4. The powers conferred by Sections 38 and 41 to 45 are exercisable on the grounds set out in S. 37(2); the powers conferred by Sections 39 and 40, on the grounds set out in S. 37(3).

5. The powers conferred by S. 44(2) - (4) are also exercisable on the ground that the Secretary of State considers the exercise desirable in the general interest of persons who are or may become policyholders of insurance companies.

6. The powers conferred by Sections 38, 41, 42, 44(1) and 45 are, in addition, by virtue of S. 37(5) ICA 1982 exercisable in relation to an insurance company in respect of which the Secretary of State has issued an authorisation, or in relation to an insurance company of which a person has become a controller within S. 7(4) ICA 1982, if the power is exercised before the expiration of 5 years from the date on which the authorisation was issued, or that person became a controller. Requirements imposed in reliance of S. 37(5) only remain in force for a period of 10 years from the event which gave rise to their imposition.

7. The powers conferred by S. 45 ICA 1982 cannot be exercised unless the Secretary of State considers the purpose of protecting policyholders cannot be appropriately achieved by the exercise of the other powers of intervention, or by the exercise of these powers alone.

8. Before exercising any of the powers on the ground that the Secretary of State would be prohibited from issuing an authorisation because of the unfitness of any person for the position held by him (not being a controller) a preliminary notice must be serviced on that person, and the recipient must be given an opportunity of making representations (S. 46 ICA 1982 refers).

9. S. 47(1) of the ICA 1982 empowers the Secretary of State to rescind or vary a requirement imposed under Sections 38-45. S. 47(2) provides that no requirement imposed on either of the S. 37(5) grounds can be varied after the expiration of a period of five years following the date of the authorisation or the date of the change of control, as the case may be. Sections 47(3)(4) and (5) set out the procedures to be followed if a requirement imposed under S. 40 is rescinded or varied.

10. The Secretary of State has separate powers to withdraw a company's authorisation (S.11/12) and to object to a change of controller (S. 60-62). For specific guidance in such situations you should refer to Guidelines 2.5 and 4.4 respectively.

Exercise of Secretary of State's Functions

11. Requirements imposed under Sections 38 to 45 ICA 1982 should not be signed at a level below Grade 7.

Insurance Division Objective

12. To ensure that the Secretary of State's powers of intervention are exercised whenever it is necessary for the protection of policyholders, without companies being subject to unnecessary restrictions.

Best Practice

13. Requirements are imposed on a company because some aspect of its affairs is causing concern or, more routinely, because the company is newly authorised, re-authorised or there has been a change of controller. It should always be borne in mind that requirements are restrictive and may be costly for a company to comply with, and for the Department to supervise. Although they should not be imposed unnecessarily, requirements should always be imposed in proper cases, and Ministers are content for officers to apply such powers robustly.

14. Companies are at their most vulnerable during their early years, and for that reason it is the Department's practice to use the imposition of requirements to strengthen its control during this period. The decision on the precise requirements to be imposed is taken by Branch 1A (or 2A in the case of life business) after consultation with the company, who will be provided with a draft of the notice for comment.

15. When deciding what requirements are necessary regard can be had to the standard requirements. However, these requirements should not all be imposed as a matter of course. The aim should be that broadly similar

Issued October 1992 — Guideline 8.1

DTI's policy guidance notes (1991)

Guideline 8.1: Intervention Powers, General

4. The powers conferred by Sections 38 and 41 to 45 are exercisable on the grounds set out in S. 37(2); the powers conferred by Sections 39 and 40, on the grounds set out in S. 37(3).

5. The powers conferred by S. 44(2) - (4) are also exercisable on the ground that the Secretary of State considers the exercise desirable in the general interest of persons who are or may become policyholders of insurance companies.

6. The powers conferred by Sections 38, 41, 42, 44(1) and 45 are, in addition, by virtue of S. 37(5) ICA 1982 exercisable in relation to an insurance company in respect of which the Secretary of State has issued an authorisation, or in relation to an insurance company of which a person has become a controller within S. 7(4) ICA 1982, if the power is exercised before the expiration of 5 years from the date on which the authorisation was issued, or that person became a controller. Requirements imposed in reliance of S. 37(5) only remain in force for a period of 10 years from the event which gave rise to their imposition.

7. The powers conferred by S. 45 ICA 1982 cannot be exercised unless the Secretary of State considers the purpose of protecting policyholders cannot be appropriately achieved by the exercise of the other powers of intervention, or by the exercise of these powers alone.

8. Before exercising any of the powers on the ground that the Secretary of State would be prohibited from issuing an authorisation because of the unfitness of any person for the position held by him (not being a controller) a preliminary notice must be serviced on that person, and the recipient must be given an opportunity of making representations (S. 46 ICA 1982 refers).

9. S. 47(1) of the ICA 1982 empowers the Secretary of State to rescind or vary a requirement imposed under Sections 38-45. S. 47(2) provides that no requirement imposed on either of the S. 37(5) grounds can be varied after the expiration of a period of five years following the date of the authorisation or the date of the change of control, as the case may be. Sections 47(3)(4) and (5) set out the procedures to be followed if a requirement imposed under S. 40 is rescinded or varied.

10. The Secretary of State has separate powers to withdraw a company's authorisation (S.11/12) and to object to a change of controller (S. 60-62). For specific guidance in such situations you should refer to Guidelines 2.5 and 4.4 respectively.

Exercise of Secretary of State's Functions

11. Requirements imposed under Sections 38 to 45 ICA 1982 should not be signed at a level below Grade 7.

Insurance Division Objective

12. To ensure that the Secretary of State's powers of intervention are exercised whenever it is necessary for the protection of policyholders, without companies being subject to unnecessary restrictions.

Best Practice

13. Requirements are imposed on a company because some aspect of its affairs is causing concern or, more routinely, because the company is newly authorised, re-authorised or there has been a change of controller. It should always be borne in mind that requirements are restrictive and may be costly for a company to comply with, and for the Department to supervise. Although they should not be imposed unnecessarily, requirements should always be imposed in proper cases, and Ministers are content for officers to apply such powers robustly.

14. Companies are at their most vulnerable during their early years, and for that reason it is the Department's practice to use the imposition of requirements to strengthen its control during this period. The decision on the precise requirements to be imposed is taken by Branch 1A (or 2A in the case of life business) after consultation with the company, who will be provided with a draft of the notice for comment.

15. When deciding what requirements are necessary regard can be had to the standard requirements. However, these requirements should not all be imposed as a matter of course. The aim should be that broadly similar

Issued October 1992 **Guideline 8.1**

DTI's policy guidance notes (1991)

Guideline 8.1: Intervention Powers, General

requirements should be imposed in broadly similar circumstances, but if it is believed that certain requirements can be dispensed with without detriment to the interests of policyholders, they should not be imposed. Conversely, in certain circumstances, additional non-standard requirements should be imposed.

16. Particular occasion for a departure from the standard form may arise with new subsidiaries of established companies, especially life companies, where tax and other considerations may influence corporate structure. More generally a corporate restructuring may lead to non-standard requirements, when for example a demutualisation by means of the establishment of a new company and a S. 49 transfer can often be treated for practical purposes as a continuation of the previous company, rather than as a new authorisation, which is the legal reality.

17. The decision to impose requirements on the change of controller is, in the first instance, a matter for the supervisor. It is usual to impose some requirements but their nature will depend on the circumstances of the company concerned, the standing of the new controller and his plans for the development of the company's business and the dangers which could result from the change of control. The company should be given the opportunity of commenting on the notice of requirements in draft.

18. The imposition of requirements other than on authorisation or change of control is a delicate matter; the failure to impose requirements at the appropriate time can result in policyholders suffering an avoidable detriment; the imposition of unnecessary or inappropriate requirements can exacerbate a company's difficulties.

19. If a company is giving cause for concern, whether because of failure to satisfy an obligation or otherwise then the matter would be reported to the Grade 7 supervisor as a matter of course. It should then be established whether there are grounds for imposing requirements, whether it is necessary and desirable to impose requirements and which requirements should be imposed.

20. Consideration should be given to whether the company should be approached before the requirements are imposed. There will be circumstances when the urgency of the situation will preclude prior negotiation with the company.

21. A more comprehensive note about our Powers of Intervention has been prepared for training purposes by [redacted] (I1B). Copies of that note can be made available on request.

Standard Drafts

22. Standard drafts are included in the appropriate sections of this chapter.

Legal Advice

23. Much of the guidance in this Guideline is based on the advice of Sols. B1. However, if requirements are being imposed other than in pursuance of S. 37(5) ICA 1982, the requirements should be cleared with Sols. B1 before being served on the company.

24. Not all the powers to impose requirements are exercisable on the same grounds. It is, therefore, vitally important to check that proper grounds exist before a requirement is imposed.

25. Great care should be taken before purporting to exercise the power contained in S. 45 ICA 1982. These powers cannot be exercised if the purpose of protecting the policyholder can be achieved by the exercise of the powers contained in Sections 38 to 44 ICA 1982.

26. Because of possible legal difficulties, Sols B1 should be consulted particularly if it is intended to use S. 45 to impose a "stop order" on a company.

GAD

27. GAD should be consulted on areas where it is known they have expertise or where their advice has been found useful in the past. GAD should always be consulted when it is proposed to serve requirements on companies carrying on long term business, and on general business companies with which it has recently been involved.

Issued October 1992 | Guideline 8.1

DTI's policy guidance notes (1991)

Guideline 8.1: Intervention Powers, General

EC Aspects

28. The restriction contained in S. 37(3) ICA 1982 relating to the power to interfere with the company's disposal of its assets was required to bring the ICA 1982 in line with the EEC directives.

29. The grounds on which the Secretary of State may take action were extended to include a failure by the company to satisfy an obligation under the law of another Member State giving effect to the general insurance Directives as part of the implementation of the second Non-Life Directive. They will be further extended to cover corresponding obligations arising from the EC life insurance Directives as part of the implementation of the second Life Directive. Further changes in the area covered by the Guideline will be necessary when the third Directives are brought into force.

On the Record Statements

30. None.

The Precedent Register

31. In cases where unusual requirements have been imposed, eg dividend control or financial guarantee companies needing to report rating agency status, details should be notified to the precedent register for future reference.

Insurance Annual Report

32. The number of times the Secretary of State exercised his powers of intervention must be recorded in the Insurance Annual Report. In addition, in respect of a company in liquidation, or in financial difficulties, the Secretary of State must lay before Parliament a statement with respect to the exercise of his powers in relation to that company. s. 28 Policyholders Protection Act 1975.

Policy Responsibility

33. Divisional Policy on this issue has been allocated to I1B.

Issued October 1992 — Guideline 8.1

DTI’s policy guidance notes (1991)

Guideline 8.2: Notice of Requirements

Guideline 8.2

Notice of Requirements

Synopsis
1. Matters relevant to Notices of Requirements generally.

The Legislation
2. Ss. 38 to 45 ICA 1982 provide that the Secretary of State may require a company to take certain action or refrain from certain action. The grounds on which he may issue such requirements are contained in s. 37 ICA 1982 and guidance on this is found in Guideline 8.1. Guidance on the specific requirements set out in Ss. 38 to 45 may be found in Guidelines 8.3 to 8.9.

3. If appropriate grounds exist, the powers of intervention are exercisable in relation to any insurance company to which Part II of the ICA 1982 applies. S. 15 ICA 1982 provides that Part II applies to all insurance companies, whether established within or outside the United Kingdom, which carry on insurance business within the United Kingdom. The section then provides that it does not apply to friendly societies, trade unions and employers’ associations where the business is limited to the provision of provident benefits and strike benefits for their members, members of Lloyd’s complying with S. 83 ICA 1982 and persons whose only insurance business is general business class 14, 15, 16, 17 or 18 carried on in the course of banking business.

4. S. 15(6) ICA 1982 provides that Part II does not apply to an insurance company whose insurance business is restricted to general business consisting in the effecting and carrying out of contracts of such descriptions as may be prescribed, being contracts under which the benefits provided by the insurer are exclusively benefits in kind. Regulation 23 Insurance Companies Regulations 1981 prescribes certain contracts covering vehicle breakdown assistance for the purposes of this section.

5. An insurance company is defined by S. 96(1) ICA 1982 as “~~arson~~ person or body of persons (whether incorporated or not) carrying on insurance business.” There is no definition of insurance business although S. 95 ICA 1982 deals with certain borderline cases which it makes clear are within the meaning of the term.

6. S. 47(1) ICA 1982 provides that the Secretary of State may rescind a requirement imposed if it appears to him that it is no longer necessary for the requirement to remain in force and he may from time to time vary any such requirement. If a requirement is imposed by virtue of S. 37(5) ICA 1982 it cannot be varied after the expiration of 5 years except in a manner which relaxes the requirement.

7. Before a Notice of Requirement is served on the grounds that the Secretary of State would be prohibited from issuing an authorisation because of the unfitness of a person for the position held by him, then notice must be given to that person pursuant to S. 46 ICA 1982 that the Secretary of State is considering the exercise of these powers and the person on whom the notice is served must be given an opportunity to make representations.

8. S. 37(7) ICA 1982 provides that when exercising any power under Ss. 38 to 45, the Secretary of State shall state the ground on which he is exercising it or, if he is exercising it by virtue of S. 37(5) that he is so exercising it.

9. By S. 70 ICA 1982, a notice served under this section may be served by post and a letter containing that notice shall be deemed to be properly addressed if it is addressed to that person at his last known residence or last known place of business in the United Kingdom.

10. A failure to comply with a Notice of Requirements is made a criminal offence by virtue of S. 73 ICA 1982. A director, chief executive, manager, secretary or other officer may be guilty of an offence, as well as the company, by virtue of S. 91 ICA 1982.

Exercise of Secretary of State’s Functions
11. A Notice of Requirements should not be signed by a grade below Grade 7. A decision to prosecute for failure to comply with a Notice of Requirements should not be made by a grade below Grade 5.

Issued July 1992 **Guideline 8.2**

DTI's policy guidance notes (1991)

Guideline 8.2: Notice of Requirements

Insurance Division Objective

12. To ensure that the intervention powers of the Secretary of State are used when it is necessary for protecting the interests of policyholders but are not used in such a way as to unnecessarily restrict the operation of an insurance company.

Best Practice

13. In considering whether a Notice of Requirements should be served on an insurance company, regard should be had to the Guidelines contained in Chapter 8.1 dealing with grounds for intervention. Guidance on specific requirements is contained in parts 8.3 to 8.9 and these should be studied before these requirements are imposed.

14. A "top and tail" Notice of Requirements is at Annex A. It should be unnecessary to depart from this format. If for any reason it is thought that this format is inappropriate then Sols B1 should be consulted.

15. The specimen requirements set out in the annexes to parts 8.3 to 8.9 will usually be appropriate. However, when a decision has been made to impose a requirement the officer responsible must be clear in his or her mind as to the precise result it is intended to achieve and must be satisfied that the proposed requirement will, indeed, achieve this result.

16. Although care should be taken in drafting requirements, it should be borne in mind that they are not Statutory Instruments. It is Insurance Division who should be the masters, not the wording of the requirements. If an insurance company purports to interpret a requirement in a way that is not intended, they should be informed that this is not the correct interpretation. If they refuse to accept the Division's interpretation then Sols. B1 should be consulted with a view to the requirement being varied.

17. Whenever possible an insurance company should be informed in advance of requirements it is intended to impose and their comments invited. This may not be possible in cases of urgency and should not be done if this will result in an increased risk to policyholders.

Standard Drafts

18. A standard "top and tail" draft is annexed to this Guideline. Specimen forms of particular requirements are annexed to parts 8.3 to 8.9.

Legal Advice

19. Much of this Guideline is based on legal advice. In considering the imposition of requirements, regard should be had to the legal advice in the other parts of this chapter.

20. A Notice of Requirements should be served on a company at its registered office which is not necessarily its place of business. If service is effected other than at the registered office, confirmation should be obtained that the company has accepted service. If service is effected on the company's solicitors they should be asked to acknowledge service on behalf of their client.

GAD

21. GAD should always be consulted when it is intended to serve a Notice of Requirements on a company carrying on long term business or on a general business company with which they have had recent dealings. More generally it is advisable that GAD be consulted on areas where it is known they have expertise or where, their advice has been found useful in the past.

EC Aspects

22. There are no EC aspects directly related to this Guideline.

On The Record Statements

23. None.

The Precedent Register

24. It is important that officers dealing with a company are aware of any action that has been taken in past cases of a similar nature, and the reasons for such action. To this end, any advice received on particular cases, and the background to any decisions taken, should be copied to I1B for inclusion on The Precedent Register.

Insurance Annual Report

25. To enable publication of details of the exercise of the Secretary of State's powers, a record must be kept of the number of occasions on which the powers exercised in Ss. 38 to 45 ICA 1982 have been used. A pro forma is provided as an annex to this Guideline.

Issued July 1992 **Guideline 8.2**

DTI's policy guidance notes (1991)

Guideline 8.5: Premium Income Limitation

Guideline 8.5

Premium Income Limitation

Synopsis

1. Guidance on the exercise of the Secretary of State's powers to require an insurance company to limit its premium income.

The Legislation

2. Section 41(1)(a) of the ICA 1982 provides that the Secretary of State may require a company to take all such steps as are requisite to secure that the aggregate of the premiums to be received by the company in consideration of the undertaking by it during a specified period of liabilities in the course of carrying on general business or any specified part of such business shall not exceed a specified amount.

3. Section 41(1)(b) provides that the Secretary of State may require a company to take all such steps as are requisite to secure that the aggregate of the premiums to be received by it in a specified period in consideration of the undertaking by the company during that period of liabilities in the course of carrying long term business, or any specified part of that business, shall not exceed a specified amount.

4. Section 41(2) provides that a requirement under Section 41 may apply either to the aggregate premiums to be received or to the aggregate of those premiums after deducting any premiums payable by the company for reinsuring the liabilities in consideration of which the premiums were received.

Exercise of Secretary of State's Functions

5. A decision to impose a requirement limiting a company's premium income must not be made below Grade 7.

Insurance Division Objective

6. To limit the risk of a company becoming insolvent in the future by controlling its rate of expansion.

Best Practice

7. The power to impose a requirement under Section 41 is exercisable on the grounds specified in Section 37 ICA 1982. If it is intended to impose such a requirement, regard should be had to the guidance on grounds for intervention and notice of requirements set out in Guidelines 8.1 and 8.2.

8. A requirement under this section can be imposed on authorisation, or subsequently. A premium income limitation on grant of authorisation will be in accordance with the business plan and it is unnecessary to deal with it further in this guideline.

9. The power to issue a requirement limiting a company's premium income is one of the powers vested in the Secretary of State to enable him to take action where there does not appear to be any doubt that the company is solvent, but there is a risk that it may become insolvent unless corrective action is taken.

10. It is not possible to set out exclusively all the circumstances which can result in the Secretary of State properly reaching a conclusion that it is desirable for protecting policyholders that this power should be used. The whole circumstances of the company must be taken into account. If there is a change of control then consideration should be given to imposing a requirement under this section. The power to impose a requirement in these circumstances is set out in Section 37(5) ICA 1982.

11. It may also be the case that the company has breached the solvency requirements or otherwise failed to satisfy an obligation to which it is subject by virtue of the ICA 1982. In this case, grounds will exist on which the Secretary of State can direct that it shall cease to be authorised to effect contracts of insurance.

12. In exceptional circumstance it may be necessary to make a decision whether it is in the interests of policyholders to cut off completely its source of new income. If this situation arises, the matter should be referred to the appropriate Grade 5.

13. When imposing a requirement the following factors should be borne in mind. First, the limitation in Section 41(1)(b) has been redefined so as to relate only to the premiums receivable during the specified

Issued October 1992 — Guideline 8.5

DTI's policy guidance notes (1991)

Guideline 8.5: Premium Income Limitation

period, not to the premiums receivable during the whole term (which could be 20 years or more) under contracts entered into during the period.

14. There is no obligation to defer the coming into operation of the requirement. Nevertheless, consideration should be given to a possible deferment. A company may need to decide how best to effect the limitation and notify any intermediaries authorised to effect risks on its behalf. In other cases, however, the Department may have to act quickly in order to prevent the company stepping up new business before cutting back.

15. It is possible to impose a requirement in which the maximum permitted premiums receivable are expressed to be net of reinsurance. Obviously, regard must be had to the adequacy of the company's reinsurance arrangements.

16. It is possible to draft a requirement imposing a premium income limitation, not in respect of the whole of the company's business, but in respect of a specified part of the company's business.

Implication for our Understanding of the Company's Position
17. Not strictly relevant in the context of this guideline. The company's position should be understood before imposing the requirement.

Standard Drafts
18. Standard Drafts are attached at Annexes A and B.

Conditions to be Attached
19. Not relevant in the context of this guideline.

Legal Advice
20. A requirement under this section should not be used to achieve results which are properly achieved by the use of other sections of the legislation. In particular, it should not be used as a method of stopping the company writing any new business by reducing its premium income in a specified period to zero.

21. Section 41 has been drafted differently in respect of long term business and general business. In respect of general business the limitation is on the aggregate of premiums to be received in respect of business written during a specified period. For example, there could be a limitation of £X worth of premiums to be received in respect of business written during 1992. It does not matter whether the premiums are received in 1992. The company must take all such steps as are requisite to secure that the amount of premiums they will receive (whenever it may be) in respect of the business written in 1992 does not exceed £X.

GAD
22. The advice of GAD should always be sought when it is intended to impose a requirement under this section on a company carrying on long term business. They should also be consulted in respect of non-life companies with which they have had recent dealings and whenever their expertise is likely to be of assistance.

EC Aspects
23. No specific EC aspects.

On the Record Statements
24. None.

The Precedent Register
25. The Precedent Register can be consulted with respect to requirements imposed under this section on other companies. It should be used in conjunction with the drafts annexed to this guideline.

Insurance Annual Report
26. A record must be maintained of the occasions on which this power has been exercised for inclusion in the annual report.
Policy Responsibility

27. Divisional responsibility for this issue has not been allocated.

Issued October 1992 — Guideline 8.5

DTI's policy guidance notes (1991)

Guideline 8.6: Actuarial Investigations

Guideline 8.6

Actuarial Investigations

Synopsis

1. Guidance on the circumstances in which the Secretary of State may require a company to have an actuarial investigation carried out.

The Legislation

2. Section 42(1) ICA 1982 provides that the Secretary of State may require a company which carries on long term business (a) to cause its appointed actuary to make an investigation into its financial condition in respect of that business, or any specified part of that business, as at a specified date (b) to cause an abstract of the actuary's report to be made and (c) to prepare a statement of its long term business, or of that part thereof, as at the specified date.

3. Section 42(2) ICA 1982 provides that for the purposes of the investigation, the value of any assets and the amount of any liabilities shall be determined in accordance with applicable valuation regulations.

4. Section 42(3) ICA 1982 provides that the form and contents of any abstract or statement shall be the same as for any abstract or statement made under section 18 and the provision of section 18(2) shall apply in the same way as it applies to an investigation to which section 18(1)(b) relates. By section 42(4) ICA 1982, five copies of the abstract or statement must be deposited with the Secretary of State on or before the specified date and one of the copies must be signed by the persons required to sign copies of abstracts or statements made under section 18.

5. For provisions as to "appointed actuary" regard should be had to section 19 ICA 1982. "Long term business" is defined in section 1 ICA 1982.

6. Section 42 relates only to long term business. There is no equivalent provision in respect of general business. If an actuarial investigation is required into a company's general business, the more general powers conferred by sections 44(1) and/or s45(1) may be invoked. Before such a requirement is imposed legal advice must be obtained.

Exercise of Secretary of State's functions

7. A decision to require an actuarial investigation should not be made at below Grade 7 level.

Insurance Division objective

8. To ascertain the financial condition of a company's long term business and the adequacy of a company's general business reserves.

Best practice

Long term business

9. The power to impose a requirement under this section is exercisable on the grounds specified in section 37, ICA 1982. If it is intended to impose such a requirement, regard should be had to the guidance on grounds for intervention and notice of requirements set out in guidelines 8.1 and 8.2.

10. This power was introduced by the Insurance Companies (Amendment) Act 1973 at a time when carrying out an actuarial investigation every year was optional. Although it is now a requirement

Issued December 1993 Guideline 8.6

DTI's policy guidance notes (1991)

Guideline 8.6: Actuarial Investigations

that actuarial investigations be carried out annually, this power can be used to require an actuarial investigation after a period of less than a year from the investigation, if it is thought desirable.

11. When imposing the requirement, consideration should be given as to whether it is necessary to require the investigation into the whole of the company's long term business or only a specified part of that business. For example, it is permissible to order an investigation into its business in a particular country.

12. It is necessary, in the requirement, to specify the date at which the financial condition is to be ascertained and, also, to specify the date by which the copies of the abstract or statement are to be delivered. The latter date should give the company a reasonable period in which to have the investigation completed but it is possible to vary the requirement under section 47 ICA 1982 so as to give the company an extension if necessary.

13. When an investigation into the whole of the company's long-term business is required at a date other than the standard year-end for that company, GAD will advise what information is required in addition to Schedule 4. Normally this will include, as a minimum, forms 9,10,13,14,15,43,45 and 46, but each case will be separately considered in the light of the special circumstances prevailing.

General business

14. The power to impose a requirement for an actuarial investigation of a company's general business under section 44(1) and/or s45(1) is exercisable on the grounds specified in section 37, ICA 1982. If it is intended to impose such a requirement, regard should be had to the guidance on grounds for intervention and notice of requirements set out in guidelines 8.1 and 8.2.

15. The decision to impose such a requirement will normally be the culmination of considerable discussion with the company on the adequacy of its general business reserves. The genesis of our concern is usually where an examination of the annual return indicates that there are or may be putative underprovisions. However sometimes our concern arises because we are unable to form a view as to the strength of the provisions, e.g. latent claims and where such provisions are material in the context of the company as a whole. The first step is to write to the company, after consultation with GAD or the Division's Actuarial Adviser, saying that our examination of the return indicates that they may be underreserved in one or more classes and asking for their comments. The company's reply may satisfy us, either because the information makes it clear that the basis on which we reached our view of underprovisioning is not an appropriate one for the company's circumstances or because the company has since increased their reserves to a more realistic level.

16. It is more likely however that the company will refute our suggestion that they are inadequately reserved and further correspondence and/or meetings may ensue. GAD should be involved fully at every step in the discussions. If the company are unable to allay our concerns, we should, subject to GAD's advice, consider the imposition of a requirement for an actuarial investigation into the company's general business reserves. GAD should be asked to advise on the terms of reference (i.e. what the investigation should cover) to be appear in the requirement. It is of course necessary to ensure that an adequate ground under section 37 exists, but given the wide ground of s37(2)(a) this is not

DTI's policy guidance notes (1991)

Guideline 8.6: Actuarial Investigations

likely to be problematic. Nevertheless, the advice of Sols B as well as GAD should be obtained before imposing a requirement for an actuarial investigation of general business reserves.

Implication for our understanding of a company's position

17. This power will be used when it is thought desirable to ascertain the financial condition of a company's long term business (or part) in advance of the section 18 investigation, or to ascertain whether a company's general business reserves are adequate. The implications are self-evident.

Standard drafts

18. Standard drafts are annexed to this guideline. It should however be borne in mind that the terms of reference for general business actuarial investigations will need to be tailored to suit the particular circumstances of the company

Conditions to be attached

19. Not relevant in the context of this guideline.

Legal advice

20. This is covered by para 6 above.

GAD

21. The advice of GAD should always be sought when it is proposed to impose an actuarial investigation requirement, whether in respect of long term or general business.

EC aspects

22. There are no specific EC aspects.

On the record statements

23. None

The precedent register

24. Not relevant in the context of this guideline.

Compliance cost for companies

25. A requirement under this section will result in a company incurring considerable costs. It may be possible to lessen the impact by specifying a date which fits in with work already done but this is unlikely to be the prime consideration.

Insurance annual report

26. A record must be maintained of the occasions on which these powers have been exercised for inclusion in the annual report.

Policy responsibility

27. Divisional responsibility has not been allocated.

Issued December 1993 Guideline 8.6

DTI's policy guidance notes (1991)

Guideline 8.7: Acceleration of Annual Returns

Guideline 8.7

Acceleration of Annual Returns

Synopsis

1. Guidance on the power of the Secretary of State to require a company to deposit returns earlier than is specified in the legislation.

The legislation

2. Section 43(1) ICA 1982 provides that the Secretary of State may require that any documents which under section 22 are required to be deposited with him within the period specified in that section, be deposited with him on or before a specified date before the end of that period.

3. The specified date must not be earlier than three months before the end of that period and not earlier than one month after the date on which the requirement is imposed. For example, if a company's financial year is the calendar year, deposit of returns is normally required by 30 June the following year. This can be brought forward to 31 March at the earliest provided the notice of requirement is served by 28 February.

4. Section 43(2) provides that the Secretary of State may require any statement which under section 25 ICA 1982 (Periodic statements by a company with a prescribed class of business) is required to be deposited with him within a prescribed period be deposited with him in or before a specified date before the end of the period.

5. As at the date of this Guideline, no regulations have been made pursuant to section 25 ICA 1982.

Exercise of Secretary of State's Functions

6. A decision to impose a requirement under this section should not be made at below Grade 7 level.

Insurance Division Objective

7. To ensure that the Division has up to date information regarding companies whose financial position may be deteriorating.

Best Practice

8. The power to impose a requirement under this section is exercisable on one or more of the grounds specified in section 37 ICA 1982. If it is intended to impose such a requirement, regard should be had to the guidance on grounds for intervention and notice of requirements set out in Guidelines 8.1 and 8.2.

9. It is essential for supervisory purposes that the Division is aware of a company's financial position. The provisions of the ICA 1982 dealing with accounts and statements mean that the Department is made aware of a company's financial position on an annual basis. If there is any reason to suspect that there has been a deterioration, consideration should be given to imposing a requirement under this section.

10. There are other circumstances in which it would be appropriate to consider requiring accelerated returns, namely tardiness in submitting returns and errors in returns.

11. In the case of tardiness, a section 43(1) requirement will focus the company's mind on the need to put proper systems in place to gather the

Issued December 1993 Guideline 8.7

DTI's policy guidance notes (1991)

Guideline 8.7: Acceleration of Annual Returns

information, rather than to create records in arrears. Even if the company cannot meet the requirement it is still likely that the returns will be received earlier than would otherwise be the case and it is more likely that they will be received in time to be useful. Accelerated returns also yield an advantage to supervisors, as it will be possible to examine them before the end June flood (assuming the company has a December year end) descends, thus allowing supervisors to concentrate on the company at a time of relatively low examination activity.

12. In the case of errors, again it will encourage the need for proper systems. If the errors are repeated then earlier receipt of the return will in part compensate for the delays caused by the time taken to resolve the errors. In some cases errors will give rise to uncertainty about the position of the company and uncertainty is itself a reason for wanting more information about the company.

13. When considering the exercise of this power, supervisors must be satisfied that a ground exists under section 37 of the ICA 1982 and that the requirement is not being imposed merely to "punish" the company. However, given the fairly wide grounds specified in section 37 this should not in practice present much of a problem. It is invariably the case that a company which is getting into financial difficulty is also more prone to (for example) breach the Act. This power has probably been used too sparingly in the past and supervisors should get into the habit of considering its imposition in respect of companies who are getting into financial difficulties or where their financial health appears uncertain.

Implication for our understanding of the company's position
14. This is self-evident from the above.

Standard drafts
15. A standard draft is annexed to this guideline.

Conditions to be attached
16. Not relevant in the context of this guideline.

Legal advice
17. Covered in para 13 above.

GAD
18. GAD should always be consulted if it is intended to impose a requirement under this section on a company carrying on long term business. They should also be consulted in respect of non-life companies with which they have had recent dealings.

EC Aspects
19. There are no specific EC aspects.

On the record statements
20. None.

The Precedent Register
21. The papers which set out the circumstances leading to the imposition of a s43(1) requirement should be copied to I1B for the Precedent Register.

Compliance cost for companies
22. Although the imposition of a requirement under this section may result in a company incurring further costs, it is unlikely to be a material consideration having regard to the reason for the imposition of the requirement.

DTI's policy guidance notes (1991)

Guideline 8.7: Acceleration of Annual Returns

Insurance annual report

23. A record must be maintained of the occasions on which this power has been exercised, for inclusion in the annual report.

24. Divisional responsibility has been allocated to [redacted]

DTI's policy guidance notes (1991)

Guideline 8.8: Obtaining Information

Guideline 8.8

Obtaining Information

Synopsis
1. Guidance on the powers of the Secretary of State to require a company or other body to provide information.

The Legislation
2. Section 44(1) ICA 1982 provides that the Secretary of State may require a company to furnish him, at specified times or intervals, with information about specified matters. This requirement can be extended to requiring the information be verified in such manner as may be specified.

3. Section 44(2) ICA 1982 provides that the Secretary of State may (a) require a company to produce specified documents at a specified time and place or (b) authorise any person to require a company to produce forthwith any documents which that person may specify.

4. Section 44(3) ICA 1982 extends the power to require production of documents from a company to requiring the documents from any person who appears to be in possession of them, subject to rights of lien.

5. By Section 44(4) the power to require production of documents includes the power to take copies and demand explanations of them from any person who is a present or past director, controller or auditor of, or is or was at any time employed by the company in question. Any statement made by a person in pursuance of a requirement under this Section may be used in evidence against him.

6. Section 44A ICA 1982 makes provision for a justice of the peace to issue a search warrant if he is satisfied that there are, on any premises, documents whose production has been required under Section 44(2) to (4) but which have not been produced.

Exercise of Secretary of State's Functions
7. A decision to require information about specified matters under Section 44(1) should not be made a level below grade 7. A decision to require production of specified documents may be made at grade 7 but a decision to authorise a person to require production of documents, to him, should be made at grade 5 level. A decision to apply to a magistrate for a search warrant should be made by a grade 5, but the information will be given by the person authorised to require the production of the documents.

Insurance Division Objective
8. To ensure that the Division is fully informed of a company's financial affairs or other aspects of its activities giving cause for concern.

Best Practice
9. The grounds for exercising powers under this Section are contained in Section 37 ICA 1982 and regard should be had to the guidance contained in Guidelines 8.1 and 8.2 dealing with grounds for intervention and notice of requirements.

10. It should be particularly noted that the powers contained in Section 44(2)-(4) ICA 1982 may be exercised on the grounds that the Secretary of State considers the exercise of the power to be desirable in the general interests of persons who are or may become policyholders of insurance companies to which Part 11 ICA 1982 applies.

11. A distinction should be made between Section 44(1) ICA 1982 and Sections 44(2)-(4). Section 44(1) is a requirement that a company provide information about specified matters. It replaced a power used on authorisation when future insolvency was not foreseen. It can now be used when a constant check is required on certain aspects of a company's affairs.

12. The powers contained in Sections 44(2)-(4) are in the nature of investigatory powers and are based on powers contained in the Companies Acts. These powers are wider than the Insurance Companies Acts powers in that they can be used against an unincorporated body carrying on insurance business. Furthermore, the powers are not limited to authorised insurers and can be used in respect of a company which is carrying on business without authorisation.

Issued December 1992 **Guideline 8.8**

DTI's policy guidance notes (1991)

Guideline 8.8: Obtaining Information

13. The power to authorise a person to require production of documents is not limited to officers of the Department. Consideration should be given, in appropriate cases, to granting authorisation to outside experts, particularly GAD.

14. It is likely that use of the investigatory powers will be made in conjunction with Investigations Division and consideration should always be given to appointing an officer from Investigations Division to exercise the authority either alone or with an officer from Insurance Division. In these circumstances, it should be considered whether ICA or Companies Acts powers are the most appropriate.

15. In deciding the composition and the level of the team to undertake the investigation we should take into account the extent of our concern and the potential implications for policyholders. We should also try and ascertain whether there exists validation of those concerns or corroboration of any allegations which may have been made. It may be that in the case of a small scale and relatively simple investigation of a company with limited business exposure (eg a small hospital scheme), it would be appropriate for an individual officer to undertake the inspection, whether from Insurance Division, Investigations Division or GAD. The grade of the officer authorised (by the head of the Branch) to conduct the investigation should be not below SEO, if they are the sole investigator, or HEO if they are clearly in a supporting role.

16. It is probable that the investigation will involve a visit by the appointed officer(s) to the administrative offices of the company concerned. Depending on the nature of the information which has prompted the investigation it may be appropriate for the person or team conducting the investigation to arrive at the premises unannounced, ie without prior warning. In some circumstances, it may be desirable to give the company prior or simultaneous notification of the visit. The head of the Branch should be involved in decisions about the tactics which should be employed. In any case, a copy of the formal authorisation document should be available for inspection, if requested by the company's representatives. The Department does not announce or publicise specific cases of the exercise by the Secretary of State of his powers under S44.

17. The nature of our concerns will determine whom we should interview and which papers we require access to but in examining these, supplementary documents may be identified which seem pertinent to our enquiries and should be produced. The investigating officer(s) may take copies of any documents they require to be produced either at the time of the visit or which they may request subsequently.

18. In exercising an authority, a careful note must be made of all conversations with officers of the company and of any explanations given of documents. It may be necessary to give evidence before a magistrate on the application for a search warrant and, possibly, in subsequent civil or criminal proceedings.

19. Following the inspection, a report will need to be prepared which summarises the results and recommends what action should be taken to alleviate any concerns which still exist. The head of Branch should approve the follow-up action considered necessary.

20. Unauthorised disclosure of information obtained under this Section is a criminal offence. Specific attention is drawn to Part 10 of these Guidelines on disclosure of information.

Implications for Our Understanding of a Company's Position
21. This is self evident.

Standard Drafts
22. Because the wording of the requirement will depend on the precise circumstances of the case, no draft is included with this Guideline. It is recommended that the assistance of Sols B1 is sought with the drafting.

Conditions to be Attached
23. Not relevant in the context of this Guideline.

Issued December 1992 — Guideline 8.8

DTI's policy guidance notes (1991)

Guideline 8.8: Obtaining Information

Legal Advice
24. This Guideline is based on advice from Sols B1. It is recommended that any officer authorised under Section 44(3) should discuss the matter with Sols before exercising the authority. If necessary, advice can be obtained through Sols B1 from Investigation Division lawyers.

GAD
25. The advice of GAD should always be sought when a requirement under this Section is imposed on a company carrying on long term business. They should be consulted in respect of non-life companies with which they have had recent dealings and in all cases where it is thought their expertise will be of assistance.

EC Aspects
26. There are no specific EC aspects.

On the Record Statements
27. None.

The Precedent Register
28. Officers contemplating action under s.44 ICA might find it helpful be able to refer to action taken on past cases of a similar nature. All such case details, or appropriate file(s) and locational references, should therefore be copied to I1B for addition to the Register.

Compliance Cost for Companies
29. Unlikely to be specifically relevant in the context of this Guideline.

Insurance Annual Report
30. A record must be maintained of the occasions on which this power has been exercised for inclusion in the annual report.

Policy Responsibility
31. Divisional responsibility for this issue rests with I1B.

Issued December 1992 **Guideline 8.8**

DTI's policy guidance notes (1991)

Guideline 8.10: Non-Statutory Intervention

Guideline 8.10

Non-Statutory Intervention

Synopsis
1. Guidance on the power of the Secretary of State to intervene in the affairs of companies otherwise than in pursuance of statutory powers.

Legislation
2. The Secretary of State's powers of statutory intervention have been set out in the earlier parts of this chapter. Guidance on other statutory provisions is given in the appropriate sections of this manual.

3. As well as being governed by the insurance legislation, insurance companies are subject to the requirements of the Companies Act. They are companies and subject to the obligations imposed on them by virtue of this status to which is added additional obligations because of the nature of the industry to which they belong.

4. The legislation should not be interpreted as setting out exclusively all actions which the Secretary of State can take in pursuance of his duty to regulate the insurance industry. It presupposes that action will be taken, for the purposes of protecting policyholders, which is covered by the statutory provisions.

Exercise of Secretary of State's Functions
5. The level at which action can be taken in the name of the Secretary of State will, obviously, depend on the proposed course of action. Assistance on this matter can be obtained from Guideline 0.2.

Insurance Division Objective
6. To intervene in a company's affairs in the most appropriate manner for protecting policy holders or potential policy holders.

Best Practice - General
7. In addition to his statutory powers, the Secretary of State enjoys the benefit of the general principle that everything is permitted by law unless it is specifically prohibited. In considering action to be taken, regard must be had not only to whether the action is specifically prohibited by law, but whether there is an implicit prohibition either by UK or EC law.

8. In principle, if there are express statutory powers to deal with a particular situation, then the situation should be dealt with by the exercise of these statutory powers. Although the exercise of the powers is discretionary, there is a duty to give proper consideration to whether the discretion should be exercised.

9. Although it is unlikely that a course of action will arise for failure to exercise a discretionary power, when the failure to exercise the power arose following the weighing up of competing policy considerations, the failure to exercise the powers could well result in criticism of the Division. The following paragraphs should be read in the light of this.

Acceptance of Undertakings
10. There are circumstances where a view can properly be taken that, it is in the best interest of policyholders, not to invoke statutory powers but to try and achieve the same result by accepting an undertaking from the company or its controllers to take, or refrain from taking, a particular course of conduct.

11. For example, it is not unusual to accept an undertaking from a company that it will cease writing new business. The advantage is that the undertaking can take effect forthwith and thus avoid the delay inherent in taking the action set out in Sections 11 and 12 ICA 1982.

12. Although, in legal theory, it may be possible to bring an action for breach of an undertaking, it would be unwise to regard this as a practical proposition. Therefore, it goes without saying, that undertakings should only be accepted when it is believed that they will be honoured. Only in exceptional circumstances should an undertaking by a controller to support a company financially, influence Insurance Division's actions.

13. A breach of an undertaking will not amount to a criminal offence. However, it may give rise to circumstances in which the person who has breached the undertaking could be held not "fit and proper" to hold a notifiable position with the company. It may also be evident that it is expedient in the public interest that a company be wound up.

Issued October 1992 **Guideline 8.10**

DTI's policy guidance notes (1991)

Guideline 8.10: Non-Statutory Intervention

14. If it is possible to take an undertaking from the company's solicitors, then this course of action should be followed. As a breach of an undertaking is particularly serious in the case of a solicitor, a solicitor will be extremely unlikely to give an undertaking if the matter is not entirely under his control. An undertaking to "use best endeavours" is a standard and in many cases, acceptable wording.

15. A company should not be led to believe that the Secretary of State has power to demand an undertaking. If an undertaking is accepted, it should be made clear that this is without prejudice to the exercise by the Secretary of State of any of his statutory powers.

Suggesting a Course of Action to a Company

16. There is no legal bar to the Secretary of State suggesting a course of action to a company, or even seeking to persuade the company to take a particular course of action which will alleviate regulatory concerns. Again, it should not be implied to the company that the Secretary of State has power to insist on this course of action.

17. Great care must be taken to ensure that the Department does not find itself acting as a shadow director. A shadow director is a person in accordance with those directions or instructions the directors of the company are accustomed to act. It has been held by the Courts to be arguable that a bank had acted as shadow director when a company was managed in accordance with the bank's instructions as a condition of the bank not appointing an administrative receiver.

18. Although it is unlikely that the Department will be held to be acting as a shadow director, there are two sets of circumstances which require particularly careful handling. First, the "white knight" situation where a company is considering going into liquidation and the Department encourages it to defer this action until a purchaser can be found. The directors should not be led to believe that they can abdicate their responsibility for the affairs of the company in favour of blindly following the Department's lead.

19. More importantly, the situation may arise where the Department is minded to present a petition for the winding-up of the company but holds off whilst the company takes steps to prevent this. The initiative in these circumstances should come from the company and the situation should not be allowed to arise where it could be claimed that the directors were acting on the instructions of the Department as a condition of the Department not presenting a petition.

Interpretation of Legislation

20. Insurance division will often be asked for its opinion as to how a particular piece of legislation should be interpreted. Such queries are likely to arise from both members of the public and firms of solicitors.

21. The interpretation of legislation is a matter for the Courts and not for the Department. It is quite in order for Insurance division to express an opinion as to how a piece of legislation should be interpreted, but this should be subject to the caveat that, at the end of the day, only the Courts can decide matters of interpretation. If the question is raised by a firm of solicitors, it should not be necessary to labour the point and it should be sufficient to precede the opinion with words to the effect "Obviously, only the Courts can decide authoritatively, but the Department's view is ...."

22. If the query is raised by a member of the public it must be made quite clear that the Department is expressing only its own view and that such view is given without responsibility. Although the Department will wish to be as helpful as possible, members of the public should not be led to believe that contacting the Department is a substitute for taking their own legal advice.

23. Notwithstanding the above, Insurance division should not be afraid of expressing a forceful opinion on regulatory matters. If an interpretation is preferred which the division is not prepared to accept, it should be made quite clear that the division will not accept this interpretation and if following it leads, in the division's opinion, to a breach of the legislation such regulatory action as is deemed necessary will be taken.

DTI's policy guidance notes (1991)

Guideline 8.10: Non-Statutory Intervention

Unauthorised Insurers

24. In dealing with cases of unauthorised insurers, it will sometimes be necessary to mount a statutory investigation followed by winding-up proceedings. This is particularly so when the public is seriously at risk. On other occasions the matter can be dealt with without recourse to statutory powers.

25. It is common for activities, which may amount to unauthorised insurance business, to be brought to the Department's attention. Usually, the division will be provided with a copy of the literature distributed by the company. It is necessary for the division to form a view as to whether the activities as set out in the literature constitute insurance business.

26. If there is no doubt that the activities are insurance then the company can be informed that such is the Department's view and an assurance sought that the activities will cease. Action can be taken under statutory powers if the company is defiant.

27. If there is some doubt as to whether the activities amount to insurance, then further explanations can be sought from the company. This should be regarded as a fact finding exercise the object of which is to obtain sufficient information to enable the division to form a view. The usual caveat that, only the Courts can decide the matter authoritatively should not be used in a letter requesting this information. Carrying on insurance business without authorisation is a criminal offence. Whether or not a criminal offence has been committed is always a matter for the Courts and it is no more relevant to point this out in investigating unauthorised insurance business than it is in investigating any other crime.

Reports to Professional Associations

28. Occasionally evidence of unprofessional conduct by accountants, lawyers or actuaries will come to the attention of Insurance division. Subject to any legal restraints on the disclosure of the information, consideration should be given to reporting the matter to the appropriate professional organisation.

Requests for Additional Information

29. Although the ICA 1982 provides for returns to be filed with the Department, and powers under Section 44 ICA 1982 to obtain information and require production of documents, there is no bar on requesting additional information.

Standard Drafts

30. None.

Conditions to be Attached

31. Not applicable in the context of this Guideline.

Legal Advice

32. This Guideline has been prepared by Sols B1.

GAD

33. The advice of GAD should always be sought when it is proposed to take non-statutory action in respect of companies carrying on long term business and in respect of non-life companies with which they have had recent dealings. GAD's experience may also be relevant to interpretation of insurance legislation and deciding whether an activity constitutes insurance; reference to GAD should be considered on these matters. Where DTI concerns relate to matters of a nature on which GAD have advised in the past, reference to GAD should be considered, GAD may be able to advise on what type of intervention might be appropriate or practicable, and whether proposals made to DTI will meet DTI's objective.

EC Aspects

34. None other than that care should be taken so as to avoid the Secretary of State taking action that would be forbidden by EC law.

On the Record Statements

35. None.

Compliance Costs for Companies

36. Not relevant in the context of this Guideline.

Insurance Annual Report

37. Not relevant in the context of this Guideline.

Policy Responsibility

38. Not specifically allocated.

Issued October 1992 | Guideline 8.10

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982

Guideline 9.1

Section 68 ICA 1982

Synopsis

1. Guidance on the use of the Secretary of State's power under s68 ICA 1982 to modify certain provisions of Part II ICA 1982 in relation to particular companies.

The Legislation

2. S68 ICA 1982 provides that, "on the application or with the consent of an insurance company" to which Part II ICA 1982 applies, he may by order direct that certain provisions "shall not apply to the company or shall apply to it with such modifications as may be specified in the order". The provisions referred to in s68 are:

a. the provisions in sections 16 to 22, 23(1), and 25 to 36 ICA 1982;

b. the provisions of any regulations made for the purpose of any of the above sections; and

c. the provisions of any valuation regulations (regulations 37-49 and 50-64 of the Insurance Companies Regulations 1981).

3. Section 68 orders "may be subject to conditions".

4. Section 68 orders "may be revoked at any time by the Secretary of State", without the consent of the company, and "the Secretary of State may at any time vary" a s68 order "on the application or with the consent of the company".

5. In the Insurance Companies Act 1974 the equivalent provision was in s57. There may still be some concessions made under that section which continue to have effect.

6. In respect of s31 ICA 1982, which applies to companies carrying on long term business, any exclusion or modification to the operation of the section by means of s68 can extend to include any subordinate company of the insurance company in question, as defined by s31(4).

Exercise of Secretary of State's Functions

7. Orders issued on behalf of the Secretary of State should not be signed by an officer below G7 level. It therefore follows that consideration as to whether an order under s68 is appropriate in a particular case, and proposed revocations and variations, must be considered at least at G7 level.

Insurance Division Objective

8. To ensure that UK authorised insurance companies comply with all relevant primary and secondary legislation, whilst recognising that in particular circumstances in relation to particular companies it may be appropriate to modify the legislative requirements referred to in paragraph 2 a-c above.

Best Practice

9. The discretion contained in s68 is exercised by means of a "Section 68 Order" but it should only be exercised when it is absolutely necessary. There should be no routine issue of a particular type of s68 Order just because a company is of a particular type, eg a mutual or is operating a "hospital benefits" scheme. No indication should be given to any company that a particular type of s68 Order, eg one modifying the asset valuation regulations in a particular respect, is available "on request", unless there has first been full consideration within the Division, including reference up to G7 level, and to GAD as necessary.

10. Following full consideration, including scrutiny of the company's returns, there can be circumstances where it may be appropriate to indicate to a company that a s68 Order is likely to be available (see para 15 below). Such cases may include those where there is an exactly parallel case for which a S68 Order has been correctly given and there

Issued December 1991 — Guideline 9.1

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982

has been no subsequent change of policy, where it has already been agreed that the legislation is to be changed, eg to give effect to an EC obligation, and to count an implicit item if previously established criteria are satisfied.

11. When dealing with a request for a s68 Order from a company, or a company's advisers, or considering the issue of an Order for which a company's consent will be needed, it is important to precisely identify what the Department is attempting to achieve by means of the proposed Order, the implications for our understanding of the company's position and business and for the understanding of that company by others.

12. When considering the issue of a new s68 Order, it is necessary to bear in mind the possible impact on the future computer processing of the company's return. The granting of a concession of a type not previously granted to any other company is likely to be undesirable. To do so may result in the Division's inability to subject the affected return to meaningful computer analysis, thus hindering our supervision of the company.

13. Requests for s68 orders are frequently received by EO or HEO supervisors. They should ensure that the company provides written argument in support of such a request and that the nature of the concession being sought is clearly stated (but see paragraphs 14 and 15 below). Following receipt of a properly argued request, and after any necessary internal consultation and consideration of precedents, it will usually be for the HEO to make a submission to G7 level recommending whether or not a S68 Order should be issued and, if so, to propose the form of the Order and any conditions to which it should be subject.

14. There may, however, be occasions when a company does not know quite what concession they should be seeking and/or does not present its argument very well. In such cases it may be necessary to arrange a meeting with the company. Only then can the precise form of concession, if one is considered appropriate, be considered. Following such a meeting, and possibly in other cases, if the supervisor is quite clear as to the concession required and the reason for it, rather than insisting on a written request with argument from the company, it may be appropriate for the supervisor to send to the company a draft s68 Order, seeking its consent to the form of the concession and confirmation of the particulars.

15. Similarly, it will be appropriate for the supervisor to write to a company, setting out the detail and seeking its consent to the form of the concession, if we have identified the need for a concession and we are taking the initiative (see paragraph 10 above).

16. Although the discretion provided by s68 relates to a wide range of sections within Part II ICA 1982 and related regulations, it is in practice rarely used in respect of many of them. It is, however, commonly used to modify the 1983 Regulations made, inter alia, under s17 and s20 ("annual accounts and balance sheets" and "annual statements" respectively) (but see paragraph 42 below), and therefore the form of annual return to be deposited by a particular company in accordance with s22 will be affected (see Guideline 9.2 covering "Accounting Concessions").

17. S68 is also used to relieve particular companies of the requirement imposed under s32 to maintain a margin of solvency of an amount determined in accordance with the Insurance Companies Regulations 1981 (but see paragraph 40 below in respect of companies to which the EC Directives on direct insurance apply). It is also not uncommon for the asset valuation regulations in the Insurance Companies Regulations 1981 to be modified in a particular respect by means of a s68 Order issued to a particular company (see Guideline 6.1 - Valuation of Assets).

18. In respect of s16, as a matter of law we do not have the power to exercise discretion in relation to companies to which the EC Directives on direct insurance apply (see paragraph 39 below) and, therefore, s68 should not be used to modify s16 for such companies. As a matter of policy, there would need to be exceptional circumstances to use s68 to modify s16 in relation to other companies (see Guideline 14.1).

Issued December 1991 **Guideline 9.1**

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982

19. In respect of s22(1), the s68 discretion should not be used to extend the period which may be allowed for the deposit of an annual return beyond the 3 month period already provided (see Guideline 5.2).

20. When considering the possibility of using s68 to waive all or any part of a section or regulation, it is essential that the entire provision of that section or regulation, and any other related provisions, are considered. This is because it is often the case that only part should be waived or modified, with other provisions continuing to apply, and because the provisions of other sections or regulations may be affected.

21. Some of the sections to which s68 applies have associated regulations. In such cases those regulations form part of the overall provision and it is necessary, when considering the modification of any section, to also consider the regulations made under the primary power in order to avoid logical inconsistencies. There may be provisions in the regulations which should be excluded entirely and others which should continue to stand and have effect. If there is any element of doubt Sols B1 should be consulted.

22. Prior to seeking advice from Sols B1 on any proposed s68 Order, taking account of the guidance in Guideline 1.5, supervisors should consider the following:

a. What objective is the company or Department attempting to achieve?

b. Is it necessary for the Order to have the effect of modifying the secondary legislation as well as the primary section?

c. What modifications to both the primary and secondary legislation are necessary?

d. What conditions should be attached to the Order?

e. Should the Order have effect for a limited period only rather than giving carte blanche for a protracted period?

f. Are there other Orders in force which need to be revoked or varied?

g. What impact will the Order have on the company's future annual returns and on the Division's ability to supervise the company effectively by means of computer analysis and to fully understand its financial position.

23. No concession should be granted informally, ie without a s68 Order. Any such concessions have no legal force.

24. Each s68 Order must be the subject of regular review to ensure that it remains relevant and appropriate and that it is not hindering our ability to supervise effectively. Such a review should take place at least once a year in respect of each company which enjoys a s68 concession following receipt of its annual return.

25. Special attention should be paid to whether all conditions to which an Order was subject have been satisfied and to whether, either because of a breach of any condition or because of a time limit, the concession has ceased to have effect. Where, for whatever reason, a s68 Order has legally ceased to have effect, but the company appears still to be relying upon it, it will normally be appropriate to communicate with the company about it (but see paragraph 26 below), having first sought advice from Sols B1 as necessary.

26. Whilst a s68 Order may be revoked at any time by the Secretary of State, it should be remembered that, by virtue of s68(3), any variation of a s68 Order must be at the company's request or with its consent. Even in cases of a proposed revocation it will frequently be appropriate to give a company advance warning of a revocation in order to provide an opportunity for the company to comment. This also helps to ensure that the Division is seen to be acting fairly and reasonably; a company may need time to arrange its affairs so that it can cope without the concession. However, where a company has breached a condition of an Order, or breached an undertaking given in connection with an Order, it may be unnecessary to give advance warning, provided that action is taken promptly following discovery of the breach.

Issued December 1991 **Guideline 9.1**

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982

27. Reviews will normally be undertaken at EO and/or HEO level as part of the annual returns examination process, rather than as a separate exercise, with recommendations being put to G7s. In respect of reviews in connection with long term business, there must be liaison with GAD.

Implications for our Understanding of a Company's Position

28. The sections of the legislation to which the discretion available under s68 relates are important in respect of our monitoring of all companies and therefore no agreement to waive them should be lightly entered into (see the "Best Practice" guidance in paragraphs 9 - 23 above).

29. A record of all extant concessions for each company must be kept on the standard "top document" on the "Requirements, Concessions and Directions" file. This enables supervisors at all levels to see at a glance, and easily locate, any concessions a company currently enjoys. This does not remove the need for a record of all concessions granted to be recorded on the current computer system "Company Profile".

Standard Drafts

30. A skeleton draft of a Section 68 Order is at Annex A. This is little more than a standard "topping" and "tailing". Each Order needs to be tailored to the particular circumstances and Sols B1 should normally be consulted (see Guideline 1.5, paragraphs 22 and 23). At Annex B is a draft of a Notice revoking a s68 Order.

Conditions to be Attached

31. It is important to consider what conditions should attach to any s68 Order. They may vary from a straightforward limitation on the duration of the effect of the Order, to the extent of any waiver with regard to subsidiary companies in cases where s31 is being modified, or to more complex conditions.

32. In many cases it is necessary to attach to a s68 Order a condition that the company includes in its annual return a statement, for all to see, referring to the fact that the Secretary of State made an Order on a specified date and stating the nature of the Order (see paragraph 3b of the draft at Annex A). Such a condition is clearly appropriate when the effect of a s68 order is to allow a company to submit a modified or abbreviated annual return, or relieves a company not covered by the EC Directives from the need to maintain the statutory solvency margin. It may also be appropriate to attach the condition to s68 Orders which modify the valuation regulations.

33. In order to decide whether a condition such as that mentioned in paragraph 32 above is appropriate, supervisors may test the circumstances against the following questions:

a. Would someone looking at the return in isolation wonder why the company had not submitted a return in the format prescribed by the 1983 Accounts and Statements Regulations, or wonder why it had not complied with the legislation in some other way?: and/or

b. Would the financial position of the company as shown in the company's future annual returns, particularly as regards admissible assets, be significantly different, and possibly cause someone to take a different view of the company, if the s68 concession had not been granted?

If the answer to either question is "yes" the condition, for a statement in the return referring to the 68 Order, should be attached.

Legal Advice

34. The major part of this Guideline is based on legal advice.

35. Although it is possible for a s68 Order to apply in respect of a financial year already ended, provided that the return has not been deposited and the due date has not passed, it should be noted that s68 cannot otherwise be applied with retrospective effect. Consequently, a s68 Order cannot "decriminalise" any event which has already occurred eg the failure by a company to satisfy an obligation which existed under one of the relevant sections of the Act prior to the issue of a s68 Order which had the effect of disapplying that section in respect of that company.

Issued December 1991 Guideline 9.1

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982

36. Paragraphs 22 and 30 above refer to Guideline 1.5, which deals with the obtaining of advice from Sols B1 and advises that Sols B1 should normally be consulted about the making of an Order under s68. Consultation with Sols B1 should be in relation to a particular section or sections of the ICA 1982 to which s68 can apply, and/or to a regulation or regulations made under one of those sections, and in respect of a particular company.

GAD

37. GAD should be consulted about proposed s68 Orders in respect of all long term business companies and all general business companies with which they have recently been involved, or need to be involved, prior to seeking advice from Sols B1. A copy of GAD's views should then be made available to Sols B1.

38. GAD should be sent a copy of any s68 Order made in respect of a company writing long term business. They should also be provided with a copy of s68 Orders made in general business company cases with which they have recently been involved, and their attention drawn to, or a copy provided of, any existing s68 Orders in cases where their advice is being sought (see Guidelines 1.3 and 1.4).

EC Aspects

39. S16 ICA 1982 implements Articles 8 1.(b) of the First Council Directives on both non-life and life insurance. Therefore, s68 Orders should not be made in respect of s16 (see Guideline 14.1) where the company in question is one to which the Directives apply. To do so would give rise to a breach of Community law.

40. Similarly, the requirements of s32 and 33 ICA 1982, relating to solvency margins, stem from the First Council Directives on both non-life and life insurance. Consequently, s68 should not be used to relieve a company to which the directives apply of the need to maintain a solvency margin or margins determined in accordance with the Insurance Companies Regulation 1981, and nor may a company be relieved of obligations imposed under these sections following a failure to maintain a required margin (see Guidelines 7.1 and 7.2).

41. Composite companies writing both long term and general business are required under the First Council Directive on life insurance to manage separately the two kinds of business. Therefore, the requirements of s28 and 29 ICA 1982 may not be modified in respect of such companies in a way that would result in a breach of the requirements of that Directive.

42. It is a requirement of the First Council Directives on non-life and life insurance that insurance companies with their head office in the UK must "produce an annual account, covering all types of operation, of its financial situation [and] solvency". All undertakings carrying on insurance business in the UK, no matter where their head office is situated, are required to "render periodically the returns, together with statistical documents, which are necessary for the purposes of supervision". Therefore, a s68 Order should not be made which would have the effect of relieving a company from the requirements of the ICA 1982, or regulations under it, to such an extent that these requirements of the Directives would no longer be met.

43. In respect of Forms EC(P), EC(A) and EC(B), for which it may be considered appropriate to make a s68 Order allowing a company a period longer than 6 months to submit them, see Guideline 5.2, paragraphs 20 and 21.

On the Record Statements

44. None.

The Precedent Register

45. By using the Precedent Register examples of previous s68 Orders can be identified.

46. To enable maintenance of the Precedent Register, copies of all "top documents" (see paragraph 29 above) should be sent to I1B1, as should a copy of any s68 Order made after 1 September 1991 together with the professional advice obtained prior to the making of the Order.

Issued December 1991 | Guideline 9.1

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982

Compliance Costs for Companies

47. The making of an appropriate s68 Order may have positive compliance cost implications for an insurance company. However a request for a s68 Order on compliance cost grounds alone should not be granted if it will significantly inhibit our ability to effectively supervise the company in question.

Insurance Annual Report

48. To enable publication of details of the exercise of the Secretary of State's powers, a record must be kept of the number of occasions on which the powers contained in s68 have been used. A pro-forma for maintaining this information at HEO level in supervisory sections is at Annex C. This will also serve as a record for management purposes.

Policy Responsibility

49. There has been no allocation of Divisional responsibility for s68 issues.

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982 – Annex A

Guideline 9.1 Annex A

DRAFT TOP AND TAIL OF SECTION 68 ORDER

ORDER BY THE SECRETARY OF STATE FOR TRADE AND INDUSTRY UNDER SECTION 68 OF THE INSURANCE COMPANIES ACT 1982

[insert FULL NAME OF INSURANCE COMPANY]

The Secretary of State for Trade and Industry, in exercise of his powers under section 68 of the Insurance Companies Act 1982 ("the Act") and [* on the application of/with the consent of] [insert full name of insurance company] ("the Company"), being a company to which Part II of the Act applies, by this Order directs as follows:-

1. In this Order:-

(a) "the 1981 Regulations" means the Insurance Companies Regulations 1981;

(b) "the 1983 Regulations" means the Insurance Companies (Accounts and Statements) Regulations 1983;

(c) references to the Act, to the 1981 Regulations, and to the 1983 Regulations are to that Act and to those Regulations as amended at the date of this Order;

(d) any expression used in this Order which is an expression defined in the Act, the 1981 Regulations, or the 1983 Regulations, shall have the meaning assigned to it in the Act or those Regulations;

[*(e) "accounting classes" means the accounting classes as set out in Regulation 3 of the 1983 Regulations;

(f) "insurance business" includes reinsurance business;

(g) "the financial year" means the financial year of the Company;]

[add/delete other definitions as appropriate]

DTI's policy guidance notes (1991)

Guideline 9.1: Section 68 ICA 1982 – Annex A

[* 2.This Order shall first apply to the Company's accounts and statements in respect of the financial year ended [insert company's fye date].]

3. This Order is conditional upon and shall have effect so long as:-

(a) the Company informs the Secretary of State forthwith of any proposed change, and within 21 days of an actual change, in the circumstances of the Company where such proposed change or actual change may reasonably be expected to be material to the maintenance of this Order in force.

[* (b) the documents required by section 17(1) include a Note stating:

"The Secretary of State for Trade and Industry, [* on the application of/with the consent of] the Company, issued to the Company in [month and year] an Order under section 68 of the Insurance Companies Act 1982 [*allowing/directing that] the Company [insert appropriate summary of the effect of the Order].]; and

[insert any further appropriate conditions]

[* 4. The Order dated [insert date] and issued to the Company is revoked.]

Dated this day of 19

[signature]

A N OTHER
For the Secretary of State for Trade and Industry

* Add/delete as necessary

DTI's policy guidance notes (1991)

Guideline 9.2: Accounting Concessions (using Section 68 ICA 1982)

Guideline 9.2

Accounting Concessions (using Section 68 ICA 1982)

Synopsis

1. Guidance on considering, granting and reviewing "accounting concessions" to authorised insurers, whether at the request of the insurer or on our initiative.

The Legislation

2. The Secretary of State may grant accounting concessions by exercising the power contained in s68 ICA 1982. This provides that, "on the application or with the consent of an insurance company" to which Part II ICA 1982 applies, he may by order direct that certain provisions "shall not apply to the company or shall apply to it with such modifications as may be specified in the order". The provisions referred to in s68 are:

a. the provisions in sections 16 to 22, 23(1), and 25 to 36 ICA 1982;

b. the provisions of any regulations made for the purpose of any of the above sections; and

c. the provisions of any valuation regulations.

3. Section 68 orders "may be subject to conditions".

4. Section 68 orders "may be revoked at any time by the Secretary of State", without the consent of the company, and "the Secretary of State may at any time vary" a s68 order "on the application or with the consent of the company".

Exercise of Secretary of State's Functions

5. Orders issued on behalf of the Secretary of State should not be signed by an officer below SEO level. It therefore follows that consideration as to whether an order under s68 is appropriate in a particular case, and proposed revocations and variations, must be considered at least at SEO level.

Insurance Division Objective

6. To ensure that we continue to receive all necessary information to enable our effective supervision of authorised insurers, whilst recognising that in particular circumstances in relation to particular companies it may be appropriate to modify the legislative requirements relating to the provision of accounting information.

Best Practice

7. There should be no routine issue of concessions just because a company is of a particular type, eg a marine mutual, a company in "run-off", etc, and no indication should be given to representatives of any company that a particular type of s68 accounting concession is available "on request". However, in many cases where an accounting concession is considered to be appropriate, it will also be appropriate for the nature of the concession, and the conditions attached to it, including any substitute reporting requirements, to be of a standard type. This will facilitate computer analysis and will enable the monitoring of various companies whose circumstances are similar to be carried out on a standard and comparable basis.

8. Requests for accounting concessions are frequently received by the EO or HEO supervisor. Supervisors should ensure that the company provides written argument in support of such a request and that the nature of the concession being sought is clearly stated (but see paragraphs 9 and 10 below). Following receipt of a properly argued request, and after any necessary internal consultation and consideration of precedents, it will usually be for the HEO to make a submission to SEO/G7 level recommending whether or not a s68 accounting concession should be granted and, if so, to propose the form of the s68 order and any conditions to which the order should be subject.

9. There may, however, be occasions when a company does not know quite what concession they should be seeking and/or does not present its argument very well. In such cases it may be necessary to arrange a meeting with the company during which the nature of the difficulties can be established.

Issued September 1991 **Guideline 9.2**

DTI's policy guidance notes (1991)

Guideline 9.2: Accounting Concessions (using Section 68 ICA 1982)

Only then can the precise form of concession, if one is considered appropriate, be considered. Following such a meeting, and possibly in other cases, if the supervisor is quite clear as to the concession required and the reason for it, rather than insisting on a written request with argument from the company, it may be appropriate for the supervisor to write to the company seeking its consent to the form of the concession and confirmation of the particulars.

10. Similarly, it will be appropriate for the supervisor to write to a company, setting out the detail and seeking its consent to the form of the concession, where we identify the need for an accounting concession and we are taking the initiative (see paragraphs 3 and 4 of Annex F for example).

11. Accounting concessions granted to particular companies need to be the subject of regular review to ensure that they remain relevant and appropriate and are not hindering our ability to effectively supervise. Such a review should take place, in respect of each company to which a s68 accounting concession has been issued, at least once a year following receipt of its annual return. Concessions granted prior to **September** 1991 need to be the subject of particular scrutiny. This is to ensure we are satisfied it is appropriate for a concession to remain in force and, if a concession remains appropriate, to consider whether the existing one should be varied in order to introduce, for example, a more acceptable form of financial reporting and one which can, in due course, be used as input for computer analysis. All reviews should initially be undertaken at EO and/or HEO level as part of the annual returns examination process, rather than as a separate exercise, with recommendations being put to SEOs and G7s.

12. Notes on background, current policy, and conditions to be attached, relating to some of the more common accounting concessions are contained in Annexes to this Guideline as follows:

Annex A - Group Accounting

Annex B - Modified and Abbreviated Returns

Annex C - Overseas Accounting

Annex D - Run-off Concessions

Annex E - Small Premium Income

Annex F - Three Year Accounting

Implications for our Understanding of a Company's Position

13. The making of an appropriate order under s68, directing that certain provisions of the legislation shall not apply or shall apply with modifications in respect of a particular company, may assist our understanding of that company's position and of its business. There are cases where a standard return in the format required by the 1983 Accounts and Statements Regulations would be largely inappropriate and would provide litle useful information. In such cases effective supervision depends on modifying the format of the return to be deposited. Conversely, the making of an inappropriate order may seriously impair our ability to understand a company's position.

14. A record of all extant concessions must be kept on the standard "top document" on the "Requirements, Concessions and Directions" file for each company. This enables supervisors at all levels to see at a glance, and easily locate, the concessions a company currently enjoys and the conditions, if any, to which they are subject. This does not remove the need for a record of all concessions granted to be recorded on the computer system "Company Profile".

Standard Drafts

15. Standard forms of "topping" and "tailing" for a s68 concession order, and for revocations and variations are Annexed to Guideline 9.1. However, no standard forms of words for particular accounting concession orders are provided here; but see paragraph 20 below.

DTI's policy guidance notes (1991)

Guideline 9.2: Accounting Concessions (using Section 68 ICA 1982)

Conditions to be Attached

16. It is usual, and appropriate, for each accounting concession order to be subject to conditions. They may vary in nature, extent and detail, depending on the nature of the concession and the circumstances of the particular company and our view of it. It is important to attach predetermined and standard conditions to certain types of concessions; these are referred to in the relevant Annex.

Legal Advice

17. Where the form of an order being considered for issue is on the lines of orders previously made in other cases and raises no new legal aspects, there should be no need for Sols B to be consulted. However, if there is doubt, including in relation to the wording to be used in the order, advice from Sols B should be sought. When seeking their advice the purpose of the proposed concession should be made clear. This should be in terms of what it is that is intended to be achieved and why.

18. The same considerations, as to whether it is appropriate to seek advice from Sols B, apply equally to proposed variations and revocations of concessions.

GAD

19. GAD should be consulted in every case where consideration is being given to the issue of an accounting concession which is in respect of long term business. GAD should also be consulted when a proposed concession in respect of the general business of a composite company will affect its long term business. An example is a group accounting concession (which can only be given for general business) when the long term solvency margin may not be met entirely from the long term business fund. Consult GAD if there is any doubt as to whether a particular concession will affect the long term business.
In any event, GAD should be advised of all concessions granted to composites.

20. In relation to companies writing only general business, judgement needs to be exercised on a case by case basis as to whether the advice of GAD should be sought. Clearly, GAD should be consulted in relation to any proposed accounting concession for any company with which it has recently been involved.

EC Aspects

21. There are no particular EC aspects although consideration must always be given as to whether a proposed concession, particularly if it does not follow an already established pattern, is contrary to any obligation contained in an EC Insurance Directive applicable to the insurance company in question.

On the Record Statements

22. None.

The Precedent Register

23. By using the Precedent Register examples of "model" accounting concessions can be identified, as can orders made in other cases, whether model examples or not.

24. So that the Precedent Register can be maintained, copies of all "top documents" (see para 12 above) should be copied to I1B1, as should a copy of any accounting concession order made after 1 September 1991 together with any professional advice obtained in a particular case.

Compliance Costs for Companies

25. The making of an appropriate accounting concession order may have positive compliance cost implications for an insurance company. It may also reduce our costs without impairing our supervisory ability. This is particularly the case when the full application of the Accounts and Statements Regulations would result in a company having to deposit a return which is not meaningful in relation to the nature of its business and the production and examination of which would be unnecessarily burdensome. However, an application for an accounting concession on compliance cost grounds alone should not be granted if it will significantly inhibit our ability to effectively supervise the company in question.

Issued September 1991 **Guideline 9.2**

DTI's policy guidance notes (1991)

Guideline 9.2: Accounting Concessions (using Section 68 ICA 1982)

Insurance Annual Report

26. To enable publication of details of the exercise of the Secretary of State's powers, a record must be kept of the number of occasions on which the powers contained in s68 ICA 1982 have been used. A pro-forma covering all uses of s68 is provided as an Annex to Guideline 9.1.

Policy Responsibility

27. No one person within the Division has been allocated policy responsibility for all accounting concession issues.

DTI's policy guidance notes (1991)

Guideline 10.2: Disclosure to and Liaison with Other UK Regulators

Guideline 10.2

Disclosure to and Liaison with Other UK Regulators

Synopsis
1. Guidance on when and how to pass information or allegations about companies or individuals to other UK Regulators. Except for routine matters, the decision to disclose should be taken by a Grade 7 or above. In cases of doubt, Solicitors' Division should be consulted.

Scope
2. The principal other regulators are those concerned with investment business carried on by life offices and composites, the Securities and Investments Board (SIB) and the self-regulatory bodies (SROs) it oversees (listed at Annex A). Along with the Bank of England and ourselves they participate in the College of Regulators which provides for co-operation in the supervision of financial conglomerates which are subject to regulation by more than one of the members. The principles set out in this guidance note apply also to relations with the Building Societies Commission, the Registrar of Friendly Societies and professional bodies such as the Insurance Brokers' Registration Council and the Institutes of Chartered Accountants.

The Legislation
3. There is no legislation which imposes an obligation on Insurance division to disclose information to other regulators. On the contrary there are restrictions both at common law and statutory which inhibit the disclosure of information.

4. The common law rules of confidentiality apply in most circumstances. Confidentiality is dealt with in Guidance Note 10.1. If the information is of a confidential nature and has been given to the Department in confidence, a judgement must be made whether the public interest in disclosure outweighs the duty of confidence. If the information is on a database regard must also be had to the Data Protection Act, for which also see Guidance Note 10.1.

5. The statutory restrictions, to be found in Section 47A ICA 1982, prohibit the disclosure of information relating to the business or other affairs of any person which has been obtained under Section 44(2) to (4) ICA 1982 without the consent of the person from whom the information was obtained and, if different, the person to whom it relates. Section 47A then makes exceptions to this general prohibition. These statutory exceptions, detailed in S47A, and in S449 Companies Act 1985 and S180 Financial Services Act 1986 are extremely complex. Advice about disclosure of S44 information should always be sought from lawyers.

6. Information obtained by other divisions in the exercise of their statutory powers (particularly Investigations division) is also subject to statutory restrictions on disclosure. Information obtained by other divisions should never be disclosed without reference to these divisions.

7. By S71 (4) (A) ICA 1982, disclosure of information in contravention of S47A is a criminal offence punishable by fine and/or imprisonment.

Exercise of SOS Functions
8. Liaison with other regulators aids the exercise of such functions as supervision of solvency (by increasing awareness of the financial position of the group as a whole and other regulated companies within the group); ensuring that notified persons are fit and proper and that authorisations are properly granted.

Insurance Division Objective
9. To avoid regulatory failures arising because an issue, company or group of companies or person falls between regulators. To prevent unfit people moving from one regulated area to another.

Best Practice
10. The general principle is that where the Department has adverse information about an individual or company we should always consider whether there are any circumstances which makes this information likely to be relevant to other regulators. Paragraphs 11 - 14 give more detail on the application of this principle in different circumstances.

Issued July 1992 Guideline 10.2

DTI's policy guidance notes (1991)

Guideline 10.2: Disclosure to and Liaison with Other UK Regulators

SIB/DTI information sharing agreement

11. The DTI and SIB have an agreement dated April 1991 about the exchange of information on investment business. The text is at Annex B. It requires both regular and ad hoc exchanges. The regular exchanges are triggered for Insurance Division by long term authorisations, a threat to the solvency margin of a long term business or a qualified auditor's report. SIB will inform us of any authorisation of an insurance company under their regime to carry on regulated investment business, or a breach of rules or serious concern aroused by such a business. In addition the agreement provides that at any time when there are doubts about the integrity or competence of management; or the financial soundness of a company in which we have a mutual interest; or if a formal investigation or the use of disciplinary or intervention powers are being considered SIB or the SRO (usually LAUTRO) and Insurance Divsion will inform each other.

12. Staff should be guided by the terms of this agreement. Information passed in this way may not be further disclosed by the recipient without the consent of the originator. Any release of other than routine information should be cleared by the Grade 7 responsible for the company concerned.

Regular exchanges on notified persons

13. Each week I1A circulates for comment a list of persons notified to the Department as being proposed for, or having recently filled, notifiable positions within a UK authorised insurance company. The list is circulated widely internally and is also sent to:

The Goverment Actuary's Department
Lloyd's
The Stock Exchange
The Securities and Investment Board
The Bank of England

In turn I1A checks names referred to it by these other regulators. Registration under the Data Protection Act permits such exchanges where information is held on computer data bases.

Handling allegations

14. If allegations are received about possible improprieties by someone active in the businesses which are the concern of other regulators, they must be referred to the relevant Grade 7. The Grade 7 will decide whether to pass the allegations on to the other regulators. The presumption should be in favour of disclosure where the allegations are being made by reputable people who are willing to identify themselves as the source. Regard should be had to the possibility of rumours being given added credibility simply because they are forwarded by the DTI.

15. There is some risk that the disclosure of information volunteered to the Department by third parties could be restrained by proceedings taken by the third party concerned, if it appeared that the information had been volunteered under an express or implied understanding that it would be treated as confidential. In a case where such an understanding might be argued to exist, and where it is impracticable or impolitic to seek the volunteer's consent to disclose the information, Solicitors should be consulted.

College of Regulators

16. The College of Regulators system allows individual regulators to retain full legal and operational responsibility for those parts of a conglomerate within their own area, while identifying a lead regulator for the group as a whole. The lead regulator, defined as the one most closely associated with the mind of the group, arranges for information to be pooled, convenes and chairs meetings of the college and co-ordinates action in relation to that group.

17. The terms of reference for the college arrangements are:

"To provide a forum in which financial regulators can together consider issues in the regulation of financial services, which arise across existing boundaries, and can

a. promote discussion and regular exchanges of information across regulatory boundaries, at working level;

b. review lessons to be learned from any individual cases of particular difficulty in conglomerate supervision;

c. offer guidance;

d. draw matters of concern to the notice of the appropriate authority".

Issued July 1992 Guideline 10.2

DTI's policy guidance notes (1991)

Guideline 10.2: Disclosure to and Liaison with Other UK Regulators

18. The lead regulators arrange meetings on a regular basis. The Department holds such meetings approximately every six months tied in with its visit programme. The Bank of England reviews the structure and performance of the groups for which it is responsible every year through meetings approximately every two months. Guidance for supervisors on briefing for such meetings which are normally attended by Grade 7s is at Annex C.

19. In addition, meetings may be called to discuss more general issues, or particularly urgent cases. An Aide-Memoire (at Annex D) has been prepared to assist regulators when serious problems arise in a group. It is not necessary to await a formal college meeting before contacting other regulators.

Implications for our Understanding of the Company's Position
20. Receipt of information about companies we supervise or associated companies aids supervision.

Company's Position
21. Exchange of information may prevent companies being run by unfit people or getting into financial difficulties because of problems in other parts of a group. However, they will not normally be aware of the exchanges taking place.

Standard Draft Letters
22. No standard draft letters have been prepared but a standard format for briefing for College of Regulator meetings is attached at Annex C.

Conditions to be attached
23. Remind other regulators receiving information of its degree of confidentiality and gateways, if appropriate.

Legal Advice
24. Unauthorised disclosure of information can result in civil proceedings against the Department and criminal proceedings against the individual officer. In all cases related to S44 and otherwise, unless there is a well established precedent, questions of disclosure should always be referred to Solicitors.

GAD
25. Actuaries in GAD's Insurance Division may be recipients of allegations, eg. from appointed actuaries, which they will pass to us for action.

EC Aspects
26. There is nothing in current EC Directives on insurance and banking affecting the disclosure of information and liaison with other UK regulators. However Directives agreed but not yet implemented, including the Third Non-Life Directive, include provisions affecting the disclosure of information.

On the Record Statements
27. None.

The Precedent Register
28. Routine exchanges of lists and authorisation details need not be recorded. Decisions about whether to pass on information should go on register, where considerations of confidentiality permit.

Compliance Cost for Companies
29. None

Insurance Annual Report
30. Not applicable.

Policy Responsibility
31. Head of Branch 2.

[redacted]

I attach a letter formally setting out the arrangements for information sharing between the Insurance Division, SIB and the SROs in respect of insurance companies, authorised by the Insurance Division and also regulated under the Financial Services Act.

The letter follows the draft outlined in your letter of 25 February 1991. This has been agreed with the SROs and I sign on their behalf.

The attached Annex I is a complete list of those insurance companies which are members of SROs or which are directly regulated by SIB. Could you check that these are currently authorised under the Insurance Companies Act and therefore subject to your regulatory oversight.

I would be grateful if you could confirm your acceptance of these arrangements. Copies of my letter go to [redacted] (IMRO) and [redacted] (LAUTRO).

In your letter of 25 February 1991, you indicated a college of regulators meeting was to be convened for a number of insurance groups for which the SROs have concerns. Are arrangements in hand for this?

LONDON SW1H 0NN

19 April 1991

PL04193/C/F LR 15

[redacted]

This letter sets out the framework which has been agreed between the Department of Trade & Industry, Insurance Division (Insurance Division), the Securities and Investments Board (SIB) and the Self-Regulatory Organisations (SROs) for the exchange of information relating to insurance companies which undertake investment business under the Financial Services Act.

The Insurance Division is responsible, under the Insurance Companies Act 1982, for the prudential supervision of insurance companies. If an insurance company conducts investment business as defined by the Financial Services Act, it will be subject to the conduct of business rules of either SIB (to the extent described in that Act) or an SRO. The attached Annex I details those insurance companies which conduct investment business. (This list will be updated as necessary).

The exchange of information under these arrangements will be subject to any applicable legal constraints, notably those contained in s.47A of the Insurance Companies Act 1982 and s.179-181 of the Financial Services Act (or, in the case of an SRO, the confidentiality constraints contained in its rulebook). Information passed in this way may not be further disclosed by the recipient without the consent of the other, and such onward disclosure will be governed by those provisions.

Where, in the case of any insurance company listed in Annex I, either the Insurance Division, on the one hand, or SIB or any SRO of which the company is a member, on the other, become aware of information which appears to it likely to be relevant to the discharge of the supervising functions of the other, it will, normally inform the other and discuss what appropriate action, if any, need be taken to protect investors. A list of the kinds of information likely to require notification is contained in Annex II.

This list is not intended to be exhaustive and in all cases it is for each regulator to decide when it is appropriate to inform the other.

Issued July 1992 Guideline 10.2

DTI's policy guidance notes (1991)

Guideline 10.2: Disclosure to and Liaison with Other UK Regulators – Annex B

2

The detailed arrangements made under this letter do not evidence or give rise to any legal obligations or liabilities on any of the parties and are not intended to do so. These arrangements will be reviewed periodically by SIB and Insurance Division in consultation with the SROs.

Guideline 10.2: Disclosure to and Liaison with Other UK Regulators – Annex II

PL04194

ANNEX II

Kinds of information likely to require notification

(a) SIB or the SRO and Insurance Division will inform each other where:

(i) there is ground for concern about the integrity or competence of direction and/or management of an insurance company or its subsidiaries;

(ii) there is otherwise ground for doubt about the financial soundness of the company or its subsidiaries (including serious problems with internal control and accounting systems);

(iii) consideration is being given to instigating a formal investigation or using disciplinary powers or powers of intervention against an insurance company or its subsidiaries or (if applicable) associates.

(b) Insurance Division will inform SIB or the SRO where:

(i) the DTI is considering authorising, or withdrawing the authorisation of, an insurance company which is also authorised under the Financial Services Act;

(ii) the margin of solvency falls below, or it is anticipated will fall below the required minimum margin under the Insurance Companies Regulations 1981:

(iii) there is a material qualification of an auditor's report or a concern arising out of the management letter.

Issued July 1992 Guideline 10.2

DTI's policy guidance notes (1991)

Guideline 10.2: Disclosure to and Liaison with Other UK Regulators – Annex II

2

(c) SIB or the SRO will inform the Insurance Division where:

(i) SIB or the SRO is authorising an insurance company, and once authorised, if the insurance company wishes to significantly amend the scope of its business plan;

(ii) there is a serious breach of a conduct of business rule or a concern relating to the operations or controls of the business.

THE INSURANCE COMPANIES ACT 1982 ("the Act")

THE INSURANCE COMPANIES (ACCOUNTS AND STATEMENTS) REGULATIONS 1983

("the 1983 Regulations")

GUIDANCE NOTES

ON THE PREPARATION OF

ANNUAL RETURNS

These notes bring together and update the various guidance notes issued with the separate Statutory Instruments now consolidated into the 1983 Regulations which apply to financial years ending on or after 15 March 1984. They are designed to assist insurance companies and their advisers in the preparation of returns to the Department and attempt to clarify points which may not be immediately apparent from the relevant legislation. They do not, themselves, have the force of law.

It would be helpful if we could be notified of any legal advice readers may receive on the interpretation of the legislation which appears to be inconsistent with these notes.

Any enquiries on these notes should be sent to the address given below. Insurance companies are asked to address enquiries to the person with whom they normally correspond about their returns to the Department.

1. THE STATUTORY REQUIREMENTS TO PRODUCE RETURNS

1.1 Annual accounts and balance sheet (Section 17 of the Act)

1.1.1 The Act requires every company which carries on insurance business in the United Kingdom to prepare returns in respect of each of its financial years. These returns include a balance sheet as at the end of the year and a revenue account and a profit and loss account for the year.

1.1.2 These documents are to have the format and contents laid down in the 1983 Regulations and are to have annexed to them such notes, statements, reports or certificates as those regulations specify.

1.1.3 The balance sheet, accounts and annexed documents (with certain exceptions) must be audited. The form of the audit report and the description of the person to carry out the audit are specified in the 1983 Regulations.

1.2 Actuarial investigation of long term business (Section 18 of the Act)

1.2.1 An insurance company which carries on long term business is also required to cause an investigation to be made every year by its appointed actuary. The investigation includes a valuation of the liabilities of the long term business. Whenever an investigation is carried out in accordance with this requirement, or with a view to the distribution of profits or the results of which are made public, an abstract of the appointed actuary's report shall be made in accordance with Schedule 4 to the 1983 Regulations.

1.2.2 At least once in every period of five years the company is also required to prepare a statement of its long term business in accordance with Schedule 5 to the 1983 Regulations.

6

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

1.3 Deposit of returns and provision of copies (Section 22 of the Act)

1.3.1 Every document mentioned above, including the auditors' report, must be printed and five copies deposited with the Secretary of State within six months of the end of the period to which the document relates.

1.3.2 The Secretary of State has power to extend the period for deposit by up to three months in appropriate cases. Applications for such an extension should be made to the Department in good time since an extension cannot be granted where application is not made within the six months' period. Similarly, if it becomes necessary to seek a further extension (within the limit of three months) beyond one already granted, application should be made by the expiry of the extension in operation.

1.3.3 One of the copies of each deposited document, other than the auditors' report, must be signed by the persons specified in Regulation 25.

1.3.4 The copy of the abstract of the actuary's report and of the statement of long term business must also be signed by the appointed actuary who carried out the investigation to which they relate.

1.3.5 One of the copies of the auditors' report must be signed by them.

1.3.6 If any of the documents appear to be inaccurate or incomplete the Secretary of State is required to communicate with the company with a view to having the matter put right.

1.3.7 A company is required to supply a copy of these documents to any shareholder or policyholder who applies for one.

7

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

1.3.8 One copy of the documents deposited with the Secretary of State will be deposited by him with the Registrar of Companies and will be open to inspection by members of the public who may also obtain copies from the Registrar.

1.3.9 A company carrying on business in Northern Ireland must also deposit a copy with the Registrar of Companies in Belfast.

1.3.10 An insurance company which is a registered society under the Industrial and Provident Societies Acts must also deposit one signed copy of each document with the appropriate registrar under those Acts.

1.4 <u>Other returns to be made to the Secretary of State</u>

1.4.1 Section 20 of the Act provides for annual statements about particular classes of business to be required by regulations. Such statements must be signed, deposited, etc in the same way as the annual accounts except that they are not required to be audited. The only such statement currently required is that relating to general business reinsurance arrangements in Form 30 of the 1983 Regulations.

1.4.2 Section 22(2) of the Act requires five copies of a statement of connected intermediaries to be deposited with the annual return. This statement must be signed in the manner indicated in paragraph 1.3.3 above and the other provisions relating to the supply of copies, etc, also apply. The statement is not subject to audit. Where a company has no connected intermediaries a statement to that effect should be included with the return.

1.4.3 Section 22(6) of the Act requires a copy of any report on the affairs of the company submitted to the shareholders or policyholders to be deposited

8

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

with the annual return. The Department would find it helpful if companies carrying on general business could supply two copies of the report and of any other report which falls within this requirement. Companies carrying on long term business should supply three copies of such reports.

1.4.4 Sections 25 and 26 of the Act allow the Secretary of State to make regulations requiring other returns to be made to him. No such regulations have been made.

2. THE 1983 REGULATIONS

2.1 The 1983 Regulations are the main instrument laying down the form and contents of the various documents referred to in section 1 of these notes. They also specify the scope of the audit and the qualifications for appointment of auditors and actuaries.

2.2 The following notes relate primarily to the interpretation of these regulations. They are designed to be read in conjunction with the regulations and not instead of them. Where no other indication is given references in these notes to the numbers of regulations, schedules, forms, etc, are references to the items bearing those numbers in the 1983 Regulations.

3. DEFINITIONS

3.1 A number of definitions are given in Regulation 3(1) preceded by the words "unless the context otherwise requires". Some of the phrases defined are in fact used with different meanings in parts of the return but the context always makes this clear. An example is "claims outstanding" which are shown as gross of reinsurance recoveries on Forms 11 and 12, but net thereof on Form 15.

9

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

3.2 Other terms which are relevant only to particular Schedules are defined in the Schedule concerned.

3.3 Items may also be defined on the particular forms where they are used. A special type of definition here is the use of the column headed "source". The information included here is not just a helpful note about which figures on different forms should agree: it is a mandatory requirement of the regulations that the figure should be derived from the source shown.

3.4 "Fund" in relation to long term business is not defined as that word is used for different purposes throughout the regulations. Where it appears, it will be necessary to determine from the context which meaning is to be applied.

3.5 Words and phrases which are not defined in any of the ways specified above are taken to have the same meaning as they have in the Act. An example of this is "valuation regulations" which is defined in Section 96(1) of the Act.

4 TYPES OF RETURN ACCORDING TO CATEGORY OF COMPANY

4.1 Six categories of insurance company are defined in the regulations. The definitions are not mutually exclusive.

A pure reinsurer is authorised to carry on only reinsurance business in the UK.

A United Kingdom company has its head office in the UK.

10

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

A Community company has its head office in a member State.

An external company has its head office outside the EEC and Section 9(2) of the Act does not apply to it.

A United Kingdom deposit company which is not a pure reinsurer, has its head office outside the EEC and has made a deposit in the UK under Section 9(2)(b) of the Act.

A Community deposit company which is not a pure reinsurer, has its head office outside the EEC and has made a deposit under Section 9(2)(b) of the Act in a member State other than the UK.

4.2 Depending on which of these definitions apply, Regulations 2(2) and 3(3) and (4) determine whether a company is required to produce returns covering its entire business (global), business carried on through an agency or branch in the UK (UK branch), business carried on through agencies or branches in the EEC (CM branch), or a combination of these, thus:-

Category of Company	Return required		
	UK branch	CM branch	Global
1. Pure reinsurer	NO	NO	YES
2. UK company	NO	NO	YES
3. Community company (other than 1 or 2 above)	YES	NO	NO
4. External company (other than 1 above)	YES	NO	YES
5. UK deposit company	NO	YES	YES
6. Community deposit company	YES	NO	NO

11

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

5. VALUATION OF ASSETS AND LIABILITIES

5.1 Regulation 4 lays down the way in which assets and liabilities are to be valued for the purposes of preparing the returns and the following paragraphs explain its effect.

5.2 Paragraph (a) of Regulation 4 requires all assets and liabilities to be valued in accordance with any valuation regulations which are applicable to them. The current valuation regulations are to be found in Parts V and VI of the Insurance Companies Regulations 1981, (the 1981 Regulations). Additionally, Regulation 10 of the 1981 Regulations provides for the valuation of various other assets for solvency purposes subject to certain conditions.

5.3 Linked assets are not covered because Regulation 38(2) of the 1981 Regulations explicitly excludes them. Paragraph (b)(ii) requires these assets to be valued in accordance with "generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies". The reference to "other generally accepted methods ..." allows appropriate actuarial and statistical methods to be used.

5.4 Any other asset not covered by valuation regulations is required by paragraph (b)(i) to be valued for the purpose of the return as though the valuation regulations were applicable.

5.5 It will be noted that Regulation 4 begins with the words "unless otherwise provided in these Regulations". This relates only to line 94 of Form 13 which is to contain the amount of assets disallowed because of the application of the admissibility limits.

12

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

5.6 The phrase "admissible asset" means an asset which is not inadmissible under Regulation 38(3) of the 1981 Regulations. It thus includes the types of assets for which valuation rules are laid down in Part V of those regulations and also linked assets and cash. Although an asset is itself "admissible", its value may nevertheless have to be restricted because of the admissibility limits in Schedule 8 to the said regulations.

6 COMPLETION OF FORMS

6.1 Forms required for different types of company

6.1.1 The forms which a company includes in its return depend on:

i. whether it carries on general business, long term business or both;

ii. the category of the company concerned (see paragraph 4.2); and

iii. the particular classes and types of general or long term business carried on by it.

6.1.2 Additional guidance on how branch returns should be completed is given in paragraph 19 below.

6.2 Conventions for showing figures

6.2.1 Some of the forms in the returns will be used by the Department to prepare data for its computer. It is therefore important that a standard notation is used in completing the forms and it would be helpful if the

13

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

conventions given in the following paragraphs were strictly followed in completing Forms 9 to 16, 20 to 28, 31 to 37 and 40 to 42.

6.2.2 Zero values. Figures which are zero (including those which become zero after rounding) should be indicated by a dash.

6.2.3 Empty boxes. Boxes which can never contain a figure have been shaded on the forms. Other boxes which are not applicable to a particular company should be left blank (eg line 12 of Form 9 will be blank for a company not carrying on general business). Boxes should not, however, be left blank if they are applicable but the relevant figure happens to be zero (eg a company not paying commission for a particular type of business should show a dash for commission).

6.2.4 Negative values. Where it is acceptable to include negative values, they should be indicated by enclosing them in round brackets. Minus signs or the letters "DR" should not be used.

6.2.5 Thousands, etc., commas. Thousands and millions may be indicated by a comma or a space, but a full stop (as used in some European countries) must not be used for this purpose. Alternatively, no indication may be made of thousands and millions.

6.2.6 Decimal points. A full stop should be used in showing the decimal points in the claims frequency ratios on Form 32 and the currency rates on Form 36. Decimal points should not be used elsewhere in Forms 9 to 16, 20 to 28, 31 to 37 or 40 to 42.

6.2.7 Units. All amounts on Forms 9 to 16, 20 to 28, 30, 37 and 40 to 42 should be rounded and shown in £000 even if particular figures are so large or

14

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

so small that normal accounting conventions would make this inappropriate. Amounts on Forms 29 and 31 to 35 which are in sterling should also be shown in £000 and the rules for dealing with amounts in other currencies are given in paragraph 4 of Schedule 2. Amounts in Forms 43 to 51 (Schedule 3) should be shown in £ or £000 as seems appropriate by the normal principles. Amounts in Schedules 4 and 5 should be shown in whatever way is appropriate. In all cases the units should be shown on the Forms.

6.2.8 Rounding. In rounding to the nearer thousand pounds £500 should be rounded up and £499 rounded down. Figures which are totals of other figures should be rounded after totalling the unrounded detail figures. If companies wish to eliminate any apparent inconsistencies in the figures then shown by adjusting the detail figures the Department will not object. It is acceptable, however, to avoid doing this unnecessarily - particularly in the detailed statistics on Forms 31 to 35.

6.2.9 The claims frequency ratios on Form 32 should be calculated from unrounded figures and then rounded to one place of decimals.

6.3 Completion of code boxes

6.3.1 Forms 9 to 16, 20 to 28, 31 to 37 and 40 to 42, each have a row of boxes above the main columns on the form in which are to be inserted the company's registration number, the period to which the return relates, and other information. The data included in these boxes is used by the Department's computer to determine the company, period, accounting class, etc to which the figures on the form relate.

6.3.2 Requirements for the completion of these boxes are given in paragraph 3 of Schedule 1, paragraphs 4 and 7 of Schedule 2 and paragraph 4 of Schedule

35

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

3. If any company is not clear which number is to be entered as its registration number it should ask the Department so that a number can be agreed.

6.3.3 The ten accounting classes are set out in Regulation 3(1). Country codes are enumerated in Annex A.

6.3.4 Forms 45 to 51, 55 to 58 and 65 to 78 each have an OB/IB heading which should be used to indicate whether the Form refers to ordinary business or industrial assurance business. Exceptionally, in the case of Forms 45 and 46, if separate assets are not distinguished for OB and IB, the heading should indicate that the Form applies to both kinds of business.

6.4 <u>Printing, binding and signature of returns</u>

6.4.1 The Department will supply companies with preprinted Forms 9 to 16, 20 to 28, 31 to 37 and 40 to 42 on which to complete one copy of these parts of their return. The regulations require these forms to be completed exactly as set out in the Schedules. If for any reason a company does not use the preprinted forms supplied it must use identical forms which include all the thick lines and double lines (which are used in preparing computer data).

6.4.2 It would be appreciated if the copy on the preprinted or identical forms was left unbound and the forms held together with a tag through the hole punched in the corner. The forms are printed on A4 paper. Forms 9 to 16 and 20 to 28 are yellow, Forms 31 to 36 are pink, Form 37 is blue and Forms 4 0 to 42 are white. It would be helpful, but is not essential, if the parts of the return which are not on the preprinted forms supplied were printed on white paper.

16

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

6.4.3 It is suggested that a convenient method of preparing the return will be to type the information on the loose preprinted forms and then use these as masters from which to prepare the other copies by litho printing or photocopying. These copies may be bound and it is suggested that one of them should be the signed copy. The Department will then receive one bound copy which is signed, one unsigned copy on the loose forms and three unsigned bound copies.

6.4.4 The Act requires one copy of each document to be signed but it is the Department's practice to accept one set of signatures to cover several documents provided they are securely bound together. If the whole return is bound in one volume it is suggested that the foot of Form 9 is the most suitable place for these signatures. Where there are several volumes it is suggested that those not containing Form 9 should each be signed on the last page. The certificates required to be signed by the directors and appointed actuary must always be separately signed and may not be included under the "general" signatures of a bound volume. The Department would be assisted if the names of signatories could be printed in the returns. If a partnership is the appointed actuary the Department would like companies to print in the returns both the name of the partnership and the actuary who made the investigation.

6.4.5 Although, strictly speaking, the regulations require certain forms for each accounting class the Department does not expect forms which would contain only blank boxes or dashes to be included.

6.5 Currency translation

6.5.1 Paragraphs 4 and 5 of Schedule 1 lay down the way in which overseas currencies are to be translated into sterling in the forms required by

17

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Schedules 1, 2 and 3. Translation shall be at end of year exchange rates except that income and expenditure relating to -

i. long term business;

ii. MAT business (accounting classes 3, 4 and 5) carried on in the UK;

iii. reinsurance treaties accepted (accounting classes 9 and 10) carried on in the UK; and

iv. home foreign business;

may be translated using other exchange rates (eg remittance rates) provided a note of the methods used is included in the return.

6.5.2 By using end of year rates it should be noted that figures shown as brought forward one year may be different from the corresponding figures shown as carried forward the previous year. Where any differences cannot be accounted for wholly by the use of different exchange rates (eg where there is a correction to last year's figure) a note of explanation should be included. Such differences may be apparent within one year's return where a form (eg Form 20) contains a column for previous year figures. In all cases the figures shown in the previous year column should be the same as those shown in that previous year's return.

6.5.3 Form 23 presents particular problems for currency translation and where overseas currencies are involved the practice outlined here should normally be followed. Column 1 shows the claims outstanding at the end of the year of origin. Figures in column 1 should be expressed in sterling using the

18

appropriate exchange rates applying in the year of origin. The figure for any particular year of origin will therefore remain the same in the annual returns for succeeding financial years. Column 2 shows the cumulative claims paid since the year of origin (but not those paid in the year of origin itself) and the amounts paid in each financial year will be at the exchange rate applying for that financial year. A figure in column 2 can therefore consist of the sum of amounts translated into sterling at several different exchange rates. Column 3 shows the amount of claims outstanding at the end of the financial year to which the return relates; all currency translation should be at the exchange rates applying in that year.

Amounts in Forms 29, 31, 33, 34 and 35 relating to individual countries are to be expressed in the currencies of the countries concerned, except where the special provisions of paragraph 5 of Schedule 2 have been applied to Form 29. All other parts of Schedules 1, 2 and 3 are to have amounts shown in sterling.

6.5.4 Amounts in Schedule 4 are to be shown in sterling, other currencies being converted at the latest closing middle rate available on the date to which the valuation relates. In Schedule 5 amounts may be expressed in other currencies in the circumstances described in paragraph 2(3) of that Schedule.

6.6 Notes to the Forms

6.6.1 Certain matters are required to be shown in notes to the Forms. These include information about netting, (see paragraph 7.1) contingent liabilities, (see paragraph 7.2) currency translation (see paragraph 6.5) and the calculation of unearned premiums. Where such notes relate to Forms in the parts of the return subject to audit (Forms 9 to 16, 20 to 29, 31 to 37 and 40

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

to 51) they should be kept separate from any notes relating to other parts of the return so that the auditors' report can readily refer to them.

6.6.2 On the preprinted Forms supplied by the Department there will often not be enough space to include a note. It is therefore suggested that the Form itself should just contain a cross-reference (see note x on page x) to the note which can then appear on a separate page with any other notes referring to audited Forms. Any notes to Form 30, which is not subject to audit and is not a form supplied by the Department, can be shown at the foot of the form or in the "Remarks" column.

6.6.3 It would facilitate the Department's computer processing if no notes, asterisks referring to footnotes or similar information are included in boxes which are intended to contain figures. This applies to Forms 9 to 16, 20 to 28, 31 to 37 and 40 to 42.

6.6.4 The notes appearing in the Companies Acts accounts, including accounting policies, are not required to be reproduced in the returns, but some of these notes may be necessary to comply with Regulation 5 of the 1983 Regulations and to make the returns more meaningful.

20

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

S44AAI

EC 7. SCHEDULE 1 (FORMS 9 to 16)

7.1 Netting

7.1.1 Paragraph 8 of Schedule 1 permits the netting of amounts due to and from the same person and in this context amounts due to or from a person through an intermediary may be taken as legally due to or from the intermediary. This is principally of application to lines 51 to 53 of Form 13 and lines 31 to 33 of Forms 14 and 15. Net amounts must not be negative. Where the amount due to a person exceeds the amount due from the same person the net amount must be included in the returns as a liability item. Where the amount due from a person exceeds the amount due to the same person the net amount must be included in the returns as an asset.

7.1.2 If such net amounts are included in the forms a note to that effect must also be included. Where more than 25% of any net amount shown as due to the company is due from one intermediary or intermediary group the note must also mention that fact.

7.1.3 It should be noted that it is only amounts due from or to the same intermediary that may be netted. Amounts due from intermediary A may not be included net of amounts due to intermediary B. Facultative and treaty reinsurance can sometimes be written in the same Department, but otherwise companies should normally follow practice within the headings shown on the Forms (so that, for example, separate balances are included for treaties accepted and treaties ceded).

21

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

7.2 Contingent liabilities

7.2.1 Paragraph 10 of Schedule 1 indicates that contingent liabilities are normally to be included in Forms 14 and 15. Certain other information is required to be given in a supplementary note to those Forms and is reproduced in lines 60 and 61 of Form 9.

7.2.2 Where any provision is made (other than within the mathematical reserves) for future liability to tax on unrealised capital gains this will be included in line 44 of Forms 14 and 15. A note to the Forms should indicate whether any such provision has been made and, if so, the amount. However, companies are not required to include in the notes an estimate of the total amount of tax which would be payable if all the assets were realised at the values shown in the return.

7.2.3 The notes on contingent liabilities should mention all non-insurance contingent liabilities which have not been included in Forms 14 and 15 together with an estimate of the amount of those liabilities wherever practicable.

7.3 Statement of solvency (Form 9)

7.3.1 Form 9 is required to be completed by every United Kingdom company, external company, United Kingdom deposit company and pure reinsurer - see

22

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Regulation 6(2). Annex B to these notes shows the inter-relationship of Forms 9 to 16 and 60 and 61.

7.3.2 Form 9, the statement of solvency, provides for there to be shown separately the required minimum margins for general business and long term business, as applicable, together with the amounts of the available assets and implicit items that may be counted against the solvency requirements. Under Regulation 10(4) of the 1981 Regulations, implicit items, ie future profits, zillmerising and hidden reserves, have no value expect in pursuance of an Order under Section 68 of the Act. Companies wishing to count such items against their solvency requirements should apply to the Department for the appropriate Order - see also paragraph 21 of these notes. For companies transacting both general and long term business the comparison is made separately for each type of business and the whole of the excess of the other than long term business assets over the other than long term business liabilities must be allocated to either the general business or the long term business solvency margin; identification of the corresponding underlying investments is not, however, required. For a proprietary company transacting only long term business, all other than long term business net assets are counted towards the long term business solvency margin.

7.3.3 The value of a dependant insurance company, as determined in accordance with Regulation 40 of the 1981 Regulations, may not correspond with the excess of net available assets over the required minimum margin shown in Form 9 for the dependant. This is because of the simplified formula for calculating the general business solvency margin attributed under Regulation 40(2)(c) to a dependant carrying on general business and because of the requirement under Regulation 40(2)(f) that the long term business liabilities of a dependant carrying on long term business shall be deemed to be not less than the value of the assets representing the long term business fund.

23

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

7.4 Statement of net assets (Form 10)

7.4.1 Form 10 is required to be completed by every company - see Regulation 6(3).

7.4.2 Lines 11 and 12 should be completed only by companies carrying on long term business and the two lines will be equal to each other (except in the case of a company whose long term assets are not sufficient to cover its liabilities). Lines 21 to 29 should be completed by every company except a mutual company which has no assets other than long term assets.

7.4.3 Line 54 will contain all shareholders' funds not included in lines 51 to 53 and will be the balancing item to produce agreement between lines 59 and 29.

7.5 Calculation of required margin of solvency and statement of required minimum margin - general business (Forms 11 and 12)

7.5.1 Forms 11 and 12 show the calculation of the required margin of solvency for general business as laid down in Schedules 1 and 2 to the 1981 Regulations. The Forms are required to be completed by every United Kingdom company, external company, United Kingdom deposit company and pure reinsurer which carries on general business - see Regulation 6(4).

7.5.2. The Forms, which are not a strict "paragraph by paragraph" application of Schedules 1 and 2 to the 1981 Regulations, first call for the calculation of the required margin of solvency on the "premium" basis (Form 11) and then on the "claims" basis (Form 12). The higher of the two results establishes the amount of the required margin of solvency which is then shown

24

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

at Form 12 line 43. The minimum guarantee fund, determined in accordance with Schedule 3 to the 1981 Regulations, is shown at Form 12 line 44. The required minimum margin which is shown at line 49 of Form 12 and at line 12 of Form 9 is the higher of the minimum guarantee fund (12.44) and the required margin of solvency (12.43) for global returns. In the case of branch returns it is the higher of half of the minimum guarantee fund shown at Form 12 line 44 and the required margin of solvency (12.43). A more detailed explanation of the various steps necessary to complete the Forms is given in the following paragraphs.

7.5.3 The steps in the calculation by the first method (premium basis) shown on Form 11 are -

a. Determine the gross premiums receivable in accordance with the note at the foot of Form 11.

b. Deduct premium taxes and levies and adjust the sum derived if the financial year runs for more or less than 12 months. The premium taxes and levies will include any local taxes or levies payable on overseas premiums (eg VAT) and in the case of UK premiums will include any general business levy under the Policyholders Protection Act 1975. (Paragraphs 3 and 4 of Schedule 1 to the 1981 Regulations).

c. Divide the amount arrived at between that which relates to health insurance, as defined in paragraph 8 of Schedule 1 to the 1981 Regulations and that which relates to other business. (The Department will advise, if requested, whether business carried on under a particular policy falls within the definition of health insurance). In the case of each amount, if appropriate, divide into

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

two portions of 10 million European Currency Units and the excess over 10 million such units. (The sterling value of the European Currency Unit varies from year to year, the changes are published in the official Journal of the European Communities). Apply the appropriate percentages (18, 16, 6 or $5^1/_3$, as the case may be) to the totals arrived at and add together the resultant sums. (Paragraphs 5 to 9 of Schedule 1 to the 1981 Regulations).

d. Calculate (i) claims paid in the financial year (ii) the amount of claims outstanding at the end of the year and (iii) the amount of claims outstanding at the beginning of the year. Establish the amount of "claims incurred" in the year by adding (i) and (ii) and subtracting (iii). The figure for claims paid to be shown at 11.21.1 will be given by 22.11.2 + 22.14.2 + 24.21.5 + 24.22.5 + 27.22.3 for all accounting classes. For business accounted for on a one year basis the claims outstanding carried forward (11.23.1) will be 22.11.3 + 22.14.3 and claims outstanding brought forward (11.25.1) will be 22.11.1 + 22.14.1. The other Forms in the return do not give the data needed to determine the amount of claims outstanding where business is accounted for other than on a one-year basis (ie three year business and proportional treaties shown on Forms 27 and 28). These figures will have to be taken from other records or if necessary estimated, or a company may base its calculation on the "fund" figure which will include elements other than claims outstanding. The figures given must, however, be gross of reinsurance recoveries. (Paragraphs 10 to 12 of Schedule 1 to the 1981 Regulations).

26

e. Deduct from the sum arrived at under sub-paragraph (d) above the total sum recoverable in respect of that amount under reinsurance contracts ceded. (Paragraph 13 of Schedule 1 to the 1981 Regulations).

f. Determine the fraction resulting from dividing the sum arrived at under sub-paragraph (e) above by the sum arrived at under sub-paragraph (d) above. (Paragraph 14 of Schedule 1 to the 1981 Regulations).

g. Multiply the sum arrived at under sub-paragraph (c) above by the fraction determined at sub-paragraph (f) above or if that fraction is less than one half, by one half. The product of this calculation is the First Result. (Paragraph 15 of Schedule 1 to the 1981 Regulations).

7.5.4 The steps in the calculation by the second method (claims basis) shown on Form 12 are -

h. Determine the reference period. If a company has not been in existence long enough to acquire a reference period this should be stated and lines 11 to 41 ignored. For the majority of companies the reference period will be the last three financial years. (Paragraphs 1 and 2 of Schedule 2 to the 1981 Regulations).

i. Establish the amount of "claims incurred" in a similar way to that explained in sub-paragraph (d) above but related throughout to the reference period rather than to the financial year. Claims in respect of both direct business and reinsurance business accepted

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

should be included. (Paragraph 3 of Schedule 2 to the 1981 Regulations).

j. Reduce the sum derived to an annual figure by dividing by the number of months in the reference period and multiplying by 12.

k. Divide the amount arrived at between that which relates to health insurance and that which relates to other business. In the case of each amount, if appropriate, divide into two portions of 7 million European Currency Units and the excess over 7 million such units. Apply the appropriate percentages (26, 23, $8^2/_3$ or $7^2/_3$, as the case may be) to their respective portions and add together the resultant sums. (Paragraphs 5 to 9 of Schedule 2 to the 1981 Regulations).

l. The amount of the Second Result will then be achieved by multiplying the final sum resulting from the calculations at sub-paragraph (k) above by the same fraction as is required to be applied under sub-paragraph (g) above.

7.5.5. The amount of the minimum guarantee fund shown at 12.44.1 is calculated in accordance with Schedule 3 to the 1981 Regulations. In most cases it will be 400,000 European Currency Units translated to sterling.

7.6 Analysis of admissible assets (Form 13)

7.6.1 Form 13 is required to be completed for the total long term business assets and the total other assets for each return indicated in paragraph 4.2 above. The requirements in respect of branch returns are further explained in paragraph 19 below. Where separate assets are appropriated for separate long

28

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

term funds or groups of funds, (other than internal linked funds,) additional Forms 13 are to be completed in respect of each such fund or groups of funds.

7.6.2 The category of assets to which a Form 13 relates is to be indicated in the appropriate code box. A list of the codes to be used is given in the Instructions for completion of the Form. (See page 37 of the 1983 Regulations).

7.6.3 All admissible assets must be included at the full value determined in accordance with Regulation 4 (see paragraph 5 above). The headings on Form 13 generally correspond to the types of assets for which separate valuation rules or admissibility limits are laid down in Part V of the 1981 Regulations.

7.6.4 The amount due in respect of long term business premiums shown at line 51 should include any amount due from the Inland Revenue in respect of life assurance tax relief. Such amounts should not be included in line 42.

7.6.5 In Forms 13 relating to long term assets, linked assets should be included in lines 85 and 86 and not in lines 11 to 83. Line 85 covers linked assets in internal linked funds and line 86 covers other linked assets (eg holdings in authorised unit trusts). Assets which are indirectly matching, or are notionally apportioned to meet,) liabilities in respect of property linked benefits but which are not themselves assets by reference to which the value of property linked benefits is determined should not be included in lines 85 and 86. However, if the linkage is to the <u>price</u> of a unit in an authorised unit trust, any holdings of units in that unit trust should be treated as linked assets and should be included in line 86 of of Form13.

29

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

7.6.6 Line 87 should be left blank. It has been included in order to avoid reprinting the form if future amendments to the 1981 Regulations make any other type of asset admissible.

7.6.7 Line 94 should give the value of the admissible assets which has been excluded from the other lines because of the operation of the admissibility limits given in Schedule 8 to the 1981 Regulations. This will not necessarily be the figure which reconciles the total value of the assets shown on Form 13 with the total value of the assets shown in the Companies Acts accounts. Differences may arise because the basis of valuation of dependants, for example, is not the same. If companies consider it would be helpful for their own purpose to explain the differences, with or without quantification, this can be provided by way of note to either or both of the Insurance returns or the Companies Acts accounts.

7.7 <u>Long Term business liabilities and margins (Form 14)</u>

7.7.1 Form 14 should be completed by every company which carries on long term business. It shows long term asset margins as well as liabilities so that the total shown at line 59 will agree with the value of the long term assets shown on Form 13 even where the long term business funds are included at book value, except where the long term liabilities exceed the long term assets (see paragraph 7.4.2 above).

7.7.2 The constituent parts of the long term business funds are required to be shown on the form. Lines 11, 12, 15 and 16 require disclosure of the mathematical reserves and the balance of the fund as established by the

30

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

actuary's valuation, reported on in accordance with Schedule 4. The amount of the mathematical reserves is to be shown after any increases resulting from the allocations of bonuses to policyholders as a result of the valuation.

7.7.3 Where cash bonuses have been allocated to policyholders and are due to be paid immediately, they are in the nature of a current liability. As such they should not be included in the mathematical reserves (and no factor need be applied to them in calculating the required margin of solvency). The Instructions to the Forms 9 and 14 provide for the amount of any cash bonuses to be stated in a footnote to Form 14 and included with other liabilities in line 24 of Form 9.

7.7.4 Lines 13 and 17 of Form 14 will be the sums of all figures shown at 40.16 in respect of ordinary and industrial business respectively. Lines 14 and 18 will be the sum of any valuation deficiencies in respect of ordinary and industrial business respectively; the figures should be included in Form 14 as positive amounts.

7.7.5 A figure will appear in line 51 only when the amount shown for the long term funds is not based on the full value allowed under the 1981 Regulations of the admissible assets representing those funds (ie when the funds are shown in the revenue account at book value). The amount of the margin to be entered in line 51 is determined by first subtracting the amount of the current liabilities (lines 21 to 47 of Form 14) from the total assets shown in 13.93 to give the value of the assets representing the funds and then subtracting from this figure the amount of those funds shown at 14.13 and 14.17. The resulting figure must not be negative since the funds may only be valued at book value where this produces a lower figure than the full value of

31

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

the fund calculated in accordance with Part V of the 1981 Regulations. If a negative figure would otherwise result, the fund must be written down in line 3 of the relevant Form 40 before being included in Forms 14 and 58.

7.7.6 The second part of Instruction 3 to Form 14 requires a company to indicate whether any part of line 51 (the excess of the value of admissible assets representing the long term business funds over the amount of those funds) represents additions to the mathematical reserves shown in lines 11 and 15 which are required for the purpose of showing the solvency position in Form 9 or whether the amount shown in line 51 is wholly a free reserve. The issue arises because for the purpose of Schedule 1, including the Statement of solvency, assets are required to be valued in accordance with Part V of the 1981 Regulations (ie broadly on a market value basis) even where a long term fund is maintained and brought into account in the Schedule 4 report on the basis of lower book values. In such circumstances the mathematical reserves shown in Form 58 may not always constitute an appropriate assessment of the liabilities for Schedule 1 purposes.

7.7.7 Although the limits placed on the valuation rates of interest for the Schedule 4 valuation by Regulation 59 of the 1981 Regulations are determined in relation to the yields on the assets on the same basis as these are shown in Schedule 1, there are other respects in which the actuary's assessment of the mathematical reserves in the Schedule 4 report may have had regard to the lower book values where the assets have been brought into account on this basis; for example, in assessing the amount of a mismatching reserve in accordance with Regulation 55 of the 1981 Regulations or in a provision for future capital gains tax. For this reason in certifying the long term liabilities as required under Part II of Schedule 6, the actuary may find it necessary in some circumstances to make an addition to the mathematical

32

reserves on the Schedule 4 basis shown in lines 11 and 15 of Form 14. It is anticipated that in practice for the majority of companies no adjustment will be required, but where an adjustment is made the amount stated in the actuary's certificate is to be shown in a footnote to Form 14 and included in the mathematical reserves shown in line 23 of Form 9.

7.7.8 The figures shown in line 62 of Form 14 should include the total of Form 56 column 14 (all funds) plus any liabilities in lines 21 to 47 in respect of property linked benefits.

7.8 <u>Liabilities - other than Long Term business (Form 15)</u>

7.8.1 Form 15 should be completed by all companies except a mutual company carrying on only long term business. It shows the amount of the liabilities other than long term business liabilities.

7.8.2 The figures for general business claims outstanding are shown net of reinsurance recoveries on this Form. A separate amount is required to be shown for the provision for "expenses for settling claims outstanding" which is designed to provide for the cost of the overheads which would be involved in running a claims department to settle outstanding claims if the company ceased to take on any new business. The expenses to be provided for here are those which will be classed as management expenses when they are incurred and not those which will be attributed to the cost of invididual claims. Provision for expenses attributable to individual claims should be included in claims outstanding (see definition in Regulation 3(1)).

33

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

7.9 Statement of other income and expenditure (Form 16)

7.9.1 Form 16 is required as part of every return. The Form relates only to the results of the year and has no balance brought forward from previous years.

7.9.2 The figures shown at line 11 of Form 16 should be the sum of those shown at line 12 of Form 40 (the long term business revenue account) for all the long term funds including, where appropriate, industrial assurance.

7.9.3 Figures at lines 13, 14, 21 and 25 will exclude any amounts included in the general business revenue account (Form 20) or the long term business revenue account (Form 40) for those same items. Investment income from long term business assets must be shown in Form 40; other investment income must be shown either in Form 20 or in Form 16 or in a combination of both. Where a company wishes to credit the long term business fund with any investment income derived from the other than long term business assets, it must show this in the returns by making a transfer to the long term business revenue account in line 11 of Form 16 (ie a negative entry), and make a corresponding negative entry in line 12 of Form 40. Investment income may be shown net of management expenses incurred in respect of the investments.

34

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

S51AP(

EC 8. SCHEDULE 2: GENERAL BUSINESS REVENUE ACCOUNT AND ADDITIONAL INFORMATION (FORMS 20 TO 29)

8.1 Accounting classes

8.1.1 The accounting classes for which the Forms in Schedule 2 are to be completed are given in Regulation 3(1). Direct insurance and facultative reinsurance acceptances are divided into 8 classes. Inwards reinsurance treaties are to be shown in two separate classes except that treaties relating to classes 3, 4 and 5 are included with the direct business of the appropriate class when this is accounted for on a three year basis.

8.2 UK and overseas premiums

8.2.1 Where the Forms require premiums to be shown separately in respect of UK and overseas business the division is to be madde on the basis of the place where the contract was made (in the case of direct insurance and facultative reinsurance) or the country where the cedant has its head office (in the case of a reinsurance treaty). Reinsurance outwards will follow the premiums to which it relates.

8.2.2 It is appreciated that this practice may produce unusual results in respect of treaties in some cases. Companies are, however, asked to follow the practice wherever possible but if a particular company has exceptional reasons for wanting to adopt an alternative practice in respect of specific types of business the Department will be prepared to consider agreeing to a modification for that company.

35

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

8.3 Reinsurance portfolios

8.3.1 Regulation 3(1) defines the various types of portfolio payments which may be made between cedants and reinsurers in connection with the commencement, termination or variation of reinsurance treaties. It also lays down the way in which they are to be treated in the returns.

8.3.2 A portfolio paid on the transfer of liability for the unexpired portion of underlying policies is called a premium portfolio when it is paid by a reinsurer to a cedant and an unearned premium portfolio when it is paid by a cedant to a reinsurer. These payments are treated by cedants as reinsurance premiums payable (or a refund of such premiums) and are treated by reinsurers as premiums receivable (or a refund of such premiums).

8.3.3 A portfolio paid on the transfer of liability for claims which have already been incurred is called a loss portfolio when it is paid by a reinsurer to a cedant and an outstanding claims portfolio when it is paid by a cedant to a reinsurer. These payments are also treated by cedants as reinsurance premiums payable (or a refund of such premiums) and by reinsurers as premiums receivable (or a refund of such premiums). Portfolio payments must be treated in this way in the returns and not as claims paid or a refund of claims paid. Treatment as premiums is appropriate because they are payments to assume liabilities under insurance contracts and because the additional liabilities would not otherwise be properly reflected in the calculation of a company's required margin of solvency.

8.3.4 For accounting classes 9 and 10 provision is made on Forms 24, 26, 27 and 28 for portfolio payments to be separately recorded. For other classes, however, portfolios will be indistinguishable from other premium payments.

36

Prudential guidance on the preparation of regulatory returns

1 – DTI guidance notes on the preparation of annual returns (1984)

8.4 Revenue account (Form 20)

8.4.1 Form 20 is required separately for each accounting class and a summary Form giving the total of all the classes is also required.

8.4.2 The lines to be completed on the Form will vary according to whether business in the class is accounted for on a one year basis or a funded basis. Lines 11 to 49 relate only to one year business and lines 51 to 59 relate only to funded business. The remaining lines are applicable irrespective of the method of accounting adopted. Where some business in a class is funded and some is not, one Form should be completed showing all the business in the class.

8.4.3 Almost all the figures on the Form are drawn from the more detailed analyses on Forms 21, 22, 24 and 27. The "source" column of the Form indicates from where the figures will be derived. Annex C to these notes shows the inter-relationships between Form 20 and the other Forms in Schedule 2.

8.4.4 Investment income may be shown in line 71 of Form 20, wholly in Form 16, or in a combination of both. It may be shown net of expenses in connection with the investments.

8.5 One year business (Forms 21 to 23)

8.5.1 Separate Forms 21, 22 and 23 are required for each accounting class in which business accounted for on a one year basis is written.

8.5.2 Form 21 should include all premiums receivable in the financial year. They are, however, to be allocated to years and months of inception within the

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Form on the basis of the date when the liability to risk under the contracts commenced. Exceptions to this rule are only permitted in the case of business included in the reconciliation return (see paragraph 9.2 below) or business which is obtained through an overseas agent (but not overseas business obtained directly by the company or its overseas branches). Where these exceptions are allowed the premiums may be allocated to years or months on the basis of date of debit (ie not later than the date when the company or its branch recorded that the risk had been accepted). The amounts of premiums allocated in this way are to be shown in column 7 of lines 41 to 43.

8.5.3 Premiums are to be divided into earned and unearned portions on Form 21 on the basis of the length of the unexpired period of cover. No attempt is to be made in this Form to allow for deductions for commission or other deferred acquisition costs (which are to be shown on Form 22). For annual premiums the apportionment should normally be made by the 365ths or 24ths method and the method used is to be stated in a note. Where the method used is less accurate than the 24ths method the note should include the reason for its adoption.

8.5.4 Late notified premiums are to be shown in line 11 where they were earned in previous years and in line 12 where they were not earned in previous years. Entries should be made in line 15 where the accounting period exceeds 12 months on the basis explained in the note at the foot of Form 21. Line 31 shows premiums receivable in earlier years but not earned by the end of the preceding year (ie unearned premiums brought forward at the start of this financial year).

8.5.5 Short period contracts should be included in lines 13 and 14. If, exceptionally, a premium is included as receivable this year in respect of a

38

risk not incepting until next year it should be included in column 2 line 28 as being wholly unearned.

8.5.6 Columns 3 and 4 should show the reinsurance premiums payable in respect of the gross premiums shown in columns 1 and 2. On each line column 5 will be column 1 minus column 3; and column 6 will be column 2 minus column 4.

8.5.7 Form 22 should include in column 2 all claims recorded as paid in the financial year and all other expenses and commission which are payable or receivable in the financial year. The amounts in lines 11 to 22 are divided according to whether the incident occurred in this financial year or in a previous year but for this purpose claims included in the reconciliation return (see paragraph 9.2 below) may all be regarded as relating to incidents occurring this year. The effect of this will be that figures may appear in column 1 of lines 14 to 16 and 22 which will seem to be amounts brought forward from last year in respect of incidents which had not occurred until this year. A note at the foot of the Form explains this apparent anomaly.

8.5.8 Expenses, whether incurred through the employment of the company's own staff or otherwise, which are directly attributable to particular claims, eg legal, medical, engineer's or surveying costs, are to be included in lines 11 to 16. Other expenses in connection with the settlement of claims should be included in lines 21 and 22.

8.5.9 Column 1 of lines 11 to 16 represents claims outstanding brought forward at the beginning of the financial year and column 3 represents claims outstanding carried forward. Column 3 of lines 23 to 25 shows any deferred acquisition costs or commissions receivable which the company carries forward to the following year and which are deducted from (lines 23/24) or added to

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

(line 25) this year's unearned premiums to give the reserve for unearned premiums included in line 21 of Form 15.

8.5.10 Form 23 should have one section completed for each accounting class accounted for on a one year basis. There are two sections on each printed Form. The Form analyses the amount of claims paid and outstanding net of reinsurance by the year of origin of the claims. Business which is included in the reconciliation return (see paragraph 9.2 below) is shown in line 19 and should not be shown by year of origin. Claims relating to years of origin commencing prior to 1 January 1981 should all be included in line 18 and are not to be analysed by year of origin.

8.5.11 Column 1 of Form 23 shows the estimate made at the end of a particular financial year in respect of the claims originating in that year. Column 2 shows the total amount paid in all financial years in respect of a particular year of origin since the end of that year. Column 3 shows the amount estimated at the end of the present financial year as still being outstanding in respect of the particular year of origin.

8.6 <u>Three year business (Forms 24 and 25)</u>

8.6.1 Forms 24 and 25 are to be completed in respect of each accounting class for which business is accounted for on a three year basis. Only classes 3, 4, 5 and 9 may be accounted for in this way, (see regulation 9) unless the company has obtained from the Department an Order under Section 68 of the Act extending the application of 3 year accounting.

8.6.2 In these Forms premiums, claims and other amounts are normally to be allocated to the year in which the contract commenced. For this purpose a policy providing permanent open cover is deemed to commence on each

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

anniversary date. In the case of classes 3, 4 and 5, however, the year may be determined by the date when the policy was issued (ie the date of closing rather than the date of attachment). If attachment dates are not used a note must be included giving the basis on which the year has been determined.

8.6.3 Line 15 of Form 24 will be blank in the case of classes 3, 4 and 5 since outstanding claims portfolios and loss portfolios are to be included in line 12. For class 9 it will contain a figure derived from Form 26 (see the Instructions for Form 24 in the Regulations).

8.6.4 Line 31 of Form 24 should include the overheads of claims settlement as well as other management expenses. It should not, however, include expenses incurred in connection with the settlement of individual claims which are to form part of claims payments shown at lines 21 to 29.

8.6.5 Line 51 of Form 24 will show any profit taken from the closed years or any transfers into the fund. No profit can, of course, be taken from the two open years.

8.7 Non-proportional treaties (Form 26)

8.7.1 Form 26 is completed for accounting class 9 in addition to Forms 24 and 25.

8.8 Proportional treaties (Forms 27 and 28)

8.8.1 These forms should be completed for accounting class 10 only.

8.8.2 Figures for a treaty are to be included in column 1 (as a closed treaty year) for treaties for which end of year accounting information on

41

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

unearned premiums/outstanding claims has been received. They may also be so included when such information is not received during the financial year if either it is received after the end of the financial year but before the return is prepared or the treaty has a date of commencement/renewal prior to the beginning of the financial year. Otherwise the information is to be included in column 2 (as an open treaty year). The balance of premiums less claims and expenses for the open year is added to the unearned premiums and outstanding claims for the closed year and carried forward to the next financial year as a fund. This procedure allows for the delays commonly found in reporting on treaties and will also provide for the situation where a treaty runs for a year which does not coincide with the company's financial year.

8.8.3 It follows from this method of accounting that no profit may be taken from the open year. If a transfer is made into the open year it will be shown at 27.51.2.

8.8.4 A note is required to be annexed to Form 27 reconciling all amounts shown on that Form with amounts shown on each Form 27 prepared pursuant to Regulation 22 and with amounts shown on each Form 29 (see paragraphs 10.1 and 10.2).

9. GENERAL BUSINESS ANALYSES OF EXPOSURE AND CLAIMS (FORMS 31 TO 36)

9.1 Risk groups

9.1.1 Regulation 10 deals with the way in which direct insurance and facultative reinsurance business within each accounting class is to be classified into risk groups for the purpose of completing Forms 31 to 35. The business carried on in each country is to be classified. The risk groups used

42

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

may vary for different countries. The only detailed stipulation is that private motor car policies must be divided into comprehensive and non-comprehensive, in such a manner as may be appropriate, and that neither of these may be included in the same risk group as any other business. Either of these groups of private motor car policies may, of course, be further sub-divided into two or more risk groups if a company considers this appropriate.

9.1.2 Where there is only one risk group for an accounting class in a country, that risk group is to be described by the particular type of business carried on. Thus if a company's only motor vehicle business in a country is motor cycles the risk group should be described as "motor cycles" and not "motor vehicle".

9.1.3 For the purpose of the classification into risk groups and for completion of Forms 31 to 35 home foreign business is to be treated as though it is carried on in a separate country from other UK business. This applies to all accounting classes except 3, 4 and 5 since MAT business is not included in the definition of home foreign business (see Regulation 3(1)). Where a company wishes to sub-divide its home foreign business according to the country of risk or the currency in which the policy is written it may do so by using different risk groups (eg Country: home foreign, accounting class: property damage, risk group: United States commercial property).

9.2 Reconciliation returns

9.2.1 Regulation 12 avoids the need to provide the detailed analyses of premiums and claims in Forms 31 to 35 for particular countries and classes when the amount of relevant business is below certain limits. However, the totals of such business for each class (other than Form 32) must be given in a

43

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

reconciliation return. Separate reconciliation returns are required for United Kingdom business (which includes home foreign business) and overseas business.

9.2.2 The information to be shown in the reconciliation return is given in the Instructions for each of the Forms.

9.2.3 The reconciliation return should include all business not included in the detailed analyses for whatever reason including that relating to:

a the current year and any earlier years which is excluded by the operation of Regulation 12(1) or the corresponding provision in the Accounts and Forms Regulations 1968 or the Accounts and Statements Regulations 1980

b any years prior to 1970 which have not yet been run off and which were not required to be reported under the 1968 Regulations

c the Atomic Energy, Electricity and similar pools for which sufficient detail is not available to complete the full forms

d small Marine and Aviation claims which were not reported under the 1968 Regulations.

Unless all business is included in Forms 31 and 33 to 35 they will not reconcile with the revenue information given in Forms 21, 22 and 24.

44

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

9.3 One year business (Forms 31 to 33)

9.3.1 One section of Form 31 is to be completed for each risk group in an accounting class carried on in a particular country. Up to four risk groups can be accommodated on one form. Similar arrangements apply to Form 32 except that it is required only for accounting class 2 (motor vehicle).

9.3.2 Column 1 of Form 31 shows premiums receivable this year but earned last year ("late notified premiums"), column 2 shows the premiums earned this year and column 3 shows the unearned premiums carried forward to next year. Line 11 relates to premiums receivable in previous years (ie unearned premiums brought forward at the beginning of this year), line 12 to premiums receivable this year in respect of policies which incepted last year and line 13 to premiums receivable this year in respect of policies incepting this year. The figure at 31.19.5 will thus be the total written premium for the year in sterling and should agree with the appropriate 21.41.1 when all the forms for an accounting class are added together.

9.3.3 For each risk group in an accounting class carried on in a particular country one section of Form 33 is to be completed for each year of origin for which there were any liabilities at any time during the financial year. There are two sections to a form.

9.3.4 Column 2 of Form 33 shows the gross amount of claims paid in the financial year and the total of 33.29.2 for all forms relating to an accounting class should agree with 22.11.2 + 22.14.2. Column 3 shows the amount of claims paid in previous financial years and column 4 shows the estimated amount of claims still outstanding at the end of the financial year. The total of the figures shown at 33.29.4 for all forms relating to an

45

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

accounting class should agree with the gross claims outstanding figure given at 22.11.3 + 22.14.3.

9.3.5 Some of the boxes on Form 33 which may at first appear to be incapable of ever containing a figure have been left unshaded because some companies may in practice find that they need to enter amounts there. Columns 2 and 3 of line 11 show amounts paid in respect of claims closed at no cost and allow for the possibility that an amount will be shown in column 3 as paid on account in a previous year which is balanced by a refund this year shown in column 2. Column 4 may contain an amount in lines 11, 12, 13 and 17 (claims outstanding on closed claims) if a company makes separate provision for the possibility that a proportion of closed claims will in practice be reopened later.

9.3.6 No information should be included in line 17 in respect of those reopened claims which were closed in the financial year or were still outstanding at the end of the year, even when Instruction 3 is being followed. Reopened claims which had been closed again in a previous financial year should be counted as one claim in 33.17.1. Thus the figure at 33.19.1 will always be the latest estimate of the total number of claims attributable to the year of origin, irrespective of how many times any of them have been reopened.

9.3.7 Where a number of small claims in respect of facultative reinsurance accepted ("inwards guarantees") are notified by the broker or leading reinsurer without details of the years of origin or amounts of the individual claims being given, such claims should be included in the most recent year to which any of them is likely to relate. Where the number of claims is also not known they should be regarded as one claim.

46

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

9.4 Three year business (Forms 34 and 35)

9.4.1 Form 34 should be completed for each country with a section for each risk group in each accounting class. It will show the premiums receivable in the financial year and the total of 34.11.6 for all sections relating to an accounting class will equal 24.11.5 for that class.

9.4.2 Form 35 is required for each risk group in each accounting class in each country with a line completed for each year of origin for which there were any liabilities at any time during the financial year. The total of the claims paid figures given in 35.11.4 for an accounting class will be equal to that at 24.21.5.

9.4.3 Figures given in column 2 of Form 35 should include amounts estimated to be outstanding in respect of claims incurred but not reported (IBNRs) in respect of premiums included in Form 34.

9.5 Currency rates (Form 36)

9.5.1 Except in boxes where indicated, amounts on Forms 31, 33, 34 and 35 in respect of individual countries are required to be entered in the currency of the country concerned. When a return includes such amounts in a currency other than sterling, Form 36 is also required with a line for each currency showing the rate of exchange used to translate the overseas currency into sterling.

9.5.2 All amounts on forms relating to United Kingdom business, home foreign business and in reconciliation returns will be shown in sterling. If

47

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

only such forms are included in the returns there will be no need for Form 36.

9.5.3 The rates of exchange shown on Form 36 should be the rates actually used without any rounding.

48

Prudential guidance on the preparation of regulatory returns

S AB
EC

10. ADDITIONAL INFORMATION ON GENERAL BUSINESS REINSURANCE ACCEPTED AND CEDED AND COMMUNITY CO-INSURANCE

10.1 Non-proportional reinsurance treaties accepted and certain proportional treaties (Form 29)

10.1.1 Under Regulation 21 every company which carries on general business is required to furnish the information specified on Form 29 in respect of

(i) Non-proportional treaty reinsurance business accepted

(ii) Marine and aviation proportional treaty reinsurance business accepted

(iii) Transport proportional treaty reinsurance business accepted (but only if such business is accounted for on a three year basis).

10.1.2 This business must be allocated to not more than ten separate categories including

(a) casualty (including classes 1, 2 and 13)

(b) property (including classes 4, 8, and 9)

(c) aviation (including classes 5 and 11)

(d) marine (including classes 6 and 12)

These references to numbered classes are references to the general business classes set out in Schedule 2 to the Act.

49

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

10.1.3 It is permissible to use only these four categories, in which case long-tail business (other than MAT business) would normally be included in the "casualty" category. However, the company has the option of allocating any of the above mentioned classes, eg class 1 or 2 or both, to a separate category or categories limited to that class or those classes. This option is subject to the proviso that not more than ten categories are used in total for business covered by this Regulation (ie including, where they are relevant, the four specified above). Classes not mentioned above may be included in any appropriate category, whether specified or not, having regard to the likely time taken for claims to be settled.

10.1.4 It is important to note that any proportional business accepted by the company which comprises the retrocession of non-proportional treaty reinsurance business must be treated as non-proportional business unless the company is unable to provide the relevant information for Form 29. Where that is the case, information relating to those treaties of this nature for which Form 29 cannot be provided should be shown on Form 27 as an entirely separate category. Other treaties of this nature should still be shown on Form 29. If the information is given on Form 27 a note must be annexed to the Form explaining why this has been done. It should also be noted that a separate category (or categories) should also be used for all treaties accepted, not included in the categories specified in paragraph 10.1.2 above if it can reasonably be foreseen that a substantial proportion of claims will be settled more than ten years after the inception of the business.

10.1.5 Where information relating to a reinsurance treaty accepted falls within more than one category, the amounts may either be apportioned as appropriate to each category or else be placed within the category into which the greater part of the business falls. In either case, an explanatory note should be annexed to the Form or Forms 29 concerned showing the method of

50

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

apportionment used and/or identifying the business falling outside the category within which it has been included. It is accepted that, in some cases, information shown on a single Form 29 as pertaining to one category may include at one and the same time treaties wholly appropriate to that category, treaties which have been apportioned between that and other categories and also treaties allocated to that category on the basis of "major risk". The only constraint is that the method of allocating information to categories must remain consistent except as provided for in paragraph 10.1.6 below.

10.1.6 The objective of Regulation 21(4)(a) is to provide that, once a treaty has been categorised for a given underwriting year, it remains so categorised for that underwriting year in the returns made for subsequent financial years. (A change in category is permitted from one underwriting year to another if a change occurs in the underlying nature of the treaty.) Further, Regulation 21(4)(b) has the objective of achieving consistency in the categorisation of business from one year to the next. In either case, exceptional changes are permitted if an explanatory note is annexed.

10.1.7 A separate Form 29 is required in respect of each category of business.

10.1.8 In the main, Form 29 provides an analysis by category of business of material already provided on Form 24. However, it will also extend the analysis by year of inception over a greater number of years than provided on Form 24 and will permit amounts to be shown in original currencies. In addition, where a company reports on Form 27 marine and aviation treaty reinsurance business accepted, (paragraph 10.1.1(ii) above) and certain business mentioned in paragraph 10.1.4 above, the amounts included there will also have to be analysed on Form 29.

51

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

10.1.9 Information shown on the Forms 29 should, therefore, in aggregate reconcile with the corresponding information included in the Forms 24 and, where appropriate, Forms 27, and a reconciliation statement must be provided, showing how this has been achieved. Where amounts are reported on Form 29 in a currency other than sterling, the reconciliation statement should include a translation to the sterling equivalents included in Forms 24 and 27. The reconciliation statement should also bring into account sums treated as de minimis under the provisions of Regulation 21(6) (see paragraph 10.1.10 below) and will also have to reflect the necessary split of the figures in the expenses section on the Forms 24 for MAT classes, ie between those relating to direct and facultative business and those relating to treaty reinsurance business. An example of one way of presenting the reconciliation statement referred to above is given in Annex D.

10.1.10 Form 29 need not be completed if the gross premiums receivable by the reporting company in respect of its general business reinsurance treaties do not exceed 2½% of the gross premiums receivable by the company in that year in respect of all its general business. Additionally, if the gross premiums receivable in a financial year for a category which requires to be reported on Form 29 do not exceed either £100,000 or 2½% of gross premiums receivable in that year in respect of general business treaty reinsurance accepted then no information need be provided on Form 29 in respect of that category.

10.1.11 Notwithstanding the exclusions set out in the previous paragraph, where information in respect of an underwriting year has been given in the returns for a previous financial year (when the minimum levels were exceeded), then information about that business for that underwriting year will have to be given in subsequent financial years until the business has been finally run-off.

52

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

10.1.12 Form 29 need not be prepared in respect of financial years beginning prior to 1 January 1983. Where information is shown on Form 29 for a reinsurance treaty accepted before the first financial year for which Form 29 is required to be prepared, the information regarding business incepted in earlier financial years from that treaty may be aggregated rather than being shown separately for each financial year, but if no relevant analysis of information has been maintained for business incepted prior to 1 January 1983, for example, because records relating to earlier years were not maintained in terms of categories, estimates (including estimates in respect of the amounts of funds brought forward or carried forward in respect of that business) should be made, in order that the form may be fully completed. The Department will take into account the uncertainties underlying some of these estimates when considering the returns submitted by companies.

10.1.13 The Form 29 layout in Schedule 2 will have to be adapted by companies in some respects to reflect the circumstances in which the returns for successive years will be prepared. When Form 29 is prepared for the first time, in respect of the 1983 financial year, three columns of financial data will be required. The first will contain amounts receivable or payable in 1983 in respect of treaties incepted in all years prior to the 1983 financial year. The second column will show the same information in respect of treaties incepted in 1983, and the third column will show the total of the other two. When the return for the 1984 financial year is prepared, a fourth column will be needed. Apart from the total column (which in this case will contain all sums receivable or payable in 1984), the others will show respectively reading from right to left, amounts in respect of treaties incepting in 1984; amounts in respect of treaties incepting in 1983; and amounts in respect of treaties incepting in all previous years. Subsequent returns will require the layout of the Form to be further extended to accommodate later financial years.

53

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

10.1.14 Currency. The provisions of paragraphs 9.5.1 to 9.5.3 above regarding amounts to be entered in original currency apply also to Form 29 except that where premiums are receivable or claims are payable in a currency other than sterling, separate Forms 29 may be provided in sterling or in United States or Canadian dollars or in an appropriately weighted average of European currencies instead of in the original currency. A company may devise its own weighting for this calculation to suit the composition of its business. Whichever option is chosen as the basis for preparing Form 29, it must be applied consistently, in relation to any particular treaty, from one financial year to another, and a note must be included in the returns stating the method adopted (including the method used in calculating a weighted average of European currencies). Where the amounts of premium receivable or amounts of claims payable in a currrency other than sterling, United States or Canadian dollars exceed 10% of the total, a separate Form 29 may be provided in that currency provided that the method of selection adopted is used consistently from one financial year to another.

10.2 Other proportional treaties accepted (Form 27)

10.2.1 Regulation 22 covers all proportional treaty business accepted which is not covered by Regulation 21 and which does not have to be shown on Form 29. A number of paragraphs above relating to Regulation 21 apply equally to Regulation 22, as shown. It should be borne in mind that (except in paragraph 10.1.4) the references therein to Form 29 should be read as references to Form 27 in relation to Regulation 22. The paragraphs are:-

(a) Paragraphs 10.1.1 to 10.1.3 except that the mandatory categories for Regulation 22 are

(i) casualty (including classes 1, 2 and 13); and

54

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

(ii) property (including classes 4, 8 and 9) only,

(b) Paragraphs 10.1.4 to 10.1.7

(c) Paragraphs 10.1.10 and 10.1.11 (but, as regards paragraph 10.1.11 only until the business in the open year has been closed).

10.2.2 A Form 27 does not have to be prepared in respect of separate categories in respect of financial years beginning prior to 1 January 1983.

10.2.3 It should be noted that the number of categories permitted is limited to 10, as for Regulation 21 business, but that these categories are in addition to those covered by that Regulation.

10.3 Summary of reinsurance business ceded (Form 30)

10.3.1 Form 30 should show all reinsurance arrangements for which premiums were payable in the financial year. Entries are required in the Form for each accounting class for which business is covered by outwards reinsurance. Entries per risk group are required if there are separate reinsurance arrrangements within an accounting class.

10.3.2 Preprinted copies of this Form are not supplied by the Department and companies are free to adapt the widths of the columns to fit the amount of information to be entered.

10.3.3 Column 6 should show the estimated total combined maximum amount recoverable from reinsurers under the appropriate treaty arrangement in respect of any one claim payable by the company or in respect of any one or more claims payable by the company arising out of any one event. The nature

55

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

of the statement will depend upon the type of reinsurance cover and the wording of the reply must be adapted according to the circumstances. The replies might be in the following form:

i. Quota Share Arrangements

"30% of original gross cover subject to estimated maximum loss any one claim of £30,000 for reinsurer's account".

ii. Surplus or Facultative Obligatory Arrangements

"Seven times combined own net retained and quota share cover subject to estimated maximum loss any one claim of £700,000 for reinsurer's account".

iii. Excess of Loss Arrangement - Catastrophe

"£1 million any one event for own retained account". (Assuming no protection for other reinsurers). An indication of the excess points should be given if this is not obvious from columns 4 and 5.

iv. Excess of Loss Arrangements - Working

"£250,000 for any one claim for own net retained account". An indication of the excess points should be given if this is not obvious from columns 4 and 5.

10.3.4 In the case of facultative reinsurance cover full details are not required in all columns of the Form. The information required is set out in the Instructions for the Form, (see page 59 of the Regulations).

56

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

10.3.5 The total reinsurance premiums recorded in columns 8 and 10 of Form 30 should be reconciled in total with the equivalent premiums recorded on Forms 21, 24 and 27 as appropriate. The corresponding amounts of premiums are shown at 21.41.3, 24.13.5, 24.14.5 and 27.14.3. An explanation should be given of any differences.

10.4 Statements on major reinsurers and treaty cedants

10.4.1 Regulation 17 requires every company which carries on general business and which cedes reinsurance on a treaty basis to furnish a statement giving the particulars set out in Regulation 17 (1) in respect of each of its major reinsurers, or else a statement that it has no major reinsurers.

10.4.2 Regulation 17 (2) defines a major reinsurer for this purpose, that is, in the context of general business treaty reinsurance. It should be noted that, while the basic criterion is the proportion of the business of the company making the return which is ceded to the reinsurer, the level at which a reinsurer qualifies as a major reinsurer varies as between proportional and non-proportional business. In the case of business ceded under proportional treaties, a major reinsurer is one to which the company making the return has ceded business under such treaties for which the reinsurance premiums payable amount to 2% or more of the gross premiums receivable by the company in respect of general business (of all kinds, both reinsurance and direct business). In the case of business ceded under non-proportional treaties, a major reinsurer is one to which the company has ceded business under such treaties for which the reinsurance premiums payable amount to 5% or more of the total of reinsurance premiums payable by the company in respect of all non-proportional treaties which it has ceded. In assessing premiums, it will be necessary to gross up those for MAT in cases where these are normally included in annual returns on a net basis.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns

1 – DTI guidance notes on the preparation of annual returns (1984)

10.4.3 A reinsurer will be regarded as a major reinsurer if the proportion of business ceded to it reached the specified level in either the financial year to which the return relates or in any of the five immediately preceding financial years (although, under the transitional arrangements it will not be necessary to consider any year ended before 23 December 1982).

10.4.4 In some cases, there will be links of one sort or another between a company's reinsurers which will require their premium income to be aggregated for the purpose of identifying major reinsurers. What constitutes a connection between companies for this purpose is defined in Regulation 20 and is explained more fully in paragraph 10.4.16 below. Where reinsurers have to be counted together in this way, they should be regarded as major reinsurers if the aggregate volume of business of the group exceeds the specified level, but, where this happens, each reinsurer within the group becomes a major reinsurer and details are required of each one separately.

10.4.5 The statement of particulars must include

(i) The full name and address of each major reinsurer of the company making the return. (See also paragraph 10.4.14).

(ii) A note saying whether, and, if so, how, each of the major reinsurers was connected with the company making the statement at any time in the financial year to which the return relates. (See also paragraph 10.4.11).

(iii) A note of the amount payable to each major reinsurer during the financial year to which the return relates by way of premiums in respect of general business ceded under reinsurance treaties. The expression used, "reinsurance premiums payable" is defined in Regulation 3(1).

58

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

(iv) A note of any amount due from each major reinsurer to the company at the end of the financial year to which the return relates under general business treaties. This will be the amount included in respect of each major reinsurer in the figure given in line 53 of Form 13 in the annual returns. The extent to which netting is permitted is dealt with in Regulation 20(5) and considered at paragraph 10.4.18 below.

10.4.6 The amounts referred to in items (iii) and (iv) above should cover all treaty general business reinsurance ceded to each major reinsurer during the year in question, that is, both proportional and non-proportional. In the event that a major reinsurer qualifies as such only on one kind of treaty business, the amounts shown should nonetheless cover both if business of both kinds was ceded to that major reinsurer in the year in question.

10.4.7 Regulation 18 requires every company which carries on general business and which places reinsurance on a facultative basis to furnish a statement giving the particulars set out in that regulation.

10.4.8 The statement of particulars must include

(i) The full name and address of each reinsurer included by the company making the return in the number of facultative reinsurers inserted in column 7 or column 9 of Form 30.

(ii) A note saying whether, and, if so, how, each of the listed facultative reinsurers was connected with the company making the statement at any time in the financial year to which the return relates.

(iii) A note of the amount payable to each named facultative reinsurer during the financial year to which the return relates by way of premiums in

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

respect of general business facultative reinsurance and included by the company making the return in column 8 or column 10 of Form 30.

10.4.9 Regulation 19 requires every company which carries on general business and which accepts general business treaty reinsurance to furnish a statement giving the particulars specified in Regulation 19(1) in respect of each of its major cedants or else a statement that it has no major cedants. Regulation 19(2) defines a major cedant for this purpose.

10.4.10 A cedant will be regarded as a major cedant if the proportion of business ceded by it to the company making the return reached the specified level in either the financial year to which the return relates or in any of the three immediately preceding financial years (although, under transitional arrangements it will not be necessary to consider any financial year commencing before 1 January 1983). In assessing premiums for this purpose, it will be necessary to gross up those for MAT in cases where these are normally included in annual returns net of commission.

10.4.11 In some cases, there will be links between a company's cedants which will require their premiums payable to be aggregated for the purpose of identifying major cedants. What constitutes a connection between companies for this purpose is defined in Regulation 20 and is explained more fully in paragraph 10.4.16 below. Each cedant has to be considered separately in this way, and each will qualify as a major cedant if the aggregate volume of business of the group with which it is connected exceeds the specified level. Where this happens, details are required of each one separately.

10.4.12 Where a company has major cedants, the statement of particulars must include

60

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

(i) The full name and address of each major cedant of the company making the return. (See also paragraph 10.4.14).

(ii) A note saying whether, and, if so, how, each of the major cedants was connected with the company making the statement at any time in the financial year to which the return relates. (See also paragraph 10.4.15).

(iii) The amount of the total gross premium receivable from each major cedant during the financial year to which the return relates in respect of general business accepted under reinsurance treaties. This should cover all general business treaty reinsurance ceded by each major cedant during the year in question, that is, both proportional and non-proportional.

10.4.13 Regulation 20 contains provisions supplemental to Regulations 17, 18 and 19 which must be observed when the statements described in paragraphs 10.4.1 to 10.4.12 above are being prepared.

10.4.14 The full name required to be shown in items (i) of paragraphs 10.4.5, 10.4.8 and 10.4.12 above should be, in the case of a body corporate, its corporate name. In the case of an individual or an unincorporated body, the name should be that under which the individual or body lawfully carries on business (ie in accordance with Section 63 of the Act). The address of a body corporate will be that of the registered office or of the principal office in the country of incorporation. In the case of an unincorporated body it will be the address of the principal office.

10.4.15 Two kinds of connection are covered by the Regulations. One arises where a company making a return is connected with a reinsurer or a major

62

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

cedant listed under items (i) of paragraphs 10.4.5, 10.4.8 and 10.4.12 above. When this is so, a note of the connection is required under items (ii) of those paragraphs. In these circumstances the company making the return and a reinsurer (or major cedant) of that company are deemed to be connected:

(i) if the reinsurer (or major cedant), being a body corporate, is a subsidiary, holding company or fellow subsidiary of the company making the return; or

(ii) if one company controls the other or both are controlled by the same person. Regulation 20 (2) defines control for this purpose and Regulation 20 (4)(b) sets out the circumstances in which a number of persons (including a company and its directors) have to be treated as one.

10.4.16 The second kind of connection arises in paragraphs 10.4.4 and 10.4.11 above and is one between reinsurers (or cedants) which are not necessarily themselves connected with the company making the return but which, when taken together are major reinsurers (or major cedants) by virtue of their volume of business in aggregate. In this context, for two reinsurers (or cedants)to be connected, both must be corporate bodies. They are then connected if:

(i) one is a subsidiary, holding company or fellow subsidiary of the other (Regulation 20 (1)(a)); or

(ii) they are controlled by or control the company making the return; or

(iii) one reinsurer (or cedant) controls the other and also the company making the return; or

62

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

(iv) they and the company making the return are all controlled by the same person. (Regulation 20(1)(b) as limited by 20(3)). Regulation 20(2) defines control for this purpose and 20(4)(b) sets out the circumstances in which a number of persons (including a company and its directors) have to be treated as one.

10.4.17 Regulation 20(1) introduces the concept of "reasonable enquiry". It is expected that the company making the return will know of any connections between its reinsurers (or cedants) and itself or companies with which it is connected (see Regulation 20(3)). However, the company making the return may not in all cases be aware of connections between its reinsurers (or cedants) which are not connected with it. It is recognised that there may be difficulty in establishing such connections. In order to comply with the requirement to make "reasonable enquiry", it will suffice for the company making the return to refer to the latest available published accounts or recognised industry reference document (provided that, in all cases, the source to which reference is made has been published within twelve months of the end of the financial year to which the return relates). Alternatively the company may request any or all of its reinsurers (or cedants) to provide details of their connected companies (within the terms of Regulation 20 (1)(a)). The latter course will have to be adopted if no information is available from acceptable published material. Where information is derived from acceptable published material, or obtained in response to a specific approach to a reinsurer (or cedant), the Department takes the view that, in the usual case, the obligation to make a "reasonable enquiry" will have been satisfied, and, should the information be found to be inaccurate or incomplete, no offence will have been committed under Section 71(1) of the Act by the company making the return. (However, possible breaches of the regulations will need to be considered case by case. The foregoing is therefore only a general guide to the Department's likely attitude).

63

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

10.4.18 Regulation 20(5) applies certain paragraphs of Schedule 1. Paragraphs 4 and 5 of Schedule 1 prescribe the methods permitted for converting other currencies into sterling for figures in the returns. Sub-paragraphs (1) and (2) of paragraph 8 permit the use of net figures in the returns to express amounts due from major reinsurers to the company making the return.

10.4.19 Regulation 20(6) states that Regulations 17(2), 18(a) to (c) and 19 apply to the members of Lloyd's taken together as they apply to a single insurance company. Companies making returns under these Regulations need therefore only to identify the amount of reinsurance placed with (or ceded to them by) members of Lloyd's and determine whether, in total, it qualifies for inclusion in the statements required by these three Regulations. The provisions of Regulations 20(1) to (4) regarding connected persons are disapplied in respect of business placed with Lloyd's syndicates. Any links between members of Lloyd's or between a member and an insurance company may be ignored in respect of any such business.

10.4.20 Governments are not deemed to be "persons" in UK legislation. There is thus no connection between reinsurers or cedants as a result of their being owned or controlled by the same non-UK government.

10.4.21 No format is prescribed for these statements. Companies may use whatever layout proves most convenient for them.

10.5 Community co-insurance operations (Form 37)

10.5.1 For the purposes of Regulation 14 a "relevant co-insurance operation" is defined in Schedule 9 to the 1981 Regulations. Regulation 53 of those

64

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Regulations defines a "relevant company" as one carrying on insurance business in the UK who is concerned in the operation but is not the leading insurer.

10.5.2 Where a relevant company has participated in any relevant co-insurance operations in any financial year a Form 37 is to be prepared analysing total gross premiums receivable.

65

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

S51AAE

EC 11. SCHEDULE 3: LONG TERM BUSINESS REVENUE ACCOUNT AND ADDITIONAL INFORMATION (FORMS 40 to 51)

11.1 When calculating the amount of premiums to be shown in the Forms companies should include that part of any premium which was or will be recoverable from the Inland Revenue.

11.2 Where contracts are required to be divided into United Kingdom and overseas contracts the allocation should be made on the basis of the place where the contract was made (in the case of direct insurance and inwards facultative reinsurance) or the country where the cedant's head office is situated (in the case of reinsurance treaties accepted). Although the Department appreciates that this may result in some unusual figures, it would nevertheless prefer that the practice should be followed in all cases. However, where a company has particularly strong reasons for wanting to adopt an alternative practice the Department is prepared to consider a proposal to do so.

11.3 Forms 40, 41 and 42 are to be completed in respect of each separate long term business fund. Where the rights of any long term policyholders to participate in profits relate to particular parts of a long term business fund, it is the practice of some companies to give a revenue account of that sub-fund in Schedule 3, which is then subject to audit. In such cases, a revenue account for each part of the fund should be given and a summary Form for that fund should be completed as indicated in paragraph 4(2) of Schedule 3. Where the practice of a company is not to put the revenue account of the sub-fund in Schedule 3, it must be put in Schedule 4 (see paragraph 11 of that Schedule) in the format of Form 40 and the actuary must state the principles and methods applied in apportioning various items in the account.

66

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

11.4 Companies should number funds consecutively beginning with the number 1. Where parts of funds are included in Schedule 3, they should be similarly numbered. Where there is more than one fund a summary form must be completed and the number "99" inserted in the relevant box.

11.5 Where a company maintains more than one long term business fund, a statement of the principles and methods applied to apportioning various items in the revenue account must be appended to Form 40. Where any rights of any policyholders to participate in profits relate to profits from particular parts of a long term business fund, the company has the choice of either appending a statement giving those same principles and methods as an Annex to Form 40 or the actuary will have to provide similar information in the abstract of his report within Schedule 4 (see paragraph 11(b) of that Schedule).

11.6 Form 40 must show the expenses of management relating to the long term business at line 8. Those relating to the company's other business cannot, by virtue of Section 29(1)(a) of the Act (subject to the exception in Section 29(1)(b)), be paid out of the long term funds and must therefore be shown in the general business revenue account (Form 20) or the statement of other income and expenditure (Form 16).

11.7 Where a company decides to allocate to the long term business the whole or any part of investment income and/or net capital gains arising from assets not attributable to its long term business, both the income and any associated management expenses (which the company may net off under paragraph 7.9.3 above), must first be included in the statement of other income and expenditure (Form 16), with the amount to be allocated to the long term business to be shown as a transfer at line 11 of Form 16, line 12 of Form 40 and in Form 58.

67

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

11.8 Where a company needs to specify more than one figure for "other income" or "other expenditure" in Form 40 single figures should be shown on lines 5 and 11. Detailed figures should be given in a note to the form.

11.9 Transfers from the investment reserve (if any), the writing down of fixed assets, the effects of "writing up" the book value of the fund (eg the amortization process of fixed interest securities), and the effects of a change in the amount of the inadmissible assets or limited admissibility of assets must be included in line 3 (or line 4, as appropriate) of Form 40.

11.10 In Form 41 premiums in respect of renewable group contracts and individual contracts issued on a recurrent single premium basis should be regarded as regular premiums. Both Pension Assurance and Pension Annuity contracts should be shown in lines 5 and 6.

11.11 The statement required by paragraph 5 of Schedule 3 is only needed when a substantial part of the day-to-day administration of a company is undertaken by another company. A typical case would be where a long established parent insurance company agrees to provide the administrative services for a new (linked) subsidiary in return for the charges which can be levied from the policies sold by the subsidiary. In the early years of such an arrangement, the figures shown for expenses in the returns for the subsidiary may well not reflect the true cost of running the company were the arrangement no longer to be in existence. The statement is intended to put the Department on warning of this situation. There may well be other circumstances in which a statement is required (for example where the agreement is with a non-insurance company) but it is not intended that a statement should be given in respect of brokers for example who, in respect of their own particular clients, provide a small administrative service for the insurance company in respect of premium payment reminders.

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Where the management agreement is between two insurance companies, the directors will need to consider very carefully the form of their certificate under Schedule 6 Part I paragraph 6(d).

11.12 Commission payable to employees of the company whose job is to sell policies should be included under "management expenses" (lines 14 and 15 of Form 41). On the other hand any commission payable to employees who sell policies on a casual basis should be included under "commission" (lines 12 and 13) along with that paid to other intermediaries and to cedants.

11.13 The accuracy of the sub-division of management expenses between lines 14 and 15 of Form 41 and between lines 17 and 18 will depend, to a large extent, on each company's financial controls and on a subjective analysis of how overheads and servicing costs, which cover several sub-heads, are allocated. Expenses which are incurred as a result of an amendment to an existing group life or group pension scheme should be included in line 15.

11.14 In Form 42, in the case of industrial assurance, claims payable on survival in respect of periodical endowment benefits should be included with claims payable on the maturity of contracts of industrial assurance, but should also be shown separately in a note. Widows' pensions in payment must be included in line 7 (or 12) and not in line 5 (or 10).

11.15 In Forms 43, 43A, 44 and 44A the term "annual premiums" refers to the total amount of premiums payable, under the terms of the contract, each year.

11.16 In Forms 43 and 44 any contract which consists of a combination of different types of insurance is to be treated as a number of separate contracts each dealing with one of the different types of insurance so combined. The amounts by which the total number of contracts shown on each of

69

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

the forms exceed the actual number of contracts to which the forms relate should be stated.

11.17 In the case of renewable group contracts and individual contracts written on a recurrent single premium basis the information should be included in Form 44 only in the year of issue and classified as regular premium contracts.

11.18 In Forms 45 and 46 the yields in columns 3 and 4 respectively should be recorded to two decimal places. All columns must be completed in Forms 45 and 46 for all lines where there is a figure in column 1, except line 11 of Form 45. The running yield should be given for irredeemable stocks. Companies should note Instruction 2 of Form 45, which requires that the assets must be assumed to be held throughout the next financial year, applies both to income producing assets and to assets which are not producing income (eg tax recoveries due and premiums due).

11.19 Form 47 should not include units held in excess of the aggregrate of units allocated to the policyholders. Excess units should be shown as non-linked assets in Form 13 line 23. The Form should include details of holdings of units in authorised unit trusts where the units are held to meet liabilities which are linked to the price of units in those trusts.

11.20 Form 48 should give details of the assets which are matching liabilities in respect of property linked benefits other than holdings in authorised unit trusts (which are shown on Form 47) or internal linked funds (which are shown on Form 49). It will contain, for example, details of assets matching the liabilities of policies whose benefits are linked to the Financial Times share index. It will also contain details of assets which

70

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

have been hypothecated to match liabilities in respect of property linked benefits where the link is not to the value of those assets.

11.21 In Form 49, line 9 relates only to investment income. Sundry debtors and prepayments should be shown at line 11. All assets held within internal linked funds must be included in Form 49, even if their value exceeds the corresponding value of linked liabilities to policyholders, through an investment by the shareholders' funds.

11.22 In Form 50, if the total number of units in force exceeds the number of the units allocated to policyholders, it would be helpful if companies stated the number of surplus units and included an additional column - "Value of surplus units excluding those held by other internal linked funds."

11.23 In Form 51, when the number of units created exceeds the number cancelled for the period to which the revenue account refers, the difference between the value of those units created and the value of those cancelled should be recorded at line 1. When the number cancelled exceeds the number created the difference between the value of those cancelled and those created should be recorded in line 6.

71

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

12. SCHEDULE 4: VALUATION OF LONG TERM BUSINESS (INCLUDING FORMS 55 to 61)

12.1 Schedule 4 prescribes the format of the abstract of the report of the appointed actuary on his investigation into the financial condition of the long term business, required under Section 18 of the Act. The mathematical reserves determined by the actuary must conform with Regulation 54 of the 1981 Regulations and sufficient information must be given about the basis of the valuation to enable the Department to be satisfied about this, and in particular that the reserves meet the minimum standards required under Regulations 55 to 64 of the 1981 Regulations.

12.2 Certain paragraphs of the abstract of the valuation report relate exclusively to non-linked contracts (eg paragraphs 3 and 7), some are related exclusively to linked contracts (eg paragraphs 4 and 8), while others relate to both types of contract. Form 55, which like Form 56 has to be provided separately for ordinary long term business and industrial business, contains the valuation summary of non-linked contracts; Form 56 contains the valuation summary of linked contracts. The totals of the mathematical reserves for non-linked and linked contracts are carried from these forms to Form 58 which gives the valuation result and information on the composition and distribution of surplus.

12.3 Paragraph 3 should give details of any guarantees and options on non-linked contracts which the actuary considers to be significant. Common examples are guaranteed surrender values, guaranteed annuity rates, guaranteed minimum rates of interest on deposit administration contracts (including links to the Building Society Mortgage Lending Rate), and options to increase sums assured without evidence of health.

72

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

12.4 The guarantees and options to be specified in paragraph 4(1)(a) should include details of any guaranteed surrender basis which is specified in the policy, whether expressed in monetary terms or as percentage deducations from the value of units etc.

12.5 When a company is allowed under the terms of contracts which are linked to internal funds to adjust its periodic charges, the maximum as well as the current charges should be given in answer to paragraph 4(2); if there is no upper limit to the charge which may be made, this should be stated.

12.6 When providing information on the general principles and methods adopted in the valuation under paragraph 5, the actuary should provide sufficient information to enable the Department to take a view, in relation to the issues specifically referred to in paragraph 5(1), on the adequacy of the reserving basis in relation to Regulations 54 to 64 of the 1981 Regulations. If the actuary has not carried out some of the tests implicit in the specific points raised in paragraph 5(1), (eg see paragraph 12.8 below) as he considers the margins in his basis are already large enough to meet the minimum standards required by Regulations 55 to 64, and to meet the requirements of Regulation 54, he should indicate this either directly or indirectly; he may, however, be required to justify his basis to the Department if it considers it is not self-evident that there are sufficient margins.

12.7 Regulation 55 of those regulations requires the actuary to take into account the nature and term of the assets and the value at which these have been brought into account when determining the appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities. If the assets in Schedule 4 are brought in at book values below the values in accordance with the regulations given in Form 13, and in determining the provision under this regulation the actuary

73

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

has had regard to this fact, paragraph 5(2) requires a statement to this effect. This applies also when the basis of the provision made for any prospective liability for tax on unrealised capital gains is determined in the context of assets taken at their book value rather than their Form 13 value.

12.8 When stating, in paragraph 5(1)(a), the basis of the provision made for a mismatching reserve under Regulation 55, the actuary should indicate the principles and methods adopted in determining his provision, including the extent and nature of the change in the value of assets which he has assumed in his calculations, even when determining that no mismatching reserve is required.

12.9 In Form 60 figures relating to Supplementary Accident and Sickness insurance for which the required margin of solvency is shown in line 10 should not be included in lines 1 to 9.

12.10 The additional information to be provided in paragraph 7(d) (where the contracts do not fall within the circumstances of the proviso) must be sufficient to constitute the required demonstration. The information could take several different forms. For example the requirement would usually be met if the results of a net premium valuation for each of the relevant main categories of contract in the format of Form 55 were given, specifying the valuation rates of interest and mortality used, the zillmer adjustment and any other relevant information. Where a full net premium valuation has not been made, the requirement could be met by a comparison of specimen reserves for each of the main categories of contracts for various ages and durations on the basis used by the actuary in his report and on an appropriate net premium basis (specifying particulars of the basis as above) together with information about the distribution of the business in the form of appropriate weightings.

74

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

In principle a method of demonstration which involved sampling could also be acceptable.

12.11 The information to be supplied in paragraph 8 should normally include the expenses of administration per policy for each policy type, the rate of future inflation of expenses and the rate of unit price growth (both gross and net of any relevant taxation) assumed in the valuation/test, and the extent to which account has been taken of any increases in management charges which are allowed under the terms of the policy. Other parameters will normally include the mortality rates and the rate of interest earned on sterling reserves assumed in the valuation/test.

12.12 In paragraph 10, certain information additional to that required under previous regulations is now required on reinsurance. In particular, information is to be provided about whether the reinsurer has an authorisation to carry on insurance business in the UK, whether there is a connection between the company and the reinsurer and whether any deposit back arrangements apply. In paragraph 10(2)(f) the reference to refund of reinsurance commission should be taken to include refunds of any form of financing advanced by the reinsurer.

12.13 Where, in accordance with paragraph 11 of Schedule 4, a revenue account for a particular part of a long term business fund is included in the abstract of the actuary's report, analyses of premiums, expenses, and claims in the format of Forms 41 and 42 are not required. The actuary must provide information on the principles and methods applied in apportioning various items in any such revenue account included in Schedule 4, and in any revenue account of a with-profit subfund which is given in Schedule 3 where the principles and methods of apportionment are not disclosed in that Schedule.

75

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

12.14 Where the information given in Forms 55 and 56, together with any additional information required by Instruction 7 regarding the number of contracts does not enable a reconciliation to be made with the information supplied in Forms 43 and 44 an explanation should be given.

12.15 The aggregate of the amounts standing to the credit of policyholders' accounts should be shown in column 5 of Form 55 for non-linked deposit administration schemes, and should be distinquished from any other measures of benefit shown in that column for such contracts.

12.16 In Form 56, details of units which are discounted at different rates of interest (eg capital and accumulation units) should be shown separately. For all contracts where units are discounted the undiscounted unit liability should be shown under an additional column heading, in accordance with Instruction 9 for the completion of Forms 55 and 56; the discounted unit liability should be shown in column 11.

12.17 Where a linked contract also provides for non-linked benefits, the liability for the non-linked benefits should be shown separately within Form 56.

12.18 Risk premium reinsurance may be aggregated, separately for non-linked and linked business, and shown as a separate class in Form 55 and Form 56 respectively.

12.19 Valuation summaries for subfunds for which surpluses are required to be determined under Section 18 of the Act, and valuation summaries for linked and non-linked business should be treated as separate for the purpose of Instruction 10 for the completion of Forms 55 and 56.

76

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

12.20 Where an interim, mortuary or terminal bonus was announced at or after the previous valuation, to be paid in anticipation of surplus arising at the present valuation, the amounts of such bonus which were actually paid in the period to the present valuation should be entered at lines 2 and 17 on Form 58. Where it is the practice of a company to meet the cost of such bonuses payable on future claims out of surplus arising at a current valuation such amount should be treated as an amount allocated to policyholders and included at line 20 on Form 58 and an appropriate note should be appended to the form identifying the various items. These amounts should not appear at lines 2 and 17 at the next valuation.

12.21 When a company records a transfer to the statement of other income and expenditure in a revenue account (Form 40) for a particular period, the amount of which has been derived from a valuation completed at the end of that period, that transfer should be shown in 58.3 so that the true surplus appears in 58.10.

12.22 Where a company decides to allocate to the long term business the whole or any part of the investment income and/or net capital gains arising from assets not attributable to its long term business, the allocation should be included in Form 58 as a transfer from the statement of other income and expenditure (see paragraph 11.6 above). This transfer should be included in either lines 3 and 5, or 12 and 14, depending on whether there is an overall net transfer out of or into the fund (or part of the fund) respectively (see Instruction 3 for the completion of Form 58).

12.23 Where, under Section 18(2)(b) of the Act, a surplus is determined for a part of a fund where the rights of any policyholders to participate in profits relates to that subfund, paragraph 18 of Schedule 4 requires a company

77

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

to provide a Form 58 both in respect of the subfund and the fund of which it is a part.

12.24 In general, line 27 of Form 58 corresponds to the proportion which has to satisfy the criteria laid down in Section 30 of the Act, but this will not always be so. For example, where the with-profits policyholders are entitled to, say, 90% of the profits from the with-profit business but are also eligible to share in the profits arising on the non-profit business on a discretionary basis, line 27 would be relevant for the purpose of Section 30 (which relates to 'eligibility') only in the Form 58 for the long term fund as a whole and not in the Form 58 for the subfund.

12.25 The surplus shown in Form 58, in keeping with the definition in the primary legislation, represents the excess of the amount of the fund over the liabilities, but the wording in lines 10 and 24 is intended to make it clear that the surplus is not to be regarded as synonymous with disposable profits. The solvency margin requirements introduced under the legislation implementing the Life Directive make it imperative for a clear distinction to be drawn between the liabilities and the margins available to count towards a company's solvency margin. The surplus should not include any part of the mathematical reserves which the actuary considers are required to constitute the "proper provision" envisaged by Regulation 54 of the 1981 Regulations (these should be included in Forms 55 and/or 56 as appropriate), but it may include contingency and other reserves held which count towards the solvency margin.

12.26 Forms 60 and 61 set out the calculation of the required minimum margin (ie the greater of the required margin of solvency and the minimum guarantee fund) for long term business. The legislation provides for a solvency margin in respect of a company's long term business as a whole and where more than one long term business fund is maintained the information in

78

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Forms 60 and 61 will relate to all funds combined, including industrial business where this is transacted. Provision is made for the mathematical reserves and the calculation of the solvency margin to be shown separately for the main classes of long term business and, for the purposes of reconciliation, mathematical reserves attracting a nil rate of solvency margin are to be included. Class III includes contracts where the benefits are partially linked to investment funds or indices and any reserves for non-linked benefits under such contracts should be included under Class III business in the appropriate column in Form 60 and not with Class I and Class II business.

79

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

13. SCHEDULE 5: STATEMENT OF LONG TERM BUSINESS (INCLUDING FORMS 65 to 78)

13.1 Schedule 5 requires separate statements for linked and non-linked contracts. Forms 65 to 70 are provided for different categories of non-linked contracts and Forms 72 to 77 for different categories of linked contracts. Contracts which are grouped under a miscellaneous heading in a valuation summary in Schedule 4 may be shown in Forms 71 and 78. Such miscellaneous headings may not exceed 5% of the total net liability shown in the appropriate valuation summary.

13.2 The final column of Forms 73, 74 and 75 (which gives details of linked regular premium assurances) shows the annual amount deemed invested in units in future. This refers to the proportion of premiums invested in units and, where this can vary, the instructions accompanying the forms require that this fact should be stated and additional information given.

13.3 Companies may amalgamate different categories of contract for risk premium reassurance business.

80

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

14. INFORMATION ON APPOINTED ACTUARY

14.1 Regulation 29 calls for a statement of the information specified in sub-paragraphs (a) to (d) of Regulation 29 (1). The company is required to make a further statement that it has asked the actuary to provide it with the particulars set out in the sub-paragraphs and to identify in the statement the information which has been so provided. The company is required to supplement these particulars if there is further information of which it is aware additional to that provided by the actuary.

14.2 Paragraphs (1)(a) and (b) refer to "particulars" but this word is not defined in the Regulation. In the case of investments, the Department would expect particulars to include at least a general description of the investments, the name of the holder of the investment, the nominal or principal amount outstanding and, where applicable, the rate of interest and terms of repayment. In the case of a life policy particulars would include at least a general description of the terms of the policy, including the sum assured, the amount of the annual premium payable, the duration of the policy or year of maturity and, as appropriate, the amount of any reversionary bonuses declared. Where there is more than one policy, some form of aggregation of the information might be acceptable. Equivalent information should be given in respect of other transactions. In the case of transactions of a minor character falling under sub-paragraph (b), a general description need only be given and full particulars are not required.

14.3 As a result of Regulation 29 (3)(a) the particulars which have to be given apply not only to the interests of or amounts paid to the actuary but also to other persons specified in that paragraph. It is worth noting, however, that Regulation 29 (4) provides for the reporting company and other companies within the same group to be treated as one for the purpose of

81

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

Regulation 29 (3)(a). The effect of the words in parenthesis in Regulation 29 (3)(a)(iii) and (iv), taken with Regulation 29 (4), is that payments made to the reporting company and to companies related to it will be excluded from the disclosure requirement.

14.4 Regulation 29 (3)(b) and (c) set out the circumstances in which a person shall be deemed to have an interest or benefit for the purpose of the Regulation. Regulation 29 (5) describes the circumstances in which a person shall be taken to control a body corporate for the purpose of Regulation 29 (3).

15. DIRECTORS' CERTIFICATE

15.1 Part I of Schedule 6 to the regulations specifies the statements to be included in the directors' certificate. These vary according to the type of company and the types of business which it writes.

15.2 Where in the opinion of those signing the certificate, the circumstances are such that any of the statements required by paragraphs 1 to 6 of the Schedule (other than sub-paragraphs (a), (c)(i) and (d)(i) of paragraph 3) cannot truthfully be made, the relevant statements shall be omitted, (see paragraph 8(1) of the Schedule). Where any statements have been omitted, this fact shall be stated in a note, (see paragraph 8(2) of the Schedule).

15.3 For companies which fall within the circumstances of the first half of paragraph 6(d) of Part I of Schedule 6, the directors will need to consider carefully whether the returns are distorted by any management services agreements - for example, where a parent insurance company subsidises its subsidiary in its infancy.

82

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

16. CERTIFICATE BY THE APPOINTED ACTUARY AND QUALIFICATIONS FOR APPOINTMENT

16.1 Part II of Schedule 6 to the regulations sets out the statements to be included in the appointed actuary's certificate. The actuary is no longer required to certify that the long term liabilities do not exceed the value of the assets representing the long term business funds, as Form 9 demonstrates the position. Instead, he is required to certify the amount of the mathematical reserves and that, if such be the case, they have been calculated in accordance with the regulations and constitute proper provision for the liabilities to which they relate, in the context of assets valued in accordance with Part V of the 1981 Regulations, and as shown in Form 13. If, in giving this certificate, the actuary finds it necessary to make an addition to the amount of the mathematical reserves as shown in his Schedule 4 valuation report, the amount of any such addition is required to be stated in the certificate. The certificate must also include a statement of the required minimum margin applicable to the company's long term business.

16.2 Regulation 28(1) lays down that an actuary must be a Fellow of the Institute of Actuaries or the Faculty of Actuaries and aged at least 30 to be qualified for appointment under the Act. Regulation 28(2) automatically protects the position of an actuary who was already appointed when the Accounts and Statements Regulations 1980 came into force but who does not possess the new qualifications either because he is aged under 30 or because he has an overseas qualification and not Fellowship of the Institute or Faculty of Actuaries.

16.3 Where an overseas company wishes to appoint an actuary with an overseas actuarial qualification, the Department will be willing to consider

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

the issue of an Order under Section 68 of the Act permitting this in appropriate cases.

16.4 If a company appoints a firm of consulting actuaries each of the partners in the firm must possess the prescribed qualifications. Where an individual member of a firm is appointed only that individual need be qualified.

17. AUDIT OF RETURNS

17.1 Regulation 27 specifies the scope of the audit. The contents of the auditors' report are set out in Part III of Schedule 6. Regulation 30 specifies the qualifications of an auditor.

17.2 The Consultative Committee of Accountancy Bodies issues separate guidance notes for auditors and it is recommended that auditors should refer to these.

17.3 The parts of the return which are subject to audit are Forms 9 to 16, 20 to 29, 31 to 37 and 40 to 51 and the statements furnished under Regulations 17 and 19. It should be noted that these do not include Form 30 (summary of reinsurance business ceded), Schedules 4 and 5 (which are signed by the appointed actuary) and the statements furnished under Regulations 18 and 29. The auditors are also required to report on whether the directors' certificate (other than so much of it as relates to information furnished under Regulations 18 and 29) has been properly prepared in accordance with the regulations and whether it was reasonable for the persons giving that certificate to have made the statements contained in it.

84

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

17.4 Paragraph 11(c) of Schedule 6 provides for the auditors to state that, in giving their opinion, they have relied on the actuary's certificate with respect to the mathematical reserves and required minimum margins and on an order by the Secretary of State for the identity and value of any implicit items which are admitted.

17.5 Forms 33 and 35 relating to years of origin prior to 1981 will contain figures which include information about claims notified and payments made prior to the 1980 Regulations coming into force. Such information was not subject to audit under those regulations and the relevant figures are excluded from audit under the 1983 Regulations by Regulation 27(2)(a)(ii).

18. INDUSTRIAL ASSURANCE

18.1 The 1983 Regulations revoke the Industrial Assurance Companies (Accounts and Statements) Regulations 1980 and apply equally to industrial assurance as they do to ordinary long term business.

18.2 A company which carries on industrial assurance business must deposit with the Industrial Assurance Commissioner and the Industrial Assurance Commissioner for Northern Ireland a copy of any document relating to industrial assurance business which is deposited with the Secretary of State.

18.3 Section 82(6) of the Act requires a special report by the auditors on the apportionment of certain items between the industrial assurance business of a company and its other business. A copy of the auditors' report is required to be furnished to the Industrial Assurance Commissioner and the Industrial Assurance Commissioner for Northern Ireland.

85

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

19 BRANCH RETURNS

19.1 Paragraph 4 of these notes explains the circumstances in which companies are required to make a return of their business carried on through an agency or branch in the United Kingdom (or agencies/branches in the Community). The following paragraphs explain the main differences which arise in completing a branch return from the procedures described elsewhere in these notes.

19.2 The Head Office Account of a branch will represent the Head Office's investment in the branch and the capital of the branch. It will include, inter alia, accumulated profits which are transferred to it each year and will be reduced by remittances from the branch to the Head Office. This net indebtedness will be shown at line 54 of Form 10 and nothing will be shown against lines 51, 52 and 53 of that Form. This item, which will also include the difference between the book values of assets and the values allowed under the 1981 Regulations, will represent the net assets of the branch available to meet the solvency margin requirement for branches of external companies and UK deposit companies. There is no solvency margin requirement for branches of non-UK Community companies or Community deposit companies. For the reasons given above the Head Office Account should never show a position of net indebtedness of the Head Office to the branch, ie a negative liability, as this would indicate a deficiency of net assets to meet the solvency margin requirement of branches of external companies and UK deposit companies or a failure to maintain sufficient assets to meet the liabilities of branches of non-UK Community companies and Community deposit companies.

19.3 For UK branches of external companies, the additional Forms 13 referred to in paragraph 7.6.1 above are required to show, separately for long term business and business other than long term, assets which are (i)

86

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

deposited with the Accountant General, (ii) maintained in the UK and (iii) maintained in the UK and other member States. These three forms will be cumulative in that (ii) will include (i), and (iii) will include both (i) and (ii). For the Community branch returns of UK deposit companies the requirements are the same, except that they will cover business carried on in the Community and item (ii) will show assets maintained in the UK and other member States.

19.4 Form 16 will show nothing against line 24, "Dividends paid and/or recommended", and the excess of income over expenditure at line 39 will represent the surplus for the financial year transferred to the Head Office Account, (see paragraph 19.2 above).

19.5 In certificate 4(b) required of branches of Community companies (other than UK companies or pure reinsurance) and Community deposit companies the liabilities for which maintenance of assets is required are not to include indebtedness to the Head Office. Companies are required to comply with regulations under Section 35 of the Act concerning the form and situation of assets. The present requirements are contained in Regulations 25 to 28 of the 1981 Regulations. Provided these requirements are satisfied, assets held anywhere in the world may be attributed to the United Kingdom branch business for the purposes of Section 34 of the Act.

19.6 Difficulties may arise for auditors in satisfying themselves on the status and availability of the assets which an overseas company maintains in accordance with Section 34 of the Act; and therefore for them to give a report on the relevant certificate (paragraph 4(b) of Schedule 6, Part I). Where such difficulties arise the Department will be prepared to seek a mutually acceptable solution with the company and its auditors.

87

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
1 – DTI guidance notes on the preparation of annual returns (1984)

20. QUARTERLY RETURNS

20.1 Where a company is subject to a notice of requirements requiring it to submit quarterly returns it should normally comply with the procedures given in these notes in so far as they relate to the Forms required to be included in the quarterly return.

20.2 In some cases it will be necessary to amend, as appropriate, the words "as at the end of the financial year" and "Financial year ended" where they appear in the certificates and Forms.

21. MODIFICATIONS AFFECTING PARTICULAR COMPANIES

21.1 Section 68 of the Act gives the Secretary of State power to make an Order modifying the requirements of the Act and regulations relating to annual returns as they apply to particular companies. This power is normally used where the circumstances of a company or the nature of the business it transacts are such that it is inappropriate for the requirements to apply in an unmodified form. Companies wishing to count implicit items against their solvency requirements should apply for the appropriate order - see also paragraph 7.3.2 of these notes.

21.2 Modifications may be made only if the company applies for or consents to the Order. A company which thinks it necessary for a modification to be made in relation to it should therefore discuss the circumstances with the Department.

EXPLANATORY GUIDANCE TO AUTHORISED INSURANCE COMPANIES

ON

THE PREPARATION OF ANNUAL RETURNS

TO

INSURANCE DIRECTORATE OF HM TREASURY

PGN 1998/1

JANUARY 1998

Version 1.1 ***January 1998***

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

FOREWORD

This document has been issued by the Insurance Directorate of the HM Treasury to provide guidance to companies preparing returns for deposit with the Insurance Directorate under the Insurance Companies (Accounts and Statements) Regulations 1996, as amended by the 1997 Amendment Regulations ("the Insurance Annual Return). It also gives guidance for UK companies preparing statements of their insurance business in other EEA states under the European single market for deposit with the Treasury under Regulation 81 of the Insurance Companies Regulations 1994, ("Insurance Statistical return"). It revises and replaces the previous guidance PGN 1996/3. The changes from that document, unless trivial, are indicated by a side bar.

This document gives an overview of the requirements of those Regulations and, in particular, presents the Insurance Directorate's interpretation of those Regulations. It also describes the statutory background to the requirement to prepare the Returns and explains the relationship between the Insurance Companies (Accounts and Statements) Regulations 1996 and the other Regulations relevant to the preparation of the Returns including the Insurance Companies Regulations 1994. Chapter 11 includes guidance on the Insurance Companies (Equalisation Reserves) Regulations 1996.

This document is intended to be read in conjunction with the Regulations and statutory provisions referred to above which alone have the force of law and which must, in the case of seeming conflict, prevail.

This document is included in the Insurance Directorate's list of published guidance to which it expects companies to certify compliance under the provisions of paragraph 5 of Schedule 6 of the Insurance Companies (Accounts and Statements) Regulations 1996. See chapter 17 for further guidance on this area.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER ONE

1. THE STATUTORY REQUIREMENT TO PREPARE RETURNS

1.1 The basic requirement

1. The Annual Returns must be prepared by all insurance companies to which Part II of the Insurance Companies Act 1982 applies. This includes with certain exceptions all insurance companies, whether established within or outside the United Kingdom which carry on business within the United Kingdom.

2. The most important of the exceptions referred to above is an "EC company", (i.e. an insurance company, other than a pure reinsurer, with its head office in another EEA State which is authorised to carry on business in the UK by its home member State). See chapter two for further comment on their status.

1.2 The statutory basis of the Annual Return

1. The outline content of the Annual Returns is laid down by three sections of the Insurance Companies Act 1982.

- Section 17 provides for a "profit and loss account", "revenue account" and "balance sheet" together with "notes, statements and reports" and "certificates annexed thereto".
- Section 18 provides for an "abstract" of the annual investigation of the appointed actuary.
- Section 21 provides for an "auditors' report".

2. All three sections provide for Regulations to be made to prescribe the detailed content of the documents to be prepared. They form the statutory basis for the ***Insurance Companies (Accounts and Statements) Regulations 1996***, ("the 1996 Regulations"), which repeal and replace the Insurance Companies (Accounts and Statements) Regulations 1983, ("the 1983 Regulations").

1.3 Deposit of returns with the Treasury

1. Section 22(1) of the Insurance Companies Act 1982 requires that every document prepared under sections 17, 18 or 21 be printed and five copies be deposited with the Treasury within **six months** of the end of the period to which the documents relate. The Insurance Directorate requests

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

that one of the five copies [not the signed one] is left unbound held together with a treasury tag in the top left-hand corner. However the Annual Returns need not (as was previously required) be printed on coloured paper. A company which opts for electronic submission (see below) need only deposit one printed copy, which should be a bound signed copy.

2. [In addition to the above a registered society should also deposit one copy with its registrar under the Industrial and Provident Societies Act 1965 or the Industrial and Provident Societies Act (Northern Ireland) 1969. A company which carries on industrial long term business should also deposit two copies with the Registrar of Friendly Societies.]

3. Section 22(3) requires that one copy of every document (other than the auditor's report) be signed by such persons as may be prescribed. Section 22(4) requires that one copy of the auditors' report be signed. Further details on the signature of returns is given in the next chapter.

4. The Treasury has power under section 22(1) to extend the period for deposit by up to three months if he thinks that "the circumstances are such that a longer period should be allowed". A company seeking such an extension should apply to its normal supervisory contact in the Insurance Directorate. The application should identify the "circumstances" being relied upon as justifying the extension and should be made as early as possible. Only in very exceptional circumstances will an application for an extension be granted where it is not made before the end of the six month period. Similarly, if it becomes necessary to seek a further extension beyond the one already granted (but within the overall limit of three months), application should be made before the expiry of the extension in operation.

5. A company wishing to deposit returns electronically may only do so with the prior approval of the Insurance Directorate. A separate document "Electronic Submission of Returns - Technical Specification" details the format in which an electronic return must be presented. The document described in paragraph 1.4.3 below details the validation rules which must be applied at source in the generation of the Annual Return. There are software packages commercially available for the generation of the Returns. It is likely that a return generated using such a package will be acceptable to the Insurance Directorate. A company wishing to use another package or bespoke software will need to satisfy the Insurance Directorate that the technical specification referred to above is met in full. Companies considering electronic submission should apply to:

the Insurance Directorate
HM Treasury

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

1 Victoria Street
London SW1H 0ET

1.4 Inaccurate or incomplete returns

1. Section 22(5) requires the Treasury to consider the documents deposited under section 22(1) and, if any such document appears to him to be inaccurate or incomplete, to communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

2. A letter from the Insurance Directorate under section 22(5) may draw attention to an apparent inaccuracy or incompleteness and ask for an explanation or it may also ask for the inaccurate or missing documents to be (re)submitted. In either case the company should consider the points raised in the letter and respond promptly either explaining why there is not in fact any inaccuracy or incompleteness, or (re)submitting the inaccurate or missing documents.

3. The validation of returns by the Insurance Directorate takes place at two levels. Firstly certain "absolute" relationships are expected always (subject to any section 68 order) to be present between data items in the Annual Return (and between those items and the data items in the previous return). Secondly the "reasonableness" of the data items is reviewed. This includes comparing data with other published sources such as the Companies Act accounts to test its consistency and completeness. A listing (in the form of a systems specification) of the "absolute" relationships which are validated is available on request from -

[redacted]
The Insurance Directorate
HM Treasury
1 Victoria Street
London SW1H 0ET

1.5 Other documents to be deposited with the Annual Returns

1. Section 22(6) requires that a company deposit with its return "any report on the affairs of the company submitted to shareholders or policyholders of the company in respect of the financial year to which the [return] relates". This includes, but is not limited to, the report and accounts of the company prepared under Schedule 9A of the Companies Act 1985 (or in the case of an overseas company prepared under section 700 of the Companies Act 1985).

2. Although strictly the section only requires one copy of any report, the Insurance Directorate would find it helpful if general business companies

would deposit ***two copies***, and long term business companies ***three copies***. [A registered society should also deposit a copy of such documents with its registrar under the Industrial and Provident Societies Act 1965 or the Industrial and Provident Societies Act (Northern Ireland) 1969. A company which carries on industrial long term business should also deposit two copies with the Registrar of Friendly Societies.]

1.6 Insurance fees

1. No later than when depositing the Annual Returns and other documents referred to above, a company should separately send a completed insurance fees form to the address shown on the Form and, where a fee is due, a cheque in payment. The insurance fees form should be returned even if it only evidences that no fees are payable.

2. Section 94A of the Insurance Companies Act 1982 provides that where a fee is due, the Annual Return shall not be regarded as deposited until that fee is paid.

1.7 Disclosure of the Annual Returns and other documents deposited with the Treasury

1. The returns and the documents deposited with them are publicised in two ways.

- Firstly under section 23(1) a company must send a copy to any shareholder or policyholder who requests it, and

- Secondly under sections 65 and 66 the Treasury must deposit with the Registrar of Companies the Annual Returns and other documents deposited with him. The documents deposited with the registrar of companies are available for public inspection.

2. Under section 23(2) the Treasury may exempt a company from the above disclosures but-

- only in respect of a statement or report annexed to the documents prepared under section 17, (e.g. not the abstract of the report of the appointed actuary), and

- only if in the opinion of the Treasury disclosure would be harmful to the business of the company or any of its subsidiaries.

3. This dispensation will only be given in exceptional circumstances, e.g. where disclosure would reveal that a company had significant trading

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

links with two states at war with each other and thereby seriously prejudice its ability to continue to trade in one or both of those states.

1.8 Section 67, 68 and 69 orders

1. These sections of the Insurance Companies Act 1982 empower the Treasury in relation to a particular company (at the request, of or with the consent of, that company) -

- to modify or disapply certain provisions of that Act; [a section 68 order];

- to direct that, for certain specified purposes under the Act, long term business be treated as general business or *vice versa*; [a section 67 order];

- to extend or shorten, for the purposes of the Act, the company's financial year; [a section 69 order].

The purposes under the Act for which these orders may be used include, but are not confined to, the preparation of the Returns.

2. A company which wishes to apply for an order should do so through its normal supervisory contact at the Insurance Directorate. The application should identify the circumstances which the company considers justify the granting of an order. It is important that an application is made as early as possible, preferably as soon as the circumstances which justify it are known to have arisen.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury’s explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER TWO

2. THE TYPES OF RETURN

2.1 An overview

There are three basic types of Annual return-

- a "global return" which reports the entire worldwide business of the insurance company,

- a "UK branch return" which reports only the business carried on through a branch in the United Kingdom, and

- an "EEA branches return" which reports the entire business carried on through all branches in EEA states (including the UK).

2.2 The detailed requirements

1. The following table summarises the types of return which insurance companies are required to prepare.

<--Type of company -->	<-------------------Location of Head Office ------------------->			
	United Kingdom	A member State[1] (other than U.K.)	An EFTA[2] state	Rest of the World[2]
Pure reinsurer	Global return	Global return	Global return	Global return
United Kingdom deposit company				Global return and EEA branches return
EEA deposit company				UK branch return
All other insurance companies	Global return	Exempt[3]	UK branch return	Global return and UK branch return.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

[(1) The member States are those States which are members of the European single market in insurance, i.e. the 15 EU States, Iceland, Norway and Liechtenstein.

(2) Special rules apply for Switzerland. A Swiss general insurance company reports as for a company with its head office in the EFTA. Other Swiss companies report as for companies with their head office in the "rest of the world".

(3) Exceptionally where an EC company is required to prepare returns under the paragraph 7 of Schedule 2F to the Insurance Companies Act 1982, the same rules apply as for an EFTA company.]

2. The above table summarises the requirements of Regulation 3(3) and 3(4). "United Kingdom deposit company", "EEA deposit company" and "pure reinsurer" are defined in Regulation 3(1).

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER THREE

3. INTERPRETATION OF THE REGULATIONS

3.1 Definitions

1. Regulation 3(1) includes a list of about 60 defined words and expressions. In addition to these specific definitions Regulation 3(2) lays down two general rules of interpretation.

2. Unless the context otherwise requires words and expressions in any Form(1), or in any Regulation(2) requiring a statement to be annexed to the Forms, are to have the same meaning as applies in-

- the Regulations(3) which lay down the rules for valuing assets and liabilities and calculating the solvency margin, or

- the rules which lay down the form and content of accounts prepared under the Companies Act 1985.

In the case of any conflict the first of the two above rules prevails.

[(1) This should be taken to include the instructions to any Form.

(2) These are Regulations 19 to 21, 23, 24 and 26.

(3) These are Parts IV, VIII and IX and Schedules 3 and 12 of the Insurance Companies Regulations 1994.]

3.2 Valuation of assets and liabilities

1. Regulation 4 requires that, unless otherwise more specifically provided, assets (other than linked assets) and liabilities included in any document in the Annual Return should be valued using the valuation rules in the Insurance Companies Regulations 1994.

2. Linked assets (defined by Regulation 3(1) as long term business assets identified in the records of the company as being assets by reference to which property linked benefits are to be determined to the extent that they are held to match liabilities in respect of property linked benefits) should be valued in accordance with "generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies".

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

3.3 Requirement to fairly state information

1. Regulation 5 requires that every revenue account, profit and loss account, balance sheet, note, statement, report and certificate required to be prepared under section 17 of the Insurance Companies Act be prepared in the manner specified and "fairly state the information provided on the basis of the Regulations". This is a closely analogous requirement to the 'true and fair' concept for Companies Act accounts. As with that concept it includes the concept of materiality where properly applied. Forthcoming guidance to be issued by the Auditing Practices Board will in great detail discuss the application of the materiality concept to the Annual Returns. [Nb. materiality is not an acceptable excuse for basic arithmetical or cross-referencing errors in or between Forms. Nor is it an acceptable excuse for the deliberate or reckless misstatement or omission of information required to be disclosed by the Regulations. Nor does it justify a lack of proper care to the preparation of such information.]

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER FOUR

4. CONVENTIONS FOR THE COMPLETION OF ALL FORMS

4.1 Scope

1. The accounting rules and conventions described in this chapter apply (other than where the contrary is explicitly stated) to all documents in the Annual Return other than the Forms, notes, statements and certificates required under Schedules 4 to 6.

2. The accounting rules and many of the conventions for preparing the Annual Return which are presented in this chapter derive from Paragraphs 1 to 7 of Schedule 1. The other conventions although not directly arising from the Regulations are merely cosmetic and are requested to facilitate the Insurance Directorate's processing of the Annual Returns.

4.2 Completion of Forms

Signature of forms

1. The first Form in the Annual Return (normally Form 9 or 10) should be signed. If the Annual Return consists of more than one bound volume then the front Form of each volume should be signed. Where space does not allow the signatures to be affixed to the foot of this Form a covering sheet should be used. The covering sheet should have the same header information as Form 9* and should be entitled "Covering sheet to Form 9*".

* = or Form 10 as the case may be.

2. A global return should be signed by at least two directors and the chief executive. If there is only one director, he or she and the chief executive should sign. If there is no chief executive, or if there is only one director (other than the chief executive), the secretary should also sign. A UK branch return or EEA branches return should be signed by the Authorised UK representative and the Principal UK employee. See Regulation 27.

Use of own forms

3. A company may either submit its return on Forms printed by the Insurance Directorate or print its own Forms. However in the latter case it should make sure that they are laid out exactly as the Forms in the relevant Schedules to the Regulations. Companies wishing to print their own Forms are requested to contact Section 4c of the Insurance Directorate. In general, the Insurance Directorate will accept returns produced using a recognised forms generation package. Where a company is using a bespoke

software application, it will be requested to send specimen blank Forms to the Insurance Directorate well before they intend to use them.

Headings

4. After the heading "Name of company" the full registered name of the company should be given without abbreviation.

5. In the heading "Global business/UK branch business/EEA branch business" all except one of the three alternatives should be deleted according to whether the Form is part of a global return, UK branch return or EEA branches return (see chapter two).

6. The heading "Financial year ended" should be followed by the date of the last day of the financial year written in the style "dd-month-yy", e.g. "31 December 1996".

7. The "company registration box" should be completed with the number used for submission of returns under the 1983 Regulations. A company making a return for the first time should use the full registration number given by the Cardiff, Edinburgh or Belfast Registrar of Companies. If the company does not have such a number it should agree a suitable number with the Insurance Directorate (the Insurance Directorate - Section 4c). An overseas company should use its F-series number issued by the Registrar of Companies.

8. The "GL/UK/CM" should be completed with one of the three alternatives according to whether the Form is part of a global return, UK branch return or EEA branches return (see chapter two).

9. The "Period ended" box should be completed so as to show, in numerals, the date of the last day of the financial year to which the Annual Return relates. The "month" box should always be completed with a two-digit number, incorporating a leading zero where necessary.

Typewritten entries

10. The Insurance Directorate prefers typewritten entries to hand-written ones, but there should be not more than 5 characters per centimetre or 12 per inch.

Other text

11. No text or figures should be included in any box in a Form or anywhere else on the face of the Form other than as required by the Regulations. In particular no entries should be made-

- in any unused line or column on Forms 26 to 29, 31, 32 and 34 after the last accident year or underwriting year required to be reported,
- in any column headed "Source", and
- in any shaded box.

4.3 Currency

1. All forms (other than some of the Forms 26 to 29 and 31, 32 and 34) are to be completed in sterling with-

- assets and liabilities converted at the financial year end exchange rate, and
- income and expenditure converted using "such bases of conversion as are in accordance with generally accepted accounting practice".

2. Accounting practice allows several alternative accounting bases for the translation of income and expenditure. The Insurance Directorate expects companies to choose the same basis as it uses in its Companies Act accounts. Where the Companies Act accounts are drawn up in a currency other than Sterling it is acceptable for the company also to maintain the underlying records upon which the Annual Return is based, in that currency and to translate those currency amounts into Sterling at the rate ruling at the year end.

3. The above conversion rules do not apply to certain entries on Forms 23, 26, 27, 31, 32 and 34. The rules for these Forms are explained in chapter ten below.

4.4 Presentation of amounts

1. Negative amounts should be shown between round brackets. A minus sign or "DR" should not be used.

2. All sterling amounts in the forms (except valuation prices on Form 45) should be shown in units of £1000 rounded to the nearest £1000. This is required even if particular figures are so large or small that under normal accounting conventions it would be it inappropriate. If the entry in any box to be rounded is less than £500 that box should be left blank. The entry **"0"** should not be used.

3. Amounts required to be shown denominated in foreign currency in a Form should be shown in units of 1000 (of the principal monetary unit of

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

that currency) rounded to the nearest 1000, and the entry "**000**" should be made in the "units" box of that Form. However if the £ to principal monetary unit exchange rate at the year end was in excess of 1000, amounts should be shown in units of 1,000,000 and "**000,000**" should be inserted in the "currency" box.

4. Figures which are totals of other figures (whether or not on the same Form) should be rounded after totalling the unrounded detail figures.

4.5 Comparative amounts and brought forward figures

1. Columns are included on Forms 9 to 17,20 and 40 for the disclosure of comparative amounts for the previous financial year. These amounts should be reported as stated in the previous return (after any correction under s22(5) - see paragraph 1.4 above), but without restatement for any prior year adjustment even where such restatement is permitted under generally accepted accounting practice.

2. Other than to reflect exchange rate reconversion, brought forward figures on the detailed general business Forms (21 to 39) should not, as a general rule, be restated as this destroys the continuity of the historical data triangles which the Insurance Directorate derives from these Forms. However the Insurance Directorate recognises that in exceptional cases, e.g. the correction of a fundamental error, restatement for other reasons may be desirable. The Insurance Directorate requests companies which wish to restate amounts (other than to reflect exchange rate reconversion), to discuss the proposed restatement with their usual supervisory contact at the Insurance Directorate prior to submitting their return.

3. Where any brought forward amount is restated (other than to reflect exchange rate reconversion) the reason for the restatement must be given in a supplementary note to the Form upon which the brought forward amount appears - see paragraph 7 of Schedule 1.

4. Special difficulties with brought forward and comparative figures arise for an established overseas insurance company newly authorised in the UK by the Insurance Directorate and preparing its first global return. Such a company may wish to seek guidance from its normal supervisory contact at the Insurance Directorate.

4.6 Supplementary notes

1. Supplementary notes should not be shown on the face of a Form but should be shown on a separate sheet or sheets of paper. It would be helpful if the notes for all Forms are bound together toward the end of the Annual

Return (but before the certificates) and not interleaved with the Forms to which they relate.

2. The requirements to prepare supplementary notes are variously located in the actual text of the Regulations, in the text of the Schedules to the Regulations and in the instructions to the Forms. However in each case the requirement to prepare the note identifies the Form to which it is to relate.

3. In the following chapters for each Form (under Schedules 1 to 3) a complete list of the required supplementary notes is provided. Each note in the list is given a unique reference code. The first two digits of the code are the number of the Form and the final two digits the number of the note. For example the 5th note in the list for Form 13 is coded "1305".

4. Each supplementary note included in the Annual Return should be given a title which identifies the Form or Forms to which it relates. The Insurance Directorate requests that (in respect of Forms prepared under Schedules 1 to 3) this be done by including the code as the first element in the title. For example the title for note 1601 might be -

1601 Basis of conversion of foreign currency

If there is more than one Form of the same number (e.g. Forms 24 for several accounting classes) only one title of the above type need be used to cover all such Forms.

5. Where a company wishes to include an extra note (beyond those required by the Regulations to be included) it should identify the Form to which it relates and give the note the next unused sequential code number for that Form. For example the Regulations specify seventeen coded notes for Form 13 which are respectively coded 1301 to 1317. If an extra note is to be added it should be coded 1318. The code 1318 should be used even if for the particular company there is no note 1317 (because the circumstances in which that note is required do not arise for that company).

6. Where the Regulations require a Form to be submitted but all entries (including comparatives) would be blank that Form may be omitted provided that a note coded FF00 (where FF is the Form number) is included stating that this is why the Form has been omitted. This note is not needed where a Form is omitted because the Regulations do not require it. For example a non-life company is not required to submit Life Forms 40 to 45 and so does not need supplementary notes 4000 etc.

7. Two or more supplementary notes should not be combined as a single text with a single title except where this avoids unnecessary repetition or leads to a clearer explanation. Where two or more supplementary notes are

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

combined the codes of all the notes should be listed at the beginning of combined title.

8. Some supplementary notes are always required whenever the Form to which the note refers is required. Others, are only required on an exception reporting basis. The detailed guidance below on each supplementary note brings out this distinction.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER FIVE

5. FORMS 9 TO 17: STATEMENT OF SOLVENCY, BALANCE SHEET AND NON-TECHNICAL ACCOUNT

5.1 Statement of Solvency (Form 9)

Completion of the form

1. Form 9 is to be prepared by every company other than an EFTA company, a Swiss general insurance company or a EEA deposit company - see Regulation 6(2).

2. Form 9 shows separately for general business and long term business-

- the required minimum margin of solvency,
- the available assets,
- any implicit items (for long term business), and
- any contingent liabilities.

3. The entries on Form 9, other than for implicit items, derive from other forms within the Annual Return.

- The general business required margin of solvency derives from Forms 11 and 12 and the long term business required margin of solvency from Form 60.
- The available assets derive from Form 10. A composite insurer may apportion part of its "other than long term business - available assets" (line 29 on Form 10) to count against the required minimum margin for its long term business provided that such assets are in excess of the amount needed to match its general business required margin of solvency - see Regulation 17(5)(b) of the Insurance Companies Regulations 1994.
- The long term business liabilities derive from Form 14.
- The contingent liabilities for general business and long term business derive from supplementary notes to Forms 15 and 14 respectively.

4. Implicit items are certain special types of "asset", i.e. future profits, Zillmerising and hidden reserves, specified in Regulation 23(5) of the Insurance Companies Regulations 1994. They may be counted against a company's required minimum margin of solvency but only if, and to the extent, specifically allowed by an order issued to it by the Treasury under

Section 68 of the Insurance Companies Act 1982. A company wishing to count such items against its solvency requirement should apply to the Insurance Directorate for the appropriate order.

Supplementary notes

Two supplementary notes may be required to this Form: -

(1) Where a section 68 order has been issued disapplying or modifying any of the provisions of the 1996 Regulations, a note to Form 9 explaining the effect of the order is usually required. The requirement for such a note would be specified in the order itself. [Code 0901].

(2) Where a section 68 order has been issued to a company permitting it to take into account implicit items on long term business, that order may specify that a note is to be included in the Annual Return explaining such items. That noted should be included as a note to Form 9. [Code 0902].

5.2 Statement of Net Assets (Form 10)

Completion of the form

1. Form 10 is to be prepared by all companies - see Regulation 6(3).

2. Lines 11 and 12 are to be completed only by a company carrying on long term business and respectively derive from Forms 13 and 14. A company which carries on long term business is required by section 28 of the Insurance Companies Act 1982 to maintain a separate fund for that business. Lines 11 shows the value of the admissible assets in that fund. Lines 11 and 12 should equal each other.

3. All other lines on Form 10 are to be completed by every company, other than a mutual without share capital (or subordinated loan capital) which only carries on long term business. Line 56 is to be completed with the balancing figure so as to ensure that line 59 equals line 29.

4. Line 23 shows the net admissible assets, i.e. admissible assets less liabilities. Lines 24 and 25 show two types of asset which may not be taken into account in determining the net admissible assets but which, provided that net admissible assets are not negative, may (to a limited extent) be added to net admissible assets for the purpose of determining whether the company meets its required margin of solvency. Similarly lines 26 and 27 show two types of liability which are taken into account in net admissible assets but which, provided that net admissible assets are not negative, may (to a limited extent) be added-back for the purpose of determining whether the company meets its required margin of solvency. Thus where line 23 is negative no amounts may be included at lines 24 to 27. [See Regulation 23

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

of the Insurance Companies Regulations 1994 for the detailed rules applicable to these types of assets and liabilities.]

5. Line 51 should include the share premium account.

Reconciliation of balance of net assets brought forward and carried forward

6. Line 61 to 69 reconcile the balance of net assets, (line 56), brought forward and carried forward. For these purposes the brought forward amount shown at line 61 should not be restated for any reason, even for exchange differences.

7. The three most frequent reasons for a movement in the net assets are listed respectively at lines 62 to 64. They are-

- the retained profit or loss for the financial year - sourced from Form 16,
- movements in the difference between the value of (other than long term) assets under the HM Treasury valuation rules and under the GAAP valuation rules - sourced from Form 13, and
- a decrease or increase in the provision for adverse changes (which is a provision made for HM Treasury purposes but which does not arise under GAAP) - sourced from Form 15.

8. Movements in the net assets which are not attributable to the three reasons given above should be included at line 65 and explained by way of supplementary note to the Form. [Code 1002].

9. The retained profit or loss (line 62) is sourced from Form 16 and, therefore, is for other than long term business determined in accordance with the same generally accepted accounting practice ("GAAP") as apply in UK Companies Act accounts. The long term business retained profit departs from GAAP in that it is based on the "statutory" method of reporting, not the "modified statutory" method.

10. The annex to this chapter gives two examples of this reconciliation.

Reconciliation of net assets to the accounts

11. In addition to the above reconciliation which appears on the face of Form 10, a further reconciliation is required by way of supplementary note to the Form. This takes net assets as per the Annual Return and reconciles them to net assets as they appear in the shareholder accounts. It is required for <u>every</u> insurance company which is not incorporated outside the UK, and which in consequence has to prepare Companies Act accounts in

accordance with Schedule 9A of the Companies Act 1985. See paragraph 14 of Schedule 1 of the 1996 Regulations.

12. For purposes of this reconciliation, net assets as per the Annual Return should be taken not from Form 10 but by netting assets taken from line 99 of the Form 13 (for the category of assets "1") and liabilities from line 59 of Form 15. The net assets as per the Companies Act accounts should be the amount shown under balance sheet item A "capital and reserves".

13. The reason for taking assets and liabilities from these sources within the Annual Return is to eliminate from the reconciliation differences due to the dissimilar asset and liability valuation rules as between the Annual Return and Companies Act accounts. [Lines 91 to 99 of Form 13 reconcile the valuation of assets as per the Annual Return rules and as per the Companies Act accounts rules. Line 99 shows the value after that reconciliation, i.e. the value as per the Companies Act accounts rules. Similarly line 59 of Form 15 shows liabilities sub-totalled excluding items which do not appear as liabilities in the Companies Act accounts, e.g. the provisions for adverse changes etc..]

14. As a result this reconciliation only needs to deal with differences which arise for other reasons. Such differences would include the following:

- The value of net assets within the long term business fund. This is included in the net assets taken from the Companies Act accounts (item A "capital and reserves") but is not included in net assets as sourced from Form 13 (category of assets "1") and Form 15.

- The amount of any subordinated loan capital. This is not deducted as a liability in the net assets as sourced, *inter alia*, from line 59 of Form 15, but is deducted as a liability in the net assets as sourced from the Companies Act accounts (item A "capital and reserves").

15. Other than as noted above companies should only rarely have any differences to report under this reconciliation; e.g. where there is a material adjusting post-balance sheet event which occurs after the date of sign off of the Companies Act accounts but before the date of sign off of the Returns.

16. Where for any reason a Company (other than one incorporated outside the UK) either does not prepare or has not yet prepared its Companies Act accounts a statement that this is the case should be included in the supplementary note instead of the above reconciliation. The Insurance Directorate would also find it helpful if the reason why accounts have not been prepared, (e.g. because they are drawn up to different year ends from the Annual Return), is also stated.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

17. The annex to this chapter gives an example of this reconciliation.

Supplementary notes

18. Three supplementary notes are specified -

(1) the supplementary note described in paragraphs 11 to 17 above - see paragraph 14 of Schedule 1; [Code 1001];

(2) particulars of any "other movements" shown at line 65; [Code 1002]; and

(3) particulars of any section 68 order allowing subordinated loan capital not to be treated as a liability for the purposes of determining whether the company holds net assets which match its required margin of solvency - the requirement for this note will be specified in the section 68 order itself; [Code 1003].

5.3 Calculation of required margin of solvency (Forms 11 and 12)

The margins of solvency

1. Forms 11 and 12 are to be completed by every company which carries on general business, other than an EFTA company, a Swiss general insurance company or an EEA deposit company - see Regulation 6(4).

2. All insurance companies (subject to certain exceptions described below) which are subject to Part II of the Insurance Companies Act 1982 are required to maintain a margin of solvency throughout the financial year. Forms 11 and 12 in the ***Global*** Annual return (see chapter two above) show the calculation of this margin of solvency in respect of general business.

3. For an insurance company (other than a pure reinsurer) with its head office outside the UK this margin of solvency relates to its entire worldwide business. Such an insurance company (unless an UK deposit company) must also maintain a "UK margin of solvency" in respect of its business carried on in the United Kingdom. Forms 11 and 12 in the ***UK Branch*** Annual return (see chapter two above) show the calculation of the UK margin of solvency in respect of general business. A UK deposit company must also maintain an "EEA margin of solvency" in respect of its business carried on within EEA states. Forms 11 and 12 in the ***EEA Branches*** Annual return (see chapter two above) show the calculation of the EEA margin of solvency in respect of general business.

4. The exceptions mentioned above are EFTA companies, Swiss general insurance companies and EEA deposit companies. They are excluded (under UK law) from the requirement to maintain any of the above types of margin

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

of solvency. [This is because they are subject to equivalent solvency rules imposed by their home state or by another EEA state.] These companies do not prepare Forms 11 and 12.

5. The text on the face of the Forms only presents in outline the method of calculation of the general business margins of solvency. The detailed rules for the calculation are to be found in Schedules 3 to 5 of the Insurance Companies Regulations 1994, (the "1994 Regulations"), to which companies preparing these Forms should refer. The Forms should be interpreted in the light of these rules - see Paragraph 10(1) of Schedule 1.

6. The 1994 Regulations lay down that the margins of solvency are to be calculated as the highest result from the application of three alternative methods. These are the premium basis, the claims basis and the minimum guarantee fund. The first method is shown on Form 11 and the latter two methods together with the comparison of all three methods are shown on Form 12.

Form 11: the first method (i.e. the premium basis)

7. <u>Line 11</u>: determine the ***gross premium receivable*** in the financial year.

(1) "Gross premium" is defined by paragraph 1 & 2 of Schedule 3 of the 1994 Regulations as "premiums after deduction of discounts, refunds and rebates of premium and before deduction of premiums for reinsurance ceded and of commission payable”. It includes premiums receivable from reinsurance contracts accepted by the company. In effect, although the 1994 Regulations do not express themselves in this way, this has the same meaning (subject to one important exception described in sub-paragraph (4) below) as "gross premiums written" as it occurs in the other Forms in the Annual Return.

(2) The amount of "gross premium" to be taken is limited by the words "receivable". This is also defined by paragraph 1 of Schedule 3 of the 1994 Regulations and means "recorded in the company's books as due to the company ... in respect of risks incepted in the financial year". Policies transferred to a Company under a Schedule 2C transfer (or transfer under the equivalent law of another EEA state) should be considered to be incepted on the date of transfer.

(3) In effect therefore (subject to the exception described below), "gross premiums receivable" may be treated as being the same as that portion of "gross premiums written" which is in respect of risks incepted in the financial year. This may be derived from the other Forms in the Annual Return as follows: take the sum of the entries in columns 1 and 2 for lines 13 to 15 on all Forms 21 and of the entry at line 11 for the current underwriting year on all Forms 24. [In algebraic notation this is:

(21.13.1 + 21.13.2 + 21.14.1 + 21.14.2 + 21.15.1 + 21.15.2) for all Forms 21 + 24.11.(mm-yy) for all Forms 24; where mm-yy is the current financial year.]

(4) The exception referred to above occurs where premiums receivable are excluded from gross premiums written as shown in Forms 21 and 24 by virtue of the rule in paragraph 26 of Schedule 2 [of the 1996 Regulations]. This says that "amounts in respect of inwards and outwards contracts of insurance shall be classified for inclusion in Forms 20 to 39 according to their economic substance in accordance with generally accepted accounting practice". This, in effect, means that the accounting treatment for so-called financial reinsurances is to be the same in these Annual return Forms as in the Companies Act accounts. This is explained more fully in paragraph 8.2.2 below. The point to note here is that even where, under this rule, the consideration receivable under a contract of insurance is not classified as "gross premiums written" for the purposes of those HM Treasury Forms, it must be included as "premiums receivable" on Form 11. The Form 11 "premiums receivable" should include all consideration receivable in respect of contracts which constitute carrying on insurance business under the Insurance Companies Act 1982, and which therefore require authorisation under that Act.

8. Line 12: deduct premium taxes and levies, but only to the extent that: (i) in the case of taxes they are included in premiums and (ii) in respect of levies they are related to premiums and are "recorded in the company's books as payable in the last preceding financial year in respect of general business" - see Paragraph 3 of Schedule 3 of the 1994 Regulations. Under generally accepted accounting practice the UK Insurance Premium Tax is excluded from the amount shown for premiums. It should not, therefore, be deducted at line 12 on the Form. The anticipated Policyholder Protection Board levy in respect of business written during the year may be deducted, but only to the extent that a provision for that anticipated liability has been established.

9. Line 14: adjust the sub-total derived from the above to an annual figure if the financial year runs for more or less than 12 months - see paragraph 4 of the 1994 Regulations.

10. Lines 15 to 19: (i) analyse the amount arrived at in line 14 between "other" and "health insurance based on actuarial principles"; (ii) in the case of each amount, if appropriate, divide into two portions of 10 million European Currency Units and the excess over 10 million such units and (iii) apply the appropriate percentages (18, 16, 6 or $5^1/_3$, as the case may be) to the totals arrived at and add together the resultant sums to determine the ***Sub-total B*** - see Paragraphs 5 to 9 of Schedule 3 of the 1994 Regulations. The Insurance Directorate will advise, if requested, whether business carried on under a particular policy falls within the definition of "health

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

insurance based on actuarial principles". The £/ECU rate of exchange to be used is that prevailing at the previous 31 October and is advised to companies each year via a HM Treasury market letter.

11. Lines 21 to 29: Determine (i) gross ***claims paid*** in the financial year; (ii) gross ***claims outstanding*** carried forward; and (iii) gross ***claims outstanding*** brought forward. Determine the gross claims incurred, ***Sub-total C***, as (i) plus (ii) less (iii).

(1) "Claims paid" and "claims outstanding" are defined in detail by paragraph 11 to 12 of Schedule 3 of the 1994 Regulations. In essence they refer to the amounts recorded in the company's books as -

- "paid in full or partial settlement of" or "set aside as likely to be sufficient to meet" claims under contracts of insurance; **or as**
- expenses "incurred" or "set aside" as likely to be incurred which are "directly attributable to the settlement of individual claims ..."; **less**
- related salvage recoveries, recoveries from third parties and recoveries from other insurers (but not reinsurance recoveries).

(2) The definition of "Claims outstanding" includes the provision for claims incurred but not reported.

(3) In effect, although the 1994 Regulations do not express themselves in these terms, the above definitions of "claims paid" and "claims outstanding" are equivalent (subject to one important exception described below) to the corresponding amounts included in Forms 22 and 25, but excluding the "claims management costs".

(4) For "claims paid" the equivalent amount is the sum of the amounts at lines 11 and 15 in column 2 in all Forms 22 and of the amounts line 21 of the total column in all Forms 24. [In algebraic notation this is: (22.11.2 + 22.15.2) for all Forms 22 + 24.21.(99-99) for all Forms 24.]

(5) For "claims outstanding" the equivalent amount is the sum of the amounts at lines 11 and 15 in column 3 in all Forms 22 and of the amounts lines 11 and 13 of the total column in all Forms 25. [In algebraic notation this is: (22.11.3 + 22.15.3) for all Forms 22 + {25.11.(99-99) + 25.13.(99-99)} for all Forms 24.] Nb. for a company which discounts its claims outstanding this requires that the undiscounted provision be taken. If necessary the brought forward amount (here and on Form 12) should be restated as undiscounted.

(6) The exception referred to above arises for the same reason as described in sub-paragraph (4) of paragraph 7 above. Amounts are classified for inclusion in Forms 22, 24 and 25 according to their economic substance

in accordance with generally accepted accounting practice. However in Forms 11 and 12 "claims paid" and "claims outstanding" should include all amounts "paid" or "set aside" for claims under contracts which constitute carrying on insurance business under the Insurance Companies Act 1982, and which therefore require authorisation under that Act, even where such amount are not classified as "claims paid" under generally accepted accounting practice.

12. Lines 30 to 39 :determine the net claims incurred, ***Sub-total D***, by deducting from the gross claims incurred, ***Sub-total C***, the total sum recoverable in respect of that amount under reinsurance contracts ceded See Paragraph 13 of Schedule 3 of the 1994 Regulations. Line 30 should only include amounts classified for inclusion as reinsurance in Forms 22, 24 and 25 according to their economic substance in accordance with generally accepted accounting practice [except that where gross premium has been included in line 11 only by virtue of paragraph 11(6) above, all reinsurance of that gross premium (whatever its economic substance) may be included in sub-total C.]

13. Line 41 :determine the ***First result*** by multiplying the ***Sub-total B*** by the ratio of the ***Sub-total D*** to the ***Sub-total C***, (or if that fraction is less than one half, by one half; or if the fraction is more than one, by one). See paragraph 14 and 15 of Schedule 3 of the 1994 Regulations.

The Second Method: the claims basis

14. Determine the reference period. If a company has not been in existence long enough to acquire a reference period this should be indicated by entering a zero at the box in line 11 and lines 21 to 41 ignored. For the majority of companies the reference period will be the last three financial years. See Paragraphs 1 and 2 of Schedule 4 of the 1994 Regulations.

15. Establish the amount of "claims incurred" in a similar way to that explained in paragraph 11 above but related throughout to the reference period rather than to the financial year. For example where the reference period is the last three financial years the "claims incurred" should be derived (using the formulae described above) from the amounts reported in the Returns for those last three years - see Paragraph 3 of Schedule 4 of the 1994 Regulations. However it is acceptable to restate amounts of "claims incurred" for currency movements.

16. Reduce the sum derived to an annual figure by multiplying by 12 and dividing by the number of months in the reference period.

17. Lines 32 to 39: (i) analyse ***Sub-total F*** between "other" and "health insurance based on actuarial principles" ; (ii) in the case of each amount, if appropriate, divide into two portions of 7 million European Currency Units

and the excess over 7 million such units and (iii) apply the appropriate percentages (26, 23, $8^2/_3$ or $7^2/_3$, as the case may be) to the totals arrived at and add together the resultant sums to determine the ***Sub-total G*** - see Paragraphs 5 to 9 of Schedule 4 of the 1994 Regulations. The definition of "health business" and the £/ECU rate are the same as apply in paragraph 10 above.

18. Line 41 :determine the ***Second result*** by multiplying the ***Sub-total G*** by the ratio of the ***Sub-total D*** to the ***Sub-total C***, (or if that fraction is less than one half, by one half; or if the fraction is more than one, by one). See paragraph 14 and 15 of Schedule 3 of the 1994 Regulations.

The Minimum Guarantee Fund

19. The amount of the minimum guarantee fund (line 44 on Form 12) is calculated by reference to the classes of business for which the company is authorised - see Schedule 5 of the 1994 Regulations. In most cases it will be 400,000 European Currency Units translated to sterling.

Supplementary notes

20. Two supplementary notes are specified.

(1) If any of the brought forward amounts differs from the corresponding carried forward amounts in the previous return the reason should be stated - see Paragraph 7 of Schedule 1. [Codes 1101 and 1201].

(2) If any of the amounts included in either Form 11 or 12 differ from the corresponding amounts in Forms 21 to 25 the amount of difference and the reason for it should be stated - see paragraph 10 of Schedule 1. The expected correspondence between amounts in Forms 11 & 12 and in Forms 21 to 25 and the reasons why they might differ are explained in paragraphs 7 and 11 above. [Codes 1102 and 1202]

5.4 Analysis of admissible assets (Form 13)

Different types of Form 13

1. Form 13 is to be prepared by every company for one or more categories of assets - see Regulation 6(5).

- Every company, (other than a mutual without share capital which only carries on long term business), is to prepare a Form 13 for its total other than long term assets.

- Every company which carries on long term business is to prepare a Form 13 for the total long term business assets.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

2. The "long term business assets" are the assets required by section 28 of the Insurance Companies Act 1982 to be maintained in the separate fund for long term business. Where separate assets within the section 28 fund are appropriated for separate long term funds or groups of funds, (other than internal linked funds), additional Forms 13 are to be completed in respect of each such fund or group of funds.

3. An external company, (other than an pure reinsurer), and a United Kingdom deposit company must complete certain additional forms. These are described in instruction 3 to Form 13. For the definitions of "external company", "pure reinsurer" and "United Kingdom deposit company" see Regulation 3.

4. The different Forms 13 are identified by the entry in the "category of assets" box in the heading. A list of codes to be used in the completion of that box is given in the instructions to Form 13.

Completion of the Form

5. Form 13 consists of three parts.

- Lines 11 to 89 provide a "line by line" analysis of the assets valued in accordance with the Regulation 4.
- Lines 91 to 99 provide a reconciliation of the total assets as valued in accordance with Regulation 4 and as valued in accordance with the Companies Act accounts rules.
- Line 100 discloses the value of the debts due from related companies, other than those under contracts of insurance or reinsurance.

6. The classifications used in lines 11 to 89 are based on those used in the balance sheet format in Schedule 9A of the Companies Act 1985, i.e. those which are required to be used in the preparation of the Companies Act accounts. In many cases, however, a single item in the Companies Act format is subdivided. The subdivisions typically reflect distinctions between types of assets found in the asset valuation Regulations, (i.e. Part VIII of the Insurance Companies Regulations 1994).

7. Lines 11 to 89 refer to the descriptions used in the Companies Act accounts balance sheet format solely for the purposes of indicating how assets are to be classified, i.e. to show at which line they are to be included. The Companies Act valuation rules are not to be followed. Assets at lines 11 to 89 are instead to be valued in accordance with Regulation 4 - see instruction 4 to the Form. Refer also to the Insurance Directorate's Prudential Guidance Note 1995/1

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

8. Regulation 4 provides that-

- assets (other than referred to below) are to be valued in accordance with Part VIII of the Insurance Companies Regulations 1994, and

- assets matching property linked benefits are to be valued in accordance with generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies. [See paragraph 12 below.]

9. Lines 11 to 86 show asset values after deductions for excesses over permitted asset exposure limits - see Regulation 57 of the Insurance Companies Regulations 1994. Where such a deduction relates to assets included at more than one line of Form 13 it should be apportioned pro rata. Negative amounts should not be shown at lines 11 to 86. If a deduction is more than the value of the assets to which it relates the 'excess' element of the deduction should be shown at line 87 as also should deductions for excesses over permitted counterparty limits and for excess concentrations over a number of counterparties. See Regulation 57(3) of the Insurance Companies Regulations 1994.

10. Where the value of any asset is denominated in a currency other than sterling it is to be converted into sterling using the year end closing middle rate - see Paragraph 4 of Schedule 1.

11. The amount of any asset in Form 13 should be shown gross of any set-off against any corresponding liability (which liability should be shown on Forms 14 or 15 as appropriate). The only exception to this is where-

- amounts are owed from and to the same person, and

- such netting is permitted under generally accepted accounting principles. [See in particular Financial Reporting Standard 5.]

"Person" refers not only to individuals but also to corporate bodies and unincorporated associations.

12. The above rule usually prevents the set-off of amounts due from and to the same broker/intermediary unless they relate to the same client of the broker. This is because typically such amounts are in law owed from and to not the broker/ intermediary but the client. The broker/intermediary merely acts as a collecting agent.

13. Lines 54 and 55 "Deposits with approved credit institutions and approved financial institutions" should only show relevant deposits subject to a time restriction on withdrawal. Such deposits not subject to such a time restriction should be shown at line 81. In the analysis between lines 54 and 55, "withdrawal subject to a time restriction of one month or less" and

"withdrawal subject to a time restriction of more than one month", the time restriction is to be measured relative to the date of the end of the financial year and not, if different, the date on which the deposits were originally made.

14. Lines 58 and 59 together show the "assets held to match linked liabilities". <u>This expression has the same meaning as in the Companies Act accounts and the items to be classified for inclusion under these lines should be the same as those included under the heading of the same name in the Companies Act accounts.</u> <u>However the valuation of the items to be included is not necessarily the same.</u> The valuation rules in Part VIII of the Insurance Companies Regulations 1994 apply to all items included at these lines other than those exempted by Regulation 45(2) of those Regulations. This only exempts "linked assets" (to the extent they are held in compliance with Section 35A of the Act) <u>which match liabilities</u> in respect of <u>property linked</u> benefits.

15. Insurance Directorate doubts whether either the heading in the Companies Act accounts or at lines 58 and 59 on Form 13 is apt to include assets backing surplus units in internal linked funds. However where such assets are included under this heading in the Companies Act accounts they should also be included at lines 58 and 59 on Form 13. [Nb. as such surplus assets are not exempted by Regulation 45(2), they must be valued in accordance with Part VIII of the Insurance Company Regulations 1994). See also paragraph 15.7.10 below. Insurance Directorate also is aware that companies adopt different treatments in their Companies Act accounts for index-linked liabilities backed by a derivative. Some include the derivative, any margining loan back (as a deduction) and the investments arising from the margining loan in "assets covering linked liabilities". Others only include some of these items under that heading and, perhaps, include the margining loan back as a liability. Insurance Directorate doubts whether all of these treatments necessarily always conform to Generally Accepted Accounting Practice, e.g. showing assets net of the margining loan is not permissible where there is no legal right of set-off. However where a company has adopted a treatment in its Companies Act accounts (and so implicitly come to the view the treatment accords with GAAP) it should adopt the same treatment in the Annual Returns.

16. Line 73 "salvage and subrogation recoveries" should only be used for such recoveries which fall to be classified as "debtors arising from insurance operations". Occasionally some salvage or subrogation recoveries may be classified under other headings in the Companies Act accounts in which case the same heading should be used in Form 13, but a supplementary note [code 1303] is required. See paragraph 16 below. If salvage and subrogation recoveries are shown in the Companies Act account as a deduction from liabilities rather than as asset, the same treatment should be adopted in the Annual Returns. That is line 73 should be left blank and

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

the amount of liabilities shown on Form 14 be shown net of the salvage and subrogation recoveries.

17. Line 80 should include leased tangible assets where such are held under a finance lease and are brought into account as an asset in the Companies Act accounts in accordance with Statement of Standard Accounting Practice 21. [Paragraph 4.62 of PGN 1995/1 which gives contrary advice are hereby rescinded.]

18. Line 83 “Other assets” refers to the balance sheet heading in the Companies Act accounts of “Other Assets - other” (item Fv. in the balance sheet format in Schedule 9A to the Companies Act 1985). It should not be used for any other type of asset and even where used for an asset falling under the Companies Act account Fv. heading it should show only the admissible value, if any.

19 Lines 91 to 99 reconcile the admissible assets to the total assets determined in accordance with the Companies Act accounts rules. For guidance on the distinction between the different types or reconciling item (lines 92 to 95) - see examples 1 to 3 in Annex A to this chapter. This reconciliation must be completed by all companies whether or not they prepare Companies Act accounts. In this reconciliation a particular problem is caused by those assets which the Companies Act permits to be shown either as assets or as a deduction from liabilities. The main classes of such assets are-

- the reinsurers' share of technical provisions, and
- the deferred acquisition costs.

20. For general business these assets, to the extent admissible, should always be shown at lines 60 to 63 and 85 respectively. Further the total shown at line 99 ("assets determined in accordance with shareholder accounts rules") should always include such assets even where they are actually shown as a deduction from liabilities in the Companies Act accounts. For long term business these assets should never be shown at lines 60 to 63 and 85 and never be included in the total at line 99, even where they are shown as an asset in the shareholder accounts. In the category of assets Forms “3” to “5” lines 60 to 63 (reinsurers' share of technical provisions) and line 85 (deferred acquisition costs) should be left blank. [There is no requirement to maintain such assets either within the UK or any EEA states.]

21. Apart from the above the Insurance Directorate does not believe that - for a company which actually prepares Companies Act accounts - there is any other reason why an item should not be classified as an asset or a deduction from liabilities on Form 13 (line 99) and Forms 14/15 in the same way as in the Companies Act accounts. The same applies for the

classification of an item as a liability or a deduction from assets. Different methods of 'grossing up' should be avoided. [Nb. for the treatment of leased assets see paragraph 13A.]

22. The Companies Act accounts rules allow for some investments to be valued either at current value or at amortised cost. A company which does not prepare Companies Act accounts should choose the current value method for disclosure at line 99 on Form 13. Any other company should choose the same method for line 99 on Form 13 as it chooses for its Companies Act accounts.

23. Asset valuation differences arising in respect of shares in, or debts due or to become due from, dependants should be included:

(i) at line 92 in so far as they arise from the application of admissibility limits to the assets of that dependant;

(ii) at line 93 in so far as they arise from a solvency margin deduction made either because that dependant is itself an insurance company or because it (directly or indirectly) has invested in another dependant which is an insurance company; and

(iii) at line 94 in respect of any other causes of differences.

[Line 95 should not be used for differences arising in respect of shares in, or debts due or to become due from, dependants. Such shares or debts are not themselves "assets of type not valued", and this is still true even if the dependants themselves invest in assets of a type not valued.]

Supplementary notes

24. There are nine specified supplementary notes. Each note (other than No.(3) below) should be given separately for long term business and other than long term business, (i.e. separately for the category of assets "1" and "10" Forms 13). Further separate disclosure for category of assets "2" to "5" or "11" onwards is not needed. The notes are coded 1301 to 1307, 1314 & 1315 for other than long term business and 1308 to 1313, 1316 & 1317 for long term business.

(1) The aggregate value of (i) unlisted investments, (ii) certain listed investments, (iii) units or beneficial interests in certain collective investment schemes and (iv) reversionary interests or remainders in property other than land or buildings, together with a description of the assets in question - see instruction 5 to the form; [Codes 1301 and 1308];

(2) the aggregate value of hybrid securities - see instruction 6 to the Form; [Codes 1302 and 1309];

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

(3) the amounts of any non-debtor salvage or subrogation recoveries - see instruction 7 to the Form; [Code 1303];

(4) a statement that amounts have been set off to the extent permitted by generally accepted accounting principles (if this option has been exercised) - see Paragraph 8 of Schedule 1; [Code 1304 and 1310];

(5) the maximum counterparty limit permitted by the company's investment guidelines (and any separate limit for counterparties other than "approved counterparties") together with an account of any breaches during the year of those limits - see Paragraph 11(1) of Schedule 1; [Code 1305 and code 1311];

(6) the amount and nature of the exposure at the year end to large counterparties (i.e. greater than 5% of the general business or long term business amounts) - see Paragraph 11(2) of Schedule 1; [Code 1306 and 1312];

(7) The aggregate value of certain fully secured rights - see paragraph 11(3) of Schedule 1; [code 1307 and 1313].

(8) The amount of any tangible lease assets included at line 80 - not required by the Regulations but disclosure requested by the Insurance Directorate; [code 1314 and 1316] ; and

(9) Particulars of any 'Other assets' included at line 83 - see the face of the form; [code 1315 and 1317].

Note 1

25. A single figure with a simple description will suffice. For example: ***The company held £xm in unlisted securities and £ym in unregulated collective investment schemes, almost all of which was of the latter type.*** The assets covered by this note are those which count towards the 10% permitted asset exposure limit at paragraph 12 of Part II of Schedule 12 of the Insurance Companies Regulations 1994. For detailed definitions of the type of assets to be included, see Part VIII of those Regulations.

Note 2

26. For a definition of hybrid securities see Schedule 12 of the Insurance Companies Regulations 1994.

Note 3

27. A single aggregate figure is sufficient disclosure. This should only include salvage and subrogation rights (other than shown at line 73) brought

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

into account under the valuation rule in Regulation 48(9) of the Insurance Companies Regulations 1994. The exercise of salvage rights which have resulted in the company acquiring an asset which is admissible in its own right, (e.g. land and buildings received by a DMI insurer), need not be included.

Note 4

28. The amounts set off do not need to be disclosed in this note.

Note 5

29. The precise content of this "account" of any breach is not specified in the Regulations. However the Insurance Directorate expects it typically at least to include an estimate of the amount of the excess and the reasons why it was permitted to arise. [The requirement to give an account of any breaches during the year should not be read as implying that real-time monitoring of the exposures is necessary. Rather, the frequency of the monitoring should be appropriate to the make-up of the investment portfolio.]

30. For the purposes of making the disclosures required by supplementary notes 1305, 1306, 1311 and 1312 "counterparty" has the same meaning as in paragraph 1 of Schedule 12 to the Insurance Companies Regulations 1994. Also the amount of any counterparty exposure should be calculated using the rules laid down in paragraphs 13 to 15 of the Schedule, except that asset values should not be limited to the amounts of any permitted asset limits. The amount of any counterparty exposure should be stated before deduction of any excess counterparty exposure or excess concentration with a number of counterparties.

31. Assets excluded from the scope of the counterparty exposure rules may also be disregarded for the purposes of these supplementary notes disclosure. This excludes -

linked assets held to match property linked liabilities; and

assets of the type listed in paragraph (5) of Regulation 57. [For a list of such asset types see paragraph 5.25 of the Prudential Guidance Note 1995/1 "Guidance Notes on the Valuation of Assets Regulations".]

Note 6

32. The limit of 5% of the long term business amount should be used for counterparty exposures which arise from the long term business assets and such other than long term business assets as are allocated toward the long term business required minimum margin (see line 22 of Form 9). This does not apply to a composite insurer which must use the general business

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

amount for such assets. The limit of 5% of the general business amount should be used for all other counterparty exposures.

33. Paragraphs 21a. and 21b. above also apply to this note.

Note 7

34. This disclosure covers those secured assets which are exempted from counting towards the appropriate permitted counterparty exposure limit by virtue of paragraph 14 of Part I of Schedule 12 of the Insurance Companies Regulations 1994. (NB By no means all secured assets are so exempted.) Secured assets which are exempted from the limit by virtue of some other provision, (e.g. Regulation 47A in relation to stock-lending collateral), should not be included. A single aggregate figure is sufficient disclosure.

Note 8

35. cf. paragraph 13A above.

Note 9

36. cf. paragraph 13B above.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

5.5 Long term business liabilities and margins (Form 14)

Completion of the Form

1. Form 14 should be completed by every company which carries on long term business in respect of:

(i) its total long term business liabilities and margins; and
(ii) the long term business liabilities and margins for each separate long term business fund or group of funds for which separate assets have been appropriated;

- see Regulation 6(6) as amended.

2. The effect of item (ii) above is that a separate Form 14 is required for each fund or group of funds whenever a separate Form 13 is required for that fund or group of funds - see Paragraph 5.4.2 above. The "category of assets" box in the header of Form 14 is to be completed with the same codes as are used for the corresponding box in the header of Form 13, except that there are no Forms 14 required which correspond to the Form 13 category of assets, "1" to "9".

3. Form 14 shows the liabilities and margins in respect of long term business. It is helpful to consider these under three separate headings:

- the liabilities, (lines 11, 12 and 15 to 49);
- the "margins", (lines 13 and 51); and
- the footnote to the Form, (lines 61 to 63).

Liabilities

4. There are three basic types of liability which fall to be disclosed:

- long term business liabilities not yet fallen due, (lines 11, 12 and 23);
- 'accounting' liabilities including long term business liabilities which had fallen due, (lines 15 to 22 and 31 to 39); and
- the provision for adverse changes, (line 41)

Different rules apply for determining the amount of each of these types of liability. Long term business liabilities (other than liabilities which had fallen due for payment before the valuation date) are determined on actuarial principles and the 'accounting' liabilities are determined using generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies - see Part

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

IX of the Insurance Companies Regulations 1994. In effect 'accounting' liabilities are to be determined for inclusion in Form 14, (lines 15 to 22 and 31 to 39), in the same way as for Companies Act accounts. However if the Companies Act accounts are signed off earlier or later than the Annual Returns differences may still arise despite the application of the same rules. This might be due to, say, the occurrence of an adjusting post-balance sheet event in the intervening period. It is important to identify whether a liability falls to be determined under the 'actuarial' or 'accounting' rules as they may produce very different results.

5. Long term business liabilities are liabilities arising under or in connection with contracts for long term business, including liabilities arising from deposit back arrangements. Liabilities from deposit back arrangements (line 23) should be determined on actuarial principles in accordance with Regulations 64 to 75 of Part IX of the Insurance Companies Regulations 1994. They include the amount of the deposit (as disclosed under Paragraph 12(2)(f) in the Abstract of Valuation Report prepared by the Appointed Actuary -Schedule 4) together with any additional provision which the Appointed Actuary considers to be required in accordance with actuarial principles. Mathematical reserves are defined so as to include all long term liabilities (other than those fallen due) with the exception of liabilities arising from deposit back arrangements. They are shown, other than for cash bonuses, at line 11 and, for cash bonuses, at line 12. The amounts shown are taken from the appointed actuary's valuation as recorded in Form 58 - see instructions 2 and 3 to Form 14 - and include any increases resulting from the allocation of bonuses to policyholders as a result of the valuation. Subject to one exception, the 'accounting liabilities' (lines 15 to 22 and 31 to 39) should not include any amounts in respect of technical provisions and the fund for future appropriations which appear in Companies Act accounts as these are already, to the extent necessary, taken into account in setting the mathematical reserves. The exception is claims outstanding which had fallen due for payment at or prior to the financial year end - see lines 15 to 17 on Form 14.

6. The Insurance Directorate interprets "liabilities arising under or in connection with contracts for long term business" to include liabilities arising under reinsurances of those contracts for long term business. This includes liabilities under financial reinsurances and by extension even liabilities under non-reinsurance financing arrangements provided the liability under the financing arrangement is closely linked to the performance of contracts for long term business. Therefore liabilities under financial reinsurances and such analogous financing arrangements - subject to the exception of liabilities which had fallen due - are to be determined under actuarial principles. This is important as the crystallisation of such liabilities is often - although not invariably - linked to the emergence of future profits. Future profits are not in themselves an asset admissible to match liabilities and may not be included on Form 13, (lines 11 to 89). However provided the reinsurance or financing liability is repayable - as a

matter of legal form and economic substance - only upon the emergence of the future profit, actuarial principles may sometimes allow the future profit to be taken into account in determining the amount of the liability. 'Accounting' rules do not permit this treatment. They prohibit the offset of an asset against a liability except where they are amounts due to and from the same person and also impose other conditions - see Financial Reporting Standard 5.

7. The provision for adverse changes is an extra provision in addition to that which would be required under either actuarial or accounting principles. It arises when an investment (or transaction associated with an investment) will, or may, give rise to a liability in future and the company does not have the appropriate assets to cover that liability. (Most commonly, but not exclusively, this issue arises in respect of derivative contracts.) The provision is to be determined in accordance with Regulation 61 of the Insurance Companies Regulations 1994.

Margins

8. The "margins" are the amounts by which the "net admissible asset value" of the long term business fund(s) exceed the mathematical reserves and cash bonuses for that fund. The "margins" are to be calculated in two stages as follows.

(1)First, the amount of the long term business fund(s) as per Form 40 is compared with the mathematical reserves including cash bonuses (lines 11 and 12 on Form 14). The amounts of any excess/(deficit) is to be shown at line 13.

(2)Secondly, the "net admissible asset" value of the long term fund(s) - being the assets as per line 89 on Form 13 less the liabilities as per line 49 on Form 14 - is to be compared with the value of the long term fund as per Form 40. The amount of any excess is to be shown at line 51. An excess may only arise in those cases where the company has chosen to report its long term business funds on Form 40 at a value other than the value of net admissible asset, e.g. using book costs for asset values. It is not permissible to report the fund at a value on Form 40 which is higher than the value of net admissible assets. Therefore a deficit should never need to be shown at line 51.

The footnotes to the Form

9. Lines 61 and 62 to the Form show respectively the amounts included in the total liabilities and margins which is attributable to-

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

- liabilities to related companies, other than those under contracts of insurance; and
- liabilities in respect of property linked benefits.

10. The scope (but not the value) of the line 62 disclosure corresponds to technical provisions in the shareholder accounts (i.e. headings C and D in the balance sheet format in Schedule 9A to the Companies Act 1985), but only in so far as they relate to property linked benefits. Line 62 shows the amounts of those liability items shown at heading C and D in the Companies Act accounts, but evaluates them using the Form 14 valuation rules and not (where different) the Companies Act rules. The Form 14 valuation rules are discussed at paragraphs 4 to 7 above. [Nb. The effect of this guidance (which differs materially from that given previously) is that line 62 shows the amount of the 'property linked liabilities' which are excluded from the calculation of the long term business amount for the purpose of applying counterparty limits - cf. Paragraph 2 of Part I of Schedule 12 to the Insurance Companies Regulations 1994.]

11. Line 63 requires a company to disclose whether any part of the amount shown at line 51 represents an amount taken into account by the actuary to support the mathematical reserves (as shown in Form 58) in giving his certificate. This issue arises because the assets shown on Form 9, which are sourced from Form 13, are shown at their admissible value even where the long term business fund is maintained and brought into account in the Schedule 4 report on the basis of lower book values. In such circumstances the mathematical reserves shown in Form 58 may not always constitute an appropriate assessment of the liabilities for the purposes of comparison with the assets stated at admissible value. For this reason in certifying the long term liabilities as required under Part II of Schedule 6, the actuary may find it necessary in some circumstances to make an addition to the mathematical reserves on the Schedule 4 basis shown at line 11 of Form 14.

Supplementary notes

12. Two supplementary notes are specified.

(1) The methods and assumptions used to determine the amount of any provision for adverse changes (as shown at line 41 of the Form), or if there is no such provision the methods and assumptions used to determine that no provision is required, should be stated - see Paragraph 12 of Schedule 1. [Code 1401]

(2) Specified details should be stated of (a) any charges over assets, (b) potential capital gains tax liability, (c) contingent liabilities, (d) guarantees, indemnities or other contractual commitments effected other than in the ordinary course of insurance business and in respect of

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

related companies, and (e) any other fundamental uncertainty - see Paragraph 13(1) of Schedule 1. [Code 1402]. This note is to be given in respect of long term business assets and liabilities. A similar note (code 1502) is to be given in respect of other than long term business assets and liabilities. The guidance given below for that note (see paragraphs 5.6.16 to 5.6.30) also applies here.

5.6 Liabilities - other than long term business (Form 15)

Completion of the Form

1. Form 15 should be completed by all companies except a company not trading for profit (i.e. a mutual) carrying on only long term business - see Regulation 6(7).

2. Form 15 shows all liabilities of the insurance company other than long term business liabilities which are shown instead on Form 14.

3. Form 15 consists of three parts.

- Lines 11 to 59 provide a "line by line" analysis of the liabilities (other than share capital and reserves and exclusively long term business items) corresponding to the balance sheet format in Schedule 9A of the Companies Act 1985, i.e. the format required to be used in the preparation of the Companies Act accounts. In a few cases, however, a single item in that format is subdivided in Form 15.

- Lines 61 to 63 list three further items of liability - (i) the provision for adverse changes, (ii) cumulative preference share capital and (iii) subordinated loan capital.

- Line 71 discloses the value (as included in the above items) of the liabilities to related companies, other than those under contracts of insurance or reinsurance.

Determination of liabilities

Lines 11 to 59

4. The liabilities at lines 11 to 59 should be valued in accordance with Part IX of the Insurance Companies Regulations 1994, the main provision of which is Regulation 60 which provides that-

> *"(1) ... the amount of liabilities of an insurance company shall be determined in accordance with generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies."*

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

> *"(2) In determining under paragraph (1) above the amount of liabilities of an insurance company, all contingent and prospective liabilities shall be taken into account [including all liabilities in respect of cumulative preference share capital but excluding other liabilities in respect of share capital]."*

5. Paragraph (2) above does not require that the "amount" of every prospective and contingent liability be set equal to the full extent of its nominal value regardless of the remoteness of the contingency it represents. The requirement is merely that all prospective and contingent liabilities "be taken into account", i.e. considered. The amount of every liability whether present, prospective or contingent should be set as required by paragraph (1) in accordance with generally accepted accounting concepts etc.

6. The paragraph (1) requirement that generally accepted accounting concepts etc. be used ***in effect means that the liabilities at lines 11 to 59 are to be valued for the Returns in the same way as for the Companies Act accounts***. For technical provisions this is indeed explicitly stated by Regulation 62 of the Insurance Companies Regulations 1994 which refers to the rules in Section D [of Chapter II] of Schedule 9A of the Companies Act 1985.

7. However the above does not mean that the value shown for such liabilities in the Annual Return will always necessarily be the same as that shown in the Companies Act accounts. Exceptionally differences may occur if the Annual Return and Companies Act accounts are either-

- drawn up to different balance sheet dates, or
- even if drawn up to the same balance sheet date signed off at different dates.

8. In the latter case it is possible that a material adjusting post-balance sheet event may have occurred between the date of the sign off of the Companies Act accounts and the date of the sign off of the Annual Return (or vice versa).

9. The technical provision for "claims outstanding" (line 12) should be shown before or after reduction for anticipated salvage and subrogation recoveries according to the treatment adopted in preparing Form 13. See paragraph 5.4.16 above. [cf. the possibly different treatment in the technical account, Forms 20 to 39 - see paragraph 8.2.6 below]

<u>Lines 61 to 63</u>

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

10. The provision for adverse changes (line 61) is an extra provision which arises when an investment (or transaction associated with an investment) will, or may, give rise to a liability in future and the company does not have the appropriate assets to cover that liability. (Most commonly, but not exclusively, this issue arises in respect of derivative contracts.) The provision is in addition to any liability which would be required to be provided in accordance with generally accepted accounting practice. It is required to be determined in accordance with Regulation 61 of the Insurance Companies Regulations 1994.

11. Share capital is not normally to be considered a liability for the purposes of completing the Annual Return - see Regulation 60(2) of the Insurance Companies Regulations 1994 quoted above. The only exception (see Regulation 23(3) to the same Regulations) is cumulative preference share capital, but this exception is in turn subject to a partial exception as explained below.

12. In determining whether an insurance company has assets in excess of its liabilities the full nominal value (plus any premium on redemption if redeemable) of all cumulative preference share capital is to be counted as a liability. If the assets exceed liabilities then part (sometimes all) of the liability from the preference share capital may be disregarded in determining whether the net assets exceed the required margin of solvency.

13. In Form 15 (line 62) the full value of cumulative preference share capital is to be shown, i.e. the value to be used in determining whether the company has assets in excess of liabilities. This full value then forms part of the total liabilities which are taken from Form 15 to Form 10 where they are compared with the total assets taken from Form 13. If assets exceed liabilities the part of the liability for preference share capital which may be disregarded in determining whether the net assets exceed the required margin of solvency, is added back as an adjustment to net assets on Form 10. No adjustment is to be made on Form 15. See paragraph 5.2.6 above on Form 10 above for further guidance.

14. Subordinated loan capital is to be valued according to the basic rule in Regulation 60 quoted above, i.e. in accordance with generally accepted accounting concepts etc.. Where a company has been granted an order under section 68 of the Insurance Companies Act 1982 permitting it to disregard all or part of the liability for its subordinated loan capital in determining whether its net assets exceed its required minimum margin, the adjustment for the amount to be disregarded is to be made solely on Form 10 and not on Form 15. (The reason for this treatment of the add-back is the same as that described above for the add-back in respect of preference share capital.)

Supplementary notes

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

15. Three supplementary notes are specified.

(1) The methods and assumptions used to determine the amount of any provision for adverse changes (as shown at line 51 of the Form), or if there is no such provision the methods and assumptions used to determine that no provision is required, should be stated - see Paragraph 12 of Schedule 1. [Code 1501]

(2) Specified details should be stated of (a) any charges over assets, (b) potential capital gains tax liability, (c) contingent liabilities, (d) guarantees, indemnities or other contractual commitments, effected other than in the ordinary course of insurance business, in respect of related companies, and (e) any other fundamental uncertainty - see Paragraph 13(1) of Schedule 1. Guidance is given below on each of the items (a) to (e) to be included in this note and in the corresponding note (code 1403) to Form 14, (see item (4) in paragraph 5.5.14 above). [Code 1502]

(3) The aggregate amount of any accrued dividend on any cumulative preference share capital issued by the company should be stated - see instruction 2 to Form 15. [Code 1503]

<u>Guidance on note 1502</u>

16. Where for any of the items (a) to (e) there is no charge, potential capital gains tax liability, contingent liability, guarantee etc., or fundamental uncertainty to report
this should be stated.

<u>Item (a)</u>

17. The details to be disclosed of any charge over assets are-

- the nature of the charge, including a brief description of the terms which are relevant to securing the prior claim of any person to assets which are subject to the charge;
- for each line in Form 13, the amount included in respect of assets which are subject to the charge; and
- for each line in Form 14 or 15, the amount included in respect of liabilities which are secured by the charge.

18. "Charge" is given a wide definition - see Paragraph 13(5) of Schedule 1. It includes not merely formal charges over assets which are registered under the Companies Act 1985 but also "any arrangement whatsoever, whether contractual or otherwise, which operates to secure the prior claim

of any person over the general creditors to any assets on a winding up of the company". It thus amongst other items includes-

- arrangements whereby assets of the insurance company are placed in trust for the prior benefit of only some creditors;
- assets held as collateral by creditors or by issuers of letters of credit;
- fixed and floating charges, and
- equivalent arrangements under the laws of overseas countries.

19. It also in principle applies to set offs, i.e. where a person owed amounts by the insurance company may in a winding up set off amounts owed by it to the insurance company. However in practice where the insurance company has accounted for set offs in accordance with generally accepted accounting principles the assets shown in Form 13 will already be net of such set offs and so no disclosure under this note will be needed. The amounts of preferential creditors (e.g. PAYE) need not be disclosed.

20. A charge should be disclosed even where it only serves to secure the prior claim of a contingent or potential creditor which has not resulted in any provision for liability in either Forms 14 or 15.

21. The sub-paragraph requiring the note refers to any charge, thus in principle requiring separate disclosure of each arrangement which falls within the definition of "charge". However where clarity or brevity require, it is acceptable to disclose in aggregate charges which arise from the same related series of transactions or charges which are of the same "nature" and have substantially the same "relevant terms".

22. The disclosure of charges is subject to a de minimis exemption. One or more charges need not to be disclosed, provided that the aggregate value (as show on Form 13) of all the assets subject to the non-disclosed charges does not exceed 2 1/2 per cent of the general business or long term business amount as appropriate.

Item (b)

23. The total potential liability should be calculated on the basis of a hypothetical disposal of all assets immediately after the year end. It should include liability to foreign taxes on capital gains.

Item (c)

24. Statement of Standard Accounting Practice 18 (SSAP 18) defines a "contingency" as "a condition which exists at the balance sheet date where the outcome will be confirmed only on the occurrence or non-occurrence of

one or more uncertain future events". A contingent liability is a loss dependent on a contingency. SSAP 18 distinguishes between contingent liabilities which are probable or remote. A remote contingent liability need not be disclosed in this note.

25. "Inward" in the expression "inward contracts of insurance and reinsurance" is intended to exclude from the exemption contracts of reinsurance where the reporting insurance company is the reinsured.

26. The disclosure of contingent liabilities is subject to a de minimis exemption. One or more contingent liabilities need not be disclosed provided that the aggregate value of the non-disclosed contingent liabilities does not exceed 2 1/2 per cent of the general business or long term business amount as appropriate.

<u>Item (d)</u>

27. "Related company" is defined in Regulation 44 of the Insurance Companies Regulations as-

- a dependant of the insurance company,
- a company of which the insurance company is a dependant, or
- a dependant of a company of which the insurance company is a dependant

where "dependant" means "subsidiary undertaking" as defined in the Companies Act 1985.

28. In the Insurance Directorate's view a guarantee, indemnity or other contractual commitment should not be considered as "given other than in the ordinary course of [an insurance company's] business" where guarantees, indemnities or other contractual commitments on substantially the same terms and conditions are not regularly given to non-related entities in similar circumstances. An example of a contractual commitment which need not to be disclosed might be where a motor insurer insures the motor car fleet of a related company using the same underwriting principles as it uses for its other fleet business.

29. The sub-paragraph requiring the note refers to (i) "maximum liability ... specified in such guarantee, indemnity or contractual commitment", (ii) "amount of provision" and (iii) "amount reported under sub-paragraph (c)", (i.e. reported as a contingent liability). The distinction between these three items may be illustrated by an example.

An insurance company guarantees the bank overdraft of its two fellow subsidiaries up to an aggregate of £100,000. At the year end-

fellow subsidiary A is insolvent and has an overdraft of £5000, and

fellow subsidiary B is believed (on the balance of probabilities) to be solvent and has an overdraft of £10,000.
A provision of £5000 (in respect of A) would be made in Form 15 and a contingent liability of £10,000 (in respect of B) would be included in the disclosure under sub-paragraph (c).

The disclosure under sub-paragraph (d) would then be-

(i) maximum liability specified in the guarantee = £100,000,

(ii) provision = £5,000 and

(iii) contingent liability = £10,000

together, of course, with a brief description of the terms and circumstances of the guarantee including the identity of the person to whom the guarantee is given and of the persons in respect of whom it was given and of the relationship with the latter (and, if applicable, with the former).

<u>Item (e)</u>

30. This sub-paragraph is intended to cause to be disclosed the circumstances of any uncertainty which is of a fundamental nature. Note that this sub-paragraph, unlike sub-paragraph (c), does <u>not</u> exempt uncertainties arising from inward contracts of insurance or reinsurance.

<u>5.7 Profit and loss account (non-technical account) (Form 16)</u>

Completion of the form

1. Form 16 should be completed by all companies - see Regulation 7. However for a mutual company carrying on only long term business the form usually will include no entries. [Where this is the case for both the current and previous financial year the blank form may be omitted provided the supplementary note, [Code 1600], referred to paragraph 4.6.6 above is included in the Annual Return.]

2. The headings used on Form 16 are based on those used in the "Profit and Loss Account - Non Technical Account" format in Schedule 9A of the Companies Act 1985 (i.e. the format to be used in preparing Companies Act accounts) and, except where referenced to other Forms, the amounts included under those headings should be determined using the same rules as apply for the Companies Act accounts.

3. One such exception occurs at line 13 (Transfer from the long term business revenue account) which is referenced to Form 40. As a result, for long term business Form 16 presents a profit for the financial year determined on the "statutory basis" and not the "modified statutory basis".

4. Unrealised gains and losses on investments (other than for investments in the long term fund) should be included in their entirety at lines 15 and 18, even if different accounting treatment is adopted in the Companies Act accounts. [Unrealised gains and losses should be measured by reference to the value included for the investment at line 99 on Form 13, i.e. the Companies Act accounts value. A company which includes investments at amortised cost at line 99 on Form 13 (see paragraph 5.4.22 above) should show the unrealised gain and loss relative to that amortised cost not to current market value.]

Supplementary notes

5. Four supplementary notes are specified.

(1) The bases of conversion adopted in respect of foreign currency for income and expenditure should be stated - see paragraph 5(2) of the Schedule 1. [Code 1601]

(2) In addition to the above the Insurance Directorate requests that where any brought forward amounts on any Form are restated due to currency reconversion this fact be briefly stated in a supplementary note to Form 16. A simple statement of this fact is all that is needed, e.g. "Some of the brought forward amounts shown in the Forms [xx to xx] have been restated from the corresponding carried forward amounts included in the previous years' return due to the reconversion of foreign currency amounts at a different rate of exchange." No further details need be given. This note is requested to facilitate the Insurance Directorate's computerised validation of the Annual Return. [Code 1602]

(3) Particulars of any amounts included at lines 21 on Forms 16 should be stated - see the face of Form 16. [Code 1603]

(4) Particulars of any amounts included at lines 41 on Forms 16 should be stated - see the face of Form 16. [Code 1604]

5.8 Analysis of derivative contracts (Form 17)

1. A Form 17 should be submitted for each category of assets for which a Form 13 is submitted (other than categories of assets "2" to "9") - see Regulation 6(5) and instruction 1 to the Form.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

2. The paragraphs below consider the following points:

- which derivatives need to be entered on the form
- what needs to be recorded in respect of the amounts of margin paid or received
- what reconciliation there is to other Forms
- what approach is needed for instruments which are required, under the Asset Valuation Rules, to be treated as derivatives even though they may have some other legal form (i.e. quasi-derivatives or "contracts or assets having the effect of a derivative contract").

3. Derivatives used for the purpose of matching index linked or property linked liabilities are not to be recorded on Form 17. (These are covered on Forms 55 or 56.) However, to the extent that the company holds derivative contracts in connection with linked contracts but additional to the amounts necessary to match linked liabilities, these should be recorded on Form 17. For example, if a company has transacted a tranche of derivatives to match linked liabilities in the expectation of selling a particular volume of linked business but where the actual volume fell short of expectations, the excess would be recorded on Form 17. Similarly, if a company retains excess derivatives no longer necessary for matching purposes (for example, as a result of policy surrenders), these would also be recorded on Form 17.

4. Quasi-derivatives are not recorded on the face of Form 17 but are required to be shown as a supplementary note [code 1702] - see paragraphs 25 and 26 below.

5. Where a provision for adverse changes is required in accordance with Regulation 61, no adjustment is to be made on Form 17 to the value of the derivative which gave rise to the provision. The provision itself is to be shown on Form 14 or 15, as appropriate.

Instructions to the Form

6. *Instruction* 1: A Form 17 should be completed for the "other than long term assets" and the "long term assets" separately. Each long term business fund separately accounted for by a separate Form 13 should also have a Form 17 completed - see instruction 1 to the Form. A sub fund whose accounting details are only given as part of Schedule 4 should be covered by a commentary in that Schedule.

7. *Instruction* 2: The same codes should be used for the "category of assets" header box on Form 17 as on the corresponding Form 13.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

8. *Instruction* 3: Analysis is by the principal underlying asset. When there is a mixture of asset types the derivative should be split if it is sensible to do so, if not then it should be categorised under the most significant asset type.

9. *Instruction* 4: Derivatives are to be assigned to the "assets" and "liabilities" columns according to whether the gross position is an asset or a liability and irrespective of the net position after margin.

10. *Instruction* 5: The asset values to be shown are gross of any variation margins received (or, unusually, paid) - i.e. assuming such margin has been reversed. The asset values are to be as determined under the Asset Valuation Rules, i.e. before the further liability of Regulation 61 (which of course can apply to an uncovered asset). Form 17 does not therefore deal with economic exposure to various asset classes (as for example, in a "LIFFE-style" presentation). This issue is dealt with in the supplementary information provided in accordance with Regulation 23.

11. *Instruction* 6: Netting of derivative positions may be permissible for the purpose of completing Form 17, provided it would be permissible under generally accepted accounting practice. However, there are additional pre-conditions to netting. Within a Form 17, derivatives which partly or wholly offset one another (for example, a bought future and a sold future on the same index) cannot be netted to one net asset or liability figure unless there is a legal right of set off with the counterparty concerned, or between the counterparties concerned. Where the derivatives are with the same counterparty and legal set off applies, <u>but</u> the derivatives are not symmetrical, i.e. they do not cancel or part cancel out a given position, then gross figures should be shown. Where a legal right of set off applies but the derivatives have to be reported on separate Forms 17, they should be shown gross in each form.

12. *Instruction* 7: The aggregate amount of variation margin then to be offset is to be shown at line 41.

13. *Instruction* 8: The assets shown at line 49, column 1 should be included at line 44 in Form 13. Where line 49, column 1 also includes deductions for applicable margins this should be included either in Forms 14 or 15 as liabilities or in Form 13 as deductions from assets according to the same accounting treatment as is adopted in the Companies Act accounts, (or if there are no such accounts according to Generally Accepted Accounting Practice). Other general buffer or good faith margins paid out (initial margins) are expected to appear on Form 13, probably on line 78.

14. *Instruction* 9: Similarly the liabilities shown at line 49, column 2 should be in Form 14 (if long term) or Form 15 (if other than long term) at lines 38 and 49 respectively. Also similarly deductions for applicable margins which are included at line 49, column 2 should be included in Form

13, or 14/15 according to the same accounting treatment as adopted in the Companies Act accounts (or if there are no such accounts according to Generally Accepted Accounting Practice)

15. *Instruction* 10: No entry is to be made on Form 17 in respect of initial margin paid or received.

Further points on margins

16. The variation margin received for assets acts as an offset to the value of the derivative that flows through to Form 13, and such margin then needs to be categorised itself in Form 13, probably under deposits if the margin payment is deposited with the insurer's bankers. Initial margins should however appear in Form 13, normally line 78, i.e. unsecured amounts due to the insurer, unless the insurer has more unusually received initial margin and so the amount is a creditor. The Regulations now define both variation and initial margin. It should be noted that the definition of variation margin may be wider than a market understanding as it includes all collateral arrangements. It is this wider definition which should be followed in completion of Form 17.

17. In the unusual situation of a variation margin payment to the broker on a asset then such an amount should appear on Form 17 as a positive entry at line 41, and thus an appropriate increase to the asset.

18. Liabilities follow the normal accounting rules of Regulation 60. Again the inclusion of all variation margins is necessary, even if this makes the resultant entry on Forms 14 of 15 as appropriate become negative. The offset of margins paid against the amount of the liability means no further entries are needed, as the net entry at line 47 of Forms 14 or 15 encapsulates the offset of the derivative liability and the sums put up in surety for such liability. In the unusual case of amounts received from the broker on a liability such amount should appear in Form 17 as a positive entry at line 41, thus an appropriate increase to the liability.

19. Asset and liability margin payments must be accounted for separately. Margin is that actually received as cash or securities from a broker or paid to a broker. Amounts due to be paid by either party, or amounts held in an account at the broker where the company has no legal rights over such account, are not transferred margin and should not be presented as such. Form 17 must demonstrate the margins actually received into the possession of the insurer or released by the insurer. Thus, at any reporting date, even daily margined contracts may be a day behind as the margin process is not instantaneous.

20. Margin received or paid to different counterparties cannot be offset under any circumstances, even where the counterparties are connected companies of one another. Similarly, margin paid to and received from a

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

single counterparty cannot be offset, where no legal right of offset applies. Thus one over margined asset cannot have its deduction for margin on Form 17 reduced to allow the reduction of a Form 17 margin on an over margined liability unless legal rights of offset apply.

21. Margin must mean the amounts transferred back and forth under part of the terms of the derivative. Only amounts closely connected to the derivative under a formal agreement that has legal rights of offset between the margin payment and the settlement of the derivative should be included, and not other deposits from or with the counterparty.

22. Where margin payment is by pledges of assets, such as short gilts, then the same approach should be followed. Unconditional granting of title to a broker will mean the asset can no longer be recorded as that of the insurer, and has been replaced by a debt due from the broker.

Supplementary notes

23. Two supplementary notes are specified in paragraphs 16 and 17 of Schedule 1, covering treatment of variation margin [code 1701] and use of quasi-derivatives [code 1702].

<u>Note 1</u>

24. This note (see paragraph 16 of Schedule 1) needs 3 separate items, as follows:

- the aggregate amount of an "excess" variation margin which has been received by the company, the excess being due to market movements which have subsequently been partly or wholly reversed.

- how variation margin received is distributed amongst the different lines of Form 13.

- the extent to which the amount recorded in any line of Form 13 has been reduced to reflect the liability to repay any excess referred to above.

<u>Note 2</u>

25. A further supplementary note is prescribed covering quasi-derivatives - see paragraph 17 of Schedule 1. These are exempt from special disclosure provided that, in aggregate, they are below the "materiality threshold" set out in paragraph 17. Separate thresholds apply for assets and liabilities and are to be calculated prior to any adjustment for variation margin.

26. For quasi-derivatives which are assets, the test at paragraph 17 of Schedule 1 is whether the aggregate value of all such quasi derivatives

exceeds 2½% of the total Form 13 asset value (i.e. for the long term business fund or a long term business sub fund the non linked, property linked and index linked assets totalled at line 89 of the particular Form 13). No attempt should be made to value the "derivative component" of a quasi-derivative separately and apply the materiality test to that component; the test should be applied to the value of the instrument as a single entity.

27. For quasi derivatives that are liabilities the test of disclosure is in some ways more demanding, being whether the aggregate liability of all such quasi derivatives would exceed 2.5% of the non insurance liabilities of Forms 15 or the relevant Form 14 as appropriate. Any provision under Regulation 61 would count towards this aggregate liability, even where it arises from a quasi derivative that is currently an asset.

28. If the holdings are sufficiently significant to trigger disclosure, then the (non-zero) amounts contributed by quasi-derivatives to each line in Forms 13, 14 and 15 are to be stated. In addition, the information specified under Note 1 is also required in respect of such contracts.

29. Leaving aside quasi-derivatives used for the purpose of matching linked liabilities, it would be a little unusual for quasi-derivatives to be subject to margining arrangements. In any event, the rules for the valuation of assets and determination of liabilities in the Insurance Companies Regulations 1994 make no provision for valuation of *quasi-derivatives* net of value of margin (or collateral) and the appropriate values for the purposes of this disclosure are therefore the gross asset or liability values. Any margins paid or received should appear in Forms 13, 14 or 15 as debtor or creditor items.

30. An example of the disclosure required when the materiality test is passed is as follows:

> *"A FTSE-linked bond with embedded option to achieve a guaranteed maturity value of £10m was included in line 48 of Form 13. The current value of the bond is £11m. The bond is not margined and was held for the full year."*

Examples

31. A number of illustrative examples of completion of Form 17 are given in annex B to this chapter.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

ANNEX A TO CHAPTER FIVE

Examples of the completion of the reconciliation's at the foot of Forms 10 and 13.

5.A.1 Example one: the reconciliation on Form 13

In this example a company shows the following assets in its Companies Act accounts.

Assets	1996	1995
Shares in UK insurance subsidiary	1000	1000
Cash at bank	2000	1500
Gold	100	-
	3100	2500

In preparing Form 13 of its Annual return the company must revalue its assets using the valuation rules in the Insurance Companies Regulations 1994. Let us say the revised values are as follows.

Balance sheet: Assets	1996	1995
Investment in insurance dependant		
Basic "look through" value	900	800
Disallowed under admissibility rules	(100)	(100)
Solvency margin deduction	(200)	(200)
	600	500
Cash at bank		
Valuation	2000	1500
Disallowed under admissibility rules	(200)	(100)
	1800	1400
Gold	nil	nil

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Form 13 should be prepared with the following entries.

Form 13		1996	1995
UK insurance dependants - shares	21	600	500
Cash at bank - deposits	82	1800	1400
Grand total of admissible assets	89	2400	1900

Form 13 (continued) *Reconciliation*			
Total - as per line 89 above	91	2400	1900
Total assets in excess of admissibility limits(1)	92	300	200
Solvency margin deduction(2)	93	200	200
Other differences(4)	94	100	200
Assets of a type not valued above(3)	95	100	-
Total assets determined in accordance with the shareholder accounts rules	99	3100	2500

Explanations of the above

(1) 300 = 100 + 200; being the amounts shown above as disallowable under the admissibility limits respectively for the investment in dependant (100) and the cash at bank (200).

(2) This the solvency margin deduction for the insurance dependant.

(3) This is the value of the gold as per the Companies Act accounts. There is no valuation rule, and hence nil value, for gold under the HM Treasury rules.

(4) This the total of all other valuation differences not dealt with at lines 92, 93 or 95. In this examples there is only one such difference: that is the difference between the Companies Act accounts value of the insurance dependant (£1000) and the basic "look through" value (£900).

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

5.A.2 Example two: the reconciliation on Form 10 for a general business company

In this example a company has the same assets as in example one above and shows the following amounts for liabilities in its Companies Act accounts.

Balance sheet: liabilities	1996	1995
Share capital	1000	1000
Profit and loss account	1000	700
	2000	1700
Technical provisions	1000	700
Creditors	100	100
	3100	2500

The company's Form 13 is as in example one above and its Form 10 as follows.

Form 10(1)		1996	1995
Other than Ltb - admissible assets(2)	21	2400	1900
Other than Ltb - liabilities(3)	22	1,100	800
Available assets	29	1300	1100
Represented by			
Paid up share capital	51	1000	1000
Balance of net assets(4)	56	300	100
Total - equal to line 29 above	59	1300	1100
Movement of balance of net assets			
Balance brought forward	61	100	50(6)
Retained profit	62	300	50(6)
Movement in asset valuation difference(5)	63	(100)	
Balance carried forward as per line 56	69	300	100

Explanations of the above
(1) Blank lines have been omitted.
(2) This is taken from line 89 in Form 13 - see example one above.
(3) This is technical provisions (1000) plus creditors (100).
(4) This is the balancing figure.
(5) This is the difference for lines 92 to 95 on Forms 13 between the comparative amounts, (200 + 200 + 200) and the present year amounts (300 + 200 + 100 + 100) - see example one above.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

(6) The comparative amounts at lines 61 and 62 are illustrative only. They cannot be derived from the other data given in this example.

5.A.3 Example three: the reconciliation on Form 10 for a long term business company

In this example a company shows the following amounts in its Companies Act accounts.

Assets	1996	1995
Investments	1000	1200
Cash	800	400
Deferred acquisition costs	40	20
	1840	**1620**
Share capital	100	100
Profit & loss account	350	220
Fund for future appropriations	700	600
Technical provisions	490	400
Creditors	200	300
	1840	**1620**

The profit and loss account for 1996 shows a transfer to the Fund for Future Appropriations of 100 and a retained profit of 130. In the Annual Return the following items are shown on Forms 13 to 16.

Form 13		**Long term business**		**Other than long term business**	
		1996	1995	1996	1995
Equity shares	41	600	650	200	250
Cash at bank -deposits	81	700	300	100	105
Grand total of admissible assets	89	**1300**	**950**	**300**	**355**
Excess of admissibility limits	92	100	150	100	145
Total assets determined in accordance with the shareholder accounts rules*	99	**1400**	**1100**	**400**	**500**

[* This amount should not include long term business deferred acquisition costs -see paragraph 5.4.20 above.]

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Form 14 (part)		1996	1995
Mathematical reserve	11	507	404
Balance of long term funds	13	193	156
		700	**560**
Creditors etc.	49	150	100
Excess assets etc.	51	450	290
Total	59	**1300**	**950**

Form 15 (part)		1996	1995
Total liabilities	59	50	200
Provision for adverse changes	61	18	12
Total	69	**68**	**212**

Form 16 (part)		1996	1995
line 59 - retained profit		**50**	**100**

Form 10 should now be completed as follows:

Form 10		1996	1995[5]
Long term business - assets	11	1300	950
Long term business - liabilities	12	1300	950
Other than LTB - assets	21	300	355
Other than LTB - liabilities	22	68	212
Available assets	29	232	143
Paid up share capital	51	100	100
Balance of net assets	56	132	43
	59	232	143
Balance of net assets - b/f	61	43	73
Retained profit[1]	62	50	100
Movement in asset valuation differences[2]	63	45	(90)
Increase in provision for adverse changes[3]	64	(6)	(40)
Other movements[4]	65	-	-
Balance of net assets - c/f	69	132	43

[Footnotes (1) to (5) from above are explained on the next page.]

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Supplementary notes to Form 10

1002 Reconciliation to shareholder accounts	1996 £'000	1995 £'000
Net assets as per Annual return		
line 99 on Form 13 (OLTB)	400	500
line 59 on Form 15	(50)	200
	350	300
Capital and reserves as per shareholder accounts	450	320
Difference due to assets retained in the long term business fund in excess of the fund for future appropriations(6)	100	20

Explanations of the above

(1) This is the retained profit as per Form 16.
(2) This is the difference for lines 92 to 95 on Forms 13 between the comparative amounts, (145) and the present year amounts (100).
(3) This the increase in the provision for adverse changes as shown on Form 15 only.
(4) This is the balancing figure, i.e. the differences not shown at the other lines.
(5) The comparative amounts at lines 61 to 69 of Form 10 are illustrative only. They cannot be derived from the other data given in this example.
(6) This is taken from the Companies Act accounts as follows: value of assets in the long term business fund (1400 + 40) less long term business technical provisions (490) less long term business creditors (150) less fund for future appropriations (700).

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

ANNEX B TO CHAPTER FIVE

Examples of completion of Forms 13, 14, 15 and 17 in respect of derivative holdings

5.B.1 ***Introduction to the Examples***

1. The examples introduced below illustrate the inter-relationship between Forms 13, 14 (or 15) and 17. Some of them relate to illustrative examples described in Prudential Note 1995/3 . The derivatives used in the examples are described in section 5.B.2.

2. The examples can be summarised as follows:

Example 1 - Derivatives used to rebalance portfolio (much as example C in Prudential Note 1995/3 but reversed to illustrate treatment of assets). Initial margin not accounted for on Form 17.

Example 2 - Treatment of simple derivative (option) which is a liability. Illustration that, in accordance with Instruction 4 to Form 17 (see paragraph 5.8.9), "negative assets or liabilities" can arise as a result of margining.

Example 3 - Two equity futures and a currency forward (as example X in Prudential Note 1995/3)

Example 4 - Direct asset, derivative and both inadmissible asset and Regulation 61 items (as example SS in Prudential Note 1995/3, amended slightly to allow inadmissibility offset.) Provision for adverse changes also required.

Example 5 - Range of direct assets and derivative with counterparty inadmissibility. The asset inadmissibility has been ignored to avoid making the example overly complex.

Example 6 - Sterling to DM interest rate swap. Illustrates provision for adverse changes on uncovered swap.

5.B.2 Derivatives used in the examples.

1. These are defined here so that the examples can refer to the instruments involved in a more abbreviated form (the bold part of each description). The example defines whether the derivative is bought or sold.

Futures

2. A **traded Long Gilt future** from 7/12/94 for settlement March 1995 at a price then of 101 15/32. This was valued at 31/12/94 at 100 23/32

(after 100 15/32 on 30/12/94) giving a liability per bought contract of £50,000 times 24/32ths or £375.
The initial margin was £1000 per contract and variation margin of £500 per contract had been paid to date.

3. A **Currency Forward for US dollars** for settlement in March 1995. This was valued at 31/12/94 at a 3 month rate of exchange of 0.6393 when the cash market was 0.6391, taken (for simplicity of illustration) as a liability of £(0.6393-0.6391) per $1,000,000 purchase or £200

<u>Options</u>

4. A **traded BP call option at 420p** from 7/12/94 for expiry by April 1995.
This was valued at 25p at 31/12/94 (after 26p at 30/12/94) and thus 25p x 1000 or £250 per contract. Initial margin as writer £1000 and variation margin of £50 paid to date.

5. A **traded BP put option at 420p** from 7/12/94 for expiry by April 1995.
This was valued at 14p at 31/12/94 (after 13p at 30/12/94) and thus 14p x 1000 or £140 per contract. Initial margin as writer £1000 and no variation margin to date.

6. A **traded FTSE 100 call option at 3100** from 7/12/94 for expiry by June 1995. This was valued at 143 at 31/12/94 (after 145 at 30/12/94) and thus 143 x £10 or £1430 per contract. Initial margin as writer £1000 and variation to date of £1450.

<u>Contracts for differences</u>

7. A **traded FTSE 100 future** from 7/12/94 for settlement March 1995 at a price then of 3036. This was valued at 31/12/94 at 3092 (cash market 3065.5) after 3077 on 30/12/94 and thus (3092-3036) x £25 or £1400 per contract. The initial margin was £2000 per contract and variation margin of £1025 per contract had been paid to date.

8. A **traded S&P 500 Future** from 7/12/94 for settlement March 1995 at a price then of 457.0. This was valued at 31/12/94 at 461.35 (cash market 459.27) after 464.6 on 30/12/94 and thus (461.35-457.0) x $500 or $2175 per contract. The maintenance margin was $1500 per contract and had been topped up by $4000 per contract to date.

9. A **Swap of sterling to DM short interest rates** on £30m of sterling, expiring May 1995. This was valued at a liability of £500,000 at 31/12/94.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

5.B.3 Example one: much as example C in Prudential Note 1995/3 page 9

100 bought **Traded FTSE 100 future** contracts, total asset £140,000

150 sold **Traded Long Gilt future** contracts, total asset £56,250

Total margin £97,500 on FTSE 100 future with broker, £200,000 paid to broker as initial and £102,500 received from broker as variation margin.

Total margin £75,000 on Long Gilt with broker, £150,000 paid to broker as initial and £75,000 received from broker as variation margin.

Initial margin taken to line 56 of Form 13, receipt of variation margin assumed on deposit, thus line 54 of Form 13.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

5.B.6 Example four - much as example SS in Prudential Note 1995/3 page 48

400,000 holding of **BP shares** at 425.5p per share, total asset £1,702,000

3000 written **traded BP put option at 420p**, valued at £420,000 liability.

Total margin £3,000,000 on traded option, all initial.

General Business Amount (GBA) £400m. 2.5% of GBA equals £10m and total exposure is to 3.4m shares worth £14,467,000. Inadmissible asset is thus £4,467,000, with first offset to direct equity holding and balance to line 87 of Form 13.

Regulation 61 liability taken as say 50% fall in price i.e. (4.255x50%-4.20) x 1000 x 3000 thus £6,217,500, less any Regulation 60 liability (i.e. £420,000), less any relief from inadmissibility that such a fall would cause (£3,616,000 - see below) therefore £2,181,500 provision.

The inadmissibility offset and provision for adverse changes are calculated as follows

£000s	**Year end**	**50% fall**	
Margin deposit	3000	3000	
Direct shares	1702	851	
Put Option	(420)	(6218)	
Inadmissibility deduction	(4467)	-	3.4m shares worth under 2.5%
Total	(185)	(2367)	**difference i.e. £ 2181.5k is minimum Reg 61 amount**

Layout of forms 13, 15, 17 overleaf.

CHAPTER SIX

6. THE REGULATION 23 STATEMENT: DERIVATIVES

6.1 Scope of the statement

1. Every company is required to make a Regulation 23 statement, whether or not it used derivatives in the year in question. For this purpose, "derivatives" is defined by the Regulation to include not only contracts which have the legal form of a derivative contract but also the quasi-derivatives defined in Regulation 56 of the Asset Valuation Rules. The latter category includes a number of instruments which are in common use and which have certain characteristics of a derivative, such as partly-paid shares and convertible bonds. It is likely, therefore, that many companies will have something of substance to say in their statement, even though they would not normally consider themselves to be users of derivatives.

2. For those companies whose policy and practice is to use neither derivatives nor quasi-derivatives, a short statement to this effect is all that is necessary.

3. It is worth noting that the statement has been expanded beyond its original limits set down in Regulations in 1994 and (to a lesser extent) beyond the limits which applied to Annual Returns submitted from 30 April 1996 under the transitional arrangements set out in Regulation 34.

6.2 Contents of the statement

1. Regulation 23 calls for a "brief description" of certain details of the use of derivatives. There is no subtlety about the use of the term "brief description". What is needed is a description which is just long enough to give the reader a reasonable flavour of the use of derivatives, including certain key points concerning use of derivatives to effect significant switches in the balance of portfolio or use of unusual or exotic derivatives. The detailed requirements of the statement are set out below, referenced by the sub-paragraphs of Regulation 23(1).

2. *(a) any investment guidelines ... for the use of derivative contracts*

The company's policy needs to be explained, even if that policy is not to use derivatives. (In this context it is worth remembering that forward currency derivatives are not derivatives for the purposes of the Regulations if they satisfy the requirements of Regulation 45(9) of the Insurance Companies Regulations 1994). A statement that derivatives are only used to match policy liabilities is however, too brief and a fuller description of the criteria used must be given.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

3. *(b) ...guidelines ... for the use of contracts ... not ... reasonably likely to be exercised*

The company must state whether such contracts are allowable under its guidelines. Thus the restriction of the use of derivatives to those bought and sold to deal at prices close to the market price of the underlying asset at outset would allow a negative reply to this question. Conversely, if the guidelines allow the practice for example of selling options out of the money, or purchasing barrier options, neither of which were expected to be called, this would need detailing together with its purpose. Where such contracts have been entered into in the year, or subsisted over the year, then a brief description is required by sub-paragraph (c) of the size (in economic exposure) of the contracts and the approximate market movement that would trigger them.

4. *(d) ...amounts recorded in Form 13*

Insurers may find a LIFFE style report the most suitable to present the changes to Form 13, i.e. a presentation of the current Form 13 by broad asset class amended by the impact of futures on economic exposure. The prudence required in the context of options is not the same as that when considering the inadmissibility limits of Regulation 57 where the maximum exposure to an asset is in question. For sub-paragraph (d), merely options that are currently expected to be exercised should be assumed to be exercised. This would normally follow the value of the option at the accounting date; if of high value then exercise is likely but if close to valueless then exercise is unlikely. Further information is required under sub-paragraph (f) only if the impact of derivatives in amending economic exposure has been materially different at other times of the year, not merely if the overall economic exposure of the insurer has been different.

5. *(e) ...to the maximum extent*

Sub paragraph (d) requires the expected changes to exposure to be stated. Sub-paragraph (e) requires the same information as (d) but assuming that derivatives are exercised against the insurer so as to create the largest changes in the economic exposures of the insurer in its major asset classes. While derivative positions that net out, or can be used to net out exposures, will not contribute to this presentation, any other optional derivative positions are to be assumed to be exercised so as to create the most extreme exposures potentially possible.

6. *(f) how different .... other time of the financial year ... maximum extent*

This requires the analysis of (d) and (e) above to be tested for other points of the year. Where a more significant position occurred other than at the financial year end the position then needs to be described. As noted above for the test under (d) the company must look for times when the use of derivatives to amend economic exposure has been significantly different at other times of the year, not when the direct exposure of the company has been different. For the test under (e) the purpose is to gauge whether during the year the company's use of more exotic or obscure derivatives has been greater than at the financial year end. The description may thus need to refer to several different times during the year where there was significant activity that was different in nature.

7. *(g) maximum loss:*

The requirement for the maximum exposure to a counterparty failure at the year end requires this to be tested as well "in the event of other foreseeable market conditions". This means a test of individual counterparty exposure (not just the counterparty giving the maximum exposure at the accounting date) under typical market movements and the current margining arrangements. If this gives a higher figure (perhaps due to infrequent margining) then this higher figure should be stated.

8. *(h) ...does not fall within Regulation 55(2) .. or ... paragraph 15:*

Structured products that fail the test in Regulation 56(4), and are thus valued purely as unconditional debt under the terms of Regulation 56(5), should be described under this section. (To save correspondence the value assigned to such assets in the relevant Form 13 should be stated). Other derivatives that are not permitted (or admissible) derivatives held in the internal property linked funds, the rest of the long term business fund, or the other than long term business fund must also be described here.

9. *(i) ...fixed consideration:*

A note is required of what fixed sums have been earned by the insurer (for example, premiums received by the insurer for selling options), and a summary of the contracts involved over the period of the Annual Returns (not merely those in force at the year end).

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER SEVEN

7. THE REGULATION 24 STATEMENT: SHAREHOLDER CONTROLLERS

1. The Regulation 24 statement is only required for an insurance company which falls within the definition in section 5 of the Insurance Companies Act 1982 of "UK company".

2. A "UK company" is any authorised insurance company (other than certain small mutuals) -

- which is incorporated in, and has its head office in, the United Kingdom; and

- whose business is not restricted to reinsurance.

3. Regulation 24 requires a list of all persons who were, to the company's knowledge, <u>at any time during the financial year</u> shareholder controllers of the company together with their percentage share holding and voting power <u>at the end of the financial year</u> in the insurance company (or in another company of which the insurance company is a subsidiary undertaking).

4. The duty to list shareholder controllers under Regulation 24 is separate and distinct from the requirement to notify those persons under sections 61 to 62. Including such a person in the Regulation 24 list does not relieve him/her of the duty to make notifications under those sections nor *vice versa*. [Guidance on the duty to report under those sections is given in Prudential Guidance Note 1995/5 issued by the Insurance Directorate.]

5. A shareholder controller is defined by section 96C of the Insurance Companies Act 1982 as any person who either alone or with any associate or associates -

- holds 10 per cent. or more of the shares in the company or another company of which it is a subsidiary undertaking;

- is entitled to exercise, or control the exercise of, 10 per cent. or more of the voting power at any general meeting of the company or another company of which it is a subsidiary undertaking; or

- is able to exercise a significant influence over the management of the company (or of another company of which it is a subsidiary undertaking) by virtue of -

  (i) a holding of shares in; or

  (ii) an entitlement to exercise, or to control the exercise of, the voting power at any general meeting of,

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

- the company or, as the case may be, that other company.

In the statement for a company that is part of a group with more than one intermediate holding companies, there may be several levels of shareholder controllers to list since each intermediate holding company has to be reported.

6. For the above an "associate" of a person is -

- the wife or husband or minor son or daughter of that person;
- the trustees of any settlement under which that person has a life interest in possession, or, in Scotland, a life interest;
- any company of which that person is a director;
- any person who is an employee or partner of that person;
- if that person is a company -

  (i) any director of that company;

  (ii) any subsidiary undertaking of that company;

  (iii) any director or employee of any such subsidiary undertaking; and

- any other person with whom that person has made an agreement or arrangement -

  (i) with respect to the acquisition, holding or disposal of shares or other interests in the company concerned or another company of which it is a subsidiary undertaking; or

  (ii) under which they undertake to act together in exercising their voting power in relation to the company concerned or another company of which it is such an undertaking.

7. Further guidance on the definition of shareholder controller is given in the Prudential Guidance Note 1995/5 referred to in paragraph 4 above.

8. The percentage shareholder and voting rights to be disclosed in the Regulation 24 statement should include the holding/rights of associates.

9. Where there are no shareholder controllers to report the Regulation 24 statement state this.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER FOURTEEN

14. FORMS 40 TO 45: THE LONG TERM BUSINESS REVENUE ACCOUNT

14.1 Form 40

Different types of Form 40

1 Form 40 presents a revenue account for long term business. It should be prepared separately for each long term business fund maintained by the company. If there is more than one such fund for either ordinary or industrial long term business a summary Form 40 for ordinary or industrial business (as the case may be) should be prepared. See Regulation 8(b).

2. The separate Forms 40 for different funds and for the summary are distinguished by the entry in the heading box "No. of Fund/Summary". Paragraph 4(2) of Schedule 3 specifies how this is to be completed.

3. Where the rights of a group of with profits policyholders are defined by reference to a specified part of the fund, paragraph 13 of Schedule 4 requires that the Appointed Actuary include in his/her valuation report -

- a revenue account for each such sub-fund in the format of Form 40; and
- a description of "the principles and methods applied in apportioning the investment income, increase or decrease in value of assets brought into account, expenses and taxation between each part"

where this information is not provided elsewhere.

4. It has been the practice of some companies (as allowed by the above) to provide -

- Forms 40 for each sub-fund; and
- the description of principles etc. as a supplementary note to those Forms;

within the Schedule 3 part of the Annual Return, which is signed off by the directors and is subject to audit. Where this is the case the company should also prepare a Form 40 for the whole fund. The Forms 40 for the sub-funds should be distinguished by the entry in the heading box "No. of part of fund". Paragraph 4(2) of Schedule 3 specifies how this is to be completed.

Relationships with other Forms and between different Forms 40

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

5. The amounts included in the Form for earned premiums, claims incurred and expenses payable are to be derived from Forms 41 and Form 42 in accordance with instruction 1.

6. Where a company decides to allocate to the long term business the whole or any part of investment income and/or net capital gains arising from assets not attributable to its long term business, both the income and any associated investment management charges, must first be included in the non-technical account (Form 16), with the amount to be allocated to the long term business shown as a transfer at line 13 of Form 16, line 26 of Form 40 and in Form 58. See instruction 3.

7. The amount shown for transfers to the non-technical account (line 26) should agree with the equivalent amount disclosed at line 47 on Form 58 - see instruction 4. However, if there is a net transfer into the fund, the entry at line 26 will be negative, and by virtue of instruction 3 to Form 58 there will be a positive entry in line 34, lines 15 and 47 remaining blank.

8. The amount of any transfer to and from other funds should be included in the Form 40 of the transferee and transferor funds respectively at line 15 and line 25 - see instruction 4.

Completion of the Form

9. The instructions to the Form specify the rules for its completion. These rules differ in several respects from those which are used in the preparation of the Companies Act accounts. The following table identifies for each line in the Form the most closely corresponding items from long term business technical account specified in the Companies Act and describes some major differences between the accounting rules for those items and for Form 40.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Line in Form 40	Item(s) in the technical account	Major points of difference in accounting treatment
Line 11- "Earned premiums"	II.1 "Earned premiums"	In preparing the technical account the company may choose whether or not to include the change in the provision for unearned premiums under this item. In Form 40 only the latter treatment is acceptable, i.e. the change in unearned premiums must be excluded. [This is also by far the more commonly used of the two permitted treatments in the technical account.]
Line 12 - "Investment income receivable before deduction of tax"	II.2 "Investment income", (but excluding items II.2.(c) and (d) - see below).	The items II.2(c) and (d) under the heading investment income in the technical account refer to value re-adjustments and realised gains on investments. In Form 40 no amounts for gains or loss on investments should be included in investment income. The treatment in the Annual Returns of tax borne on franked investment income should be consistent with guidance issued for the Companies Act accounts by the Accounting Standards Board and the Association of British Insurers.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Line in Form 40	Item(s) in the technical account	Major points of difference in accounting treatment
Line 13 - "Increase (decrease) in the value of non-linked assets, brought into account" Line 14 - "increase (decrease) in the value of linked assets"	II.2.(c) "Investment income - value readjustments on investments" II.2(d) "Investment income - gains on realisation of investments" II.3 "Unrealised gains on investments" II.9(b) "Investment expenses and charges - value readjustments on investments" II.9(c) "Investment expenses and charges - losses on realisation of investments" II.10 "Unrealised losses on investments"	(1) The technical account includes all investment gains and losses (realised and unrealised). In Form 40 such gains and losses (other than in respect of linked assets) are only included to the extent they are "brought into account". Form 40 includes all gains and losses in respect of linked assets. (2) In Form 40 the increase/(decrease) in value shown includes the changes in the valuation differences shown at lines 92 to 95 of Form 13 (for long term business assets).
Line 15 - "Other income"	II.4 "Other technical income, net of reinsurance"	

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Line 21 - "Claims incurred"	II.5 "Claims incurred, net of reinsurance" II.7 "Bonuses and rebates, net of reinsurance" but only to the extent that they are cash bonuses (which do not therefore increase technical reserves).	(1) In the technical account claims incurred includes claims management expenses. In Form 40 these are to be included under "expenses payable" not "claims incurred". (2) In the technical account claims incurred includes the change in the provision for claims outstanding. In Form 40 this change (except to the extent it relates that part of the provision not included in mathematical reserves) is not to be included as it is already taken into account in the movement of the fund shown at line 39. [The mathematical reserves take into account outstanding claims except where they have already fallen due at the valuation date.]

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Line in Form 40	Item(s) in the technical account	Major points of difference in accounting treatment
Line 22 - "Expenses payable"	Claims management expenses included in item II.5 above. II.8 Net operating expenses II.9(a) "Investment expenses and charges - investment management expenses, including interest"	(1) In the technical account net operating expenses are adjusted to take account of the change in the amount carried forward for deferred acquisition costs. In Form 40 all acquisition expenses incurred during the year should be included at line 22 and no amounts should be carried forward. (2) Any interest payable included in net operating expenses in the technical account should be included in Form 40 at line 23 not line 22.
Line 23 - "Interest payable before deduction of tax"	Interest included in item II.9(a) above. Interest included in item II.8 above.	
Line 24 - "Taxation"	II.12 "Tax attributable to long term business"	
Line 25 - "Other expenditure"	II.11 "Other technical charges, net of reinsurance"	

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Line 26 - "Transfer to (from) non-technical account"	II.12 "Allocated investment return transferred to (from) the non-technical account" II.13 "Balance on the technical account - long term business"	The main reasons for differences between the amounts transferred to the non-technical account and the technical account are typically - (1) the deferral in the technical account of acquisition expenses; (2) the transfer in the technical account of amounts to or from the fund for future appropriations; (3) valuation differences as between mathematical reserves in the Annual Return and the technical provisions in the technical account; and (4) investment gains not brought into account in Form 40.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

Line in Form 40	Item(s) in the technical account	Major points of difference in accounting treatment
Line 39 - "Increase in fund in financial year"	II.7 "Bonuses and rebates, net of reinsurance" but only to the extent that they increase the technical provisions II.6 "Change in other technical provisions, net of reinsurance, not shown under other headings" II.12a "Transfers to or from the fund for future appropriations"	These items are not directly comparable as different valuation rules apply in the Returns and Companies Act accounts.

Supplementary notes

10. Eight supplementary notes are specified to Form 40.

(1) If any of the brought forward amounts differs from the corresponding carried forward amounts in the previous return the reason should be stated - see Paragraph 7 of Schedule 1. [Code 4001].

(2) Particulars of the amounts included at lines 15 and 25 for "other income" and "other expenditure" should be stated - see instruction 2 to the Form. [Code 4002]

(3) Particulars of the amount of any investment income and/or net capital gains allocation included at line 26 in Form 40 should be stated - see instruction 3 to the Form (and also paragraph 14.1.11 above). [Code 4003]

(4) A specification of any transfer of reserves associated with a transfer of contracts from one fund to another should be stated - see instruction 4 to the Form. [Code 4004]

(5) Unless already stated in a note to Form 16, the bases of conversion adopted in respect of foreign currency for income and expenditure should be stated - see paragraph 5(2) of Schedule 1. [Code 4005]

(6) Where a company maintains more than one long term business fund, it should state the principles and methods applied to apportioning the investment income, the increase or decrease in the value of assets brought into account, expenses and taxation between the different fund - see paragraph 4(1) of Schedule 3. [Code 4006]
(7) The information required by Paragraph 13(b) of Schedule 3 to be stated in the appointed actuary's report may instead be stated as a note to Form 40 - see paragraph 4 above. [Code 4007]

(8) Where arrangements have been in force during the financial year for the provision either by or to the company of management services, this fact should be stated together with the name of the other party (to whom or from whom such services were provided or received) - see paragraph 5 of Schedule 3. This statement is only needed where a substantial part of the day-to-day administration of a company is undertaken by another company or *vice versa*. [Note that where the arrangement is between two insurance companies, the directors will need to consider very carefully the form of their certificate under Schedule 6 Part I paragraph 4(e).] [Code 4008]

14.2 Forms 41 to 45

Completion of the Forms

1. Forms 41 to 45 should be prepared separately for each fund and sub-fund for which a Form 40 is prepared and also (except for Form 45) in summary where a summary Form 40 is prepared - see Regulation 17. These Forms supplement Forms 40. Form 41 provides an analysis of premiums and expenses, Form 42 of claims, Form 43 a summarised balance sheet for internal linked funds, Form 44 an aggregate revenue account for internal linked funds and Form 45 supplementary information on internal linked funds.

2. Instruction 2 to Form 41 provides for the reporting of repeated or recurrent single premium business as regular premium business. The purpose of this is to differentiate business which may be expected to produce an ongoing premium income for the company ("regular premium") from business which is "one-off" in nature ("single premium"). It is typical of "regular premium" business that the office will issue a renewal notice for the expected amount of premium, albeit that the policyholder may have a contractual right to pay a different amount, or nothing at all. Another characteristic might be that premium collection is by a direct debit or other payment order. Contracts set up to receive minimum contributions from the Department of Social Security should be treated as single premiums. [This differentiation between single and regular premiums used in Form 41 should also be used in Form 46 and Form 47, and the total single premiums on Form 41 should equal that for Form 47 - see paragraph 15.6.2 below.]

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

3. The instructions to the Forms provide, amongst other items, for -

- the reporting of industrial assurance "claims incurred on survival in respect of periodical benefits" as surrenders (Form 42);
- the reporting of derivative contracts (Form 43);
- the elimination of cross-investment between internal linked funds (Form 44);
- the separate disclosure of gross units created and gross units cancelled in internal linked funds (Form 44) so that turnover can be monitored. Each day's movements may be netted or recorded as two separate entries, one positive and one negative, as is administratively convenient; the total net positive and negative movements will be recorded on lines 11 or 21 as appropriate;
- the method of disclosure of the provision for capital gains tax on unrealised and realised capital gains in internal linked funds and of the valuation price of units in internal linked funds (Form 45).

4. In addition to the above the following points should be noted.

- The differentiation between UK contracts and overseas contracts (Forms 41 and 42) must be in accordance with paragraph 3 to Schedule 3. The definition does not correspond with the definitions of overseas life assurance business for Inland Revenue purposes.
- The earned premiums shown in Form 41 should include that part of the premium which was or will be recoverable from the Inland Revenue.
- The expenses shown in Form 41 should be those which relate only to the company's long term business. Those relating to the company's other business cannot, by virtue of Section 29(l)(a) of the Insurance Companies Act 1982 (subject to the exception in Section 29(l)(b)), be paid out of the long term funds and must therefore be shown in the general business technical account (Form 20) or the non-technical account (Form 16).
- In dividing management expenses between lines 43, 44 and 45 of Form 41:-
  (a) costs of a non-recurring nature, such as those incurred in developing new systems, new premises, or the costs of corporate restructuring, should normally be reported in line 45;
  (b) the costs incurred in writing new business (or in obtaining incremental (but not indexed) premiums on existing business), such as underwriting, policy issue, setting up (or amending)

records and the maintenance and development of the sales and marketing organisation should be reported at line 43;

(c) the balancing item will be expenses related to the ongoing costs throughout the year of maintaining the business in force (including any investment management costs) and should be reported in line 44.

- Commission payable to employees of the company whose job is to sell policies should be included under "management expenses" (lines 43 and 44 of Form 41). On the other hand any commission payable to employees who sell policies on a casual basis should be included under "Commission" (lines 41 and 42) along with that paid to other intermediaries and to cedants.

- All assets held within internal linked funds must be included in Form 43, even if their value exceeds the amount at the unit liability, cf. paragraph 3.6 of Prudential Guidance Note 1996/2. [Note: the valuation of assets regulations apply in full to these excess assets (see Regulation 45 (2) of the Insurance Companies Regulations 1994 and Regulation 4(a) of these Regulations).]

- The figures shown in column 2 of Form 45 shall be those appropriate at the end of the financial year, net of any indexation allowances. Each percentage shown in column 3 shall be the appropriate figure shown in column 5 of Form 43 expressed as a percentage of the appropriate figure in column 2 of Form 45.

- The figures shown in column 4 of Form 45 shall be the total deductions made from each fund for the financial year in respect of tax on realised capital gains (as included in line 24 of Form 44) expressed as a percentage of the taxable net realised capital gains arising in the period.

Supplementary notes

5. Three supplementary notes to Form 43 are specified.

(1) The basis on which assets have been valued should be stated - see instruction 1. [Code 4301]

(2) The aggregate value of rights and liabilities, both gross and net of variation margin, under derivative contracts should be stated - see instruction 2. [Code 4302]

(3) Certain specified details on the netting of the liability to repay "variation margin" on derivative contracts (and contracts having the effect of derivative contracts) should be stated - see instruction 3. [Code 4303]

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

6. Two supplementary notes to Form 44 are specified.

(1) If any of the brought forward amounts differs from the corresponding carried forward amounts in the previous return the reason should be stated - see Paragraph 7 of Schedule 1. [Code 4401].

(2) Particulars of items reported as "other income" or "other expenditure" on Form 44 should be stated - see instruction 2. [Code 4402]

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER FIFTEEN

15. FORMS 46 TO 61: THE ABSTRACT OF THE ACTUARIAL VALUATION

15.1 Overview

1. Schedule 4 prescribes the format of the abstract of the report of the Appointed Actuary on his investigation into the financial condition of the long term business, required under section 18 of the Act.

2. The preamble to the Schedule provides for certain provisions to be applied to the report from Schedule 1 and Schedule 3. These include the requirement that supplementary notes to forms shall be separate statements and not footnotes, the method for completing the identification boxes on the forms, the treatment of currencies other than sterling, negative numbers within round brackets, dealing with differences between brought forward numbers and last year's return, and the definition of UK and overseas contracts. More information on these can be found in the notes relating to the relevant Schedule. The Appointed Actuary should note that throughout the Schedule and in these notes references to "surrender" should be taken to include all similar expressions, including transfer as applied to pension contracts. The preamble also requires that the answers provided by the Appointed Actuary be numbered to accord with the numbers of the corresponding paragraphs. This instructions is also intended to apply to the numbering of the sub-paragraphs.

3. Paragraph 3 refers to the requirement that the valuation is conducted so that the liabilities conform to Regulation 64 of the Insurance Companies Regulations 1994. Sufficient information should be provided within the report to enable the Insurance Directorate to form a view about this, and in particular that the reserves meet each of the minimum standards required under regulations 65 to 75 of those regulations. It is not normally necessary to supply detailed supporting information, except where otherwise stated in these notes or in the regulations.

4. The preamble also defines the report period in terms of the period since the last investigation under section 18. Paragraph 2 also requires the date of this last investigation to be given. This relates to any investigation under the section, which includes any interim valuation for publication or distribution of profits which has been fully dealt with under the requirements, but does not apply to any informal valuation, nor normally to one produced under section 42 of the Act.

5. Certain paragraphs relate exclusively to non linked contracts (e.g. paragraph 4), some are related exclusively to linked contracts (e.g. paragraph 5), while others relate to both types of contract. The definition of a linked contract under regulations (Regulation 3(1)) includes any contract under which linked benefits as defined in section 35A of the Act are provided. This includes a number of types of contract not traditionally

regarded as linked (e.g. RPI-linked annuities) - see Prudential Note 1996/2 for further guidance. Except where there are specific requirements to do otherwise, a contract with both linked and non linked benefits is to be treated as a linked contract.

15.2 Paragraph 4 - non-linked contracts

1. Paragraph 4 requires specific information to be given in respect of two types of non linked contract. The regulations define (Regulation 3(1)) accumulating with profits policies which are to be reported under sub-paragraph (1)(a). Broadly speaking these are policies of the type sometimes known as unitised with-profits, but the definition is slightly broader. Firstly, it is not necessary that the benefits are in any way 'unitised' for the definition to apply. In particular, any with profits deposit administration contract would normally fall within this definition. Further, most recurrent single premium with profits contracts are also likely to fall within this definition. It is not considered that a traditional single premium with profits policy falls within this definition where the guaranteed benefit is fully expressed in terms of the amount payable at maturity if that sum is not explicitly related to the premiums, and more importantly to any additional premiums which may be allowed under the contract. That said, it is considered by the Insurance Directorate that contracts where there is doubt should be reported under this heading.

2. Sub-paragraph 4(1)(a)(i) requires the description of all deductions from the current benefit used in determining values under the policy. This will include all charges fixed under the policy, as well as any discretionary charges permitted. In particular, where there is a provision for a 'market value adjustment' or a similar deduction, this should be disclosed in terms of when it might apply. This does not refer to when it is in practice being applied.

3. Sub-paragraph 4(1)(a)(ii) requires the description of how any discretionary adjustments such as are covered in (i) have been applied if the determination of the mathematical reserves (excluding any reserves under Regulation 75 of the Insurance Companies Regulations 1994, including a resilience reserve) has taken credit for these adjustments. Where there are powers to vary an adjustment which is laid down in the policy (as may be the case with initial or capital units), but the company has not exercised its discretion to vary these adjustments from the levels prescribed in the policy, this need not be considered as triggering this sub-paragraph. Where any discretion has been exercised in respect of a charge taken credit for in the valuation, or where the charge is provided for but no level is specified in the policy, then it is necessary to describe all such discretionary charges levied in the report period.

4. Paragraph 4 also requires specific information in respect of a further class under sub-paragraph (1)(b) which is intended to include policies of the

type known as deposit administration, unless they are with profits policies, which should be included under (a). Sub-paragraph (1)(c) covers any other types of non linked policy not covered under (a) or (b) which require amplification of the entry in Form 51. This will include any contracts which have any supplementary guarantees or options which the Appointed Actuary considers to be significant.

5. All sections of paragraph 4 require information to be supplied on any material options. Options should be interpreted widely, though it is for the Appointed Actuary to decide what is material. An option to surrender on guaranteed terms, or to convert on guaranteed terms to another form of benefit, or to increase benefits without evidence of health, should generally be considered material. Guarantees on interest rates include both fixed guarantees and guarantees which may be related to some external reference rate. Guaranteed surrender values may similarly be guaranteed by amount or by reference to some formula.

6. Sub-paragraph (2) provides an exemption from the disclosure requirements of sub-paragraph (1) but only where both of conditions (a) and (b) are satisfied.

<u>15.3 Paragraph 5 - linked contracts</u>

1. Paragraph 5 provides for information to be supplied on linked contracts. Similar considerations to those described in the preceding paragraphs, and in particular paragraph 15.2.5, in relation to paragraph 4 of the Schedule apply also to this paragraph. Paragraph 5(2) requires any with profits option to be reported as under 4(1)(a).

2. Paragraph 5(4) requires the disclosure of the methods used in creating and cancelling units and in their allocation to and de-allocation from policies. This requirement should include information on the basis of valuation of assets and how it is selected (for example, "offer" basis for net creations of units and "bid" basis for net "cancellations"), including the timing of the asset valuation used in respect of such operations in relation to the time at which both the operation is decided upon and effected. When at any one time different pricing bases may apply to different policies, then details of the circumstances which give rise to the difference should be provided. Where assets are units in collective investment schemes or similar assets, particular reference should be made to precisely what price is used, and the relationship between the last opportunity to deal at that price and the time of the valuation. In summary, the Insurance Directorate should be provided with sufficient information to demonstrate that incoming, outgoing and continuing policyholders are treated equitably. It will be acceptable for reference to be made to compliance with published guidance to the extent that such guidance covers the above issues.

3. The information under paragraph 5(5) should include the treatment of any tax on notional realisations where provision for these is made under the Taxes Acts. In particular, reference should be made to whether the liability for such tax, when it falls due, is retained within an internal fund, or has been transferred out of that fund in exchange for a tax deduction. The rate of such tax deduction should be stated.

15.4 Paragraphs 6 to 12 - bases, principles, methods etc.

1. When providing the information on the general principles and methods adopted in the valuation under paragraph 6, the Appointed Actuary should provide sufficient explanation to enable the Insurance Directorate to take a view, in relation to the issues specifically referred to in paragraph 6(1), on the adequacy of the reserving basis in relation to regulations 64 to 75 of the Insurance Companies Regulations 1994. Where the Appointed Actuary has not undertaken any specific tests implicit in the points raised in paragraph 6, as he considers the margins in his basis are already sufficiently large to meet each of the minimum requirements of regulations 65 to 75 and of Regulation 64, he should indicate this either directly or indirectly; he may, however, be required to justify his basis to the Insurance Directorate if it considers it is not self-evident that there are sufficient margins. The Appointed Actuary should include broad details of the type of investigations he has conducted to meet the requirements of professional guidance in respect of sub-paragraph (1)(b).

2. Regulation 75 of those regulations requires the Appointed Actuary to take into account the nature and term of the assets and the value at which these have been brought into account when determining the appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities. If the assets in Schedule 4 are brought in at book values below the values in accordance with the regulations given in Form 13, and in determining the provision under this Regulation the Appointed Actuary has had regard to this fact, paragraph 6(2) requires a statement to this effect. This applies also when the basis of the provision made for any prospective liability for tax on unrealised capital gains is determined in the context of assets taken at their book value rather than their Form 13 value.

3. Paragraph 7(3) requires reference to how the tables of mortality and morbidity assumed have regard to the State of commitment. This is a reflection of the requirements of the 3rd Life Directive as brought into UK law in Regulation 70 of the Insurance Companies Regulations 1994. This reference does not add to the duty on the Appointed Actuary under the Insurance Companies Regulations 1994, and if the Appointed Actuary has determined that the degree of variation of mortality or morbidity between states does not give rise to a material effect in the valuation it is sufficient for this to be stated.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

4. Paragraph 7(4) requires details of any allowance made for future reductions in the rates of mortality in tables used in valuing annuities. Many such tables have a built-in allowance, and it is not necessary for the Appointed Actuary to give explicit details of this allowance if the table is in common usage in the United Kingdom. To the extent that the Appointed Actuary has determined to make additional allowance to that intrinsic to such a table, he should give details. This includes the making of an adjustment to the table which is intended to allow for future reductions, but does not include any adjustment made in respect of reductions already evidenced at the valuation date.

5. Paragraph 7(5) will include any allowance made for the effects of the Human Immuno-Deficiency Viruses, but is not necessarily limited to those viruses. It does not require the Appointed Actuary to make an allowance for any particular change, but to disclose any allowance he may have made. This paragraph does not add any additional requirement to include any particular reserve not required by the Insurance Companies Regulations 1994.

6. Paragraphs 7(6), (7) and (8) cover the requirements of Regulation 75 of the Insurance Companies Regulations 1994. Paragraph (6) requires only a description of the various scenarios tested and identification of the most onerous of those scenarios. It does not require the results of such scenarios to be stated. It should be noted that currency variations are included in this requirement.

7. It is not always straight-forward to divide the reserve under Regulation 75(a) from that under 75(b). Reserves under 75(b) will often exceed those under 75(a), particularly where there is a significant volume of with-profits business, and in this case, if the conditions giving rise to the envisaged change in the value of assets embrace those tested under Regulation 75(a), it is sufficient to state this in paragraph 7(7). However, it is not necessarily the case that the most onerous conditions under 75(b) allow for all the effects under Regulation 75(a), and the response to 7(7) must make clear to what extent the reserve under 75(b) is taken into account.

8. The information required under paragraph 7(8) is only in respect of that scenario tested which gives rise to the greatest requirement, but it applies even if the reserve required is zero. If no scenario gives rise to an additional reserve, the most onerous scenario is that which allows the smallest reduction in reserves, whilst the basis remains consistent with the Insurance Companies Regulations 1994. Sub-paragraph (8)(a) requires any changes in assumptions, excepting only the interest rate, to be described. This includes, for example, the introduction of a zillmer adjustment within that permitted in the regulations, the application of any adjustment to accumulating with profits policies reserves to reflect discretionary charges

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

on surrender, the reduction of bonuses allowed for in the valuation, or any other change in assumptions whether explicit or implicit. Sub-paragraph (b) requires a description of the method used in determining the requirement. This needs only to be sufficiently detailed to enable the Insurance Directorate to understand the techniques employed, any changes in the hypothecation of assets to liabilities, assumed changes in the exercise of discretion, and other changes outside the valuation basis or otherwise.

9. The additional information to be provided in paragraph 8(d) (where the contracts do not fall within the circumstances of the proviso) must be sufficient to constitute the required demonstration. The information could take several different forms. For example the requirement would usually be met if the results of a net premium valuation for each of the relevant main categories of contract in the format of Form 51 or 52 were given, specifying the valuation rates of interest and mortality used, the zillmer adjustment and any other relevant information. Where a full net premium valuation has not been made, the requirement could be met by a comparison of specimen reserves for each of the main categories of contracts for various ages and durations on the basis used by the Appointed Actuary in his report and on an appropriate net premium basis (specifying particulars of the basis as above) together with information about the distribution of the business in the form of appropriate weightings. In principle a method of demonstration which involved sampling could also be acceptable.

10. The information to be supplied in paragraph 9 should normally include the expenses of administration per policy for each policy type, the rate of future inflation, and the rate of unit price growth (both gross and net of any relevant taxation, but before management charges) assumed in the valuation/test and the extent to which account has been taken of any increases in management charges, including those increasing with reference to a published index, which are allowed under the terms of the policy. Other parameters will normally include the mortality and morbidity rates and the rate of interest earned on sterling reserves assumed in the valuation/test.

11. Paragraph 10 is intended to identify the contribution towards future management expenses derived from the assumptions made by the Appointed Actuary in the valuation basis for meeting future expenses. It is a request for statements of the actual results of applying the valuation basis. Thus sub-paragraph (1) requires a description of the rates of inflation assumed and how inflation is allowed for in the valuation. Sub-paragraph (2) calls for the aggregate amount of expense contributions over the first year, with a general description of the sources, whether they be differences between net premiums and office premiums, or explicit allowances in the basis. Where with profits business valued on a net premium basis is concerned, it is not necessary to determine a precise split between the amount set aside for expenses and that for future bonuses. It is sufficient for the Appointed Actuary to describe the amount he considers appropriate

to set aside for expenses on the basis of information readily available at the time. The Insurance Directorate would normally expect there to be a correlation between the amount disclosed by the Appointed Actuary and the figure included in line 44 of Form 41.

12. Sub-paragraph 10(3) requires a description of the method and details of the basis used to calculate whether there is a need for a reserve in respect of continuing to write new business. This will require general statements as to the levels of business assumed for this purpose (perhaps in relation to that written the previous year), and broad assumptions as to costs (such as stating that he has assumed the continuation of the previous year's costs plus inflation, or by stating that he has used company budgets), product terms (such as stating he has assumed the continuation of the products on offer at the valuation date, or that he has reflected changes made after the valuation date but before the date of the certificate) etc. It does not require identification of explicit items in monetary terms, nor details of the precise assumptions. This is similarly true of sub-paragraph (4), where for example the Appointed Actuary might disclose that redundancy costs have been taken into account, if such be the case, or the costs of terminating management agreements, but not the amount of such costs.

13. Paragraph 11 is a requirement to identify the extent of currency matching. The requirement is driven from the liabilities, and requires the liabilities included within the actuarial certificate (which includes liabilities in respect of deposits received from reinsurers), but excluding property-linked liabilities, to be analysed by currency. The assets reported as matching these liabilities, which should correspond with those reported for the same liabilities in other matching schedules within the Annual Returns, are similarly to be analysed by currency. The de minimis exemption for 2% of the liabilities is intended to avoid unnecessary detail for small exposures, but the degree of mismatching still needs to be given. This mismatching should be taken as the sum of all liabilities reported in the "other currencies" heading matched by assets in other currencies divided by the total liabilities under that heading. This figure should be given as a percentage and to the nearest whole number.

14. The information on reinsurance required under paragraph 12 is largely self explanatory. It is acceptable for the Appointed Actuary to aggregate arrangements with a single reinsurer that are similar in nature. The requirements under paragraph 12(3) relate to both facultative and treaty reinsurance. The definition of a financing arrangement is intended to be wide and may include arrangements with non-insurance companies. It is likely that many original terms reinsurances with advanced commissions will constitute financing arrangements. Financing arrangements cease to be such once all elements of the financing have been repaid, earned or otherwise reduced to zero. The Appointed Actuary should exercise reasonable discretion in reporting under this heading, particularly in

relation to facultative business. It is acceptable where the financing arises from facultative reinsurances under a common overall agreement as to the general terms, for a grouped figure to be provided for the agreement, rather than for each contract.

15.5 Paragraphs 13 to 16 - profit distribution

1. Where, in accordance with paragraph 13 of Schedule 4, a revenue account for a particular part of a long term business fund is included in the abstract of the Appointed Actuary's report, analyses of premiums, expenses and claims in the format of Forms 41 and 42 are not required. The Appointed Actuary must provide information on the principles and methods applied in apportioning various items in any such revenue account included in Schedule 4, and in any revenue account of a with-profit sub-fund which is given in Schedule 3 where the principles and methods of apportionment are not disclosed in that Schedule.

2. Paragraph 14 is intended to supply sufficient information to enable the Insurance Directorate to understand the criteria used in setting bonus rates. Sub-paragraph (1) is a widened version of the previous requirement. It is important the information which is derived from each of the sources is identified, and if the various sources differ in any respect, the information must be identified by source. In this context “advertisement” has the wide meaning, and should include any sales and marketing literature. The references to policies issued by the company, and to advertisements, should be taken to mean any policy still in force, or any advertisement issued in a period from which with profits policies are still in force. It is not necessary to refer to policies which no longer exist. Sub-paragraphs (2) and (3) are intended to describe in broad terms how the bonus scales are arrived at. Although an answer that the distributions are based upon asset shares might be acceptable, it is necessary to indicate the approach to smoothing which it is intended to apply, the particular application to deaths and maturities, and the extent to which any ‘charges’ on asset shares are applied to maintain equity between classes or generations. The descriptions of the method should include any items excluded from or charged to any asset shares if that is the basic method.

15.6 Paragraphs 17 to 19 - Forms 46 to 49

1. In Forms 46, 46A, 47 and 47A, the term “annual premiums” refers to the total amount of premium payable, under the terms of the contract, each year. In Forms 46 and 47 any contract which consists of a combination of different types of insurance (as defined by instruction 5 to Form 47) is to be treated as a number of separate contracts each dealing with one of the different types of business so combined. The amounts by which the total number of contracts shown on each of the forms exceed the total number of

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

contracts to which the forms relate should be stated by way of a supplementary note. In determining whether or not a contract consists of a combination of different types of business, the Appointed Actuary should exercise his discretion in interpreting differences in the same way as for Forms 51 to 54. Where the information given in Forms 51 to 54, together with any additional information required by Instruction 10 regarding the number of contracts does not enable a reconciliation to be made with the information supplied in Form 46 an explanation should be given. The instruction in respect of hybrid linked contracts should be interpreted in accordance with the definition in Regulation 3(1). In Form 47, any contract which falls within more than one of the categories described in instruction 6 shall be shown only once, in the most appropriate category.

2. Attention is drawn to the instructions to Forms 46 and 47 in respect of regular premium and recurrent single premium contracts, and in respect of increases to existing contracts. These instructions differ from those applicable to the forms under the old regulations which these forms replace. It is essential that consistent treatment of individual contracts is adopted between Forms 46 and 47, and that all new business is reported under some heading within Form 47. Contracts set up to receive minimum contributions from the Department of Social Security should be treated as single premium business. Additional single premiums paid in respect of existing individual contracts should be shown separately from new business in Form 47. In Form 47, a single premium contract where there is a likelihood that there will be future premiums, but which do not meet the definition of regular premium contracts because their level of premiums is not defined, should be considered as not having an expectation of continuing premiums at regular intervals, and therefore be included within the single premium categories. (See also paragraph 14.2.2 above).

3. In Forms 48 and 49 the element of accrued interest or income in respect of any asset is required to be allocated to that asset class. Thus any accrued income on a government stock shall be reported under approved securities, and not under other assets. The yields required shall be calculated with the value of the stock including this accrued interest or income element, but with full credit for the whole interest payment being taken in the expected receipts. Separate forms should be produced if and only if funds have assets separately appropriated. The treatment of tax borne on franked investment income should be consistent with guidance issued by the Accounting Standards Board and the Association of British Insurers. A supplementary note to the Forms is needed where for any asset the payment of interest is in arrears. It should state the treatment of expected income from any such asset and the amount of the interest involved. See paragraph 6 to Form 48.

4. The required statements in respect of derivatives under paragraphs 19 extend those applicable under the previous regulations, but are similar to those introduced into the 1983 Regulations by the 1996 Regulations for returns submitted from 30 April 1996. The Appointed Actuary should follow the same principles as are described in chapter 6 above in respect of asset values. It is not generally necessary to quantify the changes in yields on Form 48 which would arise. A broad description would normally suffice, unless the options concerned have the effect of locking in particular yields not immediately identifiable from the description. Where and to the extent that the information provided by the company under Regulation 23 is sufficiently complete to answer this requirement, it is sufficient for the Appointed Actuary to refer to that information in the Annual Return.

<u>15.7 Paragraph 20 - Forms 51 to 56</u>

1. The aggregate of the amounts standing to the credit of policyholders' accounts should be shown in column 5 of Form 51 for non-linked non profit deposit administration schemes, and should be distinguished from any other measures of benefit shown in that column for such contracts.

2. In Forms 51 to 54, wherever different rates of interest are used, the results should be shown separately.

3. In Forms 53 and 54, if discounting applies to any type of contract, then columns 11 and 12 must be completed for all contracts. Column 12 may be left blank only if there is no discounting at all for that valuation summary. In Form 53, details of units which are discounted at different rates of interest (e.g. capital and accumulation units) should be shown separately.

4. Where a linked contract includes non linked benefits except where there are accumulating with profits benefits, these should be shown separately on whichever of Forms 53 or 54 includes the linked benefits. Where accumulating with profits benefits are included, the treatment should follow instruction 12, and other non linked benefits may be included with either the linked or accumulating with profits benefits, provided the treatment is disclosed in the note required under instruction 12.

5. Within Forms 51 to 54 it is required to report separately under instruction 10 combinations of different types of insurance. The Appointed Actuary is required to determine when such different types of insurance are present in one contract. If he considers that such separate reporting would be misleading, or would not materially alter the amounts reported under each type of insurance, due to the trivial nature of one or more types of insurance in a contract, this would be an indication that there may not, in practice, be more than one type of insurance present. This is not likely to be the case, however, where supplementary benefits of a different class of business under Schedule 1 to the Act are concerned. For this purpose, it

should be noted that non linked benefits under a linked contract still fall within class III.

6. Risk premium reinsurance may be aggregated, separately for, and shown as a separate class in Forms 51, 52, 53 and 54 respectively. Where risk premium reinsurance applies to a contract which is split between forms, the risk premium reinsurance should be reported on the same form as the benefits to which it applies. Where it is not possible to do this, the reason shall be given in a supplementary note, and the treatment shall be described.

7 Note the proviso to instruction 6 to Forms 51-54, which allows duplicate data on reassurance ceded to be aggregated. A similar easing of reporting requirements is provided by instruction 7 to Form 55 in respect of unit liabilities wholly reinsured. However in this case paragraph 20(3) requires a statement that section 35A has been complied with.

8. Valuation summaries for sub-funds for which surpluses are required to be determined under Section 18 of the Act, and valuation summaries for non-linked, accumulating with profits, property-linked and index-linked business should be treated as separate for the purpose of Instruction 15 for the completion of Forms 51 to 54.

9. The relationships between Forms 55 and 56 and the related items in Schedules 1 and 3 are important. Considering first Form 55 (property linked), Form 13 line 59 which shows assets matching linked liabilities does not necessarily include the assets backing the surplus units in Form 55. [See paragraph 5.4.15 above.] Where the reconciliation between the amounts shown in Form 55 and line 59 of Form 13 is not readily apparent it should be described in a supplementary note to Form 55. Also, Form 55 should, where appropriate, correspond with the assets in Form 43, which includes all assets in an internal fund, and reconciliation with that form should be readily apparent.

10. Similarly for Form 56 (index-linked) the assets shown do not necessarily correspond with those shown in line 58 of Form 13. [See paragraph 5.4.15 above.] Where the reconciliation between the amounts shown in Form 56 and line 58 of Form 13 is not readily apparent it should be described in a supplementary note. Note, also, that Form 56 represents holdings of assets, not liabilities, and that the long-term liability represented by the mathematical reserve on Form 54 should not be entered on the form. Form 56 recognises that index-linked liabilities will often be matched by derivative or quasi-derivative instruments, the nature of which may contain elements both of asset and of liability and this is reflected in the heading to the form and in column 2.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

11. For both Forms 55 and 56 it would be helpful if the actuary included a note of any circumstances which make the natural relationships break down (e.g. particular tax treatments).

12. Where unit liabilities are reassured and deposited back with the ceding company, the amounts deposited back are to be treated in accordance with paragraph 20(2) in all respects as though they are unit liabilities.

15.8 Paragraph 21 - Form 57

1. Paragraph 21 refers to the new Form 57 and requires the forms submitted to cover all long term liabilities except unit liabilities in respect of property and index-linked benefits, CGT reserves and unit liabilities deposited back for linked contracts. The intention of the form is to identify suitable blocks of assets which can notionally be allocated to cover each block of liabilities. Note that there is no provision that the form must include all of the non-linked assets in Form 13. However, the assets covering any resilience or mis-matching reserve (Regulation 75) should be included, generally on the "balance" form provided under instruction 6. For each form completed, the total assets for the valuation entered at line 29, column 1 should be equal to the liability entered at line 33, column 1.

2. An analysis of those same assets and liabilities is also required under the "most onerous" scenario identified by the actuary in sub-paragraph 6 of paragraph 7. Column 3 re-values the assets included in column 1 on the assumptions of the resilience scenario; column 4 shows the value of any assets notionally re-allocated to the block of liabilities in order that they are still covered under the resilience scenario; and columns 5 and 6 show the new re-allocation in total. For each form completed, the total assets for the valuation entered at line 29, column 5 should be equal to or greater than the liability entered at line 33, column 5. In most circumstances, one would expect the assets allocated to the resilience reserve and included on the "balance" form under the valuation to be re-allocated so that this liability and its matching assets disappear from the "balance" form under the resilience scenario.

3. The instructions to Form 57 require separate forms to be prepared among other reasons for each rate of interest used in the valuation. However, in respect of Instruction 5, where a contract or group of contracts is valued at a lower rate of interest to reflect an implicit margin for expenses described in the abstract, or to reflect an implicit provision for future bonuses, then they may be amalgamated with contracts valued at the higher rate without such implicit margins, and reported as if valued at the higher rate. Where this has been done, a supplementary note should record this. Instruction 5 also provides for contracts valued at a lower rate of interest to be grouped together with those at a higher rate, provided

that the rationale for doing so is explained in a note. Note, however, that it is not acceptable to combine the separate forms required by instructions 2 and 3. Where more than one Form is provided for a particular rate of interest, a supplementary note should identify the contracts included in each form. The totals under the resilience scenario recorded in column 5 shall be those under the scenario which is most onerous and is the subject of paragraph 7(8) (see paragraph 15.4.6 above).

4. In relation to the risk adjustments disclosed in answering paragraph 21, it is not necessary to disclose these for individual assets, nor to provide any individual justifications for the adjustment. The Appointed Actuary may be asked to supply such justification to the Insurance Directorate if it is not clear the basis upon which the adjustment was determined.

15.9 Paragraph 22 - Form 58

1. When a company records a transfer to the non-technical account or to another fund or part of the fund in a revenue account (Form 40) for a particular period, the amount of which has been derived from a valuation completed at the end of that period, that transfer should be shown in 58.13 or 58.14 as appropriate so that the true surplus appears in 58.29.

2. Where a company decides to allocate to the long term business the whole or any part of the investment income and/or net capital gains arising from assets not attributable to its long term business, the allocation should be included in Form 58 as a transfer from the non-technical account (see paragraph 14.1.6 above). This transfer should be included in either lines 13 and 15, or 32 and 34, depending on whether there is an overall net transfer out of or into the fund (or part of the fund) respectively (see Instruction 3 for the completion of Form 58).

3. Where, under Section 18(2)(b) of the Act, a surplus is determined for a part of a fund where the rights of any policyholders to participate in profits relates to that sub-fund, paragraph 22 requires a company to provide a Form 58 both in respect of the sub-fund and the fund of which it is a part.

4. In general, line 61 of Form 58 corresponds to the proportion which has to satisfy the criteria laid down in Section 30 of the Act, but this will not always be so. For example, where the with-profits policyholders are entitled to, say, 90% of the profits from the with-profit business but are also eligible to share in the profits arising on the non-profit business on a discretionary basis, line 61 would be relevant for the purpose of Section 30 (which relates to 'eligibility') only in the Form 58 for the long term fund as a whole and not in the Form 58 for the sub-fund.

5. The surplus shown in Form 58, in keeping with the definition in the primary legislation, represents the excess of the amount of the fund over

the liabilities, but the wording in lines 29 and 49 is intended to make it clear that the surplus is not to be regarded as synonymous with disposable profits. The solvency margin requirements introduced under the legislation implementing the First Life Directive make it imperative for a clear distinction to be drawn between the liabilities and the margins available to count towards a company's solvency margin. The surplus should not include any part of the mathematical reserves which the Appointed Actuary considers are required to constitute the "proper provision" envisaged by Regulation 64 of the Insurance Companies Regulations 1994 (these should be included in Forms 51 to 54 as appropriate), but it may include contingency and other reserves held which count towards the solvency margin.

15.10 Paragraph 23 - Forms 60 to 61

1. Forms 60 and 61 set out the calculation of the required minimum margin (i.e. the greater of the required margin of solvency and the minimum guarantee fund) for long term business. The legislation provides for a solvency margin in respect of a company's long term business as a whole and where more than one long term business fund is maintained the information in Forms 60 and 61 will relate to all funds combined, including industrial business where this is transacted. Provision is made for the mathematical reserves and the calculation of the solvency margin to be shown separately for the main classes of long term business and, for the purposes of reconciliation, mathematical reserves attracting a nil rate of solvency margin are to be included. Class III includes contracts where the benefits are partially linked to investment funds or indices and any reserves for non-linked benefits under such contracts, including those relating to accumulating with profits benefits, should be included under Class III business in the appropriate column in Form 60. The presence of non-linked benefits, including accumulating with-profits benefits, does not generally alter the appropriate column for linked benefits.

2. In Form 60, line 51 should equal the figure in line 59 of Form 61, together with any class V margin included in the note under instruction 6.

3. Where cash bonuses have been allocated to policyholders and are due to be paid, they are in the nature a current liability. As such they should not be included in the amount of mathematical reserves included in Form 60. No factor need to be applied to cash bonuses in calculating the required margin of solvency.

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER SIXTEEN

16. THE REGULATION 31 STATEMENT: INFORMATION ON THE APPOINTED ACTUARY

1. Regulation 31 calls for a statement of the information specified in sub-paragraphs (a) to (d) of Regulation 31(1). The company is required to make a further statement that it has asked the actuary to provide it with the particulars set out in the sub-paragraphs and to identify in the statement the information which has been so provided. The company is required to supplement these particulars if there is further information of which it is aware additional to that provided by the actuary.

2 Paragraphs (1)(a) and (b) refer to "particulars" but this word is not defined in the Regulation. In the case of investments, the Insurance Directorate would expect particulars to include at least a general description of the investments, the name of the holder of the investment, the nominal or principal amount outstanding and, where applicable, the rate of interest and terms of repayment. In the case of a life policy or policies, it will usually be sufficient to show total annual premiums. In the case of transactions of a minor character falling under sub-paragraph (b), a general description need only be given and full particulars are not required.

3 As a result of Regulation 31(3)(a) the particulars which have to be given apply not only to the interests of or amounts paid to the actuary but also to other person specified in that paragraph. It is worth noting, however, that Regulation 31(4) provides for the reporting company and other companies within the same group to be treated as one for the purpose of Regulation 31(3)(a). The effect of the words in parenthesis in Regulation 31 (3)(a)(iii) and (iv), taken with Regulation 31(4), is that payments made to the reporting company and to companies related to it will be excluded from the disclosure requirement.

4 Regulation 31(3)(b) and (c) set out the circumstances in which a person shall be deemed to have an interest or benefit for the purpose of the Regulation. Regulation 31 (5) describes the circumstances in which a person shall be taken to control a body corporate for the purpose of Regulation 31 (3).

5. The information required by Regulation 31 should be given in respect of each person who was the appointed actuary at any time during the financial year. Also it is good practice to give the information in respect of the person who prepared the Schedule 4 report for the financial year even if he or she was only appointed as actuary after the year end. It is also good practice to name each appointed actuary especially if more than one is referred to in the Regulation 31 disclosure.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER SEVENTEEN

17. CERTIFICATES BY DIRECTORS AND ACTUARY AND REPORT OF AUDITORS

17.1 Certificate by the directors etc.

1. Part I of Schedule 6 to the Regulations specifies the statements to be included in the directors' certificate. These vary according to the type of company and the types of business which it writes.

2 Where in the opinion of those signing the certificate, the circumstances are such that any of the statements required by paragraphs 1 to 6 of the Schedule cannot truthfully be made, the relevant statements shall be omitted, (see paragraph 7(1) of the Schedule). Where any statements have been omitted, this fact shall be stated in a note, (see paragraph 7(2) of the Schedule) and reasons given.

3 For companies which fall within the circumstances of the first half of paragraph 4(e) of Part I of Schedule 6, the directors will need to consider carefully whether the Annual Returns are distorted by any management services agreements - for example, where a parent insurance company subsidises its subsidiary in its infancy.

4 Paragraph 5 of Part 1 of Schedule 6 covers directors' certificates in respect of two types of published guidance - "systems of control" and "preparation of returns" guidance. The Insurance Directorate will circulate from time to time a list of the published guidance which it considers relevant for this purpose.

5 In order to certify compliance with "systems of control" guidance, it is necessary for the directors to be satisfied that the control system was in place at the end of the financial year in question and that it was reasonable to believe that the systems continued to be in place after that date and will continue to be in place for the foreseeable future. In this instance the beliefs which the directors hold at the time of signature of the Annual Returns are the relevant ones. For example, if the system was believed to be in place at the end of the financial year in question, had clearly - but unexpectedly - failed shortly afterwards and was once again believed to be in place at the time of signature of the Annual Returns, the certificate could <u>not</u> properly be given.

6 As to the standard of compliance required, HM Treasury recognises that absolute assurance is most unlikely to be achieved. By way of illustration, an isolated human error would not of itself be considered a failure of the system provided that the system is capable of recognising and rectifying the error swiftly. Frequent or repeated errors would however cast doubts on the integrity of the system.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

7 A list of the guidance complied with is sufficient. Where only part of a published guidance note is complied with, it is acceptable to claim compliance with that part. Where directors do not know or cannot satisfy themselves whether guidance has been complied with, such guidance should be omitted from the list. It is not necessary to state which guidance has not been complied with except in rare cases when no published guidance has been complied with (in which case the negative disclosure referred to in paragraph 2 above comes into play).

17.2 The actuary's certificate

1. Part II of Schedule 6 to the Regulations sets out the statements to be included in the appointed actuary's certificate.

2 Regulation 30(1) lays down that an actuary must be a Fellow of the Institute of Actuaries or the Faculty of Actuaries and aged at least 30 to be qualified for appointment under the Act. Regulation 30(2) automatically protects the position of an actuary who was already appointed when the Insurance Companies (Accounts and Statements) Regulations 1980 came into force but who does not possess the new qualifications either because he is aged under 30 or because he has an overseas qualification and not Fellowship of the Institute or Faculty of Actuaries.

3 Where an overseas company wishes to appoint an actuary with an overseas actuarial qualification, the Insurance Directorate will be willing to consider the issue of an Order under Section 68 of the Act permitting this in appropriate cases.

4 If a company appoints a firm of consulting actuaries each of the partners in the firm must possess the prescribed qualifications. Where an individual member of a firm is appointed only that individual need be qualified.

17.3 The auditors' report

1. Regulation 29 specifies the scope of the audit. The contents of the auditors' report are set out in Part III of Schedule 6. Regulation 32 specifies the qualifications of an auditor. It provides, in outline, that an auditor should be a person who would be eligible for appointment as a company auditor (under the Companies Act). This test is so phrased to apply even if the insurance company is an unregistered company, (e.g. an unincorporated association or overseas company). The test of eligibility for appointment as a company auditor under the Companies Act is twofold -

- first the proposed auditor must be a "registered auditor" under UK legislation; and

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

- second they must not be prohibited from appointment to that particular company by some close connection to it, (e.g. because a partner in the audit firm is also a director of the company).

2 The Auditing Practices Board issues separate guidance notes specifically for auditors of insurance companies and it is recommended that auditors should refer to these. A revised version of this guidance is expected in February or March 1998.

3 The parts of the Annual Return which are subject to audit are -

- Forms 9 to 17, and 20 to 45;

- the statements furnished under Regulations 19, 20, 21 and 23; and

4. The unaudited parts of the Annual Return are -

- the statements furnished under Regulations 24, 26 and 31;

- the information provided in accordance with Schedule 4 (including Forms 46 to 61);

- the certificate of the appointed actuary prepared under Part II of Schedule 6.

5. The auditors are also required to report on whether the directors' certificate except for paragraph 4(d) of the certificate and, in so far it relates to published guidance which either states that compliance need not be audited or which relates to controls with respect to money laundering, except for paragraph 5 of the certificate. The auditor's report must state whether the certificate has been properly prepared in accordance with the Regulations and whether or not it was unreasonable for the persons giving that certificate to have made the statements contained in it. Paragraph 11 provides that to the extent the information and explanations the auditors have received do not allow them to express this opinion they should add to their report "such qualification, amplification or explanation as may be appropriate".

6. The Insurance Directorate considers that it is appropriate for compliance with most, but not necessarily all, relevant published guidance to be subject to the audit opinion described above. When, periodically, a list of relevant published guidance is circulated (as mentioned in Section 17.1 above), the Insurance Directorate will make clear whether or not it would normally expect an audit opinion in respect of compliance with that guidance. Where audit of compliance with a guidance note is inappropriate (or has not been carried out for some reason), the auditor would be expected to invoke paragraph 11 of Schedule 6 to record the fact.

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

7. Paragraph 10(c) of Schedule 6 provides for the auditors to state the extent to which, in giving their opinion, they have relied on the actuary's certificate with respect to the mathematical reserves and required minimum margins and on an order by the Treasury for the identity and value of any implicit items which are admitted.

8. Forms 31 and 34 relating to years of origin prior to 1981 will contain figures which include information about claims notified and payments made prior to the 1980 Regulations coming into force. Such information was not subject to audit under those Regulations and the relevant figures are excluded from audit under the 1983 Regulations and this exemption was carried forward in the 1996 Regulations by Regulation 29(2)(a)(ii). This is now only relevant to Forms 31 and 34 for accounting class 7, as these forms for the other accounting classes have a ten-year cut off.

9. Paragraph 12 of Schedule 6 provides that where the auditors refer in their report or in any note attached thereto to any uncertainty, the report shall also state whether in the auditor's opinion that uncertainty is material to determining whether the company has available assets over the appropriate solvency margin. This paragraph should not be read as requiring the auditors to refer to an uncertainty. It merely provides that if they do so an additional opinion is required. The Insurance Directorate expects an uncertainty to be treated as material for these purposes if, upon the crystallisation of so much of the uncertainty as is not remote, the required level of available assets would not be met.

2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

CHAPTER EIGHTEEN

18. STATISTICAL RETURNS: FORMS 91 TO 94

18.1 Background

1. Forms 91 to 94 do not form part of the Returns but constitute a separate return which must be deposited with the Treasury, (the "statistical return").

2. The statistical return reports insurance business transacted by a UK company in other European Economic Area states either through a branch in that country or on a services basis into that country from an establishment in the UK or another EEA state. For the definition of "UK company" see section 5 of the Insurance Companies Act 1982.

[3. UK companies who wish to establish a branch in or provide services into another EEA state must make the requisite notification to the Treasury under Schedule 2G of the Insurance Companies Act 1982.]

4. The EEA states (other than the UK) are the 14 other EU states (Portugal, Spain, France, Italy, Ireland, Belgium, Luxembourg, the Netherlands, Denmark, Germany, Greece, Austria, Sweden and Finland) and 3 other European states (Norway, Iceland and Liechtenstein).

18.2 The statutory requirement to deposit Forms 91 to 94

1. The requirement to prepare and deposit Forms 91 to 94 is set out in Regulation 81 of the Insurance Companies Regulations 1994. The format of these Forms is laid out in Schedule 16 of those Regulations.

2. A UK company which in any calendar year -

- carries on general business in an EEA state (other than the UK) through a branch in that state should prepare Form 91;
- provides general insurance in an EEA state (other than the UK) through an establishment in the UK or in another EEA state should prepare Form 92;
- carries on long term business in an EEA state (other than the UK) through a branch in that state should prepare Form 93;
- provides long term insurance in an EEA state (other than the UK) through an establishment in the UK or in another EEA state should prepare Form 94.

3. The Forms should be prepared separately in respect of each EEA state in which the company carries on business or provides insurance.

4. The Forms relate to calendar years not necessarily financial years. Three copies of each Form (where required) should be deposited with Treasury within **nine months** of the end of each calendar year. One of the copies should be signed by a director, chief executive or secretary of the company.

5. Where the insurance company has made a notification of its intention to establish a branch in an EEA state or to provide insurance in an EEA state (see paragraph 18.1.3 above) but does not in any calendar year carry on insurance business or provide insurance in that EEA state, it should send notification of that fact to the Treasury within **nine months** of the end of each calendar year signed by a director, chief executive or secretary of the company.

6. Forms 91 to 94 are not subject to audit.

7. No section 68 concession may be granted modifying or exempting companies from the requirement to deposit Forms 91 to 94.

18.3 Inaccurate or incomplete returns

1. Regulation 81 of the Insurance Companies Regulations 1994 requires the Treasury to consider the Forms 91 to 94 or notification deposited under that Regulation and, if any such document appears to him to be inaccurate or incomplete, to communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

2. The procedure is similar to that described in paragraph 1.4 above for the Returns and the listing of validation rules described in that paragraph as available upon request includes Forms 91 to 94.

18.4 Conventions for completing the Forms

1. The conventions described in chapter four above for the Annual Return Forms should also be applied to the preparation of these Forms, (other than in respect of signature of the Annual Returns for which see paragraph 18.2.4 above).

2. The box in the heading entitled "Member state in which branch is situated" or "Member state in which risk is situated" should be completed with the country code of that EEA state to which the Form relates. [See the annex to chapter ten for these codes.]

18.5 Accounting rules

Other guidance by the prudential regulators

Prudential guidance on the preparation of regulatory returns
2 – the Treasury's explanatory guidance to authorised insurance companies on the preparation of annual returns (1998)

1. The Forms variously call for amounts in respect of premiums, claims, commissions etc. in respect of the branch or services business in the EEA state to which they relate. These amounts should be determined using the same accounting rules as are applied in the preparation of the Returns.

18.6 Forms 82 to 85

1. There are also other statistical Forms (82 to 85) which Regulation 80 of the Insurance Companies Regulations 1994 requires to be prepared in respect of EFTA states and/or in respect of EFTA companies. However at the time of writing there are no EFTA states (within the Insurance Companies Act meaning of that word) and no EFTA companies. Therefore no guidance is given on those Forms.

Dear Chief Executive

SOUND AND PRUDENT MANAGEMENT: PRUDENTIAL GUIDANCE AND DIRECTORS' CERTIFICATES

I am writing to draw your attention to two new series of prudential guidance notes and to the implications of such guidance for the Directors' certificate required under paragraph 6A of the Insurance Companies (Accounts and Statements) Regulations 1983, as amended. Under this requirement, on submitting the DTI Return, Directors must list "any published guidance with which the company's systems of control comply or in accordance with which the return has been prepared". Appendix A to this letter sets out the background to two types of guidance - "Systems of Control" and "Preparation of Returns" guidance - which are relevant to the requirement. It also sets out how, in general, DTI insurance supervisors expect to react to the presence or absence of a claim of compliance with published guidance in the Directors' certificate.

For completeness, I should add that by no means all guidance issued by DTI falls into either of the above categories. I attach at Appendix B a list of the guidance issued already or expected to be issued in the remainder of this year. From time to time, we will circulate a list of the guidance which we consider to be "Systems of Control" or "Preparation of Returns" guidance and which are therefore relevant to the Directors' certificate.

The "Preparation of Returns" series of guidance will set out DTI's interpretation of those aspects of the law which are reported on in the DTI Returns. We have always expected companies and their auditors to have appropriate regard to our interpretation during the preparation of the Returns. The new certificate simply formalises this.

Dear Director letter 1994/1 – Sound and prudent management: prudential guidance and directors' certificates

The "Systems of Control" series will set out our views on the issues to be taken into account in setting up and maintaining control systems. It will not contain prescriptive rules for the design of systems.

I am enclosing with this letter a copy of Prudential Guidance Note 1994/6, the first in the series of "Systems of Control" guidance notes. This deals with systems of control over investments and counterparty exposure. It refers particularly to controls over the use of derivatives. As you no doubt know, we lay great stress on the need for a company using derivatives to control that use appropriately. Skilful use of derivatives has great potential for risk reduction and for efficient management of the investment portfolio. However, if inadequately controlled, they also have enormous potential for loss, as a regular stream of case histories in the financial press reveals.

As you will see, Guidance Note 1994/6 is effective in respect of financial years starting on or after 1 January 1995. **We do not therefore expect companies to list compliance with it when submitting their returns in respect of the current financial year (although there is nothing to prevent them from doing so).** However, we do expect companies to make rapid progress towards developing systems which comply with the guidance (or alternatively provide an equivalent level of assurance).

Would you therefore please let the normal DTI supervisor for your company have, after consulting your auditors, and by 31 March 1995, a "state of play" report summarising the extent to which your company's systems already comply with Guidance Note 1994/6 and, if necessary, what remedial action is being undertaken.

If you have any questions arising from this letter, please speak to the normal DTI supervisor for your company or to [redacted].

[redacted]

Head of Insurance Division

"Dear Director" Letter - DD 1994/1

APPENDIX A: BACKGROUND TO GUIDANCE NOTES ON SYSTEMS OF CONTROL AND ON PREPARATION OF RETURNS

Sound and prudent management: adequate systems of control

Following implementation of the 3rd EC Insurance Directives, there is an explicit requirement in the Act that companies are managed "in accordance with the principles of sound and prudent management". The criteria are set out in Schedule 2A to the Act. One of these criteria, listed at paragraph 6(1)(b) of the Schedule is that:

> ***The insurance company shall not be regarded as conducting its business in a sound and prudent manner unless it maintains adequate systems of control over its business and records***

The new Directors' certificate

A new requirement placed on Directors (at paragraph 6A of Schedule 6 to the Insurance Companies (Accounts and Statements) Regulations 1983, as amended) is related to this criterion. On submitting the annual return, Directors are required to list "any published guidance with which the company's systems of control comply or in accordance with with the return has been prepared". Auditors are required to comment on the reasonableness of the Director's statement.

Two kinds of guidance

The regulation envisages two kinds of guidance therefore - "systems of control" guidance and "preparation of returns" guidance.

DTI is working up guidance on various topics in these areas, for example:

- Prudential Guidance Note 1994/6 on systems of control over investments ("systems of control")

- Prudential Guidance Note 1994/7 on Asset Valuation ("preparation of returns")

See Appendix B for a complete current list. However, the wording of the Regulation does not require directors to restrict themselves to listing compliance with guidance produced or endorsed by DTI. They may claim compliance with any published guidance which they consider to be appropriate.

Aims of DTI guidance

The aim of "systems of control" guidance notes is to set out the issues which DTI believes it is important for Directors to consider when setting up their control systems. Guidance will not contain prescriptive rules on how to set up a system.

"Dear Director" Letter - DD 1994/1

Dear Director letter 1994/1 – Sound and prudent management: prudential guidance and directors' certificates

The aim of "preparation of returns" guidance notes is to set out DTI's interpretation of the valuation regulations and other legal provisions relevant to the preparation of the DTI Returns.

Status of guidance

It is not compulsory for companies to comply with guidance. There is no requirement for Directors to state that their systems have failed to comply with guidance. However, it is compulsory for Directors to put in place adequate systems of control. Therefore failure to list compliance with "systems of control" guidance is bound to raise questions in DTI over whether adequate systems of control are in place. Similarly, failure to list compliance with the "preparation of returns" guidance raises questions as to whether the valuation regulations, for example, have been complied with.

Action to be taken by DTI

DTI will publish from time to time a list of the published guidance it considers to be relevant for the purposes of the Directors' certificate. That certificate, when backed up by an audit opinion, will normally be taken to be evidence of adequate control of the areas covered by the guidance. Failure of Directors to give an expected certificate or inability of auditors to give an expected opinion will normally lead to enquiries by DTI as to whether the relevant control system is adequate. This may lead DTI to require the company to commission a comprehensive report from the auditors on the relevant control system or take other appropriate action.

Consultation

DTI will consult companies, the auditing and actuarial professions in preparing its guidance. It will keep the guidance under review in the light of feedback.

"Dear Director" Letter - DD 1994/1

DTI guidance on future profits implicit items (1984)

GUIDANCE NOTE ON APPLICATIONS FOR ORDERS TO COUNT IMPLICIT ITEMS UNDER REGULATIONS 10 TO 13 OF THE INSURANCE COMPANIES REGULATIONS 1981 IN RESPECT OF LONG TERM BUSINESS

INTRODUCTION

1. Article 18.3 of the EC Life Directive provides for three kinds of implicit items, namely "future profits", "zillmerising" and "hidden reserves", to be counted within certain limits towards meeting a company's required margin of solvency in respect of its long term business, at the discretion of the head office supervisor. Effect is given to this in Regulations 11 to 13 of the Insurance Companies Regulations 1981. However, the Regulations define the maxima which can be taken into account and Regulation 10(4) provides that the implicit items shall have no value except in pursuance of an Order under what is now section 68 of the Insurance Companies Act 1982 ("the Act").

2. This Guidance Note sets out the procedures to be followed and the form of calculations and data to be submitted by companies in making applications for orders in respect of long term business. Orders in respect of future profits and zillmerising will be readily available, provided that the relevant requirements set out in this Guidance Note have been satisfied. Orders in respect of hidden reserves will only exceptionally be given.

TIMING

3. Ideally Orders relating to the position at an accounting date would in all cases be issued in time to be brought into account in the statement of solvency forming part of the returns relating to that date. Problems of timing, however, are likely to make it difficult to achieve this aim in practice. The information that will be required to enable an application to be considered, set out in detail below, will in most cases constitute a major part of the information required in the annual returns. Some companies may have difficulty in furnishing this information, certified by the auditors or appointed actuary as appropriate, far in advance of the due date for the submission of the returns. A further practical consideration of particular significance for the many companies with a 31 December accounting date, is that the resources available to the Department and its actuarial advisers will not enable a large number of applications to be processed over a short period.

4. An implicit item in respect of zillmerising or hidden reserves must be closely related to the basis on which liabilities or assets have been valued; also in the case of hidden reserves, as explained below, the granting of an Order will be dependent on the overall solvency position of the company. Orders in respect of these implicit items will, therefore, only be made in relation to the position shown in a particular set of returns and it will be essential for companies to submit applications to the Department well in advance of the latest date for the submission of the relevant returns.

5. The future profits implicit item is calculated on the basis of the average profits over a five year period and it is less important that an Order reflecting the position at the latest

DTI guidance on future profits implicit items (1984)

accounting date should be available at the time that the returns are submitted. In view of the practical considerations referred to above, it will be acceptable for returns to be submitted which demonstrate cover for the required solvency margin on the basis of a current Order in respect of a future profits implicit item issued during the course of the preceding 12 months on the basis of information contained in the previous set of returns. All such returns, however, must be accompanied by an application, certified by the appointed actuary, for a further Order in respect of a future profits implicit item for an amount not less than the amount for which credit has been taken in the returns.

6 Orders cannot be back-dated and may be withdrawn at any time eg on the issue of a new Order based on a further year's returns or where there are grounds for doubt about whether the amount in respect of which an Order has been given can still be justified, having regard to changes in the company's position or as a result of queries arising on the detailed scrutiny of the company's returns.

FUTURE PROFITS

Overriding Limit

7. The maximum amount of the implicit item relating to future profits is determined in Regulation 11 as 50% of the product of the estimated annual profit and of the average period (not exceeding 10 years) to run on the policies in the portfolio. In determining the amount within this limit in respect of which an Order should be made, the Department will wish to be satisfied that the amount does not exceed the value of the margins in the premiums and reserves for the existing business which would in reality be available to meet the effects of adverse contingencies which might arise in the future. The Department will require any application for a section 68 Order in respect of this item to be supported by a certificate from the appointed actuary that the amount sought by the company does not exceed the present value of the profits that may be expected to arise in the future on the long term business in force on the valuation date (see paragraph 23).

Definition of profits

8. The estimated annual profit is to be taken as the average annual surplus arising in the long term fund over the last five years up to the date of the most recent available valuation under Section 18 of the Act which has been submitted to the Department prior to or together with the application. For this purpose deficiencies arising are to be treated as negative surpluses. Where valuations have not been made annually, or a company's accounting year has altered, the surplus arising in a period falling partly outside the relevant five year period should be assumed to accrue uniformly over the period in question for the purpose of estimating the profits arising within the five year period.

9. Where a company has been carrying on long term business for less than 5 years, the total profits made during the past 5 years will be taken to be the aggregate of any surpluses that have arisen

during the period in which long term business has been carried on, less any deficiencies that may have arisen during that period. The resulting total must still be divided by five to obtain the estimated annual profit.

Exceptional items

10. Paragraph (3) of Regulation 11 requires substantial items of an exceptional nature to be excluded from the calculation of the estimated annual profit. For this purpose, such items would include profits arising from an exceptional change in the value at which assets are brought into account, where this is not reflected in a similar change in the amount of the liabilities, and profits arising from a change in the overall valuation approach between one year and another. An exceptional loss (ie a reduction of an exceptional nature in the surplus arising) may be excluded from the calculation only to the extent that it can be set against a profit or profits up to the amount of the loss and arising from a similar cause. It is not intended, however, that any adjustment should be made for the effect on surplus of a net strengthening of reserves nor of costs associated with an expansion of business nor of special capital expenditure, such as the purchase of a computer.

Double Counting

11. The inclusion of investment income arising from the assets representing the explicit components of the solvency margin as part of the estimated annual profit for the purpose of determining the future profits implicit item would result in double-counting. If those assets were required to meet the effects of adverse developments, this would automatically result in the cessation of the contribution to profits from the associated investment income. It would clearly not be appropriate for the Secretary of State to issue an Order which would enable a company to meet the solvency margin requirement on the basis of counting both the capital values of the assets and the value of the income flow which they can be expected to generate.

12. The definition in Regulation 11(4) of the estimated annual profit as the surplus arising in the long term fund* ensures that any contribution to surplus arising from transfers from the profit and loss account, including investment income on shareholders' assets, is not included in the estimated annual profit. Thus double-counting should not arise in respect of shareholders' assets. Double-counting may arise, however, in respect of the investment income from the assets representing the explicit components of the solvency margin carried within the long term fund (eg surplus carried forward or investment reserves) but the amount of such investment income is not separately identified in the returns. Where there is reason to suspect that the elimination of any such double-counting would reduce a company's solvency margin to close to or below the required level, or would otherwise be significant, further information will be sought with a view to taking account of this factor in determining the amount of the implicit item in respect of which an Order is made. It is not

* line 15 on Form 58

DTI guidance on future profits implicit items (1984)

necessary for such additional information concerning investment income to be furnished with an application for a Section 68 Order, unless a company believes that any double-counting would fall into one of the categories mentioned.

AVERAGE PERIOD TO RUN

Basis of calculation

13. The average number of years remaining to run on policies should be calculated on the basis of the weighted average of the periods for individual contracts, using as weights the actuarial present value of the benefits payable under the contracts. An early opportunity will be sought to provide for this in the regulations. A separate weighted average should be calculated for each of the various categories of contract and the results combined to obtain the weighted average for the portfolio as a whole. Approximate methods of calculation, expected to give results similar to the full calculation, will be permitted and, in particular, the calculation of an average period to run for a specific category of contract on the basis of the average valuation factor for future benefits derived from Schedule 4 data will be accepted. A company will be required to demonstrate the validity of the method adopted only where an abnormal distribution of the business in force gives grounds for doubt about its accuracy.

14. Calculations will be required only for the main categories of business, accounting for not less than 90% of the mathematical reserves, except where there are grounds for expecting that the exclusion of certain categories of policies under this provision might have a significant effect on the resulting average period to run. Detailed calculations will not be required where a section 68 Order is sought in respect of a low multiple of the annual profits, well within the average period to run for the company.

15. Where, for a particular category of business, a method of valuation is used which does not involve the calculation of the value of future benefits and which is significant for the company in question, the calculation of the average period to run should be used on estimates of the value of future benefits. For non-linked benefits, these estimates would normally be available from the demonstration required under para 7(d) of Schedule 4 that the reserves are not less than those obtained on the basis of a net premium valuation; otherwise special estimates of the value of future benefits may have to be made specifically for the purpose of the application. In the case of regular premium unit linked contracts, where the method of valuation does not involve estimating the value of benefits to be purchased by further premiums, the value of benefits should be taken to be the reserves currently held (unit and non-unit liabilities) together with the present value of the portions of future premiums which are to be invested in units under the terms of the contracts.

Premature termination of contracts

16. Allowance must be made for the premature termination of contracts, based on the actual experience of the office over the preceding five years, and taking into account specific features of

contracts such as options which can be expected to lead to premature termination, eg guaranteed surrender values on income bonds written as long term contracts and option dates on flexible whole - life contracts. The adjustment should be made separately for each of the main categories of business. The use of industry-wide rates of termination will be acceptable where the actuary is satisfied that this will result in sufficient allowance being made having regard to the office's own experience. Methods of calculation which involve a degree of approximation will be permitted.

17. For certain types of contract, where the period left to run is most naturally defined as the term of a fixed maturity or expiry date, the allowance for premature termination will also need to take into account terminations resulting from death.

Overall limit

18. The overall average period left to run calculated as described above must be limited to a maximum of ten years before applying it to the estimated annual profit in order to determine the maximum value of the future profits implicit item.

Definition of period to run

19. The definition of the period to run and the basis of the allowance for early termination must clearly be considered together. For certain types of contracts, eg pension contracts with a range of retirement ages or other options, there is inherent uncertainty about the likely term to run. In such circumstances any estimate for determining the amount of the future profits implicit item for which an Order is sought must be based on prudent assumptions tending, if anything, to underestimate the average period to run.

20. On this basis, suitable definitions of the period to run for the various types of contract for the purpose of the calculations are shown in an Annex to this note. Except for group pension schemes, the definitions are before allowance for premature termination on account of lapse or surrender. Applications based on alternative definitions of the period to run will be considered as long as it can be shown that the definitions used in conjunction with the allowance for premature termination may be expected to result in a conservative estimate of the average period to run.

21. The rationale for the definitions shown will in general be self-evident but some explanation may be appropriate for the standard period to run of ten years suggested for group pension schemes. It is recognised that the operations of group pension schemes normally extend over very long periods. However, the terms on which the business is transacted are often not guaranteed very far ahead and for the more common types of contract there is no financial penalty on the discontinuance of future premiums, which are in any event indeterminate. Having regard to the changes which have occurred in the methods of funding occupational schemes and in the choice of investment media over relatively short periods in the past, it is not considered that there is any basis for determining prudent assumptions in regard to rates of discontinuance of future

DTI guidance on future profits implicit items (1984)

premiums under these schemes. There are also major practical difficulties in determining the amounts and the incidence of payment of future benefits under schemes.

22. In these circumstances, both to ensure a prudent result and on practical grounds, it is considered that for the purpose of determining the weight to be given to group pensions business in determining the average period to run for a company's business as a whole, regard should be had only to the value of benefits secured by past premiums; and that having regard also to the limit of ten years on the overall average period to run, this period should normally be taken, arbitrarily, as the average period to run for all group pensions business, other than for schemes funded by individual regular premium deferred annuity contracts.

<u>Actuary's certificate</u>

23. An application for a Section 68 Order in respect of a future profits implicit item should be supported by a certificate from the appointed actuary stating that the amount sought by the company does not exceed the lower of:

(i) the amount calculated in accordance with Regulation 11 applied on the basis set out in the Guidance Note on Applications for Orders to Count Implicit Items; and

(ii) the present value of the profits that may be expected to arise in the future on the long term business in force on the valuation date.

24. For the purpose of (ii), "profits" is to be defined as the surplus arising in the long term fund attributable to the business in force at the valuation date. To avoid double counting, no account shall be taken of any future surplus arising from assets corresponding to explicit items which have been counted towards the solvency margin such as shareholders funds, surplus carried forward or investment reserves; also regard shall be had to the capitalisation of future profits implicit in any Order in respect of a zillmerising implicit item (see paragraph 27 below).

25. In giving his certificate, the actuary's assessment of future profits under (ii) above should be based on cautious assumptions in regard to the future experience, in many respects similar to those required for the minimum basis for calculating mathematical reserves. However, the retention of the 7½% contingency margin in the rate of interest is not required for this purpose, and credit may be taken on a prudent basis for margins in the future premiums payable under existing contracts. Credit may also be taken where appropriate for future increases in equity dividends and rents on prudent assumptions consistent with the assumptions in regard to future rates of interest and inflation of expenses.

26. Where the Department considers it necessary, information will be sought from the appointed actuary on the assumptions underlying his assessment of future profits for the purpose of his certificate but a statement of the basis need not be included as part of the application for an Order. It is likely, however, that this additional information will be requested in all cases where there

are grounds for suspecting that recurrent profits from the business in force do not account for the major part of the past profits brought into account.

ZILLMERISING

27. Regulation 12 provides for an implicit item to be counted towards the required solvency margin in respect of unzillmerised or only partially zillmerised reserves. The maximum additional amount which may be counted is defined as the amount by which the reserves would have been reduced if they had been zillmerised at a rate equal to the loading for acquisition costs included or allowed for in the premiums, subject to this not exceeding 3.5% of the aggregate of the difference between the mathematical reserves and the relevant capital sums.

28. The reduced mathematical reserves which are implicit when an amount on account of zillmerising is counted towards the solvency margin must still satisfy the requirements of Part VI of the Insurance Companies Regulations 1981. An application for an Order must be supported by a certificate from the appointed actuary that the amount applied for has been calculated in accordance with Regulation 12.

29. An implicit item in respect of zillmerising is not permitted for term assurance or permanent health insurance and will only be applicable in the case of linked contracts where a net premium method of valuation has been used. It is recognised that some modification of the definition in Regulation 12(4)(e) of the relevant capital sum for linked contracts is required and companies wishing to apply for an Order for an implicit item on account of zillmerising for this type of business should seek further guidance from the Department.

HIDDEN RESERVES

30. The provisions for counting hidden reserves as an implicit item towards the solvency margin specifically exclude hidden reserves arising from the overestimation of the mathematical reserves, so that this item can arise only in respect of undervaluation of assets or overestimation of balance sheet liabilities other than mathematical reserves.

31. Undervaluation of assets could occur in principle, where the Regulations do not permit any value to be ascribed to certain categories of assets, or where the value to be taken into account has been limited by the admissibility rules under the Regulations, or where an up to date valuation of investments in property has not been obtained.

32. To allow amounts explicitly excluded under the asset valuation regulations to be counted towards the solvency margin would be tantamount to nullifying the effect of those regulations. It is envisaged that concessions allowing such inadmissible assets will rarely, if ever, be given.

DTI guidance on future profits implicit items (1984)

INFORMATION TO BE FURNISHED

33. An application to the Department for an Order under Section 68 should state clearly the nature and the amounts of the implicit items which a company wishes to count against its required margin of solvency. The application should be accompanied by full supporting information to enable the Department to arrive at a decision on the merits of the case, including where appropriate the certificates of the appointed actuary referred to in paragraphs 23 and 28 above.

34. Applications for an Order in respect of a hidden reserves implicit item will normally be considered only if accompanied by the full Schedule 1, 3 and 4 returns. Applications for a future profits implicit item should be supported by Forms 13, 14, 40, 41, 42, 45, 46, the answers to questions 1 to 10 of Schedule 4 and Forms 55, 56 and 58; for a zillmerisation implicit item only the last four items listed ie those forming part of Schedule 4 will be required.

35. In addition the following information relating to the calculation of the amounts claimed should be supplied:-

Future profits: the profits made in each of the preceding five years and the amounts and nature of any exceptional items left out of account; the method used for calculating the average period to run and the results for each of the main categories of business, both before and after allowing for premature termination (where the calculation has been made in two stages) and the basis on which this allowance has been made.

Zillmerising: the categories of contracts for which an item has been calculated and the percentages of the relevant capital sum in respect of which an adjustment has been made.

Hidden reserves: particulars, with supporting evidence, of the undervaluation of assets or the overvaluation of liabilities (other than mathematical reserves) for which recognition is sought.

Department of Trade and Industry

October 1984

ANNEX

Definitions of the period left to run for various types of contracts for the purpose of Regulation 11(2) of I.C.R. 1981

Whole life assurances.

The expectation of life

Open ended whole-life assurance.

The expectation of life

Endowment assurances and pure endowments.

The period to the fixed maturity date.*

Flexible endowments.

The period to the first date of a guaranteed cash option.*

Temporary assurances.

The period to the expiry date.*

Deferred annuities with cash options.

The period to the vesting date; where the annuity can be taken at any age falling within a prescribed range, the earliest date.*

Deferred annuities without cash options.

The expectation of life for the age attained.

Annuities in payment.

The expectation of life; for temporary annuities, the period to the expiry date.*

Group life schemes.

The unexpired duration of the period for which the premium rates are guaranteed.

Group pension schemes

(i) by individual deferred annuity contracts
as under deferred annuities above.

(ii) by deferred annuities under controlled funding
a period of 10 years.

* In these cases mortality during the term should be covered by the adjustment for the premature termination of contracts.

DTI guidance on future profits implicit items (1984)

(iii) by deposit administration
a period of 10 years

(iv) by managed fund.
a period of 10 years.

Permanent Health Insurance.

For individual policies, the period to the expiry date;* for group contracts, the unexpired duration of the period for which the premium rates are guaranteed.

Capital redemption

The period to the fixed maturity date.

Income and growth bonds

The period to the expected date of surrender.

* In these cases mortality during the term should be covered by the adjustment for the premature termination of contracts.

GOVERNMENT ACTUARY'S DEPARTMENT

INSURANCE SUPERVISORY WORK

GUIDANCE MANUAL

A. INTRODUCTION

A.1 This manual is intended to help staff in C division, in carrying out scrutinies of long term business returns.

A.2 The manual guides the reader through the basic or standard aspects of the scrutiny work. It gives a structure for dealing with matters that are common to all or nearly all scrutinies or which frequently arise. The manual does not remove the need for actuaries to exercise professional judgement and to consider matters not covered by the manual.

A.3 The manual is looseleaf and it is intended that it will be kept up to date, by the provision of amended pages. Anyone becoming aware of errors or omissions is asked to draw them to the attention of the editor for the time being. This edition was revised in April 1992 by [redacted]. [redacted] is the current editor.

GAD	-	Government Actuary's Department
G.N.8.	-	Guidance Note 8 issued by the Institute and Faculty of Actuaries.
The Act	-	Insurance Companies Act 1982 (unless in the context another act is clearly being referred to)
ICR 1981	-	The Insurance Companies Regulations 1981 (SI 1981 No. 1654) as amended by The Insurance Companies (Amendment) Regulations 1985
ICAS 1983	-	The Insurance Companies (Accounts & Statements) Regulations 1983 (SI 1983 No. 1811)
EEC	-	European Economic Community

MAN/B/4.92

C. GENERAL FRAMEWORK OF SUPERVISION

C.1 All companies doing insurance business in the UK are subject to supervision by the DTI. Companies wishing to do business must apply to the DTI for authorisation.

C.2 Companies whose head office is in an EEC country other than the UK are subject to supervision by their own authorities, and DTI supervises only the company's UK business. An exception to this is where the company does reinsurance business only. Such pure reinsurers are not supervised in other EEC countries. If they do business in the UK they are subject to full control by DTI.

C.3 The reason for the exceptional treatment of reinsurers is (briefly) that in continental countries the practice is for reinsurers to deposit reserves with the ceding company, so the insolvency of a reinsurer would have little effect on the ceding company, or its policyholders. In the UK it is more common for reinsurers to hold substantial reserves.

C.4 DTI supervises the whole business of a company which does business both in the UK and overseas, subject to C2 and C3 above and to some special arrangements in individual cases.

MAN/C1-4 / 4.92

C.5 The main object of supervision by DTI is to ensure that a company has at the time of the relevant returns adequate assets to meet its liabilities and solvency margin, the assets and liabilities being assessed in accordance with standards laid down by legislation, and supported by actuarial practice. DTI is also concerned as to whether a company is likely to remain solvent, having regard to its future new business plans and plans for capital injection. On a rather different issue, DTI is concerned to ensure that policyholders' "reasonable expectations" will be met.

C.6 DTI does not have any obligation to regulate the market, or to ensure that companies can operate profitably. The EEC Life Directive prohibits Member States from taking the economic requirements of the market into account when dealing with applications for authorisation.

MAN/C5-6 / 4.92

C.7 The main legislation which enables DTI to try and achieve these objectives is as follows:-

(i) Insurance Companies Act 1982, which was itself a consolidation of earlier legislation.

(ii) The Insurance Companies Regulations 1981 (SI 1981 No. 1654). These are the main regulations under the Act, and came into force on various dates up to 1.10.82.

(iii) The Insurance Companies (Accounts & Statements) Regulations 1983 (SI 1983 No. 1811). These state the information which must be given in the returns and specify the forms to be used.

Regulations such as these cover matters on which the relevant Act enpowers the Secretary of State to make regulations. For completeness, each regulation should be read in conjunction with the section of the Act from which it arises.

ICR 1981 cover matters of action, as distinct from ICAS 1983 which cover matters of report.

The *Financial Services Act 1986* created the supervisory bodies, SIB, LAUTRO, FIMBRA etc and regulated the selling of insurance as well as other financial services. Section 136 of FSA created a new Section 31A in ICA. 1982.

The Policyholders' Protection Act 1975 is occasionally relevant. It sets up a fund, for indemnifying UK policyholders of failed companies. The fund is supported by a levy made from time to time on authorised companies carrying on business.

MAN/C8/4.92

C.9 The Act and the regulations impose a number of obligations on companies.

(i) For Long Term business, an actuary must be appointed, possessing prescribed qualifications. S19 of the Act & Reg. 28 of ICAS 1983.

(ii) Adequate mathematical reserves must be kept. Minimum bases for this purpose for valuation of liabilities and assets are laid down. Regs 37-64 of ICR 1981.

(iii) Assets representing the long term fund must be segregated from other assets. S28 of the Act. S29 is also relevant.

(iv) In addition, a solvency margin must be maintained. S32 of the Act & Regs. 3-13 of ICR 1981.

(v) Extensive returns must be made to DTI to demonstrate compliance with (ii) (iii), and (iv) and for other purposes. S17 & S18 of the Act.

(vi) There are requirements relating to the proportions of surplus distributed to policyholders. S30 of the Act.

(vii) There are numerous other provisions, most of which are of lesser importance as far as GAD is concerned, though they may be of considerable importance to the company or its policyholders.

Under S68 of the Act DTI have the power to direct that some of these obligations are not applied or are modified.

MAN/C9/4.92

C.10 At the discretion of DTI, it can impose other sanctions:

(i) Authorisation will not be granted, or an existing authorisation may be withdrawn if any of the directors or controllers are not "fit and proper". S60 (3) of the Act.

(ii) It can ask for a valuation report in mid-year. S42 of the Act.

(iii) It can require assets to be held in trust. S40 of the Act.

(iv) It can withdraw authorisation to write new business or limit the amount written. S11 of the Act.

(v) As a last resort it can present a petition for the winding up of the company. S54 of the Act.

(vi) DTI's powers in relation to recently authorised companies ("companies under tutellage") are somewhat more extensive than for others. In particular such companies may have to submit quarterly returns. Companies whose controllers have changed also come under this heading.

C.11 No control is exercised over the level of premium rates. In this respect the UK differs sharply from many other countries. Our main concern, where rates are thought to be inadequate, is that adequate reserves are maintained. We are also, of course concerned that the company remains solvent in spite of the new business strain.

MAN/C10-11 /4.92

C.12 The reader should be aware of the EEC Life Directive. Unlike most other EC Directives, the Life Directive does not have direct legislative effect in the UK, but most of its provisions have been incorporated in the Act.

C.13 The various guidance notes issued by the Faculty and Institute do not, yet, have the force of law, and DTI have no powers to require Fellows to comply. Nevertheless it is possible to exert considerable pressure on actuaries to comply (whether Fellows or not), and it is reasonable to regard the guides as a de facto part of the general framework of supervision.

C.14 The Insurance Division of the DTI issued in September 1984 a document entitled

"Guidance Notes on the Preparation of Annual Returns"

This document is too bulky for it to be sensible to reproduce it in this manual, but actuaries who carry out detailed scrutinies should be aware of its contents and may need to refer to it when writing to companies or to the DTI.

MAN/C12-14 /4.92

D. THE FUNCTIONS OF GAD IN CARRYING OUT SCRUTINIES OF LONG TERM BUSINESS

D. 1 GAD advises DTI and the final decision on formal action on behalf of the Secretary of State must always be taken by DTI. However, GAD may initiate enquiries direct to companies (but not to auditors nor, in the first instance, to appointed actuaries). The relationship between GAD and DTI is set out in an agreement between the two departments dated 12 June 1984. The key points of the agreement are covered by these Guidance Notes.

D. 2 GAD is given the major share of the responsibility for the examination of the statutory returns relating to long term business and for pursuing technical questions arising directly therefrom with insurance companies.

D. 3 The primary objectives of each scrutiny are:

(i) to form a view about the solvency position of the company in respect of its long term business and to determine whether, at the date of the return, the company had and whether, in the foreseeable future, it seems likely to continue to have, the margin of solvency required in respect of that business.

(ii) to determine whether the return in respect of long term business appears to comply with relevant statutory requirements (whether arising from legislation, directions, notices of requirements or conditions contained in concessionary orders) or with undertakings given by the company.

MAN/D1-3/4.92

D. 4 In scrutinising the returns of recently authorised companies we should check the results against the new business plan and query any material departures, particularly if any increased strain is possible.

D. 5 Many newly authorised companies will have Requirements to produce quarterly returns. The object of getting these is to spot undesirable trends without waiting for the next annual returns, which may be received up to 15 months later. This should be borne in mind when deciding whether to raise any questions. Compliance failures should be dealt with if there is any danger of the mistake being repeated in the annual returns, or if they are otherwise important.

D. 6 DTI have their own legal and accounting advisers and any opinions we express in these areas should be subject to confirmation by the adviser. There are some matters on which it would be undesirable for us to comment at all, but on other matters our specialised experience may help us to see matters more clearly than these advisers (who may have little experience of life assurance).

D. 7 In our work on individual companies we act as advisers to DTI. We may raise with a company or, with its agreement, its appointed actuary any points on its annual return which we consider require clarification. Any correspondence between us and a company and its advisers and notes of any meetings held with them should be copied to DTI. If we feel some formal action by DTI may be necessary we should write to them explaining the circumstances.

MAN/D4-7/4.92

D. 8 We can say to an actuary through his company that a basis conflicts with Regulations, but in questioning his judgement some tact is necessary. "What are the actuary's reasons for not holding such and such a reserve?" rather than "The actuary must keep a reserve...". Occasionally we can say "As a matter of policy this department considers that ...".

D. 9 If a company's business is straightforward and we have no concerns we should not ask for information which is not required, explicitly or implicitly, by the Regulations, but where there is anything which suggests concern we should not hesitate to ask for further information to be given. If the matter is one the public should know about, particularly where the returns are misleading, we should ask through DTI for an amendment to the returns. A middle course is to ask for an answer by letter and for future returns to be amended.

MAN/D8-9/4.92

D. 10 The progress of each company's Returns through the stages of Scrutiny is recorded as a progress schedule produced on the network computer. This schedule also provides a reminder system for correspondence.

The progress codes are as follows:

1. Returns received from DTI.

2. Forms A1, B and C completed.

3. Initial scrutiny completed.

4. Detailed scrutiny started.

5. Detailed scrutiny letter and report issued.

6. Final report sent to DTI, points in detailed scrutiny letter having been cleared.

7. Returns not due to be received from company (or other special situation).

MAN/D10/4.92

E. INITIAL SCRUTINIES

E.1 The main purpose of the initial scrutiny of returns is to determine whether there is a serious problem in relation to the company. We also want to do sufficient work on the returns to be able to allocate an appropriate priority for the detailed scrutiny.

E.2 We should notify DTI of any obvious points best raised straight away with the company. These generally come into one of two categories. Major matters on which we want an immediate answer and minor matters (such as the absence of information on the appointed actuary's earnings) which are straightforward matters on which there is little point in delaying, once they have been identified.

E.3 Forms A1, A2, B and C give a guide to matters which should be examined at the initial scrutiny stage. A general brief browse through the returns is however also appropriate.

E.4 Most matters should merely be identified (rather than fully investigated) at the initial scrutiny stage, as time spent on these scrutinies should be kept to the minimum consistent with identifying the main aspects.

E.5 The following extract from the agreement between DTI & GAD sets out in detail the points to be covered by initial scrutinies.

ACTIVITIES TO BE CARRIED OUT BY GAD

<u>Initial action on the annual returns by GAD</u>	24	GAD will advise I Division if the annual return of a company has not not been received by GAD within six weeks of the due date (allowing for any extension granted to the company).

MAN/E1-5/ 4.92

25 As soon as possible after the receipt of the annual return of a company from I Division, GAD will carry out an initial scrutiny of the return with a view to advising I Division of any serious solvency or compliance problems in respect of the company's long term business and to determine an order of priority for GAD's main examination of the returns. This will be carried out in accordance with the following paragraphs.

26 GAD will advise I Division immediately if the return suggests that a company has failed to meet the long term business solvency margin requirements or is otherwise in financial difficulty.

27 GAD will examine the directors', actuary's and auditors' certificates to ensure that they have been properly completed in accordance with the regulations in respect of long term business. GAD will advise I Division immediately of any serious cases of non-compliance, which will require amended certificates to be submitted. GAD will draw attention at the same time to any significant qualifications in any of the certificates.

MAN/E5/4.92

28. GAD will make an initial examination of those parts of the return relating to long term business which are not subject to computerisation (Form 43-51 of Schedule 3 and Schedules 4 and 5) and check that they appear to have been properly completed. GAD will advise I Division immediately if it appears that any significant information has not been provided or that there are significant errors in the information which will require revised or additional information to be submitted by the company.

29. GAD will make an initial examination of Form 58 (Valuation result and distribution of surplus) to determine whether it suggests that there has been a breach of Section 30 of the Act (allocation of surplus to with-profits policyholders). GAD will advise I Division immediately if any such breach appears to have occurred.

Classification of companies by priority

30 As a result of their initial scrutiny of the annual returns, including consideration of the actuary's valuation basis, GAD will give each company a priority rating for the purpose of carrying out the main examination of the returns. There will be four categories of priority rating determined in accordance with criteria set out at Annex A.

MAN/E5/4.92

NGS TO BE ADOPTED BY GAD

ANNEX A

RITY		CRITERIA	EXAMINATION PROGRAMME
nt	i)	Company has failed to maintain its required solvency margin (RSM); or	Detailed examination to be carried out within days of receipt of the company's return by GAD.
	ii)	apparent weaknesses in the valuation basis suggest that the RSM might not be covered.	
1 Priority	i)	Company has maintained its RSM but its declared solvency margin is less than 125% of RSM and there is no reason to suppose that significant hidden margins exist; or	Detailed examination to be carried out as soon as possible. Even less urgent companies in this category would normally all be examined within four months of the due date for submission of the returns to I Division.
	ii)	Company appears to have failed to comply with the regulations in material respects.	
dium Priority	i)	Company has a declared solvency margin of between 125% of RSM having regard to the likely level of hidden margins and has no obvious problems of compliance; or	Detailed examination normally to be carried out within ten months of the due date for submission of the returns to I Division.
	ii)	Company has higher solvency margin cover but doubts exist over certain aspects of the returns.	
ow Priority	i)	Company appears to have a solvency margin of at least 200% of RSM having regard to the likely level of hidden margins and has no obvious problems of compliance; or	Detailed examination to be carried out at least once in every three years (see examinations will be carried out within twelve months of the due date for submission of the returns to I Division.
	ii)	Business of company is inherently low risk and solvency margin appears adequately covered.	

E.6 Those companies which have had a detailed scrutiny in the previous year, or the year before that will be rated priority 5 (this is an internal GAD rating and not a DTI rating). A fuller initial scrutiny will be made and DTI notified that no further detailed scrutiny will be made in respect of these returns.

MAN/E6/4.92

F. RECOMMENDED STRUCTURE FOR DETAILED SCRUTINY

F. 1 Each actuary will want to develop his own system. The system described below may however provide a helpful base - in that it has some logic, and covers in general terms the various aspects.

F. 2 Start a "note sheet". Notes will be accumulated on this sheet throughout the detailed scrutiny and used as a basis for the report to DTI and letter to the company. Normally it will be appropriate to put the note sheet on the file after the report and letter have been drafted.

F. 3 Transfer initial scrutiny notes to the note sheet.

F. 4 Look through the file for the past few years and note key points on the note sheet, including matters from the previous year's return which we expect to be treated differently in the current year's return, and points from press cuttings which may be relevant to the scrutiny.

F. 5 Go through the Report & Accounts and returns, making notes on the note sheet of matters that probably need to be raised. It is probably best at this stage not to spend too long investigating particular points. That can come after all the points have been noted. In this way the flow of the job is not interrupted.

F. 6 Compare the current year's returns with the previous year's. This brings out the differences, which may need special consideration. Make notes on the note sheet as necessary.

MAN/F1-6/4.92

F. 7 Add to the note sheet any "standard" points such as "Comment on valuation basis" or "Report on Bonuses to DTI" or "Comment on free reserves", if these matters have not yet found their way to the note sheet.

F. 8 Go through the points on the note sheet, investigating those that need to be investigated, deleting those which on further consideration need no comment to company or DTI, and marking the remainder C, A or D, according to whether they are matters for the company, the actuary or DTI. (This process may reveal further points that need to be noted).

F. 9 Write to the company & DTI, using the items marked C, A or D as a basis, and putting a tick through the letters C, A or D as they are incorporated. This provides a simple check that items have not been omitted.

F. 10 For detailed scrutinies where there are a lot of points to be raised, it may be helpful to write about each point on a separate sheet of paper, and then arrange the sheets in a sensible order. This avoids having to think about the structure of the letter/DTI report, while composing the individual parts.

F. 11 The letter to the company should normally start with a paragraph on the following lines:

> "We have some comments and questions on the returns and would be glad to have your response, to assist us in advising the Department of Trade and Industry. Points .... are matters for the company and the remaining points are matters for the appointed actuary, from whom we would be glad to hear directly, if that would suit both you and him."

MAN/F7-11/4.92

G. RETURNS - GENERAL

G.1 Check or spot check that previous year's column 1 entries are in general reproduced in the current year's column 2 (where there is provision for previous year's figures). DTIGN 6.5.2

G.2 Consider whether any further checking of the points in the initial scrutiny Form A1 is required, as these answers will not have been independently checked.

G.3 1990 and Later Returns

Form A1 will have been annotated to show whether the Directors' Certificate includes the new subparagraph 6(e) "in the case of a company to which Section 31A of the Insurance Companies Act 1982 applies, that the company has fully complied with the requirements of that Section."

As this will apply, almost without exception, to the long term companies scrutinized by GAD, any omission of 6(e) should be reported to DTI.

MAN/G1-3/4.92

H. RETURNS - SCHEDULE 1 OF A & B REGS 1983

Check that there is a note in terms of section 10 (2).

FORM 9 - Statement of Solvency

(This form brings forward a Summary of the most significant figures from elsewhere in the Returns).

Consider ratio of 9.34.1 to 9.41.1 compare with same ratio for previous years. Is there cause for concern? Relate to surplus or deficiency arising (58.15).

In practice only implicit items in respect of future profits are allowed and must be subject to a Section 68 Order. Reference to that Order must be made in the Notes to the Returns. For procedure to approve application for such an order see Section S.

Note allocation between 9.51.1 and 9.52.1. 9.13.1 will show the excess of available assets allocated to general business; this excess may be of a size to give some comfort.

FORM 10 - Statement of Net assets

(Another Summary form).

Compare 10.29.1 minus 10.29.2 with 16.39.1. If unequal look for an explanation (eg increase in share capital or change in amount of inadmissible assets). Otherwise consider asking for a reconciliation.

MAN/H9-10 / 4.92

__FORM 13__ - Analysis of Admissible Assets. There must be a separate Form 13 for the "Other than Long Term" Fund and for each Long Term Fund. (DTIGN 7.6.1)

The detail will give a general indication of whether types of investment are similar to or different from previous year's. If different consider why, and perhaps ask.

Remember that 13.85 = 49.12 and 13.86 reconciles with F.47.

13.94.1 may be of interest. A high figure may indicate scope for increasing admissible assets by sale of inadmissible and purchase of admissibles.

Consider checking Form 13 against Form 45 to ensure that Form 45 entries correspond.

See Section R for guidance on loans.

Net amounts must not be negative (DTIGN 7.1.1)

Check that value of subsidiary insurance companies is in accordance with ICR 40. (DTIGN 7.3.3)

[redacted] has produced a note (see over) indicating the changes that have occurred during 1991. Any marked divergence in the performance of asset value of a particular company is an indication that further investigation is needed.

MAN/H13/4.92

LIFE COMPANY
ASSET PERFORMANCE IN 1991

A. STOCK EXCHANGE SECURITIES
Equities
Equity portfolios should have increased in value by about 15%.

The FT-Actuaries All-Share Index rose 15.06%.
The larger company FTSE-100 Index rose 16.3%.
Diversification overseas should have improved on these capital gains.
Although Germany (up 8.1%, in Sterling terms) and Japan (up 12.3%, thanks to a rise in the Yen) might have slightly inhibited performance, overall Europe Ex.UK rose by 11.7%, while the USA and Australian markets both showed Sterling index gains of over 31%, with Hong Kong up by 49%. (See attached sheet for details.)

Fixed Interest Investments
British Government Fixed Interest stocks rose by about 5%, while other high quality fixed interest stocks climbed further, by up to 10%, as long yields fell.

(**Index-Linked Gilts** showed capital appreciation of only about 2%, although short dated issues rose by up to 10%.)

B. PROPERTY
While Property Company shares fell in value by about 18% during 1991, this poor performance was exacerbated by their gearing and greater involvement in new developments. I would expect to see most direct investment property portfolios written down by between 5% and 15%.

C. MORTGAGE LOANS
This is again likely to be the most problematic investment area. Defaults in interest payments lead on to questions relating to the security of capital. In many cases, provisions should have been set up against both interest arrears and capital values.
A particularly vulnerable area relates to loans to subsidiaries, which are themselves involved in either mortgage lending or property development.

CONCLUSIONS
A standard office (with an investment portfolio split 60% Equity, 25% Fixed Interest, 10% Property and 5% Cash, say), should show capital appreciation of nearly 10%.
However, a company with large property holdings will have done worse, and a company with property lending commitments may have needed to make substantial provisions against capital losses.

NOTE - Expected Prospective Portfolio Yields as at 31.12.1991

Equities:	Between 5% (UK) and 3.5% (if spread overseas)
Fixed Interest Gilts:	Between 10% and 9.5%
Other Fixed Interest:	Between 12% and 11%

MAN/H.13/4.92

MOVEMENT IN FT-ACTUARIES WORLD INDICES OVER 1991

MAN/H.13/4.92

FORM 14 - Long Term business liabilities and margins

(This and Form 13 correspond to the two sides of a Balance Sheet).

Observe whether there is and consider whether there should be a note in terms of instruction 3, i.e. in respect of mismatching (resilience) reserves.

Comment if entries appear odd e.g. if there are nil entries where this seems unlikely to be correct.

Consider whether lines 41 and 42 indicate the possibility of excessively high gearing of investments.

FORM 16 - Statement of Income and Expenditure

(This form constitutes part of the Shareholders Profit and Loss Account).

The Form will not be applicable to Mutual companies.

Check that entries appear reasonable. There should normally be entries in lines 13 and 21. If not consider asking why not. (DTIGN 7.9.3)

Shareholders' investment income should not be put directly into the long term fund. It should appear in line 13 and, to the extent required, be transferred via line 11 to Form 40.

MAN/H14-16 / 4.92

J. RETURNS - SCHEDULE 3 OF A & S REGS 1983

J.1 Check that, where there are sub funds, there is a statement in terms of paragraph 4 (1) and that separate Forms 40,41,42,45 and 46 have been provided in terms of paragraph 9. (DTIGN 11.3 and 11.5)

J.2 Check that, where management services are provided by another company, there is a statement in terms of paragraph 5 (DTIGN 11.11)

J.3 If there is a Form 47 or a Form 48 or both, check that paragraph 10 has been complied with.

J.4 If there are Forms 49 to 51 check that there is a statement in terms of paragraph 11 giving the basis on which the assets have been valued and the amount of unrealised capital gains or losses.

(N.B the references are to paragraphs in SCH 3.)

MAN/J1-4/ 4.92

FORM 40

Comparison of column 1 with column 2 will give a general indication of differences between the year of the returns and the previous year. Consider whether differences are surprising - or otherwise give rise to the need for comment.

Are the entries in column 1 reasonable?

If there are entries in 40.5 and/or 40.11, have particulars been specified?

Is the fund increasing/decreasing/stationary (40.14.1)?

Compare line 40.1 with premium income in form 43 and in forms 55 & 56.

Compare line 40.2 with expected income shown in form 45 for current and previous year, after allowing for income on linked funds.

FORM 41

Compare lines 12 to 15 (column 3) with previous year's figures, and consider whether changes are reasonable - particularly in 41.15.3. Abnormally high expenses are likely to be an indicator of trouble.

Split of expenses between lines 14 and 15 will be on an approximate basis. Watch for possible bias (intentional or otherwise), and consider implications. (DTIGN 11.13).

MAN/J40-41/ 4.92

FORM 42

Note any figures which seem abnormally high, and consider implications.

FORM 43

Compare line 1 with line 12 for the previous year. (Difference in annual premiums may be due to changes in currency values.)

Check that line 12 (with relevant notes) is consistent with Form 55 and 56 entries.

Note high figures for forfeitures and report to DTI.

Note 7 of Schedule 3 to ICAS 1983 requires Group business to be dealt with by a note.

Note high/low new business figures and consider implications for new business strain and long term prospects of office.

FORM 45

Check that yields look reasonable. (A program in Lotus 1-2-3 is available to compare yields in forms 45 & 46 and to check consistency with form 13.)

Check that

45.2.3	equals 46.9.4
45.3.2	equals 46.18.4
45.12.3	is calculated in accordance with Instruction 5.

Consider whether all assets shown as income producing are in fact likely to be income producing; are yields otherwise reasonable?

Yields should be to two decimal places. (DTIGN 11.18)

MAN/J42-45/ 4.92

FORM 46

Consider checking that redemption yield (column 4) looks reasonable having regard to running yield and profit or loss on redemption. The test is crude - but may prompt a request to the company to review calculations. As mentioned in previous paragraph a testing program is available.

Yields should be to two decimal places. (DTIGN 11.18)

FORM 47

Check that valuation prices (column 3) are the same as in Form 57.2.

Compare value of assets with value of liabilities in Form 57 and consider implications of mismatching.

Form 47 should not include units held in excess of the aggregate of units allocated to policyholders (DTIGN 11.19)

FORM 48

Compare value of assets with value of liabilities in Form 57 and consider implications of mismatching.

See DTIGN 11.20.

MAN/ J46-48/ 4.92

FORM 49

Check that net asset values (line 20) are the same also in Form 50 and in Form 51.15.

Check that entries in 49.15 are equal to previous year's 49.15 entries plus this year's 51.10 entries. If not, why not?

Check that types of investment are in accordance with Schedule 4 - paragraph 4 (2) (a).

Consider whether the extent of liquidity of any property funds is satisfactory.

The funds should be set out in the same order by Forms 49, 50 & 51. This is mandatory for Form 49 & Form 51. It would be helpful if Form 50 & Form 57 followed suit.

It can be instructive to trace the progress of a particular fund by comparing Revenue A/cs & Balance Sheets over the previous years.

FORM 50

The layout can be confusing and some companies become confused. The entry in column 7 on page 88 of ICAS 1983 shows the value of units held by Fund B in Fund A. (Held in LEFT by ABOVE may be a helpful way of remembering.)

Check that valuation prices of units are the same as in Form 57.

Form 50 shows assets actually held in respect of units, whilst Form 57 shows the value of the liabilities (ie the assets that should be held). These need not be identical but consider the implications of mismatching.

MAN/J49 - 50/4.92

K. RETURNS - SCHEDULE 4 OF A & S REGS 1983

GENERAL

K.1 Information in Schedule 4 should be consistent with information in Schedules 1 to 3.

K.2 It is implicit in the Regulations that the liabilities should be valued on the basis that no further new business will be written.

K.3 If there are only a few policies left on the books, consider the effect of exceptionally adverse mortality.

K.4 Refunds of commission may be due to a reassurer, if policies lapse. Reserves must provide for this.

K.5 In general, it is not necessary to look at interest, mortality and expenses in watertight compartments. The main point is whether the valuation basis as a whole is adequate. However where weaknesses in one area are offset by strengths in another, we may need to ask questions to establish that the overall result is adequate.

If the valuation rate of interest in an unmodified net premium valuation is reduced, net premiums will increase and premium margins will reduce - thus affecting the implicit expense reserve.

K.6 It is important to establish whether the office is paying tax on interest less expenses or whether it is paying no tax because expenses have exceeded (and still do exceed) interest, and to consider the implications.

MAN/K1-6 /4.92

K.7 It appears that some companies have been misclassifying linked PHI (especially stand-alone Dread Disease) contracts as Class III business, and could thereby improve their I -E position. We should write to each such company to enquire whether the tax position of such policies have been cleared with the Inland Revenue.

K.8 Offices in a gross tax position (expenses not yet offset by interest) sometimes offer attractive terms for single premium business - giving away some of the advantage of the gross position. We need to beware of double counting of gross interest.

K.9 Changes in asset values can arise as a side effect of the Regulations, for example where the value is limited by Regulations 49 and the fund is expanding.

Is investment policy for with profit business (or with profits sub funds) reasonable?

Is investment policy for non-profit business reasonable?

K.10 The experience of many companies of PHI sickness rates on their group business has deteriorated over the 10 to 15 years to 1988. We may need to ask questions particularly if the company is specially exposed to the risk.

As a standard GAD allows the actuary to use a zillmer adjustment for PHI benefits based on the expenses and commission actually loaded for in the premium.

MAN/K7-10/4.92

Section 3 and 4	Have contracts been adequately described? In particular we should ensure that the description of any deposit administration contracts includes a description of any guarantees and surrender options contained in such contracts. We should require a description of the proportion of the fund which can be claimed on surrender, the period over which, and the manner in which, that surrender value may be deferred, and any interest guarantees built into the contract.
Section 4	Check that investments of linked funds are consistent with publicity regarding these funds.
Section 5 (i) (a)	Consider resilience test matching by term, nature and currency matching (DTIGN 12.8) On 13 November 1985 the former Government Actuary wrote an informal letter to all Appointed Actuaries setting out GAD's working rule for a resilience test (mismatching reserve). This benchmark requires that the reserves should be sufficient to absorb the effect of a rise or fall of 3% in the yield on fixed interest securities and a fall of 25% in equity and property prices. In a further letter dated 31 July 1992 the present Government Actuary stated that, whilst in most financial conditions the benchmark was unaltered, an appointed actuary should, in more extreme circumstances, discuss with GAD the possible tapering of these parameters.

MAN/K-Sch4(a)/12.92

DETAIL OF SCHEDULE 4

Section 5 (i) (e) Replies on capital gains tax are sometimes rather brief and unhelpful. The reason for a nil provision should be stated. Ensure that any provision can be identified in F.14, F.55 or F.56. In (i) F.55 or F.56 either implicitly or explicitly or (ii) in F.14 line 51 and Note 3 to F.14 or (iii) in F.14 line 44. In the last case the reserve does not attract solvency margin.

(f) The reserve for maturity guarantees should be calculated in accordance with the basis in the Report of the Maturity Guarantees Working Party (JIA Vol 107 Part II pp 106/7 and 149).

GAD normally adopts as a standard the setting up of a reserve which uses appropriate parameters and which is based on either a risk of ruin of 1 in 1000 with a conservative allowance for future withdrawals, or a risk of ruin of 1 in 100 with no allowance for future withdrawals.

MAN/K-Sch4(b)/4.92

Mortality and Interest

Section 6 6.1 The actuary is required by Regulation 60 of ICR 1981 to take into account, where relevant, both published tables and the company's past experience.

6.2 The actuary should also take account of the following, to the extent they apply

- a small amount of business, giving rise to a greater chance of variation from the average.
- special features, such as the type of client, giving rise perhaps to the likelihood of abnormally heavy or light mortality.
- The relative importance of mortality; for example, mortality would be particularly important in a company writing only non profit term assurance.

6.3 We may need to ask the actuary to state how he justifies a particular basis, perhaps by asking for details of investigations carried out to test it.

6.4 As a working standard we should look for bases not weaker than those shown below, to cover risks other than the AIDS risk.

Table 6.5 covers the latest tables, but if offices use the older tables the standards are as in 6.6.

MAN/K-Sch4(c)/4.92

6.5 - New Tables

Assurances	Males	Females
UK assurances combined	100% AM 80	100% AF 80
UK assurances, non-smoker	85% AM 80	85% AF 80
UK assurances, smoker	125% AM 80	125% AF 80
Ireland Assurances, combined	115% AM 80	115% AF 80
Annuitants		
Immediate annuities	100% PMA 80 C00	100% PFA 80 C00
Pensioners		
Immediate annuities	100% PMA 80 C10	100% PFA 80 C10
Deferred annuities	100% PMA 80 C10 or 80% AM 80	100% PFA 80 C10 or 80% AF 80

Notes

a) For term assurances, the table TM may be substituted for AM 80.

b) The table AM 80 (or TM 80) with up to a 4 year age reduction may be substituted for AF 80.

c) Mortality rates for assurances exclude any addition required for AIDS, or options, guarantees etc.

d) An age rating of 1 year may be regarded as equivalent to a 10% adjustment.

e) Annuitant or pensioner tables may be based on a projected calendar year later than 2000 or 2010 respectively.

f) A margin of 0.1% pa may be taken in the assumed rate of interest for deferred annuities along with 100% AM 80 or AF 80/

MAN/K-Sch4(d)/4.92

6.6 - Old Tables

Assurances	Males	Females
UK assurances combined	85% A67/70	90% FA 75 - 78
UK assurances, non-smoker	70% A67/70	75% FA 75 - 78
UK assurances, smoker	110% A67/70	115% FA 75 - 78
Ireland assurances, combined	100% A67/70	105% FA 75 - 78
Annuitants		
Immediate annuities	a(90) - 1 YR	a(90) - 1 YR
Pensioners		
Immediate annuities	PA(90) - 2 YRS	PA(90) - 2 YRS
Deferred annuities	65% A67/70	70% FA 75 - 78

Notes

a) The table A67/70 with up to a 4 year age reduction may be substituted for FA 75 - 78.

b) Mortality rates for assurances exclude any addition required for AIDS, or options, guarantees etc.

c) For pensions in payment, the table a(90) - ½ yr may be substituted for PA (90) - 2 yrs.

d) An age rating of 1 year may be regarded as equivalent to a 10% adjustment.

e) A margin of 0.2% pa may be taken in the assumed rate of interest for deferred annuities along with 100% A67/70 or FA 75 -78 mortality.

MAN/K-Sch4(e)/4.92

6.7 AIDS

The latest letter regarding AIDS was sent by the Government Actuary to appointed actuaries on 7 December 1989. The last paragraph is an attempted compromise to meet DTI's view that they would prefer GAD to recommend the use of Basis R (adjusted for post-2000 deaths for heterosexual spread) as the insured mortality basis. GAD's view however is that Basis R is a population mortality basis, and actuaries are entitled, if they can justify it, to use a modification of R for their insured experience.

6.8 In carrying out scrutinies, particular attention in respect of AIDS should be paid to:

- guaranteed insurability options
- overseas business
- permanent health contracts
- any other special circumstances

6.9 INTEREST

Check whether the interest rates are supportable by the Form 45 & 46 yields and comply with Regulation 59. In doubtful cases it may be necessary to ask for a "matching rectangle".

MAN/K-Sch4(f)/4.92

Section 7 (b) Consider adequacy of expense provision.

Points to bear in mind include the following.

i) Continuation of the Form 41.15 expenses, excluding exceptional items, should where appropriate be provided for in the valuation, with an allowance for inflation. Renewal commission should also be allowed for in this way, where appropriate.

ii) Companies should ensure their expense reserves are sufficient to allow for the running off of the existing business as a closed fund, with a further "over-run" allowance to allow for the time lag before the organisation can be run down to that appropriate to running off a closed fund.

(iii) If we are doubtful about the adequacy of the expense provision we should ask the actuary to explain his rationale, having regard to current expenses for existing business and an appropriate allowance for inflation.

(c) & (d) Check whether the actuary has given details of the net premium valuation (including interest and mortality bases) which he has used to test a non-net premium basis.

Section 8 (a) Check that basis for non-unit reserves meets GAD criteria, currently a 2% real rate of return, and ask the actuary what would be the effect on the reserves of assuming an 8% rate of inflation for expenses with a 10% rate of growth in units, before tax etc.

(b) Consider need for overrun expense reserves

MAN/K-Sch4(g)/4.92

Section 9 — The answer indicates whether a currency mismatching reserve should have been considered.

Section 10 — Check that details have been given as required ie that (2)(a) to (g) have been answered. Consider the appropriateness of the size of the retention limit, especially for smaller and new offices.

Check (2)(a) whether any reinsurers are not authorised to carry on insurance business in the UK. Consider whether the size of reassurance with these companies gives cause for concern, and if necessary query with Actuary and/or report to DTI.

On (2)(e) check whether deposits back have been treated as long term liabilities in terms of Regulation 50 of ICR 1981 as amended by paragraph 13 of I.C. (A) Regs 1985. If there is doubt ask.

Beware of reassurance on a different basis from the main valuation basis, thereby creating an asset.

Section 11 — Check this through, if there is a with profit sub-fund.

Section 13 to 16 — Draw DTI's attention to changes in bonus rates, compared to those of the previous year (or at previous declarations).

MAN/K-Sch4(h)/4.92

FORM 56

Check whether the unit liability (column 11) agrees with the Form 57.4 total.

Consider commenting on any negative total non-unit mortality and expense liability. It may be sensible to ask whether the net reserve for each policy is at least equal to the surrender value. Also one may want to know which liability the asset (negative liability) matches.

FORM 58

Check - whether lines 10, 16 and 26 are equal

- whether line 11 equals the previous year's line 25

- whether any entries in lines 3, 4, 5, 12, 13, 14 and 23 are positive, as they should be (see Instruction 3).

- consistency with Forms 14 and 40.

- the relationship between the percentage in line 27 and the percentage in line 28, and consider section 30 of the 1982 Act. (DTIGN 12.24). Section 30 limits by ½%p.a the amount by which the with profits policyholder's share of distributed surplus can be reduced.

Separate Forms 58 are required for sub funds (DTIGN 12.23).

FORM 60

It may be necessary to ask which class III contracts appear in each of the 4% 1% and nil columns, to ensure that this matter has been dealt with correctly.

If there is no upper limit to the charges that can be made in relation to internal linked fund contracts, this should be stated in answers to Schedule 4. para 4 (DTIGN 12.5)

MAN/K56-60/4.92

FORM 60 - MINIMUM GUARANTEE FUND

The amount of the Minimum Guarantee Fund is 800,000 ECUs for a proprietary company and 600,000 ECUs for a mutual company, and half these amounts for a UK branch of an overseas company. The ECU is defined in Council Reg (EEC) NO 3180/78 of 18/12/78 see GAD File 6629/1 ref 18.

The rate of ECU to £ applies for 31st December one year to 30th December following year.

Effective period of Rate, inclusive	Rate £ per 100 ECU	Proprietary Company 800,000 ECUs	Mutual Company 600,000 ECUs
31.12.83 - 30.12.84	£57.4723	£459,778	£344,834
31.12.84 - 30.12.85	£60.4059	£483.247	£362,435
31.12.85 - 30.12.86	£58.5670	£468,536	£351,402
31.12.86 - 30.12.87	£72.0932	£576,746	£432,559
31.12.87 - 30.12.88	£69.2616	£554,093	£415,570
31.12.88 - 30.12.89	£65.8170	£526,536	£394,902
31.12.89 - 30.12.90	£70.6719	£565,375	£424,031
31.12.90 - 30.12.91	£69.7265	£557,812	£418,359
31.12.91 - 30.12.92	£70.2425	£561,940	£421,455
31.12.92 - 30.12.93	£81.5887	£652,710	£489,532
31.12.93 - 30.12.94	£76.7145	£613,716	£460,287
31.12.94 - 30.12.95	£78.1528	£625,222	£468,917
31.12.95 - 30.12.96	£84.1142	£672,914	£504,685
31.12.96 - 30.12.97	£78.2167	£625,733	£469,300

L. RETURNS - SCHEDULE 5

L.1 GAD normally refers to Schedule 5 to check out specific points, though a general browse through the Schedule should be made whenever it is produced.

L. 2 There is no specific requirement to comment to DTI on Schedule 5, but any errors or omissionS that come to light should be reported.

MAN/L1-2/4.92

L. RETURNS - SCHEDULE 5

L.1 GAD normally refers to Schedule 5 to check out specific points, though a general browse through the Schedule should be made whenever it is produced.

L. 2 There is no specific requirement to comment to DTI on Schedule 5, but any errors or omissionS that come to light should be reported.

MAN/L1-2/4.92

Detailed Scrutiny Report

The following extract from the agreement with DTI sets out the points that must be covered in the report to DTI.

"37. Upon completion of their detailed examination of the annual return of an insurance company GAD will send I Division a report on any significant matters which have emerged as a result of the examination drawing attention to matters of importance being raised with the company. When such matters have been clarified or when GAD feels that some form of formal action is required GAD will further advise I Division.

38. Each report shall include the following information as appropriate:

i) A general description of any identifiable major developments or changes during the period covered by the report and relating to the company's long term business. This should include any significant changes in the philosophy or business approach of the company, possibly resulting from a change in ownership or control or in the attitude of the company's shareholders; any significant change in the volume, type or mix of the long term business written by the company; and any internal or external factors which may have had a special effect on the company.

MAN/M37-38(a)/4.92

ii) A general commentary on the present and prospective financial position of the company. GAD will draw attention to any major weaknesses in the basis of valuation adopted by the appointed actuary in his (Schedule 4) Valuation Report and to any significant changes (including changes in reinsurance arrangements) in the company's financial affairs since the time of GAD's previous report.

iii) If the company provides quarterly returns, attention shall be drawn to any significant differences between the figures in the annual return and those in the corresponding quarterly return and to any significant developments since the date of the last annual return which have been revealed by quarterly returns.

iv) If the company has provided a business plan, attention should be drawn to any significant deviations from the plan.

v) Details of any breaches or possible breaches of statutory requirements (however arising) (including sections 28-31 of the Act) or of undertakings given by the company revealed as a result of the examination of the company's return.

MAN/M38(b)/04.92

vi) Details of any significant errors or omissions in the return (including the directors' actuary's and auditor's certificates) or of any other significant instances of non-compliance noted during the course of the examination. If the company has already rectified the position (as the result, for example, of action taken under paragraph 18) this shall be stated in the report. In other cases, the report shall explain whether or not GAD is drawing the company's attention to the defects.

vii) Details of any qualifications contained in any certificate given by the directors, actuary or auditors. If amended certificates have already been provided by the company this shall be stated in the report. In other cases, the report shall state whether GAD is raising the matter with the company.

viii) An indication if the lapse experience of the company appears to be high for the type of business and whether information available in the return suggests that it may be deteriorating.

x) Reference to any correspondence in respect of the examination between GAD and the company or its actuary. A copy shold be appended to the report if it has not already been provided to I Division."

MAN/M38(c)/4.92

N. FRIENDLY SOCIETIES

N. 1 GAD performs a similar task for the Registry of Friendly Societies, as it does for the DTI, in respect of returns from Directive Friendly Societies i.e those societies whose size and classes of business make them comparable to life assurance companies.

N. 2 The Friendly Societies Act and Regulations impose broadly similar requirements in respect of the Annual Returns , but use different form numbers.

N. 3 Procedure within GAD is similar to that for DTI Returns, i.e. initial scrutinies followed by detailed Scrutinies within the time limits set by the assigned priority code. The major differences are that

(i) there is no formal agreement between GAD and RFS.

(ii) all correspondence is with RFS who then write to the Friendly Societies, unless it has been specially agreed that we write direct to the Society or its Actuary.

MAN/N1-3/4.92

O. QUARTERLY RETURNS

O. 1 New companies and others under special requirements have to submit quarterly returns. These usually consist of Forms 10, 13, 14, 40, 41, 42, summaries of new business, surrenders, lapses, forfeitures etc and where applicable Forms 49, 50 & 51 but there will not be an actuarial valuation.

O. 2 The objective of quarterly returns is to monitor the progress of the company within a time span that enables DTI to take action before too late. Usually a company producing quarterly returns will have recently submitted a business plan.

O. 3 Key points to look at and compare with business plans:-

Compliance with requirements imposed.
Maintenance of Solvency
Level of new premium income
Level of expenses
Level of withdrawals
Changes in assets
Any sudden movement in any factors

O. 4 A record of the key financial figures for each quarter is kept in the "Floating Cover" of the departmental company file.

O. 5 Quarterly Returns are unaudited. A comparison between the last quarterly returns of the year and the full DTI return sometimes reveals marked differences which may be as a result of the audit.

MAN/01-5/4.92

P. OTHER REFERENCES, CORRESPONDENCE & MEETINGS

P. 1 New companies and others that for some reason have had requirements imposed upon are required to submit details of new products issued and reinsurance or other agreements entered into as well as quarterly returns. Also DTI might for other reasons refer other literature or documents received from a company for comments by GAD.

New Products

P. 2 In commenting to DTI on new products GAD should make it clear that the comments are from a supervisory point of view only. The point behind this is that GAD is NOT commenting on, for example, legal implications or appropriateness in relation to LAUTRO rules. It is suggested that we use a sentence such as

"We do not consider there are any comments that your Department needs to make to the company about the ...... *contract in the context of the company's* financial resources."

To indicate that our concern has only been to examine the product in the context of the company's new business plan and its capital requirements.

MAN/P1-2/4.92

P. 3 **Reinsurance Agreements** - points to consider:-

If the agreement is not with a company that is authorised to transact business within the U.K, do we know enough about it? Is it commercially sound? It may be necessary for DTI to write to the authority that supervises ~~to~~ the reinsurer's home country to obtain more information.

Does the agreement give appropriate cover? Too much? Too little?

Are the arrangements (eg commission and other payments) on a fair commercial basis?

P. 4 **Correspondence**

All correspondence received directly from a company should be copied to DTI, as should all letters sent by GAD. A record of meetings held with the Actuary or other company representative should be placed on the file and copied to DTI.

P. 5 **Meetings with Actuaries**

The Government Actuary should be sent a copy of the notes of any meeting at which an Appointed Actuary and a member of GAD is present. The purpose is to help the GA to keep in touch with matters affecting appointed actuaries.

MAN/P3-5/4.92

Q. MANAGEMENT AGREEMENTS

Q. 1 A company may operate on the basis of a management agreement with another company in the group, under which that other company services the business either partly or fully.

Q. 2 The main point from the supervisory point of view is to ensure that the charge for the services is based on actual costs, and is not such as to distort the true position. It is particularly important that the charge does not effectively milk the long term fund.

Q. 3 DTI normally expects the following additional points to be observed and, where appropriate, to be specifically covered in the management agreement:

3.1 the management company and its employees recognise the requirements which the Secretary of State has imposed and can impose on the insurance company and will observe such requirements in carrying out the duties of a manager of the insurance company;

3.2 the insurance company should have all books, papers and records of its business handed over to it on termination of the agreement without further payment (no penalty clauses); computer software should be made available to the insurance company on termination of the agreement;

3.3 there should be an adequate termination period (say six months) to allow the insurance company time to obtain suitable alternative management;

MAN/Q1-3/4.92

3.4 there should be an obligation that all books, papers and records relating to the business of the insurance company will be made available to any duly authorised officers of the Department of Trade and Industry on demand;

3.5 a majority of the Directors of the Board of the insurance company should be independent of the management company and should have adequate insurance experience;

3.6 the insurance company should reserve the right to determine the terms for acceptance of risks and meeting of claims; the Directors and Actuary who are independent of the management company should determine the basis for calculating the value of the units for linked business;

3.7 an annual budget should be prepared for total cost of management expenses in operating the business; the management agreement should specify that without the agreement of the insurance company the budget would not be exceeded by more than, say, 10%; the insurance company should be notified of any matters which might cause it to alter or consider altering its objectives, budgets, plans or instructions to the management company.

MAN/Q3/4.92

Q. 4 Particular care should be taken to examine whether with profit funds (including with profit sub-funds) are being treated fairly, where a management services agreement (or similar informal arrangement) is in force. Similarly, if there are linked contracts in respect of which charges can be varied to reflect expenses, it is important that the charges reflect the true running expenses.

MAN/Q4/4.92

R. LOANS

R. 1 Loans and Debts due to long-term fund

In carrying out the detailed scrutiny of a company's returns, one item that is worthwhile examining is the level of any unsecured loans, especially loans to individuals.

The nature of the various loans can be assessed roughly by a comparison of Forms 13 and 45.

The various debts and loans are ascribed to the relevant line in each form by looking at the nature of the loan and matching this against the first appropriate description from the following list taking each item in descending order.

Forms 13

Lines 51, 52, 53, 54	Insurance debts in respect of premium income etc.
Lines 30, 32, 34	Debts due from dependants
Line 41	Loans secured on policies
Lines 64, 66	Debts due from individuals
Lines 61, 62	Debts due from companies and other bodies that are fully secured on land
Lines 63, 65	Debts due from companies and other bodies that are not fully secured on land

Form 45

Lines 8, 9	Debts secured on land
Lines 10, 11	All other debts and loans etc.

MAN/R1/4.92

This will mean in particular that debts due from individuals (other than policy loans or outstanding premiums etc.) will be recorded on lines 64 and 66 of Form 13 whether or not secured on land. However, these same loans will be divided on Form 45 (as indicated by the instruction to Form 45) to show loans to individuals that are secured on land within lines 8 and 9 of Form 45, and other loans to individuals within lines 10 and 11 of Form 45.

The size of the loans to individuals that are secured on land should then be determinable by looking at

(A) =	F.45.8.1 - F.13.61.1	for loans due after more than 12 months
(B) =	F.45.9.1 - F.13.62.1	for loans due within 12 months

Conversely, the size of the loans to individuals that are not secured on land would equal

(C) =	F.13.64.1 - (A)	for loans due after more than 12 months
(D) =	F.13.66.1 - (B)	for loans due within 12 months

Where the amounts of (D) and more especially (C) are significant, it would be appropriate to query the rationale for these unsecured loans to individuals when writing to the company.

Similarly, it may be necessary to query any sizeable amounts due from companies after 12 months shown on line 63 of Form 13 in respect of debts that due not appear to be fully secured. Further information about such loans may though be available in the first instance from the notes to the Shareholder Company Act Accounts.

MAN/R1/4.92

R. 2 Loans with Companies

DTI take the view that it is inappropriate for one part of a company to take credit in the returns for a loan from another part of the company. For example the company should not take credit in the long term fund for a loan from the shareholders' fund. The point has in the past caused some difficulties between some large companies and DTI. GAD should normally confine its activities to drawing the matter to the company's and DTI's attention and leave DTI to argue the matter.

MAN/R2/4.92

8. IMPLICIT ITEMS

The following is a copy of the letter dated 5 October 1984 issued by the Department of Trade and Industry, and of the Guidance Notes referred to in that letter.

MAN/S/4.92

DEPARTMENT OF TRADE AND INDUSTRY
SANCTUARY BUILDINGS
16 – 20 GREAT SMITH STREET
LONDON SW1P 3DB
Telephone (Direct dialling) 01-215 5910
GTN 215
(Switchboard) 01-215 7877

5 October 1984

Dear Sir

IMPLICIT ITEMS UNDER REGULATIONS 10 TO 13 OF THE INSURANCE COMPANIES REGULATIONS 1981

I enclose a Guidance Note which sets out the procedures to be followed in making applications for orders in respect of implicit items under the above regulations in respect of long term business. The Guidance Note has been prepared after consultation with the insurance associations and with the actuarial profession.

I would draw your attention particularly to paragraphs 3-6 of the guidance note regarding the timing of applications. We expect requests for section 68 orders in respect of the future profits implicit item will normally be made at the same time as the annual returns are submitted and the order will then apply for the next twelve months (or in practice fifteen months) until the next order is issued. If you wish to make an application in respect of the current financial year, however, you should do so as soon as possible based on the results of the latest submitted returns.

Orders in respect of the zillmerising implicit item will only be made in relation to the position shown in a particular set of returns. Applications for such orders should be received by us not later than four months after the end of the relevant financial year and accompanied by a full set of draft returns, with statements by the auditors and the appointed actuary that they are satisfied with those parts of the return for which they are responsible.

I am enclosing one additional copy of the Guidance Note for the information of your appointed actuary.

Yours faithfully

[redacted]

enc.

MAN/S/2/ 4

GUIDANCE NOTE ON APPLICATIONS FOR ORDERS TO COUNT IMPLICIT ITEMS UNDER REGULATIONS 10 TO 13 OF THE INSURANCE COMPANIES REGULATIONS 1981 IN RESPECT OF LONG TERM BUSINESS

INTRODUCTION

1. Article 18.3 of the EC Life Directive provides for three kinds of implicit items, namely "future profits", "zillmerising" and "hidden reserves", to be counted within certain limits towards meeting a company's required margin of solvency in respect of its long term business, at the discretion of the head office supervisor. Effect is given to this in Regulations 11 to 13 of the Insurance Companies Regulations 1981. However, the Regulations define the maxima which can be taken into account and Regulation 10(4) provides that the implicit items shall have no value except in pursuance of an Order under what is now section 68 of the Insurance Companies Act 1982 ("the Act").

2. This Guidance Note sets out the procedures to be followed and the form of calculations and data to be submitted by companies in making applications for orders in respect of long term business. Orders in respect of future profits and zillmerising will be readily available, provided that the relevant requirements set out in this Guidance Note have been satisfied. Orders in respect of hidden reserves will only exceptionally be given.

TIMING

3. Ideally Orders relating to the position at an accounting date would in all cases be issued in time to be brought into account in the statement of solvency forming part of the returns relating to that date. Problems of timing, however, are likely to make it difficult to achieve this aim in practice. The information that will be required to enable an application to be considered, set out in detail below, will in most cases constitute a major part of the information required in the annual returns. Some companies may have difficulty in furnishing this information, certified by the auditors or appointed actuary as appropriate, far in advance of the due date for the submission of the returns. A further practical consideration of particular significance for the many companies with a 31 December accounting date, is that the resources available to the Department and its actuarial advisers will not enable a large number of applications to be processed over a short period.

4. An implicit item in respect of zillmerising or hidden reserves must be closely related to the basis on which liabilities or assets have been valued; also in the case of hidden reserves, as explained below, the granting of an Order will be dependent on the overall solvency position of the company. Orders in respect of these implicit items will, therefore, only be made in relation to the position shown in a particular set of returns and it will be essential for companies to submit applications to the Department well in advance of the latest date for the submission of the relevant returns.

5. The future profits implicit item is calculated on the basis of the average profits over a five year period and it is less important that an Order reflecting the position at the latest

accounting date should be available at the time that the returns are submitted. In view of the practical considerations referred to above, it will be acceptable for returns to be submitted which demonstrate cover for the required solvency margin on the basis of a current Order in respect of a future profits implicit item issued during the course of the preceding 12 months on the basis of information contained in the previous set of returns. All such returns, however, must be accompanied by an application, certified by the appointed actuary, for a further Order in respect of a future profits implicit item for an amount not less than the amount for which credit has been taken in the returns.

6 Orders cannot be back-dated and may be withdrawn at any time eg on the issue of a new Order based on a further year's returns or where there are grounds for doubt about whether the amount in respect of which an Order has been given can still be justified, having regard to changes in the company's position or as a result of queries arising on the detailed scrutiny of the company's returns.

FUTURE PROFITS

Overriding Limit

7. The maximum amount of the implicit item relating to future profits is determined in Regulation 11 as 50% of the product of the estimated annual profit and of the average period (not exceeding 10 years) to run on the policies in the portfolio. In determining the amount within this limit in respect of which an Order should be made, the Department will wish to be satisfied that the amount does not exceed the value of the margins in the premiums and reserves for the existing business which would in reality be available to meet the effects of adverse contingencies which might arise in the future. The Department will require any application for a section 68 Order in respect of this item to be supported by a certificate from the appointed actuary that the amount sought by the company does not exceed the present value of the profits that may be expected to arise in the future on the long term business in force on the valuation date (see paragraph 23).

Definition of profits

8. The estimated annual profit is to be taken as the average annual surplus arising in the long term fund over the last five years up to the date of the most recent available valuation under Section 18 of the Act which has been submitted to the Department prior to or together with the application. For this purpose deficiencies arising are to be treated as negative surpluses. Where valuations have not been made annually, or a company's accounting year has altered, the surplus arising in a period falling partly outside the relevant five year period should be assumed to accrue uniformly over the period in question for the purpose of estimating the profits arising within the five year period.

9. Where a company has been carrying on long term business for less than 5 years, the total profits made during the past 5 years will be taken to be the aggregate of any surpluses that have arisen

MON/[illegible]

during the period in which long term business has been carried on, less any deficiencies that may have arisen during that period. The resulting total must still be divided by five to obtain the estimated annual profit.

Exceptional items

10. Paragraph (3) of Regulation 11 requires substantial items of an exceptional nature to be excluded from the calculation of the estimated annual profit. For this purpose, such items would include profits arising from an exceptional change in the value at which assets are brought into account, where this is not reflected in a similar change in the amount of the liabilities, and profits arising from a change in the overall valuation approach between one year and another. An exceptional loss (ie a reduction of an exceptional nature in the surplus arising) may be excluded from the calculation only to the extent that it can be set against a profit or profits up to the amount of the loss and arising from a similar cause. It is not intended, however, that any adjustment should be made for the effect on surplus of a net strengthening of reserves nor of costs associated with an expansion of business nor of special capital expenditure, such as the purchase of a computer.

Double Counting

11. The inclusion of investment income arising from the assets representing the explicit components of the solvency margin as part of the estimated annual profit for the purpose of determining the future profits implicit item would result in double-counting. If those assets were required to meet the effects of adverse developments, this would automatically result in the cessation of the contribution to profits from the associated investment income. It would clearly not be appropriate for the Secretary of State to issue an Order which would enable a company to meet the solvency margin requirement on the basis of counting both the capital values of the assets and the value of the income flow which they can be expected to generate.

12. The definition in Regulation 11(4) of the estimated annual profit as the surplus arising in the long term fund* ensures that any contribution to surplus arising from transfers from the profit and loss account, including investment income on shareholders' assets, is not included in the estimated annual profit. Thus double-counting should not arise in respect of shareholders' assets. Double-counting may arise, however, in respect of the investment income from the assets representing the explicit components of the solvency margin carried within the long term fund (eg surplus carried forward or investment reserves) but the amount of such investment income is not separately identified in the returns. Where there is reason to suspect that the elimination of any such double-counting would reduce a company's solvency margin to close to or below the required level, or would otherwise be significant, further information will be sought with a view to taking account of this factor in determining the amount of the implicit item in respect of which an Order is made. It is not

* line 15 on Form 58

MAN/SS /6 38

necessary for such additional information concerning investment income to be furnished with an application for a Section 68 Order, unless a company believes that any double-counting would fall into one of the categories mentioned.

AVERAGE PERIOD TO RUN

Basis of calculation

13. The average number of years remaining to run on policies should be calculated on the basis of the weighted average of the periods for individual contracts, using as weights the actuarial present value of the benefits payable under the contracts. An early opportunity will be sought to provide for this in the regulations. A separate weighted average should be calculated for each of the various categories of contract and the results combined to obtain the weighted average for the portfolio as a whole. Approximate methods of calculation, expected to give results similar to the full calculation, will be permitted and, in particular, the calculation of an average period to run for a specific category of contract on the basis of the average valuation factor for future benefits derived from Schedule 4 data will be accepted. A company will be required to demonstrate the validity of the method adopted only where an abnormal distribution of the business in force gives grounds for doubt about its accuracy.

14. Calculations will be required only for the main categories of business, accounting for not less than 90% of the mathematical reserves, except where there are grounds for expecting that the exclusion of certain categories of policies under this provision might have a significant effect on the resulting average period to run. Detailed calculations will not be required where a section 68 Order is sought in respect of a low multiple of the annual profits, well within the average period to run for the company.

15. Where, for a particular category of business, a method of valuation is used which does not involve the calculation of the value of future benefits and which is significant for the company in question, the calculation of the average period to run should be used on estimates of the value of future benefits. For non-linked benefits, these estimates would normally be available from the demonstration required under para 7(d) of Schedule 4 that the reserves are not less than those obtained on the basis of a net premium valuation; otherwise special estimates of the value of future benefits may have to be made specifically for the purpose of the application. In the case of regular premium unit linked contracts, where the method of valuation does not involve estimating the value of benefits to be purchased by further premiums, the value of benefits should be taken to be the reserves currently held (unit and non-unit liabilities) together with the present value of the portions of future premiums which are to be invested in units under the terms of the contracts.

Premature termination of contracts

16. Allowance must be made for the premature termination of contracts, based on the actual experience of the office over the preceding five years, and taking into account specific features of

contracts such as options which can be expected to lead to premature termination, eg guaranteed surrender values on income bonds written as long term contracts and option dates on flexible whole - life contracts. The adjustment should be made separately for each of the main categories of business. The use of industry-wide rates of termination will be acceptable where the actuary is satisfied that this will result in sufficient allowance being made having regard to the office's own experience. Methods of calculation which involve a degree of approximation will be permitted.

17. For certain types of contract, where the period left to run is most naturally defined as the term of a fixed maturity or expiry date, the allowance for premature termination will also need to take into account terminations resulting from death.

Overall limit

18. The overall average period left to run calculated as described above must be limited to a maximum of ten years before applying it to the estimated annual profit in order to determine the maximum value of the future profits implicit item.

Definition of period to run

19. The definition of the period to run and the basis of the allowance for early termination must clearly be considered together. For certain types of contracts, eg pension contracts with a range of retirement ages or other options, there is inherent uncertainty about the likely term to run. In such circumstances any estimate for determining the amount of the future profits implicit item for which an Order is sought must be based on prudent assumptions tending, if anything, to underestimate the average period to run.

20. On this basis, suitable definitions of the period to run for the various types of contract for the purpose of the calculations are shown in an Annex to this note. Except for group pension schemes, the definitions are before allowance for premature termination on account of lapse or surrender. Applications based on alternative definitions of the period to run will be considered as long as it can be shown that the definitions used in conjunction with the allowance for premature termination may be expected to result in a conservative estimate of the average period to run.

21. The rationale for the definitions shown will in general be self-evident but some explanation may be appropriate for the standard period to run of ten years suggested for group pension schemes. It is recognised that the operations of group pension schemes normally extend over very long periods. However, the terms on which the business is transacted are often not guaranteed very far ahead and for the more common types of contract there is no financial penalty on the discontinuance of future premiums, which are in any event indeterminate. Having regard to the changes which have occurred in the methods of funding occupational schemes and in the choice of investment media over relatively short periods in the past, it is not considered that there is any basis for determining prudent assumptions in regard to rates of discontinuance of future

MPN 1/57/1/22

premiums under these schemes. There are also major practical difficulties in determining the amounts and the incidence of payment of future benefits under schemes.

22. In these circumstances, both to ensure a prudent result and on practical grounds, it is considered that for the purpose of determining the weight to be given to group pensions business in determining the average period to run for a company's business as a whole, regard should be had only to the value of benefits secured by past premiums; and that having regard also to the limit of ten years on the overall average period to run, this period should normally be taken, arbitrarily, as the average period to run for all group pensions business, other than for schemes funded by individual regular premium deferred annuity contracts.

<u>Actuary's certificate</u>

23. An application for a Section 68 Order in respect of a future profits implicit item should be supported by a certificate from the appointed actuary stating that the amount sought by the company does not exceed the lower of:

(i) the amount calculated in accordance with Regulation 11 applied on the basis set out in the Guidance Note on Applications for Orders to Count Implicit Items; and

(ii) the present value of the profits that may be expected to arise in the future on the long term business in force on the valuation date.

24. For the purpose of (ii), "profits" is to be defined as the surplus arising in the long term fund attributable to the business in force at the valuation date. To avoid double counting, no account shall be taken of any future surplus arising from assets corresponding to explicit items which have been counted towards the solvency margin such as shareholders funds, surplus carried forward or investment reserves; also regard shall be had to the capitalisation of future profits implicit in any Order in respect of a zillmerising implicit item (see paragraph 27 below).

25. In giving his certificate, the actuary's assessment of future profits under (ii) above should be based on cautious assumptions in regard to the future experience, <u>in many respects similar to those required for the minimum basis for calculating mathematical reserves</u>. However, the retention of the 7½% contingency margin in the rate of interest is not required for this purpose, and credit may be taken on a prudent basis for margins in the future premiums payable under existing contracts. Credit may also be taken where appropriate for future increases in equity dividends and rents on prudent assumptions consistent with the assumptions in regard to future rates of interest and inflation of expenses.

26. Where the Department considers it necessary, information will be sought from the appointed actuary on the assumptions underlying his assessment of future profits for the purpose of his certificate but a statement of the basis need not be included as part of the application for an Order. It is likely, however, that this additional information will be requested in all cases where there

MDN 158 / 6 28

are grounds for suspecting that recurrent profits from the busine in force do not account for the major part of the past profits brought into account.

ZILLMERISING

27. Regulation 12 provides for an implicit item to be counted towards the required solvency margin in respect of unzillmerised c only partially zillmerised reserves. The maximum additional amour which may be counted is defined as the amount by which the reserve would have been reduced if they had been zillmerised at a rate equal to the loading for acquisition costs included or allowed for in the premiums, subject to this not exceeding 3.5% of the aggregate of the difference between the mathematical reserves and the relevant capital sums.

28. The reduced mathematical reserves which are implicit when an amount on account of zillmerising is counted towards the solvency margin must still satisfy the requirements of Part VI of the Insurance Companies Regulations 1981. An application for an Order must be supported by a certificate from the appointed actuary that the amount applied for has been calculated in accordance with Regulation 12.

29. An implicit item in respect of zillmerising is not permitted for term assurance or permanent health insurance and will only be applicable in the case of linked contracts where a net premium method of valuation has been used. It is recognised that some modification of the definition in Regulation 12(4)(e) of the relevant capital sum for linked contracts is required and companies wishing to apply for an Order for an implicit item on account of zillmerising for this type of business should seek further guidance from the Department.

HIDDEN RESERVES

30. The provisions for counting hidden reserves as an implicit item towards the solvency margin specifically exclude hidden reserves arising from the overestimation of the mathematical reserves, so that this item can arise only in respect of undervaluation of assets or overestimation of balance sheet liabilities other than mathematical reserves.

31. Undervaluation of assets could occur in principle, where the Regulations do not permit any value to be ascribed to certain categories of assets, or where the value to be taken into account has been limited by the admissibility rules under the Regulations, or where an up to date valuation of investments in property has not been obtained.

32. To allow amounts explicitly excluded under the asset valuation regulations to be counted towards the solvency margin would be tantamount to nullifying the effect of those regulations. It is envisaged that concessions allowing such inadmissible assets will rarely, if ever, be given.

MON/SC/1/9

INFORMATION TO BE FURNISHED

33. An application to the Department for an Order under Section 68 should state clearly the nature and the amounts of the implicit items which a company wishes to count against its required margin of solvency. The application should be accompanied by full supporting information to enable the Department to arrive at a decision on the merits of the case, including where appropriate the certificates of the appointed actuary referred to in paragraphs 23 and 28 above.

34. Applications for an Order in respect of a hidden reserves implicit item will normally be considered only if accompanied by the full Schedule 1, 3 and 4 returns. Applications for a future profits implicit item should be supported by Forms 13, 14, 40, 41, 42, 45, 46, the answers to questions 1 to 10 of Schedule 4 and Forms 55, 56 and 58; for a zillmerisation implicit item only the last four items listed ie those forming part of Schedule 4 will be required.

35. In addition the following information relating to the calculation of the amounts claimed should be supplied:-

Future profits: the profits made in each of the preceding five years and the amounts and nature of any exceptional items left out of account; the method used for calculating the average period to run and the results for each of the main categories of business, both before and after allowing for premature termination (where the calculation has been made in two stages) and the basis on which this allowance has been made.

Zillmerising: the categories of contracts for which an item has been calculated and the percentages of the relevant capital sum in respect of which an adjustment has been made.

Hidden reserves: particulars, with supporting evidence, of the undervaluation of assets or the overvaluation of liabilities (other than mathematical reserves) for which recognition is sought.

October 1984

MAN/S 10/6.38

ANNEX

Definitions of the period left to run for various types of contracts for the purpose of Regulation 11(2) of I.C.R. 1981

Whole life assurances.

The expectation of life

Open ended whole-life assurance.

The expectation of life

Endowment assurances and pure endowments.

The period to the fixed maturity date.*

Flexible endowments.

The period to the first date of a guaranteed cash option.*

Temporary assurances.

The period to the expiry date.*

Deferred annuities with cash options.

The period to the vesting date; where the annuity can be taken at any age falling within a prescribed range, the earliest date.*

Deferred annuities without cash options.

The expectation of life for the age attained.

Annuities in payment.

The expectation of life; for temporary annuities, the period to the expiry date.*

Group life schemes.

The unexpired duration of the period for which the premium rates are guaranteed.

Group pension schemes

(i) by individual deferred annuity contracts
as under deferred annuities above.

(ii) by deferred annuities under controlled funding
a period of 10 years.

* In these cases mortality during the term should be covered by the adjustment for the premature termination of contracts.

(iii) by deposit administration
a period of 10 years

(iv) by managed fund.
a period of 10 years.

Permanent Health Insurance.

For individual policies, the period to the expiry date;* for group contracts, the unexpired duration of the period for which the premium rates are guaranteed.

Capital redemption

The period to the fixed maturity date.

Income and growth bonds

The period to the expected date of surrender.

* In these cases mortality during the term should be covered by the adjustment for the premature termination of contracts.

MAN/S.12 /6

T. OLD NOTES AND PRECEDENTS

T. 1 The editor of the manual ([redacted]) has a set of files of old instructions. These will not normally be required, but the point is mentioned, as these old instructions are generally more detailed that the notes in this manual, and could on occasions provide useful background reading.

T. 2 A file No 8334 setting out precedents has been set up and is stored in Room 216. As precedents are developed the files should be added to. The details of the topics covered by the parts of the file are:-

MAN/T1-2/4.92

PART	TOPICS likely to be covered
1. CONDUCT OF INSURANCE BUSINESS (Sections 16,28-31,78 of ICA 1982)	
COVERS	
1 Restriction of business to Insurance (Section 16)	Trustees, guarantees to subsidiaries, mortgage business, provision of managment service agreements. Cross Ref. to Pt 7 for Class VII business and other "non insurance" policies.
2 Separate Accounts for LT business/Use of LT assets (Sections 28,29)	Managed Pension Fund charges, loans to shareholders. Cross Ref. to Pt 2 for IB/OB transfer and to Part 3 as required.
3 Allocations to policyholders (Section 30)	Transfers from with profit subfunds, (Cross Ref. to Pt 2 for setting them up), breaches (Cross Ref. to Pt 3 for interest on shareholders' funds).
4 Dealings with Connected Persons (Section 31)	
5 Permitted links (Section 78)	Traded options etc.

GOVERNMENT ACTUARY'S DEPARTMENT

INSURANCE SUPERVISORY POLICY AND PRACTICE

I attach a briefing note which summarises our underlying philosophy towards the regulation of insurance companies and how in practice we carry out our supervisory responsibilities.

2 We would of course be happy to develop any aspects of this further, either by way of a note or in discussion, if you wished.

[redacted]

INSURANCE SUPERVISORY POWERS AND PRACTICE

PHILOSOPHY

1 The regulatory system for UK insurance companies is founded on the principle of "freedom with disclosure" in a freely competitive market place. Companies have considerable freedom to follow their commercial judgement within a broadly defined and non-intrusive regulatory framework. But they are required to place on the public record a considerable amount of detail concerning the business they have accepted and their solvency position.

2 Consequently, policyholders, competitors, brokers, market analysts and journalists have access to the information contained in the annual DTI Returns. This has resulted in a growing number of comparative analyses of data and an increasing market in insurance information - producing a more informed market in insurance products and their financial security.

3 We believe that the broad commercial freedom which has long been a part of the UK insurance scene is one of its strengths which will help UK companies compete successfully in the European Single Market. We have successfully exported this regime to the rest of the EU following implementation of the most recent EC Directives. Since July this year, we have taken over responsibility for financial and prudential supervision of the activities of our companies throughout the EU, not just for the UK. Conversely, we no longer supervise the UK branches and agencies of EU companies. This is in accordance with the principle of home state supervision.

4 In a competitive market, it is not realistic to expect that all failures can be prevented. The risk of some companies going out of business has been regarded as an acceptable price for an innovative and price competitive market, operating in the interests of its customers. But our aim is to get as much early warning as possible about developing problems and take appropriately robust action to prevent or minimise damage to policyholders.

SUPERVISORY PRACTICE

5 The Department's objective is to supervise the insurance industry effectively so that policyholders are protected against the risk that insurance companies will not meet their liabilities, or will not fulfil their reasonable expectations. Its main weapons in achieving this are ; authorisation, financial supervision and "fit and proper" controls (now subsumed under the concept of

sound and prudent management). These are all now required by EC law though the details are left to member states under the principle of subsidiarity.

i. Authorisation: an insurer wishing to conduct insurance business in the UK must be authorised to do so. Entry of companies into the market is controlled so as to ensure as far as is possible that every new company has adequate capitalisation as well as a sound business plan and thus stands a good chance of success. Authorisation is given for a particular class or type of business. A company that then wants to write different business requires further authorisation.

ii. Financial Supervision: detailed, comprehensive returns are required on an annual basis by the Insurance Companies (Accounts and Statements) Regulations 1983, which are subjected to computer based solvency tests. These are in addition to and are considerably more detailed than the normal shareholder accounts which insurance companies have to file with the Registrar of Companies under general company law. They are audited. Insurance companies are also required to observe a series of financial requirements set out in the Insurance Companies Regulations 1994. In particular they are required to maintain, at all times, assets not just up to the amount of liabilities but to provide a safety margin (called a "solvency margin") so that they could suffer a certain degree of losses but still be able to meet their commitments in full. Asset Valuation rules ensure that companies maintain a sensible spread of assets, and value them conservatively. We expect non-life insurers normally to maintain a solvency margin of at least twice the statutory minimum. When examining returns, we consider such things as assets, liabilities, reinsurance protection, profitability, quality of management and future trends. We do not rely exclusively on the annual returns but have an active visit programme and monitor other sources of information to seek to ensure that our supervision is forward rather than backward looking.

iii. Sound and Prudent Management: under the terms of the Insurance Companies Act 1982, the Department has the statutory responsibility to ensure that key positions in authorised insurance companies (eg controllers, directors, managers) are not occupied by people who appear to be not "fit and proper". Additionally, since the implementation of the 3rd EC Directives in July this year, the concept of sound and prudent management has been introduced. This enables us to take a view as to whether the management of the company as a whole has the right balance of skills and experience not just the fitness of separately notified individuals. It also allows us to take action in a wider set of circumstances where we believe that the company is not acting in a prudent way. The criteria of sound and prudent management are explained in the attached Schedule to the 1994 Regulations. The Regulations permit use of all our existing powers of intervention in the event of failure to comply with the criteria of sound and prudent management. This has considerably strengthened our supervisory powers.

POWERS OF INTERVENTION

6 The Department has a number of intervention powers available if insurance companies appear to be in financial trouble. Probably the most common is to require companies to submit a plan for the restoration of a sound financial position in cases where the minimum solvency margin has been breached. Specific powers also exist whereby we can limit premium income, suspend underwriting, take custody of assets, accelerate accounting information required, call for actuarial reports, appoint inspectors and, ultimately, withdraw authorisation.

7 As explained above we are now able to intervene more easily where we have concerns that the company is acting in an imprudent manner, ie is failing to comply with the criteria of sound and prudent management. In the past, there have been occasions where supervisors have regarded intervention as desirable but have either had no specific power to do so, or considered that the power was not clearly enough defined to allow it to be used. These augmented powers are not intended to increase the overall level of supervision of soundly run insurance companies.. They are designed to enable us to intervene in cases where previous legislation proved to be inadequate. It remains the case that the main grounds for intervention are the protection of policyholders or breach of an obligation under the legislation.

JAIC(13.DOC

8 The first example of the robust use of our new powers has been the case of Dominion Insurance Co, which has been the subject of separate ministerial submissions. Action has been initiated under the sound and prudent management criteria to withdraw the company's authorisation to write new business because of the considerable uncertainties over the level of reserves for paying long tail asbestos and pollution claims, highlighted in an independent actuary's report. We took the view that the uncertainties over solvency were too great to permit continued writing. This was in spite of the company showing a reasonable margin of solvency according to its December 1993 DTI return (but on the basis of low reserves for asbestos etc).

9 Clearly, there are difficult judgements to be made as to when these powers should be invoked and to what extent. The overriding consideration must be the degree of risk that the company will be unable to meet its liabilities to policyholders. In the majority of cases, the Department is able to rely on its informal powers of persuasion to ensure that companies take appropriate action before serious problems arise, with the threat of formal sanctions in the background.

SUPERVISION OF LIFE AND NON-LIFE BUSINESS

10 The principles of our supervision of life and non life business are similar (freedom with disclosure) and our intervention powers are broadly the same, but there are some differences in the organisation of our supervisory work resulting from differences in the nature of the business.

11 All life companies are required to appoint an Actuary who has a professional duty to satisfy himself that the funds held by the company are at all times sufficient to meet its obligations to policyholders. The appointed Actuary also has a duty to report to the Department if he is not so satisfied (or if he is prevented from carrying out his responsibilities), and is subject to extensive professional guidance by the Institute and Faculty of Actuaries. Whilst the Department has responsibility for supervision of life companies and for decisions on the use of the intervention powers, we rely heavily on advice from the Government Actuary's Department (GAD) for detailed analysis of the financial returns.

12 There is at present no equivalent requirement for actuarial involvement in non-life insurance. The Department consults the GAD in cases where actuarial advice is appropriate. Over the past few years

considerable efforts have been made to upgrade the quality and technical competence of staff in the division, and to reinforce GAD's capability in this area, to ensure that they are adequately equipped to carry out their supervisory responsibilities.

IMPACT OF COMPANY INSOLVENCIES

13 Despite the supervisory activities described above, insurance company insolvency cannot be always prevented. Unlike some other countries which have imposed much more onerous regulation eg of policy conditions and premiums and have made prevention of failure an overriding objective, the UK system has always acknowledged the possibility of failure in a competitive market.

14 The benefits of competition feed through to the consumer in terms of more efficient and innovative companies. They can however also lead to under pricing of risks, over ambitious expansion plans or inadequate reserving. In addition sudden changes in external circumstances (a spate of catastrophes; developments in judicial awards) can catch companies unawares.

15 The consequences of company failure, whether or not the failure could have been prevented, are potentially traumatic. Following the collapse of the Vehicle and General Insurance Co in 1972 a protection scheme for policyholders (individuals and partnerships) was introduced as a back stop safety net. Under the Policyholders Protection Act (PPA) 1975 private policyholders affected by an insurance insolvency receive 90% of the value of claims for non-compulsory insurance and 100% for compulsory insurance. The PPB is also required to arrange the continuity of unexpired life policies to protect 90% of the future benefit. Funds are generated by a levy on the industry of up to 1% of annual net premium income.

16 Levies are only made when there is a specific need. Until recently calls on the PPA levy were relatively light. However, following the failure of a number of companies providing liability insurance in the US, notably the insurance subsidiaries of London United Investments, which collapsed in 1990 with liabilities of some £5 bn, the PPA levy has become a significant drain on the industry . Four of the five levies under the PPA have been made since 1989. This has focused interest within the industry on the coverage of the PPA (which currently includes overseas business when it is written in the UK but not incorporated entities) and the importance of effective supervision by the Department. You have separately received an initial brief on the review of the PPA.

The Government Actuary's Dear Appointed Actuary letters

DAA1 (13 November 1985)

MEMORANDUM TO APPOINTED ACTUARIES FROM THE GOVERNMENT ACTUARY

VALUATION RETURNS IN RELATION TO SOLVENCY MARGINS

1. It is apparent from my Department's scrutiny of companies' 1984 returns that many actuaries have not appreciated the full impact of the changes in the Accounts and Statements Regulations which came into force in March 1984 to give effect to the solvency margin requirements. Many companies have received letters drawing attention to aspects of their 1984 returns which do not appear to meet the new requirements, and the DTI with GAD is considering these on a company by company basis. Many of the points which are causing difficulty are in fact mentioned in the guidance notes on the preparation of annual returns issued by DTI in September 1984. My purpose in writing to you, in common with all other Appointed Actuaries to UK authorised companies, is to draw your attention to these guidance notes and also to explain rather more fully the background to and the nature of the changes in the regulations. I hope that any misunderstandings can be cleared up in time for the preparation of the next set of returns, which for most companies will be as at 31 December 1985.

2. The problems seem to arise from the interaction of several factors:

(i) The solvency margin requirement itself which means that a clear distinction must be drawn between the actuary's reserves and any free reserves in the life fund available for solvency margin.

(ii) The market value basis laid down for the valuation of assets. The balance sheet and statement of solvency in the Accounts and Statements Regulations are constructed around this concept.

(iii) Many companies prefer to maintain their life assurance funds at book value, rather than writing the fund up or down to market value each year. It is not intended to whittle away this facility, but there is no doubt that it adds to the complications.

The Government Actuary's Dear Appointed Actuary letters

DAA1 (13 November 1985)

3. The valuation regulations require actuarial reserves to be calculated on a prudent basis. Regulation 55 covers mismatching reserves, which ensure that the company can continue to maintain reserves meeting the minimum criteria in the face of changing investment conditions.

4. Although, in Schedule 4, an actuary may set his reserves in the context of the book value of the life assurance fund, for the purposes of the balance sheet and the statement of solvency (Forms 9, 10 and 14) the reserves have to be set in the context of the assets broadly at market value, as required by the asset valuation regulations. In other words the Schedule 4 valuation has to be justifiable by reference to market values, or additional reserves will need to be set up. In concept there are two sets of mathematical reserves, relating to book and market values respectively. Only the excess over the total "market" reserves, which have to be sufficient to cover all foreseeable liabilities including contingencies arising from mismatching, can be counted towards the solvency margin. In practice the main elements of a 'book' valuation basis, such as interest and mortality, are likely to be appropriate for both valuations, but additional provision may be needed for, eg, mismatching or capital gains tax liabilities, in order to move from a 'book' to a 'market' basis. If any of these items have been set against the margin between market and book values of assets, it is necessary to know how much of this margin has been so used, as only the remainder can count towards the solvency margin. This addition to the Schedule 4 mathematical reserves has to be mentioned in the Actuary's Certificate and shown in a note to Form 14.

5. Thus, in order that GAD can examine valuations in the usual way, the nature and extent of the provision for mismatching and CGT liabilities needs to be stated in the Fourth Schedule. Only then can a view be taken about the cover for the solvency margin shown in the returns. This is the background to paragraphs 7.7.6 - 7.7.7 and 12.6 - 12.8 of the DTI guidance notes.

6. Neither the valuation regulations nor the Institute and Faculty guidance notes lay down a specific basis for the calculation of mismatching reserves, so this is left to the professional judgement of the actuary. GAD's function is to advise the DTI how each company

The Government Actuary's Dear Appointed Actuary letters

DAA1 (13 November 1985)

stands having regard to the DTI's responsibilities under the Act. While GAD applies its professional judgement in formulating such advice, we need some rule against which to assess the adequacy of mismatching reserves. Obviously this becomes more crucial the smaller is the excess of free assets over the required solvency margin, but it would be untenable for DTI to operate the regulations on the basis that specific mismatching reserves need be set up only where the cover for the solvency margin is low, but that stronger companies need not bother and may thus overstate the cover for their solvency margins.

7. In general it is GAD's longstanding practice to formulate its own internal working rules after looking at the way in which established companies have treated the question, which thus needs to be set out in their Fourth Schedules, and after considering any Institute, Faculty or other papers on the subject and discussions thereon.

8. As regards mismatching reserves, the present working rule has regard to current investment conditions and to the tempo and scale of past changes. The present rule was stated at the Birmingham Convention; very briefly we would compare the company's reserves with the ability to meet the requirements of the Regulations (other than Regulation 55) given an immediate rise or fall of 3% in the rate of interest and fall of 25% in equity prices.

9. Naturally companies should also look at their mismatching provisions on the basis of cash flow matching, over a wide range of investment conditions, but this would be in the context of a gross premium valuation rather than the net premium valuation required by the regulations. These tests need not be fully described in the Fourth Schedule as a matter of routine, the amount of information to be shown would depend on their significance for the company concerned.

10. The essential point, however, is that Fourth Schedule returns will in future need to give greater detail as to the manner of assessment of mismatching reserves and provision for Capital Gains Tax.

The Government Actuary's Dear Appointed Actuary letters

DAA1 (13 November 1985)

11. Before the valuation regulations and guidance notes were written, there were extensive discussions in the Joint Actuarial Working Party comprising representatives of DTI, GAD and the Institute and Faculty. It is now intended to reconvene the Group to consider problems arising. This note is not intended to pre-empt the Joint Working Party in any way. I am writing to you now because it seems necessary to clarify as soon as possible what we will be looking for in the forthcoming returns. I hope this will be helpful.

[redacted]

Government Actuary's Department

22 Kingsway, London WC2B 6LE
Telephone: 071-242 6828 ext.
Fax: 071-831 6653

31st July 1992

Dear Appointed Actuary,

Earlier this month, you will have received a copy of the revised version of Guidance Notes GN1 and GN8, issued by the Institute and Faculty of Actuaries. They update the previous versions of these Guidance Notes, and GN8 in particular now incorporates the main content of Temporary Practice Note No. 2 (TPN2), which dealt with resilience testing.

TPN2 referred to and effectively endorsed the specific parameters included in my predecessor's letter to Appointed Actuaries of 13 November 1985, against which it was recommended that an appointed actuary should in normal economic circumstances test the resilience of the valuation basis, namely, an immediate fall of 25% in the value of equities and property, and an immediate rise or fall in the yield on fixed interest securities of 3 percentage points.

The new GN8 does not specifically refer to these parameters. Instead it requires the appointed actuary to use professional judgement to determine an appropriate range of changes in financial conditions over which to test the resilience of the valuation basis. Since the actuary will soon have to sign a statutory certificate to indicate that the Guidance Notes have been complied with, great care had to be taken with the wording. It was considered inappropriate to include a fixed set of parameters in a Guidance Note which has to cover all possible financial conditions.

It remains the position of the DTI and GAD that, in most financial conditions, the parameters included in TPN2 will be taken as the benchmark against which an actuary's valuation basis will be tested, though higher parameters might be appropriate in certain financial conditions.

However, in more extreme circumstances the parameters outlined in Paragraph 2 above could lead to reserving standards which might be unreasonably strong for offices to have to maintain, given the margins built into the reserving standards elsewhere by the Determination of Liabilities Regulations.

DAA4 (31 July 1992)

Accordingly, I am writing to let you know that (unless there are particular circumstances which make the continuing use of the normal parameters appropriate) DTI and GAD consider that it would be reasonable for appointed actuaries whose companies' equity portfolios correspond broadly to the Financial Times All-Share Index to review the parameters which they incorporate in the resilience test when the dividend yield on that index exceeds 5.25%. A gradual tapering of the 25% parameter would be envisaged, but it would not be considered advisable to assume that there would be a maximum dividend yield at which no further fall in market values would be assumed. If, at any time when you are continuously monitoring the financial position of the long term fund, you consider it would be appropriate to introduce a tapering of the 25% parameter, or weaken any of the other parameters referred to in this letter, you should contact my Department straightaway to discuss your proposed basis.

With regard to investments held in land and property in more extreme financial conditions, appointed actuaries will need to test the resilience of their offices to meet falls in the value of those investments on a prudent basis, taking into account the specific properties held and the factors to which the company may be particularly vulnerable which could lead to further changes in the values of those assets. Property portfolios vary to such an extent between companies that it is not possible to give a more precise view of the standards which supervisors will apply when considering the appropriateness of an actuary's valuation basis.

When considering hypothetical changes in yields under the resilience test, the limitation on the dividend yield on an equity (and the rental yield on a property) - to the yield on Consols - might be a material factor, even though an adjustment may have already been made for the risk that the aggregate income from equity shares and land might not be maintained (Regulation 59(6)(b)). In circumstances where this is a material factor, my Department would be willing to discuss with you the practical application of this aspect of your proposed resilience test, having regard to the specific assets held by your company.

With regard to fixed interest yields and the resilience test, the absolute level of interest rates is a relevant criterion. It would be reasonable to assume that it is more likely that there could be an immediate fall of three percentage points if current rates were 15% than if they were 6%, say. At the present time, appointed actuaries will need to consider the high real interest rates currently prevailing, and the possibility of the UK experiencing higher rates of interest through forces which may be in part outside its control.

The Government Actuary's Dear Appointed Actuary letters

DAA4 (31 July 1992)

Appointed Actuaries should also consider the possibility of more extreme financial conditions in the future, and the extent to which the technical reserves held by the office, together with its solvency margin, will be sufficient to enable it to meet its liabilities in such circumstances.

Full details of the assumptions used should be provided in Schedule 4 of the Returns.

Appointed Actuaries should, of course, continue to carry out cash-flow analyses on prudent assumptions to determine whether additional reserves need to be established to ensure that liabilities can be met as they fall due in future, even under unfavourable investment conditions.

Officials at DTI and GAD would be happy to discuss and to clarify the implications of this letter with individual companies and their appointed actuaries.

Yours sincerely

Telephone: 071-242 6828 ext.
Fax: 071-831 6653

DAA6

30 September 1993

Dear Appointed Actuary

RESILIENCE TEST

Since my letter to all Appointed Actuaries of 31 July 1992(DAA4), the investment outlook has changed considerably, in particular as a result of the United Kingdom's departure from the Exchange Rate Mechanism. Long term investment yields on gilts have reduced from over 9% at that time to around 7¼% now, while the FT All Share Index has risen from about 1150 to around 1500 now, a rise of about 30 percent. Over the same period, the dividend yield on the FT All Share Index has reduced from 5.2% to 3.75%.

My letter of 31 July 1992 was triggered by the publication by the Institute and the Faculty of Actuaries of the revised versions of Guidance Notes GN1 and GN8. The latter does not now refer specifically to the parameters for the resilience test, unlike the old TPN2, which had effectively endorsed the parameters included in my predecessor's letter of 13 November 1985. In my letter last July, I stated that, notwithstanding the withdrawal of TPN2, it remained the position of the DTI and GAD that, in most financial conditions, these parameters would continue to be taken as the benchmark against which an actuary's valuation basis would be tested.

However, I referred in my letter to financial conditions in which the use of those fixed parameters could lead to reserving standards which might be unreasonably strong for offices to have to maintain; in particular, I referred to dividend yields on equities rising above 5.25% and to fixed interest yields falling.

With gross redemption yields on gilts having fallen by nearly 2 percentage points since just over a year ago, it is now appropriate to reconsider the parameters for the resilience test, especially in the context of an outlook for low inflation in the immediate future, and low short-term interest rates.

Document Number:20558 Page 1

DAA6 (30 September 1993)

In considering the formulation of the resilience test, it needs to be borne in mind that the valuation of liabilities regulations will need to be revised as a result of the Third Life Framework Directive, and so at the moment it is appropriate to consider the structure of the test in the context of the valuations at 31 December 1993 (and other valuation dates in the next 12 months). Further guidance may be expected when these amended regulations have been issued, but these will not affect valuations prepared for years ending before 1 July 1994 at the earliest.

With that in mind, the DTI and GAD consider that for companies which do not write with-profits business, i.e. those which might be expected to hold only fixed-interest securities to cover their non-linked liabilities, our benchmark for an appropriate range of yields at the present time would be an increase in current yields of 3 percentage points; and a fall of 20% from present levels, i.e. a fall of about 1.5 percentage points at the time of writing.

For with-profit offices, we consider that the valuation should be tested for three different scenarios. Our benchmark at the present time would be (1) a reduction in fixed-interest yields by 20% combined with a fall in value of equities of 10%. (2) a reduction in fixed-interest yields by 10% combined with a fall in equity values of 25%, and (3) a rise in fixed-interest yields of 3 percentage points combined with a fall in equity values of 25%.

As I indicated in my last letter, property portfolios vary to a considerable extent between offices and it is not possible to give a precise view of the tests which supervisors will expect to see applied to a particular portfolio. However, provided the current value given to properties is realistic and, where appropriate, reductions in values have already been adequately brought into account, an assumption of a further fall in property values above 20% is unlikely to be required.

In determining the valuation rate of interest, Regulation 59(6)(b) requires a prudent approach to be taken to the assessment of future equity share dividends and rental income from land, with a further overriding limitation that the yield assumed on an asset should not exceed the yield on 2½% Consols. Only the first of these limitations need be applied to the hypothetical yields which arise in the resilience test. You should bear in mind, however, the possible need to fund future reserve strengthening to enable the Consols test to be satisfied at the next valuation, should these scenarios occur in practice.

2

Document Number:20558 Page 2

The Government Actuary's Dear Appointed Actuary letters

DAA6 (30 September 1993)

As mentioned in my last letter on this subject, appointed actuaries should also consider the possibility of more extreme financial conditions in the future, and the extent to which the solvency margin would be sufficient to enable the office to meet its liabilities in such circumstances. Cash flow analyses should also be carried out on prudent assumptions.

The main assumptions used in the resilience tests should continue to be stated in Schedule 4 of the DTI Returns.

In the longer term, it is being considered whether further refinement to the concept of resilience testing should be applied along the lines proposed in other countries such as Australia, US and Canada. It is hoped that the Joint Actuarial Working Party (JAWP) will take forward some of this work and further discussion with the actuarial profession can be expected.

Officials at DTI and GAD will be happy to discuss any aspects of this letter with individual companies and their appointed actuaries.

Yours sincerely,

[redacted]

Dear Appointed Actuary

APPOINTED ACTUARY'S CERTIFICATE: COMPLIANCE WITH GUIDANCE NOTES 1 AND 8.

As you are aware, appointed actuaries are now required to sign a certificate, to be incorporated in the DTI returns, stating (if such be the case) that Guidance Notes 1 and 8, issued by the Institute and Faculty of Actuaries, have been complied with. I want to draw one aspect of those Guidance Notes to your attention, and to suggest a form of certificate (which is acceptable to the Department of Trade and Industry) for your consideration should the point be of relevance to your valuation.

In paragraph 3.2.3 of GN8, it is stated that "The company's reserves (including any resilience reserve) should be sufficient to absorb the effect of immediate changes in interest rates and asset values, on a suitably prudent basis without prejudicing the company's ability to hold reserves which satisfy the regulations for valuing liabilities (other than Regulation 55)".

Regulation 55 states - "The determination of the amount of long term liabilities shall take into account the nature and term of the assets representing the long term fund and the value placed upon them and shall include appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities".

Regulation 59(6)(b) states - "In calculating the yield on an asset under this regulation for assets which are equity shares or land, adjustments to yields shall be made as appropriate to exclude that part, if any, of the total yield from those assets, taken together, that is needed to compensate for the risk that the aggregate income from those assets taking one year with another might not be maintained, so however that the yield assumed on an asset shall not be greater than that on British Government 2½ per cent Consolidated Stock on the valuation date".

DAA7 (31 March 1994)

The so-called Consols test was devised before the concept of resilience testing was established in 1985, and is too stringent in certain scenarios tested by actuaries. (The Consultative Document on the implementation of the Third Directives suggested its deletion from the regulations.) Accordingly, the Government Actuary's letter of 30th September included the following paragraph:-

"In determining the valuation rate of interest, Regulation 59(6)(b) requires a prudent approach to be taken to the assessment of future equity share dividends and rental income from land, with a further overriding limitation that the yield assumed on an asset should not exceed the yield on 2½% Consols. Only the first of these limitations need be applied to the hypothetical yields which arise in the resilience test. You should bear in mind, however, the possible need to fund future reserve strengthening to enable the Consols test to be satisfied at the next valuation, should these scenarios occur in practice".

However, the effect of appointed actuaries not applying the limitation of the Consols test in their resilience scenarios is that they will need to say so in their certificates under the new regulation as the Guidance Note requires the test to be included. We consider that an appropriate certificate would be:-

The guidance notes "Actuaries and Long-Term Insurance Business (GN1)" and "Additional Guidance for Appointed Actuaries (GN8)" issued by the Institute of Actuaries and the Faculty of Actuaries dated July 1992 have been complied with, subject to the modification to the Consols test as set out in the Government Actuary's letter of 30th September, 1993.

Dear Appointed Actuary

RESILIENCE TEST

I am writing to you in connection with the advice given to appointed actuaries by GAD, with the agreement of HMT, on the application of the so-called 'resilience test' for life insurers. As you may know, I previously wrote to you on 30 September 1993 setting out three separate benchmark scenarios that were considered to be appropriate to examine for with-profit offices.

Recent increased volatility in the equity markets has produced extreme daily movements in the indices, both the FTSE100 and the FTSE All Share. Whilst this is a phenomenon which life offices should and must learn to live with, the interaction of such rapid movements with the type of resilience test which this department has applied for a number of years can produce unreasonable results.

At the same time, we have seen a significant fall in the yields on gilts, so that the benchmark 15 year yield is now only about 5%. Although it would not be appropriate to draw too many conclusions about the interactions between markets, there are economic arguments which make it unlikely that markets will sustain simultaneously lower gilt yields and very much lower equity levels than prevail at the time of writing (when the FTSE100 is at about 5500).

We are also aware that there is a working party of the Faculty and Institute of Actuaries looking at possible revisions to the resilience test for the future, but this is unlikely to come forward with proposals for some months. Furthermore, the Treasury is consulting the industry on changes to regulations, and in particular to regulation 69, which will require the resilience test to be revisited if implemented. It is in this context that we have decided to amend the resilience test on a temporary basis for the immediate future.

The proposal affects only the test numbered (2) in my 1993 letter: a 10% fall in fixed interest yields combined with a fall in equity values of 25%. The revised test is necessarily more complex, but will avoid the unreasonable stringency which might apply if equity markets fall significantly below their current levels.

The Government Actuary's Dear Appointed Actuary letters

DAA10 (24 November 1998)

Provided the benchmark 15 year gilt yield remains at or below 6% p.a.,

(i) if the FTSE100 index is above 4500 on the valuation date, the test (2) will remain as at present;

(ii) if the FTSE100 index is below 4500, but has not closed at a level below 3750 on any day in the previous 12 months, the equity component of test (2) will be replaced by test of a fall to a market level equivalent to a FTSE100 index of 3375;

(iii) if the FTSE100 has closed below 3750 on at least one day in the 12 months ended on the valuation date, then the equity component of test (2) will be replaced by a test of a fall to 10% below the lowest closing value in that 12 month period;

although in no case will it be necessary to test a fall of more than 25% from the level on the valuation date.

By way of illustration, if the FTSE100 is 4000 on the valuation date, and has remained above 3750, the fall to be tested would be 15.625%(=625/4000). If FTSE100 were at 4400, similarly with no previous fall below 3750, the fall would be 23.295%(=1025/4400).

In all three cases described above, Appointed Actuaries should apply the same fall of 20% as at present to property values, as these do not exhibit such high daily volatility.

If the benchmark yield rises above 6%, we will review the test again, but would intend to apply a similar approach, albeit perhaps at different levels.

I would like to stress that this revision only applies to test (2), and not to test (3). If there were a marked rise in gilt yields, back to the levels of only a relatively short time ago, there would be no justification for a relaxation of this type.

On a final point, where Appointed Actuaries extend the resilience tests to other types of business such as unit linked business, I do not consider it is appropriate to include in the test any component which, taken overall, serves to reduce the prudential effect of the test. For example, an office which has only unit linked business, some of which carries a guaranteed annuity rate, should not necessarily assume equity values fall in applying tests for lower interest rates.

Yours sincerely

Dear Appointed Actuary,

RESILIENCE TEST

As you may recall, I wrote to you in November last year explaining that we were modifying on a temporary basis the guidance given to appointed actuaries on the fall in equity values that should be assumed in certain investment scenarios. We have now considered this guidance further in the context of the possible interrelationship that may exist between gilt yields and movements in the value of equities in some investment conditions.

I am therefore writing to you, with the agreement of FSA, to set out a revision to last year's guidance which should, we believe, be appropriate to apply now when assessing the ongoing financial condition of life insurers, and in particular for the production of the next set of financial returns.

As with last year's guidance, this change only affects the test numbered (2) in my 1993 letter; namely a 10% fall in fixed interest yields combined with a fall in equity values of 25%. In place of the formula set out in my letter last year, we propose that the test should comprise a combination of

(i) a 10% fall in fixed interest yields, and

(ii) a fall in the value of equities of the greater of

  (a) 25%, subject to the fall being restricted to such as would not produce a P/E ratio on the FTSE Actuaries All Share Index lower than 75% of the inverse of the long term gilt yield (as defined in regulation 69(9)) before the assumed fall in paragraph (i), and

  (b) 10%.

DAA12 (30 September 1999)

As mentioned in my 1993 letter, appointed actuaries should also consider the possibility of more extreme financial conditions in the future, and the extent to which the solvency margin would be sufficient to enable the office to meet its liabilities in such circumstances. Cash flow analyses should also be carried out on prudent assumptions.

The tests can be appropriately modified for other situations, in a similar way to that in my 1993 letter. As I indicated in my letter of last November, I do not consider it is appropriate to include in the test any component which, taken overall, serves to reduce the prudential effect of the test. For example, an office which has only unit linked business, some of which carries a guaranteed annuity rate, should not necessarily assume that equity values fall in applying tests for lower interest rates.

In arriving at the above benchmark, we have been mindful of the existence of the current professional working party, and have endeavoured not to anticipate their possible recommendations.

Yours sincerely

15 May 2000

[redacted]

Dear Appointed Actuary

RESILIENCE TEST

The revisions to the Insurance Companies Regulations 1994 made by HM Treasury recently include a revised formula for determining the yield on investment made more than three years in the future, with consequent effects on shorter term assumptions. This reintroduces a prudent margin on future investment assumptions, but has the effect of making the linkage of the future investment assumption to current yields more dynamic than applied in the past. Three scenarios were originally promulgated in my letter of 30 September 1993 and were amended most recently in DAA12 dated 30 September 1999. Two of these, in the context of the new regulation, now appear unnecessarily severe in their effects, given that the new regulations do allow for the effect of a sustained reduction in long-term interest rates.

I have, therefore, discussed with the Financial Services Authority revisions to the resilience test which FSA and GAD consider appropriate for current conditions. These revisions will apply from the date of coming into force of the amendment regulations.

For with profits offices, and others where it might be appropriate to do so, we consider the three scenarios which should constitute our benchmark to be:

(1) a combination of

- (i) a fall in the value of equities of 10%;
- (ii) for fixed interest securities
  - (a) of less than five years outstanding term to redemption, and for short term deposits, a fall in the risk free yield of 20%
  - (b) for fixed interest securities of fifteen or more years outstanding term to redemption, a fall in the risk free yield of 10%
  - (c) for fixed interest securities of more than five but less than fifteen years outstanding term to redemption, a fall in the risk free yield of (25-{outstanding term in years and part years})%
- (iii) a fall in property values of 10%

(iv) a fall in the real yields on indexed gilts of 25% (e.g. from 2% to 1.5%)

(2) a combination of

(i) a fall in the value of equities of the greater of

(a) 25%, subject to the fall being restricted to such as would not produce a P/E ratio on the FTSE Actuaries All Share Index lower than 75% of the inverse of the long term gilt yield (as defined in regulation 69(9)) before the assumed fall in paragraph (ii), and

(b) 10%

(ii) for fixed interest securities

(a) a fall in the yields on risk free securities of less than five years outstanding term to redemption and on short-term deposits to the level which is calculated under regulation 69(9) for future investments (or remain constant if already at or below this level),

(b) the yields on risk free securities of at least fifteen years duration remaining constant,

(c) a fall in the yields on risk free securities of more than five but less than fifteen years outstanding term to redemption to levels obtained by interpolating between the figures given by (a) above and the 15 year gilt index yield (or remain constant if already at or below this level),

(iii) a fall in property values of 20%, and

(iv) a rise in the real yields on indexed gilts of 10% (e.g. from 2% to 2.2%)

(3) a combination of

(i) a fall in the value of equities of 25%,

(ii) a rise in the risk free fixed interest yields of 3 percentage points,

(iii) a fall in property values of 20%, and

(iv) a rise in the real yields on indexed gilts of 1 percentage point.

For those fixed interest securities which are not risk free, we would expect actuaries to assume the yield differential to risk free does not reduce in a resilience test.

As mentioned in my 1993 letter, appointed actuaries should also consider the possibility of more extreme financial conditions in the future, and the extent to which the solvency margin would be sufficient to enable the office to meet its liabilities in such circumstances. Cash flow analyses should also be carried out on prudent assumptions.

The tests can be appropriately modified for other situations, in a similar way to that in my 1993 letter. As I indicated in my letters of November 1998 and September 1999, I do not consider it is appropriate to include in the test any component which, taken overall, serves to reduce the prudential effect of the test. For example, the actuary to an office which has only unit linked business, some of which carries a guaranteed annuity rate, should not necessarily assume equity values fall in applying tests for lower interest rates. Indeed actuaries to such offices should consider their resilience to a rise in equity values combined with falling interest rates.

DAA14 (15 May 2000)

In arriving at these benchmarks, we have been mindful of the existence of the current professional working party, and have endeavoured not to anticipate their possible recommendations. This has led us to maintain for the time being the core features of the previous tests, whilst introducing appropriate modifications in the context of the revised regulation.

Yours sincerely

Dear Appointed Actuary

RESERVING FOR GUARANTEED ANNUITY OPTIONS

Further to [redacted] letter of 18 December regarding the costs of guaranteed annuity options in the context of policyholders' reasonable expectations, he has agreed that it would be helpful if I were to provide some guidance to Appointed Actuaries of companies on the advice I have given him on the application of the existing reserving requirements in respect of contracts containing a guaranteed annuity.

2. I consider that Part IX of the Insurance Companies Regulations 1994 (ICR 1994) requires a life office to calculate its liabilities (and hence to reserve) on the basis of all the benefits offered under the contract. Regulation 64 of the Regulations requires long-term liabilities to be determined "on actuarial principles", and to "make proper provision for all liabilities on prudent assumptions". Regulation 64(2) makes clear that the determination must "take account of all prospective liabilities as determined by the policy conditions".

3. Contracts providing for a guaranteed annuity typically take two main forms-either:

- a contract to provide an annuity with an option to secure a cash fund; or
- a contract to provide a cash fund with the option to convert the benefits into an annuity at a guaranteed rate.

4. I would expect the reserving requirements to be very similar (if not identical) irrespective of whether the guaranteed annuity is the principal benefit under the contract or only an option. This is on the basis that in substance a policyholder will be entitled to the same choice of benefits irrespective of which is the principal benefit and which is the option.

Document Number: 00182 Page 1

DAA11 (13 January 1999)

5. In my view it is clear that, where a contract provides for a guaranteed level of annuity, then the effect of Part IX of the ICR 1994 is to require the company to reserve fully for its liabilities to provide annuity benefits to the value guaranteed under the contract. In addition it will be necessary to reserve fully in respect of any facility for policyholders to select an alternative form of benefits.

6. In assessing the extent of these liabilities, the company will need to make a prudent assessment of the extent to which any options are likely to be exercised. In this context I consider that, where the cost of meeting the guaranteed annuity benefits at maturity is significantly greater than the value of any alternative benefits, prudence will require the company to reserve for the contract at a level close to the full value of the guaranteed annuity. In general it would not in my view be prudent to assume that policyholders will choose a benefit form that is of significantly lower nominal value to them, although some limited allowance (of a few percentage points of the reserve) could in some cases be made for a reduction in the liability on the grounds of the additional flexibility or other perceived advantages to policyholders of any alternative benefits.

7. Where the levels of terminal bonus are to be adjusted with the aim of bringing the value of the guaranteed annuity option closer to the value of the alternative benefits, there might at first sight appear to be some room for argument that it was not necessary to reserve on the assumption that almost all policyholders will take the guaranteed annuity benefit. However, it needs to be remembered that, although the benefits formally "guaranteed" under the alternative form of benefit may be lower than those under the guaranteed annuity option, the company's discretion in setting the value of terminal bonus applied to the alternative benefit is limited as a result of the existence of the guaranteed annuity. It is likely that close to 100% of policyholders will exercise the annuity guarantee unless the company maintains terminal bonus at a level which ensures that the value to the policyholder of the alternative benefit is at least equal to the value of the guaranteed annuity. Accordingly, this constraint will need to be reflected in the valuation assumptions made about either the proportion of policyholders opting for the alternative benefit or the value of that alternative benefit. Consequently any reduction in the reserves held by the insurer by more than a few percentage points below the full value of the guaranteed annuity for this reason would require very careful justification by the actuary.

8. I am aware that many policyholders have in the past exercised their right to take up to 25% of the benefits of their pension policy in the form of a tax free lump sum. However, I would not consider it prudent to use past experience alone in this regard as a basis for reducing the percentage of benefits assumed to be taken in guaranteed annuity form. In my view there is a significant risk that there may be a marked change in policyholder practice if policyholders and their advisers view annuity guarantees as valuable and something that should be utilised to the full. For instance, there is the possibility that in future individuals with more than one pension policy will seek to maximise their benefits by exercising in full any guaranteed annuity option and only taking cash from those policies that do not carry a guarantee. In addition any further increase in the value of the annuity benefits relative to cash has the potential to lead to a significantly greater take up of annuity guarantees. As a result I would only consider it prudent to make significant allowance for a proportion

Document Number: 00182 Page 2

DAA11 (13 January 1999)

of available policy proceeds to be taken as cash, to the extent that policyholders are obliged to take some of the benefits as cash. Where policyholders are not obliged to take some benefits in cash, then the principles described in the above two paragraphs of this letter would apply.

9. In addition to holding mathematical reserves to cover their liabilities for annuity guarantees, companies will need to assess the extent to which a resilience reserve is required. I expect companies to apply the recommended resilience tests and other general advice in my letter (DAA6) of 30 September 1993 (as amended slightly in my letter of 24 November 1998 - DAA10) in determining the need for a resilience reserve. The need to hold substantial mathematical reserves to cover guaranteed annuity options would not in my view be a sound argument for reducing the stringency of the resilience test applied.

10. The level of reserves established for guaranteed annuity options is likely to be one of the features of companies' 1998 annual returns which FSA and GAD will want to review particularly closely. It should be remembered that Schedule 4 of the Insurance Companies (Accounts and Statements) Regulations 1996 requires the actuary's report in the annual returns to include detailed information about the contracts written.

11. In particular, paragraphs 4(1) and 5(1) of the Schedule require the provision of a description of the benefits of the contracts written, including any material options. I would expect such a description to provide an indication of the form of any annuity guarantee offered. In addition, in accordance with paragraph 6(1)(h), actuaries should provide a description of the way in which reserves for any annuity guarantees and options have been determined (including an indication of the interest rate and mortality assumptions used). I would also expect that, in accordance with Instruction 9 to forms 51-54, categories of contracts containing annuity guarantees would be shown separately in those forms.

12. The annual returns should include sufficient information for the FSA and GAD to make an assessment of the extent of the guarantees offered, the reserving basis adopted by the company and hence the scope for guaranteed annuity options to impact on the financial position of the company.

13. The above is my considered view and is without prejudice to any decision of the courts which may affect it.

Yours sincerely

Dear Appointed Actuary

RESERVING FOR GUARANTEED ANNUITY OPTIONS

As you will recall, I wrote to you and other Appointed Actuaries on 13January this year regarding the application of the reserving requirements in Part IX of the Insurance Companies Regulations 1994 in respect of contracts containing a guaranteed deferred annuity and a cash or other alternative.

Having now reviewed, at least provisionally, the majority of companies' 1998 annual returns, it is apparent that some aspects of this guidance have been interpreted in a variety of ways. It is clearly important that there should be consistency in the approach taken, and therefore the FSA has concluded that it would be helpful if I were to provide some further clarification on the reserving standards that would normally be expected to be seen in future HMT/FSA returns.

In my view, in determining the reserve for a contract containing a guaranteed annuity it would not generally be prudent to assume that policyholders will choose a benefit form that is of significantly lower nominal value to them than the guaranteed annuity. I indicated previously that I would expect any allowance for the reduction in the liability on the basis of policyholders making such choices to be limited to "a few percentage points" of the reserve. I would like to clarify that I was referring here to the total aggregate allowance that might prudently be made for all other benefit forms (whether cash or other forms of annuity) and that in my view an allowance in excess of 5% would not be considered to represent "a few percentage points".

Document Number: 00358 Page 1

DAA13 (22 December 1999)

There may be considered to be a stronger case for making an allowance for policyholders choosing to take a proportion of their benefits in the form of a tax free cash lump sum. However, I would not consider it prudent to assume that more than 20% of policyholders exercised the option to take the maximum cash lump sum permitted under the terms of the contract. In the case of most pension contracts, such an assumption would equate with a 5% reduction in reserve, the maximum aggregate allowance indicated above as likely to be accepted as prudent.

I am also reviewing the level of disclosure made by each company in their 1998 annual returns regarding the assumptions made to determine the level of reserve for contracts containing a guaranteed annuity. For the avoidance of any doubt, we would expect to see full disclosure of the proportions of policyholders assumed to take any available guaranteed annuity, along with the underlying mortality and interest rate assumptions. I should also add in this context that we would expect to see prudent allowance made for future mortality improvement both before and after the assumed retirement date, taking proper account of the recommendations in the latest CMI reports.

Yours sincerely

Section 6

Primary documents – the scrutiny of The Equitable Life Assurance Society's (Equitable's) returns

GAD's general scrutiny proforma reports

For companies' 1995 returns

SCRUTINY STRATEGY WORKING PARTY

PROFORMA SCRUTINY REPORT,
WITH NOTES ON CONTENT

LIFE ASSURANCE COMPANY

RETURNS AS AT 31 DECEMBER 1995

DETAILED SCRUTINY REPORT

The following pages list the 'standard' section and subsection headings. Notes of likely items to be covered are given in italics. It is suggested that the Sections should remain unchanged from one company report to another, to facilitate finding the desired part of any report, even if an occasional 'not applicable' entry is called for. Subsections should remain in the order shown where possible, but may be amended or omitted more freely.

1. SUMMARY

1.1 Key Features

Key features arising from the scrutiny should be presented, perhaps in the form of 'bullet points'. A possible approach is to extract one item from most Sections of the report. An example list of topics is shown below, but it should not be adhered to rigidly.

In addition to the specific key points arising from the scrutiny, we should express a view as to the soundness of the company in the short and longer term. Reference to the cover for the solvency margin (8.4 below) should be made, as this is a key DTI supervisory responsibility. The priority rating of the company should be clearly stated. Where there is any doubt as to whether the valuation basis used is in accordance with the Regulations (8.1 below), this should be also be clearly stated.

- *Size and type of office (e.g. medium-sized with profits mutual), and primary source of business (e.g. IFAs).*
- *Ownership issues.*
- *Our view as to its soundness.*
- *Most important types of business, and recent new business trends.*
- *Expense control.*
- *Recent trends in financial results, especially if adverse.*
- *Asset allocation for with profits business, and changes therein.*
- *Approach to valuation, and a general view as to its strength.*

- *Supportability of bonuses, and recent trends in bonus declarations.*
- *Likely impact of the SIB compensation requirements for mis-selling of personal pensions.*

1.2 Action Points

The list of Action Points should include items of as many of the following types as apply:

(a) Points needing immediate action by DTI;

(b) Points raised by GAD with the actuary in a letter (which should be enclosed);

(c) Points to be recorded for raising at a suitable opportunity, e.g. the next company visit.

2. BACKGROUND

This should be a 'potted history' of the company, covering such things as its size and ownership, and the type(s) of business it writes. Comments on the corporate structure, and particularly of any insurance subsidiaries, should be made. A brief note of the senior management, and particularly the chief executive and the Appointed Actuary, should be given, with information on their experience, recent changes, etc. Any Section 68 Orders in force should be recorded.

The background should also cover significant *developments during the year, e.g. acquisitions, disposals, S49 transfers, changes of ownership, and also such things as new types of business or distribution channels, new admin./computer systems, and LAUTRO/PIA regulatory problems, as recorded in the Chairman's statement, for example.*

Reference should be made to any recent company visit, including a brief description of its outcome. If there are any issues outstanding with the company they should be mentioned.

[It is intended that the 'Background' section should be in essay form rather than as bullet points; it will form an important part of any briefing note on the company. However, most of it should be self-standing, and may well therefore be carried forward from year to year largely unaltered.]

BUSINESS DEVELOPMENTS DURING THE YEAR

3. NEW BUSINESS

3.1 New products

Any significant new products introduced during the year should be described.

3.2 Source(s) of new business

The proportion coming from IFAs, direct sales forces, tied agents etc. (and if relevant the amount from overseas), and any significant changes during the year. [If not available from

Page 2

internal information such as the Report & Accounts, this may be obtained from surveys such as that in Planned Savings.]

3.3 Recent history:

Regular premiums

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Total					
Year on year % increase					

Single premiums

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Total					
Year on year % increase					

New Business Index (Regular premiums plus 10% of single premiums)

New Business Index (£000s)					
Year on year % increase					

Note that the classes to be shown in the new business tables must be selected individually to be appropriate to the company concerned. Some examples of likely categories are shown in the list below. One or more rows for overseas business should be shown if appropriate, and if such business is of sufficient significance it should be split by major territories too. There will normally be a row called 'Other' so that the totals reflect the Form 44 totals. Figures should be shown gross of reinsurance but a footnote may be added if, for example, some classes are (almost) wholly reinsured.

Life with profits | *Pensions with profits* | *Critical illness*
Life non profit | *Pensions non profit* | *Permanent Health*

Page 3

Unit linked life *Unit linked pensions*
Immediate Annuities *Group pensions*

For large companies all the above figures, and the expense figures below, may be shown in £millions if this is more appropriate.

4. CHANGES IN BUSINESS IN FORCE

4.1 Recent history of regular premiums

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Total gross regular premiums					
Less reinsurance premiums					
Total net regular premiums					
Year on year % increase					

4.2 Claims experience

Recent history of mortality rates

Class	1990	1991	1992	1993	**1994**

The mortality rates are:

Form 43, UK business, premiums, line 5 / (½ lines 1 + 12 + 5)*

Page 4

4.3 Persistency experience

Recent history of lapse rates

Class	1990	1991	1992	1993	**1994**

The lapse rates are:

*Form 43, UK business, premiums, line 8 / (½ * [½ * E(t-2) + E(t-1) + ½ * E(t)]), where*

E(t) = lines 2 + 3 in year t

Recent history of combined surrender, lapse & paid-up conversion rates

Class	1990	1991	1992	1993	**1994**

The combined surrender, lapse and paid-up conversion rates are:

Form 43, UK business, premiums, (lines 7 + 8 + 9) / (½ lines 1 + 12 + 7 + 8 + 9)*

Make reference to any features identified from these Form 43 figures, e.g. large increases in surrenders. Supplement this information with PIA data when this becomes available.

5. EXPENSES

5.1 Recent history of expenses:

Expense	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Initial commission					
Acquisition expenses					
Renewal commission					
Renewal expenses					
Total expenses					
Year on year % increase					

Page 5

Expense ratios:	1990	1991	1992	1993	**1994**
Acquisition					
Renewal					

Expenses should be shown gross of reinsurance. The expense ratios are:

Acquisition (IC + AE) / New Business Index

Renewal (RC + RE) / Regular premium income in force [from Form 41, col. 1, lines 2 + 4 + 6 + 7 + 8]

The definitions of these ratios should be explicitly stated in the text of the report.

5.2 Commentary

To include comment on the trends in the expense ratios.

5.3 Exceptional items

Refer to any exceptional items of expenditure, e.g. fines and compensation payments. Also comment on any references in the Report & Accounts to DP or sales distribution developments.

SITUATION AT THE YEAR END

6. NON-LINKED ASSETS

6.1 Changes in portfolio

Recent history of asset mix

Type of asset	1990	1991	1992	1993	**1994**
Land					
Govt fixed interest					
Other fixed interest					
Govt index linked					
Equity shares					
Debts sec'd on land					
Other - producing income					
Other - not producing income					

Recent history of yields

Type of asset	1993	**1994**
Land		
Govt fixed interest		
Other fixed interest		
Govt index linked		
Equity shares		
Debts sec'd on land		
Other - producing income		
Other - not producing income		

Include comment on any significant changes in mix, redirection of investment of new moneys, or use of derivatives.

6.2 Investment performance

Use With-profit Guide information to identify performance of WP Fund.

7. UNIT-LINKED FUNDS

7.1 New funds introduced

7.2 Investment performance

Of the most important funds only (e.g. the managed fund).

7.3 Fund Management Charges to policyholders

With particular reference to any changes.

8. VALUATION & SOLVENCY

8.1 Strengths and/or weaknesses

An explicit statement as to whether the basis is, or might not be, in accordance with the Regulations must be made. Include a general statement about the relative strength or weakness of the basis overall compared with that used by other similar companies. Add comment to highlight the types of risk to which the company is particularly vulnerable.

8.2 Changes since previous year

8.3 Summary of results for main classes

Liabilities for non-linked business

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Total non-linked liability (Form 55)					

Liabilities for linked business

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Total linked liability (Form 56)					

Note that, as with the new business tables, the entries for classes should be adjusted to suit the particular company. If Unitised With Profits business is significant it should be shown separately from conventional with profits. Where there are additional reserves (e.g. mismatching or contingency) then these should be identified in the tables or in a note thereto.

Page 8

Valuation summary

		1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**

Dividend declared (£000s)					

10. BONUSES

10.1 Cost of bonuses declared

10.2 Key rates of bonus

10.3 Changes to bonus rates

Perhaps including a table giving a five-year history of the most important bonus rates only.

10.4 Distribution policy

Draw attention to the split between reversionary and terminal bonuses, and also (where relevant) between policyholders and shareholders. Make particular reference to any changes of practice, and any PRE implications.

11. REINSURANCE

11.1 Overview of treaties

11.2 Changes during the year

11.3 'Financing reinsurance'

OTHER ISSUES

12. COMPLIANCE

12.1 DTI compliance problems

12.2 PIA and other compliance problems

13. MISCELLANEOUS

Possible topics for inclusion here might include press comment about the company, changes in senior staff or directors, etc.

APPENDIX

In certain circumstances, it may not be appropriate to complete a full detailed scrutiny report for each member of a group of companies, although it is usually sensible to consider all the member companies of a group at the same time. Where a full report is not called for, the subsidiary company may be dealt with in an abbreviated report forming an appendix to the parent company report. Examples of where this might be appropriate include pensions management subsidiaries, captive reinsurers and closed fund subsidiaries.

For companies' 1996 returns

SCRUTINY STRATEGY WORKING PARTY

PROFORMA SCRUTINY REPORT,
WITH NOTES ON CONTENT

LIFE ASSURANCE COMPANY

RETURNS AS AT 31 DECEMBER 1996

DETAILED SCRUTINY REPORT

The following pages list the 'standard' section and subsection headings. Notes of likely items to be covered are given in italics. It is suggested that the Sections should remain unchanged from one company report to another, to facilitate finding the desired part of any report, even if an occasional 'not applicable' entry is called for. Subsections should remain in the order shown where possible, but may be amended or omitted more freely.

1. SUMMARY

1.1 Key Features

Key features arising from the scrutiny should be presented, perhaps in the form of 'bullet points'. A possible approach is to extract one item from most Sections of the report. An example list of topics is shown below, but it should not be adhered to rigidly.

In addition to the specific key points arising from the scrutiny, we should express a view as to the soundness of the company in the short and longer term. Reference to the cover for the solvency margin (9.4 below) should be made, as this is a key DTI supervisory responsibility. The priority rating of the company should be clearly stated. Where there is any doubt as to whether the valuation basis used is in accordance with the Regulations (9.1 below), this should be also be clearly stated.

- *Size and type of office (e.g. medium-sized with profits mutual), and primary source of business (e.g. IFAs).*
- *Ownership issues.*
- *Our view as to its soundness.*
- *Most important types of business, and recent new business trends.*
- *Expense control.*
- *Recent trends in financial results, especially if adverse.*
- *Asset allocation for with profits business, and changes therein.*
- *Approach to valuation, and a general view as to its strength.*

- *Supportability of bonuses, and recent trends in bonus declarations.*
- *Likely impact of the SIB compensation requirements for mis-selling of personal pensions.*

1.2 Action Points

The list of Action Points should include items of as many of the following types as apply:

(a) *Points needing immediate action by DTI;*

(b) *Points raised by GAD with the actuary in a letter (which should be enclosed);*

(c) *Points to be recorded for raising at a suitable opportunity, e.g. the next company visit.*

2. BACKGROUND

This should be a 'potted history' of the company, covering such things as its size and ownership, and the type(s) of business it writes. Comments on the corporate structure, and particularly of any insurance subsidiaries, should be made. A brief note of the senior management, and particularly the chief executive and the Appointed Actuary, should be given, with information on their experience, recent changes, etc. Any Section 68 Orders in force should be recorded.

The background should also cover significant *developments during the year, e.g. acquisitions, disposals, S49 transfers, changes of ownership, and also such things as new types of business or distribution channels, new admin./computer systems, and LAUTRO/PIA regulatory problems, as recorded in the Chairman's statement, for example.*

Reference should be made to any recent company visit, including a brief description of its outcome. If there are any issues outstanding with the company they should be mentioned.

[It is intended that the 'Background' section should be in essay form rather than as bullet points; it will form an important part of any briefing note on the company. However, most of it should be self-standing, and may well therefore be carried forward from year to year largely unaltered.]

BUSINESS DEVELOPMENTS DURING THE YEAR

3. NEW BUSINESS

3.1 New products

Any significant new products introduced during the year should be described.

3.2 Source(s) of new business

The proportion coming from IFAs, direct sales forces, tied agents etc. (and if relevant the amount from overseas), and any significant changes during the year. [If not available from *internal information such as the Report & Accounts, this may be obtained from surveys such as that in Planned Savings.]*

3.3 Recent history:

Regular premiums

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Total					
Year on year % increase					

Single premiums

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Total					
Year on year % increase					

New Business Index (Regular premiums plus 10% of single premiums)

New Business Index (£000s)					
Year on year % increase					

Note that the classes to be shown in the new business tables must be selected individually to be appropriate to the company concerned. Some examples of likely categories are shown in the list below. One or more rows for overseas business should be shown if appropriate, and if such business is of sufficient significance it should be split by major territories too. There will normally be a row called 'Other' so that the totals reflect the Form 44 totals. Figures should be shown gross of reinsurance but a footnote may be added if, for example, some classes are (almost) wholly reinsured.

Life with profits | *Pensions with profits* | *Critical illness*
Life non profit | *Pensions non profit* | *Permanent Health*

Page 3

GAD's general scrutiny proforma reports

For companies' 1997 returns

XYZ LIFE ASSURANCE COMPANY

RETURNS AS AT 31 DECEMBER 1997

DETAILED SCRUTINY REPORT

GAD PRIORITY RATING:

GOVERNMENT ACTUARY'S DEPARTMENT

To: **[HMT Supervisor], Her Majesty's Treasury**

From: **[GAD Actuary], Government Actuary's Department**

This report conforms fully with the professional requirements of the Institute and Faculty of Actuaries, details of which are set out in section [16] of this report.

[The following pages list the 'standard' section and subsection headings. Edit the items in square brackets in the opening sentence above and in the final section (Professional Requirements), but otherwise these must be left unchanged. Notes of likely items to be covered in other sections are given in italics. It is suggested that these <u>sections</u> should remain unchanged from one company report to another, to facilitate finding the desired part of any report, even if an occasional 'not applicable' entry is called for. <u>Subsections</u> should remain in the order shown where possible, but may be amended or omitted more freely. It is essential that the whole of sections 1 and 2 fit onto just page 1 of the report.]

1. KEY FEATURES

Type of company:	*(mutual/proprietary, UK/overseas owned, etc)*	
Type of business:	*(with-profit, credit life, unit-linked, etc)*	
Last visit date:		
Key Financial Statistics:	1995	**1996**
New Business Index:		
Long Term Assets:		
Assets Available:		
RMM		

[The key statistics table must be completed for all companies, and its format and position in the report left unaltered. HMT have requested this specifically. If company has any implicit items and/or subordinated loans, then these will be shown in an extra line in the table.

-

2. ACTION POINTS

[This should (a) clearly identify any points needing immediate action by HMT; (b) give a very brief summary of the most important points raised by GAD with the company and/or Appointed Actuary in a letter (stating that this letter can be found in the Appendix); (c) identify any points to be recorded for raising at a suitable opportunity, e.g. the next company

proforma 1997.doc

visit. It is essential that all points requiring action by HMT are highlighted clearly in this section of the report, and an indication given as to their relative importance/priority.

When there are no points for immediate action, this fact should be highlighted in bold-face.]

3. EXECUTIVE SUMMARY

[This section should be kept fairly concise but still draw out all salient features on a company. It should express a view as to the soundness of the company in the short and longer term, comment on its general competitive position and likely long term viability, and indicate whether it presents any particular difficulties for HMT. Where there is any doubt as to whether the valuation basis used is in accordance with the regulations (section 10 below), this should be clearly stated. Summaries on companies with no concerns will be more concise than those on rogue ones. The features drawn out in this part of the report should link to the action points.]

Topics from which these might be drawn include:

- *significant changes in types of business written*
- *recent trends in new business and/or sources of business*
- *ownership issues (e.g. changes of control)*
- *recent trends in expenses*
- *recent trends in financial results, especially if adverse*
- *likely impact of compensation for pensions mis-selling*
- *reinsurance treaties or other financing.]*

4. BACKGROUND

[This should be a 'potted history' of the company, covering such things as its size and ownership, and the type(s) of business it writes. Comments should be made on the corporate structure, and particularly any insurance subsidiaries, all past Sch 2C transfers, and any history of significant HMT or PIA regulatory problems. A brief note of the senior management, and particularly the Chief Executive and the Appointed Actuary, should be given, with information on their experience, recent changes, etc. Any section 68 orders in force should be recorded.

This section should also cover any significant developments during the year, e.g. acquisitions, disposals, Sch 2C transfers in that year, changes of ownership, and also such things as new types of business or distribution channels, new admin/computer systems and PIA regulatory problems, as recorded in the Chairman's statement, for example.

Reference should be made to any recent company visit, including a brief description of its outcome. If there are any issues outstanding with the company they, should be mentioned.

It is intended that this section should be in essay form; it will form an important part of any briefing note on the company. Most of it should be self-standing, and may well therefore be carried forward from year to year largely unaltered, but items which are no longer of interest should be deleted. It would be helpful in this regard if items which are of short term interest are separately identified from those of more enduring interest.

Particular care should be taken to ensure that this section is historically sound and as complete as possible.]

BUSINESS DEVELOPMENTS DURING THE YEAR

5. NEW BUSINESS

5.1 <u>New and altered products</u>

[Any significant new products introduced during the year should be described. Reference should also be made in this subsection to any significant changes in existing product terms, such as increases in policy charges.]

5.2 <u>Source(s) of new business</u>

[Give the proportion of new business coming from IFAs, direct sales forces, tied agents etc. and, where relevant, from the UK and overseas. If not available from internal documents such as the Report & Accounts, this information should be obtained from surveys such as those in Money Management and Planned Savings. Highlight any significant recent trends or other changes in sales direction, presenting the data in a table where possible.]

5.3 Recent history:

New regular premiums

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Life and general annuity: - accumulating with-profit					
- other with-profit					
- non-profit					
- property-linked					
- index-linked					
Pensions: - accumulating with-profit					
- other with-profit					
- non-profit					
- property-linked					
- index-linked

- Overall	*6%*	*(2%)*	*(11%)*	*(10%)*	***20%***

Source: ABI Insurance Statistics Yearbook 1996

[Note that the classes to be shown in the new business tables should be selected individually to be appropriate to the company concerned. One or more rows for overseas business should be shown if appropriate, and if such business is of sufficient significance, it should be split by major territories too. Where the 'Other' rows contain only rounding entries, absorb these appropriately but ensure that the totals reflect the Form 47 totals.

Figures should be shown gross of reinsurance but a footnote may be added if, for example, some classes are (almost) wholly reinsured. Directly written business and reinsurance accepted should be separately identified, where both are material. For large companies, all the above figures, and the expense figures below, may be shown in £m if this is more appropriate.

For companies writing new industrial business, separate tables should be produced for OB and IB, with separate NBI figures being shown for these two classes, clearly labelled.

5.4 Commentary

Comment on any atypical features and on recent new business trends. Retain the ABI comparatives in the NBI table in subsection 5.3 above, but comment additionally in this subsection on the company's relative new business performance compared with its peer group of companies (chosen appropriately), using data from the annual report or elsewhere.

Make specific reference to any material discontinuities or distortions in the figures caused by changes in the way in which recurrent single premium contracts are reported, or due to the inclusion of increases to premiums on existing contracts in new business figures from 1996.]

6. CHANGES IN BUSINESS IN FORCE

6.1 Recent history of regular premiums received

Recent history of combined surrender, lapse & paid-up conversion rates

Class	1992	1993	1994	1995	**1996**
Life non-linked					
Life linked					
Pensions non-linked					
Pensions linked					

Note: The combined surrender, lapse and paid-up conversion rates are:
Form 46, UK business, annual premiums, lines (24+25+26) / [½*lines (11+39+24+25+26)]

[Make reference to any features identified from these figures, e.g. large increases in surrenders. Where it is felt necessary, draw attention to the differences between these two sets of persistency rates, in particular that the PIA statistics are based on policy not

proforma 1997.doc August 3, 1998 Page 8

accounting year and are to some extent out of date, and that the Form 46 figures relate to the company's total portfolio.]

7. EXPENSES

7.1 Recent history of expenses:

Expense	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Initial commission					
Acquisition expenses					
Renewal commission					
Maintenance expenses					
Other management expenses					
Total expenses					
Year on year % increase					

Source: Form 41

Expense ratios:	1992	1993	1994	1995	**1996**
Acquisition					
[Sector] average acquisition					
Renewal					
[Sector] average renewal					
Renewal as % of total fund					
[Sector] average renewal as % of total fund					

Notes: 1. The expense ratios are:
Acquisition: (IC + AE + OME) / New Business Index
Renewal: (RC + ME) / Gross earned regular premiums [F41.29.1]
Renewal as % of total fund: (RC + ME) / Average total fund [½*(F40.49 + F14.51.1 + F40.59 + F14.51.2)]

2. The trend in the acquisition expense ratio is subject to distortion from the reclassification of recurrent single premiums as regular premiums from 1996, and also from the inclusion of other management expenses in this ratio.

[Expenses should be shown gross of reinsurance, but a footnote may be added if these are substantially reinsured. Only the version of the renewal expense ratio most appropriate to the company should be retained, the other and its accompanying note being deleted.

For making comparisons, choose the sector appropriate to the company, and enter its name in the tables, extracting the data from the annual report.

Where there is industrial business, separate tables of expenses should be created for OB and IB, and the above table of expense ratios substituted with the following table:

Expense ratios:	*1992*	*1993*	*1994*	*1995*	***1996***
OB acquisition					
[Sector] average OB acquisition					
OB renewal					
[Sector] average OB renewal					
IB combined					
Industry average IB combined					

Notes: 1. *The expense ratios are:*

OB Acquisition: *OB (IC + AE + OME) / OB New Business Index*

OB Renewal: *OB (RC + ME) / OB Gross earned regular premiums [OB F41.29.1]*

IB combined: *IB (Total expenses) / IB Gross earned total premiums [IB (F41.19.1 + F41.29.1)]*

2. *The acquisition expense ratio is subject to distortion from the reclassification of recurrent single premiums as regular premiums from 1996, and also from the inclusion of other management expenses in this ratio.*

Separate tables and appropriately modified expense ratios should also be created where there is any other major and continuing subdivision of the fund - such as between with-profit and non-profit business.

Mention should be made of discontinuities arising from the 1996 A&S Regulations, expanding in particular on the fact that recurrent single premium business is now treated as regular, with a knock-on effect to the acquisition (and, to a lesser extent renewal) expense ratio, and also that other management expenses, which are treated as wholly acquisition expenses above, may also in fact include some renewal expenses.]

7.2 Commentary

[To include comment on the trends in the expense ratios, and their relative level compared with the relevant sector average, where appropriate.

The service company arrangements disclosed under note 5 on page 96 of the A&S Regulations (note to the returns coded 4008) should be mentioned and, if known, a statement as to whether expense charges from the service company are at cost should be made.

Note any sub-fund divisions where expenses are determined specially, e.g. under a Sch 2C scheme, and comment with cross reference to the controlling document. Comment also where expenses are shared with other companies within the same group.

Comment on where investment expenses are shown - in expenses or as an offset to investment income]

7.3 Exceptional items

[Refer to any exceptional items of expenditure, e.g. fines and compensation payments. Also comment on any references in the Report & Accounts to sales distribution developments and/or computer upgrades to illuminate the progression of expenses and in particular those shown as other management expenses..]

SITUATION AT THE YEAR END

8. NON-LINKED ASSETS

8.1 Make-up of portfolio

Recent history of asset mix

Type of asset	1992 %	1993 %	1994 %	1995 %	**1996 %**

Total					

Source: Form 48

[Yields to be shown without % signs, and to 1 d.p.

Comment on any significant changes in asset mix and redirection of investment of new moneys.

Make reference as to whether Form 49 reveals any significant spread of yields (columns 3 and 6), i.e. if a typical average yield above hides some very low and some high yielders.

Make specific reference to any discontinuities or distortions caused by the change in definition of the assets included in Form 48 from 1996 compared to those included in the old Form 45, in particular that excess linked assets are now included, and that assets matching index-linked liabilities (many of which may be derivatives) are now definitely excluded.

Make reference to any material holdings of inadmissible assets, and any significant reconciliation items to the Companies Act assets as per lines 94 and 95 of Form 13.

Comment on the balance between non-income producing assets above and the non-interest demanding other insurance liabilities, and whether the yield on net assets would be markedly different to the above yield on gross assets due to high other insurance liabilities, including loans. Comment if a separate investment house exists rather than an in-house team, and whether any performance bonus arrangements or penalties apply to our knowledge.

Make reference to any significant debts/loans or contingent liabilities relating to connected companies (see line 100 of Form 13 and note to the returns coded1404 respectively).

Comment also on any material counterparty exposures disclosed under paragraph 11 of Schedule 1 (note to the returns coded 1306)

For making comparisons, compare with data from Annual Report.]

8.2 Derivatives

[Include this subsection only for companies with a material exposure to derivatives.

Comment on any significant amendment to the asset distribution shown in section 8.1 from the impact of derivatives (see Regulation 23(1)(d) statement), and whether such usage is long-standing or new. Comment on margining arrangements in force.]

8.3 Investment performance

[Estimate the investment return on the total non-linked assets from Form 40 and the template below. The result of the calculation should be quoted, but the actual table may be hidden in the report after it has been reviewed by the chief actuary (but preferably not deleted), unless desired to be shown.

	£000s	£000s
1. Total investment income (F 40.12)		
2. *less* estimated investment income on assets matching property linked liabilities *		
3. *less* estimated investment income on non-linked assets matching index-linked liabilities ‡		
4. Investment income on Form 48 assets		
5. Increase in non-linked assets brought into account (F 40.13)		
6. *less* increase in non-linked assets matching index-linked liabilities brought into account ‡		
7. Increase in Form 48 assets brought into account		
8. Investment reserve carried forward (F 14.51.1)		
9. Investment reserve brought forward (F 14.51.2)		
10. Increase in investment reserve		
11. Investment return		
12. Opening Form 48 assets		
13. Closing Form 48 assets		
14. Mean fund excluding investment return [=½×(12+13-11)]		
15. Rate of return from investment [= 11/14]		%
16. Expected investment return†		

* calculated as F44.12 / average F55 internal linked col 7 * average F55 total cols (8 - 9)
‡ estimated figures based on Form 56
† based on overall market performance applied to asset mix shown in section 8.1

Given the problems of subdividing the index-linked assets and the resulting approximations above, it is recognised that the estimated investment return is subject to distortion. Clear health warnings should therefore be included where the volume of index-linked business is significant.

Where there is a separate with-profit sub-fund, the investment return should be calculated for this separately, where possible (i.e. when the split of the total investment reserve is known). Supplementary information on the with-profit sub-fund should be obtained from the with-profit guide, which will be requested for all major with-profit companies as a matter of course at the end of August each year.

Where there is a marked disparity between the crude actual investment return calculated above and that shown in line 16 expected from the mix of assets held and market performance during the reporting period, this should be commented upon. Where there is no such disparity, and the table is being retained, the line 16 figure may be deleted.

Draw attention also to any marked disparity between the crude actual investment return calculated above and that seen for a typical office (again separately for the with-profit fund where possible). Indicate whether this appears to be driven purely from differences in asset mix and comment on its possible implications for the company's long term competitiveness.]

9. ASSETS HELD TO MATCH LINKED LIABILITIES

9.1 Internal linked funds

9.1.1 New and altered funds

[Give details of any new funds introduced during the year, and of any fund mergers or rationalisations, including the terms on which these were made.]

9.1.2 Investment performance

[Comment on the relative investment performance of the most important funds only (e.g. the managed fund) compared both with the performance expected given the stated investment objectives of the funds and overall market performance during the reporting period, and with the performance of funds with similar investment objectives operated by other companies in the industry based on the results of magazine surveys.]

9.1.3 Fund Management Charges to policyholders

[Make reference to any changes in particular.]

9.1.4 Principles of unit pricing

[Give a brief description of the basis on which assets are valued and how this is selected, including the timing of the asset valuation used in respect of unit creations and cancellations in relation to the time at which both the operation is decided upon and effected. If there is any evidence that the procedures adopted may result in incoming, outgoing and continuing policyholders being treated inequitably, a specific statement to this effect should be included. Where unit trust principles are adopted, this may be stated in lieu of a description. Reference should also be made to the allowance made for CGT (see paragraph 5(5) of Schedule 4). Draw attention to any apparent inconsistencies between this information and the accounting data shown in Form 45.]

9.1.5 Liquidity and gearing

[Include this subsection only where there are any liquidity or gearing issues arising from Forms 43 and 45, adding appropriate commentary.]

9.2 Other assets matching property-linked liabilities

[Include brief details of any directly held assets shown in Form 55, where relevant.]

9.3 Mismatching to property-linked liabilities

[Indicate the degree to which linked assets (be they in internal linked funds or directly held) exceed or fall short of the corresponding property-linked liabilities they are held to match. Emphasise that such surplus or shortfall is included in section 8.1 above.]

9.4 Assets matching index-linked liabilities

[Include brief details of these assets, with particular reference to derivatives, and of the liabilities they are matching. If there is a material mismatch, this fact should be specifically noted. Comment also on counterparty exposure and margining arrangements in force in respect of such derivatives.]

9.5 PRE (issues on linked funds)

[Include reference in this subsection to any possible implications for PRE not covered in earlier subsections, for example arising from internal linked fund mergers/rationalisations, lacklustre investment performance or increases in fund management charges or any other policy fees. Comment also on rebates from unit trusts, and in particular the extent to which policyholders benefit from such rebates.]

10. VALUATION BASIS

[An explicit statement as to whether each element of the basis (interest, mortality, morbidity (if relevant), expenses and any other relevant factors) is, or might not be, in accordance with the Regulations should be made, together with a comment on the company's matching position, under the separate headings set out below. Changes since the previous year should be clearly described within each relevant section. Specific reference should be made both to trends in the basis caused by successive small changes over recent years, and to any apparently arbitrary changes.]

10.1 Overall strength

[Include here a general statement about the relative strength or weakness of the basis overall compared with that used by other similar companies. Add comment to highlight the types of risk to which the company is particularly vulnerable.]

10.2 Interest

[Comment on the supportability of, and the degree of margin apparent in, the interest rate used for each group of liabilities shown in Form 57. Check that allowance has been made for the change to asset classes brought about by derivatives (Regulation 23(d) statement and paragraph 6(1)(a) of Schedule 4). Comment on whether the with-profit interest rates appear to make adequate provision for PRE. The method by which regard has been given to PRE, and account taken of the custom and practice of the company in the manner and timing of the distribution of profits or the grant of discretionary additions over the duration of the policy should be described briefly.]

10.3 Mortality

[Make specific reference to any concerns over the mortality assumptions used, including in particular the allowance made for future improvements in annuitant mortality. Consider also the reasonableness of any other adjustments made to the assumptions, for example for changes in incidence of disease, medical developments and the State of the commitment, and of the allowance for AIDS.

Provide a commentary on the recent history of the mortality assumptions used for the most important liability classes, perhaps by means of a table if desired.

10.4 Morbidity

[Include this subsection only for companies for which morbidity is material, making specific reference to any concerns over the assumptions used.]

10.5 Expenses

[Comment on the amount and adequacy of the aggregate allowance made in the valuation for expenses in the year following the valuation date (paragraph 10(2) of Schedule 4) compared with the level of expenses in connection with maintenance of business shown in Form 41, qualifying these remarks appropriately if there are material other management expenses shown in Form 41 with the possibility that these may in fact more properly be classified as in connection with maintenance of business.

Comment also on the information provided in paragraphs 10(1), (3) and (4) of Schedule 4 on the assumed level of expense inflation and the bases used to allow for such inflation, the reserve for expenses of continuing to transact new business during the 12 months following the valuation date, and the subsequent close-down reserve.

It is recommended that a 5-year history of the per policy expense assumptions used for the most important linked liability classes is given in a table.]

10.6 Mismatching and Resilience

Comment on the suitability of the assets hypothecated to each group of liabilities shown in Form 57, and whether these still look reasonable after the change to asset classes brought about by derivatives (see Regulation 23(d) statement). Comment on the size and method of calculation of the Regulation 75(b) resilience reserve, and also on any material mismatching by currency. Highlight any apparent inconsistencies between the information given in the Schedule 4 narrative on either of these two issues and the data on these shown in Form 57. Comment also on the size and method of calculation of any Regulation 75(a) reserve required in respect of cashflow mismatching.]

10.7 Other factors

[Comment on the adequacy of aspects of the valuation basis adopted for linked contracts not already covered in earlier subsections, including in particular the differential between the rate of unit growth, gross of tax and management charges, and expense inflation, and the extent to which account has been taken of any increases in management charges which are allowed under policy terms.

Highlight any concerns over the allowance made for tax, where relevant, including in particular the adjustments made to the gross interest rates in Form 57, and the aggregate provision made for CGT.

Where additional reserves are held, these should normally be described.

Make specific reference where relevant to the provision made for pensions mis-selling, including a comment as to its likely adequacy and whether it has been increased since last year.]

10.8 Options and Guarantees

[Include details only if material, making particular reference to annuity guarantees, including information on reserving and implications.]

proforma 1997.doc August 3, 1998 Page 16

11. FINANCIAL RESULTS

11.1 Overview

[Comment on recent trends in the level of cover for the RMM and any implicit items. Where shareholders' assets are allocated to the RMM, comment on the quality and suitability of the assets held for this purpose.

Reference should be made as to where any mismatching reserves, CGT reserves or pensions mis-selling reserves are located in the returns, and in the tables in sections 11.2 and 11.3 below.

Include comments on subordinated loans, where applicable.

Provide, if possible, a brief history of policyholders' shares shown in section 11.4 below over a long period to enable the 5 years shown to be judged in context.]

Include also a general comment on the apparent current and future financial viability of the company.]

11.2 Summary of results for main classes

11.2.1 Liabilities for non-linked business

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**

Life: - accumulating with-profit					
- other (specify)					
Pension: - accumulating with-profit					
- other (specify)					

Source: Schedule 4, Paragraph 15

[Note any initial guaranteed rates on accumulating with-profit contracts from with-profit bond launches etc. Ensure that any guarantees are included in the bonus rates shown where the company quotes a minimum guaranteed bonus or increases benefits automatically and quotes bonuses on top. Comment should be made where accumulating with-profit bonus rates look difficult to sustain, and in particular where these exceed the tax adjusted yield on gilts.]

12.3 PRE (issues on with-profit business)

[Include details of the principles on which the distribution of profits among policyholders and shareholders (where relevant) is based, the company's aims in relation to the distribution of profits among policyholders, and of the methods used in order to ensure that these aims are achieved. Make particular reference to any changes of practice.

Note how rights are specified, by sub-fund if necessary, by Sch 2C transfer scheme, Articles, etc., as described in paragraph 14(1) of Schedule 4. Cross reference to documents held on file and any commitments given to HMT in addition to published documents.

Draw attention to the split between reversionary and terminal bonuses, including where possible a brief history of the percentage of total payout for key contracts represented by terminal bonus. Highlight any significant trends in this percentage and/or marked differences with the industry average.

Comment on other bonus or quasi bonus series such as deposit administration business.]

12.4 Recent history of maturity payouts

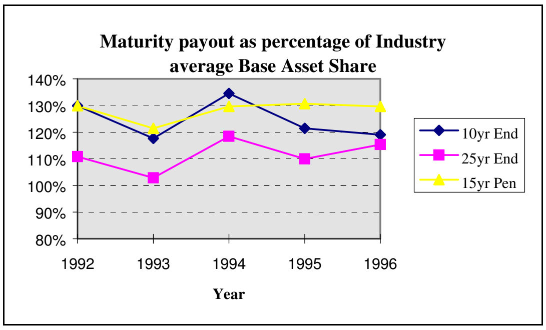
Industry average 10 yr SV on 25 yr endowment					

Note: Endowments: £50p.m., maturing 1 Feb. in next year Source: Money Management 4/97
Pensions: £200p.m., maturing 1 Jul. in year Source: Money Management 10/96



[Comment on the company's relative competitive position, the significance of individual maturity years, etc.

Warnings should be included if the method of calculation is over or under estimating the actual amount of the base asset share.]

13. REASSURANCE AND FINANCING

13.1 Overview of reassurance treaties

[Highlight in particular deals with associated companies, looking at the total risk involved overall and any other implications; significant exposures to individual reinsurers, especially ones not authorised in the UK; and new (for that company) and imaginative uses of reinsurance. The names of significant individual reinsurers should be stated, and any changes in the company's reinsurance arrangements since the previous year should be highlighted. Make reference to any deposit back arrangements in force, and comment on the issue of tax deductibility of interest payments under such arrangements, where relevant.]

13.2 Financing arrangements

[Include details of the nature of, and risks involved for the company in, any financing arrangements, apart from subordinated loans entered into, including in particular the

amounts of any undischarged obligations of the company, the conditions for their discharge, and how these have been taken into account in the valuation.]

OTHER ISSUES

14. COMPLIANCE

14.1 <u>HMT compliance problems</u>

[Watch in particular for likely errors in completing Forms 55-57, the assets which have been included in Form 48, the treatment of recurrent single premium contracts, the possible misclassification as non-linked of certain contracts which are now classified as linked, and Section 35A issues.

Also comment on Form 48/57 comparisons, if problems arise.]

14.2 <u>PIA and other compliance problems</u>

15. MISCELLANEOUS

[Possible topics for inclusion here might include press comment about the company, changes in senior staff or directors, etc. Delete this section if not applicable.]

16. PROFESSIONAL REQUIREMENTS

This report conforms fully with the requirements of the Institute and Faculty of Actuaries as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct.

This report had been prepared under the terms of the Agreement between Insurance Directorate of the Her Majesty's Treasury (HMT) and the Government Actuary's Department (GAD) dated March 1995 ("the service agreement") setting out the level of service to be provided by GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

The purpose of this report is to enable HMT to fulfil its duties under the Third Life Directive and the Insurance Companies Act 1982.

The scope of this report is:

- to advise on the statutory solvency position of the company;
- to identify any issues relevant to the duties of HMT;
- to describe the development of the company over the previous 12 months;
- to provide historical background to the company.

[This report is limited to a minor degree because certain questions need to be put to the company and/or the Appointed Actuary. Under the service agreement, GAD has written to the company directly on these. A copy of our letter is included in Appendix [B] to this report.]

The advice and information contained in this report are solely for the use of HMT in fulfilling its statutory duties and should not be transmitted to third parties, including the company concerned, without the prior consent of GAD.

APPENDIX A

[In certain circumstances, it may not be appropriate to complete a full detailed scrutiny report for each member of a group of companies, although it is usually sensible to consider all the member companies of a group at the same time. Where a full report is not called for, the subsidiary company may be dealt with in an abbreviated report forming an appendix to the parent company report. Examples of where this might be appropriate include pensions management subsidiaries, captive reinsurers and small closed fund subsidiaries.]

APPENDIX B

[Include here a copy of the letter (if any) sent to the company and/or Appointed Actuary on the returns.]

THE EQUITABLE LIFE ASSURANCE SOCIETY
****

DTI ANNUAL RETURNS to 31st DECEMBER 1989

We have completed the scrutiny of this Society's 1989 returns. 1989 was an exceptional year for the company because during this year the new business growth set a record. The annual report and accounts show that the new regular premiums amounted to £234m (1988 - £190m) and single premiums amounted to £408m (1988 -£132m). The main contributor to this growth was the Society's personal pension plan.

The long term business admissible assets at the end of the year amounted to £5,805m (1988 - £4,215m). Two-thirds of the non-linked assets were invested in low yielding equities and properties. The Society declared unchanged bonus rates and 94% of the total cost of the bonus was financed by a transfer from the investment reserves. If the property values remain depressed and the equity market does not show any bullish tendencies in the 1990 and beyond; we think that the Society may have problems in maintaining the current bonus rates on its with-profit life and pensions contracts.

The 1989 valuation basis was satisfactory. There was a significant margin in the published mathematical reserves. We have raised a few queries with the company (see attached copy letter), and we do not anticipate that the replies will affect our view of the solvency position.

The following table shows the solvency situation at the end of last two years ;

	End of 1989	End of 1988
Total Available assets	£974m	£618m
Required Minimum Margin	£204m	£161m
Cover	4.77x	3.84x

DTI

EQUITABLE LIFE - 1990 RETURNS

We have completed a detailed scrutiny of this Company's 1990 returns and enclose a copy of our letter addressed to the appointed actuary.

Our comments are as follows:

1. Growth of business: The Company continued to expand rapidly. The annual accounts show that total new premium income increased 30% to £836m. New regular premiums, at £258m, were up 10% on the previous year and single premiums increased 42% to £578m. This increase in single premiums is due partly to the continuing success of the Society's with-profits bond. The revenue account (Form 40) shows total premiums receivable during 1990 to be £1345m (1989 - £1040m).

2. The Society has produced separate Forms 40, 41, and 42 for its ordinary life, general annuity and pension business this year. We are asking the appointed actuary to explain the reasons for this split.

3. During 1990, in common with other life companies, the Society experienced falls in the market values of equities and other assets. As a result the actuary has decided to weaken the valuation basis of the with-profits business. The rates of interest he has used are within the limits laid down in the regulations and could be supported by the yields shown in Form 45 although the margin is small. We

Document Number:01692 Page 1

are asking a few questions about the valuation basis and we will comment in detail after the replies from the Society.

4. The cover for the required minimum margin is reduced from 477% (1989) to 177% of this year. The main reason for this is the fall in value of the assets (referred to in paragraph (3) above). Part of the fall has been covered by a release of £214m from the mathematical reserves arising from the weakening in the valuation basis. Other reasons for the reduction in cover for the RMM are (a) growth of new business and (b) maintenance of unchanged bonus rates on with profit policies.

5. Equitable Life is a major player in the repeated single premium personal pensions market. It has been successful in obtaining the additional voluntary contributions (AVC) contract of National Health Service in 1990.

From: [redacted]
Government Actuary's Department

Copies: [redacted]

Date: 29 October 1992

Subject: **Equitable Life - 1991 Returns**

Note: copy with [redacted] comments on general file.

We have completed our scrutiny of this company's 1991 returns and attach a copy of a letter to the company's actuary raising a few points.

2. The company continued to expand rapidly in 1991. Total premiums received amounted to £1715M [against £1345M in 1990 and £1040M in 1989]. Most of these premiums are either single premiums or renewable single premiums on pension schemes. Contractual annual premiums in force at the end of 1991 amounted to only £75M.

3. The total assets of the company were £7452M at the end of 1991. It is difficult to give a picture of growth of the company in terms of total assets as there have been fairly large changes in the market values of assets in the past 2 years. However if we exclude transfers from investment reserve. Form 40 shows an increase in the fund of £953M in 1990 and £1208M in 1991.

Document Number:01736 Page 1

4. Total available assets shown at Form 9.34 were £488M to cover a RMM of £293M [1.67 x cover]. In 1990 these figures were £413M and £233M [1.77 x cover]. In 1989 the available assets were £974M to cover a RMM of £204M.

5. This is one of the companies which we have seen recently in connection with their low cover for the RMM in 1991 and future prospects. Our present comments relate to their 1991 returns. The company publishes its valuation results using a bonus reserve basis. However it shows the alternative net premium reserves in order to comply with the regulations. Our comments on the valuation relate to the net premium figures.

6. At the end of 1991 the U.K. equity market was at about the same level as that at the end of 1989. Also some gilt prices were at a higher level in 1991. It is therefore reasonable to compare these two year ends rather than the 1990 position when markets were very depressed.

7. Total available assets in 1991 were £488M compared with £974M in 1989. The net transfer from investment reserve in non-linked funds in the two years was £185M. Hence total non-linked assets must have fallen in value by £301M.

Big difference!

8. A comparison of the net premium valuation bases used at the end of each year shows a weakening in the 1991 bases as compared with 1989. This is true of a number of companies. What we have compared here is the average valuation rate of interest employed by the actuary with the average rate of interest earned on the corresponding hypothecated assets (using the highest yielding assets first). There appears to be little or no margin in the interest rates used in the 1991 valuation and we have asked the actuary a question relevant to this point.

2

Document Number:01736 Page 2

1991 returns

9. Why has this situation arisen? We know from our recent talks with [redacted] that the with profit assets earned -11.3% in 1990 and +14.0% in 1991. These rates take into account both capital changes and interest earnings, so the return on with profit assets was only about +3% for the two years. This is after making allowance for the high rates of interest that the company needs to earn on its non-profit contract (up to 10%) and the 3½% p.a. guarantees given on with profit contracts.

10. Total bonuses paid to policyholders cost £423M in 1989 and £456M in 1991. The actual net transfer from investment reserve to the fund on non-linked assets in the two years was £185M.

11. In order to pay the bonuses in the two years the company needed to earn 11¼% per annum on the assets backing the with profit contracts. The amount earned would include interest income and capital gains. In fact the company earned about +3% over the two years instead of the required +23%, and this is the main reason why the available assets have been reduced and the valuation basis has been weakened. A major part of the bonuses have been paid out of (i) a weakening of the valuation basis and (ii) transfers from investment reserve.

12. It is perhaps worth noting that despite the lower cover for the RMM, the company still had, over 60% of its non-linked assets invested in equities and property. We understand from recent discussions with [redacted] that they are now investing more in gilts.

3

Document Number:01736 Page 3

13. The company's new business figures have increased in the past few years and we wonder whether this has given rise to any significant strains on the fund. We have asked a question about this in our letter to the company.

Government Actuary's Department

Subject: **EQUITABLE LIFE ASSURANCE SOCIETY**
ANNUAL RETURNS AS AT 31 DECEMBER 1992

RcuA: 24/3/94

We have now carried out a detailed scrutiny of the above returns. Equitable has again had a successful year overall, with an increase in funds (ignoring investment appreciation) of £1,370m (compared with £1,208m and £953m in the two previous years), and total funds at the year end of £8,562m.

As you know, the Equitable publish, rather unusually, a Bonus Reserve Valuation (BRV) and then, as an Appendix to Schedule 4, a Net Premium Valuation (NPV) in accordance with the Regulations. The reserves on the BRV are always demonstrated to be higher than those required using the NPV; on this occasion the former were £8,259m and the latter £7,809m. Thus, in Form 9 they show a cover for the RMM of 2.36x (which compares with 1.67x in 1991). The (more conventional) NPV seems to demonstrate cover of about 3.9x; however we do have one or two questions about the NPV basis. We are however satisfied that the BRV (and hence the overall returns as formally deposited) is, in aggregate, adequate according to the Regulations. As at the end of 1992 it was on a similar basis to 1991 but with some minor strengthening, amounting to some £100m overall.

The company's business is very largely with profits and nearly all single premium (or recurrent single premium) - out of total premiums received in 1992 of £1,877m, the regular premiums in force, as shown in Forms 55 and 56, amounted to only about £80m. As we have discussed before - see in particular my minute of 3 March 1992 - this makes it difficult to compare Equitable with other with profits companies. We have been concerned in the past that they have overdistributed and weakened their reserves. More recently matters seem to have been brought under better control. The situation as at 31 December 1992 is more satisfactory than the previous year, and as you will know from recent reports (e.g. the notes of the meeting held on 30 November last) we expect the position as at the end of 1993 to have improved still further. Reversionary and terminal bonus rates were reduced at the end of 1992 and it has just been confirmed that reversionary bonuses have been reduced again from the end of 1993.

Business for this company continues to do well despite the difficult economic circumstances. The tables on the next page give a recent history of new business (in the UK - the overseas business, in Guernsey and Ireland, is not of great significance), as reported in Form 44:

EQUIT02.DOC: 28 Mar 94

Document Number:01766 Page 1

1992 returns

Single premiums

Class	1989 £k.	1990 £k.	1991 £k.	1992 £k.
Life, non-linked (mainly WP)	37,126	85,437	150,027	**128,977**
Life, linked	2,060	1,969	3,628	**1,513**
Annuity	14,667	15,646	21,704	**29,327**
Pensions, non-linked WP	32,336	27,955	68,029	**131,319**
Pensions, non-linked NP	29,256	49,109	109,410	**151,729**
Pensions, linked	917	283	735	**1,269**
Total	116,362	180,399	353,533	**444,134**

Annual premiums

Life	4,512	5,249	7,291	**9,390**
Annuity	6,395	5,669	8,447	**1,286**
Pensions, non-linked WP	145,419	186,470	202,014	**221,541**
Pensions, non-linked NP	2,662	2,285	4,607	**1,965**
Pensions, linked	28,151	32,809	17,565	**31,763**
Total	187,139	232,482	239,924	**265,945**

(The apparent anomaly between the annual premium business shown here, and that mentioned earlier, is explained because recurrent single premium business is treated as regular premium business in the year of issue for Form 44 purposes.)

The next table shows a recent history of expenses in the same format as the new business. The Equitable, of course, is well known as the leading non-commission-paying office and so I have not shown any figures for commission. The ratio of management expenses to total premium income was reduced again in 1992, from 7.2% to 6.6%, which is by industry standards very low. OK

Expense	1989 £k.	1990 £k.	1991 £k.	1992 £k.
Acquisition expenses	56,633	60,381	72,576	**75,678**
Renewal expenses	29,097	37,561	47,950	**41,048**
Total expenses	85,730	97,942	120,526	**116,726**

The Equitable has responded to the letters regarding potential liability for mis-selling of personal pensions indicating that they expect any such liability to be negligible; from our knowledge of the company we would have no reason to doubt this.

Although there was some useful information supplied for the meeting held last November (already referred to), we still have a few further questions to ask on the 1992 returns, relating to particular features of the NPV basis which might appear somewhat weak. We have also asked the actuary for some formal information about bonuses, and also for his indication of the position as at the end of 1993. A copy of our letter is enclosed for your information.

Subject:	EQUITABLE LIFE ASSURANCE SOCIETY UNIVERSITY LIFE ASSURANCE SOCIETY RETURNS AS AT 31 DECEMBER 1993	

---

1 SUMMARY

1.1 Key Features

The cover for solvency for both companies remains healthy at 3.75× and 15.7× for Equitable and University respectively on the published basis.

This report deals with both companies, but as the Equitable is very much larger and more significant, the focus is deliberately slanted towards that society. Most figures for University are given in the Appendix, and not in the main report.

The expenses of Equitable remain low, with comfortably the best ratios in the industry. It is apparent that expense control is still tight.

The new business continues to grow, with the emphasis remaining on pensions business

A new branch was added in Germany in 1993, adding to existing Guernsey and Republic of Ireland branches.

Equitable, no doubt influenced by the favourable figures they can properly demonstrate, voluntarily introduced the disclosure regime early in July 1994.

1.2 Action Points

We have raised a number of questions on Equitable's returns, and a smaller number on University's.

Equitable:

1. There is a surprising sum due from a dependant insurance company not authorised in the UK, which we are not aware of. Reinsurance?
2. The treatment of single premiums in the returns appears inconsistent.
3. The note required to form 40 regarding the agreement with University is missing.

EQU93REP.DOC 15 Nov 94

Document Number:01794 Page 1

4. A contract has disappeared. We are seeking confirmation that it has ceased.
5. There appears to have been an error in describing a link.
6. A contract is now described as like a different plan to that which it was likened to in 1992.
7. Interest rates used in the valuation look high. We are seeking clarification.
8. A mortality table looks light.
9. An annuity table looks too heavy.
10. The expense reserves are determined on a somewhat optimistic basis. This has been true before, and we are trying to determine how great the society's exposure is.
11. The amount of resilience reserve required is not given, but only that it can be met.

University:

1. The new large linked contract is described as not being linked to an internal fund, and therefore forms 49-51 are not completed. This appears wrong.
2. As with Equitable, the interest rates used in the valuation are high compared with the yield on assets.

2 BACKGROUND

Equitable is very proud to be the oldest mutual life assurance society in the world, dating from 1762. It was the first to develop policies based on scientific principles as used today.

Equitable has never paid commission to third parties, a further matter of much trumpeting.

There is a background of their own somewhat unusual approach to bonuses, unit linked products (which often have discretionary surrender values) and valuation using a gross premium bonus reserve method. The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by the regulations.

Although Equitable applies for a section 68 order for an implicit item each year, it has never used this order, it being a precaution only. It does however also enjoy an order ? exempting full description of its personalised funds in the return. There is also an order in relation to call option for FTSE links on some policies.

University is also an old institution, which is now a subsidiary of Equitable, having been acquired in 1919. Equitable provides management services to University under an agreement dating from 1919, which caps University's expenses.

Equitable also has a unit trust and PEP subsidiary.Equitable Unit Trust Managers Ltd, which has over £1bn under management.

The Appointed Actuary and Managing Director posts are both held by [redacted]

1993 returns

BUSINESS DEVELOPMENTS DURING THE YEAR

3 NEW BUSINESS

3.1 New products

3.1.1 With profits and unit linked Major Medical Cash Plan, carries guaranteed insurability option.

3.1.2 With profits and unit linked Critical Illness Plan...carries RPI guaranteed insurability option.

3.1.3 With profits and unit linked Managed Annuity. There are problems with this product with the Inland Revenue, who have not approved it as a valid annuity under the Taxes Acts.

3.1.4 Branch Operations:
These offer similar products to the UK, but on a more limited scale.

3.2 Source(s) of new business

Equitable pays no commissions. They run a sales force, but a lot of their business comes from direct approaches from prospective policyholders.

3.3 Recent history:

Note: University Life is closed to new business, but in 1993 a restructuring of the contracts with the Universities Superannuation Scheme took place, and this led to a large item of new business being reported. This all arose from a surrender, and might just as easily have been reported as an alteration or transfer. It has not been included in the following tables. There are also a very small number of policies (2 in 1993) arising from options in University, but these have also been omitted on the grounds of materiality.

Year on year percentage increase		26.0	11.9	13.7	**(0.6)**

3.4 Commentary

These figures are somewhat strange, however, in that a great volume of pension business is regarded as recurrent single premium. This is reported in the year of issue as regular premium,

EQU93REP.DOC: 15 Nov 94 Page 5

Document Number:01794 Page 5

in accordance with the guidance notes, but it does not appear in form 43 as regular premium. In 1993 the effect was for £225.887m new regular premium to appear in form 44 but not in form 43. It is also therefore impossible to reconcile form 41 and form 43.

Should we ask for revised forms?

GAD doesn't mention F.43 in letter to co — query this with GAD.

4 EXPENSES

4.1 Recent history of expenses:

Expense	1989 £000s	1990 £000s	1991 £000s	1992 £000s	**1993 £000s**
Initial commission	0	0	0	0	**0**
Acquisition expenses	56633	60381	72576	75678	**76538**
Renewal commission	0	0	0	0	**0**
Renewal expenses	29097	37561	47950	41048	**41773**
Total expenses	85730	97942	120526	116726	**118311**
Year on year percentage increase		14.2	23.1	(3.2)	**1.4**

Expense ratios: Acquisition	28.5	24.1	25.9	23.7	**24.2**
Renewal (Equitable)	3.5	3.6	4.0	3.2	**3.2**

4.2 Commentary

Equitable is well known as a non-commission paying office, and prides itself in it low expense ratio.

The Equitable publish in their Report and Accounts figures for total expenses divided by total premium income for the society and industry average. The figures are illuminating and the point is valid. Equitable's expenses are indeed low.

Year	1985	1986	1987	1988	1989	1990	1991	1992	1993
Industry	21.7	20.6	20.3	23.4	20.3	21.0	19.3	18.5	not yet available
Equitable	9.6	8.4	8.5	9.1	8.5	7.6	7.2	6.6	5.8

The expenses of University are met by Equitable, and a formula basis is used to charge University. It is not therefore necessary to consider the expense history of University, as the residual effect appears as an expense in Equitable.

EQU93REP.DOC: 15 Nov 94 Page 6

Document Number:01794 Page 6

1993 returns

4.3 Exceptional items

None known. There is no provision for mis-selling of personal pensions. This is due to the selling methods which are based upon largely approaches from prospective policyholders. It remains to be seen whether this is correct, but it is true that their exposure is likely to be very much lower than typical in the industry. OK

5 CLAIMS AND WITHDRAWALS

5.1 Claims experience

There has been an increase in the level of death claims, but this does not necessarily indicate any particular problem, as the amount of claim for linked business is very clearly impacted by unit prices.

5.2 Persistency experience

The persistency rates are generally quite good, particularly on the non-linked side. The prevalence of recurrent single premium contracts prevents proper analysis, however. The linked business is generally newer, and shows higher off rates.

6 FINANCIAL RESULTS

6.1 Surplus emerging

On the bonus reserve basis a surplus of £481m arose (1992 £331m). The corresponding figures for University was £100m for the triennium. There is little point in comparing triennia, as these periods are so long and with such varied investment condition and valuation bases up to six years apart.

6.2 Transfer to (or from) P&L Account

This is only applicable to University, where a transfer of £9.979m was made. The transfer is always the 10% share of distributed surplus to within a very small margin. Small transfers can be made in other years depending on terminal bonuses.

6.3 Dividend declared

Equitable is a mutual. University declared a dividend covering the triennium of £9.985m, though small amounts are paid annually, reflecting terminal bonus shares.

1993 returns

SITUATION AT THE YEAR END

7 (NON-LINKED) ASSETS

7.1 Mix of assets at year end (Equitable)

% held	1993	1992	1993 New Money (£1.5bn)
Land	7	8	4
Gilts	28	26	54
Other Fixed Interest	13	12	16
Indexed Gilts	3	2	6
Equities	43	43	30
Other	6	9	-10*

* : representing a decrease in net current assets and cash.

A table in the With Profits Guide shows the assets attributed to with profits business.

UK with profits business	1989 %	1990 %	1991 %	1992 %	1993 %
Fixed Interest	15	17	18	27	31
Property	14	15	12	9	8
UK Equities	46	44	43	41	41
Non-UK Equities	17	12	14	11	12
Unlisted Equities	1	1	2	2	2
Other	7	11	11	10	6
Total	*100*	*100*	*100*	*100*	*100*

The most noteworthy feature of this table is the shift towards a higher fixed interest component. Over five years the fixed interest has risen by 16 points to more than twice the previous level. Equally, the property component has fallen by six points to just over half previously and equity holdings in both the UK and overseas have fallen by five points each, which in the case of overseas equities represents some thirty per cent.

7.2 Investment performance (Equitable)

Investment Income, £665m (1992 £568m)

Capital Gains (non-linked), brought into account £1,180m (1992 £140m)
change in investment reserve £ 875m (£491m)
Totals £2,055m (£631m)

The total return for 1993 was 28.3% (per company's own figures).

1993 returns

8 VALUATION & SOLVENCY

8.1 Strengths and/or weaknesses

The bases used for the gross premium valuation are primarily a tool to support the method of determining distributions. They are not particularly relevant to supervision. The adequacy of the valuation is demonstrated by publishing a net premium valuation on the minimum basis necessary to meet the regulations and except where explicitly stated otherwise comments and figures in this report are based upon this alternative basis.

Q The net premium bases have a number of apparent weaknesses, though in the light of the cover for the required minimum margin there is little concern as to the solvency. If, however, the reserves are too thin, it may lead to inappropriate conclusions being drawn by policyholders and prospective policyholders as to the financial strength of the society. We are therefore seeking confirmation of the prudence of certain of the assumptions.

The rates of interest used are somewhat high in comparison with form 45. As this form does not provide sufficient information to draw a firm conclusion, we are seeking further information.

Some mortality tables look a little on the optimistic side, and again further information on their justification is required.

There is a somewhat weak reserving basis for unit linked expenses, which does not meet the standards this department normally expects. We normally expect the differential between the rate of growth of unit linked assets, and hence the prices, before all charges and taxation to be no more than 2% higher than the rate of inflation of renewal expenses. For this company the difference is about 3.7%. We are trying to determine the extent of exposure here to an adverse experience in costs.

8.2 Changes since previous year

Expense allowances on linked business have been increased, no doubt based upon the experience shown in the table in section 4.1 above, but costs are increasing only very slowly (just over 1%), despite a substantial (over 6%) increase in contracts in force. Expense allowances on unitised with profits have been increased.

Some mortality tables have been strengthened.

The revised resilience test has been incorporated.

Interest rates have been reduced, but not generally by quite as much as the fall in asset yields.

Required Minimum Margin	*292.8*	*356.6*	***458.0***	276.8†	337.6†	**445.1†**
Cover	*1.67*	*2.36*	***3.75***	3.2†	3.9†	**4.6†**

* Section 68 order (for £420m in 1993) not used as per on form 9

† Estimated figure. The cover makes no allowance for the absence of a reserve to meet the resilience test. The amount required in 1992 was £462m, which wipes out the difference between the BRV and NPV and reduces the surplus under the NPV to only some £18m without recourse to the investment reserve which was £839m. As a result the cover for required minimum margin would only have been about the 2.4× shown under the BRV.

8.4 Cover for the solvency margin — Why does Equitable have to do things different from everyone else? !

For both societies the cover for the required minimum margin remains substantial, and gives no cause for concern in itself. The only issues therefore revolve around whether the valuation basis itself is of sufficient strength. This is covered in 8.1 above, but particular care is needed in reviewing the figures for the NPV, as the resilience reserve is omitted, and the figure is not known. ?

9 **BONUSES**

9.1 Cost of bonuses declared

The figure varies by valuation basis and method. The figures for the net premium basis are:

Equitable	£300.4
University	£ 4.3m

EQU93REP.DOC: 15 Nov 94 Page 11

Document Number:01794 Page 11

1993 returns

9.2 Key rates of bonus

The Equitable has a large range of bonus series, and a system of final bonuses which is somewhat different to the normal terminal bonus. Specimens are given below in the table.

The system of final bonus is a little unusual. It consists of a declaration of bonus which is not reversionary, in that it may be withdrawn, and/or reduced in future. However it has a lot of features in common with reversionary bonuses. It is declared in a similar way as a percentage of benefit, and the amount paid at the end of the policy's normal span is the sum of the annual "declarations", subject to the proviso that a previously granted bonus can be withdrawn. The wording used by the Society in the WITH PROFITS GUIDE is:

"Final bonuses are also determined and applied retrospectively. The final bonus is calculated so as to top up the growth arising from the policy guarantees and the declared bonus rate for the year to the overall rate of return announced for the year. Final bonuses do not add a guaranteed element to the contract, and the final bonus element of a policy can be varied up or down in future."

The same guide includes a table of investment returns gross on market value and the rate applied in fixing bonuses.

	1989	1990	1991	1992	1993
Actual	24.1%	-8.3%	13.5%	17.1%	28.8%
Allocated	20%	12%	12%	10%*	13%

* : 12% on new benefits secured during the year

Equitable Life	1993				1992			
Bonuses	Reversionary ‰		Final %		Reversionary ‰		Final %

Guernsey Life	75.00	75.00	13.0	10.0	85.00	85.00	10.0	10.0
Irish Life	52.50	52.50	12.0	9.0	52.50	52.50	11.0	9.0
Irish Pension	40.00	40.00	13.0	10.0	50.00	50.00	10.0	10.0

The whole life bonus is £37.50‰ + £3‰×(years in force in excess of 11)
(previous year £42.50‰ + £4‰×(ditto))

1993 returns

The final bonuses for traditional life are a table depending on duration in force and this gives the full final bonus, which is in this case therefore a terminal bonus. Specimen values are:

Complete Years In Force	% of SA and Bonus 1994	% of SA and Bonus 1993
1	8.5	7.5
2	11.0	10.0
3	13.0	12.5
4	15.5	15.0
5	18.0	17.5
10	40.5	46.0
15	81.0	81.0
20	102.5	99.0
25	117.5	113.0
30	120.0	113.0

The final bonuses for deferred annuities are a similar table. Specimen values are:

Complete Years In Force	% of SA and Bonus 1994	% of SA and Bonus 1993
1	10.0	7.5
2	12.5	10.0
3	14.0	11.0
4	15.5	13.5
5	17.5	14.5
10	31.0	35.0
15	72.0	71.0
20	94.5	89.0
25	106.0	101.0
30	110.0	101.0

9.3 Changes to bonus rates

Covered above.

9.4 Distribution policy

Both societies follow a stated policy of full distributions, with a basis designed to make up the implied guaranteed rate to a total earned rate. Part is in the form of the non-cancellable reversionary bonus and the rest in the form of final bonus.

The policy is to link declared reversionary bonus rates to the redemption yields on fixed interest stock. This has produced a series of reductions in recent years as yields have fallen, but the system of final bonus effectively balances this in total returns. Policyholders' reasonable expectations are therefore influenced downwards in line with yields.

10 UNIT-LINKED FUNDS

10.1 New funds introduced

Indexed Gilt (life and pensions versions) fund
Global Bond (life and pensions versions) fund — a US dollar Guernsey fund.
Global Equity (life and pensions versions) fund — a US dollar Guernsey fund.
Irish Managed (life) fund

A new arrangement now exists in University as a result of the restructuring of the University Superannuation Scheme policies.

10.2 Investment performance

By far the largest fund is the Pensions Managed, which showed an increase in valuation price of 34% which is respectable. The largest life fund is the Managed which increased by 24%, which is not as good, though still satisfactory.

10.3 Fund Management Charges to policyholders

These are unchanged at either 0.6875% p.a. (for UK and Irish life funds) or 0.75% p.a. (for all other funds).

11 REINSURANCE

11.1 Overview of treaties

Little use is made of reassurance by Equitable, other than for very large sums assured (retention being £400K for life risks and £50K for critical illness risks), income bonds, German business, and facultative cover in some cases.

11.2 Changes during the year

New treaties were put in place for 50% quota share reassurance of major medical cash benefits, and for the excess over retention for critical illness benefits..

Extensive reassurance is also now in place for German business.

11.3 'Financing reinsurance'

None

OTHER ISSUES

---

12 COMPLIANCE

12.1 Significant compliance problems

None known

13 MISCELLANEOUS

No provision is made for mis-selling of pensions.

EQUITABLE LIFE ASSURANCE SOCIETY

RETURNS AS AT 31 DECEMBER 1994

DETAILED SCRUTINY REPORT

1. SUMMARY

1.1 Key Features

- This is a large old-established mutual life insurer with total long term assets of £13½bn. This makes it the seventh largest company measured in terms of long term business assets.
- This company is classified as priority 3.
- Rather unusually, especially since the recent disappearance of Provident Mutual, the company publishes a gross premium bonus reserve valuation, and a net premium comparison.
- For the first time, Equitable has used a small implicit item in form 9, amounting to about £250m.
- The main line of business is pensions, which is somewhat unusually structured in that it is almost all on a recurrent single premium basis.
- Branches are operated in Guernsey, Ireland and Germany. These are producing ever more business - 8% of new business in 1994.
- Expenses remain the lowest in the industry, and the ratios continue to fall.
- Reserving bases are weak, by design, to maximise the free asset ratio. Nonetheless, this has fallen in 1994.

1.2 Action Points

Much useful information was derived last year from the With Profit Guide, but we have only an edition dating from 1 May 1994. We have requested a later version in our letter.

We have also raised a number of areas of greater or lesser concern, pre-eminent amongst which are mortality bases for annuitants and interest rates used in the valuation.

2. BACKGROUND

Equitable is very proud to be the oldest mutual life assurance society in the world, dating from 1762. It was the first to develop policies based on scientific principles as used today.

Equitable has never paid commission to third parties, a further matter of much trumpeting.

EQUIT94R.DOC: 23-Jan-96

Document Number:01828 Page 1

There is a background typified by their own somewhat unusual approach to bonuses, unit linked products (which often have discretionary surrender values) and valuation using a gross premium bonus reserve method. The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by the regulations.

Although Equitable applies for a section 68 order for an implicit item each year, it has used this order (in part, being £250m on an order permitting £500m) for the first time in 1994, it having being a precaution only hitherto. The implicit item is not strictly necessary for the statutory purpose, it forming part of the excess assets in Form 9. A similar order in the sum of £500m was granted for 31 December 1995. It also enjoys an order exempting full description of its personalised funds in the return.

University Life is also an old institution, which is now a subsidiary of Equitable, having been acquired in 1919. Equitable provides management services to University under an agreement dating from 1919, which caps University's expenses.

Equitable also has a unit trust and PEP subsidiary Equitable Unit Trust Managers Ltd, which has over £1bn under management.

In 1995 Equitable purchased a majority interest in [redacted], the PHI specialist, from the mutual Medical Sickness. This does not feature in this scrutiny, in view of the purchase post-dating the valuation, but will feature in future scrutinies. There are indications from scrutiny work on Permanent that the price paid may have been quite a full one.

Equitable has been active overseas in recent years, and has branches in Guernsey (sometimes called its International Branch), Ireland and Germany. These branches have been set up on a low cost base, but are developing steadily and are producing ever increasing amounts of new business. The impression we have been given is that the Equitable regard this as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders, for example. The mutual concept is extended to all policyholders, and indeed is even part of Equitable's dealing with UK non profit policyholders.

The Appointed Actuary and Managing Director posts are both held by [redacted] who is due to retire within a few years (though it is dangerous to speculate exactly when!).

A visit to the company by DTI and GAD officials was made in December 1994.

BUSINESS DEVELOPMENTS DURING THE YEAR

3. NEW BUSINESS

3.1 New products

UK

No new contracts

EQUIT94R.DOC: 23-Jan-96

Guernsey

1. International Flexible Protection Plan - a unit linked renewable endowment with selectable sum assured.
2. Unit linked Guernsey and International Group Pension Plans

Ireland

1. With profits Major Medical Cash Plan - a PHI type product, about which there has been correspondence as to its proper classification.
2. Irish Flexible Protection Plan - a unit linked renewable endowment with selectable sum assured.

Germany

1. Term assurance non profit.
2. Whole life unitised with profit "Investment Plan" - a long term savings vehicle with trivial life assurance, the difference between the death benefit and surrender value being only that the latter is discretionary and will, in particular, suffer a market value adjustment.
3. Unitised with profit endowment "Flexible Savings Plan" with life cover selected at outset.
4. With profits immediate annuities.
5. Unit linked German Investment Plan - a unit linked version of 2 above.
6. Unit linked German Flexible Savings Plan - a unit linked version of 3 above.

In addition various contracts have been revised, particularly in the European branches.

3.2 Source(s) of new business

Equitable pays no commissions. They run a sales force, but a lot of their business comes from direct approaches from prospective policyholders. There is also a significant volume of quasi-institutional business, both from pension schemes themselves and from AVC schemes run for pension schemes.

1994 returns

3.3 Recent history:

Regular premiums

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**

1994 returns

3.4 Commentary

The new business results for Equitable are once again strong, after a temporary reduction in 1993. There will have been a material strain in 1994 associated with the new business, especially in a year of declining market values of assets. The lower single premium sales do follow a good result in 1993, and are still well ahead of the previous levels and represent 25% higher sales than 1992.

These figures are somewhat strange, however, in that a great volume of pension business is regarded as recurrent single premium. This is reported in the year of issue as regular premium, in accordance with the guidance notes, but it does not appear in form 43 as regular premium.

The strong presence the Society has built in the upper echelons of the pensions market continues to underpin the business performance. The level of life sales lags somewhat, though there are signs of improvement. Single premium life with profit business is strong, of course, on the back of the low expense base and absence of commission.

The annual report on the industry showed Equitable as one of the success stories of 1994. It was ranked only 27th for new life business, but was 1st in pensions and 3rd in the combined table. In terms of growth, it ranked 8th, and was the top mutual office. It held the same place over the period 1989 to 1994, though the [redacted] was the top mutual from a low base.

Overseas business now accounts for an impressive 8% of NBI, driven primarily by regular premium sales, particularly from the Guernsey branch.

4. CHANGES IN BUSINESS IN FORCE

4.1 Recent history of regular premiums

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Life	49,468	49,911	63,303	64,806	**77,399**
General annuity	18,288	19,417	8,291	7,399	**5,833**
Pensions	974,051	1,123,234	1,201,594	1,241,058	**1,307,015**
Total gross regular premiums	1,041,807	1,192,562	1,273,188	1,313,263	**1,390,247**
Less reinsurance premiums	2,231	2,186	2,332	1,463	**1,440**
Total net regular premiums	1,039,576	1,190,376	1,270,856	1,311,800	**1,388,807**
Year on year % increase	24.6%	14.5%	6.8%	3.2%	**5.9%**

There is a continued rise in regular premiums with pensions the prime source, but life premiums are rising also. All this is helpful in keeping the low expense ratio which drives the business. This is clearly a virtuous circle.

4.2 Claims experience

Recent history of mortality rates *(based upon regular premium exiting through death)*

Class	1990	1991	1992	1993	1994
Life non-linked	0.35%	0.30%	0.37%	0.28%	**0.37%**
Life linked	0.68%	0.20%	0.11%	0.20%	**0.10%**
Pensions non-linked	0.23%	0.14%	0.19%	0.07%	**0.26%**

There is no pensions linked regular premium business reported in form 43, as the business is all recurrent single premium. There is nothing remarkable in this table.

It is not possible from the DTI return to form any view on the mortality experience of annuitants. This was the subject of correspondence with the company in recent times, partly prompted by an enquiry from the BAV on the business being written in Germany. We are returning to this issue again in the light of recently published data.

4.3 Persistency experience

Recent history of lapse rates *(forfeitures as prop'n of reg. prem NB in force < 2 years)*.

Class	1990	1991	1992	1993	1994
Life non-linked	17.48%	20.31%	17.39%	10.17%	**7.34%**
Life linked	0.00%	4.45%	0.97%	0.45%	**0.82%**
Pensions non-linked	30.72%	36.36%	37.33%	44.77%	**64.45%**

There is no pensions linked regular premium business reported in form 43, as the business is all recurrent single premium. The lapse rates are distorted for pensions as nearly all the business is term assurance type without surrender values. The life non-linked figure is falling satisfactorily, though the rising new business may explain this.

Recent history of surrender & paid-up conversion rates

Class	1990	1991	1992	1993	1994
Life non-linked	1.05%	1.24%	1.53%	2.34%	**2.62%**
Life linked	4.50%	5.06%	6.76%	10.25%	**12.56%**
Pensions non-linked	3.38%	1.43%	1.46%	1.16%	**1.11%**

There is no pensions linked regular premium business reported in form 43, as the business is all recurrent single premium. Most non-linked pensions business cannot surrender, and this ratio is therefore distorted.

5. EXPENSES

5.1 Recent history of expenses:

Expense	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**
Initial commission	0	0	0	0	0
Acquisition expenses	60,381	72,576	75,678	76,538	**78,136**
Renewal commission	0	0	0	0	0
Renewal expenses	37,561	47,950	41,048	41,773	**32,941**
Total expenses	97,942	120,526	116,726	118,311	**111,077**
Year on year % increase	14.2%	23.1%	-3.2%	1.4%	**-6.1%**

Expense ratios:	1990	1991	1992	1993	**1994**
Acquisition	24.1%	25.9%	23.7%	24.2%	**18.1%**
Renewal	3.6%	4.0%	3.2%	3.2%	**2.4%**

Note: The expense ratios are:
Acquisition (IC + AE) / New Business Index
Renewal (RC + RE) / Regular gross premium income in force
[from Form 41, Col 1, lines 2 + 4 + 6 + 7 + 8]

5.2 Commentary

Can these ratios keep improving? They really have reached astonishingly low levels now, and it is difficult to see them falling very much lower. However, the ever increasing sales seem to be taking up slack in the administration systems, and whilst this continues there will be improvements. The problem might come where a significant jump in capacity is required to support the levels of administration demanded by adding large quantities of new business.

Equitable is well known as a non-commission paying office, and prides itself in its low expense ratio. It is a very positive marketing message, and a key attraction of the Society with its customers. It helps explain the positive sales figures in a poor time for most of its competitors, and it part of a virtuous circle.

The Equitable publish in their Report and Accounts figures for total expenses divided by total premium income for the society and industry average. The figures are illuminating and the point is valid. Equitable's expenses are indeed low.

Year	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994
Industry	21.7	20.6	20.3	23.4	20.3	21.0	19.3	18.5	17.7	"not yet available"
Equitable	9.6	8.4	8.5	9.1	8.5	7.6	7.2	6.6	5.8	5.5

The annual report on the industry in 1994 showed that Equitable was the most efficient office on acquisition expenses covered, though some small specialist companies with

1994 returns

unusual factors did have lower figures. For renewal expenses the position is again 1st, but here no company at all beats Equitable.

The comparison of the expense ratios used by GAD between the Equitable and the industry are as follows:

Ratio	Equitable	Top 50 average	Industry Average
Acquisition	18.1%	92.5%	106.0%
Renewal	2.4%	13.0%	14.9%

(The industry comparatives are based upon the annual report on the life insurance industry for the year ending 31 December 1994 issued in October 1995)

SITUATION AT THE YEAR END

6. NON-LINKED ASSETS

6.1 Changes in portfolio

Recent history of asset mix

Type of asset	1990	1991	1992	1993	**1994**

Page 8

Document Number:01828 Page 8

1994 returns

Recent history of yields

Type of asset	1993	1994
Land	7.33%	**6.82%**
Govt fixed interest	6.46%	**8.92%**
Other fixed interest	6.75%	**7.51%**
Govt index linked	2.66%	***2.76%**
Equity shares	2.91%	**3.34%**
Debts sec'd on land	6.58%	**7.70%**
Other - producing income	5.25%	**5.06%**
Total	4.71%	**5.51%**

* 4.24% under regulation 69

The investment mix is not of particularly unusual shape. The proportion of non profit and with profit business is critical in assessing this mix, and the apparent mix does not always reveal everything. It is more useful to look at the mix hypothecated to the types of business. The decisions on where to allocate new money are always of interest, and it is a useful piece of information which Equitable provide. Interestingly, only 43% of new money was directed at UK equities, though 12% was in undescribed in-house unit trusts.

A table in the latest available With Profits Guide shows the assets attributed to with profits business up to 1993.

UK with profits business	1989 %	1990 %	1991 %	1992 %	1993 %
Fixed Interest	15	17	18	27	31
Property	14	15	12	9	8
UK Equities	46	44	43	41	41
Non-UK Equities	17	12	14	11	12
Unlisted Equities	1	1	2	2	2
Other	7	11	11	10	6

The most noteworthy feature of this table is the shift towards a higher fixed interest component. Over the five years the fixed interest has risen by 16 points to more than twice the previous level. Equally, the property component has fallen by six points to just over half previously and equity holdings in both the UK and overseas have fallen by five points each, which in the case of overseas equities represents some thirty per cent.

6.2 Investment performance

	£m	£m
1. Investment Income per form 40	732.2	
2. less Investment Income of Internal Funds (F51)	(34.2)	
3. less estimated Investment Income of other linked assets	(1.5)	
4. Non linked investment income		696.5
5. Increase in non linked assets brought into account (F40)		(538.5)
6. Investment Reserve carried forward	917.5	
7. Investment Reserve brought down	1,713.3	
8. Increase in investment reserve		(795.8)
9. Investment Return		(637.8)
10. Opening non linked assets	12,383.9	
11. Closing non linked assets	12,466.8	
12. Mean fund excluding investment return [=½×(10+11-9)]		12,744.3
13. Rate of return from investment [= 9÷12]		**-5.0%**

The Equitable's own figure for the with profits fund was a fall of 4.2%.

7. UNIT-LINKED FUNDS

7.1 New funds introduced

Ethical Fund - no description provided.

7.2 Investment performance

The annual report claims second quartile performance for the managed fund. The actual returns on the most important fund, the Pensions Managed, was -4.5%, which is reasonable. This fund is over 30% of unit linked business.

7.3 Fund Management Charges to policyholders

¾% per annum except for UK and Irish Life Assurance funds, for which the charge is $^{11}/_{16}$% per annum

8. VALUATION & SOLVENCY

8.1 Strengths and/or weaknesses

8.1.1 Overview

It is known from the company visit at the end of 1994 that Equitable's Actuary has decided that the interests of the Society are best served by using a weak valuation basis

1994 returns

to show as strong a free asset position as is possible. This means that the valuation basis is selected at the limits of the regulations. This requires us to exercise particular vigilance in ensuring that users of the returns are not misled. Additionally, the Equitable has a full distribution policy. Although one should not, perhaps, be critical of this per se, it does mean that the Society is more vulnerable than many to adverse conditions. The low free asset ratio means that there is comparatively little to spare if the reserves do prove inadequate.

There are, however, a number of hidden strengths in the valuation. Principal amongst these is the treatment of recurrent single premium pensions business. This is assumed to pay no more premiums, and this is an extremely strong basis, though arguably only in line with the best practice. If the business were treated as regular premium, margins in future premiums and charges on the funds built up might allow some lower reserves. It is likely that some credit is being taken implicitly for this in the expense reserves (see §8.1.4)

8.1.2 Mortality

Assurances

The bases used for assurances are generally fairly reasonable. In one or two cases a more aggressive line is taken, but within the bounds of recent data, and these have been raised with the Appointed Actuary before, and he has had little trouble in justifying them.

Annuities - general

The vast majority of UK annuities are valued on the a(90) table with a one year down rating. This is well in excess of recent industry experience, and although the Appointed Actuary claimed to be able to justify this last year, we are pressing him quite vigorously on this point this year.

Annuities - pension

The basis here is still out of date ,being PA(90)-4. This is, however, close to the effect of using the more recent table with a fair adjustment for improving mortality. We are not therefore concerned at this table. It is not a strong basis, however, but rather an adequate one.

German business

The basis here for assurances is a German table, except for term business where a heavy UK table is used. For annuities, one policy is valued on a German table, and four on a UK table. The table chosen is that for pensioners above, and is probably adequate in a UK context. In the light of the small volumes, it is unnecessary to enquire further, as the problem, if any, is too insignificant.

1994 returns

8.1.3 Interest Rates

The following table summarises the interest rates used, in general terms, for major classes (with liabilities in excess of £50m).

Classes	Net Interest Rate	Gross Interest Rate *	Approximate Liability (£m)
UK with profit assurances	3.25%	4.06%	270
UK unitised with profit assurances	4.25%	5.31%	633
UK with profit general annuities in payment	5.75%	5.75%	155
UK non profit general annuities in payment	8.50%	8.50%	90
UK pensions with profit - regular premium	5.00%	5.00%	208
UK pensions unitised with profit style	5.75%	5.75%	7,499
UK pensions non profit - main classes	8.50%	8.50%	1,481

* grossed up at 20% tax for with profit assurances and 25% for non profit assurances.

Comparing this table with the assets and yields as below, gives rise to some doubt as to the sufficiency of higher yielding assets, particularly one a yield differential for risk is included.

Category of Assets	Value of Admissible Assets (£m)	Yield
Land	1,014	6.82%
Gilts etc	3,380	8.92%
Other fixed interest	1,313	7.51%
Indexed Gilts	300	4.24%
Other variable interest	12	5.34%
Equities	5,834	3.34%
Debts secured on land	16	7.70%
Other	253	4.78%

It is far from clear how this asset yield pattern will allow such a high rate of interest for the with profits business, if the non profit business takes the highest yielding assets to support its valuation rate. We are therefore seeking a thorough matching rectangle in the format under the proposed new Accounts and Statements regulations.

8.1.4 Expenses

The expenses of Equitable are well controlled, and are falling in relation to business in force and indeed in cash terms as well. There is little reason to question the low expense allowances in the valuation, therefore. A substantial hidden margin in respect of the pensions recurrent single premium business covers any apparent shortfall.

8.1.5 Resilience and special reserves

The Equitable takes advantage of its use of a bonus reserve gross premium valuation to hide its resilience reserve. The difference between the net premium valuation and the gross premium valuation results is its resilience reserve (or at least a substantial part of that difference). They do not disclose how much. This will be asked for yet again. Other reserves seem to be on a reasonable basis.

8.2 Changes since previous year

Small amendments were made to the reserves for future bonuses under the net premium basis, and a number of other small changes were made. Some minor classes were valued under revised parameters.

Interest rate bases were revised to absorb some of the effect of rising interest rates and falling asset values.

Pension annuitant mortality was strengthened from a very weak basis to an acceptable one. The old basis would not, given recent publications, have continued to be defensible.

8.3 Summary of results for main classes

Liabilities for non-linked business

Class	1990 £000s	1991 £000s	1992 £000s	1993 £000s	**1994 £000s**	**1994 NPV £000s**
Life with-profit	386,004	561,514	718,200	856,490	**1,001,606**	**908,633**
Life non-profit	27,224	31,684	34,237	36,777	**45,328**	**49,793**

* Section 68 order not used until 1994.
† Estimated figure.
‡ The amount of resilience reserve is not known for 1994. It is possibly sufficient to make the difference between the BRV and NPV zero, but we have no way of telling until the answer to our enquiry is received.

8.4 Cover for the solvency margin

It is not possible at present to calculate the net premium basis cover for the required minimum margin, but the gross premium cover is stated as higher. The cover with the implicit item included amounts to 2.36×, and if the implicit item had not been included it would have been 1.85×. The market reaction to the free assets falling to the level shown in our table (3.12%) as opposed to the free asset ratio often used including the implicit item (4.97%) might have been similar to that when [redacted] revealed a low figure. Note that the section 68 order actually allowed an item up to £500m.

The cover may not be huge, but it is adequate, provided the Appointed Actuary can satisfactorily defend his basis from the questions we have raised.

Total Distributed	425,249	458,015	468,472	484,555	**525,182**

10.2 Key rates of bonus

The Equitable has a large range of bonus series, and a system of final bonuses which is somewhat different to the normal terminal bonus. Specimens are given below in the table.

The system of final bonus is a little unusual. It consists of a declaration of bonus which is not reversionary, in that it may be withdrawn, and/or reduced in future. However it has a lot of features in common with reversionary bonuses. It is declared in a similar way as a percentage of benefit, and the amount paid at the end of the policy's normal span is the sum of the annual "declarations", subject to the proviso that a previously granted bonus can be withdrawn. The wording used by the Society in the With Profits Guide is:

"Final bonuses are also determined and applied retrospectively. The final bonus is calculated so as to top up the growth arising from the policy guarantees and the declared bonus rate for the year to the overall rate of return announced for the year. Final bonuses do not add a guaranteed element to the contract, and the final bonus element of a policy can be varied up or down in future."

The same guide includes a table of investment returns gross on market value and the rate applied in fixing bonuses.

	1990	1991	1992	1993	1994

Irish Pension	40.00	40.00	13.0	10.0	**40.00**	**40.00**	**10.0**	**10.0**
German Life	N/A	N/A	N/A	N/A	**52.50**	**52.50**	**8.5**	**8.5**
German Annuity	N/A	N/A	N/A	N/A	**52.50**	**52.50**	**8.5**	**8.5**

The whole life bonus is £37.50‰ + £3‰×(years in force in excess of 11)
(previous year - same)

There are also a small number of policies with German style bonuses, but these are too small a class to cover here.

The final bonuses for traditional life are a table depending on duration in force and this gives the full final bonus, which is in this case therefore a terminal bonus. Specimen values are:

Complete Years In Force	% of SA and Bonus 1994	**% of SA and Bonus 1995**
1	8.5	**6.0**
2	11.0	**9.0**
3	13.0	**11.5**
4	15.5	**13.5**
5	18.0	**16.0**
10	40.5	**34.5**
15	81.0	**76.0**
20	102.5	**101.0**
25	117.5	**118.5**
30	120.0	**122.5**

The final bonuses for deferred annuities are a similar table. Specimen values are:

Complete Years In Force	% of SA and Bonus 1994	**% of SA and Bonus 1995**
1	10.0	**7.5**
2	12.5	**11.0**
3	14.0	**13.5**
4	15.5	**15.5**
5	17.5	**16.5**
10	31.0	**28.0**
15	72.0	**68.5**
20	94.5	**92.5**
25	106.0	**107.5**
30	110.0	**115.0**

10.3 Changes to bonus rates

Reversionary bonuses were, as can be seen, unchanged.

10.4 Distribution policy

The society follows a stated policy of full distributions, with a basis designed to make up the implied guaranteed rate to a total earned rate. Part is in the form of the non-cancellable reversionary bonus and the rest in the form of final bonus.

The policy is to link declared reversionary bonus rates to the redemption yields on fixed interest stock. This has produced a series of reductions in recent years as yields have fallen, but the system of final bonus effectively balances this in total returns. Policyholders' reasonable expectations are therefore influenced downwards in line with yields.

11. REINSURANCE

11.1 Overview of treaties

Little use is made of reassurance by Equitable, other than for very large sums assured (retention being £400K for life risks and £50K for critical illness risks), income bonds, German business, and facultative cover in some cases.

11.2 Changes during the year

Nothing significant.

11.3 'Financing reinsurance'

Not used.

OTHER ISSUES

12. COMPLIANCE

12.1 DTI compliance problems

Although the Equitable take a highly esoteric line on a number of issues, and are inclined to argue their case rather longer than most, they have a culture which would not permit the continuation of a compliance breach.

There are some small omissions from Schedule 4 relating to a new fund and question 4(2)(c). These are not all mentioned in our letter, and we do not feel they are of sufficient significance for DTI action, especially as elsewhere the actuary does provide the information on derivatives (under 4(2)(a)).

They are reporting business believed by us and DTI to be class IV as class III, but have undertaken to revise this in future. This will have trivially understated the required minimum margin.

12.2 PIA and other compliance problems

Although they have had a few issues, we understand, they are not significant.

13. MISCELLANEOUS

13.1 Mis-selling of personal pensions liabilities

It looks from the outside as if it is almost impossible for Equitable to conceive that any of their salesmen could have mis-sold anything - or at least they could not publicly acknowledge it! There is no explicit provision, but we understand from Equitable's reply to [redacted] letter that £50m has been set aside by an "over-estimation" of the liabilities, and this has been accepted under the "true and fair view" accounts sign-off, despite the lack of any sophisticated supporting calculations.

13.2 Derivatives

We have separately enquired of the company on their use of derivatives ([redacted] letter of 8th December 1995 refers). We would otherwise have made enquiries as part of the scrutiny process, as the usage is quite high.

13.3 Deferred Acquisition Costs and the Accounts Directive Format Accounts

Equitable was probably the first insurance company to publish accounts in the new statutory form. Although much more detailed than previously, especially on the actuarial side, and, as they are mutual, of considerably less significance than for, say, a quoted company, it is an interesting opportunity to obtain a taster of the new format.

1994 returns

Deferred acquisition costs of £219.1m are shown in the accounts. These are not, of course, admissible in the DTI return. It is a matter of debate how meaningful these deferred acquisition costs are in any life assurer, and here less than 60% of acquisition costs are deferred. The total figure represents almost 19% of the "Fund for Future Appropriations" in Equitable Life.

[redacted] 5/11.

DETAILED SCRUTINY REPORT

1. SUMMARY

1.1 Key Features

- This large, old-established mutual life insurer has total long term assets of £16½bn. This makes it the seventh largest company in terms of long term business assets.
- This company was classified as priority 4 for this scrutiny.
- Unusually, the company publishes a gross premium bonus reserve valuation - and a net premium comparison. For the second year, Equitable has used an implicit profits item in Form 9, amounting to about £264m. For '96, we've approved £600m. we approved £500m.
- In a year when the industry generally struggled for new business, the Society achieved record sales. Personal marketing is focused on high net worth individuals, while the company also has considerable presence in the AVC pensions market. Its main line of business is pensions - somewhat unusually structured, with almost all on a recurrent single premium basis.
- In 1995, the Society acquired a controlling interest in the [redacted], and thus became able to offer permanent health and business expense protection insurances. Branches are operated in Germany and the Republic of Ireland, and an International Branch is operated from Guernsey. These produced continued good growth in 1995.
- Expenses remain the lowest in the industry, and the ratios continue to fall. It reduced the annual fund charge on its internal linked funds to just ½% (from 11/16% for UK and Irish life funds and ¾% for pension and non-UK and Irish life funds).
- Reserving bases are fairly weak, by design, to maximise the disclosed free asset ratio, while permitting fair bonus distributions to the current generation of policyholders. The RMM was shown as comfortably covered by a factor of 2.89 at the end of 1995 (cf. 2.36 at end 1994) - the factor would be 2.44 without crediting the implicit future profits item.

1.2 Action Points

No matters have been raised directly with the company, but at the planned visit it would be interesting to discuss -

1. Details of the continued fall in its actual overhead expense levels, and its potential ability to continue on this creditable path.
2. How the company views the sustainability of its present contract structures - largely based on accumulating funds to which regular bonuses are added. What scenario tests has it performed in relation to possible falls in asset values, and how would it react to sustained unfavourable market movements ?
3. The increased investment in non-insurance companies - £75.4m shares and £18.7m in debt (previously, £49.3m and £2.8m respectively).

EQUITA95.REP: 1-Nov-96

Document Number:01868 Page 1

1995 returns

2. BACKGROUND

Equitable is proud to be the oldest mutual life assurance society in the world, dating from 1762. It was the first to develop policies based on scientific principles as used today.

Equitable has never paid commission to third parties - another strong marketing point.

This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method. (The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by the regulations.)

Equitable applies for a Section 68 Order for an implicit profits item each year, but used this Order to demonstrate solvency cover for the first time in 1994 - it having been only a precaution previously. The implicit item is not strictly necessary for statutory purposes, it forming part of the excess assets in Form 9. An Order allowing £500m was granted for 31 December 1995 - of which £264m was used. The Society also enjoys an Order exempting full description of its personalised funds in the return.

In 1995, Equitable purchased a controlling interest in Permanent Insurance, the PHI specialist, from the mutual Medical Sickness.

University Life, which is also an old institution, has been a subsidiary of Equitable since 1919. Equitable provides management services to University, under an agreement which caps University's expenses.

Equitable has been active overseas in recent years, with branches in Ireland and Germany and an International Branch operated from Guernsey. These branches have been set up on a low cost base, are developing steadily and are producing ever increasing amounts of new business. Equitable regard this as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders. The mutual concept is extended to all policyholders, and is even part of Equitable's dealing with UK non profit policyholders.

Equitable also has a unit trust and PEP subsidiary, Equitable Unit Trust Managers Ltd, which has over £1bn under management. Its highly developed systems department has set up a subsidiary, Equitable Services and Consultancy Limited, which obtained a major contract with [redacted] in 1995.

The Appointed Actuary and Managing Director posts are both held by [redacted] but the Board is chaired by a non-executive, [redacted], and the total Board of 13 includes 8 non-executives.

A visit to the company by DTI and GAD officials was made in December 1994, and a further visit is planned for 8 November 1996. ✓

EQUITA95.REP: 1-Nov-96 Page 2

Document Number:01868 Page 2

BUSINESS DEVELOPMENTS DURING THE YEAR

3. NEW BUSINESS

3.1 New products

UK

A new with profits or unit linked Managed Pension policy allows the taking of an income by way of withdrawals pending the use of the remainder to purchase a pension annuity on or before the policyholder's 75th birthday. Upper and lower limits are imposed on withdrawals.

From 17 April 1995, premiums payable for new Temporary Assurance contracts reverted to a guaranteed basis rather than being subject to a rebate (as operated from June 1988).

Germany

A UK-style with profits or unit linked Deferred Annuity contract with premiums of the recurrent single premium type, payable on either a regular or a variable basis. Premiums, less a deduction for expenses, are accumulated to buy an annuity - which can be fully commuted for cash on maturity.

Guernsey

No new contracts, but the premiums payable for Temporary Assurance contracts written after 29 May 1995 are guaranteed rather than subject to a rebate.

Republic of Ireland

The new Personal Retirement Bond is a single premium policy with segments providing with profits or unit linked retirement benefits as an accumulated cash fund.

After 8 June 1995, the premiums payable for new Temporary Assurance contracts are guaranteed rather than subject to a rebate.

3.2 Source(s) of new business

Equitable pays no commission. It runs a sales force and also conducts direct response advertising, targeted at high net worth individuals, but a lot of business comes from its reputation and direct approaches from prospective policyholders. It also has a significant volume of quasi-institutional business, from actual pension schemes and from AVCs.

1995 returns

4. CHANGES IN BUSINESS IN FORCE

4.1 Recent history of regular premiums

Class	1991 £000s	1992 £000s	1993 £000s	1994 £000s	1995 £000s
Life	49,911	63,303	64,806	77,399	**87,209**
General annuity	19,417	8,291	7,399	5,833	**7,497**
Pensions	1,123,234	1,201,594	1,241,058	1,307,015	**1,421,752**
Permanent health	0	0	0	0	**291**
Capital redemption	0	0	0	0	**0**
Total gross regular premiums	1,192,562	1,273,188	1,313,263	1,390,247	**1,516,749**
Less reinsurance premiums	2,186	2,332	1,463	1,440	**1,877**
Total net regular premiums	1,190,376	1,270,856	1,311,800	1,388,807	**1,514,872**
Year on year % increase	14.5%	6.8%	3.2%	5.9%	**9.1%**

This data understates the true position, since a considerable amount of business is written as subject to recurrent single premiums - which are, in practice, paid regularly.

4.2 Claims experience

Recent history of mortality rates *(based upon regular premium exiting through death)* -

Class	1991	1992	1993	1994	1995
Life non-linked	0.30%	0.37%	0.28%	0.37%	**0.35%**
Life linked	0.20%	0.11%	0.20%	0.10%	**0.40%**
Pensions non-linked	0.14%	0.19%	0.07%	0.26%	**0.29%**

There is no pensions linked regular premium business reported in Form 43, as pension business is all recurrent single premium. There is nothing remarkable in this table.

4.3 Persistency experience

Recent history of lapse rates *(forfeitures as prop'n of reg. prem NB in force < 2 years)* -

Class	1991	1992	1993	1994	1995
Life non-linked	20.31%	17.39%	10.17%	7.34%	**6.84%**
Life linked	4.45%	0.97%	0.45%	0.82%	**0.00%**
Pensions non-linked	36.36%	37.33%	44.77%	64.45%	**61.33%**

1. The life non-linked figure is falling satisfactorily.
2. The pensions non-linked lapse rates are distorted because nearly all such business is term assurance type without surrender values, so the denominator should relate to all business in force.
3. There is no pensions linked regular premium business reported in Form 43, as pension business is all recurrent single premium.

1995 returns

Recent history of combined surrender, lapse & paid-up conversion rates -

Class	1991	1992	1993	1994	1995
Life non-linked	3.52%	3.94%	3.96%	3.85%	**3.80%**
Life linked	5.29%	6.79%	10.27%	12.64%	**8.49%**
Pensions non-linked	6.16%	6.74%	6.56%	7.76%	**7.40%**

There is no pensions linked regular premium business reported in Form 43, as pension business is all recurrent single premium.

5. EXPENSES

5.1 Recent history of expenses:

Expense	1991 £000s	1992 £000s	1993 £000s	1994 £000s	1995 £000s
Initial commission	0	0	0	0	**0**
Acquisition expenses	72,576	75,678	76,538	78,136	**82,376**
Renewal commission	0	0	0	0	**0**
Renewal expenses	47,950	41,048	41,773	32,941	**30,222**
Total expenses	120,526	116,726	118,311	111,077	**112,598**
Year on year % increase	23.1%	-3.2%	1.4%	-6.1%	**1.4%**

Expense ratios:

	1991	1992	1993	1994	1995
Acquisition	25.9%	23.7%	24.2%	18.1%	**16.9%**
Renewal	4.0%	3.2%	3.2%	2.4%	**2.0%**

Note: *The expense ratios are:*

Acquisition - *(IC + AE) / New Business Index*
Renewal - *(RC + RE) / Regular gross premium income in force*
[from Form 41, Col 1, lines 2 + 4 + 6 + 7 + 8]

5.2 Commentary

Expense ratios of the Society keep improving. !

They have reached astonishingly low levels, with ever increasing sales taking up slack in the administration systems and overhead costs apparently falling.

Equitable is well known as a non-commission paying office, and prides itself on its low expense ratio. It is a very positive marketing message, and a key attraction of the Society with its customers. It helps explain the positive sales figures achieved in a poor time for most of its competitors, and is part of a virtuous circle.

EQUITA95.REP: 1-Nov-96 Page 6

Document Number:01868 Page 6

In their Report and Accounts, the Equitable publish figures for total expenses divided by total premium income. For the Society the figure reduced to just 4.8% in 1995, from 5.5% in 1994, and continues a steady fall from 9.6% in 1985.

These ratios are the lowest in the industry, being well less than half the industry average.

5.3 Exceptional items

The revealed total of "other management expenses" continued its amazing fall, actually reducing by £2.7m to £30.2m, from £32.9m in 1994 (and from £47.9m in 1991!).

It would be interesting to determine at the next visit exactly how this has been achieved.

SITUATION AT THE YEAR END

6. NON-LINKED ASSETS

6.1 Changes in portfolio

Recent history of asset mix -

Type of asset	1991	1992	1993	1994	1995
Land	10.7%	7.8%	6.9%	8.1%	**6.7%**
Govt fixed interest	15.8%	26.3%	28.1%	27.1%	**26.5%**
Other fixed interest	10.3%	11.8%	12.5%	10.5%	**8.9%**
Govt index linked	1.2%	1.9%	2.7%	2.4%	**2.5%**
Equity shares	50.7%	42.9%	43.2%	46.8%	**49.6%**
Debts sec'd on land	0.3%	0.2%	0.1%	0.1%	**0.1%**
Other - producing income	7.7%	5.8%	4.1%	2.1%	**3.6%**
Other - not producing income	3.3%	3.3%	2.4%	2.8%	**2.1%**

Part of the reduction in the "other fixed interest" percentage in 1995 is due to the revised designation of convertible loan stocks as derivative contracts - that have now been included under "other - producing income".

Increased investment in non-insurance companies has been noted - £75.4m shares and £18.7m in debt at the end of 1995 (previously, £49.3m and £2.8m respectively), and it would be interesting to receive details of these holdings.

GAD's detailed scrutiny reports in respect of Equitable's returns

1995 returns

Change in portfolio over the last year -

Type of asset	1994 £000s	1994 Yield	1995 £000s	1995 Yield
Land	1,014,404	6.82%	**1,016,553**	**7.10%**
Govt fixed interest	3,379,851	8.92%	**4,019,565**	**7.70%**
Other fixed interest	1,312,968	7.51%	**1,342,329**	**8.54%**
Govt index linked	299,970	2.76%	**383,329**	**2.86%**
Equity shares	5,834,307	3.34%	**7,520,468**	**3.26%**
Debts sec'd on land	15,908	7.70%	**13,706**	**7.94%**
Other - producing income	266,092	4.82%	**543,152**	**4.96%**
Other - not producing income	343,315	0.00%	**312,225**	**0.00%**
Total	12,466,815	5.51%	**15,151,327**	**5.15%**

1. The rise in the figure for "other producing income" in 1995 appears to be largely due to changed reporting practice, whereby convertible loan stocks (£185,275K), warrants (£22,345K) and partly paid securities (£4,964K) are all now being treated as "derivative contracts" and have been included in this line.
2. Most other changes reflect market movements, with new money being broadly invested to maintain existing allocations, except for a small movement to overseas equities from fixed interest holdings in relation to with-profit funds.

6.2 Investment performance

	£m	£m
1. Investment Income per form 40	833.6	
2. less Investment Income of Internal Funds (F51)	(44.5)	
3. less estimated Investment Income of other linked assets	(1.5)	
4. Non linked investment income		787.6
5. Increase in non linked assets brought into account (F40)		798.1
6. Investment Reserve carried forward	1,433.4	
7. Investment Reserve brought down	917.5	
8. Increase in investment reserve		515.9
9. Investment Return		2,101.6
10. Opening non linked assets	12,466.8	
11. Closing non linked assets	15,151.3	
12. Mean fund excluding investment return [=½×(10+11-9)]		12,758.3
13. Rate of return from investment [= 9÷12]		**16.5%**

1. The Equitable's own figure for its *with profits fund* was a rise of 16.6%.
2. The overall result is close to expectations, based on known market movements and after allowing for investment expenses having absorbed about ½%.
3. A slightly higher figure might have been hoped for in relation to a with profits fund, but it may be that the expanded overseas equity portfolios (referred to in the 1996 With-Profits Guide) were biased towards far eastern markets that performed poorly in 1995.

EQUITA95.REP: 1-Nov-96

Page 8

Document Number:01868 Page 8

7. UNIT-LINKED FUNDS

7.1 New funds introduced

In Ireland, new Far Eastern, International Growth and Money Funds were introduced for both Life and Pensions business.

In relation to the UK, assets backing the Guaranteed Equity Funds that were previously shown in Form 48 are now included as Linked Funds in Forms 49, 50 and 51.

7.2 Investment performance

The Pension Managed Fund produced growth of 14.4%, while the Life Managed Fund showed growth of 13.1%. These figures would seem to be somewhat disappointing in the light of known market movements.

The Pelican and North American Funds appear to have produced performances that are relatively good compared with the markets, but most other Funds show results 1% to 2% below what might have been hoped for.

7.3 Fund Management Charges to policyholders

The annual charge on its internal linked funds was reduced to just ½% (from $^{11}/_{16}$% for UK and Irish life funds and ¾% for pension and non-UK and Irish life funds).

This charge is waived where a fund invests in an Equitable Unit Trust, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.

8. VALUATION & SOLVENCY

8.1 Strengths and/or weaknesses

8.1.1 Overview

The company produces its published Return on the basis of a gross premium valuation, with some allowance for future bonuses, but the results of a net premium valuation are also shown in the Returns. It is known from the company visit at the end of 1994 that Equitable's Actuary has decided that the interests of the Society are best served by using a weak valuation basis to show as strong a free asset position as is possible. This means that interest bases are selected near the limits of the regulations. Detailed matching rectangle data was sought in relation to the 1994 Returns and was found acceptable.

Additionally, the Equitable tries to provide a fair bonus allocation to each generation of policyholders - without holding back an excessive estate. The result is that lower free asset margins are revealed than might have been expected for such a well thought of institution. It may be noted that the Society has, for the last two years, found it desirable to utilise a future profits implicit item to improve the disclosed free assets position - although at nowhere near the maximum that could be justified under the guidelines.

There is one obvious hidden strength in the valuation - the treatment of recurrent single premium pensions business, under which it is assumed that no more premiums will be received. Although arguably only in line with the best practice, this is an extremely strong basis. If the business were treated as regular premium, margins in future premiums and charges on the funds built up might allow lower reserves. It is likely that some credit is being taken implicitly for this in the expense reserves (see §8.1.4)

8.1.2 Mortality

Assurances

Bases used for assurances are reasonable - particularly taking account of the market sector in which the Society operates.

Annuities - general

UK annuities have this year been valued on the a(90) table with a two year down rating. This follows discussions last year with the Appointed Actuary about the inadequacy of a one year down rating, which he claimed to be able to justify last year. It would seem desirable to keep pressing him quite vigorously on this point - as longevity improves.

Annuities - pension

The table used here is out of date, being PA(90)-4. However, this is close to the effect of using the more recent table with a fair adjustment for improving mortality, and we are not currently minded to press the Actuary regarding use of this table.

German business

Mostly German tables are used, although some annuities are valued on the same UK table as used for UK pensioners. The level of business in force, while growing fast, is still modest, and it seems unnecessary to examine these bases further at the present time.

8.1.3 Interest Rates

The table below summarises the interest rates used for major UK classes of non-linked business (with liabilities in excess of £50m).

Classes	Net Interest Rate (1994 Rate)	Gross Interest Rate *	Liability Approx. (£m)
life assurances with profit	3.25% (3.25)	4.33%	286
pensions with profit - regular premium	5.00% (5.00)	5.00%	200
general annuities in payment with profit	5.25% (5.75)	5.25%	165
pensions with profit imm. annuities	5.25% (5.75)	5.25%	1,218
pensions unitised with profit	5.25% (5.75)	5.25%	7,851
life assurances unitised with profit	4.00% (4.25)	5.33%	776
general annuities in payment non profit	7.75% (8.50)	7.75%	98
pensions non profit - main classes	8.00% (8.50)	8.00%	1,647

* grossed up at 25% tax

These major liability categories total £12,241m. Comparing this table with the assets and yields as shown on Page 8, it would seem that the assumptions made are acceptable.

8.1.4 Expenses

The expenses of Equitable are well controlled, and continue to fall in relation to business in force and, indeed, in cash terms as well. There is little reason to question the low expense allowances in the valuation. Increased provision has been made this year for the cost of paying annuities. A substantial hidden margin in respect of the pensions recurrent single premium business could cover any apparent shortfall elsewhere.

8.1.5 Resilience and special reserves

The Actuary indicates that the resilience reserve required in relation to his net premium valuation would be covered by the difference between the bonus reserve gross premium valuation liability and the net premium valuation liability.
This difference is revealed as £436m, and we have no reason to doubt its adequacy - although managing the distribution of bonuses and consequent growth in guaranteed liabilities in respect of the very substantial (over £8.6bn) portfolio of unitised with profit type business is a potential problem to be monitored.
(The actual resilience reserve that would have been required at the end of 1994 was disclosed in correspondence with the Actuary as £171m.)

Other reserves seem to be on a reasonable basis, although the failure to set up a specific reserve in relation to the contingent liability for tax on capital gains of £37.4m is dubious - relying on other margins in the valuation basis.

8.2 Changes since previous year

Interest rate bases were revised to reflect falling interest rates and rising asset values.

Annuitant mortality and expense reserves were strengthened following correspondence last year.

8.3 Summary of results for main classes

Liabilities for non-linked business -

	Published Bonus Reserve Gross Premium Valuation					**NPV**
Class	1991 £000s	1992 £000s	1993 £000s	1994 £000s	**1995 £000s**	**1995 £000s**
Life with-profit	561,514	718,200	856,490	1,001,606	**1,169,416**	**1,063,870**
Life non-profit	31,684	34,237	36,777	45,328	**49,284**	**54,163**
Gen. annuity with-profit	121,867	137,060	166,184	181,175	**190,734**	**178,967**
Gen. annuity non-profit	81,772	91,108	106,451	105,047	**120,652**	**118,524**
Pensions with-profit	4,538,652	5,583,654	7,399,654	7,930,355	**9,646,509**	**9,268,743**
Pensions non-profit	663,966	961,301	1,504,671	1,598,887	**1,835,318**	**1,830,634**
Pensions add. reserves	44,603	34,833	33,482	0	**0**	**0**
Rep. of Ireland business	523	5,919	45,050	68,101	**109,558**	**103,892**
Other overseas business	0	0	211	1,625	**11,916**	**86,481**
Additional AIDS reserve	0	0	0	0	**0**	**17,840**
Total non-linked liability (Form 55)	6,044,581	7,566,312	10,148,970	10,932,124	**13,133,387**	**12,723,114**

1. It should be noted that in the Bonus Reserve Gross Premium valuation, the Guernsey business is included with UK, so that the "other overseas business" represents only German business.
2. Also, in the Bonus Reserve Gross Premium valuation any additional reserve required for AIDS is presumed covered by the bonus margin.
3. Most of the margin between the total BRV and NPV liabilities would be needed to cover resilience.

Liabilities for linked business -

Class	1991 £000s	1992 £000s	1993 £000s	1994 £000s	1995 £000s
Life	83,921	93,526	118,565	117,342	**131,095**
General annuity	6,533	7,368	9,348	8,674	**5,785**
Pensions	412,465	591,415	852,975	968,489	**1,224,477**
Republic of Ireland	0	20	315	1,209	**2,942**
Other overseas	0	0	0	29	**141**
Total linked liability (F. 56)	502,919	692,329	981,203	1,095,743	**1,364,440**

The Net Premium Valuation included an additional AIDS reserve of just £11,000.

Valuation summary

Published Bonus Reserve Gross Premium Valuation

		1991 £000s	1992 £000s	1993 £000s	1994 £000s	1995 £000s

12	Total available (10+11)	488,231	843,346	1,716,540	1,167,487	**1,697,111**
13	RMM	292,829	356,625	458,014	494,616	**586,275**
14	Cover (12/13)	1.67	2.36	3.75	2.36	**2.89**
15	Free assets ratio ((10-13)/8)	2.62%	5.09%	9.40%	3.12%	**5.13%**

8.4 Cover for the solvency margin

It should be appreciated that this bonus reserve valuation includes only an allowance for modest levels of future bonuses, with the result that the disclosed liability is actually very similar to that that would be derived from an acceptable net premium valuation with due allowance for resilience reserves.

Thus, the picture shown above may reasonably be compared directly with other offices who prepare Returns on standard net premium valuation bases. Without the implicit future profits item, cover for the RMM would be by a factor of 2.44. This is satisfactory.

EQUITA95.REP: 1-Nov-96 Page 12

Document Number:01868 Page 12

9. FINANCIAL RESULTS

(£000s)	1991	1992	1993	1994	1995
Surplus emerging (Form 58)	596,501	330,523	480,935	519,981	**662,848**

10. BONUSES

10.1 Cost of bonuses declared

The Whole Life bonus is £37.50‰ + £3‰×(years in force in excess of 11) [unchanged from 1994]

There are also a small number of policies with German style bonuses, but these are too small a class to cover here.

1995 returns

The system of **final bonus applied to unitised type contracts** is a little unusual. As well as any guaranteed and declared annual bonuses, a further annual bonus is declared which is not reversionary - in that it may be withdrawn, and/or reduced in future. However, it has a lot of features in common with reversionary bonuses. It is declared in a similar way as a percentage of benefit, and the amount paid at the end of the policy's normal span is the sum of these annual "declarations", subject to the proviso that a previously granted bonus can be withdrawn. The wording used by the Society in its With Profits Guide is:

"Final bonuses are also determined and applied retrospectively. Final bonus is calculated so as to top up the growth arising from the policy guarantees and the declared bonus rate for the year to the overall rate of return announced for the year. Final bonuses do not add a guaranteed element to the contract, and the final bonus element of a policy can be varied up or down in future."

The same guide includes a table of gross investment returns achieved on market value of assets of the Society in recent years (from 1993 - as attributable to with-profits business) and the smoothed rate that was applied in fixing bonuses for policyholders -

	1990	1991	1992	1993	1994	1995
Earned	-8.3%	13.5%	17.1%	28.8%	-4.2%	16.6%
Allocated	12%	12%	10%*	13%	10%	10%

* 12% was applied to new benefits secured during the year

Final bonuses for traditional life contracts are according to a table based on duration in force. This gives a standard terminal bonus.

Specimen values as a % of SA and Bonus are:

Complete Years In Force	1994	1995	**1996**
1	8.5	6.0	**6.0**
2	11.0	9.0	**8.0**
3	13.0	11.5	**10.0**
4	15.5	13.5	**12.5**
5	18.0	16.0	**15.0**
10	40.5	34.5	**30.5**
15	81.0	76.0	**66.5**
20	102.5	101.0	**99.0**
25	117.5	118.5	**118.5**
30	120.0	122.5	**125.0**

Final bonuses for deferred annuities are derived from a similar table.

Specimen values as a % of SA and Bonus are:

Complete Years In Force	1994	1995	1996
1	10.0	7.5	**7.5**
2	12.5	11.0	**10.0**
3	14.0	13.5	**12.5**
4	15.5	15.5	**15.0**
5	17.5	16.5	**16.5**
10	31.0	28.0	**26.0**
15	72.0	68.5	**58.5**
20	94.5	92.5	**90.5**
25	106.0	107.5	**108.0**
30	110.0	115.0	**117.5**

10.3 Changes to bonus rates

Reversionary bonus rates were maintained unchanged, but some adjustments were made to final bonus scales.

10.4 Distribution policy

The society follows a policy aimed at providing each generation of policyholders with a return that reflects earnings on assets during his or her membership of the fund, whilst avoiding short term fluctuations. Thus, total bonuses are intended to reflect a smoothed total earned rate. Part is allocated in the form of non-cancellable reversionary bonuses and the rest is in the form of final bonus.

11. REINSURANCE

11.1 Overview of treaties

Little use is made of reassurance by Equitable, other than for very large sums assured (retention being £400K for life risks and £100K for critical illness risks), income bonds, German business, and facultative cover in some cases.

Major Medical Cash Plans are fully reassured - 50% quota share to two reassurers.

Total reassurance premiums paid in 1995 were less than £2 million.

11.2 Changes during the year

A new treaty was introduced to cover Major Medical Cash and Critical Illness Plans - we presume with its new subsidiary, [redacted]

11.3 'Financing reinsurance'

None used.

1995 returns

OTHER ISSUES

12. COMPLIANCE

12.1 DTI compliance problems

The Equitable is a highly ethical institution and likes to think of itself as being beyond reproach, although it has recently given ground in relation to mortality assumptions in relation to annuity liabilities.

I am unconvinced of the value of its gross premium bonus reserve valuation, and would be happier to see a clearer exposition of its ability to react to possible falls in the value of assets - bearing in mind its exceptionally large exposure to unitised with profit type liabilities. It would be helpful to learn what scenario testing it undertakes.

No serious reporting omissions are noted, although the Actuary continues to rely on the comments made about derivatives under 4(2)(a) rather than include a specific response to 4(2)(c). (Usage of real derivatives is minimal, with the majority of entries in Form 13A relating to quasi-derivatives, i.e. convertible bonds, warrants and partly paid shares.)

12.2 PIA and other compliance problems

Although the Equitable might be expected to be beyond reproach, we understand that an over-estimation of pension liabilities of £50m has been incorporated into its reserves as a provision against possible costs arising from pensions mis-selling.

No other problems are known.

GAD's detailed scrutiny reports in respect of Equitable's returns

1996 returns

cc [redacted]

Rec'd 18/12

GOVERNMENT ACTUARY'S DEPARTMENT

EQUITABLE LIFE ASSURANCE SOCIETY

RETURNS AS AT 31 DECEMBER 1996

DETAILED SCRUTINY REPORT

copies to: EL general, 96, '97 Returns.

To: [redacted] **Department of Trade & Industry**

From: [redacted] **Government Actuary's Department**

I have completed my detailed scrutiny of the 1996 returns of Equitable Life and submit my report. I have raised a number of questions on these returns with the Appointed Actuary, and a copy of my letter is included as an Appendix of this report.

This report conforms fully with the professional requirements of the Institute and Faculty of Actuaries, details of which are set out in section 15 of this report.

1. EXECUTIVE SUMMARY

1. This highly regarded, oldest mutual life assurance society in the world pays no commission to intermediaries, but achieves outstanding new business growth - based largely on its reputation for low expenses.
2. About 65% of its liabilities relate to unitised with-profits business, for which it endeavours to show competitive annual accumulations of benefits reflecting the total investment returns achieved, but, because guaranteed bonuses include credit for a measure of asset appreciation, future bonus declarations of the Society would seem to be vulnerable to any sustained stockmarket downturn. It has a modest free estate.
3. Some questions have been raised about the strength of the reserves established.

2. KEY FEATURES

- Key statistics:

Type of company:	*Mutual*
Type of business:	Largely pensions, esp. AVCs. Substantial accumulating with profits
Long term assets (£000s):	19,131,286
Cover for RMM:	2.53
GAD priority rating:	3

- New business has more than doubled over the last five years.
- Expense ratios are the lowest in the business and persistency experience is good.
- The Society achieved a mediocre investment return of 10.3% in 1996.
- The gross premium bonus reserve valuation published does not appear to be any stronger than its permissible net premium valuation.

EQLIFE96.rep.doc: 8-Dec-97

Document Number:01911 Page 1

1996 returns

3. ACTION POINTS

Questions have been asked of the Actuary about the provisions made: (1) for resilience, (2) for possible CGT, and (3) for pensions mis-selling in the net premium valuation.

He has also been asked to supply data comparing total accumulated assets shares for contracts in force with the total assets available.

4. BACKGROUND

Equitable is the oldest mutual life assurance society in the world, dating from 1762. It was the first to develop policies based on scientific principles as used today.

Equitable has never paid commission to third parties - another strong marketing point.

This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method. (The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by regulations.)

Equitable applies for a Section 68 Order for an implicit profits item each year, but used this Order to demonstrate solvency cover for the first time in 1994. The implicit item is not necessary to cover its RMM, but forms part of the excess assets shown in Form 9. An Order allowing £600m was granted for 31.12.96 - of which £312,794,000 was used. The Society also enjoys an Order allowing the presentation of aggregated data for its "personalised funds" in the return.

In 1995 the Equitable purchased a controlling interest in [redacted], the PHI specialist, from Medical Sickness - and bought out the minority in June 1997.

University Life, another old institution, has been a subsidiary of Equitable since 1919. Equitable provides management services under an agreement with capped charges.

Equitable has increased activity overseas in recent years, with branches in Ireland and Germany and an International Branch operated from Guernsey. These branches have been set up on a low cost base and produce ever increasing amounts of new business. Equitable regard this as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders. [However, the company has expressed dissatisfaction with the cost effectiveness of the German branch.] The mutual concept is extended to all policyholders, and is even part of Equitable's dealing with UK non profit policyholders.

Equitable has a unit trust and PEP subsidiary, Equitable Unit Trust Managers Ltd, with nearly £1.6bn under management. Its strong systems department has set up a subsidiary, Equitable Services and Consultancy Limited, which obtained a contract with [redacted] in 1995 and, in 1996, entered an agreement to provide systems support to the group pension operations of [redacted]

The Appointed Actuary and Managing Director posts were both held by [redacted] at the valuation date, but the Board is chaired by a non-executive, [redacted] retired at the end of July 1997, being succeeded as Managing Director by [redacted] and as Appointed Actuary by [redacted]. At 31.12.1996, the total Board of 14 included 9 non-executives.

The last visit to the company by DTI and GAD officials was made in November 1996.

EQLIFE96.rep.doc: 8-Dec-97

Page 2

Document Number:01911 Page 2

In 1997, a £350m subordinated loan has been taken from a specially created subsidiary, Equitable Life Finance plc, which floated corresponding Bonds on the market.

BUSINESS DEVELOPMENTS DURING THE YEAR

5. NEW BUSINESS

5.1 New and altered products

The only new products observed are -

1. a unit linked deposit plan: a single premium whole life contract utilising the maturity proceeds of other contracts;
2. a new unit linked Jersey based personal pension plan: that accepts recurrent single premiums on either a unit linked or accumulating with profits basis;
3. life or pensions annuities in payment offered on a RPI linked basis.

5.2 Source(s) of new business

Equitable pays no commission. It runs a sales force and also conducts direct response advertising, targeted at high net worth individuals, but a lot of business comes from its reputation and direct approaches from prospective policyholders.

It also has a significant volume of quasi-institutional business, from actual pension schemes and from AVCs. More than 200 new AVC schemes started in 1996, together with many Grouped Personal Pension and Group Money Purchase arrangements.

5.3 Recent history:

New Regular premiums -

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**

5.4 Commentary

The Society continues to produce exceptionally strong new business figures, particularly for pensions business.

A very large proportion of the business is of the "accumulating with profit" type, which is newly identified in the 1996 Returns.

The single premiums shown in the Tables above correspond with the amounts shown in Form 41 of the Returns, and the regular premiums shown in these Tables are in line with the way that the Society credits the renewable single premium business sold (and the basis on which it rewards its sales operation). [However, since it is not able to produce meaningful in-force premium figures for renewable single premium business, with the agreement of the DTI, the annual premiums recorded in Forms 46 ignore this business.]

EQLIFE96.rep.doc: 8-Dec-97 Page 4

Document Number:01911 Page 4

6. CHANGES IN BUSINESS IN FORCE

6.1 Recent history of regular premiums received

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Life & General Annuity	71,594	72,205	83,232	94,706	**116,541**
Pensions	1,201,594	1,241,058	1,307,015	1,421,752	***1,125,149**
Permanent health	0	0	0	291	**484**
Other contracts	0	0	0	0	**0**
Total gross regular premiums	1,273,188	1,313,263	1,390,247	1,516,749	**1,242,174**
Less reinsurance premiums	2,332	1,463	1,440	1,877	**2,106**
Total net regular premiums	1,270,856	1,311,800	1,388,807	1,514,872	**1,240,068**
Year on year % increase	7%	3%	6%	9%	**(18%)**

* 1996 saw a change in presentation. While the revised Regulations were intended to help give appropriate recognition to renewable single premium business and classify it as regular premium business, the flexible nature of Equitable's products has made it difficult for them to quote a basic regular premium payment. As a somewhat perverse result, for 1996 the Returns of Equitable actually show lower regular pension premiums and higher single premiums.

Total gross pensions premiums received rose from £2,257,650 in 1995 to £2,832,369 in 1996, an increase of 25.5%.

6.2 Claims experience

Recent history of claim amounts -

Class	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**

Industry ave							*1.9*	*3.4*	*7.3*	*3.2*	*9.4*	*14.7*

Note: In spite of Pensions being the major class of business conducted by the Society, data is not available for persistency, due to the flexible nature of the contracts written.

Recent history of combined surrender, lapse & paid-up conversion rates -

Class	1992	1993	1994	1995	**1996**
Life non-linked	3.91%	4.02%	3.89%	3.85%	**5.54%**
Life linked	6.79%	10.27%	12.64%	8.49%	**9.96%**
Pensions non-linked	6.74%	6.56%	7.76%	7.40%	**7.50%**

Note: The combined surrender, lapse and paid-up conversion rates are:
Form 46, UK business, annual premiums, lines (24+25+26) / [½*lines (11+39+24+25+26)]

7. EXPENSES

7.1 Recent history of expenses:

Expense	1992 £000s	1993 £000s	1994 £000s	1995 £000s	**1996 £000s**
Initial commission	0	0	0	0	**0**
Acquisition expenses	75,678	76,538	78,136	82,376	**88,457**
Renewal commission	0	0	0	0	**0**
Maintenance expenses	41,048	41,773	32,941	30,222	**30,208**
Other management expenses	0	0	0	0	**2,514**
Total expenses	116,726	118,311	111,077	112,598	**121,179**
Year on year % increase	(3%)	1%	(6%)	1%	**8%**

EQLIFE96.rep.doc: 8-Dec-97

Page 6

Document Number:01911 Page 6

Expense ratios:	1992	1993	1994	1995	1996
Acquisition	23.7%	24.2%	18.1%	16.9%	**15.9%**
Mutual average	*79.0%*	*76.9%*	*81.3%*	*75.7%*	*N/A*
Renewal	3.2%	3.2%	2.4%	2.0%	**2.4%**
Mutual average	*10.1%*	*9.7%*	*9.7%*	*10.3%*	*N/A*

Notes:
1. The expense ratios are:
   Acquisition: (IC + AE + OME) / New Business Index
   Renewal: (RC + ME) / Gross earned regular premiums [F41.29.1]
2. The trend in the acquisition expense ratio is subject to distortion from 1996 from reclassification of recurrent single premiums as regular premiums, and also from the inclusion of "other management expenses" in this ratio.

7.2 Commentary

Even though difficult to assess on a totally comparable basis with other offices, because of the substantial pensions business conducted on a variable contribution basis, expense ratios of the Society keep improving. They have reached astonishingly low levels, with increasing sales taking up slack in the administration systems and overhead costs being kept under tight control. Total staff numbers fell by 20 in 1996 to 1,911.

Reported expense ratios are the lowest in the industry, being only about half those of its nearest competitor. Amazing!

Equitable is well known as a non-commission paying office, and prides itself on its low expense ratio. It is a very positive marketing message and a key attraction of the Society with its customers. It helps explain the strong sales figures achieved and is part of a virtuous circle.

In their Report and Accounts, the Equitable publish figures for total expenses divided by total premium income. For 1996 the figure reduced still further to just 4.3%, compared with 4.8% in 1995 and 5.5% in 1994, and continues a steady fall from 9.1% in 1988.

7.3 Exceptional items

The Society claims to have invested some £50m in the complete redevelopment of all operating systems over recent years, but no exceptional costs are observed in 1996.

SITUATION AT THE YEAR END

8. NON-LINKED ASSETS

8.2 Derivatives

Guidelines in force are fairly tight, and the only derivative asset held at the end of the year (other than matching linked liabilities) was £314,000 in "other" futures contracts. A liability of £1,399,000 in equity options is also observed.

* calculated as F44.12 / average F55 internal linked col 7 * average F55 total cols (8 - 9)
‡ estimated figures based on Form 56

This return is slightly disappointing for the portfolio held, but includes a write-down in the value of investments in dependants. However, the return claimed in the Society's accounts for assets matching with-profit liabilities of 10.7% is competitive.

9. ASSETS HELD TO MATCH LINKED LIABILITIES

9.1 Internal linked funds

9.1.1 New and altered funds

The Society has introduced FTSE Index Tracker Funds for Life, Annuity, Pensions and International business as well as now offering an Annuity Smaller Companies Fund.

9.1.2 Investment performance

Units in the Pension Managed Fund showed growth of 10.7%, while the Life Managed Fund produced growth of 9.7%. These figures would seem to be broadly in line with expectations based on known market movements, bearing in mind that all units are of the accumulation type and management charges are just ½% per annum.

The Pelican Funds appear to have again produced exceptionally good performances (with Pension units up 18.0% and Life units up 14.9%), but most other Funds show results no better than might have been hoped for from market movements.

9.1.3 Fund Management Charges to policyholders

The annual charge on internal linked funds, other than personalised funds, is just ½% (believed to be the lowest in the market).

1996 returns

9.1.4 Principles of unit pricing

Most of the internal funds are invested in units of trusts managed by Equitable Trust Managers. Those trusts operate on a forward pricing basis, with a 4 p.m. valuation point. When expanding a offer price is used, but when contracting the Society might exercise its discretion to move to a full bid basis - although such a change would normally await the emergence of a sustained trend. Creation or cancellation of units by the manager is based on overall liability data and then actioned on the basis of prices established on the previous day.

9.1.5 Liquidity and gearing

No problems are observed.

9.2 Other assets matching property-linked liabilities

£51,970,000 is held directly in the Pelican Unit Trust, which showed a return of 13.2% over the year, and just £152,000 is on deposit with [redacted] Building Society.

9.3 Mismatching to property-linked liabilities

No serious mismatching is observed. Only small surpluses of units exist for most funds.

9.4 Assets matching index-linked liabilities

Total RPI linked liabilities of £295,762,000 are matched by holdings of £278,406,000 in Government Index Linked Securities and £17,356,000 in deposits and other short term assets. Partial FTSE 100 linked liabilities of just £2,427,000 are covered by holdings of £246,000 in FTSE call options and £2,704,000 in deposits and other short term assets.

9.5 PRE

Where a fund invests in an Equitable Unit Trust, the annual management charge is reduced by ½%, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.

10. VALUATION BASIS

The company produces its published Return on the basis of a gross premium valuation for non linked business, with some allowance for future bonuses, but the results of a net premium valuation are also shown in the Returns - with a negligible liability difference,

The Equitable tries to provide a fair bonus allocation to each generation of policyholders - without holding back an excessive estate. The result is that lower free asset margins exist than might have been expected for such a well thought of institution. It may be noted that the Society has, for the last three years, found it desirable to utilise a future profits implicit item to improve the disclosed free assets position - although at nowhere near the maximum that could be justified under the guidelines.

There is one hidden strength in the valuation - the treatment of recurrent single premium pensions business, under which it is assumed that no more premiums will be received. Although in line with the best practice, this is a strong basis - particularly for property linked contracts. If such business were treated as regular premium, margins in future premiums and charges on the funds built up might allow somewhat lower reserves.

EQLIFE96 rep doc: 8-Dec-97 Page 10

Document Number:01911 Page 10

10.1 Interest

The table below sets out **interest rates used in the net premium valuation** for major classes of non-linked business (with liabilities in excess of £100m) from Forms 57.

Classes	Net Interest Rate (1995 Rate)	Gross Interest Rate *	Liability Approx. (£m)
life assurances with profit	3.25% (3.25)	4.06%	305
pensions with profit - regular premium	5.00% (5.00)	5.00%	198
pensions with profit - special classes?	3.00%(??)	3.00%	178
annuities in payment with profit	5.00% (5.25)	5.00%	168
pensions with profit imm. annuities	5.25% (5.75)	5.25%	1,218
pensions **accumulating** with profit	5.00% (5.25)	5.00%	10,414
life **accumulating** with profit	2.50% (4.00)	3.13%	1,071
annuities in payment non profit	7.25% (7.75)	7.75%	115
pensions annuities	7.75% (8.00)	7.75%	1,524

* grossed up at 20% tax

These major liability categories total £15,191m. Forms 57 show that matching assets are available.

10.2 Mortality

The bases used for assurances appear reasonably conservative, being largely based on AM80 and AF80 with varying adjustments for some classes of business - particularly taking account of the market sector in which the Society operates.

UK annuities have this year been valued using the IM80 and IF80 (C=2010) tables, compared with the use last year of the a(90) table with a two year down rating, while pensions annuities are reserved for using PMA80 (C=2010) ult -1 (broadly equivalent to the use last time of PA(90) -4). The Appointed Actuary insists in his report that these tables contain sufficient allowance for future reductions in rates of mortality.

10.3 Morbidity

Not material.

10.4 Expenses

The aggregate expense allowance for the next twelve months revealed in 10(2) of the report is £56m. This compares with actual F41 maintenance expenses of £30.2m in 1996 and just £2.5m of "other expenses" shown. The total provisions would thus seem to be more than adequate, and the Actuary contends that no additional provisions are needed to cover the continued sale of new business or to cover closure. This seems acceptable.

10.5 Resilience

A resilience reserve requirement is reported of £501m, but this has not been allowed for in Line 29 of Form 57 and bearing in mind that this must be largely covered by equity assets, it is thought that a grossed up figure of £668m should have been provided for.

This is being queried. OK Q. 1.

1996 returns

10.6 Other factors

The parameters used for establishing sterling reserves for unit linked products seem to be rather weak, assuming a gross 8½% annual unit price growth before charges (up from 8% last year) - while only allowing for 5% annual inflation of expenses. However, potential expense strains are not thought to be great for this company and the standard annual expense inflation rate assumption they use is only 4%, so no question has been raised on this occasion. OK

The failure to set up a specific reserve in relation to the contingent liability of £47.7m for tax on capital gains on non-linked assets is dubious - relying on other margins in the valuation basis. *This is being queried.* Q. 2.

A pensions mis-selling reserve of £50m was included within the future bonus provision in the bonus reserve valuation, but it is not clear that any such provision was established in the net premium valuation. *This is also being queried.* [Recent correspondence suggests that the required provision had risen to £85m by 30 September 1997.] Q. 3

10.7 Overall strength

The Society informs its holders of accumulating with profit contracts of the amount of their accumulating final bonus (although clearly stating that it is not guaranteed), but only holds reserves for a discounted sum compared with the current guaranteed value.

It is stated in the return that final bonus additions (the accumulated amount of which are not revealed) are implicitly covered by the amount of excess admissible assets over the mathematical reserves - shown in the 1996 Return as being about £1.4bn. (including the RMM). However, since the reserves already value current guaranteed benefit values at a combined discount of some £1.3bn, it seems likely that the total current "asset shares" (including final bonuses indicated to members) exceed total current admissible assets. *The Actuary is being asked to clarify his view of the situation!* Q. 4.

11. FINANCIAL RESULTS

11.1 Overview

The Bonus Reserve Gross Premium valuation shows available assets covering the RMM by a factor of 2.53, and the net premium valuation would show a similar picture.

Without the implicit future profits item of about £312.8m, cover for the RMM would be reduced to a factor of 2.07. Further, we are not clear that provisions made against the market value of assets for resilience and prospective capital gains tax are as strong as they should be.

Because of the large proportion of business written on a participating basis and the high level of annual emerging surplus, there are not considered to be any actual potential solvency problems for the Society, but it does seem that, in the event of a marked fall in asset values, the Society might find itself in a position where it had to cut back severely the level of payout to members.

GAD queried this in letter re asset shares

It would seem desirable for the Society to hold back more of its emerging surplus by declaring lower guaranteed bonuses - although it could still attempt to pay out generous final bonuses to members (preferably without raising expectations too much in advance with its declarations of "non-guaranteed final bonuses").

policyholders must find this confusing!

13	Total amount available	843,346	1,716,540	1,167,487	1,697,111	**1,732,972**
14	RMM	356,625	458,014	494,616	586,275	**685,282**
15	Cover (13/14)	2.36	3.75	2.36	2.89	**2.53**
16	Free assets ratio ((11-14)/8)	5.09%	9.40%	3.12%	5.13%	**3.84%**

The Net Premium Valuation generated a lower non-linked liability of £14,675,209,000 and a lower reserve for declared bonuses of £474,207,000 but was shown to require a resilience reserve of £501m.

Thus, the total Long Term liabilities for Line 9 for the NPV would be £17,705,214,000 i.e. most of the apparent margin between the BRV and NPV policy liabilities is needed to cover resilience, and the BRV does not produce any material extra margins.

* 0.25% higher for SP Bonds
The Whole Life bonus is £37.50‰ + £3‰×(years in force in excess of 11)
[unchanged from 1995]

There are also a small number of policies with German style bonuses, but these are too small a class to cover here.

1996 returns

The system of **final bonus that is granted to unitised type contracts** is unusual. As well as declared guaranteed annual bonuses, based on all income and a proportion of capital appreciation, a further annual bonus is declared which is not reversionary - in that it may be withdrawn, and/or reduced in future.

However, it has a lot of features in common with reversionary bonuses. It is declared in a similar way as a percentage of benefit, and the amount paid at the end of the policy's normal span is the sum of these total annual "declarations", subject to the proviso that the final non-guaranteed bonus can be withdrawn. The wording used by the Society in its Bonus Declaration to describe this third element of distributing a smoothed return to policyholders is:

perhaps this confuses p. holders?

"By passing on the balance of the overall rate of return through final bonus, which does not add to the guarantees under the contract. The amount of final bonus is only finally determined when a claim becomes contractually payable."

The Society's With-Profits Guide includes a table of gross investment returns achieved on market value of assets of the Society in recent years (from 1993 - as attributable to with-profits business) and the smoothed rate that was applied in allocating bonuses for policyholders -

	1990	1991	1992	1993	1994	1995	1996
Earned	-8.3%	13.5%	17.1%	28.8%	-4.2%	16.6%	10.7%
Allocated	12%	12%	10%*	13%	10%	10%	10%

* 12% was applied to new benefits secured during the year

Final bonuses for traditional life contracts are according to a table based on duration in force. This gives a standard terminal bonus.

Specimen values as a % of SA and Bonus are:

Complete Years In Force	1994	1995	1996	**1997**
1	8.5	6.0	6.0	**6.0**

30	110.0	115.0	117.5	**120.0**

12.3 PRE

The Society tries very hard to achieve an equitable distribution to each generation of its policyholders, whilst avoiding short term fluctuations in benefits - with the result that it has not accumulated any material unallocated estate compared with accumulated asset shares (if any - see Section 10.7).

However, it reserves the right to penalise early surrenders, even in relation to guaranteed bonuses added under unitised contracts, and it might be desirable for this possibility to receive greater prominence in the literature distributed. Further, with such a large proportion of unitised business and with the level of guaranteed bonuses declared taking account of some asset appreciation, it would seem to be desirable that policyholders were given some greater warning about the possible implications for future bonuses of a substantial market setback. Take up with company? I discussed this briefly with [redacted] – concern is that co. has no estate – no cushion. Should not perhaps be giving bonuses to new p. holders. But the markets are up at present.

12.4 Recent history of maturity payouts

£	1993	1994	1995	1996	**1997**
25 yr endowment (£50pm)	87,681	88,971	87,887	86,739	**84,025**
Industry average	*91,924*	*94,499*	*94,356*	*94,908*	*96,767*
10 yr endowment (£50pm)	12,203	11,494	10,575	10,211	**9,879**
Industry average	*11,067*	*10,711*	*10,331*	*9,926*	*9,784*
15 yr pension (£200pm)	148,969	145,338	131,239	120,078	**109,211**
Industry average	*137,356*	*133,094*	*125,766*	*117,754*	*113,379*
10yr SV on 25 yr endowment	11,819	10,854	10,070	9,073	**8,427**
Industry average	*7,914*	*7,707*	*7,616*	*7,638*	*7,446*

The comparative generosity of surrender payments contrasts with a rather disappointing position for maturity payouts.

Re my notes above: see [redacted] reply – of 16/1/98 – para. 4 at 'X'.

Document Number:01911 Page 17

1996 returns

13. REINSURANCE

13.1 Overview of treaties

Little use is made of reassurance by Equitable, other than for very large sums assured (retention being £400K for life risks and £100K for critical illness risks), income bonds, German business, and facultative cover in some cases.

Major Medical Cash Plans are fully reassured - 50% quota share to two reassurers.

Total reassurance premiums paid in 1996 were about £2.2 million.

13.2 Financing arrangements

None exist.

OTHER ISSUES

14. COMPLIANCE

14.1 DTI compliance problems ← I wouldn't call this a compliance problem.

The Society is not able to produce meaningful in-force premium figures for renewable single premium business, and a Section 68 Order has been given on a temporary basis (up to the end of 1998) allowing the Society to exclude recurrent single premiums from the annual premiums recorded in Forms 46. ✓ Order given for 96, 97, 98 returns.

14.2 PIA and other compliance problems

A pensions mis-selling reserve of £50m was included within the future bonus provision in the bonus reserve valuation, *although it is not clear that any such provision was established in the net premium valuation and this is being queried.* Q.3

Recent correspondence suggests the required provision had risen to £85m by 30.9.1997.

15. PROFESSIONAL REQUIREMENTS

This report conforms fully with the requirements of the Institute and Faculty of Actuaries as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct.

This report had been prepared under the terms of the Agreement between Insurance Division (I Division) of the Department of Trade & Industry (DTI) and the Government Actuary's Department (GAD) dated March 1995 ("the service agreement") setting out the level of service to be provided by GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

The purpose of this report is to enable DTI to fulfil its duties under the Third Life Directive and the Insurance Companies Act 1982.

EQLIFE96.rep.doc: 8-Dec-97 Page 18

Document Number:01911 Page 18

GAD's detailed scrutiny reports in respect of Equitable's returns

1996 returns

The scope of this report is:

- to advise on the statutory solvency position of the company;
- to identify any issues relevant to the duties of DTI;
- to describe the development of the company over the previous 12 months;
- to provide historical background to the company.

This report is limited to a minor degree because certain questions need to be put to the Appointed Actuary. Under the service agreement, GAD has written to the company directly on these. A copy of our letter is included as an Appendix to this report.

The advice and information contained in this report are solely for the use of DTI in fulfilling its statutory duties and should not be transmitted to third parties, including the company concerned, without the prior consent of GAD.

GAD's detailed scrutiny reports in respect of Equitable's returns

1997 and 1998 returns

EQUITABLE LIFE ASSURANCE SOCIETY

RETURNS AS AT 31 DECEMBER, 1998

DETAILED SCRUTINY REPORT

GAD PRIORITY RATING: 2

GOVERNMENT ACTUARY'S DEPARTMENT

To: [redacted] **Financial Services Authority**

From: [redacted] **Government Actuary's Department**

This report conforms fully with the professional requirements of the Institute and Faculty of Actuaries, details of which are set out in section 15 of this report, and combines comment on activity in both 1997 and 1998.

1. KEY FEATURES

Type of company:	Mutual	
Type of business:	Largely pensions: esp. group personal pensions and AVCs. Substantial accumulating with profits	
Last visit date:	November 1996	
Key Financial Statistics:	1997 (£000s)	**1998 (£000s)**
New Business Index:	689,332	**636,984**
Long Term Assets:	23,827,839	**28,238,041**
Assets Available:	2,122,633	**2,523,931**
Implicit Items	371,083	**850,000**
Sub-ordinated loans	346,362	**346,204**
RMM	845,457	**1,007,534**

2. ACTION POINTS

No points have been raised with the Society as a result of this scrutiny. However,

- there remains a need for FSA and GAD to consider the final terms of the reinsurance treaty agreed with Irish European Reinsurance Company Limited that limits the reserves carried by the Society to cover its liability for guaranteed annuity options.
- Further, a policy decision needs to be taken about whether to challenge some of the assumptions made by the Actuary in setting the level of his provisions for these options. [See Section 10.8.]

3. EXECUTIVE SUMMARY

The Equitable tries to provide fair benefits to each generation of its policyholders, on maturity or surrender - without holding back any excessive estate. The result is that

Equitable1998.rep.doc: 17-May-99

Document Number:01950 Page 1

1997 and 1998 returns

lower free asset margins exist than might have been expected for such a well thought of institution. It may be noted that the Society has, for the last five years, found it desirable to utilise a future profits implicit item to improve the disclosed free assets position, and also took out a subordinated loan in 1997.

The solvency position of the Society is complicated on this occasion by a need to carry reserves appropriate to the extent of guaranteed annuity options attaching to a large percentage of existing pensions liabilities. The basis for these provisions has been the subject of extensive discussions between GAD and the Appointed Actuary, and an attempt has been made to mitigate the strain by taking out a special reinsurance contract with Irish European Reinsurance Company Limited. [See Section 13.2.]

The valuation shows available assets covering the RMM by a factor of 2.51, unchanged from end 1997. Without the implicit future profits item of £850m, cover for the RMM would be reduced to a factor of 1.66. (Liability for a subordinated loan of £340m is also disregarded in this result – as permitted by a Section 68 Order.)

New business in 1998 fell back a little from the exceptional level reached in 1997, but total premiums received exceeded £3.7bn (after £3.45bn in 1997). Gross claims paid out in 1998 exceeded £2.5bn. Expense ratios remain the lowest in the industry.

Asset performance is a little disappointing, although most linked funds perform broadly in line with expectations, and maturity benefits actually fall below those of competitors who tend to pay out much less to their policyholders who surrender early.

4. BACKGROUND

Equitable is the oldest mutual life assurance society in the world, dating from 1762. It was the first to develop policies based on scientific principles as used today.
Equitable has never paid commission to third parties - another strong marketing point.

This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method. (However, the returns also show the results of a net premium valuation on a minimum basis – and the free asset position shown is identical.)

In 1995 the Equitable purchased a controlling interest in [redacted], the PHI specialist, from Medical Sickness - and bought out the minority in June 1997.

University Life, another old institution, has been a subsidiary of Equitable since 1919. Equitable provides management services under an agreement with capped charges.

Equitable has increased activity overseas in recent years, with branches in Ireland and Germany and an International Branch operated from Guernsey. These branches have been set up on a low cost base and produce ever increasing amounts of new business. The company also began providing insurance from 3 August 1998 on a services basis into Greece. Equitable regards these activities as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders. [However, the company has expressed dissatisfaction with the cost effectiveness of the German branch.] The mutual concept is extended to all policyholders, and is even part of Equitable's dealing with UK non profit policyholders.

1997 and 1998 returns

Equitable has a unit trust and PEP subsidiary, Equitable Unit Trust Managers Ltd, with over £2.4bn under management (largely units bought by the Society to back unit-linked policies?). Its strong systems department established a subsidiary, Equitable Services and Consultancy Limited, that has run a contract with [redacted] Limited since 1995 and, in 1996, agreed to provide systems support to group pension operations of [redacted] In 1997 it took on the processing of policy records for a Zimbabwe company, and in 1998 commenced a three year project to provide administration services to [redacted]

In July 1997, a £350m subordinated loan was taken from a specially created subsidiary, Equitable Life Finance plc, which floated corresponding Bonds on the market. This liability is shown in Form 15, despite having no "other than long term business" assets, thus producing a negative value in Line 23 of Form 10 – offset by an entry in Line 26. As a result of this reporting, the capital raised is not shown as an asset in Line 22 of Form 9. [This is different from the convention used by [redacted] and [redacted], who include the loan as a liability in Form 14, but we are happy to live with the presentation adopted by the Society.]

Equitable Life has been heavily criticised in the press, of late, for the approach that it is taking of reducing terminal bonuses to meet the costs of guaranteed annuity options attaching to some of its pension contracts. A test case to be brought before the Courts in July 1999 will try to obtain legal clearance for the practice.

There were four Section 68 Orders in force at the 31 December 1997 valuation date:

- an order dated 14 October 1997, allowing the Society to take into account a future profits implicit item, with a value not exceeding £700 million. The Society included an implicit item in the 31.12.97 returns of £371.1 million, for the purpose of achieving equity between the total net value of policyholders' assets, and the corresponding total net asset value shown in the Society's Companies Act accounts.
- an order dated 13 June 1997, to the effect that figures in Form 46 exclude recurrent single premiums from the annual premium figures as the Society cannot at present calculate a meaningful figure.
- an order dated 31 January 1997, directing that the Society may include aggregate details for total "Personalised Funds" in Forms 43, 45 and 55, instead of providing separate details for each fund.
- an order dated 19 August 1997, enabling the Society to disregard, for the purposes of Regulation 60 of ICR94, amounts owing to Equitable Life Finance PLC under a (Subordinated) loan agreement dated 4 August 1997 up to an amount not exceeding 50% of the company's required margin of solvency.

For the 1998 valuation the implicit item order above had been revoked. It was replaced by a similar order dated 30 December 1998, which allowed the Society to take into account a future profits implicit item of up to £1,900m. The actual amount that the Society took into account was £850m.

[redacted] is Appointed Actuary and the Managing Director is [redacted] They replaced [redacted], who held both posts until his retirement at the end of July 1997. A non-executive, [redacted] chairs the Board. At 31.12.1997, the total Board of 11 included 9 non-executives.

The last visit by DTI and GAD officials was made in November 1996.

Equitable1998.rep.doc: 17-May-99 Page 3

Document Number:01950 Page 3

BUSINESS DEVELOPMENTS DURING THE YEAR

5. NEW BUSINESS

5.1 New and altered products

There was only one new product introduced in 1997 –

A **Guaranteed Equity Fund Annuity:** a single premium product, which provides a guaranteed basic level annuity together with an additional level of income in the years where the FTSE 100 index rises. This increase is measured by the movement in the unit price of the appropriate Guaranteed Equity sub-fund.

During 1998, 7 new products were introduced -

Three accumulating with-profit contracts, namely the UK Personal Investment Plan and the Services Investment Plan, which are both life products, together with a UK Money Purchase Transfer Plan pension policy.

Four unit-linked variants: the Personal Investment Plan Benefit, the Grouped Personal Pension Plan Retirement Benefit, the Services Investment Plan and the Money Purchase Transfer Plan Retirement Benefit.

5.2 Source(s) of new business

Equitable pays no commission. It runs a sales force and also conducts direct response advertising, targeted at high net worth individuals, but a lot of business comes from its reputation and direct approaches from prospective policyholders. The last two years saw the further development of Equitable Direct, which has been established to complement the branch-based direct sales force, with staff numbers rising to 90 at the end of 1998. [The Society's internet site was enhanced in 1998, but is a source of information and data for policyholders in relation to policy servicing and is not a direct sales tool.]

The Society also has significant volumes of quasi-institutional pensions business, from actual pension schemes and from AVCs - with more than 300 of the UK's 500 largest companies having pension arrangements with Equitable. 230 employers set up new Grouped Personal Pension plans in 1997, and this number increased by 10% in 1998, so that over 2,000 such plans are now operating. The Society operates AVC schemes for both the Civil Service and the NHS.

5.3 Recent history:

New regular premiums -

Class	1994 £000s	1995 £000s	1996 £000s	1997 £000s	**1998 £000s**

New Business Index (Regular premiums plus 10% of single premiums)

Index (£000s)	432,196	488,792	573,184	689,332	**636,984**
Year on year % increase	36%	13%	17%	20%	**(8%)**
ABI comparisons (UK business):					
- Life	*(11%)*	*(9%)*	*22%*	*5%*	***Not Available***
- Pensions	*(11%)*	*(11%)*	*16%*	*22%*	***Not Available***
- Overall	*(11%)*	*(10%)*	*20%*	*11%*	***Not Available***

Source of comparisons: ABI Insurance Statistics Yearbook 1997

A very large proportion of the business is of the "accumulating with profit" type, which was first separately identified in the 1996 Returns.

5.4 Commentary

Single premiums in the Tables above correspond with amounts shown in Form 41 of the Returns, and the regular premiums shown in these Tables are in line with the way that the Society credits the renewable single premium business sold (and the basis on which it rewards its sales operation). [However, since it is not able to produce meaningful in-force premium figures for renewable single premium business, with the agreement of a Section 68 Order, the annual premiums recorded in Forms 46 ignore this business.]

Although formal comparisons are not available at present, it does appear from recently published ABI data that Equitable may have underperformed the industry average in 1998 in terms of increases in new business. This could, though, be put down to the Society's starting position - having achieved excellent growth in 1997.

In 1997, the Equitable was reported as the largest writer of pensions business in the UK.

6. CHANGES IN BUSINESS IN FORCE

6.1 Recent history of regular premiums received

Class	1994 £000s	1995 £000s	1996 £000s	1997 £000s	**1998 £000s**
Life & General Annuity	83,232	94,706	116,541	145,586	**175,465**
Pensions	1,307,015	1,421,752	1,125,149*	1,358,484*	**1,379,753***
Permanent health	0	291	484	641	**801**
Total gross regular premiums	1,390,247	1,516,749	1,242,174	1,504,711	**1,556,019**
Less reinsurance premiums	1,440	1,877	2,106	2,451	**3,455**
Total net regular premiums	1,388,807	1,514,872	1,240,068	1,502,260	**1,522,564**
Year on year % increase	6%	9%	(18%)	21%	**1%**

Source: Form 41

* 1996 saw a change in presentation. While the revised Regulations were intended to help give appropriate recognition to renewable single premium business and classify it as regular premium business, the flexible nature of Equitable's products has made it difficult for them to quote a basic regular premium payment. As a somewhat perverse result, from 1996 onwards the Returns of Equitable actually show lower regular pension premiums and higher single premiums.

Total gross pensions premiums received rose from £2.832bn in 1996 to £3.454bn in 1997, an increase of 22.0% (after a 25.5% rise in 1996). There was a further increase of 8.1% to £3.732bn in 1998.

6.2 Claims experience

Recent history of claim amounts (*gross of reinsurance*) -

Source: PIA: Fourth Survey of the Persistency of Life and Pensions Policies (Oct 1998)
Note: Data not available for SP via direct adverts (all classes)

NOTE In spite of Pensions being the major class of business conducted by the Society, data is not available for persistency, due to the flexible nature of the contracts written.

Recent history of combined surrender, lapse & paid-up conversion rates -

Class	1994	1995	1996	1997	**1998**
Life non-linked	3.89%	3.85%	5.54%	3.81%	**4.10%**
Life linked	12.64%	8.49%	9.96%	6.11%	**4.98%**
Pensions non-linked	7.76%	7.40%	7.50%	7.54%	**6.46%**

Note: The combined surrender, lapse and paid-up conversion rates are:
Form 46, UK business, annual premiums, lines (24+25+26) / [½*lines (11+39+24+25+26)]

These are excellent results, reflecting the fact that business is largely bought rather than sold !

7. EXPENSES

7.1 Recent history of expenses:

Expense	1994 £000s	1995 £000s	1996 £000s	1997 £000s	**1998 £000s**
Initial commission	0	0	0	0	**0**
Acquisition expenses	78,136	82,376	88,457	99,143	**106,552**
Renewal commission	0	0	0	0	**0**
Maintenance expenses	32,941	30,222	30,208	33,303	**34,243**
Other management expenses	0	0	2,514	7,279	**8,475**
Total expenses	111,077	112,598	121,179	139,725	**149,270**
Year on year % increase	(6.1%)	1.4%	7.6%	15.3%	**6.8%**

Source: Form 41

Expense ratios:	1994	1995	1996	1997	**1998**
Acquisition	18.1%	16.9%	15.9%	15.4%	**18.1%**
Mutual average	*80.7%*	*93.6%*	*71.1%*	*75.2%*	***Not Available***
Renewal	2.4%	2.0%	2.4%	2.2%	**2.2%**
Mutual average	*11.9%*	*11.7%*	*10.3%*	*12.4%*	***Not Available***

Notes: 1. These expense ratios are:
Acquisition: (IC + AE + OME) / New Business Index
Renewal: (RC + ME) / Gross earned regular premiums [F41.29.1]
Renewal as % of total fund: (RC + ME) / Average total fund [½*(F40.49 + F14.51.1 + F40.59 + F14.51.2)]

2. The trend in the acquisition expense ratio is subject to distortion from the inclusion of other management expenses in this ratio.

7.2 Commentary

Reported expense ratios are the lowest in the industry, being only about half those of its nearest competitor. They have reached astonishingly low levels, with increasing sales taking up slack in the administration systems and overhead costs being kept under tight control. However, total staff numbers increased in 1997 by 53 to 1,991, and in 1998 by a further 109 to 2,110 – largely accounted for by the expansion of Equitable Direct.

Equitable is well known as a non-commission paying office, and prides itself on its low expense ratio. It is a very positive marketing message and a key attraction of the Society with its customers. It helps explain the strong sales figures achieved and is part of a virtuous circle.

In its Report and Accounts, Equitable publishes figures for total expenses divided by total premium income. For 1998 the figure fell to 4.0%, after being 4.1% in 1997, 4.3% in 1996 and 4.8% in 1995, and continues a steady fall from 9.1% in 1988.

7.3 Exceptional items

The Society claims to have invested some £70m in the complete redevelopment of all its operating systems over recent years.

8.2 Derivatives

Guidelines in force are fairly tight, and the only derivative asset held at the end of 1998 (other than matching index-linked liabilities) was £355,000 in "other" futures contracts. A liability of £6,102,000 in currency futures is also observed.

8.3 Investment performance in 1998

	£000s	£000s
1. Net investment income (F 40.12 – F 40.23)	1,139,053	
2. *less* estimated investment income on assets matching property linked liabilities *	78,481	
3. *less* estimated investment income on non-linked assets matching index-linked liabilities ‡	17,500	
4. Investment income on Form 48 assets		1,043,072
5. Increase in non-linked assets brought into account (F 40.13)	1,806,498	
6. *less* increase in non-linked assets matching index-linked liabilities brought into account ‡	71,498	
7. Increase in Form 48 assets brought into account		1,735,000
8. Investment reserve carried forward (F 14.51.1)	2,373,931	
9. Investment reserve brought forward (F 14.51.2)	2,151,550

12. Opening Form 48 assets	21,406,135	
13. Closing Form 48 assets	25,124,678	
14. Mean fund excluding investment return [=½×(12+13-11)]		21,765,180
15. Rate of return from investment [= 11/14]		**13.8%**

* calculated as F44.12 / average F55 internal linked col 7 * average F55 total cols (8 - 9)
‡ estimated figures based on Form 56

This return slightly underperforms what might have been hoped for in 1998 - but is probably in line with returns generally achieved. The correspondingly calculated 1997 figure of around 19.1% was somewhat higher than the average return achieved by with-profit offices in that year, of 18.5%. [However, it may be noted that in the Society's accounts the return claimed for assets matching with-profit liabilities is lower than the figures generated by us: it was only 17.2% in 1997, and was just 13.3% in 1998.]

9. ASSETS HELD TO MATCH LINKED LIABILITIES

9.1 Internal linked funds

9.1.1 New and altered funds

In 1997, three new overseas global funds were introduced: the Far Eastern, International Growth and North American funds.
There were no new funds in 1998.

9.1.2 Investment performance

Units in the Pension Managed Fund showed growth of 16.6% and 11.6% in 1997 and 1998 respectively, while the Life Managed Fund produced corresponding growth of 15.5% and 12.5%. The Pelican Funds appear to have again produced good performances (with Pension units up 25.7% and 13.9% and Life units up 22.0% and 12.2%).

A table displaying investment growth and performance compared with the rest of the industry, for the major unit funds, is shown in the table below -

	1997	1998	
	Investment Growth	**Investment Growth**	**Market Quartile**
Life Funds: Managed	15.9%	**12.5%**	**1**
Pelican (Equity)	22.0%	**12.2%**	**1**
High Income	22.9%	**9.4%**	**2**
European	26.3%	**28.9%**	**1**
Far Eastern	-18.3%	**6.8%**	**1**
Pension Funds: Managed	16.6%	**11.6%**	**3**
Pelican (Equity)	25.7%	**13.9%**	**1**
High Income	26.7%	**10.0%**	**2**
European	31.3%	**34.9%**	**1**
Far Eastern	-23.5%	**7.2%**	**1**

Source: Planned Savings, February 1999

9.1.3 Fund Management Charges to policyholders

The annual charge levied on the internal linked funds, other than personalised funds, remains at just ½% (believed to be the lowest level in the market, apart from tracker funds).

9.1.4 Principles of unit pricing

Most of the internal funds are invested in units of trusts managed by Equitable Trust Managers. Those trusts operate on a forward pricing basis, with a 4 p.m. valuation point. When expanding an offer price is used, but when contracting the Society might exercise its discretion to move to a full bid basis - although such a change would normally await the emergence of a sustained trend. Creation or cancellation of units by the manager is based on overall liability data and then actioned on the basis of prices established on the previous day.

9.1.5 Liquidity and gearing

There were no liquidity issues in 1997.

In 1998, the aggregate Pension Personalised Funds data showed a negative liquidity percentage of 0.43%.

9.2 Other assets matching property-linked liabilities

At end 1998 £60,784,000 (1997: £58,053,000) is held directly in the Pelican Unit Trust, which showed a return of 11.4% over 1998 (20.9% in 1997); and just £146,000 (£139,000 at end 1997) is on deposit with the [redacted] Building Society.

9.3 Mismatching to property-linked liabilities

No serious mismatching is observed. Only small surpluses of units exist for most funds.

9.4 Assets matching index-linked liabilities

Total RPI linked liabilities of £560,390,000 (£385,553,000 at end 1997) are matched by holdings of £492,197,000 in Government Index Linked Securities and £68,193,000 held in deposits and other short-term assets.

Partial FTSE 100 linked liabilities of £5,082,000 (£3,950,000 at end 1997) are covered by holdings of £275,000 in FTSE call options and £4,807,000 held in deposits and other short-term assets.

9.5 PRE (issues on linked funds)

Where a fund invests in an Equitable Unit Trust, the annual management charge is reduced by ½%, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.

10. VALUATION BASIS

10.1 Overall strength

The Society produces its published Return on the basis of a gross premium valuation for non linked business, with some modest allowance for future bonuses, but the resilience reserve included is determined such that the total liability is identical with the results of a net premium valuation - that is shown as an Appendix to the Returns, and is largely the basis on which the strength of the reserves is monitored by GAD.

The bases used in the net premium valuation are generally considered to be acceptable, subject to the point raised in Section 10.8.

The Society informs its holders of accumulating with profit contracts of the amount of their accumulating final bonus (although clearly stating that it is not guaranteed), but only holds reserves for a discounted sum compared with the current guaranteed value.

It is known, having been acknowledged by the Society, that total current "asset shares" (indicated to members as their policy value) exceed total current admissible assets.

The solvency position of the Society is complicated on this occasion by a need to carry reserves appropriate to the extent of guaranteed annuity options attaching to a large percentage of existing pensions liabilities. The basis for these provisions has been the subject of extensive discussions between GAD and the Appointed Actuary, and an attempt has been made to mitigate the strain by taking out a special reinsurance contract with Irish European Reinsurance Company Limited. [See Section 13.2.]

10.2 Interest

The table below sets out **interest rates used in the net premium valuation** for major classes of non-linked business (with liabilities in excess of £100m) from Forms 57.

Classes	Net Interest Rate (1997 Rate)	Gross Interest Rate *	Liability Approx. (£m)
life assurances with profit	2.75% (3.25%)	3.44%	320
Pensions with profit - regular premium	3.25% (3.75%)	3.50%	197
Pensions with profit - various	2.50% (2.50%)	2.69%	1,329
ann. In payment with profit (Series I)	4.00% (4.25%)	4.30%	137
ann. In payment with profit (Series II)	2.50% (2.50%)	2.69%	102
Pensions **accumulating** with profit	4.00% (4.25%)	4.30%	12,667
life **accumulating** with profit	2.25% (2.25%)	2.81%	1,587
Annuities in payment non profit	4.50% (6.25%)	5.00%	151
Pensions annuities	5.00% (6.75%)	5.18%	2,310

* grossed up at 20% tax

These liability categories total £18.8bn. Forms 57 show matching assets are available.

10.3 Mortality

The bases used for assurances appear reasonably conservative, being largely based on AM80 and AF80 with varying adjustments for some classes of business - particularly taking account of the market sector in which the Society operates.

UK annuities have been valued using the IM80 and IF80 (C=2010) tables, unchanged since 1996; while pensions annuities are reserved for using PMA80 (C=2010) ult -2, unchanged from 1997 (in 1996 an age rating of only one year was used). The Appointed Actuary states in his report that these tables contain sufficient allowance for future reductions in rates of mortality.

10.4 Morbidity

Not material – permanent health business is written in Permanent Insurance.

10.5 Expenses

The aggregate expense allowance for the next twelve months, as revealed in paragraph 10(2) of the 1998 net premium valuation report, is £69m. This compares with actual F41 maintenance expenses of £34.2m in 1998 and just £8.5m of "other expenses" reported. The total of provisions made would thus seem to be more than adequate, and the Actuary contends that no additional provisions are needed to cover the continued sale of new business or to cover closure.

10.6 Resilience

A resilience reserve requirement under the net premium valuation method is reported as £1,236m in 1998 (£1,022m in 1997). Whereas, for the gross premium bonus reserve (GPBR) valuation a resilience reserve is shown of £600m (£325m). **The modified resilience reserve figures shown in the published GPBR valuation are designed to ensure that the amount of free assets disclosed is the same as would be shown by the Net Premium Valuation!**

It may be noted that the most adverse scenario at the end of 1998 involved a reduction

1997 and 1998 returns

of 10% in fixed interest yields combined with a 25% fall in equity values, whereas at end 1997 it had been the combination of a 3% rise in fixed interest yields with a 25% fall in equity values.

10.7 Other factors

For UK and Guernsey linked business, it was assumed at the end of 1998 that both unit prices and "FTSE 100" linked benefits would grow at 6.0% gross p.a. (5.0% net) before charges and that expenses would inflate at 4.0% p.a., while cash flows were discounted at an interest rate of 4.5% gross (3.5% net). [For Irish business, all these assumed rates were reduced by 0.75%.]

A pensions mis-selling reserve of £70m is included in Form 52 (£75m at end 1997).

A CGT reserve of £75m was established at end 1997, and has been increased to £100m at end 1998 (reducing to £20m in the most onerous resilience scenario).

10.8 Options and Guarantees

For UK many retirement annuities, AVCs and individual pensions contracts sold up to 1988, the option to purchase an annuity on minimum guaranteed rates at retirement can be exercised at any age between 60 and 75. These minimum guaranteed rates are largely based on a(55) ult mortality and 7% interest. As a result of current economic conditions, these options are proving extremely onerous, although the Society attempts to restrict the ultimate value given to those policyholders exercising the option to their appropriate accumulated asset share - by reducing the terminal bonus granted to such cases.

The Society has been heavily criticised in the press, of late, for taking this approach. A test case is being brought before the Courts in July 1999 to try to obtain legal clearance for the practice. [Loss of the case would result in a need for the Society to reduce its level of terminal bonus additions to a wider group of policyholders – maybe all!]

Notwithstanding the Society's method of reducing the ultimate strain on the maturity of such contracts, it has been determined by the Government Actuary that there is a need in the statutory valuation to recognise the accumulated option liability attaching to the minimum level of benefits already guaranteed – without taking credit for any possible future emerging surplus offset.

The Appointed Actuary has therefore set up a reserve in the Net Premium Valuation of £1,556m to allow for this, with £793m of this being ceded to an overseas reinsurer. [Shown as £1,593m gross, with £809M ceded, in the GPBR valuation.]

In deriving the level of the required reserves, the Actuary has made assumptions about the maximum percentage of maturity benefits that would be taken in guaranteed annuity form, and in doing so has somewhat stretched the concessions offered by the GA in his guidance letter of 13 January 1999 –

Type of contract:	Proportion taken in guaranteed annuity form
UK retirement annuities	70.0%
UK individual pensions (1st series)	82.5%
UK transfer plans (1st series)	82.5%
UK group pensions (1st series)	82.5%

It is necessary to consider whether the Actuary's reserving assumptions for annuity

guarantees should be challenged -

1. Considering the proportions indicated in the above table, it is disclosed in the Return:

(1) that allowance of a few percentage points has been made for the additional flexibility and other perceived advantages of alternative forms of benefit available and for the bonus system that the Society operates in relation to these contracts;

(2) that a modest allowance has also been made for the availability of cash commutation options, and

(3) where it would be advantageous for higher rate tax-payers to commute for cash and buy a purchased life annuity, then a further allowance of a few percentage points has been made.

These proportions of benefits assumed to be taken in guaranteed annuity form are then discounted to allow for mortality in deferment based on AM80 ult –5 years. Reasonably prudent assumptions appear to have been made in relation to mortality in payment.

It is noted that the proportions of benefits assumed to be taken in guaranteed annuity form are somewhat higher than were used in a January Board paper, and which were discussed with the Actuary by GAD on the 29th of that month, but they might still be thought to stretch the guidance given by The Government Actuary.

2. No information has been supplied about the reinsurance offset has been determined and, in particular, about what allowance has been made for the premiums payable.

There are no other guarantees or options deemed to require explicit reserves.

11. FINANCIAL RESULTS

11.1 Overview

The valuation shows available assets covering the RMM by a factor of 2.51, unchanged from end 1997.

The Equitable tries to provide fair benefits to each generation of its policyholders, on maturity or surrender - without holding back any excessive estate. The result is that lower free asset margins exist than might have been expected for such a well thought of institution. It may be noted that the Society has, for the last five years, found it desirable to utilise a future profits implicit item to improve the disclosed free assets position.

Without the implicit future profits item of £850m, cover for the RMM would be reduced to a factor of 1.66. Further, we are still not entirely clear that provisions made to cover the currently guaranteed level of annuity liabilities are as strong as they should be.

A large proportion of business is written on a participating basis, so that, provided the currently high level of annual emerging surplus continues, the Society should be able to work its way out of its current solvency margin problems. However, it does seem highly desirable for the Society to mitigate the risks posed by a possible downturn in asset values, by holding back more emerging surplus by declaring lower guaranteed bonuses - although it can still pay out appropriate final benefits to its members with declarations of "non-guaranteed final bonuses".

To be fair, the Society appears to be proceeding down this path - although mindful of the need to sustain a competitive position in the marketplace. [See the latest declarations in Section 12.2.]

11	Assets available	917,502	1,433,380	1,420,178	1,751,550	**1,673,931**
12	Implicit items	249,985	263,731	312,794	371,083	**850,000**
13	Total amount available	1,167,487	1,697,111	1,732,972	2,122,633	**2,523,931**
14	RMM	494,616	586,275	685,282	845,457	**1,007,534**
15	Cover (13/14)	2.36	2.89	2.53	2.51	**2.51**
16	Free asset ratio ((11-14)/8)	3.12%	5.13%	3.84%	3.80%	**5.37%**

NOTE. Although the Net Premium Valuation showed a lower non-linked liability of £21,539,707k and a lower reserve for declared bonuses of £340,547k, it was shown to require a resilience reserve £636m higher than the GBPR valuation. Thus, as intended, the total of Long Term liabilities (shown in Line 7) for the NPV is identical with the result shown above.

Source: Schedule 4, Paragraph 15   * 0.25% higher for SP Bonds

The Whole Life bonus at end 1998 was £25.00‰ + £1.50‰×(years in force over 11). [£32.50‰ + £2.50‰×(years in force over 11) at end 1997.]

There are also a small number of policies with revalorization style German bonuses.

The method of annual bonus declarations for unitised type contracts is unusual. As well as a declared guaranteed annual bonus, based on a proportion of accrued income and capital appreciation, a further annual bonus is quoted, which is not guaranteed (in that it may be withdrawn and/or reduced in future), but which makes up the total quoted accrued policy value at the valuation date. This non-guaranteed final bonus is declared in a similar way to reversionary bonuses, as a percentage of benefit, and the amount payable at maturity is the sum of these total annual "declarations", *subject to the proviso that the final non-guaranteed bonus can be withdrawn.*

The Society's With-Profits Guide includes a table of gross investment returns achieved on the funds of the Society at market value in recent years (from 1993 - as attributable to with-profits business), quoting the smoothed rate that was applied in allocating bonuses for policyholders in each year and the "guaranteed rate", being the rate at which guaranteed benefits were built up in each year -

	1994	1995	1996	1997	**1998**
Earned	-4.2%	16.6%	10.7%	17.2%	**13.3%**
Allocated	10.0%	10.0%	10.0%	13.0%	**10.0%**
Guaranteed	7.5%	7.5%	7.5%	6.5%	**5.0%**

Final bonuses for traditional life contracts are according to a table based on duration in force. Specimen values as a % of SA and existing declared Bonus are:

Complete Years In Force	1995	1996	1997	1998	**1999**
1	6.0	6.0	6.0	9.0	**7.0**
2	9.0	8.0	8.0	11.0	**11.0**

35	115.0	117.5	120.0	130.0	**145.0**

12.3 PRE (issues on with-profit business)

The Society tries very hard to achieve an equitable distribution to each generation of its policyholders, whilst avoiding short term fluctuations in benefits - with the result that it has not accumulated any material unallocated estate compared with accumulated asset shares (if any - see Section 10.7).

However, it reserves the right to penalise early surrenders, even in relation to guaranteed bonuses added under unitised contracts, and it might be desirable for this possibility to receive greater prominence in the literature distributed. Further, with such a large proportion of unitised business and with the level of guaranteed bonuses declared taking account of some asset appreciation, it would seem to be desirable that policyholders were given some greater warning about the possible implications for future bonuses of a substantial market setback.

Equitable Life has been heavily criticised in the press, of late, for the approach that it is taking of reducing terminal bonuses to meet the costs of guaranteed annuity options attaching to some of its pension contracts. A test case to be brought before the Courts in July 1999 will try to obtain legal clearance for the practice.

12.4 Recent history of maturity payouts

£	1994	1995	1996	1997	**1998**

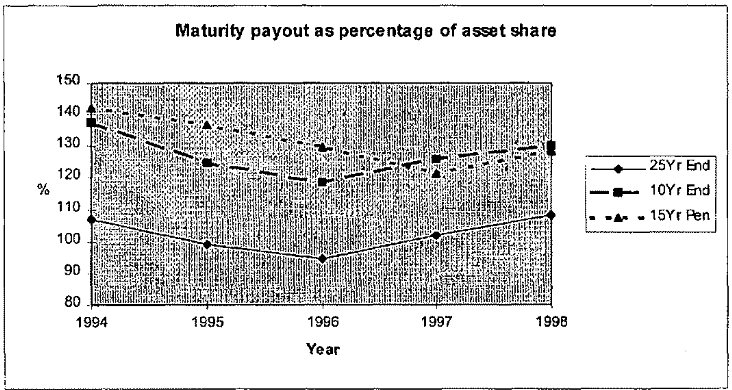
Note: Endowments: £50p.m., maturing 1 Feb. in next year Source: Money Management 4/99
Pensions: £200p.m., maturing 1 Jul. in year Source: Money Management 10/98

It is clear that, while Equitable strives to be fair to all its policyholders, and pays much more generous surrender values than most other offices, its maturity payouts fall well short of the best in the market, particularly for conventional life contracts.

Nevertheless, the chart below shows that policyholders seem to be receiving quite fair returns – no doubt helped by the low expense charges levied by the Society.



Note: Asset shares used to calculate the percentages above are theoretical amounts based on GAD's estimate of industry experience for investment return and expenses. There is no allowance for distribution of miscellaneous profits or transfers to/from the estate. See section 12.6 of the GAD annual report for further commentary.

13. REASSURANCE AND FINANCING

13.1 Overview of conventional reassurance treaties

Little use is made of traditional reassurance by Equitable, other than for very large sums assured (retention being £400,000 for UK life risks and DM250,000 for German risks), and for supplementary disability and accident risks.

Major Medical Cash Plans and Critical Illness Plans are fully reassured, on a 50% quota share basis to two reassurers: [redacted] and [redacted], with the former taking all Critical Illness risks in excess of £100,000.
Total reassurance premiums paid in 1998 were about £3.3m (£2.4m in 1997).

13.2 Financing arrangements

A new treaty with Irish European Reinsurance Company Limited provides surplus cover for the costs arising from the exercise of guaranteed annuity options in respect of Retirement Annuity policies, Individual Pension Plans and Transfer Plans issued before 1 July 1988. If the proportion of retirement terminations where the option is exercised in any year exceeds 25% of the total, measured by the guaranteed funds for those policies, the reinsurer's gross liability is equal to the value of the guaranteed annuity in excess of the guaranteed policy fund for that proportion of retirements effecting the option which is in excess of 25%.

This treaty enables the Actuary to make a substantial offset to his guaranteed annuity option additional reserves (£793m off the gross £1,556m in the net premium valuation).

OTHER ISSUES

14. COMPLIANCE

14.1 HMT compliance problems

None observed.

14.2 PIA and other compliance problems

A pensions mis-selling reserve of £70m is included in Form 52 (£75m at end 1997).

15. PROFESSIONAL REQUIREMENTS

This report conforms fully with the requirements of the Institute and Faculty of Actuaries as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct.

This report had been prepared under the terms of the Agreement between Insurance Directorate, Her Majesty's Treasury (HMT) and the Government Actuary's Department (GAD) dated November 1998 ("the service agreement"), as continued between the Financial Services Authority (FSA) and GAD under an exchange of letters in December 1998, setting out the level of service to be provided by GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

The purpose of this report is to enable FSA to fulfil its responsibilities under the Third Life Directive and the Insurance Companies Act 1982.

The scope of this report is:

- to advise on the statutory solvency position of the company;
- to identify any issues relevant to the responsibilities of FSA;
- to describe the development of the company over the previous 12 months;
- to provide historical background to the company.

The advice and information contained in this report are solely for the use of FSA in fulfilling its responsibilities and should not be transmitted to third parties, including the company concerned, without the prior consent of GAD.

GAD's detailed scrutiny reports in respect of Equitable's returns

1999 returns

3. EXECUTIVE SUMMARY

As is well known, the Society put itself up for sale following the House of Lords ruling in July 2000 that it was acting improperly in its then established practice of applying differential scales of terminal bonus according to whether or not policies contain Guaranteed Annuity Rates (GAR's) or according to the form in which benefits are taken. (In 1999 the Society had initiated and funded a Court case to seek a ruling on this point - in the first place the Society succeeded in the High Court; however, the case was then taken to the Court of Appeal, where only one of the three Judges agreed with the High Court, and the other two found against the Society. In order to obtain a definitive answer, the Society appealed to the House of Lords, and the Lords ruled 5 : 0 against the Society.)

In the light of this ruling, the Society were faced with the need to reduce the level of benefits to all policyholders and also of making substantial changes to their investment policy (essentially switching away from equities into fixed interest securities). The Board thus concluded that members' interests would be best served by selling the business to an organisation capable of providing capital support and therefore ensuring continued investment freedom. The press have reported a number of companies to be expressing interest in acquiring the Society, but there are just three companies expected to make final bids (which need to be lodged in November 2000). At the meeting at GAD on 03.11.2000 [redacted] explained that if the sale does not take place, the Society is likely to need to stop writing new business, and to re-arrange its investment portfolio to a more defensive position.

The Society is affected by many of the risks to which life offices are potentially exposed, as indicated below:

Capital risk :

1. At first sight the solvency position at 31.12.99 looks reasonable - available assets of £3,861m. cover the rmm. of £1,114m. by a factor of 3.46. However, these available assets include an implicit item for future profits worth £925m., they disregard the liability to repay the subordinated loan of £346m., and they benefit from a reduction of almost £1.1 bn. in the GAO reserves from the Society's reassurance arrangements. Without these items, the available assets would be just £1,511m., and the cover 1.36x : a less satisfactory picture for this large fund.

2. The aggregate asset shares are close to the value of the fund - i.e. there is no 'estate'. (The £1.5 bn. 'saved' from the cut in roll-up rates on UWP business since the House of Lords judgement has been re-allocated to finance future GAO support and the likely costs of the rectification scheme.)

3. This situation arises because the Equitable has traditionally operated with an underlying philosophy of providing fair benefits to each generation of its policyholders, on maturity or surrender - without holding back any excessive estate. The result is that lower free asset margins exist than might have been expected for such an institution.

1999 returns

Reserve risk :

1. There appears to be a wide range of ages over which benefits can be taken on accumulating with profits pensions contracts at the option of the policyholder, without any market value adjustment being applied to the guaranteed benefits, and with the full value of any GAR (provided this attaches to their policy) being available. It is unclear whether the reserves are adequate to provide fully for this flexibility, and we have questioned this in our letter.

2. In the resilience scenario, the Society effectively takes credit for an additional ½% p.a. on the investment return. This appears to be justified as a 'Zillmer' adjustment to enable the Society to recoup unrelieved acquisition expenses. We are questioning this also.

3. Inter alia, the Insurance Companies (Amendment) Regulations 2000 are likely to lead to increased reserves on accumulating with profits business. We are asking the Appointed Actuary in our letter to confirm the impact on this Society, which we understand from our recent meeting to be much lower than is being suggested in the market.

4. The Society utilises a reassurance treaty with Irish European which provides protection to the Society should more than 60% (formerly 25%) of the benefits in any calendar year on the contracts which incorporate guaranteed annuity options be taken in guaranteed form. This is not wholly satisfactory from a regulatory perspective as it relies on regulatory arbitrage to achieve the desired result, and would not be available in the event of insolvency. It removes over £1bn. of liabilities from Equitable's balance sheet.

5. When setting GAO reserves, the Appointed Actuary assumes that 85% of benefits are taken in GAO form. This is a weaker assumption than that specified in the guidance of DAA13, although currently any assumption over 60% would be negated by the offset gained from the reassurance treaty above.

Asset risk : The Society is exposed to falls in the equity market. A sensitivity matrix supplied by the Society to FSA on 09.10.2000 shows the Society would be unable to cover its rmm. if the FTSE-100 Index fell to around 5750 (a fall of 15% from end-August levels), though they are not particularly sensitive to movements in fixed interest yields.

Strategy risk : Without capital support from a prospective purchaser, the Society will be unable to reinstate the 7 months bonus foregone this year on the accumulating with profits pensions business. There are PRE issues here for both GAR and non-GAR policyholders. Indeed, the related question of whether the Society should be continuing to sell non-GAR policies in the same fund as that where the GAR policies reside could be considered to be an ***environment risk.***

Control risk : We understand that PIA have been in correspondence with the Society over mis-selling of income drawdown schemes, and that enforcement action is under consideration.

Equitable Life Scrutiny 1999.doc: 24-Nov-00 Page 3

Document Number:02807 Page 3

4. BACKGROUND

Equitable is the oldest mutual life assurance society in the world, dating from 1762. It was the first to develop policies based on scientific principles as used today.
Equitable has never paid commission to third parties.

This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method. (However, the returns also show the results of a net premium valuation on a minimum basis – and the free asset position shown is identical.)

In 1995 the Equitable purchased a controlling interest in [redacted], the PHI specialist, from Medical Sickness - and bought out the minority in June 1997.

University Life, another old institution, has been a subsidiary of Equitable since 1919. Equitable provides management services under an agreement with capped charges.

Equitable has increased activity overseas in recent years, with branches in Ireland and Germany and an International Branch operated from Guernsey. These branches have been set up on a low cost base and produce ever increasing amounts of new business. The company also began providing insurance from 3 August 1998 on a services basis into Greece. Equitable regards these activities as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders. [However, the company has expressed dissatisfaction with the cost effectiveness of the German branch.] The mutual concept is extended to all policyholders, and is even part of Equitable's dealing with UK non profit policyholders.

Equitable has a unit trust and PEP subsidiary, Equitable Unit Trust Managers Ltd, with over £2.4bn under management (possibly units bought by the Society to back unit-linked policies). Its strong systems department established a subsidiary, Equitable Services and Consultancy Limited, that has run a contract with [redacted] since 1995 and, in 1996, agreed to provide systems support to group pension operations of [redacted] In 1997 it took on the processing of policy records for a Zimbabwe company, and in 1998 commenced a three year project to provide administration services to [redacted]

In July 1997, a £350m subordinated loan was taken from a specially created subsidiary, Equitable Life Finance plc, which floated corresponding Bonds on the market. This liability is shown in Form 15, despite having no "other than long term business" assets, thus producing a negative value in Line 23 of Form 10 – offset by an entry in Line 26. As a result of this reporting, the capital raised is not shown as an asset in Line 22 of Form 9. [This is different from the convention used by [redacted] and [redacted], who include the loan as a liability in Form 14; FSA have recently been seeking to regularise these different methods of presentation.]

There were four Section 68 Orders in force at the 31 December 1997 valuation date:

- an order dated 14 October 1997, allowing the Society to take into account a future profits implicit item, with a value not exceeding £700 million. The Society included an implicit item in the 31.12.97 returns of £371.1 million, for the purpose of achieving equity between the total net value of policyholders' assets, and the corresponding total net asset value shown in the Society's Companies Act accounts.

- an order dated 13 June 1997, to the effect that figures in Form 46 exclude recurrent single premiums from the annual premium figures as the Society cannot at present calculate a meaningful figure. ***(See also §6.1 following.)***
- an order dated 31 January 1997, directing that the Society may include aggregate details for total "Personalised Funds" in Forms 43, 45 and 55, instead of providing separate details for each fund.
- an order dated 19 August 1997, enabling the Society to disregard, for the purposes of Regulation 60 of ICR94, amounts owing to Equitable Life Finance PLC under a (Subordinated) loan agreement dated 4 August 1997 up to an amount not exceeding 50% of the company's required margin of solvency.

For the 1998 valuation the implicit item order above had been revoked. It was replaced by a similar order dated 30 December 1998, which allowed the Society to take into account a future profits implicit item of up to £1,900m. The actual amount that the Society took into account was £850m. For the 1999 valuation there was a new order dated 09 November 1999, and the Society took into account an amount of £925 million, again within the maximum permitted.

[redacted] is Appointed Actuary and the Managing Director is [redacted]. They replaced [redacted], who held both posts until his retirement at the end of July 1997. A non-executive, [redacted], chairs the Board.

BUSINESS DEVELOPMENTS DURING THE YEAR

5. NEW BUSINESS

5.1 New and altered products

Within the 'family' of Life accumulating with profits Savings Plans, a German group savings plan and an Irish flexible income plan were introduced in 1999.

On the pensions accumulating with profits side, the UK personal pension trustee investment policy and UK personal pension trustee income drawdown policy are mentioned for the first time in the 1999 Returns. In Autumn 1999 / early 2000 there was some correspondence between GAD and the Society regarding the drawdown policy; a number of policyholders had found the maximum income they could withdraw each year had been cut considerably at the first three-yearly review. In response to our questions, the Society explained that this had been due to the investment performance of their mixed portfolio over the three year period falling short of the implied performance of a long term gilt over the period, given the yield shift experienced. Whilst this was obviously a disappointing outcome, GAD accepted the Society's explanation. ***We understand that PIA have had further dialogue with the Society on this subject, and that enforcement action is under consideration.***

Unit-linked versions of the above products were also introduced.

With profits annuities issued since 01 July 1996 are subject to a maximum permitted rate of decrease of 8.5% p.a. The actual maximum at 31.12.99 was 5.5% p.a., up from 5.0% at 31.12.98.

5.2 Source(s) of new business

Equitable pays no commission. It runs a sales force and also conducts direct response advertising, targeted at high net worth individuals, but a lot of business comes from its reputation and direct approaches from prospective policyholders. Another recent development is that of Equitable Direct, which has been established to complement the branch-based direct sales force, with staff numbers of 90 at the end of 1998.

The Society also has significant volumes of quasi-institutional pensions business, from actual pension schemes and from AVCs - with more than 300 of the UK's 500 largest companies having pension arrangements with Equitable. Over 2,000 such plans are now operating. The Society operates AVC schemes for both the Civil Service and the NHS.

5.3 Recent history:

5.4 Commentary

Single premiums in the Tables above correspond with amounts shown in Form 41 of the Returns.

A very large proportion of the business is of the "accumulating with profit" type (which was first separately identified in the 1996 Returns). In 1997, the Equitable was reported as the largest writer of pensions business in the UK.

6. CHANGES IN BUSINESS IN FORCE

6.1 Recent history of regular premiums received

Class	1995 £000s	1996 £000s	1997 £000s	1998 £000s	**1999 £000s**
Life & general annuity	94,706	116,541	145,586	175,465	**207,924**
Pensions	1,421,752	1,125,149	1,358,484	1,379,753	**1,301,634**

Source: Form 41

The above figures are taken from ***Form 41***.

Note 4604 to the 1998 Returns describes the Section 68 Order dated 13 June 1997 which permitted the Society to exclude recurrent single premiums from the annual premium figures on ***Form 46*** since they were unable to calculate a meaningful figure for these. However, in the 1999 Returns Note 4604 has been revised. It now explains that most policyholders take advantage of the flexibility under recurrent single premium contracts to change / cease the level of premium, and consequently there is no precisely identifiable annual premium on these contracts. On Form 46 the annual premiums now include recurrent single premiums to the extent that they are not specifically identified as single premiums. Annual premiums brought forward from 1998 have been restated accordingly.

Recent history of combined surrender, lapse & paid-up conversion rates

Class	1995	1996	1997	1998	**1999**
Life non-linked	3.85%	5.54%	3.81%	4.10%	**5.06%**
Life linked	8.49%	9.96%	6.11%	4.98%	**5.18%**
Pensions non-linked	7.40%	7.50%	7.54%	6.46%	**2.13%**

Note: The combined surrender, lapse and paid-up conversion rates are:
Form 46, UK business, annual premiums, lines (24+25+26) / [½*lines (11+39+24+25+26)]

These are excellent results, reflecting the fact that business is largely bought rather than sold! The pensions annual premiums reported on Form 46 in the 1999 Returns are substantially higher than previously – see the comments following the table in §6.1 above - and the reduced ratio for pensions above is a reflection of this revised information.

7. EXPENSES

7.1 Recent history of expenses:

Notes: 1. The expense ratios are:
Acquisition: (IC + AE) / New Business Index
Renewal: (RC + ME) / Gross earned regular premiums [F41.29.1]
OME as % of total expenses: OME / Total Expenses

2. The trend in the acquisition expense ratio is subject to distortion from the reclassification of recurrent single premiums as regular premiums from 1996.

Equitable Life Scrutiny 1999.doc: 24-Nov-00 Page 10

Document Number:02807 Page 10

7.2 Commentary

Reported expense ratios are the lowest in the industry, being only about half those of its nearest competitor. They are astonishingly low. Over ***1998***, its nearest (mutual) competitor was the [redacted], with an Acquisition Expense ratio of 36.0%, and a Renewal ratio of 5.9%. However, Equitable's total staff numbers increased in 1998 by 92 from 2,091 to 2,183 - reflecting increases in both Administration and Marketing.

Equitable is well known as a non-commission paying office, and prides itself on its low expense ratio. It is a very positive marketing message and a key attraction of the Society with its customers. It helps explain the strong sales figures achieved and is part of a virtuous circle.

7.3 Exceptional items

The Society claims to have invested some £70m in the complete redevelopment of all its operating systems over recent years.

8.2 Derivatives

Guidelines in force are fairly tight, and no derivative assets were held at the end of 1999 (other than those matching index-linked liabilities). A liability of £726,000 in currency futures at 31.12.99 is also observed (although this is down from £6,102,000 at 31.12.98).

8.3 Investment performance

	£000s	£000s

19. Expected investment return †		*12.8%*

* calculated as F44.12 / average F55 internal linked col 7 * average F55 total cols (8 - 9)
‡ estimated figures based on Form 56
† based on overall market performance applied to asset mix shown in section 8.1

The achieved rate of return of 14.0% over 1999 is encouraging - exceeding an expected return for the year of 12.8%. This follows achieved returns of 13.8% in 1998 and 19.1% in 1997.

9. ASSETS HELD TO MATCH LINKED LIABILITIES

9.1 Internal linked funds

9.1.1 New and altered funds

The only new fund in 1999 was the Equitable Ethical Annuity Fund, which presumably mirrors the existing Ethical (Life) and Ethical Pension Funds. There was only £31,000 invested in this new fund at 31.12.99.

1999 returns

9.1.2 Investment performance

In general, investment performance appears to have been good over 1999. The Life Managed Fund was up 18.7%, after growth of 12.5% in 1998, whilst the Pensions Managed Fund was up 22.8%, after 11.6% last time.

The Life Pelican (Equity) Fund was up 15.8% (after 12.2%), with the Pensions Pelican (Equity) Fund up 19.0%, after 13.9% last time.

9.1.3 Fund Management Charges to policyholders

The annual charge levied on the internal linked funds, other than personalised funds, remains at just ½% (believed to be the lowest level in the market, apart from tracker funds).

9.1.4 Principles of unit pricing

Most of the internal funds are invested in units of trusts managed by Equitable Trust Managers. Those trusts operate on a forward pricing basis, with a 4 p.m. valuation point. When expanding an offer price is used, but when contracting the Society might exercise its discretion to move to a full bid basis - although such a change would normally await the emergence of a sustained trend. Creation or cancellation of units by the manager is based on overall liability data and then actioned on the basis of prices established on the previous day.

9.1.5 Liquidity and gearing

At 31.12.99, the aggregate Pension Personalised Funds data showed a negative liquidity percentage of 1.06%, after a negative figure of 0.43% at 31.12.98.

9.2 Other assets matching property-linked liabilities

At end 1999 £67,407,000 (1998: £60,784,000) was held directly in the Pelican Unit Trust, which showed a return of 16.9% over 1999 (11.4% in 1998); and just £150,000 (£146,000 at end 1998) was on deposit with the [redacted].

9.3 Mismatching to property-linked liabilities

No serious mismatching is observed. Only small surpluses of units exist for most funds.

9.4 Assets matching index-linked liabilities

Total RPI linked liabilities of £599,164,000 (£560,390,000 at end 1998) are matched by holdings of £543,410,000 in Government Index Linked Securities and £55,754,000 held in deposits and other short-term assets.

Partial FTSE 100 linked liabilities of £7,297,000 (£5,082,000 at end 1998) are covered by holdings of £444,000 in FTSE call options and £6,853,000 held in deposits and other short-term assets.

9.5 PRE (issues on linked funds)

Where a fund invests in an Equitable Unit Trust, the annual management charge is reduced by ½%, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.

10. VALUATION BASIS

10.1 Overall strength.

The Society produces its published Return on the basis of a gross premium valuation for non linked business, with some modest allowance for future bonuses, but the resilience reserve included is determined such that the total liability is identical with the results of a net premium valuation - that is shown as an Appendix to the Returns, and is largely the basis on which the strength of the reserves is monitored by GAD.

We have a number of concerns about the reserving bases used by the Society, which are documented in the Executive Summary of this Report (§3 above). These relate to whether the reserves are adequate to provide fully for the flexibility policyholders have to take benefits at a range of ages, the assumptions used by the Society in the resilience scenario, the impact of the '2000' Regulations on the Society's accumulating with profits business (see also §10.1 below), and the reserving for GAO liabilities.

10.2 Accumulating with profits business.

Reserves for this business are substantial, at £14.9 bn. net of reassurance on pensions business, with a further £1.9 bn. on the life side.

A recent press article had suggested that the industry would need to increase reserves on this business by 10% as a result of the introduction of the '2000' Regulations. GAD and the Society believe this article was mis-informed, and attempting inappropriately to extrapolate figures from one large company across the market. (On Equitable's current UWP reserves, an additional 10% would amount to £1.8 bn.)

At a meeting with GAD on 03.11.2000, the Appointed Actuary told us that he does not believe the '2000' Regulations would lead to any material increase in reserves on this business (other than a general increase of the order of £300m. resulting from the more stringent reinvestment assumption). The flexibility offered by the proposed revisions to GN8, e.g. on mass discontinuance, coupled with the Society's inherent facility to apply market / policy value adjusters, e.g. to recover DAC's, are seen as giving them the valuation 'freedom' they need. However, in our letter we have asked him to confirm the position.

Many of the Society's pensions contracts contain a guaranteed rate of accumulation of 3.5%. This business is in general valued at 4% in the NPV, which results in only modest discounting, and valuation reserves of the order of 95% of face value. Benefits are generally assumed to be taken at the earliest of, or close to the bottom of, a range of possible retirement dates (typically ages 55 or 60). We are asking the company to explain why age 55 is assumed for personal pensions business. In the BRV, the allowance for future bonuses is such that the valuation reserves are at, or slightly above, face value. (GAO reserves are held in addition.)

1999 returns

10.3 Interest

The table below sets out **interest rates used in the net premium valuation** for major classes of non-linked business (figures mainly from Forms 57).

Classes	Valuation Interest Rate		1999 liability Approx. (£m)
	1999	1998	
Life assurances with profit	2.75%	2.75%	329
Pensions with profit - regular premium	3.25%	3.25%	181
Pensions with profit - various	2.50%	2.50%	1,889

Pensions annuities	5.75%	5.00%	2,334
TOTAL			**21,981**

In general, valuation interest rates are unchanged from 1998, although in response to the higher yields available from fixed interest securities, annuities have been valued at higher rates than in 1998.

Form 57 shows matching assets to be available. In the case of accumulating with profits business, however, a significant proportion of the backing assets are equities, and this contributes to our concern regarding whether the reserves are adequate to provide fully for the flexibility policyholders have to take benefits at a range of ages, as raised in our letter to the Society.

10.4 Mortality

The bases used for assurances appear reasonably conservative, being largely based on AM80 and AF80 with varying adjustments for some classes of business - particularly taking account of the market sector in which the Society operates.

Life Annuities have been valued using the IM80 and IF80 (C=2010) tables, unchanged since 1996. This appears a rather weak basis, although the Appointed Actuary states in his report that the mortality tables contain sufficient allowance for *future* reductions in rates of mortality. However the liabilities for this class are fairly minor, and so the point will not be pursued with the Society at this time.

Pensions annuities are reserved for using PMA/PFA 80 (C=2010) ult - 3 (in 1998 an age rating of - 2 was used). This looks satisfactory.

The mortality assumptions used to value the GAO's also look satisfactory, and incorporate additional allowance for mortality improvement before vesting.

10.5 Morbidity

Not material – permanent health business is written in Permanent Insurance.

10.6 Expenses

The aggregate expense allowance for the next twelve months, as revealed in paragraph 10(2) of the 1998 net premium valuation report, is £74m. (after £69m. at 31.12.98). This compares with actual F41 maintenance expenses of £35.8m in 1999 and £12.9m of "other expenses" reported. The total of provisions made would thus seem to be more than adequate.

The Actuary contends that no additional provisions are needed to cover the continued sale of new business or to cover closure. In reaching this conclusion he takes into account the results of internal management projections, the assumed future cash flows and assumed aggregate new business / closure costs. He also has regard to the level of the expense reserves already set up (see above). We see no reason to question his conclusions.

10.7 Mismatching & resilience

A resilience reserve requirement under the net premium valuation method is reported as £2,142m. in 1999 (£1,236m in 1998). For the gross premium bonus reserve (GPBR) valuation a resilience reserve in 1999 is shown of £1,350m (£600m. in 1998). **The modified resilience reserve figures shown in the published GPBR valuation are designed to ensure that the amount of free assets disclosed is the same as would be shown by the Net Premium Valuation!**

It may be noted that the most adverse scenario at the end of 1999 involved a 3% rise in fixed interest yields with a 25% fall in equity values, whereas at end 1998 it had been the combination of. a reduction of 10% in fixed interest yields combined with a 25% fall in equity values.

We presume that the GPBR resilience reserve is included in the Actuary's Certificate provision, and thus in the entry at Form 14, line 63 (£1,500m. at 31.12.99.)

In the Society's recent (post House of Lords judgement) demonstrations to FSA of their solvency position, they have continued to use the old Resilience Test 2, which they find less severe than its replacement (under which the yield curve 'flips' to the traditional rising curve, to the 15 year point). They are considering whether to justify formally the continued use of this (which may give rise to some adverse comment), or whether to seek a Section 68 Order to enable them to adopt a 'synthetic bond' concept (under which the valuation yield on the fixed interest assets would reflect both the amounts and durations of stocks held). A number of other insurers already do this. However, were they to do so, we would expect them to adopt a common approach in both the base and resilience scenarios, and to be consistent in approach as between one valuation and the next (i.e. not 'picking and choosing' according to which method was the more

1999 returns

favourable at the time). We have asked in our letter for an update from the Society on this topic.

The Society also, in the resilience scenario, effectively takes credit for an additional ½% p.a. on the investment return. This appears to be justified as a 'Zillmer' adjustment to enable the Society to recoup unrelieved acquisition expenses. We are questioning this practice also.

10.8 Other factors

For UK and Guernsey linked business, it was assumed at the end of 1999 that both unit prices and "FTSE 100" linked benefits would grow at 6.0% gross p.a. (5.0% net) before charges and that expenses would inflate at 4.0% p.a., while cash flows were discounted at an interest rate of 4.5% gross (3.5% net). [For Irish business, all these assumed rates were reduced by 0.75%.]

A pensions mis-selling reserve of £132m. is included in Form 52 (£70m at end 1998).

The CGT reserve, of £100m at end 1998, increased to £150m. at end 1999; this reduces to £53m. in the most onerous resilience scenario. [Also reported at Form 14.63.]

10.9 Options and guarantees

As described in the Executive Summary (§3 of this Report), the Society's treatment of guaranteed annuity options on pensions contracts has come to the fore in recent months. The contracts with these options are UK retirement annuities, AVCs and individual pensions contracts sold up to 1988, where the option exists to purchase an annuity on minimum guaranteed rates at retirement at any age between 60 and 75 (for retirement annuities) and between 50 and 75 for personal pensions. The form of the annuity is restricted, e.g. for retirement annuities to a single life, level non-profit annuity with no guaranteed period paid quarterly in advance. The minimum guaranteed rates are largely based on a(55) ult mortality and 7% interest.

Paragraph 6.(1) (h) of the 1999 Returns describes the approach taken by the Society in reserving for these guarantees. In the ***1998*** Returns, the Society disclosed the proportion of benefits assumed to be taken in guaranteed form under these contracts - these amounts ranged from 70% (on UK retirement annuities) to 82.5% on the other lines of business. As explained by [redacted] to GAD in his letter of 25 June 1999 (following our questioning after the 1998 scrutiny), these percentages are the result of allowing for the bonus systems operated by the Society, the flexibility of alternative forms of benefit and the availability of cash commutation options (which can be especially attractive to higher rate tax payers). These percentages are not repeated in the ***1999*** Returns, but the ***1999*** Returns state that 'the combined effect of the allowances made is that of those policies which survive to retirement date the gross reserves are reduced by less than 5%'.

The Appointed Actuary has advised us separately that the underlying assumption in the 1999 valuation was that 85% of benefits were taken in GAO form. This is weaker than the guidance included in DAA13, and so ***this aspect has been raised with him in our letter (attached).***

Equitable Life Scrutiny 1999.doc: 24-Nov-00 Page 18

Document Number:02807 Page 18

1999 returns

The Society has had a reassurance treaty with Irish European which provides protection to the Society should more than 25% of the benefits in any calendar year on the contracts which incorporate guaranteed annuity options be taken in guaranteed form. Following the House of Lords judgement in July 2000, this treaty became void, as it was contingent upon the Society maintaining its pre-judgement practice of reducing the terminal bonus entitlement of policyholders who exercised the GAO. However, a subsequent treaty with the same reassurer has since been negotiated, providing protection to the Society should more than 60% (instead of 25%) of benefits be taken in guaranteed form.

The treaty as it stood at 31.12.99 (and at 31.12.98) provided these reassurance offsets :

GAO liability :	1999 valuation		1998 valuation	
	NPV	BRV	NPV	BRV
Gross liability	£1,630m.	£1,663m.	£1,556m.	£1,593m.
Reassurance Offset	£1,079m.	£1,098m.	£793m.	£809m.
Net liability	£551m.	£565m.	£763m.	£784m.

The Reassurance offset at 12.99 was relatively greater than at 12.98 because of the inclusion in 1999 of Group Pensions business in the treaty (see §13.2 following). There still remain some categories of business excluded from the treaty.

About 3/4 of the GAO reserves relate to benefits already secured; the remaining 1/4 is in respect of benefits to be bought by future premiums. Given the uncertainty over future levels of premiums on recurrent SP contracts, the Society assume that current premium trends continue. However, the Actuary appears to have assumed that premiums reduce by 20% p.a. in assessing this reserve, which does not appear to be prudent. The Actuary has told us that in the worst case scenario (itself limited by premium maxima driven by net relevant earnings and associated Inland Revenue constraints), the GAO reserve in respect of future premiums would approximately double. ***We have asked in our letter for more details about the 'future premiums' part of the GAO reserve.***

The cost of the proposed rectification scheme, offering compensation to policyholders who have retired since 1994, could be up to £200m.

About 44% of currently retiring policyholders are exercising the GAR - restrictions on the mode of payment etc. (see above) act as a disincentive. The Society are introducing a '1/2 way house' to complement the GAO with a reversionary spouse's annuity on current rates to provide a JLLS annuity.

1999 returns

11. FINANCIAL RESULTS

11.1 Overview

At first sight the solvency position at 31.12.99 looks reasonable - available assets of £3,861m. cover the rmm. of £1,114m. by a factor of 3.46. However, these available assets include the implicit item for future profits of £925m., disregard the liability to repay £346m. of subordinated loan, and benefit from the GAO reassurance offset of £1,079m. (in the NPV). Without these items, the available assets would be just £1,511m., and the cover 1.36x : a less satisfactory picture for this large fund.

At the meeting at GAD on 03.11.2000, [redacted] confirmed that the aggregate asset shares are close to the value of the fund (i.e. there is no 'estate'). The £1.5 bn. 'saved' from the cut in roll-up rates on UWP business since the HoL judgement has been re-allocated to finance future GAO support and the likely costs of the rectification scheme.

This situation arises because the Equitable has traditionally operated with an underlying philosophy of providing fair benefits to each generation of its policyholders, on maturity or surrender - without holding back any excessive estate. The result is that lower free asset margins exist than might have been expected for such an institution.

A sensitivity matrix supplied by the Society to FSA on 09.10.2000 shows the Society would be unable to cover its rmm. if the FTSE-100 Index fell to around 5750 (a fall of 15% from end-August levels), though they are not particularly sensitive to movements in fixed interest yields. At the meeting at GAD on 03.11.2000 [redacted] explained that the Society had little alternative other than to arrange a sale and demutualisation if they are to remain open to new business.

15	Cover (13/14)	2.89	2.53	2.51	2.51	**3.46**
16	Free asset ratio ((11-14)/8)	5.13%	3.84%	3.80%	2.36%	**5.50%**

NOTE. Although the Net Premium Valuation showed a lower non-linked liability of £23,057m. (£761m. less than in the BRV) and a lower reserve for declared bonuses of £392m. (£31m. less than in the BRV), it was shown to require a resilience reserve £792m higher than the GBPR valuation. Thus, as intended, the total of Long Term liabilities (shown in Line 7) for the NPV is identical with the result shown above.

Source: Schedule 4, Paragraph 15

The Whole Life bonus at end 1999 was £25.00‰ + £1.50‰ × (years in force over 11). [unchanged from 1998.]

There are also a small number of policies with revalorization style German bonuses.

The method of annual bonus declarations for unitised type contracts is unusual. As well as a declared guaranteed annual bonus, based on a proportion of accrued income and

1999 returns

capital appreciation, a further annual bonus is quoted, which is not guaranteed (in that it may be withdrawn and/or reduced in future), but which makes up the total quoted accrued policy value at the valuation date. This non-guaranteed final bonus is declared in a similar way to reversionary bonuses, as a percentage of benefit, and the amount payable at maturity is the sum of these total annual "declarations", *subject to the proviso that the final non-guaranteed bonus can be withdrawn.*

The Society's With-Profits Guide includes a table of gross investment returns achieved on the funds of the Society at market value in recent years (from 1993 - as attributable to with-profits business), quoting the smoothed rate that was applied in allocating bonuses for policyholders in each year and the "guaranteed rate", being the rate at which guaranteed benefits were built up in each year -

12.3 PRE (issues on with-profit business)

The Society tries very hard to achieve an equitable distribution to each generation of its policyholders, whilst avoiding short term fluctuations in benefits - with the result that it has not accumulated any material unallocated estate compared with accumulated asset shares (if any).

However, it reserves the right to penalise early surrenders, even in relation to guaranteed bonuses added under unitised contracts, and it might be desirable for this possibility to receive greater prominence in the literature distributed. Further, with such a large proportion of unitised business and with the level of guaranteed bonuses declared taking account of some asset appreciation, it would seem to be desirable that policyholders were given some greater warning about the possible implications for future bonuses of a substantial market setback.

As previously described, the recent Court Case revolved around the Society's approach of reducing terminal bonuses to meet the costs of guaranteed annuity options attaching to some of the pension contracts. In current conditions, this has been negating the value of the guarantee, although in times of low terminal bonus scales (when the value of the terminal bonus is less than the value of the GAO) the policyholders with GAO's would benefit from the GAO 'underpin'. Unfortunately for the Society, the House of Lords ruled conclusively against their practice, with the consequences as set out in §3 of this Report above.

Also as noted in §3, accumulating with profits pensions policyholders have foregone 7 months bonus this year on their business following the House of Lords judgement. Whether this will be reinstated depends largely on the Society being successful in finding the 'right' purchaser.

12.4 Recent history of maturity payouts

£	1995	1996	1997	1998	1999
25 yr endowment	86,739	84,025	86,355	84,418	**84,047**
Industry average	*93,867*	*95,559*	*101,217*	*102,893*	*101,491*
10 yr endowment	10,211	9,879	9,926	9,681	**9,612**
Industry average	*9,947*	*9,813*	*9,970*	*9,971*	*9,860*
15 yr pension	126,785	114,126	104,626	98,303	**92,691**
Industry average	*122,328*	*116,309*	*107,947*	*104,937*	*98,722*
10yr SV on 25 yr endowment	9,073	8,427	8,191	8,057	**7,641**
Industry average	*7,638*	*7,446*	*7,439*	*7,315*	*7,375*

Note: Endowments: £50p.m., maturing 1 Feb. in next year Source: Money Management 4/2000
Pensions: £200p.m., maturing 1 Jan. in next year Source: Money Management 3/2000.

It is clear that, while Equitable strives to be fair to all its policyholders, and pays more generous surrender values than most other offices, its maturity payouts fall well short of the best in the market, particularly for conventional life contracts.

13. REASSURANCE AND FINANCING

13.1 Overview of reassurance treaties

Little use is made of traditional reassurance by Equitable, other than for very large sums assured (retention being £400,000 for UK life risks and DM250,000 for German risks), and for supplementary disability and accident risks.

Major Medical Cash Plans and Critical Illness Plans are fully reassured, on a 50% quota share basis to two reassurers: [redacted] and [redacted], with the former taking all Critical Illness risks in excess of £100,000.

Reassurance premiums paid in 1999 were about £3.4m (£3.3m.in 1998).

13.2 Financing arrangements

A treaty was set up on 31 December 1998 with Irish European Reinsurance Company Limited, which provides surplus cover for the costs arising from the exercise of guaranteed annuity options in respect of Retirement Annuity policies, Individual Pension Plans and Transfer Plans issued before 1 July 1988. If the proportion of retirement terminations where the option is exercised in any year exceeds 25% of the total, measured by the guaranteed funds for those policies, the reinsurer's gross liability is equal to the value of the guaranteed annuity in excess of the guaranteed policy fund for that proportion of retirements effecting the option which is in excess of 25%.

The scope of the treaty was extended in 1999 to include group pensions business effected before 01 July 1988.

Total premiums paid in 1999 were £875,000. This comprises the second instalment of £250,000 (which was due on 01 April 1999) of the £400,000 deposit premium for 1998/99, plus the first instalment of £625,000 (due on 31 December 1999) of the £700,000 deposit premium for 1999/2000. The higher premium for the second year reflects the now wider scope of the treaty.

As mentioned in Section 10.8 above, this treaty was renegotiated following the House of Lords judgement in July 2000, and provides protection to the Society should more than 60% (instead of 25%) of benefits be taken in guaranteed form.

This treaty enables the Actuary to make a substantial offset to his guaranteed annuity option additional reserves as shown in Section 10.8 above.

OTHER ISSUES

14. COMPLIANCE

14.1 IFSD compliance problems

None observed.

14.2 PIA and other compliance problems

We understand that PIA have been in correspondence with the Society over mis-selling of income drawdown schemes, and that enforcement action is under consideration.

A pensions mis-selling reserve of £132m. is included in Form 52 (after £70m at end 1998).

15. PROFESSIONAL REQUIREMENTS

This report conforms fully to the requirements of the Faculty and Institute of Actuaries as set out in their Professional Conduct Standards.

This report has been prepared under the terms of the Agreement between Insurance Directorate, Her Majesty's Treasury (HMT) and the Government Actuary's Department (GAD) dated November 1998 ("the service agreement"), as continued between the Financial Services Authority (FSA) and GAD under an exchange of letters in December 1998, setting out the level of service to be provided by GAD in respect of the supervision of companies authorised, or seeking authorisation, under the Insurance Companies Act 1982 to carry on long term business.

The purpose of this report is to enable FSA to fulfil its responsibilities under the Third Life Directive and the Insurance Companies Act 1982.

The scope of this report is:

- to advise on the statutory solvency position of the company;
- to identify any issues relevant to the responsibilities of FSA;
- to describe the development of the company over the previous 12 months;
- to provide historical background to the company.

GAD's detailed scrutiny reports in respect of Equitable's returns

1999 returns

This report is limited to a minor degree because certain questions need to be put to the company. Under the service agreement, GAD has written to the company directly on these. A copy of our letter is included in the Appendix to this report.

The advice and information contained in this report are solely for the use of FSA in fulfilling its responsibilities and should not be transmitted to third parties, including the company concerned, without the prior consent of GAD.

   Have unit costs been updated from last year? *(except for annuities)* ~~YES~~/NO/~~NA~~

6. If there is an entry in Form 58.23,
   - are the S.29 requirements met? ~~YES/NO~~/NA
   - are the S.30 requirements met? ~~YES/NO~~/NA

7. Has a (ii) of the actuary's certificate been properly completed? YES/~~NO~~

8. Has a resilience test been carried out in accordance with the GA's guidelines? YES/~~NO/NA~~

9. What proportion of the major classes is reassured? (see Form 60 rows 1 to 3) ~~NIL~~/10% or less/ ~~over 10%/100%~~

10. Is all reassurance with UK authorised companies? ~~YES~~/NO/~~NA~~

    If not are reassurances for non authorised companies on a deposit back basis? *Query regarding Bond business?* ~~YES~~/NO/~~NA~~

11. If an implicit item has been included on F9 is there a relevant S68 order? YES/~~NO/NA~~

12. Have the company set up any identifiable provision to meet potential exposure to Personal Pensions transfer problems? *April '95 letter indicated that technical liabilities "overstated" by £50m* ~~YES~~/NO/~~NA~~

13. If Form 13A is present has the company annexed a statement in accordance with Regulation 22B? YES/~~NO/NA~~

GAD's A1 and A2 initial scrutiny key checks in respect of Equitable

1995 returns

14. Actuary's comments on Form A1 answers, particularly where answer is "NO":

15. Aspects which look worrying:

16. Other notes:

① S68 Order permitted implicit future profits item of up to £500m.
£263,731K used → cover for RMM of 2.89

② Coy provides mgt. services to University Life, German [illegible] & Permanent Ins. Co. Ltd

③ 4(2)(c) still omitted (investment guidelines, incl derivatives) — Covered in 4(2)(a)

④ Reduced management charges for Funds !

⑤ Unchanged expense allowances for linked contracts, but raised allowances for annuities

⑥ New reinsurance treaty with connected coy. for Major Medical Cash Plans. ~~Query no Dep back for Bond business~~
No current reassurance seems to be in place.

17. Items to be notified to DTI, to be taken up immediately with the company:

1996 returns

SOLVENCY POSITION

10 Taking into account the individual characteristics of the company, is the absolute level of cover for the RMM shown in F9 best described as very healthy (A), healthy (B), adequate (C), of concern (D) or negative/such as to require immediate action by DTI (E)? — ~~A/B~~ / C ~~/ D / E /~~ NA

As a major w.p. office is unlikely to be insolvent – but may be building higher expectations than can be met.

What has the trend in the level of cover been over recent years? — ~~UP/DOWN~~/FLAT/ ~~VOLATILE/NA~~

If DOWN, is the slope of decline steepening? — ~~YES/NO~~/NA

11 If an implicit item has been included in F9, is there a relevant S68 order referred to in a note to the returns coded 0902? — YES/~~NO/NA~~

SUITABILITY OF ASSETS

12 Does the hypothecation of assets to liabilities in F57 look reasonable
- for with-profit business? — YES/~~NO/NA~~
- for non-profit business? — YES/~~NO/NA~~

Is it reasonable after the change to asset classes brought about by derivatives (see Regulation 23(d) statement)? — ~~YES/NO~~/NA

13 Does the company have significant exposure to derivatives? — ~~YES~~/NO/~~NA~~

IF YES, do adequate margining arrangements appear to be in place in respect of derivatives
- shown in F17? — ~~YES/NO~~/NA
- shown in F56? — ~~YES/NO~~/NA

14 Is the level of mismatching by currency revealed by the schedule shown in paragraph 11(1) of Schedule 4 material? — ~~YES~~/NO

15 Are any of the linked asset surpluses/deficits shown in column 10 of F55 material? — ~~YES~~/NO/~~NA~~

(Up to about 1% in some cases)

16 Does the company have any large counterparty exposures (see paragraph 11(2) of Schedule 1) described in a note to the returns coded 1312? — ~~YES~~/NO

OPERATING RESULTS

17 Is either the absolute level of surplus/deficit emerging or its trend over recent years such as to give current cause for concern? — ~~YES~~/NO

18 Is either the absolute level of any capital injection into the company or its trend over recent years such as to give current cause for concern? — ~~YES/NO~~/NA

Fa2-96;09/07/97 2

GAD's A1 and A2 initial scrutiny key checks in respect of Equitable

1996 returns

19 Is either the absolute level of management expenses or their trend over recent years such as to give current cause for concern? ~~YES~~/NO

20 Is either the absolute level of sales or their trend over recent years such as to give current cause for concern? ~~YES~~/NO (V. high!)

21 Is either the absolute level of the initial commission ratio or its trend over recent years such as to give current cause for concern? ~~YES/NO~~/NA

22 Is the amount of reinsurance material? ~~YES~~/NO (but all Class IV bus
If YES,
- Are there any material financing arrangements in force? ~~YES/NO~~/NA
- Is there a material exposure to non-UK authorised reinsurers without deposit back? ~~YES/NO~~/NA

PRE ISSUES

23 Has the percentage of distributed surplus allocated to policyholders been reduced? ~~YES~~/~~NO~~/~~NA~~
Method.
If YES,
- Is the reduction allowable under section 30 of the Act? ~~YES/NO~~/NA
- Is the current percentage less than 90%? ~~YES/NO~~/NA

24 Is the surplus carried forward negative? ~~YES~~/NO
If YES, has a dividend been paid? ~~YES/NO~~/NA

25 Does the method used for the creation and cancellation of units in internal linked funds and determining unit prices for the allocation of units to, and the cancellation of units from, policies described in paragraph 5(4) of Schedule 4 look reasonable? YES/~~NO/NA~~

Does the method used to determine the provision for CGT described in paragraph 5(5) of Schedule 4 look reasonable? YES/~~NO/NA~~

26 Do the circumstances in which, and the method by which, a MVA may be applied under accumulating with-profit policies described in paragraph 4(1)(a)(i) of Schedule 4 look reasonable? YES/~~NO/NA~~

Is the answer given in paragraph 4(1)(a)(ii) of Schedule 4 satisfactory? ? YES/NO/~~NA~~

CURRENT ISSUES

27 Has the company set up any identifiable pensions mis-selling reserve? ~~YES~~/NO/~~NA~~
NOT CLEAR (Understood to hold £50. within technical reserves, st and 9
If YES, has this been increased since last year? ~~YES/NO/NA~~

28 Does it appear that overall the company has completed the new style returns well (A), adequately (C) or poorly (E)? ~~A~~ C ~~E~~
Review Forms 57

CURRENT ISSUES

27 Has the company set up any identifiable pensions mis-selling reserve? ~~YES~~/NO/~~NA~~
In cy. response, £75m stated to be included (FORM 52)
If YES,
- is the reserve consistent with the total provision as at the valuation date given in the company's response to HMT's letter dated 12 March 1998 on pensions mis-selling provisions (incl Phase II costs)? ~~YES/NO~~/NA
- is the updated 31 March 1998 position given in that response such as to give current cause for concern? ~~YES~~/NO/~~NA~~

28 Is the company known/~~likel~~y to have a material exposure to annuity guarantees? YES/~~NO/NA~~
Adjusts terminal bonuses - so no value to policyholder!
No additional reserves considered necessary.

29 Actuary's comments on Form A1 answers, particularly where answer is in **BOLD**:

30 Aspects which look worrying:

Is Q28. position satisfactory?

31 Other notes:
(1) Actuary was requested to disclose mis-selling provision in letter of 16/1/98, promised to do so in letter of 4/2/98 – but ~~has~~ appears to have ~~failed to do so in these Returns.~~ [REVIEW]
NO – in FORM 52
(2) Review annuitant mortality assumptions
(3) Issue of £350m Subordinated Loan appears to be sole reason for increase in available assets over year.

GAD's A1 and A2 initial scrutiny key checks in respect of Equitable

1998 returns

Form A2

INITIAL SCRUTINY - KEY CHECKS (ACTUARY)

1 Company........THE EQUITABLE LIFE ASSURANCE SOCIETY

2 Valuation date 31. 12. 1998

STRENGTH OF VALUATION BASIS

3 Are all the interest rates in F57 (including those in col 6) supported by the risk adjusted yields on the matching assets
- for with-profit business? Query sustained yield on deposits ? YES/~~NO/NA~~
- for non-profit business? YES/~~NO/NA~~

Do the with-profit rates in cols 2 and 6 appear to make provision for PRE? * Review implications of discount rates shown for UWP business. YES/NO/~~NA~~

Has allowance been made for the change to asset classes brought about by derivatives (see Regulation 23(d) statement and paragraph 6(1)(a) of Schedule 4)? ~~YES/NO~~/NA

4 On the evidence of the margins between the interest rates in F57 and the corresponding risk adjusted yields, does the overall interest basis appear to be best described as strong (A), adequate (C), weak (D) or potentially unacceptable (E)? ~~A~~ C ~~D E~~ but see above *

5 Are the mortality rates acceptable within GAD guidelines (not yet revised)
- for assurances? YES/~~NO/NA~~
- for annuities? YES/~~NO/NA~~

Where PHI is a material class, do the morbidity rates look reasonable? ~~YES/NO~~/NA

6 Does the aggregate expense allowance disclosed in paragraph 10(2) of Schedule 4 look reasonable compared with management expenses in connection with maintenance of business shown in F41.44? £34.2m YES/~~NO~~ £69m O.K. combined

Are other management expenses shown in F41.45 material? £8.5m YES/~~NO~~

7 Do the linked contract valuation basis parameters look reasonable? YES/~~NO/NA~~
Margin between gross rate of unit growth & inflation rate now reduced to 2% (prev. somewhat dubious 3% margin)

Have per policy expense allowances been increased since last year? ~~YES~~/NO/~~NA~~

8 Is the resilience test described in paragraph 7(6) of Schedule 4 in accordance with the GA's latest published guidance? YES/~~NO/NA~~

9 Taken overall, does the valuation basis appear to be best described as strong (A), adequate (C), weak (D) or potentially unacceptable (E)? ~~A~~ C ~~D E~~

See 6(1)(h) | But, gross g'teed annuity reserves have been established assuming that would not be taken in all cases – allowances appears to be greater than suggested in GA's guidance.
N.B. Higher gross reserves would have been offset by higher reassurance credit.

GAD's A1 and A2 initial scrutiny key checks in respect of Equitable

1998 returns

(1) We still need to be satisfied that reins. treaty with Irish ERC works in the way intended - REQUEST COPY OF TREATY as finally agreed.

SOLVENCY POSITION

10 Taking into account the individual characteristics of the company, is the absolute level of cover for the RMM shown in F9 best described as very healthy (A), healthy (B), adequate (C), of concern (D) or negative/such as to require immediate action by HMT (E)? — ~~A/B~~/C/~~D/E/NA~~

(2) Loss of the Court case on treatment of G'teed Annuities would put position in doubt - would need to cut all bonuses.

What has the trend in the level of cover been over recent years? — ~~UP/DOWN~~/FLAT/~~VOLATILE/NA~~

(Increasing use of Imp. F.P. Item has raised the 4+ margin)

If DOWN, is the slope of decline steepening? — ~~YES/NO~~/NA

11 If an implicit item has been included in F9, is there a relevant S68 order referred to in a note to the returns coded 0902? — YES/~~NO/NA~~

SUITABILITY OF ASSETS

12 Does the hypothecation of assets to liabilities in F57 look reasonable
- for with-profit business? — YES/~~NO/NA~~
- for non-profit business? — YES/~~NO/NA~~

Is it reasonable after the change to asset classes brought about by derivatives (see Regulation 23(d) statement)? — ~~YES/NO~~/NA

13 Does the company have significant exposure to derivatives? — ~~YES~~/NO/~~NA~~
IF YES, do adequate margining arrangements appear to be in place in respect of derivatives
- shown in F17? — ~~YES/NO~~/NA
- shown in F56? — ~~YES/NO~~/NA

14 Is the level of mismatching by currency revealed by the schedule shown in paragraph 11(1) of Schedule 4 material? — ~~YES~~/NO

15 Are any of the linked asset surpluses/deficits shown in column 10 of F55 material? — ~~YES~~/NO/~~NA~~

A surplus of modest proportions is held for most internal funds. Σ: £19.26m, equal overall to 0.77% of Σ unit value. [All included in line 59 of F13.

16 Does the company have any large counterparty exposures (see paragraph 11(2) of Schedule 1) described in a note to the returns coded 1312? — ~~YES~~/NO

OPERATING RESULTS

17 Is either the absolute level of surplus/deficit emerging or its trend over recent years such as to give current cause for concern? — ~~YES~~/NO (but fall shown for 1998)

18 Is either the absolute level of any capital injection into the company or its trend over recent years such as to give current cause for concern? — ~~YES~~/NO/~~NA~~

but remember £350m Subordinated Loan issued in 1997.

FA2-97.doc;31/03/99 2

GAD's A1 and A2 initial scrutiny key checks in respect of Equitable

1998 returns

19 Is either the absolute level of management expenses or their trend over recent years such as to give current cause for concern? — ~~YES~~/NO | but reserve growing OHE entries.

20 Is either the absolute level of sales or their trend over recent years such as to give current cause for concern? — ~~YES~~/NO | but reduced sales of AP contracts in 1998

21 Is either the absolute level of the initial commission ratio or its trend over recent years such as to give current cause for concern? — ~~YES/NO~~/NA

22 Is the amount of reinsurance material? — YES/~~NO~~ Special treaty to cover emerging g'teed annuity liabilities
If YES,
- Are there any material financing arrangements in force? — ~~YES~~/NO/~~NA~~
- Is there a material exposure to non-UK authorised reinsurers without deposit back? — YES/NO/NA for this treaty.

PRE ISSUES

23 Has the percentage of distributed surplus allocated to policyholders been reduced? — ~~YES/NO~~/NA (Mutual)
If YES,
- Is the reduction allowable under section 30 of ICA82? — ~~YES/NO~~/NA
- Is the current percentage less than 90%? — ~~YES/NO~~/NA

24 Is the surplus carried forward negative? — ~~YES~~/NO
If YES, has a dividend been paid? — ~~YES/NO~~/NA

25 Does the method used for the creation and cancellation of units in internal linked funds and determining unit prices for the allocation of units to, and the cancellation of units from, policies described in paragraph 5(4) of Schedule 4 look reasonable? — YES/~~NO/NA~~

Does the method used to determine the provision for CGT described in paragraph 5(5) of Schedule 4 look reasonable? — YES/~~NO/NA~~

26 Do the circumstances in which, and the method by which, a MVA may be applied under accumulating with-profit policies described in paragraph 4(1)(a)(i) of Schedule 4 look reasonable? — YES/~~NO/NA~~

Is the answer given in paragraph 4(1)(a)(ii) of Schedule 4 satisfactory? — YES/NO/NA

Reserve ~~can be~~ is normally less than asset share,
but SVs only limited to asset share & normally achieved by reducing terminal bonus
~~Abt~~ i.e. Society would normally pay out more than reserve anyway

GAD's A1 and A2 initial scrutiny key checks in respect of Equitable

1998 returns

CURRENT ISSUES

27 Has the company set up any identifiable pensions mis-selling reserve? — YES/~~NO/NA~~
£70m (prev. £75m)
If YES,
- is the reserve consistent with the total provision as at the valuation date given in the company's response to HMT's letter dated 12 March 1998 on pensions mis-selling provisions (incl Phase II costs)? — YES/~~NO/NA~~
- is the updated 31 March 1998 position given in that response such as to give current cause for concern? — ~~YES~~/NO/~~NA~~

28 Is the company known/likely to have a material exposure to annuity guarantees? — YES/~~NO/NA~~
Reason for early submission of this Return.

29 Actuary's comments on Form A1 answers, particularly where answer is in **BOLD**:

30 Aspects which look worrying:

(1) Consider 6(1)(h) response.
(2) Need to examine Irish ERC treaty.
(3) Possible loss of court case – implications for the Society?

Section 7

Other primary documents

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated September 1990

September 1990

VALUATION AND BONUS DECLARATION AT 31 DECEMBER 1990

1. The recent falls in world stockmarkets could mean that we may face a more difficult position at the end of this year than has applied for some time. Although the current position is very uncertain, it seems highly likely that the earnings on the fund at market value will represent a negative return over 1990. In view of that position, I feel it appropriate to begin discussion of some possible alternative courses of action rather earlier than normal. That is the purpose of this paper.

2. In a time of depressed market values there are significant constraints on what can be achieved technically or within the current regulatory regime. I think, however, that our approach should be first of all to identify what we feel to be the 'right' result and then to consider the extent to which that can actually be achieved in practice.

3. With profits business is fundamentally about the smoothing and averaging of performance. Where there are dramatic changes in conditions from year to year, any 'objective' system of averaging tends to break down. A comparison of the position to the end of June 1990, reported to the board in July, with that at the end of August is given in the Appendix. That demonstrates how things have moved in the last two months. On current projections, assuming stability for the remainder of the year, the returns available on the with profits business might look something as follows:

1988	15.1%
1989	26.0%
1990	-8.0%

It is by no means clear what a smoothed return for 1990 should be.

4. I think, therefore, that we need to return to basics. In essence we offer our with profits policyholders an investment in a mixed portfolio of professionally-managed assets. It seems reasonable to assume that, over time, such a fund will out-perform money on deposit. A 'deposit rate' return could, therefore, be regarded as the minimum that a policyholder might expect to receive in respect of any one year.

5. Over 1990 it has been possible to earn 14-15% on deposits. To the extent that new money has been invested in other types of asset, it does not appear an unreasonable approach to assume that eventually those assets will earn 14-15% in respect of 1990. A similar argument can be made in respect of existing assets, otherwise they would theoretically have been switched. In other words we are talking about a timing problem.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated September 1990

6. Of course the real world is not as simple as implied in paragraph 5 and the required return for 1990 may never be obtained or may be obtained at so remote a date in the future that the possibility of doing so should be ignored. Given that we have not switched to deposits in a significant way, we are, presumably, reasonably confident of matching the deposit rate for 1990 in due course. It might, however, be prudent to take a precautionary margin on the required rate and set it at 12%, say. Clearly this margin is arbitrary but if it is too large it makes a comment about recent investment activity.

7. The with profits policyholder has not bought a unit linked policy which directly follows fluctuations in market values, he has been told about the smoothing and averaging approach to with profits business and he will be surprised if his contract does not grow at least in line with something like average deposit rates. I believe that as a starting point for the returns to be allotted over the year we might think of something between 12% and 15%. That is consistent with the earnings required to support a declared rate at last year's level of £7.50%.

8. A return at the 12% to 15% level would be more than sufficient to maintain long-term pay-outs at their 1990 levels but would lead to some reduction in published 10 year results. That is likely to be true for other offices also and is consistent with the information that the [redacted] have published in their 'with profits guide'.

9. The most technically and financially efficient way of allotting the return for the year would be to apply it wholly by way of an increase in the 'unconsolidated' or 'final bonus' element of policy values. This element is not guaranteed, requires no capital to finance it and is only paid out on policies leaving the fund. Hence it is very well suited to the situation where future earnings are being anticipated. If it eventually emerges that we have 'got it wrong' the damage is limited and room for future manoeuvre is retained.

10. In considering how much of the 'potential' earnings might be 'consolidated' as declared bonus, however, the constraints mentioned in paragraph 2 above must be brought into account. Declared bonuses are guaranteed policy benefits and appropriate additional reserves must be established for them. Such reserves eat into the Investment Reserve otherwise available and from which the solvency margin must be found.

11. In technical terms, any presentational problems created by declaring a bonus can almost certainly be mitigated by weakening the valuation basis. There are, however, constraints on the extent to which that can be done. Once done there is then also no leeway available in a future year. Further technical measures are also available to help the DTI Return presentation (but not the Company Act balance sheet). The use of such measures has to be publicly stated and could be construed as a sign of weakness. Again, these are largely 'one off' measures.

'Valuation and bonus declaration at 31 December 1990', dated September 1990

12. In considering such technical issues the possible position in future years needs to be kept in mind. Maximising the declared bonus might be a dangerous course of action. It might require pushing all margins to the limit this year thereby leaving no room for manoeuvre in the future. Clearly if 1991 again turned out to be a poor year for investment returns, the possible courses of action at 31 December 1991 might be severely limited. Special action might be required and other offices might not be in the same position.

13. A reduction in declared rates below £7.50% would, of course, ease the position by reducing the additional reserves which need to be established. A cut in a single year, unless dramatic, does not, however, bring significant immediate relief. For example, a reduction in the rate from £7.50% to £6.50% would 'save' only some £40m at 31 December 1990. A cut does, of course, lead to significant savings in due course.

14. After a year of high interest rates there is, also, no objective basis on which to base a reduction in declared rates. Any cut would be arbitrary and, if it were other than fairly marginal, could be seen as weak. As noted above, a marginal cut would only bring a small benefit. The current situation is quite different from that of 1986/7 when we last cut declared bonus rates. At that time interest rates had fallen to a level which would not support the previous level of bonuses and a continued dependence on the out-performance of equities seemed imprudent. At current interest levels, declared bonus rates of £7.50% are supportable on interest rate considerations alone.

15. If the more radical approach implied in paragraph 9 above were adopted, we should have no declared rate at all. The whole of the earnings allotted would be passed on by way of final bonus. That would strengthen the balance sheet position by something of the order of £300m which would be a true strengthening since no additional guaranteed benefits would have been granted.

16. Such action would be dramatic and might be perceived as weak. It might, however, equally be seen as logical and good tactics, given careful presentation to policyholders and the public. I believe that it could be presented as a positive and original approach to a confused and disorderly position on world stockmarkets. We could also present it as a way of retaining the freedom to pass on a higher return to policyholders than would otherwise be the case.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated September 1990

17. To summarise:

- unless there is a significant upturn in markets, it will be an uncomfortable year end for bonus purposes
- interest rates have been relatively high for the whole year and policyholders might expect benefits based on returns ranging from about 12% to about 15%
- that could argue for maintenance of declared rates at last year's level of £7.50%
- it might be possible technically to produce the required surplus for such a declaration but this would necessarily be a 'one off' operation. A bad year in 1991 would almost certainly lead to even greater discomfort at the end of 1991
- declaration of a marginally lower rate would not really provide adequate savings in surplus. Declaration at a significately lower rate would be difficult to justify and would inevitably look weak
- we now show policyholders how their policy values roll up from year to year at an overall rate of return. It should not really matter to what extent that roll up rate is consolidated by way of declared bonus or left in unconsolidated or final bonus form providing policyholders have confidence in us
- allotting the 1990 return in wholly unconsolidated form would retain a significant amount of freedom, freedom which might eventually be required in respect of 1991
- it seems to me, at this point in the year, that a case could be made either for maintaining declared rates at £7.50% or for having no declared bonus at all. Both courses of action contain significant risks. Maintaining declared rates would result in a significant technical and financial weakening of the Society whilst having no declared rate would run significant public relations risks. There seems no objective basis for an intermediate position and such a position would bring in train both types of risk.

November | December 1990

VALUATION AND DECLARATION AT 31 DECEMBER 1990

Introduction

1. My paper to the September board made some general observations to the effect that the forthcoming 'end of year' was likely to be a more difficult one than we had seen for some time. Since then there has been no significant sustained improvement in financial markets and, consequently, it becomes increasingly likely that we shall not be 'baled out' by a dramatic improvement in conditions before 31 December 1990.

2. I think, therefore, that it is appropriate to consider the position further so that we can begin to develop views on the alternative courses of action available. The purpose of this paper is to set out information as a basis for discussion.

3. This paper is essentially all about the external constraints on the running of a life office - we do not have a 'free hand'. No criticism is implied of the running of any particular part of the office. We are 'where we are' because of a combination of factors - but we can control events to some extent from now on. It needs to be remembered that in a commercial sense there can be no doubt that we have a very sound business - we have strong business flows, expenses are well controlled, our with profits policyholders are told that future bonuses will depend upon future investment returns and we have relatively low guarantees. Unfortunately the regulations bite despite that.

4. To put the position into perspective it may be helpful to look at 1990 in a long-term context. It seems extremely unlikely that the return earned in 1990 will be positive; indeed, a return of around -10% seems likely. If the return is negative that will be the first time that has happened since 1974 (when the return was -28%). If earnings are around -10% that will be 15% lower than in the previous worst year since 1974 (i.e. 1979).

Solvency and DTI requirements

5. The current regulatory regime does not permit the sort of action taken at the end of 1974; there are now significant constraints. Any consideration of the position needs to begin with an understanding of those constraints.

6. The primary requirement is for the office to demonstrate an excess of assets over valuation liabilities. In fact there must be excess assets at least equal to the so-called 'minimum guarantee fund' which, in the Society's case, is 1/6th of the solvency margin (i.e. around £40m out of some £240m projected at 31 December 1990). If the actual excess of assets over liabilities is greater than the 'minimum guarantee fund' but less than the required solvency margin, then a special dispensation can be obtained from the DTI (called a S68 order) to bring so-called 'implicit items' into account. In our case we could use an estimate of future surplus. The use of such orders might be regarded as showing a weak position by external commentators.

'Valuation and bonus declaration at 31 December 1990', dated November/December 1990

7. Assets must be valued on the basis set out in regulations which is, effectively, a market valuation. There is no room to manoeuvre on that side of the comparison. Any difficulties on the public presentation can, therefore, only be overcome by changing the value placed on the liabilities.

8. I have freedom in the value placed on the liabilities, subject to the following regulatory constraints:

(a) the reserves established must, in my professional opinion as the Appointed Actuary, represent a proper level of provision for the liabilities based on 'prudent assumptions';

(b) the reserves must, in any event, be no lower than those produced on a basis laid down in regulations, coupled with additional requirements specified by the Government Actuary in relation to AIDS and 'mismatching'. Mismatching is concerned with looking at the situation if there is a $\pm$ 3% change in interest rates associated with a 25% fall in the value of equities and property. We must demonstrate that our reserves are at a level such that the assets backing those reserves would still cover reserves satisfying the valuation regulations in the changed conditions.

9. It is not necessarily the case that a valuation satisfying constraint (b) above will also satisfy constraint (a). In current conditions it is, however, unlikely that, given a free hand, I should want to place a value on the liabilities higher than that on the statutory basis.

10. I have carried out projections on a range of bases to assess the effect of further market movements over the remainder of the year. These indicate that, except in the event of a further sharp fall in markets before 31 December 1990, I should be able to set liability reserves at a level which would enable a bonus to be declared at last year's level and still satisfy all the regulatory requirements. Looking at this year alone, it is, therefore, fairly unlikely that we shall be unable to do what we should like.

Looking ahead to 31 December 1991

11. A point made in my September paper was that we also need to be mindful of the 1991 position. In particular, we should not put ourselves in a position where we exhausted all room for manoeuvre at 31 December 1990 and then had to take exceptional action, out of line with the market, at 31 December 1991. Accordingly, I have carried out further projections looking a year ahead.

12. In the projections I have assumed capital movements of -10%, 0% and +10%, in 1991. The income yield on the fund will be around 7% at current levels and so these movements are broadly equivalent to overall earnings of -3%, 7% and 17% respectively.

'Valuation and bonus declaration at 31 December 1990', dated November/December 1990

13. The results of the projections for 1991, combined with two different levels of capital movement over December 1990, can be summarised as follows:

		Capital movement in 1991		
		+10%	0%	-10%
Capital movement in December 1990	+5%	90 and 91 declarations covered	90 and 91 declarations covered	90 or 91 declaration covered (but not both)
	0%	90 and 91 declarations covered	90 or 91 declaration covered (but not both)	neither declaration affordable but still solvent at 31.12.91

14. It is, I believe, still too early to form firm views but certain conclusions can be drawn from the figures above. If markets do recover by around 5% by the end of the year then the risks of maintaining bonuses might be acceptable. If there is no such recovery then there are clearly significant risks by having a declaration - that is of being forced to pass the declaration at 31 December 1991 if earnings in 1991 are modest (although significantly better than in 1990) or of having serious problems if 1991 is another bad year for earnings. Those comments imply no changes in investment strategy. One way to make the position in 1991 'more comfortable' would be to place all new money in fixed interest, for example. That would have the effect of increasing the interest rate at which the liabilities can be discounted but would also constrain, of course, the future earning power of the fund. If the situation became really desperate some of the existing portfolio of assets could also be switched - at least in theory.

Policy proceeds

15. The paper so far has been all about the Society's overall financial position. We now need to consider what kinds of action might be appropriate in relation to policy proceeds.

16. As I said in the September board paper, the issue here is fundamentally about smoothing. When violent changes in earnings levels occur, normal averaging processes break down. The board took a view at 31 December 1989 that assets were essentially neither over nor under valued on an historical perspective. We need to consider whether the experience of this year demonstrates that that view was wrong, which would imply that we should start moving policy values down in order to be consistent with the new, lower, asset valuations. Alternatively, we can take the view that 1990 represents a temporary lack of confidence in markets which will be reversed in due course. In that case there is a strong argument for smoothing out most of the effects of the 'trough'.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated November/December 1990

17. The risks of these two attitudes are fairly clear. In the former case a savage reduction in policy values could weaken confidence and, if we are not followed in that by other offices, a significant weakening of our competitive position. By taking the second course we should have policy values substantially above the level indicated by asset values. If asset values did not recover within a reasonable period we might find the maintenance of that stance uncomfortable. In particular, policies leaving the fund would be taking away substantially more than their share of assets, thereby weakening the fund for the future.

18. What the market might do is by no means clear. There is speculation that a number of offices are considering cuts in bonus rates of various types. The [redacted] which is normally amongst the first of the offices to make its declaration, is reputed to have decided on a later announcement this year. It seems likely that a situation of some uncertainty will prevail and it may be some weeks before any clear picture of overall trends becomes apparent.

19. If we look at interest rate levels alone, those have now recovered to levels consistent with the 1989 declared bonus rates. Following our usual arguments there are, therefore, no grounds for cutting declared rates. For new business effected in 1990 we could have invested in fixed interest stocks and policyholders could reasonably expect to see declared bonuses at 1989 levels with no final bonus element as an appropriate return for the year. By extension, a return of around 11% becomes a reasonable overall growth rate for all business, provided one takes the view that the set-back in asset values is temporary.

20. If we gave an 11% overall return on gross business and 9% on net business, then the approximate change in proceeds from 1990 to 1991 at different durations will be:

Term (years)	Personal pension %	Endowment assurance %
5	- 8%	- 5%
10	- 9½%	- 4%
15	- 2½%	- 2½%
20	-	- ½%
25	+ 1%	+½%

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated November/December 1990

21. Once we have decided what we should like to achieve with policy results we can then turn to how to achieve that. If an overall return of around 11% gross is to be granted (and that in itself needs to be debated) the choices are:

(a) effectively all via maintaining declared bonuses at 1989 levels;

(b) all through final bonus with no declared bonus;

(c) an intermediate position between (a) and (b).

The various options involve risks of various kinds, either in publicity terms or the risks of technical insolvency followed by investment constraints, or both. Much must depend upon the informed views which experts can bring to the possible investment scene over 1991. A note summarising the discussion at the December Investment Committee meeting is accompanying this paper.

Summary

22. The position at 31 December 1990 is likely to be more uncomfortable than for many years. All courses of action carry risks of various types and the decisions to be taken will not be easy. This paper has tried to set out, as objectively as possible, the various alternatives available and their implications, as a basis for discussion. As to timing, my current view is what we should leave decisions as late as is practically possible. I do not believe that we are in a position to take firm decisions at this stage, as we have in previous years.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated January 1991

January 1991

VALUATION AND DECLARATION AT 31 DECEMBER 1990

Introduction

1. This paper re-examines the matters discussed in earlier papers in the light of the draft actual results for 1990 and the announcements made to date by our competitors. Recommendations are then made as to the approach to be taken to the 1990 bonus declaration.

Preliminary results

2. At this stage only 'first draft' figures are available and these may be subject to change as the detailed end-of-year and audit work progresses but hopefully no significant changes will be required. The current draft revenue account figures are as follows:

	£m
Opening fund	4704
Net revenue for year	959
	5663
Change in value of linked assets	-81
Closing fund	5582

3. The estimated market value of assets at 31 December 1990 is £5795m. This will imply an Investment Reserve of some £210m in the Company Act accounts to show a Balance Sheet value equal to the fund value of £5582m. This position, which is a little more favourable than some earlier projections, reflects the somewhat improved market conditions in the final weeks of the year. The overall return at market value for 1990 was around -8½% which, again, is a little better than some earlier estimates.

4. As previously discussed, it is intended to increase the rate of interest used to value the liabilities in order to reflect the high asset yields resulting from current depressed asset values. I anticipate that the reduction in liability reserves arising from that will enable bonuses to be declared at 1989 levels without any transfer from the Investment Reserve. Indeed, I would expect the liability reserves, including new declared bonuses, to be substantially below the closing fund of £5582m. That is, there will be a larger margin between asset and liability values in the DTI 'Form 9' than simply the amount of the Investment Reserve. Work is in progress on a detailed evaluation of the position and it is intended to provide further figures at the board meeting.

'Valuation and bonus declaration at 31 December 1990', dated January 1991

Review of the market

5. Seven offices have so far made their bonus announcements. Only two, [redacted] and [redacted], have made a cut in declared bonus rates. Various adjustments have been made to terminal bonuses, the precise nature of which depends on the mechanics of each office's individual scales.

6. Rather than looking at the bonus announcements themselves, it is more helpful to look at the effect on policy proceeds. These are shown below for 10 and 25 year term endowment assurance policies, which are the results most commonly quoted in public announcements. Comparable figures for the Society, based on the approach recommended later in this paper, are shown for comparative purposes. We are trying to get some information about pensions policies but this is rather slowly and grudgingly provided.

Office	Change in endowment assurance results 1990-91	
	10 year term	25 year term
	%	%
[redacted]	-5.1	+2.5
	-1.3	+2.4
	+0.5	+12.3
	-10.7	-3.4
	- 8.1	+7.0
	-3.3	+5.0
	-6.7	-6.0
(ELAS	-1.3	+3.4)

If significant further information becomes available over the next few days, updated details will be provided at the board.

7. Two general messages seem to emerge from these initial announcements:

(a) There is no evidence of an industry-wide move to cut declared bonus rates.

(b) Offices generally are acting to smooth out, to a significant extent, the effects of low 1990 earnings. Indeed, the [redacted] has publicly spoken of earnings of 14% p.a. over each of the next 4 years and their 1991 results appear to imply at least that level of earnings deemed for 1990.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated January 1991

Consideration of the appropriate action for the Society

8. In previous discussions we have felt that a deemed rate of growth in the region of 11/12%, which is consistent with the earnings underlying our declared rates, might be appropriate for 1990. The actual outcome for 1990 and the actions of our competitors to date reinforce my view that this would represent a degree of smoothing consistent with our stated approach to with profits business and the market.

9. The board will recall that, owing to changes in the life office tax system, the Society effectively received a gross return in 1989. For 1990 a broadly similar position applies, although we expect to suffer a moderate level of tax (mainly irrecoverable foreign tax). We did not give the full benefit of a gross return to our 'net' business last year and I think it would be appropriate to do so on this occasion.

10. If we applied a rate of 12% in respect of 1990 for our pensions business then I would expect to use the same rate for endowment assurances. Resulting from the way the expenses are charged for the relevant contracts, a small margin is appropriate between the rates allocated to 'conventional' and 'recurrent single premium' net business. Consistent with these rates I would, therefore, expect to recommend a total growth rate of 11½% for our with profits bond and similar business.

11. Application of a total growth rate of 12% for pensions and endowment assurance business would give the following changes in total policy proceeds on 1 April 1991 compared with those a year earlier:

Term	Change in policy results 1990 - 91	
	Personal pension	Endowment assurance
	%	%
5	-8.1	N/A
10	-9.4	-1.3
15	-2.6	+0.3
20	+0.4	+2.3
25	+1.4	+3.4

From the results quoted for other offices in paragraph 6 it would appear that these results should broadly maintain our competitive position, and might marginally improve it.

12. As noted above, there is no general market move to cut declared rates. Dramatic action, such as passing the declaration altogether, would, in my view, carry an unacceptably high risk of a collapse in confidence. The only circumstances in which it might be appropriate to re-open that question would be in the event of a dramatic collapse in markets during the next few weeks. (One office, [redacted], has publicly stated that it is awaiting further developments in the Gulf before finalising its bonus announcement).

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated January 1991

13. I have previously argued that current conditions give no logical basis for a cut in declared rates. That remains my view. If we were to be one of the few offices to make a reduction in declared rates whilst maintaining the overall level to be allotted, then the publicity that would attract could well counteract the effects of the overall announcement which, as noted above, seems likely to be reasonably competitive. We might, therefore, attract considerable adverse publicity for a relatively trivial financial benefit this year.

14. The course of action described above is not, of course, without risk. Although it has been possible to reduce the liability valuation to permit a declaration at last year's level, the scope for further weakening in the face of another year of low earnings would be seriously constrained. In crude terms, the viability of the action described above relies upon the achievement of better investment returns in the relatively short-term future. We are at risk of needing to take drastic action if those better returns do not materialise.

15. As discussed in December, one can look at projected scenarios for 1991 in order to put those risks into perspective. In broad terms 1991 earnings would need to be:

(a) At around 15% to allow the Society to declare again at 1989 rates and present a similar level of strength to that at 31 December 1990.

(b) At least 8% to enable a declaration to be made at the 1989 level, but showing a weaker position than at 31 December 1990.

(c) At least 0% to avoid problems in demonstrating solvency. This would imply no 1991 declaration.

Our discussion of the investment outlook in December led to the firm view that an estimated return of 13.6% for 1991 should be used as the basis for the consideration of bonus and solvency matters. That view then leads to the conclusion that it is appropriate to take the risks inherent in the course of action described above in current conditions.

Conclusion

16. In the absence of unforeseen circumstances, such as dramatic changes in investment markets or announcements by other leading offices which indicate a market trend different from that emerging to date, I would expect to recommend bonus rates at next month's Special Board meeting based on the following principles:

(a) Declared rates at the same levels as announced last year.

(b) Final bonuses based on a total return of 12% for pensions and conventional net business and 11½% for net business of the recurrent single premium type.

Valuation and Bonus Declaration as at 31 December 1990

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated February 1991

VALUATION AND BONUS DECLARATION AS AT 31 DECEMBER 1990

Introduction

1. This paper provides an update on the valuation of the Society's assets and liabilities as at 31 December 1990 and contains various recommendations concerning the declaration of bonuses.

Valuation position

2. The board will recall that the approach being taken to the valuation is rather different this year than in recent years. In summary, the basis for valuing the liabilities is being weakened to reflect the higher yields available on assets at 31 December 1990. The effect of that weakening will enable bonuses to be declared at the 31 December 1989 levels without any transfer from the investment reserve in the Companies Act accounts.

3. The final accounting figures, subject to audit, are as follows:

	£m
Market value of assets	5788
Revenue account fund	5580
Investment reserve	208

This will be the position shown in the Society's Report and Accounts.

4. At the January board I indicated that the minimum level of reserves, including new declared bonuses, which could be published was of the order of £5325m. A full revaluation is being carried out on a basis which I feel to be appropriate to the 31 December 1990 position. The results of that will be available at the Special Board meeting in the form of an addition to this formal paper. The reserves including new declared bonuses will be well below the revenue account fund of £5580m. As intended, therefore, no transfer from the investment reserve is needed to support the cost of the declaration.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated February 1991

5. A detailed analysis of the cost of new declared bonuses, at the same rates as those announced a year ago, on the revised basis of valuation of liabilities will be included in the figures presented at the board.

6. The bonuses will vest on 1 April 1991 on those policies still in force on that day.

<u>Final bonus rates</u>

7. For the major part of our business, final bonus rates are now determined by the effect of allocating a specific growth rate which is applied to total policy proceeds. Consistent with previous discussions, I am recommending the allocation of a rate of 12% for gross recurrent single premium business and 11½% for the equivalent taxed contracts. Rates for business in conventional form, such as endowment assurances have been determined on consistent bases, the final form of such rates producing policy results in line with those indicated in earlier papers.

8. As well as a final bonus element at the declaration date itself, rates of growth are needed to apply in the final period between that date and the date on which the policy benefits become payable. The rates currently applicable to the period since 31 December 1989 are 12% p.a. for gross business and 10% p.a. for net business. I am recommending the maintenance of those rates into 1991. Such rates may be changed by the board at any time, if they appear to be becoming inappropriate in the light of emerging experience.

<u>Recommendations</u>

9. The formal recommendations should include the specific monetary figures for the total and distributed surplus. The recommendations will, therefore, be included in the additional paper to be presented at the meeting. They will be along the following lines:

(i) that part of the surplus disclosed by the valuation should be declared as distributable surplus and used to allocate declared bonuses at the rates shown in detail in the statement attached.
(ii) that the declared bonuses should vest on 1 April 1991
(iii) that final bonus entitlements should be announced as described in the statement of bonuses.
(iv) that the directors should reserve the right to reconsider the rates of final bonus at any time

[redacted]

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated February 1991

VALUATION AND BONUS DECLARATION AS AT 31 DECEMBER 1990

1. This paper provides the detailed results of the valuation of liabilities as at 31 December 1990 so completing the material in the paper issued in advance of the Special Board meeting. It also includes the formal recommendations regarding bonus rates.

2. The results of the valuation of liabilities are as follows:

	£m
Market value of assets	5788
Basic liabilities	5093
Surplus	695
Cost of new declared bonuses	268
Surplus carried forward	427

3. The carried forward surplus of £427m in paragraph 2 above is essentially equivalent to the assets available to cover the solvency margin in 'Form 9' of the DTI Returns. In practice the figures are likely to be a little different, since there are small differences in the way some assets are valued between the DTI requirements and the approach for the Report and Accounts.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated February 1991

Cost of bonus

4. The cost of declaring bonuses at the rates described in the main paper is as follows:

	Rate of Bonus	Cost
Assurance fund		
Endowment type business	Based on £5.00% on sum assured and £3.50% on attaching bonus	£16.84m
Recurrent single premium type contracts	£7.75% p.a. on basic benefits and £7.75% on attaching bonus	£ 6.00m
General Annuity Fund		
Level annual premium contracts	£5.75% on basic benefit and £5.75% on attaching bonus	£ 1.09m
Recurrent single premium contracts (including annuities in payment)	£7.50% p.a. on basic benefits and £7.50% on attaching bonus	£ 5.70m
Pension Business Fund Level annual premium contracts	£6.75% on basic benefits and £6.75% on attaching bonus	£16.67m
Recurrent single premium contracts*	£7.50% p.a. on basic benefits and £7.50% on attaching bonus	£222.01m
Minor profits policies (in both Assurance and General Annuity Funds)	Bonuses based on £2.25% on sum assured or deferred annuity	£ 0.09m
Total		£268.40m

* Retirement annuities, personal pensions, annuities in payment and individual and group pension schemes

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Valuation and bonus declaration at 31 December 1990', dated February 1991

Recommendations

5. I recommend:

(i) that of the surplus of £695m disclosed by the valuation, £268.40m be declared as distributable surplus

(ii) that bonuses costing £268.40m be declared at the rates referred to in paragraph 4 above. These are shown in detail in the statement attached to the main part of the paper.

(iii) that the declared bonuses vest on 1 April 1991

(iv) that final bonus entitlements be announced as described in the statement of bonuses.

(v) that the directors reserve the right to reconsider the rates of final bonus at any time

'Investment considerations 1991', dated March 1991

March '91

INVESTMENT CONSIDERATIONS 1991

Introduction

1. Last year I presented the paper on investment matters in a rather different form from that used in earlier years in order to focus on the investment nature of our with profits business. This year I am taking that process a little further and, in particular, looking again at the views on which our recent bonus decisions were based so that any investment implications can be brought out.

2. The paper is in three main sections:

(i) A review of the composition of our with profits managed fund over recent years.

(ii) A comparison of the investment strategy we have followed with that of some leading competitors.

(iii) A review of the recent bonus decisions, their associated risks and their implications for future strategy.

Composition of with profits fund

3. As at 31 December 1990, the distribution at market values of the Society's invested assets (excluding those held against unit-linked business) was:

	£m	%age of whole	(1989 %age distribution)
Fixed interest	1397	26.2	(23.6)
Index-linked stock	119	2.2	(3.0)
Equities - UK	2036	38.2	(41.8)
- Overseas	621	11.7	(15.2)
Properties	705	13.2	(12.3)
Other (e.g. mortgages, loans etc.)	453	8.5	(4.1)
	5331	100.0	(100.0)

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Investment considerations 1991', dated March 1991

4. The Society is required to hol sterling assets equal in value to at east 80% of the value of its liabilities which are all in sterling currently. At 31 December 199ᴗ the sterling assets represented 96% of the liabilities. That is a lower percentage than that at 31 December 1989 (104%) despite the lower proportion of overseas equities in the asset mix. That is a reflection of the fact that, due to the weak performance of assets last year, the total liabilities represent a higher proportion of the total asset values than was the case at the end of 1989.

5. An amount of £634m represented the Society's reserves in respect of non-profit business at 31 December 1990. Of that amount, £55m was held in respect of index-linked annuity contracts. In order to determine the assets relating to our with profit business, we should regard £55m of index-linked stock and £579m of conventional fixed interest securities as matching the non-profit reserves.

6. After making these adjustments, the invested assets at market value held against the with profits business are as shown in the following table.

	£m	%age of whole	(1989 %age distribution)
Fixed interest	818	17.4	(15.5)
Index-linked stock	64	1.4	(2.5)
Equities - UK	2036	43.4	(46.7)
- Overseas	621	13.2	(17.0)
Properties	705	15.0	(13.7)
Other (e.g. mortgages, loans etc.)	453	9.6	(4.6)
	4697	100.0	(100.0)

7. The changing composition reflects both the relative performance of different asset types and the disposition of new money during 1990. In general, the relative weighting of equities, particularly overseas securities, has declined. The relatively high level of 'other' assets at 31 December 1990 is attributable to money held on short-term deposit at that date.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Investment considerations 1991', dated March 1991

8. We have been looking at the cc ›sition of the with profits managed ıd in this way since the end of 1985. The following table shows the changing proportions over the peιiod since then:

	31.12.90	31.12.89	31.12.88	31.12.87	31.12.86	31.12.85
	%	%	%	%	%	%
Fixed interest	17.4	15.5	21.7	23.0	24.9	29.2
Index-linked stock	1.4	2.5	5.3	7.0	4.3	3.5
Equities - UK	43.4	46.7	42.6	39.7	40.1	37.5
- Overseas	13.2	17.0	11.3	10.3	12.6	10.0
Properties	15.0	13.7	16.5	16.0	14.5	15.8
Other	9.6	4.6	2.6	4.0	3.6	4.0
	100.0	100.0	100.0	100.0	100.0	100.0

9. The key features of our experience (which reflect both deliberate investment strategy and different relative performance of asset categories) are as follows:

(a) A steadily reducing emphasis on fixed interest stocks, which has been deliberate.

(b) A broadly parallel shift in favour of equity investments.

(c) Investment in index-linked securities peaked in 1987 and has declined fairly sharply since then.

(d) A broadly stable property component comprising between 13½% and 16½% of the portfolio. The holding at 31 December 1990 was almost exactly at the average level for the last 6 years.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Investment considerations 1991', dated March 1991

Comparison with our competitors

10. In recent years we have also estimated the with profit fund composition for a number of other leading offices. Offices are now providing these figures themselves in their 'With Profits Guides' and so we have used those figures. The latest figures currently available are those at 31 December 1989. The following table shows the most recent distributions available, together with the Society's position at the end of 1989 and 1990:

	ELAS		[redacted]				
	1990	1989					
Fixed interest	17	15	4	-	20	18	14
Property	15	14	33	24	15	10	17
Equities - UK	44	47	54	60	48	44	42
non-UK	13	17	9	16	9	23	18
Mortgages, deposits etc.	11	7	-	-	8	5	9
	100	100	100	100	100	100	100

11. The requirements for producing this information are not completely unambiguous and different offices appear to take different approaches. For example, [redacted]'s 4% 'fixed interest' investments would appear to be mortgages. Other offices, including the Society, might include these in 'other' investments. The figures are, however, of value as a guide to the way in which other offices view the composition of their with profits funds.

12. As in previous years, [redacted] and [redacted] stand out as taking a more 'aggressive' stance than other offices with all, or virtually all, their with profit funds invested in equities and properties. Because of that approach, the market conditions of 1990 are likely to have resulted in a lower return for them than for offices, such as the Society, holding a proportion of their assets in fixed interest stock, deposits etc. However, as we have seen from previous analyses, their ability to take this more aggressive stance has, over longer periods, been to their advantage. No doubt that is a major contributory factor to their ability to produce competitive with profits results. Both these offices have a strong balance sheet or 'Form 9' position and should have had little difficulty weathering the poor investment conditions of 1990.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Investment considerations 1991', dated March 1991

13. The Society does not currently have, nor is likely, given our policy of full distribution, to attain the strength to pursue such an aggressive investment policy as [redacted] and [redacted]. We shall, for the foreseeable future, need to continue with a more 'balanced' portfolio. A recent survey of the With Profits Guides of 17 offices indicated that at 31 December 1989 the Society's investment mix was fairly typical of the group as a whole.

14. The fact that our investment mix is generally similar to that for a number of other offices re-emphasises the importance of a point made on previous occasions. Namely, if that is the case, we must look to out-perform within sectors in order to achieve a competitive advantage.

Implications of and risks associated with the recent bonus decisions

15. In putting the Society's financial position into context at the recent declaration, I indicated that a return of around 15% would be needed in 1991 in order to 'stand still'. That is, to be able to declare again at the same bonus rates at 31 December 1991 and present a no weaker position to the DTI than at 31 December 1990. If the 1991 return fell to around 8% we would begin having problems in maintaining declared bonuses and demonstrating solvency. In those circumstances the balance sheet position would clearly be significantly weaker than at the end of 1990.

16. At the December 1990 Investment Committee, the firm view was expressed that the most likely return for 1991 was around 13½%. On that basis, it was agreed that the risks associated with the declaration decisions were acceptable. It is, however, clear that a return much below the most likely estimate could lead to an uncomfortable position in the sense of our published position being sufficiently weak to attract adverse comment, unless most other offices were similarly placed. At some point we could also begin to attract closer scrutiny from the DTI.

17. The signs so far this year are, of course, encouraging. If at some point, however, achievement of a return of the order of 13-14% began to appear in jeopardy, then we should need to take a serious look at the potential solvency position at the year end. That may lead to the need to increase the yield on the fund rapidly so as to increase the rate of interest that can be used to discount the liabilities. For example, it may then be necessary to direct new money towards fixed interest stocks, possibly combined with some switching of existing holdings. Clearly such action, which may be in conflict with other investment objectives, would only be taken if absolutely necessary.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Investment considerations 1991', dated March 1991

18. The weakening of the liability ıluation at 31 December 1990 reflect the depressed asset values at that time. As capital values regain a more normal relationship with, say, their 31 December 1989 values, I shall be forced by the regulations to begin strengthening the basis again since the liability valuation discount rate is related to the running yield on the assets. That will imply writing-up of the fund by amounts in excess of those needed merely to cover new declared bonuses at future declarations. Clearly, the higher the income yield on the fund in any one year, the greater the room for manoeuvre we shall have in the liability valuation.

19. The above discussion is essentially concerned with declared bonuses and the solvency implications. The position on overall policy proceeds also carries investment implications. These are now considered.

20. If, in broad terms, we regard the 31 December 1989 position as one of balance between policy values and asset values, then in 1990 we allocated growth of 12% against actual fund earnings of around $-8\frac{1}{2}$%. There is, thus, a shortfall of some 20% for the year to be recovered from future earnings in order to restore a position of balance. If we allocated 12% again for 1991 then actual earnings would need to be around 30% to achieve a balanced position again by 31 December 1991. In practice the 'recovery' is likely to be achieved over a number of years. It is, however, important to remember where we are. The fact that we have got through the difficulties of 1990, and smoothed a substantial part of the effects of that for our policyholders, does not mean that we are starting 1991 from a neutral base.

21. The conclusion to be drawn is that the higher the return at market value achieved this year and next the more comfortable. A balance, therefore, needs to be struck between selecting assets expected to perform well in the short-term and those where the returns will emerge over longer timescales. That is, the deliberate sacrifice of return in the short-term needs to be controlled.

Summary and recommendations

22. Investment returns provide by far the major ingredient in with profits policy results. As always, we need to look to competitive investment performance to provide the basis for competitive policy results. The unusual experience of 1990 does, however, indicate some special considerations, particularly in the balance between long and short-term factors.

Equitable Board papers sent by the Society's Appointed Actuary to GAD on 11 June 1991

'Investment considerations 1991', dated March 1991

23. In very broad terms, for non-linked business the Society had £5bn of invested assets at 31 December 1990 together with £0.4bn on deposit. About a further £1bn of new money is likely to be available for investment during 1991. In practice, the returns achieved for the year will be dominated by the existing portfolio and the influence of the disposition of new money will be secondary, although still significant. Provided investment conditions appear reasonably 'normal', I see no reason to deviate significantly from our customary approach to the investment of new money. It is only if conditions appear likely to deteriorate that some special considerations would need to come into operation.

24. My specific recommendations in relation to investment strategy in 1991 are as follows. It is assumed that we will continue our practice of directly matching unit-linked liabilities by purchase of the corresponding assets.

(a) There is no need at the present time for any re-arrangement of the portfolio on actuarial grounds.

(b) The level of investment in index-linked securities should continue to be monitored against the growing liabilities under index-linked annuity contracts.

(c) In determining strategy, we clearly need to look to maximise overall returns. Whilst continuing our usual approach of balancing long and short-term considerations, a reasonable degree of emphasis should be placed on producing high returns in the short-term. That implies, for example, that whilst committing a 'normal' proportion of new money to assets like property with an initially low, or zero, yield would be consistent with that view, investing an unusually high proportion in that way would be inconsistent.

(d) There need be no specific actuarial constraints on investment strategy at present, beyond that mentioned in (b) above. If at any point there appears a risk of not achieving a return at least of the order of 13-14% there should be an immediate formal reassessment of investment strategy for the remainder of the year. In such circumstances some actuarial constraints may need to be imposed.

(e) If investment considerations are neutral, higher-yielding stocks should be purchased in preference to lower-yielding, as this will assist the solvency position.

Proposal for a Retirement Annuity Contract

(to be approved under the provisions of section 226 of the Income and Corporation Taxes Act 1970)

A. Personal Information Please write in block letters

1 Style or title: Mr / ~~Mrs~~ / ~~Miss~~

2 Forenames in full [redacted]

3 Surname [redacted]

4 Qualifications in abbreviated form (which are to be used in address)

5 Permanent address (which will be used for correspondence unless the proposer directs otherwise – see alongside)

[redacted]

Postcode

Telephone [redacted]

6 Other Address (if any – please specify use)

For correspondence ☐

For personal contact ☐

Postcode

Telephone*

7 Exact occupation [redacted]

8 Marital status Single/Married/Widowed

Country of birth [redacted]

10 Date of birth Day [redacted] Month [redacted] Year [redacted]

11 Sex Male/~~Female~~

If age has not been admitted by the Society under a previous policy, the Society will now require to see the proposer's birth certificate and, for a married woman, her marriage certificate as well – please indicate on the right hand side

12 Existing policy with the Society Yes ☑ No ☐

B. Details of the proposed policy Please complete one of (a), (b) and (c) below

(a) With major profits by variable premiums — First premium £[redacted] (minimum £150, further premiums are payable at the option of the policyholder)

(b) With major profits by regular monthly premiums — First monthly premium (by cheque) £______ (minimum £10; a form of standing order must be completed for subsequent payments)

(c) Without profits — Single premium £______ (minimum £500) or annual premium £______ (minimum £150)

Pension age ______ Reduced annuity and cash sum at retirement Yes ☐ No ☐

C. Statement and declaration by the proposer

1 Are you engaged on your own account or as a partner personally acting in some trade, profession or occupation? Yes ☑ No ☐

2 (i) Are you an employed person (or the holder of an Office or Employment)? ☐ ☑

(Note: A controlling directorship of a company whose income consists wholly or mainly of investment income is not an office or employment for this purpose – see section 226(9) Income and Corporation Taxes Act 1970 and Schedule 16 Part II paragraph 11 Finance Act 1972.)

(ii) If so, is one or more of your occupations non-pensionable? ☐ ☐

(Note: An occupation is pensionable if in connection therewith you are a member of a "sponsored superannuation scheme" which is any scheme or arrangement from which you expect to receive a retirement benefit whether in lump sum or pension form which will not have been wholly provided out of your own resources.)

3 Are you in receipt of any retirement benefit or entitled to any future benefit as a result of a previous full time occupation? ☐ ☑

(Note. This question need be answered only if you were born before 1916 and propose to pay a premium of more than £750 in respect of the tax year 1970/71 or any earlier tax year, or a premium of more than £1,500 in respect of one of the tax years 1971/72 to 1975/76, or a premium of more than £2,250 in respect of the tax year 1976/77 or any later tax year.)

I declare that, to the best of my knowledge and belief, (a) I am eligible to pay premiums under a retirement annuity contract approved by the Commissioners of Inland Revenue under the provisions of section 226 of the Income and Corporation Taxes Act 1970 and (b) the proposed premium together with the premiums under all such other approved contracts effected by me will qualify for relief of income tax.

I declare that the above statements and declaration are true and I agree that this declaration shall be the basis of the contract between me and The Equitable Life Assurance Society.

I understand that no annuity under the contract shall be capable of being surrendered, assigned or commuted except as provided by section 226 of the Income and Corporation Taxes Act 1970.

If the proposed contract shall be in the major profits class I agree, if and when the said contract shall be effected, to become a member of the Society in respect thereof.

109

110

Tı Equitable Life Assurance Socie ,

Whereas

(1) The Grantee has proposed to the Society whose registered office is at 4 Coleman Street in the City of London to purchase from the Society a retirement annuity in the With Profits Class on the life of the Grantee in accordance with the provisions hereinafter contained and has delivered to the Society as the basis of the contract a proposal and declaration and has paid to the Society the premium specified in Endorsement 1

(2) The Grantee is entitled by virtue of this Policy in accordance with the Regulations of the Society to be a Member of the Society

(3) This Policy is approved by the Commissioners of Inland Revenue under Section 226 of the Act

Now this policy witnesseth as follows:

1. In this Policy unless there is something in the subject or context inconsistent therewith the expressions contained in the First Schedule shall have the meanings set opposite them respectively

2. The Society hereby covenants with the Grantee that if the Policy shall continue to be approved as aforesaid then:

   (a) if the Grantee shall survive to the Selected Pension Date the Society will pay to the Grantee the Annuity increased by Related Bonuses (if any); or

   (b) if the Grantee shall die before the Selected Pension Date the Society will pay to the Executors or Administrators of the Grantee the Death Benefit

   upon and subject to the terms and conditions set out in this Policy

3. The Grantee shall be entitled to exercise the option to pay a further premium or premiums to secure a Further Annuity or Further Annuities which is contained in the Second Schedule upon and subject to the terms and conditions therein set out

4. The Grantee shall be entitled to exercise the options to take alternative benefits which are contained in the Fourth Schedule upon and subject to the terms and conditions therein set out

5. This Policy is subject to the terms conditions and provisions contained in the Schedules hereto and in Endorsement 1 and any other Endorsements subsequently issued for attachment hereto and signed by an Officer of the Society duly authorised for that purpose and the said Schedules (the page reference numbers whereof are 2 3 4 5 6 7 8 9 10 11 12 13 14 15) and the said Endorsements shall form part of this Policy

The Equitable Life Assurance Society

The First Schedule

Definitions

the Society	means The Equitable Life Assurance Society
the Grantee	means the Grantee named in Endorsement 1
the Annuity	means the Annuity purchased by the premium specified in Endorsement 1 and calculated in the manner specified in the Sixth Schedule
Further Annuity	means a Further Annuity purchased pursuant to the provisions of the Second Schedule and calculated in the manner specified in the Sixth Schedule
the Death Benefit	means the benefit described in paragraph 7.0 of the Third Schedule
Related Bonuses	means in relation to the Annuity or (as the case may be) any Further Annuity such amounts (if any) as shall under the rules and regulations of the Society have been allotted by way of addition to or bonus thereon
the Selected Pension Age	has the meaning ascribed thereto by the provisions of the Third Schedule
the Selected Pension Date	means the date upon which the Grantee attains the Selected Pension Age
Accumulation Value	means in relation to any premium the Accumulation Value thereof calculated in the manner specified in the Sixth Schedule
Policy Annuity Value	means in relation to all or part of the Annuity increased by Related Bonuses (if any) or (as the case may be) all or part of any Further Annuity increased by Related Bonuses (if any) the Policy Annuity Value attributable thereto calculated in the manner specified in the Sixth Schedule
Premium Day	means in any particular year the Premium Day specified in Endorsement 1
Policy Year	means a year commencing on a Premium Day
the Act	means the Income and Corporation Taxes Act 1970
Substituted Contract	means a contract providing benefits in substitution for all or part of those provided under this Policy as provided for in Section 26 of the Finance Act 1978 and approved by the Commissioners of Inland Revenue under Section 226 of the Act
Eligible Individual	means an individual who is or would but for an insufficiency of profits or gains be chargeable to tax in respect of "relevant earnings" (as defined in Section 226 of the Act) from any trade profession vocation office or employment carried on or held by him or her
Table A	means the Table so described which is contained in the Sixth Schedule
Table B	means the Table so described which is contained in the Sixth Schedule or any Table substituted therefor pursuant to the terms hereof

111

112

The Equ. .ble Life Assurance Society

The Second Schedule

Option To Pay a Further Premium or Premiums

Option to pay a further premium or premiums

1.1 The Grantee shall have the option under this Policy of paying to the Society on any day or days during any Policy Year a further premium or premiums to secure a Further Annuity or Further Annuities in the With Profits Class

1.2 The amount of each further premium shall be determined by the Grantee at the time of payment but in any event shall not be less than £150 provided always that the total amount of all premiums paid in any Policy Year shall not in any event exceed the maximum amount approvable by the Commissioners of Inland Revenue

1.3 The Further Annuity purchased by any such further premium shall be calculated in the manner specified in the Sixth Schedule

1.4 If the Grantee shall in any Policy Year fail to exercise the option contained in paragraph 1.1 of this Schedule then the said option shall forthwith cease to be exercisable provided that the Society may at its absolute discretion accept a further premium or premiums thereafter upon such terms as the Society shall in its absolute discretion think fit

1.5 On payment of any further premium the Society shall issue to the Grantee for attachment hereto an endorsement recording the amount of such further premium

1.6 The option contained in paragraph 1.1 of this Schedule shall not be exercisable after the Selected Pension Date

Eligibility of the Grantee

2.1 The Society may before accepting any further premium payable hereunder in accordance with paragraph 1.1 of this Schedule require the Grantee to supply such information and make such declarations as the Society may deem necessary to satisfy the Society that the Grantee continues to be an Eligible Individual

2.2 Upon the basis of such information and declaration the Society may from time to time determine whether the Grantee remains an Eligible Individual and if the Grantee shall fail to produce such information or make such declarations in a form satisfactory to the Society within six months of being required so to do the Grantee shall be deemed to have ceased to be an Eligible Individual

314

The Equitable Life Assurance Society

The Second Schedule (continued)

2.3 If at any time either the Commissioners of Inland Revenue shall give notice to the Society that they have withdrawn approval of this contract or the Society shall cease to be satisfied that the Grantee continues to be an Eligible Individual then from and after the date specified in such notice or (as the case may be) the date on which the Society ceases to be so satisfied the option contained in paragraph 1.1 of this Schedule shall cease to be exercisable and the Society will return any premiums submitted after that date which shall then be treated as not having been paid

Page ref No 4

113

114

Th. Equitable Life Assurance Society

The Third Schedule

Benefit Schedule

The Annuity payable hereunder

1.1 The Annuity shall be calculated in the manner specified in the Sixth Schedule

1.2 The Annuity increased by Related Bonuses (if any) shall be payable from the Selected Pension Date during the remainder of the lifetime of the Grantee by equal quarterly instalments in advance the first instalment being payable on the Selected Pension Date and subsequent instalments being payable at the commencement of each subsequent period of three months during the lifetime of the Grantee

Further Annuities

2.0 Any Further Annuity purchased hereunder increased by Related Bonuses (if any) shall be payable at the same time and in the same manner as the Annuity increased by Related Bonuses (if any) as if it were part thereof and any provisions of this Policy relating to the Annuity shall apply also to such Further Annuity

The Selected Pension Age

3.1 The Selected Pension Age shall be:

3.1.1 the age chosen by the Grantee as provided in paragraph 3.2 of this Schedule as being that at which the Annuity is to commence or (as the case may be)

3.1.2 the age deemed to be the Selected Pension Age pursuant to paragraph 4.0 or paragraph 5.0 of this Schedule

3.2 The Grantee shall choose the Selected Pension Age on or within one calendar month of attaining that age by completing and signing an application in such form as the Society shall stipulate and producing the same to the Society at its Registered Office for registration together with this Policy

3.3 The Grantee may choose as the Selected Pension Age the age of 70 years or any lesser age provided that if the age selected be less than 60 years it shall be proved to the satisfaction of the Society that the Grantee is incapable through infirmity of mind or body of carrying on his own occupation or any occupation of a similar nature for which he is trained or fitted in which case the annuity payable at the Selected Pension Age shall be of such amount as may be agreed between the Grantee and the Society and shall be paid in lieu of all other benefits hereunder

~~316~~

The Equitable Life Assurance Society

The Third Schedule (continued)

Position until the Selected Pension Age has been chosen	4.0	Unless and until the Grantee shall have chosen an age as the Selected Pension Age the Selected Pension Age for all the purposes of this Policy (including the calculation of the Annuity and any Further Annuities and the Policy Annuity Value(s) of the Annuity and any Further Annuities) shall be deemed to be the age of 70 years
Failure to choose the Selected Pension Age	5.0	If the Grantee shall have attained the age of 70 years plus one calendar month without having chosen an age in accordance with the provisions of paragraph 3.2 of this Schedule then and in such case he or she shall be deemed for all the purposes of this Policy (including those mentioned in paragraph 4.0 of this Schedule) to have chosen the age of 70 years as the Selected Pension Age and the right of choice given by paragraph 3.2 of this Schedule shall thereupon cease to be exercisable
Selection of a later age than 70 years	6.0	If the premium specified in Endorsement 1 shall have been paid by the Grantee after he or she has attained the age of 70 years or if the Grantee shall on or within one calendar month of attaining that age elect by making written application to the Society in such form as the Society shall stipulate to be able to choose as the Selected Pension Age an age exceeding 70 years but not exceeding 75 years then
	6.0.1	an endorsement to that effect shall be prepared by the Society for attachment to this Policy
	6.0.2	a new Table calculated on the same basis as Table B but applicable after the age of 70 years shall be substituted for Table B
	6.0.3	the age of 75 shall be substituted for the age of 70 whenever the latter age appears in this Policy other than in this paragraph 6.0 and the sub-paragraphs thereof
	6.0.4	an appropriate amount of additional Stamp Duty will be paid to the Commissioners of Inland Revenue in respect of the variation of the Policy

115

116

The Equitable Life Assurance Society

The Third Schedule (continued)

Death Benefit	7.0	If the Grantee shall die before the Selected Pension Date then after satisfactory proof shall have been delivered to the Society of the death of the Grantee and of the title to receive payment and on delivery of this Policy duly discharged the Society will pay to the Executors or Administrators of the Grantee in lieu of all other benefits payable under this Policy a sum equal to the aggregate amount of the premium specified in Endorsement 1 and any further premiums paid and retained hereunder together with compound interest on each such premium calculated at the rate of six per centum per annum with yearly rests from the date of payment thereof to the date of death of the Grantee
Interest on Death Benefit	8.0	Interest on the Death Benefit will be paid by the Society calculated from a date one month after the date upon which written notification of the death of the Grantee shall have been received by the Society up to the actual date of payment the rate of interest being at the Society's absolute discretion and any payment of interest being subject to deduction of any tax applicable thereto
Illustration of Benefits	9.0	The section of Endorsement 1 which is headed "Illustration of Benefits" and the section so headed in any endorsement subsequently issued for attachment to this policy are inserted by way of illustration only

318

RAW 5/79

e Equitable Life Assurance So

The Fourth Schedule

Options to Take Alternative Benefits

Option to effect a Substituted Contract

1.1 At the time of choosing the Selected Pension Age the Grantee may elect upon the terms and conditions hereinafter appearing to renounce all or part of the Annuity increased by Related Bonuses (if any) and in lieu thereof to have the Policy Annuity Value in respect thereof at the Selected Pension Age applied as a premium under a Substituted Contract

1.2 Such election shall be made by the Grantee by giving written notice to the Society in such form as the Society shall stipulate

1.3 The assurer with whom the Substituted Contract is to be effected shall be selected by the Grantee and named by him in the written notice mentioned in paragraph 1.2 of this Schedule and before giving the said written notice the Grantee shall ascertain that the assurer named therein is prepared to accept the premium mentioned in paragraph 1.1 of this Schedule and to issue the Substituted Contract

1.4 The application of the Policy Annuity Value in respect of the Annuity pursuant to paragraph 1.1 of this Schedule shall be subject to such terms and conditions as the Commissioners of Inland Revenue may from time to time impose

Option to take an annuity calculated by reference to tables in use by the Society at the Selected Pension Date

2.0 At the time of choosing the Selected Pension Age the Grantee may elect by giving written notice to the Society in such form as the Society shall stipulate to renounce all or part of the Annuity increased by Related Bonuses (if any) (or all or part of what remains thereof after the option contained in paragraph 1.1 of this Schedule shall have been exercised) and to be paid in lieu thereof an annuity calculated by reference to the Policy Annuity Value of the benefit so renounced and the table of rates in use by the Society at the Selected Pension Date for a contract providing an immediate annuity approved under Section 226 of the Act having regard to the sex of the Grantee and the age of the Grantee at the Selected Pension Date

117

118

The Equitable Life Assurance Society

The Fourth Schedule (continued)

Option to alter benefits

3.0 At the time of choosing the Selected Pension Age the Grantee may elect by giving written notice to the Society in such form as the Society shall stipulate to alter the benefit payable hereunder (or what remains thereof after the options contained in paragraphs 1.1 and 2.0 of this Schedule shall have been exercised) in such manner and to such extent as the Society and the Grantee shall agree (whether by commutation of part thereof for a cash sum or by substitution therefor of an annuity of reduced amount which shall be payable during the remainder of the lifetime of the Grantee but in any event for a minimum period of years or by renunciation of part thereof in exchange for a subsidiary annuity or annuities for the benefit of a spouse or child or other dependant of the Grantee or otherwise howsoever) but subject always to any limitations or conditions from time to time imposed in respect of such alteration by the Commissioners of Inland Revenue including those specified in paragraph 4.0 below

Limitation in benefits

4.0 Unless the limitations or conditions imposed by the Commissioners of Inland Revenue which apply at the time when an election under paragraph 3.0 of this Schedule is made by the Grantee do not so require the following conditions shall apply when such election is made:

4.0.1 The amount to be paid by way of commutation of part of the benefit payable hereunder shall not exceed three times the amount of the annuity remaining payable to the Grantee after such commutation

4.0.2 The minimum period for which any annuity payable to the Grantee shall be expressed to be payable in any event shall not exceed 10 years

4.0.3 In respect of the renunciation of a part of the benefit payable hereunder in exchange for a subsidiary annuity or annuities (taking into account any reduction of such benefit resulting from any commutation thereof) the amount of the subsidiary annuity or (as the case may be) the aggregate amount of the subsidiary annuities shall not exceed the amount of the annuity remaining payable to the Grantee after such renunciation and the first payment of the subsidiary annuity or (as the case may be) the subsidiary annuities shall be made on the due date next following the death of the Grantee or (if later) the expiry of any minimum period for which the annuity payable to the Grantee shall be expressed to be payable in any event

320

The Equitable Life Assurance Society

The Fifth Schedule

Schedule of Conditions

Restrictions on dealings with benefits	1.1	No annuity payable under this Policy shall be capable in whole or in part of surrender or commutation except as provided for in the Fourth Schedule
	1.2	The Society will not recognise any assignment or purported assignment (legal or equitable) of any annuity payable under this Policy or of the Death Benefit and notwithstanding notice of any such assignment or purported assignment the Society shall: 1.2.1 pay such annuity to the Grantee or other the trustees of any other annuitant or (as the case may be) 1.2.2 pay the Death Benefit to the Executors or Administrators of the Grantee whose receipt shall be a full and sufficient discharge to the Society except where bankruptcy or other laws or Court Orders shall require payment otherwise than to the Grantee or such trustees as aforesaid or (as the case may be) to the Executors or Administrators of the Grantee
Alterations	2.0	No alteration in the terms of this Policy shall be permitted without the approval of the Commissioners of Inland Revenue
Proof of existence and title	3.0	Every annuity payable under this Policy shall be paid upon proof satisfactory to the Society of the annuitant being alive and of title to receive the payment and the Society may in addition before granting any subsidiary annuity pursuant to paragraph 3.0 of the Fourth Schedule require the production to the Society of proof satisfactory to the Society of the age of the proposed subsidiary annuitant and his or her relationship to the Grantee

119

120

Equitable Life Assurance Soc.

The Fifth Schedule (continued)

Participation in Profits	4.0	This Policy shall confer right to participation in the profits of the Society up to the Selected Pension Date and no longer
Limitation of Liability	5.0	The Society shall only be liable under this Policy to the extent of its assets and property from time to time existing and available for satisfying claims under this Policy and no Member of the Society and no other person who is at any time in any way interested in any policy shall be liable to any call or contribution whether in any liquidation of the Society or otherwise howsoever for satisfying any claim or demand under or in respect of this Policy whether by the Grantee or by any other person for the time being interested herein
Interpretation	6.1	References in this Policy to any section in an Act of Parliament shall be deemed to include any statutory re-enactment or amendment of such section
	6.2	Marginal headings are inserted for convenience only and shall not be taken into account in the interpretation of this Policy
Payments	7.1	All payments by the Society under this Policy shall be payable at the Registered Office of the Society
	7.2	All premiums payable under this Policy shall be paid at the Registered Office of the Society or in such other manner as the Society may approve in writing

322

R.A.W. 5/79

The .quitable Life Assurance Societ.

The Sixth Schedule

Calculation of Annuities and Policy Annuity Values

Calculation of the Annuity and any Further Annuity

1.1 The Annuity and any Further Annuity payable at the Selected Pension Date shall be calculated in the following manner

1.2 The Accumulation Value at the Selected Pension Date of the premium paid in respect of the Annuity and (as the case may be) the Further Annuity shall first be ascertained in accordance with paragraph 1.3 or (as the case may be) paragraph 1.4 of this Schedule

1.3 The Accumulation Value at the Selected Pension Date of any premium paid on a date falling on or within 30 days after any Premium Day shall be calculated as follows:

1.3.1 the number of complete years between the Premium Day in question and the Selected Pension Date shall be ascertained

1.3.2 the amount of Accumulation Value attributable to such complete number of years and to the amount of the premium in question shall then be ascertained by reference to Table A

1.3.3 unless the Selected Pension Date is a Premium Day the Accumulation Value so determined shall be increased by one half of one per cent in respect of each complete calendar month between the Selected Pension Date and the Premium Day immediately preceding that date

and the Accumulation Value so determined and (where appropriate) increased shall be the Accumulation Value of the premium in question at the Selected Pension Date

1.4 The Accumulation Value at the Selected Pension Date of any premium paid at any time other than on or within 30 days after any Premium Day shall be calculated as follows:

1.4.1 the number of complete years between the Premium Day next following the date of payment of the premium in question and the Selected Pension Date shall be ascertained

121

Page ref No 12

122

The Equitable Life Assurance Society

The Sixth Schedule (continued)

1.4.2 the amount of Accumulation Value applicable to such number of complete years and to the amount of the premium in question shall be ascertained by reference to Table A (provided that if the Premium Day next following the date of payment of the premium in question falls after the Selected Pension Date the amount of Accumulation Value applicable to a premium of £100 shall be taken as £92.27 and the amount of Accumulation Value applicable to premiums greater or smaller than £100 shall be calculated proportionately)

1.4.3 the Accumulation Value so determined shall be increased by one half of one per cent in respect of each complete calendar month or part of a calendar month between the date of payment of the premium in question and the Premium Day next following that date

1.4.4 unless the Selected Pension Date is a Premium Day the Accumulation Value so determined and increased shall be further increased by one half of one per cent in respect of each complete calendar month between the Selected Pension Date and the Premium Day immediately preceding that date

and the Accumulation Value so determined and (where appropriate) so increased shall be the Accumulation Value of the premium in question at the Selected Pension Date

1.5 Having ascertained the Accumulation Value at the Selected Pension Date of the premium paid in respect of the Annuity and (as the case may be) the Further Annuity in accordance with the preceding paragraphs of this Schedule the amount of Annuity and (as the case may be) the Further Annuity shall be the amount of annuity attributable to such Accumulation Value at the Selected Pension Age by reference to Table B

Calculation of Policy Annuity Value

The Policy Annuity Value at the Selected Pension Date of the Annuity increased by Related Bonuses (if any) and the Policy Annuity Value at the Selected Pension Date of any Further Annuity increased by Related Bonuses (if any) shall be the amount of Accumulation Value attributable thereto which shall be ascertained by reference to Table B

And the Policy Annuity Value at the Selected Pension Date of a part of the Annuity increased by Related Bonuses (if any) and (as the case may be) a part of any Further Annuity increased by Related Bonuses (if any) shall be calculated proportionately

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Original treaty

IRECO

LIFE REINSURANCE AGREEMENT

between

Irish European Reinsurance Company Limited

of

Dublin, Ireland

(hereinafter called the Reinsurer)

and

The Equitable Life Assurance Society

Of

Aylesbury, England

(Hereinafter called the Reinsured)

Document Number:02564 Page 1

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Original treaty

IRECO

Article I - Business Covered:

All Retirement Annuities, Individual Pension Plans and Transfer Plans issued by the Reinsured on or before 30 June 1988

Article II Inception Date:

The contract will incept on 31 December 1998

Article III - Duration:

The reinsurance is of unlimited duration but may be cancelled by the Reinsured in respect of future years, subject to 3 months notice prior to any December 31.

If notice is given, no further Deposit Premiums will be paid but any and all future Adjustment Premiums under this reinsurance will be paid in accordance with the terms outlined below.

Article IV Claims:

The Reinsurer will be liable for claims arising from the business covered to the extent detailed in Appendix I to this agreement.

Furthermore, the Reinsurance Claims Amount as defined in said Appendix I will be withheld by the Reinsurer. However, at any 31 December, the Reinsurer will pay an interest amount (being 12 months LIBOR) on the outstanding Reinsurance Claims Amount if requested to do so by the Reinsured if required by the Reinsured to properly satisfy the requirements of s35A(1)(a) of the Insurance Companies Act 1982 or, if the payment of an interest amount has not been requested , the Reinsured will be entitled to request a cash payment of up to 10% of the outstanding Reinsurance Claims Amount.

Article V Premium:

For each year that this reinsurance is in force, the Reinsured will pay a deposit premium of £400,000, adjusted in line with the increase in the UK Retail Prices Index from November 1998 to the the month of November immediately preceding the Renewal Date. The deposit premium for the first year will be payable in two instalments: the first being £150,000 is due as at the Commencement Date and the second instalment of £250,000 on April 1st 1999. For each subsequent year the full deposit premium shall be due on the Renewal Date. The deposit premium is payable in cash to the Reinsurer. However, should a reinsurance Claim Event occur an adjustment premium will be calculated as described in Appendix II to this agreement.

Document Number:02564 Page 2

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Original treaty

IRECO

Article VI - Accounts:

The Reinsured will prepare Accounts and submit them to the Reinsurer by the end of February each year. The first Account will be in respect of calendar year 1999.The Reinsured will supply information for the Reinsurer to check the Accounts in outline. The exact format of the Documentation will be agreed between the parties.

Article VII Currency:

All amounts referred to and all accounts under this contract shall be in British Pounds.

Article VIII - Inspection of Records:

The Reinsurer will have the right to inspect the records of the Reinsured in respect of the Business Covered. For as long as either party remains under any liability hereunder, the Ceding Office shall, upon request by the Reinsurer, make available for inspection at any reasonable time by such representatives as may be authorised by the Reinsurer for that purpose, all information relating to the business reinsured hereunder in the Ceding Offices possession or under its control and the said representatives may arrange for copies to be made of any of the records containing such information as they may require.

Article IX Errors & Omissions:

Errors and inadvertent omissions shall not affect the rights and obligations of either party under this agreement, however, they shall be immediately rectified upon discovery

Article X - Termination:

Each party is entitled to terminate the treaty without giving prior notice if

1. The fulfilment of the treaty becomes legally or practically impossible for reasons which are beyond the responsibilities of the treaty parties (such as the country where either party is domiciled becomes involved in a war);
2. The other party becomes insolvent or goes into liquidation or a Receiver/Administrator is appointed or has its licence to conduct insurance business revoked as defined in Section 13 of the Insurance Companies Act 1982;
3. The other party loses more than 50% of its paid up capital;
4. The other party transfers its business to a third party;
5. The other party is acquired by or merged with or comes under the control of another company;
6. The other party does not meet its obligations under this treaty despite having received formal reminders to do so.

In the event of cancellation under parts 2, 3, 4 ,5 and 6 of this clause the portfolio at the date of termination will be withdrawn and the Reinsured shall refund to the Reinsurer at the same point in time any Reinsurance Claims Amount and any outstanding cash balance in full, subject to the requirement that in the event of cancellation under part 2 of this clause such

Document Number:02564 Page 3

IRECO

refund will be subordinate to the Reinsured's liabilities in liquidation towards its policyholders under the terms of its long term policies. However, the Reinsurer will retain the right of offset against future Recovery Amounts due.

In the event of cancellation under part 1 of this clause no further Reinsurance Claim Events will be admissible. The reinsurance will be terminated at the earliest date at which no Recovery Amount is due. However, not later than 5 years from the termination date, the Reinsured shall refund to the Reinsurer any remaining Reinsurance Claims Amount and outstanding cash balance in full. The above notwithstanding should cancellation be effected under part 1 and part 2 simultaneously the rights granted to policyholders as a result of cancellation under part 2 as outlined above shall have precedence.

Article XI Arbitration:

The Reinsured and the Reinsurer intend to follow the customs and practices of the insurance and reinsurance industry in the operation of and interpretation of this Agreement. The parties agree to act in all things with the highest good faith.

In the event of any dispute between contracting parties concerning any matters arising from this Agreement including those pertaining to its validity, the dispute will be referred to two Arbitrators, one to be chosen by each party.

If either party refuses or neglects to appoint an Arbitrator within two calendar months after the other party has appointed an Arbitrator and has served notice upon the first mentioned party requiring that party to make such an appointment, then the Arbitrator appointed as aforesaid will, at the request of the party appointing him, proceed to hear and determine the matters in difference as sole Arbitrator.

The two Arbitrators (if both parties have duly appointed Arbitrators) will, before entering on the reference, in writing appoint an Umpire and, unless they appoint an Umpire within one calendar month, after the date of the appointment as Arbitrator of whichever of them has last been appointed, an Umpire will be appointed by the Chairman for the time being of the Life Insurance Council of the Association of British Insurers if Arbitration is to be held in the United Kingdom or, if Arbitration is to be held in the Republic of Ireland, the Umpire will be appointed by a senior official of an equivalent or similar local body. The Umpire will not take part in the proceedings unless the two Arbitrators fail to agree and then only regarding the points unsettled.

The Arbitration will be held in the United Kingdom if the Reinsured is the defendant party and in the Republic of Ireland if the Reinsurer is the defendant party and the award will be final and binding on both parties.

The cost of the reference and award will be in the discretion of the Arbitrators, Arbitrator or Umpire who may direct to and by whom and in what manner the same or any part thereof will be paid with power to tax or settle the amount of the costs to be so paid or any part thereof.

Document Number:02564 Page 4

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Original treaty

IRECO

The Arbitrators, Arbitrator and Umpire will hold leading positions in Companies transacting Life Insurance and/or Life Reinsurance and will regard this Agreement rather from the standpoint of practical business and equity than from that of strict law and their award will have regard to these principals.

This agreement to submit disputes to Arbitration will be construed as a separate and independent contract between the parties hereto.

Article XII Governing Law:

This Agreement shall be governed by and construed in accordance with the Law of the United Kingdom.

Article XIII Miscellaneous:

This Agreement may be amended on the agreement of both parties. In the event of any dispute, this will be subject to arbitration on the basis set down in Article XI of this Agreement.

The Reinsurer offers the reinsurance cover on the basis of information supplied to it by the reinsured. The reinsured will warrant that the information supplied is, to the best of its knowledge and belief correct and an accurate summary of its records. Should any material differences emerge from the information supplied then any dispute that may arise will be referred to arbitration for the reinsurance terms to be amended or rescinded.

The reinsurance will apply so long as the Reinsured makes no change to its current practice regarding the exercising of guaranteed annuity options as represented to the Reinsurer in the attached schedule (Appendix III). Should any change occur, either at the choice of the Reinsured or as a result of any legal action brought against the Reinsured, then no further Reinsurance Claim Events will be admissible. In that event, the reinsurance will be terminated at the earliest date at which no Recovery Amount is due.

In the event that the total withheld reinsurance claims balance exceeds £100,000,000 at any December 31 negotiations will take place to find a mutually agreeable restructuring of the treaty which will include a redefinition of the Adjustment Premiums in respect of future years.

The Equitable Life Assurance Society Date: 11 October 1999

For and on behalf of

[redacted]

Date: 30 September 1999

[Irish European Reinsurance Company Limited]

Document Number:02564 Page 5

IRECO

Appendix I

Reinsurance Claim Event :

For each calendar year the Reinsured will calculate the following amounts:-

GA = The total guaranteed funds for all retirements under the business covered

GG = The total guaranteed funds used to secure guaranteed annuity benefits for all retirements under the business covered where the policyholder exercises the guaranteed annuity option.

FG = The total funds (including final bonus) available to all retirements under the business covered where the policyholder exercises the guaranteed annuity option

For the purposes of the reinsurance, guaranteed funds will be taken to mean the total funds available from the original guaranteed benefit defined in the policy schedule and the total attaching reversionary bonus. The total funds will be taken to mean the guaranteed funds plus any and all final bonuses added to a maturing policy.

A Reinsurance Claim Event will be deemed to occur in respect of any year where the ratio GG/GA exceeds 25%.

Reinsurance Claim :

When a Reinsurance Claim Event is deemed to occur in respect of any calendar year, the Reinsurer's Liability for that year will be determined as the sum of

$$\frac{\text{Guaranteed Funds} * \text{Guaranteed Annuity Rate}}{\text{Current Annuity Rate}}$$

where the summation is carried out over all policies for which the guaranteed annuity option has been exercised. The result of this calculation will be denoted by GO.

The Guaranteed Annuity Rate will be that applicable in the policy document for each relevant case.

The Current Annuity Rate will be that available from the Reinsured at the date of retirement for the same mode of payment as that in the Guaranteed Annuity Rate.

The Reinsurer's Liability is then given by:

$$(1 - 0.25*GA/GG) * (GO - GG)$$

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Original treaty

IRECO

Claims Recovery Premium :

When a Reinsurance Claim Event is deemed to occur in respect of any calendar year, a Claims Recovery Premium will be due for simultaneous payment by the Reinsured to the Reinsurer.

The Recovery Premium will be determined as :

$$(1 - 0.25*GA/GG) * (FG - GG)$$

Reinsurance Claims Amount :

In respect of any calendar year, the Reinsurance Claims Amount will be determined as the Reinsurer's Liability less the Claims Recovery Premium.

[redacted]

Document Number:02564 Page 7

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Original treaty

IRECO

Appendix II

Adjustment Premium :

If a Reinsurance Claim event has occurred, then the Reinsured will pay an Adjustment Premium determined in two parts:

i) A Recovery Amount of 35% of the Reinsurance Claims Amount payable each year until the total amount paid is equal to the Reinsurance Claims Amount.

For a Reinsurance Claim event in Year N, the first Recovery Amount will be due as at the end of Year (N+1). The Recovery Amount will be withheld by the Reinsured and used to write down the amount owing from the Reinsurer.

ii) A Risk Amount of 2% of the outstanding Reinsurance Claims Amount, payable as long as a Recovery Amount is due.

For a Reinsurance Claim event in Year N, the first Risk Amount will be due as at the end of Year N. The Risk Amount will be paid in cash to the Reinsurer.

Furthermore, should an interest amount be paid on the outstanding Reinsurance Claims Amount by the Reinsurer or should any portion of the Reinsurance Claims Amount be paid as cash in any year, then a fee of LIBOR plus 3.5% shall be payable annually on the opening balance of this individual portion for each annual period until such time as this interest amount or cash payment is repaid in full to the Reinsurer.

The Adjustment Premium payable at the end of a year will not exceed the lower of:

a) the change during that year in the excess of the Available Assets over the Required Minimum Margin plus the Bonus Payments made to Policyholders in Anticipation of a Surplus during the year; and
b) the total of the amounts calculated in (a) for all years since the Commencement Date of this treaty,

excluding for the purpose of these calculations the amount of the Adjustment Premium that is being determined.

Hereby the following definitions apply:

Available Assets = Form 9 Line 25 of the HM Treasury Returns
Required Minimum Margin = Form 9 Line 41of the HM Treasury Returns
Bonus Payments made to Policyholders in Anticipation of a Surplus = Form 58 Line 41 of the HM Treasury Returns

[redacted]

Document Number:02564 Page 8

Original treaty

IRECO

The Adjustment Premium payable in any year will be used first to pay

A) Any annual interest fees on the unpaid part ii)Risk Amounts for previous years as described below ;

B) Any unpaid part ii) Risk Amounts for previous years ;

C) the part ii) Risk Amount due for the current year,
on the basis that the annual interest fees in A) are paid first then the part ii) Risk Amounts in B) and C) are paid, on a first in, first out basis. The remaining balance of the Adjustment Premium, if any, will be used to pay the part i) Recovery Amounts as described above.

If the Adjustment Premium for any year is insufficient to pay all of the part ii) Risk Amounts which are due, as described in B) and C) of the previous paragraph, an annual interest fee of LIBOR plus 3.5% shall be payable on the opening balances of the unpaid part ii) Risk Amounts for each annual period until all part ii) Risk Amounts have been paid to the Reinsurer in full. The Adjustment Premiums for future years will be increased, subject to the limit on the Adjustment Premium set out above, by the total amount of the unpaid part ii) Risk Amounts and the unpaid annual interest fees on those amounts.

That part of the Adjustment Premium which is required to pay part ii) Risk Amounts and annual interest fees, as described in A), B) and C) above, must be paid in cash to the Reinsurer each year within 30 days of receipt of the annual account. Any overdue payment will incur a late payment charge of LIBOR plus 3.5% from the due date until the actual payment date.

If in any year that part i) of the Adjustment Premium is not paid then the Reinsurance Claims Amount will be carried forward and settled when it is possible to pay that unpaid balance from the Adjustment Premium. If there has been more than one Reinsurance Claim Event for which part i) Recovery Amounts have not been paid then, subject to the provisions of the previous paragraph, the available funds will be applied to the Reinsurance Claim Events on a first in, first out basis.

Document Number:02564 Page 9

Appendix III

The Reinsured's current practice with regard to the exercising of guaranteed annuity options, as represented to the Reinsurer, is described below.

A guaranteed annuity option can be exercised only if annuity benefits are taken in a form of annuity for which guaranteed annuity rates are prescribed in the policy terms.

If a guaranteed annuity option is exercised by the policyholder selecting a form of annuity to which guaranteed annuity rates apply, the annuity secured by that part of the policy proceeds is calculated as the greater of :

a) The "relevant policy proceeds" excluding the final bonus element of those proceeds multiplied by the appropriate guaranteed annuity rate ; and
b) The annuity secured by the total "relevant policy proceeds" using the Society's current annuity rates in force at that time for the selected form of annuity,

where the "relevant policy proceeds" are defined as that part of the total policy proceeds which are used to provide the selected form of annuity benefits .

26 August, 1999

Re: Our Reinsurance Treaty

[redacted]

Further to our telephone conversation of this morning, I would like to confirm that both parties agree to the following amendment to the treaty.

In the event of the Equitable Life having to change its current practice regarding the exercising of guaranteed annuity options as a result of the discussed court case, on which Equitable Life are awaiting a decision, the reinsurance coverage shall remain in place, in full, for a further 90 days following such a decision.

This amendment does not in any way effect any other rights or obligations of either party under this treaty and is in principle a deferral of the application of Article XIII paragraph 3 for 90 days should the specific situation outlined above occur.

This letter will form an integral part of the overall treaty, as such your signing and returning of one copy of this letter, as confirmation of your agreement would be most appreciated.

Yours sincerely,

[redacted]

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 1

IRECO

As at 31.12 1999 the following conditions of the above Life Reinsurance Agreement will be changed as follows:

Article I - Business Covered:

All Retirement Annuities, Individual Pension Plans and Transfer Plans issued by the Reinsured on or before 30 June 1988, and

all Group Pension Business, other than Simplified Administration Pension Scheme (SAPS) business and Group Final Salary business, in respect of members of schemes effected with the Reinsured on or before 30 June 1988 who have a contractual option to take annuity benefits on guaranteed minimum rates.

Article V - Premium

For each year that this reinsurance is in force, the Reinsured will pay a deposit premium of GBP 625,000, adjusted in line with the increase in the UK Retail Price Index from November 1999 to the month of November immediately preceding the Renewal Date. For each year the full deposit premium shall be due on the Renewal Date. The deposit premium is payable in cash to the Reinsurer. However, should a reinsurance Claim Event occur an adjustment premium will be calculated as described in Appendix II to this agreement.

All other conditions will be unchanged.

Addendum 2

IRECO

As at 31 December 1999 the following conditions of the above Life Reinsurance Agreement will be changed with effect from 10 August 2000 as follows:

Article IV - Premium

For each year that this reinsurance is in force, the Reinsured will pay a deposit premium of GB£700,000, adjusted in line with the increase in the UK Retail Price Index from November 1999 to the month of November immediately preceding the Renewal Date. The deposit premium for year commencing 31 December 1999 will be payable in two instalments: the first instalment of GB£625,000 is due as at 31 December 1999 and the second instalment of GB£75,000 is due on 1 September 2000. For each subsequent year the full deposit premium shall be due on the Renewal Date. The deposit premium is payable in cash to the Reinsurer. However, should a reinsurance Claim Event occur an adjustment premium will be calculated as described in Appendix II to this agreement.

Appendix I

The conditions set out below will be changed as follows:

Reinsurance Claim Event :	A Reinsurance Claim Event will be deemed to occur in respect of any year where the ratio GG/GA exceeds 60%.
Reinsurance Claim :	The Reinsurer's Liability will be given by: (1 - 0.60*GA/GG) * (GO - GG)
Claims Recovery Premium :	The Claims Recovery Premium will be determined as : (1 - 0.60*GA/GG) * (FG - GG) subject to a maximum equal to the Reinsurer's Liability.

All other conditions in Appendix I will be unchanged.

Appendix III

The Reinsured's current practice with regard to the exercising of guaranteed annuity options, as represented to the Reinsurer, is described below.

A guaranteed annuity option can be exercised only if annuity benefits are taken in a form of annuity for which guaranteed annuity rates are prescribed in the policy terms.

If a guaranteed annuity option is exercised by the policyholder selecting a form of annuity to which guaranteed annuity rates apply, the annuity secured by that part of the policy proceeds is calculated as the "relevant policy proceeds" multiplied by the appropriate guaranteed

(hereinafter called the Reinsurer)

and

The Equitable Life Assurance Society

of

London, England

(hereinafter called the Reinsured)

London 3/815868/01

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

With effect from , the parties have entered into this Addendum No. 3 to:

(1) confirm, clarify and consolidate into one document their existing Agreement incepting on 31 December 1998 comprising the Life Reinsurance Agreement signed 30 September 1999 and 10 October 1999 including Appendices I to III thereto, Addendum No. 1 effective from 31 December 1999 and signed on 16 December 1999 and 4 January 2000 and Addendum No. 2 effective from 10 August 2000 and signed on 16 August 2000 and 22 August 2000; and

(2) effect certain amendments to the terms of this Agreement; and

(3) record their conclusion of a restructuring of the Agreement as envisaged by the final paragraph of Article XIII of the existing Agreement should the total withheld reinsurance claims balance exceed £100m at any 31 December.

Article I - Business Covered:

All Retirement Annuities, Individual Pension Plans and Transfer Plans issued by the Reinsured on or before 30 June 1988; and

All Group Pension Business, other than Simplified Administration Pension Scheme (SAPS) business and Group Final Salary business, in respect of members of schemes effected with the Reinsured on or before 30 June 1988 who have a contractual option to take annuity benefits on guaranteed minimum rates.

Article II - Inception Date:

The contract will incept on 31 December 1998 ("the Inception Date").

Article III - Duration and Cancellation by the Reinsured:

The Reinsured may cancel this Agreement by written notice with immediate effect at any time hereafter.

If notice of cancellation is given pursuant to this Article, there will be no return of premium in respect of the Deposit Premium payable at the immediately preceding Renewal Date. However, if notice of cancellation is given, no further Deposit Premiums (unless already due but unpaid) will be payable.

If the Reinsured cancels the Agreement in accordance with this Article, this Agreement shall be determined and commuted with effect from the date of cancellation upon terms that:

(a) the Reinsured will be immediately liable to pay the Reinsurer in cash any outstanding Deposit Premium due and payable in accordance with Article V, any outstanding Additional Fee and/or any outstanding Risk Amount (including any accrued interest thereon) due and

2

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

payable in accordance with Appendix II. Any such amounts will first be paid by the Reinsured by way of deduction, in favour of the Reinsurer, from any Additional Premium withheld by the Reinsurer at the date of cancellation as prescribed in Appendix II. To the extent that such withheld Additional Premium is insufficient to satisfy the amounts due, the Reinsured will immediately pay the balance in cash;

(b) the Reinsured shall be immediately liable to repay the Reinsurer in cash any cash payments made by the Reinsurer to the Reinsured pursuant to Article IV below together with any accrued fee interest thereon as provided in Article V. Any such amounts will first be repaid by the Reinsured by way of deduction, in favour of the Reinsurer, from any Additional Premium withheld by the Reinsurer at the date of cancellation as prescribed in Appendix II. To the extent that such withheld Additional Premium is insufficient to repay these amounts, the Reinsured will immediately pay the balance in cash;

(c) if after payment of the amounts due from the Reinsured to the Reinsurer under (a) and (b) above, there is any unused Additional Premium withheld by the Reinsurer, the Reinsurer will within 30 days of cancellation refund the remaining Additional Premium to the Reinsured;

(d) with effect from the date of cancellation, the Reinsurer and Reinsured shall be immediately subject to equal and opposite obligations to each other in respect of any and all other amounts payable or due to each other (i.e. other than those at (a) to (c) above) pursuant to this Agreement;

(e) the mutual obligations of the Reinsurer and the Reinsured under this Agreement shall be set off with the result that, save for the amounts due from the Reinsured in respect of (a) and (b) above and any unused Additional Premium due from the Reinsurer in respect of (c) above, the net amount owing by either the Reinsurer or the Reinsured pursuant to this Agreement shall always be zero;

(f) save for the Reinsured's liability in respect of (a) and (b) above and any unused Additional Premium due from the Reinsurer in respect of (c) above, the Reinsured and Reinsurer shall be mutually released and discharged from any and all further rights and liabilities under this Agreement.

If the Reinsured does not cancel the Agreement as provided above, it will automatically renew annually with effect from 31 December each year ("the Renewal Date").

The Reinsured's right to cancel under this Article is in addition to the termination circumstances set out in Article XII.

Article IV Cover and Limit — This has changed from the draft text on which our earlier comments were based

As at 31 December each year, the Reinsurer will be liable for any Reinsurance Claims Amount arising from the Business Covered as defined in Appendix I to this Agreement ("the Cover"). With effect from 31 December 2001, the total aggregate Reinsurance Claims Amount that can be claimed

3

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

from the Reinsurer under this Agreement discounted back from the relevant Renewal Date to 31 December 2001 will be subject to an aggregate limit. At any Renewal Date, that aggregate limit of Cover will be the sum of:

(1) the lowest of:

(a) 120% of the reduction in mathematical reserves as a consequence of this Agreement shown by the Reinsured in Form 52 of the Reinsured's Financial Services Authority returns (or the statutory equivalent from time to time (the "FSA Returns") for the calendar year ending at that Renewal Date; or

(b) 17% of the amount of mathematical reserves for the Business Covered which is shown in Form 52 of the Reinsured's FSA Returns for the calendar year ending at the Renewal Date; or

(c) the limit for the relevant calendar year as set out in Appendix IV to this Agreement;

and

(2) the Reinsurance Claims Amount withheld, determined at that Renewal Date,

subject at all times to a maximum amount of £1,000,000,000.

Save for the maximum £1,000,000,000 limit, all amounts used in the calculation of the aggregate limit of the Cover shall be discounted to 31 December 2001. For the period between the Renewal Date and 31 December 2001, the rate of discount for each year shall be the average of the annualised redemption yields available on 15 year UK Government fixed interest securities on the current and previous Renewal Dates respectively or on the immediately preceding working days respectively.

All Reinsurance Claims Amounts will be withheld by the Reinsurer. Notwithstanding this, at any 31 December, the Reinsurer will pay at the Reinsured's request (a) an interest amount being the one year Sterling LIBOR (as published by the British Bankers Association on that date or the immediate preceding working day ("LIBOR")) multiplied by the outstanding Reinsurance Claims Amount but only if such interest amount is required by the Reinsured to properly satisfy its requirements under s35A(1)(a) of the Insurance Companies Act 1982 or, (b) a cash payment of up to 10% of the outstanding Reinsurance Claims Amount. The aggregate limit referred to above includes any such cash payments and the Reinsurer will not be liable to pay any part of any interest amount under (a) to the extent that the payment of such a part would otherwise result in the aggregate limit being exceeded.

Article V Premium:

The Reinsured will pay premium as follows:

Deposit Premium

4

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

For each year that this Agreement is renewed, the Reinsured will pay a Deposit Premium of GB£700,000, adjusted in line with the increase in the UK Retail Price Index from November 1999 to the month of November immediately preceding the Renewal Date. The full Deposit Premium is due on the Renewal Date. The Deposit Premium is payable in cash to the Reinsurer.

Adjustment Premium

In addition to the Deposit Premium, if as at any 31 December, a Reinsurance Claims Amount is due from the Reinsurer, an Adjustment Premium will be due from the Reinsured and will be calculated in accordance with Appendix II to this Agreement.

Fee if interest or cash paid by the Reinsurer under Article IV

Furthermore, should the Reinsurer make a cash payment in any year as provided for under Article IV above, then a fee of one year Sterling LIBOR plus 3.5% of any outstanding cash payment which has not been repaid by the Reinsured during that year shall be payable by the Reinsured in cash on the Renewal Date falling in that calendar year. Such fee will be payable annually on the same basis until such time as this interest amount and the cash payment is repaid in full to the Reinsurer. This fee shall not affect the amount of cash owed to the Reinsurer.

Restructuring Fee

In consideration of the Reinsurer agreeing this Addendum, the Reinsured will pay a fee of £10,000 to the Reinsurer. Such fee will be payable within 7 days of this Addendum being executed by both parties.

Article VI - Conditions Precedent to the Reinsurer's Liability

It is a condition precedent to any liability of the Reinsurer that the Reinsured will make no change to its current practice regarding the exercising of guaranteed annuity options as represented to the Reinsurer in Appendix III to this Agreement which is reasonably likely to increase the Reinsurer's Liability under this Agreement. The Reinsurer shall acting reasonably be the sole judge of whether a change in the Reinsured's practice is reasonably likely to increase the Reinsurer's Liability under the Agreement. If any such change occurs, either at the choice of the Reinsured or as a result of any legal action brought against the Reinsured, then no further Reinsurance Claim Events will be admissible.

If the Scheme of Arrangement pursuant to section 425 of the Companies Act 1985 between the Reinsured and the Scheme policyholders as defined in the Scheme of Arrangement ("the Compromise") is either not proposed by the Reinsured or if proposed is not approved by the court (for whatever reason) by 1 March 2002, it is a condition precedent to any future liability of the Reinsurer under this Agreement that the Reinsured purchases instruments to hedge against changes in equity values or falls in interest rates comprising a minimum spend by the Reinsured of £50 million. Such instruments to be purchased within 75 days of 1 March 2002 or of any earlier date if the Compromise is either not proposed or is withdrawn or suspended by the Reinsured prior to 1 March 2002. The instruments will be purchased from a counterparty with at least an AA rating from Standard & Poor's.

5

Article VII - Warranties given by the Reinsured

The Reinsurer offers the Cover on the basis of information supplied to it by the Reinsured. The Reinsured warrants that the information supplied is, to the best of its knowledge and belief correct and an accurate summary of its records. In the event that any material differences emerge from the information supplied by the Reinsured, any dispute will be referred to an arbitration in accordance with Article XIII.

Article VIII - Statement of Account:

The Reinsured will prepare a statement of account as at any 31 December which shall include all relevant financial information as the Reinsurer may from time to time reasonably require (a "Statement of Account") in order to ascertain the limit of Cover under Article IV, the Reinsurer's Liability and any Reinsurance Claims Amount under Appendix I and any Adjustment Premium payable under Appendix II. The Statement of Account will be submitted by the Reinsured to the Reinsurer within 30 days of the Reinsured filing its FSA returns. The first Statement of Account will be in respect of calendar year 2001. The Reinsured will supply information (including all relevant information from the Reinsured's FSA returns for the previous calendar year needed to determine the limit under Article IV and any Adjustment Premium payable under Appendix II) and make available for inspection pursuant to Article X any further documentation reasonably needed by the Reinsurer to check the accuracy of the Statement of Account.

Article IX - Currency:

All amounts referred to and all Statements of Account under this contract shall be in British Pounds.

The introduction of the euro shall not have the effect of altering any term of this Agreement or of discharging or excusing performance under this Agreement, nor will it give a party the right unilaterally to alter or terminate this Agreement.

Article X - Inspection of Records:

The Reinsurer will have the right to inspect the records of the Reinsured in respect of the Business Covered. For as long as either party remains under any liability hereunder, the Reinsured shall, upon request by the Reinsurer, make available for inspection at any reasonable time by such representatives as may be authorised by the Reinsurer for that purpose, all information relating to the Business Covered hereunder and/or the Reinsured's financial position as far as it relates to future emergence of surplus as defined in this Agreement which is in the Reinsured's possession or under its control. The said representatives may arrange for copies to be made of any of the records containing such information as they may require.

6

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

The Reinsurer (and its representatives) will keep confidential any information or copy documentation it acquires as a result of any inspection. Unless agreed to by the Reinsured (such agreement not to be unreasonably withheld), the Reinsurer will not disclose the information to any person other than its regulators, professional advisors, its employees and agents, employees of affiliates and then only as required by law or on a "need to know" basis.

Article XI - Errors & Omissions:

Errors and inadvertent omissions shall not affect the rights and obligations of either party under this Agreement, however, they shall be rectified as soon as reasonably practicable upon discovery. No failure to exercise and no delay on the part of any party in exercising any right, remedy, or power under this Agreement and no course of dealing between the parties shall be construed or operate as a waiver thereof, nor shall any single or partial exercise of any other right, remedy or power.

Any waiver of a breach of any of the terms of this Agreement or of any default hereunder shall not be deemed to be a waiver of any subsequent breach or default and shall in no way affect the other terms of this Agreement.

Article XII - Termination:

Each party is entitled to terminate the Agreement without giving prior notice if:

1. The fulfilment of the Agreement becomes legally or practically impossible for reasons which are beyond the responsibilities of the parties (such as the country where either party is domiciled becomes involved in a war).

2. The other party becomes insolvent or goes into liquidation or a receiver/administrator is appointed or has its licence to conduct insurance business revoked as defined in Section 13 of the Insurance Companies Act 1982.

3. The other party loses more than 50% of its paid up capital.

4. The other party transfers its business to a third party.

5. The other party is acquired by or merged with or comes under the control of another company.

6. The other party does not meet its obligations under this Agreement despite having received formal reminders to do so.

7. The Reinsured fails to purchase the hedging instruments as prescribed in Article VI within 75 days of 1 March 2002 if the Compromise has not been approved by the court (for whatever reason) by that date or within 75 days of any earlier date if the Compromise is either not proposed or is withdrawn or suspended by the Reinsured prior to 1 March 2002.

7

8. The Reinsured changes its current practice regarding the exercise of guaranteed annuity options as represented to the Reinsurer in Appendix III but only if such a change is reasonably likely to increase the Reinsurer's Liability under this Agreement.

9. The Reinsured fails to pay the Additional Premium within 30 days of the Reinsurer giving written notice of non-payment to the Reinsured as prescribed in Appendix II.

If the Agreement is terminated pursuant to this Article, this Agreement shall be determined and commuted with effect from the date of termination upon terms that:

(a) the Reinsured will be immediately liable to pay the Reinsurer in cash any outstanding Deposit Premium due and payable in accordance with Article V, any outstanding Additional Fee and/or Risk Amount (including any accrued interest thereon) due and payable in accordance with Appendix II. Any such amounts will first be paid by the Reinsured by way of deduction from any Additional Premium withheld by the Reinsurer at the date of termination as prescribed in Appendix II. To the extent that such withheld Additional Premium is insufficient to repay these amounts, the Reinsured will immediately satisfy the balance in cash;

(b) the Reinsured shall be immediately liable to repay the Reinsurer in cash any cash payments made by the Reinsurer to the Reinsured pursuant to Article IV together with any accrued fee interest thereon as provided in Article V. Any such amounts will first be paid by the Reinsured by way of deduction from any Additional Premium withheld by the Reinsurer at the date of termination as prescribed in Appendix II. To the extent that such withheld Additional Premium is insufficient to repay these amounts, the Reinsured will immediately pay the balance in cash;

(c) if after payment of the amounts due from the Reinsured to the Reinsurer under (a) and (b) above, there is any unused Additional Premium withheld by the Reinsurer, the Reinsurer will within 30 days of termination refund the remaining Additional Premium to the Reinsured;

(d) with effect from the date of termination, the Reinsurer and Reinsured shall be immediately subject to equal and opposite obligations to each other in respect of any and all other amounts payable or due to each other (i.e. other than those at (a) to (c) above) pursuant to this Agreement;

(e) the mutual obligations of the Reinsurer and the Reinsured under this Agreement shall be set off with the result that, save for the amounts due from the Reinsured in respect of (a) and (b) above and any unused Additional Premium due from the Reinsurer in respect of (c) above, the net amount owing by either the Reinsurer or the Reinsured pursuant to this Agreement shall always be zero:

(f) save for the Reinsured's liability in respect of (a) and (b) above and any unused Additional Premium due from the Reinsurer in respect of (c) above, the Reinsured and Reinsurer shall be

8

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

mutually released and discharged from any and all further rights and liabilities under this Agreement.

However, the above is subject to the requirement that, in the event of termination as a result of the Reinsured's insolvency under part (2) of this Article, the Reinsured's liabilities to its policyholders under the terms of its long term policies will take priority over any set off rights of the Reinsurer (other than in respect of any Additional Premium withheld by the Reinsurer at the time of termination under part (2)). Upon termination as a result of insolvency under part (2), the Reinsurer may at its sole discretion apply the whole of part of any withheld Additional Premium as prescribed in Appendix II against:

(i) any outstanding Reinsurance Claims Amount due from the Reinsurer by way of set off; and/or

(ii) any sums due from the Reinsured referred to in (a) and (b) above and such sums will be set off against the amounts owed by the Reinsured accordingly.

To the extent there is any unused Additional Premium still withheld by the Reinsurer after applying (i) and (ii) above, the Reinsurer will refund such Additional Premium to the Reinsured.

In addition, notwithstanding policyholders' rights in the event of the Reinsured's insolvency, the Reinsurer will also retain the right to set off any future Recovery Amounts due.

Article XIII Arbitration:

The Reinsured and the Reinsurer intend to follow the customs and practices of the insurance and reinsurance industry in the operation of and interpretation of this Agreement. The parties agree to act in all things with the highest good faith.

In the event of any dispute or differences arising under or in connection with this Agreement including those pertaining to its validity, the dispute will be referred to three Arbitrators, one to be appointed by each party and the third to be appointed by the two appointed Arbitrators.

If either party refuses or neglects to appoint an Arbitrator within 28 days after the other party has appointed an Arbitrator and has served notice upon the first mentioned party requiring that party to make such an appointment, then the Arbitrator appointed as aforesaid will, at the request of the party appointing him, proceed to hear and determine the dispute as a sole Arbitrator.

The two Arbitrators (if both parties have duly appointed Arbitrators) will in writing appoint the third Arbitrator and, unless they appoint the third Arbitrator within one calendar month after the date of the appointment as Arbitrator of whichever of them has last been appointed, the Third Arbitrator will be appointed by the Chairman for the time being of the Bar Council. The Tribunal shall be constituted upon the appointment of the third Arbitrator.

9

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

The arbitration will be held in London and will be conducted in accordance with the ARIAS (UK) Arbitration Rules.

The cost of the reference and award will be in the discretion of the Arbitrators or sole Arbitrator who may direct to and by whom and in what manner the same or any part thereof will be paid with power to tax or settle the amount of the costs to be so paid or any part thereof.

The Arbitrators appointed by the parties or any sole Arbitrator will be persons who hold (or have held) leading positions in Companies transacting Life Insurance and/or Life Reinsurance and will be persons with not less than ten years' experience in that field. The third Arbitrator will be a Queen's Counsel who has not less than ten years' experience in the insurance or reinsurance field. The Arbitrators or any sole Arbitrator will regard this Agreement from the standpoint of practical business and will interpret its provisions according to an equitable rather than a strict legal interpretation and their award will have regard to these principles.

This agreement to submit disputes to arbitration will be construed as a separate and independent contract between the parties hereto.

Article XIV Governing Law:

This Agreement shall be governed by and construed in accordance with English law.

Article XV Miscellaneous:

For the purpose of the Contracts (Rights of Third Parties) Act 1999 nothing in this Agreement is intended to confer any benefit on any third party and no term in this Agreement is intended to be enforceable by any person who is not a party to this Agreement.

This Agreement may be amended on the written agreement of both parties. In the event of any dispute, this will be subject to arbitration on the basis set down in Article XIII of this Agreement.

All notices to be provided pursuant to this Agreement shall be given in writing by recorded delivery post and with appropriate postage paid, or by personal delivery, or by facsimile or by overnight courier service to the addressess or facsimile numbers set out below for each respective party; provided that, if any party gives notice of a change of name or address or number, notices to that party shall thereafter be given as demanded in the notice. All notices so given shall be effective upon the date of receipt by the parties to whom notice is given, except notice by post which shall be deemed delivered three days after deposit in the mail:

Fax no. +44 (0) 20 7710[redacted]
Attention of: Chief Financial Officer

This Agreement may be executed in separate counterparts with the same force and effect as if signed in an original document by each of the parties hereto. Signatures on each counterpart may be sent via facsimile transmission of such signature and any facsimile transmission of such signature shall be deemed to have the same force and effect as an original signature. Each separate counterpart when executed and delivered shall be deemed to be an original but all the counterparts shall together constitute one and the same instrument which shall only be deemed executed when counterparts executed by all the parties are delivered.

The Agreement contained in this Addendum No. 3 constitutes the entire Agreement between the parties and supercedes all previous Agreements of any kind between them in relation to the subject matter. This does not affect the duty of utmost good faith owed by each party to the other hereunder nor the ability of either party to exercise remedies for any breach of the duty of utmost good faith by the other.

Irish European Reinsurance Company Limited Date:

11

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

Appendix I

Reinsurance Claim Event:

For each calendar year the Reinsured will calculate the following amounts as at 31 December:-

GA = The total guaranteed funds for all retirements under the Business Covered.

GG = The total guaranteed funds used to secure guaranteed annuity benefits for all retirements under the Business Covered where the policyholder exercises the guaranteed annuity option.

FG = The total funds (including final bonus) available to all retirements under the Business Covered where the policyholder exercises the guaranteed annuity option.

For the purposes of this Agreement, guaranteed funds will be taken to mean the total funds available from the original guaranteed benefit defined in the policy schedule and the total attaching reversionary bonus. The total funds will be taken to mean the guaranteed funds plus any and all final bonuses added to a maturing policy.

A Reinsurance Claim Event will be deemed to occur in respect of any year where the ratio GG/GA exceeds 60%.

Reinsurance Claim:

When a Reinsurance Claim Event is deemed to occur in respect of any calendar year, the Reinsurer's Liability for that year will be determined as the sum of

$$\frac{\text{Guaranteed Funds * Guaranteed Annuity Rate}}{\text{Current Annuity Rate}}$$

where the summation is carried out over all policies for which the guaranteed annuity option has been exercised in that year. The result of this calculation will be denoted by GO.

The Guaranteed Annuity Rate will be that applicable in the policy document for each relevant case.

The Current Annuity Rate will be that available from the Reinsured at the date of retirement for the same mode of payment as that in the Guaranteed Annuity Rate.

However, if at any 31 December, the cumulative Reinsurance Claims Amount due from the Reinsurer (prior to any deduction for any Recovery Amount payable in that calendar year) exceeds £100 million, GO will be recalculated using a Current Annuity Rate that is subject to a minimum rate determined on the assumptions used to determine the mathematical reserve in the most recent FSA returns in respect of mortality and expenses and using an interest rate equal to the annualised yield for 15 year UK Government fixed-interest securities. This revised calculation of GO will continue to apply until the cumulative Reinsurance Claims Amount due falls below £50 million. Thereafter the

12

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

original calculation of GO will apply unless and until the cumulative Reinsurance Claims Amount due exceeds £50 million. At all times thereafter the revised calculation will apply whenever the cumulative Reinsurance Claims Amount due from the Reinsurer exceeds £50 million.

The Reinsurer's Liability will be given by:

$$(1 - 0.60*GA/GG) * (GO - GG)$$

Claims Recovery Premium:

When a Reinsurance Claim Event is deemed to occur in respect of any calendar year, a Claims Recovery Premium will be due for simultaneous payment by the Reinsured to the Reinsurer and will be set off simultaneously against the Reinsurer's Liability.

The Claims Recovery Premium will be determined as :

$$(1 - 0.60*GA/GG) * (FG - GG)$$

subject to a maximum equal to the Reinsurer's Liability.

Reinsurance Claims Amount:

In respect of any calendar year, the Reinsurance Claims Amount will be determined subject to Article IV as the Reinsurer's Liability less the Claims Recovery Premium. The Reinsurance Claims Amount will be withheld by the Reinsurer.

13

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

Appendix II

Adjustment Premium:

1. If as at any 31 December, a Reinsurance Claims Amount is due from the Reinsurer, then the Reinsured will pay an Adjustment Premium which will comprise four elements (as applicable):

   1.1 A Recovery Amount

   1.2 A Risk Amount

   1.3 An Additional Premium (which will only be due and payable in the event that the cumulative Reinsurance Claims Amount exceeds £100 million).

   1.4 An Additional Fee (which will only be due and payable in the event an Additional Premium is due and payable).

The calculation of the four elements of the Adjustment Premium will depend upon the cumulative Reinsurance Claims Amount due from the Reinsurer as at any 31 December as set out below.

If the cumulative Reinsurance Claims Amount due from the Reinsurer is £100 million or less

2. If the cumulative Reinsurance Claims Amount due from the Reinsurer (including any amount arising from the experience in that calendar year) as at any 31 December is £100 million or less, the Adjustment Premium will be due and payable from the Reinsured as follows:

   2.1 A Recovery Amount of 35% of the Reinsurance Claims Amount will be due each year until the total amount paid is equal to the Reinsurance Claims Amount.

      2.1.1 For a Reinsurance Claims Amount due as at the 31 December in any year, the first Recovery Amount will be due at the next 31 December. The Recovery Amount will only be payable to the extent there is surplus emerging as prescribed in paragraph 3 below at the year end in question.

      2.1.2 If there is surplus emerging at the relevant year end, the Recovery Amount will not be paid in cash but will be set off to the extent surplus is available against the Reinsurance Claims Amount due from the Reinsurer at that time.

      2.1.3 If in any year there is insufficient surplus to pay the Recovery Amount in whole or in part, the outstanding Recovery Amount will be carried forward and recovered as surplus emerges as prescribed in paragraph 3 below in later years in the order of priority set out in paragraph 9.

   2.2 A Risk Amount of 2% of the outstanding Reinsurance Claims Amount will be due as long as a Recovery Amount is due.

14

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

2.2.1 For a Reinsurance Claims Amount due as at 31 December in any year, the first Risk Amount will be due at the same 31 December. The Risk Amount will only be payable to the extent there is surplus emerging as prescribed in paragraph 3 below at the year end in question.

2.2.2 If there is surplus emerging at the relevant year end, the Risk Amount will be paid in cash to the Reinsurer at the same time as submission of the Statement of Account by the Reinsured. Any overdue payment will incur a late payment charge of one year Sterling LIBOR plus 3.5% from the due date until the actual payment date.

2.2.3 If in any year, there is insufficient surplus to pay the Risk Amount due in whole or in part, any unpaid Risk Amount will be carried forward and recovered as surplus emerges as prescribed in paragraph 3 below in later years in the order of priority set out in paragraph 9.

2.2.4 An annual interest fee of one year Sterling LIBOR plus 3.5% of any cumulative unpaid Risk Amounts will be payable in cash provided surplus emerges as prescribed in paragraph 3 below until all outstanding Risk Amounts (together with any accrued annual interest fees thereon) have been paid to the Reinsurer in full. The annual interest fee due will be payable at the time of submission of the Statement of Account by the Reinsured. Any overdue payment will incur a late payment charge of one year Sterling LIBOR plus 3.5% from the due date until the actual payment date.

2.2.5 The Adjustment Premium for future years will be increased, subject to the limit on the Adjustment Premiums (set out in this Appendix) by the total amounts of the unpaid Risk Amounts and any unpaid annual interest fees on those amounts.

3. The Adjustment Premium will only be payable at the end of a year if there is surplus emerging and payment will not therefore exceed the lower of:

3.1 the change during that year in the excess of the Available Assets over the Required Minimum Margin plus the Bonus Payments made to Policyholders in Anticipation of a Surplus during the year; and

3.2 the total of the amounts calculated in 3.1 for all years since the Inception Date of this Agreement,

excluding for the purpose of these calculations the amount of the Adjustment Premium that is being determined.

Hereby the following definitions apply:

Available Assets = Form 9 Line 25 of the FSA Returns

15

Required Minimum Margin = Form 9 Line 41of the FSA Returns

Bonus Payments made to Policyholders in Anticipation of a Surplus = Form 58 Line 41 of the FSA Returns

If the cumulative Reinsurance Claims Amount due from the Reinsurer exceeds £100 million

4. If the cumulative Reinsurance Claims Amount due from the Reinsurer as at any 31 December (including any amount arising from the experience in that calendar year) exceeds £100 million, the Adjustment Premium will be due and payable from the Reinsured as follows:

4.1 An Additional Premium will be due and payable immediately from the Reinsured to the Reinsurer in cash (regardless of whether surplus emerges).

4.1.1 The Additional Premium will amount to 12% of the reduction in mathematical reserve as a consequence of this Agreement as shown by the Reinsured in Form 52 of its FSA Returns as at the relevant 31 December.

4.1.2 The Additional Premium will be payable at the same time as submission of the Statement of Account by the Reinsured for the relevant year. If the Reinsured fails to pay the Additional Premium on the due date, the Reinsurer may serve written notice upon the Reinsured to pay the Additional Premium within 30 days of service of the notice. If after that 30 days, the Reinsurer has failed to pay the Additional Premium, the Reinsurer will have the right to terminate the Agreement in accordance with Article XII.

4.1.3 In the event the Reinsurer does not terminate for late payment under 4.1.2 above, any overdue payment will incur a late payment charge of one year Sterling LIBOR plus 3.5% from the due date until the actual payment date.

4.1.4 The Additional Premium will be withheld by the Reinsurer until this Agreement is cancelled or terminated. However, upon giving written notice to the Reinsured within 14 days of submission of the Statement of Account from the Reinsured, the Reinsurer may in its absolute discretion refund all or part of the Additional Premium on the basis that such refund is used by way of set off so as to reduce by an equal and corresponding amount any Reinsurance Claims Amount due (after deduction of any Recovery Amount actually paid for that calendar year) with effect from the immediately preceding 31 December.

4.1.5 Upon cancellation or termination of the Agreement, any withheld Additional Premium (which has not already been refunded to the Reinsured pursuant to 4.1.4 above) will be used for repayment and set off purposes as prescribed in Article III or Article XII accordingly.

4.1.6 For the avoidance of doubt, the Additional Premium will only become due and payable once and only with effect from the 31 December in the year that the Reinsurance Claims Amount first exceeds £100 million.

16

4.2 An Additional Fee will be due and payable from the Reinsured to the Reinsurer in cash (regardless of whether surplus emerges). The Additional Fee will be calculated as 9% of the Additional Premium calculated in accordance with 4.1.1 above. The Additional Fee will be payable at the same time as submission of the Statement of Account by the Reinsured for the relevant year and is non-refundable. Any overdue payment will incur a late payment charge of one year Sterling LIBOR plus 3.5% from the due date until the actual payment date. For the avoidance of doubt, the Additional Fee will only become due and payable once and only with effect from the 31 December in the year that the Reinsurance Claims Amount first exceeds £100 million.

4.3 A Recovery Amount of 100% of the Reinsurance Claims Amount will be due immediately.

4.3.1 The Recovery Amount will be due but will only be payable to the extent there is surplus emerging as prescribed in paragraph 5 below in that year. Any actual payment will be with effect from the immediately preceding 31 December in question.

4.3.2 If there is such surplus emerging, the Recovery Amount will not be paid in cash but will be set off to the extent surplus is available against the Reinsurance Claims Amount owing from the Reinsurer at that time.

4.3.3 If in any year there is insufficient surplus to pay the Recovery Amount in whole or in part, the outstanding Recovery Amount will be carried forward and recovered as surplus emerges as prescribed in paragraph 5 below in later years in the order of priority set out in paragraph 9.

4.4 Subject to paragraph 6 below, with effect from the next 31 December after the Reinsurance Claims Amount has exceeded £100 million, a Risk Amount of 4% of the outstanding Reinsurance Claims Amount (calculated before deduction of any Recovery Amounts actually payable in that year) will be due in cash immediately.

4.4.1 The Risk Amount will be due but will only be payable to the extent there is surplus emerging as prescribed in paragraph 5 below in that year.

4.4.2 If there is surplus emerging at the relevant year end, the Risk Amount will be paid in cash to the Reinsurer at the same time as submission of the Statement of Account by the Reinsured. Any overdue payment will incur a late payment charge of one year Sterling LIBOR plus 3.5% from the due date until the actual payment date.

4.4.3 If in any year, there is insufficient surplus to pay the Risk Amount due in whole or in part, any unpaid Risk Amount will be carried forward and recovered as surplus emerges as prescribed in paragraph 5 below in later years in the order of priority set out in paragraph 9.

17

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

4.4.4 An annual interest fee of one year Sterling LIBOR plus 3.5% of any cumulative unpaid Risk Amounts will be payable in cash provided surplus emerges as prescribed in paragraph 5 below until all outstanding Risk Amounts (together with any accrued annual interest fees thereon) have been paid to the Reinsurer in full. The annual interest fee due will be payable within 30 days of receipt of the Statement of Account. Any overdue payment will incur a late payment charge of one year Sterling LIBOR plus 3.5% from the due date until the actual payment date.

4.4.5 The Adjustment Premium for future years will be increased, subject to the limit on the Adjustment Premiums (set out in this Appendix) by the total amounts of the unpaid Risk Amounts and any unpaid annual interest fees on those amounts.

5. The Recovery Amount, the Risk Amount and any annual interest fees thereon will only be payable to the extent there is surplus emerging in any given calendar year. The surplus available to meet the Adjustment Premium will be the greater of:

5.1 zero; or

5.2 the Distributed Surplus less the Explicit Bonus Reserve plus the Change in the Undistributed Surplus plus the Change in the Excess Value of Net Assets over Statutory Liabilities,

excluding for the purpose of these calculations the amount of the Adjustment Premium that is being determined.

Herewith the following definitions apply:

Distributed Surplus = Form 58 Line 48 of the FSA Returns
Change in Undistributed Surplus = Form 58 Line 49 less Form 58 Line 31 of the FSA Returns
Change in the Excess Value of Net Assets over Statutory Liabilities = Form 14 Line 51 less Form 14 Line 63 of the FSA returns minus the result of that same calculation for the amounts shown in the previous year's FSA Returns
The Explicit Bonus Reserve shall be the amount certified by the Reinsured's Appointed Actuary as the mathematical reserve held at the previous 31 December to provide for reversionary bonus in the following calendar year.

6. Once the cumulative Reinsurance Claims Amount due from the Reinsurer exceeds £100 million, the Recovery Amount and Risk Amount shall be calculated on the basis set out in paragraphs 4 and 5 until the cumulative Reinsurance Claims Amount due from the Reinsurer falls below £50 million. Thereafter, the calculation for the Recovery Amount and Risk Amount set out in paragraphs 2 and 3 will apply unless and until the cumulative Reinsurance Claims Amount due from the Reinsurer exceeds £50 million again. Therefore if the cumulative Reinsurance Claims Amount due from the Reinsurer exceeds £50 million again at any time thereafter, the Recovery Amount and Risk Amount set out in paragraphs 4 and 5 will apply. Except that if the cumulative

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

Reinsurance Claims Amounts due from the Reinsurer exceeds £200 million at any time, the Recovery Amount and Risk Amount will be calculated on the basis set out in paragraphs 7 and 8 below. For the purposes of ascertaining the cumulative Reinsurance Claims Amount due at any 31 December, no deductions will be made for any Recovery Amount payable in relation to that year.

If the cumulative Reinsurance Claims Amount due from the Reinsurer exceeds £200 million

7. If the cumulative Reinsurance Claims Amount as at any 31 December exceeds £200 million, the Adjustment Premium will be due and payable from the Reinsured on the basis set out in paragraphs 4 to 6 above except that the Risk Amount will be 8% of the outstanding Reinsurance Claims Amount and not 4%. All other terms and conditions as set out in paragraphs 4 to 6 will apply.

8. The revised basis for calculating the Risk Amount will continue until the cumulative Reinsurance Claims Amount balance has reduced to £100 million after which the Adjustment Premium will be calculated in accordance with paragraphs 4 to 6.

Order of priority for payment of the Recovery Amount, the Risk Amount and any annual interest fees thereon as surplus emerges (regardless of the level of Reinsurance Claims Amount due from the Reinsurer)

9. The Recovery Amount, the Risk Amount and any annual interest fees thereon payable from surplus emerging (as set out either in paragraph 3 or paragraph 5 as applicable) in any year will be used first to pay:

   9.1. any annual interest fees on any unpaid Risk Amounts for previous years as described above on a first in, first out basis;

   9.2 any unpaid Risk Amounts for previous years which have been carried forward as set out above on a first in, first out basis;

   9.3 the Risk Amount due for the current year;

   9.4 the remaining balance payable, if any, will be used to pay any Recovery Amounts due as set out above. If there has been more than one Reinsurance Claims Amount for which Recovery Amounts have not been paid in full, subject to the Articles of the previous paragraph, the available funds will be applied to the Reinsurance Claim Amounts on a first in, first out basis.

19

Reinsurance treaty between Equitable Life and the Irish European Reinsurance Company

Addendum 3

Appendix III

The Reinsured's current practice with regard to the exercising of guaranteed annuity options, as represented to the Reinsurer, is described below.

A guaranteed annuity option can be exercised only if annuity benefits are taken in a form of annuity for which guaranteed annuity rates are prescribed in the policy terms.

If a guaranteed annuity option is exercised by the policyholder selecting a form of annuity to which guaranteed annuity rates apply, the annuity secured by that part of the policy proceeds is calculated as "relevant policy proceeds" multiplied by the appropriate guaranteed annuity rate, where the "relevant policy proceeds" are defined as that part of the total policy proceeds which is used to provide the selected form of annuity benefits.

Regulatory response to Equitable's compromise scheme proposals

FSA assessment of compromise (7 December 2001)

THE FSA'S ASSESSMENT OF EQUITABLE LIFE'S COMPROMISE SCHEME

Summary

1. The Equitable Life Assurance Society ("Equitable Life") has recently written to its with-profits policyholders inviting them to vote on its proposed compromise (the "Compromise").

2. The FSA is issuing this statement to explain how we have reviewed and assessed the Compromise, and our conclusions.

3. The FSA is content that, in relation to the relevant groups of guaranteed annuity rate ("GAR") and non-GAR policyholders, the level of increase to policy values is a fair offer in exchange for the GAR rights and potential mis-selling claims that would be given up. While there are variations from person to person, within each relevant group, we are content that there are no categories of policyholder within the groups who would receive disproportionately greater or lesser benefits.

4. Although much of the Compromise documentation sent to policyholders for the vote is complex, so are the problems. We are content that it is sufficiently clear to enable them to form their own view on how they should vote, in the light of their individual circumstances.

5. We hope that this summary of the FSA's views will help policyholders to make up their own minds on how to vote. The FSA cannot give personal advice to policyholders. Where Equitable Life policyholders believe they require assistance in deciding how to vote, they will need to seek independent financial advice. Further information about how to find a financial adviser is available on the FSA's website (www.fsa.gov.uk/consumer) or from our Consumer Helpline on (0845 606 1234).

The FSA's Role

6. Equitable Life is seeking to give effect to the Compromise by proposing a scheme of arrangement under section 425 of the Companies Act 1985. The Companies Act does not give the FSA a formal role in the process, but it has general regulatory powers, under the Financial Services and Markets Act 2000, to take action in relation to the Compromise if it considers it appropriate in order to protect the interests of policyholders. The FSA decided it had no reason to intervene to object to the proposals being put to policyholders. The FSA could seek to be heard if the Compromise is put to the Court for formal approval after the vote.

Regulatory response to Equitable's compromise scheme proposals

FSA assessment of compromise (7 December 2001)

7. As the FSA has made clear, we firmly believe that a successful compromise would, in principle, offer the best prospect of bringing stability to the with-profits fund and improving the outlook for concerned policyholders.

8. At the time that Equitable Life launched its consultation on the Compromise, the FSA said it would assess whether, for each relevant group of policyholders, the proposal was a fair exchange for the rights and potential claims they were being asked to give up. We also said that if that test was passed, we would look to see that the Compromise did not give disproportionately greater benefits or disbenefits to some groups of policyholders.

9. The FSA also said that it believed it was important that the Compromise put to policyholders should be clear and should provide them with the information they need to form their own judgement about how to vote on the proposals put to them.

10. The Compromise is explained by Equitable Life in the Compromise documents. The main feature of the Compromise is the proposed increases in policy values which each relevant group of policyholders would receive in return for giving up certain of their current rights and potential claims. Our assessment has focussed on arriving at a view as to whether these uplifts are reasonable. In considering this, and for the purposes of their own assessment, policyholders will want to refer to those parts of the Compromise documents which explain the way in which Equitable Life has calculated those values.

11. In forming its conclusions, the FSA has taken account of the assessment given by [redacted], who has been appointed by Equitable Life as an independent actuary. The Compromise documentation includes a summary of his report, which provides an important guide to the fairness of the Compromise. [redacted] considers that the terms of the Compromise have been established in a fair and reasonable way from an actuarial point of view.

<u>Detail</u>

GAR policyholders

12. Equitable Life has calculated the total amount being offered to GAR policyholders as a group on the basis of a realistic assessment of the likely cost to the Society of honouring the guarantees as policies mature, taking into account a range of considerations. The likely cost of the GARs depends on a number of factors, some of which are uncertain, such as interest rates, life expectancy and the form of benefits the policyholders select at retirement.

Regulatory response to Equitable's compromise scheme proposals

FSA assessment of compromise (7 December 2001)

13. The FSA reviewed the basis on which such likely costs were calculated. This involved reviewing the actuarial assumptions underlying Equitable Life's calculations of the likely costs of meeting the GAR liabilities. The FSA is content that the estimated cost of meeting the GAR liabilities, discounted to current values, is an appropriate amount for non-GAR policyholders to "pay" to GAR policyholders in exchange for their GAR rights.

14. We then looked at the way Equitable Life planned to share that total amount among the GAR policyholders in exchange for giving up their GAR rights. Details of the assumptions made by Equitable Life can be found in the Compromise documents. In reviewing the proposed uplifts to policy values, the FSA first assessed the objective economic values of the different types of GAR, then compared those values to the value of the uplift proposed for policyholders in each relevant group. We agree with the view of the independent actuary that the uplifts were calculated in a fair and reasonable way.

15. As part of our assesssment, we looked at a range of cases. For example, we compared the income that a policyholder who is able to retire now, or in the very near future, would have if he or she took a GAR annuity without the Compromise (on the basis of their current policy value) with an annuity bought in the open market (with the increased policy value) after the Compromise.

16. Of course, annuity rates change constantly – these calculations were on the basis of November 2001 rates. An analysis of this kind also does not take account of any of the less tangible benefits of the Compromise, which are considered later in this statement, such as the increased stability of the with-profits fund and the greater choice of retirement benefits that will be available if the Compromise is approved.

17. The analysis showed that policyholders using all their pension fund to buy an annuity now (with the GAR) would be better off than if they bought an annuity on the open market with the enhanced policy value, taking into account the uplift. However, only a small minority of policyholders would do that. The vast majority take part of their fund as a tax free lump sum. If that is taken into account, and we think it is appropriate to do so, policyholders may well find that the increase in policy value (assuming the Compromise is approved) would enable them to get an annuity close to or even slightly greater than the annuity that they would have obtained if they had exercised their GAR. Of course, those policyholders who never intended to exercise their GAR rights at all, would also get the benefit of an enhanced fund from which to buy their annuity at retirement.

Regulatory response to Equitable's compromise scheme proposals

FSA assessment of compromise (7 December 2001)

18. In current market conditions, when long term interest rates are at low levels, the GAR options are very attractive. The GAR options could become more valuable if interest rates fell further, but could just as easily become less valuable if interest rates rise again. The FSA considers that a value can be placed on the certainty of an uplift in policy values now.

19. Policyholders will also need to look at other factors which could affect the value of their GAR rights if the Compromise does not go ahead. The calculations above assume that a substantial non-guaranteed final bonus would be paid by Equitable Life at retirement. However, without the Compromise, the amount of non-guaranteed final bonus would remain very much more uncertain. Applying the GARs to a smaller retirement fund might result in a lower level of annuity than policyholders might currently be expecting, or might obtain if the Compromise is approved. And in order to have the benefit of the GAR, the annuity would have to be taken with Equitable Life.

20. On the other hand, if the Compromise went ahead, all policyholders would be in a stronger fund and would be able to use their enhanced funds to buy different kinds of annuities from Equitable Life. They would also be able, at retirement, to use the funds to buy an annuity from another provider or buy an income drawdown product.

21. GAR policyholders will need to form their own view about such risks and other less tangible benefits and disbenefits when considering the value of the Compromise to them.

Non-GAR policyholders

22. Equitable Life has published legal advice from [redacted] QC and [redacted] that non-GAR policyholders might have grounds to bring a claim for mis-selling on the basis that they were not told about the possible implications of the GAR policies to them. The FSA commissioned its own legal advice on this issue and that advice from [redacted] QC and [redacted] has also been published and is available on its website. While there were some differences on points of detail, the FSA's advice reached broadly similar conclusions. All of the published advice indicates that the strength of any claim which a non-GAR policyholder may have and the amount of any loss for which damages might be recoverable will vary and will depend on his or her particular circumstances.

23. We have considered the proposal to increase non-GAR policy values in exchange for giving up possible mis-selling claims associated with the GAR. Some non-GAR policyholders will find it easier than others to demonstrate mis-selling and the amount of any loss will vary. The amount of any loss depends on the type of policy, when it was taken out and the profile of

premium payments. Our analysis suggests that by comparing the performance - in terms of current payouts - of Equitable Life policies with those of its competitors, many policyholders may be worse off than they would have been if they had invested through another company, though others may not.

24. In addition, an analysis of loss needs to take account of the value of the greater flexibility in many Equitable Life policies. This is a difficult factor to quantify. Further, when comparing pay outs under policies issued by other life insurance companies, it should not be overlooked that Equitable Life took steps in July 2001 to adjust policy values to bring them back into line with underlying asset values. Other with-profit offices are now reviewing their terminal bonus rates and surrender values. The recent performance of equity markets has made it increasingly difficult for other companies to continue to smooth their pay outs in a way which protects consumers from the effect of recent falls in equity prices. This means that a simple snapshot comparison of policy pay outs may now overstate the potential loss to Equitable Life policyholders.

25. The FSA's legal advice is that the amount of loss that a policyholder could recover in Court would be likely to be limited to the loss of policy value which is attributable the cost of the GARs. The recoverable loss would not include losses attributable to poor investment performance and, importantly, would probably not include damages to compensate non-GAR policyholders for the fact that Equitable Life may also have mis-selling liabilities to other policyholders.

26. Accordingly, the Compromise documents identify the loss of bonus for the first seven months of 2000 (used by Equitable Life to fund the transfer of value to GARs after the House of Lords judgment) as a suitable proxy for the loss to non-GAR policyholders from the non-disclosure of the existence of the GAR risk. The FSA accepts this. As the Compromise documents explain, this amount is subject to two discounts: one for the uncertainty of success of the potential non-GAR claims and one for the probability that the costs of meeting non-GAR claims would fall to be met substantially by non-GAR policyholders themselves.

27. The FSA can see that it would be possible for different judgments to be reached about the discount which should be applied to reflect the variable strengths of the potential claims and the likelihood of demonstrating loss. The FSA is satisfied that the discount used by Equitable Life is reasonable in the circumstances for the reasons described in the Compromise documents. Similarly, we are satisfied that it is appropriate to discount for the fact that non-GARs would effectively have to meet roughly three quarters of the costs

Regulatory response to Equitable's compromise scheme proposals

FSA assessment of compromise (7 December 2001)

of paying non-GAR compensation themselves as they represent three quarters of the total value of the with-profits fund.

28. Certain policyholders have argued that they are in a materially different position to the generality of non-GAR policyholders who have possible mis-selling claims. They include with-profits annuitants, the so-called late joiners and overseas policyholders. We have considered whether those - or other - policyholders constitute separate groups with sufficiently different interests which justify different treatment. We have concluded that the Compromise does not give these groups of policyholders disproportionately greater benefits or disbenefits.

29. We have agreed that Equitable Life need not take any further steps to deal with complaints of mis-selling by policyholders whilst it is seeking to put in place a compromise of the possible claims. However, the FSA has also made it clear that if a compromise were not approved, we would be likely to require Equitable Life to carry out a review to establish whether or not there had been mis-selling and, if necessary, to rectify the problem. Policyholders would also have the right to take their claims to the Financial Ombudsman Service or to pursue them through the Courts if the Compromise is not adopted.

30. We consider, on balance, that overall the non-GAR policyholders would be unlikely to be better off were they to seek redress by such other means. Given Equitable Life's particular circumstances, the uncertainties over the claims and the competing interests in the with-profits fund, we think that the Compromise is a reasonable way to address non-GAR policyholders' potential mis-selling claims.

Wider considerations

31. All policyholders who are being asked to vote should consider the longer term benefits of the Compromise compared to the alternatives.

32. In undertaking our analysis, we have concentrated on the value of the claims that policyholders may have now. But when considering the benefits and disbenefits of the uplifts offered under the Compromise, there are some important wider points that policyholders should take into account.

Continued uncertainty

33. Without the Compromise, the outlook for all policyholders would remain much more uncertain. In already difficult market conditions, the with-profits fund would remain seriously unstable. In practice, the problem arises because Equitable Life must plan on the basis of prudent assumptions when managing its business, to ensure that it is not exposed if its actual experience turns out to be worse than it had expected. Equitable Life would need to

FSA assessment of compromise (7 December 2001)

continue to keep reserves against the range of competing rights and claims that would have been resolved under the Compromise. It would also need to adopt a more restrictive investment policy, which could affect policyholders' returns over the long term. There would also be a greater risk of extensive and costly litigation to sort out the various claims for mis-selling that would otherwise be settled by the Compromise. And those claims would in turn have to compete with the cost to the fund of meeting the GARs. All these costs would have to be met out of the with-profits fund. It is also likely that many of the remaining non-GAR policyholders would take the view - that some others have already taken - that they should take their money out rather than stay in a weaker fund.

34. In order to be able to manage the business so that it continues to comply with regulatory requirements, Equitable Life could well, as the appointed actuary has made clear, find it necessary to take an extremely cautious approach to its management of the with-profits fund and to setting future bonus policy, in order to ensure that those leaving the fund in the near future, whether contractually or otherwise, do not take more than their fair share of the fund. If bonus rates had to be cut further, this could mean that all policyholders could find themselves materially worse off than if the Compromise had gone ahead.

Halifax money

35. Another consequence of not agreeing to the Compromise is that the benefit of the additional £250 million Halifax money would be lost, as would any chance of the further £250 million that is also contingent on certain future business targets being met. The implications of that are spelt out clearly in the Compromise documentation – and having the benefit of the Halifax money is a material consideration for non-GAR policyholders.

Winding up

36. Some policyholders have suggested that winding up Equitable Life would be better, even though Equitable Life is solvent. The FSA does not agree. For a start, this would affect all Equitable Life policyholders, not just the with-profits policyholders who would be affected by the Compromise. If a winding up order were made, we would expect a liquidator to continue to run the with-profits fund and to attempt to assess and pay claims in the short term. However, a liquidator would probably be unable to declare any final bonuses, so the fund available to both GARs and non-GARs would be smaller. A liquidator would then attempt to transfer the policies to another insurer, if a willing recipient could be found. The value of a policy could be reduced on such a transfer. If a transfer were not practicable, then a liquidator would need to value all policies, on a basis agreed by the court, in order to make a distribution of the available assets. Significant costs arise

FSA assessment of compromise (7 December 2001)

on a liquidation, and any lump sum payments to policyholders might be taxed.

37. There are additional consequences of a liquidation in the event of insolvency. We would expect the Financial Services Compensation Scheme ("FSCS") to protect the interests of policyholders, in the first instance by seeking to assist the liquidator to transfer the business to another insurer. As an alternative, the Court might be asked to reduce policyholders' contractual benefits, or crystallise them, in order to restore solvency and stability. If a transfer were not possible, the FSCS is able to compensate policyholders but any compensation would be limited to 90% of the value of the policy. The fact that the future returns or other benefits under a policy were guaranteed in certain circumstances, does not necessarily mean that the FSCS can pay compensation for those guarantees. This is because the FSCS is required to consider whether the benefits under a policy may be excessive.

Implications for other policyholders

38. Many with-profits policyholders (including with-profits annuitants) will wish to understand that their votes have the potential to affect the rights of all policyholders, including those who have no vote. Non-profit annuitants, and also the unit-linked policyholders (even though that business has been reinsured by Halifax Life), stand to benefit from the increased security, which the Compromise would bring, as would the with-profits policyholders.

7 December 2001

Regulatory response to Equitable's compromise scheme proposals

FSA press release (10 December 2001)

FSA assessment of Equitable Lifes compromise scheme
FSA/PN/164/2001
10/12/2001

The Financial Services Authority has today confirmed that it has reviewed and assessed the Compromise Scheme proposals being put to Equitable Lifes with-profits policyholders to ensure that the interests of all policyholders have been properly and fairly taken into account.

[redacted] FSA Managing Director, said,

The FSA has already said that a successful compromise would, in principle, offer the best prospect of bringing stability to Equitable Lifes with-profits fund and so improving the outlook for policyholders. Having taken into account all the relevant considerations, we have concluded that the proposed Compromise now put forward is a fair offer for the rights and claims given up.

In a statement published on its website (copy attached), the regulator explains the basis for its opinion. It has assessed whether, for each relevant group of policyholders, the proposed Compromise offers a fair exchange for the rights and potential claims they are being asked to give up. The FSA is content that it does and that the Compromise does not give disproportionately greater benefits or disbenefits to some groups of policyholders.

[redacted] commented:

The FSA is not required to approve the proposed Compromise but it does have powers to take action in order to protect the interests of policyholders. We have concluded that, taken in the round, the Compromise is a fair offer and we saw no reason to intervene to stop the proposals being put to policyholders.

The FSAs assessment of the proposed Compromise does not constitute a recommendation by the FSA as to how individuals should vote; our view reflects the merits of the scheme overall. Individual policyholders must of course decide how they themselves vote in the light of their own individual circumstances.

The full FSA statement may be found at www.fsa.gov.uk.

Notes for editors
The FSA issued a release about Equitable Lifes draft proposals on 20 September 2001, Press Notice number 117.

The FSA regulates the financial services industry and has four objectives under the Financial Services and Markets Act 2000: maintaining market confidence; promoting public understanding of the financial system; the appropriate protection of consumers; and fighting financial crime.

The FSA aims to maintain efficient, orderly and clean financial markets and help retail consumers achieve a fair deal.

Contents

Section 1: Introduction

1.1 This document provides a guide to the full report of my investigation into the prudential regulation of The Equitable Life Assurance Society (the Society) during the period prior to 1 December 2001. It also summarises the findings and recommendations of that report.

1.2 The guide sets out in summary form the conclusions which I have reached in that report. However, it does not aim to explain the full rationale for those conclusions or to set out every consideration that has been taken into account in reaching those conclusions.

1.3 This guide is not a substitute for reading Part 1 of my report, to which the reader is referred if they wish to understand the reasons for my findings and determinations or to see on what evidence I have based those findings and determinations. A glossary of terms used within my report is also set out in Part 1.

1.4 The investigation which led to my report centred on allegations of regulatory failure on the part of the public bodies responsible for the prudential regulation of insurance companies in the period prior to 1 December 2001, as those responsibilities were discharged in the case of the Society.

1.5 The full report of my investigation is in four Parts (or volumes):

Part 1 describes the background to my investigation, summarises the evidence and representations submitted to me by the parties to the complaints, explains the tests I have applied in determining those complaints, sets out my key findings of fact and contains my determinations as to whether maladministration occurred and, if so, whether it has resulted in any unremedied injustice. It concludes by setting out my recommendations concerning questions of remedy.

Part 2 contains a factual description of the historical development of the regime that was relevant to the prudential regulation of life insurance companies during the period prior to 1 December 2001.

Part 3 contains a detailed chronology of events relating to the prudential regulation of the Society during the relevant period.

Part 4 contains some key primary and secondary documents, reproduced in full or in part, which I consider are either key to a full understanding of the matters that I have investigated or which help to place my determination of the relevant complaints in a wider context.

1.6 This document focuses on providing a summary of my findings. It therefore provides the reader principally with a guide to Part 1 of my full report. However, some Chapters of Part 1 are themselves a summary of more detailed evidence and documentation contained in Parts 2, 3 and 4.

1.7 So this document does not tell the full story and is not intended to do so. It is deliberately brief and focuses primarily on the complaints that I received and my determination of them.

1.8 I would encourage anyone who wishes to know more about the events which form the background to, and context for, this investigation, or about the detailed regime relevant to the prudential regulation of life insurance companies during the period in question, or who wishes to read a detailed account of the way in which the prudential regulation of the Society was undertaken, to read Part 1 in full.

The structure of Part 1

1.9 The structure of Part 1 of my report is as follows.

Chapter 1 is an introductory Chapter.

Chapter 2 sets the scene for the investigation I have conducted, focusing on the events which form the background to, and the context for, my investigation, and also on the other reviews, inquiries and litigation which have taken place (or which continue to take place) in respect of the Society.

Chapter 3 explains the involvement of my Office in respect of the events related to the Society and which led to my decision to conduct this investigation. It also outlines the legal and administrative framework for the investigation and describes the process that I have used to conduct it.

Chapter 4 sets out the general and detailed complaints that have been made to me about the prudential regulation of the Society. It also sets out the initial response to those complaints of the public bodies whose actions were the subject of complaint.

Chapter 5 sets out the basis for my determination of the complaints. It describes my general approach to investigating complaints of injustice sustained as a consequence of maladministration; and sets out both the general principles of good administration and public law and the specific legal and administrative framework of prudential regulation applicable to my consideration of those complaints. It concludes with a summary of the key obligations of the prudential regulators and/or the Government Actuary's Department (GAD) which are relevant to this investigation.

Chapters 6, 7 and 8 set out a summary of the way in which the prudential regulation of the Society was undertaken in three time periods:

- the first period being prior to 20 June 1998;
- the second period being from 20 June 1998 to 8 December 2000, when the Society closed to new business;
- the third period being the post-closure period from 8 December 2000 to 1 December 2001, when my jurisdiction ends.

Chapter 9 contains the preliminary assessments which I have made in respect of disputed questions concerning what standard of regulation it would be appropriate to apply when reviewing the acts and omissions of those undertaking the prudential regulation of the Society, and what powers were available to those regulators.

Chapter 10 sets out the results of my review of the evidence I have obtained and contains my findings of fact.

Chapter 11 sets out my determinations as to whether the acts and omissions of the prudential regulators and/or GAD constitute maladministration.

Chapter 12 sets out my determinations as to whether any such maladministration has led to injustice to those who have complained to me.

Chapter 13 contains my disposal of each complaint within the terms of reference for the investigation, setting out which I have upheld in full, which I have upheld in part, and which I have dismissed.

Chapter 14 considers questions of remedy and contains my recommendations.

Chapter 15 contains my concluding remarks.

Section 2: The background

2.1 My report sets out my determinations of complaints which alleged that the regulators of insurance companies had failed properly to exercise their functions in relation to the Society for more than a decade.

2.2 The scope of that report was determined by the limits to my powers to conduct investigations into the actions of those bodies whose actions were the subject of those complaints.

The Equitable Life Assurance Society

2.3 My report does not make findings about the actions of the Society itself and is concerned instead with regulation. However, in Chapter 2 of Part 1 of my report, I set the scene for that regulation. This includes a description of the nature of the Society's business and of how the problems it faced came about.

2.4 The Society was founded in 1762 and it was incorporated in the United Kingdom as a private unlimited company in 1892. The Society is generally accepted to be the oldest surviving mutual life assurance company in the world.

2.5 As a mutual life insurance company, the Society has no shareholders and is owned by its with-profits policyholders. Those policyholders effectively stand in the position of proprietors, sharing in any profits made or losses incurred in running the Society's business.

2.6 On 8 December 2000, the Society announced that it would stop writing new business with immediate effect. Since then, the Society has undergone a difficult period and has implemented cuts in the policy values of its with-profits policies or the income derived from its with-profits annuities.

2.7 The announcement by the Society of its closure to new business was prompted by the withdrawal of the last potential bidder from a sales process that had been launched to seek a buyer to acquire the Society following a decision of the House of Lords.

2.8 The operation of the Society's differential terminal bonus policy in respect of a representative policy for which the default benefit was an annuity paid at a guaranteed rate had become the subject of legal proceedings once doubts arose as to the legality of that policy. The differential terminal bonus policy, which Equitable had adopted since January 1994, involved the paying of different levels of terminal bonus to policyholders exercising their right to take an annuity at the guaranteed rate than were paid to policyholders not exercising such a right.

2.9 The House of Lords held on 20 July 2000 – in *Equitable Life Assurance Society v Hyman* ([2002] 1 AC 408) – that the Society's differential terminal bonus policy was unlawful.

2.10 At the time, it was recognised that the Society was distinctive within the life insurance industry and also that this distinctiveness had played a part in the circumstances which had led the Society to close to new business.

2.11 The four central factors which were of importance to the Society's problems, recognised by the Treasury at the time of its closure, were:

- first, that the Society had for many years operated a policy of full distribution of any surplus through bonuses to its with-profits policyholders and a policy of not building up a free estate, leaving the Society with a comparatively low level of free assets;

- secondly, that the Society, being a mutual, had no access to additional, shareholder capital;

- thirdly, that the Society had offered relatively generous and flexible guarantees on certain types of policy; and

- finally, that the proportion of the Society's business to which those guarantees applied was much higher than was the case for other companies.

2.12 The closure of the Society to new business as a result of those problems set the scene for the complaints that I have received. While the actions of others, such as the Society itself or its former auditors, became also the subject of complaint to others, the complaints that were made to me concerned the role of the regulators of the Society.

Insurance regulation

2.13 Before 1 December 2001, there were two forms of insurance regulation in the United Kingdom – prudential regulation and conduct of business regulation.

2.14 Prudential regulation was governed by the provisions of the Insurance Companies Act 1982 and by the Regulations made under that Act. Such regulation primarily related to the supervision of the solvency of life insurance companies and their ability to meet and continue to meet their liabilities to policyholders and to fulfil the reasonable expectations of policyholders or potential policyholders.

2.15 Conduct of business regulation was governed by the provisions of the Financial Services Act 1986 and concerned the regulation of the conduct of investment business, including the marketing activities of life insurance companies.

2.16 During the period prior to 5 January 1998, the prudential regulator was the Department of Trade and Industry (the DTI) and its predecessors; from 5 January 1998 to 1 December 2001, the prudential regulator was Her Majesty's Treasury (the Treasury).

2.17 From January 1999 until 1 December 2001 aspects of the day-to-day prudential supervision of insurance companies were contracted out to the Financial Services Authority (the FSA) – which, in this role, acted on behalf of the Treasury.

2.18 Furthermore, throughout the period relevant to this report legal advice to the prudential regulators was provided by in-house lawyers and, until 26 April 2001, actuarial advice was provided by GAD. Thereafter, actuarial advice was provided to the FSA by actuaries directly employed by the FSA, some of whom had previously worked for GAD.

My jurisdiction

2.19 I am only able to investigate certain action taken by or on behalf of those bodies which are within my jurisdiction.

2.20 Actions taken by all of the bodies which at the relevant time had statutory responsibility for prudential regulation are within my jurisdiction, where those actions are taken in the exercise of the administrative functions of such bodies. Thus the actions of the DTI and the Treasury are within my jurisdiction.

2.21 I am only able to conduct investigations in respect of the actions of GAD and the FSA on a limited basis. I have no power to conduct investigations in relation to conduct of business regulation.

2.22 GAD were not within my jurisdiction until the beginning of this investigation. I may only investigate action taken by GAD on or before 26 April 2001 in the giving of advice concerning the exercise of administrative functions under Part II of the Insurance Companies Act 1982 or any other enactment concerned with the regulation of insurance companies.

2.23 The actions of the FSA are only within my jurisdiction in so far as those actions relate to the prudential regulation of insurance companies during the period from 1 January 1999 to 1 December 2001, when the FSA undertook that regulation on behalf of the Treasury.

2.24 Conduct of business regulation throughout this first period was delegated to a system of industry and practitioner-based, self-regulatory organisations under the supervision of a designated agency. None of those bodies with statutory responsibility for conduct of business regulation is or was within my jurisdiction.

2.25 All of this meant that the scope of my investigation was limited to the actions taken during the period prior to 1 December 2001 by the DTI and the Treasury as the prudential regulators of the Society and to the actions taken by the FSA and GAD on behalf of those regulators.

Section 3: The complaints that were made and the Government's initial response

The general and specific complaints

3.1 My investigation – undertaken after wide consultation with those affected – began in July 2004. It was conducted in accordance with the provisions of the Parliamentary Commissioner Act 1967.

3.2 I have received 898 complaints referred by MPs in respect of 1,008 people. I also received 1,309 direct representations from a further 1,480 individuals.

3.3 With the help of the various action groups representing complainants, fifteen people were selected to act as lead complainants. Those people epitomise the position of all the principal groups of current and former policyholders and annuitants who had complained to me. The lead complainants authorised members of the action groups to act as their personal representatives during the course of the investigation.

3.4 The general complaint made was that:

> *... the public bodies responsible for the prudential regulation of insurance companies... and the Government Actuary's Department failed for considerably longer than a decade properly to exercise their regulatory functions in respect of the Equitable Life Assurance Society and were therefore guilty of maladministration.*

3.5 Eighteen detailed complaints were made. Those heads of complaint were labelled complaint A to complaint R and are set out in full in Annex A of this document. Those detailed complaints, together with the general complaint, formed the basis for my investigation.

3.6 All the complainants claimed that they had suffered financial and other injustice as a result of alleged maladministration by the prudential regulators and sought full redress for that injustice.

The Government's initial response

3.7 I put those complaints to the Treasury, the FSA, and GAD. Their initial response, in summary, was that:

(i) there had been no failure on the part of any of the prudential regulators or GAD properly to exercise their functions in respect of the Society. At all times those regulators and GAD had acted reasonably and properly, in the context of and having regard to the regulatory regime as it had been at the relevant time;

(ii) the nature and scope of that regime had been determined by legislation and by regulatory policies which informed and were adopted under the applicable legislation. At all times, the policies adopted had been proper ones and had been the result of choices which Parliament and Ministers had been fully entitled to make;

(iii) none of the complaints made by the complainants disclosed reasonable grounds for concluding that any of the public bodies responsible for the prudential regulation of the Society or GAD had been guilty of maladministration.

3.8 I was not satisfied that this response resolved the complaints which had been made to me and so I decided to continue my investigation.

3.9 I appointed an in-house team of investigators to conduct the investigation. I also appointed both legal and actuarial advisers to assist me and my investigation team. In addition, I arranged for the actuarial advice I received to be peer reviewed. The advice of both sets of professional advisers has greatly informed (and is fully integrated into) my report.

Terms of reference

3.10 The terms of reference for the investigation were:

To determine whether individuals were caused an injustice through maladministration in the period prior to December 2001 on the part of the public bodies responsible for the prudential regulation of the Equitable Life Assurance Society and/or the Government Actuary's Department; and to recommend appropriate redress for any injustice so caused.

Conduct of the investigation

3.11 In carrying out the investigation, we have reviewed:

- the operational and policy files of the public bodies whose actions were under investigation;
- all the documentary evidence from other sources that was available to Lord Penrose when he conducted an inquiry into the events which led to the Society closing to new business, the report of which was published in 2004;
- transcripts of evidence given to the Penrose inquiry, to the Baird inquiry, an internal FSA inquiry in 2001 into their role in the relevant events, and to my first investigation by current and former officials and actuaries connected with the prudential regulation of the Society;
- the relevant working documents and emails of those officials and actuaries; and
- publicly available material (such as actuarial papers and discussions); and historical and other material held at the National Archives, the British Library, and the libraries of the DTI, the Institute of Actuaries, and the Institute of Chartered Accountants of England and Wales.

3.12 At the end of January 2007, I sent the public bodies a first draft of my provisional views on relevant facts, whether maladministration had occurred and, if so, whether it had resulted in any injustice to complainants. This followed the sharing of draft excerpts from the factual background Parts of this report with the parties to the complaints.

3.13 In March 2007, I disclosed the provisional report of my actuarial advisers to the public bodies. Those bodies, in April 2007, made substantial representations to me about my draft report and about the content of the professional advice that had informed that draft report. In the light of those representations, I agreed to conduct a fundamental review of my draft report and to seek further professional advice.

3.14 The revised draft report that was the result of that review was issued in February 2008 to all the interested parties. My final report takes into account all the responses I received to those drafts.

Section 4: The basis for my determination of the complaints

My approach

4.1 In simple terms, when determining complaints that injustice has been sustained in consequence of alleged maladministration, I generally begin by comparing what actually happened with what should have happened.

4.2 So, in addition to establishing the facts that are relevant to a complaint, I also need to establish a clear understanding of the standards, both general and specific, which applied at the time. I call this establishing the overall standard.

4.3 In Chapter 5 of Part 1 of my report, I set out the general standard relevant to the investigation, as derived from established principles of good administration and from public law principles. I then go on to set out the specific standard relevant to the investigation, i.e. the specific legal and administrative framework of prudential regulation.

4.4 Having established the overall standard, I then assess the facts in accordance with that standard. First, I assess whether an act or omission on the part of the body complained about constituted a departure from the applicable standard. If so, I then assess whether that act or omission was so unreasonable, or fell so far short of acceptable standards of good administration, as to constitute maladministration.

The regulatory regime

4.5 The regulatory regime which developed over time to deliver prudential regulation and which pertained at the time relevant to this report had four cornerstones:

- The concept of 'freedom with publicity';
- The central place of the Appointed Actuary within the regulatory regime;
- The protection of the 'reasonable expectations' of both policyholders and potential policyholders; and
- The criteria of 'sound and prudent management'.

4.6 Those cornerstones laid the foundations on which were built:

- the way in which regulation was undertaken – in which information provided through the regulatory returns and the role played by the Appointed Actuary in ensuring that this information was so provided were given a central place; and
- the powers, duties and means conferred on the prudential regulators – which gave prominence to the protection of policyholders' reasonable expectations and ensuring the fulfilment of the statutory criteria of sound and prudent management.

4.7 The statutory framework which governed this system of regulation had four chief component parts:

- European Directives concerning life assurance;
- the Insurance Companies Act 1982;
- secondary legislation made under the Insurance Companies Act 1982; and
- certain other domestic statutory provisions related to the activity of insurance companies.

4.8 The prudential regulation of insurance companies such as the Society was primarily undertaken through two mechanisms: the submission of regulatory returns and the scrutiny of those returns.

4.9 Each company was required to submit annual returns containing detailed information about the business and financial strength of the company in a prescribed format. Once checked by the prudential regulators for completeness, those returns were placed in the public domain at Companies House.

4.10 Scrutiny of those returns was undertaken by GAD on behalf of the prudential regulators until April 2001. The prime aims of this scrutiny were to ensure that the company had complied with the statutory and other obligations imposed on it, to verify the financial position of the company, and to check that the company was able to meet its liabilities and to fulfil the reasonable expectations of its policyholders and/or its potential policyholders.

4.11 The prudential regulators and GAD also obtained information through visits to, and meetings with, insurance companies and through information provided to them by such companies on an ad *hoc* basis. GAD also undertook industry-wide analysis, which informed their scrutiny of the returns.

The legal and administrative obligations of the prudential regulators and GAD

4.12 Chapter 5 of Part 1 of my report, supported by the relevant detail in Part 2, provides a detailed overview of the general and specific legal and administrative obligations which the prudential regulators and/or GAD had at the relevant time.

4.13 From that overview, I identified the following key legal and administrative obligations which I use in my consideration of the manner in which those regulators and/or GAD discharged their obligations. I also set out below what I would expect to have seen if the prudential regulators and/or GAD were fulfilling these obligations.

(i) The prudential regulators were under statutory duties, imposed by the specific regime contained within the Insurance Companies Act 1982 and the Regulations made under it:

- to consider the regulatory returns with a view to ensuring that those returns were complete and accurate (in the sense of them being compliant with the applicable Regulations).

  In complying with this duty, I would expect the prudential regulators to have considered the regulatory returns submitted by insurance companies and, if those returns appeared to be inaccurate or incomplete in any respect, to have communicated with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

- and to ensure that an insurance company valued its assets and determined its liabilities in accordance with the requirements that were imposed on it by the applicable Regulations.

  In complying with this duty, I would expect the prudential regulators to have considered whether the way in which an insurance company valued its assets and determined its liabilities as set out within the regulatory returns had been *undertaken in accordance with the relevant requirements and, if it appeared that the company had used a valuation basis that was not compliant with those requirements, to have considered whether to take action to remedy the position.*

(ii) The prudential regulators were also under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or may have arisen which gave grounds for the use of such powers.

In complying with this duty, I would expect the prudential regulators to have considered the use of their powers in the light of any information that they possessed – whether from the content of the regulatory returns, from contact with an insurance company, or from other sources – which gave rise to questions about the solvency position of that company, or about whether it was acting in line with the interests of its policyholders or in accordance with the reasonable expectations of those policyholders, or potential policyholders, or about whether it was acting soundly or prudently.

(iii) The prudential regulators were also under a general public law duty to exercise their statutory powers in a right and proper way, in accordance with the presumed intention of the legislature which conferred those powers, in good faith, reasonably, for a proper purpose, and with procedural propriety.

In complying with this duty, I would expect the prudential regulators to have dealt appropriately with any regulatory issues which arose in relation to any insurance company other than through the scrutiny process and to have acted in such a manner as to ensure the effective operation of the regulatory regime as Parliament had established it – informed as that regime was by the concepts of 'freedom with publicity', the protection of the reasonable expectations of policyholders and potential policyholders, and the fulfilment of the criteria of sound and prudent management.

(iv) Both the prudential regulators and GAD were under an obligation generally to act in accordance with established principles of good administration.

In complying with this obligation, I would expect the prudential regulators and/or GAD:

- *to have acted in accordance with their general and specific legal duties and powers;*
- *to have acted in accordance with their own published and internal policy and guidance;*
- *to have taken proper account of established good practice, including professional practice;*
- *to have taken reasonable decisions based on all relevant considerations and ignoring irrelevant ones;*
- *to have kept proper and appropriate records as evidence of their activities, including a record of the reasons for their decisions; and*

- *to have provided information, where it was appropriate to do so, which was clear, accurate, complete and not misleading.*

Section 5: Findings of fact

5.1 In Chapters 6, 7 and 8 of Part 1 of my report, supported by the relevant detail in Parts 3 and 4, I set out how the prudential regulation of the Society was undertaken during the period from when the Society's returns for 1990 were submitted to the prudential regulators until the end of my jurisdiction on 1 December 2001 – with the coming into force of the current regulatory regime.

5.2 As I explained in Section 4, my approach to determining complaints of maladministration leading to injustice is to assess the facts against the overall standard that I have established is relevant to the investigation.

5.3 First, I assess whether an act or omission by the body complained about constitutes a departure from the applicable standard. These are my findings of fact.

5.4 My review of all the evidence, submissions and other material and my application of the overall standard to that evidence have led me to make ten principal findings of fact.

My first finding of fact

5.5 The role of the Appointed Actuary was, at the time relevant to this report, a central component of the system of prudential regulation of insurance companies.

5.6 Given this regulatory role, which was one cornerstone of the system of prudential regulation in the United Kingdom, an Appointed Actuary needed to ensure that he or she had sufficient independence from the executive management of a life insurance company to enable him or her to undertake effectively the responsibilities (to the company, to its policyholders, and to the prudential regulators and GAD) that were conferred on the Appointed Actuary and to enable him or her to do so in line with the intention of Parliament when it had created the role in 1973.

5.7 If an Appointed Actuary was unable to secure or retain the necessary degree of operational independence, this would raise serious questions about the ability of the Appointed Actuary in those circumstances to perform the regulatory functions conferred on him or her.

5.8 **My first finding of fact** is that, in June 1991, the prudential regulators approved, when they should not have done, the appointment of a new Chief Executive without insisting that he should demit office as the Society's Appointed Actuary and without applying subsequently a closer degree of scrutiny of the Society's affairs.

5.9 Furthermore, for the next six years, those regulators failed to consider the use of their powers to seek the removal of that person from his 'dual role', despite the assurance that had been given at the time of his appointment that he would hold such a dual role for 18 months only. Yet the dual role existed from 1 July 1991 to 31 July 1997.

5.10 After having considered the representations I had received, I concluded that the way in which the DTI, as prudential regulators, handled the creation and continued existence of the 'dual role' fell short of the standard that could reasonably be expected of such regulators.

My second finding of fact

5.11 Each year, the Society, like every other insurance company, was required to submit annual returns to the prudential regulators. Those returns set out a considerable amount of detail about the business of the Society, about its liabilities, about the assets covering those liabilities, and about the solvency position of the Society.

5.12 As I have noted, the submission and scrutiny of those returns were the two prime mechanisms of prudential regulation during the period covered by this report.

5.13 The Society's returns for the years 1990 to 1993 raised certain issues about the approach that the Society was adopting to its business, which the scrutiny process was designed to highlight in order to enable the prudential regulators, acting with advice and assistance from GAD, to ascertain whether there was any need to raise and pursue those issues.

5.14 **My second finding of fact** is that, with regard to the scrutiny of the Society's annual regulatory returns for the year ends for 1990 to 1993, GAD, in providing advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had sought to demonstrate that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations.

5.15 Accordingly, those regulators were unable to verify the solvency position of the Society as they were under a duty to do. The aspects in respect of which the Society's returns for these years raised questions which should have been identified, pursued and resolved were:

- the valuation rate of interest used to discount the liabilities, which appeared to be imprudent and/or impermissible (discounting liabilities well below the guaranteed face value of policies); and
- the affordability and sustainability of the bonuses previously declared by the Society, which appeared to raise the expectations of the Society's policyholders which might not be met.

5.16 On the information before GAD, the Society's approach to discounting meant that a significant amount of any future surplus would be required simply to fund current guaranteed benefits.

5.17 This occurred in a situation in which GAD knew that the Society had informed its policyholders that, subject to smoothing, the additional returns they would receive by way of future bonus declarations would reflect the future investment performance of the with-profits fund.

5.18 In addition, serious questions arose from the information within the returns about whether the Society could afford the level of bonus it was paying and whether it could continue to pay out at that level. This occurred in a situation in which, as GAD knew, the Society was unique in illustrating to its policyholders the full policy fund value, including terminal bonus.

5.19 From the information before GAD, it was not clear how the Society could fund guaranteed future bonuses (applying the guaranteed investment return) or manage to pay future discretionary bonuses, in line with the reasonable expectations of the Society's policyholders that such bonuses would continue to be paid.

5.20 Despite those questions, raising issues concerning the prudence of the Society's approach and whether the Society would be able to fulfil the reasonable expectations of its policyholders, no action was taken by GAD to seek to resolve those questions or to raise them with the prudential regulators.

5.21 After having considered the representations I had received, I concluded that the failures by GAD, as part of the scrutiny process, to raise and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations, fell short of what could reasonably be expected of GAD.

My third finding of fact

5.22 As is well known, the Society wrote policies containing guaranteed annuity rates. Those policies guaranteed the rate at which the proceeds available at retirement (based on the sum assured plus associated bonuses) would be converted to a pension – and thus the minimum amount of pension available at retirement.

5.23 The Society stopped providing guaranteed annuity rates on new policies from June 1988, although new members of some existing group schemes continued to be provided with policies containing guaranteed annuity rates until the early 1990s.

5.24 The Society's guaranteed annuity rates continued to apply to the benefits that would be purchased by any future premiums (including in relation to recurrent single premium policies) that might be paid in respect of policies which already enjoyed this guarantee.

5.25 Those guaranteed annuity rates were both more flexible, in that they applied over a wide range of ages without penalty, and potentially more widespread than was the case with similar guarantees provided by other companies. In addition, policyholders could pay future premium payments and still benefit from the same guaranteed annuity rate at the same range of ages.

5.26 No new fund was established by the Society at the time of the changes it made to exclude guaranteed annuity rates and, subsequently, guaranteed investment returns from the policies it wrote. Thus the assets held in respect of the different classes of policy thereby created were held in one fund.

5.27 Nor was there a separate bonus series declared or any differentiation in treatment between the various classes of with-profits policyholders in terms of the level of bonuses declared by the Society, despite the changes in policy terms and the associated guarantees that had occurred.

5.28 In late 1993 and early 1994 and continuously from April 1995 onwards, the Society's guaranteed annuity rates became generally more favourable than then current annuity rates, due to lowering interest rates and improved mortality. This meant that the cost of providing the guaranteed annuity benefit exceeded the total policy fund, which was only sufficient to provide the lower benefit available at the current annuity rate.

5.29 In order to deal with this situation, the Society introduced what came to be known as the differential terminal bonus policy, by restricting the value of benefit paid to the amount of the total policy fund.

5.30 The Society said that this was done to enable it to continue to reflect the Society's philosophy of 'full and fair' distribution to all its policyholders in its bonus policy and to pay each policyholder just their share of the fund.

5.31 Under the Society's differential terminal bonus policy, the amount of final bonus payable when a policyholder took benefits would be dependent on the form in which those benefits were taken and so, if the guaranteed annuity benefit was selected, the amount of the final bonus was reduced.

5.32 **My third finding of fact** is that GAD identified the introduction of a differential terminal bonus policy when scrutinising the Society's 1993 returns in October 1994, but failed to inform the prudential regulators, as GAD should have done, of that introduction or to raise the matter with the Society.

5.33 This failure by GAD to raise the matter occurred despite there having been full disclosure by the Society within its 1990 returns of the extent and level of the guaranteed annuity rates within its older policies and despite the Society referring to such guarantees when it disclosed the introduction of the differential terminal bonus policy in its 1993 returns. GAD also noted that this policy had the effect of reducing the final bonus payable to policyholders.

5.34 That failure also occurred despite GAD knowing, or having information before them which suggested, both that the Society had told its policyholders that the Society would only change bonus policy gradually and also that the Society's With-Profits Guides did not (at that time) inform its policyholders of the differential terminal bonus policy.

5.35 After having considered the representations I had received, I concluded that the failures by GAD, when they identified the introduction of the Society's differential terminal bonus policy as part of their scrutiny of the 1993 returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders, fell short of the standard that could reasonably be expected of GAD.

My fourth finding of fact

5.36 As noted above, the Society submitted annual returns to the prudential regulators. Further issues arose in respect of the Society's returns for 1994 to 1996.

5.37 **My fourth finding of fact** is that, in carrying out the scrutiny of the Society's annual regulatory returns for each year from 1994 to 1996, GAD, in providing advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had sought to demonstrate that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations. Those regulators were thus unable to verify the solvency position of the Society.

5.38 The matters arising from the Society's returns which GAD failed to address and resolve to a satisfactory conclusion were:

- the continuation of the two issues which had arisen within the returns for 1990 to 1993 (questions concerning discounting through the use of imprudent and/or impermissible valuation interest rates and the affordability and sustainability of the Society's bonus declarations);

- what appeared to be arbitrary changes to the assumed retirement age for personal pension policies, contrary to European Directives and the applicable domestic Regulations;

- the absence of explicit reserves for prospective liabilities for capital gains tax and for pensions review mis-selling costs, stating instead that such liabilities were covered by implicit margins in the valuation basis; and

- the absence of reserves in respect of guaranteed annuity rates, which by then GAD should have known were 'biting' and should therefore have been provided for.

5.39 GAD failed to identify all of those matters, to pursue them with the Society, or to seek to resolve the issues that they raised.

5.40 After having considered the representations I had received, I concluded that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996, related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, (iii) apparently arbitrary changes to the assumed retirement ages, and (iv) the holding of no explicit reserves for the liabilities associated with prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates, fell short of what could reasonably be expected of GAD.

My fifth finding of fact

5.41 Most insurance companies used the valuation method and basis set out in the applicable Regulations to calculate their Mathematical Reserves.

5.42 However, throughout the period covered by this report, insurance companies were entitled to use an approach which differed from the statutory minimum basis, so long as the alternative method that was used produced Mathematical Reserves that were at least as high as that which would have been produced using the statutory minimum basis.

5.43 During the period covered by this report, the Society always used an alternative valuation method within its returns.

5.44 In order to seek to demonstrate compliance with the Regulations, the Society set out information about the amount of its Mathematical Reserves using a basis that its Appointed Actuary considered was compatible with the method set out in the Regulations. This was done in an appendix at the end of Schedule 4 of the Society's returns.

5.45 **My fifth finding of fact** is that GAD failed in certain respects to act, when they should have acted, to question the Society's practice of producing two valuations within the regulatory returns but omitting crucial information from one of those valuations. After 1996, the Society continued to produce two valuations but published the missing information.

5.46 That information was the amount of the resilience reserves required in the Society's appendix valuation, produced to demonstrate compliance with the Regulations. That omission meant that the Society appeared financially stronger than it was and that its solvency position was capable of being misconstrued.

5.47 While GAD asked the Society for the missing information in all but one year, GAD did not take steps to ensure that a reader of the returns had that information.

5.48 Even though the Society was not in breach of any of the applicable Regulations by presenting its valuations in the way that the Society did, GAD recognised at the time that this position meant that the Society's returns, which were the main mechanism through which 'freedom with publicity' was delivered, might mislead those who read them.

5.49 Although the Society was permitted to produce an alternative valuation from that specified in the applicable Regulations, it was required, by those Regulations, to demonstrate that its chosen alternative valuation was at least as strong as that specified in those Regulations.

5.50 GAD considered that such demonstration was provided through the provision by the Society to GAD – but not through the returns – of the amount of the reserves omitted from the Society's alternative valuation. However, GAD failed to ask for this information in November 1996 when conducting their scrutiny of the Society's 1995 returns. GAD were therefore unable to verify whether those returns had complied with the applicable Regulations.

5.51 In addition, from November 1993 onwards GAD had possessed information, in the form of ratings of the Society produced by Standard & Poor's – an expert ratings agency, which showed that the position was not only capable of being misconstrued but also that it was being misconstrued.

5.52 Standard & Poor's erroneously concluded that the Society was stronger than it really was. This was as a direct result of the information which GAD knew was missing from the returns. Those ratings were also provided to GAD by the Society and retained on GAD's files and were used by the prudential regulators as part of briefing for Ministers and in other ways.

5.53 GAD took no action to raise or to seek to resolve these issues.

5.54 After having considered the representations I had received, I concluded that the failures by GAD (i) to ask for the information they needed in respect of the Society's 1995 returns to enable them to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society, fell short of what it was reasonable to expect from GAD.

My sixth finding of fact

5.55 During 1998, the prudential regulators and GAD became aware that the Society had not made provision for the liabilities arising from guaranteed annuity rates contained within certain of its policies and those regulators required that the Society should do so within its 1998 returns.

5.56 That requirement had led to an immediate increase of £1,600 million in the amount of reserves required to be shown as at 31 December 1998, as well as additional associated resilience reserves. As a result, the Society investigated means whereby those additional liabilities could be offset in order not to disclose a much weaker financial position in those returns.

5.57 Had such offsetting action not been taken, the 1998 regulatory returns would have shown such a weak financial position that the Society's future as an independent mutual would have been threatened and its continued ability to write new business and declare bonuses would have been in doubt.

5.58 The prudential regulators told the Society in December 1998 that they would take action if they considered that the 1998 bonus declaration made by the Society was imprudent. The Society therefore needed to take urgent action to either raise capital or to reduce its Mathematical Reserves.

5.59 The Society did this through a financial reinsurance arrangement. Within its published returns for 1998, 1999, and 2000, the Society took credit for the arrangement that it had entered into with IRECO.

5.60 The amount of the credit taken for those years was, respectively, £809 million, £1,098 million, and £808 million. The Society's Mathematical Reserves were reduced by more than those amounts, however, as the resilience reserves it was required to hold were also reduced. The prudential regulators permitted those credits to be taken.

5.61 The Society's published returns for 1998 showed that it had excess available assets and implicit items of £1,516 million over the required minimum margin, the returns for 1999 showed the excess asset figure as £2,747 million, and those for 2000 showed a figure of £411 million.

5.62 **My sixth finding of fact** is that the FSA permitted the Society, when they should not have done so, to take credit within its 1998 returns, which were submitted on 30 March 1999 and which were available to the public by 1 May 1999, for a financial reinsurance arrangement which had not been concluded either at the valuation date or at the date that those returns were submitted. This was done without an appropriate reporting concession being given.

5.63 Moreover, even leaving that aside, the FSA permitted the Society within its returns for 1998, 1999, and 2000 to take credit for the financial reinsurance arrangement that did not reflect the economic substance of that arrangement.

5.64 This was despite the fact that GAD had identified the potential problems with the proposed financial reinsurance arrangement and had informed the FSA of those problems, recognising that this arrangement had little or no value for the purposes of the determination of the Society's solvency position.

5.65 After having considered the representations I had received, I concluded that the failure by the FSA, acting on behalf of the prudential regulators, to (i) ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) ensure that the credit taken by the Society within its returns for 1998, 1999, and 2000 properly reflected the economic substance of that arrangement, fell short of the standard that could reasonably be expected of such regulators.

My seventh finding of fact

5.66 As is well known, the Society sought clarity as to the validity of its differential terminal bonus policy through seeking the view of the Courts. While that litigation was proceeding through the Courts, the Society – and the prudential regulators – undertook scenario planning to consider the likely impact of a range of possible outcomes to that litigation.

5.67 Consideration was given to what those scenarios would mean for the financial position of the Society and for its freedom to maintain the policies it had adopted to manage its affairs, and what other consequences the possible outcomes of the *Hyman* case could have for the Society and its members.

5.68 Even assuming that the financial reinsurance arrangement which the Society had entered into, and for which it proposed to take a substantial offset within its 1998 regulatory returns, entitled the Society so to do, the continuation of that arrangement was contingent on the Society being able to continue to apply its differential terminal bonus policy. Yet that ability was precisely the issue at stake in the *Hyman* proceedings.

5.69 Furthermore, if the Society were found not to have been able to apply its differential terminal bonus policy, the question would arise as to how to remedy the position of those policyholders with policies which contained guaranteed annuity rates who had retired since 1 January 1994, but who had not been provided with the option of taking benefits without the reduction in terminal bonus applied under the Society's differential terminal bonus policy. The question of compensating such policyholders would thus arise if the Society lost the *Hyman* case.

5.70 **My seventh finding of fact** is that the FSA failed to pursue the failure by the Society to include contingent liability notes within its regulatory returns for 1998 and 1999 regarding the potential impact of losing the *Hyman* litigation. This failure to check why the Society had not included any such disclosure in those returns occurred despite the reminders by the prudential regulators that the Society should do so, reminders given prior to the submission of the Society's 1998 returns.

5.71 No action was taken to seek to ensure that the Society had a sound basis for not publicly disclosing the fact that the outcome of the litigation could have profound effects, including for the operation of its differential terminal bonus policy (and hence its reserving practices) – effects which would have a significant impact on the solvency position of the Society and on the amount of money available to meet the liabilities it had to its policyholders and the future bonus expectations of those policyholders.

5.72 This failure by the FSA to act also occurred in relation to the Society's 1999 returns in a context in which the FSA knew that the Society had informed its policyholders that no significant costs would be imposed on the Society if it lost the *Hyman* case.

5.73 After having considered the representations I had received, I concluded that the failure of the FSA, acting on behalf of the prudential regulators, to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation fell short of the standard that could reasonably be expected of such regulators.

My eighth and ninth findings of fact

5.74 Following the decision of the House of Lords in the *Hyman* case, the Society had been faced with an extremely serious situation. That decision had profound effects.

5.75 The financial reinsurance arrangement that the Society had entered into was, as a result of the ending of the Society's differential terminal bonus policy, to lapse. Without the credit that had been taken for that arrangement, a serious question arose as to whether the Society could or would continue to meet its required solvency margin.

5.76 The Society was immediately faced with a significant reduction in what the Society regarded as the assets available to meet the costs in respect of those policyholders who chose to take benefits calculated with regard to guaranteed annuity rates. Those costs had to be shared, almost certainly by benefit reductions, across all policyholders – as any 'ring-fencing' of policyholders with annuity guarantees had been declared unlawful by the House of Lords.

5.77 This gave rise to inbuilt conflicts between the interests of different classes of policyholders that, in the circumstances facing the Society at the time, could not be resolved using the normal mechanisms available to life insurance companies and which meant that the Society's situation was inherently unstable.

5.78 In that context, the Society decided to put itself up for sale. The question arose as to what the regulatory response to that decision should be. The FSA decided not to intervene to require the Society to close to new business whilst it sought a buyer.

5.79 I make two findings of fact concerning the decision to permit the Society to remain open to new business following the decision of the House of Lords in the *Hyman* case.

5.80 **My eighth finding of fact** is that the FSA failed to record that decision. No contemporaneous record was made of that decision or of the factors and evidence which were taken into account by the FSA when they took it, or what alternative options, if any, the FSA had considered. That decision was highly significant for the interests both of existing and potential policyholders.

5.81 **My ninth finding of fact** is that, having established from those involved the basis on which the FSA took that decision, the decision to permit the Society to remain open at that time was not grounded in a sound factual or legal basis.

5.82 Relevant considerations – such as the nature of the Society's business, which meant that it was not just new policyholders who were potentially affected by the decision – were not taken into account. No proper consideration was given to the use of the full range of powers that the prudential regulators possessed.

5.83 After having considered the representations I had received, I concluded that the failure by the FSA, acting on behalf of the prudential regulators, to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation fell short of the standard that could reasonably be expected of such regulators.

5.84 I also concluded that the basis on which the decision was taken by the FSA, acting on behalf of the prudential regulators, to permit the Society to remain open to new business was unsound, not taking into account all relevant considerations and not having a proper legal and factual basis and that this fell short of the standard that could reasonably be expected of such regulators.

My tenth finding of fact

5.85 In the period between the Society's closure to new business on 8 December 2000 and the end of my jurisdiction in relation to relevant events on 1 December 2001, the FSA, acting on behalf of the Treasury as the prudential regulators of insurance companies, were contacted by many hundreds of the Society's policyholders who were concerned about the position that the Society was in and about their own future options.

5.86 The FSA during this period also issued general information relating to the Society through updates, website material, and factsheets.

5.87 As the Society prepared proposals for a scheme of arrangement under the Companies Act 1985, to compromise the competing claims of the Society's policyholders, the FSA were also contacted by policyholders about the Society's proposals and about the attitude of the FSA to those proposals.

5.88 **My final finding of fact** is that the information provided by the FSA in the post-closure period was misleading and unbalanced, with assurances being provided that the Society was solvent, when that was in considerable doubt and was not the view that was always held within the FSA, who, on behalf of the prudential regulators, had exercised formal intervention powers on the grounds that the

Society was likely to be in breach of its regulatory solvency requirements.

5.89 Nor were the assurances given by the FSA that the Society was at that time fulfilling and always had fulfilled all of its other regulatory requirements appropriate, when the FSA knew that this was not the case.

5.90 After having considered the representations I had received, I concluded that the misleading information, about the Society's solvency position and its record of compliance with other regulatory requirements, that was produced by the FSA, acting on behalf of the prudential regulators, during the period after the Society closed to new business fell short of the standard that could reasonably be expected of such regulators.

Section 6: Determinations of maladministration

6.1 In section 5, I set out the ten findings I have made that the acts or omissions of the prudential regulators and/or GAD fell short of the standard that could reasonably be expected of them.

6.2 Having done so, I then go on to assess whether those acts or omissions were so unreasonable, or fell so far short of acceptable standards of good administration, as to constitute maladministration. The assessments that I have made on these questions are set out in Chapter 11 of Part 1 of my report.

6.3 I have made ten determinations of maladministration – one against the DTI, four against GAD, and five against the FSA. I have done so because I am satisfied that the departures that each finding represent were unreasonable in the circumstances and/or fell far short of acceptable standards of good administration.

6.4 Those determinations are:

- that the failures (i) to insist, when approving the appointment in June 1991 of a new Chief Executive, that he should demit office as the Society's Appointed Actuary, and (ii) during the period from 1 July 1991 to 31 July 1997, to consider the use of their powers to seek to remove that person from such a 'dual role' constitutes maladministration by the DTI;

- that the failure, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations, constitutes maladministration by GAD;

- that the failures, when the introduction of the Society's differential terminal bonus policy was identified as part of the scrutiny of the 1993 returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders, constitutes maladministration by GAD;

- that the failure, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996, related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, (iii) apparently arbitrary changes to the assumed retirement ages, and (iv) the holding of no explicit reserves for the liabilities associated with prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates, constitutes maladministration by GAD;

- that the failures (i) to ask for the information GAD needed in respect of the Society's 1995 returns to enable them, as part of the scrutiny process, to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society constitutes maladministration by GAD;

- that the failures (i) to ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) to ensure that the credit taken by the

Society within its returns for 1998, 1999, and 2000 properly reflected the economic substance of that arrangement constitutes maladministration by the FSA;

- that the failure to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation constitutes maladministration by the FSA;

- that the failure to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation constitutes maladministration by the FSA;

- that the unsound basis on which the decision was taken to permit the Society to remain open to new business, following its loss of the *Hyman* litigation constitutes maladministration by the FSA; and

- that the misleading information, about the Society's solvency position and its record of compliance with other regulatory requirements, that they produced during the period after the Society closed to new business constitutes maladministration by the FSA.

Section 7: Determinations of injustice

7.1 When determining in general terms whether or not any maladministration which I have found to have occurred has resulted in injustice to those who have complained to me, I first identify what were the consequences of that maladministration and then I assess whether those consequences constitute an injustice for which no or no sufficient remedy has been provided.

7.2 The **consequences of my first finding of maladministration**, related to the 'dual role' were, first, that the prudential regulators and GAD became overly reliant on the information provided by one person within the Society – through his completion of the returns and through the meetings that those regulators and GAD often had with only that person. The Society was also not prompted and/or invited by the prudential regulators to address the unsatisfactory nature of the 'dual role'.

7.3 A further – and important – consequence of this failure was that the system of prudential regulation, designed on the basis that the Appointed Actuary (with operational independence from the executive management of a life insurance company) would play a central role, operated in a dysfunctional manner during this period in respect of the Society.

7.4 The maladministration which I have found to have occurred resulted in the effective operation of the system of prudential regulation in respect of the Society, and the governance of the Society, becoming compromised. There was effectively no 'whistle-blower' during this period within the Society, to the detriment of the proper governance of the Society and of the prudential regulation of the Society.

7.5 The **consequences of my second finding of maladministration**, related to the scrutiny of the Society's regulatory returns for each year from 1990 to 1993 were, first, that the prudential regulators and GAD could not be satisfied that the Society was acting prudently and with proper regard to the reasonable expectations of its policyholders. Another consequence of this failure is that the Society was never asked to justify whether it could afford its bonus declarations or how it proposed to sustain the level of bonus that it declared.

7.6 A further consequence was that the impression was given to existing and potential policyholders that the Society was financially sound and able to pay generous bonuses, when the prudential regulators and GAD could not have been sure that either was the case.

7.7 The maladministration which I have found to have occurred led to lost opportunities to seek further understanding as to whether the Society's business model was inherently prudent or whether that model exposed the Society's members to unnecessary risks.

7.8 The **consequences of my third finding of maladministration**, related to the intimation of the Society's differential terminal bonus policy were, first, that the prudential regulators were disabled from discharging their duties.

7.9 Another consequence of that failure was that the Society was not asked by the prudential regulators and/or GAD to justify its approach in the light of the reasonable expectations of its existing policyholders and/or of the contents of its advertising, which did not draw to the attention of potential policyholders (or existing policyholders, especially those considering making further contributions to policies which did not contain guaranteed annuity rates) that such a policy existed.

7.10 A further consequence of this failure was that the Society took its decisions, such as not to consider ring-fencing new entrants into a different fund, rejecting certain approaches that it received from those interested in acquiring the Society's business, and/or as to the validity of its general practices, in a context in which the Society could reasonably believe that it had secured regulatory approval – albeit tacit approval – for its new bonus policy and associated practices.

7.11 The maladministration I have found to have occurred resulted in the loss of a number of critical opportunities. Such opportunities included those to test the appropriateness of the differential terminal bonus policy and to ensure that the illustrations and advertisements provided to existing and potential policyholders explained the Society's policy and practice.

7.12 Opportunities were also lost to take decisions about the future direction of the Society in full knowledge of the reserving requirements to which it was subject and to which the prudential regulators and GAD would eventually draw attention. The Society lost the option to make provision gradually over time for the costs arising each year from those requirements as those costs accumulated.

7.13 The maladministration which I have found also resulted in the problems which caused the Society eventually to close to new business being obscured until July 1998 and to the loss of opportunities for the Society and for the prudential regulators and/or GAD to begin to address those issues much earlier than they all eventually did.

7.14 The **consequences of my fourth finding of maladministration**, related to scrutiny of the Society's regulatory returns for each year from 1994 to 1996 were, first, that an early opportunity was lost to address the issue of the Society's practice as to reserving for guaranteed annuity rates. Another consequence was that the Society's liabilities were considerably understated.

7.15 The maladministration which I have found to have occurred reinforced that which I have found in relation to the introduction of the differential terminal bonus policy, in that the problems which caused the Society eventually to close to new business were further obscured and opportunities were lost to address those issues earlier.

7.16 The **consequences of my fifth finding of maladministration**, related to the presentation of the Society's two valuation results were, first, that those reading the Society's returns during this period were capable of being misled as to the strength of the Society's true financial position.

7.17 Another consequence was that those who used the information and conclusions drawn from the returns by rating agencies and other third parties – including financial advisers, industry publications, and those briefing Ministers – were enabled to rely on information that did not contain a complete and accurate assessment of the Society's true position. They were thus actively misled.

7.18 A further consequence was that GAD were unable, with respect to the Society's 1995 returns, to verify the financial position of the Society, as they were not able on that occasion reasonably to be satisfied that the Society's chosen valuation method had produced a result at least as strong as the minimum prescribed in the Regulations as they lacked the information needed to be so satisfied.

7.19 The maladministration which I have found to have occurred resulted in the reader of the returns not having the information that was before GAD and which, arguably, should have been available to all readers of the Society's published returns.

7.20 No action was taken when it was clear that those readers were misconstruing the information that was provided. Maladministration also resulted in those who expressed concerns about the Society's solvency being reassured on grounds which were not sustainable.

7.21 The **consequences of my sixth finding of maladministration**, related to financial reinsurance were, first, that the Society was permitted to declare a bonus in March 1999. Had the Society not done so, a warning would have been given to those considering investing in the Society for the first time or to those considering making further contributions to existing policies that the Society was in significant financial difficulty.

7.22 Another consequence of those acts and omissions was that the solvency position of the Society, as published by 1 May 1999 within its 1998 returns, was misrepresented. Those reading the Society's published 1998 returns would have been misled as to the strength of the Society's financial position. That reinforced the misleading message of the strength of the financial position of the Society which had been given by the declaration of a bonus a month earlier.

7.23 A further consequence of the acts and omissions of the prudential regulators and GAD was that the ongoing weakness of the Society's financial position was hidden from public view in the Society's published returns for 1999 and 2000. Those considering their options – whether to invest, to make further contributions to existing policies, to convert a policy into an annuity, or simply to stay – were given a wholly misleading picture of the true position faced by the Society and of its solvency position due to the unreasonable credit taken for the reinsurance arrangement.

7.24 The maladministration which I have found to have occurred resulted in the true financial position of the Society being concealed and misrepresented through the publication of returns which contained a misleading picture of the Society's solvency position.

7.25 That maladministration also resulted in existing and potential policyholders making highly important decisions – some of which were irreversible – about their financial affairs without the benefit of information which the system of prudential regulation was designed to provide to them, in order to enable them to make informed choices.

7.26 The **consequences of my seventh finding of maladministration**, related to the potential impact of the *Hyman* litigation on the Society were, first, that the prudential regulators and GAD could not be certain that the Society's policyholders and those potential policyholders considering investing or continuing to invest in the Society were being given complete and accurate information about what were the extent and nature of the possible effects should the House of Lords deliver a judgment that was adverse to the Society.

7.27 Existing and potential policyholders were thus denied information about their potential exposure to significant risk, which was an integral part of informed decision-making as to their financial options.

7.28 Another consequence of those acts and omissions was that the Society and the prudential regulators and GAD lost an opportunity to consider, either separately or together, whether the scenario planning and other work they had undertaken as preparation for managing the possible outcomes of the *Hyman* litigation was sufficient to address the full range of factors which had exposed the Society to the range of problems which it faced during that period.

7.29 The maladministration which I have found to have occurred meant that the prudential regulators could not have been certain that the reality that an adverse judgment would crystallise for the Society was not being distorted.

7.30 Any such distorted reality might inform the published returns and the other publications that the Society produced during that period. The prudential regulators could not have been sure that existing and potential policyholders had the full information necessary to take informed decisions.

7.31 The **consequence of my eighth finding of maladministration**, related to the failure to record the decision to permit the Society to remain open to new business was that no proper and contemporaneous record exists as to the basis for that decision. The maladministration which I have found resulted in an absence of documentary evidence to support the basis for an important decision taken by the FSA.

7.32 The **consequences of my ninth finding of maladministration**, related to the basis on which the decision was taken to permit the Society to remain open to new business were, first, that policyholders lost any opportunity to receive the benefit of the sound and robust exercise of the discretionary powers that Parliament had conferred on the prudential regulators in order to protect the interests of such policyholders.

7.33 Another consequence of this failure was that those who invested for the first time during this period – which could not have occurred had certain intervention action such as the withdrawal or suspension of the Society's authorisation to write new business been taken – or who bought annuities, or who made further contributions to existing policies where there was no contractual requirement to do so, made those decisions in an environment in which accurate and complete information about the financial position of the Society was not available to them.

7.34 No warning had been given by the prudential regulators, as would have been provided by the exercise of intervention powers such as the withdrawal of authorisation, of the seriousness of the financial position that the Society was in.

7.35 A further consequence of this failure was that compensation for mis-selling, if any were provided, became an additional liability falling to be met by those existing policyholders.

7.36 The maladministration which I have found to have occurred resulted in those 'late joiners' and certain other existing policyholders making decisions about their financial affairs without the accurate and complete information necessary to make those decisions on an informed basis.

7.37 The **consequence of my final finding of maladministration**, related to the information provided by the FSA after closure was that reassurance was given to those who contacted the FSA to enquire about the financial position of the Society when that reassurance was not soundly based. Those who had regard to the information provided by the FSA made decisions about their financial affairs having regard to the incomplete and inaccurate information that was provided.

7.38 The maladministration which I have found to have occurred resulted in misleading information about the position of the Society being provided to existing policyholders, in a situation in which those policyholders were entitled to have regard to that information because of its source.

7.39 All of the above specific consequences of the determinations of maladministration that I have made also had three general consequences:

- that the Society's published returns were unreliable;
- that there were lost opportunities to address critical issues earlier; and
- that regulatory decisions were taken on a basis which had insufficient regard to the range of powers that the prudential regulators possessed.

7.40 I considered whether the consequences which I have determined flowed from the maladministration I have found to have occurred constitute injustice to those who have complained to me. Having done so, I make five findings of injustice, being:

- first, **financial loss**, where that has occurred, and/or **lost opportunities** to take informed decisions as a result of reliance on the information contained in the Society's returns for 1990 to 1996;
- secondly, the **loss of opportunities** in the period between July 1991 and April 1999 to take informed decisions in full knowledge of the exposure of the Society to guaranteed annuity rates and of the risks that such exposure generated;
- thirdly, **financial loss**, where that has occurred, to anyone who joined the Society or who paid a further premium that was not contractually required in the period after 1 May 1999 and/or **lost opportunities** to take those decisions on an informed basis;
- fourthly, **financial loss**, where that has occurred, and/or the **loss of opportunities** to take informed decisions to those individuals who can show, having regard to their particular circumstances, that they relied on deficient information provided by the FSA in the post-closure period, that such reliance was reasonable in the circumstances, and that it led to any such losses; and
- finally, a justifiable sense of **outrage** on the part of all those who complained to me at the failings of those operating the regulatory system during the period prior to the Society's closure to new business.

Section 8: Disposal of the complaints

8.1 Chapter 13 of Part 1 of my report sets out my disposal of each of the eighteen specific heads of complaint, and the general complaint, referred to in Section 4 above and detailed in Annex A.

8.2 I uphold the general complaint that the prudential regulators and GAD failed properly to exercise their regulatory functions in respect of the Society during the period prior to 8 December 2000. I do not uphold it for the period from 8 December 2000 to 1 December 2001.

8.3 Annex B shows how I have disposed of the eighteen specific heads of complaint.

Section 9: Remedy and recommendations

9.1 My approach to the provision of remedies for injustice or hardship resulting from maladministration is set out in my document, *Principles for Remedy*, published in October 2007. My underlying principle is to seek to ensure that the relevant public body restores someone to the position he or she would have been in, had the maladministration not occurred. If that is not possible, the relevant body should compensate them appropriately.

9.2 I received submissions from the public bodies which sought to persuade me that it would not be appropriate in the circumstances of this case to adopt my usual approach to questions of remedy. I was not persuaded by those submissions.

9.3 It is my normal practice, where someone has been inconvenienced or made to feel a justifiable sense of outrage at the way that they have been treated, to recommend that an apology is made and that consideration is given to whether that apology should be accompanied by a tangible recognition of such inconvenience or outrage.

9.4 Where financial loss is established, I would normally expect that, where appropriate, such a loss should be remedied in full, with payment of interest where that is relevant.

9.5 In that context, there are four questions that I need to address in this case before making any recommendations designed to remedy the injustice that I have found has been sustained on this occasion, namely:

- whether complainants have suffered a financial loss in absolute terms – that is, have they suffered an identifiable or quantifiable loss at all?;
- if so, whether complainants have suffered a financial loss in relative terms – that is, have they suffered a loss that they would not otherwise have suffered had they invested or saved elsewhere than the Society?;
- if so, whether there is a sufficient link between the acts and omissions of the bodies whose actions have been investigated and found to be deficient with that relative loss; and
- if there is, what would be appropriate in all the circumstances of this case to recommend by way of a remedy?

9.6 If I were to find no financial loss, or were to conclude that any such loss sustained was not sufficiently linked to maladministration, or were to consider that it would not be appropriate to recommend a remedy for any such loss, I would then need to consider whether it would be appropriate to recommend a remedy for the opportunities that I have found were lost as a result of maladministration.

9.7 I also need to consider whether any injustice has already been remedied by other means. Where that is so, I would not expect a further remedy to be provided, as it is an important principle that any recommendation I make should not lead to a complainant making a profit or gaining an unreasonable advantage.

9.8 As for **absolute loss**, I am very far from concluding that everyone who has complained to me about the prudential regulation of the Society has suffered a financial loss. Still less do I conclude that everyone who has saved with, or invested in, the Society during the period covered in my report has suffered such a loss.

9.9 It seems to me that it is a natural and unavoidable consequence of one of the basic premises of the allegations underpinning the complaints that have been made about the events covered in this report – namely, that distribution took place of the resources of the Society in what is said to be an imprudent manner which it could not afford – that some people have gained from their savings and investments with the Society more than they would have done had any such distribution not occurred.

9.10 However, there is no avoiding the fact that those who are, or were at the relevant time, members of the Society experienced the series of policy value and bonus cuts during the period after it closed to new business in December 2000. Details of those cuts are set out within Chapter 2 of Part 1 of my report.

9.11 That is sufficient evidence in my mind to persuade me to conclude that, for many people at least, financial loss has been sustained. In coming to that conclusion, I have also borne in mind the acceptance, which appears to be common ground among all the parties, that such losses were suffered across the with-profits industry at the relevant time. That loss generally occurred does not seem to be controversial.

9.12 That brings me to **relative loss**. Did those who have complained to me, and those in a similar position to those complainants, suffer a loss that they would not have suffered had they saved or invested elsewhere?

9.13 The Society has dealt with many types or categories of mis-selling complaints, or claims based on breach of contract. However, the most analogous category of complaint to the maladministration on the part of the prudential regulators and GAD is the complaints which were made due to the Society's failure to disclose the existence of guaranteed annuity rates.

9.14 I sought information from the Society as to what the outcome had been to the cases of those people who, not being caught by the effects of the Compromise Scheme, had complained to the Financial Ombudsman Service about such alleged mis-selling on the part of the Society. I understand that those cases were assessed using a comparative loss assessment using the performance of an average competitor of the Society as a comparator. That information shows that relative loss was established in approximately 60% of those cases concerning complaints of this type.

9.15 I understand that the cases dealt with by the Financial Ombudsman Service followed on from a review conducted by the Society, at the request of the FSA, of any mis-selling which related to the failure to disclose the existence of guaranteed annuity rates. In the course of that review, the Society also adopted an analagous comparative approach to assessing loss. Under that review, approximately 78% of those with mis-selling complaints of this type were found to have suffered a relative loss.

9.16 Those who have complained to me are in substantially the same circumstances as those who complained to the Society or to the Financial Ombudsman Service, with the exception that they were caught by the effects of the Compromise Scheme and thus could not pursue such complaints.

9.17 When the above information is considered together, it seems to me that this demonstrates that, for many of those covered by my recommendations, it could be established that a loss has been sustained, relative to what would have transpired had those individuals saved or invested with a comparable with-profits fund.

9.18 I therefore conclude that it would be difficult to sustain an argument that no person affected by '*the Equitable affair*' had suffered a relative loss.

9.19 I also conclude that the individual circumstances of each complainant and other people similarly affected are key to establishing whether those people are in the category of those who have suffered relative loss. Accordingly, whether relative loss in a particular case has been sustained has to be determined at an individual level.

9.20 As for whether there is a **sufficient link** between the acts and omissions of the bodies whose actions have been investigated and found to be deficient with any relative loss that is established, I conclude that there was such a link.

9.21 The aim of the system of regulation was to protect the interests of policyholders through the supervision of the affairs of insurance companies, in the manner in which Parliament intended and using the means that Parliament provided.

9.22 In the light of my determinations, set out in this guide, I conclude that there is a direct link between the acts and omissions of the prudential regulators and the information that throughout the period covered by my report was before those people who were making savings and investment decisions regarding the Society.

9.23 Those acts and omissions are also directly linked to the knowledge about the solvency position of the Society that policyholders and potential policyholders possessed during the period on or after 1 May 1999.

9.24 The prudential regulators, <u>and no-one else</u>, were given the functions of scrutinising the returns that the Society submitted and of verifying its solvency position. No other party can be said to be at fault because those regulators, acting with the advice and assistance of GAD, acted with maladministration.

9.25 I now turn to what I consider that it is **appropriate to recommend** as a remedy for the injustice that I have found resulted from maladministration on the part of the prudential regulators and GAD.

First recommendation

9.26 **My first recommendation is that, in recognition of the justifiable sense of outrage that those who have complained to me feel about the maladministration in the form of the serial regulatory failure that I have identified in this report, the public bodies should apologise to those people for that failure.**

Second recommendation

9.27 **My second – and central – recommendation is that the Government should establish and fund a compensation scheme, with a view to assessing the individual cases of those who have been affected by the events covered in this report and providing appropriate compensation.**

9.28 The aim of such a scheme should be to put those people who have suffered a relative loss back into the position that they would have been in had maladministration not occurred.

9.29 I consider that addressing relative loss in this way would be the most appropriate remedy for the injustice that I have found resulted from maladministration. Such an approach would remedy any financial loss that has occurred and also the loss of opportunities to invest elsewhere than the Society. It is thus not necessary to give further consideration to what additional remedy it would be appropriate to recommend to remedy the lost opportunities that have been sustained.

9.30 The scope of such a scheme should cover all those who have suffered similar injustice to those who have complained to me. That should include not just residents of the United Kingdom but all those who have sustained the injustice that I have found resulted from maladministration.

9.31 I consider that it would be reasonable to expect such a scheme to be established within six months of any decision by Government and Parliament to do so.

9.32 I recognise that how best to establish and administer any compensation scheme is a matter for Government and Parliament to decide. However, I would offer, as a contribution to that debate, my view of the principles which should govern any such compensation scheme.

9.33 It seems to me that such a scheme:

- should be **independent** and constituted along the lines of a tribunal or adjudication panel, with three members – one representing broadly the interests of those affected and one representing those of the relevant public bodies, with an independent chair;

- should operate in a **transparent** manner, with the basis being made public of the decisions as to how compensation should be calculated, as to what procedure will govern the consideration of individual cases, and as to the criteria which will be taken into account when considering those cases. Those decisions should only be made after appropriate consultation is undertaken, including with those directly affected; and

- should be **simple**, not imposing undue burdens, whether evidential or procedural, on those making claims to the scheme.

9.34 The above principles would, I hope, be accepted widely as being an appropriate and effective mechanism of decision and delivery of the remedy that I have recommended should be provided.

9.35 I hope, also, that it would be accepted that this mechanism has to have, as its guiding principle, the need to deliver as speedy a remedy as is possible in the circumstances, while recognising the complex issues that would need to be addressed and resolved.

9.36 In my view, the scheme should take no longer than two years from the date of its establishment to complete its work.

9.37 I recognise that the public interest is a relevant consideration and that it is appropriate to consider the potential impact on the public purse of any payment of compensation in this case.

9.38 Furthermore, I am acutely conscious of the potential scale of what I have recommended and that acceptance of my central recommendation might entail opportunity costs elsewhere through the diversion of resources.

9.39 In that context, **I invite Parliament to consider the issues that have been raised in this report and the recommendations that I have made and to further reflect on what its response to my report should be.**

9.40 Having alerted Parliament to the injustice that I have found was sustained in consequence of maladministration, I would be very happy to assist Parliament in its deliberations in any way that I can.

Section 10: Annex A

Terms of Reference and Statement of Complaint for the Equitable Life Investigation

December 2004

Investigation terms of reference

The terms of reference for the investigation are:

> *To determine whether individuals were caused an injustice through maladministration in the period prior to December 2001 on the part of the public bodies responsible for the prudential regulation of the Equitable Life Assurance Society and/or the Government Actuary's Department; and to recommend appropriate redress for any injustice so caused.*

Statement of complaint

Summary of complaint
The complainants complain that the public bodies responsible for the prudential regulation of insurance companies (successively the Department of Trade and Industry, Her Majesty's Treasury and the Financial Services Authority, collectively referred to in the rest of this statement as 'the regulators') and the Government Actuary's Department (GAD) failed for considerably longer than a decade properly to exercise their regulatory functions in respect of the Equitable Life Assurance Society (ELAS) and were therefore guilty of maladministration.

Specific complaints

1 <u>Organisational issues</u>

a. The regulators were not sufficiently resourced, and did not all possess the necessary skills, to contribute effectively to the overall regulatory process and to responsibly exercise their discretionary powers as intended by Parliament and by the European Community (now the European Union). Administrative decisions as to resourcing, priorities and methods contributed to a position in which the regulators did not properly undertake their functions as prudential regulator of ELAS.

b. The regulators failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by insurance companies. In particular, they failed to ensure that proper assessments were made of ELAS's individual practices and its communications with policyholders, and of the expectations that these generated, in the light of the information that was, or should have been, known to the prudential regulators.

2 <u>General operational issues</u>

c. The prudential regulators did not operate the regulatory regime as it was intended to be implemented by Parliament and in conformity with EC Directives. The regulators instead chose to regulate ELAS with a 'light touch' – a concept not evident from or provided for under the Insurance Companies Act 1982 and the EC Third Life Directive nor one consistent with these statutory provisions. The approach to the regulation of ELAS was exceptionally and unjustifiably lenient when compared to that adopted with other companies, with inadequate investigative site visits and lack of liaison with conduct of business regulators.

Much more rigorous standards of supervision and better co-operation with conduct of business regulators were adopted for smaller and unit-linked companies. This demonstrated that the regulators applied a two-tier standard of regulation.

d. The regulators and GAD allowed successive chief executives or managing directors of ELAS also to hold the post of appointed actuary, despite recognising the potential for conflict of interest in this position. These decisions were not consistent with the basis of the regulatory regime.

e. The regulators and GAD failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments. This was particularly critical in a situation in which narrow, technical interpretations of regulatory solvency were becoming an increasingly irrelevant measure of any insurer's realistic financial position as the industry moved more and more towards non-guaranteed bonus declarations.

f. GAD had recommended ELAS as a pension plan or additional voluntary contribution scheme provider in their advice to the administrators of the Principal Civil Service Pension Scheme and to other public sector pension schemes. This led to a lack of proper separation of their responsibilities and to a clear conflict of interest between GAD's role in providing advice to government bodies in relation to public sector pensions and in assisting the prudential regulators of ELAS. This conflict of interest compromised the proper discharge of GAD's regulatory functions.

3 Supervision of regulatory solvency

g. From the mid 1980s until 1997, the regulators failed to evaluate the potential effect of Guaranteed Annuity Rates (GARs) on the solvency of ELAS in a context where current annuity rates were falling steadily, in line with the Bank of England's base rate, to below contracted GARs. The regulators learned explicitly in November 1993 of the degree of ELAS's exposure to risks associated both with the GAR issue and with ELAS's lack of prudent reserves. The regulators' failure to take action then or to impose reserving until 1999 played a direct part in the closure of ELAS to new business and to subsequent cuts in policy and annuity values. The regulators did not prepare a study on the extent of GARs in the industry until 1997: a decade too late.

h. From about 1990 onwards, the regulators and GAD failed to give sufficient consideration to the fact that some of the measures used to bolster ELAS's solvency position were predicated on the emergence of a future surplus. As a consequence, they did not properly assess the overall impact and adequacy of those measures. The regulators also allowed ELAS to mis-use the term 'surplus' and failed to consider the use of that word in the context of policyholders' reasonable expectations.

i. Over this same period, the regulators allowed ELAS to publish financial results and projections that were misleading in that they did not reflect the Society's true position. In particular, ELAS was allowed to habitually report growth rates alongside bonus rates, which gave the impression of a prudent margin for error, whereas the true position was that:

- assets were consistently less than policy values so that higher rates of growth were needed to cover any given rate of bonus; and

- as part of the growth was needed to cover expenses and the contractual liability for conventional annuities, the growth available to meet with-profits bonuses was always materially less than the rate quoted in ELAS literature. This was never made clear.

j. During this period, the regulators and GAD failed to act when ELAS adopted what Lord Penrose described as practices of '*dubious actuarial merit*'. These included valuing future liabilities at an inappropriate rate of interest between 1990 and 1996; treating selling costs as an asset; making no provision for GARs until much too late; valuing a financial re-insurance policy (which proved to be of no value) at over £800 million; allowing credit for 'aspirational' (i.e. effectively unrealisable) assets; responding too slowly to widely evidenced changes to mortality expectations; and the issuing of a subordinated debt worth £346 million which did not count as a liability.

k. On several specific occasions, as set out in the Penrose report, the regulators and GAD ignored or failed to act on information that might have led to formal or informal regulatory action against ELAS, thus also failing to alert new investors to the risks of investing. These include when ELAS board papers were sent to GAD by the Appointed Actuary on 11 June 1991, and when information was provided to GAD on 10 September 1992 which showed that, for the years 1989 to 1991, the aggregate policy values very significantly exceeded the value of the underlying assets.

4 <u>Payment of excess bonuses</u>

l. Over a period of many years the regulators and GAD permitted ELAS to operate an unsound business model, of which they were aware. ELAS had made public its policy of reliance on 'goodwill' in a 1989 actuarial paper *With Profits Without Mystery*, but the regulators never addressed the issue or challenged ELAS about it or about the consequences of the model. Instead, they allowed ELAS to operate the model, which entailed declaring bonuses in excess of admissible assets, while at the same time operating without a significant estate and with a smoothing fund persistently in deficit. These were major contributory factors to ELAS's development of what Lord Penrose quantified as a £3 billion asset deficit at the time of closure to new business and to the losses incurred by all those who held policies on 16 July 2001.

m. The regulators failed to ensure any satisfactory correlation between the total of declared policy values and ELAS's admissible assets in a context where ELAS, uniquely in the industry, had declared total policy values that included terminal bonuses and had, without exception, always paid all claims (both contractual and non-contractual) in accordance with these declarations.

5 <u>Policyholders' reasonable expectations (PRE)</u>

n. Ministers and officials decided that regulatory activities in relation to safeguarding PRE should be based solely on the regulatory returns, but failed to put in place adequate procedures and Regulations to enable this to be achieved. This failure was particularly critical in respect of ELAS, which had unique practices that elicited PRE.

o. As a result, the regulators and GAD failed over many years properly to monitor and assess ELAS's asset position and its practices in the light of PRE. The regulators and GAD did not properly determine PRE or act to protect them as intended by Parliament and to the standards set by EC Directives.

p. During the course of the *Hyman* litigation, the regulators failed in their duty to all policyholders in respect of PRE and postponed consideration of issues related to assets and reasonable expectations, both for GAR and non-GAR policyholders, until after the House of Lords' judgment (20 July 2000). In addition, the regulators totally failed to assess properly either the impact or the scope of the judgment and to evaluate the range of scenarios for ELAS following it. They failed to take appropriate action to mitigate the adverse effect of the judgment on the majority, non-GAR policyholders, and on new investors into the same with-profits fund. Their judgement that there was a 99.9% probability that ELAS would be sold demonstrated that, despite the extensive information that they possessed, the regulators failed to understand the parlous state of ELAS which was apparent to all prospective bidders.

q. In March 2001, the regulators permitted ELAS to declare a bonus for 2000 and an interim bonus for 2001 that were both inappropriate and unjustifiable given the then state of ELAS's finances, thus raising misleading expectations about the true state of ELAS just prior to significant across-the-board cuts that were imposed only four months later. Instead, ELAS's asset deficit of 13% at year-end 2000 in a closed fund should have precipitated regulatory intervention at that time.

r. In July 2001, the regulators failed to protect PRE by permitting policy value adjustments worth more than £4,000 million in the form of an inequitable uniform percentage cut across all with-profits policies, rather than the fairer alternative of reducing policy values by cutting only non-guaranteed bonuses. The regulators also refused to comment meaningfully on this to policyholders while discouraging independent financial advisers from giving proper advice to policyholders.

Remedy sought

The complainants seek full financial redress for the losses they have incurred in consequence of the maladministration outlined above.

Section 10: Annex B

Disposal of the heads of complaint

Head of Complaint	Topic: the actions of the prudential regulators and/or GAD in relation to allegations concerning:	Disposal
A	Resourcing and skills	Dismissed
B	Liaison with the conduct of business regulators	Dismissed
C	Inconsistent approach to regulation	Dismissed
D	Dual role	Not determined
E	Failure to keep pace with developments	Dismissed
F	Conflict of interests	Dismissed
G	Guaranteed annuity rates	Upheld in full
H	Measures predicated on the emergence of future surplus ignored	Dismissed
I	Misleading financial results	Upheld in part
J	Practices of 'dubious actuarial merit'	Upheld in part
K	The use of the information before GAD and the papers disclosed to GAD	Upheld in part
L	Unsound business model	Upheld in part
M	Correlation between policy values and assets	Dismissed
N and O	PRE	Upheld in part
P	Preparation for House of Lords	Upheld in part
Q and R	Bonus and policy value cuts	Upheld in part
GENERAL COMPLAINT	General regulatory failure	Upheld for the period prior to 8 December 2000
