Foreword

Background

> *The most complex, wide-ranging and onerous investigation which the Office has ever undertaken*[1].
>
> *By far the longest and most detailed* [report] *produced by the Office* [which] … *resulted in the provision of the most substantial remedy ever to result from an investigation*[2].

These were the words used by two of my predecessors to describe the Barlow Clowes investigation conducted by my Office in the late 1980s. The reader of this report, which sets out the results of the investigation I have conducted into the prudential regulation of The Equitable Life Assurance Society during the period prior to 1 December 2001 – and the reader of other recent reports I have published – will, I am sure, agree with me that those accolades, if such they be, can no longer be accorded to the Barlow Clowes case.

A much more substantial remedy than was secured in the Barlow Clowes case has resulted from my March 2006 report on final salary occupational pensions. And this report is approximately ten times the length of my predecessor's report on Barlow Clowes, has taken four times as long to produce, and has involved the devotion of resources which go significantly beyond those which supported the completion of that earlier report.

In part, all this is a natural consequence of the differing scope of the two reports. Equitable is a much bigger company than Barlow Clowes was. This report covers events which occurred over a much longer time period than was covered in the Barlow Clowes report.

In addition, I have received many more hundreds of complaints about the prudential regulation of Equitable than were received by my predecessors in respect of Barlow Clowes. The number of interested parties with whom I have engaged while conducting this investigation far surpasses those who had any involvement in the Barlow Clowes case – and the range of interests that those parties represent has been much more complex (and perhaps less uniform) than was so in the earlier case.

However, both cases share some similarities. Both cases were about regulation in the field of financial services. Indeed, and perhaps most important of all, both cases involved the financial security of many ordinary citizens and the loss of some of their savings and investments. The resulting issues go to the heart of longstanding (and perhaps ongoing) debates both as to what should be done to protect those investing in the products of financial services providers and as to how to handle situations where things go wrong.

As will be seen later in this report, this case has raised, in such a context, similar issues as were raised in the Barlow Clowes case. Such issues include the appropriate role of financial regulators, what potential and existing investors can expect from the system of financial regulation, and whether it would be in the public interest for the taxpayer to be expected, as complainants have advanced should be the case here, to remedy losses sustained in a context where such regulation did not necessarily cause any losses sustained but also did not prevent any such losses arising or mitigate their effects.

---

[1] Sir Anthony Barrowclough, in paragraph 62 of his Annual Report for 1988, commenting on the investigation while it was underway. *Second report – Session 1988-89* (HC 301), 12 April 1989.

[2] Sir William Reid, in paragraph 64 of his Annual Report for 1989, commenting on the report after its publication. *Third Report – Session 1989-90* (HC 353), 18 April 1990.

And both cases have involved a substantial degree of Parliamentary and public interest. My predecessor reported[3], in words that resonate with me and which I would endorse, that:

> *Members, and the investors on whose behalf they approached me, are understandably anxious that I should complete my investigation as a matter of urgency. But I am having to urge that they be patient while all the necessary evidence is collected, examined and assessed.*

The time taken to publish this report

As was clear to my predecessor, ensuring that an investigation is completed as speedily as possible and ensuring that it is conducted in such a manner as to produce a robust, authoritative, and soundly-based report are often competing pressures. I too have faced such competing pressures in this case.

When I announced my decision in July 2004 to conduct the investigation which led to this report, I said that I could not be specific about how long my investigation would take. I expressed the hope that this investigation could be conducted within a reasonable timetable, as I was conscious that significant numbers of people – many of them elderly – had told me that they were in difficult financial circumstances.

I regret that it has taken much longer to publish this report than I hoped would be the case at the outset of this investigation.

I recognise that the time that I have taken to conclude the investigation and publish this report has added to the frustration and anxiety that many of those who have complained to me have felt about the events covered by this report – and that this has done little to mitigate the uncertainty that they feel about their future financial position. I am very sorry that this has been the case.

I also recognise that the time taken to publish my report has meant that those whose actions have been subject to review have had to await my determination of the complaints made about them for longer than they might first have expected. That too is a matter for regret.

As with the inspectors appointed in June 1988 to investigate the affairs of the Barlow Clowes group of companies, whose report was published in July 1995, the publication of this report has been affected by the complexity and range of the matters investigated, the sheer amount of evidence to be analysed, and the need to ensure that those whose actions were potentially subject to adverse criticism – and those representing the people whose complaints this report will determine – had a proper opportunity to respond to my provisional findings and conclusions prior to publication of this report.

My preliminary observations

Before setting out the results of the investigation, I would like to make a number of preliminary observations. They relate to questions of fairness and due process; to the relationship between this report and the report of my first investigation into the prudential regulation of the Society, published in June 2003; to the subject matter of this report – regulation; and to the absence of a single inquiry covering all aspects of what has been termed '*the Equitable Life affair*'.

[3] As for footnote 1.

Fairness and due process
First, I should record that representations have been made to me in the course of my investigation, and in particular following the issue of my draft report to the public bodies whose actions were the subject of complaint, that the process that I have followed has not been fair. I have considered those representations very carefully and responded to them in detail, although I have not reproduced those exchanges in this report.

Chapter 3 of this report sets out the process that I have followed in conducting this investigation. I am satisfied that the process I have adopted has been fair and has given those complained about ample opportunity to respond to the allegations made against them, to submit evidence and to respond to my emerging findings.

The relationship between my two reports
My second preliminary observation is that this is not the first report that I have produced in relation to the prudential regulation of the Society; and that, in relation to certain matters, the conclusions in this report differ from those reached in my first report, published on 30 June 2003.

The complaints which gave rise to the two investigations leading to those two reports were different and only some issues are common to both reports. However, in the light of a fresh investigation of the relevant matters I have reconsidered conclusions set out in the first report – something which, when in July 2004 I reported my decision to conduct this investigation, I gave an undertaking to Parliament that I would do.

There are three principal factors which help to explain why some conclusions set out in this report differ from those set out in my first report.

- First, the inclusion of the Government Actuary's Department within my jurisdiction at the outset of the second investigation has had a material effect on the approach that I was required to adopt. In the first investigation, I could only assess whether the actions of the relevant regulators constituted maladministration in the light of the advice that those regulators had received from their professional advisers in the Government Actuary's Department. In the second investigation, I have had to consider the acts and omissions of those regulators and their professional advisers when assessing whether or not maladministration occurred.

- Secondly, the time periods covered by the two investigations were very different. My first report only considered events occurring from 1 January 1999 to 8 December 2000. This second report covers the whole period prior to 1 December 2001. The events considered and the acts and omissions reviewed in the course of the second investigation have thus been considerably more extensive than was the case with the first investigation. For the first time, I have been able to examine how the issues which arose during the period considered by the first investigation developed over time in an earlier period that was not covered by that investigation – and I have also been able to examine how (some of) those issues were eventually resolved in a later period than that covered by the first investigation.

- Thirdly, the evidence available to me in the course of this investigation was considerably more comprehensive than that available at the time of the first investigation. That is partly a function of the broader jurisdiction and more extensive time period covered in the investigation leading to this report. But, as I reported to Members of Parliament during the course of the second investigation, substantial additional evidence was provided to me that was not available during the first investigation. Much of this new material has been central to establishing what standard should be applied to the actions under investigation.

These three factors – a broader jurisdiction, a more extensive time period, and a more comprehensive evidence base – all help to explain, in relation to those matters covered in both reports, the differences between the conclusions reached following the first and second investigations.

One lesson that can be learned is that, where a technical jurisdictional obstacle might have a significant detrimental impact on the efficient conduct of an investigation, action should be taken – as was taken at the beginning of the second investigation – to seek the removal of such an obstacle, if that is possible.

It is against that background that I have reconsidered conclusions set out in my first report and, where I have considered it appropriate to do so, I have reached conclusions which differ from those set out in that first report.

For the avoidance of doubt, the conclusions set out in this report supersede and replace those set out in my first report. That first report, for the reasons set out above and in this report, can no longer be regarded as having any validity.

The focus of my report – regulation
My third observation relates to the fact that my investigation has been focused on regulation. That may seem like a trite observation – but there are two direct consequences of such an observation that I believe should be emphasised from the outset.

My investigation has been conducted in response to complaints about injustice claimed in consequence of alleged maladministration by regulators. It has not been – nor could it have been – focused on the actions of the entity being regulated, which in this case was Equitable. The underlying 'true' position of the Society at any one time is thus not central to my findings. I have focused only on the actions which the relevant regulators should have considered and/or taken on the basis of the information in their possession, however accurate that information was or might have been found to be had further investigation of the true position been undertaken at the time.

It will become apparent to the reader of this report that my investigation has identified numerous instances where issues arose which should have provoked regulatory consideration. On many such occasions, either no consideration or insufficient consideration was given by the relevant regulators.

Such regulatory considerations, rather than the commercial position of the Society, have thus been my central focus. It has been no part of this investigation to attempt to make findings about the actions of the Society. The legal framework within which I must operate would not permit me to do so.

I recognise that, had the relevant regulators acted on all those occasions when they should have acted, the Society might have responded appropriately and thus enabled a satisfactory resolution of some or all of the apparent regulatory issues to be achieved. It is not possible now, given the passage of time, to identify conclusively in relation to every issue what would have transpired had such appropriate regulatory action been undertaken.

This report examines how the relevant regulators discharged their responsibilities; it does not seek to come to definitive conclusions about the underlying position of Equitable.

An equally important consequence, which is the second consequence referred to above, is the need to have proper regard to the nature of regulation and to some central dilemmas faced by those exercising any regulatory functions.

I am acutely aware that those exercising regulatory functions are often placed in very difficult situations in which they have to exercise judgement in relation to complex matters which require the balancing of a range of often competing pressures and interests.

This is especially the case where they are granted powers by Parliament to protect the interests of citizens but where the use of such powers, if exercised prematurely or without a sound basis, might bring about precisely the outcome – detriment to the interests of those citizens – which the system of regulation was designed to avert.

It is relatively easy for anyone to identify instances where the acts or omissions of others have turned out not to be the most optimal solution to a particular problem – but it is less easy to put oneself in the position of the person who had to take the relevant decision at the appropriate time. In this context, regulators are very often '*damned if they do'* take action, while at the same time being '*damned if they don't'*. This is something that I readily acknowledge and have borne in mind throughout this investigation.

When reviewing the acts and omissions of regulators, it seems to me that key to recognising this dilemma is the adoption of an appropriate standard, derived from the contemporaneous framework of law, guidance, and established good practice, against which such actions can be objectively measured and assessed.

This report has been guided by the development of such an appropriate standard. It has not been prepared having regard to a counsel of perfection, judging the relevant regulators by impossible standards or against measures of what is only now deemed appropriate, measures which bear no resemblance to the context which existed at the relevant time. Anyone's opinion as to what the purpose of regulation should be or as to how it should be conducted can be of no consequence in the context of an investigation conducted by any Ombudsman if that opinion is far removed from the reality of the regulatory system as it was constructed by Parliament and as it was required to be operated at the time.

The focus of my investigation has had to be on the role of the relevant regulators and not on the actions of the Society. It was also necessary to apply a standard that was grounded in the reality of the relevant regulatory regime as it existed at the relevant time and not in my own opinion as to what such a regime should have looked like.

Those are both considerations that have been central to my investigation. However, neither has received universal acceptance among the parties to the complaints. A small minority of complainants consider that no report is worthwhile unless it makes determinations in respect of the actions of the Society and all the other actors with some role in its story. That I simply cannot do.

The public bodies whose actions have been under investigation have submitted that the responsibilities of other actors than the prudential regulators and their advisers should be taken into account, in order not to '*leave the reader with the incorrect impression that it was only, or even mainly, the prudential regulator who bore responsibility for Equitable's subsequent difficulties*'. However, I can make no determinations in respect of the responsibilities of bodies not in my jurisdiction. Hence my report does not seek to explain what caused the '*difficulties*' of the Society, but instead seeks to determine whether maladministration on the part of the prudential regulators and the Government Actuary's Department (GAD) occurred and, if so, whether any such maladministration caused injustice to those who have complained to me.

While I regret this lack of universal acceptance of the consequences of my role and powers, I am satisfied that the approach that I have adopted to these questions is the only correct one.

The absence of a single inquiry

My final preliminary observation follows from what I have said above and relates to the absence of a single inquiry covering all aspects of what has been termed '*the Equitable Life affair*'.

As I have noted above, the time that it has taken to publish this report is considerably longer than I had expected and that is a matter of regret. However, this is compounded by the fact that this report is only part of an extended series of reports, published following various inquiries, investigations and other proceedings related to Equitable. The four years that it has taken me to publish this report are only part of the almost eight years since the Society closed to new business.

I have great sympathy with those who have told me that they find it wholly unsatisfactory that they have had to wait more than seven years since they first were affected by the relevant events for this determination of their complaints. I do not think it acceptable that the response to the problems at the Society – and consideration of the complaints that have been made about those problems – has been handled through such a protracted process.

Indeed, as I note in Chapter 3 of this report, in July 2002 my predecessor, in his annual report for 2001-02, had even then drawn Parliament's attention to the unsatisfactory nature of this situation, saying:

> *The root cause of the problem, in my view, is the failure of the authorities to establish at the outset a single inquiry with terms of reference covering all aspects of the Equitable Life affair, including issues of possible personal injustice due to maladministration and redress for such injustice if it should be demonstrated*[4].

The existence of the Baird Inquiry, an internal Financial Services Authority (the FSA) inquiry, and the establishment of the Penrose Inquiry by the Government were, of course, to the forefront of my predecessor's mind when he considered whether he should investigate the prudential regulation of the Society.

The possibility that those inquiries would enable the consideration and resolution of the complaints that had been made about the role of the relevant regulators without the necessary restrictions on my Office's role was central to the decisions that he took. Indeed, my predecessor reported that he had drawn the situation to the attention of the Public Administration Select Committee and noted:

> *I was strongly criticised in Parliament and the media for deferring a decision on whether to investigate some of those complaints until the Penrose Inquiry set up by the Government, which will consider a much wider range of issues than my statutory remit allows, had reported ... It seems to me plainly inefficient, and potentially unfair, to have two simultaneous but separate investigations covering much the same ground and taking evidence from much the same sources...*[5]

That my Office could only ever conduct an investigation that was limited in scope and reach – focusing only on the actions of the prudential regulators during the period prior to 1 December 2001 – was a consideration that guided my decision to embark on a consultation exercise prior to coming to a decision as to whether to conduct this investigation. Despite recognition of the inherent limitations that were inevitably placed on any investigation I conducted, given the jurisdiction that Parliament has bestowed on me, respondents to that consultation

[4] Eighth Report, Session 2001-02: *Annual Report for 2001-02* (HC 897), 2 July 2002, at paragraph 1.12.
[5] Eighth Report, Session 2001-02: *Annual Report for 2001-02* (HC 897), 2 July 2002, at paragraph 1.10.

were overwhelmingly in favour of my conducting a further investigation.

It seems to me that there is a direct link between the time that it has taken since the closure of the Society to new business to seek a final resolution of the complaints made about that closure and related matters and the piecemeal approach that the Government has adopted to handling the relevant issues.

The failure at the outset to establish a single inquiry which was not hampered by terms of reference or a statutory jurisdiction which limited the issues that could be addressed and resolved has resulted in such an extended and long drawn out process. The adage '*justice delayed is justice denied*' has rarely been far from my thoughts as publication of this report has drawn nearer. And the continual uncertainty that this has caused for many individuals – and also for the Society itself – must have been difficult to bear.

I find it hard to accept that the establishment of a comprehensive inquiry was not possible in this case. The situation at Equitable was not unique. It shared a number of factors with other situations in other spheres of political life which have arisen and been resolved.

There are, of course, a number of mechanisms that could have been adopted. Key to the speedy and effective resolution of the issues relevant to the closure of the Society and related matters was the adoption of a mechanism that, in the particular circumstances of this case, was fit for purpose. Ensuring that inquiries or other means of explaining events and of resolving complaints, claims, and disputes are fit for purpose is critical to their success and to public confidence in them.

It seems to me that the principles which underpin fitness for purpose are that:

- those conducting the investigation or inquiry should be appropriately chosen and wholly independent from those under investigation: confidence in the robustness of the process will only be achieved where all the parties believe that the person or persons undertaking the inquiry are suitably competent and that the process will be fair and balanced;

- there should be clarity of purpose: the terms of reference of each inquiry or investigation should be clearly set out when it is established and should, at the very minimum, provide the means to achieve four aims:

  (i) the relevant events and actions should be established on a factual basis;

  (ii) who or what caused the adverse outcome should be determined - while identifying where hindsight has informed this judgment;

  (iii) appropriate redress should be identified for any individuals or groups of individuals who have suffered as a result; and

  (iv) lessons for the future, in terms of law, policy, practice and behaviour, should be identified and recommended in such a way that they can be implemented and that such recommendations can add value;

- the particular mechanism chosen should be the most appropriate in the circumstances of each case and the form of the inquiry or investigation should follow: whether it should be held in public or in private, for example, or whether it should adopt an inquisitorial or adversarial approach should be informed by the context of the relevant events; and

- the inquiry or investigation should be provided with the necessary resources to enable it to fulfil its mandate in a timely and effective manner, with access to appropriate levels of funding, staff, professional advice and powers to obtain information, evidence or papers.

In the case of '*the Equitable affair*', no such comprehensive and fit for purpose inquiry has ever been established. Some – such as the two investigations that my Office has conducted – have been unavoidably limited in terms of jurisdictional reach. Others have been conducted within terms of reference that precluded the attribution of responsibility or the recommendation of redress or at least did not specify that either or both should be undertaken. Still yet others have focused solely on lessons to be learned for future practice.

That this is the case seems to me both iniquitous and unfair. Whatever else results from the publication of this report, I hope that I never again have to draw Parliament's attention to such a disjointed process for resolving complaints that have affected so many of the constituents of almost every Member.

Acknowledgements

The completion of the investigation and the publication of this report would not have been possible without the co-operation of a large number of people. These include the direct parties to the complaints – the lead complainants and those members of certain policyholder and annuitant action groups they appointed to act as their representatives and also the officials of the three public bodies whose actions were subject to investigation, being Her Majesty's Treasury, the Government Actuary's Department, and the Financial Services Authority. In addition, I have greatly benefited from the input of a range of interested parties, including the Society itself.

I am extremely grateful for the considerable assistance that all these parties have provided to us at every stage in the investigation process. I would like to place on record my special gratitude to those in the action groups representing the lead complainants, as they largely contributed to the investigation on a voluntary basis without having the considerable resources to enable them to do so that were available to the other parties.

I hope that the burden that the provision of such assistance may have placed on all who have contributed to my investigation was not too onerous – it has certainly been of considerable value to us.

Finally, I would like to record my thanks to the team of people who have helped me to carry out this investigation and produce this report. That includes my in-house investigation team, and everyone in my Office who has supported them in a variety of ways, as well as my external advisers, both legal and actuarial. This report would not have been produced without them and I am indebted to them all.

Ann Abraham
16 July 2008

This report contains references to, and extracts from, legal opinions and advice and their contents obtained by the Equitable Life Assurance Society and provided by it to -

(a) the public bodies responsible for the prudential regulation of insurance companies in the course of normal exchanges between a regulated body and its regulators for the specific purpose of allowing those regulators to fulfil their regulatory functions; and

(b) Lord Penrose in the course of normal exchanges between the Society and Lord Penrose and his Inquiry team for the specific purpose of allowing Lord Penrose to fulfil his terms of reference.

After the House of Commons had ordered the report of Lord Penrose to be published on 8 March 2004, all the documents obtained by Lord Penrose were retained by the Treasury.

In turn, I obtained this material from the Treasury for the specific purpose of carrying out my investigation into the prudential regulation of the Society, following my decision to carry out such an investigation which was reported to Parliament on 19 July 2004.

I acknowledge that the Society has waived privilege in this material only for the above specific purposes and that the Society does not intend any wider or general waiver of privilege by not objecting to the inclusion of, or extracts from or references to, this material in this report as published.

Glossary

Term	Explanation
1967 Act	The Parliamentary Commissioner Act 1967, from which I derive my powers.
1982 Act	The Insurance Companies Act 1982, which governed the prudential regulation of life insurance companies. Its provisions were repealed during 2000 and 2001, being replaced by the Financial Services and Markets Act 2000.
Admissible assets	Assets that the applicable Regulations permit to be taken into account for the purposes of determining an insurance company's solvency position.
Annuity	An arrangement by which a life insurance company pays someone a regular income, usually for life, in return for a lump sum payment.
Appendix valuation	The valuation produced by the Society within its *regulatory returns* to demonstrate that its chosen alternative valuation, the main valuation, produced a result at least as strong as that prescribed in the applicable Regulations.
Appointed Actuary	The actuary appointed by life insurance companies under section 18 of the *1982 Act*. Each life insurance company was required each year to cause the Appointed Actuary to undertake an investigation into the financial condition of that company. The abstract of the results of that investigation was included within the *regulatory returns*.
Asset shares	The value of a life insurance policy, calculated as the accumulation of *premiums* paid with actual investment returns, net of *expenses* and charges for the cost of guarantees.
Available assets	An insurance company's free assets less any implicit items.
Benefits	The amount paid by an insurance company when a claim is made.
Bonus	The amount added to the guaranteed part of the sum insured of a *with-profits* insurance policy. It may be added during the term of the policy (i.e. yearly or *reversionary*) or when the policy matures (i.e. final or *terminal*), or both.
Commission	The sum paid by an insurance company to a broker/intermediary/agent for selling policies.
Current annuity rate	The rate governing the amount that an insurance company would pay on an immediate retirement, expressed as a percentage of the fund converted to pension. This was based on current conditions in the financial markets and the age and gender of the policyholder.
Differential terminal bonus policy	The policy whereby the Society reduced the *terminal bonus* paid to a policyholder who took *benefits* to which was applied a *guaranteed annuity rate*. The *benefits* were reduced by such an amount as to make the resulting pension equal to that paid to a policyholder who opted to take benefits at the *current annuity rate*.

Dual role	The holding by one person simultaneously of the positions of Chief Executive and Appointed Actuary.
Equities	Shares in a company that entitle the owner to some of the profits or earnings the company makes. Equities may or may not be listed on the stock exchange.
Expenses	Costs incurred in the running of the business, including any *commission* paid to sales staff.
Estate	The balance of *admissible assets* over *Mathematical Reserves* held back from bonus distribution to *with-profits* policyholders as a buffer against major fluctuations in investment values or in underwriting experience or in the central costs of administration.
Form 9	A summary within the *regulatory returns* of the assets allocated towards the *required minimum margin* and including a statement of the company's *regulatory solvency* position.
Free assets	The excess value of assets and implicit items over the liabilities.
Free asset ratio	The excess of the *free assets* and implicit items of an insurance company over the *required minimum margin*, expressed as a percentage of the total assets determined within the *regulatory returns*.
Freedom with publicity	The concept that, in return for putting detailed and prescribed information about an insurance company's business and financial condition into the public domain, the commercial freedom of such a company would not be constrained by regulation. The aim of this approach was to enable investors and potential investors to be provided with sufficient information about an insurance company to make informed choices about whether that company was an appropriate investment vehicle for that individual.
Future profits implicit item	An asset relating to an insurer's ability to generate future profits that, if used, would count towards the *required minimum margin* of the insurer. At the time covered by this report, such an asset could only be used by an insurance company if it had been granted a *Section 68* Order by the prudential regulators.
Group personal pension	An arrangement made for the employees of a particular employer to participate in a personal pension scheme on a group basis.
Guaranteed annuity rate	The rate governing the amount that an insurance company would pay on an immediate retirement, expressed as a percentage of the fund converted to pension. Unlike the *current annuity rate*, this was based on a rate specified within the policy and expressed as a guarantee.

Guaranteed investment return	An amount by which basic *benefits* are guaranteed to increase each year before the addition of *reversionary bonus*. Also known as a guaranteed interest rate.
Guaranteed policy fund	The current accrued value of the fund guaranteed to be available to *with-profits* policyholders at *vesting* to purchase a pension. This was shown in personalised annual bonus statements sent to the Society's *with-profits* policyholders. Until the *vesting* date, the *guaranteed policy fund* continued to grow each year with the addition of any *guaranteed investment return* and *reversionary bonuses*.
ICAS Regulations 1983	The Insurance Companies (Accounts & Statements) Regulations 1983. These prescribed the information that had to be disclosed within the *regulatory returns* and set out the way in which that information had to be presented. These governed the returns submitted prior to 23 December 1996.
ICAS Regulations 1996	The Insurance Companies (Accounts & Statements) Regulations 1996. These prescribed the information that had to be disclosed within the *regulatory returns* and set out the way in which that information had to be presented. These governed the returns submitted after 23 December 1996.
ICR 1981	The Insurance Companies Regulations 1981. These made provision for how an insurance company was to value its assets and determine its liabilities and governed the period covered in this report prior to 30 June 1994.
ICR 1994	The Insurance Companies Regulations 1994. These made provision for how an insurance company was to value its assets and determine its liabilities and governed the period covered in this report after 1 July 1994.
Income drawdown	A way of taking regular income directly from a pension fund instead of buying an *annuity* straight away.
Interest rate differential	The difference between the assumed gross bonus rate and the interest rate used for discounting the liabilities.
Investment reserve	The net realised and unrealised appreciation in investments in the *with-profits* fund, after transfers to and from the long-term business fund.
Loading	An extra *premium* charged in recognition of a higher risk, such as poor health or a dangerous job on the part of the person insured.
Life insurance	Long-term policies which pay out on death or, in some cases, on earlier *maturity* of the policy, such as endowment, term, or whole life policies.

Maturity	An agreed date when a life or pension policy comes to an end and the value is paid out.
Market value adjuster	A reduction in the value of a claim on a *with-profits* policy in order to reflect fairly the movement of assets underlying the policy.
Mathematical Reserves	The provision made by an insurer to cover liabilities (excluding liabilities which have fallen due) arising under or in connection with contracts for long-term business. Those provisions were determined by the *Appointed Actuary* in accordance with *ICR 1981* and *ICR 1994*.
Mutual	An insurance company which is owned by some or all of its policyholders.
Net premium	A *premium* net of reinsurance ceded but gross of *commission*, and excluding premium tax.
New business strain	The requirement for capital to support the writing of new business.
Policyholders' reasonable expectations (PRE)	An expression derived from the words '*the reasonable expectations of policy holders or potential holders*' in the statutory grounds for the use of intervention powers by the prudential regulators, under section 37(2) of the *1982 Act*.
Premium	The amount paid by the policyholder for insurance.
Prudential regulation	At the time covered in this report, the regulation of insurance companies with respect to their solvency position, whether they were acting soundly and prudently in line with the interests of their policyholders, and in such a manner as to be able to fulfil the reasonable expectations of their existing and potential policyholders.
Quasi-zillmer adjustment	An adjustment made by the Society to its business to give the same effect as *zillmerisation*.
Recurrent single premium	Life insurance policies which did not require regular premiums to be paid. This type of business accounted for the majority of the Society's policies.
Regulatory returns	The annual returns made by a life insurance company to the prudential regulators, as required by section 22 of the *1982 Act*.
Regulatory solvency	Also sometimes known as technical solvency. Not to be confused with *solvency* in absolute terms. Section 32 of the *1982 Act* required insurance companies to hold assets which exceeded their liabilities by at least the margin prescribed by the applicable Regulations. Those were the *ICR 1981* and, from 1 July 1994, the *ICR 1994*. A failure to meet and maintain this requirement meant that a company was insolvent for regulatory purposes.
Reinsurance	An arrangement whereby one party (the reinsurer), in consideration for a premium, agrees to indemnify another party (the cedant) against all or part of the risk assumed by the cedant under a policy or policies of insurance.

Required minimum margin	The amount by which the value of a life insurance company's assets was required by section 32 of the *1982 Act* to exceed the amount of its liabilities in order to meet its *regulatory solvency* requirements.
Resilience reserves	Reserves, calculated in accordance with *ICR 1981* or *ICR 1994*, which relate to an insurance company's ability to cover mismatches of assets and liabilities that adverse movements in asset values may disclose.
Reversionary bonus	*Bonus* for *with-profits* policies, usually added at yearly intervals during the term of the policy.
Section 68 Order	An Order under section 68 of the *1982 Act*, made by the prudential regulators on the application of, or with the consent of, an insurance company, which directs that certain provisions of that Act would not apply, or would apply with modified effect, to that company.
Solvency	The ability of a company to pay its debts. Under the Insolvency Act 1986, a company is deemed unable to pay its debts if it is proven to the satisfaction of the Court that the value of the company's assets is less than the amount of its liabilities, taking into account its contingent and prospective liabilities. This is sometimes known as absolute solvency, which is not to be confused with *regulatory solvency*.
Surrender value	The amount available if a policyholder were to cash in an insurance policy, where that is possible, before it matures.
Subordinated loan	A debt issued by an insurance company where both the interest and repayment obligations are subsidiary to the insurance company's obligations to its policyholders.
Terminal bonus	The *bonus*, additional to *reversionary bonuses* already declared, that may be paid for *with-profits* policies at *maturity* or if a claim is made.
Total policy fund	The current accumulated value of the total fund (including accumulated *terminal bonuses*) expected to be available to *with-profits* policyholders at *vesting* to purchase a pension. This was shown in personalised annual bonus statements sent to the Society's with-profits policyholders. Until the *vesting* date, the total policy fund continued to grow at a rate allocated annually by the company. Other than in exceptional circumstances, when it could be zero or less, the rate of growth applying to the total policy fund was expected to be greater than the sum of any *guaranteed investment returns* and *reversionary bonus*. To the extent that the total policy fund exceeded the *guaranteed policy fund*, it was not guaranteed.

Unitised with-profits	Contracts where *premiums* are invested in units, either in the *with-profits* fund or in linked funds, or in a mix of both.
Unit-linked	Describes any plan where the value of the *benefits* goes up or down in line with the price of units in a fund.
Valuation	An investigation carried out by the Appointed Actuary under section 18 of the *1982 Act* to place a value upon the long-term liabilities of an insurance company. The resulting provision held by the insurance company for its long-term liabilities is called the *Mathematical Reserves*.
Vesting	The taking of *benefits* under an insurance policy.
With-profits	Life insurance policies which receive their investment income in the form of *bonuses*, paid out of the total income earned by the insurance company on its pooled fund. The value of the saver's fund thus depends on the amount he or she has bought and the amount of bonuses added. Once added, bonuses cannot be taken away, making these policies generally less volatile than linked policies.
Zillmerisation	A modification of the net premium method for valuing a life insurance policy which increases the future premiums valued to take account of acquisition costs incurred.

Notes:

1. Terms italicised are defined elsewhere in this glossary.
2. The definitions in this glossary have been derived from a number of sources, including the glossaries of insurance terms produced by the Association of British Insurers, the International Association of Insurance Supervisors, and the FSA, and other published reports on the Society.

Chapter 1 – Introduction

1 This report sets out the results of my investigation into the prudential regulation of The Equitable Life Assurance Society in the period prior to 1 December 2001. This is the third report that my Office has produced in respect of that regulation.

2 I announced my intention to conduct this investigation – as I noted in the Foreword to this report, the second investigation conducted by my Office – and the reasons for that decision in a report that I laid before Parliament on 19 July 2004, entitled *A Further Investigation of the Prudential Regulation of Equitable Life?* (HC 910). Excerpts from that report are reproduced in Part 4 of this report.

3 That report was published following a consultation exercise I conducted in the aftermath of the publication of the report of an independent inquiry, the Penrose Inquiry, and with the purpose of seeking views from interested parties as to whether I should conduct an investigation in respect of a broader time-period than was covered in the report of my first investigation and with a wider jurisdiction than that which governed the earlier investigation.

4 I derive my powers from the Parliamentary Commissioner Act 1967, as subsequently amended (the 1967 Act). My role is to conduct investigations and to determine complaints referred to me by Members of the House of Commons, which are made by those who claim to have sustained injustice in consequence of maladministration on the part of bodies within my jurisdiction through action by or on behalf of those bodies taken in the exercise of their administrative functions.

5 Where I find that a person aggrieved has sustained injustice in consequence of maladministration, I seek to secure a remedy for that injustice.

6 The terms of reference for the investigation leading to this report were:

> *To determine whether individuals were caused an injustice through maladministration in the period prior to December 2001 on the part of the public bodies responsible for the prudential regulation of the Equitable Life Assurance Society and/or the Government Actuary's Department; and to recommend appropriate redress for any injustice so caused.*

7 Those who have complained to me about the matters covered by this report alleged that the public bodies responsible for the prudential regulation of insurance companies and the Government Actuary's Department, which advised and assisted those regulators, acted with maladministration in failing for considerably longer than a decade properly to exercise their regulatory functions in respect of The Equitable Life Assurance Society.

8 The complainants claim to have sustained financial and/or other injustice as a result of that alleged maladministration. The remedy they seek is full redress for the financial losses that they say they have incurred in consequence of the alleged maladministration; they also seek a remedy for the other injustice they claim to have sustained.

9 In accordance with section 10(1) of the 1967 Act, I have sent a copy of this report to all those Members of the House of Commons who have referred individual complaints to me about the subject matter of this report. In accordance with section 10(2) of the 1967 Act, I have sent a copy of this report to the principal officers of those bodies about whose actions those complaints were made.

10 I am also laying this report before both Houses of Parliament, pursuant to section 10(4) of the 1967 Act, as, for a number of reasons, I consider it to be in the public interest to do so.

11 First, I have received referrals of complaints about the subject matter of this report from Members of the House of Commons acting on behalf of their constituents in respect of 1,018 individuals. 1,480 other people have also contacted me direct to complain about similar matters, many of whom sent a copy of their correspondence to their Member of Parliament or have otherwise involved those Members.

12 The events which form the basis of those complaints have had an effect on many thousands of other individuals both in the United Kingdom and elsewhere. My report therefore affects the interests of a considerable number of people and a large number of Members of Parliament from all political parties and from all parts of the United Kingdom have contacted my Office to express their views.

13 Secondly, the actions I have investigated leading to the production of this report have been (and in some respects continue to be) the subject of a number of inquiries, investigations, and other proceedings – in the domestic courts, within relevant professional bodies, at the European level and before other Ombudsmen.

14 My intention is that my report will provide a clear explanation of the role of the prudential regulators and contain an authoritative account of the acts and omissions of those regulators and their advisers in respect of the relevant events.

15 Thirdly, the issues raised by the complaints that prompted my investigation have raised a considerable amount of interest within Parliament and relate to the performance of regulatory functions which, while the statutory regime relevant to my investigation is no longer in force, go to the heart of some current political debates – about the nature of financial services regulation, about what consumers and taxpayers might reasonably expect from such regulation, and about the relationship between public bodies and citizens in the fields of banking, pensions and life insurance.

16 My report therefore addresses questions of wide social and political importance and its contents might assist Parliament in their further deliberations on these issues.

The subject matter of the report

17 The investigation which led to this report has centred on allegations of regulatory failure on the part of those responsible for the prudential regulation of insurance companies in the period prior to 1 December 2001, as those general responsibilities were discharged in the case of The Equitable Life Assurance Society. In the rest of this report, that mutual life insurance company is referred to as 'Equitable' or 'the Society'– although in some of the direct quotations reproduced in this report, other acronyms commonly used by others have been retained.

Equitable

18 Equitable was founded as the 'Society for Equitable Assurances on Lives and Survivorships' in 1762. In August 1892, it was incorporated in the United Kingdom as a private unlimited company to be known as 'The Equitable Life Assurance Society'. As a mutual life insurance company, Equitable has no shareholders. Instead, it is owned by those who effected its with-profits policies. With-profits policyholders effectively stand in the position of proprietors, sharing in any profits made or losses

incurred in running the business. Equitable is generally accepted to be the oldest surviving mutual life assurance company in the world.

19 On 8 December 2000, Equitable announced that it would stop writing new business with immediate effect. Since then, the Society has undergone a difficult period and has implemented cuts in the policy values of its with-profits policies – or the income derived from its with-profits annuities.

20 The operation of the Society's differential terminal bonus policy in respect of a representative policy for which the default benefit was an annuity paid at a guaranteed rate had become the subject of a judicial decision of the House of Lords on 20 July 2000 in *Equitable Life Assurance Society v Hyman* ([2002] 1 AC 408). That policy, which Equitable had adopted since January 1994, involved the paying of different levels of terminal bonus to policyholders exercising their right to take an annuity at the guaranteed rate than were paid to policyholders not exercising such a right. The House of Lords held that this policy was unlawful.

21 In the aftermath of the House of Lords' decision, the position of Equitable was discussed at a tripartite meeting between the Treasury, the Bank of England, and the FSA held two days prior to the announcement of the Society's closure to new business. At that meeting, Treasury officials explained their view that the problems faced by the Society had been caused by a unique set of circumstances which had contributed to the Society's position being distinct from that of other life insurance companies.

22 The four most important factors identified in that discussion were:

- first, that Equitable had for many years operated a policy of full distribution of any surplus through bonuses to its with-profits policyholders and a policy of not building up a free estate, leaving the Society with a comparatively low level of free assets;
- secondly, that Equitable, being a mutual, had no access to additional, shareholder capital;
- thirdly, that Equitable had offered relatively generous and flexible guarantees on certain types of policy; and
- finally, that the proportion of the Society's business to which those guarantees applied was much higher than was the case for other companies.

23 At the time that Equitable closed to new business, it was thus considered by the prudential regulators that the bonus distribution policy of the Society and also the level and extent of its guaranteed annuity rate policies – which enabled policyholders to secure an annuity with their pension fund at a specified, guaranteed rate as opposed to the then current annuity rates set by the Society or available on the open market – were of central importance to the Society's problems.

24 The announcement by Equitable of its closure to new business had been prompted by the withdrawal of the last potential bidder from the process that had been launched to seek a buyer to acquire the Society following the decision of the House of Lords in the *Hyman* case.

25 In a letter sent by Equitable to all its policyholders on 12 December 2000, those events and the background to them were summarised by the then President of the Society as follows:

As most policyholders will be aware, on 8 December 2000 the Board announced that it had been unable to find a purchaser for the Society and had decided to stop writing new business ... I must stress that the Society remains solvent and will continue to pay benefits and accept premiums under existing policies ...

I am greatly saddened by the need to close the Society ... but the Board decided ... that this was the only realistic option. I apologise most sincerely to you ... that this has come about. The intention of the sale process had been to make good the loss of growth for with-profits policies from 1 January to 31 July 2000 which followed the House of Lords' ruling. In the event, this loss of value is unlikely to be restored, although we remain committed to generating the greatest possible value from the sale of some of the Society's operations and providing the best possible ongoing service.

26 On 19 December 2000, during the first debate in the House of Commons on the closure of Equitable to new business, the sponsor of that adjournment debate, Mr Richard Ottaway MP, said that:

On the role of the regulator, it is the view of many in the industry that the Equitable has been treated differently by successive regulators ... It is clear that something had to give. It was not possible for some policyholders to have guaranteed policies with guaranteed annuities, while other categories of policy holder were not so entitled, without there being some difficulty ...

What was the regulator's view? When it looked at policyholders' contracts, did it think that the directors were adopting a policy that was nowhere mentioned in the contract? If not, why not?

27 Other complaints soon began to be made. Those complaints alleged that failures by those responsible for the prudential regulation of Equitable had caused or contributed to the position in which the Society had found itself when it had closed to new business.

Insurance regulation

28 In the period since 1988, the regulation of insurance companies within the United Kingdom has been subject to different statutory regimes within two distinct time periods. The first period ran from April 1988 to December 2001. In this period, the regulatory regime was effectively split along functional lines and was based on two separate statutes: the Insurance Companies Act 1982 – which concerned primarily the prudential regulation of insurance companies – and the Financial Services Act 1986 – which concerned the regulation of the conduct of investment business, including the marketing activities of life insurance companies.

29 Responsibility for the prudential regulation of insurance companies – which was primarily related to supervision of the solvency of such companies and their ability to meet and continue to meet their liabilities to policyholders and to fulfil the reasonable expectations of those policyholders or of potential policyholders – lay throughout this first period with central Government Departments.

30 During the period prior to 4 January 1998 relevant to this report, the prudential regulator was the Department of Trade and Industry (the DTI) and its predecessors; from 5 January 1998 to 1 December 2001, the prudential regulator was Her Majesty's Treasury (the Treasury). From January 1999 until 1 December 2001 aspects of the day-to-day prudential supervision of insurance companies were contracted out to the Financial Services Authority (the FSA) – which, in this role, acted on behalf of the Treasury.

31 Furthermore, throughout the period relevant to this report legal advice to the prudential regulators was provided by in-house lawyers and, until 26 April 2001, actuarial advice was provided by the Government Actuary's Department (GAD). Thereafter, actuarial advice was provided to the FSA by actuaries directly employed by the FSA, some of whom had previously worked for GAD.

32 Actions taken by all of the bodies with statutory responsibility for prudential regulation during the first period are within my jurisdiction, where those actions are taken in the exercise of administrative functions of such bodies. GAD, however, was not within my jurisdiction until the beginning of this investigation (see paragraphs 18 and 21 of Chapter 3) and was only brought within my investigative reach on a limited basis, to enable me to conduct this investigation.

33 I may only investigate action taken by GAD on or before 26 April 2001 in the giving of advice concerning the exercise of administrative functions under Part II of the Insurance Companies Act 1982 or any other enactment concerned with the regulation of insurance companies.

34 The FSA's actions are only within my jurisdiction in so far as those actions relate to the prudential regulation of insurance companies during the period in which the FSA undertook this regulation on behalf of the Treasury. I have no power to conduct investigations in respect of any other of the actions of either GAD or the FSA.

35 Conduct of business regulation throughout this first period was delegated to a system of industry and practitioner-based, self-regulatory organisations under the supervision of a designated agency. This agency was at first called the Securities and Investments Board but became the FSA. The self-regulatory organisations of which the Society was a member during the period covered by my investigation were, until 1994, the Life Assurance and Unit Trust Regulatory Organisation and, from 1994, the Personal Investment Authority. None of the bodies with statutory responsibility for conduct of business regulation are or were within my jurisdiction.

36 The regime that was operational during this first period and which entailed this functional split between prudential and conduct of business regulation was replaced on 1 December 2001 by the current integrated regulatory regime, governed by the Financial Services and Markets Act 2000.

37 Since then, in this second period, the regulatory regime has combined all aspects of insurance regulation within the remit of one regulator – the FSA, which now regulates the insurance industry in its own right. The FSA, acting in its own right, is not within my jurisdiction and so, consequently, complaints about action taken as part of the regulation of any insurance company on or after 1 December 2001 are not ones that I have the power to consider.

38 I now complete this introduction by explaining the structure of my report.

The structure of the report

The Parts to the report

39 My report is in four Parts (or volumes): this, **Part 1**, describes the background to my investigation, summarises the evidence and representations submitted to me by the parties to the complaints, explains the tests I have applied in determining those complaints within the general and specific contexts of the subject matter of this report, sets out my key findings of fact, and contains my determinations as to whether

maladministration occurred and, if so, whether it has resulted in any unremedied injustice.

40 **Part 2** of the report contains a factual description of the historical development of the regime that was relevant to the prudential regulation of life insurance companies during the period prior to 1 December 2001.

41 **Part 3** of the report contains a detailed chronology of events relating to the prudential regulation of the Society during the relevant period.

42 Finally, **Part 4** of the report contains some key primary documents, reproduced in whole or in part, which I consider are either key to a full understanding of the matters that I have investigated or which help place my determination of the relevant complaints in a wider context.

43 We have also prepared a guide to the main report and summary of findings and recommendations, which is published as Part 5 of this report.

The Chapters in this Part of my report

44 There are fourteen other Chapters in this Part of my report:

Chapter 2 sets the scene for the investigation I have conducted, focusing on the events which form the background to, and the context for, my investigation, and also on the other reviews, inquiries and litigation which have taken place (or which continue to take place) in respect of Equitable.

Chapter 3 explains the involvement of my Office in respect of the events related to Equitable and which led to my decision to conduct this investigation. It also outlines the legal and administrative framework for the investigation and describes the process that I have used to conduct it.

Chapter 4 sets out the general and detailed complaints that have been made to me about the prudential regulation of the Society. It also sets out the initial response to those complaints of the public bodies whose actions were the subject of complaint.

Chapter 5 sets out the basis for my determination of the complaints. It describes my general approach to investigating complaints of injustice sustained as a consequence of maladministration; and sets out both the general principles of good administration and public law and the specific legal and administrative framework of prudential regulation applicable to my consideration of those complaints. It concludes with a summary of the key obligations of the prudential regulators and/or GAD which are relevant to this investigation.

Chapters 6, 7 and 8 set out a summary of the way in which the prudential regulation of the Society was undertaken in three time periods:

- the first period being prior to 20 June 1998;
- the second period being from 20 June 1998 to 8 December 2000, when the Society closed to new business;
- the third period being the post-closure period from 8 December 2000 to 1 December 2001, when my jurisdiction ends.

Chapter 9 contains the preliminary assessments which I have made in respect of disputed questions concerning what standard of regulation it would be appropriate to apply when reviewing the acts and omissions of those undertaking the prudential regulation of the Society, and what powers were available to those regulators.

Chapter 10 sets out the results of my review of the evidence I have obtained and contains my findings of fact.

Chapter 11 sets out my determinations as to whether the acts and omissions of the prudential regulators and/or GAD constitute maladministration.

Chapter 12 sets out my determinations as to whether any such maladministration has led to injustice to those who have complained to me.

Chapter 13 contains my disposal of each complaint within the terms of reference for the investigation, setting out which I have upheld in full, which I have upheld in part, and which I have dismissed.

Chapter 14 considers questions of remedy and contains my recommendations.

Chapter 15 contains my concluding remarks.

Chapter 2 – The background: The Equitable Life Assurance Society

Introduction

1 In this Chapter, I set the scene for the investigation I have conducted, focusing on the events which form the background to, and context for, this report. I also explain which other reviews, inquiries and litigation have taken place (or which continue to take place) in respect of Equitable.

2 This Chapter is structured in the following way:

- in paragraphs 3 to 10, I describe the constitution of the Society;
- in paragraphs 11 to 18, I summarise the nature of the business Equitable conducted during the period covered by this report;
- in paragraphs 19 to 66, I explain the Society's distinctiveness in certain respects within the wider context of the United Kingdom life insurance market at the time;
- in paragraphs 67 to 69, I describe the reputation that the Society had gained at the relevant time;
- in paragraphs 70 to 96, I summarise the events which led to the closure of Equitable to new business on 8 December 2000;
- in paragraphs 97 to 123, I describe the principal events relevant to this report which have occurred following that closure to new business; and
- in paragraphs 124 to 167, I set out the professional and regulatory reviews, inquiries, complaints and litigation which have taken place or been made (or which continue to take place or to be made) in respect of, or relating to, the closure of Equitable to new business.

Equitable

The constitution of the Society

3 I explained in Chapter 1 of this report that Equitable, founded in 1762, is generally believed to be the oldest surviving mutual life insurance company in the world. The Society was registered with its current name as a private unlimited company on 18 August 1892.

4 Equitable's constitution is contained within the Memorandum and Articles of Association, which set out the objectives of the Society and which make provision for who may become a member, the rights and responsibilities of those members, and the Society's governance and organisation.

5 Throughout its history, the Society has been owned by its members. As a mutual life insurance company, its participating policyholders became members of the company and shared in any profits made or losses incurred in running the business of the Society. However, not all of its with-profits policyholders are members of the Society. Only the person who effects a with-profits policy is a member of the Society and, where such a policy is effected by two (or more) people, only the first-named (living) person is a member.

6 The Society is governed by a Board of Directors, which is appointed by the members. Throughout the period covered by this report, the executive directors on the Board were mainly actuaries and, amongst other things, they represented both the Society's finance and actuarial functions. None of the non-executive directors was an actuary (except during the period between 1991 and 1993, when the Society's former Chief Executive, who was an actuary, joined the Board as a non-executive director). During the period relevant to this report, the Society's Chief Executive was always an actuary.

7 The Society has no shareholders, so the scope for conflict between the interests of policyholders and shareholders which can occur in a proprietary life insurance company does not arise.

8 The Society's annual general meetings are open to its members and consider standard items, including the election of directors. Matters not included in that standard agenda are treated as special business. The voting rights of individual members are defined in articles 24(3) and 24(4) of the Society's Articles of Association. On a poll, each member is entitled to one vote for every £1,000 of the sum assured of the with-profits policies that member holds, limited to a maximum of ten votes.

9 The Society's Articles of Association during the period covered by this report made provision for an 'Actuary' to carry out a valuation at least triennially. The Society was the first life insurance company to use the title 'Actuary', having introduced the term in the 18th century.

10 The initial holders of this post (particularly William Morgan) are credited with much of the early development of actuarial science. With the passage of time, the designation 'Actuary' (and later 'General Manager and Actuary') became the Society's title for its Chief Executive – although this is no longer the case.

The nature of the Society's business

11 In the 1950s, Equitable were a relatively small mutual company, selling largely retirement plans – in particular, to university staff under the Federated Superannuation Scheme for Universities. This source of business disappeared in the early 1970s, when the Federated Scheme took the management of its pension business in-house.

12 The Society at that time embarked on a new strategy of active marketing to the upper end of the pensions market, concentrating on high net-worth individuals. It developed new products, a sales force and a branch network.

13 That new strategy was successful, and growth between 1970 and 2000 was substantial. According to the Society's published accounts, at the end of 1970, 1988 and 2000 the total value of funds under management was, respectively, £113 million, £4,163 million and £33,899 million.

14 The Society's business was largely pensions business. Equitable did write some non-pensions business, ranging from endowments to school fees policies, but this was far less financially significant.

15 Equitable sold both individual and group pensions business. Individual products were mainly aimed at the market for high net-worth self-employed individuals, and, in particular, self-employed professionals. The Society also provided pension annuities to individuals on their retirement or to trustees to provide an income when scheme members retired.

16 Group products were sold to trustees of occupational pension schemes and included investment products aimed at small to medium size occupational schemes. Those products were also sold as additional voluntary contribution arrangements for larger schemes, including both the National Health Service and Principal Civil Service pension schemes.

17 While the Society wrote other sorts of pensions business, it was best known for its with-profits products. The option of a broadly-based fund where the Society made the investment decisions and the results were smoothed was attractive to many investors. As a result of this and of the Society's concentration on pensions business, the majority of the business it sold constituted with-profits pensions.

18 Over time, Equitable developed other products to help maintain their position. The Society was one of the first offices to introduce with-profits annuities and income drawdown products. It also allowed combinations of with-profits and unit-linked investments within the same policy.

The distinctiveness of Equitable

19 In addition to being regarded as the oldest mutual life insurer in the world and as important to the early development of actuarial science, the Society was distinctive in other ways related to the nature of its business and its commercial policies.

20 The pension savings products sold by Equitable were generally more flexible than other products available in the market. In particular, under its most popular pension policies the Society did not require policyholders to make regular or minimum premium payments every year.

21 In addition, policyholders did not have to choose a specific retirement age when purchasing a policy. This meant that those who retired 'early' with an Equitable policy typically avoided some of the penalties that could be imposed by other insurers, so that those policyholders were free to retire at any age that was permitted under what were then the Inland Revenue rules relevant to the product.

22 Another way in which it was distinctive was the nature of the guarantees contained within the Society's products. The Society provided a range of guarantees on its with-profits pension products, although those of its policies issued in later years did not contain all of those guarantees. However, unlike some other life insurance companies at the time, the Society did not impose explicit charges for these guarantees via an addition to the premium charged or a deduction from each policy's share of the assets of the with-profits fund.

23 The Society provided three main types of guarantee. Although many life insurance companies provided similar guarantees, Equitable differed in their application of those guarantees. Such guarantees were also provided on an unusually high proportion of the Society's business and a significant proportion of that business contained all three guarantees.

24 The first guarantee provided by the Society was that policyholders would receive full benefits on retirement, without penalty. However, while most other insurance companies generally restricted this guarantee to one particular age, usually selected by the policyholder at the outset, Equitable provided this guarantee at a wide range of ages.

25 The second guarantee provided by the Society was in the form of a guaranteed investment return, which meant that the guaranteed benefits available to policyholders (based on the sum assured) would grow at a minimum rate each year whatever the Society's actual investment performance had been. This guaranteed investment return was not included within new policies sold from 1996 onwards.

26 Equitable differed from most other companies because the level premium policy structure of those other companies normally meant that only future premiums paid at the initial level would benefit from guarantees in the original policy. Most other companies had ceased to offer guaranteed investment returns by 1990, although some continued to offer them into the mid-1990s.

27 However, with the Society, future premium payments in respect of policies which already contained this guarantee (including recurrent single premium policies where policyholders had the right, but not the obligation, to pay further premiums) continued to benefit from this guarantee.

28 The third guarantee provided by the Society was in the form of the guaranteed annuity rates it wrote into some of its policies. Those guaranteed the rate at which the proceeds available at retirement (based on the sum assured plus associated bonuses) would be converted to pension – and thus the minimum amount of pension available at retirement.

29 The Society stopped providing guaranteed annuity rates on new policies from June 1988, although new members of some existing group schemes continued to be provided with policies containing guaranteed annuity rates until the early 1990s.

30 The guaranteed annuity rates provided by the Society were more generous than those provided by most other companies. Those guarantees were also more flexible, as they gave policyholders the option to apply the guarantees over a wide range of ages rather than the more usual practice of applying them at a single age.

31 Under the terms of most of the Society's policies containing those guarantees, including the comparatively high proportion of recurrent single premium policies, benefits purchased by future premiums would also enjoy the same guarantees. In this respect, the Society differed from most other companies who restricted the amount of future premium payments that could benefit from such guarantees.

32 At the time of the changes made by the Society to remove guaranteed annuity rates and, subsequently, to remove guaranteed investment returns from the policies it wrote, no new fund was established by the Society. Thus the assets held in respect of the different classes of policy thereby created were held in one fund.

33 Nor was there a separate bonus series declared or any differentiation in treatment between the various classes of individual pension policyholders in terms of the level of bonuses declared by Equitable, despite the changes in policy terms and the associated guarantees that had occurred.

34 Equitable differed from other life insurance companies in other ways. One example was that, from the 1987 bonus declaration onwards, the Society began to illustrate in annual bonus statements, under the heading of '*Present value of the fund*', the policy value for each policyholder, including the value of terminal (or '*final*') bonus.

35 Those bonus notices explained that the amount of final bonus payable was not guaranteed and that it might vary as financial conditions altered. Those notices also said that, when benefits were ultimately taken, the amount of final bonus could be less than the final bonus illustrated. Other companies typically provided less information than this, or focused only on the guaranteed benefits.

36 Another example of the Society's distinctiveness was its bonus policy introduced from 1989. Equitable stated that this reinforced their philosophy of providing a 'full and fair' return to policyholders. The Society treated its with-profits policyholders as participating in a managed fund[1], which allowed them to benefit from investments in a wide range of assets[2].

37 In the Society's accounts for 1992, its then President said:

[1] This view was set out by two actuaries employed by the Society in a paper, *'With Profits Without Mystery'*, presented to the Institute of Actuaries and to the Faculty of Actuaries in 1989 and 1990. This paper was, much later, to become the most famous exposition of the Society's approach.
[2] See also, for example, Section C of the Society's *With-Profits Guide* as at 1 July 1997.

In the Equitable we pride ourselves on allocating earnings from our investments across all classes and durations of contact in as fair and consistent a manner as possible. The fundamental philosophy is that each generation of policies should receive benefits commensurate with the earnings produced during its lifetime. Beyond the bounds of normal commercial prudence, it would be alien to our culture to hold back benefits from one generation to build reserves for a future generation.

38 Equitable thus did not maintain an estate – that is, assets in excess of the amount needed to meet policyholder benefits, including terminal bonus. Apart from maintaining what was sometimes referred to as a 'revolving estate' to provide some working capital, the Society said that it made a full distribution to its participating policyholders.

39 The Society also considered that all its policyholders should get a fair return, which reflected investment earnings during the period of their membership, whilst avoiding short-term fluctuations in those earnings.

40 Prior to 1989, Equitable aimed to achieve this using a bonus system similar to that of other life insurance companies writing with-profits business, in that the Society declared different levels of terminal bonus for policies maturing at different durations since commencement.

41 For the 1989 bonus declaration, the Society changed its bonus system and introduced the concept of a 'total policy fund' for each policy, which started at the amount of the sum assured and subsequently grew by an amount that represented accumulated bonuses, including terminal bonus.

42 In order to do this, the Society decided to allocate a single growth rate, adjusted for tax, as appropriate, to the total policy fund of all policies, irrespective of policy duration or the guarantees they contained.

43 The total policy fund equalled the policy value illustrated to policyholders each year. Also, each year, the guaranteed funds of each policy (which, at the outset, equalled the sum assured) were increased by the addition of the guaranteed investment return and any declared reversionary bonuses. The amounts of the guaranteed funds were shown in the statements sent to policyholders each year.

44 The rate of growth of the guaranteed funds was intended to be lower than the rate of growth applied to the total policy fund. Thus, under the Society's new system, final bonus represented the amount required to lift the guaranteed benefits up to the total policy fund value.

45 Policyholders were also told in the Society's *Annual Report and Accounts* and, from 1993, in its *With-Profits Guides*, about the investment returns earned on the with-profits fund in the year and, starting with the 1989 *Annual Report and Accounts*, policyholders were also informed of the returns which had been allocated to their total policy funds.

46 A further example of its distinctiveness related to the Society's approach to the adjustment of policy values, equal to the total policy funds, applicable on surrender.

47 Where policy values, including terminal bonus, were in excess of the market value of underlying assets, it was common for life insurance companies to use market value adjusters in order to restrict the benefits paid to policyholders who withdrew from the fund at times other than at maturity, death or retirement. It was also common for such companies to penalise policyholders who were in theoretical breach of contract by surrendering their policy before the contractual retirement or maturity date.

48 In common with other life insurance companies, at certain times Equitable applied market value adjusters to reduce payouts on non-contractual withdrawals from the with-profits fund. The Society's stated aim when applying such adjusters was to protect remaining policyholders. This was achieved by paying surrender values that approximated to the market value of the underlying assets of each policy if this amount were less than the value of its total policy fund.

49 However, unlike other companies, Equitable said that they did not use market value adjusters unduly to penalise surrendering policyholders. For this reason, the approach Equitable adopted was to apply market value adjusters only if significant numbers of policyholders were judged to be seeking to take advantage financially of the with-profits fund.

50 The Society said that this was done to ensure that continuing policyholders were not disadvantaged by withdrawing policyholders being paid more than their fair share, measured by market value, of the underlying assets.

51 The Society's practice in this respect during the 1990s was more generous than that of most other life insurance companies. Before November 1992, most of its surrender values were not adjusted – although some, involving large amounts payable to individual policyholders and all those in respect of group schemes, did suffer such adjustments.

52 From November 1992, adjusters were applied to all surrenders at various levels until such adjusters were withdrawn in March 1997. Adjusters were reintroduced in July 2000 and then applied to all surrenders.

53 Yet another example of the distinctiveness of the Society relates to the fact that it did not pay commission to third parties for the introduction of a potential investor to the Society's sales force and was said by the Society to be a reason for its low expenses.

54 The combination of these distinctive features of the Society's business was not in itself problematic. However, as the external environment changed, the combination of those features eventually would have profound effects.

55 Briefly in late 1993 and early 1994 and continuously from April 1995 onwards, the Society's guaranteed annuity rates became generally more favourable than its then current annuity rates.

56 As a result, the application of a single growth rate to the total policy fund in respect of all policies would have meant that those policyholders whose policies contained guaranteed annuity rates could receive a greater proportion of the surpluses than was, in the Society's view, compatible with its stated approach to 'full and fair' distribution.

57 In order to deal with this situation, the Society introduced what came to be known as the 'differential terminal bonus policy' to enable it to continue to reflect the Society's philosophy of 'full and fair' distribution to all its policyholders in its bonus policy.

58 Under the differential terminal bonus policy, the amount of final bonus payable when a policyholder took benefits under a policy would be dependent on the form in which those benefits were taken – that is, either a guaranteed annuity of a specified type or a current annuity where a wider choice of benefits was available, such as index-linked or joint-life annuities.

59 In particular, if the guaranteed annuity were taken, the level of terminal bonus was reduced from the rate that otherwise would have applied – restricting the amount of the annuity so that its value equalled the value of an annuity available at the then current rate, in respect of which the full amount of terminal bonus was awarded.

60 The operation of the differential terminal bonus policy, however, did not reduce the amount of the resulting annuity to below the amount provided by the application of the guaranteed annuity rate to the amount of the guaranteed fund value.

61 Notes to the Annual Statements provided to policyholders, included from the Statements for the year ending 31 December 1995 and subsequently, gave a brief description of the differential terminal bonus policy[3]. However, at that time no other indication was given to the Society's policyholders of the effects of that policy.

62 Whether the operation of the differential terminal bonus policy was consistent with the understanding that the Society's policyholders had developed of the terms of their policies and the nature of the Society's approach was a question which was central to what those policyholders might reasonably expect from the Society.

63 At all times relevant to this report, it was commonly accepted that the reasonable expectations that the policyholders of a with-profits life insurance company possessed would be influenced by, among other matters, the illustrations, marketing material and other information that had been provided to them.

64 There was therefore a direct link between the Society's method of illustrating benefits and the expectations that its policyholders would have as to what benefits they would receive in normal circumstances.

65 The introduction of the differential terminal bonus policy in this context thus added to the distinctiveness of the Society. While some other companies also adjusted terminal bonuses in a similar way in the type of circumstances which faced the Society from 1995 onwards, those companies tended to illustrate benefits to their policyholders without including terminal bonus in the illustrations and often had separate bonus series for policies with and without annuity rate guarantees.

66 This meant that the expectations of their policyholders may have developed in a different way from those that the Society's policyholders were likely to possess.

The Society's reputation

67 While the Society was distinctive in important ways, some of which were, in combination, to have significant adverse consequences in due course, the Society had a generally excellent reputation until the differential terminal bonus policy began to be questioned and challenged.

[3] For example, for the year ending 31 December 1995, the note said *'the total fund values include amounts of final bonus which are not guaranteed and may vary. In addition, where the policy provides a guarantee of terms on which annuity benefits can be secured, the final bonus then payable will take account of the cost of providing that guarantee. The fund available at retirement may therefore be less than the total shown, but would not be less than the guaranteed value'.* In 1997, some categories of policyholder received only an abbreviated note. No notes were included in the statements for the years ending 31 December 1993 or 31 December 1994.

68 During the 1980s and 1990s, Equitable had built up a reputation for good customer service, provided by skilled and efficient staff. The Society had said that it had invested significant resources in developing its administration systems[4], which were at the time generally considered to be efficient and were, for example, used to administer contracts for other insurers, as well as those systems being sold to third parties.

69 Equitable also told policyholders that the Society's expenses were low compared to other offices due to these efficient systems[5]. In addition, Equitable had developed good management information systems that were said to allow regular and detailed monitoring of expenses and investment policy. Equitable were generally seen as a market leader, albeit one that was, in certain respects, out of step with the rest of the industry.

The events leading up to closure to new business

70 As I have noted in paragraph 57 above, with effect from 1 January 1994 and in a context of reducing interest rates and of improving longevity[6], the Society introduced what became known as its differential terminal bonus policy.

71 That policy was introduced in order to deal with the cost of meeting the guaranteed annuity rates within its older policies, which had become more advantageous to its policyholders and thus more onerous for the Society than the current annuity rates otherwise available.

72 Interest rates continued to fall during the 1990s. The actuarial profession undertook work to review industry practice in the light of the fact that guaranteed annuity rates generally were then, in that low interest rate environment, starting to exceed current annuity rates.

73 In June 1998 and in the light of the profession's work, GAD, with the permission of the prudential regulators, surveyed the approaches of life insurance companies to reserving for annuity guarantees.

74 The analysis undertaken by GAD of the results of that survey found that, while eight companies gave general cause for concern in terms of the approach adopted by those companies to this question, Equitable and one other company were notable exceptions to industry practice and were of particular concern.

75 This was because those two companies did not hold adequate reserves to cover the liabilities which existed in respect of these policies and GAD were concerned about their ability to meet their statutory solvency requirements once they did so reserve.

76 From October 1998 onwards, the Society, the prudential regulators and GAD entered into extensive discussions about the regulatory requirements concerning reserving for annuity guarantees and the consequent need for the Society to establish significant reserves to cover the liabilities which arose from its policies which contained guaranteed annuity rates.

77 In 1999, Equitable entered into a financial reinsurance arrangement with IRECO, a reinsurer based in Dublin, in order to seek to mitigate the impact of the reserving requirements to which the prudential regulators and GAD had now insisted that the Society had always been subject.

---

[4] See, for example, the Annual Report and Accounts as at 31 December 1989: *The President's Statement,* pages 3 and 10, and the Annual Report and Accounts as at 31 December 1991: *The President's Statement,* page 3.
[5] See, for example, the Annual Report and Financial Highlights as at 31 December 1997: *The President's Statement to Members*, page 4.
[6] Which affected the annuity rates that were generally available to a policyholder when benefits under a pension policy were taken.

78 That arrangement, which had been 'backdated' to 31 December 1998 and was first relied on in the Society's regulatory returns for 1998, was contingent on the Society maintaining its differential terminal bonus policy.

79 Whilst now reserving as GAD required, the effect of the way that the Society treated the arrangement with IRECO in the calculation of its long term liabilities was to reduce that amount by £809 million as at the end of 1998, and by £1,098 million as at the end of 1999.

80 In the meantime, complaints had begun to be made to Equitable and to the Personal Investment Authority Ombudsman about the Society's operation of the differential terminal bonus policy.

81 On 15 January 1999, in response to those complaints about the legitimacy of their approach, Equitable instituted a legal action against a representative guaranteed annuity rate policyholder, Mr Hyman, to seek confirmation from the Court that the Society's approach was lawful and within the discretion of its Board. The Society funded Mr Hyman's costs. The policy document which was at the centre of those proceedings is reproduced in Part 4 of this report.

82 According to papers lodged with the Court, Mr Hyman had been chosen as the representative defendant because he was the only policyholder from among those who had made formal complaints to the Personal Investment Authority Ombudsman who had already taken retirement benefits.

83 On 9 September 1999, the High Court ruled that the Society was entitled to operate its differential terminal bonus policy, but Mr Hyman was given leave to appeal.

84 On 21 January 2000, the Court of Appeal gave judgment against Equitable by a majority of two to one. The Society was granted leave to appeal to the House of Lords and was permitted by the Court in the interim to continue to operate its differential terminal bonus policy pending that appeal – subject to the assurance that, if the Court of Appeal's decision were to be upheld, Equitable would pay additional sums in respect of any retirement or maturity after the date of the decision of the Court of Appeal.

85 On 20 July 2000, the House of Lords handed down its decision and held that Equitable could not apply different rates of bonus depending on whether or not a policyholder took benefits based on guaranteed annuity rates. The House of Lords also held that the Society could not pay lower bonuses to policyholders with annuity rate guarantees as a class than those paid to the class of policyholder whose policies did not contain such guarantees. The differential terminal bonus policy could no longer be applied.

86 The decision of the House of Lords had a significant and immediate financial impact on the Society. The decision of the House of Lords meant that the Society could not 'ring-fence' groups of existing policyholders from its effects. The increased costs to the Society had to be charged to the entire with-profits fund, and shared among all those holding at that date all types of with-profits policies, whether or not those policies contained an annuity guarantee.

87 In the absence of the operation of the differential terminal bonus policy, the ability to take benefits in guaranteed annuity rate form became significantly more attractive. The Society was now required to apply, without reduction of terminal bonus, the guaranteed annuity rate to the total policy funds of those policyholders whose policies contained such

rates where they elected to take benefits in this form. This meant that it had become more likely that policyholders would so elect.

88 Equitable now had significantly increased liabilities against which they held much reduced assets. This was in part because the financial reinsurance arrangement, for which credit of £809 million and £1,098 million, respectively, had been taken by Equitable within their regulatory returns to the prudential regulators in respect of 1998 and 1999, could no longer be relied upon.

89 As the continuation of that arrangement had been conditional upon Equitable maintaining the differential terminal bonus policy, which the House of Lords had held to be unlawful, the financial reinsurance arrangement now needed to be re-negotiated, which it was subsequently. The Society thereafter relied upon that arrangement again within its 2000 regulatory returns, although the credit taken was reduced to approximately £500 million.

90 The decision of the House of Lords had other effects. In the words of the Society's press release of that day, that decision also would '*increase the Society's statutory reserves and that will diminish the Society's capital strength and reduce its investment freedom*'.

91 In the face of all this, the Society immediately announced that it was seeking a buyer, saying that:

> *Despite the Society's long commitment to mutuality, the Board has concluded that members' interests will be best served by the sale of the business to an organisation capable of providing capital support and therefore ensuring continued investment freedom. The proceeds of* [a] *sale to such a parent will mitigate the reduction in benefits that with profits policyholders not taking* [guaranteed annuity rate] *benefits would otherwise suffer.*

92 On 26 July 2000, Equitable further announced that, in the light of the decision of the House of Lords, the Society had set new final bonus rates. For with-profits policies where benefits were taken in guaranteed annuity form, the Society said that those policies would '*receive higher benefits than would have been available under the Society's previous approach*'. For with-profits policies which did not contain an annuity guarantee, or where the guaranteed annuity was not selected, the Society said:

> *These policies will receive lower growth in the current year than would otherwise have been the case as a result of the need to cover the increased GAR benefits. There will thus be no growth on these policies' funds from 1 January 2000 to 31 July 2000...'* [7].

However, the Society went on to say that a particular aim of the sale of the business was to replace this loss of growth of policy funds.

93 One further result of the House of Lords' decision was that it now appeared that policyholders with policies containing guaranteed annuity rates who had taken benefits between 1 January 1994 and 19 July 2000 had been presented with information about their options which had been incorrect.

[7] Internally, on 27 July 2000 Equitable described the broad effect of these changes as being: '*For the main classes of business, current policy values before 20 July 2000 for contractual benefits were achieved by rolling forward the 31 December 1999 values by a given growth rate. The Board has decided that a reduction in policy values of around 5% is necessary and this will be achieved by giving no growth for the first seven months of this year and resuming the appropriate interim overall rate of return with effect from 1 August 2000*'. In relation to with-profits annuities, Equitable said that: '*such policies cannot be transferred and thus a more gradual approach can be taken to adjusting rates. Therefore a reduction of 1% p.a. will apply in the growth rates for with-profits annuity contracts to avoid too sharp a discontinuity in income levels*'. The Society also changed its terms for non-contractual exits from the with-profits fund by introducing a 20% deduction to final bonus.

94 In response to this problem, in December 2000 the Society launched a Rectification Scheme, with the objective of putting policyholders in the position they would have been in had final bonus rates been set in accordance with the principles set out within the House of Lords' decision at the time at which they had taken benefits.

95 The announcement on 8 December 2000 that Equitable had closed to new business with immediate effect, following the failure of an attempt to effect a sale of the Society's business to another insurer, came as a shock to many of its members and to outside observers.

96 Equitable had been viewed as a well-regarded institution with a venerable and proud tradition. However, the attempt at sale still failed. While many companies had expressed some interest in purchasing the Society, none put in a formal bid after examination of the Society's financial position.

The aftermath of closure to new business

Regulatory response

97 The closure of the Society to new business also attracted a regulatory response. The FSA – the body by then responsible under contract for exercising on behalf of the Treasury and the Personal Investment Authority (one of the conduct of business regulators) various regulatory powers in respect of insurance companies such as Equitable – issued a press notice on 8 December 2000.

98 In this notice, the FSA said that:

> *The Society has worked closely with the... FSA since its decision to put itself up for sale. We have been in particularly close touch since it became apparent in recent days that an offer for the Society might not, in the event, be made. As the management of the Equitable said after the House of Lords judgment, the institution's special circumstances meant that a sale was in the best interests of policyholders, as it would provide the investment flexibility necessary to permit long-term continuation of business as normal. The Society will now need to review its investment strategy and, as is normal in a closed fund, this is likely to lead to a progressive move away from equities to lower risk investments over time.*

99 The press notice continued:

> *The FSA has stressed the importance of the Equitable providing comprehensive and timely information to its policyholders so that they can consider their options fully... The FSA will continue to monitor closely the operations of the Equitable. The Society continues to meet the statutory solvency requirements.*

Sale of parts of the business

100 The Society continued to make efforts to mitigate the impact of the House of Lords' decision on its financial stability and future prospects. On 22 December 2000, it was announced that the Society's wholly-owned subsidiary, the Permanent Insurance Company Limited, was to be sold – which it subsequently was, to Liverpool Victoria Friendly Society.

101 On 5 February 2001, Equitable announced that, through a deal agreed with Halifax Group, the Society had raised capital by reinsuring its non-profit and unit-linked business (including index-linked policies, but excluding annuities) and by selling its sales force, its asset management function, and its customer services division.

102 As a result, additional future payments, conditional on sales performance and on the implementation within a set timescale of a scheme of arrangement under section 425 of the Companies Act 1985 (commonly known as a Compromise Scheme), were to be made to the Society.

103 Despite these sales of parts of its business, the Society continued to face significant financial uncertainty in a context of difficult market conditions, with the stock market falling by 10% during 2000 and by a further 15% during 2001. Those conditions were reflected in a market value adjuster applied to non-contractual exits, which had been set at 10% from when the Society closed to new business, and which was increased on 16 March 2001 to 15%.

104 On 28 February 2001, the new Chairman of the Society said, in an open letter to policyholders that:

> *... the* [with-profits] *fund is intact and solvent and has been strengthened by the Halifax first instalment of £500m. However, the potentially open-ended nature of the* [guaranteed annuity rate] *policies means that the position is unsatisfactory for all policyholders and investment freedom is constrained. A compromise agreement... will allow us to stabilise the* [guaranteed annuity rate] *costs and will trigger a further large payment from the Halifax. The combination of these should restore the investment freedom of the fund.*

Policy value cuts

105 On 16 July 2001, Equitable announced to the Society's policyholders that the Board had decided to reduce final bonuses on all with-profits policies.

106 The total policy funds of each with-profits pension policy were reduced by an amount equal to 16% of their value as at 31 December 2000, with reductions made of 14% in the value of all non-pension with-profits policies. Those cuts reduced previously notified accumulated terminal bonuses but could not reduce benefits on any particular policy below the level of its guaranteed fund. Similar cuts to the benefits to be paid under with-profits annuities were also made at a later date.

107 That decision had been taken, Equitable said, following analysis of the Society's cash flows, premiums, the rates of policies maturing and being surrendered, and the value of investments underlying the fund – and after assessment had been made of the Society's obligations to all its policyholders in the context of the '*fundamental uncertainties*' which Equitable now faced.

108 The press release issued by the Society to accompany this announcement explained that the rationale for these reductions in policy values had been informed by '*the need to ensure fairness between all policyholders*' and that these reductions had been '*vital for the long-term interests of the Society and its policyholders*'. Equitable explained that:

> *The decision was taken, and could not be delayed, because:*
>
> - *Stock markets have fallen heavily over the last 18 months;*
> - *Maturity values now significantly exceed the value of the investments underlying maturing policies;* [and]
> - *As a mature fund, a large number of policyholders are currently retiring and taking their benefits.*

The Compromise Scheme

109 In September 2001, Equitable published proposals for a scheme of arrangement under section 425 of the Companies Act 1985 through which, in the words of the press release which accompanied the publication of the detailed proposals, '*all with-profits policyholders* [would] *give up some rights in exchange for increases in their policy values*'. As already noted, such arrangements are often referred to as Compromise Schemes.

110 Equitable explained that the '*key points*' of the Society's proposals were:

- that they were based on the four principles of *'fairness, clarity, mutuality, and legality';*
- that all policyholders were *'being asked to give up some rights in exchange for greater certainty, more investment freedom, and the possibility of higher investment returns in the future';*
- that the proposals would settle the guaranteed annuity rate issue through the provision to those policyholders who held policies with such guarantees of, on average, '*an increase of 17.5% in their policy values in exchange for giving up their rights*' to the guaranteed rates; and
- that those with-profits policyholders without policies which attracted such guarantees would '*receive an increase of 2.5% in their policy values in exchange for giving up any rights to make claims against the Society*' which arose from the costs of the guarantees.

111 On 20 September 2001 (the day on which the Society published its proposals for consultation on its Compromise Scheme), the FSA made a statement on the proposals, in which it was said that:

> *We firmly believe that a successful compromise would offer the best prospect of bringing stability to the with-profits fund and improving the outlook for worried policyholders. We think that today's proposals offer a sensible basis on which Equitable Life can consult its policyholders...*
>
> *Our concern is to ensure that the interests of all Equitable Life's policyholders are properly taken into account. We are keeping Equitable Life's financial position under continuous review. We have also obtained independent legal advice on the issue of whether Equitable Life may be exposed to potential claims for compensation by non-*[guaranteed annuity rate] *policyholders with a realistic chance of success... Our formal assessment of the final scheme later this year will examine whether, for each relevant group of policyholders, the proposal put to them is a fair exchange for the rights they are being asked to give up. If that test is passed, we will also look to see that the scheme does not give disproportionately greater benefits or disbenefits to some policyholders.*

112 On 1 December 2001, the Society sent to its policyholders the Compromise Scheme proposal documentation (the 'Circular'). The Circular made clear that, although the Society remained solvent at that time, it faced a number of '*serious problems*' that the scheme would help to address. The key benefits to policyholders of the scheme were described in the Circular as being:

- [guaranteed annuity rate – GAR] *policyholders as a group will receive fair value for the loss of their GAR Rights and the waiver of their GAR-Related Claims*;

- *Non-GAR Policyholders as a group will receive fair value for the waiver of their GAR-Related Claims*;

- *the financial strength of the Society will be improved and the Society will have a more flexible investment policy than it would have if the Scheme did not become effective*;

- *all policyholders (including the Society's non-profit annuitants) will have greater certainty going forward in that their contractual benefits will have greater certainty of being paid; and*

- *£250 million will be made available by Halifax to the Society's With-Profits Fund if the Scheme becomes effective on or before 1 March 2002.*[8]

113 Policyholders were advised that the statements and information set out in the Circular superseded the information, statements and opinions contained in the consultation documentation and otherwise made available by or on behalf of the Society in the past. Policyholders were therefore advised to rely only upon the information in the Circular when making their decision as to how to vote.[9]

114 On 10 December 2001, the FSA published their formal assessment of the Society's proposals. This followed correspondence with the Society during the previous month – in which the FSA had signalled that, subject to the resolution of outstanding points, they saw no regulatory obstacles to the successful sanctioning of the Compromise Scheme. That assessment is reproduced in full in Part 4 of this report.

115 The press notice accompanying the FSA's assessment of the Compromise Scheme – which is also reproduced in Part 4 of this report – quoted one of its Managing Directors as saying:

> *The FSA has already said that a successful compromise would, in principle, offer the best prospect of bringing stability to Equitable Life's with-profits fund and so improving the outlook for policyholders. Having taken into account all the relevant considerations, we have concluded that the proposed Compromise now put forward is a fair offer for the rights and claims given up...*
>
> *The FSA is not required to approve the proposed Compromise but it does have powers to take action in order to protect the interests of policyholders. We have concluded that, taken in the round, the Compromise is a fair offer and we saw no reason to intervene to stop the proposals being put to policyholders.*
>
> *The FSA's assessment of the proposed Compromise does not constitute a recommendation by the FSA as to how individuals should vote; our view reflects the merits of the scheme overall. Individual policyholders must of course decide how they themselves vote in the light of their own individual circumstances.*

116 Following the votes of affected policyholders in favour of the Compromise Scheme, on 8 February 2002 the High Court gave its sanction to that Scheme. This bound all those who were members of the Society at that date to its terms.

[8] Page 17 of the Circular.
[9] Page 5 of the Circular.

Further policy value and other cuts

117 Despite the action taken by the Society to stabilise the with-profits fund, to improve the financial strength of that fund, and to provide policyholders with greater certainty that their contractual benefits would continue to be paid, further cuts followed the Compromise Scheme. First, these were in the form of a maturity adjuster. In announcing this, Equitable said that:

> *... with effect from 15 April* [2002]*, the maturity value for a UK pension policyholder choosing to take maturity now will be the indicative policy value calculated allowing for the new bonus announcements, adjusted down by 4%. The maturity value of a policy will not be lower than the guaranteed value of that policy*.

In July 2002, the level of the maturity adjuster was increased to 10%.

118 The extension of similar reductions to with-profits annuities was announced later in 2002, resulting in significant reductions in annuity payments over the following two years. This was the result of the recognition that it would no longer be possible to delay the reductions to final bonus equivalent to those previously made for other groups of policies.

119 A letter sent by the Society on 15 November 2002 to its with-profits annuitants to announce those reductions in their income set out the scope of the various cuts that had been made since the decision of the House of Lords in the following way:

> *Since 20 July 2000, our decisions on bonuses have been particularly affected by the falling value of investments in stocks and shares, the costs of the guaranteed annuity rates... and increases in the money we set aside for potential claims for compensation. Following the House of Lords decision in July 2000, we had to reduce the value of with-profits policies. We did this, other than for with-profits annuities, by reducing the policy value by 5% at that time. We made significant further reductions in July 2001, April 2002, and July 2002. This means, allowing for bonuses, our other with-profits policyholders have suffered an overall reduction of about 20%.*

120 That letter continued by explaining to annuitants that:

> *So far we have largely protected you from these falls. In fact, you and other with-profits annuitants have generally received a positive investment return of about 14% over the same period... It was possible for us to phase the cuts to with-profits annuities in the hope of improved financial conditions. Unfortunately, because conditions have not improved we can no longer keep doing this. This basically means that with-profits annuities, like yours, are now out of line by about 30%.*

121 The Society's letter then set out the action that would be taken by Equitable to remedy this position during the following year – being a reduction in the total value of with-profits annuities '*by up to 20%*', the declaration of a zero rate of return for all such annuities in respect of 2002, and an increase from 1% to 1.5% in the annual adjustment made to the value of each annuity. The letter also said that there would be further reductions in a year's time for most annuities.

Further developments

122 The Society has continued to seek ways of bringing stability to its remaining business. Following approval by the Court, the Society effected the transfer of the bulk of its non-profit annuity business, with reserves of £4.6 billion, to Canada Life – completing this

transfer on 12 February 2007. On 1 June 2007, the Society completed the sale of its subsidiary company, University Life, to Reliance Mutual. The Society announced on 2 January 2008 that the transfer to Prudential of its with-profits annuity book, with reserves of £1.7 billion, had been completed.

123 In the Society's *Annual Report and Summary Financial Statements 2007*, considered at its annual general meeting on 19 May 2008, its Chairman and Chief Executive both said that:

> *2008 is likely to be a key year in deciding the longer term future of the Society. The Society can run its existing policies to maturity or it may be able to transfer them to one or more third parties who can provide the prospect of better outcomes for policyholders. The options should become clear during 2008... The Society is now stable and secure and it can foresee running its business, paying policy benefits as they fall due, for many years. The Society will remain closed to new business and will gradually run down as policies mature. This is known as 'run-off'.*
>
> *In 2008 we are inviting other companies to say what they could do to improve the prospects for policyholders. If we believe that one or more can provide a better option for policyholders than run-off, we will choose the best proposal and recommend it to you. We emphasize that no such change would take place without the approval of members.*

Reviews, inquiries, complaints and litigation

124 Other developments occurred in the aftermath of the Society's closure to new business on 8 December 2000. Since then, a number of reviews and inquiries have been undertaken into the professional and regulatory aspects of the events which led to that closure. Complaints and litigation have also been initiated.

The FSA review of regulation and the Baird Report

125 On 22 December 2000 – two weeks after the closure of the Society to new business and following an announcement that day by the Treasury that such a review would be established – the FSA published the terms of reference for an internal review they would undertake.

126 Those terms of reference included consideration of how the various functions the FSA had exercised on behalf of those given statutory responsibility for the regulation of insurance companies had been discharged in relation to the Society. That review led to the Baird Report (see paragraphs 129 to 132 below).

127 The FSA explained the thinking behind the establishment of the review thus:

> *The* [FSA] *Board believes that it is good discipline to learn the regulatory lessons from episodes such as this while acknowledging the fact that the Equitable remains solvent and has not failed. Under these circumstances, the Board has asked the FSA's executive management to produce a full account of its regulation of Equitable Life for its consideration. It will cover the period from 1 January 1999 until... closure to new business on 8 December 2000. It will also set out the background and events leading up to the FSA assuming formal responsibility for prudential insurance regulation on 1 January 1999.*

128 The terms of reference for this review were to cover:

- *the FSA's discharge of the functions (under the Insurance Companies Act 1982) which it undertakes as delegate for HM Treasury; and*

- *the Personal Investment Authority's... discharge of its functions as a recognised self regulating organisation (under the Financial Services Act 1986).*

and the resulting report would:

- *describe the background and events leading up to the FSA's assumption of responsibility for the prudential regulation of the Equitable Life on 1 January 1999;*

- *describe the course of supervisory work from then until the Society's closure to new business on 8 December 2000;* [and]

- *identify any lessons to be learned.*

129 The Baird Report was published on 17 October 2001 when it was laid before Parliament by Treasury Ministers. The Report concluded that the Society's policy of deliberately maintaining a low free asset position through the full distribution of profits to each generation of policyholders and in writing historic business on a large scale containing very generous guarantees had contributed to the weak financial position of Equitable, which had accordingly developed over many years.

130 The Baird Report found that the specific difficulties which Equitable had faced had crystallised following the decision of the House of Lords, which had rendered unlawful the differential terminal bonus policy which the Society had adopted to manage those difficulties. In paragraph 6.1.4, the Report concluded that:

> *The scale of Equitable Life's potential liability from the unmatched interest rate exposure, which it created when it wrote its* [guaranteed annuity rate] *business, and the scale of the future profits it had already taken into account combined to leave Equitable Life seriously exposed to any further financial shock.*

131 In making its overall assessment of the discharge by the FSA of its regulatory responsibilities under contract during the relevant period, the Baird Report stated, in paragraphs 6.2.4 and 6.2.5, that:

> *... applying hindsight, it is fair to say that, by 1 January 1999, the "die was cast" and we have seen nothing which the FSA could have done thereafter which would have mitigated, in any material way, the impact of the outcome of the Court case as far as existing policyholders were concerned, or made any material beneficial difference to the final outcome so far as Equitable Life was concerned.*
>
> *That said, our assessment does identify a number of things which the FSA could have done better. There were occasions when both the prudential and the conduct of business regulators did not spot issues to be addressed or, having spotted them, did not follow them up... One of the reasons why issues were missed was the poor level of communication and coordination between the two arms of regulation, prudential and conduct of business...*

132 The Baird Report went on to make a number of recommendations in order that lessons might be learned from the Society's experience and that future life insurance regulatory practice might be improved. The FSA have implemented those proposals.

Professional reviews

133 Meanwhile, there had been two further developments related to the professional aspects of the relevant events.

134 First, on 21 December 2000, the actuarial profession had announced that it was setting up an independent committee of inquiry to look at the events surrounding the closure of Equitable to new business and at the implications of those events for that profession. This committee – the Corley Committee – reported subsequently on 28 September 2001, making general recommendations concerning the adequacy of relevant professional guidance.

135 Secondly, on 10 January 2001, the accountancy profession had announced that the part played by the Society's auditors would be subject to enquiry by that profession. Upon reaching the opinion at the conclusion of that enquiry that there were grounds upon which a Joint Disciplinary Tribunal could make an adverse finding concerning the firm in question, a formal complaint was then presented and a Tribunal appointed to determine the complaint.

136 The proceedings had been stayed while those against whom that complaint had been made were involved in other proceedings. Following the conclusion of those other proceedings, the hearing into the complaint took place during 2007 and the findings of the Disciplinary Tribunal Panel are, at the time of writing, awaited.

Parliamentary inquiry: the interim report of the House of Commons Treasury Select Committee

137 On 27 March 2001, before the Baird Report was published, the House of Commons Treasury Select Committee published an interim report. The main conclusions and recommendations of the Committee, as they relate to the subject matter of this report, included the following:

(i) that Equitable's '*risky decision in 1993 not to build up a reserve to cover the cost of Guaranteed Annuity Rate (GAR) liabilities was a crucial turning point*';

(ii) that it was unclear '*why the issue of GAR liabilities and reserving was not considered by the prudential insurance regulator at least by 1993, rather than only in 1998*' and that this should be pursued;

(iii) that the prudential regulators should be asked to '*reconsider whether it was right to accept the reinsurance contract given its terms, and whether it was prudent to allow such a contract to have accounted for half of the Equitable Life's statutory reserves*' set up to meet the cost of annuity guarantees;

(iv) that the Society had '*demonstrated that the information provided to policyholders, through the statutory accounts, and to the regulator, through the regulatory return, differed substantially in their treatment of the GAR liabilities and the consequential reserving that had been undertaken. As a result, policyholders were not able easily to establish the true position of the company…*';

(v) that those regulators '*should … consider whether the assessment made by Equitable Life, and indeed by themselves, of whether the eventual House of Lords ruling could have been predicted, was justified…*'; and

(vi) that it was '*important that the role of the regulator since 1993, when Equitable Life began to operate a policy of terminal bonus differentiation, should be analysed in order for the regulatory lessons to be properly learnt, for policyholders to fully understand the history of the affair and for Parliament to* *undertake its scrutiny of this topic properly and fully…'.*

Conduct of business complaints

138 The effect of the Compromise Scheme was that only those who were no longer members of the Society on 8 February 2002 could proceed with complaints to Equitable and then to the Financial Ombudsman Service (or to the courts) alleging mis-selling on the part of the Society in relation to the guaranteed annuity rate issue.

139 On 23 May 2003, the Financial Ombudsman Service published determinations on three lead cases that required Equitable to compensate for mis-selling certain categories of policyholders whose claims had not been extinguished by the Compromise Scheme. I am told that payment of this compensation has been completed (with the exception of a small number of cases still with the Financial Ombudsman Service or the courts).

Litigation by the Society against its former directors and auditors

140 In April 2002, Equitable commenced formal litigation against certain of their former directors and Appointed Actuaries who held office between 1996 and 2000 and also against their former auditors. The claims made by the Society were based on allegations concerning:

(i) the Society's guaranteed annuity rate policies and its differential terminal bonus policy;

(ii) the risks as to the legality of that policy and the management of those risks;

(iii) the Society's accounting for guaranteed annuity rate policies within its Companies Act accounts; and

(iv) its contingent liability and risk disclosures in relation to the *Hyman* litigation within the Society's Companies Act reports and accounts.

141 The High Court hearing commenced in April 2005. In September 2005, the Society announced that it had agreed with its former auditors that the Society's case against them would be discontinued and that each side would pay its own costs.

142 Over the following two months, the Society announced that it had reached further agreements for the discontinuance of cases against some of the remaining defendants.

143 In December 2005, following service of written closing submissions by all parties and immediately prior to the final court session, the Society announced that it had agreed terms to discontinue the cases against the remaining defendants. There was thus no determination of, or agreement about, the matters at the heart of the case.

The inquiry led by Lord Penrose

144 The Report of the Equitable Life Inquiry, which had been led by Lord Penrose, was published on 8 March 2004. That Report had been commissioned on 31 August 2001 by Treasury Ministers, who announced that they had established this independent inquiry. The terms of reference for that inquiry had been:

To enquire into the circumstances leading to the current situation of the Equitable Life Assurance Society, taking account of relevant life market background; to identify any lessons to be learnt for the conduct, administration and regulation of life assurance business; and to give a report thereon to Treasury Ministers.

145 The contents and principal conclusions of the Penrose Report are well known and I do not repeat those here. In summary, in so far as his Report considered matters related to regulatory action within my jurisdiction, Lord Penrose concluded that there were six '*areas of specific concern about the regulatory response to the Society's practices*'.

146 He also concluded that those areas of concern had had a bearing on the solvency of the company as that solvency position had been presented to the public. Those areas of concern are set out in paragraph 166 of chapter 19 of his Report, and related to:

- *the interest rate differential (between the bonus rate projected forward and the rate of return used to discount liabilities back to present values) between 1990 and 1997;*
- *the quasi-zillmer adjustment (through which acquisition costs for recurrent single premium business were annuitised) from the early 1990s;*
- *implicit items for future profits employed in and after 1994;*
- *the subordinated debt;*
- *the* [guaranteed annuity rate] *liability valuation;* and
- *the financial reinsurance treaty.*

147 In paragraph 240 of chapter 19 of his Report, Lord Penrose then set out five '*key findings*' about the regulation of the Society, as part of a wider list of such findings which also related to other aspects of the Equitable situation. The relevant findings were that:

- *Regulation was based on an over-reliance on the appointed actuary, who in the case of the Society was also the chief executive over the critical period from 1991 to 1997, despite a recognition of the potential for conflict of interest inherent in this position*;
- *The regulatory returns and measures of solvency applied by the regulators did not keep pace with developments in the industry, in particular the trend towards unguaranteed and unreserved for terminal bonus. Thus regulatory solvency became an increasingly irrelevant measure of the realistic financial position of the Society*;
- *The significance of policyholders' reasonable expectations under the legislation was understood by the regulators, who had also developed over time a good appreciation of the factors involved. There was, however, no consistent or persistent attempt to establish how* [policyholders' reasonable expectations] *should affect the acknowledged liabilities of the Society*;
- *The regulators also failed to give sufficient consideration to the fact that a number of the various measures used to bolster the Society's solvency position were predicated on the emergence of future surplus. In the case of the reinsurance agreement, it is not clear on what basis the Society was permitted to take the credit against its potential annuity guarantee liability that it did*; and
- *There was a general failure on the part of the regulators and GAD to follow up issues that arose in the course of their regulation of the Society, and to mount effective challenge of the management.*

148 In giving the Government's formal response to the Penrose Report, the then Financial Secretary to the Treasury explained to the House of Commons on the day that the report was published that:

> *Lord Penrose makes it clear that the Society's former management adopted a series of "dubious" practices, many of which it concealed from its own Board, its policyholders, and the regulators. This, he argues, led to the situation in which the Society found itself in July 2001.*

149 The Financial Secretary said that Lord Penrose had come to a '*central finding*', which was that '*principally, the Society was the author of its own misfortunes*'.

Events following the publication of the Penrose Report

150 Since the publication of the Penrose Report, a number of developments have occurred. Those developments include the following two events:

(i) on 15 July 2004, 873 'trapped annuitants' launched a legal action against the Society. During the proceedings, the number of claimants fell and the action has recently been settled by way of a confidential agreement with the 401 annuitants remaining in that action; and

(ii) on 22 March 2005, the Financial Ombudsman Service announced that it would not consider what it referred to as '*Penrose-related complaints*' against the Society – citing jurisdictional obstacles, the existence of other proceedings and investigations on some aspects of the subject matter of the complaints, that some of the complaints would be more suitable for resolution in the courts, the likelihood that no worthwhile outcome would be achieved by an investigation due to the '*earlier substantive conclusions of the regulator on these matters*', and the wider implications for the Society and for the interests of its remaining policyholders of any investigation which might result in an order for compensation to be paid only to some policyholders at the expense of others.

Recent developments

151 Two further significant developments have occurred during the closing stages of my investigation: the first being a Decision made on 30 January 2007 by a Panel of the Disciplinary Tribunal of the actuarial profession, following a hearing of charges brought against certain actuaries who had held senior posts within the Society.

152 The second was the publication on 4 June 2007 of the *Report on the Crisis of the Equitable Life Assurance Society* by a Committee of Inquiry of the European Parliament, established following two petitions made by United Kingdom citizens to that Parliament.

The actuarial professional tribunal

153 In the August 2004 edition of its magazine *The Actuary*, the actuarial profession had published – as the profession's rules required it to do – a summary of the allegations which formed the basis for a referral to a disciplinary tribunal by a professional investigating committee of the cases of four actuaries who had formerly held senior positions at the Society. Those charges concerned their conduct of the affairs of the Society in respect of the part of the period from 1988 to 2000 relevant to each actuary.

154 In March 2006, a Panel of the Disciplinary Tribunal constituted under the profession's 1995 disciplinary scheme ordered that the charges against one of the actuaries should be dismissed with no order for costs, following confirmation by the investigating

committee that it did not intend to offer any evidence in respect of that actuary at any subsequent meeting of the tribunal.

155 After consideration of the defences submitted by two of the other actuaries, charges in relation to the submission of regulatory returns by those actuaries, who also faced other charges, were also withdrawn by the investigating committee prior to the hearing. Those charges were not considered by the panel – which found, in the absence of evidence being submitted, that there was no basis on which they could make an adverse finding in these respects.

156 A panel of the disciplinary tribunal then heard the other charges brought by the investigating committee against the remaining three actuaries at a hearing held during November and December 2006. The relevant standard of proof required was the criminal standard; in other words, the panel had to be satisfied beyond all reasonable doubt before it could find a charge proven.

157 The decisions made at the conclusion of that hearing were published in a written determination on 2 March 2007. The panel found in respect of the first actuary – Mr Roy Ranson, who had held the post of Appointed Actuary of the Society from 1982 to 1997 – that, in the words of the Executive Summary of the determination:

(i) *in implementing a stated philosophy of providing a full and fair return to policyholders, holding no estate apart from a revolving estate providing working capital, and treating policyholders as participating in a managed fund, the actuary had, over a long period of time, consistently failed to apply an appropriate smoothing policy, had failed to provide appropriate information to the Society's board to enable proper consideration to be given to the consequences of his recommendations and had failed to maintain the publicised relationship between the investment reserve and total policy values notified annually to policyholders*;

(ii) *in addition to the points above, the information provided to policyholders created a misleading impression of the Society's financial strength. The Society's board was provided with little information showing the relationship between the totality of the policy values including accrued terminal bonuses as notified to policyholders and the Society's actual asset strength. No evidence was provided to the panel to indicate any proper degree of financial analysis undertaken by the Society during the period under examination*; [and]

(iii) there had been '*a failure to properly distinguish, in spite of the significantly different terms and conditions, between the pension policies issued prior to 1988 and those subsequently issued, both in internal analyses of the financial performance and in communications to policyholders. The panel found this failure created the basis for the subsequent problems of the Society. This failure, compounded by the unresponsiveness of management to signals and questioning of the policy adopted, in the light of changing circumstances, was viewed by the panel as irresponsible. The introduction of the differential terminal bonus policy and its implications under different economic scenarios was not properly addressed either in the board or in the communications to policyholders*'.

158 The panel found that the matters outlined above constituted a breach of the standards of integrity, competence and professional judgement which

other members of the profession and the general public might reasonably expect of a member of the profession and determined that Mr Ranson should be expelled from membership of the Institute of Actuaries.

159 The panel found in respect of the second actuary – Mr Christopher Headdon, who had held the post of Appointed Actuary of the Society from 1997 until early 2001 – that:

(i) a charge that he had failed to take appropriate action, on becoming aware of what appeared to be a breach by Mr Ranson of professional conduct standards and/or professional guidance notes and had caused or contributed to such breaches, should be dismissed;

(ii) a charge that he had failed to provide full information to the Society's board on the financial position of the Society and failed to advise the board accurately on its policyholders' reasonable expectations was found to constitute misconduct to the extent that it was upheld. The part of the complaint that was upheld related to '*a failure to notify and warn the board of the potential consequences for the Society of the valuable guarantees contained in certain policies on which the Society was continuing to accept increments, and of the existence of the differential terminal bonus policy and the likely policyholder reasonable expectations problems arising from the failure to communicate that policy sufficiently to policyholders*'. This was found to constitute misconduct; and

(iii) a charge that he had failed to disclose to the prudential regulators the signing, in April 1999, of a side-letter to a reinsurance agreement, which '*was possibly relevant to the value attributed to such agreement in the regulatory returns*', was found to constitute misconduct.

160 The panel decided that Mr Headdon should be admonished in respect of the two charges on which misconduct was found. Had he held a current practising certificate, which he did not, the panel stated that it would have suspended any such certificate for three years.

161 The panel found in respect of the third actuary – Mr Alan Nash, who had been the Society's Managing Director and Actuary at the time of the court proceedings which had culminated in the House of Lords' judgment – that:

(i) a charge that he had '*failed to ensure that the board was properly informed and advised in circumstances where the aggregate policy value of the Society's policies as reported to policyholders consistently exceeded the value of its assets*' was not proven, partly because '*the excess of maturity payments which had reduced the Society's financial strength was a consequence of decisions predating* [his] *tenure*'; and

(ii) a charge that he had authorised and signed '*a letter to policyholders dated 1 February 2000, upon which policyholders were likely to rely, that allegedly misrepresented the Society's position in the event of its appeal to the House of Lords failing*' was proven and constituted misconduct, because '*the letter, in an effort to provide an unambiguous assurance for the future, went further than was appropriate under the sensitive circumstances*' and, albeit that legal advice had been obtained, he had remained responsible for the content of that letter.

162 The panel admonished Mr Nash.

The European Parliament report

163 On 18 January 2006, the European Parliament announced that it would establish a Committee of Inquiry into the situation at Equitable. The mandate of this Committee was to:

- *investigate alleged contraventions or maladministration in the application of Directive 92/96/EEC, now codified by Directive 2002/83/EC, by the United Kingdom's competent authorities in relation to Equitable Life, notably as regards the regulatory regime and the monitoring of the financial health of insurance undertakings, including their state of solvency, the establishment of adequate technical provisions and the covering of those provisions by matching assets;*

- *assess, in this respect, whether the Commission has properly fulfilled its duty to monitor the correct and timely transposition of Community law and identify whether systematic weaknesses contributed to the situation that has arisen;*

- *assess allegations that the UK regulators consistently failed, over a number of years, and at least since 1989, to protect policy holders by exercising rigorous supervision of accounting and provisioning practices and the financial situation of Equitable Life;*

- *assess the status of claims by non-UK European citizens and the adequacy of remedies available under UK and/or EU legislation for policy-holders from other Member States; and*

- *make any proposals that it deems necessary in this matter.*

164 The report of the Committee was published on 4 June 2007 and was debated and endorsed by a plenary session of the European Parliament on 19 June 2007. The recommendations of the report were adopted by the Parliament with 602 votes in favour, 13 votes against and 64 abstentions.

165 The report made certain recommendations related to the role of the European Commission, to the way in which the United Kingdom had transposed European Directives into domestic law, and to the role of Committees of Inquiry within the institutions of the European Union. Those recommendations are not directly relevant to the subject matter of this report.

166 However, in addition and under the heading '*Remedies*', the report's recommendations included the following two statements:

(i) *... in view of the UK Government's failure to comply with the requirements of the Third Life Directive and given the absence either of accessible legal redress through the courts or of effective alternative means of redress, the committee firmly believes that the UK Government is under an obligation to assume responsibility. The committee therefore strongly recommends that the UK Government devise and implement an appropriate scheme with a view to compensating Equitable Life policyholders within the UK, Ireland, Germany and elsewhere*; [and]

(ii) *... the committee urges the UK Government and all affected parties to accept and implement appropriately any recommendations the UK Parliamentary Ombudsman may make with regard to Equitable Life. The committee recommends that the Irish, German and other host*

Member State authorities actively assist their citizens in implementing those recommendations.

167 At the time of writing, no response has been made by the United Kingdom Government to the relevant recommendations of the report of the Committee of Inquiry or to any other aspects of that report.

Chapter 3 – My investigation

Introduction

1 In this Chapter, I explain the involvement of my Office in respect of the events related to Equitable which led to my decision to undertake this investigation. I then go on to outline the legal and administrative framework for the investigation and to describe the process that I have used to conduct it.

2 This Chapter is structured in the following way:

- in paragraphs 3 to 22, I explain the earlier involvement of my Office in the relevant events – including those which led to my decision to undertake this investigation;
- in paragraphs 23 to 28, I outline the legal and administrative framework which governed the investigation which led to this report;
- in paragraphs 29 to 43, I describe the process used during the preliminary phase of the investigation;
- in paragraphs 44 to 54, I describe the process used to conduct the investigation proper; and
- in paragraphs 55 to 66, I describe the process used to share drafts of this report with the parties to the complaints and other interested parties.

The involvement of my Office

3 The first complaint that my Office received about the prudential regulation of Equitable was received in early January 2001. In his Annual Report for the year 2000-01, published on 27 June 2001, my predecessor set out his decision in relation to the complaints he had received by that date, saying:

> *I decided to postpone a decision on whether there were aspects of* [the regulatory] *handling of the affair which I might usefully investigate until the report of an investigation being undertaken by the Financial Services Authority was available. In doing so, I was mindful of the limitations of the Authority's remit, and of the expectations that Members of Parliament and the public rightly have as regards the independence of the investigating body in matters of this kind.*
>
> *I hoped, however, that the Authority's investigation might serve to indicate those areas, if any, which warranted further scrutiny. I accordingly wrote to all Members setting out my position, and undertook to write again once I had reached my final decision. I expect that to be later in 2001-02.*

4 Following publication of the Baird Report (see paragraphs 129 to 132 of Chapter 2), my predecessor re-assessed the position, as he had indicated to Parliament that he would do, in the light of the conclusions of that internal FSA review. He decided to conduct an investigation into the discharge under contract by the FSA of certain of the functions of the Treasury related to the prudential regulation of Equitable during the period covered by the Baird Report.

5 My predecessor did so on the basis that the shortcomings in regulation identified in the Baird Report constituted *prima facie* evidence of maladministration, which had hitherto been lacking.

6 In relation to other aspects of the Equitable affair, he decided to await the outcome of the Penrose Inquiry (see paragraphs 144 to 149 of Chapter 2) before deciding whether to conduct a wider investigation. Those decisions reflected the normal practice of Ombudsmen that intervention in

respect of complaints is only appropriate once the body whose actions are the subject of complaint has had an opportunity to consider the complaint and to respond to it.

7 When his next Annual Report was published on 2 July 2002, my predecessor reported those events to Parliament in the following way:

> *... there were particular difficulties concerning complaints about the conduct of the prudential regulation of the Equitable Life Assurance Society. I was strongly criticised in Parliament and the media for deferring a decision on whether to investigate some of those complaints until the* [internal inquiry] *set up by the Financial Services Authority had reported, and for deferring a decision on whether to investigate other complaints until the Penrose Inquiry set up by the Government, which will consider a much wider range of issues than my statutory remit allows, had reported. I did not, and do not, agree with the critics. It seems to me plainly inefficient, and potentially unfair, to have two simultaneous but separate investigations covering much the same ground and taking evidence from much the same sources.*
>
> *However, the critics had a point: the situation is not satisfactory. The investigation by my office into the first category of complaints could not begin until December 2001; any investigation into the second category – should such an investigation be considered appropriate – would start a good deal later still. That is objectionable, not only because complainants should not have to wait so long for their case to be considered, but also because it is difficult or impossible to conduct a satisfactory investigation after such a lapse of time.*
>
> *The root cause of the problem, in my view, is the failure of the authorities to establish at the outset a single inquiry with terms of reference covering all aspects of the Equitable Life affair, including issues of possible personal injustice due to maladministration and redress for such injustice if it should be demonstrated.*

8 I became Parliamentary Ombudsman on 4 November 2002. Shortly after taking up office, as a matter of priority I conducted a review of the limited investigation that my predecessor had launched, in the light of representations I had received that I should widen the scope of that investigation.

9 I reported the results of that review to all Members of Parliament in a letter dated 5 December 2002. I explained that it had become clear from a statement made on the Inquiry's website that the Penrose Inquiry – which was looking at all aspects of these events, which I could not do – was prepared to make adverse findings against any of the relevant parties should the evidence justify such findings. That being so, I saw no basis at that time to depart from the decision taken by my predecessor to limit the scope of my Office's investigation – one that was nearing completion – to the time period covered by the Baird Report.

10 The report setting out the results of that investigation was laid before Parliament on 30 June 2003. I reported (in paragraph 9 of Part I of that report) that:

> *I did not find evidence to suggest that FSA acting as prudential regulator had failed in their regulatory responsibilities during the period under investigation. Nor did I find that the decisions which the prudential regulator had taken as to what action (either formal or informal) was required of them in relation to*

Equitable were outside the bounds of reasonableness, given the information they held and the legal and actuarial advice which they received.

11 I reported to Parliament that I therefore could not uphold the complaints which alleged that maladministration had occurred during the period covered by that report and that such maladministration had resulted in injustice to complainants.

12 Following the publication of the Penrose Report on 8 March 2004 – in which no determinations were made as to whether the prudential regulators had failed properly to undertake their responsibilities in accordance with the standards that had prevailed at the relevant time – I wrote to all Members of Parliament on 16 March 2004.

13 I advised them that, in order to inform my decision on whether I should conduct any further investigation into the prudential regulation of Equitable in the light of the evidence set out in that report, I would consult interested parties.

14 That consultation, on whether my Office should carry out a further investigation and, if so, over what period and with regard to which matters, was launched on 22 April 2004 by way of letters to interested parties and by notices in the press.

15 I set out the results of that consultation and of my subsequent decision in a report that was laid before Parliament on 19 July 2004, to which I referred at the beginning of Chapter 1 of this report. As I explained there, excerpts of that report are reproduced in Part 4 of this report.

16 In my 2004 report, I explained that the Penrose Report and the representations I had received during the consultation process had provided me with sufficient *prima facie* evidence that indicated that administrative action or inaction on the part of the bodies responsible for the prudential regulation of Equitable might have played some role in causing the unremedied injustice that individuals claimed to have sustained and about which they had provided me with ample information through the consultation process.

17 Having considered all the evidence before me at the time and having regard to submissions concerning whether a further investigation would be in the public interest or might be able to produce a worthwhile outcome for the parties to the complaints, I decided to conduct a further investigation.

18 The full reasoning for this decision was set out in my July 2004 report to Parliament (relevant extracts of which, as I have said, are reproduced in Part 4 of this report). However, key to my decision was a recognition that the outcome sought by those who had complained to me – a determination as to whether maladministration on the part of the prudential regulators and GAD had occurred and, if so, whether that had caused injustice to them – was something that only I could provide.

19 Considering the practical difficulties that would inevitably arise if I were not able, for jurisdictional reasons, to investigate the actions of GAD in assisting the prudential regulators of Equitable, I asked the Government to make provision for GAD to be brought within my jurisdiction to enable me properly to assess all of the actions of those involved in the prudential regulation of the Society during the relevant period.

20 Following the agreement of the Government to this request and Parliamentary sanction of this proposal, the Parliamentary Commissioner Order 2004 (SI 2004/2670) came into force on 15 November 2004.

21 That Order brought GAD within my jurisdiction, enabling me to investigate any action that related to the giving of advice by GAD on or before 26 April 2001 in respect of the exercise of administrative functions under Part II of the Insurance Companies Act 1982 or any other enactment concerned with the regulation of insurance companies.

22 It was in this context that I launched the investigation which has led to this report. I will now turn to explain the procedure used to conduct the investigation.

The legal and administrative framework for the investigation

23 The 1967 Act places me under certain obligations in respect of the nature of the process by which I conduct investigations – the first being those contained in section 7 of that Act, which states, in section 7(1), that, where I propose:

> *... to conduct an investigation pursuant to a complaint under this Act,* [I] *shall afford to the principal officer of the department or authority concerned, and to any other person who is alleged in the complaint to have taken or authorised the action complained of, an opportunity to comment on any allegations contained in the complaint.*

24 Section 7(2) of the 1967 Act further provides that:

> *Every such investigation shall be conducted in private, but except as aforesaid the procedure for conducting an investigation shall be such as* [I consider] *appropriate in the circumstances of the case; and without prejudice to the generality of the foregoing provision* [I] *may obtain information from such persons and in such manner, and make such inquiries, as* [I think] *fit, and may determine whether any person may be represented, by counsel or solicitor or otherwise, in the investigation.*

25 A further obligation placed on me is contained in section 10 of the 1967 Act. I must send a copy of the final report of any investigation to the Member(s) of Parliament who referred the original complaint(s) and to the principal officers of the body or bodies whose actions were the subject of those complaints.

26 There are no other mandatory requirements imposed on me as to the procedure I must use in the conduct of an investigation. Parliament, through the provisions of the 1967 Act, has thus given me considerable discretion as to procedure; and the Courts have recognised the width of the discretion granted in this respect to Ombudsmen.

27 I must, nonetheless, act fairly and in accordance with principles of natural justice when conducting any investigation and when determining what an appropriate process to conduct any investigation might be. However, the Courts have also recognised that what process is appropriate in any investigation is largely derived from the circumstances of each case.

28 In all investigations conducted by my Office, in the interests of fairness it has always been our practice to provide, prior to the issue and/or publication of a final report, full drafts of those reports to those whose actions have been investigated. It has also been my practice in recent years, for the purposes of the investigation, to share such drafts with complainants (and/or their representatives). Where relevant, I will also for the same reasons provide excerpts from draft reports to affected third parties.

The investigation

July 2004 to March 2005 – the preliminary stage

29 As I am required to do, in December 2004 I asked the principal officers of the public bodies whose actions were subject to complaint for their response to the allegations contained in the complaints as those complaints had been put to me.

30 The formulation of those heads of complaint (with the input of certain policyholder and annuitant action groups) – from a mass of documentary material submitted in support of (at that time) more than 600 referred complaints – constituted part of the preliminary stage of the investigation.

31 The initial response to those heads of complaint, which I received from the principal officers in March 2005, is summarised within Chapter 4 and is reproduced in full in Part 4 of this report.

32 In May 2005, I decided that the scope of my investigation would include those known as the 'internationals', that is, those people who had bought policies from one of the Society's overseas or offshore branches. I came to this conclusion following consideration of the views as to this question that were provided to me by the public bodies whose actions were the subject of the investigation which led to this report and by the Guernsey Financial Services Commission.

33 The preliminary stage of the investigation had a number of other aspects. First, as I explained in a letter to all Members of Parliament issued on 24 November 2004, between August and October 2004 I appointed a team of investigators to conduct the investigation, using the power contained in section 3(2) of the 1967 Act – which enables me to authorise any of my officers to undertake functions on my behalf. That team has, throughout the investigation, exercised such delegated authority on my behalf.

34 Secondly, I appointed both legal and actuarial advisers to assist my investigation team. Legal advisers were appointed in February 2005 and actuarial advisers appointed in May 2005. The advice of both sets of professional advisers has greatly informed (and is integrated into) this report.

35 My legal advisers during the investigation were Tony Child, of Beachcroft LLP, and Anna Forge, of McGrigors LLP, and my actuarial adviser was Tony Leandro, of Barnett Waddingham LLP.

36 In addition, I arranged for the actuarial advice I received to be peer reviewed. I also appointed in August 2005 an academic advisory panel, made up of external professionals with relevant experience. I asked them to advise me on the standard of regulation set out in this report, with a view to ensuring that this standard was consistent with the prevailing standards that were applicable at the time relevant to the actions I have investigated.

37 Thirdly, as has been noted already in paragraphs 19 to 21 above, work was undertaken to bring GAD within my jurisdiction and to gain sanction for the provision by Parliament of additional resources to support the conduct of the investigation. I had a number of meetings with principal officers and others during the preliminary stage of the investigation in connection with both of these developments.

38 Fourthly, during September 2004 my team held preliminary meetings with officials of the public bodies whose actions were the subject of complaint to establish liaison arrangements and to discuss the likely scope of the investigation and the process through which it would be conducted.

39 During October 2004, similar preliminary meetings were held with the policyholder and annuitant action groups. The action groups who have liaised with my staff during the investigation are the Equitable Members' Action Group, Equitable Life Trapped Annuitants, the Equitable Late Contributors' Action Group, the Equitable Members' Help Group; and the Investors' Association.

40 Such meetings have continued throughout the investigation, as have meetings with the Society and with other interested parties.

41 Fifthly, with the assistance of those action groups, 15 individuals who had made complaints about the prudential regulation of Equitable were chosen to act as lead complainants for the purposes of the investigation. Those lead complainants epitomised the position of all the principal groups of the Society's current and former policyholders and annuitants who had complained to me.

42 Section 6(2) of the 1967 Act permits the persons aggrieved to be represented by a personal representative, a family member, or other suitable individual. In this case, the lead complainants authorised members of the action groups referred to above to act as their personal representatives during the course of the investigation.

43 Finally, as part of the preliminary stage of the investigation we sought to gain access to all the relevant evidence necessary for the conduct of the investigation. The different sources of evidence we have reviewed included:

(i) the operational and policy files of the public bodies whose actions were under investigation;

(ii) all the documentary evidence from other sources that was available to Lord Penrose;

(iii) transcripts of evidence given to the Baird and Penrose inquiries (and to my first investigation) by current and former officials and actuaries who had some connection with the prudential regulation of the Society;

(iv) the working documents and emails of those officials and actuaries;

(v) publicly available material (such as actuarial papers and discussions); and

(vi) historical and other material held at the National Archives, the British Library, and the libraries of the DTI, the Institute of Actuaries, and the Institute of Chartered Accountants of England and Wales.

April 2005 to January 2007 – the investigation proper

44 As I explained in paragraph 31 above, in March 2005 I received the response of the principal officers of the public bodies to the allegations contained in the terms of reference for the investigation. As that response, which, as I have said, is reproduced in full in Part 4 of this report, did not resolve the matters which formed the basis for the complaints made to me, I decided to continue my investigation.

45 As part of the investigation, in April 2005 the public bodies were asked to comment on the detailed submissions made by the action groups in support of the complaints set out in the terms of reference for the investigation. Those public bodies provided comments in July 2005.

46 In May 2005, a summary of the initial response of the public bodies to those complaints was issued to the action groups; those groups were invited to comment on that response, which they did in June 2005.

47 Also in May 2005, all the parties to the complaints were issued with a discussion document, on which comments were sought, which outlined my role and the nature of the subject matter that this investigation would cover. That document also, after setting out a summary of the responsibilities of the public bodies as they at that time were understood, explained the tests that I proposed to adopt as being an appropriate standard of regulation.

48 I received comments on that document from the action groups in June 2005 and from the public bodies in both July and November 2005. The discussion document and excerpts from the responses of the public bodies to that document are reproduced in Part 4 of this report.

49 During September 2006, my Office conducted a survey of all those with registered complaints concerning the prudential regulation of Equitable. Throughout the investigation, a substantial number of letters from those with complaints about the prudential regulation of the Society were received and reviewed. We corresponded with the lead complainants throughout the investigation and my investigation team met them in April 2008.

50 Early drafts of Parts 2 and 3 of this report, which contain the work done to chart the historical development of the relevant regulatory regime and the chronology of relevant events, were shared with the public bodies in September 2005, January 2006, and December 2006. We also shared revised drafts of those Parts of this report, which reflected the comments of the public bodies on earlier drafts, with the Society and the action groups in July 2006 and April 2007. The comments and suggestions of all those parties, provided in response to the emerging drafts, were considered.

51 Meetings were also held, in addition to those held with the principal parties to the complaints, with other interested parties, including with the actuarial profession, the Financial Ombudsman Service, the European Parliament Committee of Inquiry, and several Members of Parliament. My staff also travelled to Brussels in September 2005 to assist the Petitions Committee of the European Parliament to understand the nature and scope of my investigation.

52 My investigation team also held regular meetings with my actuarial and legal advisers. Throughout the investigation, my team and advisers have worked collaboratively. A number of roundtable meetings were held at which the professional advice I have been given was reviewed. All my advisers have contributed to the drafting process through such meetings, as well as through the advice that they have provided.

53 I have carried out a thorough and wide ranging investigation into the subject matter of the complaints within the terms of reference for the investigation. I have given careful consideration to all of the evidence, submissions, and other material before me, whether or not that material is referred to within this report.

54 While this report does not refer to everything that I and my investigation team have reviewed, I am satisfied that nothing of significance to my conclusions has been omitted from this report.

Draft reports and review – January 2007 to date

55 At the end of January 2007, I sent to the principal officers of the public bodies a first draft of this Part of my report, which contained my provisional views as to the relevant facts and as to whether maladministration had occurred and, if so, whether it had resulted in any injustice to complainants.

56 At the same time, I also sent those officers further drafts of Parts 2 and 3 of this report, which had been amended in the light of my consideration of the comments which had been made in respect of earlier drafts of those Parts. In March 2007, I made available to the public bodies the full draft of the provisional report of my actuarial adviser.

57 As I explained in a letter of 22 May 2007 to all Members of Parliament, in April 2007 I received substantial joint representations from the public bodies concerning my first draft report. I received at the same time additional representations from three former FSA senior managers.

58 I agreed, in the light of the nature and extent of those representations, to conduct a fundamental review of my first draft report. That review included the seeking of further professional advice from both actuarial and legal advisers and seeking the view of peer reviewers as appropriate.

59 The representations of the public bodies were considered in detail as part of that review, which was also informed by supplementary submissions by the public bodies made in September 2007 at the request of my investigation team. Other work, such as revisiting the original files and other relevant evidence, was also undertaken as part of my review.

60 I communicated the results of that review to the principal officers of the public bodies on 30 November 2007, providing them with an indication of the extent to which I was at that time minded to accept their representations and of the provisional views that I proposed to set out within a revised draft report, which I would send to all the parties to the complaints.

61 That revised draft report, setting out my revised provisional views, was issued in February 2008 to the public bodies, to those representing lead complainants, and to the Society. Representations (or further representations) were invited on that revised draft report.

62 Relevant draft excerpts were also disclosed for the purposes of the investigation to interested parties. Those interested parties included certain former directors of the Society and its former auditors.

63 I received responses to my revised draft report from the public bodies, from those action groups representing the lead complainants, from certain individual members of those groups, from the former Appointed Actuaries of the Society, and from solicitors representing the Society's former auditors.

64 Having considered those responses, which to the extent necessary are reflected within later Chapters of this Part of this report or reproduced in whole or in part within Part 4 of this report, shortly before publication I informed the parties to the complaints as to whether any substantive changes were to be made to my conclusions in the light of my consideration of their representations. I also informed them of the findings that would be made in this report.

65 This report, in which I have reached my final conclusions in the light of my consideration of all the evidence, the submissions I have received, and the other material before me, is the product of all that work.

66 I now turn to set out in detail the complaints which formed the basis for the investigation and the initial response of the public bodies to those complaints.

Chapter 4 – The complaints I have received and the Government's initial response to those complaints

Introduction

1 In this Chapter, I set out the general and detailed complaints that have been made to me about the prudential regulation of the Society; and the initial response to those complaints of the public bodies whose actions were the subject of complaint.

2 This Chapter is structured in the following way:

- in paragraph 3, I set out the number of complaints which have been made to me concerning the prudential regulation of the Society;
- in paragraphs 4 to 7, I set out the general complaint which alleges maladministration on the part of those public bodies whose actions have been the subject of investigation;
- in paragraphs 8 to 32, I set out the 18 heads of complaint alleging specific acts and omissions on the part of those public bodies which it is said constitute maladministration;
- in paragraphs 33 to 51, I summarise the submissions that have been made to me, both by complainants and by those authorised to act on their behalf, in support of those complaints of alleged maladministration;
- in paragraphs 52 and 53, I set out the injustice which it is claimed has resulted from maladministration and the remedy which is sought by complainants in respect of this injustice; and
- in paragraphs 54 to 154, I summarise the initial response to these complaints of the public bodies whose actions were the subject of complaint:

  (i) paragraphs 59 to 61 provide a summary of the response of the public bodies;

  (ii) paragraphs 62 to 75 deal with some general matters;

  (iii) paragraphs 76 to 153 address each specific head of complaint; and

  (iv) paragraph 154 responds to the injustice claimed.

The complaints made to me

3 As noted in paragraph 11 of Chapter 1 of this report, I have received 898 referred complaints in respect of 1,008 people and I have received 1,309 direct representations from a further 1,480 individuals about the prudential regulation of Equitable. Information about the people who have contacted me about the subject matter of this report is set out in Part 4 of this report.

The maladministration alleged

The general complaint

4 As noted in Chapter 1 of my report, the terms of reference for my investigation were:

> *To determine whether individuals were caused an injustice through maladministration in the period prior to December 2001 on the part of the public bodies responsible for the prudential regulation of the Equitable Life Assurance Society and/or the Government Actuary's Department; and to recommend appropriate redress for any injustice so caused.*

5 The terms of reference were agreed with those representing the lead complainants (see paragraphs 41 and 42 of Chapter 3) and, on 14 December 2004,

those terms of reference were distributed to all the parties to the complaints and also published on my Office's website.

6 From all the complaints I have received, three broad areas of complaint emerge from the many submissions we had read and considered. Those concern complaints about, first, the general organisation of the system of prudential regulation; secondly, about the way that this system had been applied generally towards Equitable; and, thirdly, about the specific handling by the prudential regulators and GAD of various aspects of the detail of the Society's business during the relevant period.

7 The general complaint made was that:

> *... the public bodies responsible for the prudential regulation of insurance companies (successively the Department of Trade and Industry, Her Majesty's Treasury and the Financial Services Authority...) and the Government Actuary's Department (GAD) failed for considerably longer than a decade properly to exercise their regulatory functions in respect of the Equitable Life Assurance Society and were therefore guilty of maladministration.*

The detailed heads of complaint

8 Eighteen detailed complaints were made – although, as will be seen, some of those heads of complaint contained more than one allegation. Those heads of complaint were labelled complaint A to complaint R.

9 **Complaint A** was that the prudential regulators had not been sufficiently resourced, and had not all possessed the necessary skills, to contribute effectively to the overall regulatory process and to exercise responsibly their discretionary powers as intended by Parliament and by the European Union. It was alleged that administrative decisions as to resourcing, priorities and methods had contributed to a position in which the prudential regulators had not properly undertaken their functions in respect of Equitable.

10 **Complaint B** was that the prudential regulators had failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by insurance companies. In particular, it was alleged that the prudential regulators had failed to ensure that proper assessments had been made of the Society's individual practices and its communications with policyholders, and of the expectations that those practices and communications had generated, in the light of the information that was, or should have been, known to the prudential regulators.

11 **Complaint C** was that the prudential regulators had not operated the regulatory regime as it was intended to be implemented by Parliament and in conformity with EC Directives. It was alleged that those regulators instead had chosen to regulate Equitable with a 'light touch' – a concept not evident from or provided for under the Insurance Companies Act 1982 and the European Third Life Directive, nor one consistent with these statutory provisions.

12 It was further alleged that the approach to the prudential regulation of Equitable had been exceptionally and unjustifiably lenient when compared to that adopted with other companies, with inadequate investigative site visits and lack of liaison with conduct of business regulators. Much more rigorous standards of supervision and better co-operation with conduct of business regulators had been adopted for smaller and unit-linked companies, it was alleged. That, it was said, demonstrated that the prudential regulators had applied a two-tier standard of regulation.

13 **Complaint D** was that the prudential regulators and GAD had allowed successive Chief Executives or Managing Directors of the Society simultaneously to hold the post of Appointed Actuary, despite recognising the potential for a conflict of interest. This, it was alleged, had not been compatible with the basis of the regulatory regime.

14 **Complaint E** was that the prudential regulators and GAD had failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments. This, it was alleged, had been particularly critical in a situation in which narrow, technical interpretations of regulatory solvency were becoming an increasingly irrelevant measure of any insurer's realistic financial position as the industry moved more and more towards non-guaranteed bonus declarations.

15 **Complaint F** was that GAD had recommended Equitable as a pension plan or additional voluntary contribution scheme provider in its advice to the administrators of the Principal Civil Service Pension Scheme and to other public sector pension schemes. This, it was alleged, had led to a lack of proper separation of its responsibilities and to a clear conflict of interest between GAD's role in providing advice to government bodies in relation to public sector pensions and in assisting the prudential regulators of the Society. This conflict of interest, it was said, had compromised the proper discharge of GAD's regulatory functions.

16 **Complaint G** was that, from the mid-1980s until 1997, the prudential regulators had failed to evaluate the potential effect of guaranteed annuity rates on the solvency of Equitable in a context where current annuity rates were falling steadily, in line with the Bank of England's base rate, to below contracted guaranteed annuity rates.

17 It was alleged that the prudential regulators had learned explicitly in November 1993 of the degree of Equitable's exposure to risks associated both with the guaranteed annuity rate issue and with the Society's lack of prudent reserves. It was said that the regulators' failure to take action then or to impose reserving until 1999 had played a direct part in the closure of Equitable to new business and to subsequent cuts in policy and annuity values. The prudential regulators had not prepared a study on the extent of guaranteed annuity rates in the industry until 1997: which, it was said, was a decade too late.

18 **Complaint H** was that, from about 1990 onwards, the prudential regulators and GAD had failed to give sufficient consideration to the fact that some of the measures used to bolster Equitable's solvency position were predicated on the emergence of a future surplus. It was alleged that, as a consequence, those regulators and GAD had not properly assessed the overall impact and adequacy of those measures. It was further alleged that the prudential regulators had also allowed Equitable to mis-use the term 'surplus' and had failed to consider the use of that word in the context of policyholders' reasonable expectations.

19 **Complaint I** was that, over this same period, the prudential regulators had allowed Equitable to publish financial results and projections that were misleading in that they had not reflected the Society's true position. In particular, Equitable had been allowed habitually to report growth rates alongside bonus rates, which had given the impression of a prudent margin for error, whereas the true position was that:

- assets had been consistently less than policy values so that higher rates of growth were needed to cover any given rate of bonus; and

- as part of the growth had been needed to cover expenses and the contractual liability for conventional annuities, the growth available to meet with-profits bonuses had always been materially less than the rate quoted in Equitable's literature, which had never been made clear.

20 **Complaint J** was that, during this same period, the prudential regulators and GAD had failed to act when Equitable had adopted what Lord Penrose described as practices of '*dubious actuarial merit*'. Those practices, it was alleged, had included valuing future liabilities at an inappropriate rate of interest between 1990 and 1996; treating selling costs as an asset; making no provision for guaranteed annuity rates until much too late; valuing a financial reinsurance policy (which proved to be of no value) at over £800 million; allowing credit for 'aspirational' (i.e. effectively unrealisable) assets; responding too slowly to widely evidenced changes to mortality expectations; and the issuing of a subordinated debt valued at £346 million, which was not counted as a liability.

21 **Complaint K** was that on several specific occasions, as set out in the Penrose Report, the prudential regulators and GAD had ignored or failed to act on information that might have led to formal or informal regulatory action against Equitable, thus also failing to alert new investors to the risks of investing. It was alleged that those occasions included when the Society's Board papers were sent to GAD by the appointed actuary on 11 June 1991, and when information was provided to GAD on 10 September 1992 which showed that, for the years 1989 to 1991, the aggregate policy values had very significantly exceeded the value of the underlying assets.

22 **Complaint L** was that, over a period of many years, the prudential regulators and GAD had permitted Equitable to operate an unsound business model, of which those regulators and GAD had been aware. It was said that the Society had made public its policy of reliance on 'goodwill' in a 1989 actuarial paper *With Profits Without Mystery*[1], but the prudential regulators had never addressed the issue or challenged the Society about it or about the consequences of the model.

23 Instead, it was alleged, the prudential regulators and GAD had allowed Equitable to operate their model, which had entailed declaring bonuses in excess of admissible assets, while at the same time operating without a significant estate and with a smoothing fund persistently in deficit. It was said that this had been a major contributory factor to the Society's development of what Lord Penrose had quantified as a £3,000 million asset deficit at the time of closure to new business and to the losses incurred by all those who held policies on 16 July 2001.

24 **Complaint M** was that the prudential regulators had failed to ensure any satisfactory correlation between the total of declared policy values and the Society's admissible assets in a context where Equitable, uniquely in the industry, had declared total policy values that had included terminal bonuses and had, without exception, always paid all claims (both contractual and non-contractual) in accordance with those declarations.

25 **Complaint N** was that Ministers and officials had decided that regulatory activities in relation to safeguarding policyholders' reasonable expectations were to be based solely on the regulatory returns, but had failed to put in place adequate procedures and Regulations to enable this to be achieved. It was alleged that this failure had been particularly critical in respect of Equitable, which had had unique practices which elicited policyholders' reasonable expectations.

[1] Presented to the Institute of Actuaries on 20 March 1989 (see Journal of the Institute of Actuaries 116 (1989): 301-345) and to the Faculty of Actuaries on 19 February 1990 (see Transactions of the Faculty of Actuaries 42 (1990-1991): 139-186).

26 **Complaint O** was that the prudential regulators and GAD had allegedly failed over many years properly to monitor and assess the Society's asset position and its practices in the light of policyholders' reasonable expectations. Those regulators and GAD, it was said, had not properly determined policyholders' reasonable expectations or acted to protect them as intended by Parliament and to the standards set by European Directives.

27 **Complaint P** was that, during the course of the litigation which had led to the House of Lords' decision in the *Hyman* case, the prudential regulators had allegedly failed in their duty to all policyholders in respect of policyholders' reasonable expectations and had postponed consideration of issues related to assets and reasonable expectations, both for guaranteed annuity rate and non-guaranteed annuity rate policyholders, until after the decision of the House of Lords (on 20 July 2000).

28 In addition, it was said that the prudential regulators had totally failed to assess properly either the impact or the scope of the *Hyman* decision and to evaluate the range of scenarios for Equitable following it. Those regulators, it was alleged, had failed to take appropriate action to mitigate the adverse affect of the decision on the majority, non-guaranteed annuity rate policyholders, and on new investors into the same with-profits fund.

29 The judgement of the prudential regulators that there had been a 99.9% probability that the Society would be sold demonstrated that, despite the extensive information that those regulators had possessed, they had failed to understand the parlous state of Equitable, which had been apparent to all prospective bidders.

30 **Complaint Q** was that, in March 2001, the prudential regulators had permitted Equitable to declare a bonus for 2000 and an interim bonus for 2001 that were both inappropriate and unjustifiable given the then state of the Society's finances, thus raising misleading expectations about the true state of Equitable just prior to significant across-the-board cuts that were imposed only four months later. Instead, it was alleged that the Society's asset deficit of 13% at year-end 2000 in a closed fund should have precipitated regulatory intervention at that time.

31 **Complaint R** was that, in July 2001, by permitting policy value adjustments worth more than £4,000 million in the form of an inequitable uniform percentage cut across all with-profits policies, rather than the fairer alternative of reducing policy values by cutting only non-guaranteed bonuses, the prudential regulators had allegedly failed to protect policyholders' reasonable expectations.

32 It was further alleged that the prudential regulators had also refused to comment meaningfully on this to policyholders while discouraging independent financial advisers from giving proper advice to policyholders.

Submissions made by complainants in support of those complaints

33 In support of those complaints, I received many hundreds of letters from complainants and from those making direct representations to my investigation team. In addition, certain policyholder action groups (see paragraph 39 of Chapter 3) submitted a vast amount of evidence in support of the complaints outlined above.

34 It is not practicable to set out here every argument, submission or piece of evidence that has been submitted to us since the investigation which led

to this report began, nor to describe the contents of all the documents that were sent to me in support of these complaints. However, we have read each letter sent to us and have considered whether the contents of all the communications we have received warrant inclusion in the report or follow-up through some other means.

35 I will now do two things: first, I will set out in their own words some of the general and specific points made to me by those who have complained to me. These describe, in a representative fashion, what those people have told me have been the effects on them of the events at Equitable and set out their feelings about what has happened. Secondly, I will summarise the key submissions made to me by policyholder action groups on the heads of complaint set out above.

What individual complainants told me

36 The lead complainants provided a considerable amount of information about the effect of the events at Equitable on them. Comments they made included:

(i) that '*the effects of actual and anticipated losses have caused me to sell a large house and move to a smaller property and to general cut-backs on expenditure, holidays, motoring, eating out, and assisting my children*';

(ii) that '*while I was looking forward to a comfortable retirement, this has now been shattered. It is a worry and is constantly on one's mind. When I wake up during the night this is the first thing that enters my mind*'; and

(iii) that '*I have lost confidence and trust in all pension producers and the government's watchdog. After working hard all my life and putting together what I thought were adequate plans for my retirement many years in advance, I feel I have been let down*'.

37 The knock-on effects and worry and distress caused by the financial uncertainty that complainants have suffered were also, they argued, compounded by actual financial losses of varying degree and with differential impact sustained by complainants. The largest sum that a complainant estimates that they have lost amounts to three-quarters of a million pounds; while the smallest amount of loss claimed is less than six hundred pounds.

38 Complainants generally claimed that the prudential regulators were to blame for the situation, although many also expressed anger at the Society's management. They said, for example:

(i) *This saga has undermined my confidence in the regulatory apparatus administered at taxpayers' expense to supervise the U.K. financial system and protect its users. I am also totally disillusioned with the conduct of government*;

(ii) *I feel emotionally affected, angry, as if I have been robbed. I feel the regulatory system has let me down. I was prepared for investment risk but not systemic risk which I felt was covered by the regulator. I will never trust an insurance company again and have advised my children against trusting one*;

(iii) *I have lost confidence in the ability and competence of long-term financial planners and regulators*; and

(iv) *Not only have I been affected financially but I feel badly let down by the regulatory bodies who should have ensured that investors interests are protected. The Government encourages us to save for the future and yet fails to regulate by the appointed bodies.*

39 Many complainants expressed more than disappointment in the role played by the prudential regulators and their advisers – arguing that the actions or inaction of those bodies had been the primary cause of the situation. One told me:

> *I submit that the Treasury/FSA failed to consider, or were culpably negligent in considering the effects on new or continuing investors, of the severe lack of reserves... and failing to require disclosure, or sufficient provision for this at least by the beginning of 1998.*
>
> *The company was allowed to advertise and tout for further business on the basis of "leadership in the UK pensions market" and was awarded by Standard and Poor their prestigious AA (Excellent) rating on the basis of the content of their accounts and returns.*
>
> *I relied on the above and the fact that the company gave no commission and boasted of their low costs and charges. I also believed I had the full protection intended by regulation in making my choice of company.*

40 Another complainant said:

> *The DTI did not impose effective control over the Society. The consequence of this allowed the Equitable to declare bonuses not covered by the assets of the Society from 1989 to 2000. As a further consequence of this, the Equitable retained its AAA rating and thousands of innocent members carried on pouring millions of pounds into a sinking ship. If there had been the slightest inkling that there was anything wrong, I would have changed to another insurance company to provide an annuity for my retirement.*

41 Other complainants also placed the blame for the injustice they claimed to have sustained at the door of the prudential regulators. Such submissions included those from:

(i) a man in his 80s, who told me that he had '*bought an Annuity in 1994. Prior to doing so, and prompted by another company's salesman, I had suggested to Equitable that their financial position might not be secure. I was given a Standard and Poor analysis, which gave an AA+ rating and must therefore have been based on incomplete information given to them. Annual reports were equally misleading. GAD must have known the true situation and they and DTI should not have allowed this to happen. As a result, my pension was reduced last year by £3,000 pa and we have had to sell our house and buy a much cheaper one. Further reductions are still being made*';

(ii) a man in his 70s, who told me that '*before placing my contracts with the Equitable I undertook considerable market research and took particular note of past performance, expense ratios and Standard and Poor's ratings relating to financial strength. The Equitable Life also assured me that information required on regular returns made to the Department of Trade and Industry, the then regulator, had been provided and that the DTI's requirements had been fully met*';

(iii) a man in his 60s, who told me that '*the regulatory bodies – the FSA, the Department of Trade and Industry, the Government Actuary's Department and Her Majesty's Treasury – failed in their duty to rigorously monitor the activities of Equitable Life. The information which was garnered was not made available to potential investors. It is my contention that the regulators failed in their* *duties to safeguard the interests of actual and potential investors and alert them to the financial weakness of Equitable Life thus depriving them of making informed choices; ergo compensation is due*'; and

(iv) a woman in her 60s, who told me that '*what has really upset me is that I did not purchase a time share or something like a pyramid scheme for "women empowering women". I purchased a pension scheme run by a supposedly respectable insurance company. I researched this company in the Financial Times, Standard and Poor's, Money Management, and the Sunday broadsheets, which all gave the company glowing reports. Now to get this money back I will have to go back to work for years*'.

The key submissions made in support of their complaints by those representing complainants

42 In addition to the many individual submissions I have received, certain action groups who were authorised to represent the lead complainants and who, more generally, represented those current or former Equitable policyholders and annuitants who had complained to me in support of the complaints.

43 In February 2005, the Equitable Members' Action Group (EMAG) made a lengthy submission to me, in which it set out its views on each of the heads of complaint covered by the investigation[2].

44 I consider that EMAG's submission, while not covering every submission that has been made to me by or on behalf of complainants, sets out broadly the key arguments put forward in support of their complaints. The following excerpt from the concluding section of that submission is worth quoting at length.

45 EMAG said that:

Our understanding is that the regulatory system was set up with reliance on a regulatory return by the insurance company, scrutiny of that return and reliance on the professional independence of the Appointed Actuary to inform the Regulators of failings in prudent management and above all concerns about Policyholders' Reasonable Expectations. It was to be a system based upon "freedom with disclosure". This strikes us as fair enough BUT:

1. *With developments in the industry the shift from guaranteed to non-guaranteed bonuses should have been noticed as actually happening as... GAD had predicted and the information sought in the regulatory returns suitably adapted to the new circumstances.*

2. *The scrutinies should have been carried out with punctiliousness and care. On occasions they were not carried out at all or only very inadequately.*

3. *Allowing the Chief Executive of Equitable to be the Appointed Actuary for many years completely destroyed his professional function.*

4. *There was no proper disclosure about the realistic financial state of Equitable to the public in the Companies Act accounts. The regulatory returns provided no additional information which would have been of any use to a member of the public. The idea of "freedom with disclosure" was therefore completely undermined.*

[2] The full submission is available on their website: www.emag.org.uk

46 EMAG continued:

> *We submit that there has been serious maladministration and that that maladministration continues. We further submit that such maladministration led to a number of consequences resulting in financial losses to the policyholders who invested in the Society.*
>
> *It is common ground that Equitable's problems were deep-seated going back to the start of providing guaranteed annuity rate policies and losses of their reserves in the early 1970s...*
>
> *The non-availability of files has made it difficult to track the behaviour of the Regulators in the 1980s but there is real evidence of failure from the late 1980s onwards. The failure to scrutinise the 1987 and 1988 regulatory returns came at a crucial time says Lord Penrose. Equitable was already over-bonusing by then.*
>
> [A GAD] *paper in 1988 had warned of the dangers to policyholders' reasonable expectations if companies were allowed to shift from guaranteed to non-guaranteed bonuses. Equitable was doing just that effectively shifting their business out of the purview, as practised, of the Regulators. It is, at that point, that the Regulators should have started to act to bring Equitable back into their effective oversight. For no good reason they failed to do this.*
>
> *From then on as a result of the Society having used up all its reserves the position of solvency for the purposes of covering guaranteed bonuses became more and more problematical with very doubtful devices being allowed to be used to cover the position.*

47 Turning to the role of the prudential regulators, EMAG continued:

> *This together with the shift described above should have impelled the regulators to strong action to protect policyholders. Their failure to do so allowed Equitable to misrepresent their financial strength and to suck in huge numbers of new policyholders into what was becoming a Ponzi scheme where capital is sucked in to cover current revenue deficits.*
>
> *The Regulators not only failed to inquire more deeply into the financial affairs of Equitable but they ignored the evidence that was presented to them: With Profits Without Mystery, the board papers given to* [GAD] *and* [the Appointed Actuary's] *message about over-bonusing over the three years 1989 to 1991.*
>
> *The Regulators cut themselves off from a source of information vital to their policy by allowing the roles of Chief Executive and Appointed Actuary to be combined for most of the 1990s. This was an inexplicable mistake.*
>
> *If the Regulators had bothered to take an overall view of the Company they would have seen that many were joining the company as a result of false pretences. They could have taken steps to control and limit the bonuses being announced so that a truer picture of the Company was presented to the public.*

Equitable would not have pulled in all this new money and would have remained a much smaller but healthier company instead of becoming a cancerous growth on the pensions industry. The guaranteed annuity rate problem would have remained unsolved but at least the cost of the problem would have fallen on the guaranteed annuity rate policyholders and been alleviated by hedging and a proper ring-fencing scheme. It is ironic that with fewer non-guaranteed annuity rate policyholders the need to solve the guaranteed annuity rate problem would have been much more acute and in need of resolution if the non-guaranteed annuity rate total pension funds were not to be removed. The guaranteed annuity rate problem could have been simply resolved in 1988 by the Regulators insisting on a separate fund being set up.

Whether or not the Regulators had controlled the allocation of bonuses they could at least have ensured that Conduct of Business conducted an inquiry into bonus notices and other promotional literature when it would have been seen that serious misrepresentations were being made.

There was also the question of the "technically efficient" but deceitful products such as the [with-profits] *annuities and the Managed Pension where no effective action has or is being taken.*

48 Summarising the more detailed submissions made elsewhere in their paper, EMAG noted:

We have described the period of the Hyman litigation and the pitiful absence of decent legal advice. We have mentioned how the FSA failed to intervene to protect the non-guaranteed annuity rate [policyholders] *who then represented 75% of the membership of the company. We have commented on the total failure to do anything after the Court of Appeal judgment. Finally there was the decision to allow Equitable to continue to trade in the hope of finding a buyer allowing even more policyholders to be pulled in. The failure of the Regulators to make any attempt to protect or compensate these late joiners has come in for particular criticism by Lord Penrose.*

Since the FSA has taken over regulation from HM Treasury, it is difficult not to see that "protection of policyholders" has been ditched in favour of protection of the insurance industry and the public purse. There are many, many policyholders who have lost a substantial part of their savings.

49 EMAG concluded by arguing that:

Policyholders have lost large sums of money as a result of the maladministration by the Regulators to the extent that it is questionable whether they might not have been better served by no regulation at all.

50 I also received further submissions from or on behalf of the other action groups. Those submissions include:

(i) *Equitable Life: Penrose and Beyond: Anatomy of a Fraud* – written by Dr Michael Nassim and submitted to me on behalf of both Equitable Life Trapped Annuitants and the Equitable Late Contributors' Action Group (as well as other papers written by Dr Nassim);

(ii) a submission by the Equitable Late Contributors' Action Group related to events that occurred after the Society's closure to new business; and

(iii) evidence, also given by the Investors' Association to the European Parliament Committee of Inquiry, written by Mr Michael Josephs.

51 The fact that I have not quoted here from these or any other documents does not denote that I have had no regard to their contents. I have had regard to all the evidence submitted to me from whatever source.

The injustice claimed

52 All those who have complained to me claimed to have sustained financial and other injustice as a result of alleged maladministration by those responsible for the prudential regulation of Equitable. Speaking on behalf of all those who complained to me, the lead complainants stated that:

> *The complainants invested in Equitable Life on the basis of its published literature (in some cases supplemented by the claims of its salesmen) on the understanding that it was a properly financed company which was effectively regulated by the Government.*
>
> *They did not know that the Society habitually declared and paid bonuses in excess of its earnings and did not provide properly for its liabilities, all of which was known to the regulators but with which the regulators failed to deal effectively.*
>
> *As a direct consequence of regulatory failure each complainant lost 16% (or 14% for life policies) of their policy values on 16 July 2001 and in some cases they lost more in market value adjustments and other costs and penalties upon subsequent departure. Had the regulators effectively undertaken their responsibilities, the crisis at Equitable Life would have been prevented by earlier intervention and appropriate remedial action.*

The remedy sought

53 The complainants sought full redress for the financial losses they claimed to have incurred in consequence of the maladministration they alleged and for the other injustice they claimed to have sustained.

The initial response of the public bodies

54 As I have explained in paragraph 23 of Chapter 3 of this report, I am required by section 7(1) of the Parliamentary Commissioner Act 1967 to afford to the principal officer of the department or authority concerned and to any other person who is alleged in the complaint to have taken or authorised the relevant action an opportunity to comment on any allegations contained in any complaint pursuant to which I propose to conduct an investigation.

55 On 9 December 2004, I afforded the principal officers of four public bodies – the Treasury, the FSA, GAD and the DTI (which is now the Department for Business, Enterprise and Regulatory Reform) – such an opportunity. I received a joint response on 3 March 2005 from three public bodies – the Treasury, the FSA and GAD.

56 The DTI confirmed that, as statutory responsibility for the prudential regulation of insurance companies had passed in 1998 from that department to the Treasury, it wished to make no separate submissions to my investigation from those made by the Treasury. It was explained that this was in line with the normal conventions concerning the transfer of government functions and Ministerial responsibility.

57 The joint response took the form of two documents. The first document set out the view of the public bodies whose actions were the subject of complaint as to the key aspects of the regime that pertained to the prudential regulation of Equitable during the period covered by my investigation. That document is reproduced in full as an annex to Part 2 of this report.

58 The second document contained detailed responses to the general and specific complaints contained in the published terms of reference for the investigation. That document is reproduced in full within Part 4 of my report.

Summary of response

59 I will now summarise the initial response of the public bodies to the heads of complaint set out above as those responses were set out in the second document submitted by the public bodies. I will also summarise the response of the public bodies on questions of injustice.

60 In summary, the initial joint response of the Treasury, the FSA and GAD to the complaints alleging maladministration was that:

(i) there had been no failure on the part of any of the prudential regulators or GAD properly to exercise their functions in respect of Equitable. At all times those regulators and GAD had acted reasonably and properly, in the context of and having regard to the regulatory regime as it had been at the relevant time;

(ii) the nature and scope of that regime had been determined by legislation and by regulatory policies which informed and were adopted under the applicable legislation. At all times, the policies adopted had been proper ones and had been the result of choices which Parliament and Ministers had been fully entitled to make; and

(iii) none of the complaints made by the complainants disclosed reasonable grounds for concluding that any of the public bodies responsible for the prudential regulation of Equitable or GAD had been guilty of maladministration.

61 Before responding to each of the specific complaints set out in the terms of reference for my investigation, the public bodies made some general observations about two matters: first, about the degree to which the contents of the Penrose Report were relevant to my investigation and, secondly, about the nature of the relevant regulatory context.

Two general observations made by the public bodies

The Penrose Report

62 The public bodies contended that almost all of the specific complaints that were the focus of my investigation had been derived from the Penrose Report. It was the view of the public bodies that the contents of the Penrose Report could not be used to support a case of maladministration, for two reasons. The first reason given was that the observations and criticisms made by Lord Penrose had been made with the benefit of hindsight, which had been permitted by the terms of reference of his inquiry.

63 By contrast, the joint response noted that, in carrying out my investigation, I had to consider the relevant events and actions solely in the light of the circumstances and knowledge of those involved at the relevant time. The public bodies said that this constituted a critical difference between the nature of the exercise which Lord Penrose had carried out and that of my investigation.

64 The public bodies also contended that the criticisms which had been made in the Penrose Report of particular decisions and actions that it was alleged had been taken, or omitted to have been taken, by the prudential regulators and GAD in exercising their functions were in fact few.

65 The public bodies noted that I would wish to form my own view of whether those criticisms were both well founded and relevant to this investigation. Whether those criticisms were accepted or not, the Treasury, the FSA and GAD took the view that they were dependent on the use of hindsight and that, if hindsight were disregarded, there was no reasonable basis for a finding of fault.

66 The public bodies contended that the second reason why the Penrose Report could not be used to support a case of maladministration was that, although that Report had (with the benefit of hindsight) been on occasion critical of the performance of the prudential regulators and GAD, its criticisms had been essentially directed at the regulatory regime which was in force at the relevant time rather than at particular decisions and actions taken, or not taken, in operating that regime.

67 The public bodies argued that the gist of those criticisms was not that the prudential regulators and GAD had failed properly to discharge their functions under the regime as it stood; but rather that the regulatory regime as it had stood was, in the view of Lord Penrose, unsatisfactory in various respects and required to be changed.

68 The public bodies contended that it was evident from his Report that the regulatory approach advocated by Lord Penrose would have required a much greater degree of intervention and intrusion by the prudential regulators than had obtained, or had been seen as politically desirable or appropriate, at the relevant time.

69 The public bodies also submitted that criticism of the regulatory regime as it had stood was not material for the purposes of my investigation. In judging whether maladministration has occurred, it was said that my investigation would not be concerned with whether the regulatory regime that had existed was the optimum one, or with the merits or demerits of the policies adopted.

70 Instead, the issue would be whether, given the regime that existed, and the policy choices made, there had been a culpable failure on the part of the prudential regulators or GAD to apply the provisions and policy of the regime.

The regulatory context

71 The public bodies then turned to the regulatory regime and told me that, in a situation where policyholders' interests are alleged to have been harmed or put at risk, it was unsurprising that some policyholders would believe that they had been 'let down' by the prudential regulators.

72 The joint response explained, however, that no system of prudential regulation could prevent, nor should it be designed to prevent, all financial difficulties that might be experienced by insurance companies operating in a competitive market economy.

73 Prudential regulation of insurance companies instead required a balance to be struck between protecting policyholders against the risk that a company would act imprudently on the one hand and, on the other, allowing the maximum freedom to the company and its management to pursue their chosen commercial strategy in the way they considered best.

74 The public bodies contended that the way in which that balance was to be struck was a matter of policy for Parliament in enacting the applicable legislation, and, within the statutory framework laid down by Parliament, for the Government of the day to decide, reflecting values and priorities as set by Ministers.

75 They told me that it followed that any assessment of whether the prudential regulators and GAD had properly exercised their functions could only be made by reference to the statutory framework of powers and duties which governed the prudential regulation of insurance companies during the period covered by the investigation and to the policy context in which prudential regulation took place – especially in their view as regards the degree of intrusiveness seen as appropriate and the level of public resources allocated to such regulation.

The initial response of the public bodies to the detailed heads of complaints

***Complaint A** – the prudential regulators had not been sufficiently resourced, and had not all possessed the necessary skills, to contribute effectively to the overall regulatory process and to responsibly exercise their discretionary powers as intended by Parliament and by the European Union.*

76 The public bodies submitted that the two allegations – that the prudential regulators were not sufficiently resourced and that they lacked the necessary skills – were both wholly unjustified. It was said that resources were finite and decisions as to their allocation had been policy decisions; Ministers had taken a reasonable view at the time relevant to my investigation that the balance of resources that were deployed was correct.

77 From the 1980s to 2001, the cost of prudential regulation (and the number of staff employed by the DTI and GAD in undertaking it) increased significantly in real terms, against a prevailing climate of pressure on costs and of deregulation. While it could always be argued that it would have been desirable to allocate more resources, there was no objective basis for concluding that the decisions taken at the time on resourcing prudential regulation were improper.

78 In relation to skills, the public bodies said that an early policy decision had been taken to outsource to GAD the actuarial expertise needed by the prudential regulators, a decision confirmed by reviews in 1978 and 1983. That was not an improper delegation of prudential regulation. The public bodies noted that Lord Penrose in his report had recognised that GAD had had access to developing thought in the profession. Steps had also been taken (such as secondments or longer postings) to improve the skills and resources that were available within the DTI and then the Treasury.

79 In summary, the public bodies contended that decisions as to resourcing, priorities and methods were not administrative decisions but were discretionary decisions which involved policy objectives and that there were no grounds for suggesting that those decisions had been improperly taken.

***Complaint B** – that the prudential regulators had failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by insurance companies.*

80 The public bodies contended that this complaint did not specify any concrete instance in which there had supposedly been a failure of liaison or co-operation by the prudential regulators with the conduct of business regulators. Nor, it was said, did

complainants specify any particular steps which the prudential regulators should have taken at any particular time but did not take.

81 The public bodies said that the relevant regime had not required extensive co-ordination as the two regulators addressed separate issues within their own areas of policy and focus.

82 The view of the public bodies was that there had been no failure of liaison between the two sets of regulators. They noted that Lord Penrose had recognised that there had been routine exchange of information in the 1980s and that interaction on a more formal footing had begun from 1992 onwards. During the period in which the FSA had had day-to-day responsibility for both prudential and conduct of business regulation, the public bodies said that arrangements had been put in place to encourage liaison between both sets of regulators.

83 The public bodies noted that, while Lord Penrose had said (with hindsight) that there had been insufficient liaison, he had given no specific examples other than in the autumn of 1999, which the public bodies took to refer to communications between the two regulators in September 1999 over bonus notices. In the view of the public bodies, however, that episode did not reveal any failure of liaison but rather a potential gap in the regulatory framework which pertained at that time. That gap was not as a result of any improper decision by the prudential regulators, but reflected the then prevailing system of regulation and the way the prudential and conduct of business regulators had been required to operate prior to their full merger within the FSA.

Complaint C *– that the prudential regulators had not operated the regulatory regime as it was intended to be implemented by Parliament and in conformity with European Directives. Those regulators instead had chosen to regulate Equitable with a 'light touch' – a concept not evident from or provided for under the Insurance Companies Act 1982 and the European Third Life Directive, nor one consistent with those statutory provisions.*

84 The public bodies submitted that neither allegation under this head of complaint – that the prudential regulators had operated a 'light touch' contrary to the provisions of United Kingdom statutes and European Directives and that, compared to other companies, the approach of those regulators towards Equitable had been exceptionally and unjustifiably lenient – was well founded.

85 In relation to 'light touch', the position of the public bodies was that the regime applied (whose guiding principle had been 'freedom with publicity') was precisely that which informed and was enabled by the relevant statutory provisions; in addition, it was their position that the relevant domestic legislation at all times had complied with European Directives.

86 In relation to the allegation of a 'double standard' applied to the prudential regulation of Equitable, the public bodies wholly rejected this. They noted that the regime had targeted resources through a priority rating system. In most years, Equitable had been assigned a rating of 3[3], indicating that there had been sufficient concerns to warrant early attention or other reasons to require scrutiny early in the cycle. These ratings had been assigned on the basis of objective criteria, taking account of key indicators (including coverage for the required solvency margin).

87 In the 1990s, Equitable's required minimum solvency margin had been reasonably well covered, as had been reflected in their ratings, which were in line with those given to other companies with similar

[3] See Appendix E to Part 2 of my report for a description of GAD's priority ratings.

levels of cover. Supervision had not been limited to scrutiny of the returns alone, but had included site visits (which relied on co-operation and were not 'investigative'), which had been introduced in 1991 on a three-year cycle. Equitable had been visited in 1992, 1994 and 1996, within the three-year cycle.

88 The public bodies stated that the priority ratings given to the Society and the frequency of visits to it showed that Equitable had been treated no differently from other companies. If anything, the public bodies argued, the intensity of exchanges between GAD and the prudential regulators, and between those regulators and Equitable, had been higher than for other companies of a comparable priority level during the 1990s.

Complaint D *– that the prudential regulators and GAD had allowed successive Chief Executives or Managing Directors of the Society simultaneously to hold the post of Appointed Actuary, despite recognising the potential for conflict of interest. This had not been compatible with the basis of the regulatory regime.*

89 The public bodies denied that there had been successive Chief Executives or Managing Directors of the Society who had simultaneously held the post of Appointed Actuary; this had only applied to one person from 1991 to 1997, they said.

90 Nevertheless, those bodies said, the prudential regulators had regarded the dual role as undesirable and had sought to discourage it; but it had not been contrary to established industry norms and other companies also had been in that position at the relevant time.

91 The public bodies submitted that there had been arguments both for and against somebody holding that 'dual role'. In the case of a mutual insurance company, there could have been no conflict between shareholders and policyholders and so there had been less potential for a conflict of interest in the Society's case.

92 The Insurance Companies Act 1982 had not expressly prohibited the dual role and so the complaint that the prudential regulators 'allowed' this was, in the view of the public bodies, misplaced. It was said that those regulators could have objected to the appointment of a Chief Executive on the ground that he or she was not a 'fit and proper' person. This, however, had been taken to mean grounds such as dishonest conduct. The public bodies said that the person concerned had been amply qualified to be the Society's Chief Executive.

93 In addition, the public bodies contended that there had existed specific circumstances in the case of Equitable, in that there had been no-one to take over from the incumbent as Appointed Actuary when he became Chief Executive.

94 The public bodies submitted that the prudential regulators had expressed concern but had had to accept that they could not impose a condition that the incumbent should end his dual role after 12 months; nor, it was said, could those regulators bring the dual role to an end. The prudential regulators and GAD had continued to express concern (from 1992 to 1996), but the incumbent's response had been that he would give up one of the roles if a conflict arose, that it was still a temporary measure, and that there was no suitable replacement.

95 In addition, the public bodies contended that it was not clear what advantage to the complainants there would have been had the dual role been avoided, or what changed in Equitable's thinking or actions when the dual role ended in 1997.

Complaint E *– that the prudential regulators and GAD had failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments.*

96 The public bodies' response to this head of complaint was that it was wrong to suggest that the regime remained static or that the prudential regulators had not taken steps to adapt to developments in the industry. There had been a series of initiatives from 1974 onwards.

97 Those initiatives had included successive legislative changes from 1974-2001 affecting the valuation of assets and liabilities, the applicable Regulations and the regulatory returns; moves to require the Appointed Actuary to specify certain facts in the returns; site visits from 1991; and the addition of the requirement for sound and prudent management in 1994.

98 Those initiatives had also included a Service Level Agreement between GAD and the DTI in 1995, replaced by a further such agreement in 1998; annual reports on the industry prepared by GAD from 1995; GAD surveys of bonus distributions (1993) and in respect of guaranteed annuity rates (1998) and three working parties set up through the Joint Actuarial Working Party in the 1990s – on policyholders' reasonable expectations, on the net premium method of valuation and on the impact of guaranteed annuity rates. Changes in mandatory guidance issued by the actuarial profession to Appointed Actuaries and additional guidance by GAD through 'Dear Appointed Actuary' letters had also been issued.

99 In these ways, the public bodies said, the regime had been kept up-to-date and the level of regulation increased, despite a then prevalent policy of deregulation.

100 With regard to regulatory solvency, the public bodies submitted that this had been the crucial yardstick by which the balance between policyholder protection and freedom to compete had been struck. The public bodies stated that the prudential regulators could not be criticised for applying and scrutinising regulatory returns by reference to the prescribed solvency criteria.

101 The public bodies contended that the complainants' real grievance appeared to be that, as the industry had moved increasingly towards non-guaranteed terminal bonuses, the prudential regulators should have required Equitable to reserve for these. But, in the view of the public bodies, those regulators could not have done so.

102 The Third Life Directive had given Member States discretion over whether or not to require the setting aside of reserves for bonuses. The United Kingdom Government had decided not to require this. The alternative approach that had instead been agreed was that an implicit allowance for terminal bonus should be made through a deliberately prudent and cautious approach to the valuation of assets and liabilities, which would create implicit margins for future bonuses. That was achieved in particular by requiring conservative valuation assumptions (including not taking credit for future capital appreciation on equity investments) and using a net premium method of valuation.

103 The public bodies submitted that it was not open to the prudential regulators to impose reserving by the back door method of policyholders' reasonable expectations. Had those regulators done so, it would have gone against the policy decision of the Government and would have been an attempt to use its powers of intervention impermissibly in preventing a company from disposing of its assets even though the test for regulatory solvency had been met.

104 The public bodies also said that it was not clear from where policyholders had derived a reasonable expectation that Equitable would set aside reserves for terminal bonuses, given the lack of a statutory requirement to do so and given the Society's well-publicised policy of full distribution. The public bodies submitted that, had Equitable set aside reserves, it would arguably have gone against the reasonable expectations of with-profits policyholders that there would be full distribution.

Complaint F *– that GAD had recommended Equitable as a pension plan or additional voluntary contribution scheme provider in its advice to the administrators of the Principal Civil Service Pension Scheme and to other public sector pension schemes. This had led to a lack of proper separation of its responsibilities and to a clear conflict of interest between GAD's role in providing advice to government bodies in relation to public sector pensions and in assisting the prudential regulators of the Society. This conflict of interest had compromised the proper discharge of GAD's regulatory functions.*

105 The public bodies submitted that it was wrong to suggest that the facts demonstrated any lack of proper separation of GAD's responsibilities or a conflict of interest in GAD's roles. GAD had provided advice at the time that Equitable had been selected to provide additional voluntary contributions for the civil service scheme (in 1988) and then had carried out three paper reviews (in 1992, 1993 and 1995) of this provision but this role had then been outsourced.

106 The public bodies said that GAD's role of giving advice had not conflicted with its role assisting the prudential regulators. The two functions had been kept separate by what they referred to as a 'Chinese wall' and there had been no exchange of confidential information. There had been no professionally improper conduct and, in their view, the complaint was without substance.

Complaint G *– that, from the mid-1980s until 1997, the prudential regulators had failed to evaluate the potential effect of guaranteed annuity rates on the solvency of Equitable in a context where current annuity rates were falling steadily, in line with the Bank of England's base rate, to below contracted guaranteed annuity rates.*

107 The public bodies' response to this head of complaint was that the applicable Regulations had required guaranteed annuity rates to be valued on prudent assumptions – depending on the extent they would be 'in the money' if mortality and interest rate assumptions were borne out and with regard to a prudent assumed take-up rate. Otherwise, guaranteed annuity rates represented only a contingent liability and were something the Appointed Actuary was expected to take into account when analysing the company's overall financial condition.

108 The public bodies noted that guaranteed annuity rates had begun to exceed current annuity rates briefly in 1993 (and then continuously from 1995). Equitable had decided to award a lower terminal bonus to a policyholder who took benefits with a guaranteed annuity rate and on this basis took the view that there was no need to set up a reserve. However, the public bodies argued that it had been the responsibility of the Appointed Actuary to disclose the company's liabilities and to justify how they had been reserved for; it was contended that the prudential regulators had relied on the Society's Appointed Actuary to do this and had been entitled so to do.

109 The public bodies noted that the Society's returns had not disclosed its exposure to guaranteed annuity rates or the approach it had adopted of awarding differential terminal bonuses in anything approaching a satisfactory way. The public bodies contended that the prudential regulators could not have been expected to identify the problem from

the information provided or (given the time and resources available and nature of the regulatory regime) to have sought the information needed. Contrary to the Society's claim that it had disclosed its differential terminal bonus policy since 1993, the public bodies noted that Lord Penrose had found that the Society's returns had failed to identify the growing obligations, with his report referring to obscure, opaque and uncommunicative information.

110 In relation to the November 1993 meeting, the public bodies stated that there had been no clear disclosure of Equitable's policy or their exposure to guaranteed annuity rates. The note of that meeting had referred to the Society remarking that the allocation of a final bonus could be conditional on the waiving of the guarantee. But, it was said, the Appointed Actuary had said that in the context of the resilience reserve – i.e. that the guaranteed annuity rates may bite in the reduced interest rate scenario but not in the base valuation. The public bodies submitted that the Appointed Actuary had not been saying that, while a base valuation reserve was needed, this was not being held due to the differential terminal bonus policy. That this was the position had only emerged in 1998.

111 In relation to the study of the extent of guaranteed annuity rates in the industry, the public bodies said that it had not been until the late 1990s that guaranteed annuity rates had become of significant value to policyholders. At GAD's suggestion, a professional working party had been set up in January 1997. Its terms of reference had recognised that there was no accepted practice for reserving for the guarantees.

112 The working party's report had been published in spring 1998. It had found considerable variations in reserving practice and did not provide definitive recommendations as to the right approach. GAD had been represented on the working party but could not provide the prudential regulators with confidential information provided by (or concerning) companies. So GAD had initiated its own survey in June 1998, to tie in with the submission of 1997 returns by the end of June 1998. The public bodies said that this had been an appropriate follow-up to the professional working party report and there was no reasonable basis to suggest this should have been done a decade earlier.

113 The public bodies said that the Society's exposure to guaranteed annuity rates had become apparent with Equitable's response to GAD's survey, in July 1998. This had showed that Equitable had not reserved for guaranteed annuity rates, had significantly higher exposure than others, and had not separated that business from non-guaranteed annuity rate business. For other companies, guaranteed annuity rate business had been on a smaller scale, or had been kept separate from other business, or the company had had an estate or was reserving on a proper basis.

114 The public bodies contended that the prudential regulators and GAD had reacted swiftly and firmly to information provided to them in July 1998. In November 1998, GAD had sent the Treasury a report identifying Equitable as particularly vulnerable. The prudential regulators had taken steps (which had begun in September 1998) to ensure that the Society made proper provision for those liabilities. Equitable had maintained their position that it would be excessively prudent for them to reserve on the basis that there would be a 100% take-up rate. The Society had threatened judicial review, sought the assistance of the then Economic Secretary to the Treasury, and continued the debate until the House of Lords' judgment in July 2000.

115 The public bodies submitted that the Society's difficulties after the decision of the House of Lords in *Hyman* had arisen due to the cost of honouring the guaranteed annuity rates on the non-guaranteed part of maturity values. That cost, it was said, had been determined by the prevailing investment conditions and not by the reduced interest rate scenario in the resilience test. The cost was separate from the cost of honouring guaranteed annuity rates on the guaranteed part of maturity values, which had already been reserved for at the insistence of the prudential regulators (subject to the renegotiation of the reinsurance treaty).

116 The public bodies contended that those events demonstrated no fault on the part of the prudential regulators or GAD, who had acted promptly and firmly: it was one thing to say, with the benefit of hindsight, that Equitable should have been quizzed about its approach at an earlier stage. The public bodies said, however, that the Society's returns for 1993 to 1996 had not disclosed that Equitable were not reserving for the liabilities associated with guaranteed annuity rates, or that the extent of the relevant policies was significant; nor had those returns disclosed the reserving method, the rate of guarantee, or the volume of business.

117 The public bodies submitted that it was not the case that the Society's failure to reserve had played a direct part in Equitable's closure to new business and the subsequent cuts in policy values. It was said that Equitable had been required to reserve for guaranteed annuity rates and the outcome of the litigation had not changed their gross reserving requirements. After the House of Lords' judgment, Equitable had sought a buyer to fund the guaranteed annuity rate costs. For various reasons, not all related to the financial state of Equitable, the sale had failed and policy values had had to be cut. The public bodies argued that there was no clear, let alone direct, link between the cut in policy values and the guaranteed annuity rate issue.

118 The public bodies contended that this had been a complex chain of events and that it was not clear what role, if any, the Society's delayed introduction of full reserving had played. It was said that earlier additional reserves would most likely have been at the expense of showing a weaker statutory solvency position or of slimming down margins elsewhere in the valuation basis, so it was not clear that additional reserving would have forced Equitable to change their bonus policy.

119 The public bodies stated that the July 2001 cuts had been largely due to negative rates of investment returns earned by Equitable in 2000 and 2001, against a background of falls in equity markets and their policy of no estate, which meant that, in adverse investment conditions, policy values might have had to be cut.

Complaint H *– that, from about 1990 onwards, the prudential regulators and GAD had failed to give sufficient consideration to the fact that some of the measures used to bolster Equitable's solvency position were predicated on the emergence of a future surplus. As a consequence, the prudential regulators and GAD had not properly assessed the overall impact and adequacy of those measures.*

120 The public bodies stated that the measures used to bolster Equitable's solvency margin criticised in this head of complaint were assumed to relate to the use of future profits implicit items (those complaints which related to the subordinated loan and reinsurance are dealt with under Complaint J below).

121 The public bodies contended that United Kingdom and European legislation had allowed value to be placed on projected future surplus for demonstrating cover for the regulatory required solvency margin. For an insurance company to be permitted to include a future profits implicit item, an Order under section 68 of the Insurance

Companies Act 1982 had been required. The value of the item was limited by law.

122 The United Kingdom's approach, as reflected in guidance issued by the prudential regulators in 1984, had been more cautious, it was said, than the European regime – in requiring the amount applied for to be less than the present value of profits expected to arise on in-force business. The Appointed Actuary had been required to certify this. Guidance had made clear that the Appointed Actuary's assessment had to be based on cautious assumptions.

123 The public bodies submitted that the role of the prudential regulators, acting with the advice and assistance of GAD, had been to determine whether a section 68 Order could be justified under relevant Regulations and guidance. It was said that the prudential regulators had been entitled to place weight on the certificate from the Appointed Actuary. If the calculations provided were justifiable, a refusal to grant the Order would have been highly unusual. The 1984 guidance had allowed, but had not required, the prudential regulators to request details of the assumptions used in the Appointed Actuary's certificate.

124 The public bodies contended that it would not have been proportionate for this to have been done unless there had been evidence from the returns (particularly the 'matching rectangle' in Form 57 of the returns) to suggest that the application might not have been adequately supported. This, it was said, had never been the case with Equitable. In addition, even where a section 68 Order was granted, what credit should be taken for it in the returns had been a matter for the professional judgement of the Appointed Actuary.

125 The public bodies submitted that there was no evidence that the prudential regulators had ever wrongly granted a section 68 Order. The public bodies noted that Lord Penrose in his report had accepted that the Order made in September 2000 (and by implication each earlier Order) had been properly granted and in accordance with the Regulations.

126 The public bodies argued that the allegation that the prudential regulators had failed to assess the impact of these Orders was also not justified. Equitable had applied for and used less (generally substantially less) than they had been entitled to use. The Society had not been the first company to use such an item; the increase in its use from 1995 to 2000 had also not been out of line with the increase in the aggregate amount for the industry.

Complaint I *– that, from 1990 onwards, the prudential regulators had allowed Equitable to publish financial results and projections that were misleading in that they had not reflected the Society's true position.*

127 The public bodies' position in relation to this head of complaint was that the accuracy of the material in Equitable's literature had not been a matter for the prudential regulators. The way Equitable had reported growth reflected their policy of a guaranteed reversionary bonus and non-guaranteed terminal bonus. It had not been for those regulators to prescribe the approach to be followed, provided that the Society complied with its statutory obligations.

128 The public bodies contended that the calculations contained in the Penrose Report, which suggested that the Society's assets had been consistently less than policy values, had not been seen by the prudential regulators at the time and it was not clear how those or similar calculations by complainants ensured consistency of assets and liabilities.

129 The public bodies submitted that the comparison of policy values and asset shares was a complex actuarial exercise where different professional opinions were possible, depending on the methodology and assumptions employed. Thus, in their view, there was little scope for a finding of maladministration unless the specific professional opinion relied on was demonstrably unreasonable or was contrary to the then prevailing regulatory regime.

130 The public bodies maintained that no instances had been given of Equitable being allowed to disclose results or projections that were contrary to the Regulations. The only relevance for the prudential regulators of the literature supplied to customers was in relation to policyholders' reasonable expectations, which are covered below in the response to complaints N and O below.

Complaint J *– that, during the period under investigation, the prudential regulators and GAD had failed to act when Equitable had adopted what Lord Penrose described as practices of 'dubious actuarial merit'.*

131 The public bodies noted that the seven practices identified in this head of complaint included five of the six practices discussed by Lord Penrose in chapter 19 of his report. He had expressed concern, in paragraph 166 of that chapter, about the prudential regulators' response to these practices, but had acknowledged that most of Equitable's steps had been within the limits allowed for in the Regulations and in guidance. The public bodies said that such practices had been a matter for the professional judgement of the Appointed Actuary, acting within the limits allowed by the Regulations. The public bodies accepted, however, that not all of Equitable's practices had been permissible but said that, when this had come to the prudential regulators' attention, those regulators had taken appropriate action.

132 The full initial response of the public bodies to these allegations is set out within Part 4 of this report. That response rejected the basis of all the specific allegations made under this head of complaint.

Complaint K *– that... the prudential regulators and GAD had ignored or failed to act on information that might have led to formal or informal regulatory action against Equitable, thus also failing to alert new investors to the risks of investing. Those occasions included when the Society's Board papers were sent to GAD by the Appointed Actuary on 11 June 1991, and when information was provided to GAD on 10 September 1992 which showed that, for the years 1989 to 1991, the aggregate policy values had very significantly exceeded the value of the underlying assets.*

133 The public bodies said that they did not accept that the Board papers provided to GAD in 1991 had contained critical information or had revealed extreme steps. Those bodies said that the adjustment made to the Society's valuation basis had been well within the limits permissible under the applicable Regulations; the GAD actuary had seen no problem and neither had GAD in its correspondence with Equitable in November 1991. In addition, in their view the GAD actuary's actions in not passing the papers to the DTI had been entirely professional and understandable. The public bodies submitted that any criticism of the actuary's actions could only be made with hindsight.

134 The public bodies said that they also did not accept that the information provided to GAD on 10 September 1992 should have led to formal regulatory action. Those bodies said that GAD had raised the issue at a meeting on 15 September 1992 and had passed the letter to the prudential regulators. Equitable had acknowledged on 17 September 1992 that the implications for

bonuses had to be considered carefully. There had been no need for specific comment on the figures, which in any event had showed that the excess of policy values over assets was falling.

135 The public bodies noted that GAD's scrutiny of the 1991 returns had raised concerns about the weakening of the valuation base. The prudential regulators had, in November 1992, acknowledged that this painted a worrying picture. Those regulators had asked GAD to seek a fuller analysis.

136 In response, in March 1993, GAD had said that Equitable could survive a short term fall in the markets. GAD asked Equitable for an indication of the end 1992 position and, when Equitable had indicated that that position had much improved, those concerns '*ebbed away*'. Within the scrutiny of the 1992 returns, GAD had commented on this improvement and had anticipated a further improvement in the 1993 returns, which in turn happened.

137 The public bodies argued that it was not necessarily unacceptable for policy values to exceed the value of assets. Equitable's view had been that the normal range was plus or minus 10% but that there could be circumstances when the relationship was outside this range.

138 There had been no reason, it was said, for the prudential regulators to doubt the Society's view, particularly when the lack of an estate had made smoothing at times of very unfavourable market conditions more difficult. The Society's lack of an estate had been well known and the public bodies said that it was difficult to argue that the Society's approach had been inconsistent with policyholders' reasonable expectations.

139 The public bodies also maintained that it had not been a matter for the prudential regulators to alert potential policyholders to the risks of purchasing policies from a particular company.

Complaint L *– that, over a period of many years, the prudential regulators and GAD had permitted Equitable to operate an unsound business model, of which those regulators and GAD had been aware.*

140 The public bodies stated that this complaint was founded on a false premise. In their view, it had not been for the prudential regulators to judge the soundness of a company's business model.

141 To have done so, it was said, would have substantially interfered in the normal course of competition in the market, would have exceeded those regulators' legal powers, and would have run contrary to the policy of 'freedom with publicity'.

142 The public bodies accepted that the Society's business model had meant that it was inherently weaker in balance sheet solvency terms than companies with shareholders or an estate. The Society's model had had commercial risks. But, the public bodies submitted, that model had been no secret and the risks ought to have been appreciated by policyholders and their advisers when they were taking investment decisions.

143 The public bodies categorically rejected the suggestion that the prudential regulators should have sought to prevent or dissuade Equitable from following their chosen model. It was said that, provided the applicable Regulations had been followed, those regulators had had no power to intervene.

Complaint M *– that the prudential regulators had failed to ensure any satisfactory correlation between the total of declared policy values and the Society's admissible assets in a context where Equitable, uniquely in the industry, had declared total policy values that had included terminal bonuses and had, without exception, always paid all claims (both contractual and non-contractual) in accordance with those declarations.*

144 The public bodies stated that this complaint added little to the other complaints. It was said that, in essence, Equitable had met their statutory solvency requirements, the Regulations did not require reserving for terminal bonus, realistic solvency had been a matter for the Board and the Appointed Actuary, Equitable's business model had been legitimate, and there was nothing to suggest that the prudential regulators had failed, at any time, to ensure that Equitable met the obligations imposed on them by the regulatory regime.

145 In addition, while it was accepted that policyholders' reasonable expectations had been a relevant issue, this was an area in which the role of the Appointed Actuary had been even more important than in other areas. In the view of the public bodies, it was not, and could not sensibly have been, a part of the role of the prudential regulators to monitor and make their own independent assessment of what, at any given time, were the reasonable expectations of the various classes of policyholders of the many life insurance companies.

Complaints N and O *– the protection of policyholders' reasonable expectations.*

146 The public bodies submitted that the concept of policyholders' reasonable expectations had been introduced in 1973 partly to ensure the interests of policyholders were protected as against those of shareholders. The public bodies contended that this concept had not been seen as a means of scrutinising the expectations of different cohorts of policyholders within a mutual company.

147 It was said that the powers of intervention granted to the prudential regulators were only to be exercised where it was obvious that the reasonable expectations of policyholders were not going to be met. Those powers were not to be used to ensure value for money. The Government of the day had also decided that policyholders' reasonable expectations would be safeguarded solely by reference to the regulatory returns and that to take a different regulatory approach would have trespassed on management decisions. This, it was said, was a policy decision that the Government had been entitled to take.

148 The public bodies argued that the Insurance Companies Act 1982 had made clear that the powers of intervention on the grounds of the protection of policyholders' reasonable expectations were extremely limited.

149 It was asserted that section 37(6) of the 1982 Act made clear that this was merely a residual power and that section 45(2) only permitted the prudential regulators to restrict the disposal of assets for the purposes of policyholders' reasonable expectations when regulatory solvency had been breached or when a company had been closed to new business. It was also said that the applicable Regulations had placed the primary responsibility for monitoring policyholders' reasonable expectations on the Appointed Actuary.

Complaint P *– preparation for, and follow-up to, the House of Lords' judgment*

150 The public bodies argued that my first investigation had already fully considered all the issues in this head of complaint and that that investigation had '*rightly concluded*' that there had been no fault by the prudential regulators. That remained the case in the view of the public bodies. The subsequent inclusion within my jurisdiction of GAD made no difference to those findings. GAD had advised the FSA, who had advised the Treasury. In the view of the public bodies, this complaint was not about the advice given by GAD but about the decisions which had been taken by the FSA and the Treasury.

Complaints Q and R *– events in the period following the closure to new business*

151 The public bodies contended that these complaints related to post closure events, which were not the focus of this investigation. In relation to the 2000 bonus declaration, it was said that there had been no such bonus. However, if the complaint referred to the addition of a notional interim bonus, that had not been something that Equitable had been required to report to the prudential regulators. But those regulators did keep a close watch over what Equitable were doing during this time and had taken the view that the Society was acting reasonably.

152 The public bodies submitted that, by the summer of 2001, it had been clear that the Society's practices were no longer sustainable. Equitable had decided that the expectations of policyholders needed to be addressed and that a financial adjustment was needed for those leaving. That, it was said, had been the background to the policy cuts.

153 The public bodies contended that, provided such a decision had been reasonable, it had been for Equitable to decide the approach to these cuts, not a matter for the prudential regulators. Those regulators had considered the issues and had discussed them with Equitable at the relevant times. The prudential regulators had at all times sought to keep policyholders informed of the situation.

Injustice

154 Having addressed the allegations that maladministration had occurred, the public bodies then addressed the injustice claimed by complainants. For all the reasons set out in their full initial response to the complaints (which is set out within Part 4 of this report and is only summarised in this Chapter), the public bodies whose actions were the subject of complaint told me that they believed:

- that it was wrong to say, as complainants did, that the July 2001 policy value cuts had been in any material respect a consequence of '*sustained over-allocation and sustained over-distribution on claims*', as Lord Penrose had concluded;

- that, on the contrary, analysis undertaken by the Society had demonstrated that more than 14% of the 16% cut in policy values made in July 2001 had been in fact attributable to:

  (i) adverse investment conditions prevailing between 1 January 2000 and mid-July 2001;

  (ii) adjustments made to the valuation of the Society's liabilities (on a realistic basis) by the new Appointed Actuary; and

(iii) a decision (taken by the new Board on the advice of the new Appointed Actuary) to create, as at 31 July 2001, an excess in the with-profits fund of available assets over aggregate with-profit policy values of £600 million as a prudential measure given the uncertain outlook for the future;

- that, even to the very modest extent to which the 16% cut in policy values did relate to events before the end of 1999, it was not correct to say that those policyholders as at 31 July 2001 who had also been policyholders throughout the period covered by the analysis contained within the Penrose Report were any worse off;
- that the Society's policy value cuts had not been out of line with those imposed by other life insurance companies at about the same time. Complainants could not demonstrate with any degree of certainty that sums invested elsewhere than with Equitable would have fared any better; and
- that, accordingly, there was no basis for the alleged injustice.

Conclusion

155 Having received a response from the public bodies whose actions were the subject of complaint to the allegations of maladministration made by complainants and to the claims of injustice that those complainants said resulted from such maladministration, and not being satisfied that those responses had resolved the complaints or had provided an explanation of the relevant facts that cleared up the issues, I decided to continue my investigation.

156 The next Chapter sets out the basis for my determination of the complaints contained within the terms of reference for that investigation.

Chapter 5 – The basis for my determination of the complaints

Introduction

1 In this Chapter, I do four things:

- I first describe, in paragraphs 2 to 7 below, the general approach that I adopt when determining complaints that a citizen has sustained injustice as a result of maladministration. This approach is based on establishing a clear understanding of the standards, both those of general application (the general standard) and those which are specific to the circumstances of a case (the specific standard), which applied at the time that the events complained about occurred. The general standard and the specific standard together comprise the overall standard.
- I then set out, in paragraphs 8 to 16 below, the general standard relevant to the investigation, as derived from established principles of good administration and from public law principles.
- I then set out, in paragraphs 17 to 108 below, the specific standard relevant to the investigation, i.e. the specific legal and administrative framework of prudential regulation and the specific duties imposed upon, and the powers available to, the prudential regulators within that framework during the relevant period.
- I then summarise, in paragraphs 109 to 114 below, the key legal and administrative obligations that the prudential regulators and/or GAD had at the relevant time, which are relevant to my consideration of the manner in which those regulators and/or GAD discharged those obligations.

My general approach and the overall standard

2 In simple terms, when determining complaints which have as their basis a claim that injustice has been sustained in consequence of alleged maladministration, I generally begin by comparing what actually happened with what should have happened.

3 So in addition to establishing the facts that are relevant to a complaint, I also need to establish a clear understanding of the standards, both of general application and which are specific to the circumstances of the case, which applied at the time that the events complained about occurred and which governed the discharge of administrative functions by those whose actions are subject to complaint. I call this establishing the overall standard.

4 The overall standard has two components: the general standard which is derived from general principles of good administration and of public law; and the specific standard which is derived from the specific legal and administrative framework relevant to the events in question.

5 Having established the overall standard, I then assess the facts in accordance with that standard.

6 In particular, I assess whether or not an act or omission on the part of the body complained about (in this case the prudential regulators and/or GAD) constituted a departure from the applicable standard. If so, I then assess whether that act or omission was so unreasonable, in the particular circumstances when regard is had to the specific legal or administrative context of the case, as to constitute maladministration; and/or whether any such act or omission otherwise fell so far short of acceptable standards of good administration as to constitute maladministration.

7 The general and specific standards applicable to this investigation are set out below in paragraphs 8 to 16 and 17 to 108, respectively; together they comprise the overall standard. The facts as I have found them to be are set out in Part 3 of this report, which contains a detailed chronology of the relevant events. Those events are summarised in Chapters 6, 7, and 8 of this report. My assessment of those facts against the overall standard is set out in Chapters 10 and 11.

The general standard: principles of good administration and public law

General principles of good administration

8 Since my Office was established in 1967, it has developed and applied certain principles of good administration in determining complaints of maladministration. In March 2007, I published those established principles in codified form, in a document entitled *Principles of Good Administration*.

9 The document[1] organises the established principles of good administration, which are based on 40 years' experience of investigating complaints and are thus derived from the practical processes of our casework, into six principles. Those principles are:

- Getting it right;
- Being customer focused;
- Being open and accountable;
- Acting fairly and proportionately;
- Putting things right; and
- Seeking continuous improvement.

10 I have taken into account those principles of good administration in my consideration of the complaints which led to this report. I have identified that the principles of 'getting it right' and 'being open and accountable' are of particular relevance in relation to the complaints which formed the basis for this investigation. For that reason, I set out below in greater detail some of what *Principles of Good Administration* says under those headings.

11 **Getting it right** means (amongst other things):

- Acting in accordance with the law and with due regard for the rights of those concerned.
- Acting in accordance with the public body's policy and guidance (published or internal).
- Taking proper account of established good practice.
- Taking reasonable decisions, based on all relevant considerations.

12 **Being open and accountable** means (amongst other things):

- Being open and clear about policies and procedures and ensuring that information, and any advice provided, is clear, accurate and complete.
- Stating the criteria for decision making and giving reasons for decisions.
- Keeping proper and appropriate records.

[1] Available at http://www.ombudsman.org.uk/improving_services/good_administration/index.html

General principles of public law

13 The first principle of good administration, 'getting it right' means, as indicated above, acting in accordance with the law. In addition to working within the specific legal framework applicable to insurance business, those responsible for the prudential regulation of insurance companies were required, as are all public bodies, to act in accordance with general principles of public law.

14 In summary, public law may be described as the law that governs the exercise by public bodies and officers of the powers and duties conferred on those authorities. It is a collection of general principles which control the exercise of powers and the carrying out of duties by public authorities.

15 The aim of those principles is to ensure that public authorities carry out their duties in accordance with the law and to keep the exercise by those bodies and officers of their powers and duties within their legal bounds.

16 The principles of public law particularly relevant to my investigation are that:

(i) Public bodies must carry out their legal duties in accordance with the law.

Every public authority must comply with any duties imposed upon it by statute in accordance with any requirements specified in that statute. Those on whom duties are imposed may not choose not to perform or permit themselves to be prevented from performing such duties.

Any public authority which carries out an action must be able to demonstrate that it has statutory authority to do so and that it has exercised that authority in the right and proper manner that Parliament, when conferring that authority, is presumed to have intended. A public authority must have regard to, and act in accordance with, all relevant law, including the law of the European Community.

(ii) Where public bodies have a power granted to them they must properly consider whether to exercise that power.

The exercise of a legal power is discretionary, but a public authority must give proper consideration to the use of its powers at the point when it reasonably considers that grounds for the exercise of those powers have or may have arisen. The authority cannot fetter or constrain its ability to give proper consideration to the exercise of its powers.

(iii) When public bodies exercise a power they must act fairly and reasonably and in accordance with any conditions imposed by law.

Legislation conferring power on public authorities frequently imposes conditions about procedures to be followed before the power may be exercised. Any such conditions must be complied with. In addition, statutory powers must be exercised in a right and proper way and in accordance with the presumed intention of Parliament when it conferred those powers. Those powers must be exercised in good faith, reasonably, for a proper purpose, and with procedural propriety.

The specific standard: the framework of prudential regulation

17 I now turn to set out the principal provisions of the regime relevant to the prudential regulation of insurance companies derived from legislation.

Before doing so, I will explain briefly what the principal influences were on the development of that regime and the legislative purpose underlying that regime.

The influences on the regulatory regime

18 The development of the regime relevant to the prudential regulation of life insurance companies which pertained at the time covered by my investigation is explained in more detail in Part 2 of this report. The development of that regime had four principal influences:

- the traditional approach within the United Kingdom to insurance regulation, which was underpinned by the concept of 'freedom with publicity';

- the central place of the actuarial profession within the architecture of life insurance regulation, which was primarily given effect through the role of the Appointed Actuary;

- the reaction to insurance company failures and the need for consumer protection, which led to the introduction of the concept of the protection of the reasonable expectations of existing and potential policyholders; and

- the United Kingdom's membership of the European Economic Community and the development of a Single Market for insurance within Europe, which led to the introduction of the concept of the fulfilment of the criteria of 'sound and prudent management'.

The United Kingdom approach to regulation and 'freedom with publicity'

19 The first influence was the central importance within the developing system of insurance regulation in the United Kingdom of the concept of 'freedom with publicity'. In a paper prepared in February 1976 by the Insurance Division of the Department of Trade, entitled *Brief History of Insurance Supervisory Legislation in Great Britain*, it was stated that:

> *The main purpose of insurance supervisory legislation is to protect policyholders through measures aimed at preventing insolvencies of insurance companies. Its introduction in this country more than a century ago could therefore be regarded as one of the earliest forms of consumer protection. The basis of the British system has been "freedom with publicity" – freedom for the insurers to fix their own premium rates, policy conditions, investment policies etc. in return for publicity about their financial condition to enable solvency to be monitored.*

Actuaries and life insurance and the role of the Appointed Actuary

20 The second influence was the central place of the actuarial profession within life insurance regulation in the United Kingdom and the creation in 1973 of the statutory role of the Appointed Actuary as part of that system of regulation.

21 In its February 1991 brochure, *The role of the Appointed Actuary in the United Kingdom*, the actuarial profession explained that:

> *Actuaries in the United Kingdom, as in most countries, fulfil a very broad range of roles in the financial management of life insurance companies. In the United Kingdom, however, one actuarial position is set apart by legislation and practice. The actuary who holds this position is known as the Appointed Actuary...* [who plays a] *special role... in a life company's affairs.*

22 In an earlier paper to the Institute of Actuaries in November 1988 on the role of the Appointed Actuary, the then Government Actuary had explained what that special role entailed:

> *... the Appointed Actuary is in a special position in that he is appointed and remunerated by the company, and thus forms part of the management team responsible to the Directors, and at the same time he has responsibilities and obligations to the DTI by reason of his statutory duties, which arise from the Department's supervisory functions aimed at the protection of policyholders.*

Insurance company failures and policyholders' reasonable expectations

23 The third influence was the reaction to a number of high-profile instances in the 1960s and 1970s in which insurance companies collapsed leaving their policyholders without insurance cover. Perhaps the most notorious example of such a failure was Vehicle & General.

24 The domestic statutory regime for prudential regulation at the time relevant to my investigation was contained in the Insurance Companies Act 1982. That regime had its roots in – and consolidated – legislation enacted in the 1970s, after those collapses, which had aimed to strengthen the protection provided by insurance regulation. When this new legislation had been introduced in 1973, its objective was stated by the then Minister to be:

> *Not primarily to penalise post facto dishonest or incompetent managements, but to protect policyholders by taking or requiring suitable corrective action in time to avert the consequences of imprudent or misguided policies...* [the intention was to] *strike a proper balance between, on the one hand, allowing the industry so much freedom that it can be exploited by rogues, and on the other hand, creating for the industry such shackles that it cannot give efficient, competitive and forward looking service to consumers here and abroad* (*Hansard*, House of Commons, 21 May 1973).

25 That legislation – the Insurance Companies (Amendment) Act 1973 – had introduced the concept of 'policyholders' reasonable expectations' (a concept which also included the reasonable expectations of potential policyholders) as a central component of the protection that was to be delivered by that regulatory regime. This concept became known as 'PRE' – I will refer to it, where appropriate, in this way in the rest of this report.

The European dimension and sound and prudent management

26 The fourth influence was the United Kingdom's membership of the European Economic Community and the development of a Single Market for life insurance by moves to co-ordinate the laws, regulations and administrative provisions in Member States in relation to the financial supervision of insurance companies.

27 Key to the completion of the Single Market in so far as the financial supervision of insurance companies was concerned was the concept of 'sound and prudent management' which concerned the way in which insurance companies conducted their business and were governed.

28 In 1992, the European Third Life Directive had established this concept. Article 15.3 of that Directive provided that '*the competent authorities of the home Member State shall require every assurance undertaking to have sound administrative and accounting procedures and adequate internal control mechanisms*'.

The cornerstones of prudential regulation

29 The prudential regulation of life insurance companies was undertaken within the context of those four principal influences – the traditional United Kingdom approach to insurance regulation, the pivotal role of the actuarial profession, the reaction to insurance company failure, and the development of a Single Market for insurance within Europe.

30 The regulatory regime which developed over time to deliver prudential regulation and which pertained at the time covered by this report thus had four cornerstones. Those four cornerstones were:

- 'freedom with publicity';
- the central place of the Appointed Actuary within the regulatory regime;
- the protection of the 'reasonable expectations' of both policyholders and potential policyholders; and
- the criteria of 'sound and prudent management'.

31 Those cornerstones laid the foundations on which were built:

- the way in which regulation was undertaken – in which information provided through the regulatory returns and the role played by the Appointed Actuary in ensuring that this information was so provided were given a central place; and
- the powers, duties, and means conferred on the prudential regulators – which gave prominence to the protection of PRE and ensuring the fulfilment of the statutory criteria of sound and prudent management.

The aim of prudential regulation

32 The stated aim of the system of prudential regulation was to protect the interests of policyholders and potential policyholders. Securing that aim was to be done in such a way as to balance the need to take such action as was necessary to protect those interests, without interfering in the business of insurance companies to such an extent as would stifle competition and prevent innovation, thus harming consumer interests.

The statutory framework

33 The statutory framework which governed that system of regulation, and within which the prudential regulators (acting with the advice and assistance of GAD) were given powers for the purpose of protecting the interests of policyholders and potential policyholders, had four chief component parts:

- European Directives concerning life assurance;
- the Insurance Companies Act 1982;
- secondary legislation made under the Insurance Companies Act 1982; and
- certain other domestic statutory provisions related to the activity of insurance companies.

34 The duties imposed and the powers conferred under this framework were generally to be performed, or were exercisable, by Ministers, although in line with the Carltona principle2, the day-to-day exercise of those powers was carried out by officials working under delegated authority.

[2] It is a principle of constitutional law that a decision made on a Minister's behalf by an official is that of the Minister. This is known as the Carltona principle after the case of *Carltona Ltd v. Commissioners of Works* [1943] 2 All ER 560. Except where the express delegation of authority is required by a particular statute, the official's authority flows from a general rule of law and not from formal delegation.

Table 5a shows the Ministers responsible for prudential regulation during the period covered by this report.

DTI Ministers responsible for the prudential regulation of insurance companies from June 1983 to January 1998

Period	Secretary of State	Junior Minister
16/06/1983-16/10/1983	Cecil Parkinson	Alex Fletcher
16/10/1983-02/09/1985	Norman Tebbit	Alex Fletcher
02/09/1985-26/01/1986	Leon Brittan	Michael Howard
26/01/1986-13/06/1987	Paul Channon	Michael Howard
13/06/1987-26/07/1989	Lord Young of Graffham	Francis Maude
26/07/1989-27/07/1990	Nicholas Ridley	John Redwood
27/07/1990-15/04/1992	Peter Lilley	John Redwood
15/04/1992-21/11/1994	Michael Heseltine	Neil Hamilton
21/11/1994-12/07/1995	Michael Heseltine	Jonathan Evans
12/07/1995-24/07/1996	Ian Lang	Jonathan Evans
24/07/1996-06/05/1997	Ian Lang	John Taylor
06/05/1997-05/01/1998	Margaret Beckett	Nigel Griffiths

Treasury Ministers responsible for the prudential regulation of insurance companies from January 1998 to December 2001

Period	Chancellor	Chief Secretary	Junior Minister
06/01/1998-27/07/1998	Gordon Brown	Alistair Darling	Helen Liddell
28/07/1998-22/11/1998	Gordon Brown	Stephen Byers	Patricia Hewitt
23/11/1998-27/07/1999	Gordon Brown	Alan Milburn	Patricia Hewitt
28/07/1999-10/10/1999	Gordon Brown	Alan Milburn	Melanie Johnson
11/10/1999-10/06/2001	Gordon Brown	Andrew Smith	Melanie Johnson
11/06/2001-01/12/2001	Gordon Brown	Andrew Smith	Ruth Kelly

European law

35 The three life insurance Directives together form the principal European legislation relevant to this investigation. Those Directives aimed to create a single market in the insurance sector and to coordinate the laws, regulations and administrative provisions concerning direct life assurance within Member States. The First Life Directive was made on 5 March 1979 and is described more fully in paragraphs 220 to 233 of Part 2 of this report; the prime aim of that Directive was to ensure freedom of establishment throughout the Community – that is, that life insurance companies which were authorised in one Member State were permitted to establish branches within other Member States.

36 The Second Life Directive was made on 8 November 1990 and is described in more detail in paragraphs 407 to 411 of Part 2 of this report; the prime aim of that Directive was to ensure freedom to provide services throughout the Community – that is, that life insurance companies authorised in one Member State were permitted to market their products in other Member States without the need for authorisation in those other countries.

37 The Third Life Directive was made on 10 November 1992 and is described in more detail in paragraphs 485 to 508 of Part 2 of this report. The prime aim of this Directive was to complete the Single Market in life insurance throughout the Community.

38 All three Directives contained provisions which aimed to co-ordinate the systems of financial supervision of life insurance companies within Member States. The key provisions of those Directives, as they affect the issues under consideration in this report, are:

(i) that all insurance companies were required to be subject to official authorisation which had to be obtained from the competent supervisory authority prior to a company being permitted to operate[3];

(ii) that all authorised insurance companies had to maintain specified reserves and margins of solvency that were to be calculated in accordance with prescribed principles[4]; and

(iii) that an authorised insurance company could have its authorisation withdrawn by the supervisory authority if the company no longer met the conditions necessary for authorisation, if the company breached its solvency requirements and was unable within a specified time to take the measures it had been required to take to restore a sound financial position, or if the company failed seriously in its obligations under the applicable Regulations within the relevant Member State[5].

39 An important provision for the prudential regulation of insurance companies was that contained in Article 16 of the First Life Directive. This provided that:

> *The supervisory authority of the member state in whose territory the head office of the undertaking is situated must verify the state of solvency of the undertaking with respect to its entire business. The supervisory authorities of the other member states shall provide the former with all the information necessary to enable such verification to be effected.*

[3] Article 6 of the First Life Directive.
[4] Articles 17 to 20 of the First Life Directive.
[5] Article 26 of the First Life Directive.

40 That obligation was replaced pursuant to an amendment contained in the Third Life Directive which, so far as is relevant, amended the relevant Article[6] to provide that:

> *... financial supervision shall include verification, with respect to the assurance undertaking's entire business, of its state of solvency, the establishment of technical provisions, including mathematical provisions, and of the assets covering them, in accordance with the rules laid down or practices followed in the home Member State pursuant to the provisions adopted at Community level. The competent authorities of the home Member State shall require every assurance undertaking to have sound administrative and accounting procedures and adequate internal control mechanisms.*

41 The European Directives were implemented in the United Kingdom through domestic legislation, the principal components of which are described below. However, those Directives continued to have direct effect and to impose certain direct duties on Member States.

42 The duties placed on the United Kingdom by those European Directives are, in my view, central to any interpretation of the functions that those responsible for the prudential regulation of life insurance companies were to discharge. It is an established legal principle that, where a statutory provision is necessary in order to comply with a European Directive, that provision is to be construed by reference to the wording and purpose of that Directive, even if that Directive post-dates the relevant domestic legislation.

43 If, as is the case with the subject matter of this report, the extent of the obligations imposed on those public authorities with responsibility for discharging the United Kingdom's duties with respect to financial supervision of insurance companies is a matter of dispute, regard should be had to the terms of the relevant European Directives. In this context, European Directives having direct effect take precedence over domestic legislation.

44 I consider that the most important duties relevant to the subject matter of this report are those imposed by the provisions of the three life insurance Directives, which required the United Kingdom:

(i) to take all steps necessary to ensure that its supervisory authorities had the powers and means necessary for the financial supervision of the activities of those life insurance companies established within their territory, including activities engaged in outside that territory[7].

(ii) to ensure that its supervisory authorities[8]:

  (1) were able to make detailed enquiries about an insurance company's situation and the whole of its business, including by gathering information or requiring the submission of documents concerning life insurance business or by carrying out on-the-spot investigations at the company's premises;

  (2) were able to take any measures that were appropriate and necessary to ensure that the activities of the insurance company remained in conformity with the laws, regulations and administrative provisions with which the company had to comply; and

6 Following other restructuring of the Directive, this was now Article 15.
7 Article 23 of the First Life Directive, as inserted by the Second Life Directive.
8 Article 23 of the First Life Directive, as inserted by the Second Life Directive.

(3) were able to act to prevent or remedy any irregularities prejudicial to the interests of policyholders.

(iii) to ensure that each life insurance company within the United Kingdom maintained an adequate solvency margin in respect of its entire business[9].

(iv) to ensure that, as part of their financial supervision, its supervisory authorities were required[10]:

(1) to verify a life insurance company's state of solvency, with respect to its entire business;

(2) to verify the establishment of technical provisions and of the assets covering them, in accordance with the rules laid down or practices followed in the United Kingdom pursuant to the provisions adopted at Community level; and

(3) to require every company to have sound administrative and accounting procedures and adequate internal control mechanisms.

(v) to ensure that each life insurance company[11]:

(1) established sufficient technical reserves, including mathematical reserves (in line with stated principles); and

(2) had assets equivalent to the underwriting liabilities assumed in all the countries where it carried on its activities.

(vi) to collaborate closely with other Member States in supervising the financial position of authorised insurance companies[12].

(vii) to ensure that each life insurance company produced an annual account of its financial situation and solvency and rendered periodically the returns and statistical documents necessary for the purposes of supervision[13].

Domestic law – primary legislation – the Insurance Companies Act 1982

45 In the United Kingdom, the duties imposed by those three European Directives were transposed into domestic law through what became the Insurance Companies Act 1982 and through subsequent amendments to that Act.

46 The system of prudential regulation of insurance companies created by this statutory framework focused on four regulatory areas of activity. These were:

- the control by the prudential regulators of entry into the insurance market through the dual processes of the authorisation of companies to conduct business and the approval, using 'fit and proper' powers, by those regulators of persons who held a controlling interest or undertook certain specified and significant management roles within a company;

---

9 Article 18 of the First Life Directive.
10 Article 15 of the First Life Directive, as inserted by the Third Life Directive.
11 Article 17 of the First Life Directive. This was modified and expanded by the Third Life Directive – see Part 2 of this report.
12 Article 15 of the First Life Directive, prior to amendment by the Third Life Directive – the latter contained similar provisions for collaboration which reflected the different responsibilities between 'home' and 'host' States enshrined within that Directive.
13 Article 23 of the First Life Directive.

- the monitoring by the prudential regulators of the financial condition of companies through the process of the submission and scrutiny of annual regulatory returns, which contained prescribed information about the activity and financial strength of the company;

- the possession by the prudential regulators of powers of intervention that could be used in specified circumstances to direct a company to take certain forms of action or to refrain from certain action; and

- the ability of the prudential regulators to petition the court to wind up a company in certain circumstances.

47 The detailed provisions of the 1982 Act are described in paragraphs 282 to 340 of Part 2 of this report; the provisions of predecessor legislation are described in paragraphs 22 to 45 and 78 to 160 of Part 2 of this report. The key provisions of the 1982 Act, as they affect the issues under consideration in this report, are:

(i) that a life insurance company could only carry on insurance business if it had received prior authorisation to do so from the prudential regulators[14];

(ii) that each life insurance company had to appoint an actuary – who became known as the Appointed Actuary – who was required to hold prescribed qualifications and whose identity had to be notified to the prudential regulators within fourteen days of appointment[15];

(iii) that the company was required to 'cause' its Appointed Actuary to make an annual investigation of the company's financial position and the company was then required to cause an abstract of the Actuary's report to be made in a prescribed form[16];

(iv) that such an investigation had to include a valuation of the liabilities of the company attributable to its life assurance business and a determination of any excess over those liabilities of its assets representing the fund or funds maintained by the company in respect of that business[17];

(v) that, for the purposes of that investigation, the value of any assets and the amount of any liabilities were to be determined in accordance with valuation regulations made by the Secretary of State (or, in later years, by the Treasury)[18];

---

[14] Section 2 of the 1982 Act.

[15] Section 19 of the 1982 Act. Each Appointed Actuary was normally invited on first appointment to meet the Government Actuary in person to discuss the role of the Appointed Actuary in the regulation of insurance companies. From the transfer in April 2001 of the responsibility for providing actuarial advice to the prudential regulator to actuaries working in-house at the FSA, those interviews were generally conducted by the head of the FSA's actuarial function.

[16] Section 18(1) of the 1982 Act.

[17] Section 18(2) of the 1982 Act.

[18] Section 18(4) of the 1982 Act.

[19] Section 32 of the 1982 Act.

(vi) that each company was required to hold assets which exceeded their liabilities by at least a prescribed margin. That requirement – known as meeting the required margin of solvency – had to be maintained throughout every year although, in general, it was only required to be demonstrated to the prudential regulators at each year-end[19]. However, from 1996, the Directors of a company had to certify that the company had met the required minimum margin of solvency throughout the year[20]; and

(vii) that each company was required to submit to the prudential regulators, in a prescribed format and normally within six months after the close of the period to which the documents related:

- a copy of its annual accounts and balance sheet;
- the abstract of the Appointed Actuary's report (which was not audited) and any statement of its long term business;
- its annual statement of business, prepared under section 20 of the 1982 Act; and
- any auditor's report on the accounts[21].

48 The above documents, more commonly known as the regulatory returns, were deposited by the prudential regulators with Companies House and were made available for public inspection – and each company was also required to make available a copy of the returns on request to any policyholder or, where relevant, shareholder[22].

49 The prudential regulators were subject to express statutory duties by virtue of section 22(5) of the 1982 Act. That section provided that the prudential regulators:

> *... shall consider the documents...* [i.e. the regulatory returns], *and if any such document appears to* [the prudential regulators] *to be inaccurate or incomplete in any respect,* [the prudential regulators] *shall communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.*

50 Thus, the prudential regulators were under duties:

(i) to consider the regulatory returns and associated documents that insurance companies were required to submit on an annual basis to those regulators; and

(ii) to communicate with an insurance company with a view to the correction of any inaccuracy or the supply of any deficiency where those regulators considered that the relevant returns were inaccurate or incomplete in any respect.

51 In addition to those duties, the 1982 Act gave to the prudential regulators certain powers of intervention, which included:

(i) powers to withdraw authorisation from a company to conduct new business if it appeared that the company was not fulfilling its statutory obligations under the 1982 Act or if it no longer met the criteria necessary for the authorisation of companies to carry out insurance business[23] – and, with effect from July 1994, an additional power to suspend authorisation in urgent cases was introduced[24];

[20] Paragraph 2 of Schedule 6 to the 1996 Regulations.
[21] Section 22 of the 1982 Act.
[22] Sections 23 and 65 of the 1982 Act.
[23] Section 11 of the 1982 Act.
[24] Section 12A of the 1982 Act.

(ii) powers, in the event that a company failed to meet its required margin of solvency, to require the company to submit a plan for the restoration of a sound financial position and to require the company to propose modifications to that plan if it was inadequate. The company was then required to give effect to any plan accepted by the prudential regulators as adequate[25];

(iii) powers, if a company's margin of solvency fell below the 'guarantee fund' of one third of the required margin of solvency (or below £400,000 if that sum were the greater), to require the submission of a short-term financial scheme and to require the company to propose modifications to that scheme if it was inadequate. The company was then required to give effect to any plan accepted by the prudential regulators as adequate[26]; and

(iv) powers to intervene in the affairs of a company in specified circumstances in the form of:

- a requirement for the company not to make, or to realise, certain investments[27];
- a requirement for the company to maintain certain assets within the United Kingdom and to require that all or part of those assets be placed in the custody of an independent trustee[28];
- a requirement for the company to limit its aggregate premium income, either gross or net of reinsurance[29];
- a requirement for the company to arrange for its Appointed Actuary to investigate all or part of the affairs of the company at a time other than the annual investigation and to deposit an abstract of the Actuary's report with the prudential regulators (which was then sent to the Registrar of Companies and was open to public inspection)[30];
- a requirement for the company to accelerate the deposit of its regulatory returns with those regulators[31];
- a requirement for the company to produce specified information or documents, verified in any way specified by those regulators[32]; and
- a residual power to take such other action as appeared to be appropriate for the purpose of protecting policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities or to fulfil the reasonable expectations of policyholders or potential policyholders[33].

52 The power under section 45 of the 1982 Act was 'residual' in the sense that it was only to be used in the event that protecting policyholders (or potential policyholders) from the risk that their reasonable expectations might not be fulfilled could not be appropriately achieved by the exercise of the prudential regulators' other powers[34].

25 Section 32 of the 1982 Act.
26 Section 33 of the 1982 Act.
27 Section 38 of the 1982 Act.
28 Sections 39 and 40 of the 1982 Act (exercisable on restricted grounds specified in section 37(3) of the 1982 Act).
29 Section 41 of the 1982 Act.
30 Sections 42 and 65 of the 1982 Act.
31 Section 43 of the 1982 Act.
32 Section 44 of the 1982 Act.
33 Section 45 of the 1982 Act.
34 Section 37(6) of the 1982 Act.

53 Furthermore, the power in section 45 of the 1982 Act could not be used in such a way as to restrict a company's freedom to dispose of its assets unless authorisation to conduct new business had first been withdrawn from the company (or suspended); or unless the prudential regulators believed that the company did not meet the required minimum margin of solvency; or unless the regulatory returns by the company showed that the company's liabilities had been determined otherwise than in accordance with the valuation regulations or, if no such regulations applied, in accordance with generally accepted accounting practices[35].

54 From 1 July 1994, as a result of the commencement of domestic Regulations implementing the provisions of the Third Life Directive, additional powers were conferred on the prudential regulators:

(i) those regulators were empowered to appoint an independent, competent person to conduct an investigation with a view to ascertaining whether the criteria of sound and prudent management were fulfilled or whether those criteria would be fulfilled if the application from a person seeking to become a controller of the company were approved[36];

(ii) those regulators were empowered to apply to the court to seek an order restraining an insurance company from disposing of its assets where it appeared that grounds existed on which the prudential regulators were empowered to require a company not to do so[37]; and

(iii) the prudential regulators were empowered to use the residual power in section 45 of the 1982 Act to take such action as appeared to them appropriate for the additional purpose of ensuring that the criteria of sound and prudent management were fulfilled with respect to a particular company[38].

55 The criteria of sound and prudent management were listed in the new Schedule 2A to the 1982 Act. Those criteria included:

(i) that the business of the company should be carried on with integrity, due care and the professional skills appropriate to the nature and scale of its activities[39];

(ii) that each director, controller, manager or main agent of the company should be a fit and proper person to hold that position[40];

(iii) that the company should be directed and managed by a sufficient number of persons who were fit and proper persons to hold the positions they hold[41]; and

(iv) that the company should conduct its business in a sound and prudent manner[42].

56 A company was not to be regarded as conducting its business in a sound and prudent manner in the following, among other, circumstances:

---

35 Section 45(2) of the 1982 Act. Prior to July 1994, the exception relating to solvency referred only to the minimum margin under section 33 of the 1982 Act – see further paragraph 307 of Part 2 of this report. Similar limitations applied to the exercise of powers of intervention which involved imposing restrictions on a company's freedom to dispose of its assets (under sections 39, 40, and 40A of the 1982 Act) by virtue of section 37(3) of that Act.

36 Section 43A(1) of the 1982 Act.

37 Section 40A of the 1982 Act (exercisable only on the restricted grounds specified in section 37(3) of the 1982 Act).

38 Section 45(1)(b) of the 1982 Act.

39 Paragraph 1 of Schedule 2A to the 1982 Act.

40 Paragraph 2 of Schedule 2A to the 1982 Act.

41 Paragraph 4 of Schedule 2A to the 1982 Act.

42 Paragraph 5 of Schedule 2A to the 1982 Act.

(i) unless the company maintained adequate accounting and other records of its business and maintained adequate systems of control of its business and records (and those arrangements were not to be considered adequate unless they were such as to enable the business to be prudently managed)[43];

(ii) if the company failed to conduct its business with due regard to the interests of policyholders and potential policyholders[44];

(iii) if the company failed to satisfy any obligation to which it was subject under the 1982 Act[45]; or

(iv) if the company failed to supervise the activities of any subsidiary undertaking with due care and diligence and without detriment to the company's business[46].

57 The powers of intervention conferred on the prudential regulators were exercisable on the grounds specified in the 1982 Act, which included:

(i) where those regulators considered that intervention was desirable for protecting policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities[47];

(ii) in the case of long-term business, where those regulators considered that intervention was desirable for protecting policyholders or potential policyholders against the risk that the company might be unable to fulfil their reasonable expectations[48];

(iii) (with effect from 1 July 1994) where it appeared to those regulators that any of the criteria of sound and prudent management of an insurance company was not or might not be fulfilled by the company (or had not or might not have been fulfilled in the past)[49];

(iv) if it appeared to the regulators that the company had failed to satisfy an obligation to which it was subject by virtue of the 1982 Act or predecessor legislation[50];

(v) if it appeared to the regulators that the company had furnished misleading or inaccurate information to those regulators under or for the purposes of the 1982 Act or of predecessor legislation[51];

(vi) if those regulators were not satisfied that adequate arrangements were in force or would be made for the reinsurance by the company of any risks that the prudential regulators considered should be reinsured[52];

(vii) if there were grounds on which, were the company a new company, those regulators would have been prohibited from granting it authorisation to carry on insurance business[53]; or

43 Paragraph 6(1) of Schedule 2A to the 1982 Act.
44 Paragraph 7 of Schedule 2A to the 1982 Act.
45 Paragraph 8 of Schedule 2A to the 1982 Act.
46 Paragraph 9 of Schedule 2A to the 1982 Act.
47 Section 37(2)(a) of the 1982 Act.
48 Section 37(2)(a) of the 1982 Act.
49 Section 37(2)(aa) of the 1982 Act.
50 Section 37(2)(b) of the 1982 Act.
51 Section 37(2)(c) of the 1982 Act.
52 Section 37(2)(d) of the 1982 Act.
53 Section 37(2)(e) of the 1982 Act.

(viii) if it appeared to those regulators that the company had substantially departed from any business proposal or financial forecast submitted at the time of its authorisation[54].

58 The power to require a company to produce documents to the prudential regulators at specified times or intervals was also exercisable on the ground that those regulators considered the exercise of that power to be desirable in the general interests of persons who were or who might have become policyholders[55].

59 The powers of intervention conferred on the prudential regulators to impose requirements on an insurance company regarding:

(i) the making or realisation of investments; or

(ii) the limitation of premium income; or

(iii) the actuarial investigation of all or part of its affairs; or

(iv) the furnishing of information; or

(v) the residual power to take other action necessary for the protection of PRE or to ensure that the criteria of sound and prudent management were being fulfilled

were also exercisable *whether or not any of the grounds for the exercise of the prudential regulators' powers of intervention existed* – if the relevant power was exercised before the expiration of the period of five years beginning with the date on which a new controller of the company became such a controller, although any requirement imposed on the company by virtue of this provision could not continue in force after the expiration of ten years from the relevant date[56].

60 The prudential regulators were also given the power to disapply or to modify the application to a particular company of certain provisions governing the prudential regulation of insurance companies, where that company applied for or consented to the modification or disapplication of such provisions[57]. Those regulators were also given the power to alter the financial year of an insurance company, either by extending or shortening that financial year[58].

61 In addition to being granted powers to control entry into the insurance market through the dual processes of the authorisation of companies and the approval of certain controllers and senior managers of such companies using 'fit and proper' powers (see paragraph 46 above), additional powers were conferred on the prudential regulators with effect from 1 July 1994 in respect of existing controllers or senior managers of authorised companies.

62 From 1 July 1994, those regulators also had the power to object to a controller or senior manager of a company continuing to hold such a position where it appeared that the criteria of sound and prudent management were not fulfilled or may not in the future be fulfilled by reason of the ability of that person to influence the company[59]. The prudential regulators were required to give written notice that they were considering the use of this power. However, they were not obliged to disclose

[54] Section 37(2)(f) of the 1982 Act.
[55] Sections 37(4) and 44(2)-(4) of the 1982 Act.
[56] Section 37(5) of the 1982 Act.
[57] Section 68 of the 1982 Act.
[58] Section 69 of the 1982 Act.
[59] Section 61B and paragraph 4(1) of Schedule 2D to the 1982 Act.

to the person concerned or to the company any particulars of the ground on which they were considering the service of a notice of objection beyond specifying which of the criteria of sound and prudent management was being relied on.

63 Those affected by such a proposal had to be afforded an opportunity to make representations to the prudential regulators and any such representations were to be taken into account before any notice of objection was served by those regulators. Where a notice of objection had been served on a company in respect of a managing director or chief executive, the company was required to remove the person from their post forthwith[60].

64 The prudential regulators were also given the power to petition the court for the winding-up of an insurance company in accordance with insolvency legislation – on the grounds that the company was unable to pay its debts, or that the company had failed to satisfy an obligation to which it was subject under the 1982 Act or under an obligation arising in another country related to the provisions of the European Directives, or that the company had failed to keep or to provide such accounting records as enabled those regulators to ascertain the financial position of the company[61].

65 When exercising any power of intervention, the prudential regulators were required to state the ground on which they were exercising that power – although, in the circumstances described in paragraph 59 above, those regulators were only required to state that they were exercising the relevant power[62].

Domestic law – secondary legislation under the Insurance Companies Act 1982

66 Much of the detail of the relevant regime was left by the provisions of the relevant primary legislation to be fleshed out in secondary legislation. The Regulations most relevant to the prudential regulation of insurance companies during the period covered by this report were:

(i) the valuation of assets and determination of liability regulations – contained in various Insurance Companies Regulations. These contained the rules (which were amended over time) concerning the methods and assumptions which insurance companies were required to apply in valuing their assets and determining their liabilities for the purpose of the requirements of the 1982 Act;

(ii) the regulations which prescribed the form and content of the returns – contained in various Insurance Companies (Accounts and Statements) Regulations. These prescribed over time, in varying degrees of detail, the form in which the regulatory returns were to be submitted to the prudential regulators and the information to be given in those returns (and placed in the public domain) – these Regulations contained general requirements for valuations to be undertaken in accordance with the valuation regulations referred to in (i) above and that the annual accounts required by section 17 of the 1982 Act should '*fairly state the information*' on the basis required by the Regulations; and

[60] Section 61B and paragraphs 4(2) to 4(6) of Schedule 2D to the 1982 Act.
[61] Section 54 of the 1982 Act.
[62] Section 37(7) of the 1982 Act.

(iii) the Insurance Companies (Third Life Directive) Regulations 1994, which amended the 1982 Act to give effect to the provisions of the European Third Life Directive, particularly relating to the codification of the criteria of sound and prudent management, outlined in paragraphs 55 and 56 above.

67 There were two principal sets of regulations governing the valuation of assets and the determination of liabilities made during the relevant period: those made in 1981 and those made in 1994 – although various amendments were made to them over the years[63]. The provisions of the 1981 Regulations are described in paragraphs 248 to 281 of Part 2 of this report. The provisions of the 1994 Regulations are described in paragraphs 628 to 684 of Part 2 of this report.

68 There were three principal sets of accounts and statements regulations made during the period covered by this investigation: those made in 1980, in 1983 and in 1996 – although minor amendments were made to them in other years. The provisions of the 1980 Regulations are described in paragraphs 235 to 239 of Part 2 of this report[64]. The 1983 Regulations are referred to in paragraphs 341 to 343 of Part 2 of this report. The provisions of the 1996 Regulations as complemented by the provisions of the Deregulation (Insurance Companies Act 1982) Order 1996 and as subsequently amended are described in paragraphs 774 to 812 of Part 2 of this report, where the revised requirements placed on insurance companies to provide certain information through the regulatory returns are outlined.

69 Thus, during the time relevant to the subject matter of this report, there were primarily:

(i) two periods in which different regulations governed the methods and assumptions to be used by insurance companies and their Appointed Actuaries when calculating a company's assets, liabilities, solvency position when completing the returns and providing information about other aspects of that company's business – the first ran from the submission of the 1988 returns to the submission of the 1993 returns, with the second running from the submission of the 1994 returns to the submission of the 2000 returns; and

(ii) two periods in which the format and content of the regulatory returns were to be produced under different regulations – the first ran from the submission of the 1988 returns[65] to the submission of the 1995 returns, with the second running from the submission of the 1996 returns to the submission of the 2000 returns[66].

70 It is not necessary here to set out every provision that those Regulations contained in respect of the valuation of assets and the determination of liabilities or in respect of the format of the returns. The relevant provisions of these Regulations will be set out in my assessment, within later Chapters of this report, of the way in which the Society was regulated.

[63] See, for example, paragraphs 412 to 416 of Part 2 of this report for further detail about some of these amendments.
[64] Those Regulations primarily amended earlier ones made in 1968, see also paragraphs 238 and 239 of Part 2 of this report.
[65] The first returns submitted during the period under consideration in this report.
[66] The last returns submitted during the period under consideration in this report.

Domestic law – other relevant legislation

71 Other legislation had an indirect impact on the prudential regulation of insurance companies – or otherwise came into play in certain circumstances. The most important of these were the Policyholder Protection Act 1975, the Insurance Companies (Winding-Up) Rules 1985, and the Insurance (Fees) Act 1985.

72 The Policyholder Protection Act 1975 put in place a system for the payment of compensation to policyholders in the event that an insurance company became insolvent or was otherwise unable to meet its liabilities. The provisions of that Act are described in more detail in paragraphs 207 to 214 of Part 2 of this report.

73 The Insurance Companies (Winding-Up) Rules 1985 set out the preconditions for and the process through which insurance companies were to be wound up by the court – and how the court would calculate the liabilities of the company to its policyholders and other creditors.

74 The Insurance (Fees) Act 1985 inserted a new section 94A in the 1982 Act under which Regulations were made from time to time, with a view to securing (so far as practicable) that the costs of the prudential regulation of insurance companies would be recouped by the Secretary of State (and, later, by the Treasury) through the levy of annual fees on each company, based on a sliding scale that had regard to the size of each company's premium income.

The administrative framework – those playing a role in the system

The role of the prudential regulators

75 The statutory framework therefore gave the prudential regulators the central role in the system of prudential regulation, which involved those regulators in:

- the authorisation of insurance companies – and the suspension or withdrawal of such authorisation – and the approval of proposed managing directors, chief executives and controllers of such companies;

- the receipt and appraisal of accounts, balance sheets, abstracts and statements submitted by insurance companies and the monitoring of insurance companies using those documents, in order to verify their solvency and otherwise to secure compliance by insurance companies with the requirements of the applicable law; and

- the consideration of whether to exercise powers of intervention in respect of an insurance company or to exercise powers to petition the court for the winding-up of such a company, on the basis of specified statutory grounds, and the use of such powers where such grounds existed and their exercise was appropriate to promote the purposes of the 1982 Act in the public interest.

The role of GAD

76 In the period prior to 26 April 2001, the prudential regulators were assisted in the discharge of their statutory functions by GAD, under the terms of service level agreements (SLAs) that were agreed between them in 1984, in 1995 and in 1998. Those agreements are reproduced in full in Part 4 of this report. From 26 April 2001 onwards, actuarial advice to the prudential regulators was provided by actuaries working for the FSA, who also conducted the scrutiny of the regulatory returns.

77 Under the 1984 SLA, the primary objectives of the detailed examination of the returns which GAD undertook on behalf of the prudential regulators were[67]:

- to form a view about the solvency position of the company in respect of its long-term business and to determine whether, at the valuation date of the returns, the company had and whether, in the foreseeable future, it seemed likely to continue to have, the margin of solvency required in respect of that business;
- to determine if the returns, with respect to long-term business, complied with relevant statutory requirements (and with any undertakings given by the company); and
- to determine, as far as possible from the returns, whether the company appeared to have complied with other statutory requirements (or any other undertakings) relating to its long-term business.

78 GAD prepared a scrutiny report which was provided to the prudential regulators and which was required to include[68]:

- a general description of developments in the year which might have affected the company or its long-term business;
- a general commentary on the present and future financial position (including any major weaknesses in the valuation basis adopted by the Appointed Actuary);
- any differences between any quarterly returns and the annual returns (which was not relevant to Equitable, as the Society was never required to submit quarterly returns);
- any deviations from a business plan that had been submitted by a company (which was also not relevant to Equitable, as the Society was already authorised at the time of the enactment of the 1982 Act and was thus never required to submit a business plan as part of the process of new authorisation);
- details of breaches, or possible breaches, of statutory requirements or undertakings;
- details of significant errors or omissions in the returns or other significant instances of non-compliance, explaining whether the problem had been rectified and, if not, whether or not GAD was raising the issue with the company;
- details of any qualifications of any of the certificates; and
- details (and copies) of correspondence between GAD and the company or its Appointed Actuary.

[67] As set out in paragraph 33 of the 1984 SLA.
[68] See paragraph 38 of the 1984 SLA.

79 The 1984 SLA was updated in March 1995. Under the revised agreement, the primary role of the Insurance Division of the DTI, which was responsible for the regulation of insurance companies, was set out[69] as being:

> *... to regulate the insurance industry effectively (within the duties and powers set out in the Act) so that policyholders can have confidence in the ability of UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations.*

80 One of the prime functions of GAD[70] was to '*advise* [the prudential regulators] *in the fulfilment of these aims*'. The 1995 SLA stated that the DTI's Insurance Division had sole responsibility for all executive decisions taken in the exercise of the Secretary of State's powers under the 1982 Act and that GAD '*recognise*[d]' that its functions were advisory (and that it had no responsibility for the exercise of those powers).

81 In its role in the scrutiny programme, GAD was to provide a report to the prudential regulators to identify any company which[71]:

- was not complying with statutory requirements;
- was not meeting regulatory solvency requirements or was in any danger of failing to meet them in the near future; and
- appeared not to be fulfilling PRE.

82 The scrutiny report to the prudential regulators from GAD, in the format specified in Appendix A of the 1995 SLA, was to include[72]:

- a basis for action if any of those fundamental requirements were not being met, or if trends in the reports suggested problems might be encountered when seeking to meet those requirements in the near future; and
- a basis for informed longer term discussion with any company on problems which might arise if trends in key performance indicators continued.

83 Key indicators were said to include cover for solvency, actuarial issues (for example, changes in the valuation basis or matching position), types of new business, expenses, lapses, asset exposures and investment strategies, impact on bonuses and any significant other developments during the year.

84 In October 1998, the SLA was again updated. The revisions mainly reflected the fact that statutory regulatory responsibility had moved from the DTI to the Treasury – and that GAD was now providing advice to the new prudential regulators.

---

[69] In paragraph 1 of the 1995 SLA.
[70] As set out in paragraph 2 of the 1995 SLA.
[71] See paragraph A8 of the 1995 SLA.
[72] See paragraph A9 of the 1995 SLA.

The mechanisms of scrutiny – the means by which GAD discharged its responsibilities to the prudential regulators under the SLAs

85 In providing advice to the prudential regulators of authorised insurance companies in order to enable those regulators both to verify the financial position of such companies and properly to consider whether grounds existed for the use of any of the regulators' intervention powers or of their power to petition the court for the winding-up of the company, GAD used a number of mechanisms.

86 Chief amongst those mechanisms was the annual scrutiny of the regulatory returns which an insurance company was required to submit to the prudential regulators on an annual basis. That process had two separate stages – the initial scrutiny and the detailed scrutiny. The initial scrutiny of the returns of a particular company was itself carried out in two steps. The first step, the A1 initial scrutiny, was designed to ensure that all the parts of the returns had been completed and properly signed. The second step, the A2 initial scrutiny, was carried out through an initial review based largely on some standard arithmetical checks. GAD had a standard 'tick-list' for these checks, which was completed in manuscript.

87 The A2 tick-list also contained sections where comments could be made, including one headed 'aspects that look worrying'. Based primarily on the solvency position shown on Form 9 of the returns, a priority rating was allocated and recorded on the tick-list. That priority rating governed whether or not a particular company's returns were to be subject to a detailed scrutiny and, if they were, the higher the priority rating the more quickly the detailed scrutiny was to be carried out. The Society's returns were subject to detailed scrutiny in all years covered by this report apart from those submitted in respect of 1988 and 1989.

88 Once the returns had been reviewed by GAD, it was normal for GAD to raise questions directly with the company about any *actuarial* issues. The SLAs allowed this, although they also provided that any particular *regulatory* issue was to be dealt with between the prudential regulators and the company. GAD was required to identify any significant errors or omissions in the returns when reporting to those regulators. This contact between GAD and a company was an important part of the scrutiny process. Through such contact, GAD gained a better understanding of the company, was able to advise the prudential regulators whether the returns needed clarification or whether further information from the company was needed and was able to advise those regulators what the important issues regarding the company were, as GAD were required to do. In addition to its scrutiny of the returns, GAD was also provided with copies of other correspondence between the prudential regulators and the company. In this way, GAD was kept informed of developing issues during the year.

89 However, while the scrutiny of the annual regulatory returns submitted by insurance companies was the prime focus of the mechanisms used by the prudential regulators and GAD to assist them to undertake their responsibilities, that was not the only mechanism open to them. A further part of the information-gathering process was company visits, which were introduced in the early 1990s and which became a regular part of the regulatory process. Those visits covered industry and company-specific topics and allowed the prudential regulators and GAD to assess the actuarial management of the company in face-to-face meetings.

90 GAD also undertook a number of industry-wide analyses to enable them to scrutinise the returns of insurance companies in a wider context, to highlight any practices which were out of line with industry practice, and to spot any developing trends. GAD also initiated and/or participated in professional working parties on specific actuarial issues of concern or interest. This work also included the preparation of internal GAD standards in relation to mortality assumptions and analysis of the investment performance of a typical fund. Much of this analysis was reported within an annual report on the industry, which was confidential to GAD and to the prudential regulators but which was referred to by GAD scrutinising actuaries as part of their consideration of the regulatory returns.

The role of others in the system – the insurance company and its Directors

91 A number of other actors had key roles within the system of prudential regulation that pertained at the time covered by this report. The terms of the 1982 Act imposed obligations on life insurance companies to ensure that their Appointed Actuaries took certain steps, which are summarised in paragraphs 95 to 98 below. The applicable law also placed the following obligations on insurance companies:

(i) to maintain at all times a prescribed solvency margin of assets in excess of their liabilities, prudently assessed;

(ii) when calculating their solvency margin, to make proper provision for all liabilities on prudent assumptions which included appropriate margins for adverse deviation of the relevant factors;

(iii) when calculating their solvency margin, to value their assets in accordance with the asset valuation regulations and to maintain a proper spread of such assets; and

(iv) when determining the amount of their liabilities for the purpose of these calculations, to follow prescribed valuation rules set out in the valuation regulations or – where departures from those rules were permitted – to use valuation methods which produced at least equally prudent results.

92 These were the principal obligations to which insurance companies were subject pursuant to the 1982 Act and to secondary legislation made under it. Where a company failed to satisfy any such obligation, this gave grounds for the prudential regulators to exercise their powers of intervention.

93 In addition, as a failure by insurance companies to conduct their business having regard to the interests and reasonable expectations both of their policyholders and potential policyholders and as a failure to act in accordance with the criteria of sound and prudent management both constituted grounds for intervention action by the prudential regulators, insurance companies were under implicit obligations to act in a way which did not provide grounds for the exercise of those powers of intervention.

94 Specific responsibilities were also imposed on the members of a life insurance company's Board of Directors. Those responsibilities included ensuring that the Companies Acts accounts of the company gave a true and fair view of the affairs of the company, that the regulatory returns prepared for the purposes of insurance legislation were prepared in accordance with that legislation, and that the company fulfilled the criteria of sound and prudent management (as set out in Schedule 2A to the 1982 Act). The Directors also had to sign a certificate in relation to the regulatory returns regarding such matters as whether those returns had been produced in accordance with the applicable Regulations, the adequacy of accounting

records and appropriate systems of control, the maintenance of the margin of solvency throughout the year in question, and whether a list of published guidance had been complied with.

The role of others in the system – Appointed Actuaries

95 Appointed Actuaries also had express requirements and implicit obligations by virtue of the relevant subordinate legislation. The statutory requirements were complemented by professional guidance to actuaries (both mandatory and recommended in terms of professional standards) issued by the Faculty and Institute of Actuaries to their members.

96 The actions which the Appointed Actuary was required to undertake by the legislation or in order to comply with the professional guidance to actuaries were considerable. Those actions included carrying out at the instigation of the company, once in every twelve months, an investigation of the company's financial condition in respect of its long term business, undertaking a valuation of the liabilities and determining any excess of assets over liabilities, and separately identifying any excess relating to the with-profits part of the fund.

97 The Appointed Actuary was also to be required by the company to prepare an abstract of the valuation report (for the annual returns) when the annual investigation was undertaken, or when another investigation was made with a view to the distribution of profits or when the results of the investigation were to be made public. The Appointed Actuary would also undertake a special actuarial investigation when the company was required by the prudential regulators to arrange for such an investigation to be undertaken.

98 Other matters in respect of which the Appointed Actuary had responsibilities pursuant to professional guidance included ensuring, so far as was within his or her authority, that the company was operated on sound financial lines and with regard to PRE and also taking all reasonable steps to ensure, at all times, that he or she was satisfied that in any investigation the long-term fund would be sufficient and the company would be able to satisfy any obligation to which it was subject by virtue of the 1982 Act. The Appointed Actuary was also required to advise the company of his or her interpretation of PRE, advising on the implications for PRE of any likely significant changes which might affect the company and ensuring that incoming policyholders were not misled as to their expectations.

The role of others in the system – the actuarial profession

99 The Faculty of Actuaries and the Institute of Actuaries also played a part in the prudential regulation of insurance companies, although that role was given only limited acknowledgement in the relevant subordinate legislation[73]. Acting under their Royal Charters, these professional bodies, among their other functions, set professional standards and provided guidance to actuaries; liaised with GAD and were formally and informally consulted by GAD over such matters as methods of valuation; initiated research and set up working parties on actuarial issues and proposed new Regulations and guidance; set professional qualification standards (which eventually culminated in the issue of practising certificates); and were responsible for professional discipline.

[73] The Accounts and Statements Regulations required that an actuary should be a Fellow of the Institute of Actuaries or of the Faculty of Actuaries and, in later years, the actuary's certificate given in connection with the regulatory returns was required to include a statement regarding compliance with certain of the professional guidance issued by the profession.

The role of others in the system – the auditors of an insurance company

100 The auditors of insurance companies had only a limited role to play in the system of prudential regulation. Such auditors had no role in considering the Appointed Actuary's valuation report or the certificates and forms that those Actuaries were required to submit as part of the returns. Those were matters for the professional judgement of the Actuary concerned. Auditors were, however, generally responsible for:

(i) auditing the company's accounts and related documents in the manner prescribed in the Companies Acts;

(ii) reporting to members of the company on the annual accounts laid before a general meeting, stating whether the annual accounts had been prepared in accordance with the Companies Act 1985 (and certain international accounting standards on consolidated accounts, if applicable) and, from 1995, stating whether the accounts gave a 'true and fair view', in accordance with the relevant financial framework, of the state of affairs of the company (in the case of a balance sheet) and its operating profit and loss (in the case of a profit and loss account);

(iii) auditing the company's balance sheet, profit and loss account and revenue account (required to be prepared under section 17 of the 1982 Act) and every statement, analysis, report or certificate annexed thereto which was referred to in certain of the Regulations (but, as noted above, not including the abstract of the actuary's valuation report, the forms required to be submitted by Schedule 4 to the Regulations, or the certificate given by the Appointed Actuary);

(iv) giving a report containing statements (in addition to the comparable statements required under companies legislation) of the opinion of the auditors on such matters as whether specified forms and information in the annual returns had been properly prepared in accordance with the applicable Regulations and whether or not it was unreasonable for the directors to have made the statements contained in their certificates; and

(v) communicating to the Secretary of State information which the auditors had reasonable cause to believe might be of material significance for determining whether any of the Secretary of State's powers of intervention should be exercised.

The administrative framework – relevant policy and guidance

101 In order to seek to ensure that the statutory framework for the prudential regulation of insurance companies operated effectively and that all those who had a role to play within that system understood their obligations and responsibilities properly, guidance was issued to explain the nature of the system, to set out how those operating it should conduct themselves, and to set minimum standards to which it was expected that the relevant actors within the system would conform.

102 There were five types of general guidance applicable to the system of the prudential regulation of insurance companies.

103 First, there was internal guidance developed by the prudential regulators to assist them to apply consistently the provisions of the relevant statutory framework. During the period covered by this report, the principal form of such guidance was the DTI's Policy Guidance Notes, which were

issued in September 1991. The most relevant of this guidance is reproduced in Part 4 of this report.

104 Secondly, there was internal guidance developed by GAD to assist those actuaries responsible for conducting the scrutiny of the annual regulatory returns to undertake that scrutiny. During the period covered by this report, the two principal forms of such guidance were GAD's Insurance Supervisory Work Guidance Manual and their scrutiny proformas, which set out key questions to be covered in the scrutiny reports of a company's annual returns and which gave a structure to such reports. Both of those sets of guidance are reproduced in Part 4 of this report.

105 Thirdly, there was external guidance developed by the prudential regulators and issued to assist insurance companies to comply with the requirements of the relevant and applicable statutory framework. During the period covered by this report, there were two principal forms of such guidance: the Prudential Guidance Notes issued by the prudential regulators to assist companies in, among other matters, completing and submitting their regulatory returns, and the '*Dear Director*' (or '*Dear Managing Director*') letters sent by those regulators to companies from time to time on issues of topical or general concern. The most relevant of this guidance is reproduced in Part 4 of this report.

106 Fourthly, there was external guidance developed by GAD and issued to assist the Appointed Actuaries within insurance companies to understand the general requirements that GAD expected from such actuaries when applying the relevant Regulations and professional standards. During the period covered by this report, the principal forms of such guidance were the '*Dear Appointed Actuary*' letters issued by the Government Actuary. The most relevant of these letters are reproduced in Part 4 of this report.

107 Finally, the actuarial profession issued guidance in the form of both mandatory and recommended professional standards, to which Appointed Actuaries (and other actuaries) were required or expected to conform in the discharge of their responsibilities. This guidance is publicly available on the profession's website.

108 It is not practicable to summarise here all of that policy, procedural, explanatory and professional guidance, some of which, as I have said, is set out in full or in part within Part 4 of this report. Where relevant, aspects of such guidance are set out within later Chapters of this report.

Summary of the key obligations of the prudential regulators and/or GAD which are relevant to this investigation

109 In later Chapters of this report, I set out my findings of fact and my determinations as to whether the acts and omissions of the prudential regulators and/or GAD which are disclosed in those findings constitute maladministration on the part of either the prudential regulators, or GAD, or both.

110 I have set out in paragraphs 2 to 7 above the approach that I generally adopt when making such determinations. I establish first the facts and the overall standard, and I then go on to assess the facts against that overall standard.

111 In particular, I assess whether or not an act or omission on the part of the body complained about (in this case the prudential regulators and/or GAD) constituted a departure from the applicable standard. If so, I then assess whether that act or

omission was so unreasonable, in the particular circumstances, when regard is had to the specific legal or administrative context of the case, as to constitute maladministration; and/or whether any such act or omission otherwise fell so far short of acceptable standards of good administration as to constitute maladministration.

112 Central to this approach is the identification of the general and specific legal and administrative obligations which I consider the prudential regulators and/or GAD had at the relevant time; and my consideration of the manner in which those regulators and/or GAD discharged those obligations.

113 This Chapter, supported by the relevant detail in Part 2 of this report, provides an overview of the general and specific legal and administrative obligations which I consider the prudential regulators and/or GAD had at the relevant time.

114 From that overview, I have identified the following key legal and administrative obligations that the prudential regulators and/or GAD had at the relevant time, which I use in my consideration of the manner in which those regulators and/or GAD discharged those obligations:

(i) The prudential regulators were under a specific statutory duty, imposed by the 1982 Act and the Regulations made under that Act, to consider whether the regulatory returns were complete and accurate (in the sense of them being compliant with the applicable Regulations).

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered the regulatory returns submitted by insurance companies and, if those returns appeared to be inaccurate or incomplete in any respect, to have communicated with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

(ii) The prudential regulators were under a specific statutory duty, imposed by the 1982 Act and the Regulations made under that Act, to ensure that an insurance company valued its assets and determined its liabilities in accordance with the requirements that were imposed on it by the applicable Regulations.

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered whether the way in which an insurance company valued its assets and determined its liabilities that was set out within the regulatory returns had been undertaken in accordance with the requirements of the 1982 Act and the Regulations made under that Act and, if it appeared that the company had used a valuation basis that was not compliant with these requirements, to have considered whether to take action to seek to remedy the position.

(iii) The prudential regulators were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or may have arisen which gave grounds for the use of such powers.

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered the use of their powers in the light of any information that they possessed – whether from the content of the regulatory returns, from contact with an insurance company, or from other sources – which gave rise to questions about the solvency position of that company, or about whether it was acting in line with the interests of its policyholders or in accordance with the reasonable expectations of those policyholders, or potential policyholders, or about whether it was acting soundly or prudently.

(iv) The prudential regulators were under a general public law duty to exercise their statutory powers in a right and proper way, in accordance with the presumed intention of the legislature which conferred those powers, in good faith, reasonably, for a proper purpose, and with procedural propriety.

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have dealt appropriately with any regulatory issues which arose in relation to any insurance company other than through the scrutiny process and to have acted in such a manner as to ensure the effective operation of the regulatory regime as Parliament had established it – informed as that regime was by the concepts of 'freedom with publicity', the protection of the reasonable expectations of policyholders and potential policyholders, and the fulfilment of the criteria of sound and prudent management.

(v) Both the prudential regulators and GAD were under an obligation generally to act in accordance with established principles of good administration.

In complying with this obligation, I would expect the prudential regulators and/or GAD:

- to have acted in accordance with their general and specific legal duties and powers;
- to have acted in accordance with their own published and internal policy and guidance;
- to have taken proper account of established good practice, including professional practice;
- to have taken reasonable decisions based on all relevant considerations, leaving out of account irrelevant considerations and balancing those considerations appropriately;
- to have kept proper and appropriate records as evidence of their activities, including a record of the reasons for their decisions; and
- to have provided information, where it was appropriate to provide information, which was clear, accurate, complete and not misleading.

Conclusion

115 In this Chapter, I have set out my general approach to determining complaints of maladministration against public bodies; and I have provided an overview of the general and specific legal and administrative obligations which I consider the prudential regulators and/or GAD had at the relevant time – the overall standard against which I assess the facts in this case.

116 Finally, I have extracted from that overview a summary of the key legal and administrative obligations that the prudential regulators and/or GAD had at the relevant time, which I use in my consideration of the manner in which those regulators and/or GAD discharged those obligations.

117 In Chapters 6, 7, and 8 which follow, I set out a summary of the way in which the prudential regulation of the Society was undertaken during the period from when the regulatory returns for 1988 were submitted to the end of my jurisdiction on 1 December 2001.

Chapter 6 – The prudential regulation of Equitable in the period prior to 20 June 1998

Introduction

1 In this Chapter and in the two Chapters which follow it, I set out how the prudential regulation of the Society was undertaken during the period from when the Society's regulatory returns for 1988 were submitted to the prudential regulators until the end of my jurisdiction on 1 December 2001 – with the coming into force of the current regulatory regime, which replaced that which existed during the period relevant to this report.

2 Given the history of events which unfold during the period covered by my report, this account is structured in three time-periods which are covered in these three separate Chapters. This is in recognition that, within the regulatory regime that was applicable at the relevant time, the way in which the prudential regulation of a life insurance company was undertaken, including the degree of intensity of the scrutiny given to such a company's affairs, would reflect the circumstances of that company as those circumstances were known to the prudential regulators and/or GAD at the time.

3 Where a life insurance company showed no signs of being in financial difficulty or where the prudential regulators and GAD considered that there were no such signs, the way in which that company's affairs would have been scrutinised followed the routine pattern of supervision, with the focus being on the regulatory returns.

4 However, where the prudential regulators and GAD had been provided with information which raised significant doubts about the financial condition of such a company or about its ability to meet its liabilities or about its compliance with the obligations imposed on the company, the supervision of such a company would have been undertaken with heightened intensity.

5 That might include more regular liaison between the prudential regulators and/or GAD and the company, as well as more detailed consideration by those regulators of the specific issues and problems which the company faced and the options open to it to resolve those problems.

6 Moreover, where such a company had been closed to new business, the issues faced both by that company and by the prudential regulators and GAD were of a different nature to those facing companies which were still writing new business. The regulatory approach accordingly changed.

7 Crisis management or the supervision of a company that is already deeply in financial trouble and where the effects of such trouble have already been triggered throws up very different questions from those which arise in a situation in which the issue has yet to develop or crystallise – and where prudential regulation might still have a role to play in preventing its occurrence or mitigating its impact.

8 As I have explained in paragraphs 85 to 88 of Chapter 5, during the period covered by this report, the prudential regulation of insurance companies such as Equitable was primarily undertaken through two mechanisms.

9 The first mechanism was the submission of regulatory returns. Each company was required each year to submit to the prudential regulators returns, containing detailed information in a prescribed format about the business and financial strength of the company. Once checked by those regulators for completeness, the returns were placed by the prudential regulators in the public domain at Companies House – and were required to be provided by the company to any policyholder on request. One purpose of the publicity given to those returns was to enable an independent assessment of the financial strength of the

company to be undertaken by policyholders, potential policyholders, or by those advising such individuals.

10 The second mechanism was the scrutiny of those returns to enable the prudential regulators to verify the financial position of the company. GAD, who assisted those regulators in the discharge of their responsibilities and who gave them advice, undertook the scrutiny of the returns. The aim of that scrutiny was to ensure that the company had complied with the statutory and other obligations imposed on it. This included taking all reasonable steps to verify the financial position of the company and to check that the company was both able to meet its liabilities and to fulfil the reasonable expectations of its policyholders and/or potential policyholders.

11 However, as I have also explained in paragraphs 89 and 90 of Chapter 5 of this report the prudential regulators and GAD obtained information about these matters other than through their scrutiny of the regulatory returns, not least through visits to, and meetings with, insurance companies – and through the information provided to them by such companies on an *ad hoc* basis. GAD also undertook industry-wide analysis, which informed their scrutiny of the returns.

12 The information which the prudential regulators and GAD possessed – whether by way of disclosure within the regulatory returns, whether arising from the scrutiny process undertaken in respect of those returns, or whether provided through other means – was the principal basis on which those regulators would undertake their statutory functions.

13 I have explained in Chapter 5 that, where the circumstances for the performance of any of the duties imposed on the prudential regulators or for the use of any of their discretionary powers may have or had arisen, those regulators were required to consider what, if any, action was necessary in respect of a particular company and to record the reasons for their considered decision.

14 This Chapter begins my account of how the prudential regulators and GAD undertook those responsibilities. That account is continued in Chapters 7 and 8 of this report. What follows in these three Chapters is by necessity only a summary of how the prudential regulation of the Society was undertaken. Part 3 of this report contains an extensive and detailed chronology of events, to which the reader is referred if they wish to obtain a more detailed knowledge of the history of the prudential regulation of the Society during the relevant period.

15 My account of the first period in the prudential regulation of the Society covered by this report is set out in this Chapter. That period covers events from the submission in late June 1989 of the regulatory returns for 1988 until late June 1998.

16 During this period, the Society was not considered by the prudential regulators or GAD to show any signs of serious problems and its supervision was thus conducted in the normal way, with the focus of such supervision being on scrutiny of the regulatory returns and on consideration of any other information which came into the possession of the prudential regulators or GAD.

17 My account of the second period is set out in Chapter 7 of this report. That period covers events from 20 June 1998 – approximately at the time of the Society's submission both of its response to an industry-wide survey about the exposure of life insurance companies to guaranteed annuity rates and of its 1997 regulatory returns – until 8 December 2000, when the Society closed to new business.

18 As information about some of the problems which were in time to engulf the Society had been provided to the prudential regulators and GAD both in that survey response and within those regulatory returns (and as further information about those problems began to emerge), during this period those regulators and GAD were closely involved in discussions with Equitable about the significant problems that it was now known that the Society faced.

19 My account of the third period is set out in Chapter 8 of this report and deals with events occurring in the period from the Society's closure to new business until the end of my jurisdiction over the relevant actions on 1 December 2001.

20 Throughout this third period, Equitable was not writing new business and the supervision of the Society reflected that fact. A large amount of supervisory activity was undertaken within this period on a wide range of matters, covering the whole spectrum of the issues facing Equitable in the context of the Society being a closed fund.

The structure of this Chapter

21 The rest of this Chapter is structured in the following way:

- in paragraphs 22 to 25, I summarise the events relevant to the scrutiny of the Society's 1988 regulatory returns;
- in paragraphs 26 to 42, I summarise the events relevant to the scrutiny of the Society's 1989 returns;
- in paragraphs 43 to 56, I summarise the events relevant to the scrutiny of the Society's 1990 returns;
- in paragraphs 57 to 82, I summarise the events relevant to the scrutiny of the Society's 1991 returns;
- in paragraphs 83 to 118, I summarise the events relevant to the scrutiny of the Society's 1992 returns;
- in paragraphs 119 to 131, I summarise the events relevant to the scrutiny of the Society's 1993 returns;
- in paragraphs 132 to 158, I summarise the events relevant to the scrutiny of the Society's 1994 returns;
- in paragraphs 159 to 170, I summarise the events relevant to the scrutiny of the Society's 1995 returns; and
- in paragraphs 171 to 212, I conclude this Chapter with a summary of the events relevant to the scrutiny of the Society's 1996 returns.

The period prior to 20 June 1998

Events relevant to the 1988 returns

22 The Society submitted its 1988 regulatory returns to the prudential regulators on 29 June 1989. A detailed description of the content of those returns is contained within the chronology entry for that date within Part 3 of this report. GAD completed the A1 initial scrutiny check on the returns on 24 July 1989 and completed the A2 initial scrutiny check on 11 September 1989. No concerns about the Society's position as disclosed in those returns were raised in either initial check and no detailed scrutiny was undertaken of those returns.

23 On 19 February 1990, the Society's Appointed Actuary and another actuary who worked for Equitable presented their paper, *With Profits Without Mystery*, to a sessional meeting of the Faculty of Actuaries. This paper set out the authors' account of the business model that Equitable operated. The discussion generated lively debate as to the appropriateness of the approach that the Society was adopting. That paper had also earlier been presented to the Institute of Actuaries, on 20 March 1989.

24 A DTI Minister attended a lunch engagement at Equitable's offices on 23 May 1990. Briefing provided for the visit by DTI officials in advance of that engagement included the statement that the *'Society appears to be sound, and has expanded steadily, with the underlying trend of expenses being satisfactory. Its strong solvency position makes it low priority in the companies supervised by Insurance Division. Consequently, contact with the Society is infrequent, and there appear to be no important issues'.*

25 There were no further events relevant to the 1988 returns.

Events relevant to the 1989 returns

26 The Society submitted its regulatory returns in respect of the 1989 year end to the prudential regulators on 29 June 1990. A detailed description of the content of those returns is contained within the chronology entry for that date within Part 3 of this report. GAD completed the A1 initial scrutiny check on the returns on 6 July 1990 and completed the A2 initial scrutiny check on 10 July 1990. No concerns about the Society's position as disclosed in those returns were raised in either initial check.

27 On 14 November 1990, DTI and GAD officials met the Appointed Actuary of the Society and another actuary employed by Equitable, as the first in a recently initiated round of such meetings with insurance companies. A detailed description of the content of the note of that meeting, prepared by GAD, is contained within the chronology entry for that date within Part 3 of this report.

28 The meeting discussed the financial position of Equitable and ways of improving their reported financial position. Equitable informed the DTI and GAD that they were considering not paying any reversionary bonus for 1990, although the Society indicated that it would pay an interim bonus in respect of policies maturing in 1991. GAD's note of the meeting records:

> *When he informed me of the current position, i.e. that free assets were £55m assuming the same valuation basis as last year,* [the Appointed Actuary] *asked me whether I had any qualms about the position of Equitable. I had to say that I did. He asked why? I replied that I had not looked at the figures in detail although I knew it was possible to weaken the valuation basis. However, the society had to comply with the valuation regulations and my main concern was whether it would be able to do this if the market fell any further (or even remained at its present level). What about next year, for example?* [The Appointed Actuary] *said he took my point and he thought that if the market fell by a further 20% they would have problems and he would have to consider what action should be taken. He implied that at such a point he would have to consider reducing the level of new business taken on.*

29 GAD's note concluded with two comments. The first was to note that the Appointed Actuary had stated that *'the Society is solvent. However, as he is considering not paying a reversionary bonus this year (while at the same time paying terminal*

bonuses) he must be feeling very uneasy about the current position of the Society'. The second was to record that GAD would be *'carrying out a detailed scrutiny of the 1989 returns in order to get a better feel for the position of the society, and in particular for what margins there are in its current valuation basis and in the alternative net premium basis'.*

30 On receipt of GAD's note of the meeting, on 22 November 1990, a DTI official commented on the note *'if the Equitable is not going to declare a bonus we need to warn the Minister before it becomes public. Will there be publicity? What about Equitable's advertising? Does it need to be changed?'*

31 GAD wrote to the Society on 4 December 1990, as part of their detailed scrutiny of the 1989 returns. The questions raised with Equitable included whether there were any surrender/transfer guarantees relating to their pension business fund contracts and *'... what investment return is required to support (i) the current reversionary bonus rates and (ii) the current reversionary and terminal bonuses'.*

32 The day after GAD had written to Equitable, GAD provided the DTI with a short note which explained that GAD had completed their detailed scrutiny of the 1989 returns. That note included the statement that *'if the property values remain depressed and the equity market does not show any bullish tendencies in the* [1990s] *and beyond, we think that the Society may have problems in maintaining the current bonus rates on its with-profit life and pensions contracts'.* GAD explained that they had written to the Society and enclosed a copy of their letter. However, GAD also informed the DTI that they considered that *'we do not anticipate that the replies will affect our view of the solvency position'.*

33 Equitable replied to GAD's letter on 17 December 1990. In response to GAD's question about the existence of surrender and transfer guarantees, the Society stated that *'our pensions contracts generally carry guarantees of the amount that will be paid in the event of actual retirement (whether on the originally stated pension date or otherwise) or death. There are, however, no guarantees on withdrawal in other circumstances, e.g. transfer to another pension provider. It is our aim to pay full value in those circumstances also but there are no guarantees in the matter'.*

34 In response to GAD's question about what investment return was required to support the current reversionary bonus rates and to support current reversionary and terminal bonus rates, the Society explained, in relation to the former, that the declared bonuses rates, announced at 31 December 1989, required annual earnings of 11¼% for pensions business and around 8% net for life business. In relation to the latter, the Society did not answer the question directly, and instead explained that, due to the way in which the Society operated their business, *'the question of what rate of growth is needed to support "current reversionary and final bonuses" is not ... meaningful in our case'.*

35 On 19 December 1990, GAD wrote to the Society to thank it for the information provided in the above letter, which they described as *'most helpful'* and to inform the Society that GAD had *'no further queries on your 1989 returns'.*

36 On the same day, GAD sent two notes to the DTI. A detailed description of the content of those notes is contained within the chronology entry for that date within Part 3 of this report. The first note began by stating that:

There is one point which we think you may need to consider following our meeting with Equitable. If, as seems possible, the society decides not to declare reversionary bonuses this year you would need to consider whether or not there is a risk that the society may be unable to fulfil the reasonable expectations of present and future policyholders.

37 After explaining their understanding of the position, GAD stated that:

> *... on balance, we do not think that the society's possible course of action, in itself, leads to a risk that the society may be unable to fulfil the reasonable expectations of such policyholders. If the society had another bad year (or this year's performance is worse than anticipated) and the company was unable to establish sufficient mathematical reserves on current guaranteed levels of benefits (including past reversionary bonuses) within the resources of the company, that would be a different matter.*

38 GAD concluded by stating that *'at present we do not have enough information about the society to be more specific and indeed, unless the society makes more signals, we do not suggest that further information should be sought. The society is our longest established life company and is well respected in the market'.*

39 The second note recorded the fact that GAD had spoken to the Society's Chief Executive on the telephone to discuss certain concerns that GAD had about the financial position of Equitable. The note explained that the background to this discussion had been, in part, related to concerns that the DTI had expressed about the Society's current advertising. It was said that:

> *This was in the context that, if the Equitable were unable to pay a reversionary bonus this year, policyholders who had taken out policies on the basis of recent advertisements (which highlighted the returns achieved by the Equitable over the past 10 years), might have justification for wondering whether their reasonable expectations would be, or were being, met. You would like the Equitable to examine their advertising to ensure no such complaint could be justified.*

40 The note continued by recording that the Society's Chief Executive had told GAD that he considered that Equitable was now *'pretty unlikely to be in a position of not being able to declare a bonus this year given the optimistic assessment of investment returns achievable by the company next year'* and that *'there was clearly a risk in this strategy, but there is a risk in all bonus declarations taken in similar circumstances'.*

41 GAD concluded their note by informing the DTI that it now seemed likely that a bonus would be declared, by agreeing that there was *'clearly some risk'* in this strategy, and by recording the view of GAD that *'if the Equitable goes ahead with a bonus distribution this year and the market subsequently falls considerably, we will need to hold some urgent talks with the company's actuary, as we would, of course, with other companies that take similar decisions and who are in a similar financial position to (or an even less strong position than) the Equitable'.*

42 On 20 December 1990, the day after the above notes were sent, Equitable applied for a section 68 Order which would permit them to include a future profits implicit item of £250 million within their 1990 returns. The DTI granted this, after taking GAD's advice, on 11 January 1991.

Events relevant to the 1990 returns

43 On 27 June 1991, the Society had submitted its regulatory returns in respect of the 1990 year end to the prudential regulators. A detailed description of the content of those returns is contained within the chronology entry for that date within Part 3 of this report. GAD completed the A1 initial scrutiny check on the returns on 24 July 1991 and completed the A2 initial scrutiny check on 29 July 1991. No concerns about the Society's position as disclosed in those returns were raised as part of the A1 initial check. As part of the A2 initial check, GAD had noted two points, being '*deteriorating cover for the* [required minimum margin]' and '*loss of working capital for future expansion*'.

44 On 11 June 1991, shortly prior to the submission of the returns, the Society's Appointed Actuary had sent certain Board papers to GAD, saying:

> *The papers are of course confidential and offered as a good will gesture to promote greater understanding and I should prefer restricted circulation in your department.*

Those Board papers are published in full in Part 4 of this report and a detailed description of the content of them is contained within the chronology entry for that date within Part 3 of this report. Amongst the other information which the papers contained, the Board papers gave a great deal of detailed information about the financial condition of Equitable, about the approach that the Appointed Actuary took to managing the reported solvency position of the Society, and the relationship between that solvency position and bonus declarations.

45 On 12 September 1991, as part of more general internal commentary concerning guarantees on with-profits bonds, GAD had commented that:

> *Generally we are aware that a number of companies are now issuing this type of contract. These include for example Equitable Life and others which apparently held reserves below the face value of the units at the end of last year. This practice can only be justified if they currently apply market value adjustments on surrenders, and can reasonably hope to earn a positive rate of return (in addition to future bonus declarations that may be "reasonably expected") over the period to death or "maturity" of the policy. Furthermore, we have to be satisfied that they can still set up adequate reserves under changing investment conditions, including a 25% fall in the value of equities and a 3% variation in yields on fixed interest securities.*

46 On 19 November 1991, GAD wrote to Equitable concerning their returns. In addition to asking for information to be supplied about various miscellaneous issues, GAD asked the Society to justify against the relevant provisions of the 1982 Act and the applicable Regulations the method by which the Appointed Actuary had completed the returns in respect of the use of sub-funds, without providing individual portions of the returns for each sub-fund. GAD also asked about the guarantees on the Society's with-profits bond.

47 GAD also asked Equitable what the cost had been of the change in the Society's main valuation basis as at the 1990 year end, when compared with the equivalent basis used at the previous valuation. GAD also noted that:

> *... you refer to the resilience test which you have carried out in connection with the valuation using the net premium method. I note your comments and that you would not need to have recourse to assets shown at line 51 of Form 14 of the Returns. There is however a substantial difference in the mathematical reserves shown at*

line 11 of Form 14, and the amount of the reserves arrived at using the net premium method of valuation. I would therefore like to know the amount of the mismatching [i.e. the resilience] *reserve which you would have needed to set up had you used the net premium method in arriving at the amount shown in line 11 of Form 14.*

48 GAD also asked Equitable to provide their estimate of the figures, including the likely amount of the available assets, which would be shown within the 1991 returns.

49 On 20 November 1991, GAD provided the DTI with a detailed scrutiny note. After noting that Equitable had experienced falls in the market values of equities and other assets, GAD noted that, as a result:

> *... the actuary has decided to weaken the valuation basis of the with-profits business. The rates of interest he has used are within the limits laid down in the regulations and could be supported by the yields shown* [in the returns] *although the margin is small. We are asking a few questions about the valuation basis and we will comment in detail after the replies from the Society.*

50 GAD also explained that:

> *The cover for the required minimum margin is reduced from 477% (1989) to 177%* [for] *this year. The main reason for this is the fall in value of the assets (referred to ... above). Part of the fall has been covered by a release of £214m from the mathematical reserves arising from the weakening in the valuation basis. Other reasons for the reduction in cover for the* [required minimum margin of solvency] *are (a) growth of new business and (b) maintenance of unchanged bonus rates on with profit policies.*

51 Equitable replied on 22 November 1991 to GAD's letter of 19 November 1991. The Society explained that, if it had shown mathematical reserves for the resilience reserve, calculated using the net premium method of valuation, the Society would have needed to set up an additional resilience reserve of £450 million.

52 Equitable also explained that, if the reserves shown in the main valuation had been calculated as at the 1990 year end, using the basis used for publication at the previous valuation, their reserves would have been £557 million higher. Equitable also explained that they would:

> *... need to publish a substantially stronger valuation at the end of 1991, either by explicit strengthening of the basis or the inclusion of an explicit* [resilience] *reserve, than at 31 December 1990 reflecting the reduction in yields during the year. My current view is that it is unlikely that the* [solvency] *position at the end of 1991 will be any stronger than at 31 December 1990, although the underlying liability valuation will, of course, be substantially stronger.*

53 On 16 December 1991, Equitable were granted a section 68 Order by the DTI for a future profits implicit item of £300 million for possible use in their 1991 returns.

54 On 31 January 1992, GAD wrote to the Society in response to its letter of 22 November 1991. GAD continued to seek further information about the with-profits bond but made no comment on either the information provided by Equitable concerning the resilience reserves, about the impact of the change in the valuation basis adopted in 1990, or the comments made by Equitable about the likely solvency position in the 1991 returns. GAD wrote to the DTI on the same day to set out what had been done as part of the detailed scrutiny.

55 Equitable replied to GAD on 13 February 1992. The Society explained that the guarantee of 'full value' payment on the with-profits bond applied only at certain specific dates set out in the policy document and that the valuation basis took account of those dates.

56 However, although Equitable's current practice was to pay out *'full value'* on early surrender, *'... we do not guarantee this. I do not see that the reserving basis for the bonds needs to take any particular account of this practice'*. The Society also stated in relation to its with-profits bonds that: *'If our surrender experience deteriorates or if financial conditions worsened significantly, we should certainly impose surrender penalties'*. GAD informed the DTI on 24 February 1992 that the detailed scrutiny was completed.

Events relevant to the 1991 returns

57 Prior to submission of their 1991 returns, Equitable wrote to GAD on 12 May 1992 and informed GAD that the solvency position at 31 December 1991 showed that the cover for the Society's required minimum margin was likely to be 1.17. This would signal a drop in solvency cover from 1.77 the previous year (and from 4.77 the year before that).

58 An internal GAD minute, dated 14 May 1992, contained analysis of Equitable's letter. A detailed description both of the content of the Society's letter and of the GAD minute is contained within the chronology entries for these dates in Part 3 of this report. GAD's analysis and notes made separately as part of an assessment of the Society's position included observations:

(i) that the margins in the valuation basis were *'very thin'* in 1990, *'with an average interest rate used of 7.12%'*;

(ii) that the strengthening of the valuation basis in 1991 had increased reserves by £150 million, whereas the weakening in 1990 had reduced reserves by £557 million;

(iii) that Equitable had over £100 million of single premium with profits bonds in force, which had been valued on an acceptable basis, *'although the reserves held were less than current surrender values (not guaranteed). This led to some release of premiums into surplus'*;

(iv) that it had been expected, with the increase in market values, that the Society's position would have seen an increase in excess assets available in 1991 but that, surprisingly, there had been instead a reduction in the value of those assets;

(v) that the Society's free asset ratio was low and that, when the 1991 returns were published, financial advisers would question the strength of Equitable;

(vi) that the Society had used up its investment reserves (i.e. its free assets) quickly in paying *'very good bonuses'*; and

(vii) that Equitable's recurrent single premium business (i.e. its principal line of business) would be *'exposed to cancellation as soon as there is adverse publicity about the strength of Equitable'*.

59 The DTI were copied into GAD's note. On their copy, the DTI official responsible for the supervision of Equitable noted that GAD *'thinks they have been paying too much in bonuses'*.

60 The DTI and GAD met Equitable on 19 May 1992, as part of a planned series of company visits. Prior to the meeting, on 14 May 1992, the DTI prepared briefing, which included the observation that there had been a:

> *... considerable reduction in excess assets between 1989 and 1991 ...* [the] *Society has experienced falls in the market value of equities and other assets, and the actuary has decided to weaken valuation basis of* [with-profits] *business. Reduction in cover for* [required minimum margin of solvency] *is due to fall in value of assets, growth in new business, and maintenance of unchanged bonus rates on* [with-profits] *policies. GAD meeting with Equitable on 14.11.90 noted that they were considering not paying any reversionary bonuses for 1990. In the event a bonus was declared for 1990 at same rate as for 1989.*

61 A detailed description of this briefing and of the note of the meeting prepared by the DTI is contained within the chronology entry for these dates within Part 3 of this report. The latter records that the Society disclosed the existence of its policies with a guaranteed investment return, that GAD had observed that the solvency position of the Society was *'arguable'*, and that GAD had noted that they *'would be concerned about Equitable's performance if there were dramatic falls in the market'*. After the meeting, Equitable provided GAD with some further information on 28 May 1992.

62 On 29 June 1992, the Society submitted its regulatory returns in respect of the 1991 year end to the prudential regulators. A detailed description of the content of those returns is contained within the chronology entry for that date within Part 3 of this report.

63 GAD completed the A1 initial scrutiny check on the returns on 3 August 1992 and completed the A2 initial scrutiny check on 10 August 1992. No concerns about the Society's position as disclosed in those returns were raised in the A1 initial check. In the A2 initial check, GAD noted that the valuation interest rate of 10% for immediate annuities was *'very high'*. GAD also identified three aspects that *'look worrying'*: a low free asset ratio, the amount of other management expenses, and *'transfer from* [investment reserve]'.

64 On 30 July 1992, GAD had described, in general internal briefing, the Society as being one of the *'companies on whom we have been keeping a close watch for a number of years'* and that Equitable remained a company *'which cause serious concern'*.

65 Other briefing, prepared by the DTI on 19 August 1992, observed that the Society's *'solvency margin, whilst well covered, has reduced in recent years mainly due to falls in the market value of equities'*. This was subsequently corrected, following GAD informing the DTI that *'since 1990 ... the solvency margin position has worsened, and is a cause for some concern ... Equitable Life will be one of the first companies we will be talking to in our imminent discussions with appointed actuaries'*.

66 At this time, GAD expressed some more general concerns in their discussions with the DTI about the then current weakness in investment and foreign exchange markets and the possible effect on the free asset ratios of life insurance companies. GAD explained that they had sought meetings with the Appointed Actuaries of a number of insurance companies to discuss their company's current and projected financial position. Prompted by concern about Equitable's worsening solvency position, GAD had included the Society in this exercise.

67 GAD and the DTI met Equitable on 15 September 1992. Before, at, and after the meeting Equitable provided additional information about their past and projected performance. This information is summarised within the entries in Part 3 of this report for 10 September 1992, 15 September 1992, and 17 September 1992.

68 The Society stated that it remained confident that it would be able to meet the regulatory solvency requirements at the end of 1992 and 1993, although Equitable at the same time cautioned that the implications for bonuses would need to be considered carefully. In their note of the meeting, Equitable recorded that, at the meeting, GAD had asked about:

> *... the extent to which the Society's minimum statutory reserving basis might be weakened by removing "unnecessary" margins.*

In response, on 17 September 1992 the Society pointed to a number of measures which it might use to protect its position, including weakening the valuation basis *'on account of zillmerisation'* and using a future profits implicit item.

69 Following the meeting and in the light of the additional information provided by Equitable, GAD observed in an internal note, copied to the DTI, that the Society had implied that too stringent liability valuation regulations were forcing it to invest in fixed interest securities rather than in equities, which the Society considered a better long term investment. GAD concluded:

> *Our view is that the society has over-distributed in the last few years, compared with the return on investments. This has eroded the level of free assets available in the society, which are needed to provide for market changes in the value of assets.*

On 29 October 1992, GAD provided the DTI with their scrutiny report on the 1991 returns. GAD explained that they had compared the average valuation rate of interest used by Equitable with the average rate of interest earned on the corresponding allocated assets (using the highest yielding assets first). GAD noted that there appeared to be little or no margin in the interest rates used and that this was an issue they were taking up with Equitable.

70 GAD highlighted the fact that Equitable's earnings on assets had fallen well short of what was required to meet bonuses paid in 1989 and 1991. As a result, Equitable had transferred funds from their investment reserves and had weakened the valuation basis. GAD also noted that the Society still had over 60% of its non-linked assets invested in equities and property.

71 GAD also attached a copy of their letter to Equitable, taking up a number of matters from the 1991 returns. In this, they asked Equitable to:

- explain how their with-profits immediate annuity contract worked;
- explain why the proportion of reserves not matched by assets in the same currency had risen from 0% to 7.7% in one year;
- clarify the paragraph in their returns which dealt with the calculation of the final bonus for a group of policies, including recurrent single premium deferred annuities, and to provide an example of how this worked in practice *'including the effect of both reversionary and final bonuses'*;

[1] A matching rectangle is a table showing the assets hypothecated, or notionally allocated, to liabilities. It thus allows the regulators to establish if the valuation rate of interest for any liability is supported by the yield on the notionally allocated assets. A specimen is annexed to Part 2 of this report.

- provide a *'matching rectangle showing what assets you would hypothecate to the net premium mathematical reserves*[1]'; and

- explain the amount of the valuation strain in respect of additional business written in 1991.

On the last point, GAD stated:

> *... we wish to know (i) the reserves set up at the end of 1991 (ii) the total cost of any bonuses allocated during 1991 and provided for in the 1991 returns (iii) the cost of any claims paid in 1991 (iv) the total premiums received in 1991 and (v) the total related expenses incurred in 1991.*

72 By way of annotations made on their copy of GAD's report and letter, the DTI's Head of Life Insurance commented:

> *This paints a worrying picture. Over-distribution by a company with a (deliberately) small coverage of its* [required minimum margin] *and a (continuing) policy of high equity exposure. I think we should ask GAD for a fuller assessment of the position and of the options available to the company in the event of a significant further downturn in the market (unless we have this already, in which case I should like to see it).*

The Head of Life Insurance also suggested that GAD should ask Equitable how long they could continue with their present bonuses in the event of a zero investment yield.

73 On 6 November 1992, in response to GAD's letter, Equitable:

- provided details of their with-profits immediate annuity contract, including an example of how annuity payments were determined by bonus rates. These showed that the annuity calculation implicitly guaranteed growth of 3.5%, which was taken into account in the calculation of the guaranteed annuity payment. Equitable also explained that, for with-profits annuity contracts, policyholders were allowed to select at the outset an assumed future reversionary bonus of up to 5.5% (in addition to the 3.5% guarantee) – the higher the level of assumed future bonuses the higher the initial annuity payment. But, if in future the actual level of bonuses fell short of the assumption, the annuity payment also would fall;

- explained that the proportion of reserves not matched by assets in the same currency had been overstated – the correct figure should have been 2.9% (or zero on a net premium basis);

- explained that each with-profits policy had a 'total claim value' based on the accumulated value of the premiums paid, increased as appropriate by annual bonus declarations – and that the amount by which the total claim value exceeded the value of the guaranteed benefits (including reversionary bonuses) determined the final bonus element;

- provided matching rectangles – but these did not show assets allocated to liabilities calculated at a particular valuation rate of interest; and

- explained that information on the valuation strain generated by business written in 1991 was not readily available and would take a great deal of time and effort to produce. Instead, Equitable provided an analysis of the financial impact of new business, which did not include 'regular' recurrent single premium renewals, in 1991. The Society stated that the new business did not produce a valuation strain. This, it was said, was *due mainly to the fact that 'the valuation bases for recurrent single premium business released monies at outset in a similar way to the release produced by a zillmer adjustment'.*

74 In reply, GAD told Equitable that their response would be considered in detail shortly. However, the Society's letter was given no further consideration at that time. It appears that this was because its receipt coincided with a change in the GAD actuary responsible for scrutinising the Society's returns.

75 On 3 March 1993, GAD advised the DTI that Equitable's replies to their questions on the 1991 returns:

> *... seem satisfactory. The operation of the bonus system (as described in the responses to Questions 1) and 3) seems complex, and even more difficult for policyholders to understand than that of most companies, but there is nothing inherently unsound about it.*

76 The DTI had passed to GAD in January 1993 the queries that they had raised. In their advice to the DTI, GAD highlighted a number of unusual features about the Society. Those features included that Equitable had a very high proportion of with-profits business and, even more unusually, that 80%-85% of their with-profits business was in the form of single or recurrent single premiums, with the annual premiums in force being very modest in relation to the size of the company. GAD stated this could be:

> *... both a strength and a weakness. A strength because it has only to secure the benefits bought by premiums already paid, and needs less by way of protection for the future premiums to be received under the contracts. A weakness because it will have less by way of "free reserves" and is therefore more vulnerable to changes in asset values.*

77 GAD also noted Equitable's use of a bonus reserve valuation in their main valuation. GAD stated that the Society's high proportion of single or recurrent single premium business made this more appropriate than the net premium approach. GAD observed that the results in the main valuation would be similar to those that would be disclosed on the appendix basis.

78 GAD noted from reports of earlier meetings that, in setting bonus rates, Equitable had considerable regard to gilt yields. GAD commented that this was not entirely consistent with the bonus system or the asset mix but that it no doubt explained what, in retrospect, had been an over-distribution by the Society in 1990. GAD added:

> *It seems possible from the* [required minimum margin] *cover ratios that the over-distribution followed a period of some <u>under</u>distribution; but without going back into previous history in detail I could not be sure.*

79 GAD noted that, in the event of a downturn in the market, the option of reducing bonuses would be less of a protection for Equitable than would be the case for other companies, as terminal bonus did not represent such a high proportion of their total payouts. GAD concluded:

> *Overall, I suspect that Equitable could survive a <u>short-term</u> fall in market levels, even a substantial one, as well as most companies. Their portfolio, however, must leave room for concern, were there to be a prolonged period of depressed share values. Their recent shift towards fixed interest securities will ease the difficulties, although they would argue at the expense of the expected ultimate benefit to policyholders.*

80 Also on 3 March 1993, GAD wrote to Equitable, in response to the Society's letter of 6 November 1992. GAD explained '[t]*here seems little point in asking further questions on the matters relating to the 1991 Returns'*. GAD asked, instead, for the Society's initial assessment as to what its position would be at the end of the year, including the position regarding the cover for the required minimum margin, the actual rate of return on the fund in 1992, and details of the 1992 bonus distribution.

81 GAD explained that, in due course, they would also be seeking details of how the Society's assets were allocated to liabilities, as well as the yield on the assets so allocated and an analysis of new business.

82 Equitable provided their initial assessment of the end of 1992 position on 9 March 1993. The Society described an improved position and, on 11 March 1993, GAD advised the DTI that they regarded the scrutiny of the 1991 returns as *'fully completed'*.

Events relevant to the 1992 returns

83 In June 1993, the Institute of Actuaries held one of its regular one-day conferences on current issues in life assurance, attended by nearly 200 actuaries. One topic for discussion was the disclosure and reporting of terminal bonus costs.

84 The conference heard that disclosure of some information would help avoid creating unreasonable policyholder expectations and would demonstrate that policyholders were being treated fairly. However, the actuarial profession's Valuation Regulations Working Party favoured private disclosure (for example through a report by the Appointed Actuary to the Board or through a new 'financial condition report'[2] to the DTI) rather than public disclosure (for example through the annual returns or a with-profits guide).

85 Contributors to the discussion also favoured private rather than public disclosure. A spokesperson for GAD:

> *... made it clear that this body would like to see some private disclosure. The Government Actuary's Department will be seeking further information on surplus distribution, given the inadequacy of the information provided in Schedule 4 of the DTI returns. It is particularly interested in marketing material and the methodology used in determining bonus distributions. The information will be collected through a survey of larger offices or by other means, such as company visits*[3].

86 On 5 July 1993, the Society's Appointed Actuary complained to the Government Actuary (following a press report that GAD were to launch an investigation into the way life companies distributed bonuses to their policyholders). He argued that Equitable had a very open bonus system and so the consequences of such a survey were likely to be to their advantage. However, he expressed concern that the intended survey was announced first in the press rather than direct to companies, that it might further weaken confidence in the industry, and that it might be a precursor of tighter regulation – for example of bonus rates.

87 On 7 July 1993, the Government Actuary replied and explained to the Appointed Actuary that the survey had been announced at the recent conference on current issues in life assurance and that there had been no intention to weaken confidence in the industry or to introduce tighter regulation. He added:

> *In one sense there is nothing new in this, since GAD and the DTI have always taken a close interest in policyholders' reasonable expectations. Indeed, this has been the central issue in many Section 49 Transfers* [i.e. transfers

[2] A report on the actions available to the company for dealing with particular circumstances, traditionally prepared by the Appointed Actuary for the Board.
[3] Quoted in the *Journal of the Institute of Actuaries,* Volume 120, pp. 481 – 482.

of the whole or part of a company's long term business], in the setting up of sub-funds, in changes to the proportion of surplus going to shareholders and in a number of other areas. We have been signalling for some time that asset share calculations would be one of the aspects on which we would seek to focus during the next round of company visits. On top of this there have been particular pressures on companies because of falling investment returns and some evidence that proprietary companies are under more than usual pressure to demonstrate value to shareholders. These and other factors pointed to the need to focus on this area and for DTI to be seen to be doing something positive to indicate that it has policyholders' reasonable expectations very much in mind.

88 On 9 July 1993, the DTI wrote to all life insurance companies in the United Kingdom writing with-profits business and explained:

The Department has an ongoing responsibility to keep itself informed of developments within the life insurance industry, and a particular responsibility to protect policyholders' reasonable expectations. In this context we wish to gain a clearer picture of current industry practice in respect of bonus methodology.

We have therefore asked the Government Actuary's Department to conduct a survey of leading UK offices which write with-profits business, in order to obtain more detailed information about companies' bonus philosophies, and the actuarial techniques used in assessing bonus payments.

89 The DTI enclosed a letter which had been sent at the same time by GAD to Appointed Actuaries, giving more detail on the background to the survey. In their letter, GAD explained that actuaries had introduced new methodologies for assessing bonuses, including the technique known as 'asset shares'.

90 However, GAD recognised that there was no clearly accepted definition of how such asset shares were calculated, nor was there information in the regulatory returns about how the appropriate rates of bonus could be assessed. The survey had been designed, GAD said, to obtain this information.

91 Attached to GAD's letter was a questionnaire, which sought detailed information in response to 11 questions. GAD explained that the survey was divided into two broad headings:

(i) the content of current marketing literature, combined with information on the principles of distribution in the constitution of the company and (ii) the company's actual methodology in respect of the determination of appropriate levels of final or terminal bonus payable on with-profit policies.

92 On 20 July 1993, Equitable wrote to GAD enclosing their completed questionnaire for the with-profits survey. The Society was the first to respond. Within the Society's responses to part (i) of GAD's survey (about marketing literature and the principles of distribution), Equitable stated that their Articles of Association gave:

... the Society's Directors absolute discretion as to bonus allocations[4]. Beyond that, there is no statement of bonus philosophy in the Society's constitution. The main statement of the Society's long-standing philosophy on bonus distribution in marketing literature is contained in ... the With Profits Guide.

[4] Article 65 of Equitable's Articles of Association stated that the amount of any bonus which may be declared or paid and the amount to which any policyholder may become entitled *'shall be matters within the absolute discretion of the Directors, whose decision thereon shall be final and conclusive'*.

Equitable further explained that their With-Profits Guides gave no specific information on the period and magnitude of smoothing or the likely frequency of changes to final bonus rates. The Society said that general comments in the Guides could be expected to lead policyholders to expect relatively infrequent changes to the latter.

93 Equitable provided the detailed information sought in part (ii) of GAD's survey (about actual methodology for determining final or terminal bonuses). The Society explained in particular:

- that, for surrenders, *'the full policy value (including final bonus) is normally adjusted to ensure that the surrender value paid does not exceed the underlying asset share. The level of adjustment required is monitored monthly'*;
- that, when determining the annual expense level attributed to with-profits contracts for recurrent single premium business, *'allowance is made for an implicit fund charge of ½% p.a. That is, the gross rate of accumulation ... is taken to be ½% p.a. higher for conventional contracts, such as endowment assurances, than for recurrent single premium contracts'*;
- that, in assessing appropriate final or terminal bonuses, the Society made no allowance for a charge for the guarantee provided in respect of benefits payable on maturity or for a contribution to an 'estate';
- that Equitable did not discriminate between different contracts in their smoothing process;
- that the smoothing of final or terminal bonuses *'is determined by the relationship between the accumulation rates determined each year and actual investment earnings. That smoothing is also reflected in the comparison of the aggregate total policy values with actual asset values. In normal circumstances the Directors look to apply a 3 to 5 year averaging cycle but expect to apply that more flexibly in more unusual circumstances'*; and
- that, when valuing their assets for the above comparison, *'allowance is made for the accumulated new business strains which will be recouped from future premium loadings'*.

94 Equitable added:

> *Part of the Society's stated philosophy is to achieve a reasonable degree of stability in proceeds with gradual, rather than sudden, changes in proceeds. The approach to smoothing needs to reflect that philosophy, particularly in volatile investment conditions.*

95 Equitable submitted their 1992 returns on 29 June 1993. GAD completed their A1 Initial Scrutiny check on 30 June 1993. GAD noted that the cover for the required minimum margin was 2.36. They identified no concerns. GAD completed their A2 Initial Scrutiny check on 5 July.

96 GAD lowered the Society's priority rating from 2 to 3 and identified the valuation basis for unit-linked business as a worrying aspect, although it was also noted that this was not a major part of the Society's business. GAD noted that the proportion of assets invested in fixed interest securities had risen from 26% to 38%. GAD identified no items to notify to the DTI, to be taken up immediately with Equitable.

97 Following receipt of the 1992 returns but prior to GAD's detailed scrutiny both GAD and the DTI considered other information about Equitable. On 30 November 1993, GAD and the DTI met Equitable to follow up the meeting in September 1992, at which they had discussed the effect of market

conditions on the Society's solvency position. Prior to the meeting, GAD had signalled that they wished to discuss Equitable's current and projected financial position, their bonus and investment policy and their resilience reserves.

98 On 25 November 1993, Equitable had provided a number of papers, including a report by Standard & Poor's giving Equitable a *'very good rating'*[5] and papers considered by the Society's Board in October and November. The entry for that date in Part 3 of this report includes a detailed description of the information that those papers contained.

99 At the meeting, Equitable indicated that they expected their position at the end of 1993 to be significantly stronger than had been the case at the end of 1992. The Society also expected to eliminate the recent excess of payouts over asset shares and that future bonuses would depend primarily on earned returns. In response, GAD noted that Equitable *'... appeared to be moving to a lower proportion of the total bonus payout being guaranteed (i.e. declared as distinct from terminal)'*[6].

100 The issue of guarantees arose at the meeting in other ways. The DTI noted that Equitable had *'no guarantees that bite'*. In the course of discussion about the resilience test, GAD noted the following comments by the Society's Appointed Actuary and Chief Executive:

> *Pensions business has a guaranteed annuity rate at about 7% but this was not as onerous as it appeared since, because "old" policies had been given the benefit of more modern features and options, it would be reasonable (in his view) for the allocation of final bonus to be conditional on the waiving of this guarantee ...*[7]

Equitable added that they were sure that allowance for the resilience reserve had been made within the appendix valuation but agreed that they would check and confirm whether this was so[8].

101 Prior to the meeting, GAD had informed Equitable that they might wish to clarify some points from Equitable's response to the bonus survey. I have seen no evidence that GAD raised any issues concerning this response at the meeting.

102 Meanwhile, in the autumn of 1993, the DTI had analysed which life insurance companies had shown a significant deterioration in their 1992 solvency cover, compared with 1991.

103 As a result of that exercise, the DTI identified sixteen companies which they *'... should be paying special attention to in the remainder of 1993 and 1994'*. Although it was said that Equitable had shown a *'marked improvement'* in terms of solvency, the Society was listed as being one of these companies[9]. The DTI also noted that Equitable had been one of 11 included in GAD's *'free asset ratio list'*, prepared on 16 August 1993, as raising concerns.

[5] Standard & Poor's are an international company providing credit ratings and other financial services. Their reports were paid for by the companies concerned.
[6] When scrutinising Equitable's 1991 returns, the GAD actuary had noted that the option of reducing bonuses was less of a protection for Equitable, as terminal bonus did not represent a high proportion of their total payouts.
[7] Shortly after the meeting, in December 1993, the Appointed Actuary presented a report to Equitable's Board, which set out amendments to Equitable's Statement of Bonuses, including the insertion of wording describing a differential terminal bonus policy for policies with guaranteed annuity rates. The amendment was agreed.
[8] Equitable did not provide any further information on this point until GAD raised the issue in March 1994.
[9] Equitable's cover had fallen from 4.77 at the end of 1989 to 1.67 at the end of 1991.

104 The DTI arranged a meeting to be held on 6 January 1994 to discuss those 16 companies. By way of a note headed *'1992 returns – "Problem Companies"'*, the DTI line supervisor with responsibility for Equitable was asked to attend. On 5 January 1994, the line supervisor explained that he could not attend. The line supervisor pointed out that GAD had held a *'mainly actuarial'* meeting with the Society, also attended by the DTI (i.e. the meeting on 30 November 1993). He continued:

> *At the time* [this] *list was drawn up, both* [Equitable and another named company for which he was responsible] *seemed rather marginal candidates for inclusion, a view confirmed by recent contacts. They are both well-managed and reasonably successful; neither appears to be anywhere near the slippery slope at present. I believe they need no special attention before submission of the 1993 returns.*

105 No-one was asked to attend in his place. I have been unable to establish what happened at the meeting.

106 On 24 March 1994, GAD considered Equitable's 1992 returns in detail and drew attention in their detailed scrutiny notes to their advice to the DTI of March 1993 and the note of the meeting on 30 November 1993, both of which GAD said *'should be noted in particular'*. GAD also explained that, according to the Society's letter of 9 March 1993, the Society had strengthened its valuation basis by about £100 million.

107 GAD stated that there was *'nothing to note'* from the Society's reply to the with-profits survey. I have seen no other evidence to suggest that the information in the bonus survey informed the scrutiny of the 1992 returns[10].

108 On 28 March 1994, GAD provided the DTI with their *'detailed'* two page scrutiny report on the returns. GAD highlighted the Society's improved cover for the required minimum margin (2.36 compared with 1.67 at the end of 1991) and noted the Society's practice of using a bonus reserve valuation in the body of its returns and publishing a net premium valuation as an appendix.

109 GAD also pointed out that, under the net premium valuation, Equitable's cover was 3.9 and referred to past concerns which GAD had had that Equitable had over-distributed. However, GAD now felt able to provide reassurance to the DTI:

> *More recently matters seem to have been brought under better control. The situation as at 31 December 1992 is more satisfactory than the previous year, and as you will know from recent reports (eg the notes of the meeting held on 30 November last) we expect the position as at the end of 1993 to have*

[10]In December 1993, GAD produced a question by question summary of the responses to the survey. This was largely factual and did not refer to companies by name. GAD did not include any further analysis of the responses or seek to draw any general conclusions. I have seen no other evidence regarding whether and, if so, how Equitable's response to the bonus survey, or the responses from other companies, were assessed with regard to policyholders' reasonable expectations or any other considerations, at that time or subsequently. In March 1995, Equitable wrote to GAD to state that they had seen a press report from which it appeared that GAD had decided to take no action as a result of the survey. Equitable complained that it had been discourteous of GAD to disseminate the results of the survey in such a way. In April 1995, GAD replied. GAD stated that they had explained to the journalist in question that *'... the grounds for intervention available to the Secretary of State are prescribed in the* [Insurance Companies Act] *1982, as amended, and if higher bonuses are awarded than have been earned, this is principally a matter of commercial judgement provided the reasonable expectations of the other policyholders are not affected.'* GAD denied that they were disseminating the results of the survey through the press and added: *'In fact, during the conversation I told* [the journalist] *that it was decided not to publish the results of the survey due to the difficulty of not laying ourselves open to the charge that one could identify particular companies' practices.'*

improved still further. Reversionary and terminal bonus rates were reduced at the end of 1992 and it has just been confirmed that reversionary bonuses have been reduced again from the end of 1993.

110 Also on 28 March 1994, GAD wrote to Equitable to ask them to provide copies of their recent bonus announcement and of their most recent With-Profits Guide. GAD requested that these documents should be supplied routinely in the future. GAD also asked Equitable:

- *In the Appendix (where the net premium results are set out) you mention in para. 5(a) on page 98 that resilience reserves could be set up without recourse to the Form 14 line 51 assets. However you do not give an indication of the amount of any resilience reserve which would be required on the* <u>*net premium*</u> *basis and which is not covered by the net premium liabilities. Could you please advise this amount as at 31 December 1992, and ensure that the corresponding figure is disclosed in future returns;*
- to provide the figure for the growth rate of non-unit reserves, if a rate of return of 2% rather than 3% were used;
- to explain why, for certain linked business, Equitable had reduced their reserves in respect of tax on unrealised capital gains;
- *... the rate of 9% used to value the non-profit immediate annuities seems on the high side. Could you please supply more details of the assets that are deemed to be backing these liabilities, and their yields, having regard to Regulation 59(2) and (6)(a);* and
- to provide a preliminary estimate of the Society's position at the end of 1993, including an indication of the extent to which the valuation basis had been strengthened.

111 In response, on 7 April 1994 Equitable sent to GAD a copy of their 'Bonuses' booklet, which set out their most recent bonus rates. The Society undertook to supply its With-Profits Guide when that had been updated and to add GAD's details to the Society's press release distribution list. In addition, the Society's Appointed Actuary, in response to the specific issues that GAD had raised on 28 March 1994:

- informed GAD that the figure for the resilience reserves required in the statutory minimum valuation was £462 million. The Appointed Actuary said that he was not prepared to publish the figure in future returns as he considered it to be confidential. The Appointed Actuary added:

  > *GAD have previously indicated that they feel the Society provides much fuller information than the norm in this area*[11]*. To require even more from us seems unreasonable;*

- explained that there would be no increase in the non-unit reserves, if a return of 2% rather than 3% had been used;
- explained that Equitable had net unrealised losses in their linked funds and accordingly the capital gains tax reserve was negative;

[11] I have seen no evidence to support that statement. I have been told by the Society's former Appointed Actuaries that it is their recollection that: *'it was GAD's consistent view that, by publishing an appendix valuation which was intended to be close to the statutory minimum, ELAS revealed much more about the strength of its main valuation than was the norm whereby offices just published one net premium valuation on a basis stronger than the statutory minimum'.* Those former Appointed Actuaries also pointed out to me that GAD had not challenged the comment at the time.

- explained that, in the Appointed Actuary's view, the valuation of the assets backing the non-profit liabilities in the Society's gross premium valuation was a matter for his professional judgement. He further explained that, within this group, there were different categories of annuities and that Equitable considered that the valuation rate used was suitable, as some assets actually yielded a higher rate; and

- provided an estimate of the position at the end of 1993, showing a strengthening in reserves of £1,076 million and cover for the required minimum margin of 3.75.

112 Handwritten comments on this letter show that, after some discussion, GAD were satisfied that, with the addition of the resilience reserves, the Society's published valuation was *'(just) OK'*[12]. GAD expressed surprise that non-unit reserves would not increase if a return of 2% rather than 3% had been used, but suggested that GAD should *'let this pass'*.

113 On 19 April 1994, GAD sent the DTI copies of their correspondence with Equitable. GAD explained that they were generally satisfied with the Society's responses and noted that, once the resilience reserves were taken into account, there was little difference between the Society's main and appendix valuations, although the latter valuation was weaker than that used by most with-profits offices.

114 GAD noted that the Board papers that had been supplied showed that the Society's bonus rates had been reduced by less than was justified by their usual approach of relating declared rates to prevailing interest rate levels, primarily on account of the good performance of assets during 1993. GAD also explained that they were asking Equitable some additional questions.

115 GAD also enclosed a copy of their letter to Equitable, in which they had pursued two points. The first point was whether the Society's approach to unrealised tax losses was prudent. The second point was whether the valuation interest rate used for non-profit immediate annuities could be supported by the assets deemed to have been backing those liabilities. GAD explained:

> *You will appreciate, I am sure, that our primary concern is with the net premium valuation published in the Appendix to Schedule 4, rather than with the office basis. This question was posed in the context of the net premium assumption (where 9% was also used), and I am sorry if that was not clear. Could you please now provide the information that we are seeking; the yields shown in Forms 45 and 46 do not, after allowing for the 7½% margin, seem to support the 9% assumption.*

116 In response, on 25 April 1994 Equitable provided a justification of their approach to the treatment of unrealised capital losses. The Society also explained that the *average* valuation rate of interest used had been 6.5%, which was less than the *average* yield of 7.0%.

117 Equitable explained that it was their view that, while the applicable Regulations permitted the allocation of assets to specific liabilities, those Regulations did not require this. Equitable reiterated that the valuation of the assets was a matter for the professional judgement of the Appointed Actuary. GAD decided not to pursue either point further.

118 On 7 June 1994, GAD copied this correspondence to the DTI and explained that GAD had *'no further questions for the actuary, and this scrutiny* [of the 1992 returns] *is regarded as complete'*.

[12] The apparent margin of £476 million, between Equitable's published valuation (£8,557 million) and their statutory minimum valuation (£8,081 million), fell to just £14 million when the resilience reserve of £462 million was added.

Events relevant to the 1993 returns

119 Equitable submitted their returns for 1993 on 27 June 1994. GAD completed their initial scrutiny in a different order than had been the case for earlier years, completing the A2 Initial Scrutiny check first on 7 July 1994. GAD gave Equitable a priority rating of 3 (unchanged from the previous year). GAD again identified the valuation basis for unit-linked business as a matter of (small) concern.

120 GAD noted that the Society had not set up any provision to meet potential exposure for pension mis-selling but commented that such a problem was unlikely to be significant. GAD identified no items to notify to the DTI, to be taken up immediately with Equitable. GAD completed their A1 Initial Scrutiny check on 15 July 1994. GAD noted that the cover for the required minimum margin was 3.75.

121 On 24 October 1994, GAD prepared three pages of *'detailed scrutiny notes'* on the 1993 returns. As part of these, GAD noted *'New rules reducing final bonuses'*, citing the page in the returns which set out the Society's differential terminal bonus policy. GAD commented that the valuation rates of interest looked too high and needed to be justified by a matching rectangle.

GAD also queried Equitable's mortality assumptions for annuities.

122 On 15 November 1994, GAD provided the DTI with a 14 page scrutiny report on the 1993 returns. The report followed a new standardised format adopted by GAD, comprising thirteen specific sections[13]. In their report, GAD drew attention to a number of matters. In particular:

- GAD noted that particular care was needed when reviewing the appendix (net premium) valuation, as the figure for the resilience reserves necessary under that valuation had been omitted from the returns;

- GAD explained that the valuation bases used for Equitable's main (gross premium) valuation were primarily a tool to support the method of determining bonus distributions and commented that they were not particularly relevant to the prudential supervision of the Society. GAD observed that the adequacy of the Society's valuation *'is demonstrated by publishing a net premium valuation on the minimum basis necessary to meet the regulations'*. GAD noted that this appendix valuation had a number of apparent weaknesses, including that the valuation rates of interest appeared somewhat high. GAD explained that they had little concern about the Society's solvency, given its cover for the required minimum margin. However, GAD said that, if Equitable's reserves were too thin as a result (that is, if the Society were using valuation rates of interest that were too high):

  > *... it may lead to inappropriate conclusions being drawn by policyholders and prospective policyholders as to the financial strength of the Society*[14]. We are therefore seeking confirmation of the prudence of certain of the assumptions; and

- GAD noted that some mortality tables appeared on the optimistic side and further information as to their justification was required.

[13] GAD had established a Scrutiny Strategy Working Party in 1994, and it appears that it was as a result of this that the Service Level Agreement (SLA) between the DTI and GAD came to be revised in 1995. The revised SLA included a new detailed format for scrutiny reports and it appears that GAD's report on the 1993 returns anticipated its adoption.

[14] By this, GAD meant that policyholders could conclude that Equitable's position was *stronger* than was in fact the case.

123 GAD explained that they would seek further information from the Society on each of the above points. GAD also observed that Equitable carried no reserves for pension mis-selling, due to the Society's selling methods *'which are based upon largely approaches from prospective policyholders'*, but that it remained to be seen if this was correct.

124 Also on 15 November 1994, GAD wrote to Equitable. GAD asked the Society to disclose the amount of the resilience reserve required in the appendix valuation, to provide a matching rectangle, to demonstrate the notional allocation of assets to liabilities, and to explain why Equitable had chosen the particular mortality tables they had used.

125 In response, on 22 November 1994 Equitable:

- explained that the figure for the resilience reserves required in the appendix valuation was £236 million[15];

- provided a rudimentary matching rectangle which did not allocate assets to specific liabilities. Equitable stated that the average yield of the assets was 5.32% and that, after the required reduction of 7.5%, those assets supported the average valuation rate of interest of 4.78%.

  Against this, GAD noted *'Seems OK, but the averaging should only be assets'*; and

- provided details of the mortality experience Equitable were using for annuity contracts and acknowledged that some slight strengthening might be appropriate for the valuation at 31 December 1994.

126 On 23 November 1994, GAD copied the Society's reply to the DTI and commented:

> *In view of the nature of the net premium valuation for this company, which is published to demonstrate the adequacy of the published main bonus reserve valuation, and the undoubted adequacy of the reserves in aggregate, we are satisfied with the reply received.*

GAD concluded:

> *We regard this scrutiny as complete.*

127 Nevertheless, on the same day GAD pursued with Equitable their treatment of valuation rates of interest. GAD explained that the applicable Regulations did not permit the averaging of valuation interest rates, and that each interest rate used had to be supported by the yield on the assets matching the corresponding reserve. GAD also suggested to the Society that, for the 1994 valuation, its assets should be allocated to each category of contracts for which a different interest rate was used.

128 On 30 November 1994, Equitable replied and disputed GAD's interpretation of the relevant Regulations. Following another exchange of correspondence, on 7 December 1994 Equitable undertook to give the matter further consideration in relation to the 1994 returns. The Society explained that it did not wish to prolong the correspondence unduly as *'it relates only to our "appendix" demonstrations of compliance with the regulations'*. The Appointed Actuary also stated that he had provided a similar presentation on a number of occasions in the past without being questioned. GAD did not pursue the point further.

129 On 9 December 1994, shortly after the conclusion of the scrutiny of the 1993 returns, GAD and the DTI

[15] The apparent margin of £323 million, between Equitable's published valuation (£11,450 million) and their statutory minimum valuation (£11,130 million), fell to just £81 million when the resilience reserve of £236 million was added.

met Equitable. The meeting was the second with Equitable arranged as part of GAD's rolling programme of visits to life companies[16].

130 In preparing for the meeting, the DTI had noted GAD's comments, contained within their scrutiny report on the 1993 returns, about the prudence of the Society's assumptions in its valuation. The DTI also queried whether GAD had pursued these matters following the scrutiny but also commented:

> *The point which concerns me ... a little is that, as from the 1994 returns, it is not sufficient for the actuarial liabilities to be estimated prudently. Each of the assumptions which goes into the actuarial calculation has itself to be prudent. Equitable need to be alive to this.*

131 At the meeting on 9 December 1994, Equitable provided a number of reports and papers including details of their recent rating from Standard & Poor's of 'AA'[17]. The entry for that date within Part 3 of this report contains a fuller description of the information provided by the Society. In discussion on their bonus philosophy, Equitable commented:

> *... it was expected they would "overshoot" in 94 – they were not worried – but DTI may be!*

In response, GAD commented:

> *... that it looked like over-distribution, compared with market values.*

Equitable also commented that they were not concerned at how small their free assets got. The Society had, so far, chosen not to show an implicit item in its regulatory returns, as to do so *'would make them look weak'* – but, if the free asset ratio became negative, Equitable said that they would use a future profits implicit item and would not declare a bonus if they were unable to do so.

The Appointed Actuary asserted that a well managed office would not become insolvent in such circumstances and that a vigorous expanding office might have a low free asset ratio. It does not appear from the DTI's note of the meeting that this statement was challenged. There is nothing in the note of the meeting to suggest that there was any discussion of the DTI's concerns, which they had expressed prior to the meeting, about the need to ensure the prudence of each of the assumptions within the Society's valuation.

Events relevant to the 1994 returns

132 Following the meeting with Equitable in December 1994, the DTI reminded them that the Society had not yet submitted an application for a future profits implicit item for use in its 1994 returns. On 15 December 1994, Equitable sought a section 68 Order for an implicit item of £500 million. The calculations submitted in support of this application suggested that Equitable were entitled to seek an Order up to the value of £2,140 million.

133 In their review of the application in order to advise the DTI as to whether to grant the Order, GAD expressed concern at the way that Equitable had omitted from the calculations some exceptional losses even though they were not matched by exceptional profits. However, having reworked the calculations to eliminate the exceptional items, GAD concluded that a maximum implicit item of £1,590 million was still justified.

134 On GAD's recommendation, the DTI granted the Order, for possible use in Equitable's 1994 returns. When doing so, the DTI reminded Equitable that

[16] The first such meeting had been held in May 1992.
[17] See footnote 5, earlier in this Chapter.

exceptional losses should only be omitted if they were matched by exceptional profits.

135 On 4 January 1995, in response, Equitable stated that they *had* excluded exceptional losses only to the extent that they were matched by exceptional profits. The Society sought some more general advice from the DTI about how to treat profits and losses arising from changes in the valuation basis. This advice was not provided at that time.

136 On 23 March 1995, Equitable pressed the DTI for a response, explaining that they were now thinking of using the implicit item in their 1994 returns. The DTI sought advice from GAD and passed this on to Equitable.

137 On 27 March 1995, Equitable replied and acknowledged that they had not carried out past calculations in accordance with this advice, but stated that this had had *'... no material effect on the applications for a future profits implicit item submitted by the Society in previous years'*.

138 When considering this matter, the DTI noted that one GAD actuary took the view that *'the calculation of the implicit item was essentially flawed, and he didn't fuss too much about* [very] *technical details'*.

139 Meanwhile, Equitable raised a second query about the use of implicit items, pointing out that, in the Society's 1993 returns, the required resilience reserves were considerably below the available future profits implicit item. Equitable asked if, on this basis, it would be acceptable for the Appointed Actuary to conclude that no explicit reserve was required. GAD advised that this approach was not acceptable.

140 On 23 March 1995, Equitable told the DTI that their excess over the required minimum margin as at 31 December 1994 would be about £400 million, which would *'present a marginally stronger position than at the end of 1991'*. Equitable did not say what this figure represented in terms of cover for the required minimum margin.

141 On 13 April 1995, the DTI asked the Society again for an update on its liability for compensation payments for pensions mis-selling, which had first been requested in October 1994 but to which request the Society had not replied. Following this reminder, Equitable stated that it was not possible to quantify their liability, even crudely, but that the Appointed Actuary still believed that the Society's exposure was relatively small, adding:

> *We are therefore making no explicit provision against this contingency in the accounts although I have "over estimated" the technical liabilities by £50m as a very full implicit provision. Our auditors have given a "true and fair" certificate on our accounts in the new Insurance Accounts Directive in the full knowledge of our approach.*

142 I have seen that, at this time, the conduct of business regulators were still in correspondence with Equitable about their sales of pension policies. I have seen no evidence that the DTI checked the position with those regulators. During April 1995, discussions were also taking place within the DTI about the possible nomination of the Society's Chief Executive and Appointed Actuary for recognition in the New Year honours list for 1996. The factors cited in support of a nomination included that Equitable had no known pensions sales malpractice and had avoided the bad image afflicting the industry generally as a result of poor selling methods.

143 Equitable submitted their returns for 1994 on 30 June 1995. GAD completed their A1 Initial Scrutiny check on 24 July 1995. The design of the check form had changed and there was no longer an entry showing the cover for the required minimum margin. GAD identified no concerns.

144 GAD completed their A2 Initial Scrutiny check on 25 July 1995. GAD gave Equitable a priority rating of 3 (unchanged from the previous two years). GAD noted, again, that Equitable had not set up any reserves to meet their potential exposure for pension mis-selling and that there should be a *'check into mis-selling'*. GAD also noted that Equitable's mortality rates were reasonable *'but thin'*.

145 GAD identified mismatching as a worrying aspect and highlighted as other issues derivatives, ethical fund general investments, and reserves for contingent liabilities to tax on unrealised capital gains. GAD identified no items to notify to the DTI, to be taken up immediately with Equitable.

146 GAD took no further action on the 1994 returns until 8 December 1995, when GAD asked Equitable about their *'significant'* use of derivatives. In his reply of 14 December 1995, the Appointed Actuary pointed out that such derivatives accounted for only 0.1% of the Society's assets and denied that this was significant.

147 On 23 January 1996, GAD provided the DTI with a 20 page scrutiny report on the 1994 returns. The report followed the format used for the 1993 returns. In their report, GAD drew attention to a number of matters. GAD noted, *inter alia*:

- that GAD had derived much useful information from Equitable's With-Profits Guide of May 1994 and that they were requesting a later edition. (GAD had previously asked Equitable to send such documents routinely and Equitable had agreed.)

- that Equitable took advantage of their main valuation to *'hide'* their resilience reserve. GAD explained that at least a substantial part of the difference between the main and the appendix valuation was accounted for by the resilience reserve which was not disclosed. GAD said they would ask for this *'yet again'*.

- that, following the visit to Equitable in December 1994, it was known that the Society's Appointed Actuary had decided that its interests were best served by using a weak valuation basis, in order to show as strong a free asset position as possible (albeit that this had fallen in 1994). GAD stated:

> *This means that the valuation basis is selected at the limits of the regulations. This requires us to exercise particular vigilance in ensuring that users of the returns are not misled.*

GAD set out in tabular form the valuation rates of interest used by Equitable and compared these with the asset yields (although Equitable did not allocate specific yields to specific liabilities). GAD concluded that this gave rise to some doubt as to the sufficiency of the higher yielding assets and noted that, in the main valuation, cover for the required minimum margin was 2.36.

- that, for general annuities, Equitable used a mortality table showing death rates well in excess of recent industry experience.

- that one of the strengths in the Society's valuation was its assumption that recurrent single premium business would pay no more premiums, although this was *'arguably only in line with the best practice'*. GAD pointed out that, if the business were treated as regular premium business, the margins in future premiums might allow lower reserves and that it was likely *'that some credit is being taken implicitly for this in the expense reserves'*.

- that Equitable had had a few *'PIA and compliance problems'* but that GAD understood that these were not significant. GAD stated:

> *Although the Equitable take a highly esoteric line on a number of issues, and are inclined to argue their case rather longer than most, they have a culture which would not permit the continuation of a compliance breach.*

GAD explained that they were raising with Equitable areas of concern, the most pre-eminent of which were the Society's valuation rates of interest and mortality bases. GAD said that they were pressing Equitable on the latter point *'quite vigorously'*.

148 Also on 23 January 1996, GAD wrote to Equitable. GAD sought the latest version of Equitable's With-Profits Guide, asked that the amount of the resilience reserve required in the main valuation and a matching rectangle were both provided, the latter in order to demonstrate the notional allocation of assets to liabilities.

149 GAD asked the Society to provide this information in the new format that would be required for the 1996 returns. In addition, GAD asked Equitable to justify their mortality assumptions for annuitants and to explain how allowances had been made for future improvements in mortality rates, as well as for adverse deviations.

150 In response, on 21 February 1996 Equitable supplied their latest With-Profits Guide. The Appointed Actuary explained that the figure for the resilience reserves required in the main valuation was £171 million[18]. He provided matching rectangles. Because Equitable amalgamated liabilities, the Appointed Actuary explained that this information had been provided only *'approximately'* in the requested format.

151 The figures, as presented by Equitable, showed that the valuation rates of interest used were supported by the allocated assets. However, the notional matching was to reserves which excluded any resilience reserves. Equitable explained that their mortality experience was some 106% of the a(90) table, rated down one year.

152 The Appointed Actuary said that he felt that using this table was appropriate. However, as Equitable had experienced a modest improvement in mortality and that their 1994 experience was close to 100% of a(90)-1 year[19], the Appointed Actuary said that he would deduct a further year in future returns.

153 On receipt, GAD considered the information that Equitable had provided and noted that the figure for the resilience reserve was *'OK'*. GAD accepted the Appointed Actuary's wish not to publish the figure and simply asked him again to supply this information at the same time that future returns were submitted.

154 GAD also noted that the information provided by the Society as to the hypothecation of assets to liabilities was:

> *Supplied approximately in the requested format except that, surprise surprise, the resilience reserve is omitted. OK apart from the missing resilience line. It is probably pushing it a bit to complain and I intend to turn a blind eye.*

[18] The apparent margin of £301 million, between Equitable's published valuation (£12,380 million) and their statutory minimum valuation (£12,080 million), fell to £130 million when the resilience reserve of £171 million was added.
[19] See the glossary of terms for an explanation of this term.

GAD raised no objection to the Society's amalgamation of its liabilities, with the proviso that the valuation rate of interest used had to be the highest for the group. GAD concluded that Equitable's explanation of their mortality tables was 'OK for now'.

155 GAD wrote to the Society on 5 March 1996 and offered some advice to Equitable on the mortality tables that might be appropriate. Equitable replied on 3 April 1996, objecting to what they saw as GAD's intrusion into matters which the Society saw as being the preserve of its Appointed Actuary.

156 Following clarification by GAD of their remarks in a further letter, on 15 April 1996 Equitable stated that they shared GAD's concerns about the need to manage the risk of future improvements in mortality on an annuity portfolio. The Appointed Actuary added:

> *That was one of the reasons why we introduced our with profits annuity some years ago. Any unexpected improvement for that class could, of course be reflected in the bonus rate granted. You may be interested to know that around two thirds of our current immediate annuity new business is with profits.*

157 Meanwhile, on 5 March 1996 GAD sent the DTI an update on their scrutiny report. Taking account of the figure for the resilience reserves that had been provided by the Society, GAD assessed that, in the appendix valuation, the Society's cover for the required minimum margin was 2.65 and its free asset ratio was 4.1% (compared with 2.36 and 3.1%, respectively, in the main valuation).

158 GAD concluded:

> *We are now satisfied with the valuation basis. The net premium cover for the required minimum margin is greater than that for the published basis, and a priority of 4 could have been justified[20]. The scrutiny is now complete.*

Events relevant to the 1995 returns

159 Equitable submitted their returns for 1995 on 28 June 1996. GAD completed their A1 Initial Scrutiny check on 8 July 1996. GAD identified no concerns. GAD completed their A2 Initial Scrutiny check on 18 July 1996 and lowered Equitable's priority rating from 3 to 4.

160 GAD noted, among other things, that the reserve held by the Society for additional liabilities arising due to mortality strains caused by AIDS was contained within the reserve for future bonus in the main valuation, that unit costs had not been updated, that Equitable had used a future profits implicit item of £264 million, and that the Society's cover for the required minimum margin was 2.89.

161 GAD noted, again, that Equitable had not set up any provision to meet potential exposure for pension mis-selling but that the Society had indicated in April 1995 that technical liabilities had been *'overstated'* by £50 million. GAD identified no worrying aspects and no items to notify to the DTI, to be taken up immediately with Equitable. At the end of July 1996, Equitable sent GAD a copy of their latest With-Profits Guide.

162 GAD's initial target date for completing the detailed scrutiny of the Society's returns had been December 1996. However, this was brought forward to October 1996, apparently because of an impending visit to Equitable.

[20] That is, a lower priority.

163 On 1 November 1996, GAD provided the DTI with their 16 page scrutiny report on the 1995 returns. The report followed the format used since the 1993 returns. In their report, GAD drew attention to a number of matters. GAD noted, *inter alia*:

- that the Appointed Actuary:

> *... indicates that the resilience reserve required in relation to his net premium valuation would be covered by the difference between the bonus reserve gross premium valuation liability and the net premium valuation liability.*
>
> *This difference is revealed as £436m, and we have no reason to doubt its adequacy – although managing the distribution and consequent growth in guaranteed liabilities in respect of the very substantial (over £8.6bn) portfolio of unitised with profit type business is a potential problem to be monitored.*

GAD also observed that they were unconvinced of the value of Equitable's main valuation and would be happier to see a *'clearer exposition'* of Equitable's ability to react to possible falls in the value of their assets, particularly given their *'exceptionally large exposure to unitised with profit type liabilities'*. However, GAD did not indicate that they would seek an actual figure for the resilience reserve from Equitable.

- GAD noted that Equitable's main valuation:

> *... includes only an allowance for modest levels of future bonuses, with the result that the disclosed liability is actually very similar to that that would be derived from an acceptable net premium valuation with due allowance for resilience reserves. Thus, the picture shown above may reasonably be compared directly with other offices who prepare Returns on standard net premium valuation bases. Without the implicit future profits item, cover for the* [required minimum margin] *would be by a factor of 2.44. This is satisfactory.*

- that Equitable had revised their valuation rates of interests to reflect falling interest rates and rising asset values. GAD set out in tabular form the valuation rates of interest used by Equitable and compared these with the asset yields (although they did not allocate specific yields to specific liabilities). GAD concluded that the assumptions made by the Society were acceptable.

- that Equitable had revised their mortality assumptions for general annuities, following the discussion of their 1994 returns. GAD considered it desirable to keep pressing Equitable *'quite vigorously'* on this point as longevity improved.

- that, again, one of the strengths in the Society's valuation was the assumption that its recurrent single premium business would pay no more premiums, although this was *'arguably only in line with the best practice'*. GAD pointed out that, if the business were treated as regular premium business, the margins in future premiums might allow lower reserves and that it was likely *'that some credit is being taken implicitly for this in the expense reserves'*.

- that the Society's failure to set up a specific reserve for tax on capital gains of £37.4 million was *'dubious – relying on other margins in the valuation basis'*.

- that, although Equitable:

  ... might be expected to be beyond reproach, we understand that an over-estimation of pension liabilities of £50m has been incorporated into its reserves as a provision against possible costs arising from pensions mis-selling. No other [compliance] *problems are known.*

- that it would be helpful to learn what scenario-testing Equitable undertook.

164 GAD stated that they had not raised any points directly with Equitable. However, it was noted that GAD, with the DTI, were due to meet Equitable at the third of GAD's rolling programme of visits to life companies[21].

165 In their 1 November 1996 scrutiny report, GAD also suggested that, at the meeting, it would be *'interesting'* to discuss Equitable's continued fall in expenses, the reasons for their increased investment in non-insurance companies[22] and the sustainability of their present contract structures, the scenario tests they performed in relation to falls in assets values, and how they would react to *'sustained unfavourable market movements'*. On 5 November 1996, the DTI wrote to the Society to put these matters on the agenda.

166 The meeting took place on 8 November 1996. At the meeting, Equitable explained that their expenses had fallen partly in relative terms as a consequence of the high expenses which had been incurred in previous years because of their investment in information technology software. The Society offered some reassurance about its investment in non-insurance companies, explaining that it had majority holdings in some companies for investment purposes.

167 Equitable confirmed that they did not reserve for terminal bonuses, as these were whatever was left after the declared reversionary bonuses and thus *'instantaneous'*. Equitable acknowledged that their main valuation was not really any stronger than the appendix valuation. GAD expressed concern about the Society's bonus statements and warned that Equitable needed to ensure that customers were not misled.

168 Equitable, looking ahead, indicated that they might apply for a section 68 Order for a subordinated loan. The DTI had also signalled a wish to discuss the Society's liability for pensions mis-selling. The Appointed Actuary explained that, although £50 million had been included in the Society's technical reserves, it was his view that only £10 to £15 million would be needed.

169 Equitable also reported that a conduct of business team had visited them for a week earlier in the year. The Appointed Actuary told the meeting that he:

> *... thought* [the conduct of business regulators] *had misunderstood the issues, and* [he] *had sent them away! It was hoped that all cases would be settled by Autumn* [1997].

170 I have seen no evidence that the DTI checked the position after the meeting with the conduct of business regulators. Nor have I seen any other correspondence between the prudential regulators and Equitable about the 1995 returns or about any of the issues which had been discussed at the meeting on 8 November 1996. I have also seen no note from GAD to the DTI or to Equitable formally concluding their scrutiny of the 1995 returns.

---

[21] The previous two meetings had been held in May 1992 and December 1994.

[22] GAD noted that the level of investment had increased from £52 million to £94 million. The latter figure represented 0.62% of Equitable's non-linked assets.

Events relevant to the 1996 returns

171 Equitable submitted their returns for 1996 on 30 June 1997. GAD completed their A1 Initial Scrutiny check on 18 July 1997. GAD identified no concerns. GAD completed their A2 Initial Scrutiny check on 7 August 1997. The check was more detailed than in the past. GAD raised Equitable's priority rating from 4 to 3. GAD highlighted a number of matters, including:

- that Equitable, as a major with-profits office, *'was unlikely to be insolvent but it may be building higher expectations than could be met'*;
- that the valuation basis appeared weak and that the valuation rates of interest used for certain with-profits business did not appear to make proper provision for policyholders' reasonable expectations;
- that the Society's matching rectangle might need review;
- that Equitable's description of discretionary adjustments relating to surrender values made during the reporting period was not satisfactory; and
- that it was not clear if Equitable had set up any identifiable pensions mis-selling reserves.

172 Under *'Aspects that look worrying'*, GAD noted that the Society had declared high reversionary bonuses for its substantial unitised with-profits business. Moreover, it was noted that Equitable held reduced reserves and could be relying too much on the potential application of market value adjusters.

173 Under *'Other Notes'*, GAD stated that reviews were required of the Society's mortality assumptions for their pensions and annuity business, their assumptions for unit growth rates for their unit-linked business, and their unitised with-profits reserves in the resilience scenario. GAD identified no items to notify to the DTI, to be taken up immediately with Equitable.

174 On 1 August 1997, the position whereby one person had held both the posts of Appointed Actuary and Chief Executive came to an end. On 8 August 1997, prompted by this change, GAD provided briefing about Equitable to the Government Actuary.

175 That briefing stated that, as a mutual, the Society made a *'strong play'* of not building an excessive estate which led to it declaring high non-guaranteed terminal bonuses on its substantial accumulating with-profits contracts. The briefing expressed doubts about the ability of Equitable to apply a market value adjustment in all the circumstances covered by the resilience test (which was what their valuation assumed). The briefing noted that Equitable had insisted that their bonus system gave them the necessary flexibility.

176 Before the 1996 returns were submitted, another issue – namely whether the Society should be permitted, as a mutual, to issue subordinated loan capital with the consent of the prudential regulators but not to recognise such capital as a liability – arose for consideration.

177 At the meeting with GAD and the DTI on 8 November 1996, Equitable had advised the DTI and GAD that they might apply for a section 68 Order for a subordinated loan. This matter had first been raised in 1993. At that time, GAD had made a number of observations, including the importance of subordinating the rights of depositors to those of policyholders. GAD had then commented:

> *As the rate of interest would presumably need to be fairly high, perhaps above the market*

rate, how would the issue of such deposits benefit the security and, more importantly, the reasonable expectations of members generally?

On GAD's advice, the DTI had put this query to the Society and had sought other information about this proposal. There is no record of a reply from Equitable to this query.

178 Following the meeting in November 1996, Equitable noted, internally, that the DTI appeared to be *'relaxed'* about the issue of the subordinated loan.

179 On 27 November 1996, the Society asked the DTI to indicate in principle if they would agree to the necessary application for a section 68 Order, in order to allow the Society to count the loan towards their required solvency margin. Equitable presented the proposal as a means of raising finance and providing benefits to policyholders.[23]

180 The DTI sought GAD's views. As in 1993, GAD was cautious about this proposal. In their reply to the DTI on 14 February 1997, GAD said that they were *'uncomfortable'* with the idea that Equitable could market the subordinated loan products, treat the proceeds as free capital, and not hold reserves to cover the repayment liability.

181 GAD also pointed out that the loan could only count for up to 25% of Equitable's required minimum margin and warned the DTI that they would need to be satisfied that early redemptions could not suddenly threaten cover for the required minimum margin of solvency.

182 On 14 March 1997, Equitable signalled their hope that it would not be necessary to set up a subsidiary company and also their wish to pursue the proposal swiftly. On 24 March 1997, GAD told the DTI that they understood it to be that department's view that it would not be possible to satisfactorily issue subordinated debt from within a company's long term fund.

183 GAD also said that a proper degree of subordination could best be achieved if the debt were issued through a subsidiary company. There followed further exchanges between the DTI, GAD and Equitable.

184 GAD remained unconvinced about the proposal. In further advice to the DTI, given on 29 April 1997, GAD questioned in what way it would be possible for the loan to be treated as not being a liability on the long term fund and how Equitable could make interest payments and eventual capital repayment, if they held no assets outside the long term fund. Equitable's proposal initially involved loans potentially of the value of £325 million.

185 GAD pointed out:

It should be appreciated by the DTI that the potential sums involved in these proposed issues are substantial ... and this amount of gearing could cause problems to the Society unless the terms are reasonable and proper subordination to policyholder rights is achieved.

186 The DTI's legal advisers shared the view that a subordinated loan taken out by a mutual was likely to constitute a liability on the long term fund. But, in advice given on 9 May 1997, those advisers noted that the DTI had already issued section 68 concessions to mutuals:

[23] However, I have seen that, in a report to Equitable's Board in January 1997, the Appointed Actuary had justified the pursuit of a subordinated loan by reference to Equitable's relatively weak solvency position, the tightening of the valuation regulations and the way they were interpreted, and the increased scope for GAD to challenge his choice of bases. This report was not seen by the prudential regulators or GAD at that time.

... despite the apparent lacking of the safeguard that would be in place in a proprietary company.

The legal advisers suggested that the DTI should not change what had become their policy, namely to agree a section 68 Order, subject to the proposal being reasonable – particularly in relation to adequate subordination. They also drew attention to Prudential Guidance Note 1994/1 on hybrid capital, which had set out the need to establish a proper degree of subordination[24]. But they also considered that it was not necessary for there to be a subsidiary company to achieve this and that the terms of Equitable's proposal already demonstrated the necessary subordination.

187 Equitable continued to share the view that it should not be necessary to set up a subsidiary company. Discussions continued on this basis, although GAD remained *'uncomfortable'* about the proposal, citing the advice in Prudential Guidance Note 1994/1. In the event, on 3 July 1997, Equitable changed their approach. The Society announced that it now proposed a subordinated loan of £350 million and that:

In line with market practice, the issuer will be a wholly owned subsidiary of the Society and the issue will be guaranteed by the Society.

188 Having considered the issue again, on 25 July 1997 GAD told the DTI that they were satisfied that the revised proposal was acceptable and in line with precedent. The outstanding details were settled and, on 20 August 1997, the DTI issued the necessary section 68 Order to allow Equitable to count the loan towards their required solvency margin.

189 While the scrutiny of the 1996 returns was underway, other issues arose. On 26 September 1997, the Government Actuary met with Equitable's new Appointed Actuary.

190 On 30 September 1997, the DTI had again asked Equitable and other companies for details of their provision for potential liabilities arising from pensions mis-selling. On 24 October 1997, Equitable replied and explained that their estimated liability was £85 million compared with £50 million as at the end of 1996.

191 The Appointed Actuary stated that one reason for this increase was that a number of cases had been brought back into their review following discussions with the conduct of business regulators. He anticipated showing the provision more explicitly in the Society's 1997 returns[25]. I have seen no evidence that the DTI checked the position with the conduct of business regulators in the light of this information.

192 On 17 November 1997, the administrators of the NHS pension scheme wrote to the DTI. Those administrators explained that they were reviewing the NHS's arrangements for enabling members of their occupational pension scheme to make additional voluntary contributions (AVCs).

193 The administrators said that they were considering appointing Equitable as their AVC provider and needed further information in order to advise the Secretary of State for Health, as the sponsoring employer, whether to do so. The administrators asked the DTI if there had been any points of contention with Equitable within the last three years or whether there were any material facts of which the Secretary of State should be aware before a decision was made.

[24] See paragraphs 715 to 723 of Part 2 of this report.
[25] In May 1998, Equitable explained that their estimated liability was now £75 million.

194 The DTI sought the views of their lawyers and also other internal advice. In seeking the view of officials, the DTI line supervisor responsible for Equitable said:

> *To my knowledge there are no outstanding supervisory "points of contention" with Equitable Life (and would we say anything if there were?) ... Personal pensions mis-selling — Equitable appears to be getting on well with this — as at 30/9/97 compensation offers of £11m had been made. Total provision at 30/9/97 is £85m, including non-priority cases. New Chief Executive from 1/7/97 and separate Appointed Actuary. Previously* [the Chief Executive] *was also the* [Appointed Actuary]. *Issue of £350m subordinated loan capital August 1997. Future profits implicit item agreed for 1997 returns of £700m.*

195 The DTI line supervisor also noted that, as at 31 December 1996, Equitable's cover for the required minimum margin had been 2.53. Against this, an official noted that, without the future profits implicit item, the cover would be 2.07.

196 It was agreed that the DTI should reply to the NHS scheme administrators, confirming Equitable's solvency position and indicating that the DTI were not aware of any matters that should be brought to the Secretary of State's attention. On 26 November 1997, the DTI did so and informed the administrators of the NHS pension scheme that, on the basis of Equitable's 1996 returns, and in the absence of interim information, they would say that the company was financially sound. The DTI added that there were *'no outstanding issues of a material nature pertaining to DTI's regulation of the Equitable Life Assurance Society ...'*.

197 The wording in the letter was based on one sent in respect of another company, although the DTI recorded that they had omitted a reference from the precedent letter to strong solvency cover of more than 6.00 because, in the Society's case, *'their solvency cover* [without] *the implicit item is* [2.07], *which isn't that hot'*.

198 On 16 December 1997, GAD provided the DTI with their 19 page scrutiny report on the 1996 returns. The report followed the format used since the 1993 returns. In their report, GAD drew attention to a number of matters. GAD noted, *inter alia*:

- that Equitable had a *'modest free estate'*.
- that there was one hidden strength in the valuation basis relating to the Society's treatment of recurrent single premium contracts, where it was assumed that no further premiums would be received. GAD note that this was in line with best practice.
- that it was thought that the resilience reserve should be a grossed up figure of £668 million, rather than the £501 million reported.
- that the Society's main valuation did not appear to be any stronger than its appendix valuation.
- that the Society's mortality bases were *'reasonably conservative'*, and Equitable had insisted in the returns that they contained sufficient allowance for future improvements.
- that, as reversionary bonuses included credit for asset appreciation (that is, as yet unrealised gains), future bonuses appeared vulnerable to a sustained stock market downturn and that it would seem desirable for policyholders to be given greater warning of this.

- that Equitable reserved the right to penalise early surrenders, including guaranteed benefits under unitised contracts, and that it might be desirable to give this greater prominence in their literature.

- that the Society's failure to set up a specific reserve for the contingent liability to tax on unrealised capital gains of £47.7 million was, as had been the case in 1995, *'dubious – relying on other margins in the valuation basis'*.

- that, while Equitable had included in the main valuation a reserve of £50 million for the potential liability from pensions mis-selling, it was not clear if a similar provision had been established in the appendix valuation.

- that Equitable *'informs its holders of accumulating with profit contracts of the amount of their accumulating final bonus (although clearly stating that it is not guaranteed), but only holds reserves for a discounted sum compared with the current guaranteed value'*.

GAD explained to DTI that:

> *Because of the large proportion of business written on a participating basis and the high level of annual emerging surplus, there are not considered to be any actual potential solvency problems for the Society, but it does seem that, in the event of a marked fall in asset values, the Society might find itself in a position where it had to cut back severely the level of payout to members.*
>
> *It would seem desirable for the Society to hold back more of its emerging surplus by declaring lower guaranteed bonuses – although it could still attempt to pay out generous final bonuses to members (preferably without raising expectations too much in advance with its declarations of "non-guaranteed final bonuses").*

GAD said that they were taking up a number of points with Equitable, including the provision made for resilience, possible tax on capital gains, and pensions mis-selling.

199 Also on 16 December 1997, GAD pursued five specific issues with Equitable:

- GAD pointed out that Equitable did not state which assets were backing the required resilience reserve. GAD queried if the figure indicated in the report on the appendix valuation (£501 million) should be grossed up.

- GAD queried whether it was acceptable for Equitable to assert that other margins were available to cover the contingent liability to tax on unrealised capital gains and invited Equitable to advise what other margins were considered to be available.

- GAD noted the provision for £50 million for pensions mis-selling in the main valuation and asked where the corresponding provision was in the appendix valuation.

- GAD noted that Equitable stated that terminal bonus additions were implicitly covered by the amount of excess admissible assets held over the mathematical reserves — shown in the 1996 returns as being about £1,400 million (including the required minimum margin). GAD added:

  > *However, since your reserves already value <u>current guaranteed</u> benefit values at a combined discount of some £1.3bn, it seems likely that the total current*

"asset shares" (including the final bonuses indicated to members) exceed total current admissible assets. Is this a correct deduction? Please provide a figure for the accumulated asset shares for all in-force accumulating with-profit contracts at end 1996.

- GAD asked if the reserves for any accumulating with-profits policies were less than the basic surrender values (i.e. excluding terminal bonus) available on the valuation date and, if so, what was the total of those differences.

200 In their initial scrutiny report on 7 August 1997, GAD had noted that Equitable did not appear to have made proper provision for policyholders' reasonable expectations in the valuation rates of interest used for with-profits business. GAD did not refer to this issue in their detailed scrutiny report nor did they pursue it with the Society.

201 On 13 January 1998, Equitable replied to each of GAD's five queries. They explained:

- that the resilience reserve required in the appendix basis *was* the grossed-up value.
- that substantial margins were available in the expense reserves that could be used to cover the contingent liability to tax on unrealised capital gains. The Appointed Actuary suggested that, as the tax would essentially relate to gains that Equitable would distribute as terminal bonus, it was not necessary to reserve for it.
- that a provision for pensions mis-selling was held in the appendix valuation, on a similar basis to that held in the main valuation.
- that they were unclear what GAD meant by their question, explaining that: *'The face value of benefits is the current value of guaranteed benefits if a contractual event (e.g. death) occurred at the valuation date. In most cases there is no contractual right to receive the current accumulated benefit at the valuation date'*. Equitable went on to say that GAD were *'correct in deducing that at 31.12.96 the total face value of policies including accrued final bonus was in excess of the value of the assets attributable to the with profits business. Those assets will include items like the accumulated new business strains and so are higher than a pure share of the Form 9 admissible assets'*. For accumulating with-profits business, the total smoothed asset shares at 31 December 1996 were some £14,700 million.
- that surrender values were not guaranteed for Equitable's accumulating with-profits business. The Society said that the valuation *'took account of the range of ages at which benefits could be taken at full value, including on retirement, which explains why the discounted value of benefits was 95% of their face value when the typical outstanding period to the selected pension date would lead one to expect a much more substantial degree of discounting'*. Equitable did not answer GAD's question as to whether reserves were less than the surrender values for any policies as at 31 December 1996.

202 On 16 January 1998, GAD wrote again to Equitable:

- GAD stated that it would be easier for them to follow the resilience reserve calculation if this reserve were included in the matching rectangle. GAD asked Equitable to reconcile the change in asset and liability values in the resilience scenario disclosed in the main valuation and the change disclosed in the appendix valuation (as the figures were different).

- GAD stated that they were not convinced that it was appropriate to use margins within the expense reserves to cover the contingent liability to tax on unrealised capital gains. Neither did GAD accept Equitable's view that they did not need to reserve for this liability. GAD asked Equitable to reconsider this matter for the 1997 returns.

- GAD noted that the reserve for pensions mis-selling was included in the reserves for personal pensions business in the appendix valuation. GAD asked Equitable to disclose this reserve separately in future returns.

- GAD accepted that the amount of the current face value of guaranteed benefits was not immediately payable at the valuation date. However, GAD noted that the total asset share for accumulating with-profits business of £14,700 million exceeded the reserves in the appendix basis by £3,800 million. This, they said, clearly exceeded the amount of free assets shown in the returns. GAD stated that, whilst this did not necessarily cause concern, the lack of a free estate highlighted the importance of not building up policyholders' expectations too far.

- GAD again asked Equitable to confirm whether the policy reserves in the appendix valuation for any accumulating with-profits policies were less than the basic surrender values (i.e. excluding final bonus) available on the valuation date.

On the same day, GAD provided the Treasury[26] with copies of their post scrutiny correspondence with Equitable.

203 On 4 February 1998, the Society responded to GAD's further queries. The Appointed Actuary:

- explained that the differing amounts quoted for the change in asset and liability values were accounted for by the differing treatment of index-linked business.

- noted GAD's comments and undertook to reconsider the matter for the 1997 returns.

- explained that the Society's approach in the 1996 returns reflected the difficulty of quantifying the amount of the possible liability. He stated that, as Equitable now had more data, he would be *'showing an explicit reserve in the 1997 returns'*.

- suggested that the figures given by GAD in their letter of 16 January might have somewhat misrepresented the position, as GAD had compared the excess of policy values over the appendix net premium reserves with the available assets shown in Form 9 of the returns, which were determined by reference to the reserves established under the main (gross premium) valuation.[27]

- explained that the Society took great care to emphasise that the final bonus element of the current policy value was not guaranteed in any way. He suggested that declared bonuses were being kept imprudently high by some offices, particularly on with-profits bonds *'partly due to a failure of* [those] *offices to communicate the developing terminal bonus position adequately to their clients'*.

[26] Responsibility for prudential regulation had passed from DTI to the Treasury on 5 January 1998.
[27] GAD subsequently pointed out, on 27 February 1998, that the available assets, calculated by reference to the appendix valuation reserves (including the resilience reserves), were in fact very little different from those shown in the main valuation.

- again did not answer GAD's question regarding whether the policy reserves in the appendix valuation were less than basic surrender values.

204 On 27 February 1998, GAD wrote once more to Equitable to seek a response to the last point. GAD stated:

> *It is clearly in the best interests of the whole industry for all participants to be wary of either granting over-generous guaranteed bonuses or of building up any false expectations in relation to final bonuses. The manner in which Equitable operates as a mutual – giving the best possible returns to each generation of policyholders, with the consequent lack of any substantial unutilised free estate, does mean that you do not have much of a cushion to enable you to protect holders of such contracts from the natural effects of future falls in the market value of assets. We remain confident that your company is fully aware of this.*

On the same day, GAD advised the Treasury that there were no compliance points in relation to the 1996 returns to follow up. GAD confirmed that:

> *... even though our correspondence is not yet concluded about their accumulating with-profit business we are basically satisfied with the prudence of their reserving bases as adopted for the 1996 returns.*
>
> *The position revealed is very tight, since Equitable operates on the basis that, as a mutual, it should endeavour to give full value to each generation of policyholders. It therefore does not accumulate any meaningful free estate. Hence our desire to ensure that it does not build up any false expectations for its policyholders, because it would be hard for it to establish reserves for any greater liabilities than those it currently recognises.*

GAD concluded that the Treasury could regard the scrutiny of the 1996 returns as complete.

205 On 12 March 1998, the Society's Appointed Actuary wrote to GAD to explain that he now understood the question about whether any reserves for accumulating with-profits policies were less than basic surrender values.

206 He stated that the Society could not *'state categorically that the non-contractual surrenders we were actually paying on 31 December 1996 were, in all cases, lower than the mathematical reserves held'*. The Appointed Actuary added that he was not clear as to the relevance of the point raised by GAD, as:

> *The surrender values being paid were only "available" because we were prepared to pay them on the low incidence of early non-contractual terminations being experienced. If we had been experiencing a significant volume of surrenders we should have exercised our right to reduce further the values paid – possibly to below the level of the mathematical reserves in all cases – in order to protect the fund.*

207 In the light of this further exchange, GAD invited Equitable to a meeting to discuss the issue. GAD explained that:

> *The whole area of the appropriate bonus methodology to be used for accumulating with-profits business, the expectations built up for policy holders and the establishment of proper reserves has become more difficult as a greater proportion of investment returns is being derived from asset appreciation – which could prove to be ephemeral.*

208 On 28 May 1998, GAD met Equitable. GAD made no formal record of the meeting but noted the following:

> *Non* [guaranteed] *element could be negative.*
>
> *Particular problems with Bonds rather than pensions* [business].
>
> *Has company done specific market research on policyholder understandings? Analysed telephone queries.*
>
> *Further discussion to take place on reserves. – Equitable.*
>
> *Discussed PRE surrender test.*

209 According to the Society's note of the meeting, the discussion had been fairly unstructured and GAD had gone through a *'ragbag of not particularly well thought through concerns'* that they had. However, GAD's main points had seemed to be that *'Declared bonus rates are still too high'*, that offices had been incautious in distributing recent high capital returns and that it would be difficult to change terminal bonuses without *'severely damaging policyholders' perceptions of them'*.

210 Equitable also recorded that, at the meeting, they had strongly refuted GAD's concern that the Society was more exposed to these risks than most other life insurance companies, as a result of its 'full distribution' approach to bonuses and anecdotal evidence that policyholders believed their full fund value to be guaranteed. The Society's note recorded that GAD had stated that GAD were *'considerably more reassured about our approach than they had been at the start'*.

211 Following the meeting, GAD explained in a letter to Equitable on 8 June 1998 that:

> *I think that there is little more to be said or done at this stage in relation to the reserving bases that are appropriate for accumulating with-profits business but it is clear that we are agree*d *that great restraint should be exercised in relation to the setting of guaranteed bonus levels at a time when a large part of investment returns is being derived from capital gains.*

212 On 8 June 1998, GAD provided an update to the Treasury on the position. GAD confirmed that, in the light of those discussions, GAD *'did not conclude that any particular strengthening of their reserves was needed in relation to accumulating with-profits business, although I remain somewhat concerned that not all holders of such contracts (with this and other offices) appreciate what could happen at future bonus declarations if we saw a sudden downturn in the market values of assets. The whole industry is relying on a soft landing, so that reductions can be achieved gradually and without trauma'*.

213 Events were soon to take a different turn for the prudential regulation of the Society. In the next Chapter, I turn to summarise those events.

Chapter 7 – The prudential regulation of Equitable in the period between 20 June 1998 and 8 December 2000

Introduction

1 In this Chapter, I summarise the way in which the prudential regulation of the Society was undertaken during the period from 20 June 1998 until the Society closed to new business on 8 December 2000.

2 As was explained in Chapter 6 of this report, this covers a period where the supervision of the Society was undertaken with heightened intensity as a result of information provided by it to the prudential regulators and GAD concerning serious financial difficulties which Equitable faced. This Chapter is structured in the following way:

- in paragraphs 3 to 12, I explain how the Society's annuity guarantees problem became known to the prudential regulators and GAD;
- in paragraphs 13 to 60, I explain how those regulators and GAD reacted to the Society's guaranteed annuity issue and how, in particular, they dealt with three questions that arose for consideration, relating to:
  - (i) the Society's practice as to reserving for the annuity guarantees, which I cover in paragraphs 17 to 41;
  - (ii) what the Society had told its policyholders, which I cover in paragraphs 42 to 52; and
  - (iii) what the Society had told the prudential regulators and GAD, which I cover in paragraphs 53 to 60;
- in paragraphs 61 to 75, I set out the events relevant to the consideration given by the prudential regulators and GAD to the Society's financial position in the immediate aftermath of their awareness of the annuity guarantees problem;
- in paragraphs 76 to 172, I summarise, on a month-by-month basis, the events which occurred during the period starting from the preparations for the handover on 1 January 1999 of regulatory functions from the Treasury to the FSA and ending with the decision of the House of Lords in the *Hyman* case, which was handed down on 20 July 2000; and
- in paragraphs 173 to 231, I summarise the events which occurred during the period between the *Hyman* judgment and the Society's decision to close to new business on 8 December 2000.

The Society's GAR problem

The intimation of the problem

3 On 20 June 1998, GAD wrote to all life insurance companies enclosing a questionnaire seeking information on the annuity guarantees they had written, their methods of reserving for such guarantees, and related issues.

4 GAD's survey followed a similar exercise (which they had instigated) undertaken by the actuarial profession who, in January 1997, had set up an Annuity Guarantees Working Party to consider the issue of annuity guarantees and how companies should reserve for them in the context of low interest rates and improved mortality, which made such guarantees more valuable. As part of their enquiries, the profession's Working Party had surveyed offices that had written business containing guaranteed annuity rates.

5 On 1 November 1997, the Working Party published its report and approximately one month later, at the profession's annual Life Convention held from 30 November 1997 to 2 December 1997, that Working Party presented their findings to the industry.

6 Their report, which dealt with companies on an anonymous basis, identified three approaches to reserving for contracts containing annuity guarantees that had been used by companies, none of which were found to be entirely satisfactory. One of the approaches identified involved covering the guarantees by adjustments to terminal bonus. The Working Party considered that this *'could be viewed as unsound because no explicit provision is made for an explicit guarantee'*.

7 One of the members of the Working Party had been an actuary from GAD, who was party to the results of their work. However, it has been said that the Working Party had collected the information which underpinned their conclusions on a confidential basis and GAD considered that it could not use this information for other purposes, including in providing assistance and advice to the prudential regulators.

8 On 10 February 1998 at an internal directorate meeting, GAD discussed the annuity guarantee issue and the fact that the findings of the profession's Working Party demonstrated that a problem existed and that 75% of companies were not reserving properly[1]. The minutes of that meeting record that GAD had decided to conduct its own survey into the issue.

9 On 18 June 1998, GAD informed the Treasury that they intended to conduct a survey of companies about annuity guarantees. GAD explained that *'a number of* [companies which had sold policies containing guaranteed annuity rates] *may now be significantly exposed to additional liabilities in respect of these guarantees'*. On 19 June 1998, the Treasury gave their agreement for GAD to conduct the survey. GAD sent out the survey questionnaires on the following day.

10 On 29 July 1998, Equitable submitted their completed questionnaire to GAD. In this, the Society explained:

- that Equitable had sold policies between 1956 and 1988 which carried a guaranteed annuity rate (which also applied to future premiums);
- that Equitable did not reserve for those guarantees (against this, GAD wrote '?');
- that Equitable made no general allowance for the guarantees, when establishing maturity values, and took no significant account of the guarantees when determining investment policy and matching guidelines;
- that, for any policy for which the annuity guarantee was 'biting' (that is, where such a guarantee had become more advantageous than an alternative option), Equitable reduced the amount of terminal bonus to pay for the cost of the guarantee; and
- that Equitable did not advise policyholders of any available options to receive a guaranteed annuity when they reached retirement (against this, GAD also wrote '?').

Equitable added as a final comment:

> *The cost of annuity guarantees has more than adequately been covered by the terminal bonus cushion to date for all but a few small policies, as described ... above. As the business to which annuity guarantees apply ages, the increasing terminal bonus cushion will make it increasingly unlikely that guarantees will actually bite.*

[1] It appears that GAD did not inform the Treasury at this time that they were aware that such a problem existed.

GAD sidelined this comment and wrote: *'Is this acceptable?'*.

11 This constituted disclosure of the GAR issue – that is, that the Society had extensive exposure in its older business to such guarantees and that it had made no explicit provision for the liabilities arising from those guarantees.

12 That disclosure gave to the prudential regulators and to GAD a clear indication that the Society's reported financial position might not have been prudent and that its liabilities might have been understated. Those issues still had to be resolved. An enhanced level of scrutiny and supervision was now to be given to the Society.

Regulatory treatment of the GAR issue

13 On 1 September 1998, GAD wrote to the Treasury concerning the monitoring of the behaviour of companies towards policyholders whose policies contained a valuable guarantee. GAD advised that the Treasury had a duty to ensure that insurance companies did not try to avoid meeting their obligations, as this would be a breach of policyholders' reasonable expectations. GAD suggested that the Treasury had a number of options, those being:

- to advise all companies that avoiding their obligations would constitute unacceptable behaviour;
- to ask all companies to report on the procedures that were in place to ensure that guaranteed rates would be applied in maturity option quotations, and that the existence of options was made known (although GAD queried this internally as being perhaps *'a step too far'*);
- to use any policyholder complaint or one made by an independent financial adviser as a trigger for a visit to review a company's procedures in these respects;
- to carry out an investigation under section 43A of the 1982 Act[2] should there be any subsequent failures; and
- to take further action, including a review of cases and consideration of 'fit and proper' action[3], if a substantial problem were identified.

14 On 3 September 1998, the Treasury's Head of Life Insurance welcomed GAD's note as a clarification of the issues. At the same time, in the light of press attention being given both to annuity guarantees and to Equitable, and prior to the Treasury contracting out their prudential regulatory functions to the FSA[4], he advised the relevant FSA Managing Director of the action that the prudential regulators and their advisers had taken on annuity guarantees.

15 The Treasury explained that, *'when it became clear that a number of companies had issued policies with these guarantees'*, GAD, on the Treasury's behalf, had written to all companies seeking information about such guarantees and how those companies had reserved for them.

[2] This empowered the prudential regulators to appoint one or more competent persons to make an investigation into, and report to those regulators on, (a) whether the criteria of sound and prudent management were fulfilled with respect to an insurance company, or (b) whether those criteria would be so fulfilled if a person notified to the prudential regulators as intending to become a controller of such a company were to become such a controller.
[3] That is, action under section 37(2)(aa) of Insurance Companies Act 1982.
[4] See paragraphs 914 to 918 of Part 2 of this report.

16 On 15 September 1998, GAD advised the Treasury to explore further the issue of meeting the costs of providing guaranteed annuity rates by reducing terminal bonus. There followed, over the next three months, detailed correspondence between the Treasury and the Society about the latter's approach. Officials from the Treasury and GAD also met Equitable four times. In the course of these exchanges, three questions emerged:

(i) Did Equitable need to reserve for the annuity guarantees within the policies that they had sold – and, if so, at what level?

(ii) What had Equitable told their policyholders about their practice?

(iii) What had Equitable told the prudential regulators?

Reserving for annuity guarantees

17 The first question which arose in the discussions between the Society and the prudential regulators and GAD concerned the approach which Equitable took to the establishment of the reserves required in respect of those policies which contained guaranteed annuity rates. Throughout those discussions, the Society defended its approach robustly.

18 On 29 September 1998, the Society explained that it had introduced the differential terminal bonus policy in order to be fair to all policyholders (in that this resulted in benefits of broadly equivalent value, irrespective of whether or not a guaranteed annuity was taken). Equitable stated that this had been their policy since the end of 1993.

19 Equitable, in their response to GAD's questionnaire, had implied that the Society had not reserved in its 1997 returns for the annuity guarantees because, where the guaranteed rate was 'biting' (i.e. the guaranteed rate was higher than any available current annuity rate), Equitable were protected by the cushion of the differential terminal bonus policy. In the subsequent exchanges with the Treasury and GAD, Equitable informed those regulators and GAD that the position had changed.

20 On 2 October 1998, at a meeting with the Treasury and GAD, Equitable's Chief Executive stated that:

> *... no provision had been made for GAOs as at 31 December 1997 since it had only been recently that the guarantees were biting on the guaranteed fund. The Equitable does not as a matter of course reserve for GAOs that exist on policies; the recent practice has only been to reserve once the guarantees bite.*[5]

21 Equitable further explained that, even where the guarantees were more advantageous than the open market option, there had been a low take-up of the guaranteed options.

[5] Equitable's former Appointed Actuary in post at that time has told me that there was no change to the Society's reserving practice over this period. He said: *'The Society's approach was that reserving could reflect actual and expected policyholder behaviour, in terms of the proportion of policy benefits that could reasonably be expected to be taken in guaranteed annuity form. Up to and including the end of 1997, financial conditions were such that that proportion was effectively nil because, as stated in the survey response, conditions were such that the DTBP could be expected to result in GAR benefits of no higher value than the "cash based" alternative in all but a trivial proportion of cases. The sharp fall in interest rates in 1998 had changed that position so that, by the time of the meetings, the GAR was "biting" in the sense that, even with a zero final bonus, the GAR benefits were more valuable than the alternative. In those changed conditions, it was now reasonable to expect some level of take-up of guaranteed benefits. The Society had accepted that that change of conditions meant further reserves were needed at the end of 1998 – the debate was around the level of those further reserves (the Society suggested that assuming a take-up rate of GAR benefits of 25-35% would be appropriate)'.*

22 On 30 October 1998, Equitable stated that, in the first nine months of 1998, only 3% of retirement annuity benefits had been taken in the form of a conventional non-profit annuity. Equitable also stated that '[all] *retirement cases are checked to determine whether, if a conventional non-profits annuity is required, the guaranteed annuity rate will produce a higher level of income*'[6] than a conventional non-profit annuity at the current rate. This, they said, had been so in around 30% of cases.

23 Equitable said that they had advised the policyholders concerned but none had taken up the guaranteed option[7]. The Society concluded that, in a worst case scenario of 100% take up of those guaranteed options which produced a higher income, the reserving requirement amounted to some £170 million and that their 1998 experience suggested that £50 million would be the more likely cost.

24 For their part, GAD took the view from the outset that guarantees had to be reserved for, whether or not they were more advantageous. On 3 November 1998, GAD observed that the Society's analysis at the end of October 1998:

> *... does not take account of the key point that the existence of a guaranteed annuity rate increases the level of cash that needs to be paid in substitution for that annuity (as otherwise policyholders would not agree to take the cash sum in place of the guaranteed annuity).*

GAD advised the Treasury that:

> *... appropriate mathematical reserves need to be established for the full value of these guaranteed benefits and the associated obligations to policyholders in accordance with Part IX of* [the Insurance Companies Regulations 1994]*, including in particular Regulation 64. It is not acceptable in this context to regard these guarantees as covered by a "first charge" against a final bonus for which no provision is made.*

GAD stated that, on this basis, a reserve of £170 million was quite inappropriate and advised the Treasury to ask Equitable how they proposed establishing the reserve that was required. GAD also suggested that, if the Society were unable to meet this obligation, intervention using the powers available to the prudential regulators might be warranted. GAD added that *'we believe that policyholders would expect Equitable to maintain adequate mathematical reserves to cover their obligations'.*

25 The Treasury conveyed those views in writing to the Society on 5 November 1998 and also at a meeting on 13 November 1998. On 24 November 1998 in response, Equitable estimated that, using the Treasury's approach, the reserving requirement at the end of 1997 would have been approximately £675 million. Equitable estimated the equivalent figure for the end of 1998 could be between £955 million and £1,360 million. An annotation made by GAD on the Society's letter suggested that GAD considered that the figure might actually be as high as £1,650 million.

---

[6] Equitable's former Appointed Actuary has told me that: *'Cases were not routinely checked at the time of the survey response because by then interest rates had not fallen to a level which was likely to lead to more valuable benefits in GAR form. Checking of all retirements was introduced a little later in 1998 following further falls in interest rates and, once introduced, applied to 100% of cases.'*

[7] Equitable made no reference here to the role of the differential terminal bonus policy, which was designed to ensure that there was, in fact, no difference in the benefits produced if a policyholder elected to take a guaranteed annuity. Equitable's Counsel subsequently recorded in the factual background of his Opinion on the reserving implications of annuity guarantees that the differential terminal bonus policy had *'substantially influenced'* the low take-up of an annuity at the guaranteed rate specified in the policy.

26 The Society continued to dispute strongly the requirement that it should reserve on the basis of 100% take up of guaranteed annuity options. On 24 November 1998, Equitable suggested that there was some misunderstanding of the precise policy benefits in question which the exchanges with the Treasury and GAD had not resolved.

27 The Society accordingly provided three examples of how the differential terminal bonus policy was applied, in order to demonstrate *'why the vast majority of policyholders selected the cash fund* [that is, the open market] *form of benefit'* rather than the guaranteed annuity. Equitable claimed that their approach to reserving fulfilled the requirements of the applicable Regulations. The Society warned that the consequences for it of adopting GAD's approach to reserving were *'potentially extremely serious'*.

28 Equitable then set out five options available to them in those circumstances:

(i) *Passing* [that is, not making] *the bonus declaration, either for all business or for the classes incorporating guaranteed annuity rates.*

(ii) *Raising capital either through further subordinated debt (limited scope at present) or financial reassurance.*

(iii) *Trying to obtain some sort of protection based on derivatives.*

(iv) *Publishing a* [statement of solvency] *where the required minimum margin is only just covered.*

(v) *Making a sizeable switch from equities to fixed interest or cash.*

The Society went on to explain:

> *Of the above (ii) is now probably rather difficult to put in place by 31 December* [1998] *and there must be doubts as to how effective (iii) could be. Approaches (i) – (iv) carry very significant* [public relations] *risks – possibly of a scale which would threaten the continued independence of the Office. Approach (v) will damage the future prospects of policyholders for a number of years.*

29 GAD remained of the clear view that Equitable had to reserve in full. At the meeting on 3 December 1998, the Society's Chief Executive stated that *'the reserving basis required was excessively prudent and bore no resemblance to commercial reality and policyholders would be damaged by this (through a change to a more conservative investment policy, passing bonuses or through there being a run on the office)'*.

30 The Chief Executive was told by the Treasury's Head of Life Insurance that he could not see any scope for granting Equitable any concession, as the reserving requirements derived from European Directives. Equitable's Chief Executive was also told that the only avenue of appeal would be to seek judicial review of the Treasury's decision. The Chief Executive said that the Society *'might well have to take up this option'*.

31 In response to the suggestion from GAD's Chief Actuary C that financial reinsurance could be used to offset their reserving requirements, Equitable's Appointed Actuary confirmed that he had considered that that was '[an] *option for protecting the balance sheet'*. However, the Appointed Actuary pointed out that it was unlikely that any reinsurance agreement could be put in place by 31 December 1998.

32 The Treasury said that, in those circumstances, it might be possible for the prudential regulators to grant Equitable a concession so that the effect of any such agreement was pre-dated to cover the 1998 year-end position.

33 The Appointed Actuary expressed his concern that *'from a professional point of view ... he was being forced to adopt a reserving approach that was "wildly prudent"'*. He said that he might have to consult the actuarial profession on that matter.

34 In response to this, GAD's Chief Actuary C said that he did not think there was a professional issue to consider as, in his view, '[there] *was ... a distinction between the legal position as required by Regulation 64 and* [for example] *the resilience reserve, where there was more scope for professional judgement and interpretation'*.

35 On 8 December 1998, GAD advised the Treasury that:

> *... it could be reasonable to assume that less than 100% of policyholders elected to take the guaranteed annuity provided that the reserve held in respect of those policyholders who are assumed to take an alternative annuity benefit is based on a realistic value of that alternative.*

GAD noted that the Society's approach had been one identified by the actuarial profession's Annuity Guarantees Working Party as potentially *'unsound'*[8]. After some doubt, legal advice provided within the Treasury supported the view that Equitable had to reserve on a 100% basis[9]. The Treasury reiterated this position to Equitable.

36 On 15 December 1998, the Treasury advised the FSA as part of the discussions held with them in advance of the FSA taking on the day-to-day regulation of insurance companies, that in their view:

> *Equitable is effectively having to "guarantee" to pay terminal bonuses at a level which means that the cash option is worth as much as the annuity option in order to be able to assume policyholders continue to take the cash option. If terminal bonus is effectively guaranteed we consider the company needs to reserve for it (it has effectively become a "guaranteed benefit").*

37 On 18 December 1998, Equitable supplied to the Treasury a copy of Counsel's opinion they had received which supported their stance. Counsel had advised that, had Equitable reserved on the basis now suggested, the Society would have been unable to pay bonuses in previous years.

38 Counsel also advised that, had the prudential regulators taken a consistent line on the issue from 1994, it would have been possible for the Society to have absorbed any need to establish reserves gradually. But, as a result of the Treasury seeking to impose their interpretation of the Regulations for the first time at the end of 1998, Counsel said that it appeared that the prudential regulators were now requiring the Society to establish a 'one-off' reserve of approximately £1,500 million.

39 In the course of these discussions, Equitable disclosed that policyholders could apply the guaranteed annuity rate to money they transferred in from other schemes, prior to retirement.

---

8 See paragraphs 854 to 872 of Part 2 of this report.

9 Some time later, on 3 August 2001, the FSA *'look again'* at the requirements of the applicable Regulations and came to the view that it was not clear that reserving on the basis of a 100% take up rate was required by those Regulations and concluded that a lower level of reserving would be permissible, if that was prudent.

40 On 22 December 1998, the Treasury and GAD met Equitable once more. There was no agreement on the issue of reserving. The Treasury offered to consider any case Equitable put forward for the phasing in of reserves. But the Treasury warned that they would take regulatory action if the Society's returns disclosed that the reserves established by Equitable were inappropriate, or if the Society's actions imperilled its solvency cover. The Treasury also agreed to consider and respond to Counsel's opinion which the Society had shared with them.

41 On 11 January 1999, the FSA advised Equitable that that opinion did not cause them to change the views which had been expressed by the Treasury. The FSA stated that, in their view, the company's discretion not to pay additional bonuses was *'substantially fettered'* and that *'prudence would require the actuary to hold a reserve which is within a few percentage points of the reserve required for the guaranteed benefit'*.

What had Equitable told their policyholders?

42 The second question which arose during the discussions between the Society and the prudential regulators and GAD concerned what information had been given to its policyholders about the guaranteed annuity rates contained within the policies that Equitable wrote and about their differential terminal bonus policy. Again, the Society robustly defended its position.

43 In doing so, on 29 September 1998 Equitable told those regulators and GAD that the Society had described its approach to bonuses *'in the most general terms in marketing literature'*. However, Equitable also said that, when writing to policyholders, they had made it very clear that terminal bonus was allotted only at retirement, that the amount could vary, and that it was not guaranteed. Equitable explained that a note indicating the possibility of a different terminal bonus had been added to the 1995, 1996 and 1997 policyholder annual statements[10].

44 For their part, GAD advised the Treasury to establish if Equitable had marketing literature or other evidence to support their approach, as the Treasury needed *'to be satisfied that the reasonable expectations of policyholders are being met'*.

45 On 21 September 1998, the Treasury had asked Equitable for copies of marketing literature and policy documents, which were then supplied. The Treasury's initial view was that the Society's approach was in accordance with the contracts sold and that Equitable were endeavouring to fulfil the reasonable expectations of their policyholders.

46 On 6 November 1998, the Treasury noted that the prudential regulators still needed to take a view on whether Equitable were acting with due regard to the interests of their policyholders and more generally in accordance with those policyholders' reasonable expectations.

47 On 12 November 1998, GAD set out a number of *'fundamental questions'* – including whether Equitable had made their differential terminal bonus policy sufficiently clear to policyholders (GAD said that they doubted that the available evidence demonstrated that policyholders' reasonable expectations had been adequately modified) and whether the introduction of the policy was itself contrary to policyholders' reasonable expectations. GAD identified a need to review Equitable's documentation *'to assess the reasonableness of their approach on* [guaranteed annuity options] *in terms of PRE'*.

[10] No such note had been added to the 1993 or 1994 statements. Furthermore, it appears that not all the 1997 statements contained such a note due to clerical errors.

48 GAD and the Treasury both considered that they required further documentation from the Society (as the Treasury were concerned that Equitable might have *'cherry picked'* those supplied so far). At the meeting with Equitable on 13 November 1998, GAD and the Treasury therefore asked for an additional selection of documents *'to get a feel for what impression had been given to policyholders over the years'.*

49 At a meeting on 3 December 1998, the Treasury sought more documentation, relating to the previous 40 years. The Treasury explained that the description of Equitable's contracts and bonus policy in the documentation supplied so far *'did not appear to be fully in line with the approach adopted by the company'.*

50 On 23 November 1998 and 17 December 1998, the Society supplied the further information sought by GAD and the Treasury. That information included copies of the literature which had been sent to GAR policyholders over the lifetime of the contract. Equitable also supplied a copy of a leaflet recently provided to policyholders considering retirement, explaining the guaranteed annuity rates issue and the operation of the differential terminal bonus policy.

51 While those exchanges were taking place, the Treasury considered whether to provide guidance to the insurance industry. On 18 December 1998, the Treasury issued to Managing Directors of all United Kingdom life companies guidance on *'Guaranteed Annuity Option Costs and Policyholders' Reasonable Expectations'*. That guidance acknowledged the possibility that the terminal bonus added at the maturity of a contract with a guaranteed annuity might be somewhat lower than the terminal bonus for contracts without such options or guarantees or where benefits were taken in other forms. The Treasury added that:

> *... the appropriateness of any adjustments to bonus allocations for participating policyholders would need to be assessed by each office in the context of the reasonable expectations of policyholders. This assessment will be influenced by their policy documents and any representation made through marketing literature, bonus statements or elsewhere.*

52 Also on 18 December 1998, Equitable announced their intention of taking a test case to the High Court, in order to seek confirmation that they had acted within their powers in adopting the differential terminal bonus policy. On 26 January 1999, the FSA, which was now exercising the prudential regulatory functions contracted out by the Treasury, took the view that the issue of policyholders' reasonable expectations should be put on hold, pending the outcome of that Court case. As a result, there was no further analysis at that time of the information supplied.

What had Equitable told the regulators?

53 The third question which arose in the discussions between the Society and the prudential regulators and GAD related to whether Equitable had properly disclosed the position with regard to guaranteed annuity rates to those regulators. Again, the Society defended its position and maintained that Equitable had disclosed their differential terminal bonus policy in the 1993 returns and in each subsequent year.

54 At the meeting on 3 December 1998, Equitable argued that GAD should have been aware from those returns that the Society was writing business which contained guaranteed annuity rates. By not questioning that disclosure, the Society said that GAD had since 1993 *'tacitly accepted'* Equitable's approach to reserving.

55 On 22 December 1998, the Society noted that Counsel had expressed the view that Equitable, in their returns from 1993 to 1997, had *'consistently'* notified the prudential regulators of their differential terminal bonus policy, and that those regulators had been well aware that there existed policies containing guaranteed annuity rates within the Society's business[11].

56 For their part, on 16 November 1998 GAD noted that the differential terminal bonus policy had been *'mentioned'* in the 1993 returns but disputed that Equitable had disclosed their reserving basis in those returns or that GAD had acquiesced in the Society's approach.

57 On 8 December 1998, GAD argued that the references in the 1997 returns had been *'brief'* and '[as] *the Actuary signed a certificate which confirmed that the liabilities had been determined in accordance with the regulations we had no reason to challenge that Actuary's basis'*[12].

58 GAD developed this point on 4 January 1999, accepting:

> *... with hindsight that we might have addressed the issue rather earlier by asking some pointed questions about their guaranteed annuities. However, the presentation of their valuation methodology in their returns was somewhat obscure, and required the reader to pick up comments in three quite separate parts of the return and draw certain inferences from them. There was nothing said to indicate that the level or extent of these guaranteed annuities were regarded as significant.*
>
> *For example, the wording in paragraph 5 refers to no explicit provision being made in current conditions for the "other" guarantees in paragraph 3, without clarifying exactly which guarantees have or have not been included, or saying whether allowance had been made implicitly for guarantees within the methodology adopted or within the other valuation assumptions.*

59 GAD expressed *'some sympathy'* with Counsel's argument that, had the prudential regulators taken a consistent line on the issue of reserving from 1994, it would have been possible for the Society to absorb the need to make reserves gradually. However, GAD noted that *'most of the increase in the £1.5bn provision has arisen in 1997 and 1998 ...'*.

60 The FSA shared GAD's views on the information which had been given within the regulatory returns. On 11 January 1999, in commenting on Counsel's opinion, the FSA rejected the suggestion that the information in those returns could be seen as constituting notice to the DTI or to the Treasury of the Society's reserving practice. The FSA argued:

> *... the statements in the returns are brief in the extreme and do not disclose the reserving method, the rate of guarantee or the volume of business affected. (In fact, as an aside, we have some concerns about Equitable's compliance with paragraphs 4(1)* [which required full description of benefits for accumulating with-profits policies] *and 6(1)* [which set out the principles and methods to be adopted in the valuation] *of Schedule 4 to the Insurance Companies (Accounts and Statements) Regulations 1996 which we hope will be put to rest in the 1998 return).*

[11] See the entry for 18 December 1998 within Part 3 of this report.
[12] However, the Society had not suggested that it was only in its 1997 returns that this approach had been stated.

Regulatory consideration of the Society's financial position

61 On 26 June 1998, the Society had submitted its regulatory returns for 1997. A detailed description of the content of those returns is contained within the chronology entry for that date within Part 3 of this report. GAD completed their A1 Initial Scrutiny check on 17 July 1998. They identified no concerns. GAD completed their A2 Initial Scrutiny check on 20 August 1998. That check followed the more detailed format first used for the 1996 returns. GAD lowered Equitable's priority rating from 3 to 4 and highlighted a number of matters, including:

- that the interest rates used by Equitable were *'just about'* supported by the risk adjusted yields on the matching assets;
- that the Society's overall interest basis was *'adequate'* and that the valuation basis was *'adequate'* to *'weak'*;
- that Equitable had an *'Enormous Growing Liability for terminal bonus on* [unitised with-profits] *business* [which] *is not reserved for, so that FORM 9 margin overstates strength!'*;
- that the absolute level of cover for the required minimum margin was *'adequate'*. However, GAD referred to their comment about the Society's liability for terminal bonus (see directly above) and to the fact that Equitable had raised capital of £350 million through the issue of the subordinated loan;
- that the Society's level of sales was very high and that it held a negligible estate; and
- that Equitable were known to have material exposure to annuity guarantees and that the Society *'Adjusts terminal bonuses – so no value to policyholders! No additional reserves considered necessary'*.

62 Under *'Aspects that look worrying'*, GAD queried whether Equitable's position on annuity guarantees was satisfactory. Under *'Other notes'*, GAD initially noted that Equitable appeared to have failed to disclose provision for pensions mis-selling but GAD appear later to be satisfied that provision had been made within the Society's returns.

63 GAD also stated that a review of annuitant mortality assumptions was required and that the issue of the subordinated loan appeared to be the sole reason for the increase in available assets over the year. GAD identified no items to notify to the prudential regulators, to be taken up immediately with Equitable.

64 There was no detailed scrutiny of the 1997 returns at this time. Comment on the 1997 returns was included in the detailed scrutiny of the 1998 returns, on which GAD reported in May 1999. This was despite the fact that consideration of certain issues arising from GAD's Reserving for Annuity Guarantees survey had raised questions about Equitable's 1997 returns, their on-going solvency position, and, as would be seen in due course, about the options open to the prudential regulators.

65 On 22 October 1998, the Treasury provided an update to the Tripartite Standing Committee (a Committee of senior officials from the Treasury, the FSA and the Bank of England) on the effect of current market conditions on UK life insurers. They referred to a paper, submitted to a previous meeting of the Committee, which listed eight *'fairly well known offices that we are monitoring particularly carefully'*. Equitable was one of those companies.

66 In an annex to that paper, the Treasury gave details for each company, stating that Equitable *'are not well placed to weather difficult investment conditions'*. This was said to be because of a lack of estate and exposure to liabilities associated with the guaranteed annuity rates within a significant number of policies.

67 Figures attached to the update paper recorded that Equitable's free reserves (excluding any item for future profits) were £1,752 million – and that the Society's solvency margin requirement at 31 December 1997 was £845 million. The Treasury estimated that the current additional cost of the Society's annuity guarantees was between £1,000 million and £2,500 million, the large range reflecting *'uncertainty about the nature of their guarantees'*. The Treasury estimated that the Society's current free reserves were estimated to be between (a negative figure of) £750 million and (a positive figure of) £700 million, and that Equitable faced a further £5 million in costs as a result of personal pensions mis-selling[13].

68 On 27 October 1998, GAD produced a preliminary report on the annuity guarantees survey. The report stated that a number of companies held substantial reserves for those guarantees and that Equitable were one of two notable exceptions. The report noted that the Society seemed to be *'particularly vulnerable because the relevant business is approaching 30% of their total'*.

69 GAD identified Equitable as one of twelve offices with potential solvency margin problems and one of five that could be *'technically insolvent'*. GAD stated *'we shall certainly need to raise the issue of annuity guarantees with each of these offices as part of the scrutiny process for their returns'*. GAD also identified Equitable as one of seven offices which had not told policyholders about the existence of a guaranteed annuity option, and one of eight that were considering whether they should reduce the final bonus payment to policyholders with guarantees, to reflect part or all of the cost.

70 On 5 November 1998, the Treasury noted that their principal concern was the Society's ability to reserve adequately for those guarantees. The Treasury concluded that the information received to date had been unconvincing and raised *'serious questions about the company's solvency'*[14].

71 At the meeting on 13 November 1998, Equitable's Appointed Actuary stated that he was convinced that the Society was still solvent. On 16 November 1998, the Treasury sought an estimate of Equitable's free assets and solvency cover.

72 On 24 November 1998, Equitable explained that, as at 30 October 1998, and before taking account of any implicit items or any liabilities associated with guaranteed annuity rates, the Society had available assets of £2,090 million to cover the required minimum margin of £926 million. Equitable provided figures which showed that, having established reserves for the full cost of those annuity guarantees, the Society had available assets of £300 million, which, with the release of margins contained within the valuation basis of £100 million and a future profits implicit item of £850 million, could be increased to £1,250 million.

73 On 26 November 1998, GAD provided the Treasury with a *'2nd Update on the Effect of Current Market Conditions on UK Life Insurers'*, to be provided to the Tripartite Standing Committee. In that update, GAD stated that Equitable were only *'just solvent'*, if it were assumed that 100% of policyholders exercised their guaranteed annuity options. GAD's update continued:

13 Under the Treasury's lowest estimate for the cost of meeting the annuity guarantees, they calculated that Equitable had £700 million to cover the required minimum margin of £845 million. Under the Treasury's highest estimate for the cost of those guarantees, the Treasury calculated that Equitable would have been insolvent for regulatory purposes by £750 million. However, the Treasury noted that those figures did not account for certain measures which might have been taken. Such measures included any future profits that might have been permissible if an appropriate concession were granted or any margins within the valuation basis which might have been available to be released. (For the full notes accompanying the Treasury's figures, see the entry for 22 October 1998 in Part 3 of this report.)

14 In December 2000, after the decision of the House of Lords in the *Hyman* case, this note was leaked to a national newspaper. Commenting on the last point in the note, the FSA's Line Manager E wrote: *'We were subsequently satisfied that* [Equitable] *was solvent and it remains solvent today'*.

While this is reassuring it should be realised that publication of such a low solvency position is likely to severely undermine the company's reputation in the market and could threaten its survival as an independent entity.

74 On 1 December 1998, GAD advised the Treasury that Equitable *'would just have sufficient cover for their required margin of solvency'*, but that this was *'before any declaration of bonus'*.

75 On 11 December 1998, the Treasury gave consideration as to whether the applicable Regulations gave them the power to require the Society to resubmit its 1997 returns, with proper reserving for the liabilities associated with guaranteed annuity rates. The initial legal view was that the Regulations did not allow this. GAD disputed this and, on 15 December 1998, GAD expressed surprise that the Treasury believed:

... that there is no power in the Act or any Regulations which would enable [the Treasury] *to require a company to "reissue" or amend accounts when it has breached* [Regulation] *64 of the Insurance Companies Regulations 1994. In our opinion there are grounds to require reproduction of the abstract of the actuary's report and resubmission of the returns...*

The handover to the FSA and events up to the decision of the House of Lords

December 1998

76 On 15 December 1998, the Treasury met the FSA to brief them about Equitable. The Treasury described the Society as *'just solvent'* if it reserved fully for the liabilities arising from policies which contained guaranteed annuity rates.

77 However, the Treasury also noted that the Society's free assets figure had made no allowance for the declaration of any bonus and that Equitable appeared to have insufficient assets to declare a bonus in 1999.

78 The Treasury also noted that, if Equitable reserved fully for guaranteed annuity rates, the Society would be close to breaching the requirement that only five-sixths of the required minimum margin could be covered by implicit items. In such circumstances, the Treasury noted, a relatively small fall in equities or gilt yields could wipe out the company's explicit free assets.

79 The Treasury set out for the FSA a *'Strategy for Regulatory action'*, which formed the basis for a further meeting with the Society in December 1998, and which would be used to:

- *Clarify that* [the Treasury are] *not minded to take action against the company for its failure to reserve fully for* [guaranteed annuity options] *in its 1997 returns. (This would be consistent with* [the] *approach taken with other companies)*;

- *Formally put the company on notice that the reserving approach that the company is proposing (assuming this remains to reserve for 25-35% of the* [guaranteed annuity rate liabilities]) *is not acceptable in* [the Treasury]*'s view;*

- *Indicate that in the context of settling its year end position it is for Equitable to decide the reserving approach that it intends to adopt in its 1998 returns since it is for the company to comply with the Regulations. But make the company aware that if in FSA's view the returns submitted at the end of June are not compliant, FSA will take action;*

- *Seek an undertaking from the company that it will not declare any further bonuses without prior discussion with* [the Treasury]. *If necessary use the lever/threat of intervention action on the grounds of sound and prudent management to obtain agreement from the company.*

80 The Treasury stated that intervention action would be likely to take the form of closing the Society to new business and that this could happen immediately, if Equitable did not agree to refrain from declaring further bonuses without prior discussion with the Treasury. The Treasury noted that, if Equitable did agree:

> *... intervention action would only become necessary when the company indicated its intention to declare a bonus which would have the effect of making the company breach its* [required minimum margin] *if the* [guaranteed annuity options] *were fully reserved for. (The company usually declares bonuses in February.) If agreement is obtained and no bonus is declared the need for intervention action/prosecution would probably not arise until July when the annual returns were submitted and it was clear from those returns that the* [liabilities associated with guaranteed annuity rates] *had not been adequately reserved for.*

The Treasury warned that the Society could be expected to seek judicial review of any intervention action on reserving for guaranteed annuity options[15].

81 The FSA asked the Treasury about the potential impact of a policyholder challenge to the Society's differential terminal bonus policy. The Treasury stated that the Society's financial position would not be made worse, assuming that it had reserved on a 100% basis. The only additional costs to it would arise from compensation payments to policyholders who had already retired and who had been adversely affected by the operation of that policy.

82 According to the Treasury's note of the meeting, the FSA also asked why no action had been taken on Equitable's 1997 returns, when those returns showed no reserves for the liabilities associated with guaranteed annuity rates. In response, the Treasury *'explained that the approach taken by the company had not been clear from the return'.*

83 On 18 December 1998, GAD, on seeing the note of the meeting, disputed the assertion that no action had been taken on those returns. GAD pointed out that the current discussions on guaranteed annuity rates had followed directly from questions which GAD had raised on the reserving basis within those returns. GAD also noted:

> *It should be remembered by* [the Treasury] *that GAD invited* [Equitable] *to a meeting on 28th May this year (following consideration of their 1996 returns), at which we discussed the reserving bases appropriate to accumulating with-profits business, attempted to clarify certain PRE aspects of the bonus notices being issued by Equitable and urged great restraint in the granting of guaranteed bonuses.*

[15] When the Treasury and GAD met Equitable on 22 December 1998, the Society had been warned that regulatory action was a possibility.

January 1999

84 On 4 January 1999, GAD advised the FSA that:

> *We need to set out in writing to Equitable that we are not satisfied with the level of mathematical reserves (ie zero) established for annuity guarantees in their 1997 returns. (Otherwise, they would have a good case next year in saying that we accepted these returns in full knowledge, through detailed correspondence and discussion, of their reserving methodology and assumptions).*

85 GAD produced a list, detailing the additional information that they would like to receive from Equitable. GAD said that this would enable them to form a better understanding of the Society's current financial position.

86 On 7 January 1999, the FSA's Director of Insurance put to the FSA's Chairman an options paper, suggesting the courses of action open to the FSA in relation to companies whose 1997 returns had been submitted on an imprudent or unacceptable basis.

87 The Director advised the Chairman that:

> *... there are significant doubts about whether the legislation empowers us to require companies to correct their returns where we consider them to have been prepared on an inappropriate basis ...*

Given those doubts, the Director recommended to the Chairman that the FSA should require accelerated returns from those companies which had submitted *'misleading'* returns for 1997. The FSA's Chairman later agreed to this recommended approach.

88 On 13 January 1999, the FSA wrote to all insurance companies to express their concern that the regulatory returns of some companies might have presented *'a materially misleading impression of companies' financial positions as at the end of 1997'*. The FSA stated that:

> *Where there was a material effect on the overall financial position shown in the 1997 returns, and where the company has not subsequently taken commensurate action to strengthen its financial position, it is the FSA's view that it would be appropriate for such companies to submit their 1998 returns early – and in any case not later than 31 March – so that the FSA and potential policyholders and their advisers can form a proper view of these companies' financial position.*

89 On the same day, the Government Actuary issued guidance to all Appointed Actuaries, reminding them of the need to make proper provision for guaranteed annuity rate liabilities on prudent assumptions.

90 On 15 January 1999, in response to complaints from some of their policyholders about the legitimacy of their differential terminal bonus policy, Equitable initiated legal proceedings against a representative guaranteed annuity rate policyholder, Mr Hyman, so that the arguments for and against their differential terminal bonus policy could be put before – and be resolved by – the courts.

91 On 18 January 1999, the FSA asked Equitable for more information about their mathematical reserves and aggregate asset shares as at the 1998 year-end. On 21 January 1999, Equitable's Chief Executive told the FSA that the Society planned to declare a 5% annual reversionary bonus (down from 6.5% for 1997).

92 The Chief Executive said that the Society had *'entered into a financial reinsurance arrangement with effect from 31 December 1998'*, at a cost of £150,000 each year. It was said that this arrangement would provide support to Equitable when those holding more than 25% by value of the guaranteed annuity rate business maturing in that year selected to take benefits applying a guaranteed annuity rate.

93 On 22 January 1999, FSA noted that Equitable were one of four companies giving cause for concern, and that it was questionable whether the Society would be able to declare a bonus that year. Based on the GAD estimate, it was also noted that the Society, without reinsurance, was only just covering the required minimum margin at the end of October 1998, with £1,150 million available assets to cover a regulatory solvency margin of just under £1,000 million.

94 The FSA noted that, should the court case go against the Society, *'its financial position would become even more precarious (there would be a potential liability to enhance past settled claims) and it would have to reduce the level of terminal bonus paid to its other policyholders – thus upsetting its status in the market'*.

95 On 26 January 1999, Equitable provided the information that the FSA had requested on 18 January 1999. The Society's Appointed Actuary informed the FSA that the *'aggregate smoothed asset share was 103% of the value of the actual assets attributable to the with profits business'*. The FSA responded by asking for further information, including sight of any bonus recommendations made to the Board during the previous year.

96 On the same day, the FSA decided that it would not continue earlier efforts to reach a view on policyholders' reasonable expectations until after the conclusion of the court case as, although that case would not preclude the FSA from taking a view on whether the Society's policy had been consistent with policyholders' reasonable expectations and as to the possible need for intervention, the Court's judgment on whether or not such expectations had been met would be sure to influence the FSA's view on those matters.

97 On 27 January 1999, GAD raised a number of concerns with the FSA about Equitable's proposed reinsurance arrangement, including the fact that the draft reinsurance agreement could be cancelled retroactively, if the Society changed its practice on guaranteed annuity rates (which GAD presumed included Equitable losing their court case).

98 At a meeting between Equitable, GAD and the FSA the next day to discuss the matter, the Society was asked to seek various revisions of the draft agreement from the reinsurer. The FSA also questioned at that meeting whether the Society was satisfied that the proposed reinsurer was sufficiently strong to be able to fulfil the obligations under that treaty *'(i.e. to cover a potential £1bn+ liability)'*. The FSA recorded that the Society's response to their questioning indicated that:

> *Equitable Life appeared to be relying on the company's AAA rating for comfort as to the reinsurer's financial strength. The Actuary was reminded that it was his responsibility to be satisfied with the security of the reinsurance for which he was* [taking] *credit in his valuation.*

99 How the reinsurance treaty could be presented in the returns was also discussed at that meeting. The Society's Appointed Actuary said that he was keen not to have to show a reserve for the annuity guarantees of more than £1,000 million, as he thought that the press would wrongly interpret such a figure as representing the real cost to Equitable. The Appointed Actuary also said that instead he would like to show the reserve net of reinsurance – while including a statement that *'the reserve had been established at the 25% level because reinsurance provided protection for liabilities in excess of that level'*.

100 The response from the FSA and GAD to this suggestion was that:

> *GAD were concerned that this was not consistent with the Directive requirements which required insurers to calculate their gross liabilities and then deduct the liabilities covered by reinsurance. It was also potentially inconsistent with the guidance issued by the* [Government Actuary] *and endorsed by FSA. It was emphasised that FSA's main concern was that the reserving basis should be clear from the annual returns. FSA would explore the implications of the presentation Equitable Life were seeking to adopt before expressing a definitive view on the issue.*

The FSA's note of the meeting also records the comment that:

> *... having reviewed the structure of the relevant forms, it is clear that any presentation which did not show separately the gross liability and reinsurance cover would be artificial and hence potentially misleading. In view of the significance of the reinsurance treaty to the company's solvency position it was important that the level of dependence on the reinsurance was clear to readers of the returns.*

101 On 29 January 1999, GAD commented on the Board papers that the Society had forwarded in respect of its proposed bonus declaration. GAD said that, while the financial position shown was likely to appear reasonably satisfactory, Equitable *'would be potentially close to regulatory action under Section 33* [of the 1982 Act – that is, for failure to maintain the required minimum margin of solvency] *if their proposed reinsurance is not completed satisfactorily'*.

102 GAD noted that, while it would be difficult for the FSA to object formally to what Equitable were proposing, the prudential regulators would need to monitor the Society's position carefully.

103 GAD commented that both GAD and the FSA should voice their concerns to Equitable about the Society's vulnerability and ask Equitable to produce some contingency plans to show how they would react to adverse investment conditions. GAD also pointed out that the Society continued to issue annual notices to policyholders showing a high level of projected benefits, thereby generating further expectations.

February 1999

104 On 1 February 1999, the FSA wrote to Equitable on the lines suggested by GAD, underlining the fact that, in the absence of a robust reinsurance agreement, it would not be prudent to declare any bonus for 1998. The FSA advised the Society that, even with a reinsurance treaty in place:

> *... we consider it necessary for the company to consider carefully the scope for declaring a bonus because of the uncertainties surrounding the financial implications of the court case in relation to the company's payment practice in respect of contracts carrying guaranteed annuity options. In*

particular it would appear necessary for Equitable Life to consider the prudence of declaring a bonus in the light of the risk of losing the court case and the potential costs that might be incurred as a result. We also consider it necessary for the company to take account of the risk, even after the terms of the reinsurance treaty have been revised as discussed with GAD, of the treaty being cancelled by the insurer ...

The FSA concluded that, were the reinsurance agreement to be revised to resolve GAD's concerns, the FSA would not be minded to object to the Society's proposed bonus declaration. Two weeks later, the Society sent the FSA a copy of the revised draft reinsurance terms, which led to both the FSA and GAD raising further matters regarding those draft terms.

105 On 22 February 1999, GAD confirmed to Equitable that the principle whereby the reinsurance arrangement offset the guaranteed annuity rate liabilities, as set out in the terms of the agreement, was acceptable to GAD. This was, however, subject to the resolution of GAD's outstanding queries and sight of a final version of the agreement.

106 On 24 February 1999, however, the FSA raised a concern of a different nature with the Society, that being:

... we think that the returns might have given potential policyholders a misleading impression as to Equitable Life's financial position at the end of 1997. You indicate that there would have been a net decrease in the coverage of the required minimum margin from 2.5 to 2 times after allowing for the use of margins which existed in the valuation basis and taking account of a much larger future profits implicit item. We consider that such a decrease is material and that some account must be taken for the greater reliance on implicit items that would have been necessary (and apparent in the returns) if a further reduction in the solvency margin coverage was to be avoided.

Equitable were asked to agree by 3 March 1999 to submit their 1998 returns by 31 March 1999 or face possible regulatory action.[16]

March 1999

107 Equitable were not specifically mentioned at the first quarterly liaison meeting between the Treasury and the FSA on 10 March 1999. The following week, the relevant FSA Managing Director informed the FSA Board about the Society's particular difficulties.

108 On 19 March 1999, the FSA summarised in an internal note the position of the six companies identified as being potentially at risk from guaranteed annuity rates and whose statutory solvency could be threatened, if economic conditions were to deteriorate further. Of those six companies, it was said that Equitable were viewed as giving rise to the greatest concern, as their financial position had been very severely affected.

109 The FSA recorded that, despite action which had been taken to restore the Society's solvency margin to a more acceptable level, the FSA remained *'concerned about the financial viability of the company in the longer term'*, and they set out their particular concerns. The FSA also noted that the position might worsen if Equitable lost the *Hyman* case and incurred significant compensation costs as a result.

[16]The public bodies told me that the FSA had taken the same action in respect of several other life assurance companies which had not reserved appropriately for guaranteed annuity rate policies.

110 The Society submitted its 1998 regulatory returns on 30 March 1999, as the FSA had requested. A detailed description of the content of those returns is contained within the chronology entry for that date within Part 3 of this report. On the same day, the Society applied for a section 68 Order for the use of a future profits implicit item of £1,000 million within the Society's returns for 31 December 1999. Equitable had included a future profits implicit item of £850 million within their 1998 returns.

April 1999

111 On 8 April 1999, GAD completed the A2 Initial Scutiny check. GAD's scrutinising actuary's observations during that check included that:

(1) *We still need to be satisfied that* [the reinsurance] *treaty with* [IRECO] *works in the way intended — REQUEST COPY OF TREATY as finally agreed.*

(2) *Loss of the Court case on treatment of* [Guaranteed] *Annuities would put position in doubt – would need to cut all bonuses.*

112 On 9 April 1999, GAD reported to the FSA the results of their initial scrutiny of the Society's 1998 returns, saying that the Society's financial position appeared satisfactory, but that GAD had not yet seen a copy of the finalised reinsurance treaty. GAD asked the FSA to request it urgently, which the FSA did.

113 On 20 April 1999, Equitable told the FSA that the reinsurance treaty had not yet been concluded, and the Society sent a copy of the term sheet which would form its basis. That term sheet showed that the reinsurance treaty remained contingent on no change being made to the Society's then current guaranteed annuity rate bonus practice, either by choice or as a result of legal action; and that, if the withheld claims balance exceeded £100 million, negotiations would take place to find a mutually acceptable restructuring of the agreement.

114 The Society also enclosed a copy of a paper prepared by the Appointed Actuary for its Board on measures to protect the Society's statutory solvency position. One issue that the paper discussed, but could offer no solution to, was how the Society might use policy conditions to restrict the growth in its guaranteed annuity rate business. The paper concluded with a list of measures which, it was said, it seemed sensible to pursue.

115 Commenting on those measures on 27 April 1999, GAD said that they seemed *'fairly plausible'*, but could ultimately reduce the Society's investment returns. GAD said that they were also content with the level to which any future repayment premiums under the reinsurance treaty had been subordinated to policyholders' rights.

116 Meanwhile, on 30 April 1999 Equitable had written to the then Economic Secretary of the Treasury, complaining about the level to which the Society was being required by the FSA and GAD to reserve for guaranteed annuity rates. She replied on 14 June 1999, defending the position which had been taken by the prudential regulators, saying that:

> *... companies have to err on the side of underestimating the value of their assets' future income and overestimating their liabilities. In this way it is ensured companies have some spare capacity to withstand adverse economic circumstances. The determination of how conservative the assumptions should be has been derived from past experience and is embodied in guidance to appointed actuaries.*

May 1999

117 On 4 May 1999, Equitable provided a further paper on the Society's projected solvency position. That paper showed three different scenarios, each based on different assumptions as to developments in the investment markets.

118 All three scenarios showed the Society remaining solvent and the position steadily improving. Equitable had attempted to project the impact of losing the court case, although it was said that this had been difficult to do, as there were a number of varying components. In the Society's view, however, the key solvency consideration, if an unfavourable outcome occurred, was the replacement or modification of the reinsurance arrangement, which was being actively pursued.

119 On 20 May 1999, GAD provided the FSA with a detailed scrutiny report on the Society's 1997 and 1998 regulatory returns; this gave Equitable a priority rating of 2 (raised from 3 in respect of their 1996 returns). A detailed description of that report is contained within the chronology entry for that date within Part 3 of this report.

120 GAD highlighted a number of problem areas, but concluded that, because of the way that the Society operated, *'provided the currently high level of annual emerging surplus continues, the Society should be able to work its way out of its current solvency margin problems'*. The Society, in GAD's view, needed to hold back more emerging surplus by declaring lower guaranteed bonuses; and to give policyholders greater warning about the possible implications for bonuses of a substantial market setback.

121 The following day, GAD suggested to the FSA that the Society should be asked to consider further possible scenarios – and to confirm the basis of some of those calculations.

June 1999

122 In the meantime, both the FSA and Equitable had been considering the possible outcome scenarios in respect of the Society's court case and the resulting implications of those scenarios. On 21 June 1999, the Society informed the FSA that its lawyers had identified six possible scenarios, which were:

1) *Complete success.*

2) *Success but with some adverse comment in* [the] *judgement.*

3) *Directors have discretion but have incorrectly executed it on technical grounds (for example, the wording of the formal statement of bonuses is inadequate in some way).*

4) *Directors have discretion but have not given sufficient weight to or considered the right PRE.*

5) *Ruling that ELAS approach invalid and that final bonus rates on cash and annuity benefits must be equal but that Board still have discretion to set rates at a level they deem appropriate. Even if the Society appeals, the judgement stands until that appeal is heard.*

6) *Ruling that ELAS approach invalid and that final bonus rates on cash and annuity benefits must be equal due to PRE it must be at the cash levels. Appeal certain but judgement will stand until that appeal is heard.*

Equitable said that they considered all of them except for scenarios 1 and 2 to be highly unlikely. Nevertheless, Equitable confirmed that they had been discussing with IRECO possible amendments to the reinsurance agreement, and had been discussing other possible arrangements with other reinsurers. The next day, the FSA and GAD reviewed the court papers which had been provided by the Society.

123 On 24 June 1999, the FSA asked the conduct of business regulators if they had any jurisdiction over the bonus notices issued to policyholders, and whether those regulators could require Equitable to change those notices. The FSA sent the conduct of business regulators copies of the 1996 and 1997 notices, which the FSA said were possibly misleading, and said that they would forward the 1998 notice to those regulators the following week.

124 On 25 June 1999, prompted by concerns expressed by GAD on the likely consequences if the court referred the issue of policyholders' reasonable expectations to the prudential regulators, the FSA prepared a paper on the action that they might need to take if the court did not give a clear view on how policyholders' reasonable expectations might be viewed.

125 The FSA noted that they saw no point in reaching a view ahead of the court judgment, but also said that they would do some more work on the issue, so as to be ready to give a view shortly afterwards.

126 The FSA added that the Society's bonus notices, which seemed to give policyholders unrealistically high expectations of the pay-outs they could expect, were currently the main evidence in support of the argument that the Society's approach had not been consistent with the reasonable expectations of its policyholders.

127 The FSA stated that:

> *Even in the context of non-GAO policies the notices appear liable to lead policyholders to have potentially unrealistically high expectations of their total payouts because of the prominence given to the total accumulated benefits figure which includes undeclared terminal bonus. The format of bonus notices is something we have raised with Equitable previously (before the GAO issue arose) but we never made any progress in obtaining changes.*

128 On 29 June 1999, Equitable met GAD and the FSA to discuss further information that the Society had provided and also developments in relation to the court case. Equitable said that their lawyers considered it very likely that the Society would win the court action but with some adverse comment. Equitable also said that those lawyers considered the worst case scenario (wherein bonus rates for both the cash fund option and annuities had to be equalised at the highest cash level) to be '*inconceivable*'[17].

129 The FSA pointed out that, even if Equitable won, the FSA would still need to consider whether the Society's bonus policy had been consistent with policyholders' reasonable expectations; the FSA also said that they had concerns about the information contained within the Society's bonus notices, but that the FSA had not yet reached a view as to whether that information had been misleading.

[17] At interview with the FSA's Baird Inquiry, Chief Counsel A said that she had provided oral advice to the regulators and GAD on the likely outcome of *Hyman* following a meeting with Equitable. The Baird Report stated that it was believed that this advice was provided after this meeting. In response to the view put forward by Equitable at the meeting (that the outcome of the case was likely to be positive for them), Chief Counsel A cautioned that: '*You can never predict judicial outcomes ... If Equitable get the wrong panel or the wrong judge, they could find themselves on the receiving end of a change in judicial approach. The Court ... might not like what the Equitable has done and might be influenced for that reason. Don't jump to conclusions on this.*' (See the entry for 29 June 1999 within Part 3 of this report.)

130 The Society insisted that its practice of paying out as much as possible in bonuses and in not building up any hidden estate offered the best value to policyholders, as well as being a useful deterrent against predators. Equitable said that they had been approached by a number of suitors, but that Equitable had always replied that the Society was committed to mutuality.

131 The impact of each presumed potential court ruling on the reinsurance treaty was also discussed at that meeting. Equitable's Chief Executive told the FSA and GAD that he believed that the reinsurance treaty would remain in place if the court ruling fell within scenarios 1 to 4. He also informed the FSA and GAD that:

> *As a contingency against losing the case the company had been in discussion with reinsurers about increasing the scope of reinsurance cover.* [A named reinsurance company] *had been prepared to offer a form of surplus relief reinsurance and even offered to take over the company's existing reinsurance with* [IRECO]. *However at the eleventh hour* [the company's] *Head Office backed off from the proposal claiming "capacity problems".*
>
> *Following this the company had decided to wait until the outcome of the Court case before talking to other reinsurers, they did not want to tout around the reinsurance market at such a sensitive time.* [Equitable's Chief Executive] *believed that there was room to extend the scope of the existing reinsurance contract if Equitable were to lose the case and that premium rates would be practical and consistent with the existing treaty ...*

July and August 1999

132 The High Court hearing began on 5 July 1999, and on the same day the FSA Managing Director with responsibility for Equitable was sent a note (which was also copied to the conduct of business regulators) about that legal action and about the implications both for Equitable and the FSA, in terms of any follow-up action which might be required.

133 The FSA's note set out the implications of three possible outcomes: Equitable winning, winning in part, and losing the case. In the last scenario, the FSA noted that the reinsurance arrangement would then be invalid, although the Society had established that there would then be scope for replacing it; should that not be possible, the FSA noted that Equitable would only just cover the required minimum solvency margin after taking full account of the future profits implicit item available to the Society. The FSA also noted that Equitable would need to consider drastic measures, which might precipitate a take-over bid or a reduction in new business.

134 The note continued by stating that the FSA would then need to determine the Society's solvency position and, if the required minimum margin were breached, to exercise intervention powers to require the production of a plan for the restoration of a sound financial position.

135 Even if the solvency margin were not breached, the note said that the FSA would require steps to be taken to strengthen the position in the short to medium term. It was noted that there would also be the question, if there were a significant risk that Equitable would be unable to meet their liabilities to policyholders, as to whether to close the company to new business or to suspend their authorisation.

September and October 1999

136 On 9 September 1999, the High Court ruled that Equitable had been entitled to operate their differential terminal bonus policy. However, the claimant was given leave to appeal. GAD told the FSA that they could see nothing in the judgment which was inconsistent with the guidance that had been issued by the prudential regulators on that subject, although GAD suggested that the FSA might need to consider intervening in respect of those policyholders whose expectations might not have been met.

137 The FSA's legal advisers also pointed out various issues arising for the FSA, which related to policyholders' reasonable expectations. However, those advisers noted that the FSA had decided to defer a decision on taking such action until the appeal had been concluded.

138 On 15 September 1999, the FSA's prudential regulation division suggested to the FSA's conduct of business division that both divisions needed together to consider the matter from the perspective of all the FSA constituent bodies, but should not decide on any action until the Court of Appeal's decision was known.

139 If the High Court judgment were overturned, the FSA noted that it would be possible that intervention action would be warranted under the 1982 Act, and that they wanted to avoid any action which might constrain or prejudice such action. The FSA noted that they should consider the matter further in the light of analysis that they had agreed should be undertaken while the appeal was still pending.

140 On 20 September 1999, the FSA contacted Equitable to arrange a company visit. The FSA said that they were:

> *... very conscious that although we have had a considerable amount of contact over the past year, this has necessarily been heavily focussed on the guaranteed annuities issue. I think that while this issue is somewhat in abeyance, and given that it is nearly 3 years since we last visited you, now would be an opportune moment for a visit to discuss the Society's overall position and future plans.*

The FSA expected that the visit would last a day, would involve both the FSA and GAD, and would cover the following areas:

1. *Overview of corporate management structure of Equitable Group.*

2. *General market outlook and business strategy.*

3. *Marketing approach including product development and distribution.*

4. *Role of the Appointed Actuary.*

5. *Systems and Controls.*

6. *Investment Policy and Asset Management.*

141 On 23 September 1999, the FSA's conduct of business division responsible for regulating Personal Investment Authority member firms (such as the Society) wrote to their prudential regulation colleagues within the FSA about the Society's bonus notices which had been referred to them.

142 The conduct of business regulators said that they did not consider the Society's bonus notice to be poorly presented or inaccurate and that they did not therefore intend to take any regulatory action. The conduct of business regulators went on to say that, historically, they had not regarded post-sales literature as being within their remit and would,

therefore, have had to have serious concerns about a document before taking action against a company.

143 On 24 September 1999, GAD advised the FSA that the Society's application of 30 March 1999 for a future profits implicit item of £1,000 million was acceptable. GAD confirmed that the calculations which had been provided by the Society's Appointed Actuary were *'in line with the guidance and that the* [figure for the maximum amount of future profits that could be claimed] *of £2,960m appears to be a fair estimate of 50% of "Estimated Future Profits"'.*

144 GAD also noted that the sum applied for was about one third of the sum for which the Society could have applied, and was substantially less than it had been allowed in the previous year. However, GAD said that Equitable should first be asked to confirm certain details and should be asked to provide a copy of the reinsurance agreement as that had been finally signed (which Equitable subsequently provided and GAD confirmed as acceptable[18]).

145 The FSA subsequently[19] recommended to its Insurance Supervisory Committee that the application should be granted. The FSA informed the Committee that, while there remained some debate at the margins between Equitable and GAD about the appropriate reserves for guaranteed annuity rates, the FSA were generally satisfied that Equitable had adequately reserved for their exposure to those rates, as that had *'been largely offset'* through reinsurance. The Committee approved the application and the Treasury issued the Order on 9 November 1999.

146 In the meantime, on 14 October 1999 Equitable sent the FSA a copy of the final signed version of the reinsurance treaty. On 22 October 1999, GAD advised the FSA that the treaty:

> *... is totally in accord with the Draft Term Sheet that was examined in detail in April. (It is my understanding that the construction of the reinsurance agreement as set out in the draft term sheet was considered to be acceptable at that time).*

November and December 1999

147 On 17 November 1999, the FSA prepared a risk assessment of Equitable, as part of piloting a new approach to company assessment. That assessment suggested that Equitable should be viewed as a high financial risk for a number of reasons.

148 The assessment noted that, while Equitable had not been alone in being caught out by the guaranteed annuity rate issue, the FSA's view was that the Society had not woken up to that issue quickly enough, and communication to policyholders of the Society's change in policy in relation to bonuses was decidedly unclear and had left Equitable open to criticism.

149 The assessment observed that Equitable had *'gone too far in distributing surplus to policyholders to the extent that the company is dangerously under capitalised and exposed to a market downturn'*. However, it was noted that Equitable had taken heed of concerns about the level of reversionary bonuses and had made some effort to reduce them. It was also noted that the Society's reserving basis was *'acceptable (but not particularly strong)'*. The overall assessment prepared as part of the FSA's co-ordinated supervisory programme confirmed Equitable as medium to high risk.

---

[18] See the entries for 14 and 22 October 1999 within Part 3 of this report.
[19] See the entry for 3 November 1999 within Part 3 of this report.

150 On 6 December 1999, the FSA and GAD carried out a company visit to Equitable. The areas discussed included: the Society's corporate structure; its business plan; and its intentions with regard to bonuses.

151 On 20 December 1999, the FSA informed Equitable that the FSA had introduced a system of 'enhanced lead supervision'. The FSA explained that, under those arrangements, a lead supervisor would be nominated for each company (which, in its case, would be the prudential line supervisor for the Society) and that that lead supervisor would be responsible for maintaining an overall assessment of the Society and for producing a co-ordinated supervisory plan, with the aim of avoiding any regulatory *'overlap and underlap'*.

January 2000

152 On 21 January 2000, the Court of Appeal gave judgment against Equitable by a majority of two to one. One of the majority judges, however, went on to say, at the end of his judgment and in an observation which did not form part of his reasoned decision, that it would be legitimate, in his view, for the Society effectively to 'ring-fence' funds relating to different types of policyholder, which could result in those policyholders with guaranteed annuity rates not doing much better in cash terms.

153 The Society was granted leave to appeal to the House of Lords and was permitted by the Court in the interim to continue its differential terminal bonus policy pending the appeal, so long as Equitable gave an assurance that, if the Court of Appeal's decision were to be upheld, the Society would pay additional sums in respect of any policy maturing after the Court of Appeal's judgment by way of rectification.

154 On the same day, GAD told the FSA that the judgment meant that most of the advice in the guidance note issued by the Treasury on 18 December 1998 remained valid. GAD suggested that the extra costs to Equitable might be fairly marginal, but that the Society should be asked to confirm that the judgment did not affect its reinsurance agreement.

155 The FSA told their conduct of business colleagues that the judgment gave no cause for panic. The FSA, while noting that the adverse publicity was likely to dent the Society's sales, told those colleagues that the Society's reserving requirement would not be affected by the judgment – and so Equitable's financial position for regulatory purposes would be largely unaltered.

156 On 28 January 2000, the FSA prepared a note setting out the implications for the insurance industry if the House of Lords were to uphold the Court of Appeal's judgment. The FSA said that, although the Society would need to revise its bonus policy for future years, the new approach need not lead to any significant additional costs for it.

157 On 31 January 2000, an FSA legal adviser circulated a summary of the judgment, commenting that each of the four judges who had at that stage considered the case (the High Court judge and the three Court of Appeal judges) had arrived at their respective conclusions for different reasons.

158 The FSA legal adviser said that, in that context, it was not possible to predict what the decision of the House of Lords would be, and any attempt to do so, or to determine the implications of the Court of Appeal's decision, would therefore be of little benefit. Over the subsequent months, discussions continued internally about the wider implications more generally of the judgment for policyholders' reasonable expectations.

February to May 2000

159 On 1 February 2000, Equitable had written to policyholders, assuring them that there would be no significant costs for the Society if the House of Lords were to uphold the Court of Appeal's decision.

160 On 22 March 2000, Equitable published their Companies Act report and accounts for 1999[20] and declared a bonus of 5%. In that report and accounts, the Society explained that any additional costs resulting from the guaranteed annuity rate issue would fall generally on the with-profits fund. Equitable reported that:

> *We have projected that the cost of these additional benefits is unlikely to exceed £50 million in total over the coming years, and the experience in 1998 and 1999 was well within our expectations. However, for accounting purposes we have established a provision of £200 million in our balance sheet, to provide an allowance for more extreme future changes in financial conditions and mortality experience which could lead to more policyholders taking benefits in the guaranteed annuity form.*

Equitable also set out the background to the *Hyman* litigation and the progress up to that date, saying that the Society expected the House of Lords' hearing to be in June 2000 and that the judgment would follow shortly thereafter.

161 On 30 March 2000, Equitable applied for a section 68 Order to raise the limit on the amount of shareholdings in a particular company that could be taken into account within the Society's 1999 returns. On 10 April 2000, the FSA's Insurance Supervisory Committee confirmed that such an Order could not be granted retrospectively. The FSA informed the Society of their decision, and the reason for it.

June and July 2000

162 On 27 June 2000, Equitable applied for a section 68 Order for a future profits implicit item of £1,100 million, for use in their 2000 returns. On 30 June 2000, Equitable submitted their regulatory returns for 1999. A detailed description of those returns is contained in the chronology entry for that date within Part 3 of this report.

163 On 7 July 2000, GAD recommended to the FSA that the Society's application for a future profits implicit item should be granted on the grounds that there was a significant margin between the sum applied for and the maximum for which Equitable could have applied (£3,300 million). GAD also noted that the Society's Appointed Actuary had confirmed that he had taken account of the reinsurance agreement in determining the value of future profits.

164 In the meantime, on 4 July 2000 the FSA's relevant Managing Director told his senior colleagues that one of the Society's directors had approached him to say that there were *'straws in the wind'* that the House of Lords would find against Equitable – and that the Society was considering *'what level of sacrifice'* might be needed at the top of the organisation if that proved right.

165 On 18 July 2000, the FSA and GAD met with Equitable to discuss contingency planning for the House of Lords' judgment, which was due to be delivered two days later. The Society expressed the view that it was unlikely that the House of Lords would find against it, but nevertheless the meeting discussed the possibility that Equitable might be prevented from altering the rate of bonus for those with policies containing guaranteed annuity rates and who chose to take benefits to which those rates were applied.

[20] See the entry for 30 June 2000 within Part 3 of this report.

166 Whilst this had previously been identified as a possible (but not a probable) outcome, it was noted that this outcome was beginning to appear more likely, in the light of the arguments which had been put forward for the first time before the House of Lords. It was stated that the cost of that outcome (referred to as the third option) would be in the region of £1,000 to £1,500 million, and would have a profound effect on the Society's regulatory solvency position.

167 Equitable informed the FSA and GAD at the meeting that the Society had not attempted to renegotiate the reinsurance agreement to take account of such a ruling and that such renegotiation was unlikely to be viable.

168 In the event of such a ruling, the Society said that it would immediately announce an intention to seek a partner. The Appointed Actuary said that he *'did not think that the company would be insolvent if the company suffered this judgement, but he was currently conducting some scenario modelling'*.

169 Equitable's Chief Executive said that he was keen to avoid precipitous regulatory action should the judgment go against the Society, mainly because that was likely to have a detrimental effect on the value of the business. The FSA's Head of Life Insurance:

> *... reassured the Society that we would not rush to take remedial action in these circumstances and understood the importance of maintaining the value of the society. We would, however, need to be convinced that a suitable buyer for the Society was likely to be found quickly.*

Equitable envisaged that substantive sales negotiations could begin in August 2000, with the view to completing a sale by the end of that year. Equitable said that, if the House of Lords simply upheld the Court of Appeal's decision, the Society expected to reduce the bonuses payable to guaranteed annuity rate policyholders as a class; they did not consider that this would contravene any such judgment.

170 On 19 July 2000, the FSA prepared a note, which was effectively an update of earlier scenario planning, setting out the possible outcomes of the appeal, and the regulatory action that was likely to be appropriate in each case. The note recognised the third option as a possibility, but it was said that this was much less likely than the other two potential outcomes. The FSA noted that, should that third option become a reality, Equitable would only just be able to meet their required minimum margin and would therefore seek a partner. The FSA's note concluded that it was expected that there would be no shortage of potential partners.

171 On 20 July 2000, the House of Lords gave its decision, holding, in terms of both the guaranteed annuity rate policy contracts and the Society's Articles of Association, that Equitable could not apply different rates of bonus depending on whether or not the policyholder took benefits based on guaranteed annuity rates, and that the Society could not pay lower bonuses to guaranteed annuity rate policyholders as a class.

172 Equitable immediately announced that they were seeking a buyer, and told the FSA that the Society planned an immediate cut of 5% in the value of all with-profits policies at non-contractual termination and that no bonus would be allotted for the first seven months of 2000. The Society said that it expected bonus levels to be restored once a sale had been completed.

Events leading to closure

July 2000

173 On 21 July 2000, Treasury officials informed the FSA that it was likely that those officials would be asked by their Ministers for briefing on the situation regarding Equitable. The Treasury said that the decision of the House of Lords had prompted thoughts on the wider implications for the future development of the life insurance sector and the effectiveness of the regulatory system. The Treasury set out a number of key questions to be considered by the FSA, as part of preparing their input to such briefing. Those questions included whether the FSA now considered that they ought to have done more to prevent the situation from arising.

174 On 24 July 2000, the FSA told GAD that, in their view, the House of Lords' judgment had no implications for the life insurance industry as a whole, because companies had generally been required to reserve fully for the liabilities associated with those policies containing guaranteed annuity rates, with the same level of reserve being needed whether or not a differential terminal bonus policy was being applied.

175 The FSA said that the impact would be different on Equitable because the *Hyman* judgment had led to a reduction in the Society's assets, rather than an increase in its liabilities, because the reinsurance agreement had fallen away as a result of that judgment.

176 GAD replied, confirming the FSA's analysis. GAD said that:

> *Equitable was unique in the form of reassurance that it entered into, with its cancellation clause. In retrospect the Actuary is shown to have acted imprudently in taking credit for the reassurance. No doubt he was relying upon the Board's view, based upon legal advice, that they were unlikely to have to change their bonus policy.*

177 In an internal minute, the FSA commented that, while a sale could not be regarded as an absolute certainty, *'it must be close to 99.9%'*. The FSA also circulated an action plan, under which the FSA would:

- obtain confirmation as to the Society's regulatory solvency position and review projections of future solvency;
- review the reserving guidance which had been issued by the Treasury in 1998;
- ask other companies what implications they saw for themselves; and
- arrange discussions with the Society about the bidding process.

178 On 26 July 2000, the Society announced the changes to its bonus rates, but added that, through the sale, Equitable would be looking to secure funds to make good the lost growth. On the same day, the Society's Appointed Actuary also wrote to the FSA, setting out the company's solvency position. The Appointed Actuary said that:

> *On a continuing basis the position would be unacceptably weak. However, as you said last week, we have effectively implemented a plan to strengthen the position by taking the course of action which we have. Meanwhile I believe it is reasonable to regard the Society as continuing to meet its required minimum margin.*

179 Also on 26 July 2000, the FSA replied to the Treasury's questions. On the matter of whether the guidance that the prudential regulators had issued on meeting the cost of the liabilities associated with guaranteed annuity rates had been right, the FSA said that it would have been difficult for any guidance to be consistent with the full range of Court judgments which had been made. If the FSA had been wrong, then, it was said, so too had the actuarial profession – since the Faculty and Institute of Actuaries had gone on record as saying that the actuarial profession had fully supported the guidance.

180 The FSA said that they were not convinced that either the Treasury or the FSA could or should have pushed the Society to alter its differential terminal bonus policy; and that the Society's policy *'was not clearly unlawful'*, as had been demonstrated by the first judgment and by the fact that the Court of Appeal had found against Equitable only by a majority.

181 The FSA told the Treasury that:

> *The FSA did ensure that Equitable set up adequate reserves to cover their GAO exposure. As a result Equitable decided to enter into the reinsurance treaty in order to avoid having to take alternative courses of action that they considered to be against their policyholders' interests.*

The FSA also informed the Treasury that:

> *Equitable had been told that if the court upheld their practice, we would nevertheless consider whether PRE had been breached and whether intervention was appropriate. Obviously FSA's consideration of this issue was suspended whilst the matter was before the courts.*

August and September 2000

182 On 11 August 2000, the FSA and GAD met Equitable to discuss the regulatory aspects of the sale process. On 24 August 2000, the prudential and conduct of business divisions within the FSA met to discuss the implications of the *Hyman* judgment. The FSA's prudential division said that it was hoped that a buyer would be identified by December 2000, and that the process could be completed by June 2001.

183 The FSA's note of that meeting said that:

> *It was clarified that the judgment generally did not have solvency implications as the level of reserving had not been affected (it was just that some companies would experience higher real costs). Equitable Life had only experienced a weakening in its financial position because the reinsurance it held for* [guaranteed annuity rates] *had been terminated (because it was conditional on the company continuing to pay differential terminal bonuses).*

184 On 1 September 2000, the Society submitted an update of its estimated solvency position (showing the position as at 31 July 2000), which showed that Equitable had available assets of £2,500 million to cover the required minimum margin of £1,200 million.

185 On the same day, the FSA recommended to their Insurance Supervisory Committee that they should grant the Society's application for a future profits implicit item of £1,100 million. The FSA said that, although Equitable had been weakened as a result of the *Hyman* judgment, the Society was still solvent. The FSA noted that Equitable was seeking only a third of the sum to which they were entitled, and that the relevant calculation had been checked by GAD.

186 As a result, on 11 September 2000 the FSA's Head of Life Insurance and Chairman of their Insurance Supervisory Committee told members of that Committee, by e-mail, that the Society's section 68 application involved a *'fairly standard request'* for a concession for a future profits implicit item.

187 The FSA recommendation made clear that the Society's request was well within normal parameters, and no difficulty was envisaged in agreeing to the recommendation. The Head of Life Insurance added, however, that the implicit item was an important aspect of Equitable's overall financial position and that, given the Society's high profile at that time, he imagined that some members might wish to discuss the paper.

188 One member of the FSA Insurance Supervisory Committee responded that:

> *... the amount of the implicit item actually shown in Form 9 for the December 2000 return cannot exceed the amount that could be supported by a new application submitted with that return and bringing in the financial performance of the company in 2000. We expect a sharp fall in surplus in 2000 because of the* [House of Lords'] *judgment and this will need to be brought in to the figures ... In practice, the company may not actually be able to use the figure that we agree now.*

189 The FSA's Committee approved the application on 11 September 2000 without meeting and, on 13 September 2000, the Treasury issued a section 68 Order. At their quarterly meeting with the FSA the following week, the Treasury pointed out that Equitable were still advertising for new business. The FSA responded to this point by stating that the Society's recent difficulties *'have not affected its solvency position, only its freedom to invest'.*

190 On 21 September 2000, the FSA's relevant Managing Director told the FSA Board that the House of Lords had gone much further than the previous court rulings in that case, in that the House of Lords had held that Equitable could not 'ring-fence' guaranteed annuity rate business from other with-profits business, for the purposes of setting terminal bonus.

191 The extra costs of the guaranteed annuity rates therefore had to be spread amongst all policyholders in the with-profits fund. This, he said, had potentially serious implications for the reasonable expectations of the other with-profits policyholders of the Society.

192 On the same day, GAD informed the FSA that they had no questions to raise about the Society's regulatory solvency at that time, although GAD pointed out that, without the future profits implicit item, Equitable would have excess assets of *'just £300m'.*

October 2000

193 On 9 October 2000, the Society informed the FSA that, as at 31 August 2000, Equitable had available assets estimated to be £3,360 million to cover the required minimum margin of £1,195 million. Equitable said that this significant improvement from the July 2000 position had been due to the markets having strengthened in the interim.

194 Meanwhile, since Equitable had announced in July 2000 that they were seeking a buyer, a number of potential bidders had expressed interest and had been assessing the Society's financial position. A number of those had since withdrawn.

195 In a report to the FSA Board on 19 October 2000, the relevant FSA Managing Director said that, despite the difficulties in assessing the level of liability arising from the *Hyman* judgment, Equitable had received three serious expressions of interest – all of which would be sufficient to enable the repayment of the bonuses which had been withheld for the first seven months of that year, with an additional payment for goodwill. However, he also said that the FSA would need to see the detailed bids and their structure to determine whether the with-profits fund would, as a result, be strong enough to secure the desired restoration of investment freedom going forward.

196 On 30 October 2000, Equitable provided solvency figures which showed that, as at the end of September 2000, the Society had available assets estimated to be £2,345 million to cover the required minimum margin of £1,205 million.

197 On 31 October 2000, a potential bidder for Equitable (whom in this report I call bidder A) told the FSA that they believed that the shortfall in the Society's funds was greater than Equitable themselves had estimated.

198 Bidder A expressed concern that the wording of the Society's policies allowed guaranteed annuity rate policyholders to increase their contributions to the fund, to which the guarantee would attach, thereby increasing the fund's liabilities to the detriment of other policyholders. Bidder A said that they were investigating whether and, if so, how that liability might be capped, but explained that they were more pessimistic on the issue than were the Society's Directors.

199 On the same day at a meeting of FSA's Firms and Markets Committee, the FSA's Chairman expressed concern over press reports that there had been little interest in purchasing the Society. The minutes of that meeting record that, although only three potential bidders were left, the FSA still thought that it was likely that *'a good sale'* could be achieved.

November 2000

200 Meanwhile, GAD had been considering potential means through which Equitable might cap the liabilities, arising from guaranteed annuity rate policyholders making 'topping up' payments, without preventing the Society from writing new business. The closure of the Society to new business would, GAD said, almost certainly end any chance of a sale and there was a need to cap those liabilities.

201 It does not appear that, at this time, GAD's consideration of those matters had taken into account the fact that the Society's guaranteed annuity rate policyholders had a contractual right to make such 'top-up' payments even after any closure to new business.

202 On 3 November 2000, the FSA and GAD met Equitable to discuss the Society's current financial position. GAD noted that the Society did not appear to believe that the 'top-up' issue was a serious concern for potential bidders. GAD also recorded that the aggregate value of the recent cut in bonus rates had amounted to £1,500 million, which, it was expected, would be sufficient to cover the cost of paying guaranteed annuity rates on full asset shares.

203 GAD concluded, therefore, that:

> *With the recent cut in bonus rates ... new policyholders should not have to meet any* [of] *the cost of GARs, as indeed is likely to be their expectation. However, they will be joining a very weak fund.*

GAD also noted that, if no sale were to take place, the Society would almost certainly have to stop writing new business, and would probably have to rearrange the Society's investments to a more defensive position, to protect against possible liquidation in the event of a substantial fall in equity values.

204 Also on 3 November 2000, in the light of further complaints from policyholders about the appropriateness of the Society's advertising, the FSA prepared a draft response to those complaints, which they circulated to their conduct of business colleagues.

205 The draft, which was agreed by the FSA's Head of Life Insurance, stated:

> *As regulator, the FSA does of course monitor the financial position of insurance companies carefully. However, we understand that Equitable continues to be solvent for Companies Act purposes and indeed continues to maintain the required margin of solvency over its liabilities as required under the Insurance Companies Act 1982. As the Equitable continues to be a going concern, complying with the relevant regulatory requirements, we do not share your view that it should be prevented from marketing its products, which could be damaging to the business. Nor do we believe that at a time when the statutory requirements continue to be met, and when there is a realistic chance of a successful sale of the business, that the newspaper advertisement inviting potential customers to request additional information from the company is misleading.*

206 On 6 November 2000, another potential bidder, bidder C, met with the FSA and GAD and expressed significant concerns about the risks that they would be taking on if they were to acquire the Society, citing: the reinsurance arrangement; what appeared to be a zillmer adjustment applied to the Society's reserves in the resilience scenarios; and the possibility that, given the Society's precarious regulatory solvency position, Equitable might *'go through a period of statutory insolvency'*, before making a recovery.

207 On 10 November 2000, bidder C informed the FSA's Chairman that, although they had been very interested in acquiring Equitable, they:

> *... had reached the view that the Equitable's financial position was considerably worse than they had first thought. The hole was significantly larger than they had expected ...* [and their] *main motive in telling* [us] *this was to alert* [us] *to the fact that the Equitable's position might be rather more doubtful than we had been led to believe.*

208 In an internal note dated 14 November 2000, the FSA set out how each of the possible outcomes of the sales process might be handled. While noting the serious concerns raised by potential bidders about the Society's exposure to certain liabilities, the FSA concluded that, at this stage, '*there do not seem to be any grounds for considering action on the basis of insolvency since Equitable is able to meet its contractual obligations*'.

209 On the following day, bidder C told the FSA that they considered it would not be worth taking Equitable *'at any price'*, as some current policyholders were clearly expecting a restoration of bonuses forgone and perhaps even a de-mutualisation bonus, expectations which it would be impossible to meet.

210 On 16 November 2000, GAD commented that, if no buyer were found, the Society would be in a very difficult position. GAD told the FSA that:

> *... from a regulatory perspective, we know that* [Equitable's] *financial position remains very close to the edge of not covering their margin of solvency, there are a number of uncertainties (eg in the viability of their financial reinsurance, and resilience to changes in financial markets – they are unable at present to satisfy one of the recommended resilience tests which they argue is quite strong and they point to a known anomaly in Regulation 69), and we would then also know that it would be difficult to arrange a "rescue" by another insurer in the event of technical insolvency arising.*

211 GAD advised the FSA that the prudential regulators would have to require the Society to commission an independent investigation into its viability, in order to help to demonstrate to all concerned whether Equitable should be allowed to continue writing new business.

212 Over the next two weeks, Equitable and GAD continued to debate the determination of appropriate reserving levels. The FSA also continued to explore with the potential bidders various issues including:

- the possibility of capping the Society's liabilities;
- whether the acceptance of payments into non-guaranteed annuity rate policies (which might then have to be used to subsidise guaranteed annuity rate policy payments) might be viewed as mis-selling (as to which the conduct of business regulators provided advice that this would not be so viewed, if an appropriate warning had been given);
- whether the bidders' proposals would fulfil the reasonable expectations of the Society's policyholders; and
- whether the Society's existing future profits implicit items could be transferred to any buyer.

213 On 22 November 2000, Equitable's Appointed Actuary reported that, as at the end of October 2000, the Society's available assets were estimated to be £2,295 million to cover the required minimum margin of £1,215 million.

214 On 24 November 2000, GAD submitted to the FSA their detailed scrutiny report on the Society's 1999 regulatory returns. A detailed description of the content of GAD's report is contained within the chronology entry for that date within Part 3 of this report.

215 Although GAD said that the Society's solvency position appeared reasonable, with available assets of £3,860 million to cover a required minimum margin of £1,110 million, GAD noted that this figure included a future profits implicit item of £925 million, disregarded liability to repay a subordinated loan of £346 million, and benefited from a reduction in the liabilities of almost £1,100 million resulting from the reinsurance arrangement.

216 Without those factors, GAD noted that the Society's available assets would reduce to £1,510 million. The report went on to cite a list of further weaknesses in Equitable's position, and added that the question of whether the Society should continue to sell non-guaranteed annuity rate policies in a common fund with guaranteed annuity rate policies could be considered an *'environment risk'*.

217 On 29 November 2000, the FSA informed the Managing Director with responsibility for Equitable and their Chairman that two potential bidders (bidders A and B) remained interested in a possible sale. It was said that the Society's preferred bidder, bidder A, was to submit a recommendation to their Board on 7 December 2000 on whether or not to make a formal bid.

December 2000

218 On 1 December 2000, the FSA and GAD met Equitable. The discussion at that meeting concluded that there now seemed to be only one realistic bidder remaining, bidder A, and that it was doubtful that the sum that that bidder was likely to offer would be sufficient to allow Equitable to proceed with the sale. Should that be the case, it was noted that it was probable that the Society would close to new business and seek to sell its sales force and infrastructure.

219 The FSA noted at that meeting that there remained disagreement between GAD and Equitable on reserving requirements and on the use of a quasi-zillmer adjustment[21] in their returns. The FSA also noted that the Society *'did not appear to be unduly concerned about* [with-profits] *policyholders who joined the Society after the House of Lords judgement'.*

220 The FSA recorded that the Society had explained to the FSA that *'they had not considered whether post 20 July* [with-profits] *policyholders could be excessively disadvantaged in a closed fund. This is because after this date the preferential treatment of GAR policyholders was known'.* It was also noted that Equitable had confirmed to the FSA that their sales force had been adequately informed about the Society's circumstances and that Equitable's Board had taken legal advice on that matter.

221 On the same day, the FSA met with the two remaining prospective bidders (bidders A and B) and it became apparent during those meetings that both bidders might be about to pull out of the sales process.

222 Bidder B pulled out on 4 December 2000, after Equitable felt unable to agree to allow them a period of exclusive negotiation. On the same day, bidder A told the FSA that they were becoming increasingly concerned that acquisition of Equitable would be uneconomical. Bidder A said that they could not predict what their Board's decision on 7 December 2000 would be.

223 On 5 December 2000, the relevant FSA Managing Director was informed that GAD had made adjustments to the Society's free asset estimates to include various assumptions in the reserving basis *'to bring them into line with what* [GAD] *would normally expect'.*

224 It was said by GAD that, if all their assumptions were correct and if all the adjustments were made, this would leave the Society with free assets of only £70 million – although this was an arithmetical error, with the correct amount being £20 million – above the required minimum margin of solvency. GAD's estimate of the Society's available free assets was thus approximately £1,010 million lower than the Society's own estimate.

225 In reply, the FSA then said that, if no bid were forthcoming, the prudential regulators would have grounds for closing Equitable to new business, either for failing to meet the required minimum margin or because of the risk that policyholders' reasonable expectations would not be met. However, it was said that the FSA would prefer the Society's directors to take that decision on a voluntary basis.

[21] See the glossary for an explanation of this term.

226 On 5 and 6 December 2000, urgent meetings were held, including internal FSA meetings, meetings of the FSA Chairman's Committee, and meetings between the FSA, GAD and Equitable, to discuss the implications of a scenario in which the last remaining bidder withdrew.

227 On 6 December 2000, an urgent meeting of the Tripartite Standing Committee was also called to discuss whether the closure of Equitable would have any systemic consequences for financial stability. The Committee noted that closure to new business would be the only option if the sales process fell through.

228 The Committee agreed that the Society's position had been different to that of other insurance companies due to a unique combination of factors, which meant that the *Hyman* judgment had had a particularly significant effect on Equitable. At that meeting, the Treasury listed those factors as being:

- *It was a mutual, so (in the absence of a buyer) had limited access to capital.*
- *It did not have an estate of surplus assets.*
- *The terms of its guarantees were unusually generous and flexible.*

It was noted that Equitable could not refuse top-up payments from with-profits policyholders with such guarantees, even though those payments would potentially harm non-guaranteed annuity rate with-profits policyholders. The FSA said that that was why, given the Society's lack of substantial surplus, Equitable could no longer prudently write new business.

229 Treasury officials also briefed the then Economic Secretary at this time, informing her that a sale was unlikely to take place; those officials said that this was mainly because it had been impossible to cap the Society's guaranteed annuity rate liabilities.

230 The Treasury officials also said that, while it might be argued that the prudential regulators should have stopped Equitable writing new business sooner, there had, until a few days previously, been every sign that a sale could be achieved. It was said that those regulators had been just as surprised as the markets that no buyer could be found.

231 On 7 December 2000, prospective bidder A withdrew and on 8 December 2000, as is noted in Chapter 1 of this report, the Society closed to new business with immediate effect.

232 In the next Chapter of this report, I will summarise the way in which the prudential regulation of the Society was undertaken during the post-closure period – ending with 1 December 2001, when my jurisdiction over the relevant events ended.

Chapter 8 – The prudential regulation of Equitable in the post-closure period

Introduction

1 In this Chapter, I summarise how the prudential regulation of the Society was undertaken during the period from when the Society closed to new business on 8 December 2000 until the end of my jurisdiction over the relevant events on 1 December 2001.

2 As was explained in Chapter 6 of this report, this covers the period within my jurisdiction during which the Society was closed to new business. The regulatory approach to the Society changed to reflect its changed circumstances and the different nature of the issues faced both by Equitable and by the prudential regulators and GAD as a result of the closure of the Society to new business.

3 In the immediate aftermath of the closure of the Society to new business and for the rest of the period covered by this Chapter, a considerable amount of regulatory activity took place, as the Society's policyholders and annuitants – and the wider world – came to terms with the new reality and as both the Society and those regulators sought to find ways of putting the Society's financial position back onto a stable and sustainable footing.

4 The chronology of events set out in Part 3 of this report demonstrates the extent and nature of the issues that the Society – and thus its regulators – faced. It is impracticable in this Chapter to do anything other than summarise the key aspects of that activity. The reader is referred to the very extensive chronology of events if they wish to gain a fuller understanding of the extent and direction of the activity which occurred during this period.

5 I begin with an account of the events which occurred in the immediate aftermath of the Society's closure to new business. I then focus the account given in this Chapter on four important themes of regulatory activity during this period.

6 The first theme is the monitoring of the solvency position of the Society. The second theme is the information about the Society which was provided by the FSA to policyholders and others. The third theme is the FSA's reaction to the Society's bonus declaration for 2000 and to the July 2001 policy value cuts. The final theme is the FSA's review of the development of proposals for a scheme of arrangement under the Companies Act 1985, through which the Society hoped to compromise the competing claims of its policyholders and re-stabilise its financial position.

7 I conclude my account by indicating the other strands of regulatory work that were undertaken during the period covered by this Chapter.

8 This Chapter is structured in the following way:

- in paragraphs 9 to 29, I summarise events that occurred in the immediate aftermath of the Society's closure to new business on 8 December 2000;
- in paragraphs 30 to 114, I summarise events relevant to the monitoring of the Society's solvency position;
- in paragraphs 115 to 135, I set out the information that the FSA gave to policyholders during the post-closure period;
- in paragraphs 136 to 143, I summarise the consideration given by the FSA to the Society's bonus declaration for 2000 and to the July 2001 policy value cuts;

- in paragraphs 144 to 158, I summarise events relevant to the development of proposals for a Compromise Scheme, pursuant to section 425 of the Companies Act 1985, and to the consideration given by the FSA to those proposals; and

- in paragraphs 159 to 186, I summarise the other strands of work that the prudential regulators undertook during the period covered by this Chapter.

The immediate aftermath of the closure to new business

9 On the day that the Society closed to new business, 8 December 2000, the FSA noted internally that they did not believe that the Society's problems were symptomatic of a wider industry problem: it was said that *'the underlying cause is specific to Equitable's own circumstances'*.

10 FSA also prepared a more detailed note for internal use when briefing journalists. This set out some of the background to the closure of the Society to new business. The note dealt specifically with 'Regulatory Issues', setting out possible questions and suggested responses. In response to the question: *'Why didn't the FSA take action sooner – how could you let them keep taking new business?'*, it was said that:

> *The Company remained solvent and there was a realistic prospect of a sale which would have been in the long term interests of policyholders. So there was no clear reason or basis for taking action.*

11 In response to the question: *'How do you judge policyholders' reasonable expectations (PRE)? How can Equitable have been meeting them in recent months?'*, it was said that:

> *PRE can not be precisely defined but it is important to remember that this company is owned by its members and With Profit policyholders share in the fortunes of mutuals for good or ill. Generally speaking policyholders have received benefits from this arrangement either through improved investment returns or windfall benefits after demutualisations but it is a two way street.*

12 In response to the question: *'On what grounds would someone launch a legal action against FSA for its action or inaction, or are you just a law unto yourself?'*, it was said that it was:

> *Not clear to us that a person could have grounds to bring a case. FSA has acted in good faith and with integrity throughout. No statutory immunity for those functions of the FSA delegated by the Treasury under the Insurance Companies Act 1982. But FSA does have the protection of the common law which would make successful challenge very unlikely.*

13 In response to the question: *'Why didn't you at least require Equitable to explain to prospective policy holders its precarious position?'*, it was said:

> *We understand that prior to the House of Lords judgement the position as reported to potential policyholders would have been in line with the current understanding of the law – where a differential approach to GARs was justified. Post the* [House of Lords'] *judgement it is our understanding that potential policyholders were advised about the circumstances surrounding the proposed sale of the company.*

14 In response to the question: *'Would you like to have more or different powers over insurers?'*, it was said that *'it is not clear that there is any deficiency in the regulatory powers available.'*

15 On 13 December 2000, the Treasury prepared a response to a written question in the House of Lords, which had asked whether the FSA had taken adequate action to safeguard the interests of the Society's policyholders. The text of the suggested answer was: *'The FSA is working with The Equitable Life Assurance Society to look after the interests of its policyholders'*.

16 In the background brief for the proposed answer, Treasury officials explained:

> *The Society's difficulties stem from with profit guaranteed annuity rate policies (GARs) which it wrote up until the late 1980s. These pension policies gave policyholders the contractual right to an annuity at a specific percentage rate when the policyholder retired, which although appropriate for the time in which the policies were offered, can be seen in today's low inflation environment as generous. During the 1990s, when interest rates fell, the GARs began to exceed current annuity rates. Reserving standards were increased to reflect the revised expectations of investment performance in a low inflation environment, but it became apparent to the Society that the increased costs of reserving for these increased GAR benefits would add a significant financial burden on the company, with one set of members getting a larger slice of the assets of the mutual than another.*

17 The brief continued:

> *The Directors of the Society took the view that it would be inappropriate for one set of members to disproportionately benefit in this way and they put in place a bonus policy that differentiated between GAR and non-GAR policyholders on maturity of the investment. This policy caused resentment amongst some GAR policyholders who felt that they were being deprived of their full entitlement. The Equitable responded by funding a representative action in Court to decide the issue.*

18 The brief concluded by saying:

> *The result of the judgment meant that, although the solvency of the Equitable was unaffected, the cost of the GAR liability would curtail its investment freedom and so a decision was made by the Board that it would be in the best interests of policyholders to seek a buyer for the Society. When this option failed to materialise, the Society took the decision to close to new business in order to concentrate on safeguarding the interests of its existing policyholders.*

19 On 19 December 2000, GAD sent the FSA a paper, entitled 'Reserving and related issues', which it was said had been prepared in order to *'demonstrate the substantial dialogue that has been held between FSA (previously HMT), GAD, and the Society over recent years in respect of their reserving practices'*.

20 This paper summarised the background to the guaranteed annuity rate issue and set out the exchanges on this issue that had taken place between the Society and the prudential regulators and GAD since July 1998, when the issue had first become known to those regulators and GAD.

21 Turning to the financial reinsurance arrangement into which the Society had entered, GAD described the Treaty in general terms, noting that the *'most controversial'* aspect was that it could be cancelled in the event of the Society being wound up. GAD summarised the discussions that had taken place on this Treaty between the Society and the prudential regulators and GAD from the end of 1998 onwards.

22 GAD explained that the FSA and GAD had reviewed the Treaty in the early part of 1999 and *'were eventually satisfied that it was reasonable for the actuary to take credit for the cover provided'*. GAD continued:

> *Such treaties continue to depend on regulatory arbitrage to achieve the desired result. (It is unlikely that the reassurer,* [IRECO]*, will currently be setting up compensating reserves to those removed from the balance sheet of the Equitable.) ... The reliance on an offshore reassurer, and the cancellation clause leave the treaty as a more controversial device by the Society, but the treaty has been accepted as satisfactory in statutory reserving terms up until now.*

23 GAD then explained the Society's practice of reporting the valuation which accorded with the applicable Regulations as an appendix to their returns, saying that:

> *... in recent years, the resilience reserve reported by the Society in their bonus reserve valuation has been such that the free asset position in the net premium valuations and the bonus reserve valuations has been the same. This means that the resilience reserve in the BRV is simply a balancing item, and so the robustness of the BRV is somewhat dubious. However ... GAD do not use the BRV to monitor solvency.*

24 GAD explained that, in the early 1990s, the Society *'took advantage of its use of a bonus reserve valuation in the statutory returns to hide its resilience reserve'* and say that the Society's disclosure had improved, following the implementation of the 1996 Accounts and Statements Regulations.

25 GAD went on to quote the statement that the Society had made within its 1996 returns: *'For accumulating with profits pensions business, ½% pa of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses'*. GAD explained that this:

> *... was never questioned by GAD; it appeared to be a part of the Society's overall provision for renewal expenses. However, in our Scrutiny of the 1999 Returns – in October/November 2000 – and in discussion with potential purchasers of the Society, this was identified as an unusual statement.* [Equitable] *confirmed to GAD in* [their] *letter of 16 November 2000 that this was an allowance, not for renewal expenses, as we had understood, but a mechanism to recover as yet unrecouped acquisition expenses. GAD view this as totally unsatisfactory, since it anticipates that future premiums will be paid on the recurrent single premium pensions contracts, when there is no obligation on the policyholder to do so, and furthermore the Society is taking credit in advance for expense margins in those premiums, to reduce the accrued liability.*

26 GAD then set out how they had pursued this matter – the 'quasi-zillmer' adjustment – with the Society at the end of 2000. GAD concluded that *'there has been a history of unsatisfactory disclosure regarding the Society's approach to resilience'* and that the statement in the 1996 returns *'is particularly opaque'*.

27 Under a heading of 'other reserving issues', GAD stated that, in their scrutiny of the Society's 1995 returns, they had noted that Equitable had taken the view that their interests were best served by using a weak valuation basis in order to show as strong a free asset position as possible. GAD noted that the Society had made the same point at a meeting between them on 9 December 1994.

28 GAD also explained that they had had concerns at the time of the scrutiny of the 1995 returns about the sustainability of the Society's present contract structures, although GAD had not written to the Society about those matters, but instead had taken them up at a meeting on 8 November 1996.

29 GAD in their note recorded that, at that meeting, they had come away with the view *'that the Society had to be very careful that customers were not misled about their eventual benefits'*.

The monitoring of the Society's solvency position

30 Throughout the period covered in this Chapter, the FSA, with the advice and assistance of GAD in the period up to April 2001, monitored the financial position of the Society on a monthly basis. The Society first submitted monthly solvency figures to GAD and the FSA on 26 July 2000. It subsequently agreed to an FSA request on 11 August 2000 to provide information about the position as at each month-end (and did so for each month-end, with the exception of November 2000, when no report was submitted).

31 This was done to supplement the scrutiny process of the Society's returns, which was the usual way in which the prudential regulators and GAD monitored the solvency position of life insurance companies. Further consideration is given to the detail of this work in Chapter 10 of this report.

32 Shortly before the Society's closure to new business, GAD wrote to the FSA on 1 December 2000, ahead of a meeting with Equitable that day. GAD provided a summary of the implications of their assessment of Equitable's response (of 29 November 2000) to the questions that GAD had raised about reserving. Those implications were as follows:

- that GAD were looking for *'an increase from 85% to say 90% in the assumed GAR take-up rate'*. However, GAD said that this would have no effect on the net level of reserves whilst the reinsurance treaty remained in place;

- that GAD were unhappy with the 20% rate of decrement in future premiums when assessing the 'future premiums' part of the reserve for annuity guarantees. On the basis of information provided by Equitable's actuarial consultants, GAD estimated that, if no such decrement were assumed, Equitable's net liabilities would increase by up to £360 million;

- that GAD believed Regulation 72(3) of ICR 1994 might require Equitable to assume in future valuations that personal pensions benefits were all taken at age 50. On the basis of information provided by Equitable's actuarial consultants, GAD estimated that the effect on Equitable's liabilities would be an increase of up to £200 million;

- that GAD believed the new resilience test 2 would lead to increased reserves of £600 million, or £300 million if the Society adopted the 'synthetic bond' concept;

- that GAD believed that a more sophisticated hypothecation of assets in the resilience scenario could reduce the resilience reserve by up to £750 million (or less, if a synthetic bond were used); and

- that GAD did not accept the use of a 0.5% pa allowance for expenses in the resilience scenario. GAD stated that *'the resilience reserve is therefore weak and not in accordance with the guidance.* [Equitable's actuarial consultants] *say that reserves are £950m lower than they otherwise would have been because of this'*.

33 GAD noted that the Society's monthly solvency figures for the end of October 2000 showed that it had assets of £1,080 million in excess of its required minimum margin. GAD advised the FSA that taking account of those reserving issues increased Equitable's liabilities by £1,060 million, resulting in the Society having assets in excess of its required minimum margin of just £20 million. GAD also pointed out that, if the IRECO reinsurance treaty were to be terminated, Equitable's liabilities would increase by about £500 million.

After the Society's closure to new business

34 On 19 December 2000, GAD prepared a report on *'Reserving and related issues'*. GAD's report repeated what they had said in their note of 1 December 2000, namely that a corrected solvency position for the Society would show assets of only £20 million above the required minimum margin. GAD's report also discussed the level of the market value adjuster which was applied to non-contractual withdrawals, along with the current level of payouts against asset shares. I return to this issue later in this Chapter.

35 The following day, in response to being informed that the FSA were not going to approve Equitable's application for a section 68 Order to permit the Society to use a 'synthetic bond' or 'artificial bond' approach to the calculation of the valuation of certain fixed interest assets, GAD pointed out that:

> *We understand that the artificial bond approach would have led to reserves £300m. lower than otherwise in this scenario.*
>
> *The adjustments which we believe need to be made to the Society's liabilities ... become an increase of £1,360m. (instead of £1,060m.), when there are only £1,080m. of assets available (at end-October 2000).*
>
> *It is all very tight, to say the least.*

36 On 16 January 2001, Equitable told the FSA and GAD that they expected to show in their returns for 31 December 2000 that the Society would have free assets of approximately £500 million above its required minimum margin. However, Equitable said that this was subject to further work that their new Appointed Actuary had to undertake and to *'confirmation by* [the FSA] *of some technical waivers to the valuation rules as intimated to us last year (and as given recently to some other companies)'* (i.e. the section 68 Order for a *'synthetic bond'*, which GAD had said would reduce the reserves required to be held by £300 million, and which the FSA had decided they would not approve).

37 Equitable also said that this valuation included the various changes that had been agreed in recent correspondence *'(other than the possible additional £250 million for personal pension policies on which we await legal advice), but does not include a contingent liability for any possible redress for pension fund withdrawal contracts that might be imposed by PIA (estimated by the PIA as £40m on a worse case scenario)'.*

38. On 19 February 2001, the FSA wrote to Equitable's Appointed Actuary, ahead of a meeting arranged for the following day. The FSA said that they would like an indication of the Society's current solvency position and emphasised the importance of the timely provision of all solvency reports, while noting that Equitable had not yet provided the monthly reports for November and December 2000, and that the January 2001 report was due.

39 At that meeting, it appears that the solvency position as at 31 December 2000 was the only month that was discussed, with the FSA recording that:

The position disclosed demonstrated fairly thin solvency cover and had assumed that both the concessions for the artificial bond (valuation rate of interest) and for an increased valuation taking into account the sale of the Permanent [Insurance] *had already been given. Without these concessions the company would not be able to demonstrate coverage of the RMM in its statutory returns. The* [Appointed Actuary] *had, however, now adopted the stronger resilience basis that had been required by recent changes in the regulations in these figures. He thought that all other reserving issues had been ironed out but GAD pointed out that there was still an issue surrounding Regulation 72 and retirement dates to be resolved.*

40 Following that meeting, the FSA's Line Manager informed the Managing Director of Financial Supervision that the Society's Appointed Actuary had reported that Equitable had free assets above their required minimum margin of £340 million, as at 31 December 2000. However, the Line Manager explained that this valuation had relied on certain concessions which had at that time not been granted. The Line Manager listed those concessions, which the FSA had estimated as totalling approximately £430 million. The Line Manager suggested that this information about the Society's solvency position:

> *... does point to the need to be careful about what we say, if we want to be certain that we are right. Either we should refer specifically to the position at 8 December, or simply say that the company is solvent.*

41 The Line Manager also informed his Managing Director that Equitable would like to be able to report their year-end position as if those concessions had been in place at the year-end. The FSA's Chairman commented to all of the supervisory staff who held responsibility for the Society on this point that:

> *If we are to concede that, I hope there are precedents (and preferably hundreds of them)!*

42 On 21 February 2001, GAD recorded in an internal discussion that they had thought that Equitable had accepted GAD's interpretation of the requirements of Regulation 72 of ICR 1994 as to whether assumptions could be made concerning retirement ages. GAD's interpretation was that the Regulations required Equitable to *'set up a liability to cover the cash payment that would result from an exercising of the vesting of the option, at any time that the option may be exercised'*. GAD had estimated that this would lead to an increase of £200 million in the reserves required to be held (Equitable had themselves estimated that it would increase the reserves required by £250 million).

The Society's solvency position following the completion of the Halifax deal

43 At the beginning of March 2001, Equitable's administrative and asset functions were transferred to Halifax and the Society's solvency position was boosted by a £500 million payment in respect of that transfer.

44 The FSA and GAD met Equitable on 6 March 2001, in order to get an update on the key issues that the Society faced. On the solvency position that was to be reported within the Society's 2000 returns, the FSA recorded that:

> *... solvency cover was likely to be tight with only £300m free assets after RMM coverage. In making this assessment the Society was taking into account the benefit from the "artificial bond" concession that had yet to be formally*

> *applied for or given (which itself would be worth c£300m). It was also taking into account the debt from the sale of the Permanent* [Insurance] *to Liverpool Victoria which was not completed until 2001 ...*

45 Equitable told the FSA and GAD that, as at 31 January 2001 and before they had received the £500 million from the Halifax deal, it was estimated that the Society had free assets of approximately £700 million above its required minimum margin. The FSA also noted that:

> *Solvency was boosted by the sale of £1.8bn of equities and the reduction in the resilience test. It was thought that current solvency cover was of a similar magnitude despite the £500m injection, this was because the FTSE at c5900 was a lot lower than it was at the end of January.* [Equitable's Chief Executive] *disclosed that prior to the end of February with weak equity markets solvency cover was thin.*

46 On 8 March 2001, Equitable provided their estimated monthly solvency figures for 31 January 2001. Those figures showed that the Society had free assets of £1,930 million to cover its required minimum margin of £1,215 million.

47 On 15 March 2001, the FSA's Managing Director of Financial Supervision reported to his Board on Equitable's solvency position. He informed that Board that the Society had free assets of approximately £300 million. However, the Managing Director pointed out that this solvency position relied on certain concessions from the requirements of the Regulations, and that those concessions had not at that time been granted by the Treasury. The Managing Director explained that, if those concessions were not granted, *'the position will be very tight'*.

48 During a meeting held on 20 March 2001, Equitable confirmed to the FSA that they were at that time following GAD's interpretation of Regulation 72. The Society said that, should the FSA accept Equitable's interpretation instead, *'there could be a c£100m release from reserves'*. (The effect of this adjustment had previously been valued by the Society at approximately £250 million.)

49 On 27 March 2001, the FSA informed Equitable that they could not recommend to the Treasury that the Society's request for a section 68 Order in respect of the calculation of the valuation of certain fixed interest assets (i.e. the synthetic bond) should be approved.

50 The FSA explained that the reason for this was that the Treasury had no powers to grant such an Order, which would have had retrospective effect. However, the FSA suggested to Equitable that *'it is possible for the Treasury to make an order under section 68 that would require the Society to prepare its annual returns on a particular basis, even though that information would relate to a period that has already ended but has not yet been reported upon'*.

51 On the same day, the FSA were advised by Counsel that Regulation 72(3) *'did permit assumptions to be made as to the age at which the individual would take benefits'*. However, Counsel also advised the FSA that *'there was scope for amendments to ... put in a requirement for reserving so that there was a smooth curve leading to the position where regulation 72(2) took effect'*.

52 On 23 April 2001, Equitable reported to the FSA that the *'end of March figures were almost complete and would show the notable improvement in solvency following the £500m injection and the added knock on benefit of the reduction in resilience'*. However, the Society said that: *'Both the*

end of February and March figures are based on the latest test 2 for resilience, assume the Section 68 Orders for Permanent/equivalent bond but take a more conservative approach than required by the regulations for Regulation 72 (assumed age of retirement). The value of the equivalent bond concession was estimated at c£200m for the end of the year, although this would be reduced over time as the yield curve flattens'.

53 Equitable also provided to the FSA their estimated monthly solvency figures for 28 February 2001. Those figures showed that the Society had free assets of £1,500 million to cover its required minimum margin of £1,200 million.

54 During the first week of May 2001, there was extensive discussion, between the members of the FSA's Insurance Supervisory Committee (who were responsible for deciding whether to put a recommendation to the Treasury that a section 68 Order should be granted) and the Society's supervisory team, about the section 68 Orders for which Equitable had applied.

The implications for the Society's solvency position of Counsel's opinion on mis-selling

55 On 8 May 2001, the FSA were informed by the Society's Chairman that Equitable had received an opinion from Counsel which suggested that non-GAR policyholders might have reason to make claims that the Society had mis-sold their policies. The FSA immediately turned their attention to the implications of the opinion for the Society's solvency position.

56 A great deal of activity was undertaken by the FSA on this issue to establish what claims could legitimately have been made by policyholders and to quantify the potential values of such claims. That activity is recorded fully within Part 3 of this report.

57 The implications of Counsel's opinion were discussed the following day, during a meeting with Equitable. The FSA recorded that:

> *A significant additional reserve would almost certainly lead to the Society not covering its* [required minimum margin]. *The Appointed Actuary said that if required the Society could find the amount required in the worse case scenario (the £1.5bn) but this would mean that the Society would have to move entirely out of equities and into gilts.*

58 On the same day, the FSA decided that they should put their recommendation to the Treasury that the section 68 Orders in relation to the valuation of Permanent Insurance within the Society's 2000 returns and in relation to the valuation of certain fixed interest assets should be granted. On the latter Order, the FSA recorded that they had:

> *... concluded that on balance it supported the application, largely on the basis there were no clear grounds for rejecting it. It was agreed that this should be made clear to the Treasury, along with the points about the impact and reasonableness of Equitable Life's tendency to use the most favourable valuation basis to it.*

59 Also on 9 May 2001, Equitable provided their estimated monthly solvency figures for 31 March 2001. Those figures showed that the Society had free assets of £2,020 million to cover its required minimum margin of £1,150 million.

60 On 21 May 2001, the Treasury raised a number of concerns with the FSA about the FSA's recommendation that the section 68 Order, in relation to the calculation of the valuation rates of interests for certain fixed interest assets, should be granted. The Treasury explained that their concerns centred on *'consistency and presentation'.*

61 On 31 May 2001, the FSA provided to the Treasury a further explanation of the justification for their recommendation. The FSA also recorded at that time that the Society believed that the Order would improve its solvency position by approximately £150 million to £200 million.

62 On 8 June 2001, the Treasury granted the two section 68 Orders (in relation to the valuation of Permanent Insurance and the calculation of the valuation rates of interests for certain fixed interest assets) which had been requested by the Society.

63 The Society submitted its 2000 regulatory returns to the FSA on 28 June 2001. The solvency position shown in Form 9 of those returns said that, as at 31 December 2000, Equitable had free assets of £1,632 million to cover their required minimum margin of £1,221 million. A full description of the content of those returns is contained within Part 3 of this report.

64 On 10 July 2001, the FSA's Head of Actuarial Support commented on the emerging legal opinion of Counsel who were advising the FSA, saying that:

> [Counsel for the FSA] *is looking at possible mis-selling claims for all with-profit policies sold from around 1996 as being a possibility (though his view may well differ from* [Counsel for Equitable] *who has so far come at his from a rather different angle). The present policy values in respect of this business are likely to be of the order of £10bn, so that if the quantum of claim were say 15% of policy value (and it could be higher on the approach he is looking at), we could have mis-selling liabilities of £1.5bn or more.*
>
> *In present investment market conditions, this would very likely mean that the company was insolvent.*

65 Around this time, Equitable sent to the FSA copies of four papers which had been prepared for their Board. In one of those papers, the Society's Appointed Actuary commented on the financial position for the year-end 2000, as presented in its returns. The Appointed Actuary advised the Society's Board that:

> *It should be noted the £411m of free assets is after taking credit for the reinsurance benefit (£808m) and future profits (£1000m). It also ignores the value of the subordinated debt liability of £346m.*
>
> *These are all permissible and previously agreed with the FSA. However, their use clearly eats into any conservatism in the basic valuation regulations.*

In relation to the strength of the valuation basis used by Equitable, the Appointed Actuary advised the Board that:

> *In arriving at the valuation, specific assets are hypothecated to particular liabilities, and reallocated in the resilience scenarios. I believe that the process we used is close to the best achievable.*
>
> *Overall I think that whilst prudent in all respects according to the valuation regulations the Directors should be aware that it would, in my view, not be possible to produce a satisfactory valuation which produced a materially higher net asset position at 31/12/2000.*

66 At a meeting with PIA held on 18 July 2001, the FSA reported that they thought that a recent statement made by the Society's Chairman regarding the solvency of Equitable was *'arguably misleading'*.

67 It was agreed that the FSA should issue a Notice under section 44 of ICA 1982, requiring the Society to provide monthly financial information and to demonstrate that it was solvent under the requirements of both ICA 1982 and the Companies Act 1985. However, the FSA did not in fact impose formal reporting requirements on the Society. Instead, they asked for enhanced reporting but on an informal basis, so as to provide the FSA with *'greater flexibility to update the form and content of the information to reflect concerns at any particular time'*.

68 It was also agreed that there should be an independent review of Equitable's financial condition, to be carried out within three to four weeks.

69 On 18 July 2001, the FSA provided answers to certain questions which had been raised by the Economic Secretary to the Treasury. On solvency, the FSA advised that:

> *We are satisfied, on the basis of the latest figures supplied by the company, that it continues to meet its solvency margin requirements. As the company has made clear in its Annual Report and in its regulatory returns, it continues to face some fundamental uncertainties...*
>
> *There are however uncertainties, including in relation to the opinion on mis-selling which is due shortly (the FSA is also doing work on this topic). Subject to those uncertainties, at this stage, we do not think insolvency likely and we have been assured by the appointed actuary that there are further steps the company can take to avoid that, such as by cutting terminal bonus further ... If however insolvency was unavoidable, this would trigger the operation of the Policyholders Protection Act where the Policyholders Protection Board would in the first instance seek to secure a transfer of policies to another insurer. It would be able to provide financial assistance to achieve that. Alternatively, the business could be placed in liquidation and policyholders would be paid compensation up to 90 per cent of the guaranteed value of their policy at the point of liquidation.*

70 In the initial scrutiny of the Society's 2000 returns, undertaken by the FSA on 19 July 2001, it was noted that the absolute level of coverage for the required minimum margin was a matter *'of concern'* and that, even with the sale of assets to Halifax (which had improved the Society's free assets), *'the position remains tight'*.

71 On 20 July 2001, Equitable provided their estimated monthly solvency figures for April, May and June 2001. The figures for 30 April 2001 showed that the Society had free assets of £2,005 million to cover its required minimum margin of £1,155 million. The figures for 31 May 2001 showed that the Society had free assets of £1,790 million to cover its required minimum margin of £1,140 million. The figures for 30 June 2001 showed that the Society had free assets of £1,780 million to cover its required minimum margin of £1,120 million.

72 Equitable also informed the FSA that:

> *Last week I sent you our "ready reckoner solvency" matrix. Using this type of methodology we estimate the statutory solvency position daily and at the low point of the market at around lunchtime on 19 July 2001 when the FTSE 100 stood at 5320 it is likely that the cover ratio was about 1.0, i.e. just covering the required minimum margin. As discussed, and is clear from the matrix further equity market falls could lead to the required minimum margin being breached.*

73 On 23 July 2001, in response to the latest version of Counsel's opinion on the potential for mis-selling claims to be made against the Society, the FSA's Head of Actuarial Support commented that *'the potential liability could still be around £2-3 billion'*.

74 Later that day, the Head of Actuarial Support commented that the financial implications for Equitable looked *'quite bleak'*, and he said that:

> *If, for example, they are likely to incur mis-selling claims on all post-1993 policies, then the liability could be around £3-4 billion, which would be well beyond their current free reserves on a Companies Act basis of around £1½ billion. If the potential claims extend back to 1988 or even earlier, then the situation is clearly even worse.*
>
> *Even if the Limitations Act applies (which seems very odd to me as a layman given that it was not the fault of the policyholders that they could only have been likely to have become aware of the alleged non-disclosure in 1998 or even later), then the liability could be around £2½ to £3½ billion, assuming that there would be a liability in respect of all premiums paid in the last 6 years. The result is still then likely to be insolvency.*

The weekend of 28 and 29 July 2001

75 Leading up to, and immediately following, the weekend of 28 and 29 July, there was a great deal of activity concerning whether the Society was solvent and whether it could continue as a going concern. The details of those events are described in full within Part 3 of this report, and I will not repeat all of them here. However, there are five key events from this period which I will highlight.

76 First, there was a review of the situation by the three authorities responsible for financial regulation and stability. On 25 July 2001, a meeting of the Tripartite Standing Committee considered the case for intervention by the authorities and whether there existed arguments for an injection of public funds into Equitable. The note of that meeting recorded the following:

> [FSA's Chairman] *said that something between £3* [billion] *and £5bn would make* [Equitable] *solvent.* [FSA's Director of Insurance] *said that it was difficult to assess what additional contribution to the pot might be necessary to make a s.425 scheme attractive to* [Equitable] *policyholders. But while the insurance industry would probably not be keen on a rescue, it might be readier to consider this if the government was involved.* [FSA's Chairman] *said that if the government put money into the company, it would be interpreted as a problem with the past regulatory regime.*

77 Secondly, on 26 July 2001 the FSA approached the Association of British Insurers to see if an industry rescue could be arranged. The initial response was that such a proposal was unlikely to receive the support of the industry.

78 Thirdly, on 27 July 2001 the FSA served a Notice on Equitable. The requirement of that Notice, which was issued pursuant to section 44(2B) of ICA 1982, was that:

> *... the Society shall furnish the FSA on 20 August 2001 with a report by* [a named company] *analysing the financial position of the Society as at 30 June 2001 (or such later date as shall in the opinion of* [the named company] *be practical) such analysis to be in accordance with, and contain the information set out in Appendix A to this Notice.*

The FSA explained that their rationale for serving this Notice was as follows:

> *In order for us to assess the solvency of the Society, both to determine the baseline financial position against which the proposed compromise scheme needs to be assessed and to consider which of all options open to the Society best protects policyholders' interests, we consider it necessary to have a report prepared by a firm which is independent from the Society.*

79 Fourthly, over this period the FSA and the Treasury considered whether Article 4 of Equitable's Articles of Association meant that the amount of their liabilities would reduce in line with their assets. They also considered whether the prudential regulators possessed powers to prevent Equitable from using Article 4 to reduce the guaranteed amounts payable under their contracts.

80 Finally, on 29 July 2001 the Society informed the FSA that the Board had concluded, that morning, that:

> *The Society appeared to be solvent on every basis for calculating solvency.*

The FSA noted that, in reaching that conclusion, the Society's Board had taken a *'rational, worst case basis'* for assessing mis-selling liabilities of £900 million.

81 Throughout August 2001, the prudential regulators and the Society continued to attempt to establish some certainty on both the status of possible mis-selling claims and the quantification of those claims.

82 On 21 August 2001, the FSA returned their attention to the Society's 2000 returns, having asked some questions of Equitable following their initial scrutiny of the returns on 19 July 2001.

The results of the report into the Society's solvency position

83 On 24 August 2001, the FSA were given a presentation of the results of the review of the Society's solvency position as at the end of June 2001. The FSA were told that Equitable had assets above their required minimum margin of £758 million. However, when reporting on the presentation to his Chairman, the FSA's Line Manager pointed out that:

> *These figures do not take into account any explicit liability for future discretionary bonuses or for compensation to non-GARs.*

The Line Manager went on to say that:

> *In effect, on all three bases,* [the company] *have quantified the surplus assets that are available to pay the mis-selling and, after that has been paid, to fund future (non-contractual) bonuses. In advance of the finalisation of the work quantifying the mis-selling claims it is not possible to reach a definitive conclusion on Equitable Life's ability to fund those claims. However, based on the preliminary work that has been done the level of surplus assets reported by* [the company] *as being available to meet those claims does not give us any cause for concern.*

Disclosure of the side-letter to the IRECO reinsurance treaty

84 On 14 September 2001, the Society's Appointed Actuary wrote to the FSA to inform them that a side-letter, dated 1 April 1999, to the Financial Reinsurance Treaty had come to light. He reported that this *'purports to clarify the position if the balance insured and outstanding exceeds £100m sterling'* and said that the Society had sought legal advice about the implications of the letter, but that this had been unclear.

85 Reliance had been placed within the Society's 2000 returns on the financial reinsurance arrangement when setting the mathematical reserves. The Treaty giving effect to this arrangement had been amended for a second time in August 2000, in an attempt to reflect the changed position of the Society after the decision of the House of Lords in the *Hyman* litigation.

86 After this change, the Society took credit in its main valuation of £808 million for the financial reinsurance arrangement. The Society's 2000 returns disclosed that its assets exceeded the sum of its liabilities and its required minimum margin by £411 million.

87 On 21 September 2001, Equitable provided their estimated monthly solvency figures for 31 August 2001. Those figures showed that the Society had free assets of £1,733 million to cover its required minimum margin of £1,053 million.

88 On 24 September 2001, the FSA received a fax from the Society, enclosing a copy of the side-letter. The side-letter said that it was not intended to be legally binding but to clarify the intentions of the parties, that if any claim exceeded £100 million then the Treaty would be cancelled by mutual agreement, that the Society would not draw cash pursuant to the Treaty and that the purpose of the arrangement had been to create flexibility for the Society in reserving.

89 A handwritten note was made on the Society's fax by an FSA official, which recorded that the side-letter had not been seen before, that the intention to cancel the Treaty if the withheld amount exceeded £100 million was at odds with what GAD and the FSA had been told in February 1999, and that the undertaking not to draw cash could invalidate the reinsurance offset to the Mathematical Reserves shown in the returns.

90 On 28 September 2001, the FSA met the Society to discuss the side-letter. The Society said that it had been passed by the former Appointed Actuary to his successor on 7 August 2001. The day before the meeting, the reinsurer had informed the Society that it felt that the side-letter gave them the option to cancel the Treaty if the £100 million trigger level were reached.

91 The Society had not accepted this, citing legal advice it had received that the side-letter was not necessary to interpret the Treaty. However, the Society had been concerned that, in the event of a dispute between the parties and if that dispute became subject to arbitration, which would be heard in Ireland where the reinsurer was based, the letter might have some force.

FSA's exercise of powers pursuant to ICA 1982 to require the Society to produce a plan for the restoration of a sound financial position

92 By the beginning of October 2001, the FSA had reached a view of their best estimate of the level of provision for mis-selling that Equitable should be required to hold. On 1 October 2001, the FSA's Head of Actuarial Support had concluded that:

> *The overall accounting provision ... after taking account of the probability of success could then be around £300 - 550 million, with a best estimate likely to be in the range of £400 - £500 million. For the FSA returns, we would expect to see a greater margin for prudence, and probably a contingent liability for potential recission claims, which might indicate a provision of between £600 and £700 million.*

93. On 4 October 2001, the Head of Actuarial Support commented on the credit that could be taken for the reinsurance treaty, saying that:

> *In view of the letter apparently received from IRECO saying that they would intend the treaty to be cancelled if the claim ever exceeded £100 million, I think it would be very difficult for Equitable to take credit for more than this amount in a "prudent" statutory valuation, where the actuary has to take account of both the credit and legal risk under this reinsurance agreement.*

94 The following day, Equitable provided the FSA with an update on their solvency position under three different bases. Under the Society's normal valuation basis, yet still taking into account *'the full effect of the reinsurance treaty for GAR liabilities'*, it showed assets in excess of its required minimum margin of £150 million. Equitable explained that they had included in this valuation a provision of £220 million for any mis-selling of non-GAR policies.

95 In the light of this information, the uncertainty in relation to the reinsurance treaty, and their own work on the quantification of potential mis-selling liabilities, on 9 October 2001 the FSA exercised the power to require the Society to produce a plan for the restoration of a sound financial position. The FSA stated that:

> *Section 32(4) of the 1982 Act gives the FSA power to require the production of a plan for the restoration of a sound financial position in the event that a company has failed to maintain the prescribed margin of solvency. In present circumstances the FSA must now formally ask for the submission of such a plan within 2 weeks of the date of this letter.*

96 On 16 October 2001, the FSA returned their attention to the valuation basis that the Society had used in its 2000 returns. The FSA raised a number of questions in relation to how Equitable had reserved for surrender values for their accumulating with-profits business and whether the level of reserves was consistent with the Society's policyholders' reasonable expectations. The issues related to whether Equitable had fully explained to policyholders how they operated the market value adjuster. The following day, the FSA's Head of Actuarial Support commented that:

> *At end-2000, the reserves held were broadly equal to the guaranteed fund without any discounting. Therefore, the surrender value test was not relevant in the base scenario at that stage. However, I would agree that in view of the fall in equity markets since then, and the discounting of the guaranteed benefits that is now being applied, we do need to be satisfied that these reserves take account of the underlying current PRE surrender value.*

97 The FSA met the Society again on 22 October 2001. The meeting notes record that Equitable had been conducting negotiations with the immediate parent company of the reinsurer to clarify the situation. The meeting notes also record that the proposals that had been put forward by that parent company as a means to resolve the issue were unacceptable to both the Society and the FSA.

98 It was agreed that the FSA would meet the reinsurer because of the regulatory significance of the issue and the need to resolve matters, so that any ongoing uncertainty did not introduce further instability into the financial position of the Society at a time when it was seeking a way of compromising the competing claims of its policyholders.

99 On 25 October 2001, Equitable provided their estimated monthly solvency figures for 30 September 2001. Those figures showed that the Society had free assets of £1,340 million to cover its required minimum margin of £1,006 million.

100 On 26 October 2001, Equitable provided the FSA with their plan for the restoration of a sound financial position. The Society's plan comprised of three elements, those being:

- the renegotiation of the IRECO reinsurance treaty;
- the switching of funds from equities into fixed interest securities; and
- the Compromise Scheme.

A full description of the Society's plan is contained in the entry for this date within Part 3 of this report.

101 The FSA met the parent company of the reinsurer on 1 November 2001. The parent company stated that, in their view, the financial reinsurance arrangement had always been intended to be a *'riskless'* transaction. The FSA explained that that had *'very definitely not* [been] *our view at the time, of the basis of the information we were given'*.

102 Further discussions to renegotiate the terms of the arrangement took place. A draft of the amended arrangement was supplied to the FSA on 8 November 2001. On 12 November 2001, consideration was given by the FSA to the effect of the Treaty as it now stood in draft. The Head of Actuarial Support stated that he believed that the maximum reserving benefit that the Society could take was £250 million, based on the 10% cash payments allowed under the Treaty. The Line Supervisor responsible for the Society gave his view that the Treaty was still *'little more than window dressing and the reinsurer has no intention of assuming any serious risk at all'.*

103 On 15 November 2001, the FSA's Chairman wrote to the Economic Secretary to the Treasury to inform her of the Society's financial position. The Chairman explained the uncertainty which existed over the credit that could be taken for the reinsurance treaty, and said that:

> *This problem, together with the effect of various market movements, and the need to reserve for potential mis-selling claims following delivery of the Opinions of* [Counsel for Equitable and Counsel for FSA], *result, on our assessment, that the Society could be in breach of its solvency margin requirement by some £200m.*

104 On 16 November 2001, the Society's Appointed Actuary wrote to the FSA to ask about the offset that the Society could take within its returns if the new Treaty were to be signed. The Appointed Actuary suggested that, in his view, a £600 million offset was appropriate, based on the amount of the reserve (not discounted), but reduced by £100 million to allow for the new additional premium that was required by the updated Treaty. The Society asked the FSA to agree to this credit in writing.

105 On 20 November 2001, it was agreed within the FSA that the prudential regulators should accept that the effect of the Treaty was that an offset could be taken within the Society's returns but that it was not yet clear what the amount of this should be. The amount would be calculated by reference to the cash available to the Society, which it was suggested might be in the range of £250 million.

106 On 22 November 2001, the FSA were advised by Counsel that the existence of the side-letter to the reinsurance treaty added nothing to the provisions within the reinsurance treaty itself and that there would have been no need to renegotiate the treaty if the 'Reinsurance Claims Amount' had exceeded £100 million. However, on the credit that could be taken for the reinsurance treaty, the FSA recorded the following:

Could [Equitable] *call* [in the Reinsurance Claims Amount] *in cash?* [Equitable's solicitors] *said no.* [Chief Actuary C] *said makes treaty worthless then.* [Counsel] *agreed.*

Need clarity that [the Reinsurance Claims Amount would] *be* [payable] *in cash by IRECO on* [liquidation, otherwise] *only thing you can take credit for is the 10%.*

107 The FSA informed Equitable, that day, that they should not take credit in their returns for the reinsurance treaty of more than £350 million.

108 On 23 November 2001, the FSA issued a press statement about the disclosure of the side-letter to the reinsurance treaty. The statement said that the FSA:

> *... took the view that the contents of the letter raised questions about the true value of the reinsurance contract that Equitable Life had entered into in early 1999 and which was shown in its regulatory returns. The FSA concluded that, had it been aware of the letter at the earlier stage, it would not have been prepared to accept the reinsurance arrangements as providing as much security for reserving purposes as was in fact taken.*

109 The statement went on to say that the FSA:

> *... has seen and reviewed the terms of a renegotiated reinsurance agreement and has confirmed that it has no objection to them.*

110 However:

> *... in the light of advice from leading Counsel, the FSA has taken the view that the value that Equitable Life should reasonably ascribe to the reinsurance contract is lower than it previously took. The FSA has made clear to Equitable Life that it must properly disclose the effect of the revised agreement, so that policyholders are made aware of the impact on Equitable's financial position for regulatory purposes.*

111 FSA also stated:

> *On the basis of the information received by the FSA, Equitable Life continues to meet its regulatory solvency requirements even taking account of the lower credit for the revised reinsurance policy.*

112 On 26 November 2001, Equitable provided their estimated monthly solvency figures for 31 October 2001. Those figures showed that the Society had free assets of £1,395 million to cover its required minimum margin of £985 million.

113 There remained a number of issues which were yet to be resolved before the new regulatory regime came into force, at which time my jurisdiction over the relevant events ended.

114 Those issues included whether Equitable's approach to discounting the reserving established for their accumulating with-profits policies was consistent with policyholders' reasonable expectations. The regulators also continued the discussions on the credit which could be taken for the financial reinsurance treaty, an issue which was also by that time linked to the success of the Compromise Scheme, to which I return later in this Chapter.

The information provided by the FSA

115 Throughout the post-closure period, the FSA were contacted by many policyholders seeking information and advice about the position of the Society and about their own options. In response to this, the FSA decided that they would provide general information to assist those policyholders.

116 The information provided by the FSA during the relevant period can be divided into three types: general information provided on websites and in press notices; responses to individual communications from concerned policyholders; and the published assessment of the Compromise Proposals that was published in December 2001.

General information

117 On 14 December 2000, the FSA put the following information on their website:

The FSA is:

- *monitoring the Equitable's position closely;*
- *making sure that policyholders are given timely and comprehensive information so that they can consider their options fully;*
- *requiring the Equitable to have effective arrangements for dealing with any complaints they receive; and*
- *the Equitable has, with the encouragement of the FSA, established a process for helping policyholders to decide whether they should take any immediate action.*

Since current Equitable policyholders may be asking other firms for advice, the regulators will shortly be reminding all firms of their obligations to give suitable advice, taking properly into account the personal circumstances and aspirations of their customers.

118 On 8 October 2001, the FSA noted that, in response to the question *'is the Society solvent?'*, their website had stated for some time that:

> *We have been monitoring Equitable Life's financial position closely, and on the basis of the information available to us, we are satisfied that it continues to meet its regulatory solvency margin requirements. Nevertheless, Equitable Life made clear in its annual accounts and in its regulatory return (a report that* [they] *must make to us), that it continues to face some fundamental uncertainties – for example, in relation to the cost of its liabilities to the Guaranteed Annuity Rate (GAR) policyholders. The proposed compromise scheme is designed to address those uncertainties.*

119 It was said that this was also the line that had been taken consistently by the FSA's press office.

Specific responses

120 I have also reviewed the many files of policyholder correspondence held by the FSA. Having done so, it is clear to me that, for understandable reasons, the FSA developed and used standard paragraphs to include in responses to individual policyholders who wrote to them following the Society's closure to new business. On occasion, they also replied on an individual basis, tailoring their reply to the specific points raised with them. What follows largely refers to the standard paragraphs that were used by the FSA on many occasions.

121 Prior to the closure of the Society to new business, the FSA often used the following standard paragraph in responses to communications from policyholders:

> *Your letter questions the solvency of the Society. As regulator, the Financial Services Authority monitors the financial position of insurance companies carefully. We are satisfied on the basis of the information provided to us*

that, even after having made appropriate provision to cover benefits on a basis consistent with the House of Lords ruling, the Equitable continues to satisfy regulatory requirements under the Insurance Companies Act 1982.

122 Another standard paragraph stated:

> *... as you may be aware, the Society takes the view that its financial position has now been weakened and that the future interests of policyholders will be best protected by seeking a buyer for the business. This would enable the Society to raise additional capital to support its future business.*

123 In relation to early criticisms that the prudential regulators were failing to prevent the Society from advertising for new business in the light of the House of Lords' judgment, the FSA often replied:

> *... given that the Society continues to meet the relevant statutory requirements and is therefore able to continue to trade, we see no reason why the Society should not continue to advertise to attract new business.*

124 Less than a month prior to closure, the FSA also felt able to deal with the way in which the Society had acted in relation to its regulatory obligations:

> *As regulator, the FSA monitors the financial position of insurance companies carefully. We are satisfied on the basis of the information provided that the Equitable continues to be solvent and satisfies all relevant regulatory requirements under the Insurance Companies Act 1982. As the Equitable continues to be a going concern, complying with the relevant regulatory requirements, we do not share your view that it should be prevented from marketing its products, which could be damaging to the business.*

125 For natural reasons, the volume of communications from Equitable's policyholders greatly increased when the Society closed to new business. The line taken by the FSA in response to such correspondence included the following standard material:

(i) *I would point out that the Society remains solvent and will continue to pay out benefits and accept premiums under existing policies;*

(ii) *I should point out that the company continues to be solvent and to meet the statutory requirements for insurance companies;*

(iii) *I can assure you that the Equitable remains solvent, existing policies are still valid and the Company continues to be able to meet its contractual obligations to policyholders; and*

(iv) *The Equitable remains solvent, existing policies are still valid and it continues to be able to meet its contractual obligations to its policyholders.*

126 In response to correspondents seeking specific information about the position of the Society, in January 2001 the FSA replied:

> *You asked for some reassurance concerning the future security of your investments with the Equitable. The Equitable remains solvent, existing policies are still valid and it continues to be able to meet its contractual obligations to its policyholders. Of course, the FSA also continues to monitor closely the operations of the Equitable in accordance with our powers under the Insurance Companies Act 1982 and the Financial Services Act 1986.*

127 In February 2001, the FSA wrote:

It might be helpful if I first clarify that while the Equitable announced on 8 December 2000 that it would from that day close to new business, the Equitable was solvent and remains so, complied with all relevant statutory solvency requirements for insurance companies, and was able to meet its contractual obligations to its policyholders.

128 From June to August 2001, one of the standard paragraphs used by the FSA was:

We are satisfied, on the basis of the latest figures supplied by the company, that it continues to meet its solvency margin requirements. The company has made it clear in its Annual Report and in its regulatory returns, that it continues to face some fundamental uncertainties.

129 Following the policy value cuts in July 2001, the FSA would reply to correspondents, saying:

Equitable Life, like many companies, is having to cope with very difficult investment conditions. The position is that policies have notionally been growing in value at an annualised interim rate of 8 per cent. However, because of the current investment climate, the returns on the with-profits fund over the last couple of years have been minimal. The notional increase in policy values has therefore been eating away at the company's free assets. The board has therefore decided it is time to act to bring policy values back into line with the value of the assets that back them, and to reset the interim rate of return at a sustainable level. The guaranteed elements of any policy values will not be affected.

130 In August 2001, the FSA informed a policyholder who asked about possible compensation being made available to mitigate the effects of the policy value cuts:

You ask whether anything is being done to compensate policyholders for the reduction in policy values. This reduction was to bring the value of policies on maturity or surrender into line with the value of the underlying investments which have fallen considerably as a result, in part, of recent falls in stock market values. This was to ensure that those leaving the Society were not paid more than a fair share of the funds. Our understanding is that the Equitable's overall policy values, which include an element in respect of expected final bonus at maturity, were expressly stated not to be guaranteed except when the policy matures or at other contractual dates when funds can be withdrawn without penalty.

131 The standard response from the FSA, when asked what the reasons for the policy value cuts were and whether regulatory failure had played any role in the events at the Society, was:

I am sorry that you feel the information you received from us regarding the Equitable Life Assurance Society (the Equitable) was incorrect in light of the recent announcement about the reduction in policy values. It might be helpful if I clarify why this reduction has occurred.

The Equitable announced that it would have to reduce pension policy values by 16 per cent and not award any growth for the first six months of 2001 because of:

- *heavy falls in stock markets over the last 18 months;*

- *the need to align policy values so they do not exceed the value of the investments underlying them; and*
- *the number of policyholders taking their benefit out on retirement*

The Equitable is not the only life assurance company reducing final bonuses because of falls in the stock market.

132 On 5 January 2001, the FSA also wrote in the following terms to a policyholder, concerning what might happen should Equitable become insolvent:

However, should the need arise, there is a scheme designed to assist with the transfer of policies or arrange compensation.

The immediate objective of the scheme would be to arrange for your contract to be transferred to another provider to ensure continuity of cover as the case may be. If that were not possible, the scheme provides for compensation to be paid, generally of 90% of the contractually guaranteed benefits at the time of the insolvency.

133 On the role of the regulators, the FSA explained to policyholders that:

The Financial Services Authority... has, in accordance with its statutory objectives, been actively working in a number of areas to protect the interests of the Equitable's policyholders. We have been carefully monitoring the Equitable to ensure that it continues to meet the requirements under the Insurance Companies Act 1982 and complies with the rules of the Personal Investment Authority. We are working with the Equitable to try to make sure that clear and appropriate information is available to policyholders as developments happen. And that the Equitable continues to give support and advice to its customers.

134 The FSA also was often asked for advice as to what an individual policyholder should do in the light of the ongoing uncertainty surrounding the future of the Society. A standard reply given was:

Our advice to policyholders has not changed. Policyholders will need to think carefully about the options open to them, and the consequences of those actions. We would also recommend policyholders consider carefully whether to take independent advice on their position. In considering your options you will wish to be aware it is often possible to transfer or surrender policies. However, where that is possible, surrendering or transferring with-profits policies at points other than on contractual dates may result in policy values being reduced. Contractual dates might be maturity, retirement or other dates which may be specified in the contract. Policyholders withdrawing funds at such specified dates are not affected by these adjustments, nor are most of those with unit linked policies. You will need to check the terms of your policies or with the Equitable to establish the position as it relates to your policies.

135 Finally, while the proposals for the Compromise Scheme were being developed, those who contacted the FSA were often told that:

The main effect of the closure to new business was that at the time, the Equitable thought it would have to hold a higher proportion of its funds in more secure investments, such as gilts, which might have led to a slight reduction in returns. The Equitable has since announced *plans to buy out rights to an annuity at guaranteed rates, which it believes would provide a degree of certainty for policyholders going forward. The Equitable also believes that the increased certainty would allow it to release statutory reserves held to cover the GARs and, combined with the amounts payable by Halifax, this would restore the company's investment freedom for the future, thereby enabling it to operate more like an open fund. We understand that details of the proposals will be announced over the summer.*

The FSA's consideration of Equitable's bonus declaration for 2000 and the July 2001 policy value cuts

136 At several points over this period, the prudential regulators raised the matters of the level of benefits that Equitable were paying out on their policies, the amount of bonus that would be declared for the year 2000 and the interim rate to be used going forward, and the relationship between policy values and asset shares.

137 In their report to the FSA on reserving and related issues, GAD said that they could not say whether the current level of a 10% market value adjustment applied to non-contractual surrenders was the correct one. GAD's report noted:

> *However, we understand from figures supplied* [by Equitable's auditors to Prospective Bidder A] *last month, that Equitable are overpaying (on monies leaving the fund) at 30.09.00 at the rate of £2.3bn (across the whole portfolio) and this suggests that some correction to the level of payouts is overdue. In the normal course, the Society would seek to recover this overpayment in future years, but in the situation they now find themselves in, this would be to the particular detriment of the remaining policyholders.*

GAD's report continued:

> *The Insurance Companies' Regulations and the actuarial guidance do not require companies to reserve for Terminal Bonus in statutory valuations, and most companies/societies take advantage of this exemption. When Terminal Bonus is paid on a claim, the cost is met from the Society's free assets. However, as shown ... above, we do not believe the Equitable have any free assets of any size. There is therefore a danger that if the Equitable allow out-going policyholders to leave the fund on terms which are too generous, there could then be insufficient assets available to meet the guaranteed benefits of the remaining policyholders. The whole situation is very delicate, and needs to be handled carefully.*

138 On 21 December 2000, GAD suggested to the FSA that they should discuss with Equitable the year-end bonus declaration and the impact of this on the Society's reserves. Also on that day, GAD suggested that Equitable should be questioned on the current level of payouts, and how those payouts compared to asset shares. GAD also suggested to the FSA that the Society should be asked to explain why, according to its auditors' figures, the '"*deficit on the smoothing account to recover in future" stood at £2.3bn. at 30.09.2000*'. GAD advised the FSA that this:

> *... suggests that the underlying amounts payable on termination are currently too high. Answers to these questions will help us to understand the dynamics of the business and the ramifications of those leaving the fund on the continuing policyholders.*

139 The regulators raised the question of the bonus declaration with Equitable on 16 January 2001. GAD's note of that meeting recorded that the Society was expecting not to declare any bonus that year, as it did not have sufficient emerging surplus. GAD also noted that Equitable were reviewing the interim bonus of 9% which was being applied to maturing policies.

140 On the bonus declaration for 2000, the FSA noted in a meeting held on 20 February 2001 that: *'The* [Appointed Actuary] *proposed to postpone the 2000 bonus notice until after the vote on the accommodation. If there was a positive vote it may be possible to offer a* [guaranteed] *bonus to everyone for 2000 of possibly 4%, (although as 3.5% is guaranteed under some GAR policies the real additional cost of this bonus was effectively the same as a 1% bonus across the board)'.*

141 On 30 April 2001, the FSA realised that Equitable's Companies Act annual report and accounts had been published. Within those accounts, it was said that the Society had decided to maintain the interim rate of bonus at 8% until further notice. It appears that the FSA gave no further thought to those matters until the issue of the July 2001 policy value cuts emerged.

142 At the time that Equitable submitted their returns at the end of June 2001, the Society wrote to the FSA to inform them that its Board intended to address the situation which existed, namely that policy values exceeded asset shares.

143 On 10 July 2001, the FSA received copies of four Equitable Board papers on the issue. A full description of these papers is included within the relevant entry for this date in Part 3 of this report. Following Equitable's announcement, made on 16 July 2001, that the Society's Board had decided to cut policy values by 16%, the Treasury asked the FSA a number of questions. In response to the Treasury's questions '*Do you consider saying anything about yesterday's announcement?*' and '*Did you consider urging EL to make it sooner, or saying something yourselves beforehand?'*, the FSA said:

> *We considered carefully whether it would be helpful for the FSA to make an announcement in parallel with that from Equitable Life. We concluded that there was nothing that we wished to say proactively since this was an announcement by the company. However, we prepared lines to take in response to enquiries and were in close touch with the company to review the proposed terms of its statement to ensure that it was appropriately expressed. The announcement was made as soon as practicable after the board had decided on its course of action, so an earlier announcement was never a possibility. It should also be remembered that part of the reason for the need for such extreme action was the continuing decline in the financial markets at a time when Equitable Life policies were continuing to attract notional annual growth of 8 per cent taking the value of the policies and the assets further out of line.*

In response to the Treasury's question *'How does the size of yesterday's revaluation compare with market movements generally over a directly comparable period?'*, the FSA said:

> *The adjustment to policy values, as compared with the year end position, was of 16 per cent. The FTSE 100 closed at about 6220 on 31 December 2000; on 17 July 2001 it closed at 5430, a fall of about 13-14 per cent. However, at the year end, policy values were already some way ahead of the value of the underlying assets because of the continued application of an 8 per cent interim rate of return. The overall effect is to reduce policy values to close to the value of the underlying assets at the present time.*

The development of the Compromise Scheme and the FSA's consideration of that Scheme

144 Throughout the post-closure period, the Society sought the means to stabilise its financial position in the light of its precarious financial position and the competing claims of different groups of policyholders. In particular, the Society sought to resolve any possible claims for mis-selling from policyholders who did not have policies with guaranteed annuity rates and to mitigate the potential detrimental impact on its solvency position of the open-ended liabilities arising from top-ups, which those policyholders with policies which contained guaranteed annuity rates were contractually allowed to make.

145 Having analysed the various options open to it, the Society decided that the best means of ensuring such stability was to compromise the claims of policyholders through a scheme of arrangement under the Companies Act 1985.

146 The preparations for this Scheme were undertaken throughout the period covered by this Chapter and it is impractical to seek to summarise those developments here, although as can be seen from Part 3 of this report, the Society kept the FSA regularly informed as to the progress on putting such a scheme in place.

147 The role of the FSA in such a scheme was explained by the FSA in their published assessment of the Society's proposals. It was noted that while *'the Companies Act does not give the FSA a formal role in the process... it has general regulatory powers... to take action in relation to the Compromise if it considers it appropriate in order to protect the interests of policyholders'*.

FSA assessment of the Compromise Scheme

148 On 19 November 2001, the FSA wrote to Equitable concerning their proposals for a Compromise Scheme. This followed an extensive dialogue between the prudential regulators and GAD, on the one hand, and the Society and its advisers on the other, which is set out within Part 3 of this report.

149 The prudential regulators listed a number of matters that remained to be resolved to their satisfaction but concluded that, subject to the resolution of these matters, the FSA *'would be content for its view to be recorded in the Scheme documentation in the following terms'*, namely that:

> *The Scheme has been formulated by the Society, which has satisfied itself about the fairness of the offer and the detail of the terms. The Society is also responsible for determining and disclosing its financial condition. The FSA's review has been directed to deciding whether it should exercise powers to intervene to prevent the Scheme being put to policyholders on the grounds that, in doing so, the Society was acting without due regard to the interests of policyholders. The FSA has determined that it should not do so, and considers that the Scheme is one which it is appropriate for the Society to put to policyholders. The FSA will publish more detail of its views on the Scheme before policyholders vote.*

150 This formulation was used by Equitable in section 7.7 of the information pack that they sent to all their members to explain the background to the proposals and to provide information about the various options.

51 The FSA subsequently, as it said that it would do, published a formal 'assessment' of the Scheme proposals, which is reproduced in full in Part 4 of this report. The assessment, published on 7 December 2001, summarised the view of the FSA thus:

> *The FSA is content that, in relation to the relevant groups of guaranteed annuity rate (GAR) and non-GAR policyholders, the level of increase to policy values is a fair offer in exchange for the GAR rights and potential mis-selling claims that would be given up. While there are variations from person to person, within each relevant group, we are content that there are no categories of policyholder within the groups who would receive disproportionately greater or lesser benefits.*

152 The FSA then described their role in relation to the compromise arrangement and explained that they had no formal role in the procedure under section 425 of the Companies Act 1985. However, the FSA explained that they could seek to be heard if the compromise were to be put to the court for formal approval after the vote by policyholders. The FSA went on to say:

> *As the FSA has made clear, we firmly believe that a successful compromise would, in principle, offer the best prospect of bringing stability to the with-profits fund and improving the outlook for concerned policyholders.*

153 After having set out their view as to the principal considerations to which both GAR and non-GAR policyholders should have regard, the FSA dealt with *'some important wider points that policyholders should take into account'*.

154 The first of these was entitled *'continued uncertainty'* and the FSA explained that:

> *Without the Compromise, the outlook for all policyholders would remain much more uncertain. In already difficult market conditions, the with-profits fund would remain seriously unstable...*
>
> *Equitable Life would need to continue to keep reserves against the range of competing rights and claims that would have been resolved under the Compromise. It would also need to adopt a more restrictive investment policy, which could affect policyholders' returns over the long term. There would also be a greater risk of extensive and costly litigation to sort out the various claims for mis-selling that would otherwise be settled by the Compromise. And those claims would in turn have to compete with the cost to the fund of meeting the GARs. All these costs would have to be met out of the with-profits fund. It is also likely that many of the remaining non-GAR policyholders would take the view – that some others have already taken – that they should take their money out rather than stay in a weaker fund.*
>
> *In order to be able to manage the business so that it continues to comply with regulatory requirements, Equitable Life could well, as the appointed actuary has made clear, find it necessary to take an extremely cautious approach to its management of the with-profits fund and to setting future bonus policy, in order to ensure that those leaving the fund in the near future, whether contractually or otherwise, do not take more than their fair share of the fund. If bonus rates had to be cut further, this could mean that all policyholders could find themselves materially worse off than if the Compromise had gone ahead.*

155 After explaining that another consideration to be borne in mind if the proposals were not agreed was that *'the benefit of the additional £250 million Halifax money would be lost, as would any chance of the further £250 million that is also contingent on certain future business targets being met'*, the FSA dealt with the alternatives to the proposals:

> *Some policyholders have suggested that winding up Equitable Life would be better, even though Equitable Life is solvent. The FSA does not agree. For a start, this would affect all Equitable Life policyholders, not just the with-profits policyholders who would be affected by the Compromise. If a winding up order were made, we would expect a liquidator to continue to run the with-profits fund and to attempt to assess and pay claims in the short term.*
>
> *However, a liquidator would probably be unable to declare any final bonuses, so the fund available to both GARs and non-GARs would be smaller. A liquidator would then attempt to transfer the policies to another insurer, if a willing recipient could be found. The value of a policy could be reduced on such a transfer. If a transfer were not practicable, then a liquidator would need to value all policies, on a basis agreed by the court, in order to make a distribution of the available assets. Significant costs arise on a liquidation, and any lump sum payments to policyholders might be taxed.*
>
> *There are additional consequences of a liquidation in the event of insolvency. We would expect the Financial Services Compensation Scheme ("FSCS") to protect the interests of policyholders, in the first instance by seeking to assist the liquidator to transfer the business to another insurer. As an alternative, the Court might be asked to reduce policyholders' contractual benefits, or crystallise them, in order to restore solvency and stability. If a transfer were not possible, the FSCS is able to compensate policyholders but any compensation would be limited to 90% of the value of the policy. The fact that the future returns or other benefits under a policy were guaranteed in certain circumstances, does not necessarily mean that the FSCS can pay compensation for those guarantees. This is because the FSCS is required to consider whether the benefits under a policy may be excessive.*

156 The FSA then concluded by dealing with the effects on other policyholders that an individual's vote might have.

157 The FSA's concluded view on the detail of the Scheme was that *'a successful compromise would, in principle, offer the best prospect of bringing stability to the with-profits fund and improving the outlook for concerned policyholders'*.

158 The Compromise Scheme was sanctioned by the Court on 8 February 2002, following a vote of the Society's policyholders in favour of its terms.

Other strands of regulatory work during this period

159 During the period covered by this Chapter, the FSA were also involved in a number of other strands of work concerning the supervision of the Society.

160 These included:

(i) the appropriateness of the use by the Society of market value adjusters which it applied in respect of the funds built up by policyholders who wished to transfer out of the Society to another pension provider – in the light of the concerns expressed by the Office of Fair Trading (OFT) about whether the use of such adjusters, which it saw as a penalty, was contrary to the Unfair Terms in Consumer Contracts Regulations;

(ii) the sale of part of the Society's infrastructure and non-profit business – to which I have already referred in Chapter 2 of this report;

(iii) consideration as to whether compensation from the Policyholder Protection Board (or action by it to effect the transfer of the Society's with-profits business to another provider) would be available if the Society became insolvent, given that the Society's Articles of Association appeared to limit its liabilities to the assets it possessed; and

(iv) attempts to gain an understanding of the potential liabilities that the Society faced as a result of any mis-selling that may have occurred in respect of those policyholders whose policies contained no guaranteed annuity rates – and the provision of compensation, by way of a rectification scheme, to those policyholders with guaranteed annuity rates who had been denied the opportunity to apply such rates to their fund, when taking benefits during the period in which the Society had operated its differential terminal bonus policy.

The OFT and the market value adjuster

161 On 12 December 2000, the OFT wrote to the FSA. They explained:

> *We are considering whether we need to take enforcement action in relation to reports that Equitable Life has imposed a new charge of 10% on transfers of assets out of the Society. We are beginning to receive complaints and enquiries about this charge. The relevant terms and conditions could be unfair if they give the Society discretion to make new charges or to vary existing ones. The Director General of Fair Trading has powers to prevent the use of unfair terms, by seeking an injunction in the High Court. The Office is prepared to move swiftly on the matter to protect the interests of consumers. However, we know insufficient about the basis on which Equitable is making the charge to justify formal action at this stage. Whatever light you can throw on the question would therefore be most welcome.*

162 This had been prompted by policyholder complaints. GAD provided advice on the letter to the FSA. This advice said that:

> *... the Equitable would very likely become insolvent if they were to remove this adjustment at the present time and experienced a large number of surrenders. This is a result of the combination of GAO costs, a negative investment return in the present year, the final bonus additions for which no provision is required under the regulations, and unrecovered "deferred acquisition costs". I hope that FSA will therefore not insist on them removing or reducing this adjustment factor on surrenders without considering the impact on their solvency.*

163 The FSA's Managing Director commented on the OFT approach, expressing particular concern that, if the OFT were to take the view that the Society's market value adjuster amounted to an unfair contract term, *'the position could become highly problematic'*.

164 This issue continued to be considered by the FSA. Legal advice provided internally to the FSA on 21 December 2001 stated:

> *... it would seem to be odd were we to be taking action against* [Equitable] *on the grounds that the 10% deduction was contrary to the Unfair Terms in Consumer Contracts Regulations (particularly where similar reductions appear to have been imposed in the past by* [Equitable] *without adverse regulator comment). I would also think that it would be odd, given the above considerations, for the OFT to consider taking action under those regulations against* [Equitable]*, though that of course is a matter for the OFT.*

165 The advice *'therefore'* concluded *'that the "exit charge" imposed by* [Equitable] *is unlikely to be contrary to the Unfair Terms in Consumer Contracts regulations'.*

166 The FSA's response to the OFT of 21 December 2001 explained that:

> *Equitable announced last week that its "exit charge" would be increased to 10% from its previous level of charges which averaged around 5%. On the basis of information available to the Government Actuary's Department, we understand that, even following this increase, surrender values of Equitable policies are not out of line with the industry average. The FSA will be monitoring the adjustments made by Equitable and we have powers to intervene at any time, if we consider the figure to be excessive.*

167 On 16 January 2001, at a meeting between the FSA, GAD and the Society, Equitable:

> *... explained that the present 10% MVA is* [needed] *to cover the additional cost of* [GAOs] *arising following the* [House of Lords'] *judgment (probably around 5%), along with the relatively poor investment return last year (around 2.5%), and the need to recover all initial expenses incurred (around 2.5%). They have made a robust response to the OFT on this topic. The MVA is applied of course to the full value which was increased on an interim basis by around 4% last year, as compared with an actual investment return on the fund of around 2-2.5%. Meanwhile, they are not keen to draw any further attention to the MVA and its link to investment conditions in view of the possible adverse publicity. They stressed to us that the MVA is not intended to act as a penalty; rather the objective is that payments on noncontractual termination should be fair to both outgoing and remaining policyholders.*

168 On 19 January 2001, the OFT's provisional views, which had been informed by the response of the Society to their query about the market value, were communicated to the FSA. The FSA recorded those views as being that the OFT accepted the *'explanation we gave them and the criteria that Equitable apply in calculating a suitable adjustment',* while the OFT were not being in a position to form a view as to whether the 10% level applied by the Society was a reasonable one in terms of the unfair contracts legislation. However, *'the bad news'* was that the OFT *'took exception'* to the terms of the policies which provided that the Society had absolute discretion to make such adjustments.

169 On 7 February 2001, the FSA wrote to the OFT about their concerns. The FSA noted that the OFT's:

> *...concern is not so much about the application of an mva in itself, but rather the way in which any adjustment is calculated. You indicated that you might be looking to ask* [Equitable] *to take steps to amend the wording of its policy documentation to explain more precisely the basis on which adjustments would be made... I think that achieving your objective by way of a contractual change may present some difficulties and you will understand our concern, for prudential reasons, that nothing should be done to undermine* [Equitable's] *(or any other life office's) ability to adjust contract values at early termination in appropriate circumstances.*

170 The OFT replied on 15 February 2001, saying:

> [We] *are clear that the Regulations apply here. We cannot agree with the argument that the mva terms are fair or fall outside our scope to take action under the Regulations if they are operated fairly. The question is whether the terms have the potential to be used unfairly in the future or mislead customers, and we consider that they have. Equitable will need, in order to meet the requirements of the Regulation, to limit the scope of its "absolute discretion" and conform its conditions to the fair practices that it says it applies and the fair principles that are enforced by regulation, though these principles may need further elucidation. Similarly, the scope of the FSA to regulate Equitable and Equitable's present practice in operating the relevant terms, do not remove the problem or confer any kind of exemption... Whether a standard term is unfair does not depend on an assessment of factors such as the practices and potential remit of any regulators, the likelihood that the courts will overturn the unfair term when it is challenged, or the current practices and policies or culture of the business using the terms.*

171 The OFT concluded by saying:

> *I note your concern that nothing should be done to undermine Equitable's ability to adjust contract values at early termination in appropriate circumstances. However the effect of the Regulations is that the relevant terms should not enable Equitable to make unfair adjustments. The width of the terms is without doubt challengeable under the Regulations and could therefore be seen as unenforceable, whereas fair terms would not be. It seems to us essential therefore for Equitable to face this concern and that it would meet both your prudential concerns and ours for Equitable to do so by revisiting the terms to clarify and objectify the expectation that investors can legitimately have.*

172 In meetings subsequent to this exchange, the FSA and the OFT continued to disagree about the issue. In a report to the FSA Board given on 15 March 2001, it was said:

> *Policyholders had been complaining to the Office of Fair Trading that the adjustments made to the policy values on surrender (which was increased from an average of 5% to 10% after the closure announcement) were contrary to the unfair contract terms legislation. As a matter of policy, we share the concerns that adjustments should not be excessive and serve materially to disadvantage one group of policyholders over another. However, for prudential reasons, it is important that any life office has sufficient*

flexibility to protect its insurance funds. OFT accepted that a 10% penalty was not unfair but were concerned about the 'absolute discretion' reserved to the Society to determine surrender values. We have worked closely with both the OFT and Equitable on this and assisted them [to] *reach agreement about a way forward. OFT will not seek to challenge the relevant powers, and in return, Equitable will seek to improve the information about MVAs available to policyholders, including the reasons why they may be applied. The biggest short-term concern is that continuing falls in equity prices may lead Equitable to want to raise the MVA ...*

173 On 3 April 2001, the OFT informed the FSA that the OFT had already begun enforcement action against Equitable, following more than 60 complaints about the way they used the market value adjuster. The OFT said:

> *Equitable has explained how it exercises this discretion in practice but it is clear that there is no transparency and consumers cannot take an objective view of how it will be used. We think Equitable may be able to meet our concerns by giving an undertaking to limit the exercise of the discretion so that the term is used fairly and in a way that is – within the limitations imposed by varying market conditions – predictable and objectively verifiable by consumers. However, we would need to undertake a good deal of research before we could be confident that the undertaking effectively met our serious consumer protection concerns.*

174 From 1 May 2001, the FSA took over responsibility from the OFT for complaints made under the unfair contract terms legislation. Prior to this, on 17 April 2001, the FSA's Chairman had written to the OFT, saying:

> *I am sure you are correct to suggest that for OFT to pursue these cases would risk cutting across the review of with-profits business which I announced in February. Since the FSA will shortly gain powers under the UTCC Regulations I think it does make sense for us to take on these complaints, and we shall be happy to do so.*

175 By the time that my jurisdiction over the relevant events ended, those complaints were still under consideration by the FSA.

Contingency planning and winding-up

176 The chronology of events set out in Part 3 of this report details how the other issues arose, the degree of regulatory involvement in each, and the way in which these issues were resolved, if they were, during the period covered by this report.

177 Consideration was given on almost every day of the period covered by this Chapter as to the options which the prudential regulators and the Society faced. The FSA identified at an early stage the need for contingency planning and analysis of the possible methods and implications of winding the Society up.

178 The FSA secured the services of a secondee who was an expert in insurance insolvencies to advise and assist the FSA to consider these options. This resulted in a significant volume of analysis. What rapidly became clear, however, was that there was little by way of precedent, the rules were extremely complex, and the actual mechanics of winding up were very uncertain, but likely to be prolonged. It is not practicable to replicate here all the entries which set out this activity. Those are set out in Part 3 of this report.

Liability for mis-selling

179 On 8 May 2001, the Society's Chairman provided the FSA with an initial draft of Counsel's opinion on the possibility of mis-selling claims to be made by non-GAR policyholders. The FSA said that they would need to consider the implications of this opinion for the Society's solvency position. The FSA and the Society met the following day, continuing their discussions on the issue.

180 On the possible costs of mis-selling and the Society's solvency position, the FSA recorded that:

> *A significant additional reserve would almost certainly lead to the Society not covering its RMM. The Appointed Actuary said that if required the Society could find the amount required in the worse case scenario (the £1.5bn) but this would mean that the Society would have to move entirely out of equities and into gilts.*

181 On 5 July 2001, the Society informed the FSA that it had not reached a firm view on how it would act but had concluded that solvency could be maintained by switching almost the entire fund from equities to bonds. The FSA's Director of Insurance commented that the FSA needed to get a better *'handle'* on Counsel's opinion regarding mis-selling compensation and that the sums which had been mentioned of between £1,000 million and £1,500 million sounded very alarmist.

182 On 6 July 2001, the Society's auditors telephoned the FSA to discuss Counsel's opinion, which had suggested that the Society could face significant mis-selling claims.

183 At a meeting of the prudential and conduct of business regulators to discuss Equitable on 18 July 2001, it was agreed that:

- the FSA should ask Counsel to produce provisional advice on mis-selling;
- the FSA should also ask the Society about its strategy for pensions mis-selling claims on publication of Counsel's opinion;
- the FSA did have powers to prevent the Society publishing their Counsel's opinion but that it was unlikely to be in the interests of policyholders to exercise those powers; and
- the FSA should ask the Society about its ability to reserve for mis-selling claims.

It was noted that work would be needed to quantify claims and that the Society would need adequate contingency planning to cope with a range of possible outcomes.

184 This work continued throughout the rest of the period covered by this Chapter. For example, the FSA commissioned work by consulting actuaries to assess the value of possible mis-selling claims, calculated against both the Society's and the FSA's legal advice as to the Society's potential exposure. Discussions between Counsel for the Society and Counsel for the prudential regulators remained ongoing.

185 Prior to an emergency meeting on 29 July 2001 to discuss the results of the Society's Board meeting of that same day which discussed whether the Board considered the Society to be solvent, the Society's Chairman informed the FSA that the 'worst case' basis for the value of mis-selling liabilities was £900 million.

186 Estimates of the potential liabilities to which the Society might be exposed ranged from £250 million (see the entry for 29 July 2001 in Part 3 of this report) to £5,000 million (see the entry for 25 July 2001 in Part 3 of this report). Those liabilities were eventually compromised under the scheme of arrangement which the Society concluded pursuant to the provisions of the Companies Act 1985.

Conclusion

187 In this Chapter, I have set out a summary of the main themes and work strands related to the supervision of the Society that the prudential regulators and GAD were involved in during the third period covered in this report.

188 I now turn to consider what the events and actions that have been summarised in the last three Chapters of this report – and set out more fully in Part 3 of this report – disclose. Before doing so, I must address certain submissions I have received which dispute my approach to the standard I should apply when assessing those events and actions.

Chapter 9 – Preliminary assessments

Introduction

1 In this Chapter, I set out some assessments which I have made in respect of disputed questions, concerning not the particular facts relevant to the Society, but what standard of regulation it would be appropriate for me to apply, when considering the actions of those charged with the prudential regulation of insurance companies during the period covered in this report.

2 Those disputed questions, which I address as matters which are preliminary to my findings of fact, relate to the nature of the applicable regulatory regime, what duties were imposed on the prudential regulators and what approach I should adopt when assessing the discharge by those regulators of their powers.

3 This Chapter is structured in the following way:

- in paragraphs 4 to 13, I summarise the key statutory functions – that is, the powers and duties – that were conferred on the prudential regulators of insurance companies. I also summarise the standard which I have applied when considering the discharge by those regulators of their functions;
- in paragraphs 14 to 28, I outline the submissions that I have received on those matters from the public bodies whose actions were subject to complaint, disputing certain aspects of the approach that I proposed to adopt to those questions; and
- in paragraphs 29 to 118, I set out my assessment of those submissions, which deal with:

1. the aim and objectives of the regulatory regime, in paragraphs 29 to 47;
2. the purpose of the regulatory returns, in paragraphs 48 to 57;
3. the duties imposed on the prudential regulators by section 22(5) of the Insurance Companies Act 1982, in paragraphs 58 to 79;
4. intervention on the grounds of the protection of PRE, in paragraphs 80 to 86;
5. actuarial judgement and the regulatory margin of appreciation, in paragraphs 87 to 109; and
6. the application of hindsight, in paragraphs 110 to 118.

The statutory functions of the prudential regulators and the standard of regulation that I have applied

4 In Chapter 5 of this report, I summarised the statutory and administrative framework which was relevant to the actions which have been the subject of the complaints within the terms of reference for the investigation which led to this report. This I did as part of establishing the basis on which I would determine those complaints.

5 I explained that there had been four influences on the regulatory regime which existed at the time covered by this report: the traditional approach within the United Kingdom to insurance regulation, the central place of the actuarial profession within that system of regulation, the introduction of intervention powers in the aftermath of certain high profile insurance company failures in the 1960s and 1970s, and the influence of the United Kingdom's membership of the European Union and the creation of a Single Market for insurance.

6 I also explained that those influences had created four cornerstones of the specific regulatory regime, which together laid the foundations on which were built the way in which the prudential regulation of life insurance companies was undertaken and the powers, duties and means conferred on those responsible for undertaking that regulation.

7 Those cornerstones were:

- the concept of 'freedom with publicity';
- the central role of the Appointed Actuary;
- the protection of the reasonable expectations of both policyholders and potential policyholders; and
- the fulfilment of the criteria of sound and prudent management.

8 Overlaying that specific framework were certain general principles of both good administration and public law, which were applicable to the actions of any public authority.

9 The principles of good administration that I identified as being generally relevant to the complaints which formed the basis for the investigation which led to this report were getting it right and being open and accountable.

10 The principles of public law that I identified as being generally relevant to those complaints were:

- that public bodies must carry out their legal duties in accordance with the law;
- that, where public bodies have a power granted to them, they must properly consider whether to exercise that power; and
- that, when public bodies exercised a power, they must act fairly and reasonably and in accordance with any conditions imposed by law.

11 At the end of Chapter 5 of this report, I summarised the general and specific legal and administrative obligations which I considered that the prudential regulators and/or GAD had at the relevant time.

12 Those were:

(i) a specific duty to consider whether the regulatory returns of an insurance company were complete and accurate and to communicate with such a company if those returns appeared to be inaccurate or incomplete in any respect;

(ii) specific duties to consider whether an insurance company valued its assets and determined its liabilities in accordance with the requirements of the applicable Regulations and to verify the solvency position of such a company;

(iii) a general duty to give proper consideration to the use of their powers of intervention where the circumstances had or might have arisen which gave grounds for the use of such powers;

(iv) a general duty to exercise their statutory powers in a right and proper way, in accordance with the presumed intention of the legislature which conferred those powers – in good faith, reasonably, for a proper purpose, and with procedural propriety; and

(v) a general obligation to act in accordance with established principles of good administration - by acting lawfully and in accordance with published and internal policy and guidance, by taking proper account of established good practice, by taking reasonable decisions based on all relevant considerations, by having kept proper and accurate records, and by providing information which was clear, accurate, complete and not misleading.

13 All the above established the standard which I will apply in my consideration and assessment of the facts of this case and of the way in which the prudential regulators and GAD discharged their statutory functions and other obligations.

The submissions of the public bodies

14 In their response to a draft of this report, the public bodies whose actions were the subject of complaint made submissions to me which disputed certain aspects of this approach. There are five important respects in which those bodies disputed my approach.

15 The first relates to the purpose of the regulatory returns submitted by life insurance companies to the prudential regulators and scrutinised by GAD on behalf of those regulators.

16 The second relates to the specific statutory duties imposed on the prudential regulators, pursuant to section 22(5) of the 1982 Act, to consider the returns of an insurance company and, if those returns appeared to be inaccurate or incomplete in any respect, to communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

17 The third relates to the powers of the prudential regulators to intervene to protect PRE.

18 The fourth relates to a range of reasonable professional judgements on certain questions and the margin of appreciation to be afforded to those responsible for exercising regulatory functions.

19 The fifth relates to whether hindsight is permissible within my assessment of how the prudential regulators and GAD discharged their obligations.

The purpose of the regulatory returns

20 The public bodies whose actions were subject to complaint submitted to me that:

> *...in forming a view of an insurance company, policyholders, potential policyholders and other parties would generally have given much more consideration to material such as its Companies Act accounts, policy illustrations, bonus notices and With Profits Guides than they would to its returns to the prudential regulator.*
>
> *The returns were not designed for the purpose of enabling comparative analyses to be made; nor was the information they provided relevant to an assessment of the suitability of an insurance company's products to investors or potential investors. In contrast to the Companies Act accounts, which were sent to all policyholders, the returns were only available on request.*

The duties contained in section 22(5) of the 1982 Act

21 I have been invited by the public bodies whose actions were subject to complaint to conclude that the performance of the statutory duty imposed on the prudential regulators by section 22(5) of the 1982 Act only arose where those regulators considered, acting with the advice and assistance of GAD, that an error in or omission from the returns was material.

22 Three grounds have been advanced for that submission:

- first, it was submitted that, although section 22(5) imposed a duty on the prudential regulators, that section nevertheless afforded those regulators a substantial margin of appreciation. The duty to communicate with the company only arose in circumstances where the returns '*appear*[ed]' to be inaccurate or incomplete. The section was thus framed in a subjective form, which expressly recognised that any determination of this question involved an exercise of judgement on the part of those bodies to whom responsibility to undertake the prudential regulation of insurance companies had been delegated;

- secondly, it was submitted that, in relation to the words *'inaccurate or incomplete'*, the touchstone of accuracy and completeness was the requirements of the 1982 Act and of the applicable Regulations made under that Act. Accordingly, a company's regulatory returns could be considered inaccurate or incomplete only if they did not comply with the relevant legislation; and

- finally, it was submitted that section 22(5) did not require the prudential regulators to secure the correction of errors or omissions which were not material. Guidance at the time had set out the prudential regulators' view, based on legal advice, that the expression *'inaccurate or incomplete in any respect'* in section 22(5) ought to be interpreted in a common sense way to mean *'in any material respect'*. This approach was said to be supported by well-established principles of statutory construction.

23 The public bodies told me that:

> *There was no obligation to follow up every point that might arise on the returns. The proper role of GAD and the prudential regulator was to exercise professional regulatory judgement to determine which points were significant in the overall context...*
>
> [The] *practical application of the regulatory requirements required regulators and actuaries to use judgement in reaching decisions on which issues to pursue and the level of satisfaction needed to resolve issues in the best interests of policyholders. These judgements are necessarily made on the basis of the facts available at the time, not all the knowledge which might be available with the benefit of hindsight.*
>
> *They were also made, quite properly, on the basis of the regulations, prudential and actuarial guidance, and generally accepted actuarial principles, as they stood at the time.*

Intervention on the grounds of PRE

24 I have also been invited by the public bodies whose actions were under investigation to conclude that the powers of intervention conferred on the prudential regulators to intervene in the affairs of an insurance company, in order to protect PRE, were only to be used sparingly and as '*long-stop*' powers.

25 As can be seen from paragraphs 282 to 286 of the initial response of the public bodies to the complaints, reproduced in Part 4 of this report, I have been invited to conclude that:

> *... the 1982 Act... made it clear... that powers of intervention on the grounds of PRE were to be extremely limited. In particular, this was spelled out by section 37(6) of the 1982 Act which made it clear that the power to take action for the purpose of protecting PRE under section 45 was a merely residual power, only to be used by the prudential regulator when other powers of intervention could not achieve the necessary goals... from 1994 onwards... the primary responsibility for monitoring PRE was placed on the Appointed Actuary...*

Actuarial judgement and the regulatory margin of appreciation

26 The public bodies have submitted that my proposed approach failed sufficiently to recognise the scope for a range of reasonable judgements on the subject matter of the complaints within the terms of reference for the investigation which led to this report.

27 Those bodies have also submitted that my proposed approach failed to allow a sufficient margin of appreciation to the prudential regulators when assessing how the prudential regulation of insurance companies was undertaken at the time covered by this report.

Hindsight

28 The public bodies have submitted that I have been influenced by hindsight, in particular by 'retrospective actuarial advice' and by '*knowledge of subsequent events*'.

My assessment of the submissions made by the public bodies

The aims and objectives of the regulatory regime

29 Having considered the submissions that have been made to me on these matters, I am not persuaded by any of those submissions and I am satisfied that the approach that I adopt in this report is appropriate.

30 In my view, those submissions which relate to the purpose of the regulatory returns, to the duties imposed on the regulators, and to intervention on the grounds of the protection of PRE, all take a view as to the aims and objectives of the system of prudential regulation that is inconsistent with the regulatory regime as Parliament created it.

31 Moreover, I consider that the submissions on those matters which have now been made to me are inconsistent with the views expressed by those undertaking prudential regulation or the scrutiny of the regulatory returns at the time covered by my report.

32 I have noted in Chapter 5 of this report that the aim of the system of prudential regulation was to protect the interests of policyholders and potential policyholders. Securing that aim was to be done in such a way as to balance the need to take such action as was necessary to protect those interests, without interfering in the business of insurance companies to such an extent as would stifle competition and prevent innovation, thus harming consumer interests. That this was so does not appear to be a matter of contention.

33 The objectives of prudential regulation were set out in, among other places, the guidance which those regulators produced.

34 The DTI's Policy Guidance Notes, produced in September 1991, and thus in place when those regulators were considering whether to approve the appointment of the Society's Appointed Actuary to be also its Chief Executive - and by the time that the scrutiny of the Society's 1990 returns was being undertaken - set out the objectives of prudential regulation.

35 After stating that the prudential regulators *'should operate, and be seen to operate, a firm but fair regulatory regime'* and that *'the message to the public should be that the Department is watching very carefully and is likely to err on the side of caution rather than to adopt a relaxed attitude'*, those objectives were said to be:

- in relation to the carrying on of insurance business (Guideline 2.2):

  The protection of policyholders and potential policyholders is paramount.

- in relation to the power to withdraw authorisation from a company carrying out insurance business (Guideline 2.5):

  By withdrawing a company's authorisation in respect of new business... if we have serious concerns about their solvency position, we would be able to limit the risk to potential policyholders.

- in relation to the authorisation of the controllers of insurance companies (Guideline 4.2):

  To prevent persons or companies that appear to the Secretary of State not to be 'fit and proper' to be controllers of insurance companies from assuming such positions.

- in relation to the duties imposed by section 22(5) of the 1982 Act to consider the regulatory returns submitted by insurance companies and to communicate with such a company with a view to the correction of any inaccuracies and the supply of deficiencies (Guideline 5.4):

  To secure the correction of material errors and the supply of deficiencies in annual returns... in order that neither the Department nor the public, including shareholders and actual or potential policyholders, form a view of the company based on inaccurate or incomplete information.

- in relation to the valuation of a life insurance company's long-term liabilities (Guideline 6.2):

  To be satisfied that the valuation of long-term liabilities is in accordance with the 1981 Regulations and is correctly reported in Schedule 4 (and Schedule 5 where appropriate) of the 1983 Regulations. In addition, to be satisfied that the required margin of solvency is covered at all times and that it appears likely that the company will continue to maintain adequate cover for its solvency margin in the future.

- in relation to the general powers of intervention that Parliament conferred on the prudential regulators (Guideline 8.1) and in relation to the specific power that the prudential regulators possessed to impose notices of specified requirements on an insurance company (Guideline 8.2):

  To ensure that the Secretary of State's powers of intervention are exercised whenever it is necessary for the protection of policyholders, without companies being subject to unnecessary restrictions.

- in relation to the specific power that the prudential regulators possessed to limit the premium income which an insurance company received while it was authorised to write new business (Guideline 8.5):

  To limit the risk of a company becoming insolvent in the future by controlling its rate of expansion.

- in relation to the specific power that the prudential regulators possessed to require an insurance company to have an actuarial investigation carried out (Guideline 8.6):

  To ascertain the financial condition of a company's long-term business and the adequacy of a company's general business reserves.

- in relation to the specific power to require the submission by an insurance company of accelerated regulatory returns (Guideline 8.7):

  To ensure that the [prudential regulators have] *up to date information regarding companies whose financial position may be deteriorating.*

- in relation to the specific power that the prudential regulators possessed to require an insurance company or other body to provide information additional to that contained within the regulatory returns (Guideline 8.8):

  To ensure that the [prudential regulators are] *fully informed of a company's affairs or other aspects of its activities giving cause for concern.*

- in relation to what was described as *'the power of the Secretary of State to intervene in the affairs of companies otherwise than in pursuance of statutory powers'* (Guideline 8.10):

  To intervene in a company's affairs in the most appropriate manner for protecting policyholders or potential policyholders.

- in relation to the specific power that the prudential regulators possessed to modify certain provisions of the 1982 Act through the making of a section 68 Order (Guideline 9.1):

  > *To ensure that UK authorised insurance companies comply with all relevant primary and secondary legislation, whilst recognising that in particular circumstances in relation to particular companies it may be appropriate to modify the legislative requirements...*

- in relation to disclosure by the prudential regulators to, and liaison with, other regulators (Guideline 10.2):

  > *To avoid regulatory failures arising because an issue, company, or group of companies or person falls between regulators.*

36 Those objectives, as set out in that guidance, were reinforced by the views expressed by the prudential regulators and GAD at the time.

37 For example, in briefing produced within the DTI in March 1983, as part of the preparations for a scrutiny of the efficiency of the supervision of insurance companies, it was explained that:

> *The Department of Trade is responsible for the administration of the insurance companies' legislation, the primary objective of which is to protect consumers (i.e. policyholders and prospective policyholders) against the risk of loss or exploitation, due to insolvency, incompetence, dishonesty, or other unlawfulness of insurers... The intention is that the system of supervision should bring to notice any danger signals sufficiently early so that action can be taken to prevent the failure of a company...*

38 In a presentation given by a DTI official in June 1988, it was said that there were *'probably two major strengths in the present system: one is the extensive discretionary powers given to supervisors which enable us to take action at an early stage; another is the generally high standards of integrity and competence promoted by our "fit and proper" powers'*.

39 Other presentations given by regulatory officials at this time conveyed similar messages. In a talk entitled 'the regulatory environment', a DTI official explained that *'our aim... is to allow maximum freedom to the managers of insurance companies to manage in the light of their own judgement, but against the background of the careful supervision of their conduct by the Department and very full public disclosure of their company's affairs'*.

40 Briefing provided by DTI officials for Ministers in January 1990, which contained *'points on insurance regulation'*, stated that:

> *The aim of regulation is to create an environment which provides a fair level of protection for the policyholder but which does not inhibit competition and freedom to innovate.*

41 The then Government Actuary, in a paper entitled 'the Supervision of Life Insurance Business in the United Kingdom' given in 1990, said, in respect of insurance companies, that:

> *... information about the business they are carrying on, the assets held, income and expenditure, solvency, etc must be given in*

full in returns to the DTI. These are placed on public record so that anyone who wishes to may refer to them.

In principle, the information which is publicly available should be sufficient to permit another actuary to make an evaluation of the financial state of the company and to estimate the probable level of future profits which could be attributable to policyholders.

42 The balance that underpinned the system of prudential regulation was explained further in a speech, made in July 1990, by the then junior DTI Minister responsible for insurance regulation. In it, the Minister noted that:

There is a difficult area of judgement between excessive regulation and ineffective regulation... The correct balance is to provide reasonable standards within the industry within which investors can take their own judgements about the risks and rewards of their investments. The setting of the correct balance is a matter of constant vigilance and clear analysis. The Department is far from thinking that it can be purely reactive.

43 After setting out several developments that were then currently underway, the Minister said that these demonstrated *'a pro-active and vigorous regulatory role by the Department'*.

44 The powers conferred by Parliament on those responsible for operating the system of prudential regulation during the period covered by this report were, as I have explained in Chapter 5, robust and wide-ranging.

45 The objectives of that system, as those were seen at the time by those operating that system were not, in my view, grounded in a limited view as to the purpose of prudential regulation or in a philosophy or approach now characterised as 'light touch'. Nor was that what the prudential regulators and GAD said at the time.

46 The central aim of prudential regulation was the protection of the interests and reasonable expectations of policyholders and potential policyholders.

47 It is in this context that I have made the following assessments of the submissions made by the public bodies as to the standard of regulation I should apply in this case.

The purpose of the returns

48 I consider that the submissions of the public bodies on the purpose of the regulatory returns and the uses that those returns were put to during the period covered by this report are inconsistent with the reality of the system created by Parliament.

49 I would first note that I also received a submission on this matter from the Society's former auditors, who told me:

The purpose of the regulatory returns was to provide a prudent means of monitoring a life company's solvency and its ability to withstand potential future adverse experience. The returns were relied on by the regulator in performing its supervisory role in relation to insurance [companies]. *They also formed the primary source of information about the company's financial status for most informed observers. By contrast, the Companies Act* *accounts were of limited usefulness to external observers, presenting purely historical information and giving only limited information about the room for manoeuvre available to the company in question.*

50 It would thus appear that no consensus on this matter exists among those involved with the Society's affairs at the time covered by this report. In such circumstances, I look to what those operating the system of prudential regulation said at the time.

51 I consider that, when regard is had to those statements, it is clear that the submission, scrutiny, and publication of the regulatory returns were the prime mechanisms of the prudential regulation of insurance companies at the time covered by this report.

52 I also consider that an argument that the information contained in those returns would not, or did not, influence policyholders, their advisers, the financial press, the actuarial profession, or other industry commentators could not be sustained.

53 The DTI in May 1991, in a consultation document concerning proposals to transpose the European Third Life Directive into domestic law, explained that the system of prudential regulation was:

> *... designed to maintain public confidence in the continuing solvency of insurers while not being over-prescriptive or burdensome on insurers. This is possible because the activities of insurers are open to enquiry by the public, and to scrutiny by DTI and others, to ensure sound and prudent management.*

54 In a DTI paper published in December 1994, and entitled 'Insurance Supervisory Powers and Practice', the prudential regulators explained that the publication of the returns meant that:

> *Consequently, policyholders, competitors, brokers, market analysts, and journalists have access to the information contained in the annual DTI returns. This has resulted in a growing number of comparative analyses of data and an increasing market in insurance information – producing a more informed market in insurance products and their financial security.*

55 Further insight was given by an article in the 22 July 1993 edition of Money Marketing, in which the then Government Actuary was interviewed. The article appeared under the title *'The Government Actuary maintains that his role in examining life-office accounts means that* [independent financial advisers] *need not worry about the issue of financial strength'*.

56 The article stated that the Government Actuary had said that, *'by being aware that DTI criteria are being met,* [independent financial advisers] *should satisfy themselves that offices are well-managed and look at areas such as performance and distribution philosophy rather than at highly complex actuarial issues'*. It also quoted the Government Actuary as having said:

> *I think differences in financial strength should not be too much of an issue to the financial adviser because, so long as the company is adequately capitalised, it is not really relevant from the point of view of the policyholder whether the security is covered twice or 10 times over. If it is covered 10 times over, it may just reflect a*

philosophy of stacking away surplus and not distributing it to the policyholders.

57 I do not accept that the submissions of the public bodies on this question can be sustained, when regard is had to the position as it was seen at the time by those operating the system of prudential regulation. I am satisfied that my approach is appropriate in those circumstances.*The duties imposed by section 22(5) of the 1982 Act*

58 In relation to the duty imposed by section 22(5) of the 1982 Act, I agree with the public bodies that, for the purposes of that duty, the accuracy and completeness of the returns was governed by the provisions of the applicable law, which prescribed in great detail what information was required to be provided within those returns and how that information was required to be calculated and disclosed.

59 However, I consider that the other grounds put forward in support of this submission are highly unpersuasive.

60 The prudential regulators were under a statutory duty *'to communicate with the company with a view to the correction of any... inaccuracies and the supply of deficiencies'*. That is the duty to which the prudential regulators were subject at the relevant time. It is what Parliament provided that they '*shall*' do. That duty was not qualified by reference to what may or may not have been material.

61 Section 22(5) of the 1982 Act imposed a duty on the prudential regulators to do what Parliament prescribed, not a discretion to do it or not according to whether an inaccuracy or deficiency was material in the view of those regulators, whether or not those regulators acted with the advice and assistance of GAD.

62 I accept that the law does not concern itself with trifles and I would not be critical of the prudential regulators if they had not concerned themselves with trifling matters. But there is in my view no sound basis for rewriting this provision of the 1982 Act by inserting a reference to materiality.

63 I am also not persuaded that the submissions made to me by the public bodies on this matter reflect the approach which those bodies took to this question at the relevant time.

64 During the period covered by this report, there is clear evidence of the prudential regulators communicating with insurance companies, pursuant to the duty imposed by section 22(5) of the 1982 Act.

65 In respect of every year covered by this investigation, the insurance industry annual reports laid by Ministers before Parliament show that the duty to communicate to seek corrections to the returns led to the prudential regulators communicating with insurance companies on more than one hundred occasions in each year and, in most years that are relevant to this investigation, on many more occasions than this. Details are shown in Table 9a below.

66 I have reviewed the files containing the documents which record this communication during some of the years covered by this report. I have seen that the prudential regulators often undertook such communication in respect of relatively trivial matters.

67 For example, I have seen that, in one case, the prudential regulators communicated with an insurance company to seek the correction of an arithmetical error of less than £50 within the returns of a multi-million pound fund. I have seen other such examples, although that is the starkest.

68 Furthermore, the public statements of the prudential regulators made at the time suggest that those regulators accepted that a duty was imposed on them – indeed, on occasion going beyond recognition of the simple duty on the face of the 1982 Act to communicate with the relevant company with a view to the correction of the returns, extending the scope of their powers to an apparent ability to require such corrections.

69 For example, in the Annual Reports on the insurance industry that were laid before Parliament by the prudential regulators, it was said, in the reports for every year from 1988 to 1997, that *'section 22(5) requires the* [prudential regulators] *to arrange for companies to correct inaccuracies in the returns submitted'*. The communication envisaged by section 22(5) was thus described as a requirement.

70 Another example is the FSA's consultation draft of the proposed Interim Prudential Sourcebook, which also described that communication as a requirement on the prudential regulators. Issued in March 2000 and said to restate the existing law, that Sourcebook contained a draft rule 9.6(5), which, it was said, restated the requirements of section 22(5) of the 1982 Act. This provided, under the heading *'inaccurate and incomplete returns'*, that:

> *Rule 9.6(5) (Section 22(5)) requires the FSA to consider the* [returns] *and, if any such documents appears to it to be inaccurate or complete, to communicate with the insurer with a view to the correction of any such inaccuracies and making good any omissions.*

71 Parliamentary answers on occasion appeared to suggest that the prudential regulators could require insurance companies to correct their returns using this provision of the 1982 Act. For example, in a written answer given on 23 April 1996, the then

Table 9a – number of times regulators exercised powers to require amendments to regulatory returns

During...	Number of times power used
1988	141
1989	187
1990	139
1991	262
1992	401
1993	210
1994	201
1995	136
1996	112

Note: This table refers to the number of times the DTI exercised their power under section 22(5) of the Insurance Companies Act 1982 to require the amendment of errors or the supply of deficiencies in the returns.

The number provided in this table does not relate to the number of companies in respect of which this power was exercised but rather to the number of errors/deficiencies identified and required to be corrected.

Source: Insurance Annual Reports, Department for Trade and Industry

Minister of State at the DTI, explaining the changes which had been made as a result of the Deregulation (Insurance Companies Act 1982) Order 1996, and particularly the introduction of an ability to submit returns in electronic form, said (with added emphasis):

> *This measure is for the convenience of the industry and cost savings will be small, representing the difference between the cost of the production and submission of four paper copies of the return, and that of producing a diskette. The administrative cost to companies of taking corrective action, **if required to do so under section 22(5) of the Act**, should also be reduced.*

72 The prudential regulators produced detailed guidance which dealt with this provision of the 1982 Act. Guideline 5.4 of the DTI's Policy Guidance Notes, issued in September 1991, dealt with the correction of inaccuracies and the supply of deficiencies related to the regulatory returns.

73 After noting that section 22(5) of the 1982 Act placed an obligation on the Secretary of State to communicate with the company with a view to the correction of any inaccuracies and the supply of deficiencies where it appeared to him that any document was inaccurate or incomplete *'in any respect'*, the guideline set out the regulatory objective underpinning this provision. This was:

> *To secure the correction of material errors and the supply of deficiencies in annual returns... in order that neither the Department nor the public, including shareholders and actual or potential policyholders, form a view of the company based on inaccurate or incomplete information.*

74 The guideline continued:

> *Supervisors should have few reservations about formally requesting companies to correct inaccuracies and/or to supply deficiencies. Errors in and omissions from a company's return may be discovered at any stage during the examination process...*
>
> *There may be occasions when it is not entirely clear whether there is an inaccuracy in a return although one may be suspected. Whilst it only has to "appear" to the Secretary of State that there is an inaccuracy or a deficiency, it may be necessary to query the point with the company before concluding there is definitely an error.*

75 The guideline then set out 'implications for our understanding of a company's position', noting:

> *Clearly, any return may be misleading if it contains material inaccuracies or is deficient. It is important that any inaccuracies or deficiencies be rectified as soon as possible. The materiality of an inaccuracy depends, inter alia, on the extent to which it affects the validity of the conclusions which may be drawn about the company.*

76 The guideline then set out legal advice received, which stated that the statutory framework *'imposes on the Secretary of State a duty to "police" the documents rather than merely to act as a depository for them'*. The legal advice continued thus:

Notwithstanding the use in s22(5) of the expression "inaccurate or incomplete in any respect", this can be interpreted in a common sense way to mean "in any material respect".

Materiality must, however, be judged not only from the point of view of the supervisor acting on behalf of the Secretary of State, but also from the point of view of a shareholder or policyholder who applies to the company for a copy... or inspects a copy on the public record at Companies House.

Therefore, the Department must communicate with the company to secure the correction of inaccuracies and/or the supply of deficiencies. This must be the case, even though the supervisor, because of his skill and experience, may be able to see through the inaccuracy or deficiency and ascertain the true meaning if there is a risk that a policyholder or shareholder will not be able to do so.

77 The advice continued:

There is no legal obligation to take up every trivial error in an annual return, provided we are satisfied that it is indeed trivial and does not hide serious compensating errors...

All errors in items which are used in solvency tests should be regarded as material unless, or until, the supervisor is satisfied that either they will not affect the results of the solvency test in current or future years, or effective supervision is possible without the test.

78 I consider that my view as to the duties imposed on the prudential regulators by section 22(5) of the 1982 Act – to consider the returns and to communicate with an insurance company to seek the rectification of errors or omissions in those returns unless those regulators had satisfied themselves that any error or omission was trivial, in the sense used within the DTI guidance, and would not mislead the reader of the returns – is the correct one. I have judged the acts and omissions of the prudential regulators and/or GAD against the standard set out in their own guidance.

79 For all these reasons, I reject the submissions by the public bodies on this question.

Intervention on the grounds of PRE

80 I also do not accept the submissions of the public bodies regarding intervention on the grounds of the protection of PRE.

81 I consider that those submissions confuse the 'residual' power in section 45 of the 1982 Act – the power to take any action other than those actions listed principally within sections 38 to 41 of the 1982 Act as being powers of intervention – with the grounds on which the exercise of such powers had to be considered and could be used, which were set out in section 37 of that Act.

82 The protection of PRE gave grounds for the potential use of any or all of the powers listed in sections 38 to 41 of the 1982 Act. There was nothing 'residual' about the protection of PRE as a basis for using those powers of intervention that the prudential regulators possessed.

83 It was only where the objective of those regulators could not be achieved through use of the other powers available to them that the 'residual' power – to take whatever other form of action appeared

appropriate – arose. This power was residual; the ground on which it might be exercised (i.e. the protection of PRE) was not.

84 I agree with the public bodies that the Appointed Actuary had certain responsibilities in respect of PRE. However, the existence of those responsibilities cannot detract from the obligations imposed by Parliament on the prudential regulators, who acted with the advice and assistance of GAD.

85 I also accept that, under the regulatory regime which applied during the period covered by this report, there was no obligation on the prudential regulators constantly to monitor PRE or proactively to seek information from insurance companies about their marketing strategies, the contents of all of their publications, or what their sales force were telling existing or potential customers. I accept that the Government of the day decided that the protection of PRE would be largely reactive to what was found in an insurance company's regulatory returns. That made the scrutiny process undertaken in respect of those returns even more important.

86 Where information which was before the prudential regulators called into question whether an insurance company was acting in a manner that enabled it to fulfil PRE – and that, therefore, the grounds for the exercise of one of the powers of intervention conferred on those regulators may have arisen – the prudential regulators were under an obligation to satisfy themselves, by seeking further information or otherwise, whether such grounds had arisen and, if they had, to consider whether it would be appropriate to exercise their powers.

Actuarial judgement and the regulatory margin of appreciation

87 With regard to the submissions made by the public bodies concerning actuarial judgement and the margin of appreciation to be afforded to regulators, I readily accept that two professionals, acting reasonably, might, when considering the same facts, come to different but entirely rational views.

88 At all times relevant to my investigation, the actuarial profession, in its Memorandum of Professional Conduct, emphasised that this was the case. For example, in paragraph 17 of version 6.0 of that Memorandum (effective from 14 April 1997), the profession stated:

> *A member should recognise that there is room for differences of opinion in relation to actuarial advice and must avoid any action that would unfairly injure the professional reputation of any other actuary. However, this is not intended to prevent criticism to the client of another actuary's work for that client where this is properly reasoned and felt to be justified.*

89 Where matters of professional judgement come into play in my consideration of the facts that an investigation has disclosed, my general approach is to consider whether the judgements in question are consistent with the relevant legal and administrative framework as it stood at the time and with then prevailing professional guidance and accepted good practice.

90 If a professional judgement is within the range which a professional could reasonably reach in all the relevant circumstances, acting with the skill and care that could reasonably be expected from a professional acting in such a capacity, I would not be critical of such a professional judgement.

91 In making the findings set out in this report, I have had regard to the fact that many relate to actuarial matters. However, I have also had regard to the key obligations of the prudential regulators and/or GAD, to which those bodies were subject. Those are grounded in the general and specific legal and administrative framework which existed at the time relevant to the events recounted in this report.

92 In that context, it is my view that the concept of actuarial judgement has limited or no application to many of the issues which I have considered.

93 I accept that, in respect of issues including the exercise of professional judgement, for example as to the prudence of a particular valuation rate of interest, so long as the conclusion reached was within the range that a professional of the relevant discipline could reasonably reach, no criticism should be made of that exercise of professional judgement.

94 However, where information which a life insurance company was required in law to provide has not in fact been provided within the regulatory returns or where a duty imposed on such a company has not been performed, it does not seem to me possible, in general, to apply the concept of a wide range of professional views to this omission; whether it occurred is a matter of fact, not of judgement.

95 And in a situation in which the prudential regulators were under a duty to communicate with an insurance company where there were apparent omissions from or errors within the regulatory returns, once it has been established that such an omission or error existed, there is no scope for professional judgement as to whether to perform a duty imposed on those regulators by Parliament.

96 Similarly, where enquiries are made of, and responses are received from, a company or its Appointed Actuary in respect of apparent breaches of the applicable Regulations or in respect of a valuation basis that appeared to be weaker than the prescribed minimum basis (or indeed on any other matter of concern which involved issues on which reasonable professionals might disagree), consideration of those responses might well involve the exercise of professional judgement.

97 GAD in those circumstances might have come to the view that the responses provided clarified matters acceptably or that they indicated a genuine and perfectly reasonable divergence of professional views.

98 However, I consider that such matters of professional judgement are irrelevant in a situation where such breaches were apparent but no action was taken. Any decision that, on the facts, no action is appropriate should be recorded at the time it was taken, together with cogent reasons for that decision.

99 My approach to this question mirrors that which was adopted at the time covered by this report. For example, GAD themselves, in exchanges concerning Equitable, made this very point.

100 As can be seen from the relevant entry in Part 3 of this report, on 3 December 1998, the Treasury and GAD met Equitable. One issue which arose at that meeting was a disputed interpretation of a particular statutory requirement concerning reserving for the liabilities associated with those of the Society's policies which contained guaranteed annuity rates.

101 The Appointed Actuary of the Society argued that the dispute centred on a professional disagreement. But GAD said that there was no professional matter to consider and that there was:

... a distinction between the legal position as required by [the relevant Regulations] *and* [other matters] *where there was more scope for professional judgement and interpretation.*

102 GAD thus recognised and drew a distinction between those legal obligations on insurance companies and the relevant professionals which were mandatory and those powers (or matters) which were discretionary (or which were covered by professional judgement). I too would draw such a distinction and I apply that distinction to the relevant actions of the prudential regulators and GAD.

103 Similar considerations apply to questions concerning the margin of appreciation which I consider should be afforded to the prudential regulators.

104 Where a duty to act has arisen, I consider that there is no such margin. Consideration should be given at that time as to whether it would be appropriate to exercise any of the powers granted to those regulators.

105 Where the circumstances for the performance of a duty appear to have arisen but the prudential regulators have taken a reasoned decision that no such duty has in fact arisen, it is open to those regulators to take such a decision. But that decision should be recorded at the time, together with cogent reasons for their decision that no duty has in fact arisen.

106 There is a considerable margin of appreciation to be afforded to the decisions taken by the prudential regulators in relation to the exercise of their discretionary powers. So long as those decisions are taken on a proper legal and factual basis, those regulators have discretion to decide what the most appropriate form of action would be, if any.

107 However, where no consideration is given by the prudential regulators to the use of their powers (where such consideration should have been given) or where such consideration as is given proceeds on a flawed legal and/or factual basis, no margin of appreciation is to be afforded to the prudential regulators, unless the subject matter in question was determined by them at the time (or which can now be seen) to be trivial.

108 While I will pay due regard both to the scope for a range of reasonable professional views and to the margin of appreciation in relation to the exercise of discretion that should be afforded to regulators, I am satisfied that my approach to the identification of the legal and administrative obligations to which the prudential regulators and GAD were subject is appropriate.

109 I do not accept that my approach is flawed in the manner suggested by the public bodies.

Hindsight

110 I agree with the public bodies that, in making my findings of fact and determinations whether those facts constitute maladministration, I cannot have regard to hindsight.

111 Those findings and determinations must be grounded in the standards which applied at the relevant time and must be based on the information and knowledge that the relevant public body or bodies possessed at the time – or should reasonably have possessed if they had acted according to the obligations to which at the relevant time they were subject.

112 However, I reject the submission that, on this occasion, I have in any way been influenced by hindsight.

113 As I have explained in Chapter 5 of this report, having established the facts in any investigation, I assess those facts against the standards, both those of general application and those which are specific to the circumstances of the case, which applied at the time that the events complained about occurred and which governed the discharge of administrative functions by those whose actions are subject to investigation.

114 In this report, I have identified those standards having regard only to the legal and administrative framework as it existed at the time. From this, I have identified the key obligations to which the prudential regulators and/or GAD were subject at the relevant time.

115 My assessment of the acts and omissions of those regulators and/or GAD will be based on the information or knowledge that those bodies had at the relevant time or on the information that a prudential regulator and/or an actuary charged with the scrutiny of regulatory returns, acting reasonably, would have had before them.

116 My findings will thus be grounded in the applicable standards and obligations to which the prudential regulators and GAD were subject and in the information and awareness that those bodies possessed or should have possessed at the relevant time.

117 I do not accept that my seeking actuarial advice during the investigation which led to this report about matters which occurred some years ago necessarily introduces hindsight or undermines my approach.

118 So long as my assessments are grounded in the overall standard, derived from the obligations which existed at the relevant time, and only pay regard to the information that was – or should have been – before the relevant body at that time, hindsight can – and, in this case, has been – avoided.

Conclusion

119 In this Chapter, I have made some preliminary assessments in respect of disputed questions concerning the standard of regulation that it is appropriate for me to apply, when considering the actions of those charged with the prudential regulation of insurance companies during the period covered in this report.

120 I now turn to set out the results of my review of the evidence I have obtained and to make findings of fact regarding the subject matter of the complaints which have formed the basis for the investigation which led to this report.

Chapter 10 – Findings of fact

Introduction

1 In this Chapter, I set out the results of the review I have conducted of all the evidence, submissions and other material that was before me.

2 I also set out the findings of fact that I consider are key to my determination of the heads of complaint within the terms of reference for the investigation which led to this report.

3 This Chapter is structured in the following way:

(i) in paragraphs 4 to 38, I provide an overview of the principal findings of fact which I have made; and

(ii) in paragraphs 39 to 698, I explain, in relation to each finding of fact, the basis on which I have made those findings.

Overview of my principal findings of fact

4 My review of all the evidence, submissions and other material before me has led me to make ten principal findings of fact. Those findings relate to:

- the way in which the DTI, as prudential regulators, handled the 'dual role' – that is, the holding by one person for more than six years, from 1 July 1991 to 31 July 1997, of the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary – which I cover in paragraphs 40 to 131;

- the scrutiny of the Society's regulatory returns, which was undertaken by GAD on behalf of the prudential regulators, for each year from 1990 to 1993 – which I cover in paragraphs 132 to 202;

- the way in which GAD, as part of their scrutiny on behalf of the prudential regulators of the Society's 1993 returns, handled the intimation within those returns of the introduction by the Society of what came to be known as its differential terminal bonus policy – which I cover in paragraphs 203 to 297;

- the scrutiny of the Society's regulatory returns, which was undertaken by GAD on behalf of the prudential regulators, for each year from 1994 to 1996 – which I cover in paragraphs 298 to 343;

- the way in which GAD, as part of their scrutiny on behalf of the prudential regulators of the Society's returns for 1990 to 1996, handled issues arising from the presentation by the Society within those returns of two separate valuation results – which I cover in paragraphs 344 to 396;

- the way in which the FSA, acting on behalf of the prudential regulators, handled issues arising from a financial reinsurance arrangement into which the Society had entered – which I cover in paragraphs 397 to 486;

- the way in which the FSA, acting on behalf of the prudential regulators, handled the issue of whether the potential impact on the Society of it losing the *Hyman* litigation should be disclosed within the Society's regulatory returns – which I cover in paragraphs 487 to 522;

- the way in which the FSA, acting on behalf of the prudential regulators, approached the taking and recording of their decision to permit the Society to remain open to new business following its loss of the *Hyman* litigation – which I cover in paragraphs 523 to 613;

- the basis on which the FSA, acting on behalf of the prudential regulators, took their decision to permit the Society to remain open to new business following its loss of the *Hyman* litigation – which I also cover in paragraphs 523 to 614; and

- the information given by the FSA, acting on behalf of the prudential regulators, to policyholders and others about the Society's solvency position and its record of compliance with other regulatory requirements during the period after the Society closed to new business in December 2000 – which I cover in paragraphs 615 to 698.

The 'dual role'

5 My first finding of fact is that, in June 1991, the prudential regulators approved, when they should not have done, the appointment of a new Chief Executive without insisting that he should demit office as the Society's Appointed Actuary and without applying subsequently a closer degree of scrutiny of the Society's affairs.

6 Furthermore, for the next six years, those regulators failed to consider the use of their powers to seek the ending of his 'dual role', despite the assurance that had been given at the time of his appointment that he would hold such a dual role for 18 months only.

The scrutiny of the Society's regulatory returns for 1990 to 1993

7 My second finding of fact is that, with regard to the scrutiny of the Society's annual regulatory returns for the year-ends for 1990 to 1993, GAD, in providing advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had sought to demonstrate that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations.

8 Accordingly, those regulators were unable to verify the solvency position of the Society as they were under a duty to do. The aspects in respect of which the Society's returns for these years raised questions which should have been identified, pursued and resolved were:

- the valuation rate of interest used to discount the liabilities, which appeared to be imprudent and/or impermissible (discounting liabilities well below the guaranteed face value of policies); and

- the affordability and sustainability of the bonuses previously declared by the Society, which appeared to raise the expectations of the Society's policyholders which might not be met.

9 On the information before GAD, the Society's approach to discounting appeared to suggest that a significant amount of any future surplus would be required simply to fund current guaranteed benefits. This occurred in a situation in which GAD knew that the Society had informed its policyholders that, subject to smoothing, the additional returns they would receive by way of future bonus declarations would reflect the future investment performance of the with-profits fund.

10 In addition, serious questions arose from the information within the returns about whether the Society could afford the level of bonus it was paying and whether it could continue to pay out at that level, in a situation in which, as GAD knew, the Society was unique in illustrating to its policyholders the full policy fund value, including terminal bonus.

11 From the information before GAD, it was not clear how the Society could fund guaranteed future bonuses (applying the guaranteed investment return) or manage to pay future discretionary bonuses, in line with the reasonable expectations of the Society's policyholders that such bonuses would continue to be paid.

12 Despite those questions, raising issues concerning the prudence of the Society's approach and whether the Society would be able to fulfil the reasonable expectations of its policyholders, no action was taken by GAD to seek to resolve these questions or raise them with the prudential regulators.

The intimation of the Society's differential terminal bonus policy

13 My third finding of fact is that GAD identified the introduction of a differential terminal bonus policy when scrutinising the Society's 1993 returns in October 1994, but failed to inform the prudential regulators, as GAD should have done, of that introduction or to raise the matter with the Society.

14 This failure by GAD to raise the matter occurred despite there having been full disclosure by the Society within its 1990 returns of the extent and level of the guaranteed annuity rates within its older policies and despite the Society referring to such guarantees when it disclosed the introduction of the differential terminal bonus policy in its 1993 returns – which, GAD noted, was a policy which had the effect of reducing the final bonus payable to policyholders.

15 That failure also occurred despite GAD knowing, or having information before them which suggested, both that the Society had told its policyholders that Equitable would only change bonus policy gradually and also that the Society's With-Profits Guides did not (at that time) inform its policyholders of the differential terminal bonus policy.

The scrutiny of the Society's regulatory returns for 1994 to 1996

16 My fourth finding of fact is that, in carrying out the scrutiny of the Society's annual regulatory returns for each year from 1994 to 1996, GAD, in providing advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had sought to demonstrate that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations. Those regulators were thus unable to verify the solvency position of the Society.

17 The issues arising from the Society's returns which GAD failed to address and resolve to a satisfactory conclusion were:

- the continuation of the two issues which had arisen within the returns for 1990 to 1993 (questions concerning discounting through the use of imprudent and/or impermissible valuation interest rates and the affordability and sustainability of the Society's bonus declarations);

- what appeared to be arbitrary changes to the assumed retirement age for personal pension policies, contrary to European Directives and the applicable domestic Regulations;

- the absence of explicit reserves for prospective liabilities for capital gains tax and for pensions review mis-selling costs, stating instead that such liabilities were covered by implicit margins in the valuation basis; and

- the absence of reserves in respect of guaranteed annuity rates, which by then GAD should have known were biting and should therefore have been provided for.

18 GAD failed to identify all those issues, to pursue them with the Society, or to seek to resolve the issues that they raised.

The presentation of the Society's two valuation results

19 My fifth finding of fact is that GAD failed in certain respects to act, when they should have acted, to question the Society's practice of producing two valuations within the regulatory returns but omitting crucial information from one of those valuations. After 1996, the Society continued to produce two valuations but published the missing information.

20 That information was the amount of the resilience reserves required in the Society's appendix valuation, produced to demonstrate compliance with the Regulations. That omission meant that the Society appeared financially stronger than it was and that its solvency position was capable of being misconstrued.

21 While GAD asked the Society for that information in all but one year, GAD did not take steps to ensure that the reader of the returns had that information.

22 Even though the Society was not in breach of any of the applicable Regulations by presenting its valuations in the way that the Society did, GAD recognised at the time that this position meant that the Society's returns, which were the main mechanism through which 'freedom with publicity' was delivered, might mislead those who read them.

23 Although the Society was permitted to produce an alternative valuation from that specified in the applicable Regulations, it was required, by those Regulations, to demonstrate that its chosen alternative valuation was at least as strong as that specified in those Regulations.

24 GAD considered that such demonstration was provided through the provision by the Society to GAD – but not through the returns – of the amount of the reserves omitted from the Society's alternative valuation. However, GAD failed to ask for this information in November 1996 when they were conducting their scrutiny of the Society's 1995 returns. GAD were therefore unable to verify whether those returns had complied with the applicable Regulations.

25 In addition, from November 1993 onwards GAD had possessed information, in the form of ratings of the Society produced by Standard & Poor's – an expert ratings agency, which showed that the position was not only capable of being misconstrued but also that it was being misconstrued.

26 Those ratings, which were provided to GAD by the Society and retained on GAD's files, were used as part of briefing for Ministers and others. Standard & Poor's erroneously concluded that the Society was stronger than it really was. This was as a direct result of the information which GAD knew was missing from the returns.

27 GAD took no action to raise or to seek to resolve this issue.

Financial reinsurance

28 My sixth finding of fact is that the FSA permitted the Society, when they should not have done so, to take credit within its 1998 returns, which were submitted on 30 March 1999 and which were

available to the public by 1 May 1999, for a financial reinsurance arrangement which had not been concluded either at the valuation date or at the date that those returns were submitted. This was done without an appropriate reporting concession being given.

29 Moreover, even leaving that aside, the FSA permitted the Society within its returns for 1998, 1999, and 2000 to take credit for the financial reinsurance arrangement that did not reflect the economic substance of that arrangement.

30 This was despite the fact that GAD had identified the potential problems with the proposed financial reinsurance arrangement and had informed the FSA of those problems, recognising that this arrangement had little or no value for the purposes of the determination of the Society's solvency position.

The potential impact of the *Hyman* litigation on the Society

31 My seventh finding of fact is that the FSA failed to pursue the failure by the Society to include contingent liability notes within its regulatory returns for 1998 and 1999 regarding the potential impact of losing the *Hyman* litigation. This failure to check why the Society had not included any such disclosure in those returns occurred despite the reminders by the prudential regulators that the Society should do so, reminders given prior to the submission of the Society's 1998 returns.

32 No action was taken to seek to ensure that the Society had a sound basis for not publicly disclosing the fact that the outcome of the legal action could have profound effects, including for the operation of its differential terminal bonus policy (and hence its reserving practices) – effects which would have a significant impact on the solvency position of the Society and on the amount of money available to meet the liabilities it had to its policyholders.

33 This failure by the FSA to act also occurred in relation to the Society's 1999 returns in a context in which the FSA knew that the Society had informed its policyholders that no significant costs would be imposed on the Society if it lost the *Hyman* case.

The decision to permit the Society to remain open to new business

34 I make two findings of fact concerning the decision to permit the Society to remain open to new business following the decision of the House of Lords in the *Hyman* case.

35 My eighth finding of fact is that the FSA failed to record that decision. No contemporaneous record was made of that decision or of the factors and evidence which were taken into account by the FSA when they took it, or what alternative options, if any, the FSA had considered. That decision was highly significant for the interests both of existing and potential policyholders.

36 My ninth finding of fact is that, having established from those involved the basis on which the FSA took that decision, the decision to permit the Society to remain open at that time was not grounded in a sound factual or legal basis. Relevant considerations – such as the nature of the Society's business, which meant that it was not just new policyholders who were potentially affected by the decision – were not taken into account. No proper consideration was given to the use of the full range of powers that the prudential regulators possessed.

The information provided by the FSA after closure

37 My final finding of fact is that the information provided by the FSA in the post-closure period was misleading and unbalanced, with assurances being provided that the Society was solvent, when that was in considerable doubt and was not the view held by the FSA, who, on behalf of the prudential regulators, had exercised formal intervention powers on the grounds that the Society was likely to be in breach of its regulatory solvency requirements.

38 Nor were the assurances given by the FSA that the Society was at that time fulfilling and always had fulfilled all of its other regulatory requirements appropriate, when the FSA knew that this was not the case.

The basis for each finding of fact

39 Having summarised the ten principal findings of fact that I have made, I now explain in more detail the basis on which I have made each of those findings.

The basis for my finding concerning the 'dual role'

The issue and relevant background

40 The role of the Appointed Actuary was, at the time relevant to this report, a central component of the system of prudential regulation of insurance companies. As the actuarial profession noted in the July 1992 version of its mandatory guidance note GN1:

> *The responsibilities of* [appointed] *actuaries... are central to the financial soundness of long-term insurance business... It is incumbent upon all Appointed Actuaries to ensure, so far as is within their authority, that the long-term business of the company is operated on sound financial lines and with regard to its policyholders' reasonable expectations.*

41 Key to this role was the relationship that Appointed Actuaries had with the prudential regulators but more especially with GAD. As the then Government Actuary noted in a paper entitled *'The Supervision of Life Insurance Business in the United Kingdom'* that he gave in 1990 to the *Groupe Consultatif* Summer School:

> *The UK system of supervision has worked well over many years and has shown itself well-suited to a diverse and innovative insurance industry, providing flexibility and not inhibiting change. A heavy load of responsibility is placed on the Appointed Actuary, but this is balanced by an active actuarial involvement in the supervisory process through GAD... The result is an effective partnership between the actuarial profession and the supervisory authority for the benefit and protection of policyholders...*

42 Given this regulatory role, which was one cornerstone of the system of prudential regulation in the United Kingdom, an Appointed Actuary needed to ensure that he or she had sufficient independence from the executive management of a life insurance company to enable him or her to undertake effectively the responsibilities (to the company, to its policyholders, and to the prudential regulators and GAD) that were conferred on the Appointed Actuary – and to enable him or her to do so in line with the intention of Parliament when it had created the role in 1973.

43 If an Appointed Actuary was unable to secure or retain the necessary degree of operational independence that would raise serious questions about the ability of the Appointed Actuary in those circumstances to perform the regulatory functions conferred on him or her.

The facts

44. On 28 March 1991, the Society notified the DTI, then the prudential regulators of insurance companies, that Equitable proposed to appoint the Society's then Appointed Actuary to the post of Chief Executive, once its current Chief Executive retired on 30 June 1991. The Society said that it was intended that the Appointed Actuary would not relinquish his existing post.

45 In the event, one person held both posts (Appointed Actuary and Chief Executive of the Society) for six years and one month, during the period between 1 July 1991 and 31 July 1997.

46 The Society's proposal echoed the position that had prevailed during 1980 and 1981, when the then Chief Executive of Equitable had also been the Society's Appointed Actuary.

47 The DTI sought the views of GAD on the proposed appointment. As GAD's policy was believed to be against combining the roles of Chief Executive and Appointed Actuary, the matter was referred to the Government Actuary himself to consider. On 17 April 1991, the Government Actuary commented:

> *I think we would certainly want to discourage him from holding both positions, other than on a very temporary basis. It would be appropriate for DTI to write asking what* [the Society's] *intentions are regarding the Appointed Actuary position, bearing in mind the fact that it is not now generally thought desirable for the same person to be* [Chief Executive] *and* [Appointed Actuary]. *If they get a dusty response I will speak to* [him].

48 This advice was referred to the DTI, under cover of a note by GAD, in which GAD wrote:

> *As it is not now thought desirable for the same person to be both Chief Executive and Appointed Actuary I think it would be best to clarify the Society's intentions.*

49 In the light of this advice, the DTI asked the Society's Secretary what Equitable proposed regarding the Appointed Actuary and withheld consent to the appointment of the Appointed Actuary as Chief Executive, pending clarification of the position. This prompted a telephone call from the Appointed Actuary on 30 April 1991.

50 He explained that, although Equitable had several good in-house actuaries, it was considered that they needed 12 months or so senior management experience before assuming the role of Appointed Actuary. Accordingly, Equitable would prefer him to retain the role of Appointed Actuary for a further period of approximately twelve to eighteen months.

51 On 2 May 1991, the Society's Secretary wrote to the DTI to confirm the position. He explained that Equitable were of the view that the Appointed Actuary role should be regarded and operated at a senior and influential level. The Secretary confirmed that Equitable did not currently have an actuary with the desired seniority but that they expected to have an appropriate person for the role of Appointed Actuary in twelve to eighteen months' time. The Secretary continued:

Accordingly, rather than moving away from the general approach and resorting to a purely technical interpretation of the Appointed Actuary's role, we regard it as substantially more satisfactory in professional and business terms for [him] *to continue to undertake the Appointed Actuary role for a limited period longer, as mentioned above.*

52 On 8 May 1991, the DTI sought the views of GAD, indicating that they were prepared to accept the position now reached, provided it was for a limited period. In response, GAD commented that they were also prepared to accept the position, on the basis that Equitable had confirmed that the incumbent would remain Appointed Actuary for twelve to eighteen months only after his appointment as Chief Executive.

53 On 16 May 1991, in the light of this advice, the DTI line supervisor for the Society wrote to the Society's Secretary to explain that the Secretary of State had no objection to the proposed appointment of the Appointed Actuary also as Chief Executive:

... on the understanding that [he] *will only retain the Appointed Actuary role for a further 12 to 18 months as indicated in your letter.*

54 On 31 May 1991, the Society's Secretary raised concerns about the terms of the DTI's letter. He suggested that the Secretary of State's acceptance of the Appointed Actuary's appointment as Chief Executive appeared conditional on his only continuing in the role of Appointed Actuary for a further twelve to eighteen months. The Secretary stated:

Whilst it is certainly the Society's current intention to separate the roles and appoint another Appointed Actuary within that timescale, we would not wish a condition to that effect to apply to [his] *appointment as Chief Executive. In making no objection to* [his] *appointment the Secretary of State appears to accept that* [he] *is a "fit and proper person". We cannot see that this will change if for some at present unforeseen reason,* [he] *does not cease to be the Appointed Actuary within the timescale mentioned. There is, we believe, a point of principle here.*

55 The Secretary asked the DTI to accept the appointment without the implied condition. However, the DTI official's view was that this was unacceptable. He passed Equitable's letter to the DTI senior line supervisor responsible for the Society, with a note, which said:

I do not think we can accede to [the appointment without condition]. *GAD consider 18 months exceptional! Suppose* [he] *falls ill – no Chief Executive – no Appointed Actuary – a successor should have been groomed by now to take on role of Appointed Actuary. I suggest we initially telephone* [Equitable's Secretary] *to express our views – I could not contact him today.*

56 The GAD Directing Actuary responsible for the Society intervened and pointed out that the emphasis of the Government Actuary's advice had been changed subtly, saying:

... he knows our concerns and respects them. However, if someone hasn't matured as quickly as they had hoped, there is no point in DTI getting up-tight. [The incumbent] *now sees this issue as a point of principle for him – and I take his point. We should explain to* [the DTI] *that*

Equitable is not a one-man show, likely to be dominated by [him]. *There are several good actuaries in the company, and they are unlikely to fall into the kinds of problems we have seen elsewhere purely because he holds two key posts. DTI should accept the company's assurances that they will separate the two posts as quickly as it is prudent to do so.*

57 On 17 June 1991, the DTI senior line supervisor wrote to Equitable's Secretary to note their:

> *... current intention to separate the roles of Appointed Actuary and Chief Executive within the time frame suggested... In the light of that and the points made during our conversation I am happy to confirm our acceptance of* [the] *appointment without condition.*

58 The DTI senior line supervisor, in a minute to the DTI official, noted that he had told the Society's Secretary that:

> *If the Appointed Actuary is also the Chief Executive and therefore responsible for taking the decisions on the direction of the company there is, almost by definition, a conflict of interest. The Appointed Actuary is most unlikely to blow the whistle on the Chief Executive!* [Equitable's Secretary] *took the point but said he would still prefer our acceptance to be unconditional. I said we were prepared to lift the condition but nevertheless we noted the company's intention to find a new Appointed Actuary within 12-18 months and that we would not be constrained from raising the point again if no appointment had been made at the end of that timescale. On that basis I wrote the letter* [of 17 June 1991].

59 During May 1992, GAD identified the continued combination of the roles as one of a number of current concerns they had about Equitable. GAD noted that the incumbent's *'position as Chief Executive and Actuary may create problems because there is nobody to blow the whistle when things go wrong'*. The DTI also noted that they were not happy with the combined role and had regarded this as a temporary situation.

60 Both GAD and the DTI raised these concerns when they met Equitable on 19 May 1992. The Appointed Actuary and Chief Executive denied any conflict of interest but stated that, if one were to arise, then he would give up one of the posts. He had explained that he was expecting to retire in three to four years' time, at which point the combined role would end and that, in the meantime, the appointment of a new Appointed Actuary was now at least one year away.

61 Following this meeting, GAD expressed disappointment that they had only met the Appointed Actuary and Chief Executive. In response, the Appointed Actuary and Chief Executive provided information about Equitable's 'actuarial management area'.

62 He also explained that this area was under the control of a senior actuary to whom three actuaries reported. One of these provided technical support to him in his Appointed Actuary role. The DTI and GAD did not then pursue further the issue of the combined role at this time.

63 I have seen that, during 1993, the continuing combined role was also a matter of concern within Equitable. In March of that year, Equitable's former Managing Director advised Equitable's President that the roles should be separated.

64 The former Managing Director identified a member of Equitable's staff whom he thought could be appointed to the post of Appointed Actuary within three months. In June 1993, in his personal notes the President highlighted the need to settle the retirement date of the Appointed Actuary and Chief Executive and to separate those roles.

65 The Society's auditors also advised the President that it was essential that the combined role was terminated at the earliest possibly opportunity, as it was *'completely wrong'* for any one person to have so much power in his own hands. In September 1993, in his personal notes, Equitable's President again highlighted the separation of the roles as a matter of great importance.

66 It appears that, during 1993, neither the DTI nor GAD raised the combined role with Equitable. The contact they had with the Society was almost exclusively with the Appointed Actuary and Chief Executive. The DTI and GAD appear to have been unaware of the fact that there was support within Equitable for ending the combined role or that advice to that effect had been provided to the Society by its auditors.

67 In February 1994, the DTI noted the concern that GAD and the DTI had expressed at the meeting in May 1992 but concluded that the situation would be brought to an end when the Appointed Actuary and Chief Executive retired in 1995 or 1996 (that is, three or four years from May 1992).

68 In November 1994, GAD, in their scrutiny report on the Society's 1993 returns, noted the continuance of the combination of both roles. The DTI identified this as an issue for discussion at a meeting with Equitable to be held on 9 December 1994.

69 At that meeting, the Appointed Actuary and Chief Executive confirmed that the roles would be split on his retirement. His response made clear that the appointment of a new Appointed Actuary prior to his departure was no longer being considered.

70 Neither the DTI nor GAD raised with him (or with the other directors of the Society) the fact that his appointment as Chief Executive in July 1991 had been agreed on the understanding that the roles were likely to be separated within eighteen months. That information had been provided to the prudential regulators as part of the process of authorising the Appointed Actuary to act also as Chief Executive.

71 I have seen that this continued to be a matter of concern within the Society. In June and December 1994 and in August 1995, Equitable's President and auditors noted that the combined role remained an issue that was in need of resolution.

72 In January 1996, GAD, in their scrutiny report on the 1994 returns, noted again that both roles were combined but that the Appointed Actuary and Chief Executive was *'due to retire within a few years (though it is dangerous to speculate exactly when!)'*. GAD did not pursue this issue with Equitable as part of their follow up work on the returns.

73 However, following correspondence on other matters, the Appointed Actuary and Chief Executive had suggested that GAD and the DTI should take *'a far tougher line on whom they allow to become appointed actuaries'*. GAD replied that neither they nor the DTI had any powers in this respect.

74 The Appointed Actuary expressed surprise at this and, on 15 April 1996, he stated:

Although I accept that the [1982] *Act does not require approval of Appointed Actuary appointments, there would appear to be an avenue of influence under the "sound and prudent management" criteria. That is via the requirement that any office "is directed and managed by a sufficient number of persons who are fit and proper persons to hold the positions which they hold".*

75 A handwritten note on the GAD file copy of this letter expressed doubt on this, saying that *'this would not pass review'*. It appears that neither the DTI nor GAD gave any further consideration to the use of the power to which the Appointed Actuary/Chief Executive had drawn their attention in order to influence the situation at Equitable, either before he had done so, at that time, or subsequently. Nor did the DTI give consideration to the use of any other of their powers.

76 In November 1996, in their scrutiny report for the 1995 returns, GAD noted again that the roles of Appointed Actuary and Chief Executive were combined. GAD also noted, apparently as an example of a counterbalance to this concentration of responsibilities, that the Society's Board of thirteen was chaired by a non-executive director and had a total of eight non-executives on it.

77 GAD did not pursue the combined roles of Appointed Actuary and Chief Executive as part of their follow up work on the Society's 1995 returns.

78 On 8 November 1996, GAD and the DTI met Equitable. There is no evidence that the combined role of the Appointed Actuary and Chief Executive was discussed with the Society. At that meeting, the Appointed Actuary gave no date for his retirement but explained that he would stay at Equitable until current changes had been consolidated.

79 On 1 August 1997, following the retirement of the incumbent the roles of Chief Executive and Appointed Actuary were separated. His successor as Appointed Actuary was the member of staff identified to the Society's President in March 1993.

The statutory and administrative context

80 The prudential regulators were not required to approve the appointment of an Appointed Actuary, although the name of such a person had to be notified to those regulators. The Government Actuary would also meet a new Appointed Actuary shortly after he or she was appointed.

81 The prudential regulators, however, were given powers to refuse to authorise an individual seeking appointment as the Chief Executive of an insurance company, if those regulators did not consider that person to be fit and proper to hold the position that it was intended they should hold.

82 The powers of intervention available to the prudential regulators, with effect from 1 July 1994, included those which enabled them to seek to remove a director, controller, or senior manager on a number of grounds.

83 Where a Chief Executive had already been appointed, section 37(5) of the 1982 Act provided that certain powers of intervention could be exercised within a five-year period from that appointment, whether or not any of the grounds in sections 37(2) or 37(4) of the 1982 Act existed, provided that there was good reason for doing so.

84 It also from that date became a ground for intervention if it appeared to the prudential regulators that the criteria of sound and prudent management – set out in Schedule 2A to the 1982 Act – were not fulfilled or might not be fulfilled in respect of a particular company.

85 Paragraph 2 of Schedule 2A to the 1982 Act provided that one of the criteria of sound and prudent management was that each director, controller, manager, or main agent of an insurance company was a fit and proper person to hold that position.

86 Paragraph 4 of that Schedule also provided that one of the criteria of sound and prudent management was that an insurance company was directed and managed by a sufficient number of persons who were fit and proper to hold the positions that they held.

87 Paragraph 4(1) of Schedule 2D to the 1982 Act provided that, where it appeared to the prudential regulators that the criteria of sound and prudent management were not or might not be fulfilled by reason of the ability of a person who is a controller of an insurance company to influence that company, those regulators could serve on the company a written notice of objection to that person continuing to be a controller of that company.

88 In Guideline 8.10 of the DTI's Policy Guidance Notes, the prudential regulators dealt with what was described as *'non-statutory intervention'*. Paragraph 4 of that Guideline stated:

> *The legislation should not be interpreted as setting out exclusively all actions which the Secretary of State can take in pursuance of his duty to regulate the insurance industry. It presupposes that action will be taken, for the purpose of protecting policyholders, which is covered by the statutory provisions.*

89 Paragraphs 7 to 9 of that Guideline continued:

> *In addition to his statutory powers, the Secretary of State enjoys the benefit of the general principle that everything is permitted by law unless it is specifically prohibited. In considering action to be taken, regard must be had not only to whether the action is specifically prohibited by law but whether there is an implicit prohibition either by UK or EC law.*
>
> *In principle, if there are express statutory powers to deal with a particular situation, then the situation should be dealt with by the exercise of these statutory powers. Although the exercise of the powers is discretionary, there is a duty to give proper consideration to whether the discretion should be exercised.*
>
> *Although it is unlikely that a course of action will arise for failure to exercise a discretionary power ... the failure to exercise the powers could well result in criticism of the* [prudential regulators].

My assessment

90 At the outset, I should emphasise that, in considering the existence of such a dual role, I make no judgement on the fitness or propriety of the particular individual in this case to hold an individual position within an insurance company.

91 My concerns do not relate to his specific qualities or to those of any other person who held similar dual roles at that time. Whatever his personal attributes or experience, I consider that it is not the specific attributes of the person who held both posts which is in issue, but a wider matter of principle.

92 The purpose of the 1982 Act – the protection of the interests of policyholders and potential policyholders – was, it seems to me, capable of being frustrated if the Appointed Actuary was constrained in the discharge of his or her functions by a conflict of interest.

93 By acting simultaneously as Chief Executive, the Society's Appointed Actuary was subject to significant constraints on his or her capacity to act as part of the system of prudential regulation.

94 Given the unique position of the Appointed Actuary within that regulatory regime, the centrality of which is recognised by the public bodies, this had the potential to lead to the dysfunction of the system of regulation created by Parliament.

95 An Appointed Actuary was, in my view, by definition not a fit and proper person to hold concurrently the position of Chief Executive of the same insurance company. The Society's application for authorisation of its new Chief Executive in that context should have been denied unless a condition was imposed that he should demit office as Appointed Actuary forthwith.

96 Once the appointment had been approved, there were a number of possible ways in which the prudential regulators could have prevented an Appointed Actuary and a Chief Executive of a mutual (or any other) life insurance company from holding both posts concurrently. None of those ways was considered in this case by the prudential regulators.

97 Given that the prudential regulators and GAD recognised at the time that the dual role in question led to what they referred to as an inherent *'conflict of interest'* – one which would exist at the heart of the regulatory system of checks and balances – it seems to me that questions arose as to whether the situation could prejudice the interests of policyholders. Those questions were never considered.

98 From 1 July 1994, three years after the dual role had been created, the failure of the prudential regulators to consider taking action to seek to end the position that they had been told was intended to last for approximately eighteen months became even more inexplicable and unacceptable. Yet those regulators took no action on the continuing situation.

99 The rationale for the Society not appointing a successor to the incumbent as Appointed Actuary – a role which all concerned recognised was central to the efficient operation of the system of prudential regulation of insurance companies – was that there was no-one within the Society of sufficient stature and with the relevant experience to take on this role.

100 Rather than assuaging any concerns that the prudential regulators should have had about one person holding perhaps the two most central roles in a life insurance company at the same time, the information that there was purportedly no-one else within the Society experienced or senior enough to succeed as Appointed Actuary should have raised further concerns.

101 Nor was it necessary for a successor as Appointed Actuary to come from within the Society. Why Equitable had not considered advertising for a replacement or using a firm of actuarial consultants, given the rationale for the dual role which the Society had put forward, was not a question that the prudential regulators considered putting to the Society.

102 Nor was the possibility considered by the prudential regulators of their taking action themselves to seek to encourage the Society to recruit a suitable Appointed Actuary from outside its then current staff.

103 The precise rationale that the Society put forward for the initiation and continuance of the position in which one person held the dual role was the lack of appropriately qualified and experienced people within the Society to take over as Appointed Actuary.

104 Given that rationale, I find it inexplicable that the prudential regulators did not take action to prompt the Society to seek to recruit its Appointed Actuary from outside, using their powers of intervention under the sound and prudent management criteria.

105 From 1 July 1994, there was also a further potential means whereby the dual role of Appointed Actuary and Chief Executive might have been brought to an end.

106 As I have noted above, paragraph 4(1) of Schedule 2D to the 1982 Act gave the prudential regulators the power to object to a controller or senior manager of a company continuing to hold such a position where it appeared that the criteria of sound and prudent management were not or may not in the future be fulfilled by reason of the ability of that person to influence the company.

107 The exercise of this power to resolve the dual role of the Appointed Actuary and Chief Executive of the Society – a situation in which it could not be doubted that he had considerable influence over it – was never considered by the prudential regulators at any time after that power became available to them.

108 Even without relying on the exercise of their statutory powers, to which the prudential regulators gave no consideration, there still remained a wide range of means – for example, non-statutory action, contact with the Society's President or Board, or professional influence – which could have been considered and/or taken by the prudential regulators but which were not considered and/or taken by those regulators.

109 The prudential regulators should have been concerned that, not only did the dual role negate one of the cornerstones of the regulatory regime, but also that there appeared to be no-one else within the Society with the seniority to temper any abuse of power that might occur.

110 A more intensive level of scrutiny could, moreover, have been applied to mitigate the effect of there being no 'whistle-blower', if the prudential regulators had come to the view that it was not appropriate to exercise any of their statutory or other powers.

111 None of these avenues was considered. The prudential regulators took no action to seek the ending of the unacceptable dual role. Furthermore, those regulators and GAD throughout the period had little contact with anyone at the Society other than the Chief Executive and Appointed Actuary.

112 My conclusion is that the prudential regulators failed in two respects. First, those regulators approved, when they should not have done, the appointment of a new Chief Executive without insisting that he should demit office as the Society's Appointed Actuary and without applying subsequently a closer degree of scrutiny of the Society's affairs.

113 Secondly, for the next six years, those regulators failed to consider the use of their powers to seek to end that 'dual role', despite the indication that had been given at the time of appointment that he would hold such a dual role for a limited period only.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

114 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, I had misinterpreted or misapplied the applicable law.

115 The public bodies said that the prudential regulators had had no power to force the incumbent to resign either as Chief Executive or as Appointed Actuary of Equitable, without evidence either that his conduct was such as to justify regulatory intervention or that Equitable were not being properly managed. The public bodies said that those regulators had been aware of no such evidence.

116 In support of these views, the public bodies submitted that:

> *... there was no legal requirement for the Appointed Actuary of a company to be independent of the company's executive. It was plainly permissible for the Appointed Actuary to be on the company's board, and to hold the role of Chief Executive. Similarly, there was nothing which either required or prevented the Appointed Actuary from being a policyholder and/or a shareholder.*

117 The public bodies told me that they did:

> *... not accept that there was in fact a conflict of interest within Equitable, or that the prudential regulator recognised such a conflict of interest to exist. There was no reason to consider that, for a mutual such as Equitable, the Chief Executive and the Appointed Actuary would not have interests that were broadly coincident interests in favour of the policyholders. Moreover, particular safeguards against conflicts of interest in respect of Appointed Actuaries were put in place by the actuarial profession, as reflected in specific provisions in both the Memorandum of Professional Conduct and GN1.*

118 The public bodies told me that, accordingly, *'put at its highest, there was a potential for conflict, in respect of which the prudential regulator had been given assurances that* [the incumbent] *would relinquish one of his roles'*.

119 The public bodies submitted that, in addition:

> *... one person holding both roles was not unique to Equitable, this situation having also applied in the then recent past to at least four other large mutuals in particular. Consistency of approach between companies was (and remains) an important principle of regulation, save where different treatment was specifically provided for by the Insurance Companies Act 1982 or justified by the systems of priority ratings and other objective criteria employed by GAD and the prudential regulator relating to solvency and compliance with the Insurance Companies Act 1982 and its associated regulations. There was no justification for different treatment on either basis in Equitable's case.*

120 The public bodies then told me that they did not accept that the powers within the Insurance Companies Act 1982, to which I have referred above:

> *... provided a legal basis that would have enabled the prudential regulator to intervene in respect of the dual appointments... none of the... powers of intervention could have been used by the prudential regulator to object to* [the incumbent]*'s dual role. The prudential regulator was well aware that it did not have the power to force* [him] *to relinquish one or other post.*

121 The public bodies submitted that, additionally, *'it must be presumed that Equitable's auditors took the same view'*, as:

> *From 1 July 1994, the auditors had a duty to report to the prudential regulator in circumstances in which they had concerns that there was a question as to whether the prudential regulator ought to consider exercising its powers of intervention, including in relation to potential breaches of the criteria of sound and prudent management... At no point did Equitable's auditors make such a report to the prudential regulator.*

122 The public bodies concluded that, for all these reasons, *'given the pressure which the prudential regulator had already brought to bear on Equitable on this point, the bodies under investigation consider that it was reasonable for the prudential regulator not to have taken action beyond what it actually did'*.

123 The public bodies told me that any adverse finding would be unreasonable and flawed.

My evaluation of those submissions

124 I was not persuaded by the submissions made by the public bodies on this matter. Whether or not the position which existed at the Society was unique seems to me to be an irrelevant consideration.

125 That other situations which are incompatible with the regulatory regime designed by Parliament have arisen and been accepted by those operating that regime does not make the underlying incompatibility acceptable.

126 Nor have I said that Appointed Actuaries were, or should have been, prevented from sitting on a Board or becoming a policyholder or shareholder, where relevant. Those submissions go therefore to conclusions which I have not reached and are irrelevant to the dual role issue.

127 As will be seen, in their other submissions, the public bodies have suggested that the prudential regulators and GAD were entitled to rely on the certification of the Appointed Actuary when considering the Society's regulatory returns and the information he provided in correspondence or at meetings.

128 I have had regard to the nature of the duties which the prudential regulators had at the relevant time, which included the verification of the solvency position of insurance companies and of the way in which those companies had determined their liabilities and sought to demonstrate that they had sufficient assets to cover those liabilities.

129 I do not accept that it was open to the prudential regulators to fail to consider the taking of action to deal with the conflict of interest arising from the dual role, whereby the person who was their main means of ascertaining information from within the Society about those questions – the Appointed Actuary – was also the Chief Executive of that company.

130 The failure by the prudential regulators to consider whether to take appropriate action was exacerbated by their failure to ensure through other means – heightened scrutiny of the Society's affairs – that the information they were being provided with was accurate and reflected a prudent assessment of the Society's position.

My finding

131 **I find that the way in which the DTI, as prudential regulators, handled the 'dual role' – that is, the holding by one person for more than six years, from 1 July 1991 to 31 July 1997, of the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary – fell short of the standard that could reasonably be expected of such regulators.**

The basis for my finding concerning the scrutiny of the Society's returns for 1990 to 1993

The issue and relevant background

132 Each year, the Society, like every other insurance company, was required to submit annual returns to the prudential regulators. Those returns set out a considerable amount of detail about the business of the Society, about its liabilities, about the assets covering those liabilities, and about the solvency position of the Society.

133 The submission and scrutiny of those returns were the two prime mechanisms of prudential regulation during the period covered by this report.

134 The Society's returns for the years 1990 to 1993 raised certain issues about the approach that the Society was adopting to its business, which the scrutiny process was designed to highlight in order to enable the prudential regulators, acting with the advice and assistance of GAD, to ascertain whether there was any need to raise and pursue those issues.

135 The particular issues which arose during these years were:

- the valuation rate of interest used to discount the Society's liabilities, which appeared to be imprudent and/or impermissible (and resulted in the discounting of liabilities well below the guaranteed fund – the sum assured plus allocated guaranteed interest and bonuses – of policies); and
- the affordability and sustainability of the bonuses previously declared by the Society, which appeared to raise the expectations of the Society's policyholders which, on the information before GAD, the Society was unlikely to be able to meet.

The facts

136 The contents of the regulatory returns submitted by the Society each year, the notes and reports which together constituted the scrutiny of those returns by GAD, the correspondence between the Society and the prudential regulators and GAD, and the meetings held between them are extensively cited within Part 3 of this report. They are also summarised within Chapter 6 of this report. It is not practicable to reproduce all of that material again here.

137 Table 10a sets out the principal entries within Part 3 of this report which are relevant to the scrutiny of the Society's returns for each year from 1990 to 1996.

Table 10a: the scrutiny of the Society's regulatory returns

Year	Date submitted	GAD initial scrutiny	GAD detailed scrutiny to regulators	Correspondence from GAD to Equitable	Correspondence from Equitable to GAD
1988	26/06/1989	A1 – 24/07/1989 A2 – 11/09/1989			
1989	29/06/1990	A1 – 06/07/1990 A2 – 10/07/1990	05/12/1990	04/12/1990	17/12/1990
1990	27/06/1991	A1 – 24/07/1991 A2 – 29/07/1991	20/11/1991	19/11/1990	22/11/1990
1991	29/06/1992	A1 – 03/08/1992 A2 – 10/08/1992	29/10/1992	29/10/1992	06/11/1992
1992	29/06/1993	A1 – 30/06/1993 A2 – 05/07/1993	28/03/1994	28/03/1994	07/04/1994
1993	27/06/1994	A1 – 15/07/1994 A2 – 07/07/1994	15/11/1994	15/11/1994	22/11/1994
1994	30/06/1995	A1 – 24/07/1995 A2 – 25/07/1995	23/01/1996	23/01/1996	21/02/1996
1995	28/06/1996	A1 – 08/07/1996 A2 – 18/07/1996	01/11/1996		
1996	30/06/1997	A1 – 18/07/1997 A2 – 07/08/1997	16/12/1997	16/12/1997 16/01/1998 27/02/1998 21/04/1998	13/01/1998 04/02/1998 12/03/1998

138 I have noted above that, with respect to the Society's returns for each year from 1990 to 1993, the issues arising from those returns which should have raised questions in the mind of those scrutinising the Society's returns were the valuation rate of interest used to discount the Society's liabilities and the affordability and sustainability of the bonuses it had previously declared.

139 Table 10b shows the Mathematical Reserves for non-linked business as shown in the Society's appendix valuations within its returns for 1992 and 1994, along with the average valuation interest rates and the appropriate regulatory asset yields, as estimated by my actuarial adviser. The last column shows the margin between the asset yields and the valuation interest rates.

140 To meet the requirements valuation regulations, this margin should be greater than zero and significantly so if an allowance is made for future bonus on with-profits business.

The statutory and administrative context

141 Section 22(5) of the Insurance Companies Act 1982 required the prudential regulators to consider the regulatory returns, prepared pursuant to sections 17 and 18 of the 1982 Act and deposited pursuant to section 22(1) of that Act.

142 Section 22(5) also required those regulators, if it appeared to them that those returns were inaccurate or incomplete in any respect, to communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

143 Section 18(4) of the 1982 Act required, when an investigation into the financial condition of the company was undertaken by the Appointed Actuary, that the value of any assets and the amount of any liabilities should be determined in accordance with the valuation Regulations. The valuation Regulations applicable to the Society's returns for 1990 to 1993 were those contained in the Insurance Companies Regulations 1981.

144 Section 18(5) of the 1982 Act required the Appointed Actuary to produce the abstract of his or her report of the results of that investigation into the financial condition of the company in conformity with the Accounts and Statements Regulations. The Regulations applicable to the Society's returns for 1990 to 1993 were those contained in the Insurance Companies (Accounts & Statements) Regulations 1983.

145 The prudential regulators issued internal guidance in 1991 – the DTI Policy Guidance Notes, which set the policy framework for the discharge by those regulators of their statutory functions. Those functions included the duty to consider the regulatory returns submitted by insurance companies.

146 The prudential regulators had, in 1984, also issued guidance to insurance companies on the preparation of the annual returns. Paragraph 12.1 of that guidance stated that:

> *... sufficient information must be given about the basis of the valuation to enable the Department to be satisfied* [that the Mathematical Reserves conformed to the applicable Regulations]*, and in particular that the reserves meet the minimum standards required under Regulations 55 to 64 of the 1981 Regulations.*

147 Paragraph 12.3 of that guidance also stated that the returns should:

Table 10b – the Society's valuation rates of interest v asset yields

	1992			
	Weighted average of the valuation rates %	*Appendix valuation reserve £m*	*Weighted average of the yield on the hypothecated assets%*	*Margin %*
With-profits business	*6.20*	*5,932*	*6.09*	*(0.10)*
Non profit business	*7.63*	*1,193*	*7.63*	*0.00*
Total non-linked business	*6.44*	*7,125*	*6.35*	*(0.09)*

	1994			
	Weighted average of the valuation rates %	*Appendix valuation reserve £m*	*Weighted average of the yield on the hypothecated assets%*	*Margin %*
With-profits business	*5.68*	*8,829*	*5.52*	*(0.16)*
Non profit business	*7.58*	*1,841*	*7.58*	*0.00*
Total non-linked business	*6.01*	*10,669*	*5.87*	*(0.13)*

... give details of any guarantees and options on non-linked contracts which the actuary considers to be significant. Common examples are guaranteed surrender values, guaranteed annuity rates, guaranteed minimum rates of interest on deposit administration contracts, and options to increase sums assured without evidence of health.

148 Paragraph 12.4 continued that *'the guarantees and options to be specified... should include details of any guaranteed surrender basis which is specified in the policy, whether expressed in monetary terms or as percentage deductions from the value of units'*.

149 Acting under the terms of a service level agreement made in 1984, GAD undertook the scrutiny of the regulatory returns on behalf of the prudential regulators.

150 Paragraph 25 of that agreement specified that, as soon as possible after the receipt of the returns, GAD would *'carry out an initial scrutiny of the return with a view to advising* [the prudential regulators] *of any serious solvency or compliance problems in respect of the company's long-term business and to determine an order of priority for GAD's main examination of the returns'*.

152 That main examination aimed to produce a detailed scrutiny report which GAD would submit to the prudential regulators. The primary objectives of those reports were:

- to form a view about the solvency position of the company and to determine whether, at the valuation date for the returns, the company met the margin of solvency required in respect of its long-term business and whether, in the foreseeable future, it seemed likely that the company would continue to meet that margin;
- to determine if the returns complied with the relevant statutory requirements; and
- to determine, as far as possible from the returns, whether the company appeared to have complied with other requirements relating to its long-term business.

153 The detailed scrutiny report was, pursuant to the terms of the service level agreement, to include:

- a general description of developments in the year covered by the returns which might affect the company – examples of such developments were said to be changes in the company's philosophy or business approach, changes in the type, volume or mix of its business, and any other internal or external factors that could have a special effect on the company;
- a general commentary on the present and future financial position;
- details of breaches, or possible breaches, of the applicable Regulations or of any undertakings given by the company to the prudential regulators;
- details of significant errors in or omissions from the returns;
- details of any qualifications in any of the certificates which were required to be submitted with the returns;
- details of high lapse rates; and
- details of correspondence between GAD and the company.

153 GAD also issued internal guidance, the Insurance Supervisory Work Manual, to assist those of its actuaries who had responsibilities for the scrutiny of the returns of insurance companies. Paragraph D.9 of that manual stated that:

> *If a company's business is straightforward and we have no concerns, we should not ask for information which is not required, explicitly or implicitly, by the Regulations, but where there is anything which suggests concern, we should not hesitate to ask for further information to be given. If the matter is one that the public should know about, particularly where the returns are misleading, we should ask through DTI for an amendment to the returns. A middle course is to ask for an answer by letter and for future returns to be amended.*

154 Paragraph K.5 of the GAD manual said:

> *In general, it is not necessary to look at interest, mortality and expenses in watertight compartments. The main point is whether the valuation basis as a whole is adequate. However, where weaknesses in one area are offset by strengths in another, we may need to ask questions to establish that the overall result is adequate.*

155 Section K of the GAD manual also invited scrutinising actuaries to:

- consider whether a company's contracts had been *'adequately described'*, saying in relation to deposit administration contracts, that the description in the returns should include a description of any guarantees and surrender options contained in those contracts and any interest guarantees built into them;
- consider the resilience test and whether the GAD guidance on the tests to be applied had been followed;
- consider whether any reserve for maturity guarantees had been calculated in line with the basis set out within the report of a professional working party; and
- consider whether the valuation interest rates were supportable and in compliance with the applicable Regulations, noting that, *'in doubtful cases, it may be necessary to ask for a "matching rectangle"'*.

156 For the 1993 returns, GAD also developed a scrutiny proforma with notes on the content to be included in those detailed scrutiny reports. Among the issues which the proforma stated should be included were:

- *'a view as to the soundness of the company in the short and longer term'*;
- *'cover for the solvency margin'* – which was said to be *'a key DTI supervisory responsibility'*;
- a clear statement *'where there is any doubt as to whether the valuation basis used is in accordance with the Regulations'*; and
- a series of *'key features'*, including *'recent trends in financial results, especially if adverse'*, the *'approach to valuation and a general view as to strength'*, and the *'supportability of bonuses and recent trends in bonus declarations'*.

157 Professional guidance was also issued by the Faculty and Institute of Actuaries with regard to the conduct of the Appointed Actuary when undertaking an investigation under section 18 of the 1982 Act.

My assessment

158 The Society's returns for 1990 to 1993 gave rise to a number of questions as to whether the Society was acting in contravention of the applicable Regulations with respect to the valuation interest rates used as part of the determination of the Society's liabilities within the returns for all these years.

159 In 1990, 1991 and 1992, the valuation interest rates used by Equitable for most of their non-profit business were near the maximum that could be supported by the current assets, leaving little or no margin between those rates and the appropriate risk-adjusted yields.

160 However, the current assets were of shorter duration than a significant proportion of the liabilities, which meant that those assets would have to be reinvested at some future date.

161 In such circumstances, Regulation 59(7) of the 1981 valuation Regulations limited the yield that could be assumed to be earned after such reinvestment and, in turn, this limited the valuation rate of interest that could be supported by those assets.

162 This rate was significantly below the rate supported by the current assets. Overall, the maximum valuation interest that could be used was the weighted average of (i) the risk-adjusted yield on the current supporting assets and (ii) the maximum yield that could be assumed to be earned on future reinvested assets.

163 As the valuation interest rates used by the Society were close to, or equalled, the maximum that could be supported by its current assets, the content of the Society's returns raised issues as to whether the Society had properly allowed for the requirements of Regulation 59(7) when determining what valuation rates to use.

164 GAD did identify the existence of, and raise concerns about, some of these issues with Equitable. However, GAD did not do so in relation to every potential contravention of the Regulations. For example, GAD did not identify that, in the Society's 1992 returns, the valuation rates used in relation to significant elements of the Society's business appeared not to be supported by the backing assets.

165 Moreover, on the occasions that GAD did raise concerns with the Society, GAD did not pursue those concerns to a satisfactory resolution.

166 On 15 November 1994, GAD wrote to the Society concerning its 1993 returns. GAD noted that the valuation interest rates that had been used by the Society seemed high compared to the available yields on assets shown in Form 45 of those returns.

167 GAD asked the Appointed Actuary to provide a matching rectangle in relation to the valuation basis prescribed in the Regulations, in order that GAD could be satisfied that the returns complied with the requirements of Regulation 59 of the applicable Regulations.

168 The Society replied on 22 November 1994. The Appointed Actuary provided rudimentary information which did not include a hypothecation of assets to categories of business.

169 The Appointed Actuary said that the weighted average valuation rate of 4.78% was supported by the asset yields shown on Form 45 of the return. The Appointed Actuary stated that he did not consider that, when establishing the maximum valuation interest rates allowed by the Regulations, hypothecation of assets to categories of liabilities was necessary or required by the applicable Regulations.

170 GAD responded on 23 November 1994 and expressed some surprise at the interpretation of the Regulations that the Appointed Actuary professed to hold.

171 GAD reminded the Society's Appointed Actuary that the Regulations did not permit an individual valuation interest rate to be higher than the overall yield on the assets hypothecated to liabilities valued at that rate – and that, consequently, valuation rates could not be averaged for the purposes of demonstrating compliance with the statutory requirements.

172 GAD asked the Society to hypothecate assets to each category of business for which a different interest rate had been used.

173 Further correspondence ensued. On 2 December 1994, GAD told the Society's Appointed Actuary that GAD did *'not agree with your interpretation of Regulation 59'*. GAD explained their understanding of the applicable Regulations and concluded:

> *We trust that in considering your bases for the net premium test in the 1994 valuation you will verify that each interest rate can be supported in terms of the new Regulation 69(11) with the application of paragraph 12 if required.*

174 That correspondence culminated in a letter from the Appointed Actuary to GAD on 7 December 1994, in which he stated that he did *'not wish to prolong this correspondence unduly since, on this occasion, it relates only to our "appendix" demonstrations of compliance with the Regulations'*. However, he accepted that the position adopted by GAD would *'become more pertinent under the new Regulations and I shall give further consideration to that'*.

175 The Society's Appointed Actuary also stated that *'looking back through my files, I see that a similar presentation to that* [used by the Society]*... has been provided on a number of occasions in the past without being questioned by your predecessors'*.

176 Thus, GAD's attempt to secure compliance with the relevant Regulations was left unresolved, with only an indication from the Appointed Actuary that GAD's interpretation would be *'considered'* for future returns.

177 Using higher valuation interest rates to calculate the Mathematical Reserves than was supportable by the assets held by the Society meant that the amount of the liabilities that were used when calculating the solvency position of the Society would be significantly understated, thus giving a more favourable impression of its financial condition.

178 The content of the Society's returns for 1990 to 1993 also gave rise to a number of issues regarding the affordability and sustainability of the Society's bonus declarations. Those issues related to the interest rate differential which the Society applied and the associated issue of reserving for future declarations of reversionary bonus.

179 The way in which Equitable made provision in its reserves for the payment of future reversionary bonuses, above the guaranteed interest rates which applied to policies written before 1996, should have raised concern. This was because the Society's practice did not appear to be consistent with the reasonable expectations of its policyholders.

180 The Society used net discount rates – that is, valuation interest rates less any explicit allowance for future bonuses – which were higher than the guaranteed investment return in the calculation of

its Mathematical Reserves. The Society did so (i) in the appendix valuations for all years from 1988 to 1999 and (ii) in the main valuations from 1990 to 1996. This is illustrated in table 10c, which sets out the information contained within those returns.

181 The difference between the net discount rate and the guaranteed investment return constitutes an 'interest rate differential'. Where such interest rate differentials were used, the resulting Mathematical Reserves were lower than the guaranteed fund in respect of each policy.

182 The information in the Society's regulatory returns did not demonstrate that the Society was complying with the requirements of the applicable Regulations in regard to these matters. However, GAD did not query this with the Society or bring it to the attention of the prudential regulators.

183 I consider that the contents of the Society's returns for 1990 to 1993 raised a number of issues which GAD should have raised with the Society. That was not done and that failure constitutes a departure from the proper performance by GAD of its obligations under the service level agreement with the DTI.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

184 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, any conclusion that the Society's returns raised questions as to the compliance of the Society with the applicable Regulations, or as to the affordability and sustainability of its bonus policy had no sound basis in fact or in the relevant law.

185 Those bodies provided detailed actuarial analysis to support their view with regard to the valuation rates of interest used. It is not practicable to reproduce that detailed analysis here – nor that of my actuarial advisers in response.

Table 10c: the Society's interest rate differentials used for recurrent single premium with-profits business with guaranteed investment returns

	Main valuation	*Appendix valuation*	
	Interest rate differential used % p.a.	*Interest rate differential used % p.a.*	*Estimated value of differential applied to guaranteed policy funds £m*
1988	*-*	*1.50*	*181*
1989	*-*	*1.50*	*286*
1990	*1.25*	*3.75*	*901*
1991	*1.25*	*3.00*	*1,017*
1992	*1.25*	*3.00*	*1,170*
1993	*0.25*	*1.00*	*516*
1994	*1.50*	*2.25*	*1,315*
1995	*1.00*	*1.75*	*1,205*
1996	*0.75*	*1.50*	*1,264*

My evaluation of those submissions

186 I was not persuaded by the submissions of the public bodies. While I accept that it might now be possible to show that the Society was acting appropriately, the question before me is not what, with the benefit of hindsight, the true position was at the time.

187 Instead, I have to consider whether the information available at the time enabled GAD, in carrying out the scrutiny of the Society's returns, to be satisfied that the Society was acting in accordance with the obligations to which it was subject – and in such a manner that would not give rise to the risk that it would be unable to fulfil the reasonable expectations of its policyholders and potential policyholders.

188 I consider that the information within the Society's returns gave rise to questions which should have been asked in order to enable GAD to be so satisfied.

189 On the information before GAD at the time, the Society's approach to discounting appeared to suggest that a significant amount of any future surplus would be required simply to fund guaranteed benefits.

190 That occurred in a situation in which GAD knew that the Society had informed its policyholders that the additional returns they would receive by way of bonus declarations would reflect the investment performance of the with-profits fund.

191 In addition, the information within the Society's returns gave rise to serious questions about whether the Society could afford the level of bonus it was paying and whether it could continue to pay out at that level, in a situation in which, as GAD knew, the Society was unique in illustrating to its policyholders the full policy fund value, including terminal bonus.

192 From the information before GAD, it was not clear how the Society could fund future guaranteed bonuses and pay future discretionary bonuses, in line with the reasonable expectations of the Society's policyholders that such bonuses would continue to be paid. Nor was it clear that the valuation rates of interest used by the Society accorded with the applicable Regulations.

193 Despite those questions raising issues concerning the prudence of the Society's approach and whether there was a risk that the Society would not be able to fulfil the reasonable expectations of its policyholders, no action was taken by GAD to seek to resolve those questions or to raise them with the prudential regulators.

194 This was despite the fact that GAD had raised concerns at the time. As can be seen in the entries for the relevant dates in Part 3 of this report:

- GAD's Scrutinising Actuary B had noted, on 14 May 1992, that *'Equitable had used up investment reserves quickly in paying very good bonuses'* and, on the same day, it was noted that GAD's Chief Actuary B *'thinks they have been paying too much in bonuses'*;

- GAD's Directing Actuary A had referred, on 30 July 1992, to the Society as being one among the *'companies on whom we have been keeping a close watch for a number of years'* and which *'remain companies which cause serious concern'* – referring on 21 August 1992 to the Society's solvency position as being *'a cause for concern'*;

- a note from GAD to the prudential regulators on 15 September 1992 had said, in relation to GAD's view of the Society's position, that *'our view is that the Society has over-distributed in the last few years, compared with the return on investments.'*;

- a further note from GAD to the prudential regulators on 29 October 1992 had said that *'in order to pay bonuses in* [respect of 1990 and 1991] *the company had to earn 11.25% per annum on the assets backing the with profits contracts... In fact the company earned about +3% over the two years rather than the required +23%, and this is the main reason why the available assets have been reduced and the valuation basis has been weakened'*; and
- the Head of Life Insurance for the prudential regulators commented on the above further note from GAD on 4 November 1992 that *'this paints a worrying picture. Over-distribution by a company with a (deliberately) small coverage of its RMM and a (continuing) policy of high equity exposure'*.

195 The Society was also described, in internal briefing by the prudential regulators (see the entry for 26 October 1993 in Part 3 of this report), as a company to whom those regulators should be *'paying special attention to in the remainder of 1993 and 1994'*.

196 However, despite the views as to these issues which I have set out above – and those other occasions on which such doubts were expressed which any reader of the chronology of events that is set out in Part 3 of my report will identify – GAD failed to raise those questions with the Society or to seek to resolve them in other ways.

197 I am not suggesting that it can be established that the Society was in breach of the regulatory requirements to which it was subject. Nor am I coming to a view as to whether what is generally called 'over-bonusing' has occurred.

198 I am of course aware that the basis of the complaints which were made to me was that the Society operated a uniquely flawed business model which was always going to, and did, cause the Society to fail.

199 However, I also recognise that a view could be taken that, in a context in which the smoothing implicit in with-profits business meant that policies would typically receive more or less than their unsmoothed asset share, a particular sequence of financial conditions led most with-profits offices, including the Society, to pay out more than unsmoothed asset share to maturing policyholders throughout much of the 1990s.

200 Whether one or other view is the right one is not a matter for me to determine and I have no power to do so. My focus is on the acts and omissions of the prudential regulators and/or GAD.

201 Given the doubts that existed within GAD at the time and the nature of the information before GAD when it conducted the scrutiny of the Society's returns for 1990 to 1993, the submissions of the public bodies on these matters did not persuade me to come to a different conclusion.

My finding

202 I find that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations, fell short of what could reasonably be expected of GAD.

The basis for my finding concerning the introduction of the differential terminal bonus policy

The issue and relevant background

203 As is well known, the Society wrote policies containing guaranteed annuity rates. Those policies guaranteed the rate at which the proceeds available at retirement (based on the sum assured plus associated bonuses) would be converted to pension – and thus the minimum amount of pension available at retirement.

204 The Society stopped providing guaranteed annuity rates on new policies from June 1988, although new members of some existing group schemes continued to be provided with policies containing guaranteed annuity rates until the early 1990s.

205 The Society's guaranteed annuity rates continued to apply to the benefits that would be purchased by the future premiums (including in relation to recurrent single premium policies) that might be paid in respect of policies which already enjoyed this guarantee.

206 Those guaranteed annuity rates were both more flexible, in that they applied over a wide range of ages without penalty, and potentially more widespread than was the case with similar guarantees provided by other companies. In addition, policyholders could pay future premium payments and still benefit from the same guaranteed annuity rate at the same range of ages.

207 No new fund was established by the Society at the time of the changes it made to exclude guaranteed annuity rates and, subsequently, to exclude guaranteed investment returns from the policies it wrote.

208 Thus the assets held in respect of the different classes of policy thereby created were held in one fund. Nor was there a separate bonus series declared or any differentiation in treatment between the various classes of with-profits policyholders in terms of the level of bonuses declared by Equitable, despite the changes in policy terms and the associated guarantees that had occurred.

209 In late 1993 and early 1994 and continuously from April 1995 onwards, the Society's guaranteed annuity rates became generally more favourable than then current annuity rates. This meant that the cost of providing the guaranteed annuity benefit exceeded the total policy fund, which was only sufficient to provide the lower benefit available at the current annuity rate.

210 In order to deal with this situation, the Society introduced what came to be known as the 'differential terminal bonus policy', by restricting the value of benefit paid to the amount of the total policy fund.

211 The Society said that this was done to enable it to continue to reflect the Society's philosophy of 'full and fair' distribution to all its policyholders through its bonus policy and to pay each policyholder just their share of the fund.

212 Therefore, under the Society's differential terminal bonus policy, the amount of final bonus payable when a policyholder took benefits would be dependent on the form in which those benefits were taken and so, if the guaranteed annuity benefit was selected, the amount of the final bonus attributed to that policy was reduced.

The facts

213 Equitable submitted a statement of their business within Schedule 5 of their regulatory returns in both 1985 and in 1990. In those statements, the Society produced tables which disclosed both the level of the guaranteed annuity rate and the value of the business to which such a rate was applicable.

214 For example, in Form 67 of Schedule 5 of both the 1985 and 1990 returns, it was stated underneath tables which set out the value of the business that, for *'Individual Pension Arrangements – Variable Premiums'*:

> *Examples of the guaranteed annuity rates applicable to this business are:*
>
> *Men – at 60 £10.26%; at 65 £11.55%.*
>
> *Women – at 60 £9.34%; at 65 £10.33%.*

215 There is no evidence that, in either year, the GAD scrutinising actuary considered that information or any other such information within Schedule 5 of the Society's regulatory returns.

216 The Society had also stated in its regulatory returns for each year from 1988 onwards (until 1997) that *'it was considered unnecessary in current conditions to make explicit provision for the other guarantees and options described'* within the returns.

217 The description provided was that *'the premiums provide a cash fund at the pension date, to which (for policies issued prior to 1 July 1988) a guaranteed annuity rate is applicable'*.

218 Equitable stated, on page 71 of their 1993 returns:

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

219 This was a description of the differential terminal bonus policy that the Society had adopted and which was used from the date of bonus declarations in respect of the 1993 year-end until the date of the decision of the House of Lords in July 2000.

220 That description was included in each of the returns from 1993 to 1997. In their 1998 returns, Equitable stated:

> *If the contract guarantees minimum rates for annuity purchase the aggregate final bonus otherwise applicable is reduced when benefits are taken by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate after such reduction, is equal to the annuity which would be secured by applying the Society's annuity rate for an equivalent annuity in force at the time benefits are taken to the cash fund value of the benefits before that reduction, subject to a minimum value for the final bonus after such reduction of zero.*

221 The copy of the Society's 1993 returns that was held on the GAD file was annotated in red ink and in pencil. Several sections of the returns were marked *'new'*, including the disclosure of the differential terminal bonus policy.

222 On 24 October 1994, GAD prepared 'detailed scrutiny notes' as part of their consideration of the Society's 1993 returns. In these notes, the GAD scrutinising actuary listed the key points arising from his first read-through of the returns. On the third page of his notes, the actuary typed:

Bonus rate changes

- *New rules reducing final bonuses, see page 71*
- *Various changes in bonus rates.*

223 However, while the GAD actuary identified this in his notes to assist him to conduct the detailed scrutiny of the returns and to write a scrutiny report to the DTI, the issue was not covered in the scrutiny report he provided to the prudential regulators on 15 November 1994.

The statutory and administrative context

224 Section 17 of the Insurance Companies Act 1982 required every insurance company to prepare a revenue account for the year, a balance sheet as at the end of the year, and a profit and loss account for the year in a prescribed form. Those documents formed part of the regulatory returns.

225 All insurance companies which wrote long term business were also required by Section 18 of the 1982 Act to cause an annual actuarial investigation to be made into its financial condition by its Appointed Actuary, who had to report the results of that investigation in a prescribed form. The abstract of the actuary's report formed part of the regulatory returns.

226 The amount of the long term liabilities as calculated by the Appointed Actuary, pursuant to Section 18 of the 1982 Act, were included in the balance sheet required by section 17 of the 1982 Act.

227 Section 18(4) of the 1982 Act provided that, for the purposes of the investigation that the Appointed Actuary undertook into the financial condition of the company, the value of any assets and the amount of any liabilities were required to be determined in accordance with the applicable valuation Regulations.

228 With effect from 1 July 1994, those regulations were set out in Part VIII and Part XI of the Insurance Companies Regulations 1994, replacing the Insurance Companies Regulations 1981.

229 Regulation 54 of the Insurance Companies Regulations 1981 stated that:

> *The determination of the amount of long term liabilities (other than liabilities which have fallen due for payment before the valuation date) shall be made on actuarial principles and shall make proper provision for all liabilities on prudent assumptions in regard to the relevant factors.*

230 Regulation 64(1) of the Insurance Companies Regulations 1994 stated that:

> *The determination of the amount of long term liabilities (other than liabilities which have fallen due for payment before the valuation date) shall be made on actuarial principles which have due regard to the reasonable expectations of policy holders and shall make proper provision for all liabilities on prudent assumptions that shall include appropriate margins for adverse deviation of the relevant factors.*

231 Regulation 64(3) of the 1994 Regulations provided that the amount of a company's long-term liabilities should take into account, among other matters, all guaranteed benefits and all options available to the policyholders under the terms of their contracts.

232 Regulation 62(1) of the Insurance Companies Regulations 1981 required that provision should be made to cover any increase in liabilities caused by policyholders exercising options under their contracts. Regulation 72(1) of the Insurance Companies Regulations 1994 required that provision should be made on prudent assumptions to cover any increase in liabilities caused by policyholders exercising options under their contracts.

233 Section K of the GAD Insurance Supervisory Work Guidance Manual invited the GAD scrutinising actuary to *'draw DTI's attention to changes in bonus rates, compared to those of the previous year (or at previous declarations)'*.

My assessment

234 GAD did not identify the full disclosure within Schedule 5 of the Society's 1990 returns of the nature and extent of the Society's exposure to guaranteed annuity rates. GAD therefore did not take this information into account when undertaking their scrutiny of the Society's 1990 returns, or in relation to their scrutiny of subsequent returns, or when the issue of reserving for such guarantees became a matter of considerable concern. That was a missed opportunity.

235 While it seems to me arguable that GAD should have used the information provided within Schedule 5 of the 1990 returns in order to assist the prudential regulators to verify the solvency position of the Society, I do not, on balance, conclude that GAD acted unreasonably by not doing so at the time that they scrutinised those returns.

236 However, the Society in later returns continued to refer to the existence of policies which contained guaranteed annuity rates and did so in meetings with the prudential regulators and GAD.

237 GAD and the prudential regulators were aware that interest rates had lowered for a sustained period and that mortality was improving. Thus, when the Society introduced its differential terminal bonus policy – designed to address the fact that the Society's guaranteed annuity rates were now 'biting' in an environment of lower current annuity rates – that introduction cannot have been seen in isolation.

238 Yet, while the GAD scrutinising actuary noted that the Society had introduced this policy and that it had the effect of reducing the terminal bonus payable to certain policyholders, this was not taken forward as part of the scrutiny process nor notified to the prudential regulators.

239 I find this omission inexplicable. Moreover, the disclosure within the Society's 1993 returns of the differential terminal bonus policy did not feature in GAD's scrutiny of those returns.

240 I consider that the disclosure in the 1993 returns of the differential terminal bonus policy raised three separate issues which should have been considered and addressed: the first being how the Society's new policy impacted on the reasonable expectations of its existing policyholders; the second being whether that policy was being clearly described to potential policyholders; and the third being its impact on the Society's approach to reserving.

241 On 20 July 1993, Equitable had provided GAD with their completed response to a with-profits survey then being conducted by GAD on behalf of the prudential regulators.

242 In that response, Equitable explained that *'part of the Society's stated philosophy is to achieve a reasonable degree of stability in proceeds with gradual, rather than sudden, changes in proceeds'*. The response also stated that, while no specific information was given within the Society's publications about the period and magnitude of smoothing or the likely frequency of changes to final bonus rates, general comments in their 'With-Profits Guide' could be expected to lead policyholders to expect relatively gradual changes to bonus rates.

243 The actuarial profession had also noted, in the report of the professional working party on PRE, published in June 1993, that it was reasonable to expect that an insurance company would exercise continuity in its approach to determining benefits and change its approach to smoothing only gradually.

244 GAD had been provided with information by Equitable that suggested that the Society's policyholders would not generally expect changes to bonus rates and to its distribution policy. That information had also expressed the view that the philosophy of the Society was to effect gradual and not sudden changes in the way in which it disbursed proceeds to its members.

245 Given all of the above, I consider that GAD should have pursued with Equitable the new policy, which GAD noted had the effect of reducing bonuses, in order to be able to advise the prudential regulators as to whether the differential terminal bonus policy accorded with policyholders' reasonable expectations.

246 In a letter sent by the Government Actuary to Equitable on 7 July 1993, in response to the Appointed Actuary's concerns about how the survey had been announced, the Government Actuary emphasised that *'GAD and the DTI have always taken a close interest in policyholders' reasonable expectations'* and that the rationale for the survey had been partly to underline *'the need to focus on this area and for DTI to be seen to be doing something positive to indicate that it has policyholders' reasonable expectations very much in mind'*.

247 GAD did not, however, bring the new policy to the attention of the prudential regulators or raise the matter with the Society. That was a lost opportunity to establish the way in which the Society's differential terminal bonus policy worked and how that policy affected policyholders and their reasonable expectations.

248 Given that GAD were aware that the material published by Equitable led the reader to expect only gradual changes to bonus policy, that was also a lost opportunity to recommend to the prudential regulators that liaison with the conduct of business regulators should be undertaken and to advise the prudential regulators that concerns should be raised with the Society as to whether it was properly describing this new policy in the Society's marketing and other literature, in order that the reasonable expectations of potential policyholders were fulfilled.

249 The disclosure of the differential terminal bonus policy in the Society's 1993 returns also referred to the 'guaranteed annuity rate'. That reference was further indication of an issue that could and indeed did become critical in later years. Had it been pursued at the time, the question of whether the Society was reserving for such policies might have arisen earlier.

250 GAD's failure to ask the Society to explain what the new bonus policy entailed, why it had been adopted, and the nature and extent of the problem that it was designed to address was a lost opportunity to identify and address the issues that would cause the Society great problems some years later.

251 The failure by GAD to pursue this at the time led to a further lost opportunity. The Society's bonus statements and With-Profits Guides did not reflect this change in bonus policy until some years later. That might have been identified and remedied had GAD pursued this matter when it first arose.

252 I consider that GAD should have raised, pursued and sought to resolve issues arising from the introduction of the Society's differential terminal bonus policy – but failed to do so. GAD should, moreover, have reported those issues to the prudential regulators but also failed to do so.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

253 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, I had attached far too much significance to the disclosure of the differential terminal bonus policy, at a time when there had been no basis for concluding that it was unlawful or otherwise objectionable, and at a time when its ultimate implications for Equitable, following the decision of the House of Lords in the *Hyman* litigation, could not have been foreseen.

254 The public bodies also said that, at the time that Equitable had introduced and disclosed the differential terminal bonus policy, such a policy had not been generally seen as imprudent or surprising.

255 The public bodies told me that disclosure by Equitable of the new policy within its 1993 returns would not, at that time, have raised any concerns with regard to PRE, the way in which the policy was described to potential policyholders, or the impact on reserving by Equitable.

256 The public bodies said that any adverse finding on this matter would be unreasonable and could only be made with the benefit of hindsight.

257 The public bodies accepted that the introduction of the differential terminal bonus policy had been identified by GAD as part of its scrutiny of the Society's 1993 regulatory returns.

258 However, in support of their view that such a conclusion was unreasonable, the public bodies submitted that:

> *... the reference to "new rules" in the scrutinising actuary's notes, and his recognition that these rules involved the reduction of terminal bonus in certain circumstances, were no more than records of fact. They did not indicate that the scrutinising actuary had identified the* [differential terminal bonus policy] *as a matter of potential concern for any reason, or that it ought to be commented on in the detailed scrutiny report which he would be preparing for the prudential regulator...*

259 The public bodies further submitted that:

> *In these circumstances..., it is wholly unsurprising that no comment was made on the* [differential terminal bonus policy] *in the detailed scrutiny report. There was no reason for the scrutinising actuary to consider the description of* [that policy] *in the 1993 returns... as referring to a practice which Equitable was*

not contractually entitled to carry out. Indeed, it was only the House of Lords' judgment in 2000 that established that the practice was in breach of Equitable's Articles of Association.

260 The public bodies went on to submit that:

> *The practice described was not unique to Equitable, a similar approach having been adopted by several other companies. Nor was it considered by most actuaries at the time to be unfair or to raise any issue with regard to PRE.*

261 The public bodies said that the view taken by GAD, that no action needed to be taken as part of the scrutiny of the Society's returns, had been a reasonable one for GAD to take at the time.

262 Turning to the issue as to whether the introduction of the differential terminal bonus policy raised questions regarding its impact on the reasonable expectations of existing policyholders, whether and how the policy was being described to new policyholders, and on the reserving practice of the Society, the public bodies submitted that *'the disclosure of* [that policy] *in the 1993 returns did not (and reasonably did not) give rise to concerns in any of these respects.'*

263 As for issues regarding the impact of the policy on the reasonable expectations of existing policyholders, the public bodies submitted that recognition that this policy might have had such an impact was:

> *... based entirely on an assessment made with the benefit of hindsight. At the time, other companies used a* [differential terminal bonus policy] *and it was generally regarded by actuaries as an approach which was consistent with contractual rights and PRE. In particular, it resulted in a maturity payment to the policyholder which was targeted on the individual "asset share", which was widely accepted among actuaries at the time as setting a benchmark for satisfying PRE.*

264 The public bodies further submitted that:

> *... there was no PRE reason why mention of the* [differential terminal bonus policy] *should have been made in GAD's report to the prudential regulator on its detailed scrutiny of Equitable's 1993 returns. This was also the case in later years. It is only with the benefit of hindsight, and knowledge of the House of Lords' judgment, that* [that policy] *can be seen as having been an improper approach to bonus distribution for Equitable to have adopted.*

265 The public bodies went on to submit that the *'circumstances in which the prudential regulator would have considered intervention on PRE grounds in relation to bonus declarations were far from being fulfilled at the material times in relation to the* [differential terminal bonus policy]*'*.

266 As for issues regarding whether and how the Society's policy was being described to new policyholders, the public bodies submitted:

> *The marketing to potential policyholders through Equitable's literature (including the bonus statements and With-Profits Guides...) was a matter for the conduct of business regulator, not the prudential regulator. It was not the responsibility of GAD or the prudential regulator to raise with the conduct of business regulator the issue of the* [differential terminal bonus policy] *and how it might be communicated by Equitable to potential policyholders.*

267 As for issues regarding the reserving practice of the Society, the public bodies submitted that:

> *... the point is misconceived because there was no need to reserve for terminal bonus under the regulations, and the* [differential terminal bonus policy] *(relating as it did only to payments of terminal bonus) would therefore properly have been considered by GAD to have no impact on Equitable's reserves. The subsequent wholly inappropriate reliance that was placed on the* [policy] *by Equitable, in relation to avoiding setting up reserves which should properly have been held under the regulations for the benefits guaranteed under the relevant contracts, could not have been foreseen from the disclosure of the* [differential terminal bonus policy] *in the 1993 returns.*

268 As regards the disclosure within Schedule 5 of the Society's regulatory returns for 1990, and also within the Society's returns for later years, of its policies containing guaranteed annuity rates, the public bodies told me that, in their view, it was only with the benefit of hindsight that the Society's disclosure regarding guaranteed annuity rates in the years from 1990 to 1996 could be seen to have been misleading.

269 The public bodies also said that it was not reasonable now to criticise GAD for failing to use the disclosure of the extent and nature of the guarantees within the Society's 1990 returns to test the Society's assertion that it did not need to establish an explicit reserve for the liabilities associated with policies which contained guaranteed annuity rates.

270 The public bodies told me that:

> *With the benefit of hindsight, it is clear that, had GAD interrogated the relevant Schedule 4 disclosure using the data in the Schedule 5 statements, it would have discovered the problem with Equitable's GARs and the lack of an explicit reserve in respect of them.*

271 The public bodies submitted, however, that my conclusion had been informed by:

> *... the impermissible application of* [such] *hindsight and a failure to acknowledge (i) the inadequate and misleading nature of Equitable's disclosure in the returns and (ii) that any deficiency that there may have been in the relevant reserves was not significant before 1997.*

272 The public bodies also said that they did not consider that the disclosure of the position by the Society within its returns had been adequate, submitting that:

> *With the benefit of hindsight and in the knowledge of the extent of its exposure to GARs revealed by its reply to the GAR survey, it is now clear that Equitable did not provide the disclosure required by the regulations. Further, Lord Penrose, in his report, described the disclosure provided by Equitable as wholly inadequate. It is now clear that the disclosure was insufficient to enable GAD to have a clear understanding of the true position at the time the disclosure was made.*

273 The public bodies further submitted that:

> *GAD was entitled to rely on the Appointed Actuary to provide full and proper disclosure in the returns in accordance with his*

professional responsibility. The Appointed Actuary was a professional, subject to mandatory guidance and codes of conduct and accountable in that regard to the actuarial profession. GAD did not "police" Appointed Actuaries; that was not GAD's function and it was never intended that it be resourced or staffed to undertake any such task.

274 The public bodies went on to submit that:

> *It is only with the benefit of hindsight that the disclosure provided by Equitable can be seen to have been misleading. At the time of the relevant disclosures, the clear implication of the information which Equitable provided was that the need to make explicit provision for the GARs had been considered and dismissed by the Appointed Actuary because they were not "in the money", or they attached to an immaterial amount of business, or both.*
>
> *The information available to GAD in the relevant years was not such as to have caused it to question whether Equitable was being disingenuous in giving this impression. In particular, Equitable made no reference to the Differential Terminal Bonus Policy, a policy which it is now known Equitable relied upon to seek to justify the lack of a GAR reserve. GAD did not know, nor could it at the time reasonably have been expected to discern, that (contrary to Equitable's assertion) reserves were in fact required in respect of its GAR exposure, arguably in 1993 and 1994 (although at that time only in respect of the resilience reserve), and in the base valuation from the 1995 returns onwards.*

275 In relation to any meetings held between the Society and the prudential regulators and GAD, at which mention had been made of the existence of the guaranteed annuity rates, the public bodies submitted that:

> *With the benefit of hindsight, it can now be seen that the comments made by* [the Society's Appointed Actuary] *at the meeting in relation to the GARs were misleading. Contrary to the clear impression that he gave, the GARs must in fact have been at least close to biting in the base valuation at that time, and would have been biting to some extent in the resilience scenario in which interest rates were assumed to fall. At the time, however, GAD and the prudential regulator had no way of knowing this, and it was reasonable for them to have accepted the statements made by the Appointed Actuary.*

276 In relation to the full disclosure of those guarantees within Schedule 5 of the Society's 1990 regulatory returns (and in similar earlier returns), the public bodies told me that:

> [We accept] *that, in providing the periodic statements of its long-term business required under Schedule 5... as part of its returns for 1982, 1985 and 1990, Equitable did disclose data from which the level and extent of its GAR exposure could be discerned.*

277 However, the public bodies went on to submit that:

> *... there was no explicit requirement under the terms of its Service Level Agreement with the prudential regulator for GAD to "review the returns for previous years" at the time in question. Nor did GAD's own internal guidance require reference back to Schedule 5 statements submitted for earlier years.*

278 The public bodies also submitted that:

> *Further, from 1990 to 1997, Equitable stated expressly in Schedule 4 to its returns that no explicit GAR reserve was required. That assurance was made by Equitable's Appointed Actuary, who had professional responsibility to provide full and proper disclosure of Equitable's financial position.*
>
> *Accordingly, the prudential regulator, through GAD, was entitled in all of the* [relevant] *years... (including 1990) to rely on that assurance when scrutinising the relevant returns and was not required to go behind it and test its veracity against the data contained in Equitable's Schedule 5 statements.*
>
> *The position would have been different if, as it ought to have done in at least some of* [those] *years..., Equitable had disclosed in Schedule 4 to its returns the need for it to establish an explicit GAR reserve. In that case,* [we] *accept that the prudential regulator, through GAD, would have been required to verify the sufficiency of the reserve established with reference to the data in the Schedule 5 statements.*

279 The public bodies concluded by submitting that they did:

> *... not accept as well-founded criticism of GAD for failing to:*
>
> - *detect the inadequacy of Equitable's (opaque) disclosure of the existence and extent of its GARs in its 1990 to 1996 returns; and*
> - *advise the prudential regulator to seek further information from Equitable¸ whether under section 22(5) of the Insurance Companies Act 1982 or otherwise, about its exposure to GARs.*
>
> *GAD's scrutiny of the returns was conducted in a proper and appropriate manner.* [I had] *rightly acknowledged, and endorsed, the robust approach which GAD and the prudential regulator adopted in relation to Equitable's 1997 returns. However, that approach reflected a key change in circumstances – namely the unambiguous disclosure by Equitable in a single statement in those returns of the existence, level and extent of its exposure to GARs, and the way in which it was using its* [differential terminal bonus policy] *to seek to justify avoiding the need to set up reserves for the GARs. GAD and the prudential regulator simply did not have that information when scrutinising the returns for each of the years up to 1996.*

My evaluation of those submissions

280 The public bodies have accepted that, had GAD used the information provided by the Society within Schedule 5 of its 1990 returns, *'it would have discovered the problem with Equitable's GARs and the lack of an explicit reserve'*. Had GAD done so, it is thus reasonable to conclude that much of the subsequent history of the Society's problems might have been different.

281 The public bodies have submitted, however, that any criticism of GAD's failure to use that information can only be sustained by having regard to hindsight. However, I am not persuaded by the submissions of the public bodies on this matter.

282 While I accept, on balance, that there was nothing before GAD when it scrutinised the Society's 1990 returns that would have made that scrutiny focus on the existence, nature and extent of maturity

guarantees within the Society's business, the position was entirely different when GAD were scrutinising the Society's 1993 regulatory returns.

283 GAD knew that interest rates had fallen on a sustained basis over the previous years. More importantly, the Society disclosed within those regulatory returns that it had introduced a new bonus policy directed at the reduction of bonuses in a context of policies which contained guaranteed annuity rates.

284 It is arguable whether the Society provided sufficient and sufficiently clear disclosure of the guarantees contained within its business and whether its description of the differential terminal bonus policy was appropriate. I consider, however, that it was sufficient to put GAD on notice that questions about those matters needed to be asked if GAD did not fully understand the position.

285 But, in any event, in undertaking the scrutiny of the regulatory returns on behalf of the prudential regulators, GAD was required to verify the solvency position of the Society, and to verify that it had determined its liabilities in accordance with the applicable Regulations.

286 Those Regulations provided that appropriate reserves should be established within the Society's Mathematical Reserves in respect of liabilities arising from the guaranteed annuity rates.

287 The Society, however, did not include in its regulatory returns any provision for the liabilities which would arise in respect of any policyholder taking the guaranteed default benefits, calculated by applying the guaranteed annuity rate to the guaranteed fund, or for the liabilities which would arise where such policyholders paid additional premiums to 'top-up' the existing policies they held which had the benefit of guaranteed annuity rates.

288 Instead, the Society merely held reserves equal to the guaranteed fund of each policy, which provided only for less valuable annuities calculated at the current annuity rates.

289 I accept, on balance, that none of this was obvious on the face of the Society's regulatory returns. However, the very *'opaque'* disclosure which the public bodies submit made it unreasonable to expect GAD to have picked up these issues from those returns was, on the contrary, something which should precisely have prompted GAD to raise questions with the Society.

290 I do not accept that GAD would only have had to satisfy themselves that appropriate reserves had been established if the Society had stated within its returns that it needed to reserve for those guarantees.

291 The statements that the Society had such guarantees and that it did not consider that there was any need to reserve for them should have prompted GAD to ask questions. That was even more the case in a context of a sustained downturn in interest rates, the introduction of a new bonus policy to address the cost of those guarantees, and the tight financial position that the Society was then disclosing within its regulatory returns.

292 If GAD could not ascertain what the Society's reserving practice was, why a new differential terminal bonus policy had been introduced, and the resulting effect on the Society's solvency position, then GAD was required to take the matter further, pursuant to GAD's obligations under the service level agreement to provide advice and assistance to the prudential regulators.

293 That could have been done either by asking the Society to explain the approach it was adopting or by recommending to the prudential regulators that

further information about the Society's new bonus policy was sought. GAD could also have looked back at the Society's returns for earlier years, including those for 1990, to ascertain how the issue had developed over time and what previous discussions or action had been undertaken.

294 I consider also that the submissions of the public bodies regarding the PRE issues that were raised by the introduction of the differential terminal bonus policy do not address all the relevant facts.

295 GAD had before them information that the Society was not communicating its new policy to its policyholders. It is not the case that such matters were only matters for the conduct of business regulators, although recommending to the prudential regulators that liaison with those regulators was needed was one option open to GAD. The fulfilment of the reasonable expectations of the Society's policyholders was central to the role of the prudential regulators.

296 I was not persuaded by the submissions of the public bodies. I conclude that GAD should have addressed these issues as part of their scrutiny of the Society's 1993 returns.

My finding

297 **I find that the failure by GAD, when the introduction of the Society's differential terminal bonus policy, intimated within the Society's 1993 returns, was identified by GAD as part of their scrutiny of those returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders, fell short of the standard that could reasonably be expected of GAD.**

The basis for my finding concerning the scrutiny of the Society's returns for 1994 to 1996

The issue and relevant background

298 Further issues arose in respect of the Society's regulatory returns for 1994 to 1996, namely:

- the continuation of the two issues which arose from the returns for 1990 to 1993 (questions concerning discounting through the use of imprudent and/or impermissible valuation interest rates and the affordability and sustainability of bonus declarations);
- apparently arbitrary changes to the assumed retirement age for personal pension policies, contrary both to European Directives and the applicable domestic Regulations;
- the absence of explicit reserves for prospective liabilities for capital gains tax and for pensions review mis-selling costs, stating instead that such liabilities were covered by implicit margins in the valuation basis, when GAD knew that the effect of the applicable Regulations was that they should be provided for explicitly; and
- the absence of reserves in respect of the liabilities arising from guaranteed annuity rates, which GAD by then should have known were biting and should therefore have been provided for.

The facts

299 Again, it is not necessary to reproduce all of the material again here concerning the contents of the regulatory returns submitted by the Society each year, the notes and reports which together constituted the outcome of the scrutiny of those

returns by GAD, the correspondence between the Society and the prudential regulators and GAD, and the meetings that were held.

300 That material is contained in Part 3 of this report and is summarised in Chapter 6 of this report. Table 10a above sets out the entries within Part 3 of this report of most relevance to the scrutiny process.

The statutory and administrative context

301 The statutory and administrative context for the scrutiny of the Society's returns for 1994 to 1996 was largely unchanged from that which was applicable to the scrutiny of the Society's returns for 1990 to 1993, with the exception that the valuation Regulations were now contained within the Insurance Companies Regulations 1994 and that, in 1996, the Insurance Companies (Accounts & Statements) Regulations 1996 replaced the 1983 Accounts and Statements Regulations.

302 For the scrutiny of the 1995 and 1996 returns, a new service level agreement was in place between GAD and the prudential regulators. In this agreement, the primary objective of prudential regulation was said to be:

> *... to regulate the insurance industry effectively (within the duties and powers set out in the Act) so that policyholders can have confidence in the ability of UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations.*

303 The prime function of GAD was to *'advise* [the prudential regulators] *in the fulfilment of these aims'*. GAD's scrutiny reports were now required to set out where a company was not complying with statutory requirements, was failing to meet the statutory solvency requirements, or was in danger of failing to meet them in the future, or appeared not to be meeting policyholders' reasonable expectations.

My assessment

304 In addition to the two issues which had arisen from the Society's returns for 1990 to 1993, which were questions concerning discounting through the use of apparently imprudent and/or impermissible valuation interest rates and the affordability and sustainability of bonus declarations, three further issues arose.

305 The first was the way in which the Society assumed the retirement age that would be chosen by its policyholders when calculating its liabilities. Changes to those assumptions appeared to breach the requirements of the applicable Regulations.

306 This question arose because, in both 1994 and 1996, the Society changed in what appeared to be an arbitrary manner the retirement age it assumed would be prudent when calculating its reserves. On both occasions, the effect of those changes was to reduce the reserves that the Society needed to hold.

307 After July 1988, Equitable wrote large numbers of recurrent single premium personal pension policies, which allowed policyholders to retire without penalty at any time from age 50. Thereafter, a cash sum equal to the guaranteed benefits that had accrued in respect of a policy became available and could be used to buy an annuity either from the Society or, using the open market option, from any other pension provider.

308 In the years prior to 1993, the Society calculated its reserves for these policies by discounting the guaranteed benefits from the age of 50, the earliest retirement age allowed under the policies. That was a prudent approach.

309 However, the Society in its 1994 returns assumed, for the purposes of determining the liabilities in respect of such policies, that personal pension policyholders would retire aged 55. The Society did the same in its 1995 returns.

310 In the years from 1996 to 1999, Equitable changed its approach again and assumed that personal pension policyholders would retire aged 60.

311 In addition, for policyholders retiring between the ages of 50 and 55 – and later between 50 and 60 – this meant that the reserves held by the Society in relation to their policy might be less than the cash sum that would be immediately available to those policyholders by way of guaranteed benefits, or under any other option in those policies, or which was available to buy an annuity from another pension provider.

312 The effect of those changed assumptions was that, in all its returns from 1994 onwards in the period covered by this report, the liabilities that the Society showed in its returns, in respect of which it needed to hold reserves, could have been considerably understated. Information that this was so was available to GAD when they scrutinised those returns but GAD took no action until November 2000.

313 The second issue that arose was the failure by the Society to hold explicit reserves for prospective liabilities to tax on capital gains and for pensions mis-selling costs. This was in a context in which GAD had recognised that there were only small, if any, margins in the Society's valuation basis, and that the Society had selected that basis at the limits of what the Regulations allowed.

314 In the years prior to 1997, the Society stated in both its main and appendix valuations that, although a liability for capital gains tax existed, a provision for that liability was not made as it could be covered by margins elsewhere in the basis used to determine its long term liabilities.

315 That approach did not appear to be consistent with Regulations 60 and 64 of the Insurance Companies Regulations 1994 or the professional guidance in GN8, the effect of which required explicit provision for those liabilities.

316 The Society failed to establish reserves for its disclosed capital gains tax liability – of £22m, £37m and £48m respectively in 1994, 1995 and 1996 – within both its main and its appendix valuations. From 1997, the Society provided for this liability.

317 GAD identified this issue in their scrutiny of the Society's 1994 returns but did not take any action to raise it with the Society or with the prudential regulators. GAD did comment on the issue in its detailed scrutiny report to the DTI on the 1995 returns, however – but again GAD did not raise the issue with the Society.

318 GAD identified the issue once more when they were scrutinising the Society's 1996 returns and this time pursued it with the Society.

319 GAD asked the Appointed Actuary to reconsider this matter for the 1997 returns. The failure to establish a reserve for the Society's prospective liability to tax on unrealised capital gains was rectified in the Society's 1997 returns, although no amendment was required to be made to its 1996 returns. The 1994, 1995 and 1996 returns may therefore have understated the Society's liabilities in this respect.

320 With regard to personal pensions mis-selling, the Society stated that its liability in that respect could be covered by margins elsewhere in the valuation basis.

321 That too appeared not to be consistent with Regulation 64 of the applicable Regulations. Although GAD was aware of the issue, as it had been discussed in a meeting that GAD and the prudential regulators held with the Society on 9 December 1994, GAD took no action in respect of this breach in relation to the 1994 and 1995 returns.

322 However, on 16 January 1998 during the scrutiny of the Society's 1996 returns, GAD wrote to the Society, requiring it to make explicit provision for those reserves in future returns. Yet GAD did not seek any amendments to the Society's 1996 returns. The Society made provision for those reserves in later returns. However, the Society's 1994, 1995 and 1996 returns understated the Society's liabilities in this respect.

323 The final issue which arose was the failure by the Society to reserve for the liabilities associated with those policies which contained guaranteed annuity rates.

324 The Society did not make any provision for the liabilities associated with those guarantees, despite the fact that the applicable Regulations required that the calculation of the Mathematical Reserves should include provision for such liabilities. The public bodies told me during my investigation that, by their reckoning, reserves of £275 million and £325 million were omitted from the Society's returns for 1995 and 1996 respectively. My advisers suggest a higher figure, but either way the omission was, in my view, material.

325 Whilst the Society had disclosed the existence of those guarantees within its returns for each year, no information had been provided within those returns about the level and extent of the guarantees since that information had been provided within Schedule 5 of the Society's 1990 returns.

326 This issue, the failure by the Society to establish reserves in respect of the liabilities associated with those of its policies containing guaranteed annuity rates was not noted by GAD in its scrutiny of any of the Society's returns from 1994 to 1996 and did not come to the attention of GAD or the prudential regulators prior to July 1998.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

327 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, any criticism of GAD's scrutiny of the Society's regulatory returns was misconceived.

328 In support of that view, the public bodies submitted that:

> *There was no requirement to hold an explicit reserve for the contingent liabilities for tax on unrealised capital gains or pensions mis-selling costs. Equitable's practice of making implicit provision for these through reliance on margins elsewhere in the valuation basis was in accordance with the applicable regulations.*
>
> *Equitable's retirement age assumptions complied with the applicable regulations and there is no evidence that changes made to them were arbitrary.*
>
> *The requirement for a reserve for guaranteed annuity rates in the base valuation can only be established with the benefit of hindsight, but, in any event, only a very limited GAR reserve was required in 1995 and none for 1994.*

There was no requirement for an explicit allowance for future reversionary bonus to be made in Equitable's appendix valuation and Equitable's practice was again in accordance with the applicable regulations.

There is no evidence that Equitable's use of an "interest rate differential" was not reasonable, which... was not precluded by the applicable regulations at the time in question.

329 The public bodies submitted that, given the above, the contemporaneous view of GAD and the prudential regulators, that there were no grounds for regulatory intervention, was a reasonable one. Accordingly, any adverse finding would be unreasonable and flawed.

My evaluation of those submissions

330 I was not persuaded by the submissions of the public bodies on these matters. By the time that GAD undertook the scrutiny of the Society's 1994 returns, they had available to them information which indicated that the Society's valuation basis appeared to be weaker than the minimum permitted by the valuation Regulations.

331 As part of the preparation by GAD of their annual report to the prudential regulators on the industry, GAD carried out work to analyse the strength of the valuation bases used by the principal life insurance companies in the United Kingdom.

332 That work included a comparison of those valuation bases, measured by reference to the difference between the valuation rate of interest adopted and the rate of return available on the backing assets, against the minimum standards set out in the applicable Regulations.

333 As a result of that work, GAD now had information before them that the valuation basis that the Society had adopted within its 1993 returns appeared to be materially weaker than that minimum standard. The Society's result was 66.8%, where 100% denoted that a valuation basis was approximately aligned to the minimum prescribed strength.

334 GAD was also aware, from the equivalent work it had done in respect of the 1994 returns of life insurance companies (including the Society), which was available to GAD prior to their scrutiny of the Society's 1994 returns, that the valuation basis that Equitable had adopted within those returns appeared still to be below the minimum prescribed strength, at 96.3%.

335 The analyses carried out by GAD in respect of the Society's 1993 and 1994 returns also indicated that the Society was significantly out of step in this regard with the rest of the life insurance industry.

336 However, despite this empirical evidence, no action was taken by GAD to secure that the Society's valuation basis complied with the applicable Regulations – beyond an enquiry about the valuation rate of interest that had been used. The Society's response to this enquiry was not analysed, or pursued to a satisfactory resolution by GAD or raised with the prudential regulators. It was simply accepted at face value.

337 I received further submissions from the public bodies which said that the original analysis that had been undertaken by GAD had been vitiated with arithmetical errors and which submitted that, once those figures were re-worked, the figure for the strength of the Society's valuation basis was approximately 100%. The public bodies also submitted that the type of business in respect of which GAD's analysis had been undertaken was a small part of the Society's business and that, thus, that analysis was 'irrelevant' for the Society.

338 I do not accept those submissions. Whether it can now be shown that the valuation basis met the statutory requirements is itself irrelevant. I have to be concerned only with the information that was before those scrutinising the Society's returns at the time. Nor do I accept that the material in question would have been irrelevant to the way in which GAD should have conducted the scrutiny of its returns.

339 I consider that GAD, in advising and assisting the prudential regulators through undertaking the scrutiny of the Society's returns, were required to satisfy themselves that the Society was acting soundly and prudently, in accordance with the applicable Regulations, and in such a way as to fulfil the reasonable expectations of its policyholders. GAD were also required to advise the prudential regulators of any issues of concerns which came to the attention of GAD.

340 Questions as to whether the Society was so acting or questions as to whether its valuation basis, including the interest rate used to determine the Society's liabilities, was appropriate – and as to whether the method by which the Society determined its surplus was appropriate – had to be raised by GAD with a view to verifying the Society's financial position. The information before them at the time should have been taken into account, but was not.

341 I would finally note, as to the relevance to the Society of the comparative analysis that GAD undertook, that the types of business in respect of which that analysis was undertaken were precisely the same business types as formed the basis for evidence provided to me by the public bodies, also based on comparative analysis, to support their submission that industry-wide bonus cuts had occurred around the time that the Society made its policy value cuts in July 2001, as part of their submission that financial injustice had not been sustained by policyholders.

342 I was not persuaded by the submissions of the public bodies on these matters and those submissions did not persuade me that my conclusions are flawed.

My finding

343 **I find that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996, related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, (iii) apparently arbitrary changes to the assumed retirement ages, and (iv) the holding of no explicit reserves for the liabilities associated with prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates, fell short of what could reasonably be expected of GAD.**

The basis for my finding concerning the presentation of the Society's two valuations

The issue and relevant background

344 Most insurance companies used the valuation method and basis set out in the applicable Regulations to calculate their Mathematical Reserves.

345 However, throughout the period covered by this report, insurance companies were entitled to use an approach which differed from the statutory minimum basis, so long as the alternative method that was used produced Mathematical Reserves that were at least as high as that which would have been produced using the statutory minimum basis.

346 During the period covered by this report, the Society always used an alternative valuation method within its returns.

347 In order to seek to demonstrate compliance with the Regulations, the Society set out information about the amount of its Mathematical Reserves using a basis that its Appointed Actuary considered was compatible with the method set out in the Regulations. This was done in an appendix at the end of Schedule 4 of the Society's returns.

The facts

348 In its regulatory returns for every year from 1990 to 1996, the Society, when producing its appendix valuation, did not provide complete information in that valuation. The amount of the resilience reserves that would be needed if the statutory minimum basis had been used by the Society was omitted from each of those returns.

349 For each year from 1990 to 1994, as part of their scrutiny of those returns, GAD asked the Society to provide the omitted information. This the Society provided.

350 This was done so that GAD could verify what the amount of the Society's Mathematical Reserves using the statutory minimum basis would be, before comparing the results of the Society's chosen method with the results on the statutory minimum basis. GAD could thereby be satisfied that the Society's chosen alternative had produced a result at least as strong as would have been produced on the statutory minimum basis.

351 GAD carried out their scrutiny of the Society's 1995 regulatory returns in November 1996. Although the Society again omitted the figure for the resilience reserve, GAD did not ask the Society to provide that figure. Instead, GAD simply assumed that it would be less than the difference between the Mathematical Reserves in the main and appendix valuations before the allowance for resilience reserves.

352 During their scrutiny of the Society's 1992 returns, GAD had suggested to the Society's Appointed Actuary that this information should be disclosed. The Appointed Actuary did not agree and GAD did not pursue the matter further.

353 At no other time did GAD seek to require the Society to include within its published returns the missing figures for the resilience reserves, so that the information which GAD possessed, for years other than 1995, would become available to all readers of the returns.

354 GAD and the prudential regulators were also in possession of information about how the Society's financial position as set out in its regulatory returns was being interpreted by industry commentators.

355 The ratings given by Standard & Poor's, an expert ratings agency, were used extensively by Equitable in their marketing material and other policyholder communications. Those ratings were also cited in support of the Society's position when doubts were expressed about the long-term viability of the Society.

356 Standard & Poor's first considered Equitable in 1993, when the Society received an 'AA (Excellent)' rating, which it continued to receive until May 1999. Companies which were given such a rating by Standard & Poor's were described as offering *'excellent financial security'* with their *'capacity to meet policyholder obligations* [being] *strong under a variety of economic and underwriting conditions'*.

357 Explaining its rationale for giving the Society this rating, Standard & Poor's stated, in November 1993, that:

> *On the basis of its published valuation,* [Equitable] *appears to have relatively weak free asset and investment leverage ratios: 2-5% (since 1990) and above 920%, respectively. However, free assets are understated by the use of a very conservative valuation basis. Adjusted to a more conventional reserving basis, the free asset ratio is much stronger, nearer 10% in 1992... S&P expects these levels of strength to continue.*

358 The same rating was given to the Society in April 1995. A similar rationale for that rating was given by Standard & Poor's, as follows:

> *Although* [Equitable] *uses a conservative valuation methodology, S&P still believes that it shows a significant degree of capital strength. The Society's published returns display a strong level of capitalization, despite a significant strengthening of the valuation in 1993, with the free asset ratio rising to 9.4% and coverage of the required minimum margin to 3.7 times... from 5.09% and 2.4x, respectively, in 1992. An alternative net premium valuation, more comparable with peers, would increase the free asset ratio to almost 12% and coverage of the required margin to over 4.4x.*

359 Similar explanations as to why the ratings agency believed that the Society's financial strength was understated in its main valuation – and that the (incomplete) appendix valuation indicated a much stronger real financial position – were provided as late as October 1997. Those ratings were provided by the Society to the prudential regulators and GAD.

360 Table 10d summarises the information available from the Society's returns for 1990 to 1993 and the surplus assets understood by Standard & Poor's to be available, as based on the main and appendix valuations, and measured in terms of the free asset ratio and cover for the required minimum margin.

361 The table then shows the resilience reserve information provided to GAD and how this reduces the surplus assets and the free asset ratio available based on the appendix valuations to levels near that in the main valuations.

The statutory and administrative context

362 Regulation 54 of the Insurance Companies Regulations 1981 required that the amount of the Mathematical Reserves reported in the returns (the published reserves) should not be less than those calculated under Regulations 55 to 64 of the 1981 Regulations (the minimum reserves).

363 Regulation 57(1) of the 1981 Regulations required that, for the purpose of calculating Mathematical Reserves, the future premiums to be valued by an insurance company should not exceed the net premium value of those premiums.

364 The requirements on the valuation of future premiums did not materially change when the Insurance Companies Regulations 1994 came into force. However, Regulation 64(3) of the 1994 Regulations required that a company's liabilities had to comply with each of the provisions of Regulations 65 to 75 of those Regulations. This meant that the calculation of the minimum reserves under Regulations 65 to 75 had to comply with each of these Regulations and not just that the total did so in aggregate.

Table 10d - the Society's presentation of Resilience Reserves

	1990 Main valuation £m	1990 Appendix valuation £m	1991 Main valuation £m	1991 Appendix valuation £m	1992 Main valuation £m	1992 Appendix valuation £m	1993 Main valuation £m	1993 Appendix valuation £m
Admissible Assets	5,932	5,932	7,452	7,452	9,565	9,565	13,382	13,382
Total Liabilities	5,520	5,026	6,964	6,565	8,721	8,243	11,666	11,343
Required Minimum Margin (RMM)	233	233	293	293	357	357	458	458
Surplus Assets	179	673	195	594	487	965	1,258	1,581
Free Asset Ratio (FAR) as calculated by S&P	**3.0%**	**11.3%**	**2.6%**	**8.0%**	**5.1%**	**10.1%**	**9.4%**	**11.8%**
RMM Cover as calculated by S&P	**1.8**	**3.9**	**1.7**	**3.0**	**2.4**	**3.7**	**3.7**	**4.5**
Resilience Reserve disclosed to GAD		450		390		462		236
Surplus after allowance for Resilience Reserve		223		204		503		1,345
FAR allowing for Resilience Reserve		**3.8%**		**2.7%**		**5.3%**		**10.0%**
RMM Cover allowing for Resilience Reserve		**2.0**		**1.7**		**2.4**		**3.9**

365 Guidance issued by the prudential regulators (PGN 1984/1, paragraph 12.1) stated that, where an insurance company was using a method other than that prescribed in the Regulations, that company was required to provide sufficient information about the basis of the valuation to enable those regulators to be satisfied that the requirements of the Regulations were fulfilled.

366 GAD's scrutiny proformas, which assisted them to conduct the scrutiny of the regulatory returns, stated that those scrutinising such returns should look for *'sufficient demonstration'* of this.

My assessment

367 I consider that, in two ways, omissions by GAD bring into question whether they were fulfilling the obligations to which they were subject.

368 The first relates to the failure by GAD to ask the Society to provide the figure for the missing resilience reserves in the appendix valuation within the Society's 1995 returns.

369 In my view, it is arguable that the Society should have been asked to set out the missing figure within its returns to enable the reader of those

returns to be provided with sufficient demonstration that the alternative method of valuation used by the Society had produced a result at least as strong as the minimum prescribed in the Regulations.

370 Without this information, the returns were capable of being misconstrued. However, on balance, I accept that, as this was not required by the Regulations, it was not something that GAD or the prudential regulators could insist on. However, there was also nothing to prevent them from taking non-statutory action to ask the Society to consider the point.

371 That said, it was quite another thing for this information not to be sought by GAD as part of their scrutiny of the Society's returns.

372 The prudential regulators were under a duty to verify the financial position of life insurance companies. In order to do this, they needed, among other things, to be satisfied that the Society had determined its liabilities in such a manner as would produce Mathematical Reserves at least as high as was prescribed in the Regulations.

373 By not asking the Society for this information in respect of its 1995 returns, GAD, acting on behalf of the prudential regulators, were unable to verify that the Society's alternative method had produced a result at least as strong as the statutory minimum. Without that information, GAD could not be satisfied that the Society had acted in accordance with the regulatory requirements to which it was subject.

374 The second way in which the actions of GAD bring into question whether they were fulfilling their obligations relates to how GAD handled the information before them, contained in the ratings about the Society produced by Standard & Poor's. Those ratings demonstrated that the Society's method of presenting the two valuations, but without including the figure for the resilience reserve, was being misconstrued.

375 GAD knew that, contrary to the information contained within Standard & Poor's ratings, Equitable did not adopt a conservative valuation approach – quite the opposite.

376 GAD also knew that, contrary to the information within those ratings, there was little difference between the results of the Society's alternative method of valuation and the minimum prescribed in the Regulations. In substance, there were no margins, as had been wrongly assumed, between the statutory minimum reserves and the results which the Society's alternative method had produced.

377 The way in which the Society presented its returns – and was permitted to present its returns – led directly to financial analysts misunderstanding the true financial condition of the Society and to misleading information being disseminated about the 'hidden' strengths of the Society's position. Yet GAD failed to take any action concerning this matter.

378 I consider that both these failings – to ask for the Society's figure for the missing resilience reserves in respect of the 1995 returns and to inform the prudential regulators of the fact that the Society's returns were being misconstrued due to the way in which those returns were presented – represent a failure to do what GAD should have done in the circumstances.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

379 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, I had misinterpreted or misapplied the applicable law.

380 The public bodies said that Equitable had disclosed the fact that any resilience reserves required in the appendix valuation could be financed without recourse to the investment reserve in the main valuation. Those bodies said that this disclosure had complied with the applicable law and related guidance.

381 The public bodies also told me that there had been no obligation on GAD to ask for the amount of the resilience reserve required in the appendix valuation within the Society's 1995 regulatory returns.

382 Furthermore, the public bodies said that they did not accept that *'ratings agencies (or other industry commentators), on whom reliance might reasonably have been placed by policyholders, were misled by Equitable's returns, nor that, even if they were, the prudential regulator or GAD bore any responsibility for this'*.

383 As to whether or not GAD should have asked the Society for the amount of the resilience reserve required in the appendix valuation within the Society's 1995 returns, the public bodies, after accepting that the amount of the resilience reserve required in the appendix valuation had not been requested by GAD in respect of the 1995 returns, submitted that:

> *However, as for previous years, the returns were not misleading in that year, and the amount of the resilience reserve required in the appendix valuation did not have to be provided to GAD, nor did it have to be requested by GAD.*

384 The public bodies further submitted that:

> *The 1995 detailed scrutiny report shows that it was a deliberate decision by GAD not to request the amount for that year and not an oversight. The basis for this decision was reasonable. The disclosure provided the required demonstration of compliance with the 1994 Regulations, and GAD stated in their report that they had no reason to doubt this, giving their reasons.*
>
> *These were: (1) the size of the quantified excess of the aggregate liability in the main valuation over the aggregate policy reserves shown in the appendix valuation; (2) the Appointed Actuary's statement that the resilience reserve required in the appendix valuation was covered by that excess; and (3) the lack of evidence from the returns to doubt that statement, having made appropriate comparison with the previous year's returns.*
>
> *That comparison took into account the margin between the resilience reserve required in the appendix valuation in 1994 on the one hand and the excess of the aggregate liability in the main valuation over the aggregate policy reserves in the appendix valuation in 1994 on the other, and also the percentage increase in the aggregate liability in the main valuation between 1994 and 1995.*

385 As to the use made of the content of the Society's regulatory returns by ratings agencies and other industry commentators, the public bodies submitted that:

The very nature of rating agencies' work was to undertake analysis and make their own, independent assessment of companies, and policyholders and other parties would reasonably have expected them to do so. In carrying out this task, the rating agencies had access not just to the returns but generally also to much additional information, and it was reasonable to expect them to discuss any issues arising with the companies they were rating, such that they were confident they had a full understanding of the position of those companies.

386 The public bodies further submitted that:

To the extent that rating agencies placed any reliance on Equitable's appendix valuation, and if they failed to recognise from the disclosure provided in the returns that the amount of the resilience reserve required in that valuation was not disclosed, then those were entirely matters for the agencies concerned. The prudential regulator and GAD had no duty to vet the rating agencies' understanding of the regulations; it was for the agencies to analyse the results of the main and appendix valuations and the disclosure provided in relation to the resilience reserve required in the appendix valuation, and seek any further information they required to be satisfied that they fully understood the position before commenting on it.

387 For these reasons, the public bodies told me that, in their view, any adverse finding would be unsustainable.

My evaluation of those submissions

388 I was not persuaded by the submissions of the public bodies on these matters. With respect to the failure by GAD to ask for the figure for the 1995 returns, what should have prompted them to ask for it was not a judgement on their part that those returns were misleading, as appears to be the basis of the submissions of those bodies, but instead the need for GAD to satisfy themselves as to the conformity of the Society's returns with the applicable law.

389 That it was a conscious decision not to ask for this figure on the part of GAD does not excuse this failure. The prudential regulators were under a duty to verify the financial position of the Society. In giving advice to those regulators on this question, without the information that they had asked for in every other year, GAD could not have verified the financial position of the Society, including by being satisfied that the Society had determined its liabilities in such a manner as would produce Mathematical Reserves not less than the statutory minimum reserves.

390 It was impossible for GAD to have concluded that the Society's chosen valuation method had produced a result that was at least as strong as that which would have been produced had the Society used the method prescribed in the Regulations, unless GAD knew what that prescribed method would have produced.

391 Without access to the omitted information, GAD could not know whether the Society had conformed to the regulatory requirements to which it was subject.

392 Nor was I persuaded by the submissions with regard to the ratings produced by Standard & Poor's.

393 While I accept that the prudential regulators and GAD were not responsible for the content of the ratings produced by such agencies, that does not explain why the Society's ratings – despite them containing assessments which GAD should have known were fundamentally flawed – were used by GAD and by the prudential regulators in a number of contexts – such as in scrutiny reports, as briefing for Ministers and to deal with enquiries as to the strength of the Society.

394 The flaws in those ratings derived not from error on the part of those producing them but were a direct result of the way in which the Society presented its returns without objection from GAD.

395 Given that this presentation was not contrary to the Regulations, I do not suggest that GAD should have recommended intervention action or action under section 22(5) of the 1982 Act. However, I consider that GAD should have alerted the prudential regulators to the issue and should have recommended that those ratings should not be used as briefing material and to respond to enquiries.

My finding

396 **I find that the failure by GAD (i) to ask for the information GAD needed in respect of the Society's 1995 returns to enable them, as part of the scrutiny process, to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society, fell short of what it was reasonable to expect from GAD.**

The basis for my finding concerning financial reinsurance

The issue and relevant background

397 During 1998, the prudential regulators and GAD became aware that the Society had not made provision for the liabilities arising from guaranteed annuity rates contained within certain of its policies. Those regulators had required that the Society should do so within its 1998 returns.

398 That requirement had led to an immediate increase of £1,600 million in the amount of reserves required to be shown as at 31 December 1998, as well as additional associated resilience reserves. As a result, the Society investigated means whereby those additional liabilities could be offset – in order not to disclose a much weaker financial position in those returns.

399 Had such offsetting action not been taken, the 1998 regulatory returns would have shown such a weak financial position that the Society's future as an independent mutual would have been threatened and its continued ability to write new business and declare bonuses would have been in doubt. Indeed, the prudential regulators told the Society in December 1998 that they would take action if they considered that the 1998 bonus declaration made by the Society was imprudent.

400 The Society therefore needed to take urgent action to either raise capital or to reduce its Mathematical Reserves.

401 This the Society did through a financial reinsurance arrangement. Within its published returns for 1998, 1999 and 2000, the Society took credit for such an arrangement that it had entered into with IRECO, a reinsurer based in Dublin. That treaty, in its original and subsequently amended forms, is reproduced within Part 4 of this report.

402 The amount of the credit taken for those years was, respectively, £809 million, £1,098 million, and £808 million. The Society's Mathematical Reserves were reduced by more than those amounts, however, as the resilience reserves that the Society was required to hold were also reduced.

403 The Society's published returns for 1998 showed that it had excess available assets and implicit items of £1,516 million over the required minimum margin, the returns for 1999 showed the excess asset figure as £2,747 million, and those for 2000 showed a figure of £411 million. The prudential regulators permitted those credits to be taken.

The facts

404 The full account of the events relevant to the development of the Society's reinsurance arrangement, how it was treated within the Society's returns, and the later developments on those issues is set out within Part 3 of this report. It is not practicable to recount the relevant events here. That account is also summarised within Chapters 7 and 8 of this report. This is only a brief summary of those events.

405 At a meeting on 3 December 1998, the Society's Appointed Actuary informed the prudential regulators and GAD that he considered that reinsurance was an *'option for protecting the balance sheet'* but that a reinsurance agreement was unlikely to be in place by 31 December 1998. Those regulators informed the Appointed Actuary that it might be possible to give a reporting concession (under section 68 of the 1982 Act) so that the effect of any such arrangement would be retrospective to cover the 1998 year-end position.

406 A letter dated 7 December 1998 from the prudential regulators to the Society's Managing Director, recording the outcome of the meeting on 3 December 1998, stated:

> Reinsurance was suggested as a possible means *of overcoming the difficulties that Equitable Life would face in reserving on the assumption that 100% of policyholders took their benefits in the form of a guaranteed annuity. You pointed out that it would be difficult to put in place such an arrangement before the end of the month. We acknowledged this but indicated that we would be willing to consider the possibility of treating any such reinsurance arrangement as having been effective from the year end provided that at least the broad terms of the agreement were in place by that date and a firm intention to enter into the agreement could be shown.*

407 On 31 December 1998, the Society informed the prudential regulators that it had received an offer in respect of a financial reassurance arrangement and enclosed a fax from IRECO, which confirmed that a meeting was to take place on 7 January 1999. The Society informed the prudential regulators that it hoped that the remaining issues could be resolved at that meeting in order to enable a contract to be drawn up.

408 On 21 January 1999, the Society wrote to the FSA, enclosing 'draft detailed terms'. On 27 January 1999, GAD informed the FSA that they had reviewed the reserving effect of the draft terms sent under cover of the Society's letter of 21 January 1999.

409 Among other things, GAD:

- raised the absence of information as to the financial strength of IRECO;
- identified the proposed treaty as a 'financing arrangement' (as opposed to a traditional contract of reinsurance);

- identified that no payment of any reinsurance claims amount would be made by IRECO to the Society;
- identified that the draft terms limited IRECO's (non-cash) *'overall exposure'* to £100 million;
- drew attention to the wide cancellation clause (which was retrospective to 31 December 1998); and
- drew attention to the term that the treaty would also be cancelled if the Society changed its practice on guaranteed annuity rates (that is, changed its differential terminal bonus policy), including as a result of losing litigation.

410 GAD further advised the FSA that *'the treaty will not achieve the intended reserving effect for a number of reasons set out in GAD's advice including the definition of reinsurer's liability, the breadth of the cancellation clause and the provision for the treaty to be cancelled retroactively'*.

411 GAD went on to advise the FSA that:

> *The treaty limits the total withheld reinsurance claims balance to £100m at any 31 December or otherwise the treaty would have to be restructured. It is difficult to reconcile this with* [the Society's] *intention to allow a reinsurance credit in their returns of around £700m. We believe therefore that there should be a commitment for the treaty to be continued, but that the schedule of reinsurance payments to the reinsurer could be revised in the event of this credit of £100m being exceeded.*

412 GAD also provided, as an annex to their advice, a simplified example *'for the purposes of demonstrating that the reinsurance treaty fails to achieve its intended reserving effect'*.

413 None of those matters were the subject of substantive amendment in the terms of the agreed slip (evidencing the financial reinsurance contract entered into between the Society and IRECO on or shortly after 1 April 1999) or in the treaty entered into between them (signed on behalf of the Society on 11 October 1999).

414 Notwithstanding that this was the case, the FSA permitted the Society, without challenge, to take a reinsurance offset of £809 million within its 1998 returns – without any concession under section 68 of the 1982 Act.

415 Nor did the FSA take any adequate steps to ascertain the financial strength of IRECO. Reliance was instead placed on the credit rating given to IRECO by Standard & Poor's.

The statutory and administrative context

416 Financial, or finite, reinsurance is often an arrangement under which, as part of a traditional reinsurance treaty, the reinsurer undertakes to make a loan to the ceding office, in this case the Society, either immediately or in the future. The availability of the loan is normally related to a claim event under the treaty.

417 Without modification to such a treaty, ceding offices could not take a full reserving credit for the future availability of such a loan as, if they did, they would also have to provide for the liability to repay it. One modification that was frequently used in such treaties during the period covered by this report was to make the liability to repay the loan dependent on sufficient profits being generated by the ceding office.

418 Once any loan where the liability to repay was dependent on sufficient profits being generated was received by a ceding office, it would not have to be recognised as a liability in the balance sheet contained in the regulatory returns the ceding office produced. In this way, the value of the initial cash payment provided by the loan could be recognised in the returns of the ceding office even before such a loan was drawn down.

419 Therefore, even though credit was taken for the loan, the liability to repay that loan did not have to be recognised in the calculations of the Mathematical Reserves of the ceding office, as that calculation excluded liabilities that would arise only if sufficient profits were generated – for example, the liability to pay terminal bonus.

420 This treatment contrasted with the way such transactions would be shown in Companies Act accounts, where the liability to repay such a loan, in those circumstances, could not be omitted.

421 If, in the event of a claim, a reinsurance treaty did not pay cash or if a reinsurer delayed claim payments, then the ceding office would account for the monies due to it as a debtor on its balance sheet within the regulatory returns, which would count as an asset for the purposes of matching policyholder liabilities.

422 In such circumstances, section 35A of the 1982 Act applied. This provided that an insurance company was required to secure that its liabilities under contracts of insurance were covered by assets of appropriate safety, yield and marketability and such considerations would apply to the recognition of that debt.

423 Insurance companies could recognise the future availability of such an asset by reducing their Mathematical Reserves by an amount that represented the full value of debt for which they intended to take credit.

424 Such a reduction in respect of reinsurance was, at the relevant time, generally permitted by Regulation 64(3)(e) of the Insurance Companies Regulations 1994. That Regulation provided that the amount of the long-term liabilities *'shall take into account any rights under contracts of reinsurance in respect of long-term business'*, having regard to Regulation 64(1) of those same Regulations.

425 Regulation 64(1) of the Insurance Companies Regulations 1994 required that the determination of those liabilities were to be made on actuarial principles, which meant, amongst other things, that those liabilities had to be determined by taking into account the time value of the cash flows due under a policy or contract of reinsurance.

426 Paragraph 6 of section 5.5 of the Treasury's 1998 guidance on the preparation of the annual returns provided, with respect to the determination of long-term liabilities:

> *The Insurance Directorate interprets "liabilities arising under or in connection with contracts for long term business" to include liabilities arising under reinsurances of those contracts for long-term business. This includes liabilities under financial reinsurances and by extension even liabilities under non-reinsurance financing arrangements provided the liability under the financing arrangement is closely linked to performance of contracts for long-term business. Therefore liabilities under financial reinsurances and such analogous financing arrangements... are to be determined under actuarial principles.*

This is important as the crystallisation of such liabilities is often – although not invariably – linked to the emergence of future profits. Future profits are not in themselves an asset admissible to match liabilities... However, provided the reinsurance or financing liability is repayable – as a matter of form and economic substance – only upon the emergence of future profit, actuarial principles may sometimes allow for the future profit to be taken into account in determining the amount of the liability.

427 Paragraph P.3 of the GAD Insurance Supervisory Work Guidance Manual stated that the 'points to consider' in relation to any reinsurance agreement were:

- *'If the agreement is not with a company that is authorised to transact business within the UK, do we know enough about it? Is it commercially sound? It may be necessary for* [the prudential regulators] *to write to the authority that supervises the reinsurer's home country to obtain more information'*;

- *'Does the agreement give appropriate cover? Too much? Too little?'*; and

- *'Are the arrangements... on a fair commercial basis?'*

428 Section 37 of the 1982 Act gave the prudential regulators powers of intervention where they considered that an insurance company had failed to satisfy an obligation to which it was subject by virtue of the 1982 Act or where those regulators were not satisfied that adequate arrangements were in force or would be made for the reinsurance of risks against which persons were insured by the company.

My assessment

429 In considering the acts and omissions of the FSA and/or GAD in respect of the events relevant to the Society's reinsurance arrangement, I have considered two questions:

(i) whether the Society was entitled within its 1998 returns to have regard to the financial reinsurance arrangement – which revolves around the date on which that arrangement was entered into and whether the arrangement had any legal effect at the date to which those returns applied; and

(ii) whether the financial reinsurance arrangement had any value for the purposes of the Society's 1998, 1999 and 2000 returns and, if so, what that value should have been.

430 I am advised that, in order to constitute a valid contract as a matter of English law, there must be: (i) a sufficiently certain agreement in the form of an offer which has been accepted; (ii) an intention that the agreement be legally binding; and (iii) save in the case of a contract under seal, consideration moving from each party to the other.

431 What was required before a legally binding contract between IRECO and the Society came into existence was agreement upon every material term of the contract of reinsurance which the parties wished to make, accompanied by an intention on the part of both parties that the contract was intended to be legally binding.

432 The financial reinsurance arrangement between IRECO and the Society was not entered into on or before 31 December 1998. In the absence of a reporting concession pursuant to section 68 of the 1982 Act, the Society was, accordingly, not entitled to have regard to that arrangement within its 1998 returns, which were prepared with the valuation

date of 31 December 1998 and submitted on 30 March 1999.

433 No such concession was sought or granted. No credit for the financial reinsurance arrangement was permissible within the Society's 1998 published returns in the absence of such a concession.

434 However, even had a reporting concession been granted, the Society was not entitled to take the credit that it did for the financial reinsurance arrangement within its 1998 returns. Nor could such credit have been taken within the Society's 1999 and 2000 returns.

435 Article 4 of the financial reinsurance treaty provided that IRECO was to be *'liable for claims arising from the business covered to the extent detailed in Appendix 1'* of the treaty. Appendix 1 provided that a Reinsurance Claims Event (RCE) occurred if the proportion of guaranteed annuity rate policyholders electing to take their benefits in guaranteed annuity rate form exceeded 25% by value of the retirements of such policyholders in any calendar year.

436 The Reinsurance Liability represented the extra cost, compared to current annuity benefits, to the Society of providing benefits at guaranteed annuity rates – but only in respect of the guaranteed funds (rather than the total policy value, including terminal bonus) of the relevant policies.

437 However, the Reinsurance Liability was reduced by the terminal bonus on the relevant policies, prior to the application of the differential terminal bonus policy, to give the Reinsurance Claims Amount (RCA). The RCA matched the Society's extra costs above the total policy values (including terminal bonus) as long as the differential terminal bonus policy continued to operate.

438 The treaty, however, placed no obligation on IRECO to make any payment to the Society in respect of the RCA. On the contrary, Article IV of the treaty, expressly provided that *'the* [RCA] *as defined in the said Appendix 1 will be withheld by* [IRECO]', i.e. no payment in respect of the RCA was to be made by IRECO to the Society.

439 The obligations, under Article IV of the treaty, on IRECO to make payments under the treaty to the Society arose following the occurrence of an RCE and were limited to:

- an obligation, on request, *'to pay an interest amount ... on the outstanding* [RCA] *but only if that payment was required by* [Equitable] *to properly satisfy the requirements of s35(1)(a) of the Insurance Companies Act 1982'*: any such payment was to be calculated by reference to 12 months LIBOR and the RCA; or

- an obligation, on request, to pay *'a cash amount of up to 10% of the outstanding RCA'* but only if payment of an *'interest amount'* had not been requested by Equitable.

440 If IRECO was called upon to make a payment to the Society of an interest amount or a cash amount, the Society became liable to pay to IRECO *'a fee of LIBOR plus 3.5% ... annually on the opening balance of this individual portion for each annual period until such time as this interest amount or cash payment is repaid in full to* [IRECO]', according to Appendix II of the treaty. That annual fee was payable by the Society to IRECO irrespective of any future surplus achieved by it.

441 The substance was that the Society was entitled, according to the terms of the treaty, to require IRECO to make a loan to Equitable of the interest amount or the cash amount at a penal rate of interest. Neither the repayments of any loan nor the annual fee payable in respect of the loan were

dependent upon any surplus being achieved by the Society.

442 The calculation of the offset to the Society's Mathematical Reserves in respect of the treaty had to value the cash flows actually payable under the treaty. In the circumstance of a loan to the Society, those cash flows would include both the amount of the loan (cash to the Society) and the payment of interest and repayments of cash to IRECO. In that case, the net value of these cash flows was nil.

443 In terms of the calculation of this offset, the intended effect of the treaty was that the Society could take full credit for the Reinsurance Liability, rather than the RCA. This meant that the reserves held were reduced by the terminal bonus on the relevant policies.

444 No cash was payable, but any future liability to repay that amount by way of additional premiums was disregarded, since any such repayment was dependent on the emergence of future surplus. The offset used by the Society was calculated in this way and, in effect, assumed that a reinsurance asset would arise in the event of a claim.

445 In addition, the permissibility of the reductions in its guaranteed annuity rate reserve which the Society made within its returns was, under the terms of the applicable Regulations, dependent on the arrangement being a contract of reinsurance.

446 A reinsurance contract is one whereby, for a consideration, the reinsurer agrees to indemnify another wholly or partly against loss or liability by reason of a risk the latter has assumed under a separate and distinct contract as the insurer of a third person.

447 Here, the second part of that definition of a reinsurance contract was satisfied. The Society had assumed a risk under contracts with a guaranteed annuity rate option into which it had entered. The Society suffered loss or liability if a guaranteed annuity rate policyholder exercised his or her option to take his or her benefits in guaranteed annuity rate form.

448 However, the first part of that definition of reinsurance was not satisfied. The only payment, pursuant to the treaty, which IRECO might have been required to make to the Society was a loan at a penal rate of interest under a drawdown facility which was not (and was not intended to be) utilised.

449 On the contrary, the Society agreed to make payments to IRECO as consideration for IRECO lending its name to a transaction which had no genuine economic purpose. IRECO did not agree in any respect to indemnify the Society against any loss or liability to which the Society might become subject under policies with a guaranteed annuity rate option.

450 It follows that the treaty did not constitute reinsurance and therefore could not be taken into account in determining the Society's long term liabilities. I consider that the Society should not have been permitted to take any credit for this arrangement in any of its returns for 1998, 1999 and 2000.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

451 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, the Society's reinsurance treaty had been an example of an acceptable arrangement commonly used by insurance companies to manage their liabilities, and that such arrangements had been expressly permitted by the regulatory regime.

452 The public bodies also said that it was their view that Equitable had concluded their reinsurance contract in January 1999, with the reinsurance cover effective from 31 December 1998.

453 The public bodies also told me that the terms of the treaty had been such as to justify the amount of credit which Equitable had taken in their returns in all the years in question.

454 In support of these views, the public bodies submitted that:

> *A binding contract, complete with payment of premium by Equitable, was entered into in January 1999, to be effective from 31 December 1998. By the time the 1998 returns were submitted, on 30 March 1999, the prudential regulator and GAD had also requested Equitable to amend the terms of this contract to meet their concerns relating to the amount of credit that could properly be taken for it in the returns, and it was the professional responsibility of the Appointed Actuary to take credit for the treaty in the returns taking into account those requests.*

455 The public bodies further submitted that:

> *The amount of the credit taken for the contract in the returns was fully consistent with, and reflected the present value of, the cash flows payable under the contract... The contract was undoubtedly a contract of reinsurance; but even if it had not been, the regulations in force at the time still permitted credit to be taken for it in the returns.*

456 The public bodies also submitted that, accordingly, there had been nothing impermissible or unreasonable *'in permitting credit to be taken for the reinsurance contract in the returns in the manner and to the extent that it was'*.

457 The public bodies submitted that:

> *At the time of submission of Equitable's 1998 returns on 30 March 1999, the prudential regulator knew the following:*
>
> *(a) Equitable had stated, by letter dated 21 January 1999, that it had entered into a binding contract of reinsurance;*
>
> *(b) Equitable's returns acknowledged the first premium of £150,000 in relation to this contract;*
>
> *(c) The detailed terms of the reinsurance had been amended a number of times to comply with the requests of the prudential regulator and GAD, over a period of many weeks, and all the points which they considered needed to be addressed in the final terms of the contract to achieve the desired reserving effect in the returns had been advised to Equitable over a month previously.*
>
> *Furthermore, on 20 April 1999 the prudential regulator was provided by Equitable with the final version of the term sheet. Before the scrutiny of the 1998 returns was completed, GAD was also provided by Equitable with the signed reinsurance treaty wording itself, and GAD satisfied itself that the credit that Equitable had taken for the reinsurance treaty in those returns was appropriate in the light of the finally executed treaty – which was fully in accord, in all respects relevant to the credit that could properly be taken for the reinsurance in the returns, with the final version of the term sheet, and confirmed to be so by GAD.*
>
> *For these reasons, GAD and the prudential regulator were of the view that the treatment*

of the reinsurance treaty in Equitable's 1998 returns (and those for subsequent years) was satisfactory. The bodies under investigation consider that, on the basis of their knowledge at the time, they were reasonably of that view.

458 The public bodies then turned to the credit taken for the financial reinsurance arrangement within the Society's 1999 and 2000 returns, and specifically as to whether the credit taken ought to have reflected the net present value of the cash flows payable under the reinsurance treaty, which was nil.

459 The public bodies first said that they agreed that, under the terms of the treaty, the Reinsurance Claims Amount *'was not payable in cash to Equitable, but was rather to be withheld by IRECO (a feature which was common to many types of financial reinsurance arrangements at the time in question)'*.

460 The public bodies submitted, however, that it would be wrong to suggest that the Society had in fact taken credit within its returns for the Reinsurance Claims Amount *'to an extent which was not justified having regard to the present value of the cash sums, associated with and expressed as percentages of the Reinsurance Claims Amount, which Equitable was entitled to receive under the treaty'*. The public bodies said that *'on the contrary, the amount of credit taken for the treaty was justified having regard to the present value of those cash sums'*.

461 The public bodies further submitted that:

The real issue is whether and to what extent Equitable was entitled to take credit for the Reinsurance Claims Amount on the basis of the cash sums it was entitled to receive under the reinsurance treaty.

462 The public bodies went on to submit that:

These cash sums included, in particular, the interest amounts on the Reinsurance Claims Amount available to Equitable annually under Article IV of the treaty. In the calculation of the credit taken for the treaty, it was appropriate to assume that these interest payments would be drawn by Equitable. This was because they provided the positive yield on the reinsurance offset against Equitable's gross liabilities which was required to comply with section 35A of the Insurance Companies Act 1982.

Furthermore, the annual interest payments applied to the Reinsurance Claims Amount, unreduced from its original level, and were payable in perpetuity. The reason for this was that the Adjustment Premiums, by which the Reinsurance Claims Amount would be repaid over a number of years under the treaty, did not need to be allowed for in the calculation of the offset. This was because their payment was contingent on the emergence of future surplus in Equitable (in accordance with sections 5.5 and 5.6 of PGN 1998/1). The present value of the annual interest payments exceeded the face value of the Reinsurance Claims Amount in all the years 1998 to 2000.

It was for this reason that the terms of the treaty justified the amount of credit that was taken for it in the returns.

463 The public bodies further submitted that:

Article IV of the treaty also entitled Equitable to make annual 10% draw downs in cash against the Reinsurance Claims Amount, as an alternative to drawing the annual interest payments described above.

This provision was included in the treaty to ensure that cash amounts were still available to Equitable in respect of the Reinsurance Claims Amount in circumstances in which the reinsurance offset was made against gross liabilities valued at a zero rate of interest and the annual interest payments were therefore not required to comply with section 35A of the Insurance Companies Act 1982.

464 The public bodies submitted that *'accordingly, the criticism of GAD and the prudential regulator… for allegedly failing to follow up concerns which they had expressed in relation to the terms of the treaty in the period during which these were amended is entirely misplaced'*.

465 The public bodies went on to submit, in relation to cash repayments and interest fees, that my conclusion was based on an assumption:

> *… that, in valuing the cash sums payable to Equitable under the treaty, it was necessary to include both the amount of the repayments of the cash sums, and the accumulated interest on the cash sums due to IRECO, because their payment was not contingent on the emergence of future surplus in Equitable. On this basis,* [I have concluded] *that the net present value of the cash flows under the treaty was zero, so that no credit could properly be taken for it in Equitable's returns.*

466 The public bodies further submitted that:

> *This view of the appropriate treatment of the reinsurance treaty under the applicable regulations and associated prudential guidance depends upon adopting an interpretation of the treaty which is contentious and contrary to the intention and contemporaneous understanding of the actual parties to the treaty. The way in which the treaty was intended and understood to operate at the time was as requiring cash repayments and interest fees to be payable only out of future surplus (so that Equitable's liability in respect of them could be left out of account in accordance with sections 5.5 and 5.6 of PGN 1998/1 and in particular its paragraph 5.5.6).*

467 The public bodies submitted that it had been reasonable for GAD and the prudential regulators to have understood this to be the effect of the treaty at the time.

468 The public bodies went on to submit that:

> *If the prudential regulator or GAD had taken the view that a change to the wording of the treaty was required in order for it to achieve its intended effect of making cash repayments and interest fees payable only out of future surplus, there can be no doubt that such a change would have been requested and made. As it was, it was reasonable for Equitable, IRECO, the prudential regulator and GAD to understand that the treaty had this effect without the need for amendment.*
>
> *It was not the general policy of the prudential regulator to instruct counsel to review the legal contracts entered into by the companies they were regulating. The bodies under investigation have, however, received legal advice in the context of this investigation that the understanding of all concerned at the time as to the effect of the treaty is arguably correct.*

469 The public bodies continued by submitting that *'the fact that…, acting years later with the benefit of hindsight,* [it is possible to conclude] *that*

another legal interpretation of the treaty is preferable does not in any way undermine the reasonableness of the conduct of the prudential regulator or GAD at the time'.

470 Dealing with the limit of £100 million to the reinsurer's exposure under the treaty (with the implication that any credit taken by Equitable in their returns for the reinsurance should not have exceeded £100 million), the public bodies submitted that it was *'essential in this regard to distinguish the position under the terms of the treaty and the position under the side letter between Equitable and IRECO'*.

471 The public bodies further submitted that:

> *By the side letter the parties agreed that "should the withheld fund exceed £100,000,000 sterling and no solution can be found" under the terms of the agreement, then the treaty would be cancelled.*
>
> *However..., the regulator and GAD were not aware of this letter as Equitable did not disclose it at the time, and it did not come to light until 24 September 2001. The side letter should therefore be left out of account for present purposes.*

472 The public bodies went on to submit that:

> *The relevant term of the treaty (the last paragraph of Article XIII) provided: "In the event that the total withheld reinsurance claims balance exceeds £100,000,000 at any December 31 negotiations will take place to find a mutually agreeable restructuring of the treaty which will include a redefinition of the Adjustment Premiums in respect of future years."*
>
> *The only obligation which this term even purported to impose on Equitable was an obligation to take part in negotiations. There was no obligation to act in good faith, or even reasonably, in the conduct of such negotiations, let alone to agree anything. Furthermore, as a matter of law, an agreement to negotiate is unenforceable. Accordingly, this term did not impose any legal obligation on Equitable or confer any legal right on IRECO at all. In those circumstances, the treaty remained in force indefinitely and could not be cancelled by IRECO. It is therefore wrong to suggest that the terms of the treaty imposed a limit of £100 million (or any limit) on the reinsurer's exposure, or meant that the credit taken by Equitable for the treaty in its returns should have been limited to £100 million.*

473 The public bodies concluded by submitting that, for all these reasons, any adverse finding would be unreasonable and flawed.

My evaluation of those submissions

474 I was not persuaded by the submissions of the public bodies on this matter. The absence of a concession under section 68 of the 1982 Act – a concession to which the Treasury referred when they first discussed with the Society the possibility of arranging a financial reinsurance treaty – meant that no credit could be taken within the Society's 1998 regulatory returns as it was concluded after the valuation date for those returns.

475 While I have not examined the financial reinsurance arrangements of all other life insurance companies at the time relevant to my report, I gain no assistance from the fact that others are said to have used such arrangements.

476 Nor am I persuaded that the issues concerning the proper reserving treatment for the Society's arrangement can only be identified with the benefit of hindsight or through contentious interpretations of the terms of the treaty.

477 GAD at the time identified the issues which I have concluded meant that no offset was permissible and notified the FSA of those issues. The concerns expressed by GAD were not resolved but the FSA, acting on behalf of the prudential regulators, nevertheless permitted the Society to take credit in its regulatory returns for the financial reinsurance arrangement with IRECO. The FSA were wrong to do so.

478 Nor do I agree that the existence of the 'side-letter' had any impact on the amount of offset that the Society could take for the arrangement within its regulatory returns – although in reaching my conclusion, I disregarded the existence and terms of the side-letter.

479 I would note also that the FSA received an opinion, first given orally to them by Counsel on 22 November 2001 (see entry 4 for this date within Part 3 of this report), with a written draft provided on the following day (see the entry for that date at 17:01) which (i) advised that the side-letter added nothing to the provisions of the arrangement and (ii) which otherwise confirmed the conclusion to which I have come as regards the economic substance of both the original and revised versions of the IRECO treaty. Such legal advice was not sought at the time that the FSA had to decide whether to permit the credit sought.

480 Nor would I accept that the existence of side-letters in relation to financial reinsurance treaties was something distinctive about the Society at this time. As was noted in a paper prepared for the actuarial profession's 1991 General Insurance Convention:

> *It is not easy to describe an elephant but "you know one when you see one". Financial reinsurance is similar... Financial reinsurance contracts will tend to depart from some of the features* [of traditional reinsurance]*... and examples of such departures are...* [that] *there may be side agreements which significantly modify the terms of the policy document... In order to operate effectively, a number of financial reinsurance contracts may need side agreements not apparent from the contracts themselves, or at least a clear understanding between the parties covering how the contract is to be managed over the longer term.*

481 The declaration by the Society of a bonus in March 1999, and the publication of its regulatory returns shortly afterwards, were together a critical juncture in the story which unfolded in relation to the Society.

482 The context in which the Society decided to conclude a financial reinsurance arrangement needs to be remembered. The prudential regulators told the Society that, without some means of improving its solvency position, those regulators would act to prevent the declaration of a bonus.

483 Given the nature and extent of the problems which had brought the Society to that position, the prudential regulators were, in my view, under an obligation not simply to accept assurances about the existence, scope, nature and effect of the proposed arrangements, without having verified that those assurances were correct and could be relied on.

484 Those regulators should not have accepted any reserving offset <u>unless and until</u> they had seen the terms of the financial reinsurance arrangement, had considered those terms, and concluded that the terms and economic substance of the treaty entitled the Society to take the credit that it took.

485 None of that happened. The submissions of the public bodies do not detract from the reasons underlying my conclusion. If anything, those submissions serve to confirm the correctness of that conclusion.

My finding

486 **I find that the failure by the FSA, acting on behalf of the prudential regulators, to (i) ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) ensure that the credit taken by the Society within its returns for 1998, 1999 and 2000 properly reflected the economic substance of that arrangement, fell short of the standard that could reasonably be expected of such regulators.**

The basis for my finding concerning the disclosure of the potential impact of the *Hyman* litigation

The issue and relevant background

487 While the *Hyman* litigation was proceeding through the Courts, the Society – and the prudential regulators – undertook scenario planning to consider the likely impact of a range of possible outcomes to that litigation.

488 Consideration was given to what those scenarios would mean for the financial position of the Society and for its freedom to maintain the policies it had adopted to manage its affairs, and what other consequences the possible outcomes of the *Hyman* case could have for the Society and its members.

489 Even assuming that the financial reinsurance arrangement which the Society had entered into, and for which it proposed to take a substantial offset within its 1998 regulatory returns, entitled the Society so to do, the continuation of that arrangement was contingent on the Society being able to continue to apply its differential terminal bonus policy. Yet that ability was precisely the issue at stake in the *Hyman* proceedings.

490 Furthermore, if the Society were found not to have been able to apply its differential terminal bonus policy, the question would arise as to how to remedy the position of those policyholders with policies which contained guaranteed annuity rates who had retired since 1 January 1994, but who had not been provided with the option of taking benefits without the reduction in terminal bonus applied under the Society's differential terminal bonus policy. The question of compensating such policyholders would thus arise if the Society lost the *Hyman* case.

The facts

491 On 7 December 1998, the Treasury, then the prudential regulators of insurance companies, had written to the Society to record the outcome of a meeting which had been held on 3 December 1998. The Treasury recorded that, at that meeting:

> *We also indicated that we expected an appropriate statement on contingent liabilities to appear in your regulatory returns, related to the risk* [of] *successful challenge to the Equitable Life's bonus practice with regard to guaranteed annuities.*

492 However, no such statement was made in the Society's 1998 or 1999 returns, despite the invitation of the prudential regulators at the meeting and in the follow-up letter.

493 In addition, continuation of the financial reinsurance arrangement that Equitable were negotiating at the time their 1998 returns were submitted to the prudential regulators was dependent on the continuation of the Society's differential terminal bonus policy. That was also not disclosed within the Society's 1998 returns.

494 On 4 May 1999, the Society informed the FSA – by now, under contract, undertaking on behalf of the Treasury the prudential regulation of insurance companies – that it estimated that an immediate provision of £400 million would be required if the Society lost the *Hyman* litigation, in order to compensate those GAR policyholders who had retired between 1995 and 1998 without receiving benefits which had attracted the full guaranteed annuity rate applied to the total policy fund. No statement to that effect was made within the Society's regulatory returns.

495 On 21 January 2000, prior to Equitable submitting their 1999 returns, the Court of Appeal had ruled against Equitable in the *Hyman* case, thus increasing the likelihood that the differential terminal bonus policy would be found to be unlawful and that compensation would have to be paid.

496 On 1 February 2000, the Society wrote to its policyholders, informing them that, even if the Court of Appeal ruling was upheld by the House of Lords, no significant additional costs would be imposed on the Society. A copy of this letter was provided to the prudential regulators and to GAD.

The statutory and administrative context

497 Section 17 of the Insurance Companies Act 1982 required every insurance company to prepare a revenue account for the year, a balance sheet as at the end of the year, and a profit and loss account for the year in a prescribed form. These documents formed part of the regulatory returns.

498 All insurance companies which wrote long term business were also required by Section 18 of the 1982 Act once in every twelve months to cause an actuarial investigation to be made into its financial condition by its Appointed Actuary, who had to report the results of that investigation in a prescribed form within the returns.

499 The amount of the long term liabilities as calculated by the Appointed Actuary, pursuant to Section 18 of the 1982 Act, were then included in the balance sheet required by Section 17 of the 1982 Act.

500 Section 18(4) of the 1982 Act provided that, for the purposes of the investigation that the Appointed Actuary undertook into the financial condition of the company and reported in the returns, the value of any assets and the amount of any liabilities set out therein were required to be determined in accordance with the applicable valuation Regulations. With effect from 1 July 1994, those Regulations were set out in Part VIII and Part XI of the Insurance Companies Regulations 1994.

501 Regulation 60 of the 1994 Regulations provided that, subject to the detailed requirements of Part XI, the amount of liabilities of an insurance company in respect of long term business was required to be determined in accordance with generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies. It also provided that, in determining the amount of liabilities of an insurance company, all contingent and prospective liabilities were to be taken into account within the returns.

502 Schedule 1 to the Insurance Companies (Accounts & Statements) Regulations 1996 set out the form of the balance sheet to be reported in the returns. Paragraph 13(1)(c) of that Schedule required the disclosure of contingent liabilities, subject to a *de minimis* exemption, not already recognised in the balance sheet, other than those arising under inward contracts of insurance or reinsurance.

503 Paragraph 12(2)(d) of Schedule 4 to the Insurance Companies (Accounts & Statements) Regulations 1996 required the Society to indicate the nature and extent of the cover given under each outward reinsurance treaty.

504 Paragraphs 25 and 26 of section 5.6 of the Treasury's 1998 guidance on the preparation of the returns stated:

> *"Inward" in the expression "inward contracts of insurance and reinsurance" is intended to exclude from the* [disclosure] *exemption contracts of reinsurance where the reporting company is the reinsured.*
>
> *The disclosure of contingent liabilities is subject to a de minimis exemption. One or more contingent liabilities need not be disclosed provided that the aggregate value of the non-disclosed contingent liabilities does not exceed 2.5% of the... long term business amount.*

My assessment

505 The question arose as to whether the two issues raised above – that the continuation of the Society's financial reinsurance arrangement was contingent on the Society maintaining its differential terminal bonus policy, and that the Society, if it lost the *Hyman* case, would be exposed to significant compensation costs – should have been disclosed within the Society's regulatory returns for 1998 and 1999 as being contingent liabilities above the minimum disclosure threshold.

506 I am aware that other proceedings are ongoing which focus, among other matters, on the treatment that the Society and its auditors gave to these issues within the Society's Companies Act accounts and within its regulatory returns. In that context, it seems to me appropriate to make no finding regarding that matter.

507 However, whatever the position may be as to that, the prudential regulators at the time asked twice – first in a meeting on 3 December 1998 with the Society and then in a follow-up letter from the Treasury on 7 December 1998 – that such disclosure should be made. That indicates that those regulators at the time considered that this needed to be done.

508 Yet when no such disclosure was made, those regulators did not query that omission or ask for justification as to the basis on which the decision not to make such a statement had been made.

509 Nor did those regulators, when considering the Society's regulatory returns for 1999, ask the Society to justify the content of the letter it had sent to its policyholders. That letter had said that no significant additional costs would be imposed on the Society. However, the information provided by the Society to the prudential regulators was that an immediate provision of £400 million would be needed in respect of the compensation costs alone. That appeared to be inconsistent with the content of the Society's returns.

510 I consider that the prudential regulators should have followed up their concerns and should have satisfied themselves that the Society's decision was reasonable and that it was, in this respect, acting prudently and not contrary to the interests of its policyholders.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

511 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, neither the lapse of the Society's financial reinsurance arrangement nor the potential costs of it losing the *Hyman* case had constituted a contingent liability under the applicable Regulations.

512 In addition, the public bodies said that, even if one or both of those matters constituted a contingent liability, they were less than the threshold value, below which there had been no disclosure requirements, and therefore they did not have to be disclosed.

513 The public bodies also told me that those matters had also not been disclosed in the Society's Companies Act accounts, which had been approved by Equitable's external auditors. Those bodies said that the treatment in the returns was required to follow that in the accounts, and Equitable's auditors had also agreed with the position taken in the returns.

514 In support of these views, the public bodies submitted that, with regard to the decision by the Society not to disclose these matters within its 1998 and 1999 returns:

> *Equitable's decision not to disclose these matters was reasonable in the light of the legal advice which Equitable had received at the material times. Any criticism of Equitable in this regard relies on the use of hindsight, with knowledge of the House of Lords' judgment in the Hyman litigation, rather than being judged in the context existing at the relevant times.*

515 As to the two occasions, prior to the submission of the Society's 1998 regulatory returns, on which the prudential regulators had asked the Society to include such notes within those returns, the public bodies submitted that:

> *Notwithstanding the fact that there was no requirement to this effect under the applicable regulations, and that there was therefore no formal basis on which to insist upon it, the prudential regulator did suggest to Equitable that it should include a statement in its returns concerning the risk of successful challenge to the* [differential terminal bonus policy]*, as indicated in HMT's letter to Equitable dated 7 December 1998. This was entirely a matter for Equitable (and its auditors) to decide, and not an issue in respect of which the prudential regulator could have required Equitable to amend its returns. Ultimately, Equitable chose not to include such a statement in its returns. At that point, there was nothing further that the prudential regulator reasonably could do, given that Equitable was not in breach of the regulations.*

My evaluation of those submissions

516 I was not persuaded by the submissions of the public bodies on this matter. It may well be that it can now be established that the Society had received legal advice to support its position.

517 However, that the Society was acting on such advice does not help explain why those regulators failed to pursue a matter which they had raised and about which they received further information that the Society's public position may not, at that time, have been consistent with what the Society had told the prudential regulators.

518 The legal advice received by the Society was not known to the prudential regulators at the time nor

had those regulators been told then on what basis the Society's decision had been taken.

519 Moreover, the submissions by the public bodies have addressed a conclusion that I have not reached – nor is it one that I could reach. It is not for me to question the reasonableness of the Society's decisions. What I am concerned with is the acts and omissions of the prudential regulators.

520 There is no evidence that the existence of legal advice to the Society concerning its obligations in respect of the disclosure of the possible impact on it of losing the *Hyman* case was known to the prudential regulators at the time or that GAD took such advice into account when scrutinising the Society's regulatory returns.

521 The failure by the prudential regulators to pursue, as part of their consideration of the Society's returns, matters which they had raised and which were of potential significance to the Society and its policyholders constituted a departure from what it is reasonable to expect from those regulators.

My conclusion

522 **I find that the failure of the FSA, acting on behalf of the prudential regulators, to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the Hyman litigation fell short of the standard that could reasonably be expected of such regulators.**

The basis for my two findings concerning the decision to permit the Society to remain open

The issue and relevant background

523 Following the decision of the House of Lords in the *Hyman* case, the Society had been faced with an extremely serious situation. That decision had profound effects.

524 The financial reinsurance arrangement that the Society had entered into was to lapse, as a result of the ending of the Society's differential terminal bonus policy. Without the credit that had been taken by the Society within its returns for that arrangement, a serious question arose as to whether the Society could meet its required solvency margin.

525 The Society was immediately faced with a significant reduction in what the Society regarded as the assets available to meet the costs in respect of those policyholders who chose to take benefits calculated with regard to guaranteed annuity rates. Those costs had to be shared, almost certainly by benefit reductions, across all policyholders – as any 'ring-fencing' of policyholders with annuity guarantees had been declared unlawful by the House of Lords.

526 That gave rise to inbuilt conflicts between the interests of different classes of policyholders which, in the circumstances facing the Society at the time, could not be resolved using the normal mechanisms available to life insurance companies – and which meant that the Society's situation was inherently unstable.

527 In that context, the Society decided to put itself up for sale. The question arose as to what the regulatory response to that decision should be.

The FSA decided not to intervene to require the Society to close to new business whilst it sought a buyer.

The facts

528 I have been unable to find any documentary evidence relating to the decision taken by the FSA to permit the Society to remain open to new business after the *Hyman* judgment. During the investigation, the basis on which that decision was taken by the FSA was explained to me.

529 According to the FSA, the basis of their decision to permit Equitable to remain open to new business and seek a buyer, which, according to the FSA, was the right decision in light of all the facts and circumstances known to the FSA at the time, was as follows.

530 I have been told that the FSA believed that it took a reasonable decision to allow the Society to remain open, balancing the interests of those persons holding approximately one million existing policies against the possible risks to a small number of new joiners, on the basis that new joiners could be compensated if there were any mis-selling – and that the FSA had taken a reasonable view of the availability of compensation in the event that any mis-selling did occur.

531 I have been told that, if the FSA had not allowed the Society to write new business, this would have had a detrimental effect on its sale value, which would, in turn, have been damaging to the interests of the Society's existing policyholders. It is said that the proceeds of de-mutualisation and sale would have benefited all policyholders and would have enabled the Society to restore the bonus cuts which it had imposed following the decision of the House of Lords.

532 I have also been told that, at the time, the FSA believed that the Society was *'in compliance with its statutory requirements and was also solvent on a regulatory basis'*. Accordingly, had the FSA decided to intervene to close the Society to new business or to prevent it from advertising, it was not clear what powers the FSA would have had to do so.

The statutory and administrative context

533 By section 11 of the Insurance Companies Act 1982, the prudential regulators were empowered to withdraw the authorisation of an insurance company to write new business, where it appeared to those regulators either that the company had failed to satisfy an obligation to which it was subject by virtue of the 1982 Act or where there existed a ground on which those regulators would have been prohibited from issuing an authorisation to the company.

534 With effect from 1 July 1994, section 12A of the 1982 Act gave the prudential regulators powers in urgent cases to suspend the authorisation of an insurance company to write new business.

535 The grounds on which that power could be used included that the company appeared not to be satisfying the criteria of sound and prudent management. Those criteria included requirements that the company carried on its business with integrity, due care, and the professional skills appropriate to the nature and scale of its activities and that the company conducted its business with due regard to the interests of policyholders and potential policyholders.

536 Throughout the period covered by this report, the prudential regulators also had powers of intervention which could be used in situations where it appeared that a company might not be able to fulfil the reasonable expectations of policyholders or potential policyholders, where it

appeared that a company might not be able to meet its liabilities, or where it appeared that a company might not be able to satisfy an obligation to which it was subject by virtue of the 1982 Act.

537 The grounds on which those powers were exercisable were specified in section 37 of the 1982 Act and the powers of intervention were set out in sections 38 to 45 of that Act.

538 Public authorities are under an obligation generally to act in accordance with established principles of good administration. As part of that obligation, those authorities are required to take reasonable decisions based on all relevant considerations and leaving out of account irrelevant considerations.

539 Such public authorities are also required to keep proper and appropriate records as evidence of their activities, including a record of the reasons for their decisions.

My assessment

540 I accept the account provided by those involved in the decision not to intervene to close the Society to new business and I have assessed that decision having regard to that account. However, the lack of any documentary record means that I have been unable to verify the evidence which underpinned that decision at the time.

541 I consider that the failure to record their decision and the reasons for that decision at, or shortly after, the time it was taken represents a departure by the FSA from the standard expected of such regulators.

542 But what of the basis on which that decision was taken? The question before me is whether the rationale for that decision indicates that the FSA took their decision having regard to all relevant considerations, leaving irrelevant considerations out of account, and whether they reached a decision that, acting reasonably, it was open to the FSA to make.

543 Parliament bestowed on the prudential regulators a power to intervene where it appeared that an insurance company might not have been able to fulfil the reasonable expectations of policyholders and/or of potential policyholders.

544 When that power was introduced, Parliament recognised that circumstances would arise where the interests and expectations of existing and potential policyholders would be different or might conflict.

545 The prudential regulators were under a duty to consider whether particular circumstances or events amounted to grounds for the exercise of a power of intervention and, if so, whether it was appropriate to exercise such a power.

546 There can be no doubt that, after the decision of the House of Lords in *Hyman*, the circumstances which gave rise to the duty to consider what action, if any, to take to protect the reasonable expectations of potential policyholders had arisen.

547 Those regulators were therefore under a duty to consider whether it would be appropriate to exercise any of the powers of intervention that the prudential regulators possessed for that purpose.

548 However, in the circumstances which pertained after the decision of the House of Lords in the *Hyman* case, it was not only the reasonable expectations of potential policyholders which required consideration. Those of existing policyholders were also at stake.

549 I consider that, in this context, the aim of the FSA, acting on behalf of the prudential regulators and acting reasonably, should have been to identify an appropriate course of action which met the aim of protecting the interests and reasonable expectations of both existing and potential policyholders and which minimised any adverse impact on the other class of policyholder if the interests and/or expectations of those different classes were considered to conflict.

550 Consideration had to be given, as distinct questions, to what action was necessary in order to protect the interests of (i) existing policyholders, (ii) potential policyholders, and (iii) both classes of policyholder.

551 A number of factors were not taken into account by the FSA, acting on behalf of the prudential regulators, which were relevant to their consideration of the question of what action, if any, was appropriate to protect the interests and reasonable expectations of both the existing and potential policyholders of the Society.

552 Without ring-fencing and in a context of increased liabilities to others, it was inevitable that new policyholders would be significantly disadvantaged by entry into a fund which the FSA knew, or should have known, could not continue to honour the guarantees that the Society had given, as it was required to do, while at the same time continuing to provide the investment return which potential policyholders would reasonably have expected to receive once they joined.

553 I consider that any prudential regulator, acting reasonably, would not have made the assumptions that the FSA made about the nature of the expectations that the Society's advertising might be creating or about the availability of compensation which might exist for any mis-selling as a result of such advertising.

554 The FSA did not, for example, review the advertising that the Society was issuing to ensure that the FSA understood what the reasonable expectations of new policyholders were likely to be.

555 The FSA also made no enquiries to satisfy themselves that mis-selling compensation, the cost of which in any case would have to be met by the members of the Society themselves – including those joining in this period – was in principle and in practice likely to be available. Those considerations were left out of account by the FSA.

556 That brings me to a further point. The basis of the FSA's decision to take no action appears to have been largely predicated on a balancing exercise undertaken to weigh the relative interests of the Society's existing policyholders against those of new entrants. That the former, in the FSA's view, were considerably larger in number than the latter was a significant consideration in their decision.

557 However, for two reasons I consider that this approach was significantly flawed. The first is that those who might be directly affected by the decision by the FSA to take no action were not limited to those who became new policyholders during this period. The second is that the FSA had no sound basis at the time they took their decision for assuming, as the FSA did, that the number of people newly investing in the Society would be minimal.

558 As the FSA knew, the bulk of the Society's business constituted recurrent single premium business, where an existing policyholder had the right – but not the obligation – to pay further premiums at any time. The majority of the Society's existing policyholders, including those with guaranteed annuity rates, were entitled to pay further money into the with-profits fund during this period.

559 Those who were considering whether to do so – particularly those whose policies did not contain guaranteed annuity rates, who were most exposed to the risks inherent in the position – were directly affected by the FSA's decision to take no action concerning the Society's continued ability to write new business.

560 Even though the withdrawal or suspension of authorisation would not itself have prevented policyholders from making further contributions under existing policies, such intervention action would have put those existing policyholders on warning as to the problems that such action was designed to address.

561 That relevant consideration was not among the considerations to which the FSA had regard in coming to its decision.

562 The FSA's assumption that only a small number of new policyholders would be affected by their decision to take no action was, furthermore, not based on any empirical analysis that might have provided a sound basis for such a decision. The FSA did not seek, as they did after Equitable had closed to new business, information from the Society as to the number of the transactions it was undertaking.

563 The FSA did not therefore know the number of new entrants or the number of further premiums being paid. The FSA's decision was largely based on an assumption, for which there was no apparent basis, that only a small number of people might be affected by that decision.

564 I consider that the decision by the FSA to take no action did not take into account relevant considerations that should have been taken into account and that considerations which were accorded importance in their decision-making process were based on assumptions made by the FSA which had no sound basis in fact.

565 That conclusion is strengthened when consideration is given to the legal basis on which it is said that the FSA's decision was taken. It is not the case, as has been suggested to me, that the prudential regulators had no powers to take intervention action unless an insurance company was already in breach of its regulatory requirements or was insolvent on a regulatory basis.

566 The powers which Parliament conferred on the prudential regulators were exercisable in situations where those regulators considered that there was a risk that a company <u>might not be able</u> to fulfil the reasonable expectations of policyholders or potential policyholders, where it appeared that a company <u>might not be able</u> to honour its liabilities, or where it appeared that a company <u>appeared to have</u> failed to satisfy an obligation to which it was subject by virtue of the 1982 Act. The exercise of those powers should have been, but were not, considered by the FSA when they took their decision to take no action.

567 Furthermore, given the financial position of the Society at that time, any prudential regulator, acting reasonably, could not have been satisfied, without reviewing the information contained in the advertisements that it was using, that the Society, by advertising and writing new business, was acting in line with the interests of its potential policyholders in this respect. The FSA, however, did not review those advertisements.

568 Nor do I consider that any prudential regulator, acting reasonably, could take into account of the possibility of compensation for mis-selling when it had not established that such compensation would be available.

569 I consider that the FSA acted unreasonably in assuming that such compensation would be available where the FSA knew, or should have known, that it was not likely to be available to those existing policyholders who made further contributions without relying on anything that the Society did or said.

570 I am not suggesting that it was unreasonable for the prudential regulators to give the Society an opportunity to find a buyer. However, it does not follow that the only options open to the FSA in such a situation were either to close the Society to new business or to do nothing.

571 The FSA had other options available to them which the FSA failed to consider. A requirement could have been imposed on the Society as to advertising. Equitable, after all, had made much of its ability to attract new business without the assistance of third parties and had also treated much of its new business as 'execution-only'.

572 A premium limitation could have been imposed, which restricted new business to a certain amount. That would have enabled the FSA to be sure that those effecting new business with the Society were indeed limited in number or that such business was at least limited in value, as the FSA had simply assumed would be the case.

573 The authorisation of the Society could also have been suspended as a matter of urgency, pending the completion of the sale – after which time the Society could have submitted an application for re-authorisation. Any such suspension could have been explicitly linked to the sales process and imposed as an interim way of recognising the desirability of progressing the sale of the Society while seeking to protect the interests of existing and potential policyholders.

574 Given that the Society's attempts to sell itself were no secret, such a suspension, if linked to that process, should not have been seen as anything other than caution while the sales process was underway. That might have protected the interests of those existing policyholders who were considering making further contributions and also the interests of potential policyholders, pending the outcome of the sales process.

575 Even in the absence of considering any of these actions, non-statutory action could have been considered by the FSA with a view to persuading the Society to take a different line.

576 The DTI had used such action in the Nation Life case in the 1970s, persuading that company to delay banking any cheques it received from existing or new policyholders and/or to delay issuing new policies while the sales process continued. The FSA should have considered what equivalent forms of non-statutory action were available to them – but did not do so.

577 My conclusion is that the decision by the FSA to permit the Society to remain open to new business was flawed. That decision was taken leaving out of account relevant considerations which should have been taken into account and without having regard to the range of powers and other options available to the FSA.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

578 When I informed the public bodies that I was minded to come to this view, those bodies told me, in relation to the failure to record the decision by the prudential regulators to permit the Society to remain open after the decision of the House of Lords in the *Hyman* case, that, in their view, there

was no doubt that the decision to allow Equitable to remain open was taken after careful consideration and at the most senior level of the FSA.

579 While accepting that the decision had not been recorded, the public bodies disputed that this justified an adverse finding as, they said, there is no public law obligation to record decisions not to take action.

580 In support of that view, the public bodies submitted that, *'whilst it is undoubtedly good practice, it is not obligatory and in a crisis situation it is not always achievable'* to record such decisions.

581 In relation to the basis on which the decision was taken by the prudential regulators to permit the Society to remain open after the decision of the House of Lords in the *Hyman* case, the public bodies told me that, in their view, it had been not just appropriate but necessary for the FSA to balance the interests of existing and potential policyholders when taking that decision.

582 The public bodies told me that the FSA had considered that a successful sale of the business was in the best interests of policyholders, and that allowing Equitable to remain open to new business was essential to give Equitable the best chance of finding a buyer.

583 In the circumstances, the public bodies said, none of the other regulatory steps available to the FSA would have been appropriate and they would instead have acted to undermine the prospects of a successful sale.

584 In support of these views, the public bodies submitted that my conclusion rested on:

> *... the misplaced belief that there were realistic options available to the FSA which would have protected such investors and which were consistent with permitting Equitable the opportunity to find a buyer. The reality is that any such options proposed would have undermined the sale process and would therefore have acted counter to the overall course of action which was reasonably being pursued.*

585 As to why the FSA had not made enquiries into the availability of compensation for those existing or new policyholders who might suffer loss as a result of the Society being permitted to remain open, the public bodies submitted that:

> *No specific enquiries were made by the FSA because none was necessary: there was no uncertainty on the FSA's part as to whether compensation would be available in principle or in practice. New policyholders who were victims of mis-selling would have recourse to the Financial Ombudsman Service (FOS) or its predecessor, in the event that Equitable itself did not resolve a complaint satisfactorily. The FSA was well aware of the operation of both bodies, not least because it was involved in setting up the FOS during 2000 and 2001 ...*
>
> *The only circumstance in which compensation would not have been available by this route would be in the event of Equitable's insolvency. However, in this situation the Financial Services Compensation Scheme (or its predecessor) would have been available to pay claims (subject to the rules of that Scheme).*

586 As to the basis on which the FSA had concluded that only a small number of people would be potentially affected by the decision to permit the Society to remain open, the public bodies submitted that they:

... consider that it was reasonable for the FSA to have formed the view that the number of policyholders who might pay new premiums to Equitable (including existing policyholders) would be small relative to the total number of existing policyholders. The FSA formed this view on the basis of its knowledge of Equitable (which was under intense scrutiny at this stage), including the fact that existing and potential policyholders were aware of the problems facing Equitable from widespread reports in the press.

587 The public bodies also submitted that:

Furthermore, the FSA had already noted that it would only allow Equitable to remain open if "a suitable buyer for the Society was likely to be found quickly". Equitable itself had set a deadline for bids of 20 November 2000 and believed that a sale would be agreed "in principle" by the end of 2000. This would further have limited new premiums which might be paid.

588 The public bodies went on to submit that:

The common sense conclusion that the number of policyholders who may pay new premiums to Equitable would be small was also reasonable in light of information from previous years. It could reasonably have been anticipated that the number of new policyholders joining, up to the point at which it was clear there would (or would not) have been a buyer, would have represented no more than 2-3% of the number of existing policyholders, and their premiums would be no more than 1% of the total fund. In the event new business turned out to be much smaller even than that estimate; only around 16,000 policyholders joined Equitable between the House of Lords' judgment and closure to new business – some 1% of the existing membership.

589 The public bodies submitted that, in addition:

Existing policyholders paying further premiums were historically a smaller group than new policyholders, and given the extra information they had received it was reasonable for the FSA to conclude that their premiums would represent less than 0.5% of the total fund.

590 As to the inevitable disadvantage that new policyholders would suffer, the public bodies submitted that:

The FSA was mindful of the possible risks of investing in Equitable during this period and this was a factor which was taken into account when balancing the interests of different groups of policyholders and potential policyholders. However, there were no realistic options available to the FSA which would have protected such investors and which were consistent with permitting Equitable the opportunity to find a buyer, which was the FSA's overriding objective.

591 Turning to the available options that had been open to the FSA by way of the powers of intervention, the public bodies told me that they agreed that:

... the FSA's regulatory powers could be used where it appeared that a company may be unable to meet its liabilities or fulfil the reasonable expectations of policyholders, and that the FSA had at the relevant time a discretionary power (under section 12A of the Insurance Companies Act 1982) to suspend the

authorisation of an insurance company to write new business in urgent cases.

592 However, the public bodies submitted that:

> *... the regulator only needs to consider the exercise of the available powers where they may be useful. There is no need to consider exercising powers when there is no action the regulator wishes to take.*
>
> *The duty of a reasonable prudential regulator is to assess each situation on its merits, determine what outcome it wishes to achieve and consider what, if any, powers it might exercise to that end. In accordance with that obligation, and fully aware of the legal powers available to it, the FSA consciously decided in this case that taking any action against Equitable would have undermined the desired outcome of a successful sale.*

593 The public bodies further submitted that:

> *In circumstances where the prudential regulator does not wish to take action against a firm, it cannot sensibly be suggested that the prudential regulator is guilty of maladministration if it does not go through each and every potential legal power one by one and explain why its use is not appropriate in the particular case.*
>
> *In this case, the options available to the FSA were in fact very limited, if it did not want to undermine the achievement of a sale.*

594 Turning to each of the specific powers the prudential regulators at that time possessed, the public bodies, with respect to the power to impose a requirement on advertising, submitted that:

> *... it was reasonable for the FSA to permit Equitable the opportunity to find a buyer. In practice, it was a necessary consequence of that decision that Equitable must be permitted to remain open to new business. Permitting Equitable to advertise for such new business was consistent with that decision. It is difficult to envisage a situation where the FSA would intervene to prevent a firm advertising, while not intervening to prevent it from selling at all: either the company is open and therefore allowed to advertise, or it is not.*
>
> *To have insisted on a ban on advertising or to have required riskwarnings would also have undermined the prospects of a successful sale. This would have had a detrimental effect on the interests of existing policyholders.*

595 The public bodies further submitted that:

> *... in considering whether Equitable should have been subject to a ban on advertising, it was legitimate for the FSA to take into account the fact that a conduct of business regulatory regime was in force which monitored financial promotions and prohibited firms from advertising in a way which was misleading. Further, the possible need for risk-warnings was reduced due to the knowledge which ... both potential and existing policyholders could reasonably be assumed to have had about Equitable's situation.*

596 As to why the FSA had not reviewed the Society's advertising in that period, the public bodies submitted that:

> *... it was reasonable for the prudential regulator not to review Equitable's advertising. Quite apart from the existence of a separate*

conduct of business regime, there were no particular requirements which the prudential regulator would have wished to impose on Equitable in this respect, as to do so would have undermined the prudential regulator's main objective of maximising the prospects of a sale.

597 With respect to consideration of the use of the power of intervention which would have imposed a limit on the premium income received by the Society, the public bodies submitted that:

> *Imposing a limitation on premiums would not have been appropriate in this case because it would have indicated to potential purchasers that the FSA lacked confidence in the future of the business and the prospects of a sale. This would itself have made the firm a less attractive purchase prospect. A previous report from the Ombudsman's office, into the DTI's regulation of Nation Life, concluded that it would not have been appropriate to apply premium limits, precisely because it would have damaged attempts to find a buyer for that firm.*

598 With respect to consideration of the use of the power of intervention to suspend the authorisation of the Society, the public bodies submitted that:

> *Suspension of authorisation, whether or not linked to the sale process, would have had the same effect as closure to new business. Either would have made Equitable a considerably less attractive prospect for purchase as it would have made it difficult for Equitable to retain its main asset, the sales force. In any event, to have taken such action in order to put existing policyholders "on warning" would have been an arbitrary step which bore no direct relation to the risk involved.*

599 With respect to the consideration of non-statutory action, the public bodies submitted that:

> *Even if such persuasion would have been appropriate, the bodies under investigation do not consider that the FSA can be guilty of maladministration for failing to consider persuading a company to take unenforceable non-statutory action. In any event, such action would have undermined the principal objective of securing a sale because it would have meant that the product which consumers were considering purchasing was not in practice available: this would have been tantamount to closure with the same negative consequences on the prospects for a sale.*

600 The public bodies told me that, for all these reasons, any adverse finding that the basis on which the decision had been taken to permit the Society to remain open to new business would be, in their view, unreasonable and flawed, submitting:

> *The FSA reasonably decided not to intervene to prevent Equitable from seeking to secure a successful sale having taken the view that this was the best way to protect policyholders' interests. Having taken this decision, it was reasonable to conclude that there were no additional actions which could have been taken further to protect the interests of policyholders, either by the exercise of any discretionary powers, or by the provision of any additional or different information, or by any other means which would not undermine this wider objective.*

My evaluation of those submissions

601 I was not persuaded by the submissions of the public bodies on these matters. Whether or not there is a legal obligation on public bodies to record their decisions, it is a basic principle of good

administration that public bodies should record and maintain adequate records of their decisions and the reasons for those decisions, including the factors taken into account or left out of account and the alternative options considered.

602 The public bodies have accepted that no record was made of the decision to permit the Society to remain open for new business. I conclude that the failure by the FSA to record their decision and the reasons for that decision constitutes a departure from accepted principles of good administration.

603 As for the basis on which the decision was taken, I will first address the surprising submission by the public bodies that:

> *... the regulator only needs to consider the exercise of the available powers where they may be useful. There is no need to consider exercising powers when there is no action the regulator wishes to take.*
>
> *The duty of a reasonable prudential regulator is to assess each situation on its merits, determine what outcome it wishes to achieve and consider what, if any, powers it might exercise to that end.*

604 I reject that submission. It is necessary for a public body to consider the range of powers and options open to it before deciding what course of action to take and which of those powers, if any, that body will exercise.

605 In Chapter 5 of this report, I have explained that there are certain basic principles of public law to which public bodies exercising statutory functions must have regard.

606 Those principles include that such bodies must carry out their legal duties in accordance with the law and that, when public bodies exercise a power, they must act reasonably and in accordance with any conditions imposed by law.

607 Public bodies must properly consider whether to exercise any statutory powers given to them. A public body must give proper consideration to the use of its powers at the point when it reasonably considers that grounds for the exercise of those powers have or may have arisen. Such a body cannot fetter or constrain its ability to give proper consideration to the exercise of its powers.

608 I consider therefore that the FSA were required to consider whether it would be appropriate to exercise any of the powers that they possessed, in acting on behalf of the prudential regulators, before taking a decision not to do so. That consideration did not take place.

609 Finally, I am not persuaded by the submissions which deal with the assumptions made by the FSA. I am satisfied that, <u>at the time that they took their decision</u>, the FSA did not have sound evidence on which they could base those assumptions.

610 That it later turned out to be the case, so I am told, that a limited number of people were affected by that decision does not detract from the fact that the FSA had no basis at the time that they were made for the FSA's assumptions on these matters.

611 I would also note that it is still not known how many existing policyholders with policies which did not contain guaranteed annuity rates paid further money towards those policies during the relevant period. It is by no means certain, even now, that the number of those affected by the decision of the FSA was as limited as has been suggested to me.

612 The submissions of the public bodies on this matter do not provide any basis on which to change my conclusions on these matters. I consider that the FSA, in failing to record their decision and in failing to take into account all relevant considerations when making it, departed from the standard that could reasonably be expected from the FSA.

My finding

613 **I find first that the failure by the FSA, acting on behalf of the prudential regulators, to record their decision to permit the Society to remain open to new business, following its loss of the Hyman litigation fell short of the standard that could reasonably be expected of such regulators.**

614 **I find secondly that the basis on which the decision was taken by the FSA, acting on behalf of the prudential regulators, to permit the Society to remain open to new business was unsound, not taking into account all relevant considerations and not having a proper legal and factual basis and that this fell short of the standard that could reasonably be expected of such regulators.**

The basis for my finding concerning the information provided by the FSA in the post-closure period

The issue

615 In the period between the Society's closure to new business on 8 December 2000 and the end of my jurisdiction in relation to relevant events on 1 December 2001, the FSA, acting on behalf of the Treasury as the prudential regulators of insurance companies, were contacted by many hundreds of the Society's policyholders, concerned about the position that the Society was in and about their own future options.

616 The FSA also during this period issued general information relating to the Society through updates, website material, and factsheets.

617 As the Society prepared proposals for a scheme of arrangement under the Companies Act 1985, to compromise the competing claims of the Society's policyholders, the FSA was also contacted by policyholders about the Society's proposals and about the attitude of the FSA to those proposals.

The facts

618 In Chapter 8 of this report, I set out the terms of the information published or otherwise provided by the FSA through its general publicity, through its specific responses to the correspondence it received, and through its published assessment of the Society's Compromise Scheme proposals.

619 I will not repeat all that information here. However, it can be seen from the account given in Chapter 8 of this report that the information produced by the FSA contained the following two key messages:

(i) that the Society was and always had been solvent; and

(ii) that the Society had always met and at that time continued to meet all of the regulatory requirements to which it was subject by virtue of the applicable law, particularly those related to the required minimum margin of solvency.

620 That information, it was said, was based on the information that had been provided by the Society to the FSA and on the assessment that the FSA had made of that information.

621 The Society began to submit monthly solvency figures to GAD and the FSA on 11 August 2000, providing information about the position at each month-end from June 2000 until November 2001, with the exception of November 2000 when no report was submitted. The figures in those monthly reports were based on the Society's valuation approach.

622 However, at the same time the Society was in protracted discussions with the FSA and GAD about outstanding issues concerning the way in which the Society had determined its liabilities and had purported to establish sufficient provisions to cover those liabilities. Work was also ongoing at that time to establish what the additional potential liability of the Society might be in respect of compensation for any mis-selling of policies which did not contain guaranteed annuity rates without informing those new policyholders of the potential impact of that issue.

623 The monthly solvency reports provided by the Society did not take these issues into account and thus were statements of the solvency position of the Society before the impact on its solvency position of several significant issues was assessed – all of which had an adverse effect on its solvency position, although not all of the issues affected the position in every month.

624 The Society often quantified and provided to GAD and the FSA such quantification of the impact of these issues. GAD or the FSA sometimes sought to quantify other issues themselves.

625 This information informed the analysis that the FSA undertook in relation to the difficulties faced by the Society. That analysis often set out the views of FSA officials and actuaries as to what the solvency position of the Society was at any given time.

626 For example, on 9 July 2001, the FSA's Head of Actuarial Support asked whether the Society's Appointed Actuary or its auditors had expressed a view as to the solvency position that the Society was in, commenting:

> *It is not at all clear to me from the limited information provided at present that there is much margin at all on a Companies Act basis, particularly if they have in due course to make any material provision for mis-selling claims.*

627 The Head of Actuarial Support was informed in response on the same day that the Society had said that it was solvent as at 30 June 2001, but that such a view had been given before any provision was made for any mis-selling claims.

628 On 10 July 2001, the FSA's Head of Actuarial Support provided an estimate of what the quantum of the liability in respect of any such mis-selling claims might amount to, based on the work that Counsel had been doing to seek to establish who might be eligible to make such a claim and how such claims could be quantified. The Head of Actuarial Support noted that the Society *'could have mis-selling liabilities of £1.5 bn or more. In present investment market conditions, this would very likely mean that the company was insolvent.'*

629 On 19 July 2001, the FSA's Head of Actuarial Support recorded the main points to emerge from an internal FSA discussion about the Society. Those points included an observation that *'a provision for mis-selling would take them right up to the line'* in Companies Act (i.e. absolute) insolvency terms.

630 On 23 July 2001, by which time further work had been done as to liability for mis-selling and as to the quantification of any such liability, the FSA's Head of Actuarial Support noted that:

If, for example, [Equitable] *are likely to incur mis-selling claims on all post-1993 policies, then the liability could be around £3-4 billion, which would be well beyond their current free reserves on a Companies Act basis of around £1½ billion. If the potential claims extend back to 1988 or even earlier, then the situation is clearly even worse. Even if the Limitation Act applies (which seems very odd to me as a layman given that it was not the fault of the policyholders that they could only have been likely to have become aware of the alleged non-disclosure in 1998 or even later), then the liability could be around £2½ to £3½ billion, assuming that there would be a liability in respect of all premiums paid in the last 6 years. The result is still then likely to be insolvency.*

631 A note made by the conduct of business regulators of the discussion at a meeting they had attended with the FSA on 25 July 2001 referred to the view of Counsel, set out in his draft Opinion, which *'implied that* [Equitable] *was insolvent (and had been for some years)'*.

632 In the meantime, in the initial scrutiny of the Society's 2000 returns, undertaken by the FSA on 19 July 2001, it had been noted that the absolute level of coverage for the required minimum margin was a matter *'of concern'* and that, even with the sale of assets to Halifax (which had improved the Society's free assets), *'the position remains tight'*.

633 Those assessments took place in a context in which the Society's reported position made no allowance for liabilities arising from any mis-selling and in which credit had been taken of approximately £800 million for the financial reinsurance arrangement.

634 On 20 July 2001, the Society informed the FSA, as part of the scrutiny process on the 2000 returns, that:

... at the low point of the market at around lunchtime on 19 June 2001 when the FTSE 100 stood at 5320 it is likely that the cover ratio was about 1.0, i.e. just covering the required minimum margin. As discussed ..., further equity market falls could lead to the required minimum margin being breached.

Shortly thereafter, on 1 August 2001 the FSA noted that the FTSE index had stood at 5220 as at 25 July 2001.

635 Towards the end of July 2001, the Society was getting ready to pay the latest instalment of interest due on the subordinated loan capital it had issued. That instalment was at the time estimated to total approximately £30 million. The tight position that the Society was at that time in – even with no provision for mis-selling and having taken substantial credit for the financial reinsurance arrangement – gave rise to concerns that the Society might be unable to make this payment.

636 At a pre-meeting before the Tripartite Standing Committee meeting on 25 July 2001, the Chairman of the FSA reported that the Society had informed the FSA that it could make the payment but only if a waiver were obtained from the FSA in respect of the need to meet statutory solvency requirements.

637 Whether the Society could make that payment and remain solvent continued to be a matter of doubt. On 26 July 2001, after receiving information from the Society as to its financial position, the FSA recorded that:

On the basis of the 2000 regulatory returns, submitted at the end of June 2001, and reflecting the valuation as at end 2000 ... the payment could properly be made, as the [Required Minimum Margin] *would remain intact after the interest payment. But* [the Chief Executive] *implicitly recognised that in the Equitable's current circumstances, this test lacked some credibility. Therefore the directors were giving thought to whether it would be appropriate for them to make the interest payment if the company was insolvent in Companies Act terms. They might decide to do so, on the basis that a £28m payment was justifiable if it could sustain the Society through the period until an orderly administration could be arranged. But* [Equitable's Chief Executive] *recognised that this would be a brave decision.*

638 Further doubts were expressed as to the solvency of the Society. At the full meeting of the Tripartite Standing Committee, the FSA Chairman had informed the Committee that *'something between £3 and £5bn would make* [Equitable] *solvent'*.

639 On 1 August 2001, the FSA noted that *'the cover for the margin of solvency looks very thin at present, (after making a resilience provision but before allowing for potential mis-selling costs)'* – but also including a substantial offset for the financial reinsurance arrangement.

640 The FSA required the Society to commission an independent report into its financial condition. On 24 August 2001, a note was sent to the Chairman of the FSA, in which was recorded the outcome of discussions that the FSA had held with the Society after the receipt of a draft of the report. The note recorded that:

... a surplus of assets over liabilities [is reported]. *At one extreme, on the Insurance Companies Act basis, ... Equitable covered its required minimum margin by £758 million at the end of June 2001 (£1,025m at the end of July). At the other extreme, on the Insolvency Act basis, they report that Equitable had a surplus of £2,200m. These figures do not take into account any explicit liability for future discretionary bonuses or for compensation to non-GARs.*

Those figures were, moreover, produced on a basis that allowed the Society to take £664 million in credit for the financial reinsurance arrangement.

641 The FSA continued to discuss internally what the appropriate regulatory response to this ongoing situation should be. On 28 September 2001, the FSA met the Society and its auditors. The FSA's note of that meeting recorded that, although the Society had yet to apply for a section 68 Order and despite the estimates of the quantification of the potential mis-selling liability that Counsel for both the FSA and the Society had provided:

[Equitable's Appointed Actuary] *said that the Equitable continued to meet its required margin of solvency. The assumptions which he made in reaching this view were that the Equitable would be granted a Section 68 order to take credit for the changes to the valuation rate of interest being brought in at N2; that the resilience test would not impose any additional liability; that the provision for non-GAR mis-selling was £220 million; that only £100 million credit could be taken for the Reinsurance Treaty; that the GAR takeup rate was assumed to be 85% rather than 90% as at present; and no provision had been made for those leaving the fund. On this basis, there would be an excess of about £400 million over the RMM.*

642 On 8 October 2001, the FSA's Head of Life Insurance noted that it was not clear whether the Society was in breach of its required minimum margin. He continued:

> *On the other hand, there is sufficient doubt about the position to make the present* [public] *line* [taken by the FSA as to the solvency of the Society] *difficult to sustain. What is new is that we now have (confidential) information which throws doubt on the credit for £700 million claimed under the Reinsurance Treaty. We are not yet in a position to reach a view on this.*

643 Later that day, after doubts had been expressed within the FSA as to whether they had the power to intervene, one of the FSA's Chief Counsel stated that *'just to be clear, I think we do have the power now to require a plan ...* [as Equitable] *are almost certainly underprovisioning for both misselling and resilience'*.

644 On 9 October 2001, the FSA decided to take formal intervention action under the Insurance Companies Act 1982 by requiring the Society to submit a plan for the restoration of a sound financial position. The FSA's letter informing the Society of that decision said that the information provided by the Society had made it:

> *... clear that the Society faces considerable uncertainty as to its ability to cover its required margin of solvency. Indeed, it appears that on 24 September 2001, which is the date used for the presentation of the figures quoted in the letter, on the basis of the scenario in which credit for reinsurance would be restricted to £100 million and mis-selling liabilities of £220 million are assumed, the Society would only just be able to cover its solvency margin, but with no free assets. However, in this scenario, credit is assumed for a concession under section 68 of the Insurance Companies Act 1982 ("the 1982 Act") for a modification of regulation 69(5), for which an application has been made only today. At the same time no provision is made for a resilience reserve. On the basis of that scenario, and in the light of our present dialogue on reserving for mis-selling, the FSA believes that the Society must have been in breach of its solvency margin requirement on that day. While markets have improved slightly in the last week, the FSA can have no confidence that this unsatisfactory position does not continue.*

645 The Society responded to this requirement by referring to the Compromise Scheme proposals that it was developing, saying that this was the plan that was to be used to restore the Society to a sound financial position. As has been noted elsewhere, the FSA later published an assessment they had made of that Scheme – which is reproduced in Part 4 of this report.

646 Doubts continued within the FSA as to the solvency position of the Society. On 15 November 2001, the FSA's Director of Insurance sent the FSA's Chairman a draft letter for consideration. This was to be sent to the then Economic Secretary to the Treasury to provide advice about how the Treasury should handle an application by the Society for a section 68 Order.

647 The Director of Insurance explained that:

> *We believe the Society to be £200m below its* [solvency] *margin requirement. This is* [the] *latest estimate this morning ... It does <u>not</u> include allowance for the* [section 68] *order concession or for the reinsurance treaty beyond the £100m initial limit. The effect of the s68 order, if granted, would just about restore the Society's margin.*

The statutory and administrative background

648 The information which the prudential regulators could give to the public about the entities which they regulated was limited by the terms of the European Directives, implemented in the United Kingdom through the Insurance Companies Act 1982 and by subsequent amendments to that Act.

649 There is also no common law or statutory duty on public authorities, such as the prudential regulators of insurance companies, to give information or advice to the public.

650 However, the prudential regulators were under an obligation generally to act in accordance with established principles of good administration. As part of that obligation, where those regulators chose to give information to the public, they were required to provide information which was clear, accurate, complete and not misleading.

My assessment

651 Did the information that was before the FSA during the post-closure period provide a sound basis in fact for the information provided by the FSA that the Society did meet, and always had met, its solvency and other regulatory requirements?

652 There are two factors which suggest that the information provided by the FSA during the post-closure period relevant to this report was not soundly based and was thus potentially misleading.

653 The first is that the information provided to the FSA and GAD about the financial position of the Society showed that, objectively, the Society's solvency position was in real doubt. The second is that such doubts were held and expressed by the FSA internally on numerous occasions.

654 The Society provided estimates as to the quantification of the outstanding reserving issues to which I have referred above. The FSA also internally considered those issues. Taking all that into account, I have analysed, with the assistance of my actuarial advisers, what the estimated solvency position of the Society would have been, if all those issues had been reflected in the Society's estimate of its position in respect of each month, for which figures are available, between June 2000 and November 2001.

655 That analysis shows, first, that, on the basis of the monthly solvency reports it provided, the Society was, throughout the period covered by the analysis, solvent for regulatory purposes on the basis of the information it provided to GAD and the FSA.

656 However, that analysis also shows that, once adjustments are made to the reserving requirements reported by the Society to take into account the outstanding issues of which GAD and the FSA were aware, there arose considerable doubt as to the Society's cover for the required minimum margin of solvency.

657 In response to a draft of my report, the public bodies produced similar analysis, although based on different assumptions. While that analysis produced different results, it did not remove all doubt as to whether or not the Society was meeting its regulatory solvency requirements throughout the relevant time.

658 Neither the analysis that I have undertaken nor that carried out by the public bodies resolves the doubts that should have concerned the prudential regulators at the time both about the compliance by the Society with all its regulatory requirements and also as to whether the Society was solvent on a regulatory basis throughout the post-closure period.

659 Furthermore, I would note that no such analysis was undertaken at the time. Whatever detailed analysis would show now, the question before me

is what information was before the FSA at the relevant time, not what the 'true' position might now be found to be using a range of assumptions.

660 I consider that it is impossible to reconcile the reassurances that the FSA routinely provided with the information before the FSA – to which the FSA informed policyholders that they had had regard when concluding that the Society was solvent for regulatory purposes and always had been so solvent, and was meeting and always had met the regulatory requirements to which the Society was subject.

661 I recognise that the figures provided by the Society were estimated and had not been subject to audit. However, the provision of unqualified assurances by the FSA at that time was untenable, given the position disclosed by the Society to those regulators.

662 That there existed very real doubts as to the ability of the Society to meet the regulatory solvency requirements to which it was subject and/or that it might be insolvent for regulatory purposes is further demonstrated by the fact that, during the post-closure period, on a number of occasions GAD and/or the FSA recognised in internal discussions that the Society was either in breach of its regulatory solvency requirements or might have been in such breach.

663 Indeed, with respect to at least two significant issues – the failure by the Society to establish reserves for all the liabilities associated with those of its policies which contained guaranteed annuity rates and the use by the Society of a quasi-zillmer adjustment, which had the effect at the 1999 year end of reducing the amount of the Society's liabilities it determined by £950 million – the FSA had no doubt at the time that the Society had not always satisfied the requirements to which the FSA considered the Society was subject.

664 It is thus unclear how the FSA reasonably have concluded that the Society had not been in breach of its regulatory requirements.

665 The Compromise Scheme was the Society's means both of responding to the prudential regulators' requirement to restore a sound financial position and of restabilising its broader financial condition in the light of the events which had led to its closure to new business.

666 In addition to removing the guaranteed annuity rates from those policies which had contained those guarantees, the Society's proposals involved remaining policyholders giving up the right to pursue complaints or claims against the Society for alleged mis-selling or other matters.

667 While those policyholders were considering how to respond to the Society's compromise proposals, the information provided by the FSA to the Society's policyholders emphasised that care needed to be taken if a policyholder was considering transferring out of the Society and indicated what some of the potential ramifications of exit at that time would be.

668 However, the FSA did not provide similar information to those who were considering their options about the possible ramifications of remaining with the Society.

669 Policyholders looked and were entitled to look to the FSA to ascertain reliable information about the financial condition of the Society as part of the process of considering the available options. Given that the Society did not generally do business through independent financial advisers or other such intermediaries, the FSA was an important potential source of relevant advice.

670 I accept that there was no obligation on the FSA to provide information or advice to policyholders. However, having chosen to provide information, such information as the FSA provided had to be clear, accurate, complete and not misleading.

671 The FSA, acting reasonably, should have known that the Society had been and still might be in breach of its regulatory requirements. From the solvency figures presented by the Society to the FSA, and without taking into account any of the reserving issues about which the FSA was well aware and which GAD or the FSA had quantified, it appeared that the Society could barely cover its regulatory solvency margin. During the early part of 2001, the FSA also knew that the Society's basis for determining its solvency position was further open to doubt, given the position of the OFT regarding market value adjusted.

672 The FSA, acting reasonably, should also have known that, when regard was had to the evidence before the FSA as to the financial impact of a number of highly material reserving issues that had not been resolved, it was possible that the Society was insolvent for regulatory purposes.

673 Indeed, it was on this basis that the FSA took formal intervention action in October 2001 to seek to rectify that position by requiring the Society to produce a plan for the restoration of a sound financial position.

674 Yet the FSA told policyholders that, having monitored carefully the financial condition of the Society and based on the information available to the prudential regulators, the FSA was satisfied that the Society was able fully to meet its obligations and had not breached the regulatory requirements to which it was subject. That was misleading.

675 By the time that the FSA provided a form of words to the Society for use within the scheme documentation to be provided to policyholders considering how to vote on the compromise proposals, neither of those things was a matter about which the FSA could have been satisfied at the relevant time. Nor could the FSA have been satisfied as to these matters on 1 December 2001, when my jurisdiction came to an end.

676 My conclusion is that, by giving reassurance through the information provided by the FSA that the Society was meeting its regulatory solvency and other requirements, when that was not something about which the FSA at that time could reasonably have been satisfied, the FSA failed to act in accordance with the standards reasonably to be expected of such regulators.

Submissions I have received and my evaluation of those submissions

Submissions by the public bodies

677 When I informed the public bodies that I was minded to come to this view, those bodies told me that, in their view, the information provided to policyholders in the period after Equitable's closure to new business had been accurate and not in any way misleading.

678 Those bodies said that it had been reasonable for the FSA to have taken the view that Equitable had been solvent at all times, and meeting the regulatory solvency margin requirements up to October 2001.

679 The public bodies told me that this had been the FSA's considered view, although part of its task was also to question and communicate the possible impact of various uncertainties on the position. The FSA's public statements about solvency, those bodies said, had properly and appropriately reflected this approach.

680 In support of that view, the public bodies submitted that:

> *The FSA's public statements about solvency were carefully considered, regularly reviewed, soundly based, and consistent with the considered view of the FSA, as determined by internal experts and supported by advice from third party experts.*
>
> *It is wrong to say that the FSA's statements about Equitable's solvency and wider regulatory position had no sound basis in fact, or that the FSA ... "should have known" this to be the case. The FSA believed that Equitable was and remained solvent at all material times, and compliant with the regulatory solvency margin requirements up to October 2001, and it was entirely reasonable for it to have taken this position.*

681 The public bodies told me that the basis on which the FSA had reached that position had been informed by the facts that:

- *The Appointed Actuary reported that Equitable was meeting all of its regulatory requirements at all times.*
- *The FSA made its own judgements about Equitable's solvency and reasonably concluded that Equitable was solvent at all times, and did not breach the solvency margin requirements until October 2001.*
- *The FSA required Equitable to commission an independent review of its position in July-August 2001, and this confirmed the view which both Equitable and the FSA held at the time, that Equitable was meeting all its regulatory requirements.*

682 The public bodies told me that the views expressed within the FSA about the solvency position of the Society, which I have cited above, do not support my conclusion that the FSA had known that the Society's solvency position was questionable. The public bodies said that those views:

> *... cover a period from 9 July 2001 to November 2001. They show that throughout the period, uncertainties were expressed about the impact of non-GAR mis-selling liabilities and other factors on Equitable's solvency position.*
>
> *The comments are examples of the kinds of internal questioning and probing which was an integral part of the prudential regulator's considerations at that stage. The interim views were often differing or conflicting ... but in the end a considered and agreed view was taken by the FSA and no weight can properly be attached to the interim views of individuals.*

683 I was told that *'alongside this continual questioning of the position, there were at least three occasions during this period when the FSA took additional steps to satisfy itself as to Equitable's solvency'*. Those three occasions were:

- the meeting with Equitable on 29 July 2001, at which, the public bodies told me, *'Equitable (with its auditors, solicitors and Counsel) satisfied the FSA that it was solvent on all three bases and would have "no difficulty in making the payment on the subordinated loan"'*;
- the commissioning in July 2001 of an independent report on the financial condition of the Society, the results of which, the public bodies told me, *'confirmed that Equitable was solvent on all three bases, and had sufficient surplus assets to absorb the estimates of mis selling compensation calculated (even on a worst case basis) at the time'*; and

- the prompt action taken in October 2001 to require the Society to produce a plan for the restoration of a sound financial position once *'the FSA's analysis indicated that Equitable had breached the regulatory solvency margin requirements'*.

684 The public bodies submitted that:

> *It was these carefully considered views of Equitable's solvency position, rather than the points raised in the interim questioning and debate, which were – rightly – used to inform FSA's external communications ...*
>
> *Having taken the reasonable decision to communicate with the public, the FSA gave careful and continuous consideration to the content of its statements. Great care was taken to ensure that the language was clear, accurate, up to date and balanced and there were rigid processes in place (including involving technical and legal experts) to ensure that all public statements reflected the FSA's most up-to-date analysis. Rigorous procedures were also put in place to ensure that the agreed text was used consistently across all communications (letters to policyholders, letters to MPs, the FSA website and press enquiries).*

685 The public bodies continued:

> *Although the public statements always reflected the FSA's considered view that Equitable remained solvent, no reader of the FSA's public communications could fairly have concluded that they provided "unqualified assurances" about Equitable's prospects. In the period between the House of Lords' judgment and closure to new business, letters sent by the FSA commonly referred to Equitable's financial position being "significantly weakened" or that the House of Lords' judgment had "significant financial implications/impact". Later correspondence from the FSA stated that Equitable's "difficulties significantly increased" after the judgment, and from August 2001 there were statements that its "problems stemmed from uncertainties around GARs". Furthermore, the FSA's communications repeatedly referred to the "fundamental uncertainties" in the way that Equitable's financial situation might develop. The FSA also reminded policyholders that it could not give advice. A common statement was that "we would recommend that you do not make any hasty decisions and seek financial advice before taking any action".*

My evaluation of those submissions

686 I was not persuaded by the submissions of the public bodies on this matter. There can be no question but that the solvency position of the Society was a matter of great uncertainty throughout the post-closure period covered by this report. That is evident from the information before the FSA at the time and from the views expressed by them internally.

687 I accept that many of the opinions expressed within the FSA as to the real doubts surrounding the Society's solvency position were not concluded views but part of an ongoing process of supervision.

688 However, I do not accept, for example, that the reported view of the then FSA Chairman given to a Tripartite Standing Committee meeting can reasonably be seen as *'internal questioning and probing'* or *'interim questioning and debate'*.

689 Nor do I accept that the commissioning in July 2001 of a report into the financial condition of the Society, from the company for whom the Society's Appointed Actuary was a consultant, reflects

assurance on the part of the FSA that the Society was, in regulatory terms, fully meeting its solvency margin requirements. The commissioning of such a report instead underlined the doubts that existed at that time.

690 I also do not accept the notion that, after October 2001, the information given by the FSA was consistently changed to reflect the exercise of intervention powers on the basis that the Society was in breach of its regulatory solvency margin.

691 For example, as can be seen from the relevant entry in Part 3 of this report, on 26 November 2001 the FSA issued a press statement about the disclosure of the existence of the reinsurance 'side-letter'. After dealing with the implications of that letter, as the FSA saw those implications, that press statement stated that *'on the basis of the information received by the FSA, Equitable Life continues to meet its regulatory solvency requirements even taking account of the lower credit for the revised reinsurance policy'*.

692 In any case, the submissions of the public bodies on these questions appear to me to miss the point. If a public body is giving clear assurances about something, the onus is on them to have established that those assurances have a sound basis in fact before giving such assurances.

693 It is not the case, in terms of established principles of good administration, that such a body can proceed to give such assurances and continue to do so, while internal discussion and debate as to the real position continues, until the view underpinning those assurances is disproved. The very fact that many of the people directly involved in the supervision of the Society were expressing real and, sometimes, grave doubts as to the true position should in itself have led to no such assurances being given.

694 The submissions of the public bodies also address views which I have not expressed. I do not suggest that a reader of the FSA's information *'could fairly have concluded that they provided "unqualified assurances" about Equitable's prospects'*.

695 What I have concluded is that the information provided by the FSA promoted the assurance that the Society was, and had always been, solvent for regulatory purposes and that it was meeting, and had always met, the regulatory requirements imposed on it.

696 That the future of the Society was subject to uncertainty is a matter of common ground. Indeed, it was that very uncertainty which prompted many people to contact the FSA for information in the first place.

697 I conclude that the information provided by the FSA was misleading and fell short of what it would be reasonable to expect them to have provided.

My finding

698 **I find that the misleading information, about the Society's solvency position and its record of compliance with other regulatory requirements, that was produced by the FSA, acting on behalf of the prudential regulators, during the period after the Society closed to new business fell short of the standard that could reasonably be expected of such regulators.**

Conclusion

699 In this Chapter, I have set out the results of my review of the evidence I have obtained and made findings of fact concerning the subject matter of the complaints which were contained within the terms of reference for the investigation which led to this report.

700 In Chapter 11 of this report, I set out my conclusions as to whether those facts disclose that maladministration has occurred.

Chapter 11 – Determinations: Maladministration?

Introduction

1 In this Chapter, I set out my determinations as to whether the acts and omissions of the prudential regulators and/or GAD constitute maladministration. Those determinations are made in relation to the findings of fact that I have set out in Chapter 10 of this report.

My approach

2 In Chapter 5 of this report, I set out the approach that I adopt when making such determinations. First, I establish the facts and the overall standard which applies to the events which form the basis of the complaints made to me. I then assess the facts against that overall standard.

3 In particular, I assess whether or not an act or omission on the part of the body complained about (in this case the prudential regulators and/or GAD) constituted a departure from the applicable standard. If so, I then assess whether that act or omission was so unreasonable in the particular circumstances, when regard is had to the specific legal or administrative context of the case, as to constitute maladministration; and/or whether any such act or omission otherwise fell so far short of acceptable standards of good administration as to constitute maladministration.

4 Central to this approach is the identification of all the general and specific legal and administrative obligations which I consider that the prudential regulators and/or GAD had at the relevant time; and my consideration of the manner in which those regulators and/or GAD discharged those obligations.

5 Chapter 5, supported by the relevant detail in Part 2 of this report, provided the overview of all those obligations; and went on to identify the key obligations that the prudential regulators and/or GAD had at the relevant time. In this Chapter, I consider the manner in which the prudential regulators and/or GAD discharged those obligations.

6 For ease of reference, the key obligations of the prudential regulators and/or GAD are reproduced below.

Summary of the key obligations of the prudential regulators and/or GAD which are relevant to this investigation

7 The key legal and administrative obligations that the prudential regulators and/or GAD had at the relevant time were as follows:

(i) The prudential regulators were under a specific statutory duty, imposed by the 1982 Act and the Regulations made under that Act, to ensure that the regulatory returns were complete and accurate (in the sense of them being compliant with the applicable Regulations).

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered the regulatory returns submitted by insurance companies and, if those returns appeared to be inaccurate or incomplete in any respect, to have communicated with the company with a view to the correction of any such inaccuracies and the supply of deficiencies.

(ii) The prudential regulators were under a specific statutory duty, imposed by the 1982 Act and the Regulations made under that Act, to ensure that an insurance company valued its assets and determined its liabilities in accordance with the requirements that were imposed on it by the applicable Regulations.

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered whether the way in which an insurance company valued its assets and determined its liabilities that was set out within the regulatory returns had been undertaken in accordance with the requirements of the 1982 Act and the Regulations made under that Act and, if it appeared that the company had used a valuation basis that was not compliant with these requirements, to have considered whether to take action to remedy the position.

(iii) The prudential regulators were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or may have arisen which gave grounds for the use of such powers.

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered the use of their powers in the light of any information that they possessed – whether from the content of the regulatory returns, from contact with an insurance company, or from other sources – which gave rise to questions about the solvency position of that company, or about whether it was acting in line with the interests of its policyholders or in accordance with the reasonable expectations of those policyholders, or potential policyholders, or about whether it was acting soundly or prudently.

(iv) The prudential regulators were under a general public law duty to exercise their statutory powers in a right and proper way, in accordance with the presumed intention of the legislature which conferred those powers, in good faith, reasonably, for a proper purpose, and with procedural propriety.

In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have dealt appropriately with any regulatory issues which arose in relation to any insurance company other than through the scrutiny process and to have acted in such a manner as to ensure the effective operation of the regulatory regime as Parliament had established it – informed as that regime was by the concepts of 'freedom with publicity', the protection of the reasonable expectations of policyholders and potential policyholders, and the fulfilment of the criteria of sound and prudent management.

(v) Both the prudential regulators and GAD were under an obligation generally to act in accordance with established principles of good administration.

In complying with this obligation, I would expect the prudential regulators and/or GAD:

- to have acted in accordance with their general and specific legal duties and powers;
- to have acted in accordance with their own published and internal policy and guidance;

- to have taken proper account of established good practice, including professional practice;
- to have taken reasonable decisions based on all relevant considerations, ignored irrelevant ones and balanced those considerations appropriately;
- to have kept proper and appropriate records as evidence of their activities, including a record of the reasons for their decisions; and
- to have provided information, where it was appropriate to do so, which was clear, accurate, complete and not misleading.

The way in which the prudential regulation of the Society was undertaken

8 In Chapter 6 of this report, I explained that the way in which the prudential regulation of a life insurance company was undertaken, including the degree of intensity of the scrutiny given to such a company's affairs, reflected the circumstances of that company as those circumstances were known to the prudential regulators and/or GAD at the relevant time.

9 I also explained that the prudential regulation of the Society during the period covered by this report can be separated into three periods – the first being the period prior to 20 June 1998, the second being the period from 20 June 1998 to the closure of the Society to new business on 8 December 2000, and the third being the period from that closure until 1 December 2001, when my jurisdiction over the relevant events ended. Those events are covered, respectively, in Chapters 6, 7 and 8 of this report.

My findings of fact

10 In Chapter 10 of this report, I made ten findings of fact which indicate that certain complaints within the terms of reference for this investigation have a sound basis in fact and which are thus potentially capable of leading to a determination that maladministration occurred.

11 Those findings related to:

- the failure by the DTI, as prudential regulators, (i) to insist, when approving the appointment in June 1991 of a new Chief Executive, that he should demit office as the Society's Appointed Actuary, and (ii) during the period from 1 July 1991 to 31 July 1997, when one person held the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary, to consider the use of their powers to seek to remove that person from such a 'dual role' (paragraphs 40 to 131 of Chapter 10);
- the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations (paragraphs 132 to 202 of Chapter 10);
- the failure by GAD, when the introduction of the Society's differential terminal bonus policy, intimated within the Society's 1993 returns, was identified by GAD as part of their scrutiny of those returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders (paragraphs 203 to297 of Chapter 10);

- the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996, related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, (iii) apparently arbitrary changes to the assumed retirement ages, and (iv) the holding of no explicit reserves for the liabilities associated with prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates (paragraphs 298 to 343 of Chapter 10);

- the failure by GAD (i) to ask for the information GAD needed in respect of the Society's 1995 returns to enable them, as part of the scrutiny process, to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society (paragraphs 344 to 396 of Chapter 10);

- the failure by the FSA, acting on behalf of the prudential regulators, (i) to ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) to ensure that the credit taken by the Society within its returns for 1998, 1999, and 2000 properly reflected the economic substance of that arrangement (paragraphs 397 to 486 of Chapter 10);

- the failure of the FSA, acting on behalf of the prudential regulators, to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation (paragraphs 487 to 522 of Chapter 10);

- the failure by the FSA, acting on behalf of the prudential regulators, to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation (paragraphs 523 to 613 of Chapter 10);

- the unsound basis on which the decision was taken by the FSA, acting on behalf of the prudential regulators, to permit the Society to remain open to new business, following its loss of the *Hyman* litigation (paragraphs 523 to 614 of Chapter 10); and

- the misleading information, about the Society's solvency position and its record of compliance with other regulatory requirements, that was produced by the FSA, acting on behalf of the prudential regulators, during the period after the Society closed to new business (paragraphs 615 to 698 of Chapter 10).

My determinations

The 'dual role'

12 I turn first to the way in which the DTI, as prudential regulators, handled the 'dual role' – that is, the holding by one person for more than six years, from 1 July 1991 to 31 July 1997, of the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary.

13 The role of Appointed Actuary was one cornerstone of the system of prudential regulation in the United Kingdom. An Appointed Actuary needed to ensure that he or she had sufficient independence from the executive management of a life insurance company to enable him or her to undertake effectively the responsibilities (to the

company, to its policyholders, and to the prudential regulators and GAD) that were conferred on the Appointed Actuary and to enable him or her to do so in line with the intention of Parliament when it had created the role in 1973.

14 A position in which an Appointed Actuary was unable to secure or retain the necessary degree of operational independence would therefore go to the heart of the prudential regulation of a life insurance company and would raise serious questions about the ability of the Appointed Actuary in such circumstances to perform the regulatory functions conferred on him or her.

15 The prudential regulators were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or may have arisen which gave grounds for the use of such powers.

16 Those regulators were under a further general public law duty to discharge their statutory functions as prudential regulators reasonably and in line with the intention of Parliament.

17 The prudential regulators were also under an obligation generally to act in accordance with the established principle of good administration that their decisions should be taken reasonably, based on all relevant considerations.

18 I have found that the prudential regulators did not consider the use of any of their powers in relation to the continuing position in which the posts of Appointed Actuary and Chief Executive of the Society were held by the same person. That constitutes a departure from the applicable standard.

19 Did this failure to consider the range of powers that was open to the prudential regulators, when faced with this position, constitute an unreasonable departure from the applicable standard?

20 My consideration of this question turns on whether the prudential regulators took their decisions – not at first to object to the appointment of the Appointed Actuary as Chief Executive (an appointment that required regulatory approval) nor later to intervene to ensure that the posts were held by different persons – having properly understood the range of legal powers (and other means) that were available to them and having then considered the issue on a proper legal and factual basis.

21 I have found, in Chapter 10 of this report, that there were a number of powers that Parliament had granted to the prudential regulators which could have been used in situations such as this, where those regulators recognised at the time that what they described as a *'conflict of interest'* existed and would be perpetuated by allowing that situation to continue. I have also found that the use of those powers was not considered by the prudential regulators at the relevant time.

22 I consider that the decision by the prudential regulators not to object to the appointment of the continuing Appointed Actuary to the additional post of Chief Executive was not taken on a proper and balanced basis, as relevant considerations were left out of account in the decision-making process.

23 The prudential regulators also directed themselves to the wrong question – whether they had power to object to the incumbent remaining as Appointed Actuary – rather than the real questions before them. Those questions were, first, whether they had power to object to him being appointed as Chief Executive of the Society and, secondly,

whether, if so, it would be appropriate in the circumstances to exercise any such powers.

24 After his appointment, no consideration was given to the use of the powers that those regulators possessed to remove an incumbent Chief Executive or to seek through non-statutory action to persuade him to demit office as Appointed Actuary.

25 Those were significant failures. The prudential regulators failed at any time between 1991 and 1997 to consider the use of any of their powers of intervention and to take into account all relevant considerations when taking their decision not to object to the holding by one person of both the posts of Appointed Actuary and Chief Executive to the Society.

26 Given the importance of the role of the Appointed Actuary within the system of prudential regulation and the need for such Actuaries to be able to operate with sufficient independence from the executive management of life insurance companies, I consider that this constituted a departure from the applicable standard that was both unreasonable in the circumstances and fell far short of acceptable standards of good administration.

27 **I find that the failure by the DTI, as prudential regulators, (i) to insist, when approving the appointment in June 1991 of a new Chief Executive, that he should demit office as the Society's Appointed Actuary, and (ii) during the period from 1 July 1991 to 31 July 1997, when one person held the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary, to consider the use of their powers to seek to remove that person from such a 'dual role' constitutes maladministration. I therefore make such a finding of maladministration against the DTI.**

The scrutiny of the Society's returns for 1990 to 1993

28 I now turn to consider the scrutiny of the Society's regulatory returns, which was undertaken by GAD on behalf of the prudential regulators, for each year from 1990 to 1993.

29 Section 18(4) of the 1982 Act provided that, for the purposes of the investigation that the Appointed Actuary undertook into the financial condition of the company and reported in the returns, the value of any assets and the amount of any liabilities set out therein were required to be determined in accordance with the applicable valuation Regulations. Those Regulations were set out in Parts V and VI of the Insurance Companies Regulations 1981.

30 Regulation 54 of the 1981 Regulations provided that the determination of the amount of long term liabilities was required to be made on actuarial principles, making proper provision for all liabilities on prudent assumptions with regard to the relevant factors.

31 Section 37 of the 1982 Act gave the prudential regulators the power to intervene in the affairs of an insurance company, if they considered that such a company might not have been acting in such a manner as to fulfil the reasonable expectations of its policyholders.

32 I have found that GAD, in providing advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had demonstrated that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations. Accordingly, those regulators were unable to verify the solvency position of the Society as they were under a duty to do.

33 I have found, specifically, that GAD failed to question the Society about issues which arose in its returns for 1990 to 1993 in respect of:

- the valuation rate of interest used to discount the liabilities, which appeared to be imprudent and/or impermissible (apparently discounting the liabilities well below the guaranteed face value of policies); and

- the affordability and sustainability of the bonuses declared by the Society during this period, which appeared to raise the expectations of the Society's policyholders which it appeared could not be met.

34 Seeking to ensure that the regulatory returns of an insurance company were accurate and complete was at the heart of the role of the prudential regulators, acting with the advice and assistance of GAD.

35 Both issues – whether the Society was discounting its liabilities in an impermissible way and whether the level of bonus that it was declaring was affordable and could be sustained – went to the heart of the interests of with-profits policyholders and of the Society's ability to fulfil their reasonable expectations.

36 The prudential regulators were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or may have arisen which gave grounds for the use of such powers.

37 In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered the use of their powers in the light of any information that they possessed – whether from the content of the regulatory returns, from contact with an insurance company, or from other sources – which gave rise to questions about the solvency position of that company, or about whether it was acting in line with the interests of its policyholders or in accordance with the reasonable expectations of those policyholders, or potential policyholders, or about whether it was acting soundly or prudently.

38 While I accept that the information before GAD raised questions rather than gave clear evidence of any imprudence on the part of the Society, I consider that GAD were required to satisfy themselves, once those questions arose, as to the true position, as part of the advice they gave to the prudential regulators in order to enable them to verify the financial position of the Society and to ensure that it was acting in conformity with the obligations to which the Society was subject.

39 The failure to do so constitutes a departure from the applicable standard that was unreasonable in the circumstances.

40 **I find that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations, constitutes maladministration. I therefore make such a finding of maladministration against GAD.**

The intimation of the differential terminal bonus policy

41 I now turn to consider the way in which GAD, as part of their scrutiny on behalf of the prudential regulators of the Society's 1993 returns, handled the intimation within those returns of the introduction by the Society of what came to be known as its differential terminal bonus policy.

42 Section 37 of the 1982 Act gave the prudential regulators the power to intervene in the affairs of an insurance company if they considered that that company might not have been acting in such a manner as to fulfil the reasonable expectations of its policyholders.

43 With effect from 1 July 1994, those regulators also had the power to intervene if they considered that a company was not acting in accordance with the criteria of sound and prudent management, pursuant to which an insurance company was not to be considered as acting in such a manner if it did not have due regard to the interests of its policyholders.

44 The prudential regulators were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or might have arisen which gave grounds for the use of such powers. Those regulators were under a further general public law duty to discharge their statutory functions as prudential regulators reasonably and in line with the intention of Parliament.

45 In order to comply with those duties, I would expect the prudential regulators, acting with the advice and assistance of GAD, to have considered whether the information before them gave rise to the need to exercise any of their powers. I have found that GAD identified the introduction of this new policy but did not pursue and resolve the questions that such an introduction raised. GAD also failed to inform the DTI of this development.

46 Did the failure of GAD to raise the issue within their detailed scrutiny report on the Society's 1993 returns to the prudential regulators or to raise the issue with the Society in correspondence on those returns constitute an unreasonable departure from the applicable standard?

47 I consider that the failure to alert the DTI to this development constituted such a departure from the applicable standard.

48 When considering whether that departure was unreasonable, it must be remembered that, on 20 July 1993, GAD and the prudential regulators had received the Society's response to the industry-wide bonus survey. That response did not mention the differential terminal bonus policy but had explained that the Society aimed to achieve a reasonable degree of stability in proceeds. With their response, Equitable had also provided a copy of its With-Profits Guide and its bonus leaflets. The Society had also sent GAD an updated copy of their guide on 24 May 1994.

49 The Society's 1993 returns had disclosed the differential terminal bonus policy which the Society had introduced abruptly. That policy, as GAD noted, was new and would have the effect of reducing the terminal bonus payable to certain policyholders. Yet GAD failed to enquire as to what the new bonus policy was, whether it was being properly described in the Society's publications, and what the rationale was for this change of a central policy in the operation of any life insurance company.

50 That failure occurred despite the recognition by GAD and the prudential regulators, when they were conducting the bonus survey only weeks before this disclosure, that the nature of bonus policies went to the heart of the reasonable expectations which policyholders would have.

51 That failure also occurred despite the fact that GAD had received a copy of the Society's May 1994 With-Profits Guide, published five months after the valuation date to which the Society's 1993 returns related, in which no disclosure of the new differential terminal bonus policy had been made.

52 In a context in which such a central policy was changed in a direction which had the effect of reducing the proceeds that some of the Society's policyholders would receive and where, on the information before GAD at the time, it appeared that no disclosure to policyholders of this change in policy was being effected, I find it surprising that GAD did not ask as part of the detailed scrutiny process for an explanation of the new system and for more details about its rationale. I find it even more surprising that GAD did not inform the DTI that all this had occurred.

53 There could be no doubt in such circumstances that significant questions arose in respect of the reasonable expectations of the Society's policyholders. GAD was required by the service level agreement to bring such matters to the attention of the DTI. However, GAD did not do so. That was a serious omission.

54 **I consider that the failure by GAD, when the introduction of the Society's differential terminal bonus policy, intimated within the Society's 1993 returns, was identified by GAD as part of their scrutiny of those returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders, constitutes a departure from the applicable standard that was both unreasonable in the circumstances and was far short of acceptable standards of good administration.**

55 **I consider that this constitutes maladministration and I therefore make such a finding of maladministration against GAD in relation to this aspect of their scrutiny of the Society's 1993 returns.**

The scrutiny of the Society's returns for 1994 to 1996

56 I now turn to consider the scrutiny of the Society's regulatory returns, which was undertaken by GAD on behalf of the prudential regulators, for each year from 1994 to 1996.

57 Similar issues arise here as did with my finding regarding the scrutiny of the returns for earlier years. However, the issues which had been raised in those returns remained and new issues had developed. Those new issues included the holding of no reserves in respect of guaranteed annuity rates, which GAD by then if they had acted earlier without maladministration, would have known were biting and should thus have been provided for by the Society.

58 I have found that GAD failed to identify and to raise these issues. GAD was required to satisfy themselves, once those questions arose, as to the true position, as part of the advice they gave to the prudential regulators in order to enable them to verify the financial position of the Society and to ensure that it was acting in conformity with the obligations to which it was subject.

59 Given the similar context, for the same reasons I have given in relation to the scrutiny of the Society's returns for 1990 to 1993, I consider that the failure to do so constitutes a departure from the applicable standard that was unreasonable in the circumstances.

60 **I find that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996 – related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, (iii) apparently arbitrary changes to the assumed retirement ages, and (iv) the holding of no explicit reserves for the liabilities associated with**

prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates – constitutes maladministration. I therefore make such a finding of maladministration against GAD.

The presentation of the Society's two valuations

61 I turn now to consider the way in which GAD, as part of their scrutiny on behalf of the prudential regulators of the Society's returns for 1990 to 1996, handled issues arising from the presentation by the Society within those returns of two separate valuation results.

62 The Society produced two valuations – in this report, I have called those the main valuation and the appendix valuation. The appendix valuation was provided to demonstrate that the main valuation that the Society chose to use in those returns had produced a valuation which was at least as strong as the minimum required by the applicable Regulations.

63 Those scrutinising the Society's returns needed to know the amount of the resilience reserves applicable to the appendix valuation, in order to be able to compare the strength of the alternative valuation that the Society used against the minimum prescribed by the Regulations. In respect of the Society's 1995 returns, however, GAD did not ask for this figure nor did the Society provide it.

64 Was this an unreasonable departure from the applicable standard? I would first note that the relevant regulatory regime was in part predicated on the concept of 'freedom with publicity'.

65 While, in my view, the Society was not in breach of the disclosure requirements imposed on it by the applicable Regulations, I consider that the way in which the Society presented its two valuations was capable of misleading users of the Society's returns.

66 Indeed, I note that, in their scrutiny report to the DTI on the Society's 1992 returns, GAD initially informed the prudential regulators that the Society's cover for the required minimum solvency margin was significantly higher under the appendix valuation method than under the main valuation. That was not the case. GAD rectified that advice, after they had communicated with the Society and had been provided by the Society with the figure for the required resilience reserve.

67 I have also accepted, with more hesitation, that the 'demonstration', which insurance companies were required to provide to satisfy the prudential regulators that they had used an alternative valuation method that was at least as strong as the prescribed minimum, did not have to be undertaken within the regulatory returns. That GAD permitted the provision of the omitted information by the Society only to GAD is, on balance, something that I do not criticise.

68 The prudential regulators possessed powers of intervention, which were exercisable on the grounds that an insurance company had not satisfied an obligation to which it was subject under the Insurance Companies Act 1982.

69 Section 18(4) of the 1982 Act required Appointed Actuaries, when investigating and reporting on the financial condition of the company, to value any assets and to determine the amount of any liabilities in accordance with the provisions of the valuation Regulations.

70 The prudential regulators were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or might have arisen which gave

grounds for the use of such powers. In complying with this duty, I would expect the prudential regulators (acting with the advice and assistance of GAD) to have considered the use of their powers in the light of any information that they possessed.

71 As part of their scrutiny of the Society's 1995 returns, GAD were required to verify that the Society had complied with the regulatory requirements to which it was subject. As part of that verification, GAD needed to satisfy themselves that the Society's alternative valuation complied with the applicable Regulations, by producing a result that was at least as strong as the minimum required by the applicable Regulations.

72 By not asking the Society to provide the omitted information in respect of the 1995 returns, GAD disabled themselves from the carrying out of the verification that they were under an obligation to undertake as part of the provision of assistance and advice to the prudential regulators. That constitutes a departure from the applicable standard.

73 The verification of the financial position of an insurance company was the central duty imposed on the prudential regulators. At the relevant time, GAD had expressed some concern that particular vigilance had to be exercised, given the relative weakness of the Society's solvency position and given the method it adopted of presenting two valuations which, in reality, produced an almost identical result.

74 In those circumstances, I consider that the failure of GAD to seek the information it needed to verify the Society's solvency constituted an unreasonable departure from the applicable standard.

75 Moreover, GAD at the time had access to the ratings provided in respect of the Society by Standard & Poor's, which had demonstrated that even an expert third-party rating agency could be misled by the Society's practice in this respect.

76 Those ratings confirmed not only that the users of the regulatory returns might be misled by the Society's presentation but also that they had been misled.

77 I consider that, as this was so, GAD should have brought that to the attention of the prudential regulators. If a major ratings agency had been misled by the way in which the Society had presented the information in its returns, the question arose as to what individual policyholders would do as a result. Effecting industry comparisons was said to be one of the purposes of the publication of the regulatory returns. That regulatory returns would be used for this purpose was thus well known to GAD.

78 Yet GAD did not raise the fact that the reader of the Society's returns had been misled with the prudential regulators nor did it discuss that matter with the Society or take any other action.

79 In a regime which was predicated on the doctrine of 'freedom with publicity' and in a situation in which GAD should have known that the way in which Equitable were presenting their returns was capable of misleading a reader of those returns (and did know that at least one rating agency, whose work GAD knew would have been well publicised and which was used by the prudential regulators to brief Ministers, had indeed been misled), the failure of GAD to seek to persuade the Society to provide this information within its returns (or to recommend that the prudential regulators considered taking action to secure that it was so provided) is inexplicable.

80 That is all the more so when account is taken of the fact that GAD at the time knew that the absence of this information accounted for almost all of the difference between the results of the main and appendix valuations that the Society produced. As GAD now knew, that difference was seen by commentators as comforting given the weak position (based on its main valuation) that the Society reported in its returns.

81 The true financial position of the Society was a central consideration in any assessment of its viability as a potential investment vehicle. Those making such an assessment using the information disclosed within the returns were entitled, in my view, to rely on the role of the prudential regulators and GAD to ensure that the information published in those returns was not misleading.

82 The failure by GAD to ensure that this was the case was unacceptable and constituted a departure from the applicable standard that was unreasonable in the circumstances. There were clearly alternative courses of action open to GAD which it would have been proportionate for them to have taken in respect of information that could mislead the reader of the returns as to the actual financial position of the Society, as compared to the statutory minimum requirements.

83 Such potentially misleading information should have been of fundamental concern to any prudential regulator, acting reasonably. The failure by GAD to ensure that misleading information was not disseminated through the Society's returns thus also falls far short of acceptable standards of good administration.

84 **I consider that the failure by GAD (i) to ask for the information GAD needed in respect of the Society's 1995 returns to enable them, as part of the scrutiny process, to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society, constitutes maladministration. I accordingly make such a finding of maladministration against GAD in these respects.**

Financial reinsurance

85 I now turn to the way in which the FSA, acting on behalf of the prudential regulators, handled issues arising from a financial reinsurance arrangement into which the Society had entered.

86 Section 37 of the 1982 Act gave the prudential regulators powers of intervention where they considered that an insurance company had failed to satisfy an obligation to which it was subject by virtue of that Act or where those regulators were not satisfied that adequate arrangements were in force or would be made for the reinsurance of risks against which persons were insured by the company.

87 I have found that the FSA permitted the Society to take credit for that arrangement within its returns for 1998, 1999, and 2000 when no such credit should have been taken.

88 The FSA were under a general public law duty to give proper consideration to the use of their powers of intervention where circumstances had or may have arisen which gave grounds for the use of such powers. The FSA were under a further general public law duty to discharge their statutory functions reasonably and in line with the intention of Parliament.

89 In order to comply with those duties, I would expect the FSA, acting with the advice and assistance of GAD, to have considered the use of their powers and to have acted appropriately and in line with the intention of Parliament to ensure the effective operation of the system of prudential regulation that Parliament had established.

90 In my view, there can be no doubt that the actions of the FSA in permitting the Society to take credit for the financial reinsurance arrangement constituted a departure from the applicable standard.

91 In determining whether those actions of the FSA constitute an unreasonable departure from the applicable standard, I consider that the significance of the financial reinsurance arrangement to the reported financial condition of the Society at the relevant time is central to my assessment of this question.

92 Without the offset that the Society was permitted by the FSA to take for the arrangement within its 1998 returns, it is unlikely that the Society would have been permitted to declare a bonus in March 1999. That was certainly the view of the prudential regulators at the time.

93 The Society's reported solvency position without the offset that was taken which – due to the early submission of its returns at the instigation of the prudential regulators – would have been published by 1 May 1999 would have made public the very serious financial position that Equitable was in.

94 The actions of the FSA – in insisting on the early submission of the Society's returns and in indicating that intervention was likely to prevent the declaration of a bonus which the Society could not afford if it did not find some way of improving its financial position – were entirely proper regulatory responses to a very serious situation.

95 However, I find it inexplicable that the FSA allowed the Society to take credit for an arrangement that was not in place at the valuation date for the 1998 returns (nor at the date when those returns were submitted) without granting a reporting concession to enable this to be done in accordance with the statutory framework that they operated.

96 I also find it inexplicable that, when all concerned recognised that this arrangement was central to the ability of the Society to pay a bonus and to demonstrate that it was clearly solvent in regulatory terms, the FSA permitted any credit to be taken in respect of the financial reinsurance arrangement.

97 I find it even more inexplicable that, even if some credit were permissible, the FSA permitted the Society to take an amount of credit which was greatly excessive and did not reflect the economic substance of that arrangement.

98 Those failures were compounded once the FSA finally saw the agreed terms of the arrangement. The FSA, acting reasonably, could not have been satisfied that such an asset could be brought within the valuation rules that applied to the Society's returns for 1999 and 2000 in the manner and amount for which Equitable relied on that arrangement.

99 However, I make no finding in this respect against GAD, as they raised with the FSA a number of concerns about the reserving effect of the proposed financial reinsurance arrangement. That was entirely proper.

100 I consider that those failures by the FSA constitute a departure from the applicable standard that was both unreasonable in the circumstances and fell far short of acceptable standards of good administration.

101 **I consider that the failure by the FSA, acting on behalf of the prudential regulators, (i) to ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) to ensure that the credit taken by the Society within its returns for 1998, 1999, and 2000 properly reflected the economic substance of that arrangement, constitutes maladministration. I therefore make such a finding of maladministration against the FSA.**

The disclosure of the possible impact of the Hyman litigation

102 I now turn to the acts and omissions of the prudential regulators and/or GAD in respect of the way in which those bodies handled the disclosure by the Society of the potential seriousness of the impact of the *Hyman* litigation.

103 Section 17 of the 1982 Act required every insurance company to prepare a revenue account for the year, a balance sheet as at the end of the year, and a profit and loss account for the year in a prescribed form. Those documents formed part of the regulatory returns.

104 All insurance companies which wrote long term business were also required by section 18 of the Act once in every period of twelve months to cause an actuarial investigation to be made into its financial condition by its Appointed Actuary. An abstract of the Actuary's report of that investigation also formed part of the regulatory returns. The amount of any liabilities as determined by the Appointed Actuary pursuant to section 18 were then included in the balance sheet required by section 17 of the 1982 Act.

105 Section 18(4) of the 1982 Act provided that, for the purposes of the investigation that the Appointed Actuary undertook into the financial condition of the company and reported in the returns, the value of any assets and the amount of any liabilities set out therein were required to be determined in accordance with the applicable valuation Regulations. Those Regulations were set out in Part VIII and Part IX of the Insurance Companies Regulations 1994.

106 Regulation 60 of the 1994 Regulations provided that, subject to the detailed requirements of Part IX, the amount of the liabilities of an insurance company in respect of long term business was required to be determined in accordance with generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies. That Regulation also provided that, in determining the amount of the liabilities of an insurance company, all contingent and prospective liabilities were to be taken into account within the returns.

107 Schedule 1 to the Insurance Companies (Accounts & Statements) Regulations 1996 set out the form of the balance sheet to be reported in the returns. Paragraph 13(1)(c) of that Schedule required the disclosure of contingent liabilities not already recognised in the balance sheet, other than those arising under inward contracts of insurance or reinsurance.

108 The contingent liabilities associated with the Society losing the *Hyman* litigation were not taken into account in the balance sheet or disclosed in the actuarial part of the Society's returns. A significant part of those contingent liabilities related to the effect of the reinsurance arrangement, which was an <u>outward</u> contract of reinsurance, and also to compensation costs which would arise should the Society lose in the House of Lords.

109 It thus appeared, *prima facie*, that the Society was required to disclose those contingent liabilities within its returns. However, whether that was so in fact would have depended on analysis of the potential liabilities involved.

110 Section 37 of the 1982 Act gave the prudential regulators powers of intervention where they considered that an insurance company had failed to satisfy an obligation to which it was subject.

111 The FSA, acting on behalf of the prudential regulators, were under a general public law duty to give proper consideration to the use of the powers of intervention available to those regulators where the circumstances had or might have arisen which gave grounds for the use of such powers. In order to comply with this duty, I would expect the FSA, acting with the advice and assistance of GAD, to have considered the use of their powers in the light of the information before them.

112 The Society made no disclosure of the contingent liabilities arising from the possibility that it might lose the *Hyman* litigation. I have found that, although the prudential regulators twice told the Society that such liabilities had to be disclosed within its returns, the FSA took no action when that was not done.

113 I have made no finding as to whether the Society should have disclosed those liabilities as a matter of law or of professional practice. That question is the subject of other proceedings, which I consider are better placed than me to resolve the relevant issues.

114 However, the prudential regulators themselves, at the time, considered that the Society should have made such disclosure. When no such disclosure was made, the FSA, who had assumed responsibility for the prudential regulation of the Society, on behalf of those regulators, did not ask the Society to justify its position or to provide information as to the basis on which it was taken.

115 It seems to me that it would have been plain to any prudential regulator, acting reasonably, that the consequences of the Society losing the *Hyman* case were potentially disastrous and that thus this question was no mere trivial aspect of the regulatory returns.

116 Failure to persuade the House of Lords that the Court of Appeal decision had been incorrect was one of the scenarios considered by the FSA and GAD. Both also knew that, in such circumstances – however remote they considered them to be – the financial reinsurance arrangement that Equitable had entered into would lapse and that the Society's reported financial position would have been so bad that a real question mark as to its survival would have arisen in a very public way.

117 Yet the Society did not disclose in its 1998 or 1999 returns that it had contingent liabilities relating to the *Hyman* litigation. Such disclosure, if it had been made, would have occurred in the early part of the returns in which the solvency position of the Society was stated and would have been very visible to any reader of those returns, who would have been alerted to the possible financial impact of losing the case.

118 At the very least, the prudential regulators were under an obligation to satisfy themselves *at the time* that the Society's decision had been taken on sound legal advice and with due regard to the interests of its policyholders. Yet no action was taken by the FSA.

119 The later failure by the Society to disclose any such contingent liabilities in the 1999 returns was also not questioned, pursued or resolved by the FSA.

120 That happened in a context in which the Court of Appeal had already found against the Society and in which the Society had informed its policyholders in writing that the costs of losing the *Hyman* case would not be significant. The prudential regulators were aware of the contents of that letter.

121 I make no finding against GAD in this respect. The prudential regulators had raised the issue with the Society and I do not consider that it was unreasonable for GAD not to have further raised it with those regulators or with the FSA.

122 However, I consider that the omission by the FSA to take appropriate action to satisfy themselves that the Society had taken a proper decision not to disclose the potential effects on it of losing the *Hyman* litigation constituted a departure from the applicable standard that was both unreasonable in the circumstances and fell far short of acceptable standards of good administration.

123 **I consider that the failure of the FSA, acting on behalf of the prudential regulators, to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation, constitutes maladministration. I therefore make such a finding of maladministration against the FSA.**

The decision to permit the Society to remain open

124 I now turn to the way in which the FSA, acting on behalf of the prudential regulators, approached the taking and recording of their decision to permit the Society to remain open to new business following its loss of the *Hyman* litigation and to the basis on which the FSA took that decision. Did those acts and omissions constitute an unreasonable departure from the applicable standard?

125 I will first deal with the failure by the FSA to record, at the time that it was taken, their decision and the reasons for that decision not to intervene to close the Society to new business or to take any other form of action in order to protect the reasonable expectations of the existing or potential policyholders who were considering investing with the Society during the period after the decision of the House of Lords.

126 As I have explained in Chapter 10 of this report, I have seen no documentary evidence of any decision taken by the FSA on this question. None of the files which record the considerable amount of activity that the FSA engaged in after the decision of the House of Lords in the *Hyman* case included an assessment of the options available both to the Society and to the prudential regulators in terms of what the House of Lords' decision meant for the continued ability of the Society to advertise and to write such business.

127 Whether the Society should be permitted to continue to advertise and to write new business was not a consideration mentioned in the FSA's strategy for regulatory action that it developed in the days after the judgment, or as part of the scrutiny of the regulatory returns that the Society submitted in respect of the 1999 year-end, or in the meetings which the FSA and GAD had with the Society during this period. Indeed, I have seen no evidence that these matters were discussed with the Society at all until the week before it closed to new business.

128 I have no reason to doubt the account that I have been given by those involved as to the basis for the decision that the FSA took to permit the Society to continue to advertise and to write new business during this period.

129 I also recognise that, in the immediate aftermath of the House of Lords' decision, a considerable

amount of analysis and activity was required to be undertaken by the FSA and GAD as a result of the unexpected nature to those bodies of that decision and due to the significant consequences that the decision might have had both for the Society and for the wider industry. I recognise that this activity was a considerable strain on the resources of the FSA at that time.

130 However, that decision was an extremely important one for all concerned. The FSA, by their account, decided that, although the circumstances had arisen which constituted one of the grounds for the use of the intervention powers of the prudential regulators, no action should be taken – because the FSA considered that the interests of potential policyholders were outweighed by the interests of existing policyholders, in the context of a possible sale of the Society.

131 I have had regard to the explanation given by those involved that much discussion on important matters was undertaken in an open-plan office environment and was not always or routinely recorded at this time. I also have no reason to doubt that this was so.

132 I consider, however, that it is a basic principle of good administration that significant decisions affecting the rights and interests of citizens should be recorded by those public bodies taking such decisions. The decision by the FSA not to take action to protect the interests and/or reasonable expectations of potential policyholders was without doubt such a decision.

133 The FSA were under an obligation generally to act in accordance with established principles of good administration. In fulfilling this obligation, I would expect the FSA, acting on behalf of the prudential regulators, to have kept proper and appropriate records as evidence of their activities, including a record of the reasons for their decisions.

134 The failure by the FSA to record the reasons for their decision at, or shortly after, the time that it was taken constituted a departure from the applicable standard. Given the potential consequences of the decision for those affected by it, I consider that this fell far short of acceptable standards of good administration.

135 **I consider that the failure by the FSA, acting on behalf of the prudential regulators, to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation, constitutes maladministration. I therefore make such a finding of maladministration against the FSA.**

136 But what of the basis on which I have been told that the FSA took this important decision? The prudential regulators had a range of intervention powers conferred on them by the provisions of the 1982 Act. The FSA, acting on behalf of those regulators, were under a general public law duty to give proper consideration to the use of their powers of intervention where the circumstances had or may have arisen which gave grounds for the use of such powers.

137 The FSA were also under an obligation generally to act in accordance with established principles of good administration, including by taking reasonable decisions having regard to all relevant considerations and leaving out of account irrelevant ones.

138 The question before me is whether the rationale for this decision, as it has been explained to me, demonstrates that the FSA took their decision on a proper legal and factual basis, having regard to all relevant considerations, leaving irrelevant considerations out of account, and balancing relevant considerations appropriately.

139 I am not persuaded that such a proper basis informed that decision. The FSA left out of account a number of relevant considerations, such as the nature of the Society's business and the fact that it was not only potential policyholders who might be adversely affected by the Society being permitted to remain open.

140 In addition, none of the legal powers available to the prudential regulators (or as to the other actions they could have taken) appears to have been taken into account by the FSA at the time they took their decision. Those powers or other actions were not given any consideration as part of the FSA's decision-making process.

141 I consider that those deficiencies both in the way in which the FSA took its decision to permit the Society to remain open to new business – and also in respect of the basis on which that decision was taken – meant that this decision was both unreasonable in the circumstances and fell far short of acceptable standards of good administration.

142 **I consider that the unsound basis on which the decision was taken by the FSA, acting on behalf of the prudential regulators, to permit the Society to remain open to new business, following its loss of the *Hyman* litigation, constitutes maladministration. I therefore make such a finding of maladministration against the FSA.**

Information provided by the FSA in the post-closure period

143 I turn finally to the acts and omissions of the prudential regulators in respect of the information that they provided to policyholders and others during the period after the Society had closed to new business (and before my jurisdiction ended on 1 December 2001) concerning the financial position of Equitable and its conformity to the regulatory obligations to which the Society was subject.

144 The prudential regulators were under an obligation generally to act in accordance with established principles of good administration. In fulfilling this obligation, I would expect the prudential regulators to have provided, where it was appropriate to provide such information, information which was clear, accurate, complete and not misleading.

145 I have found that the information provided by the FSA during the post-closure period was misleading, in that this information gave unqualified assurances both that the Society was and always had been solvent in regulatory terms and that it was and always had met its other regulatory requirements. However, the FSA should have known that those assurances had no sound basis. The provision of this misleading information therefore constitutes a departure from the applicable standard.

146 In determining whether the provision of this information constitutes an unreasonable departure from that standard, it seems to me that there are a number of matters which I should take into account.

147 On the one hand, I recognise that it would not have been reasonable to expect those exercising regulatory functions, and privy to sensitive commercial information about the position of one of the entities which they regulated, to provide confidential information to the public and others about the discussions that those regulators were having with that company. Nor do I think it appropriate generally to regulate by public statements or press releases.

148 In addition, I recognise the force of the argument that public statements during the post-closure period by the prudential regulators to the effect

(i) that the solvency position of the Society at that time was questionable, (ii) that the Society might have been in breach of the regulatory required minimum solvency margin for some of this period, and/or (iii) that the Society had (or might have) failed to comply with other regulatory requirements in the past would have added to the difficulties faced by the Society and might have encouraged a run on its with-profits fund.

149 On the other hand, I have found it difficult to reconcile the actions of the FSA in this respect with their view that the regulatory regime which existed at this time did not entail a 'zero-failure' position. The primary concern of the prudential regulators in such a regime was not the survival of an insurance company, but the protection, partly through the provision of certain information, of the interests of existing and potential policyholders.

150 Nor have I been able to reconcile those actions with one of the fundamental premises of the applicable regulatory regime, namely 'freedom with publicity'. That an insurance company might be in serious financial difficulty and might fail was a central feature of the applicable regime. Information that a particular company was in such difficulty could hardly have been seen as inappropriate in that context. Indeed, under the regulatory regime, it might have been expected that such information would be available.

151 Citizens are entitled to expect that the information provided to them by public bodies does not mislead them as to the true position. That is particularly so, it seems to me, when the central role of such public bodies is to protect the interests of those citizens at least in part through ensuring the disclosure of accurate and complete information about the entities they regulate.

152 The relevant regulatory regime was said and recognised at the time to be predicated in part on the concept of 'freedom with publicity'. The provision of accurate information to policyholders and potential policyholders (and their advisers) about the financial position of life insurance companies was one of the cornerstones of the United Kingdom's approach to prudential regulation.

153 The system was designed to enable consumers (and their advisers) to make their own choices using information that was produced in a prescribed manner and which was sufficient to enable such choices to be made (and such advice to be given) on a sound basis.

154 Yet, when things got difficult for the Society, the FSA failed to bear this approach out and instead provided unqualified assurances that all was well. Such information also contrasted with the clearer information that the Society gave during this period about the fundamental uncertainties and financial difficulties it faced – in, for example, the material it published as background to the Compromise Scheme or within its 2001 returns.

155 I consider that no prudential regulator, acting reasonably, would have given the assurances that the FSA gave during the post-closure period. The information before them should have led the FSA to realise that the assurances that they were routinely providing were unsustainable on the facts and were misleading.

156 That does not mean that the FSA should have opened up the regulatory discussions they were having about the serious nature of the Society's financial difficulties to public scrutiny. Nor does it mean that nothing useful could have been said by the FSA to citizens who enquired about the financial position of the Society.

157 It is one thing to set out impartially a range of options available to a policyholder or to signpost them to sources of independent or specialist advice. However, it is quite another thing to provide assurances which no prudential regulator, acting reasonably, could have given – especially in circumstances where it was plain that those contacting the FSA were deeply concerned about their own financial future and about the uncertain position of the Society.

158 I consider that the information provided by the FSA in this period was inaccurate and misleading and, as such, departed significantly from the standard of information that it is reasonable to expect a prudential regulator to have provided. It was also in sharp contrast to the standard of information that the FSA, acting as conduct of business regulator, expected insurance companies themselves to provide to consumers.

159 The provision of inaccurate and misleading information by the FSA constituted a departure from the applicable standard that was both unreasonable in the circumstances and which fell far short of acceptable standards of good administration.

160 **I consider that the misleading information, about the Society's solvency position and its record of compliance with other regulatory requirements, that was produced by the FSA, acting on behalf of the prudential regulators, during the period after the Society closed to new business, constitutes maladministration. I therefore make such a finding of maladministration against the FSA.**

Conclusion

161 I have made ten findings of maladministration – one against the DTI, four against GAD, and five against the FSA. I now turn to determine whether any injustice resulted from that maladministration and, if such injustice did result, to consider what an appropriate remedy might be for that injustice. I do this in Chapters 12 and 13 of this report.

Chapter 12 – Determinations: Injustice?

Introduction

1 In this Chapter, I summarise the findings of maladministration that I have set out within Chapter 11 of this report. I also set out my determinations as to whether that maladministration resulted in injustice to those who have complained to me.

2 Before doing so, I outline the nature of the concept of 'injustice' as it applies to the work of my Office.

The nature of injustice

3 The concepts of maladministration and injustice were not defined in the Parliamentary Commissioner Act 1967 and Parliament has left it to me, as it did with my predecessors, to develop those concepts – which I and my predecessors have done over the last 40 years.

4 However, it is clear that Parliament did not intend, when using the term 'injustice', to limit the concept to narrow legal definitions. Nor did Parliament intend simply to replicate the remedies that were available to citizens through proceedings in the courts.

5 The Minister who piloted what became the 1967 Act through Parliament, when explaining what was intended by the use of this term, said[1]:

> *We have not tried to define injustice by using such terms as "loss or damage". These may have legal overtones which could be held to exclude one thing which I am particularly anxious shall remain – the sense of outrage aroused by unfair or incompetent administration, even where the complainant has suffered no actual loss.*
>
> *We intend that the outraged citizen who persuades his Member to raise a problem shall have the right to an investigation, even where he has suffered no loss or damage in the legal sense of those terms, but is simply a good citizen who has nothing to lose and wishes to clear up a sense of outrage and indignation at what he believes to be maladministration...*
>
> *We have left both words – maladministration and injustice – undefined in the Bill. We believe that the meaning of the words will be filled out by the practical processes of case work...*

6 The courts have recognised that to be the correct approach in considering the concept of injustice as it applies to the work of my Office and to that of other Ombudsmen in the public sector:

(i) in the first 'Balchin' case[2], the court held that *'the question whether any given set of facts amounts to maladministration – or by parity of reasoning, to injustice – is for the* [Ombudsman] *alone'*;

(ii) in the same case, the court held, in relation to the differences between court proceedings and Ombudsman investigations with regard to injustice, that *'the defence familiar in legal proceedings, that because the outcome would have been the same in any event there has been no redressible wrong, does not run in an investigation by the* [Ombudsman]';

[1] The Rt Hon. Richard Crossman, *Hansard:* 18 October 1966 (col. 51).
[2] *R v Parliamentary Commissioner for Administration, ex parte Balchin* [1997] CCD 146.

(iii) in the second Balchin case[3], the court held that *'the meaning of injustice is... equally capable of being limited to* [financial loss] *or importing considerations which are wider than financial loss';* and

(iv) in *R v Commissioner for Local Administration ex parte S*[4], the court held that *'it must be established that there has been some prejudice to the complainant before a finding of injustice can properly be made. That prejudice may be no more than the loss of an opportunity... and certainly it is not required that any particular damage be established. Indeed, it is quite plain that the word "injustice" was used with a view to indicating something wider than is covered by the concept of damage, and also perhaps to avoid the need to delve into questions of causation which might otherwise arise in certain cases'*.

7 In the more than 40 years since my Office was established, Ombudsmen have found that the concept of injustice is capable of covering:

(i) financial loss caused by official acts or omissions;

(ii) damage deriving from other causes but which has been exacerbated or prolonged by official acts or omissions;

(iii) the loss of opportunities to take remedial action or to pursue a course of action that might benefit a citizen or protect his or her position;

(iv) the frustration of such courses of action embarked upon by a citizen which prevent those courses of action from achieving the desired or another reasonable outcome;

(v) inconvenience or distress;

(vi) a sense of outrage;

(vii) the frustration of legitimate expectations; and

(viii) the expenditure of unnecessary effort or money in the pursuit of an appropriate outcome.

Summary of the maladministration I have found

8 I have made ten findings of maladministration in respect of the acts and omissions of GAD and/or the prudential regulators:

- my first finding is that the failure by the DTI, as prudential regulators, (i) to insist, when approving the appointment in June 1991 of a new Chief Executive, that he should demit office as the Society's Appointed Actuary, and (ii) during the period from 1 July 1991 to 31 July 1997, when one person held the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary, to consider the use of their powers to seek to remove that person from such a 'dual role' constituted maladministration;

- my second finding is that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations, constituted maladministration;

[3] *Ex parte Balchin (No. 2)* (1999) 2 LGLR 87.
[4] (1998) 1 LGLR 633.

- my third finding is that the failure by GAD, when the introduction of the Society's differential terminal bonus policy, intimated within the Society's 1993 returns, was identified by GAD as part of their scrutiny of those returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders constituted maladministration;

- my fourth finding is that the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996 – related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, apparently arbitrary changes to the assumed retirement ages, and (iii) the holding of no explicit reserves for the liabilities associated with prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates – constituted maladministration;

- my fifth finding is that the failure by GAD (i) to ask for the information GAD needed in respect of the Society's 1995 returns to enable them, as part of the scrutiny process, to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society constituted maladministration;

- my sixth finding is that the failure by the FSA, acting on behalf of the prudential regulators, (i) to ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) to ensure that the credit taken by the Society within its returns for 1998, 1999 and 2000 properly reflected the economic substance of that arrangement constituted maladministration;

- my seventh finding is that the failure of the FSA, acting on behalf of the prudential regulators, to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation constituted maladministration;

- my eighth finding is that the failure by the FSA, acting on behalf of the prudential regulators, to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation constituted maladministration;

- my ninth finding is that the unsound basis on which the decision was taken by the FSA, acting on behalf of the prudential regulators, to permit the Society to remain open to new business, following its loss of the *Hyman* litigation constituted maladministration; and

- my tenth finding is that the misleading information – about the Society's solvency position and its record of compliance with other regulatory requirements – that was produced by the FSA, acting on behalf of the prudential regulators, during the period after the Society closed to new business constituted maladministration.

9 When determining in general terms whether or not any maladministration has resulted in injustice to those who have complained to me, I first identify what were the consequences of that maladministration and then I assess whether those consequences constitute an injustice for which no, or no sufficient, remedy has been provided. This I now turn to do.

The consequences of the maladministration I have determined occurred

10 What were the consequences of the ten findings of maladministration that I have determined occurred? I will set out what I consider to be both the specific consequences of each finding and also the general consequences of those findings when they are taken together.

The specific consequences of each finding

The consequences of the first finding of maladministration

11 My first finding relates to the failure by the DTI, as prudential regulators, (i) to insist, when approving the appointment in June 1991 of a new Chief Executive, that he should demit office as the Society's Appointed Actuary, and (ii) during the period from 1 July 1991 to 31 July 1997, when one person held the position of the Society's Chief Executive simultaneously with the position of its Appointed Actuary, to consider the use of their powers to seek to remove that person from such a 'dual role'.

12 One consequence of that failure was that the prudential regulators and GAD became overly reliant on the information provided by one person within the Society – through his completion of the returns and through the meetings that those regulators and GAD, at which the Society was only represented by that person.

13 Another consequence was that the Society was not prompted and/or invited by the prudential regulators to address the unsatisfactory nature of the 'dual role', which was unacceptable in terms of the prudent management of the Society and for regulatory reasons.

14 A further – and important – consequence of this failure was that the system of prudential regulation, designed on the basis that the Appointed Actuary (with operational independence from the executive management of a life insurance company) would play a central role, instead operated in a dysfunctional manner during this period in respect of the Society.

15 The maladministration which I have found resulted in the effective operation of the system of prudential regulation in respect of the Society, and the governance of the Society, being compromised. There was effectively no 'whistle-blower' within the Society during this period to the detriment of the proper governance of the Society and of the prudential regulation of the Society.

The consequences of the second finding of maladministration

16 My second finding relates to the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1990 to 1993, related to (i) the valuation rate of interest used to discount the Society's liabilities and (ii) to the affordability and sustainability of the Society's bonus declarations.

17 One consequence of this failure was that the prudential regulators and GAD could not be satisfied that the Society was acting prudently and with proper regard to the interests and reasonable expectations of its policyholders. Another consequence of this failure is that the Society was never asked to justify whether it could afford its bonus declarations or how it proposed to sustain the level of bonus that it declared.

18 A further consequence was that the impression was given to existing and potential policyholders that the Society was financially sound and able to pay generous bonuses, when the prudential regulators and GAD could not have been satisfied on either point.

19 That maladministration led to lost opportunities to seek further understanding as to whether the Society's business model was inherently prudent or whether that model exposed the Society's members to unnecessary risks.

The consequences of the third finding of maladministration

20 My third finding relates to the failure by GAD, when the introduction of the Society's differential terminal bonus policy, intimated within the Society's 1993 returns, was identified by GAD as part of their scrutiny of those returns, (i) to inform the prudential regulators about the policy, (ii) to raise the matter with the Society, or (iii) to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders.

21 One consequence of this failure was that the prudential regulators, to whom GAD had not disclosed the introduction of the new policy, were disabled from discharging their duties. Another consequence of that failure was that the Society was not asked by the prudential regulators and/or GAD to justify its approach in the light of the reasonable expectations of its existing policyholders and/or of the contents of its advertising, which did not draw to the attention of potential policyholders (or existing policyholders, especially those considering making further contributions to policies which did not contain guaranteed annuity rates) that such a policy existed.

22 Had the prudential regulators raised the matter with the Society, in a context in which the Society was receiving complaints which challenged its application of the differential terminal bonus policy, it seems likely that the Society would have taken legal advice.

23 Had the Society done so at that time, I see no reason to conclude that the legal advice it would have received would be different from that which the Society received later in 1998. That in itself would not have changed events, although I recognise that it is possible that, having received such advice and having to deal with complaints about the differential terminal bonus policy at that time, the Society would have decided to test that policy in the Courts much sooner.

24 That, in my view, would have been all the more likely had the prudential regulators also insisted on full disclosure of the existence of the differential terminal bonus policy within the Society's literature, which might have led to more people realising that such a policy was being applied.

25 Whatever may be the case as to that, the taking by the Society of legal advice at a much earlier stage might have had significant consequences. It might have brought a large number of people who were not eligible for compensation for mis-selling within the scope of such compensation.

26 A further consequence of the failures I have identified in this respect was that the Society took its decisions, such as not to ring-fence new entrants into a different fund, rejecting certain approaches that it received from those interested in acquiring the Society's business and/or as to the validity of its general practices, in a context in which the Society could reasonably believe that it had secured regulatory approval – albeit tacit approval – for its new bonus policy and associated practices.

27 That maladministration resulted in the loss of a number of critical opportunities. Such lost opportunities included opportunities to test the appropriateness of the differential terminal bonus policy, to ensure that the illustrations and advertisements provided to existing and potential policyholders explained the Society's policy and practice, and to take decisions about the future direction of the Society in full knowledge of the reserving requirements to which it was subject and to which the prudential regulators and GAD would eventually draw attention.

28 The Society was not constrained to make provision gradually over time for the costs arising each year from those requirements as those costs accumulated.

29 Maladministration also resulted in the problems which caused the Society eventually to close to new business being obscured until July 1998 and to the loss of opportunities for the Society and for the prudential regulators and/or GAD to begin to address these issues much earlier than they all eventually did.

The consequences of the fourth finding of maladministration

30 My fourth finding relates to the failure by GAD, as part of the scrutiny process, to question and seek to resolve questions within the Society's regulatory returns for each year from 1994 to 1996, related to (i) the valuation rate of interest, (ii) the affordability and sustainability of bonus declarations, (iii) apparently arbitrary changes to the assumed retirement ages, and (iv) the holding of no explicit reserves for the liabilities associated with prospective liabilities for capital gains tax, for pensions mis-selling costs, and for guaranteed annuity rates.

31 One consequence of this failure was that an early opportunity was lost to address the issue of the Society's practice as to reserving for guaranteed annuity rates. Another consequence was that the Society's liabilities were considerably understated.

32 That maladministration reinforced that which I have found in relation to the introduction of the differential terminal bonus policy, in that the problems which caused the Society eventually to close to new business were further obscured and opportunities were lost to address those issues earlier than eventually happened.

The consequences of the fifth finding of maladministration

33 My fifth finding relates to the failure by GAD (i) to ask for the information GAD needed in respect of the Society's 1995 returns to enable them, as part of the scrutiny process, to be sure that the Society had produced a valuation that was at least as strong as the minimum required by the applicable Regulations, and (ii) to pursue the information before them that the omitted information had led to the users of the returns misconstruing the financial strength of the Society.

34 One consequence of this failure was that those reading the Society's returns during this period were capable of being misled as to the strength of the Society's true financial position.

35 Another consequence was that those who used the information and conclusions drawn from the returns by rating agencies and other third parties – including financial advisers, industry publications, and those briefing Ministers – were led to rely on information that did not contain a complete and accurate assessment of the Society's true position. They were thus actively misled.

36 A further consequence was that GAD were unable, with respect to the Society's 1995 returns, to verify the financial position of the Society, as they were not able on that occasion reasonably to be satisfied that the Society's chosen valuation method had produced a result at least as strong as the minimum prescribed in the Regulations as they lacked the information needed to be so satisfied.

37 That maladministration resulted in the reader of the returns not having the information that was before GAD and which, arguably, should have been available to all readers of the Society's published returns. No action was taken when it was clear that those readers were misconstruing the information that was provided. Maladministration also resulted in those who expressed concerns about the Society's solvency being reassured on grounds which were not sustainable.

The consequences of the sixth finding of maladministration

38 My sixth finding relates to the failure by the FSA, acting on behalf of the prudential regulators, (i) to ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and (ii) to ensure that the credit taken by the Society within its returns for 1998, 1999 and 2000 properly reflected the economic substance of that arrangement.

39 One consequence of the acts and omissions of the FSA in this regard was that the Society was permitted to declare a bonus in March 1999. Had the Society not done so, a public warning would have been given to those considering investing in the Society for the first time or to those considering making further contributions to existing policies that the Society was in significant financial difficulty.

40 Another consequence of those acts and omissions was that the solvency position of the Society, as published in April 1999 within its 1998 returns, was misrepresented. Those reading the Society's published 1998 returns would have been misled as to the strength of the Society's financial position. That reinforced the misleading message as to the strength of the financial position of the Society which had been given by the declaration of a bonus a month earlier.

41 A further consequence of the acts and omissions of the FSA was that the ongoing weakness of the Society's financial position was hidden from public view in the Society's published returns for 1999 and 2000. Those considering their options – whether to invest, to make further contributions to existing policies, to convert a policy into an annuity, or simply to stay – were given a misleading picture of the true position faced by the Society and of its solvency position.

42 The maladministration which I have found resulted in the true financial position of the Society being concealed and misrepresented through the publication of returns which contained a misleading picture of the Society's solvency position.

43 That maladministration also resulted in existing and potential policyholders making highly important decisions – some of which were irreversible – about their financial affairs without the benefit of information which the system of prudential regulation was designed to provide to them, in order to enable them to make informed choices.

The consequences of the seventh finding of maladministration

44 My seventh finding relates to the failure of the FSA, acting on behalf of the prudential regulators, to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation.

45 One consequence of the acts and omissions of the FSA in this regard was that they could not be certain that the Society's policyholders and those potential policyholders considering investing or continuing to invest in the Society were being given complete and accurate information about what were the extent and nature of the possible effects should the House of Lords deliver a judgment that was adverse to the Society. Existing and potential policyholders were thus denied information about their potential exposure to significant risk, which was an integral part of informed decision-making as to their financial options.

46 Another consequence of those acts and omissions was that both the Society and the FSA lost an opportunity to consider, either separately or together, whether the scenario planning and other work either had undertaken as preparation for managing the possible outcomes of the *Hyman* litigation was sufficient to address the full range of factors which had exposed the Society to the range of problems which it faced during this period.

47 The maladministration which I have found meant that the prudential regulators could not be certain that the reality that an adverse House of Lords' judgment would crystallise for the Society was not being distorted. Any such distorted reality might inform the published returns and the other publications that the Society produced during this period. The prudential regulators could not be sure that existing and potential policyholders had the full information necessary to take informed decisions.

The consequences of the eighth finding of maladministration

48 My eighth finding relates to the failure by the FSA, acting on behalf of the prudential regulators, to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation.

49 The consequence of that failure is that no proper and contemporaneous record exists as to the basis for that decision. The maladministration which I have found resulted in an absence of documentary evidence to support the basis for an important decision taken by the FSA.

The consequences of the ninth finding of maladministration

50 My ninth finding relates to the unsound basis on which the decision was taken by the FSA to permit the Society to remain open to new business.

51 One consequence of the failure of the FSA to give proper consideration to the range of their powers to protect the interests of both existing and potential policyholders is that those policyholders lost any opportunity to receive the benefit of the sound and robust exercise of the discretionary powers that Parliament had conferred on the prudential regulators in order to protect the interests of such policyholders.

52 Another consequence of this failure was that those who invested for the first time during this period – which could not have occurred had certain intervention action such as the withdrawal or suspension of the Society's authorisation to write new business been taken – or who bought annuities, or who made further contributions to existing policies where there was no contractual requirement to do so, made those decisions in an environment in which accurate and complete information about the financial position of the Society was not available to them.

53 No warning had been given by the prudential regulators, as would have been provided by the exercise of intervention powers such as the withdrawal of authorisation, of the seriousness of the financial position that the Society was in.

54 A further consequence of this failure was that compensation for mis-selling, if any were provided, became an additional liability falling to be met by those existing policyholders.

55 That maladministration resulted in those 'late joiners' and certain other existing policyholders making decisions about their financial affairs without the accurate and complete information necessary to make those decisions on an informed basis.

The consequences of the tenth finding of maladministration

56 My tenth finding relates to the misleading information – about the Society's solvency position and its record of compliance with other regulatory requirements – that was produced by the FSA, acting on behalf of the prudential regulators, during the period after the Society closed to new business.

57 The principal consequences of this deficient information were that reassurance was given to those who contacted the FSA to enquire about the financial position of the Society when that reassurance was not soundly based. Those who had regard to the information provided by the FSA made decisions about their financial affairs having regard to incomplete and inaccurate information provided by the FSA.

58 That maladministration resulted in misleading information about the position of the Society being provided to existing policyholders. Those policyholders were entitled, having regard to its source, to rely on that information as being accurate and not misleading.

The general consequences of the findings taken together

59 I have set out above the consequences which I consider flow from each specific finding of maladministration which I have found to have occurred. In my view, three general consequences flow from the maladministration I have found:

- the first was that the Society's published returns were unreliable;
- the second was that there were lost opportunities to address critical issues earlier; and
- the third was that regulatory decisions were taken on a basis which had insufficient regard to the range of powers that the prudential regulators possessed.

The published returns were unreliable

60 The first general consequence of the maladministration I have found is that the Society's published **returns for each year from 1990 to 2000 were in important respects an unreliable source of information** about the financial position of the Society – about its exposure to guarantees, about the effects of its bonus policies, and about the solvency position which resulted from the determination of its liabilities and the valuation of its assets in a manner required by the applicable law.

61 By saying that the regulatory returns were unreliable, I do not in every case suggest that the Society's returns would have been found to be deficient had appropriate questioning by the prudential regulators and/or GAD taken place. However, the prudential regulators, acting with advice and assistance from GAD, had not verified that those returns were complete, accurate and in compliance with the requirements of the law. Those regulators could thus not have been satisfied that the Society's returns showed its true financial position and were thus reliable.

62 Those published returns materially understated the Society's liabilities in several respects. That would have misled those seeking to assess the financial strength of the Society by considering those returns. Information in the returns was misleading and would have led those reading them to assume that the Society's financial position was stronger than the position reported in the returns, when that was not the case.

63 Anyone investing in the Society – whether as a new investor or as someone making a further investment in it – from the second half of 1991 onwards was at risk of being misled, if they had regard to the regulatory returns, about the financial condition of the Society. The prudential regulators permitted returns to be published which those regulators could not have been satisfied revealed the Society's true liabilities or an accurate financial position.

64 The extent of the failure to verify the Society's financial position as shown in its returns began to become critical in the mid-1990s. Anyone reading the Society's published returns for 1993 would not have been able from reading those returns to understand the implications of the fact that the Society had changed its bonus policy. Those reading later published returns did so without the benefit of adequate disclosure of the relevant issues which it was the responsibility of the prudential regulators and/or GAD to secure.

65 The failure by the Society and the prudential regulators and/or GAD to address relevant issues at this time was to have serious ramifications for the solvency position of the Society and for the reasonable expectations of its existing and potential policyholders.

66 From the second half of 1996 onwards, the Society's published returns should also have – but did not – disclose that the Society was in a very weak financial position. Had the Society been required at that time by the prudential regulators and/or GAD adequately to reserve for its guarantees, which were 'biting' by the time that the 1995 returns were submitted, the financial position of the Society would have looked very different to those considering investing in it.

Lost opportunities to address critical issues earlier

67 The second general consequence of the maladministration which I have found is that the Society and the prudential regulators, acting with the advice and assistance of GAD, **lost opportunities to address critical issues much earlier than they eventually addressed those issues**.

68 In relation to the widely accepted causes of the Society's closure to new business – a low free asset ratio, a policy of full distribution, a failure to reserve for generous and flexible guarantees, and the differential terminal bonus policy – these were all matters which the prudential regulators and/or GAD could have addressed through the scrutiny process in earlier years than 1998.

69 The Society disclosed information about those matters, although on occasion such disclosure was incomplete. Had the prudential regulators raised concerns with the Society at an earlier date, the resulting problems might have crystallised earlier and before they became so acute – thus mitigating or forestalling the impact of those problems on those who invested in the Society afterwards.

70 Some of those factors might have been ameliorated by earlier action but such action was not taken due to maladministration by the prudential regulators and/or GAD. Instead, they developed over time to become intractable. The postponed consideration of those factors and of the options open to the Society enabled the Society to continue to grow and to attract new business.

Decisions taken with insufficient regard to the powers available to the prudential regulators

71 The third general consequence of the maladministration which I have found is that, when critical decisions were taken about the Society – about whether to permit one person to hold the posts of Appointed Actuary and of Chief Executive, about the declaration of a bonus in March 1999, about the solvency position published within the Society's returns for 1998, 1999 and 2000 (in the light of a financial reinsurance arrangement), and about whether to permit the Society to remain open to new business in the period after the House of Lords' judgment – those **decisions were taken on a basis which had insufficient regard to the range of powers that the prudential regulators possessed** and which they had an obligation to consider when coming to those decisions.

72 A failure to give sufficient regard to the powers available to them led to the prudential regulators permitting a situation where, at the heart of the governance of the Society, a cornerstone of the system of prudential regulation was not in place – a situation which continued to exist for more than six years.

73 The failure to take action in respect of the 'dual role' meant that the normal system of checks and balances that existed within insurance companies to mitigate the risk of imprudent business strategies was absent for the whole of the period during which were sown many of the seeds of the financial problems that the Society finally had to face.

74 When the prudential regulators and GAD did initiate appropriate action in 1998, that was negated by maladministration by the FSA in relation to the financial reinsurance arrangement entered into by the Society, with its consequent effects on the decisions by the FSA to permit the declaration of a bonus in March 1999 and in respect of the published solvency position of the Society contained within the returns that were published by 1 May 1999.

75 The weak financial position of the Society, once action was taken by the FSA and GAD to ensure that Equitable made provision for all of their liabilities, was masked by the inclusion by the Society, without a reporting concession, within the reported position for 1998 of an offset for a financial reinsurance arrangement whose principal terms had not been agreed by the valuation date.

76 Any prudential regulator, acting reasonably, would have recognised that, if the economic substance of the financial reinsurance arrangement were assessed, no credit at all could legitimately have been taken for that arrangement within the Society's returns in any case. Even if that were not so, the credit taken had no rational basis and was inconsistent with the arrangement into which the Society had entered. Such a regulator would also have insisted that the Society's returns were appropriately corrected and resubmitted.

77 The Society was permitted by the FSA to declare a bonus and to continue writing new business well beyond a time when, had no maladministration taken place, the weakness of the Society's financial position and deep-seated problems would have been made public.

78 The failure by the FSA adequately to consider what could be done to protect those policyholders who joined the Society in the period after the House of Lords' judgment meant that those people who invested in the Society in that period lost the opportunity to be afforded the protection that the regulatory regime envisaged and may have led to them incurring financial loss due to the fundamental imbalance inbuilt into the Society's with-profits fund about which the prudential regulators and GAD should have known.

79 The reassurances that were given by the FSA to policyholders about the financial condition of the Society during the period following closure to new business gave them comfort which the FSA, acting reasonably, could not have provided.

80 All of the above were consequences which impacted on the policyholders and annuitants of the Society. However, those consequences also impacted on the Society itself and on third parties such as the other users of the returns.

81 Those consequences are relevant to my determination of whether injustice resulted from the maladministration that I have found. I now turn to consider that question.

Did injustice result from maladministration?

82 Do the consequences which I have determined flowed from the maladministration I have found constitute injustice to those who have complained to me?

83 I will deal in turn with each of the specific consequences of the maladministration which I have identified but, when doing so, I will consider together the specific consequences of the findings which relate to the content of the Society's returns in the period prior to 20 June 1998. I will address my other findings separately.

84 I take that approach because I consider that specific elements of the content of the returns cannot be addressed in isolation from each other. The users of those returns would be looking at the financial condition of the Society (or any other insurance company) as published within the returns as a whole.

85 Such a user would be entitled to assume that the published returns were accurate, complete, in compliance with the regulatory requirements, and not misleading. This assumption would be based on a belief – encouraged by the nature of the concept of 'freedom with publicity' – that the returns as a whole were not misleading and set out the true position.

Do the specific consequences constitute injustice to those who have complained to me?

The 'dual role'

86 Do the specific consequences that I have identified as being the result of my finding of maladministration in relation to the 'dual role' – the simultaneous holding by one person of the two posts of Appointed Actuary and Chief Executive of the Society – constitute injustice to those who have complained to me?

87 I consider that I am unable to determine this question. Such a judgement necessarily involves making findings about the actions of bodies or individuals who are not in my jurisdiction. In order to identify whether anything of substance changed once the dual role was ended, I would have to embark on an assessment of the relative merits of the persons who held the relevant posts at the Society. But I have no power to do so. I would also need to examine the commercial affairs of the Society. That I also cannot do.

88 **In that context, I make no determination of this question.**

The Society's regulatory returns for 1990 to 1996

89 Do the specific consequences that I have identified as being the result of my findings of maladministration concerning the scrutiny of the returns for 1990 to 1993, the scrutiny of the returns for 1994 to 1996, and the acts and omissions of GAD in relation to the Society's presentation of two valuations within its returns – which all relate to the unreliability of the information published within those returns for 1990 to 1996 – constitute injustice to those who have complained to me?

90 I consider that my determination of this question must turn on the purpose of the returns and the nature of the maladministration I have found in respect of the contents of those returns.

91 In Chapter 9 of this report, I have concluded that the purpose of this mechanism was thus twofold: to enable the prudential regulators to monitor the financial position of insurance companies and to provide those considering investing in such a company with accurate and complete information about each company, on which those investors could base their investment decisions.

92 I have found that the returns published by the Society in every year from 1990 to 1996 were unreliable as a source of information for existing and potential policyholders and their advisers. The prudential regulators and GAD did not verify the position in respect of the reserves held for the guarantees contained in many of the Society's policies, in respect of the valuation rates of interest applied by the Society when calculating its liabilities, and in respect of the true amount of free assets that the Society possessed.

93 All of those matters were central to any assessment of the financial condition of the Society. I have also found that the actions of GAD in relation to those matters constituted maladministration.

94 I consider that those deficiencies and omissions undermined the ability of the users of the returns to be able to rely on the information contained within those returns as being complete, accurate, and compliant with what the law required. Given that one of the fundamental purposes of those returns was the ability to rely on this information, I consider that injustice was capable of resulting from such maladministration.

95 In determining whether a particular individual has sustained injustice in this context, I would normally expect to see three things:

- first, that the individual had relied on the information in question;
- secondly, that such reliance had been reasonable in the circumstances; and
- finally, that loss (either of a financial kind or the loss of an opportunity) had resulted.

96 By reliance, I do not mean that it should be expected that an individual policyholder or annuitant should now, perhaps twenty years after the relevant events, be expected to produce copies of the information or advice on which they relied. Nor do I consider that the principal means through which policyholders would have been influenced by the information contained within the Society's regulatory returns was through them reading the returns at Companies House.

97 In the context that I have outlined in this report, I consider that the reliance that an individual (or his or her advisers) placed on the information contained with the Society's returns when considering their financial options could have been as a result of the comparative analyses of life insurance companies, company profiles, ratings produced by agencies, or advice derived by actuarial consultants and others from their reading those returns.

98 Any such reliance, given the purpose of the regulatory returns and the nature of the system of prudential regulation was, in my view, reasonable.

99 The only questions, therefore, are whether an individual relied on the information and did so to their detriment. That can only be determined at an individual level.

100 **I find that injustice was sustained by any policyholder who relied on the information contained in the Society's returns for 1990 to 1996 and who suffered either a financial loss or a lost opportunity to take an informed decision as a result of such reliance. Where a policyholder neither relied on this information nor suffered a loss of either type, I find that no injustice resulted from this maladministration.**

The intimation of the Society's differential terminal bonus policy

101 Do the specific consequences that I have identified as being the result of my finding of maladministration related to the failure by GAD when they noted its introduction to inform the prudential regulators about the Society's differential terminal bonus policy, or to raise the matter with the Society, or to seek to identify what the rationale was for the introduction of the policy and how it was being communicated to policyholders constitute injustice to those who have complained to me?

102 The biggest impact of the failure to act when the differential terminal bonus policy was introduced derived from the lost opportunity to look back and to establish what problem that policy was designed to address.

103 I have no doubt that an opportunity was lost to engage the Society in discussion about the rationale for the introduction of this new policy, about whether that policy met the reasonable expectations of the Society's policyholders, and about whether those policyholders were being properly informed about that new policy.

104 But what effect did this have? I consider that my determination of this question must focus on what would have happened had the maladministration not occurred. Absent that maladministration, would things have been the same?

105 Had no maladministration occurred, I consider that it is, on the balance of probabilities, likely that the Society's growing exposure to guaranteed annuity rates would have been understood much earlier, as would the Society's related reserving practices.

106 The requirements of the prudential regulators were not made clear to the Society at an early and appropriate stage. Instead, the Society was faced in the period after July 1998 with a position in which those regulators were insisting that it established in one go reserves of approximately £1.5 billion in respect of the liabilities arising from those guarantees.

107 Had the prudential regulators and/or GAD insisted, at the time that the differential terminal bonus policy was introduced, on full reserving for the liabilities arising from those guarantees, the financial effect on the Society of such a requirement was not likely to have been as onerous as it had become by 1998.

108 During the period from 1994 to 1996, reserving for those guarantees would not have been difficult for the Society to accommodate over that period, as those guarantees were not always deeply 'in the money'.

109 During that period, the amount of the liabilities associated with those guarantees was still likely to have been manageable within the resources of the Society as, at that time, it still had open to it the possibility of using (or using to a greater extent) various methods to mitigate the impact of any reserving requirement.

110 The Society could have considered changing its investment strategy as part of its planning process or could have sought to secure the reinsurance of the relevant risks, or could have used a future profits implicit item for a higher amount. Those alternatives were not available to the Society in later years when this issue finally crystallised, as many of them had by then already been used to address other issues.

111 Had no maladministration occurred, the Society would have been required to establish the required reserves over time and would have then had time to plan for the onset of the considerable liabilities with which they would be faced as the business which contained those guarantees matured.

112 The other options open to the Society could then have been explored sufficiently early for them still to have been available and viable. Decisions taken by the Society – such as in relation to overtures from other companies interested in the de-mutualisation of the Society – would have been taken in a much changed environment.

113 This had an effect on those considering investing in the Society in the period between 1990 and 1998. Those investors took decisions as to whether to invest in the Society in a context which would not have existed had maladministration not occurred.

114 If the maladministration had not occurred, the financial position of the Society, as published in its returns, would have indicated the potential exposure of the Society to the growing liabilities that those guarantees produced. This would have been a critical factor for any potential investor to take into account when balancing the advantages and the risks of such an investment as part of taking an informed decision about their financial affairs.

115 That the Society's returns did not provide such an indication prevented potential policyholders from ascertaining the Society's true position.

116 Had the Society been required to establish reserves and had it, as a consequence, been required to take the other steps available to the Society to mitigate the growing liabilities that it faced, the picture presented of the Society's affairs to existing and potential policyholders might also have been further transformed.

117 An earlier or more extensive use of a future profits implicit item within the Society's returns would have been a clear indication of the weakness of its financial position. Changing investment strategy would have directly affected the returns on the Society's assets that were available to fund bonuses. Traditional reinsurance would have been costly, thus further reducing the assets available to fund policyholder proceeds.

118 That the Society was not required to consider those options meant that existing and potential policyholders were unable to consider all the options, with the impact that those options would necessarily have had on the Society's financial position, when considering whether to invest further or for the first time in the Society or to purchase an annuity from it with their pension fund.

119 Existing and potential policyholders lost the opportunity to take informed decisions about their affairs in full knowledge of all the factors related to the Society's financial position that were relevant to such decisions.

120 I do not consider that it is possible to conclude that financial loss resulted from this aspect of the maladministration which I have found. I am unable on the balance of probabilities to make findings about what policyholders would or might have done differently had the Society been constrained, as a result of regulatory attention at the time of the introduction of the differential terminal bonus policy, to address at an earlier date the issue of reserving for the liabilities arising from these guarantees. I therefore make no finding of injustice in the form of financial loss to policyholders in relation to this maladministration.

121 **However, I consider that the loss of opportunities to take informed decisions about their financial affairs during the period from July 1994 to April 1999 in full knowledge of the exposure of the Society to guaranteed annuity rates and of the risks that such exposure generated constitutes injustice to policyholders and I consequently make a finding that policyholders suffered such injustice as a result of maladministration.**

Financial reinsurance

122 Do the specific consequences that I have identified as being the result of my finding of maladministration related to the failure by the FSA to ensure that the financial reinsurance arrangement was not taken into account within the Society's 1998 returns without an appropriate concession being given, and to ensure that the credit taken by the Society within its returns for 1998, 1999 and 2000 properly reflected the economic substance of that arrangement, constitute injustice to those who have complained to me?

123 I consider that the maladministration relating to the acts and omissions of the FSA in permitting the Society to take the credit that it did for the financial reinsurance arrangement within the Society's 1998 regulatory returns, which were available to the public by 1 May 1999, constituted a significant turning point. Those acts and omissions represent, in my view, a critical juncture in the sequence of events which I have recounted in this report.

124 That the Society was permitted by the FSA to take any credit within its 1998 returns, without the required concession, had significant consequences. That was reinforced by the fact that the credit that was taken with the permission of the FSA totalled £809 million – despite the fact that, had regard been had, as it should have been, to the economic substance of the arrangement, no credit would have been permissible at all.

125 The Society's 1998 returns were available to the public by 1 May 1999. Had the FSA acted, as they should have done, they would have ensured that the financial reinsurance arrangement was given no credit within those returns, with all the ramifications that this would have had on the reported financial position of the Society.

126 I consider that, in those circumstances and on the balance of probabilities, if the Society had sought to declare either a reversionary bonus or a terminal bonus in March 1999, the FSA would have taken action to prevent the declaration from taking effect, on the grounds that such a declaration would have adverse effects for the reasonable expectations of the Society's policyholders if it were later to be reduced.

127 Any failure to make such a bonus declaration was recognised, at the time, to be 'commercial suicide' by both the regulatory bodies and the Society itself. Whether or not in fact the Society did declare a bonus, the Society's published regulatory solvency position would have been very weak at that point. This would have occurred in a context in which the Society's serious financial position was not yet generally known to the public.

128 Once that financial position became known, I consider that many fewer new prospective policyholders, acting reasonably, would have taken out with-profits policies with the Society. The Society's financial position would have become known shortly after the Society announced, as it would have had to do, that it was not declaring a bonus. If in fact it did declare a bonus, its financial position would have become known by 1 May 1999, when the Society's 1998 returns were published.

129 I also consider that many fewer existing policyholders would have taken out a with-profits annuity, from which there was no subsequent prospect of exit.

130 Furthermore, I consider that many fewer existing policyholders would have made further contributions to existing policies in the circumstances which would have prevailed had this maladministration not occurred.

131 Under the applicable regulatory regime, whether to declare a bonus or to make arrangements for the reinsurance of risks were matters for the Society in the first instance. However, under that regime, how reinsurance arrangements were to be treated within the regulatory returns for the purposes of demonstrating the solvency of an insurance company – or whether the declaration of a particular bonus put the solvency position of such a company at risk – were matters of direct concern to the prudential regulators, who were under an obligation to verify the financial position of life insurance companies such as the Society.

132 Such an insurance company was entitled to seek to protect their position. Commercial considerations would have been influential when they did so. The role of the prudential regulators was different. Their role was to protect the interests and expectations of existing and potential policyholders and to ensure that such companies acted prudently and in accordance with the obligations to which they were subject.

133 On 24 November 1998, following an earlier meeting with the Treasury, as prudential regulators, and GAD, the Society had begun to consider what options it had in the light of the view that had been expressed by those regulators that the Society needed to take action to improve its solvency position if it wanted to declare a bonus.

134 For any such action to have been taken into account within the Society's 1998 returns, thus contributing to its reported solvency position, it would either have to have been in place on or before 31 December 1998 or have been at such an advanced stage of completion that a concession could reasonably have been granted by the prudential regulators by that date.

135 That gave the Society no more than six weeks – and, given the holiday period which affected the ability to take action in the markets, probably considerably less – to effect any remedial action.

136 In that context, and given that many other options, such as 'genuine' reinsurance, would have been so expensive as not to be realistic in the circumstances in which it found itself at that time, the Society recognised that its main option was financial reinsurance.

137 The alternative was to publish a very weak solvency position. I acknowledge, however, that it would, in theory, have been possible for the Society to have sought to sell equities and buy into gilts, thus improving its asset distribution for solvency purposes. That might have improved the reported position of the Society to a reasonable degree.

138 However, given the lack at that time of public knowledge of the extent and full nature of the difficulties that the Society faced, I consider that a significant switch from equity holdings into gilts compressed into a short timescale before the end of the year might have been difficult to achieve.

139 This ran the risk of causing additional damage to the value of the Society if it had been viewed, as a result, as a 'distressed seller'[5]. A move to a more defensive investment portfolio would also have further weakened the Society's marketing message. This would not have mitigated the public relations impact on the Society; indeed, it would have reinforced it.

140 Given that, I consider that, on the balance of probabilities, had no maladministration taken place and had no credit been permitted – as it should not have been – for the financial reinsurance arrangement within the 1998 returns, the Society would have been very publicly in such a parlous position that its ability to attract new investments would have been greatly constrained. That this did not happen had a significant impact on subsequent events.

141 In order to put the Society's finances on a footing that would permit it both to declare a bonus and to report a solvency position that would not alarm existing policyholders and potential investors, immediate and significant action needed to be taken.

142 It should be remembered, however, that the full extent of the issues was not, at that time, being addressed and that, had that not been so, the scale of the action required would have been considerably greater.

[5] That is, someone who is under severe pressure to dispose of an asset, usually because of a dire financial position.

143 A full assessment of the Society's financial position, had such been undertaken, would have established that the Society was using a 'quasi-zillmer adjustment'. As a result, the Society's liabilities were also being understated by what was subsequently, in respect of the Society's 1999 returns, calculated by the then auditors of the Society to be £950 million. This would have been a further issue to address.

144 I am satisfied that 1 May 1999, by which time the Society's precarious position would have been made fully public had no maladministration occurred, is a critical juncture – and that the acts and omissions of the prudential regulators in respect of the financial reinsurance arrangement played a central part in the ability of the Society to continue to attract business after that date.

145 I consider that the prudential regulators failed to fulfil their obligations in respect of the way in which the financial reinsurance arrangement was treated within the Society's returns for 1998, 1999 and 2000. Had those regulators acted properly, the attractiveness of the Society as a potential investment vehicle would have been wholly undermined. The investments which were made were undertaken in a context which was distorted as a result of maladministration.

146 **I find that, in respect of all those who joined the Society or paid a further premium that was not contractually required in the period after 1 May 1999, any financial loss that they have sustained constitutes injustice in consequence of maladministration. Those affected by that maladministration have also suffered injustice in the form of lost opportunities to take informed decisions about their financial affairs.**

147 I will address questions as to whether individuals have sustained actual financial loss which has not been remedied when I address questions of remedy in Chapter 14 of this report.

The potential impact of losing the Hyman litigation on the Society

148 Do the specific consequences that I have identified as being the result of my finding of maladministration related to the failure of the FSA to pursue the issue of the proper disclosure, within the Society's regulatory returns for 1998 and 1999, of the potential impact on the Society of it losing the *Hyman* litigation constitute injustice to those who have complained to me?

149 Given my finding about the injustice which flowed from the maladministration I have found in respect of the financial reinsurance arrangement, it is not necessary to determine this question, as anyone affected by this maladministration would already be covered by the finding of injustice that I have made in relation to that financial reinsurance arrangement.

150 **I make no further finding on this question.**

The failure to record the decision to permit the Society to remain open to new business

151 Do the specific consequences that I have identified as being the result of my finding of maladministration related to the failure by the FSA to record their decision to permit the Society to remain open to new business, following its loss of the *Hyman* litigation constitute injustice to those who have complained to me?

152 While the failure to record the decision constituted maladministration, no consequences flowed from that maladministration for those who have complained to me.

153 **In those circumstances, I find that this maladministration did not lead to injustice.**

The basis on which the decision to permit the Society to remain open to new business was taken

154 Do the specific consequences that I have identified as being the result of my finding of maladministration related to the unsound basis on which the decision was taken by the FSA to permit the Society to remain open to new business, following its loss of the *Hyman* litigation, constitute injustice to those who have complained to me?

155 Given my finding about the injustice which flowed from the maladministration I have found in respect of the financial reinsurance arrangement, it is not necessary to determine this question as anyone affected by this maladministration would already be covered by the finding of injustice that I have made in relation to that financial reinsurance arrangement.

156 **I make no further finding on this question.**

The information provided by the FSA after closure

157 Do the specific consequences that I have identified as being the result of my final finding of maladministration – which relates to the misleading information, about the Society's solvency position and its record of compliance with other regulatory requirements, that was produced by the FSA during the period after the Society closed to new business – constitute injustice to those who have complained to me?

158 I consider that the maladministration which I have found in relation to this official information meant that such information was unreliable as a guide to the true financial position of the Society and to its record of compliance with the regulatory requirements to which it was subject. Such unreliable information, given its source and the context in which it was given, was undoubtedly capable of causing injustice to those who received it if they acted on that information to their detriment.

159 I have explained above that, when considering whether unreliable information has led to injustice to an individual, I would expect to see that such an individual had relied on the information in question, that such reliance had been reasonable in the circumstances, and that either financial loss or the loss of an opportunity had resulted.

160 I consider that those factors should guide my consideration as to whether injustice resulted from the inaccurate and misleading information given by the FSA during the post-closure period.

161 There is, however, one difference in the context from that which pertained in respect of the unreliable information contained in the Society's returns for 1990 to 1996 and I have had regard to this difference when considering this question.

162 In my view, anyone who had regard to the information provided by the FSA in this period could not be said to have acted reasonably if they, without further enquiry, relied on this information alone when making any decision about their financial affairs.

163 Unlike in the earlier period covered by this report, the Society was at this time widely known to be in financial difficulty. It had closed to new business and was reporting a very weak solvency position. The Society was issuing information as background to its Compromise Scheme which set out the fundamental uncertainties that it faced.

164 Widely publicised policy value cuts had been imposed by the Society in July 2001. The Society's returns for 2001 were later to underline the weakness of its financial position and the doubts that it had met the regulatory solvency margin at all times throughout 2001 if certain unresolved reserving issues had been taken into account.

165 In this context, whatever the information provided by the FSA, it was widely known that the Society was in deep difficulty and that one way of balancing the competing demands on its with-profits fund was by reducing the payouts that the Society was making.

166 I recognise that the FSA was seen as an authoritative and impartial source of information about the financial security of insurance companies. Given their role, that was entirely reasonable. However, the FSA did not, and did not purport to, give tailored or specific advice to individuals about their own circumstances and options.

167 I consider that, in order to have sustained injustice as a result of this maladministration, those who acted in reliance on the information they received from the FSA and who suffered either a financial loss or a lost opportunity need also to show that such reliance was reasonable in the circumstances. That can only be determined at an individual level.

168 **I find that injustice resulted from maladministration to all those who can show that they relied on misleading information provided by the FSA, that such reliance was reasonable in the circumstances, and that it led to a financial or other loss. Where all this cannot be shown, I find that no injustice resulted from this maladministration.**

The injustice claimed on behalf of complainants

169 But what of the injustice claimed by those representing complainants – that financial loss in the form of the July 2001 policy value cuts was a direct consequence of regulatory failure?

170 I would first record my conclusion that an argument that maladministration alone caused the policy value cuts is not one that could be sustained.

171 There is no basis for determining that the maladministration which I have found to have occurred caused, and was the sole cause, of the particular financial losses that those representing complainants say have been sustained, when regard is had to the effects of stock market movements or other commercial factors on the decision taken by the Society to make those policy value cuts.

172 Nor can the wider economic context – and the falls in the value of the stock market during 2000 and 2001 – be ruled out as being a contributory factor to the need for the Society to consider how best to stabilise its financial position.

173 All that suggests that the maladministration that I have found that was specific to the regulation of the Society cannot alone be seen to have caused the policy value cuts.

174 It is impossible to ignore the industry-wide reductions in with-profits payouts which occurred some time after the Society's own cuts. Those cuts demonstrate the wider impact of the economic context. The also demonstrate that the Society's particular position influenced the timing of those reductions, which will itself have affected the impact on some individual policyholders.

175 However, that does not mean that the maladministration which I have found to have occurred is wholly irrelevant when considering the factors which led to the creation of the situation in which the Society's new Board decided that it was prudent and/or necessary to make those policy value cuts.

176 It seems to me that a fundamental premise behind the policy value cuts was the need to rebalance the Society's finances due to the natural consequences of the events which led to the closure and which were in due course compromised through the Companies Act scheme of arrangement.

177 The responsibilities of the prudential regulators to verify the solvency of insurance companies and to protect the reasonable expectations of policyholders gave the prudential regulators a unique role.

178 Those regulators also considered, at the time that the Society closed to new business approximately eight months prior to the policy value cuts, that the Society was unique among the life insurance industry and that this distinctiveness had played a central role in its closure to new business.

179 As I have explained in Chapter 1 of this report, Treasury officials at that time had explained to the Tripartite Standing Committee their view that the problems faced by the Society had been caused by a unique set of circumstances. The four most important factors identified in that discussion were:

- first, that Equitable had for many years operated a policy of full distribution of any surplus through bonuses to their with-profits policyholders and a policy of not building up a free estate, leaving the Society with a comparatively low level of free assets;
- secondly, that Equitable, being a mutual, had no access to additional, shareholder capital;
- thirdly, that Equitable had offered relatively generous and flexible guarantees on certain types of policy; and
- finally, that the proportion of the Society's business to which those guarantees applied was much higher than was the case for other companies.

180 What the prudential regulators recognised at the time were the root causes of the Society's closure to new business were matters about which those regulators had – or could have had – information many years before the consequent relevant events occurred. All of that must have had an impact on the Society.

181 Given the nature and extent of the maladministration I have identified, it seems to me that it is not possible to say that regulatory issues are unrelated or merely incidental to this question.

182 If I were to accept that such a fundamental failure of the system of prudential regulation as this report has identified would have had no impact whatsoever on the fate which befell the Society, it would, it seems to me, beg the question as to what the purpose of such a system of regulation was.

183 Indeed, it is my view that the maladministration I have found to have occurred played a contributory role in the creation of the circumstances that led to the decision to cut the policy values of the Society's policyholders. While

the external context and matters unrelated to the acts and omissions of the prudential regulators and/or GAD did have a direct impact on the *creation* of the situation, part of the reasons why the Society's options were limited was a direct result of regulatory failure.

184 Other companies faced difficult market conditions and reduced the proceeds paid to policyholders as a result of reduced investment returns. What made the Society different was that the methods available to it were constrained by the nature of the financial position in which the new Board found itself.

185 I consider that it would be impossible for me definitively to determine to what extent the losses claimed on behalf of complainants in the form of the July 2001 policy value cuts were unique to Equitable and, moreover, a direct consequence only of regulatory failure in respect of the particular supervision of the Society.

186 That would require me to go beyond the terms of reference of this investigation, to enter territory over which I have no jurisdiction, and to speculate rather than determine questions about the evidence before me.

187 But in any case, I do not need to do so. I am satisfied that maladministration was a contributory factor in the creation of the circumstances which led to the decision that it was prudent and/or necessary to make those policy value cuts.

188 **I therefore find that any losses associated with the July 2001 policy value cuts are not exclusively attributable to the maladministration which I have found to have occurred but that such maladministration was one among many contributory factors to those losses.**

189 Having determined whether maladministration led to injustice, I now turn to set out my disposal of each complaint within the terms of reference for the investigation which led to this report. I do this in Chapter 13 of this report.

Chapter 13 – My disposal of the complaints

Introduction

1 In this Chapter, I set out whether or not I uphold in full or in part each head of complaint contained within the terms of reference for the investigation which led to this report. Those heads of complaint were set out in Chapter 4 of this report.

2 This Chapter is structured in the following way:

(i) in paragraphs 3 to 15, I explain my approach to the determination of complaints at the end of any investigation;

(ii) in paragraphs 16 to 136, I set out my disposal of each of the specific heads of complaint contained within the terms of reference for the investigation which led to this report; and

(iii) in paragraphs 137 to 180, I set out my disposal of the general complaint contained within those terms of reference.

My approach to the determination of complaints

3 In order to be able to uphold any complaint that I consider, four conditions have to be satisfied. Those conditions are:

- first, that the complaint is **not misconceived**;
- secondly, that the complaint **has a sound basis in fact**;
- thirdly, that the relevant acts or omissions constitute **maladministration**; and
- finally, that any such maladministration led to **injustice** to those who have complained to me for which no remedy or no sufficient remedy has already been provided.

Identifying whether a complaint is misconceived

4 A complaint that is misconceived is one which has no prospect of being upheld whatever the outcome of any investigation. Such a complaint can belong to this category because, after closer examination, it turns out that it relates to action that is not within my remit, or that no injustice was ever sustained, or that any injustice sustained has since been remedied.

5 It can also belong to that category because, even if the allegations which underpinned the complaint were found, after investigation, to have a sound basis in fact, there would be no basis on which I could make any finding of maladministration.

6 That would generally be the case where the complaint was predicated on a view of the obligations of the relevant public body which was inconsistent with the obligations that were in fact imposed on that body, which I would establish, as part of an investigation, after identifying the general and specific legal and administrative obligations which such a body had at the relevant time.

Identifying whether a complaint has a sound factual basis

7 Whether a complaint is soundly based in fact is the core question that I consider during the course of any investigation. This I do by verifying, through consideration of the documentary and other evidence available to me, what actually happened in relation to the subject matter of the relevant complaint or complaints.

Determining maladministration

8 In Chapters 5 and 11 of this report, I have explained my approach to determining whether maladministration has occurred. Having established the facts and the overall standard which applies to the events which form the basis of the complaints made to me, I then assess those facts against that overall standard.

9 In particular, I assess whether or not an act or omission on the part of the body complained about constituted a departure from the applicable standard. If so, I then assess whether that act or omission was so unreasonable in the particular circumstances, when regard is had to the specific legal or administrative context of the case, as to constitute maladministration; and/or whether any such act or omission otherwise fell so far short of acceptable standards of good administration as to constitute maladministration.

Determining injustice

10 In Chapter 12 of this report, I have explained my approach to injustice. When determining in general terms whether or not any maladministration which I have determined has occurred resulted in injustice to those who have complained to me, I first identify what were the consequences of that maladministration and then I assess whether those consequences constituted an injustice for which no, or no sufficient, remedy has been provided.

Disposing of complaints

11 Where all four of the above conditions are satisfied, I would uphold the specific complaint in full.

12 Where a specific complaint contains more than one alleged act or omission which is the subject of that complaint, and where all four conditions are satisfied only in respect of one or more (but not all) of those allegations, then I would uphold the specific complaint in part.

13 Where none or not all of those conditions are satisfied in respect of any of the allegations, then I would not uphold the specific complaint and would dismiss it.

14 As I explained in Chapter 4 of this report, the terms of reference for this investigation contained eighteen specific heads of complaint and one general complaint. The general complaint was that *'the public bodies responsible for the prudential regulation of insurance companies ... and GAD failed for considerably longer than a decade properly to exercise their regulatory functions ... and were therefore guilty of maladministration'*. The specific heads of complaint contained, in most cases, more than one allegation. Many of those allegations overlapped with or duplicated other such allegations within different heads of complaint.

15 I will now set out my disposal of each of those specific heads of complaint and also of that general complaint.

The specific complaints

Complaint A – the prudential regulators had not been sufficiently resourced, and had not all possessed the necessary skills, to contribute effectively to the overall regulatory process and to responsibly exercise their discretionary powers as intended by Parliament and by the European Union.

16 Complainants alleged that the prudential regulators and/or GAD were not sufficiently resourced and did not possess the necessary skills to contribute effectively to the regulatory process.

17 Having reviewed all of the evidence before me, I have seen nothing to suggest that the prudential regulators and/or GAD were insufficiently resourced to undertake their responsibilities appropriately. Nor have I seen any evidence that would sustain a finding that those regulators and/or GAD were not sufficiently skilled to undertake their statutory functions.

18 My attention has been drawn to the view of Lord Penrose that insufficient resources or skills had played a part in the way in which the Society was regulated. I would respectfully suggest that his remarks were predicated on his view that a different system of regulation should have existed, when it did not in fact exist. I can derive no assistance from such a view.

19 In any event, there is no factual basis for this allegation. I therefore dismiss this head of complaint.

Complaint B – that the prudential regulators had failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by insurance companies.

20 Complainants alleged that the prudential regulators failed to liaise and to co-operate effectively with those responsible for the regulation of the conduct of business by the Society, particularly in respect of its communications with its policyholders.

21 Having considered the applicable statutory and administrative framework which governed the discharge by the prudential regulators of their functions during the period covered by this report, I find this complaint to be partly misconceived.

22 The conduct of business regulators and the prudential regulators had discrete spheres of responsibility. It was the responsibility of the conduct of business regulators to oversee how the Society was (and how other insurance companies were) interacting with customers and whether the information given to those customers conformed to the requirements of the conduct of business rules about information that was true, fair and not misleading.

23 I can make no finding about the acts or omissions of the conduct of business regulators in this, or any other, respect – as they are not within my jurisdiction.

24 That said, the prudential and conduct of business regulators had in April 1991 entered into an agreement concerning the information that they would pass to each other in certain specified circumstances.

25 This agreement provided that the prudential regulators would pass information to the conduct of business regulators where there were grounds for concern about the integrity or competence of those directing or managing an insurance company; where otherwise there were grounds for doubt about the financial soundness of the company – and where consideration was being given to the instigation of a formal investigation; where consideration was being given to the use of other powers of intervention; or where consideration was being given to the withdrawal of authorisation.

26 That agreement also provided that information would be passed by the prudential regulators to the conduct of business regulators where a company's margin of solvency either had fallen or where it was anticipated that it would fall below the required minimum margin.

27 Indeed, as the detailed chronology of events set out within Part 3 of this report shows, once the prudential regulation of the Society was undertaken by the FSA, which coincided with the onset of the significant problems that the Society faced in the period after July 1998, those regulators regularly were in contact with their colleagues within the FSA who were responsible for conduct of business regulation. Such liaison grew in intensity throughout the post-closure period.

28 But what of the earlier period, when the two sets of regulators operated within different public bodies? While there were isolated occasions in that earlier period where it might be arguable that liaison pursuant to the agreement between the two regulators was called for, those occasions were few and far between, were about matters which did not evidence any pattern that would have indicated that such liaison was necessary, and related to peripheral issues that were not the focus of the prudential regulatory regime.

29 In any case, in so far as PRE is concerned, as I explain in this report the prudential regulators were required, if information came to their attention, to take their own action with respect to such matters.

30 It was not liaison with the conduct of business regulators which was necessary when grounds arose for the consideration of the need to act to protect PRE. However useful such liaison might also have been, the prudential regulators were under an obligation to consider the use of their own powers in such circumstances.

31 As it is based on an understanding of the relevant regulatory regime which is misconceived, I therefore dismiss this head of complaint.

Complaint C – that the prudential regulators had not operated the regulatory regime as it was intended to be implemented by Parliament and in conformity with European Directives. Those regulators instead had chosen to regulate Equitable with a 'light touch' – a concept not evident from or provided for under the Insurance Companies Act 1982 and the European Third Life Directive, nor one consistent with those statutory provisions.

32 Complainants alleged that the approach to the regulation of the Society was exceptionally and unjustifiably lenient, when compared to that adopted with other companies, and that the prudential regulators had applied a 'two-tier' standard of regulation.

33 To the extent that this allegation contends that there was a conscious decision by the prudential regulators to apply a different standard of regulation to the Society than for other similar companies of a similar size and writing similar business, I have seen no evidence that would support such a contention. There is no sound basis in fact for that allegation.

34 Furthermore, there were objective and entirely proper reasons for the differential treatment of certain insurance companies that were grounded both in the statutory and administrative elements of the applicable regulatory regime.

35 First, the provisions of the 1982 Act applied different standards of oversight and scrutiny and wider powers of intervention to newly authorised companies than those standards and powers which applied to existing companies. Similarly, companies where there had been a change of control were subject to a more intrusive regulatory regime, which included more frequent reporting and the need to submit and have a business plan approved. Those additional requirements also continued to apply to newly authorised companies for specified periods.

36 Secondly, there were administrative systems operated by the prudential regulators and by GAD when advising and assisting those regulators which were relevant to the standard of regulation applied in individual cases. Those systems included the system of priority ratings used by GAD, when considering the order in which the scrutiny of the annual returns of insurance companies would be undertaken, and administrative mechanisms, which enabled the prudential regulators to monitor companies that were giving grounds for disquiet.

37 The prudential regulators, acting with the advice and assistance of GAD, applied a closer level of scrutiny to insurance companies which, in their view, were demonstrating trends that might lead to them becoming a cause for concern.

38 In the light of the nature of the regulatory regime that I have described in Chapter 5 of this report, it seems to me entirely reasonable for the prudential regulators to have developed guidance or administrative systems to enable them, in the words of the Minister who piloted the Insurance Companies (Amendment) Act 1973 through Parliament, to take or to require *'suitable corrective action in time to avert the consequences of imprudent or misguided policies'*. That the prudential regulators did.

39 I consider that it was wholly consistent with the regulatory regime relevant to this investigation for the prudential regulators to have applied differential levels of scrutiny to the affairs of insurance companies where the decision to do so was based on objective criteria or was appropriate to enable or assist them in the discharge of their statutory functions.

40 To that extent, this complaint is also misconceived. Having no sound basis in fact and being partly based on a misunderstanding of the relevant regulatory regime in place at the time, I therefore dismiss this head of complaint.

Complaint D – that the prudential regulators and GAD had allowed successive chief executives or managing directors of the Society simultaneously to hold the post of appointed actuary, despite recognising the potential for conflict of interest. This had not been compatible with the basis of the regulatory regime.

41 Complainants alleged that the prudential regulators and GAD permitted one person to hold the dual roles of the Society's Chief Executive and Appointed Actuary and that this had been incompatible with the basis of the regulatory regime.

42 I have found that maladministration is established in respect of this head of complaint. But I have been unable to determine whether any injustice resulted from that maladministration, because to make such a determination would require me to consider matters which I have no power to consider. However, equally, I cannot determine that no injustice resulted from that maladministration.

43 I therefore find myself unable to determine this head of complaint.

Complaint E – that the prudential regulators and GAD had failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments.

44 Complainants alleged that the prudential regulators and/or GAD failed to keep pace with developments in the pensions and life insurance industry and to assess and adapt their methods to reflect those developments.

45 Having reviewed the evidence before me, I am satisfied that there is no evidential basis for the contention that the prudential regulators and/or GAD failed to keep pace with the developments in the pensions and life insurance industry during the period covered by this report.

46 I have seen evidence that considerable work was put into updating the systems and processes that those regulators and GAD utilised to discharge their functions. Many developments in the regulatory framework occurred during the period covered by this report. These include those developments to which the public bodies whose actions were the subject of complaint have drawn attention within their initial response to those complaints, which is set out within Part 4 – and which is summarised in Chapter 4 – of this report.

47 It may be that what is implied by this complaint is that the regulatory framework – the primary legislation and associated delegated legislation – had become unwieldy or out-of-date. If that is so, such a complaint is misconceived.

48 In any event, it is not within my jurisdiction to consider the discharge of legislative functions. I cannot therefore review the legal framework which governed the acts and omissions which I have investigated. My role is to identify whether those operating that framework discharged their functions with or without maladministration.

49 All that being so, I dismiss this head of complaint.

Complaint F – that GAD had recommended Equitable as a pension plan or additional voluntary contribution scheme provider in its advice to the administrators of the Principal Civil Service Pension Scheme and to other public sector pension schemes. This had led to a lack of proper separation of its responsibilities and to a clear conflict of interest between GAD's role in providing advice to government bodies in relation to public sector pensions and in assisting the prudential regulators of the Society. This conflict of interest had compromised the proper discharge of GAD's regulatory functions.

50 Complainants alleged that a conflict of interest existed because of the role GAD played within the system of prudential regulation, when they also had a role in advising the administrators of the Principal Civil Service Pension Scheme.

51 Having reviewed the evidence before me, I am satisfied that there is no basis for the allegation that GAD had a conflict of interest because of its roles within the system of prudential regulation and as adviser to the administrators of the Principal Civil Service Pension Scheme.

52 There is no dispute that GAD acted both as adviser to the prudential regulators of insurance companies and also as adviser to the Civil Service scheme, although in relation to the latter role this ended at the end of 1995.

53 I have examined all of the relevant files held by the administrators of the Principal Civil Service Pension Scheme. Having done so, I am satisfied that there was no conflict of interest, as alleged, on the part of GAD.

54 Indeed, I note that when the Treasury, then acting for the pension scheme administrators, contacted the prudential regulators on 1 October 1991 to establish what the financial condition of the Society was and whether there were any issues of contention between the Society and its regulators of which they should be aware, the DTI replied on 17 October 1991, after having taken the advice of GAD, and stated that they were not in principle able to provide such information and drew attention to the published regulatory returns

instead. This was a proper approach and was the approach that the prudential regulators and GAD adopted to all such enquiries.

55 For completeness, I also asked the bodies whose actions were under investigation to obtain declarations of any financial or employment interests that those of its current or former staff with any direct role in the prudential regulation of the Society during the relevant period might have had. I received such declarations from all the relevant individuals – none disclosed any actual or apparent conflict of interest in terms of personal or financial links to the Society.

56 As there is no legal or factual basis for the conflict of interest alleged, I therefore dismiss this head of complaint.

Complaint G – that, from the mid-1980s until 1997, the prudential regulators had failed to evaluate the potential effect of guaranteed annuity rates on the solvency of Equitable in a context where current annuity rates were falling steadily, in line with the Bank of England's base rate, to below contracted guaranteed annuity rates.

57 Complainants alleged that the prudential regulators failed to deal appropriately with the Society's exposure to the risks associated with the guaranteed annuity rates contained within the Society's older policies.

58 I have found that this allegation has a sound basis in fact and that the failures of the prudential regulators in this respect constitute maladministration. I have also found that injustice resulted from that maladministration.

59 I therefore uphold this head of complaint in full.

Complaint H – that, from about 1990 onwards, the prudential regulators and GAD had failed to give sufficient consideration to the fact that some of the measures used to bolster Equitable's solvency position were predicated on the emergence of a future surplus. As a consequence, the prudential regulators and GAD had not properly assessed the overall impact and adequacy of those measures.

60 Complainants alleged that the measures used to bolster the Society's solvency position were predicated on the emergence of a future surplus and that the prudential regulators and/or GAD did not properly assess the overall impact and adequacy of those measures.

61 The phrase *'emergence of future surplus'* is broad and, in the context of this head of complaint, I have limited it to the use by the Society in its returns of future profits implicit items. To the extent to which the emergence of future surplus was a factor in other matters (for example, the credit taken for financial reinsurance), that is considered under the relevant heads of complaint which cover those other matters in this report.

62 I consider that this complaint, so limited, is misconceived – as it is premised on a view of what methods were appropriate for a life insurance company to improve its published solvency position which is inconsistent with the provisions of the applicable legislation which pertained at the relevant time.

63 The European Directives permitted (and still permit) the use of future profits implicit items by insurance companies. Those provisions were transposed into the domestic legislative framework of the United Kingdom through inclusion within the provisions of the valuation Regulations.

64 My attention has been drawn to the fact that this allegation reflects a view expressed by Lord Penrose in his report that such methods were inappropriate. I would respectfully suggest that Lord Penrose based his assessment of the relevant events on an entirely different basis from that on which I must base my assessment.

65 The Penrose Report was not produced on a basis which accepted the regulatory regime of the day as a given. Indeed, Lord Penrose made it very clear that his assessment had had little regard to the standards which applied at the relevant time. His role was as a reporter, aiming to identify lessons that could be learned for the future, and I derive no assistance from his view.

66 I must have regard to the applicable general and specific legal and administrative framework which pertained at the relevant time. I must assess the acts and omissions of the prudential regulators and/or GAD against that framework.

67 As the measures utilised by the Society were lawful and properly granted, there is no basis for making any finding of maladministration. I therefore dismiss this head of complaint.

Complaint I – that, from 1990 onwards, the prudential regulators had allowed Equitable to publish financial results and projections that were misleading in that they had not reflected the Society's true position.

68 Complainants alleged that the prudential regulators allowed the Society to publish projections, illustrations, and bonus notices that were misleading in that they did not reflect the Society's true position. Those complainants also alleged that the financial results contained in the Society's regulatory returns were published in a misleading form.

69 To the extent that this head of complaint deals with the Society's projections, illustrations, and other bonus notices, that complaint I find to be misconceived.

70 How the Society interacted with its policyholders and potential policyholders as part of the sales process or in relation to how it conducted or illustrated its business is not a matter over which I have any jurisdiction. The regulatory framework that was in place at the time covered in this report did not enable the prudential regulators to intervene in those matters, unless questions of PRE arose.

71 While my review of the evidence in the light of the specific complaints that have been made about PRE has had regard to the submissions I have received on this issue, it is not for me to make findings in respect of the Society or of the conduct of business regulators, whose role it was to ensure that information provided by insurance companies to their customers was true, fair, and not misleading.

72 To the extent, however, that this complaint deals with the Society's returns, I have found in this report that one of the general consequences of the maladministration that I have determined occurred was that the prudential regulators could not reasonably have been satisfied, at any time covered by this report, that those returns were a reliable statement of the Society's true financial position. I have also found that injustice, in the form of lost opportunities to take informed investment decisions, resulted from that maladministration.

73 That being so, this aspect of the complaint is substantiated and I therefore uphold this head of complaint in part.

Complaint J – that, during the period under investigation, the prudential regulators and GAD had failed to act when Equitable had adopted what Lord Penrose described as practices of 'dubious actuarial merit'.

74 Complainants alleged that the prudential regulators and/or GAD had failed to act when the Society had adopted what Lord Penrose had described as practices of *'dubious actuarial merit'*.

75 I find this complaint to be misconceived in so far as it is based on a view that certain practices which were permissible within the regulatory regime at the time should not have been permitted because they were inappropriate. Such practices included the mortality assumptions that the Society used and the subordinated loan capital that it issued.

76 It is not my role to make findings that practices which were permissible should not have been permitted.

77 I have not found that maladministration is established in relation to the acts and omissions of the prudential regulators and GAD in respect of the 'quasi-zillmer' adjustment. While clues were present, it was not unreasonable, in the particular context, for those bodies not to have identified that practice at the time.

78 However, in respect of the failure to reserve for guaranteed annuity rates and the financial reinsurance arrangement, I have found maladministration is established in both respects. I have also found that injustice resulted from the maladministration associated with both of those matters.

79 That being the case, I uphold this head of complaint in part.

Complaint K – that ... the prudential regulators and GAD had ignored or failed to act on information that might have led to formal or informal regulatory action against Equitable, thus also failing to alert new investors to the risks of investing. Those occasions included when the Society's board papers were sent to GAD by the appointed actuary on 11 June 1991, and when information was provided to GAD on 10 September 1992 which showed that, for the years 1989 to 1991, the aggregate policy values had very significantly exceeded the value of the underlying assets.

80 Complainants alleged that the actions of a particular GAD actuary were inappropriate in that, when he was sent certain of the Society's Board papers on 11 June 1991, he did not pass those papers to the prudential regulators.

81 Having reviewed all of the evidence before me, I am satisfied that there is no sound basis on which an adverse finding should be made concerning the receipt of certain of the Society's Board papers by an individual GAD actuary.

82 That GAD actuary was sent those Board papers by the Appointed Actuary of the Society on a confidential basis. Those papers are reproduced in full in Part 4 of this report and are also summarised within the chronology entry for 11 June 1991 in Part 3 of this report.

83 It is common ground that the GAD actuary did not forward a copy of those papers to the DTI. That was perhaps unwise, as it left the GAD actuary open to precisely the type of allegations that have since been made.

84 That failure was also a technical breach of the obligations that were placed on GAD by paragraph 36 of the 1984 Service Level Agreement, which required that *'any correspondence between GAD and an insurance company or its advisers and notes of any meetings held with them will be copied at the time to* [the DTI]'.

85 While I consider that it was unwise for the GAD actuary to refrain from copying the papers to the DTI and also that, in so doing, he was not acting in accordance with the terms of the Service Level Agreement, there are two considerations which lead me, on balance, to come to the view that, while the facts bear the allegation out, there is no basis for the making of an adverse finding in all the circumstances of the case.

86 The first is that, on 19 December 1990, the GAD actuary had already informed the DTI of the existence of these and other Board papers (see the entry for this date in Part 3 of this report). The second is that the GAD actuary did pass the documents to his colleague who was responsible for the regulation of the Society.

87 Both of those being the case, I dismiss this aspect of this head of complaint.

88 However, I have found that GAD did not raise or seek to resolve with the Society as part of its scrutiny of the Society's regulatory returns for every year from 1990 to 1996 the questions which arose from the information within those returns – and that those failures constituted maladministration.

89 I have also found that injustice resulted from the unreliable nature of the Society's returns during this period.

90 That being the case, I uphold this aspect of the head of complaint and, accordingly uphold the head of complaint in part.

Complaint L – that, over a period of many years, the prudential regulators and GAD had permitted Equitable to operate an unsound business model, of which those regulators and GAD had been aware.

91 Complainants alleged that the prudential regulators and/or GAD had permitted the Society to operate an unsound business model of which they had been aware.

92 I consider this complaint to be partly misconceived. In Chapter 5 of this report, I have set out the key obligations that the prudential regulators and/or GAD had at the relevant time, in terms of the general and specific duties and powers which they possessed within the applicable regulatory framework.

93 I also explained that this system was based on a number of cornerstones, one of which was 'freedom with publicity'. That is, that an insurance company was given considerable commercial freedom to act, so long as it conformed to the statutory requirements to which it was subject and provided complete and accurate information about its financial position in a prescribed manner.

94 The prudential regulators and/or GAD were entitled to have regard to the information they possessed about a particular business model deployed by any insurance company. Indeed, where doubts arose about the Society's compliance with the requirements imposed on it, this would have been a necessary part of the background to regulatory consideration of the Society's position.

95 However, within the regulatory regime which pertained at the time covered by this report, it was not for the prudential regulators to approve or to monitor an insurance company's business model or to act as a 'shadow director'.

96 That said, where information came to the attention of those regulators, acting with the advice and assistance of GAD, that a particular company was acting imprudently, without regard to the interests and/or reasonable expectations of its existing or potential policyholders, or in contravention of any statutory requirements to which it was subject, the prudential regulators were required to consider whether that information meant that grounds had arisen for intervention action to be taken to protect policyholders and, if so, whether it was appropriate to take such action.

97 A complaint about any failure to take information about a particular business model into account in the discharge of those obligations which the relevant regulatory regime imposed on the prudential regulators and/or GAD would thus not be misconceived. However, approval of such a model was not part of the applicable regulatory regime.

98 In relation to the scrutiny of the Society's returns for every year from 1990 to 1996, I have found that GAD, in giving advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had demonstrated that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations. I have also found that those regulators were consequently unable to verify the solvency position of the Society, as they were under a duty to do.

99 I have also found that the respects in which the Society's returns raised questions included the valuation rate of interest used to discount the liabilities and the affordability and sustainability of the Society's bonus declarations. Those were both aspects of the Society's business model, about which GAD had sufficient information. That information did not feature in the scrutiny of the relevant returns.

100 That aspect of this head of complaint is thus not misconceived and has a sound basis in fact. I have found maladministration in respect of the scrutiny of the relevant returns and that injustice, in the form of lost opportunities to take informed investment decisions, resulted from that maladministration.

101 I therefore uphold this head of complaint in part.

Complaint M – that the prudential regulators had failed to ensure any satisfactory correlation between the total of declared policy values and the Society's admissible assets in a context where Equitable, uniquely in the industry, had declared total policy values that had included terminal bonuses and had, without exception, always paid all claims (both contractual and non-contractual) in accordance with those declarations.

102 Complainants alleged that the prudential regulators and/or GAD failed to ensure any satisfactory correlation between the total of declared policy values and the Society's admissible assets.

103 In relation to the scrutiny of the Society's returns for every year from 1990 to 1996, I have found that GAD, in giving advice to the prudential regulators, failed to satisfy themselves that the way in which the Society had determined its liabilities and had demonstrated that it had sufficient assets to cover those liabilities accorded with the requirements of the applicable Regulations. Those regulators were consequently unable to verify the solvency position of the Society, as they were under a duty to do.

104 I have also found that, among the respects in which the Society's returns raised questions, were the valuation rate of interest used to discount the liabilities and the affordability and sustainability of the Society's bonus declarations.

105 I have also found that GAD had information before it, through the analysis they undertook as part of the annual report on the industry which GAD provided to the prudential regulators, that raised questions as to whether the Society was routinely paying out more than the asset share for individual policies.

106 On the other hand, I have seen considerable evidence that this was a more general problem which did not just affect the Society at the relevant time.

107 While this phenomenon begged the question as to its prudence and sustainability, I do not think that those facts are capable of sustaining an adverse finding in relation to the specific supervision of the Society.

108 GAD's analysis showed that the Society was not in this regard at the extreme end of the spectrum among life insurance companies. Furthermore, I am not persuaded that, had GAD raised the issue, a reasonable explanation would not have been provided which might have referred to the fact that most equivalent companies were engaged in this practice.

109 It is not clear what any subsequent action by the prudential regulators would have been aimed at or what it would have secured for the Society's policyholders. Had those policyholders known about the Society's practice and decided to invest elsewhere, they would have invested in another company which might well have been doing the same as the Society or have been paying sums further above the asset share.

110 While I have found this complaint to have a sound basis in fact, in that the prudential regulators and/or GAD took no action on this matter when they had information before them, I make no finding of injustice resulting from maladministration. I therefore dismiss this head of complaint.

Complaints N and O – the protection of policyholders' reasonable expectations.

111 Complainants alleged that Ministers had decided that consideration of PRE was to be based solely on the scrutiny of the returns and that the prudential regulators and/or GAD had, as a result, failed to determine the reasonable expectations of the Society's existing and potential policyholders.

112 I consider that this complaint is partly misconceived in so far as it suggests that the prudential regulators and/or GAD were under an obligation to consider PRE questions in a particular way, such as the constant monitoring of PRE or the proactive assessment of the marketing material of insurance companies. I have explained why in Chapter 9 of this report.

113 It was open to Ministers to take a decision to discharge in a particular way their functions in relation to the protection of PRE, so long as that decision was compatible with the key obligations that the prudential regulators and GAD had during the relevant period, which I have described in Chapter 5 of this report.

114 While the scrutiny of the returns was the prime mechanism through which prudential regulation was undertaken, I have found that, where information came into the possession of the prudential regulators and/or GAD through any other source, they were required to consider it and to act in accordance with the obligations to which they were subject.

115 Those obligations included a duty to consider the use of their powers where the circumstances had or might have arisen which gave grounds for the use of such powers.

116 I have found that, in relation to the scrutiny of the Society's returns for every year from 1990 to 1996, issues arose which appeared to raise questions about the PRE of the Society's existing policyholders. Those issues were the valuation rate of interest used to discount the Society's liabilities and the affordability and sustainability of the bonuses that were declared by the Society during this period.

117 I have also found that insufficient regard was had to the PRE of both existing and potential policyholders when the FSA took its decision to permit the Society to remain open to new business in the period after the decision of the House of Lords in the *Hyman* case.

118 I have determined to this extent that maladministration is established in connection with these findings and that injustice resulted from that maladministration.

119 I therefore uphold this head of complaint in part.

Complaint P – preparation for, and follow-up to, the House of Lords' judgment.

120 Complainants alleged that the prudential regulators failed to protect the interests and reasonable expectations of the Society's existing and potential policyholders during the *Hyman* litigation and in the period between the decision of the House of Lords in July 2000 and the Society's closure to new business in December 2000.

121 With regard to the FSA's actions in relation to the *Hyman* litigation and the associated scenario planning, I have seen no evidence on this matter which would make me depart from my conclusion, set out in my first report, that no maladministration occurred in this respect.

122 Therefore, while I have reconsidered this question, I find no basis for an adverse finding with respect to this aspect of this head of complaint.

123 However, I have found that, in so far as this head of complaint relates to the acts and omissions of the prudential regulators in relation to the decision to permit the Society to remain open to new business in the period after the *Hyman* judgment in the House of Lords, those regulators failed to record that decision and took it on an unsound basis.

124 I have also determined that maladministration was established in respect of both those findings and that injustice flowed from the basis on which that decision was taken but not from the failure to record the decision.

125 That being so, I find this complaint to be substantiated to the extent that it relates to this aspect of the actions that were subject to complaint.

126 All of the above being so, I uphold this head of complaint in part.

Complaints Q and R – the bonus and policy value cuts in the period following the closure to new business.

127 Complainants alleged that the prudential regulators permitted the Society to declare a bonus for 2000 and an interim bonus for 2001, which were subsequently withdrawn and which were both inappropriate and unjustifiable given the state of the Society's finances at that time. They also alleged that those regulators failed to protect PRE by permitting the policy value cuts that were made in July 2001.

128 In so far as this head of complaint relates directly to the acts and omissions of the prudential regulators in respect of those matters, I find that there is no factual basis on which I could uphold this aspect of the complaint and that, in any case, it is partly misconceived.

129 As can be seen from Part 3 of this report, the FSA received and considered the Society's board papers setting out the background to the policy value cuts, which discussed at some length the various options that were open to the Society to manage the fundamental financial uncertainties that it faced.

130 I have already explained that I have found no basis for any suggestion that the regulatory regime at the time required or permitted the prudential regulators to act as 'shadow directors' or to intervene in the commercial freedom granted by Parliament to insurance companies. Such a suggestion represents a misconception about the nature of the relevant regime in place at the time covered by this report.

131 The FSA had information before it which showed that the Society had carefully examined the position it was in, had set out and discussed the available options, and had considered in some detail the potential impact on the Society's policyholders and the need to balance a range of competing interests. The FSA also gave consideration as to whether any of that information required them to consider the use of any of their powers of intervention.

132 Given both of those things, I find that there is no factual basis for any criticism of the FSA in these respects. This aspect of the head of complaint should thus be dismissed.

133 However, I consider that these complaints are essentially linked to the injustice claimed by those representing policyholders – financial loss sustained through reductions in bonus and cuts in policy values. Those aspects of the matters within this head of complaint have been addressed when making my determinations of injustice.

134 I have found that the consequences of all the maladministration that I have determined occurred was one contributory factor in the creation of the situation in which the policy value cuts had to be made by the Society. To that extent only, I find this head of complaint to be made out.

135 There were other contributory factors. For example, the falls in the equity and property markets would also have contributed to that situation.

136 To the extent alone that maladministration was a contributory factor in the creation of the situation in which the policy value cuts were made, I uphold these head of complaints in part.

The general complaint

137 But what of the general complaint? Did the prudential regulators and GAD fail *'for considerably longer than a decade properly to exercise their regulatory functions in respect of the Equitable Life Assurance Society'*?

138 In determining this general complaint, I need to address two separate questions. The first is whether the maladministration which I have determined occurred substantiates that complaint; the second is whether, if so, any injustice resulted from it.

Is the general complaint substantiated?

139 I would first note that, with respect to the Society's regulatory returns throughout the period covered by this report, the prudential regulators and GAD could never properly have been satisfied that the true financial condition of the Society, in terms of its compliance with the regulatory requirements and of its presentation of its solvency position, was being disclosed through the publication of those returns.

140 As a result of maladministration on their part and on the part of GAD, the prudential regulators were not able to verify the financial condition of the Society throughout this period. The Society's regulatory returns were published without amendment while serious questions about the Society's true position remained unresolved.

141 The information available to investors and potential investors and their advisers on which those investors could base their financial decisions throughout the period covered by this report was, in the specific ways that I have found, consequently incomplete, possibly inaccurate, and thus misleading.

142 The nature of the failings on the part of the prudential regulators and GAD which I have determined occurred differed over the time periods which I have considered in this report.

143 I consider that the prudential regulators and GAD in the period prior to the closure of the Society to new business in December 2000 failed properly to undertake their responsibilities in a number of respects.

144 In consequence, those regulators did not verify the solvency of the Society, failed to satisfy themselves that the Society's returns were accurate and complete, and failed to consider appropriate action to protect the interests of existing and potential policyholders, when such consideration should have been given as questions about the Society arose.

145 There was a comprehensive failure by the prudential regulators and GAD to identify issues of potential concern within the returns when they first arose – and in some cases ever. Those issues were significant either because they potentially had a fundamental impact on the solvency of the Society or because they appeared to demonstrate questions concerning compliance with the applicable law.

146 Moreover, when matters of concern <u>were</u> identified, little or no consideration was given by the prudential regulators, acting with the advice and assistance of GAD, as to whether that information merited the use of any of the powers of intervention which Parliament had conferred on them. Nor were the Society's returns required to be amended and resubmitted on any occasion during the period covered by this report.

147 As I have explained in Chapter 9 of this report, there is no evidence that there existed a generally applied policy that inaccuracies or other deficiencies in the regulatory returns submitted by insurance companies would be left unchallenged by the prudential regulators.

148 Indeed, such a policy if it existed would have been inconsistent with the obligations which those regulators had – which might in itself have constituted maladministration. Moreover, as I have also explained in Chapter 9 of this report, the evidence on this question that I have seen points the other way.

149 Furthermore, certain matters were not pursued appropriately and to a conclusion which enabled the prudential regulators to be satisfied that the Society was acting in accordance with the provisions of the statutory regulatory framework

or the administrative provisions set out in the relevant guidance.

150 Assurances given by the Society that it would undertake certain actions were often not followed through, reasonable concerns were rebuffed and not pursued further, and practices which should have raised questions in the minds of prudential regulators, acting reasonably, went undetected or were left unchallenged.

151 There was also a series of missed opportunities. The great respect in which the Society was generally held and the reputation it had developed over many years are the only rationalisations that I have been able to find which might explain the **passive, reactive** and **complacent** approach to the supervision of the Society that is evident from the acts and omissions of the prudential regulators and GAD during the period prior to 20 June 1998.

152 Once the supervision of the Society took on a heightened intensity in the period after 20 June 1998, when the prudential regulators and GAD had become aware of the significance of the guaranteed annuity rate issue and while the *Hyman* litigation was underway, those regulators and GAD initiated appropriate discussions with the Society, sought to insist that the requirements to which the Society was subject had to be fulfilled, and entered into extended dialogue with the Society to seek to ensure that those obligations were discharged. All that seems perfectly proper.

153 However, the prudential regulators permitted the Society to take impermissible credit within its returns for a financial reinsurance arrangement, when the terms of that arrangement were not concluded and also not capable of permitting such credit to be taken as the arrangement had no economic substance. On that basis, the Society was permitted to declare a bonus in March 1999. The amount of credit taken, in the returns for 1999 and 2000, was also unreasonable.

154 The prudential regulators also failed properly to consider whether to take action to protect the Society's existing and potential policyholders once the *Hyman* judgment had ended the basis on which the Society had managed its affairs in relation to guaranteed annuity rates, through the use of its differential terminal bonus policy.

155 I have no doubt as to the severity of the situation which faced the prudential regulators and GAD (and the Society) in the period between 20 June 1998 and the closure on 8 December 2000 of the Society to new business. Nor do I consider that those regulators failed to *initiate* action in the difficult circumstances that the Society faced at that time.

156 But once such action was initiated appropriately, it was then negated by the subsequent acts and omissions of the prudential regulators and GAD. On the whole, those acts and omissions in this period were **largely ineffective** and **often inappropriate**.

157 Those bodies acted in a way that was inconsistent with the regulatory regime they were responsible for operating and they departed unreasonably from compliance with the obligations to which those regulators and GAD were subject.

158 In the post-closure period which I have considered, a considerable amount of activity was undertaken by the prudential regulators across a wide range of issues, many of which were of a seemingly intractable nature and which raised serious questions about the future survival of the Society. That the Society was able eventually to weather the storms that it faced during this period must, it seems to me, to be due, at least in part, to this considerable effort by the prudential regulators.

159 The actions of the prudential regulators in the post-closure period were **largely effective** but, when giving information to the Society's policyholders and to others about the situation Equitable was in, the FSA **provided information which was inaccurate and misleading**.

160 That is particularly unacceptable, given the nature of the regime that the FSA were operating – which permitted the Society commercial freedom in return for accurate and complete information, information which the prudential regulators were supposed to ensure was provided. It was also unacceptable given the obvious and understandable concern felt by the Society's policyholders about its stability and their own financial security when they contacted the FSA for such information.

161 Although I have made findings of maladministration within this report, such findings should not be taken as being based on a view that the prudential regulators and GAD were in any sense guilty of acting in bad faith. Similarly, in so far as the period covered in this report from July 1998 onwards is concerned, I do not suggest through my findings that those regulators and GAD gave inadequate attention to, or put insufficient effort into, the supervision of the Society.

162 Nevertheless, I have found there to have been three general consequences of the maladministration which I have determined occurred, namely:

- that the Society's returns were an unreliable source of information;
- that both the prudential regulators and the Society lost opportunities to address at an earlier date issues which were to become critical; and
- that regulatory decisions were frequently taken on a basis which had insufficient regard to the powers available to the prudential regulators.

163 Those consequences of the extensive maladministration which I have determined occurred in this case demonstrate failings which all go to the heart of the responsibilities and obligations which the prudential regulators and GAD had at the relevant time.

164 I consider that, accordingly, the maladministration that I have identified pervades the exercise by the prudential regulators and GAD of their functions over the period covered by my investigation. I also conclude that my findings are of such individual and cumulative significance that they demonstrate a failure by the prudential regulators and GAD to discharge their statutory functions and other obligations in a proper and effective manner.

165 But does all this substantiate the general complaint? **I consider that the maladministration which I have found substantiates the general complaint that the prudential regulators and GAD failed properly to exercise their regulatory functions in respect of the Society during the period prior to its closure.**

166 I consider, however, that the one finding of maladministration that I have made in respect of the inaccurate and misleading information provided by the FSA during the post-closure period does not substantiate the general complaint in relation to that period. Such a finding does not outweigh the substantial and sustained efforts that the prudential regulators put into the supervision of the Society during this period in very difficult circumstances.

Did injustice result from these failings?

167 But did any injustice further to that which I have identified in Chapter 12 of this report result from the failings which have caused me, when those failings are taken together, to find that the general complaint is substantiated with respect to the period prior to 8 December 2000?

168 I have considered whether any further injustice has resulted from the maladministration I have found in respect of the general failure of those operating the system of prudential regulation during the period when the Society was still open to new business. In doing so, I was struck by one theme which ran throughout every one of the referred complaints and throughout every one of the considerable number of letters that I have received from those complainants.

169 The particular circumstances of each complainant vary enormously – in terms of their age, their involvement with the Society, the amount that they claim to have lost as a result of that involvement, and the degree of reliance that they have now, or had in the past, on income derived from their investments with the Society. However, one thing unites all those complainants.

170 That is a sense of outrage that those complainants feel at the failure of those operating the system of prudential regulation, which the complainants believe that events relevant to the Society demonstrate – and which, by way of findings of maladministration, in respect of some of their complaints at least, I have vindicated.

171 In determining whether this sense of outrage is justifiable and thus constitutes injustice, I have had regard to the purpose of the regulatory regime which on this occasion was operated with maladministration. I have also had regard to the prospectus held out at the time by those operating that regime about their responsibilities and the degree to which an existing or potential policyholder could rely on that regime.

172 In Chapter 5 of this report, I found that the stated aim of this system of prudential regulation was to protect the interests of policyholders and potential policyholders. Securing this aim was to be done in such a way as to balance the need to take such action as was necessary to protect those interests without interfering in the business of insurance companies to such an extent as would stifle competition and prevent innovation.

173 That regime was predicated on four cornerstones – freedom with publicity, the central role of the Appointed Actuary in the system of prudential regulation, the protection of the reasonable expectations of existing and potential policyholders, and the fulfilment of the criteria of sound and prudent management.

174 In the case of the Society during the period covered by this report prior to the closure of the Society to new business in December 2000, none of those features of the regulatory regime operated as Parliament intended they should operate. That was a result of maladministration by those charged with operating that regime.

175 Furthermore, the prospectus held out to existing and potential policyholders gave the impression that those operating the system of prudential regulation would undertake their responsibilities in such a manner as would enable those investors, when making investment decisions, to rely on the information about the Society which was published in its annual returns. As a result of maladministration, that information was unreliable throughout the period covered by this report.

176 **In light of the above, I consider that this serial regulatory failure, which the maladministration I have found in respect of the period prior to the Society's closure to new business represented, has caused further injustice to those who have complained to me.**

177 **Such injustice takes the form of a justifiable sense of outrage that those operating the system of prudential regulation so comprehensively failed, when those complainants had been told that this system would protect their interests and would ensure that adequate information in prescribed formats about the activities of insurance companies would be published to enable informed investment decisions to be made.**

178 I find that maladministration permeated the discharge by the prudential regulators of their statutory functions – functions which were discharged with the advice and assistance of GAD. This occurred throughout the period covered by this report. The consequences of that maladministration were both significant and serious for those who have complained to me. I also find that injustice resulted from that maladministration.

179 That maladministration substantiates the general complaint made to me in respect of the period prior to the closure of the Society to new business. Injustice – in the form of a justifiable sense of outrage – resulted from that maladministration.

180 **I therefore uphold the general complaint that the prudential regulators and GAD failed properly to exercise their regulatory functions in respect of the Society during the period prior to 8 December 2000 that is covered in this report.**

181 In the previous Chapter of this report and in this one, I have made five determinations that injustice resulting from maladministration has been sustained. Those are:

(i) that injustice was sustained by any policyholder who can show that they relied on the information contained in the Society's returns for 1990 to 1996 and who suffered either a financial loss or a lost opportunity to take an informed decision about their financial affairs as a result of such reliance;

(ii) that policyholders sustained injustice in the form of the loss of opportunities in the period between July 1991 and April 1999 to take informed decisions about their financial affairs in full knowledge of the exposure of the Society to guaranteed annuity rates and of the risks that such exposure generated;

(iii) that all those who joined the Society or who paid a further premium that was not contractually required in the period after 1 May 1999 have sustained injustice in the form both of any financial loss they may have suffered and also in the form of lost opportunities to take informed decisions about their financial affairs;

(iv) that those individuals who can show, having regard to their particular circumstances, that they relied on deficient information provided by the FSA in the post-closure period, that such reliance was reasonable in the circumstances, and that it led to a financial or other loss have sustained injustice; and

(v) that all those who have complained to me have sustained injustice in the form of a justifiable sense of outrage at the failings of the system of prudential regulation that are epitomised by my findings of maladministration relating to the prudential regulation of the Society during the period prior to its closure to new business.

182 I now turn to consider what would be an appropriate remedy for the injustice that I have found resulted from maladministration. I do this in Chapter 14 of this report.

Chapter 14 – Remedy and recommendations

Introduction

1 In this Chapter, I set out the consideration that I have given as to what remedy, if any, it would be appropriate for me to recommend in the light of my determinations that injustice resulted from the maladministration I have found. That consideration has been informed by representations on this question that I sought and received from the parties to the complaints.

2 I also set out the recommendations that I am making in the light of that consideration. Before doing so, I will explain my approach to remedying injustice resulting from maladministration.

My approach to remedy

3 In October 2007, I published a document, *Principles for Remedy*[1], which sets out my views on the Principles that should guide how public bodies provide remedies for injustice or hardship resulting from their maladministration and confirms my own approach to recommending remedies.

4 Those Principles flow from my *Principles of Good Administration*, referred to in paragraphs 8 to 12 of Chapter 5 of this report. The provision of fair and proportionate remedies is an integral part of good administration, so the same principles apply.

5 My underlying principle is to seek to ensure that the relevant public body restores the complainant to the position he or she would have been in, had the maladministration not occurred. If that is not possible, the relevant body should compensate them appropriately.

6 As with my *Principles of Good Administration*, these Principles are not a checklist to be applied mechanically. Judgement should be used when applying the Principles to produce reasonable, fair, and proportionate remedies in the circumstances of each case.

7 The Principles that I have identified as being most relevant to this case are 'getting it right', 'being customer focused', 'acting fairly and proportionately', and 'putting things right'.

8 'Getting it right' means quickly acknowledging and putting right cases of maladministration or poor service that have led to injustice or hardship and considering all relevant factors when deciding the appropriate remedy, ensuring fairness for the complainant and, where appropriate, for others who have suffered injustice or hardship as a result of the same maladministration.

9 'Being customer focused' means, among other things, apologising for and explaining the maladministration and providing remedies that take account of people's individual circumstances.

10 'Acting fairly and proportionately' means, among other things, offering remedies that are fair and proportionate to the complainant's injustice or hardship and providing remedies to others who have suffered injustice or hardship as a result of the same maladministration.

11 'Putting things right' means, if possible, returning the complainant – and, where appropriate, others who have suffered similar injustice or hardship – to the position they would have been in, had the maladministration not occurred. If that is not possible, the complainant and such others should

[1] Available at: http://www.ombudsman.org.uk/improving_services/remedy/index.html

be compensated appropriately. It also means considering fully and seriously all forms of remedy (such as an apology, an explanation, remedial action or financial compensation) and providing the appropriate remedy in each case.

12 In considering what an appropriate remedy might be in any particular case, I would expect a public body to consider the wishes and needs of the complainant in deciding an appropriate remedy and to consider all the circumstances of the case, trying, wherever possible, to offer a remedy that is calculated fairly and impartially but is still appropriate.

Representations made to me

13 In line with my normal practice, in February 2008, when I sent a copy of the revised draft of this report to the public bodies, to those representing complainants and to other interested parties, I asked those representing the lead complainants to tell me what they, on behalf of those complainants, considered would be an appropriate remedy for the injustice which I have found resulted from maladministration.

14 In May 2008, I received submissions on this question from those acting on behalf of the lead complainants. I also received submissions from the public bodies, whom I had also asked for their views on this question.

The submissions by EMAG on behalf of complainants

15 EMAG made submissions concerning both the broad principles which should govern any scheme for compensation and suggested an approach towards the quantification of such compensation. Those submissions are reproduced in full in Part 4 of this report.

16 With regard to the principles which should govern a compensation scheme, EMAG submitted that:

> *... an FSA-style compensation scheme, such as applied to various forms of mis-selling, could take another eight years. In eight years most Equitable Life policyholders will be beyond caring. They need and deserve, having suffered 'outrageous' treatment at the hands of the Treasury and the regulators, a redress package that:*
>
> 1. *Is rapid in payment.*
> 2. *Is simple to administer.*
> 3. *Is not administered by either the Treasury, or the FSA or any of their offshoots or by Equitable Life.*
> 4. *Does not require an extensive and complicated claims system.*

17 EMAG further submitted, with respect to an approach to the quantification and delivery of compensation, that:

> *The approach EMAG suggests ... is as follows:*
>
> 1. *Take the areas where* [I have] *found maladministration leading to injustice and make a broad brush estimate of the total loss arising to policyholders at 16 July 2001.*
> 2. *Add an estimate of the 'removal costs' in respect of those that have subsequently moved their funds elsewhere. This would include Market Value Adjustments, other penalties and re-investment charges.*

3. *Apply a series of appropriate discounts for things like the proportion who were not influenced by published data and those who would not have invested elsewhere and apply those percentages to the total to arrive at a compensation sub-total as at that date.*

4. *Add something for outrage and interest to the resulting sum to arrive at a current compensation 'pot', which the Treasury should pay immediately to an appropriate independent scheme administrator.*

5. *Distribute that compensation 'pot' upon a policy by policy basis in accordance with a sliding scale based upon values immediately before the big cut of 16 July 2001.*

18 EMAG continued by saying:

The benefit of this approach is that once the compensation pot is agreed and transferred to the scheme administrators, calculation could be handled mechanically from the information held upon Equitable Life's computers, now in the possession of Halifax Financial Services. The downside is a lack of sophistication to deal with all possibilities.

EMAG sees it as vital for the fair treatment of Equitable Life policy holders as a whole that compensation can be calculated, apportioned and distributed without undue delay, even if it involves the acceptance of some rough edges to the calculations.

19 EMAG told me that they had calculated the '*losses incurred by policyholders investing after 1990 at £3.2bn if they would have remained with Equitable or £4.6bn if they would have invested elsewhere*'.

My assessment of the submissions by EMAG

20 The principles that EMAG set out do not seem to me to be controversial. If it is decided to establish a compensation scheme, given the length of time that it has taken to determine the relevant complaints and the history of this case, it seems to me that it would be fair, just and reasonable for such a scheme to operate independently, flexibly, openly, and speedily – and with the acceptance of some '*rough edges*'.

21 As for EMAG's suggested method of compensation, I am aware that there is more than one means of calculating compensation in circumstances such as this.

22 One method is that chosen by EMAG – the identification of quantifiable amounts which are then set at a global level, with the resulting amount shared out to those deemed eligible by some pre-determined formula. Another is that used by the Financial Ombudsman Service which, on an individual level, makes a comparative assessment of the performance of the company in question against an average-performing competitor. I have no concluded view on the relative merits of such proposals, which are a matter for others to determine.

23 Before I would make a recommendation for financial compensation in any individual case, I would need to be satisfied that those who had complained to me, and those who had been affected in the same way by the same maladministration, had sustained injustice in the form of financial loss as a result of that maladministration.

24 The injustice that I have found on this occasion to have been sustained by those who have complained to me was summarised in Chapter 12 of this report, and is:

- financial loss, where that has occurred, or lost opportunities to take informed decisions as a result of reliance on the information contained in the Society's returns for 1990 to 1996;

- the loss of opportunities in the period between July 1991 and April 1999 to take informed decisions in full knowledge of the exposure of the Society to guaranteed annuity rates and of the risks that such exposure generated;

- financial loss, where that has occurred, to anyone who joined the Society or who paid a further premium that was not contractually required in the period after 1 May 1999 and lost opportunities to take those decisions on an informed basis;

- financial or other loss, where that has occurred, to those individuals who can show, having regard to their particular circumstances, that they relied on misleading information provided by the FSA in the post-closure period, that such reliance was reasonable in the circumstances, and that it led to any such losses; and

- a justifiable sense of outrage on the part of all those who complained to me at the failings of those operating the regulatory system during the period prior to the Society's closure to new business.

25 It is my normal practice, where someone has been inconvenienced or made to feel a justifiable sense of outrage at the way that they have been treated, to recommend that an apology is made and that consideration is given to whether that apology should be accompanied by a tangible recognition of such inconvenience or outrage.

26 Where financial loss is established, I would normally expect that, where appropriate, such a loss should be remedied in full, with an appropriate payment of interest where that is relevant.

27 In that context, there are four questions that I need to address in this case before making any recommendations designed to remedy the injustice that I have found has been sustained on this occasion, namely:

- whether complainants have suffered a financial loss in absolute terms – that is, have they suffered an identifiable or quantifiable loss at all?;

- if so, whether complainants have suffered a financial loss in relative terms – that is, have they suffered a loss that they would not otherwise have suffered had they invested or saved elsewhere than the Society?;

- if so, whether there is a sufficient link between the maladministration found and that relative loss; and

- if there is, what it would be appropriate in all the circumstances of this case to recommend by way of a remedy.

  If I were to find no financial loss, or were to conclude that any such loss sustained was not sufficiently linked to maladministration, or were to consider that it would not be appropriate to recommend a remedy for any such loss, I would then need to consider whether it would be appropriate to recommend a remedy for the opportunities that I have found were lost as a result of maladministration.

28 I also need to consider whether any injustice has already been remedied by other means. Where that is so, I would not expect a further remedy to be provided, as it is an important principle – one set out within the detail of my *Principles for Remedy* – that any recommendation I make should not lead to a complainant making a profit or gaining an unreasonable advantage.

29 As for **absolute loss**, I am very far from concluding that everyone who has complained to me about the prudential regulation of the Society has suffered a financial loss. Still less do I conclude that everyone who has saved with, or invested in, the Society during the period covered by this report has suffered financial loss.

30 It seems to me that it is a natural and unavoidable consequence of one of the basic premises of the complaints that have been made about the events covered in this report – namely, that distribution took place of the resources of the Society in what is said to be an imprudent manner which it could not afford – that some people have gained from saving and investing with the Society more than they would have done had any such distribution not occurred.

31 That said, there is no avoiding the fact that those who are, or were at the relevant time, members of the Society underwent the series of policy value and bonus cuts during the period after it closed to new business that are set out within Chapter 2 of this report.

32 That is sufficient evidence in my mind to persuade me to conclude that, for many people at least and in a context where those people had reasonable expectations concerning their policy values and bonuses, financial loss has been sustained. In coming to this conclusion, I have also borne in mind the acceptance, which appears to be common ground among all the parties, that such losses were suffered across the with-profits industry at the relevant time.

33 That brings me to **relative loss**. Did those who have complained to me, and those in a similar position to those complainants, suffer a loss that they would not have suffered had they saved or invested elsewhere?

34 I explained above that the approach that the Financial Ombudsman Service takes to the question of remedying financial loss is a comparative approach. For example, such an approach is illustrated in their determination of the case of Ms E[2]:

> *The compensation due to Ms E should put her in the position she would have been in if she had not invested with Equitable Life. The value of her funds, like those of nearly all funds invested in the stock market, fell during this period. But it would be unfair to order Equitable Life to compensate Ms E for losses due to falls in the stock market that would have affected all with-profits funds and which she would have suffered if she had invested with a different firm instead of Equitable Life.*
>
> *Therefore, compensation is to be assessed by comparing the return Ms E received on the money she put into a with-profits pension with Equitable Life and the return she would have received from a similar product with an alternative provider. Since I have been unable to identify which particular alternative provider Ms E would have chosen, I have decided that the comparison should be made with the average return achieved by comparable with-profits funds.*

---

[2] Whose complaint to the Financial Ombudsman Service about mis-selling by the Society was upheld: http://www.financial-ombudsman.org.uk/faq/pdf/Equitable_GAR_final_decision.pdf

35 The Society has dealt with many types or categories of mis-selling complaints, or claims based on breach of contract. However, the most analogous category of complaint to the maladministration on the part of the prudential regulators and GAD that I have found to have occurred on this occasion was those complaints which were made due to the Society's failure to disclose the existence of guaranteed annuity rates.

36 I sought information from the Society as to what the outcome had been to the cases of those people in a similar position to Ms E who, not being caught by the effects of the Compromise Scheme, had complained to the Financial Ombudsman Service about such alleged mis-selling on the part of the Society – and whose case had been assessed using the approach outlined above in relation to Ms E.

37 That information shows that relative loss was established in 1,072 cases. In a further 233 cases, a complaint of mis-selling was upheld but the comparative assessment resulted in a determination that no loss had been sustained. That is, that approximately 60% of those who had made complaints of the type made by Ms E were found to have suffered a relative loss, there having been 1,796 such cases in total.

38 I understand that the cases dealt with by the Financial Ombudsman Service followed on from a review conducted by the Society, at the request of the FSA, of any mis-selling which related to the failure to disclose the existence of guaranteed annuity rates. In the course of that review, the Society also adopted an analagous comparative approach to assessing loss, although I understand that it imposed a ceiling or cap on the remedy provided.

39 Under that review, a total of 7,253 cases were considered. Relative loss was established in 5,636 of those cases. No loss was found in 601 cases and no liability for mis-selling or loss in 1,016 cases. That is, that approximately 78% of those with mis-selling complaints of types other than that made by Ms E were found to have suffered a relative loss.

40 Those who have complained to me are in substantially the same circumstances as those who complained to the Society or to the Financial Ombudsman Service, with the exception that they were caught by the effects of the Compromise Scheme and thus could not pursue such complaints.

41 When the above information is considered together, it seems to me that this demonstrates that, for many of those covered by my recommendations, it could be established that a loss has been sustained, relative to what would have transpired had those individuals saved or invested with a comparable with-profits fund.

42 I therefore conclude that it would be difficult to sustain an argument that no person affected by '*the Equitable affair*' had suffered a relative loss. I also conclude that the individual circumstances of each complainant and other people similarly affected are key to establishing whether those people are in the category of those who have suffered relative loss. Accordingly, whether relative loss in a particular case has been sustained has to be determined at an individual level.

43 I now turn to consider whether there is a **sufficient link** between the acts and omissions of the bodies whose actions have been investigated and found to be deficient with any relative loss that is established.

44 I explained in Chapter 5 of this report that the aim of the system of prudential regulation was to

protect the interests of policyholders through the supervision of the affairs of insurance companies, in the manner in which Parliament intended and using the means that Parliament provided.

45 Chapter 10 of this report sets out my findings as to the deficiencies in the way in which that regulation was carried out in this case. My conclusions as to whether injustice resulted from the maladministration, which, in Chapter 11 of this report, I found had occurred, are set out in Chapter 12.

46 It is on that basis that I conclude that there is a direct link between the acts and omissions of the prudential regulators and both the information throughout the period that was before those making savings and investments decisions regarding the Society – and also between those acts and ommissions and the public knowledge about the solvency position of the Society in the period on or after 1 May 1999.

47 The prudential regulators, and no one else, were given the functions of scrutinising the returns that the Society submitted and of verifying its solvency position. Those regulators did this with advice and assistance from GAD. No other party can be said to be at fault because those regulators and/or GAD acted with maladministration.

48 I am satisfied that there is a sufficient link between the actions of the prudential regulators and GAD and any relative loss that may be established occurred in individual cases. That also goes for the opportunities to invest elsewhere than the Society which I have found that complainants have lost.

49 I now turn to what it might be **appropriate to recommend** to remedy the injustice that I have found resulted from maladministration on the part of the prudential regulators and/or GAD.

50 This I would normally do in line with the basic principle that I have outlined above, namely that the relevant public bodies should restore complainants to the position they would have been in, had maladministration not occurred or, where that is not possible, those bodies should compensate the complainants appropriately.

51 However, I have received submissions from the public bodies that question whether it would be appropriate, in the specific context of this case, to apply the approach that I would normally apply to questions of remedy and redress.

52 I consider those submissions below and then go on to address the question of what it would be appropriate to recommend on this occasion.

The submissions by the public bodies

53 The public bodies in their submissions questioned whether, in principle, it would be appropriate for me to recommend financial compensation, in the light of my findings and determinations. Those submissions were made, those bodies said, '*without prejudice*' to a '*central submission*' on their part that no maladministration had occurred and that, in any event, no injustice had resulted.

54 Those bodies first told me that they accepted that my '*jurisdiction is wider than that of the courts*' and that I applied '*different tests to* [my] *approach to maladministration and injustice*'.

55 However, the public bodies submitted that:

> *... in any consideration of a possible recommendation of a remedy involving compensation being paid by any of the bodies under investigation, they contend that there are compelling reasons of policy as to why it is contrary to the public interest or otherwise*

inappropriate to recommend financial redress to "remedy" any maladministration. Amongst these reasons are those that have led the English courts to shy away from imposing a duty of care on regulators.

56 The public bodies continued by saying:

It is important to note that, even now, Equitable has not failed. Essentially, the complainants in this investigation seek redress not for the collapse of Equitable, but to compensate for the fact that, following the events that were brought about by the decision of the House of Lords in the Hyman litigation, the non-guaranteed element of their policy values has fallen relative to what they were expecting.

57 It was submitted by the public bodies that:

There are many sound public policy reasons for not recommending that a regulator such as the bodies under investigation should provide financial recompense even if negligent regulation (and, by analogy, maladministration) is established. Prominent among these reasons are that such a recommendation would:

(a) tend to result in an over-cautious or excessively risk-averse regulatory approach, for example the distortion of decision-taking in favour of those most likely to sue;

(b) if accepted, result in the diversion of scarce public resources;

(c) be illegitimate in circumstances where the regulator does not exercise sufficiently immediate day to day control over the primary wrongdoer;

(d) obscure the fact that the immediate and material cause of the loss in this case was Equitable itself, coupled with the combined impact of external factors which were beyond the control of the prudential regulator;

(e) be inconsistent with the broader role of regulation; [and]

(f) be incompatible with the statutory scheme in place during the relevant period covered by the ... Report.

58 The public bodies continued by saying:

Effective regulation entails the careful weighing of competing objectives and the exercise of judgement as between a range of possible courses of action. The Courts have consistently recognised this, in cases such as Yuen Kun Yeu[3] *v Attorney General of Hong Kong; Davis v Radcliffe*[4]*; and Three Rivers DC v Bank of England*[5]*.*

As the Court observed in the last of these three cases, "... the exercise of the powers and duties of a supervisor in this field involves the balancing of many different factors in the interests both of the public generally and of both existing and future depositors. The interests of these and other different groups may conflict so that it makes no real sense to hold that a duty of care or a statutory duty is owed to only one or some of those groups ...".

---

[3] [1988] AC 175.
[4] [1990] 1 WLR 827.
[5] (Commercial Court) 1 April 1996.

59 It was further submitted by the public bodies that:

> *In the present context, the prudential regulator had to make judgements in the context of a need to weigh up competing considerations of investors and potential investors, the interests of the financial services sector and the wider public interest in fostering competition and innovation.*

60 The public bodies continued:

> *The Courts have on many occasions, in a number of different contexts*[6]*, recognised that to impose a liability to provide financial redress on regulators would result in over-cautious or excessively risk-averse regulatory decisions. In the particular context of financial regulation, in Yuen Kun Yeu the Court considered that there was "much force" in the argument that the imposition of a duty of care on a banking regulator in respect of losses suffered by depositors would have a seriously inhibiting effect on the work of the regulator.*
>
> *This is because a sound judgement would be less likely to be exercised if the regulator were to be constantly looking over its shoulder at the prospect of claims against it, and its activities would be likely to be conducted in a detrimentally defensive frame of mind. The result of this, the Court decided, was that the effectiveness of the regulator's functions would be at risk of being diminished: consciousness of potential liability could lead to distortions of judgement*.

61 The public bodies then submitted that:

> *Any acceptance of a recommendation to make financial compensation would potentially expose the public purse to liability to an unlimited number of claimants comprising existing depositors or investors and potential depositors or investors.*
>
> *This was a powerful factor which weighed with the Court in Davis v Radcliffe, where it commented that a consideration militating against the existence of the alleged duty of care on the regulator was that "it is said to be owed to an unlimited class of persons including not only the depositors of money with [the regulated entity] but also those considering whether to deposit their money with [the regulated entity]".*

62 It was further submitted that:

> *This leads to the related point that any acceptance of a recommendation to pay compensation from the public purse as a result of defective regulation would inevitably result in the diversion of scarce public resources provided by the taxpayer away from important social programmes such as education or health.*

63 The public bodies then set out a '*further fundamental objection to the making or acceptance of any recommendation for financial compensation*', that being:

> *... that this would entail, in effect, making the regulator liable for the defaults of the regulated entity.*

[6] In cases such as, for example, *X v Bedfordshire CC* [1995] 2 AC 633 and *Hill v Chief Constable of West Yorkshire* [1989] AC 53.

As a matter of principle, it is only legitimate to seek to impose liability on a body for the wrongdoings of another to the extent that the body can exercise a high degree of control over the latter, as was emphasised by the Court in Davis v Radcliffe and in Yuen Kun Yeu.

Both these cases were cited by the High Court in Three Rivers District Council v Bank of England. In considering whether the Bank of England owed a duty of care in its regulatory capacity in respect of losses suffered by depositors following the collapse of BCCI, the Court (having referred to Davis v Radcliffe and Yuen Kun Yeu) highlighted the significance of the fact that the Bank of England did not exercise day to day control in its regulatory functions. The judge stated:

> *"... in each case it was held that the supervisor had no day to day control of the supervised institution. ... the same is true here. ... none of [the Bank's powers] gave the bank the kind of control which the Privy Council had in mind as potentially giving rise to a duty of care or statutory duty to depositors ... In my judgment the Bank cannot fairly be regarded as having day to day control of BCCI or any other supervised institution."*

64 It was then submitted by the public bodies that:

This reasoning is, the bodies under investigation contend, applicable to the respective positions of the bodies under investigation on the one hand and Equitable on the other. The regulation of life insurance companies such as Equitable is in principle similar to the regulation of banks with which the Yuen Kun Yeu, Davis v Radcliffe and Three Rivers cases were concerned.

65 The public bodies then set out a '*further reason why it would be quite inappropriate to recommend any financial remedy*', that being:

> *... that the root causes of the "losses" suffered by policyholders were changes in financial market conditions and Equitable's loss of discretion to adjust terminal bonus rates as a result of the House of Lords' judgment in the Hyman litigation, coupled with the shortcomings of Equitable itself, its senior management and its Appointed Actuary, whose "central place ... within the regulatory regime" is recognised by* [me] ...

66 The public bodies then submitted that:

> *A broader reason for coming to the same conclusion is that the purpose of the regulatory system in force at the material time was not to provide a warranty to investors.*
>
> *Moreover, any recommendation for a financial remedy would not be in accordance with the specific statutory scheme in place during the relevant period. In Yuen Kun Yeu the Court declined to impose a duty of care on the regulator because the Court is "unable to discern any intention on the part of the legislature that in considering whether to register or deregister a company the commissioner should owe any statutory duty to potential depositors. It would be strange that a common law duty of care should be superimposed upon such a statutory framework."*
>
> *Similarly, there is nothing in the regulatory regime with which the ... Report is concerned which suggests that Parliament intended any common law duty of care to be superimposed on that framework.*

67 The public bodies then concluded by submitting that:

> *Any recommendation for a financial remedy would be tantamount to a recommendation that the State should accept by the back door a very similar obligation to that which Parliament has declined to impose via the front. Such a recommendation, in the circumstances of the present case, would not be an appropriate use of the Ombudsman's powers.*

and that:

> *Moreover, it is not necessary for there to be financial redress to provide for the full accountability of regulators. Public bodies are held accountable for their acts and omissions in a number of ways: through Parliamentary and press scrutiny, by bodies such as the National Audit Office and by public opinion.*

My assessment of the submissions by the public bodies

Preliminary matters

68 Before setting out my assessment of those submissions by the public bodies, I would first note, as a preliminary point, that this statement of principle by those bodies – that it would never be appropriate for me to recommend financial compensation in, or following, a report in which I had upheld complaints that injustice had been sustained in consequence of maladministration on the part of financial regulators – is a surprising submission.

69 I say that it is surprising for three reasons. First, I would note that I am being invited to adopt, without regard on each occasion to the relevant circumstances of the case, a blanket approach to the question as to whether or not it would be appropriate, in the context of all complaints about financial regulation, to recommend financial compensation for any injustice which I identify has been sustained.

70 However, I do not consider that the adoption of such an approach would be permissible. I may not fetter my discretion. I am required to consider each case on its merits. The adoption of a rigid policy, such as is here proposed by the public bodies, would not, in my view, be lawful or appropriate. Nor either, in my view, would it be appropriate if public bodies adopted such a rigid policy when responding to my reports, for similar reasons.

71 Secondly, if I were required as a matter of principle to adopt such an approach, this would constitute a fundamental constitutional principle, one which was not articulated by Parliament within the legislative framework which governs my role.

72 There are many examples within the 1967 Act of qualifications to, or restrictions on, the type of action taken in the exercise of administrative functions that I am empowered to investigate. Specific exclusions from such action, which relate to individual bodies among those which are listed in Schedule 2 to the 1967 Act as being bodies to which that Act applies, are set out by way of Notes to that Schedule.

73 It seems to me that, had it wished to do so, Parliament could have excluded through this method action taken as part of the discharge of the functions of particular financial regulators such as the DTI or the Treasury from the scope of my jurisdiction. Indeed, when Parliament brought GAD

within my jurisdiction to enable me to conduct the investigation which led to this report, Parliament limited the actions by GAD that I could investigate by way of such a Note.

74 The bringing into my jurisdiction of GAD was, it seems to me, itself an indication of the Parliamentary intention that I should consider the actions which I have investigated in this case – and apply the tests that I would normally apply, once I had considered those actions and had determined whether the complaints I have received about those actions were justified.

75 Furthermore, Schedule 3 to the 1967 Act lists types of action taken in the exercise of the administrative functions of all the bodies within my jurisdiction that I am not permitted in any case to investigate.

76 Had Parliament intended that the actions of all financial regulators should be treated differently from those of the other bodies in my jurisdiction, including certain regulators in other fields, it could have removed as a class the actions of financial regulators from my investigative reach by listing those actions within that Schedule.

77 Yet Parliament did not do so – not even on the many occasions on which the 1967 Act was amended after the then Government had indicated, in response to my predecessor's report on Barlow Clowes, that the Government believed that financial regulators were, in the context of my remit, a special case – in respect of which the normal approach adopted by the Ombudsman should not apply.

78 In the absence of express authorisation by Parliament, I consider that it would be inappropriate for those whose actions are subject to investigation to seek to bypass the scheme established by Parliament through the creation of my Office, merely by the assertion that their particular position is different to that of other public bodies.

79 If I were to accept that a public body, through such assertions, was entitled to take itself outside the scope of the remedies that can be provided through my work, this would potentially have significant ramifications on a wider scale.

80 This, it seems to me, is even more the case when regard is had to the purpose of the scheme established by Parliament, which is precisely to enable remedies to be provided for justified complaints that injustice has resulted from maladministration on the part of those bodies within my jurisdiction.

81 That brings me to the third and final reason why I have found the submissions of the public bodies on this point to be surprising.

[7] As is well known, the initial response of the then Government to my predecessor's report on the collapse of Barlow Clowes was that, while, out of respect for my Office and in recognition of the special circumstances which pertained in that case, compensation would be paid to those who had lost as a result of that collapse, the findings that maladministration had occurred were contested. Moreover, the then Government set out its view, in its published response to that report, as to the role of regulators in the financial sector and as to whether it would be reasonable for such regulators ever to be held liable for negligence in the performance of their functions. However, that initial response did not constitute the Government's final view on whether maladministration had occurred in relation to the regulation of Barlow Clowes. On 7 July 1995, in the DTI inspectors' report concerning Barlow Clowes, those inspectors concluded that *'in our view, the DTI did not demonstrate, in relation to Barlow Clowes, the characteristics of a competent regulatory authority'.* And the then Secretary of State for Trade and Industry, Lord Young, had earlier conceded, in an interview shown as part of a Channel 4 documentary on Barlow Clowes, that the regulators had probably been to blame for licensing at least the domestic operation of that company, saying, as regards my predecessor, that *'I suspect he was right'* in that respect – see *The Barlow Clowes Affair* – Lawrence Lever (1992: Macmillan).

82 The initial position of the then Government in respect of the Barlow Clowes report changed over time[7]. Despite this, that position – namely that recommending financial compensation to remedy injustice resulting from maladministration on the part of financial regulators would always be inappropriate – is now put forward again as an important principle that should guide my consideration of what recommendations I should make in this case.

83 But such a fundamental principle is surely one that the public bodies in this case could have clearly and publicly stated before now.

84 At no time have the public bodies made such a statement that, whatever I might find at the end of the investigation which led to this report, it was an important matter of principle that no compensation would ever be payable in any circumstances. That has only been submitted to me since I issued the first draft of this report to those bodies.

85 The terms of reference for my investigation stated plainly that, at the end of that investigation, I would recommend appropriate redress for any injustice I found had been caused by maladministration on the part of those bodies whose actions were subject to complaint. Yet such a principle as is now put forward was not articulated within the initial response of those bodies to the complaints within those terms of reference.

86 Nor was such a principle stated in the response of the Government to the Penrose Report, or during the consultation process that I undertook prior to deciding to launch the investigation which led to this report, or at any of the other opportunities to make such a submission that have arisen during my investigation, or in evidence given by the public bodies before the European Parliament Committee of Inquiry.

87 It seems to me that those who have complained to me therefore have a legitimate expectation that I will consider what it would be appropriate to recommend by way of remedy, without imposing constraints which have no grounding in the legislative scheme governing my role.

88 Those complainants – and others, including Parliament – would, it seems to me, be entirely justified in asking what had been the purpose of my investigation, or of the other inquiries which have been undertaken in respect of the Society, if I were simply to suggest now, at the invitation of the public bodies, that there had never been any possibility of an appropriate remedy at the end of this process.

Do these submissions provide an adequate basis for concluding that no remedy for maladministration should be forthcoming?

89 While, for the reasons I have explained above, I am surprised by the nature of the submissions made by the public bodies, I recognise that those submissions constitute a clear statement of principle which I am invited to adopt. I also recognise that the adoption of such a principle would have a profound effect on what I might consider it appropriate to recommend in this report.

90 I accept, therefore, that the substantive merits of those submissions should be assessed. This I now turn to do.

91 The public bodies have told me that they accept that, '*my jurisdiction is wider than that of the courts*' and that I apply '*different tests to* [my] *approach to maladministration and injustice*'. At the same time they submit that, '*there are compelling reasons of policy as to why it is contrary to the public interest or otherwise inappropriate to recommend financial redress to*

"remedy" any maladministration.' They say that, '*amongst these reasons are those that have led the English courts to shy away from imposing a duty of care on regulators.*'

92 The underlying premise of these submissions by the public bodies, their acceptance that my jurisdiction is wider than that of the Courts notwithstanding, is that I should take into account the same considerations as would the Courts when considering negligence claims against public authorities. In other words, that the work of the Courts in relation to negligence claims is directly analogous to my work. I do not accept that underlying premise for the following reasons.

93 First, I am aware that the Courts have held that only in exceptional cases would they accept that the interests of justice justified an extension of the law of negligence to new categories of public body, such as financial regulators; and that this has normally been on the basis that to do so would create a novel category of negligence liability.

94 A classic example of the caution that I understand the Courts would adopt in such a situation appears in the case of *Reeman v Department of Transport* [1997], where Phillips LJ said[8] that: '*When confronted with a novel situation the Court does not* [consider whether to impose a duty of care] *... in isolation. It does so by comparison with established categories of negligence to see whether the facts amount to no more than a small extension of a situation already covered by authority, or whether a finding of the existence of a duty of care would affect a significant extension to the law of negligence. Only in exceptional cases will the Court accept that the interests of justice justify such an extension of the law*'.

95 However, the rationale for the establishment of my Office was to provide a mechanism for complaints that are not actionable in the Courts to be considered by an independent and impartial officer and to assist Parliament to provide remedies that the Courts could not provide for injustice – a wider concept than those which underline matters which are actionable in the Courts.

96 Indeed, that no remedy exists before the Courts, as is the case here according to the submissions of the public bodies, does not preclude me from conducting an investigation or from treating such a case in line with my normal practice – the position is quite the opposite.

97 Section 5(2)(b) of the 1967 Act provides that I shall not conduct an investigation in respect of any action where the person aggrieved has or had a remedy by way of proceedings in any court of law, unless I am satisfied that, in the particular circumstances of the case, it is not reasonable to expect that person to resort (or to have resorted) to such a remedy.

98 Situations where there is no legal remedy, or where there is such a remedy but I do not consider it reasonable to expect a complainant to exercise that remedy, thus constitute the staple diet of the work of my Office.

99 This is perhaps best exemplified by the case of Mr and Mrs Reeman, to which I have in paragraph 94 above referred.

100 Mr and Mrs Reeman had bought a fishing vessel called *Cornelis Johanna*, which had received a certificate issued by the Department of Transport certifying that the ship complied with the relevant statutory provisions designed to ensure that it was seaworthy.

[8] Phillips LJ in *Reeman v Department of Transport* [1997] 2 Lloyd's Rep 648, CA.

101 Mr and Mrs Reeman relied on that certification as demonstrating that the vessel's design and construction rendered it fit for service as a fishing vessel. Unfortunately, the surveyor who had issued that certificate had failed to carry out his duties when so doing with due skill and care.

102 After stability tests found that, in fact, the vessel did not meet the minimum requirements of the legislation and was thus not permitted to take to sea, Mr and Mrs Reeman initiated a legal action against the Department of Transport, claiming damages for breach of the common law duty of care which they alleged was owed to them by that Department.

103 That litigation concluded when the Court of Appeal held, on 26 March 1997, that it would not be fair, just and reasonable to impose a duty of care on a body, such as the Department of Transport, charged with the regulatory duty of certifying ships with a view to promoting safety at sea. Mr and Mrs Reeman's claim for damages thus failed[9].

104 However, that was not the end of the matter. Mr and Mrs Reeman complained to my predecessor, who decided to conduct an investigation. In his report on that investigation[10], my predecessor upheld their complaint, having found injustice in the form of financial loss resulting from maladministration on the part of the surveyor who had acted on behalf of the Department.

105 The Department of Transport, as a result, agreed to make an *ex gratia* payment to Mr and Mrs Reeman to compensate them for the injustice they had sustained and that Department subsequently made an interim payment of more than £215,000 to Mr and Mrs Reeman, with the final amount paid amounting to approximately £750,000[11].

106 That case underlines the fact that there is no direct or close analogy between the standards which apply to the consideration by the Courts of negligence claims against public authorities and those which apply to my consideration of complaints about injustice resulting from maladministration by those same authorities.

107 There is a difference, rightly accepted by the public bodies in this case, between legality and maladministration. As has been held elsewhere[12], although there is a substantial element of overlap between maladministration and unlawful conduct, those concepts are not synonymous.

108 There is no reason in principle why the considerations which determine whether there has been maladministration should, necessarily, be the same as those which determine whether conduct has been unlawful.

109 There is therefore no reason why, when exercising my powers to conduct investigations and to report on complaints of maladministration, that I should necessarily be constrained by the legal principles which would be applicable were the different task being carried out of determining whether certain conduct is lawful.

---

9 *Reeman v Department of Transport* [1997] 2 Lloyd's Rep 648, CA.

10 Case No. C.557/98, *Selected Cases and Summaries of Completed Investigations: April – September 1999*, pp. 29-45. Mr and Mrs Reeman at that time asked that our normal practice of anonymisation within published reports should be disapplied in their case.

11 See our Annual Report for 1999-2000 (HC 593), page 37.

12 In *R v Local Commissioner for Local Government for North and North East England, ex parte Liverpool City Council*, [2001] 1 All ER 462. See also my report, *A Debt of Honour*, 4th Report, Session 2005-2006, (HC 324: 13 July 2005), at paragraphs 132-3.

110 For the reasons given above, I reject the submission that there is a direct analogy, which I should follow, between the approach adopted by the Courts, when considering the liability of certain public authorities for negligence, and the approach that I should adopt, when considering remedies for injustice resulting from maladministration by financial regulators.

111 Nonetheless, it seemed to me that I should, in any event, consider the public policy reasons put forward by the public bodies for not providing financial recompense in this case. Those reasons are set out at paragraph 57 above. I am not persuaded by them, with one exception. I explain why below.

112 I would first emphasise that I fully accept that, when considering what an appropriate remedy might be for the injustice sustained in this case, the public interest is a consideration to which I should have regard.

113 I also accept that, when doing so, it would be appropriate to consider the potential impact on the public purse of any payment of compensation in this case. That one group of taxpayers might have to underwrite the payment of compensation to another group is something that cannot be left out of all account.

114 To that extent, I accept the submissions of the public bodies. I agree that the diversion of scarce public resources is a relevant consideration which should be taken into account and weighed in the balance along with other relevant considerations.

115 I also accept that it is a matter of record that the Courts have not imposed a common law duty of care on financial regulators[13].

116 In that context, the public bodies in their submissions have argued that I should have regard to certain matters of public policy. Those submissions raise the following four questions:

- would any recommendation for financial redress in this case result in an over-cautious or excessively risk-averse regulatory approach?;
- would such a recommendation be illegitimate because the regulators in this case did not exercise sufficient control over the '*primary wrongdoer*' or because it would '*obscure the fact that the immediate and material cause of the loss in this case was Equitable itself, coupled with the combined impact of external factors*'?;
- would such a recommendation be inconsistent with the broader role of regulation?; and
- would such a recommendation be incompatible with the statutory scheme that was in place during the relevant period?

117 I am not persuaded by the answers to those questions provided by the public bodies in their submissions.

118 When considering the above questions, I have borne in mind two central facts about the wider context of this case. The first is that the system of regulation which has been under consideration in this report no longer exists. The events recounted in this report belong to an historical era.

119 As I noted in Chapter 1 of this report, there has been, since 1 December 2001, a wholly new system of financial supervision in place pursuant to the terms of the Financial Services and Markets Act 2000. When that new regime was introduced, it was

[13] This has normally been on the basis that to do so would create a novel category of negligence liability.

said to have strengthened and made more effective the regulatory regimes it replaced through consolidation and a move to a principles-based supervisory approach.

120 Secondly, as I also explained in Chapter 1 of this report, those operating that new regime, the FSA, are not within my jurisdiction and so there is unlikely to be any further occasion on which I will be able to consider complaints made about their actions.

121 It is therefore unclear to me on what basis a specific recommendation now – designed to remedy a purely historic injustice which arose within a regulatory framework which no longer exists and which has been the subject of complaints that could never again be considered – would reasonably lead to any detrimental impact on the actions of financial regulators exercising different powers in another context.

122 Nor would such a recommendation be designed to remedy losses caused by the Society, as has been suggested by the public bodies. In relation to findings of maladministration leading to injustice, such as I have made in this report, the '*primary wrongdoer*' is the body or bodies which acted with such maladministration, not any third party.

123 In my view, a recommendation to remedy injustice would be entirely consistent with the broader role of regulation, and would not, as has been suggested by the public bodies, be equivalent to the creation of a warranty for current and future investors. Such a recommendation would also be compatible with the statutory scheme for prudential regulation that was in place during the relevant period, considered in the context of the further statutory scheme created by the 1967 Act.

124 When considering whether it would be appropriate to make a recommendation for financial compensation – or for any other remedy – the statutory regime to which I must have regard is that which governs my work. That is the approach I have followed.

125 While the facts of each case are matters to be taken into account in any investigation, the appropriateness of the contents of my report, including what remedies might be appropriate, will be determined by consideration of my role and remit as that is prescribed in the 1967 Act.

126 There is no inconsistency between the recommendation of a financial remedy in this case and the provisions of the legislative framework within which I must work.

127 Even if that were not so, I do not accept that a recommendation for financial compensation in this case would be incompatible with the statutory scheme in place at the time governing the prudential regulation of insurance companies. Indeed, I consider that those who promoted that legislation would be surprised by the contention that the application of my normal approach to complaints about the prudential regulation of insurance companies would be inconsistent with that regime.

128 In 1973, when Parliament was considering what became the Insurance Companies (Amendment) Act 1973 – which was subsequently consolidated with other relevant legislation into the Insurance Companies Act 1982 – concern was expressed about certain of the powers granted to the prudential regulators by those legislative proposals.

129 Such concerns primarily related to the authorisation process and to the 'fit and proper' powers to be granted to the prudential regulators, which together were designed to enable those regulators to control entry to the insurance industry. Particular concerns arose regarding the lack of independent appeal mechanisms in cases where those regulators decided not to authorise a company or not to permit an individual to hold a controlled position.

130 The Ministers promoting that legislation expressly relied on the ability of those with complaints about the actions of the prudential regulators of insurance companies to come to my Office through their Member of Parliament[14]. That ability persuaded Parliament to agree to the proposals and to reject amendments aimed at building into the legislation additional appeal mechanisms.

131 Given this clear intention on the part of Parliament and the lack of any express qualification on my ability to apply our normal tests when considering complaints about the functions of the prudential regulators, I see no basis for accepting the proposition that any recommendation that I might make would be incompatible with the scheme of the insurance companies' legislation.

132 I have explained above why, even were I to accept that the considerations to which the Courts have regard are directly applicable to my consideration of this case, the submissions of the public bodies are unpersuasive. I would, moreover, note that the Courts have held[15], in the context of negligence claims against public authorities, that:

> *... it would require very potent considerations ... to override the rule of public policy which has first claim to the loyalty of the law: that wrongs should be remedied.*

133 I too would need to be satisfied that '*very potent considerations*' existed before I would decide that no remedy should be recommended where one was properly due. I consider that having regard to that rule of public policy would be in the public interest on this occasion. The submissions of the public bodies do not, in my view, constitute such potent considerations.

My recommendations

134 For all the reasons given above, I have concluded that the submissions by the public bodies – that I should be constrained in this case from adopting the normal approach that I would adopt in other cases, when considering what an appropriate remedy would be for the injustice which I have found resulted from maladministration – are unpersuasive. It is open to me to recommend financial compensation if that is appropriate.

135 I do not accept that I should adopt the approach of the Courts to these questions and I am entirely unpersuaded that I should depart from my normal approach in that way. I now turn to set out my recommendations.

[14] See, for example, the Earl of Limerick in the House of Lords on 8 February 1973 and on 22 February 1973.
[15] Sir Thomas Bingham MR in *X v Bedfordshire County Council* [1995] 2 AC 633. This view has been cited with approval by the House of Lords in *Gorringe v Calderdale Metropolitan Borough Council* [2004] 1 WLR 1057 at [2] and by the Court of Appeal in *Brooks v Commissioner for Police of the Metropolis* [2002] EWCA Civ 407.

First recommendation

136 **My first recommendation is that, in recognition of the justifiable sense of outrage that those who have complained to me feel about the maladministration in the form of the serial regulatory failure identified in this report, the public bodies should apologise to those people for that failure.**

137 As I explain in *Principles for Remedy*, apologising is not an invitation to litigate or a sign of organisational weakness. It can benefit the public body as well as the complainant, by showing its willingness to acknowledge when things have gone wrong, accept responsibility, learn from maladministration, and put things right.

Second recommendation

138 **My second – and central – recommendation is that the Government should establish and fund a compensation scheme with a view to assessing the individual cases of those who have been affected by the events covered in this report and providing appropriate compensation.**

139 The aim of such a scheme should be to put those people who have suffered a relative loss back into the position that they would have been in had maladministration not occurred.

140 Addressing relative loss in this way would remedy any financial loss that has occurred and also the loss of opportunities to invest elsewhere than the Society. It is thus the most appropriate remedy for the injustice that I have found resulted from maladministration.

141 The scope of such a scheme should, in line with my *Principles for Remedy*, cover all those who have suffered similar injustice to those who have complained to me. That should include not just residents of the United Kingdom but all those who have sustained the injustice that I have found resulted from maladministration.

142 I consider that it would be reasonable to expect such a scheme to be established within six months of any decision by Government and Parliament to do so.

143 I recognise that there are likely to be practical difficulties in establishing and operating such a scheme. There may be an inherent conflict between the speed and simplicity of delivery on the one hand, and fairness both to those affected and to taxpayers generally on the other.

144 I began this investigation by addressing, in my July 2004 report to Parliament, arguments that complexity of the subject matter or practical operational difficulties were a relevant factor to be taken into account in any decision to conduct an investigation. I said that those were not compelling arguments in that context. I similarly do not accept now that such difficulties mean that an appropriate remedy should not be delivered.

145 I also recognise that how such compensation should be calculated will need to be carefully considered, not just in terms of how best to design any scheme but also in the context of the principles of regularity, propriety, and accountability for the use of public money that are set out in *Managing Public Money*[16].

[16] This document, which replaced *Government Accounting* in 2007, contains cross-Government guidance on the use of public money. It is available at: http://www.hm-treasury.gov.uk

146 While different approaches might be taken to the calculation of compensation in such circumstances, the existence of those approaches – such as that proposed by EMAG on behalf of complainants or that adopted by the Financial Ombudsman Service in considering mis-selling complaints – indicates that any difficulties that may be encountered are not insuperable.

147 All those considerations are relevant to how any compensation scheme should be organised and delivered. While recognising that the creation of such a scheme would not be straightforward by any means, such difficulties as are likely to arise are not, in my view, sufficient to negate the prime consideration to which I consider regard should be had – namely that, where wrong has been suffered, a remedy for that wrong should be provided.

148 I recognise that the decision as to how best to establish and administer any compensation scheme is a matter for Government and Parliament. However, I would offer, as a contribution to that debate, my view of the principles which should govern any such compensation scheme.

149 It seems to me that such a scheme:

- should be **independent** and constituted along the lines of a tribunal or adjudication panel, with three members – one broadly representing the interests of citizens and one representing those of the relevant public bodies, with an independent chair;

- should operate in a **transparent** manner, with the basis being made public of the decisions as to how compensation is to be calculated, as to what procedure will govern the consideration of individual cases, and as to the criteria which will be taken into account when considering those cases. Those decisions should only be made after appropriate consultation is undertaken, including with those directly affected;

- should be **simple**, not imposing undue burdens, whether evidential or procedural, on those making claims to the scheme.

150 The above principles would, I hope, be accepted widely as being an appropriate and effective mechanism of decision and delivery of the remedy that I have recommended should be provided.

151 I hope, also, that it would be accepted that this mechanism has to have, as its guiding principle, the need to deliver as speedy a remedy as is possible in the circumstances, consistent with recognising the complex issues that would need to be addressed and resolved. In my view, the scheme should take no longer than two years from the date of its establishment to complete its work.

Conclusion

152 I recognised above that the public interest is a relevant consideration and that it is appropriate to consider the potential impact on the public purse of any payment of compensation in this case. Furthermore, I am acutely conscious of the potential scale of what I have recommended and that acceptance of my central recommendation might entail opportunity costs elsewhere through the diversion of resources.

153 I also acknowledge that the public bodies have raised an issue of principle which, if accepted, would potentially have a much wider significance for my work and thus for the remedies available to Members of Parliament to enable them to assist their constituents.

154 In that context, **I invite Parliament to consider the issues that have been raised in this report and the recommendations that I have made and to further reflect on what its response to my report should be.**

155 Having alerted Parliament to the injustice that I have found was sustained in consequence of maladministration, I would be very happy to assist Parliament in its deliberations in any way that I can.

Chapter 15 – Conclusion

1 At the very beginning of this report, in its Foreword, I explained that the issues raised within this report go to the heart of some current debates about the nature of financial regulation and what citizens might reasonably expect from such regulation.

2 Of course, it is an objective shared by all that it would be preferable to avoid, where that is possible, situations where many hundreds of thousands of citizens find themselves in financial difficulties not of their own making.

3 Financial regulation exists to make a contribution to achieving such an aim. However, as successive Parliaments have recognised, such regulation cannot prevent all company failures or financial loss arising therefrom.

4 In my first report on the prudential regulation of the Society, I reported that I had found there to be a:

> *... fundamental mismatch between the nature and expectations of the prudential regulatory regime under which* [the regulators] *were required to operate during the period in question, and the understanding and expectations that policyholders and others appear to have had of that regulatory system*[1].

5 In terms both of what it is reasonable generally to expect from the system of financial regulation and of what standard should be applied by me to the review of the actions of those operating that system in this particular case, a minority of complainants certainly hold views which would suggest that such a mismatch continues to exist.

6 However, in considering the various submissions that I have received from the public bodies whose actions have been the subject of this investigation, I have also been struck by another fundamental mismatch.

7 Those submissions demonstrate a huge gulf between the duties and powers that Parliament in fact conferred on those operating the system of prudential regulation and the responsibilities in relation to those functions that the relevant regulators and their advisers are now prepared to accept were imposed on them.

8 I have explained in Chapter 5 of this report that one of the four cornerstones of the system of prudential regulation which existed at the time of the events recounted in this report was regulatory reform in the wake of high-profile insurance failures or other such problems. Indeed, the regulatory regime for the prudential regulation of insurance companies was largely established through legislation in 1973 that was a direct response to the failure of Vehicle & General.

9 The tribunal that was established by the Government of the day to inquire into the circumstances which had led to that failure concluded that the regulators had taken an overly restricted view both of the powers which Parliament had bestowed on them and of the circumstances in which the use of those powers should be considered[2]. That tribunal found that, for almost four years, there had existed grounds for intervention action in respect of the company, action which should have been taken but which was not even considered.

---

[1] 4th Report, Session 2002-03, *The prudential regulation of Equitable Life* (HC 809), Part 1, paragraph 10.

[2] *Report of the Tribunal appointed to inquire into certain issues in relation to the circumstances leading up to the cessation of trading by the Vehicle and General Insurance Company Limited*, (HC 133), 15 February 1972.

10 That system of regulation, as it was supplemented and amended over time, was replaced on 1 December 2001 by the system which is now operational and which is contained within the Financial Services and Markets Act 2000. However, while the two regimes are governed by different legislation and informed, perhaps, by different approaches, difficulties continue to be experienced by financial firms. The contribution of those responsible for regulating those firms, in terms of the prevention or mitigation of those difficulties, also continues to be the focus of attention.

11 In the report of its internal inquiry into the supervision of Northern Rock during the period prior to its nationalisation, which was published at the end of April 2008, the FSA concluded that it could not provide assurance that the prevailing framework for the assessment of risks had been appropriately applied in respect of Northern Rock. The FSA also identified other failings which were described as '*the most significant combination of shortcomings*'[3]. It was found that the risk '*assessment of Northern Rock ... as "low probability" was key to many elements of the subsequent supervision of the firm*'.

12 I have not investigated either the historical regulation of Vehicle & General or the more recent supervision of Northern Rock, although my attention has been drawn to both cases on a number of occasions towards the end of the investigation which led to this report. For current purposes, I take the findings of both the tribunal and the FSA at face value.

13 Nevertheless, it seems to me that there are parallels between these other cases and the conclusions to which I have come within this report in respect of the prudential regulation of the Society.

14 I have found that, in relation to the Society, grounds existed on many occasions for the use of the powers of intervention which the prudential regulators possessed. However, little or no consideration was given by those regulators to whether it might be appropriate to use those powers. That echoes the findings of the Vehicle & General tribunal.

15 I have also found that, despite the information before the relevant regulators, any concerns which should have been raised by that information did not materialise in relation to Equitable. The Society was seen by those regulators as low risk, because of its long history and central place in actuarial tradition, because of its market position, and because of its good reputation. Such an assessment was, as appears to have been the case with Northern Rock, key to the way in which the regulation of the Society was undertaken.

16 There are other ways in which those other cases resonate with my findings in relation to the prudential regulation of Equitable – such as the apparent failure by the FSA to record the content of meetings with Northern Rock – but those are perhaps matters for others – and perhaps history – to consider.

17 It seems to me that the central lesson that can be learned from those cases – and perhaps the only way to address the fundamental mismatches that I have found on the part both of some complainants and of the relevant public bodies – is the need for absolute clarity as to what can and cannot be expected from the system of financial regulation.

[3] *The supervision of Northern Rock: a lessons learned review*, FSA Internal Audit Division, March 2008.

18 Key to achieving such clarity are three things: a clear Parliamentary intention, systems and processes that are designed to deliver that intention, and a shared understanding as to the limits to the protection that the system offers to investors both before and after problems arise, as they inevitably will.

19 I make no suggestion as to what is the appropriate or optimal form of, and approach to, financial regulation. That is a matter for Parliament.

20 Nevertheless, whatever form or approach is adopted should be clearly articulated both within the relevant legislative framework and in any information provided about the system of regulation as to what it can or cannot deliver. Such information should be available to those – whether as investors, as regulated entities, or simply as legislators and taxpayers – who are potentially affected by such regulation.

21 Devising policies and approaches to implement the policy underlying the system of regulation – whatever that policy is – is critical to the success of such a system. The development of principles or philosophies, and of administrative systems of verification and oversight, will doubtless aid such effective delivery of Parliament's intention.

22 However, such approaches to regulation should be consistent with what Parliament intended. It would be entirely unsatisfactory if Parliament were to legislate for a particular form or level of protection that was negated or reduced by the adoption of restricted and narrow interpretations of the duties and powers that Parliament has imposed in order to see its intention properly administered and effectively discharged.

23 Moreover, all those participating in – or with responsibilities for supervising from without – the financial system, including those investing or considering making such investments, should understand their own rights and responsibilities and thus be enabled to take appropriate action to mitigate those risks which cannot be removed by a system of regulation.

24 It seems to me that market stability and confidence in financial services can only be harmed where problems arise in a context in which no general understanding exists as to whether or not the system of regulation aims to prevent such problems from arising or as to whether a safety net exists to remedy any financial losses sustained.

25 I am aware of the views of others who believe that deficiencies in the system of regulation, and not the way in which that system was operated in the particular case of the Society, are more to blame for the circumstances which led to the Society to close to new business in December 2000.

26 However, I have found little evidence that would support such an assessment. The aim of the system of regulation that was in force under the Insurance Companies Act 1982 was clear enough. The means afforded by Parliament to the prudential regulators in order to deliver that aim were robust and could have been used, but were not used, in relation to the Society.

27 In reviewing the development of this regulatory regime, I was struck by a recurring theme in the Ministerial explanations to Parliament as to the basis for the powers that it was being asked to provide to the relevant regulators.

28 Sir Geoffrey Howe (as he then was), the Minister introducing what became the Insurance Companies (Amendment) Act 1973, told the House of Commons on 21 May 1973 that:

> *The purpose of the Bill is to improve the protection given to insurance policy holders. It is another example of the measures being introduced by the Government under the general heading of consumer protection. It is clear that we must do all we sensibly can not only to protect the policy holder but also to maintain the name and reputation of our insurance industry which does so much for our invisible earnings.*

29 When the Policyholder Protection legislation, which established a scheme to provide compensation where insurance companies failed, was introduced, the then Secretary of State for Trade, the late Peter Shore, told the House, on 18 June 1975, that the legislation had:

> *... one central purpose and justification – to see to it that policyholders do not suffer major loss and hardship when an insurance company fails. Let me say straight away that I consider that my main objective, in supervising the industry, is to see that insurance companies do not fail ... But the fact is that insurance companies have failed over many years, and in the past two years, in particular, a number of companies have got into difficulties as a result of the deterioration in the general economic situation and particularly the fall in stock market values and the decline in the property market.*
>
> *I shall do my utmost to prevent failures in the future, but, if and when they occur, my major concern, and I believe that of this House, must be for the victims of such failures. Life insurance is the major form of saving in this country. For many people a life insurance policy represents their only substantial investment. The average citizen relies very heavily indeed on his insurance policies.*

30 On 2 February 1981, in introducing legislation to implement the provisions of the first European Directive, subsequently to be consolidated within the 1982 Act, Sir Reginald Eyre, the then Minister responsible for prudential regulation, explained the approach to insurance regulation within the UK as being based on the doctrine of 'freedom with publicity' – like membership of the European Communities, another of the cornerstones of the system of prudential regulation covered in this report – and said:

> *Quite properly, the freedom I have referred to has its limits; the Secretary of State has a clear duty to intervene if it appears that all is not well. The need for supervision of the insurance industry is one of record. There have been cases in the past where failures of insurance companies have done policyholders and interested third parties great harm, and, indeed, done the industry no good. Although no system of supervision can avoid completely all risks of difficulty or failure of an insurance company, Government responsibility for a systematic approach is to be found not just in the United Kingdom, but throughout the countries of the developed world and in many others.*

31 Ample means to deliver the central aim of regulation, as articulated by all those Ministers – the protection of policyholders – were given by Parliament to those responsible for regulating the insurance industry.

32 The central story of this report is that this robust system of regulation was not, in respect of the Society, implemented appropriately – that is, consistently, fairly, and with proper regard to the interests of those directly affected – by the prudential regulators and those providing assistance and advice to those regulators.

33 Assessing the risks relevant to a particular insurance company cannot be appropriately achieved through relying on its longevity or reputation. Verification of the financial position of such a company is not achieved if clear indications of difficulty or other warning signs are ignored or not followed through to a proper resolution. Ensuring that current and potential investors have sufficient information to enable them to make informed choices about their finances requires the published information about companies to be accurate and complete.

34 My findings in this report show that the prudential regulation of the Society during the relevant period failed – and failed comprehensively. That was not a system failure, but a failure properly to implement in the particular case of the Society the system of regulation that Parliament had enacted.

35 Shared understandings as to the purpose of, and limits to, financial regulation and as to the relevant rights and responsibilities of all those affected by such a system depend on the proper implementation of Parliament's intention. That did not happen in this case.

36 As I noted in Chapter 4 of this report, on behalf of complainants EMAG submitted that:

> *Policyholders have lost large sums of money as a result of the maladministration by the Regulators to the extent that it is questionable whether they might not have been better served by no regulation at all.*

37 The comfort taken by investors that a system of regulation exists to protect their interests cannot be lightly dismissed – but it should have a realistic basis. Ensuring that such comfort is realistic requires clarity as to what regulation is for, as to how it will be undertaken, and as to its limits.

38 This report deals with events and a regulatory framework that are both in the past. It is for Parliament to consider whether any lessons for the present – or for the future – can be drawn from the story that has been told in this report.

Introduction

Background

1 In this Part of my report, I set out the work we have done to establish how the regulatory regime relevant to the prudential regulation of Equitable and other insurance companies developed over time. The structure of my report is explained in Chapter 1 of Part 1 of this report.

2 The complaints which were contained within the terms of reference for the investigation are set out in Chapter 4 of Part 1 of the report. In summary, these complaints contended that the public bodies responsible for the prudential regulation of insurance companies and the Government Actuary's Department (GAD) '*failed for considerably longer than a decade properly to exercise their regulatory functions in respect of* [Equitable] *and were therefore guilty of maladministration*'[1].

3 Specific complaints relate to organisational issues, general operational issues, supervision of regulatory solvency, payment of excess bonuses and the adequacy of procedures to safeguard the reasonable expectations of policyholders and (implicitly) of potential policyholders (PRE[2]).

4 I explained in Chapter 5 of Part 1 of this report that an essential factor in the consideration of these complaints is the nature of the regulatory functions which pertained at the relevant time. Within Chapter 5 of Part 1 of this report, I also set out in broad outline the key aspects of the regulatory regime relevant to this investigation and the obligations to which the prudential regulators and GAD were subject.

5 This Part of the report describes in more detail how the regime for the prudential regulation of life assurance companies such as Equitable developed over the period from approximately 1970 until December 2001. As is noted elsewhere in this report, 'prudential regulation' is primarily concerned with the solvency of insurance companies and the soundness and prudence of their management. Since 1973, the legislation has included the concept of PRE and the protection of PRE as a basis for regulatory intervention.

6 The rest of this Part of the report explains the main duties and powers of the regulators and the mechanisms available to them and outlines the role of GAD in relation to the regulation of life insurance companies. It summarises the relevant primary legislation and statutory instruments that were in force in the United Kingdom, the European directives, some of the professional guidance produced for appointed actuaries and the 'service level agreements' entered into by bodies within my jurisdiction.

Bodies within my jurisdiction

7 The government departments primarily concerned with the prudential regulation of insurance companies over the relevant period were the Department of Trade and Industry (the DTI) and its predecessor departments and Her Majesty's Treasury (the Treasury).

8 Chronologically, responsibility rested with and/or administrative functions were undertaken by the Board of Trade (the BT) (1870-1970)[3], the DTI (1970-74), the Department of Trade (the DoT) (1974-1983),

[1] Complainants alleged that this maladministration had resulted in injustice to them and sought redress for the injustice they claimed to have sustained.

[2] Where appropriate to the context, the acronym 'PRE' should be taken to refer to the reasonable expectations of potential policyholders as well as those of existing policyholders in the following text.

[3] In 1970, the functions of the BT under the relevant legislation were transferred so as to be exercisable concurrently by the Secretary of State and the BT. On the coming into force of section 54(2) of the Insurance Companies Amendment Act 1973, the powers and duties under the relevant legislation were to be exercisable by the Secretary of State alone.

the DTI (1983-98) and, as from 5 January 1998[4], the Treasury. GAD, one of the Chancellor of the Exchequer's departments, was created in 1919 to provide actuarial advice to all government departments.

9 Under section 5 of the Parliamentary Commissioner Act 1967 (the 1967 Act), I have power to investigate action taken in the exercise of administrative functions by or on behalf of the government departments and other public bodies listed in Schedule 2 to that Act. The listed bodies over time included the BT, the DoT, the DTI and the Treasury.

10 Through an amendment to the 1967 Act which came into force on 15 November 2004, GAD has been brought within my jurisdiction, but only in respect of its actions in advising on or before 26 April 2001 in relation to the exercise of certain functions relating to the regulation of insurance companies[5].

11 The actions of the Financial Services Authority (FSA) fall within my jurisdiction only in so far as they relate to functions contracted out[6] to it by the Treasury in respect of the prudential regulation of insurance companies under arrangements which were in place between 1 January 1999 and 1 December 2001 and its actions are deemed to be those of the Treasury.

12 The actions of the Securities and Investments Board Limited (SIB), the Personal Investment Authority Limited (PIA), those of the FSA prior to 1 January 1999 and those of Equitable and its appointed actuary are not within my jurisdiction. This report accordingly does not address the regime for conduct of business regulation[7] for which the SIB, PIA, and FSA were responsible.

13 This Part of the report also refers to the professional guidance which was available to appointed actuaries during the relevant period, in particular that issued by the Faculty of Actuaries and Institute of Actuaries (F&IA), as a relevant factor for GAD and the prudential regulators. The actuarial profession is not within my jurisdiction[8].

Legal identity of Equitable

14 The treatment of various undertakings which carry on insurance business under the legislation (and the implications of certain provisions) differs in some respects dependent upon the legal status of the undertaking concerned. Information about Equitable is provided in Chapter 2 of Part 1 of this report.

Appendices to this Part of the report

15 This Part of my report has a number of appendices[9]. Appendix A shows the derivations of the relevant provisions of the Insurance Companies Act 1982. Appendix B contains information about the frequency of exercise of powers of

4 See the Transfer of Functions (Insurance) Order 1997 SI No. 2781, which transferred functions of the Secretary of State for Trade and Industry under the Insurance Companies Act 1982 and other specified insurance legislation to the Treasury, or in some instances to the Treasury and the Secretary of State concurrently.

5 See the Parliamentary Commissioner Order 2004 SI No. 2670. The advice by GAD which may be the subject of an investigation by me is that given on or before 26 April 2001 which relates to the exercise of functions under Part II of the Insurance Companies Act 1982, or any other enactment relating to the regulation of insurance companies within the meaning of that Act.

6 See the Contracting Out (Functions in Relation to Insurance) Order 1998 SI No. 2842, empowering the Treasury to authorise another person or its employees to exercise specified functions on behalf of the Treasury.

7 'Conduct of business regulation' primarily concerns the marketing and sale of insurance companies' products and the provision of related advice to current and potential investors.

8 References to the actuarial profession and its publications are made only to set the account of the prudential regulation in context.

9 At pages 266 to 321.

intervention under the Insurance Companies Act 1982. Appendix C contains specimen forms from the regulatory returns which life insurance companies were required to submit to the prudential regulators during the time covered by this report.

16 Appendix D contains the annex to the Service Level Agreement between the prudential regulators and GAD, which set out the priority order ratings for the scrutiny of those regulatory returns. Finally, appendix E contains a Government paper on '*the regulatory regime pursuant to which Equitable Life was regulated during the period 1973 to 2001*'[10].

Early history of the legislation and organisation of information

17 Specific legislation in relation to life assurance companies dates back to 1774[11]. Rudiments of the current regulatory regime were contained in the Life Assurance Act 1870, which was enacted following a high incidence of failure of life assurance companies[12] and included requirements for the establishment of a separate long-term fund, actuarial investigation at specified intervals and annual returns to the BT, with returns to be made available to policyholders on request and powers for policyholders to petition for winding up.

18 The promoters of that legislation described the aim of regulation as being '*perfect freedom with perfect publicity*'[13], with limited government intervention in the affairs of insurance companies, an approach which has survived (with some adaptation) in modern times.

19 Over the late nineteenth and early twentieth centuries the legislation continued to develop, to cover more classes of insurance and eventually to include powers for the BT to appoint inspectors for companies of dubious solvency and (with leave of the court) to petition for their winding up. In 1946[14], following further incidents of failure of insurance companies[15], former requirements for such companies to deposit money with the court were replaced with a 'solvency margin' requirement for companies conducting general business, with the aim of anticipating and preventing insolvency arising. The Insurance Companies Act 1958 (the ICA 1958) was then enacted to consolidate the Assurance Companies Acts 1909 to 1946.

20 The Companies Act 1967 (the CA 1967), Parts I and II of which were introduced in the light of concerns about fraud in non-life areas of insurance business and a perceived need for greater disclosure by companies generally, provides a convenient starting point for my account. A summary of the main provisions of Part II of that Act provides a 'base

10 This was one of two documents which together comprised the initial response of the public bodies to the complaints set out within the terms of reference for the investigation. The other, which is summarised within Chapter 4 of Part 1 of this report, is reproduced in full in Part 4 of the report.

11 When the Life Assurance Act of that year prohibited all such insurance unless the policyholder had an 'insurable interest' in the life or death of the person insured.

12 In particular, the failure of the Albert Life Assurance Company in 1869, which had taken over the business of twenty other societies. Concern had also been expressed that UK companies would be 'shut out' of overseas countries where more stringent legislation applied (notes for the Jubilee Lecture of the Institute of Actuaries Students' Society on 18 January 1977 by a senior official of the DTI).

13 Recorded in the notes referred to in footnote 12.

14 Under section 3 of the Assurance Companies Act 1946. The required solvency margin was the greater of £50,000 or one-tenth of the general premium income of the company in its preceding financial year. For the purposes of other legislation concerning the winding up of companies by the court, a company conducting general business was to be deemed to be unable to pay its debts if its assets did not exceed its liabilities by that amount.

15 The notes referred to in footnote 12 mention 34 such failures between 1919 and the promotion of the 1946 Act.

line' from which to assess the evolution of the prudential regulation regime for insurance companies since the 1970s.

21 The prudential regime is described as it applied over the following phases:

Phase 1:	1967 - 1972
Phase 2:	1973 - 1980
Phase 3:	1981 - 1990
Phase 4:	1991 - 1993
Phase 5:	1994 - 1999
Phase 6:	2000 - 2001.

Phase 1: 1967 – 1972

The Companies Act 1967

Introduction and overview

22 Part II of the CA 1967 amended the ICA 1958 and introduced new and stricter controls over the establishment and activities of insurance companies carrying out specified classes of insurance business, including ordinary long-term insurance business.

23 'Ordinary long-term insurance business' was defined by section 59(6)(a) of the CA 1967 (and its successor provisions) to include '*effecting and carrying out contracts of insurance on human life or contracts to pay annuities on human life*'. Long-term business was (and is) treated distinctly from 'general business' for many purposes under insurance legislation[16]. 'Insurance business' was not defined in the legislation at this time[17].

24 The government department responsible for regulation under the CA 1967 (as under the ICA 1958) was the BT. The CA 1967:

- extended the classes of insurance business subject to statutory regulation to include all identified classes;
- introduced requirements for entities to obtain authorisation from the BT to conduct new classes of insurance business, based on criteria relating to initial resources, adequacy of arrangements for reinsurance and 'fit and proper persons';
- introduced powers for the BT to direct or require action by the company of specified kinds in specified circumstances, in particular to avert prospective insolvency; and
- imposed additional requirements in relation to insurance company accounts and the audit of accounts.

25 The impact of the CA 1967 was described as leaving the basic concepts of supervision essentially as before, namely, that each enterprise would be left free to determine the scope of its business, its relations with policyholders (including the terms of contract) and the management of its funds, subject only to the interplay of competition and to the final tests of maintenance of a proper degree of solvency[18]. In relation to the powers to intervene to avert insolvency, these were later described in an internal paper prepared for the Secretary of State in relation to proposed legislation to replace the CA 1967 as '*hastily grafted on to the earlier power to petition for winding up when insolvency had occurred*'[19].

26 The criterion of 'policyholders' reasonable expectations' as a 'sweeping-up' ground for intervention appears to have been proposed by officials of the DTI as early as 1971 (by means of insertion of a new clause in the CA 1967), although it was not pursued at that time[20].

---

16 Ordinary long-term insurance business and industrial assurance business were together defined as 'long-term business'. Long-term business was excluded from the definition of 'general business' in section 33 of the ICA 1958 (as amended by Schedule 5 to the CA 1967).

17 It was first defined in section 34 of the Insurance Companies Act 1981.

18 National Report from Great Britain to the 19th International Congress of Actuaries, referred to in the Journal of the Institute of Actuaries (JIA) 101 (1974) at paragraph 7, page 54.

19 See the Report of the Equitable Life Inquiry led by the Right Honourable Lord Penrose ordered by the House of Commons to be printed on 8 March 2004 (the Penrose Report), Chapter 13, paragraph 16.

20 See the Penrose Report, Chapter 13, paragraph 19.

27 The origins of this expression are obscure, but appear to pre-date the 1967 legislation[21]. The expression had been used in 1966 by RS Skerman, in a paper published in the Journal of the Institute of Actuaries entitled 'A Solvency Standard for Life Assurance Business'[22] in a particular context. In considering exactly what income and outgoings should be taken into account when testing solvency he described, as one of the three main problems, the issue of policyholders' participation in profits under with-profits policies. He noted[23]:

> *Although an office is not under a contractual obligation which can be quantified in relation to the benefits which its policyholders will derive from future profits, it would be unsatisfactory not to take account of the policyholders' reasonable expectations when determining the value of its liabilities.*

In identifying five suggested principles for a solvency standard for life assurance business he rejected the use of a gross-premium basis of valuation as being appropriate only if 'solvency' was understood to mean '*no more than fulfilling contractual obligations*'. He considered that in order to fulfil policyholders' reasonable expectations, it was necessary to use a net-premium[24] or other valuation basis which would produce stronger reserves.

Authorisation to conduct additional classes of insurance business

28 Under the CA 1967, companies[25] which immediately before 3 November 1966 were properly[26] carrying out a relevant class of insurance business were authorised to continue to do so, but those wishing to extend their businesses into additional classes required express authorisation from the BT (sections 60 and 61). Before issuing such an authorisation, the BT was required to be satisfied that the company fulfilled minimum financial requirements concerning the excess of the value of its assets over the amount of its liabilities and that where necessary, adequate arrangements for reinsurance of risks had been or would be made (sections 62 and 63).

29 No authorisation could be issued if it appeared to the BT that an officer of the company, its parent company or a person who controlled the company was not a 'fit and proper person' to be associated with the company (section 64). On issuing an authorisation, the BT was empowered to impose requirements regarding the initial conduct of business by the company, including restrictions on investments made by the company, the custody of

[21] A report on PRE prepared by a working party of the F&IA in 1993 (referred to below) suggests that the origins of the expression may date back to the 19th Century and describes the ideas behind PRE as being *'deeply embedded in actuarial thought in concepts such as equity'* but with consumerist overtones added in recent years.

[22] JIA 92 (1966) 75-84.

[23] Ibid, at page 77.

[24] RS Skerman described the net-premium valuation method as being one under which: *'the premiums valued exclude any amounts included in the with-profits office premiums which would provide profits to policyholders. Thus, these amounts receivable in the future are not capitalized so as to reduce the amount of the liabilities and, if solvency is demonstrated using a net-premium method, then, broadly speaking, the amounts included in future premiums which should provide profits for policyholders will, in fact, emerge as surplus from year to year in the future and be available for this purpose'.* This was intended to do a good deal more than achieve solvency in terms of ensuring the fulfilment of contractual liabilities, it was intended as a *'standard of good conduct'* so far as with-profits policies were concerned, linked to Skerman's concept of the need to fulfil the reasonable expectations of with-profit policyholders: JIA 92 (1966) at page 79.

[25] I use the term 'company' throughout this Part of the report although the provisions of the CA 1967 and subsequent legislation also applied to certain unincorporated bodies. As noted, Equitable is a private unlimited company.

[26] i.e. without contravention of section 2(1) of the ICA 1958, which prohibited any person from carrying on life assurance or other specified kinds of insurance business unless that person was incorporated (under the Companies Act or otherwise) and held a paid-up share capital of at least £50,000 (subject to certain exceptions).

assets and the supply of specified information for a period of up to five years, with supplementary provisions which rendered certain mortgages or charges created in contravention of the statutory requirements void against the liquidator and any creditor of the company (sections 65 and 66).

Restrictions on entering into new contracts of insurance

30 By section 68 of the CA 1967 the BT was empowered, in specified circumstances, to give directions which imposed restrictions on the carrying on of insurance business. Those circumstances included those where the BT was not satisfied about the solvency of the company[27], as well as those where statutory obligations were not being satisfied by the company; reinsurance arrangements were not considered to be adequate; it appeared that the 'fit and proper person' criterion under section 64 for authorisation would not be fulfilled if an application were to be made; or where it appeared to the BT that misleading or inaccurate information had been supplied when authorisation had been sought.

31 In the case of a company conducting ordinary long-term insurance business, the appropriate form of the restriction was to prohibit the company effecting further contracts of insurance on human life or contracts to pay annuities on human life. Companies were given the opportunity to make representations and the BT was required to consider any such representations before a direction was given. Notice of a direction was required to be published in the London and Edinburgh Gazettes. Criminal sanctions applied to a company which contravened a restriction imposed by a direction given by the BT under these powers. The BT could withdraw a restriction if it appeared to it that the restriction was no longer necessary.

Accounts, audit, documents and actuarial valuations

32 The former provisions of section 4 of the ICA 1958 which required the accounts and balance sheets of insurance companies to be in a prescribed form were replaced with a power for the BT to make regulations to specify the contents of the accounts and the documents to be annexed to them (section 71 of the CA 1967). The Insurance Companies (Accounts and Forms) Regulations 1968 were made under the amended provisions of the 1958 Act (and are referred to under a separate heading below).

33 The rules prescribed for the audit of accounts of insurance companies were extended to all such companies whether or not they were also governed by the Companies Acts; the BT was empowered to prescribe by description the person who should audit the accounts and the manner in which they should be audited (section 72).

34 The BT was also empowered to vary the length of an insurance company's financial year (section 73). The requirements for signature of the accounts by specified officers of the company were slightly reduced in order to minimise delay in the deposit of accounts with the BT (section 75).

35 Requirements for companies to prepare an annual 'statement of business' under section 7 of the ICA 1958 (which had formerly applied only to those conducting accident insurance business) were extended to apply to companies conducting business of other prescribed classes (section 74 of the CA 1967).

[27] In the case of a company carrying on long-term business the test regarding solvency in the CA 1967, section 68(1)(b) was expressed as being that the BT *'are not satisfied that the value of its assets exceeds the amount of its liabilities (including all prospective and contingent ones, but excluding those in respect of share capital)'*.

36 By Regulation 14 of the Insurance Companies (Accounts and Forms) Regulations 1968, ordinary long-term insurance business became a class prescribed for this purpose and those Regulations prescribed the form of the statement (described as a 'Summary of Changes in Long-Term Business').

37 The BT, as an 'appropriate authority', was empowered to exempt an insurance company from the normal requirements of disclosure to shareholders and policyholders[28] of statements and reports annexed to the accounts if, in its opinion, disclosure '*would be harmful to the business of the company or of any of its subsidiaries*' (section 76).

38 The maximum interval for actuarial investigation of the financial condition of an insurance company (including a valuation of liabilities) under section 5(1)(a) of the ICA 1958 for a company conducting ordinary long-term business was reduced from five years to three years (section 78 of the CA 1967).

39 The maximum interval of five years for the preparation of the statement of business under section 5(2) of the ICA 1958, in cases where an annual actuarial investigation was made, was not changed. Schedule 5 to the Insurance Companies (Accounts and Forms) Regulations 1968 set out the prescribed form of statement of ordinary long term business for the purposes of section 5(2) of the ICA 1958. It required considerable detail to be provided in relation to separately distinguished categories of contract in order to enable an independent assessment of the company's liabilities to be made (see further paragraph 51 below).

Insolvency and winding up

40 Sections 79-81 of the CA 1967 amended the provisions of the ICA 1958 regarding insolvency and winding up of insurance companies. The solvency margin requirements for companies conducting general insurance business (i.e. non-life business) were strengthened.

41 The BT as an 'appropriate authority' was empowered to impose requirements on insurance companies which were conducting business in a way which created a risk of insolvency. These requirements were framed in similar terms to those which might be imposed under section 65 when authorisation for a new class of business was to be issued, such as restrictions on the making of new investments of a specified class and the realisation of investments of that class[29], with the addition of a requirement through which the maximum amount of premiums received during a specified period could be limited (section 80).

42 The powers under section 15 of the ICA 1958, for the BT to petition for the winding up of an insurance company, were extended to include failure by the company to comply with specified requirements of the legislation. The former requirement that leave of the court should be obtained before a petition was presented was removed (section 81 of the CA 1967).

Notification of changes in officers and changes in control of the company and penalties for non-compliance with the legislation

43 Insurance companies were required to give written notification to the BT of any changes in officers or in the persons controlling the company, and of similar changes in respect of its holding company. Any person acquiring or relinquishing control of an

[28] Section 8(6) of the ICA 1958 required an insurance company to provide a printed copy of the accounts, balance sheet, abstract or statement last deposited with the BT under section 8 of that Act to any shareholder or policyholder who applied for the document.
[29] As well as maintenance of assets of a minimum value in the UK and provision of information verified in a specified manner.

insurance company (or its holding company) was required to give written notification to the company of that fact. A criminal sanction was imposed for non-compliance with the latter requirement (sections 82 and 83).

44 Various related criminal offences were created, for example in respect of the supply of false information in purported compliance with certain requirements of the CA 1967 and the ICA 1958. By section 89 of the CA 1967, individual officers of a company could be personally liable for any offence committed with their consent or connivance, or through their neglect (see sections 84-91 regarding penalties and legal proceedings).

Miscellaneous

45 The BT was empowered to exempt individual companies from certain provisions of the ICA 1958 where compliance would be unduly onerous or inappropriate, and was empowered to make the application of those provisions less stringent (section 92 of the CA 1967). The BT was required to make an annual report to Parliament about insurance matters in place of the former obligation (under section 10 of the ICA 1958) to lay before Parliament the accounts and related documents deposited with the BT during the proceeding year (section 98).

The Insurance Companies (Accounts and Forms) Regulations 1968

46 From 1969 onwards, the accounts of insurance companies incorporated under the Companies Acts[30] were subject (in addition to the requirements of companies legislation) to the more detailed requirements of insurance companies legislation, initially, the Insurance Companies (Accounts and Forms) Regulations 1968[31] (the ICAF Regulations 1968) which came into operation on 1 January 1969.

47 In view of the particular requirements of the ICAF Regulations 1968, it was possible that the figures provided by a company in order to comply with those Regulations would differ from the figures shown in the company's profit and loss account and balance sheet produced to comply with general companies legislation.

48 The ICAF Regulations 1968 applied to all insurance companies (other than those conducting only industrial assurance business) and included a set of prescribed forms specifically for those conducting long-term business. The returns to be made in respect of long-term business under the five Schedules to the ICAF Regulations 1968 were:

Schedule 1	Balance sheet and profit and loss account
Schedule 2 (Parts 1 and 2)	Revenue account and premium analysis
Schedule 3 (Part 4)	Summary of changes in business and new business
Schedule 4	Valuation report
Schedule 5	Statement of business.

49 The primary objective of the returns was to provide the supervisory authorities with sufficient information to determine that a company was solvent and was not following a policy which could lead to future insolvency[32].

[30] Such as Equitable.
[31] SI 1968 No. 1408.
[32] Paper prepared for the Institute of Actuaries on 26 November 1973 by A Ford, FIA, FSA: JIA 101 (1974) 53–87.

50 They were also a means by which policyholders might obtain information about the state of the company's affairs, although it was noted that it was not widely known that the returns were available for public scrutiny and were not reasonably intelligible to an educated layman[33].

51 In respect of the contents of the statement of ordinary long-term business of the company (under Schedule 5 to the ICAF Regulations 1968) it was specified that the statement must contain '*such particulars as are sufficient to enable an independent assessment of the liabilities of the company's ordinary long-term business to be made*'.

52 From this it appeared that, at minimum, the returns should permit an independent actuary, with no other knowledge of the company than that contained in the statutory returns, not only to assess the valuation basis but also to perform a valuation on a different basis or bases in order to gauge the effect that the use of different assumptions would have on the value of the assets and liabilities[34].

53 The ICAF Regulations 1968 required that the accounts prepared under section 4 of the ICA 1958 and all the statements, certificates and reports to be annexed to the accounts gave a 'true and fair' view of the affairs of the company as at the end of its financial year and of the profit or loss of the company for the financial year (regulation 2(1)).

54 However, the accounts and other documents were not to be deemed to fail to give a true and fair view '*by reason only of the fact that the amount at which any asset of the company has been included in the balance sheet is less than the full value of that asset*'. The effect of this proviso was obscure, as there was no requirement to show the difference between the full value and the balance sheet value.

55 Furthermore, the meaning of 'full value' was itself unclear[35]. The application of the general company law requirement for the accounts to show a 'true and fair view' in relation to the accounts of insurance companies and the valuation of long-term liabilities were to become major issues between auditors and actuaries[36].

56 The most important of the prescribed documents were considered to be the balance sheet and valuation report. For a company which had carried out long-term business during the financial year, a certificate signed by the actuary (see paragraph 57) was to be annexed to the balance sheet stating whether or not, in his opinion, the aggregate amount of the liabilities of the company in relation to its long-term business as at the end of the financial year exceeded the aggregate amount of those liabilities shown in the balance sheet (Regulation 5). However, no minimum was prescribed for the excess of the life fund over the actuarial liabilities.

57 Regulation 15 prescribed the qualifications required[37] of the company's actuary as being either a Fellow of the Institute of Actuaries or of the Faculty of Actuaries or such other person having

35 Ibid.
36 See the Penrose Report, Chapter 11, paragraph 13 in relation to the practice of actuaries being to include *'over-prudent margins in liability valuations'* and auditors taking the view that this practice undermined the possibility that the accounts could show a true and fair view. The relationship between actuaries and company auditors was eventually the subject of a Guidance Note: GN7, first issued with effect from 1 January 1980.
37 For the purpose of the interpretation provisions of section 33 of the ICA 1958, which defined an 'actuary' as an actuary who possessed prescribed qualifications (subject to a limited exception).

actuarial knowledge as the BT might, on the application of the company, approve.

The Finance Act 1971

58 Section 20(3) of the Finance Act 1971 amended section 226 of the Income and Corporation Taxes Act 1970 so as to enable a policyholder under a contract approved by the BT to take part of the policy benefit as a cash lump sum rather than as an annuity. That lump sum could be no greater than three times the annual amount of the remaining part of the annuity (and the election by the policyholder to take a lump sum was required to be made at or before the time the annuity first became payable to him or her).

59 This change gave policyholders greater flexibility. It enabled them (or their advisers) to assess whether the cash lump sum might be used to purchase a more beneficial annuity from another insurer on the open market. Later changes made to section 226 of the Income and Corporation Taxes Act 1970 by section 26 of the Finance Act 1978 made it possible for the policyholder to require that the entire cash sum representing his or her policy benefits be paid to another life insurance company, facilitating the introduction of what became known as the 'open market option'.

The European Communities Act 1972

60 The European Communities Act 1972 (the ECA 1972) received Royal Assent on 17 October 1972 and had effect on 1 January 1973 when the United Kingdom (the UK) joined the Community.

61 On joining the Community, the Community Treaties and legislation became binding on the UK at an international level. The ECA 1972 was designed to give effect to the Community Treaties and legislation 'internally'.

62 By section 2(1) of the ECA 1972, rights, powers, liabilities, obligations, restrictions, remedies and procedures from time to time created, arising from or provided for under the Community Treaties (as defined by section 1(2) of that Act) were given direct effect in the UK if the Treaty provided for the provision to have effect without further enactment in the UK.

63 By section 2(2), provision was made for certain rights and obligations under Community law to be implemented in the UK by means of subordinate legislation. This could either be through an Order in Council or by regulations made by a designated Minister or department, but in either case the form of the measure must be a statutory instrument approved by each House of Parliament, or subject to annulment by either House.

64 Following on from the various European Economic Community (EEC) and European Community (EC) Directives on insurance referred to below, subordinate legislation was made on a number of occasions to give effect to the Directives, in some cases amending the primary legislation.

65 It was plain that the aims of the Treaty of Rome would have a considerable impact on insurance business once the UK joined the Community. In general the UK regulatory regime, particularly for long-term business, was seen as being less interventionist and having less stringent rules than the regimes which applied in other EC countries.

66 The fundamental aims of the Treaty in terms of freedom of establishment and to provide services, the free movement of persons, services and capital and fair competition within the Community, were bound to have considerable implications for the

regulatory regime in the UK. The process of harmonisation of the legislation to facilitate the aims of the Treaty was expected, at the least in the short-term, to lead to stricter rules in the UK.

67 However, it was suggested by the Minister for Trade (in a talk given on 1 November 1972) that, once the UK joined the Community, the Commission would welcome the liberalising influence of the UK in the preparation of the insurance directives, as such an approach accorded with the general philosophy of the Commission.

68 The twelve-year general programme for the progressive establishment of the Common Market included a specific, five-stage, timetable for the introduction of the principles of freedom of establishment and freedom of services in respect of insurance transactions. This timetable was subject to substantial delay.

69 By the time the UK joined the Community, no Community rules had been promulgated in relation to direct insurance business[38]. The First Non-Life Directive (representing the second step in the five-stage process of transition in the original timetable) was almost finalised, subject to the contributions of the countries (including the UK) who were about to join[39]. The First Life Directive (or Establishment Directive) was at an early stage of preparation. It was anticipated that reaching agreement with other member states on solvency regulations was likely to be a difficult issue in view of the less stringent supervisory approach adopted in the UK.

Background to the role of the Government Actuary's Department

70 Before GAD was formally created in 1919, actuaries who were to form part of that Department provided advice to the BT on life assurance matters[40]. In a letter written in 1916, the actuary who was to assist the BT recorded that his duties for the Board were to include:

(a) reporting generally on returns sent in by individual companies and occasionally to advise as to the meaning of legislation from an actuarial point of view; and

(b) in the event of new legislation, to advise on proposals made.

71 With the creation of GAD in 1919, the arrangements between government departments and GAD were formalised. GAD had its own source of finance from a Parliamentary vote, so other departments were not expected to pay for its services at least until 1989[41].

72 In addition to the matters referred to above, over the years GAD became involved in the liquidation of life assurance companies and participated in government committees of inquiry to address issues of concern in the field of life assurance.

73 By the 1930s, the role of GAD had gradually widened to include advising the BT on possible action to improve the position of policyholders and to make published information more transparent and informative. GAD was also asked to

[38] An EEC Council Directive 64/225/EEC of 25 February 1964 had abolished restrictions on the freedom of establishment and on the free supply of reinsurance and retrocession within the Common Market. (A further directive had been issued in relation to motor insurance.)
[39] Talk by Minister for Trade at a seminar on 'Corporate Insurance and Risks Today', 1 November 1972.
[40] According to a paper by the Government Actuary: JIA 119 (1992) 313–343.
[41] Since 1989 when a management review was undertaken, GAD has been expected to recover almost all of its costs from fee income from its clients.

become closely involved in consideration of cases of suspected insolvency. GAD appears to have played a part in encouraging the BT to consult informally with the then insurance associations: the Life Offices Association and the British Insurers Association. Eventually GAD (and the Government Actuary) became involved in international life assurance issues and the emerging single European market for insurance business.

74 The role of GAD is not referred to in the legislation which creates and governs the regime for prudential regulation of life assurance companies. However, GAD's services in scrutinising returns and seeking clarification of technical issues and its advice on problem areas, emerging legislation and guidance have been essential components in the scheme of prudential regulation. The experience GAD had built up over the years must have been of particular significance prior to any valuation regulations being introduced. In 1991, the Government Actuary described the role of GAD as follows:[42]

> *From 1984 GAD has operated a major part of life insurance supervision as a delegated responsibility, under the terms of a written contract with the DTI, which lays down the respective responsibilities of DTI officials and of GAD. It is the responsibility of GAD to monitor the financial position of each life company, including examination of annual returns, quarterly returns (where applicable) and other information, to discuss matters with the company and, in particular, with the Appointed Actuary, to clear up any uncertainties or to resolve any disagreements, and then to report to DTI with an assessment of the situation, including any recommendations for further action.*

The Government Actuary went on[43] to emphasise that responsibility for supervising insurance companies rested with the Secretary of State supported by the Insurance Division of the DTI and that GAD was in no sense the supervisory authority:

> *However, as actuarial advisers to the DTI, GAD has a major contribution to make to the supervisory process. Insurance is a complex and technical business, which is not easily understood by generalist administrators and executive staff at the DTI...*

75 The '*written contract*' was a 'service level agreement', first made in 1984 between the DTI (Insurance Division) and GAD in respect of the role to be played by GAD in the examination of statutory returns made by insurance companies carrying out long-term business, and is referred to below.

76 The meaning of 'appointed actuary' and the significance of that role are explained in paragraphs 95 and 96 below. The series of letters sent by the Government Actuary to appointed actuaries of insurance companies from 1985 onwards, known as 'Dear Appointed Actuary' or 'DAA' letters, giving information on the working standards applied by GAD and its view of good practice in the actuarial profession, are also mentioned below. In practice, DAA letters were considered to set a minimum acceptable standard for appointed actuaries in determining provisions for particular risks in the valuation of liabilities[44].

77 In April 2001, staff of GAD who had been involved in the prudential regulation of insurance companies transferred to the FSA in order to provide the FSA with 'in house' actuarial advice.

Phase 2: 1973-1980

The Insurance Companies Amendment Act 1973

Introduction and overview

78 Shortly after the CA 1967 and the ICAF Regulations 1968 had come into force, consideration began to be given within the DTI and the actuarial profession to the need for still further revision of insurance legislation. The actuarial profession debated[45] the level and nature of supervision which applied in the UK and compared it to that which applied in other countries. It was suggested that the UK system was '*probably the cheapest in the world*'.

79 The relative roles of the DTI, GAD and company auditors and actuaries in the UK system were considered. Debate surrounded the respective roles of insurance company auditors (who were prohibited, by general companies legislation, from being an officer or servant of the company) and actuaries (who usually were company employees[46]) in reporting on the financial condition of the company and some auditors had approached external actuaries to comment on the company actuary's valuation (although the ICAF Regulations 1968 did not require the auditor to audit the certificate required to be given by the appointed actuary under those Regulations in relation to the aggregate amount of the company's long-term liabilities).

80 Consideration was also given to whether the ICAF Regulations 1968 fulfilled the 'publicity' element of the '*freedom with publicity*' objective (and what that objective meant), as those Regulations addressed the position from the standpoint of the DTI rather than that of policyholders, shareholders or the public.

81 Following the collapse of the Vehicle and General Insurance Company in 1971 leaving one million motorists without insurance cover, a Tribunal of Inquiry had been set up to consider the circumstances which had led to its failure, including the role played by the DTI and Ministers in failing to foresee and avert its collapse. Whilst this Inquiry related to the non-life field, it was seen as highlighting the ineffectiveness of the then existing powers of intervention in general.

82 In 1971 the Scott Committee was formed by the DTI to consider the need for new safeguards in respect of property bonds and equity-linked life assurance.

83 Although it was not required to consider the whole of the life assurance business, some of the areas that Committee addressed, such as the role of the actuary in relation to the issue of solvency, were of wider significance.

84 Before the publication of the Scott Report in 1973, the Bill which led to the enactment of the Insurance Companies Amendment Act 1973 (the ICAA 1973) was introduced in the House of Lords. There had been close liaison within the DTI between those preparing the Bill and the Scott Committee secretariat[47]. The Government accepted, in principle, all but one of the recommendations made by the Scott Committee[48], although most of the recommendations were provided for in powers to make regulations rather than within the body of the Act.

[45] Notes of a Sessional Meeting of the Institute of Actuaries held on 24 April 1972: JIA 98 (1972) 233-250.
[46] A paper presented to the Institute of Actuaries in 1988 by the then Government Actuary suggested that some 20% of 'appointed actuaries' were appointed as consultants rather than as employees of the insurance company: JIA 116 (1989) 27–100 (paragraph 5.1).
[47] Discussion on the Report of the Committee on Property Bonds and Equity-Linked Life Assurance: Transactions of the Faculty of Actuaries (TFA) 34 (1973–1975) 23–48 (page 28).
[48] The exception was the Committee's recommendation that, to enable the DTI to act in urgent cases, the one month minimum period of delay whilst representations from the company were considered under the CA 1967, section 68 should be repealed.

85 In promoting the new legislation it was said that experience had shown that the powers of intervention under the CA 1967 were too inflexible and narrow and that wider discretion was required as it was '*impossible to foresee all the circumstances in which an insurance business might run into trouble*'[49].

86 The doctrine of '*freedom with publicity*' was again referred to. The approach to government regulation adopted in other countries which encompassed premium rates, policy conditions[50] and choice of investment was rejected in favour of leaving these matters, as a general rule, '*to the free play of competition*'.

87 The comparatively less prescriptive approach adopted in the UK was seen as a benefit in terms of allowing innovation in the insurance industry, keeping costs down and encouraging healthy overseas earnings. However, it was acknowledged that there were circumstances in which the government should intervene '*to react quickly and appropriately in order to protect the interests of policyholders*'[51]. It was noted that '*although we have almost certainly tried to supervise insurance too cheaply in the past, there is a point at which returns for increased expenditure must diminish sharply*'. The stated objective of new legislation was '*not primarily to penalise post facto dishonest or incompetent managements, but to protect policyholders by taking or requiring suitable corrective action in time to avert the consequences of imprudent or misguided policies*'. The intention was to '*strike a proper balance between, on the one hand, allowing the industry so much freedom that it can be exploited by rogues, and on the other hand, creating for the industry such shackles that it cannot give efficient, competitive and forward looking service to consumers here and abroad*'[52].

88 In July 1973, the ICAA 1973 was enacted, with most of its provisions coming into force on subsequent dates. The Act gave new powers to the Secretary of State, refined existing powers and imposed new obligations on insurance companies. Important features of the 1973 legislation included:

- the reformulation and strengthening of powers of intervention (now expressed as being exercisable by the Secretary of State, rather than by the government department);

- an explicit statement of the grounds on which the Secretary of State might exercise his powers of intervention including (in section 12(1)(a)) that he considered it desirable for protecting policyholders or potential policyholders against the risk that the company might be unable '*... in the case of long term*[53] *business, to fulfil the reasonable expectations of policy holders or potential policy holders*[54]';

[49] Hansard Debates, House of Lords 8 February 1973, column 1158.
[50] Under the UK system, in the main, these matters were to be considered by the 'appointed actuary'. See further below in relation to the guidance given to actuaries of long-term insurance businesses in GN1 as from 1975 (paragraphs 172 et seq) and the role of GAD in scrutinising the valuation methods and assumptions being used, once policies had been written (paragraph 205).
[51] Hansard Debates, House of Lords 8 February 1973, column 1156.
[52] Hansard Debates, House of Commons 21 May 1973, column 118.
[53] In the ICAA 1973 and subsequent legislation, in most cases, the hyphen in ***'long term'*** was dropped, other than in the expression *'ordinary long-term business'*.
[54] For the purpose of the ICAA 1973, 'policy holder' was defined by section 33 (1) of the ICA 1958 to mean the legal holder of the policy and in relation to life assurance business, included an annuitant. 'Policy holder' was defined in similar terms in the primary legislation up to and including the Insurance Companies Act 1982. Although the legislation mainly refers to ***'policy holders'*** as two words, I have not followed this elsewhere in the text except where quoting from the legislation.

- an explicit role for the actuary appointed by the insurance company within the statutory regime;
- provision for separate identification of long-term assets and liabilities;
- power to make valuation regulations (arising from the Vehicle and General Report);
- provisions for continuation of long term business in liquidation; and
- the introduction of what might be described as greater 'consumer protection measures' such as a 'cooling off period' for prospective policyholders, powers to regulate advertising and offences in relation to misleading statements (following recommendations of the Scott Committee).

Exercise of powers following the commencement of the ICAA 1973 and the making of regulations and orders

89 The powers under the ICAA 1973 were expressed to be exercisable by the Secretary of State rather than by the BT or its successor government department, the DTI. Prior to the enactment of the 1973 Act the functions of the BT had been transferred so as to be exercisable concurrently by the BT and the Secretary of State[55]. Section 54(2) of the 1973 Act provided that the functions of the Secretary of State under the ICA 1958 and the CA 1967, Part II should cease to be exercisable concurrently by the BT, so that they became exercisable by the Secretary of State alone.

90 Many of the provisions of the ICAA 1973 were dependent upon subordinate legislation being made. Regulations made for the purpose of the ICAA 1973 were to be made by the Secretary of State by statutory instrument subject to annulment in pursuance of a resolution of either House, as under the ICA 1958 (the negative procedure). However, the power to make orders under sections 1 and 28 (to amend earlier primary legislation in relation to the margin of solvency) were subject to the affirmative procedure, requiring a statutory instrument to be laid in draft and approved by resolution of each House.

Authorisation of insurance companies

91 The Secretary of State was given greater flexibility in relation to authorisation of insurance companies through new powers to vary the minimum financial standards under section 62 of the CA 1967 by order (section 1 of the ICAA 1973).

92 The provisions prohibiting the issue of authorisation to a company on the basis of the involvement of 'unfit persons' under section 61 of the CA 1967 were extended to include directors, 'controllers' and managers of an insurance company, with 'controller' being defined to include managing directors, chief executives and those in accordance with whose directions or instructions the directors of the company (or its parent company) were accustomed to act, or who controlled at least one third of the voting power at a general meeting of the company (or its parent) (section 2).

Actuarial valuation and the appointed actuary

93 The requirements for periodic investigation of the financial condition of the company and valuation of liabilities by an actuary for companies conducting life assurance (and certain other kinds of business) under section 5(1) of the ICA 1958, were to be construed as relating only to the long-term business of the company, as was the required

[55] The Secretary of State for Trade and Industry Order 1970 SI No. 1537.

statement of business under section 5(2) of the ICA 1958 (section 3(1) of the ICAA 1973).

94 The valuation of assets and the amount of any liabilities in respect of the long term business were to be determined in accordance with regulations[56] (section 3(3)). The maximum intervals for actuarial investigation and valuation of liabilities (three years) and for the statement of long term business (five years) were not amended. The Secretary of State was empowered to require the company to carry out a special actuarial investigation (under section 18).

95 Every insurance company subject to the ICA 1958 which carried on long-term business was required to appoint an actuary to the company to carry out the investigations required under section 5 of the ICA 1958. Whenever an actuary was appointed the company was required, within fourteen days, to give written notice to the Secretary of State of the name and qualifications of the person who had been appointed and notice was also to be given when their appointment ended (sections 3(5) and 3(6) of the ICAA 1973)[57]. The actuary appointed under this requirement, and equivalent subsequent provisions, became known as the 'appointed actuary' (although the expression did not appear in the primary legislation).

96 The brevity and simplicity of the requirements in section 3 of the ICAA 1973 belie the considerable discussion which had taken place between the actuarial profession and the DTI about the role the company's own actuary was intended to play in the overall regime for prudential supervision of companies conducting long-term insurance business.

97 It has been suggested that the system of prudential regulation of life insurance companies since the mid-1970s has been only partly one of government supervision, containing elements of self-regulation, with (it was said) the F&IA standing in the place of a self-regulating organisation[58], although this view was not universally accepted.

Accounts and statements

98 Requirements for the deposit of accounts and other documents with the Secretary of State under section 8 of the ICA 1958 were updated and were required to include any report of the company's auditor prepared under section 9 of the ICA 1958 (section 4 of the ICAA 1973).

99 The normal timing for the deposit of those documents (within six months after the close of the period to which they related) could be accelerated (under section 19). The Secretary of State was

[56] Section 32 provided for regulations to be made in relation to the valuation of assets and the determination of liabilities. In relation to the valuation of assets, the initial regulations made under the equivalent provision of the ICA 1974 were the Insurance Companies (Valuation of Assets) Regulations 1974 SI No. 2203.

[57] The Insurance Companies (Changes of Director, Controller or Manager) Regulations 1975 SI No. 959 (made under the regulation making powers of the Insurance Companies Act 1974) prescribed the information to be supplied when a person ceased to be or became a director, controller or manager.

[58] See the paper by the then Government Actuary on 'The Appointed Actuary': JIA 116 (1989) 27-100 (paragraph 1.1). During the discussion which followed the presentation of the paper other actuaries challenged this analogy. The view was expressed that the F&IA *'are not, and never should be, SROs regulating insurance companies'* and that '[a]*ny attempt to use the profession to regulate insurance companies is unacceptable'* (F.B. Corby at page 82). Concern was expressed about extending the Institute's guidance as a self-regulating authority if this led to a downgrading of the responsibility of the board (R. Brimblecombe and F.B. Corby at page 90). One actuary described the analogy as *'not altogether happy'*; whilst accepting that in extremis the appointed actuary would have a duty to report concerns about the company to the DTI he stressed the responsibilities of a company's management team as a whole and not solely those of the appointed actuary in the normal operations of a company, *'... the 'big stick' of statutory responsibility and the requirements of the Guidance Notes are simply part of the framework of good practice within which the team as a whole operates'* (T.J. Palmer at page 94). See further, footnote 92 regarding a later Government Actuary's view of the historical role of the appointed actuary and footnote 539 regarding his view of the actuary's role as at 1994.

empowered to require an insurance company which conducted business of a prescribed class to provide periodic statements of its business in a prescribed form, accompanied by prescribed certificates, to enable a closer watch over its affairs (section 5 of the ICAA 1973). The timing of the provision of such statements could be accelerated by the Secretary of State (section 19).

100 The Secretary of State was empowered to prescribe classes of transaction which he considered likely to be undesirable in the interests of policyholders, in respect of which he was to be given prompt notification by the company (section 6).

Separation of assets and liabilities attributable to long term business and other measures to safeguard long term policyholders

101 All companies carrying out long-term business were required to maintain a specific account in relation to that class or those classes of business, with receipts being carried to a separate appropriately named insurance fund for each class of long-term business. The company was to maintain such books of account or other records as were needed to identify the assets representing that fund or funds. It was also to make arrangements to identify the assets and liabilities of the company attributable to its long-term business as at the last day of the financial year, in accordance with regulations made for this purpose[59] (section 7).

102 Section 8 prohibited the use of the assets representing the long-term business fund for any purpose other than that business, except in respect of any surplus in the value of the assets over the amount of the liabilities. A mortgage or charge created in contravention of this prohibition was void. Insurance companies were prohibited from declaring a dividend at any time when the value of the assets representing the long-term fund was less than the amount of the liabilities attributable to that business.

103 Where long-term policyholders of any class were entitled to participate in an established surplus (and an amount had been allocated to them in respect of the last preceding surplus), a 'relevant minimum' amount was required to be allocated to those policyholders before any part of the surplus could be applied for purposes other than the long-term business[60] (section 9).

104 The Secretary of State was empowered to prescribe a limit on the value of transactions conducted by the insurance company or any of its 'subordinate companies'[61] with persons connected[62] with it (calculated by reference to a percentage of the credit on the long-term fund). The effect of this provision was not to render any transaction unenforceable between the parties to it (section 10). However, contracts entered into by an insurance company which created a liability of an amount which was uncertain at the time the contract was entered into were rendered void by section 11, unless exempt by regulations.

Powers of intervention and the introduction of PRE

105 Sections 12-25 of the ICAA 1973 contained provisions intended to expand and make more effective the powers of intervention given by the CA 1967 which, by that time, were considered to be too narrow and inflexible to address the wide variety of circumstances which could arise.

[59] The Insurance Companies (Identification of Long Term Assets and Liabilities) Regulations 1973 SI No. 2064 were made for the purpose of this provision.
[60] Part of the debate in the lead up to the ICAA 1973 had surrounded the balance of interests between shareholders and policyholders.
[61] Defined in section 10(4) of the ICAA 1973.
[62] Defined in section 10(5) of the ICAA 1973.

106 The intervention powers under the 1973 legislation fell into two categories: first those, as under the CA 1967 but expanded, which were designed to address readily foreseeable circumstances; and second a 'sweeping-up' provision intended as a safety net to enable the Secretary of State to intervene in any other circumstances where the interests of policyholders required it but which could not be identified in advance[63].

107 As a basis for the sweeping-up provision, DTI officials involved in the preparation of the Bill had 'commandeered' an expression which had been used in an actuarial context (and apparently with a different purpose in mind[64]).

108 As noted above, the expression 'policyholders' reasonable expectations' had been suggested for inclusion in a clause to be inserted in the CA 1967 in 1971, but the proposal was not pursued at that time[65]. The expression was included in the instructions to Parliamentary Counsel and found its way into the Bill which preceded the ICAA 1973. The interests of future policyholders were also drawn within the net of protection in the drafting of the 1973 legislation.

109 There had been some debate between GAD and the DTI about the practical implications of incorporating what was seen as a wide-ranging test for government intervention, in terms of the capacity and resources which would be required to monitor the need for reliance upon it, as well as concern among Ministers that there would be grounds for increased criticism of them when the inevitable failure of an insurance company occurred notwithstanding its existence.

110 However, I have not traced any record of detailed consideration having been given, prior to the enactment of the 1973 Act[66], to whether the expression would be difficult to interpret or apply in practice, or what implications (if any) this test might have if the interests of various classes of long-term policyholder were to conflict, although it was acknowledged that the action needed to protect future policyholders as opposed to present ones might differ[67]. It was, as the government official proposing the clause indicated, an expression suggested '*notwithstanding lawyers' objections to lay competition*'[68]. It is conceivable that some benefit was perceived in its imprecision in terms of providing wide discretion for the regulator should it wish to intervene[69], but presenting difficulties for anyone seeking to compel it to do so.

---

63 See the quotations from the internal paper prepared for the Secretary of State to send to other ministers in December 1972, set out in the Penrose Report, Chapter 13, paragraphs 16 and 17.
64 See paragraph 27 above regarding the paper by RS Skerman published in 1966 on a solvency standard for life business and the underlying valuation basis to be used.
65 See paragraph 27.
66 In the course of the 'clause stand part' debate on what was by then clause 12 of the Bill, one Member (Dr John Gilbert MP), drew attention to the lack of any definition of PRE in the drafting, but it does not appear that he received any response on behalf of the government. Some time after enactment, at a Sessional Meeting of the Faculty of Actuaries in 1976, the Under-Secretary of State stated that what expectations might be reasonable in any particular case would have to be determined in the light of the circumstances, but it was the government's expectation that companies that charged large premiums, loaded for bonuses, would in fact make profits to be shared with their policyholders. However, the government did not envisage general intervention in the amount of surplus to be disclosed by companies or the manner in which it was distributed between policyholders of different classes or of different generations, which would be left to the directors, acting on the advice of appointed actuaries: TFA 35 (1975-1977) 113 – 136 (at page 115).
67 Earl of Limerick moving a drafting amendment to clause 20 during the Lords Committee stage. (The original drafting of *'the reasonable expectations of policyholders **and** potential policyholders'* was changed to *'... policyholders **or** potential policyholders'*.)
68 DTI memorandum dated 3 November 1971; also referred to in the Penrose Report at chapter 13, paragraph 19.

111 PRE were built into the drafting of the ICAA 1973 in two ways. First, as one of the grounds on which any of the specific powers of intervention under sections 13-21 might be used (section 12(1)(a)); and second, as an integral part of the most wide-ranging of the intervention powers under which the Secretary of State could require the company to take '*such action as appears to him to be appropriate ...*' (under section 21), if the specific measures in the preceding sections of the Act could not, alone, appropriately achieve the statutory objective of section 21.

112 The notes on clause 11 of the Bill when introduced in the Lords (subsequently renumbered as section 12 of the ICAA 1973) explained that the reference to PRE took account of the extensive participation of with-profit policyholders in modern long-term insurance profits.

113 It was suggested that with-profits policyholders might pay double the premium of non-profit policyholders in order to participate in the future profits of the company. It was stated that, whilst it was reasonable to expect that the proceeds under the policy would be considerably greater than the basic sum assured under the contract (unless the policyholder died shortly after the policy was taken out), it was not reasonable to expect that the current bonus rate would be maintained come what may, although it would seem odd if only trivial bonus increases were awarded in return for substantially increased premiums. It was noted that companies issuing with-profits policies typically allocated with-profits policyholders nine-tenths[70] or more of the profits but that the company normally retained discretion to vary the proportion.

Section 12 – grounds for intervention under sections 13-21

114 Section 12 dealt with the grounds on which the intervention powers conferred on the Secretary of State in sections 13-21 could be exercised and imposed limitations on reliance on section 21 (which related to PRE). In summary the grounds under section 12(1) were:

(a) that the Secretary of State considered the exercise of the power to be desirable for protecting policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities, or (in the case of long term business) to fulfil the reasonable expectations of policyholders or potential policyholders;

(b) that the company (or a parent or subsidiary) had failed to satisfy specified statutory obligations under the ICA 1958, Part II of the CA 1967 or the 1973 Act;

(c) that the company had provided misleading or inaccurate information to the Secretary of State for any purpose under the ICA 1958 or Part II of the CA 1967;

(d) that the Secretary of State was not satisfied with the company's reinsurance arrangements; or

[69] In a Presidential Address to the Institute of Actuaries made many years later, the Government Actuary expressed the view that *'Part of the strength of the relevant DTI power lies in the uncertainty – the actuary can use this to good effect in adopting a professional approach to ensuring equity and value for money for the policyholders'* (BAJ 1, 5-36).

[70] Apparently a reference to proprietary life companies (rather than to mutual companies) for which it has been common, but not universal, practice to allocate surpluses in the proportion 90:10 as between policyholder and shareholder funds.

(e) that a ground existed which, under section 2 of the ICAA 1973 relating to the involvement of 'unfit persons' in the company, would prohibit authorisation being issued if it were to be applied for.

115 A further ground for intervention was specified in section 12(2). In the case of a company carrying on long-term business, the Secretary of State was empowered to intervene if he was not satisfied that the value of the assets representing the long-term fund exceeded the amount of the liabilities of its long-term business, with the value of assets and the amount of any liabilities to be determined in accordance with regulations[71].

116 In respect of the power to require the company to produce documents under section 20 of the ICAA 1973, an additional ground for exercise was specified: that the Secretary of State considered it desirable in the general interests of those who were or might become policyholders (section 12(3)).

117 The Secretary of State was given greater flexibility in exercising his powers of intervention in relation to insurance companies which had only recently obtained authorisation. In respect of companies which had obtained authorisation within the preceding five years (or those for which there had been a change of control within that period), the powers under sections 13-18, 20(1) or 21 were exercisable whether or not any of the grounds summarised in paragraph 114 above existed, but any restriction imposed could last for no more than ten years (section 12(4)).

118 An express limitation was imposed on the wide 'safety net' power under section 21 concerning PRE: that this power could only be used if its purpose could not be appropriately achieved by relying on one of the specific powers under sections 13-20, or could not be so achieved by reliance on those powers alone.

119 There was an express requirement (in section 12(6)) for the Secretary of State to state the grounds on which he was exercising any of the powers under sections 13-21, unless he had given notice of the proposed exercise of the power under section 22 (in relation to section 13, restrictions on new business) or section 23 (unfit persons).

Section 13 – restrictions on new business

120 The intervention power under section 13, to impose restrictions on effecting new contracts of insurance or varying existing contracts, was said to permit the Secretary of State a more discriminating means of restricting new business than under the former provisions of section 68 of the CA 1967. A restriction under section 13 might apply to only part of an insurance company's business, through specifying by description the contracts to which it was to apply.

Sections 14, 15 and 16 – requirements about investments, maintenance of assets in the United Kingdom and custody of assets

121 Section 14 gave power to the Secretary of State to require a company not to make investments of a specified class or description and to realise assets of a specified class or description. This was intended to give greater flexibility to apply such a requirement to a particular investment if necessary. Such requirements could be framed so as to apply only to assets representing the long-term fund (or only to other investments).

122 Section 15 empowered the Secretary of State to require that the company hold in the UK assets of equal value to the whole or a specified proportion

[71] The various regulations made under these requirements are referred to below. In the event, only regulations relating to the valuation of assets and not in respect of the determination of the amount of liabilities were made under the ICAA 1973 or the ICA 1974.

of its UK liabilities. Unlike the former provisions of section 80 of the CA 1967 the grounds for exercise of this power were not limited to cases of threatened insolvency, but included all the grounds listed in section 12 (in common with other intervention powers under the ICAA 1973 summarised below).

123 Where a requirement had been imposed by the Secretary of State under section 15 for the maintenance of assets in the UK, he could impose an additional requirement that the assets be placed in the custody of a person approved by him. The custodian was to hold the assets as trustee for the company (section 16).

Section 17 – limitation of premium income

124 Section 17 elaborated on the former requirement of the CA 1967, section 80(1)(d) to enable the Secretary of State to impose a limitation on the new business taken on by the company, by restricting the aggregate amount of premiums it was to receive during a specified period. Separate restrictions could be imposed as regards life and general business. The limitation could be applied to premiums net of reinsurance costs.

Section 18 – special actuarial investigations

125 A further form of intervention relied upon the appointed actuary. The Secretary of State could require any company which carried on long term business to cause its actuary to make an investigation into its financial condition (including a valuation of its liabilities) in respect of the whole or any part of its long-term business, as at a specified date; to cause an abstract of the appointed actuary's report of the investigation to be made and to prepare a statement of all or part of its long term business as at the date specified.

126 The valuation was to be conducted in accordance with '*any applicable valuation regulations*'[72]. The form and content of any abstract or statement were to be the same as those required under section 5 of the ICA 1958 (namely, as prescribed in the ICAF Regulations 1968).

Sections 19 and 20 – acceleration of accounting information and production of documents

127 The Secretary of State could require that the accounting documents which were to be deposited with him under section 8 of the ICA 1958 should be submitted up to three months earlier than their due date, provided at least one month's notice was given to the company. Periodic statements required under section 5 of the ICAA 1973 could be required earlier than the originally specified date.

128 Section 20 empowered the Secretary of State (or a person authorised by him) to require the company (or any person appearing to him to be in possession of them) to furnish him with such books and papers[73] as the Secretary of State might specify, and authorised the Secretary of State to take copies of them. The Secretary of State could also require the person in possession of the documents or any director (present or past), controller or auditor employed by the company to provide an explanation of any item or, if any items were not produced, to state (to the best of the person's knowledge and belief) where those items were. Statements made in compliance with these requirements could be used in evidence against the person who made them.

[72] This appears to be a reference to valuation regulations made for the purpose of section 32, first made under the equivalent provisions of the ICA 1974 in relation to the valuation of assets (but not liabilities) in the Insurance Companies (Valuation of Assets) Regulations 1974 SI 1974 No. 2203.

[73] The term 'books and papers' was to be construed in accordance with the Companies Act 1948. Section 455 of that Act (the interpretation provision) defined the term as *including* accounts, deeds, writings and documents (i.e. it was not intended to be an exhaustive definition).

Section 21 – residual power to impose requirements for the protection of policyholders

129 This short section provided:

> *The Secretary of State may require a company to take such action as appears to him to be appropriate for the purpose of protecting policy holders or potential policy holders of the company against the risk that the company may be unable to meet its liabilities* ***or, in the case of long term business, to fulfil the reasonable expectations of policy holders or potential policy holders****.* (Emphasis added.)

130 As noted, this was a power of 'last resort'. The Secretary of State's powers under section 21 could only be relied upon if the purposes of the section could not be appropriately achieved through reliance on the powers in sections 13-20 or by reliance on those powers alone.

Notice of proposed exercise of powers

131 Under section 22, the Secretary of State's power to impose a restriction on entering into new business under section 13 could only be exercised if he had given the company written notice that he was considering exercising that power and of the ground on which he was considering exercising the power and had invited the company to make written representations to the Secretary of State and (if the company so requested) oral representations to an officer of the DTI appointed for this purpose.

132 Section 22 did not apply if the proposed ground for exercising the power was that under section 12(1)(e) (involvement of an unfit person in the company), unless that person was a controller of the company, in which case the controller was also to be served with notice.

133 Section 23 provided for prior notices in cases where the proposed ground for exercising any of the intervention powers under sections 13-21 was that under section 12(1)(e) and the person being considered under the unfitness requirements was a person *other than* a controller of the company.

134 Notice was to be served first on the person concerned, setting out the grounds on which such action was being considered and inviting them to make representations and (unless the Secretary of State decided, having considered those representations, not to exercise intervention powers), an equivalent notice was then required to be served on the company, identifying the grounds, inviting representations and specifying the powers proposed to be exercised.

Power to rescind or vary requirements imposed and obligation to publicise

135 Under section 24, the Secretary of State was given power to rescind or vary at any time a requirement imposed by sections 13-21. Five years after its imposition, a requirement could only be relaxed through variation.

136 Notice of imposition, rescission or variation of a requirement under section 13 (debarring a company taking on new business) was to be published in the London and Edinburgh Gazettes and in such other ways as the Secretary of State considered expedient for notifying the public. Written notice of a requirement in respect of the custody of assets by an approved person under section 16 (or its variation or rescission) was to be served on the registrar of companies.

Power to bring civil proceedings

137 Section 25 extended the general power of the Secretary of State under section 37 of the CA 1967 to bring civil proceedings on behalf of a body corporate where it appeared to him that such proceedings ought, in the public interest, to be brought. In relation to insurance companies, this power also arose in relation to information or documents obtained under the ICA 1958 or the CA 1967 (and not just in respect of the information and documents specified in section 37 of the CA 1967 which applied to bodies corporate generally).

Transfer of long term business

138 Sections 26 and 27 updated the provisions of section 11 of the ICA 1958 in so far as it applied to the transfer of long-term business between insurance companies. In the absence of these statutory provisions, the consent of every policyholder would be required before any transfer could be effected. Section 26 provided for either the transferor or the transferee company to petition the court[74] to sanction a transfer scheme and prohibited the scheme being carried out unless an order was made. The petition was required to be accompanied by a report from an independent actuary on the terms of the scheme.

139 Publication and notification requirements had to be fulfilled, including a requirement to provide long-term policyholders with a summary of the independent actuary's report indicating the likely effects of the scheme for them. The court was prohibited from making an order sanctioning the scheme unless satisfied that the transferee company was, or immediately after the making of the order would be, authorised to carry on long-term business of a class or classes to be transferred under the scheme.

140 Both the Secretary of State and any person '*who alleges that he would be adversely affected by the carrying out of the scheme*' were entitled to be heard on the petition. In making an order under section 26, the court could make provision for the transfer of the whole or any part of the transferor's undertaking and liabilities, the allocation or appropriation of shares etc. by the transferee, the continuation of legal proceedings, the dissolution (without winding up) of the transferor company and incidental and consequential matters. Office copies of the court order were to be deposited with the Secretary of State by the transferee company.

Insolvency and winding up

141 Sections 29-31 were intended to improve the procedures for winding up insurance companies, with particular reference to the position of long-term policyholders.

142 Section 28 expanded on the provisions relating to the margin of solvency under section 13 of the ICA 1958 which applied to companies conducting general business, by empowering the Secretary of State to amend section 13 by order to substitute amounts specified or determined in accordance with that section. Specific provision was made for the assessment of the margin of solvency for insurance companies which carried on long-term business in addition to general business, by specifying how the amount of its long-term business liabilities was to be calculated (section 28(5)).

143 Sections 29-31 contained new winding-up provisions. The Secretary of State was empowered to present a petition for the winding up of an insurance company subject to the ICA 1958 where it appeared to him that it was '*expedient in the*

[74] The High Court in England or the Court of Session in Scotland.

public interest that the company should be wound up ... if the court thinks it just and equitable for it to be so wound up'. This power did not apply if the company was already being wound up by the court. Where the petition for winding up had been presented by another person, a copy of the petition was to be served on the Secretary of State who was entitled to be heard on the petition. Provision was made for the general rules about winding up under section 365 of the Companies Act 1948 to include rules relating to the determination of the amount of an insurance company's liabilities to policyholders of any class or description.

144 Section 30 applied specifically to the winding up of companies subject to the ICA 1958 which conducted long-term business and prohibited such a company from being wound up voluntarily. In general, the assets representing a long-term fund could only be made available to meet the company's liabilities in respect of its long-term business (section 30(3)(a)). Rules, additional to those under section 365 of the Companies Act 1948, could be made to provide for such matters as the identification of assets and liabilities attributable to the long-term and other business of an insurance company.

145 Where money or property had been recovered by the company through an order under section 333 of the Companies Act 1948 (misappropriation by directors) in respect of its long-term business, the court was to include in the order a direction that the money, property or contribution be treated as assets of the long-term fund.

146 Section 31 introduced a new measure to provide for the continuation of the long-term business of an insurance company in liquidation. The liquidator was required to carry on that business with a view to its being transferred as a going concern to another insurance company (either existing or specially formed) unless the court ordered otherwise.

147 The liquidator was empowered to apply to the court to appoint a special manager of the long-term business if the liquidator was satisfied that the interests of the creditors required it. If it thought fit, the court was empowered to reduce the amount of the contracts made by the company in the course of carrying out its long-term business[75]. On the application of the liquidator or of a special manager or of the Secretary of State, the Court could also appoint an independent actuary to investigate the long-term business of the company and to report on the desirability or

[75] The expression 'the amount of the contracts made by the company' which the court was empowered to reduce under section 31(5) of the ICAA 1974 was not defined in that Act. However, it was defined by the court in *Re Capital Annuities Limited* [1978] 3 All ER 704 as meaning 'the sum or sums payable under the contract'. In essence, section 31(5) provided a means by which the court could reduce the magnitude of an insurance company's liabilities. This provision was re-enacted as section 48(5) of the ICA 1974 (and later, as section 56(5) of the ICA 1982). Under section 50 of the ICA 1974 (section 58 of the ICA 1982), the court was empowered to reduce the amount of the contracts of an insurance company which was unable to pay its debts as an alternative to making a winding up order. The extent of the court's powers under section 50 of the ICA 1974 was considered in the *Capital Annuities* case, in which it was held that section 50 applied to sums prospectively payable under the company's current policies as at the date of presentation of the winding up petition. Thus:

(a) the court was empowered to reduce sums prospectively payable by the company under its insurance contracts as at the date of the order effecting the reduction;

(b) the court could also reduce sums which had been prospectively payable under those contracts as at the date of presentation of the winding up petition, but which had 'ripened' into presently payable debts between the date of presentation of the petition and the date of the court order;

(c) but the court did not have jurisdiction to reduce debts which had accrued due by the date on which the winding up petition had been presented.

otherwise of that business being continued and on any reduction in the contracts that might be necessary for its successful continuation.

Valuation regulations

148 Under section 32, provision was made for the value of assets and the amount of liabilities to be determined in accordance with valuation regulations (made by the Secretary of State). Such regulations could make different provision in relation to different cases or circumstances. The regulations made under these provisions for the purpose of valuing assets are referred to below. No regulations for the determination of liabilities were made under the ICAA 1973. This was first addressed in the Insurance Companies Regulations 1981[76] (ICR 1981), Part VI.

Changes of director, controller or manager

149 Before appointing a managing director or chief executive an insurance company was required to serve the Secretary of State with written notice stating that it proposed to appoint a person to the position and providing prescribed particulars.[77]

150 The Secretary of State was given a three month period to give notice of his objection to the appointment on the grounds that the person concerned was not a '*fit and proper person to be appointed to the position in question*'. The effect of such a notice served by the Secretary of State within the three month time limit was to debar the company from making the appointment[78].

151 The Secretary of State was not obliged to disclose to the company or to the person concerned any particulars of the ground on which he was considering service of notice of objection. Provision was made for representations to be made by the company or the person concerned in respect of a notice of objection given by the Secretary of State (section 33).

152 Section 34 made similar provision to that in section 33 in respect of persons who were proposed to become a 'controller' of an insurance company other than as the managing director or chief executive. This applied to the third category of 'controller' defined in section 2, namely, a person in accordance with whose directions or instructions the directors of the company (or its parent company) were accustomed to act or a person who alone or in association with others was entitled to exercise, or controlled the exercise of, one third or more of the voting power at a general meeting of the company or its parent.

153 A person who became, or ceased to be, a controller of an insurance company was required to give the company seven days' written notice of that fact and of such other matters as might be prescribed. Those who became a director or manager of an insurance company were to notify the company in writing of such matters as might be prescribed. The company was required to give the Secretary of State written notice of anyone becoming or ceasing to be a director, controller or manager of the company (section 35).

[76] SI 1981 No. 1654 (see paragraphs 248 et seq).
[77] The Insurance Companies (Changes of Director, Controller or Manager) Regulations 1975 SI No. 959 were made later under the ICA 1974.
[78] Section 33(1) stipulated that no insurance company subject to the ICA 1958 should appoint a person as managing director or chief executive of the company unless (a) the company had served the required notice of its proposal on the Secretary of State containing prescribed particulars and (b) the Secretary of State had either given written notice to the company within three months that he had no objection to the person being appointed or the three month period had elapsed without the Secretary of State giving written notice of objection.

154 The involvement of a person in an insurance company whom the Secretary of State considered was not a fit and proper person to be a director, controller or manager of the company was one of the grounds on which the Secretary of State's powers of intervention were exercisable (section 12(1)(e) of the ICAA 1973, see paragraph 114(e) above).

Miscellaneous provisions (sections 36-38 and 42-47)

155 Section 36 required the Secretary of State to deposit with the registrar of companies certain of the documents which had been deposited with him by an insurance company under the requirements of the ICA 1958 and the ICAA 1973.

156 Under section 37 of the ICAA 1973, the Secretary of State was empowered, on the application of an insurance company or with its consent, to treat certain business of the insurance company as either being or not being ordinary long-term insurance business.

157 Section 38 provided the Secretary of State with the power to disapply specified statutory provisions of the ICA 1958 and the ICAA 1973 or to modify those provisions through a direction made by order. (Comparable powers had been given to the BT under sections 92 and 93 of the CA 1967.)

158 In consequence of recommendations made by the Scott Committee, section 42 of the ICAA 1973 provided that a person making a misleading statement, promise or forecast to induce a person to enter into a contract of insurance would be guilty of an offence[79]. Sections 44 to 46 dealt with the new 'cooling-off' period provisions. They required an insurance company to provide a statutory notice, by post, to any proposed long-term policyholder containing prescribed information.

159 A notice of cancellation was required to be annexed to the statutory notice, stating the person's right to withdraw from the transaction within a specified period. A new power to make regulations was included in section 47 in respect of 'linked long-term policies' (i.e. those under which the benefits were wholly or partly determined by reference to the value of, or income from, property).

Offences and penalties

160 Section 52 provided for (and extended previous provisions in respect of) offences for non-compliance with the requirements of the insurance legislation, including the new requirements relating to the separation of assets and liabilities attributable to long-term business and the application of the assets of a company with such a business under sections 7-9.

The First Non-Life Directive 73/239/EEC

161 Two days before the ICAA 1973 received Royal Assent, an EEC directive on insurance was made (73/239/EEC, 23 July 1973, the First Non-Life Directive). Although this Directive expressly excluded life assurance, it provided a 'foretaste' of the extent to which UK legislation on insurance would be affected by the need to remove restrictions on the establishment of insurance providers from other member states and to harmonise supervisory legislation.

162 One of the main features of the First Non-Life Directive was the requirement for insurance companies to possess a supplementary reserve, known as the 'solvency margin', represented by free assets in order to make provision against business

[79] Contracts of insurance were excluded from the application of the Prevention of Fraud (Investments) Act 1958 by section 48 of the ICAA 1973.

fluctuations, and for this solvency margin to be calculated on a uniform basis throughout the EEC.

163 The First Non-Life Directive was implemented through a series of statutory instruments made in 1977 to amend the Insurance Companies Act 1974 in respect of non-life business and its application to companies from other EEC member states. It was not until 1979 that a comparable directive was made in relation to life assurance (79/267/EEC, 5 March 1979, referred to below).

The Insurance Companies Act 1974

164 The Insurance Companies Act 1974 (ICA 1974) came into force, subject to 'transitory' provisions[80], on 31 August 1974. It was a consolidating Act to amalgamate almost the whole of the ICA 1958, the relevant provisions of the CA 1967 and the ICAA 1973, and to repeal the earlier insurance legislation.

Subordinate legislation following on from the Insurance Companies Amendment Act 1973 and Insurance Companies Act 1974

Identification of long-term assets and liabilities

165 To give effect to the requirements of sections 7(3) and (4) of the ICAA 1973, the Insurance Companies (Identification of Long Term Assets and Liabilities) Regulations 1973[81] were brought into force on 1 January 1974. They included an obligation on the company to deposit a certificate with the Secretary of State indicating that the required arrangements had been made.

Valuation regulations

166 Section 32 of the ICAA 1973 (section 78 of the ICA 1974) provided for regulations to be made in relation to the determination of the value of assets and the amount of liabilities, in any case in which the value or amount was required by any provision of the Act to be determined in accordance with 'valuation regulations'.

167 The first set of valuation regulations made for this purpose were the Insurance Companies (Valuation of Assets) Regulations 1974[82] which were brought into operation on 1 February 1975. As their name suggests, they dealt solely with the valuation of assets. They made provision for the manner or basis on which such items as shares in dependent companies, debts and other rights, land, equipment and other shares, investments and assets were to be valued.

168 The value of certain assets was to be reduced or disregarded in the asset valuation. These regulations were revoked and replaced in 1976 and the replacement regulations were then amended to introduce various refinements, for example to impose limitations on the extent to which the value of certain descriptions of asset could be brought into account[83].

169 In relation to the determination of the amount of liabilities, it appears that despite attempts to draft such regulations[84], no such regulations were made under the 1973 or 1974 Acts. As noted, valuation regulations in relation to liabilities were eventually included in ICR 1981.

---

[80] Contained in section 89 of that Act, which preserved the effect of various requirements, directions and other forms of action under the legislation which was being repealed and provided for transition to the new primary legislation.
[81] SI 1973 No. 2064.
[82] SI 1974 No. 2203.
[83] See the Insurance Companies (Valuation of Assets) Regulations 1976 SI No. 87, the Insurance Companies (Valuation of Assets) (Amendment) Regulations 1976 SI No. 2039 and the Insurance Companies (Valuation of Assets) (Amendment) Regulations 1980 SI No. 5.
[84] It appears that draft regulations relating to long-term liabilities were prepared before those for assets, but the Institute of Actuaries (although not the Faculty) objected to them (letter from GAD to DTI dated 9 October 1973).

Changes of Director, Controller or Manager

170 In 1975, regulations were made under the ICA 1974 to prescribe the information to be supplied to the Secretary of State regarding any person proposing to become a 'controller', director or manager of an insurance company and when any person ceased to be in such a position[85]. The 1975 Regulations were superseded in 1978[86], to require additional information to be provided and in the light of exceptions to the legislation on rehabilitation of offenders, which required spent convictions to be disclosed.

Amendments to the Insurance Companies (Accounts and Forms) Regulations 1968

171 The ICAF Regulations 1968 were amended in 1975[87] to take account of the requirements for the separate identification of assets and liabilities attributable to long term business (by that time, included in section 23 of the ICA 1974) and for assets to be valued in accordance with any applicable valuation regulations, such regulations having by then been made at least in relation to the valuation of assets[88]. The ICAF Regulations 1968 were amended on four further occasions to take account of updated valuation regulations and other changes in the related legislation[89] before they were revoked[90] with effect from 1 January 1981.

Guidance for Appointed Actuaries – the first version of GN1

Introduction

172 Actuaries had played an important part in the management of life assurance companies in the UK long before the enactment of the ICAA 1973[91]. It has been noted that the underlying approach of the legislation, that insurance companies should be free to manage and develop their businesses as they thought fit provided that the financial condition of the company satisfied certain financial standards, placed considerable reliance on the work of actuaries, since those standards had largely to be actuarially determined[92].

173 It has been said that the regulatory system in the UK was not fully codified in legislation, but instead it relied, in significant part, on the professional responsibilities of actuaries. It has been suggested that in doing so it could be '*more flexible, less onerous on management, and cheap to run*'[93].

85 The Insurance Companies (Changes of Director, Controller or Manager) Regulations 1975 SI No. 959.
86 By the Insurance Companies (Changes of Director, (Controller or Manager) Regulations 1978 SI No. 722.
87 By the Insurance Companies (Accounts and Forms) (Amendment) Regulations 1975 SI No. 1996.
88 SI 1974 No. 2203, made for the purpose of section 78 of the ICA 1974, see paragraph 166.
89 The further amendment regulations were the Insurance Companies (Accounts and Forms) (Amendment) Regulations 1976 SI No. 549, the Insurance Companies (Accounts and Forms) (Amendment) (No.2) Regulations 1976 SI No. 869, the Insurance Companies (Accounts and Forms) (Amendment) (No.3) Regulations 1976 SI No. 2040 and the Insurance Companies (Accounts and Forms) (Amendment) Regulations 1978 SI No. 721.
90 By the Insurance Companies (Accounts and Statements) Regulations 1980 SI No. 6: see paragraphs 235 et seq.
91 In a paper – 'The Supervision of Life Insurance Business in the United Kingdom' – prepared for a summer school of *Le Groupe Consultatif des Associations d'Actuaires des Pays des Communautés Européennes* in 1990, the Government Actuary noted (at paragraphs 1.4 and 1.5) that, historically, actuaries had enjoyed a respected position in UK life assurance. Their technical ability, high standards of ethical behaviour, professional discipline and broad view of their responsibilities made them invaluable in the commercial environment. As a result, actuaries had become dominant in the management of life assurance companies; '*the early attempts at supervisory legislation accepted a central role for the actuary, not just in valuing the liabilities but in monitoring the overall financial strength of the company*', paving the way for the much more recent introduction of their '*formal position*' (under the ICAA 1973).
92 See the paper by the then Government Actuary for the Institute of Actuaries on 'The Appointed Actuary' at JIA 116 (1989) 27–100 (paragraph 1.3).

174. The status of the appointed actuary within a life office varied considerably between individual companies[94]. There was no requirement that the appointed actuary should or should not hold any particular post in the company[95] and some appointed actuaries were consultants rather than company employees. Later, the appointed actuary might also have been the 'reporting actuary' for the purpose of the company's accounts prepared to comply with the Companies Acts when the relevant requirements were introduced in 1993[96].

175. It appears that GAD's initial reservations about the resource implications for GAD of introducing such a wide ranging test for intervention as that in relation to PRE were at least partially resolved in practice by leaving the detailed ongoing responsibility for considering PRE with the appointed actuary (eventually as an explicit matter to be taken into account in preparing valuations), with GAD continuing to base its scrutiny (undertaken on behalf of the DTI) on the regulatory returns and identifying issues relating to PRE in that way.

176. Prior to the enactment of section 3 of the ICAA 1973 (which required insurance companies to appoint an actuary and to notify the DTI of the appointment), companies had only to produce actuarial valuations at three yearly intervals[97]. Even under the 1973 Act there was no requirement for the continuous involvement of an actuary.

177. However, following the insolvency or threatened insolvency of several life offices during 1974[98] despite the introduction of the ICAA 1973, further action was considered necessary. In part, this took the form of the Policyholders Protection Act 1975. But as far as supervision of insurance companies was concerned, no new primary legislation was implemented at this stage. Instead, following discussion within the actuarial profession, the F&IA agreed to issue additional guidance to actuaries on the role of the appointed actuary in relation to long-term insurance business.

178. The guidance in GN1 (which described the general duties and responsibilities of the appointed actuary) and the later guidance in GN8 (on the technical basis of actuarial valuations) were seen as key elements in the regulatory framework which '*buttressed*' the regulations[99] made under the various Acts, albeit that they did not amount to 'statutory guidance'. In later years, the appointed actuary was required to certify, as part of the annual returns, whether the practice standard

93 The paper referred to in footnote 92, at paragraph 1.9.

94 In the case of Equitable, the company's chief executive was also the appointed actuary for the period 1991-1997. In December 2000, the Society's Appointed Actuary was nominated by the company to act as chief executive, following the resignation of the incumbent chief executive. The roles were again split in January 2001, with the Society appointing a new appointed actuary.

95 The Corley Report (at paragraph 68) recommended that Guidance Notes issued by the F&IA should require that an actuary resists holding the dual role of chief executive and appointed actuary or any role which compromises his or her ability to fulfil the duties of the appointed actuary.

96 See paragraph 550. The expression 'reporting actuary' is used to refer to the actuary responsible for calculating the 'long term business provision' in respect of a company's accounts prepared for the purposes of the Companies Acts pursuant to requirements introduced by the Companies Act 1985 (Insurance Companies Accounts) Regulations 1993 SI No. 3246.

97 Section 78 of the CA 1967.

98 Nation Life became insolvent in 1974 and three other companies were at risk of insolvency during 1974.

99 As later described in Annex 1 to the Insurance Division's (internal) Policy Guidance Notes, Guideline 6.2. Paragraphs 6 and 7 of the Policy Guidance Note explained that regulations 50-64 of ICR 1981 were couched in very broad terms requiring the appointed actuary, for example, to determine long-term liabilities on '*actuarial principles*' and to make '*proper provision for all liabilities on prudent assumptions*' and went on to explain that: '*In other words, the regulations do not prescribe precise ways of valuing long term liabilities. The actual amounts to be placed on a company's long term business, therefore, is for the judgement of the Appointed Actuary in the light of his professional skills, subject to the criteria set out in the 1981 Regulations and further guided by the professional guidance notes issued by* [the F&IA in GN1 and GN8]'.

guidance notes had been fully complied with[100]. Compliance with GN1 (and in later years GN8) was 'mandatory' which meant that departure from the guidance without good reason could lead to disciplinary action against the actuary, including dismissal from the profession[101].

Guidance Note 1: Actuaries and Long-term Insurance Business

179 The first version of this guidance note, known as 'GN1', was issued by the F&IA on 1 May 1975. It stressed the importance of the role of the appointed actuary in ensuring the financial soundness of a company '*and the reputation of the profession*'. Whilst stating that it was '*no more than a guide*', it was made plain that it outlined a framework within which the appointed actuary was expected to work at all times and that failure to do so without justification would be regarded as prima facie evidence of unprofessional conduct.

Roles of the person appointed as actuary

180 The contents of GN1 illustrate the complex position in which an appointed actuary must have found himself[102]: owing duties to his profession ('*upholding its standards... in the public interest*'), to the company which appointed and paid him, and as the guidance put it, to the DoT[103] '*by reason of his statutory duties, which arise from the Department's supervisory functions aimed at the protection of policyholders*'.

181 The guidance accepted that the appointed actuary might have a separate, executive, role within the company, but indicated that in his capacity as appointed actuary he would have no executive authority. The appointed actuary would, however, have an advisory role and should have direct access to the board of directors '*having regard to the paramount importance of his advice in the context of long-term business*'.

182 If the appointed actuary was concerned at a course of action being pursued by the company which was likely to lead to him withholding a certificate in a normal form, he was first obliged to advise the company; but if the company persisted notwithstanding his advice, he was then required to advise the DoT, having so informed the company[104]. It is implicit that the appointed actuary's position would become more complex and difficult in a situation where the company was running into difficulties[105].

---

100 Regarding the consultation paper issued by the DTI in 1990 on strengthening the role of the appointed actuary), see paragraphs 401 et seq.

101 The later versions of GN1 and GN8 were classified as 'Practice Standards' by the F&IA (see versions 6.2 and 7.1 respectively, the final versions of the guidance to be overseen by the F&IA). According to the F&IA's Professional Conduct Standards (version 2.3, paragraph 4.2), a material breach of a practice standard is a ground for referral under disciplinary schemes and strong *prima facie* evidence of misconduct.

102 For simplicity I have referred to 'him' and 'his' in this section as stated in GN1.

103 The relevant Government Department between 1974 and 1983.

104 A footnote to the guidance stated that this duty applied to '*Fellows of the Institute of Actuaries notwithstanding Basic Principle 2 of its Memorandum on Professional Conduct and Practice*'. Other sources indicate that this Basic Principle was entitled 'Relationship with the Principal' and introduced a fundamental concept that an employed actuary should advise his or her employer, who might then pass on that advice to the ultimate client (JIA (1980) 107 441-486 at page 475). In subsequent versions of GN1, updated references to professional conduct standards appear which, by 1998 (version 5.1), stated that the duty applied '*notwithstanding the normal requirement of the Memorandum on Professional Conduct of the Faculty and Institute to maintain the confidentiality of the company's affairs*'.

105 See further paragraphs 193 et seq in respect of the position of appointed actuaries who were also directors of their company.

Creation of a continual duty of the appointed actuary

183 Under section 14 of the ICA 1974 the appointed actuary's responsibility was to carry out and report upon the financial condition of the life office (including a valuation of its liabilities) at specified intervals, but the guidance imposed a greater obligation on the actuary. It stated that it was the appointed actuary's duty '*to take all reasonable steps to ensure that he is, **at all times**, satisfied that if he were to carry out such an investigation, the position would be satisfactory*' (emphasis added).

Obtaining information and data from the company and issues to be considered

184 The guidance in GN1 dealt with the information the appointed actuary would need to fulfil his task and stressed the need for him to ensure that the company provided him with correct and complete data, including obtaining written assurances from the company if necessary. It noted that the company's financial position was particularly affected by:

(a) the premium rates on which existing business had been, and current business was being, written;

(b) the nature of the contracts in force and currently being sold, with particular reference to all guarantees;

(c) the existing investments and the continuing investment policy;

(d) the marketing plans, in particular the expected volumes and costs of sales;

(e) the current and likely future level of expenses; and

(f) the extent of the company's free estate[106].

185 A reference to reinsurance arrangements was added to the above list of factors particularly affecting a company's financial position in paragraph 4.2 of version 1.1 of the Guidance Note issued for the period 1978-1979.

Premium rates and terms of contracts

186 A '*prime responsibility*' of the appointed actuary was to satisfy himself that the premium rates being charged for new business were appropriate in terms of being sufficient to enable the company in due course to meet its emerging liabilities[107].

187 It was stated that the appointed actuary '*may need to have regard to the provisions of section 28(1)(a) of the Insurance Companies Act, 1974*[108]', a reference to the first ground on which the Secretary of State's intervention powers under the legislation would be exercisable, namely where he considered it desirable for protecting policy holders or potential policyholders against the risk

106 There is no universally agreed or statutory definition of the term 'free estate'. In simple and general terms the 'free estate' is the company's uncommitted reserves. One definition is the excess of assets held within the long-term fund over and above the amount required to meet liabilities. The liabilities, for this purpose, include the present value of amounts that are expected to be paid in respect of discretionary benefits, including terminal bonuses, consistent with policyholders' reasonable expectations. The free estate, which will generally have accumulated over many years, acts as working capital of the business. It is used to support the business by, for example, providing investment flexibility and protection against adverse stock market conditions, facilitating the smoothing of bonuses, generally providing a cushion of extra security against unanticipated events, and supporting the sale of new business. If not required for such purposes, distributions can be made from the free estate and shared between policyholders and (in the case of proprietary life companies) shareholders.

107 An area which was the subject of government regulation at this time in certain countries outside the UK.

108 Which by then had re-enacted section 12(1)(a) of the ICAA 1973.

that the company may, in the case of long-term business, be unable to fulfil the reasonable expectations of policyholders or potential policyholders (the PRE ground).

188 It was acknowledged that a statement that a premium rate would be sufficient could not be an absolute statement as it would inevitably be dependent on future events. However, it was stated that the required judgment would need to be based on the use of sound techniques and that attention should be specially drawn to (among other things) '*contracts involving various options*'.

Actuarial investigations

189 In relation to actuarial investigations, the appointed actuary was to satisfy himself as to the existing business by considering the liabilities, the corresponding assets and their interrelationship. He was to use liability valuation methods that were appropriate to the contract in question taking into account not only the principal benefits, but any ancillary guaranteed benefits such as surrender and paid-up values and any options.

Role in respect of investment policy (and balance sheet)

190 The guidance made clear that the responsibility for investment policy rested with directors of the company, as did the decision as to the value to be placed on the assets in the balance sheet (GN1 version 1, paragraph 6.4). However, the appointed actuary was to decide whether, in his judgment, the investment policy pursued by the directors was, or could become, inappropriate having regard to the nature and term of the company's liabilities. If that was the case, the actuary was required to advise the company of the constraints on investment policy necessary to protect the position of policyholders.

Insolvency

191 In relation to insolvency, whilst noting that the problems with which the appointed actuary was to be concerned were again matters of judgment rather than being capable of precise assessment, the guidance stressed that in issues which affected the solvency of the company much more rigorous standards should be applied when exercising that judgment.

192 The guidance noted that the possibilities of insolvency or intervention by the Secretary of State on PRE grounds could arise either from factors within the control of the company or those which were not. If within the control of the company, the appointed actuary's duty was to assess the limits within which the company must act and advise the company of the necessity for these limits. In relation to external factors which might lead to insolvency, the actuary was required to consider all external factors outside the control of the company and then take whatever action he considered appropriate. It was noted that '[t]*he profession requires that any appointed actuary should pay the most scrupulous regard to prudent judgment in these matters*'.

Appointed actuaries as directors of their company

193 The final section of GN1 dealt with the situation where the appointed actuary was also a director of the insurance company (version 1, paragraph 8). In describing the position of appointed actuaries who were also company directors, GN1 stated (version 1, paragraph 8.0):

> *It is clearly in the public interest that actuaries should be available to act as directors of insurance companies, particularly those transacting long-term insurance, where by their professional training they are especially fitted to make a useful contribution. The actuary should, however, recognise that the*

public, and his fellow directors, will assume that he is satisfied as to the way in which the affairs of the company are likely to be conducted whilst he is a member of the Board.

194 GN1 did not comment on the possibility that the appointed actuary might also be the chief executive of an insurance company. This combination of roles was addressed in a paper on the appointed actuary presented to the Institute of Actuaries on 28 November 1988 by the Government Actuary at that time[109]. He noted that in '*small proprietary offices*' this combination of roles was more common than combining the roles of actuary and marketing executive.

195 The then Government Actuary considered that the combination had a number of obvious disadvantages, observing that '[t]*he Actuary is needed as a check and balance; these functions cannot be combined in one person*' and that all the problems of combining the actuarial function with that of marketing would be present[110], but more strongly.

196 The then Government Actuary suggested that it might be supportable to combine the positions of chief executive and appointed actuary while an office was at level (i)[111] and all seemed to be going well, but the strains inherent in this double role would show up at level (ii). He considered it would seem to become almost impossible and certainly profoundly unsatisfactory at level (iii). He suggested that the combination of these roles should be regarded as a last resort and the use of consultants should always be carefully considered[112]. He noted that this combination of the roles of chief executive and actuary was also found in a number of leading mutual offices, but indicated that whilst his remarks might still apply in theory:

... the practical situation contains important safeguards. These offices have a well established tradition of actuarial involvement in management at the highest level. The Deputy Actuary, on whom much of the Actuary's responsibilities will fall, is usually an important figure in the management. While there are of course marketing pressures, the extreme pressure from shareholders for results which may be found in a small and (hopefully) expanding office is not present. The ultimate purpose of supervision, and hence of the Appointed Actuary system, is to protect policyholders, and in a mutual office the Board to which management answers is itself responsible to with-profit policyholders. In spite of these points, though, I feel that the arguments against the combination is strong, and the responsibilities have in fact been separated in several cases in recent years.

197 In the debate which followed the presentation of this paper it was suggested that (in relation to the then Government Actuary's comments regarding small proprietary companies) a combination of these roles was preferable to the situation where the appointed actuary was well down the pecking order[113].

---

109 JIA 116 (1989) 27-100 at paragraphs 4.2.6-4.2.8.

110 Paragraph 4.2.5 ibid referred to those problems as including under-pricing, the inclusion of improper options or under-reserving in order to attract high sales.

111 These 'levels' are explained in paragraph 1.14 of the paper. Level (i) relates to what is needed when things are going reasonably well for a company; level (ii) when things are going badly; and level (iii) where there are really serious difficulties.

112 Ibid, paragraph 4.2.7.

113 Ibid, R.E. Brimblecombe at page 80.

198 Another member noted that the author had expressed more concern about the situation where the two roles were combined in a small proprietary office rather than in a mutual office. He observed:

> *Although no mutual office which has its Chief Executive as its Appointed Actuary has got into difficulties it is a less than satisfactory situation. This concentration of power in the hands of one person is akin to the situation where the Chief Executive is also the chairman of the board. The relationship between the Appointed Actuary and the investment management is referred to* [in paragraph 3.3.8 of the paper]. *It would be preferable to have regular, frequent and documented meetings between these two. This is perhaps an area where GN1 could be expanded.*[114]

Subsequent revisions of GN1

199 During the period under consideration, which runs until December 2001, twelve further versions of GN1 came into force. The revisions to GN1, where relevant, are referred to in chronological sequence below.

The role of the Government Actuary's Department

200 The then Government Actuary had been actively involved in discussions with the DTI when the Bill which preceded the ICAA 1973 was being prepared, notably in relation to the resource implications of the PRE provisions.

201 One of the effects of the collapse or threatened collapse of a number of insurance companies in 1974 was to highlight the need for effective supervision by the DTI with support from GAD. The size of the team involved in insurance work at GAD began to expand at this time and it has been suggested that a more active approach to supervision began[115].

202 Following the introduction of the appointed actuary system under the ICAA 1973, each new appointed actuary was invited for an informal discussion with the Government Actuary once the DTI had been notified of the appointment. This was said to provide an opportunity to establish personal contact and discuss the appointed actuary's relationship with the company's board and senior executives.

203 Issues discussed included GN1 and the arrangements in place to ensure compliance, product design, premium setting, investment policy, valuation, data systems and the influence the appointed actuary brought to bear on these matters. It was also said that appointed actuaries were encouraged to get to know the individuals at GAD who would be examining returns and to contact them informally to sound them out or give advance warning of developments[116].

204 Speaking about the role of GAD[117] (many years after the introduction of the appointed actuary system) the Government Actuary said:

> *The most important item in a life insurance company's returns to the DTI is the report by the Appointed Actuary. Only another actuary*

[114] Ibid, A. Spedding at page 88.
[115] Paper by the Government Actuary: JIA 119 (1992) 313–343, paragraph 14.20.
[116] Ibid, paragraph 14.21. It is to be noted that the 1984 service level agreement referred to in paragraphs 355 et seq indicates that (at the time of that agreement and '*in relation to the scrutiny of returns*') there was intended to be a fairly structured approach to any direct contact with appointed actuaries which, '*at least in the first instance*', was not to be made by GAD.
[117] Paragraph 5.3 of the paper given in 1990 referred to in footnote 91.

can form a proper appreciation of what is going on in the company and whether there are developments which could become serious. The process of examining the returns of life insurance companies is, therefore, delegated[118] *to GAD. This delegation extends to entering into a dialogue with the company and the Appointed Actuary over any points which need to be clarified in order to understand fully the valuation report and the returns.*

205 According to the Government Actuary, although the DTI did not approve individual contracts or products written by insurance companies, the DTI or GAD was sometimes approached by an insurance company to give guidance on how a new form of contract should be classified or to establish whether GAD was satisfied with the way in which the appointed actuary proposed to value that contract. Once contracts had been written, GAD would scrutinise the valuation method and assumptions used by the actuary to ensure that they were prudent. GAD monitored the impact of certain products on the development of the company's financial position and warned the DTI if it was likely that the company's margin of solvency would be eroded in the near future[119].

206 There was no specific power within the statutory regime for the statutory regulator (or GAD) to object to the appointment of an appointed actuary (in that capacity) on grounds of fitness or otherwise. It was simply required that the actuary should hold prescribed minimum qualifications (or have been approved by the BT/DTI) and that the Secretary of State should be notified of the appointment and of the name and qualifications of the person concerned.

The Policyholders Protection Act 1975

207 The Policyholders Protection Act 1975 (the PPA 1975), although not part of the prudential regime, is relevant to its overall context. The Act was introduced following the failure or threatened failure of several insurance companies during 1974. Its introduction entailed an acknowledgment that the principle of *caveat emptor* was not appropriate in relation to decisions concerning the purchase of insurance policies because the information needed to make an informed choice simply was not available to the public[120].

208 The PPA 1975 was designed to make provision to protect policyholders in the event that an insurance company carrying on business in the UK was unable to meet its liabilities under an insurance policy. The Act established the Policyholders Protection Board (the PPB) whose functions were to indemnify or otherwise assist policyholders in such circumstances. The PPB was empowered to impose levies on insurance companies and others engaged in the insurance industry[121] in order to finance its expenditure (section 1). The five members of the PPB (and five alternate members) were appointed by the Secretary of State[122] (Schedule 1), who was empowered to give guidance to the PPB from time to time (section 2).

118 See paragraphs 355 et seq regarding the first of the service level agreements entered into between the DTI and GAD.
119 Paragraphs 11.1 and 11.2 of the paper referred to in footnote 91.
120 Statement by the then President of the Board of Trade, quoted in the notes referred to in footnote 12.
121 In particular, under section 19 of the PPA 1975, the PPB could impose levies on 'accountable intermediaries', i.e. those who had received income from a company in liquidation for procuring long-term business for that company.
122 Initially, the Secretary of State for Trade.

209 The main powers of the PPB applied to companies permitted to carry on insurance business under the ICA 1974 ('authorised insurance companies') and came into play when a winding-up order was made by the court or when a resolution for voluntary winding up was passed in relation to an authorised insurance company, provided either such event occurred after 29 October 1974 (section 5).

210 Sections 10-12 dealt with the protection of long-term policyholders on a liquidation (for this purpose, 'policyholders' included annuitants: see section 32(2)(a) of the PPA 1975 and section 85(1) of the ICA 1974.) The PPB was under a duty to secure that a sum equal to ninety per cent of the amount of any liability to a long-term policyholder of a company in liquidation was paid to the policyholder as soon as reasonably practicable after the beginning of the liquidation.

211 The PPB was also under a duty to make arrangements for securing continuity of future benefits under long-term policies, either by transferring the insolvent company's long-term business to another authorised insurance company or by arranging for substitute policies to be issued by another authorised insurer. Where it was not reasonably practicable for the PPB to make arrangements to secure continuity, it was under a duty to pay the policyholder ninety per cent of the value attributed to the person's policy for the purpose of any claim under the winding up as soon as reasonably practicable after the claim was admitted. Where the benefits under the policy appeared to the PPB to be excessive, the matter was to be referred to an independent actuary.

212 As well as intervening in the case of insolvency, the PPB was given powers to assist authorised companies which were in financial difficulties. The PPB could assist by taking measures to secure the transfer of all or any part of the company's business to another authorised insurer. The PPB also had power to give the company assistance to enable it to carry on business, with power to impose conditions requiring future liabilities and premiums due under a long-term policy to be reduced to ninety per cent of their former amounts (sections 16 and 17).

213 The amount of the levy payable by an insurance company was calculated by reference to its net premium income and was subject to a maximum of one per cent of the income for the previous financial year. The levy (and income in respect of) general business and long-term business were dealt with separately (section 21 and Schedule 3). The levy began to be payable with effect from the financial year commencing on 1 April 1976.

214 The PPA 1975 was amended by the Policyholders Protection Act 1997, although many of the amendments were not brought into force before the 1975 Act was repealed on 1 December 2001[123] (and the revisions were instead embodied in the Financial Services and Markets Act 2000 (the FSMA 2000)).

Guidance for actuaries – GN1 version 1.1: 1978

215 Amendments and additions were made to the guidance for actuaries on long-term business in 1978.

216 A comment was included in the introductory section advising appointed actuaries to seek help and advice from their professional body by approaching the Honorary Secretary[124] if the

123 By article 3(1)(a) of the Financial Services and Markets Act 2000 (Consequential Amendments and Repeals) Order 2001 SI No. 3649.
124 Apparently a reference to the Honorary Secretary of the Faculty of Actuaries or of the Institute of Actuaries, dependent on the body to which the actuary belonged.

actuary became doubtful as to the proper course to adopt in relation to a potentially significant problem.

217 A paragraph regarding conflicts of interest was added in the context of considerations affecting an actuary's decision as to whether to accept an appointment, making it plain that an appointment should not be accepted if the actuary's financial interests in the company were such that a conflict would arise. However, it was indicated that if '*temporarily in a special situation*' a conflict of interest arose, the appointed actuary should ask the company to obtain a report from another actuary (who had no such conflict of interest) before the actuary made his or her own report.

218 References to reinsurance arrangements were added to the list of matters to which the appointed actuary would need to have regard in assessing the financial position of the company and in conducting actuarial investigations. The actuary was to advise the company on any necessary modifications to such arrangements to protect the position of policyholders.

219 In relation to the actuary's required assessment of premium rates and policy conditions, mention was made of the need for the actuary to be satisfied that if a premium basis involved a significant new business strain, the company was able to set up the necessary reserve and the actuary should indicate any limit on new business which might prudently be accepted.

First Life Directive 79/267/EEC

220 In 1979 the First Life Directive (79/267/EEC of 5 March 1979: the **First Life Directive**) was issued. Although many of the requirements under the Directive were already reflected in some form in the UK legislation, certain aspects were entirely new to the UK. This Directive was also known as the 'Establishment Directive'. In essence it was aimed at facilitating freedom of establishment and the harmonisation of rules across the EEC. In particular, it sought to co-ordinate the financial requirements imposed on companies[125] carrying on long term business under the prudential regulation regimes of member states. The Directive contained a definition of the long-term insurance business to which it applied[126], which included life assurance (as further defined) and annuities. Long-term and general business were to be separately managed and the authorisation of new composite companies was prohibited.

221 The Directive permitted insurance companies incorporated anywhere in the EEC to establish a head office, branches or agencies in respect of their long term business in any other EEC country, provided that the company obtained 'official authorisation' from the member state in question[127].

222 In the UK legislation, this requirement was provided by means of authorisation issued by the Secretary of State (and eventually required more detailed provision to be included in the legislation to deal with authorisation of insurers from other EEC countries and those from outside the EEC). A company which wished to operate in several member states would require authorisation from each country. Withdrawal of authorisation by the

[125] The EEC Directives refer to 'undertakings' rather than 'companies'.

[127] Article 6.

state in which the company's head office was based would lead to withdrawal of authorisation in other countries.

223 The requirements for an undertaking which was seeking authorisation were set out in article 8. One requirement for authorisation which was new to the UK was that the company should limit its activities to the business of insurance and operations arising directly therefrom. A company seeking authorisation was required to show that it possessed the minimum of the **guarantee fund** and to submit a **scheme of operations** (and in some cases, provide proof that it possessed the **minimum solvency margin**).

224 The Directive required that precise reasons should be given by the regulators in cases where authorisation was refused or withdrawn and there was an explicit requirement that there should be an opportunity for an aggrieved company to apply to the Court[128].

225 One important feature of the Directive was that companies were required to maintain specified reserves and margins of solvency calculated in accordance with the Directive.

226 Technical reserves (sufficient to meet the company's underwriting liabilities), including mathematical reserves[129], were required to be covered by equivalent **matching assets**[130] localised in the country where the activities were carried on, subject to the power of a member state to relax the rules on matching and localisation[131]. Regulations made by the member state in which the activities were carried on were to determine the nature of the assets which could be used to cover the technical reserves (including the mathematical reserves) and where appropriate, the extent to which those assets could be so used. Domestic regulations were also to deal with the valuation of assets. Member states could choose to provide for 'on the spot' verification of whether the assets representing the reserves complied with their regulations.

227 The required solvency margin could be represented by explicit items, such as capital, free reserves and surpluses in the company's balance sheet or (to a specified degree and with the consent of the prudential regulator) by implicit items such as a percentage of the present value of future profits, **zillmerising** and other hidden reserves[132]. In the UK, the regulator was to give consent to reliance on implicit items by means of an order made by the Secretary of State under section 57 of the ICA 1974[133].

228 Articles 19 and 20 provided for, respectively, the calculation of the 'minimum solvency margin' and the 'guarantee fund' (one third of the minimum solvency margin, at least half of which was to be represented by explicit items).

229 Where a company was unable to cover its required minimum solvency margin, the prudential regulator was to require the submission of a **plan for**

128 Articles 12 and 26.3.

129 i.e. reserves in respect of long-term liabilities specially calculated for regulatory purposes, intended to be determined on a prudent basis (see paragraph 265 and footnote 431 regarding the definitions used in the UK regulations).

130 'Matching assets' was defined for this purpose as '*the representation of underwriting liabilities which can be required to be met in a particular currency by assets expressed or realisable in the same currency*' (article 5(b)).

131 Article 17.2. Technical reserves were not defined in the Directive, but are taken to mean amounts an insurer must have in place to meet liabilities under policies.

132 Article 18.

133 Or later, under the equivalent provisions of section 68 of the ICA 1982 (see paragraph 337).

restoration of a sound financial position for its approval[134]. If the margin fell below the level of the guarantee fund, the regulator was to require the submission of a **short-term finance scheme** for its approval (and could also restrict or prevent free disposal of assets by the company) [135].

230 Article 21.2 of the Directive prohibited member states from restraining the **free disposal of assets** by an insurance company except in limited specified circumstances. Exceptions applied in relation to the requirement to establish technical reserves covered by matching assets and the localisation of those assets[136], where the company had failed to comply with provisions envisaged in article 17 (which included rules and regulations made by member states in connection with the establishment of technical reserves, including mathematical reserves)[137]; in the event that the solvency margin fell below the 'guarantee fund'[138]; and in the event that authorisation of the company was withdrawn[139]. (The extension of these exceptions by the Third Life Directive is referred to in paragraph 497 below.)

231 Article 23 obliged member states to require insurance companies with a head office in their territory to produce an annual account of their financial situation and solvency, covering all types of operation.

232 The First Life Directive harmonised some aspects of insurance regulation and kept them under the control of the member state in which the company's head office was based[140], whilst other aspects were to be dealt with in *every* member state in which the company wished to do business[141]. Certain aspects of insurance regulation were not harmonised, or were not completely harmonised, by this Directive. The amount of the technical reserves (including mathematical reserves) were to be determined according to rules fixed by the member state and regulations made by the country in which the activities were carried on were to determine the nature and value of assets[142]. Member states were to continue to have power to enforce provisions of their 'domestic' legislation regarding approval by their supervisory authorities of policy conditions and to prescribe the technical bases for calculating premium rates and technical reserves (including mathematical reserves) and to apply provisions such as those requiring approval by the supervisory authorities of the technical qualifications of directors and the memorandum

135 Article 24.3.
136 Article 17.2.
137 Article 24.1.
138 Article 24.3.
139 Article 26.1.
140 The 'head office state' was responsible for such matters as receipt of annual accounts; verifying that the company's balance sheet showed the necessary technical reserves in respect of liabilities in *all* states in which the company operated; certifying matters to other member states in which the company sought authorisation (such as the existence of the guarantee fund or margin of solvency if higher); ensuring the adequacy of solvency margins in respect of the company's *entire* business; responsibility for taking action in the event that the company's solvency margins or guarantee fund did not comply with the minimum requirements; the power to restrict the free disposal of assets by the company where the technical reserves were not sufficient; and the duty to notify other member states in which the company operated if authorisation was withdrawn, leading to withdrawal of authorisation in other countries (articles 23, 17.4, 10.1(b), 18, 24 and 26.1).
141 Every member state in which the company operated (including the head office state) was responsible for giving and withdrawing authorisation to operate in its country; ensuring the sufficiency of the technical reserves localised in its country in respect of the business carried on there; receipt of periodic returns; and some supervisory responsibility in the form of the power to restrict free disposal of assets by the company if the technical reserves were not sufficient, but only after informing the supervisory authorities in the head office state (articles 6-12, 26, 17, 23.2 and 24).
142 Article 17.

and articles of companies seeking to become established in their country[143]. (As noted elsewhere, the legislation in the United Kingdom did not impose direct controls on premium rates).

233 Member states were given a period of 18 months from notification of the First Life Directive to amend their national provisions in order to comply, and the amended national provisions were to be applied within 30 months of notification (article 40). As noted below, the provisions of the Directive were implemented in the UK by the Insurance Companies Act 1981 by means of amendments to the ICA 1974 and those amended provisions were subsequently consolidated within the Insurance Companies Act 1982.

Insurance Companies Act 1980

234 The Insurance Companies Act 1980 (the ICA 1980) was enacted to extend the provisions of the ICA 1974 to Northern Ireland, where similar but separate legislation had formerly applied. In order to achieve this, various consequential amendments were made to the ICA 1974 and to other legislation (including the PPA 1975) listed in Schedule 3 to the ICA 1980. The statutory instruments made under the ICA 1974 and earlier legislation listed in Part I of Schedule 2 to the ICA 1980 were also extended to Northern Ireland.

The Insurance Companies (Accounts and Statements) Regulations 1980

235 The Insurance Companies (Accounts and Statements) Regulations 1980[144] (the ICAS Regulations 1980) came into force on 1 January 1981 and applied to accounting years which commenced after that date. Those Regulations substantially revised the format and content of the accounts and returns to be made annually to the DoT[145] pursuant to section 13(1) of the ICA 1974 by insurance companies operating in the UK. They amounted to a full scale revision of the earlier regulations and prescribed some 65 forms for life and non-life business. The objectives of the changes included:

(a) to consolidate the numerous amendments made to the ICAF Regulations 1968;

(b) to correct inadequacies in the ICAF Regulations 1968 and to incorporate the margin of solvency requirements for non-life business arising from the EEC requirements on solvency in the First Non-Life Directive;

(c) to take account of new thinking on the forms required by long-term business;

(d) to increase the information to be provided by the actuary in his or her valuation summary for long-term business; and

(e) to add a number of new items of information considered likely to be of use in arriving at an assessment of a company's position.

236 The ICAS Regulations 1980 prescribed the form and content of the statement of long-term business to be prepared by a company under section 14(3) of the ICA 1974 and of the abstract of the appointed actuary's report prepared following an investigation under section 14(1). They also made provision for audit, and specified that the auditor must be a person qualified to audit accounts for the purpose

143 Articles 10.3 and 8.3.
144 SI 1980 No. 6.
145 The relevant government department between 1974 and 1983.

of the Companies Acts 1948 to 1976. However, the auditor was not required to audit or report on the abstract of the appointed actuary's report or related prescribed forms (regulation 19 and paragraph 8 of Schedule 6 to the ICAS Regulations 1980).

237 The appointed actuary was required to give a certificate, to be annexed to the accounts, stating (if it was the case) that in the opinion of the actuary the company had kept proper records, adequate for the purpose of valuing the long-term liabilities; that the actuary was satisfied that the aggregate long-term liabilities did not exceed the value of the assets identified as representing the long-term business; and that the actuary had taken due account of the nature and term of assets and the nature and term of the liabilities in making the statement (regulation 18(b) and Schedule 6, Part II.)

238 Regulation 20 of the ICAS Regulations 1980 prescribed the qualifications required of an 'actuary' for the purpose of the ICA 1974[146] and of an appointed actuary under section 15 of that Act. An appointed actuary was required to be a Fellow of the Institute of Actuaries or of the Faculty of Actuaries and to be at least 30 years old. Actuaries who immediately before the ICAS Regulations 1980 came into force held an appointment by virtue of Regulation 15 of the ICAF Regulations 1968 were permitted to continue in their appointment (this applied to any actuary who was not a Fellow of the Faculty or Institute but who came within the former category of '*such other person having actuarial knowledge as the* [BT] *may, on the application of the company, approve*').

239 The ICAS Regulations 1980 revoked the ICAF Regulations 1968 and other regulations relating to insurance company accounts and forms (Regulation 23 and Schedule 7). At the time the ICAS Regulations 1980 were made it was known that further revision would be necessary once the First Life Directive was implemented in the UK. The ICAS Regulations 1980 were treated as continuing in force after the enactment of the Insurance Companies Act 1982[147] and were later amended under that Act.

---

146 Pursuant to the definition of 'actuary' in section 85(1) of that Act.
147 By virtue of section 17 of the Interpretation Act 1978 and/or a general saving provision in paragraph 22 of Schedule 4 to the ICA 1982.

Phase 3: 1981 – 1990

The Insurance Companies Act 1981

240 The Insurance Companies Act 1981 (ICA 1981) and ICR 1981 made four months later were designed to put into effect the changes required by the First Life Directive and to incorporate the various changes made as modifications to the ICA 1974 by statutory instruments during 1977 to implement the First Non-Life Directive[148].

241 Section 21 of the ICA 1981 inserted new sections 26A-26D into the ICA 1974 to provide for the margin of solvency requirements arising from the EEC Directives.

242 The new section 26A of the ICA 1974 required insurance companies which had their head office in the UK (or whose UK business was restricted to reinsurance) to maintain a margin of solvency '*of such amount as may be prescribed or determined in accordance with regulations made for the purpose of this section*'. (Provision was also made for the margin of solvency for companies based in other countries which operated in the UK.)

243 The margin of solvency for the purpose of the ICA 1981 for a company with a UK head office was defined as the excess of the value of its assets over the amount of its liabilities, with the value and amount being determined in accordance with any applicable valuation regulations. If the company failed to maintain the required margin of solvency, the Secretary of State was to request the company to submit a plan to him for the restoration of a sound financial basis.

244 Section 26B dealt with the maintenance of a 'minimum margin' and required the company, at the request of the Secretary of State, to submit a short-term financial scheme if its margin of solvency fell below the amount prescribed or determined in accordance with regulations made for this purpose (reflecting the 'guarantee fund' requirements of the Directives).

245 Section 26C made provision for the requirements in relation to companies supervised in other member states. Section 26D gave power for regulations to be made regarding the situation and form of assets, having regard to the currency in which liabilities might be required to be met.

246 Section 17 of the ICA 1981 amended section 14 of the ICA 1974, reducing the interval between the required actuarial investigations from three years to twelve months.

247 The Insurance Companies Act 1982 (the ICA 1982) received Royal Assent in the following year, consolidating the ICA 1974, the ICA 1980 and the ICA 1981. Since the section numbers in the ICA 1982 are of longer-term significance, the provisions of the legislation as revised in the ICA 1981 are not further described here. However, a table showing the main derivations of relevant provisions of the ICA 1982 is attached as Appendix A.

The Insurance Companies Regulations 1981

248 Most of the provisions of ICR 1981 came into effect on 1 January 1982, with certain regulations coming into operation on later dates during 1982[149]. ICR 1981 continued in force after the commencement of the

---

[148] The Insurance Companies (Classes of General Business) Regulations 1977 SI No. 1552 and the Insurance Companies (Solvency: General Business) Regulations 1977 SI No. 1553, made under section 2(2) of the ECA 1972.

[149] For companies authorised to transact long-term business on 31 December 1981, the margin of solvency provisions did not apply until 15 March 1984 (section 99(1) and paragraph 4 of Schedule 4 to the Insurance Companies Act 1982).

ICA 1982 and was subsequently amended under that Act.

249 ICR 1981 was primarily made in connection with the amendments introduced under the ICA 1981 in relation to the EEC Directives, but they also consolidated with amendments the earlier regulations made under the ICA 1974, other than those dealing with accounts and statements (which had been provided for in the ICAS Regulations 1980) and those dealing with Lloyd's.

250 Parts II and III and Regulations 25 to 30 implemented the provisions of the First Non-Life Directive and the First Life Directive. Part II dealt with the margin of solvency requirements (and Part III regulated the making of deposits by companies whose head office was not in a member state).

251 Part VI included, for the first time, provisions on the determination of the amount of long term liabilities. These regulations followed on from a very long period of negotiation and consultation between the DoT, GAD and the F&IA, based on proposals initially put forward by the DTI in 1974[150], which in turn were based on six principles for a good standard of conduct outlined in a paper submitted to the Institute of Actuaries by RS Skerman in 1973[151]; eventually they were the subject of the joint actuarial working party formed in 1981 referred to below.

252 It has been noted[152] that until 1981, responsibility for ensuring that a prudent value was placed on the liabilities of long-term insurance business was left to the appointed actuary. Prior to the introduction of the solvency margin requirements of the First Life Directive, there were no requirements in the UK legislation regarding the level of free assets held by life insurance companies[153].

253 As the solvency margin was based on the excess of assets held over the amount of the technical reserves, it has been suggested that the solvency margin requirements created an incentive for insurance companies to keep the technical reserves to a minimum in order to demonstrate a healthy margin of solvency. In addition, the exercise of certain of the Secretary of State's powers of intervention became linked to a breach of the new margin of solvency requirements.

254 For these reasons, a more clearly defined minimum standard for the valuation of liabilities was needed. It has been said that providing for this (in Part VI of ICR 1981) strengthened the position of the appointed actuary, who might otherwise have come under increasing pressure from shareholders to weaken the valuation basis.

Margin of solvency

255 Regulations 4 to 8 were made for the purpose of the new section 26A of the ICA 1974[154] in connection with the margin of solvency requirements, in order to prescribe how the margin was to be determined. (Regulations 5 to 8 dealt with the required calculations in respect of various classes of long term business.)

---

150 According to a paper entitled 'Statutory Regulation of Long Term Insurance Business' prepared for the F&IA by William M Abbott and revised by Nick C. Dexter in 2000.

151 JIA 100 (1973) 35-69 at paragraph 18. The principles proposed by Skerman included a net premium method of valuation (or some other method producing reserves at least as strong); partial allowance to be made for the expenses of new business; and actuarial reserves of no less than the guaranteed surrender values or the values of other options available under the policy (paragraphs 18.1–18.6).

152 Observations made by the Government Actuary in paragraphs 6.1-7.3 of the paper prepared for *Le Groupe Consultatif* summer school referred to in footnote 91.

153 Although there had been requirements for an initial minimum margin of solvency as a prerequisite to authorisation under, for example, section 62 of the CA 1967 and section 1 of the ICAA 1973.

154 See paragraph 242 above.

256 Regulation 9 set out the *minimum* margin for the purpose of section 26B of the ICA 1974[155] and created the concepts of a 'guarantee fund' of one third of the required margin of solvency as well as a 'minimum guarantee fund' calculated in accordance with Schedule 3 to the Regulations.

257 Regulations 10(4) and 11 to 13 made provision for the valuation of implicit items in respect of:

(a) future profits;

(b) zillmerising; and

(c) hidden reserves.

Implicit items were amounts which were not assets available to meet a company's liabilities, but which Article 18.3 of the First Life Directive permitted to be counted towards meeting the required margin of solvency with the agreement of the supervisory authority, up to specified limits (see paragraph 227).

258 In the UK, implicit items were to have no value except in accordance with an order made by the Secretary of State under section 57 of the ICA 1974. In the event of such an order being made, as regards long-term business, implicit items were to be valued in accordance with Regulations 11-13 (Regulation 10(4)).

259 Under Regulations 11-13:

(a) an implicit item relating to future profits was to be valued at not more than 50% of the full amount of the future profits calculated in a prescribed manner (Regulation 11);

(b) an implicit item in respect of zillmerising was to be valued at no more than a maximum amount calculated in accordance with Regulation 12. Zillmerising was defined in Regulation 3 as meaning the method known by that name for modifying the net premium reserve method of valuing a long term policy by increasing the part of the future premiums for which credit is taken so as to allow for initial expenses; and

(c) hidden reserves resulting from the under-estimation of assets and over-estimation of liabilities (other than mathematical reserves) might, in so far as the reserves were not of an exceptional nature, be given their full value (Regulation 13).

Valuation of assets and determination of liabilities

260 Regulations 37-49 (Part V) made provision for the valuation of companies' assets and reproduced, with amendments[156], the law previously in force (see paragraph 167). Essentially, assets were to be valued at their current market value, although there were limits on the extent to which certain assets could be taken into account in demonstrating that the technical reserves and margin of solvency were covered[157].

155 See paragraph 244 above.

156 The amendments included changes in relation to the valuation of dependants of life companies so as to increase their liabilities by an amount approximating to the solvency margin (Regulation 40(2)); to allow debentures or shares which were suspended at the valuation date to be included in the valuation within limits (Regulation 46(2)); amendment to the definition of 'long term business amount', to bring it into line with the definition of 'general business amount' (Regulation 49) and to apply limits on the extent to which all assets of a proprietary life company could be taken into account in the valuation (only the life fund had previously been subject to such limits) (Regulation 49).

157 In practice, those rules were considered to have a significant impact on insurance companies' investment policies (paragraph 10.1 of the paper prepared by the Government Actuary referred to in footnote 91).

261 Regulations 50-64 (Part VI) which set out principles for the determination of liabilities were new. Those Regulations were of particular importance in relation to the required annual actuarial valuation[158] and the determination of the solvency margin[159].

262 Subject to the detailed requirements of subsequent regulations in Part VI of ICR 1981, the basic requirement in Regulation 52 was that the amount of the liabilities of a company conducting either long term or general business should be determined '*in accordance with generally accepted accounting concepts, bases and policies or other generally accepted methods appropriate for insurance companies*', taking account of all contingent and prospective liabilities (other than liabilities in relation to share capital).

263 Regulation 54 required that actuarial principles be used for the determination of the amount of the long term liabilities other than those which had fallen due for payment before the valuation date (and, where Regulation 54 applied, actuarial principles would, in the event of any inconsistency, take precedence over the generally accepted accounting and other methods).

264 There were no financial reporting standards specifically for insurance contracts until 2004. An International Financial Reporting Standard for Insurance Contracts (IFRS 4) was issued in March 2004 and the (UK) Accounting Standards Board issued a Financial Reporting Standard for life assurance business (FRS 27) in December 2004, the latter in response to criticisms made in the Penrose Report. These standards still left certain aspects for further consideration.

265 'Long term liabilities' were defined in Regulation 50 as meaning '*liabilities of an insurance company arising under or in connection with contracts for long term business*'. The term 'mathematical reserves' was defined in Regulation 2 as meaning '*the provision made by an insurer to cover liabilities (excluding liabilities which have fallen due) arising under or in connection with contracts for long term business*'. The latter definition was not explicitly linked to the required calculations under Part VI of ICR 1981, although for certain purposes the figure for the mathematical reserves was to be '*not less than those required by Part VI*'[160], and it appears to have been intended that this should generally be the case[161].

266 Regulation 54 specified that the determination of the amount of long term liabilities (other than those due for payment before the valuation date) should be made on actuarial principles and make proper provision for all liabilities on prudent assumptions in regard to the relevant factors, and that the aggregate amount should be no less than that calculated in accordance with Regulations 55-64, which made specific provision for the calculation of long term liabilities. Thus, if any alternative methods of valuation were used to those stipulated in Regulations 55-64, the resulting figure was to be tested against the amount produced by following those regulations. At this stage the Regulations did not state that the determination of the liabilities should take account of PRE[162].

158 Under section 14 of the ICA 1974 as amended by section 17 of the ICA 1981.
159 Under section 26A of the ICA 1974 inserted by section 21 of the ICA 1981.
160 Regulation 12(1)(b) on zillmerisation.
161 C.D. Daykin: JIA 119 (1992) 313 –343 at paragraph 15.2.
162 Reference to PRE was included later: see regulation 64 of the Insurance Companies Regulation 1994 SI No. 1516, which specified that the actuarial principles used to determine liabilities must have *'due regard to the reasonable expectations of policy holders'*. It has been suggested that, even before this change was made, the requirement to use (as a minimum) a net premium valuation method for certain long term contracts amounted to an implicit requirement to take account of PRE in respect of those contracts.

267 The determination of the amount of the liabilities was required, by regulation 55, to take account of the nature and term of the assets which represented the long term fund and the value placed upon them was required to include '*appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities*'.

268 The process of establishing whether a life company's reserves were sufficient to meet the liabilities after a change in external conditions e.g. a change in returns on investments or in rates of mortality, became known as '**resilience testing**', with monies set aside to address such changes being known as a '**resilience reserve**'.

269 The method of valuation of future premiums in regulation 57 was referred to as being a net-premium method of valuation[163] for certain contracts, although that expression was not used in the regulation itself. Regulation 57 provided:

(1) Where further specified premiums are payable by the policy holder under a contract (not being a linked long term contract) under which benefits (other than benefits arising from a distribution of profits) are determined from the outset in relation to the total premiums payable thereunder, then, subject to regulation 58 below–

(a) where the premiums under the contract are at a uniform rate throughout the period for which they are payable, the premiums to be valued shall be not greater than such level premiums as, if payable for the same period as the actual premiums under the contract and calculated according to the rates of interest and rates of mortality or disability which are to be employed in calculating the liability under the contract, would have been sufficient at the outset to provide for the benefits under the contract according to the contingencies upon which they are payable, exclusive of any additions for profits, expenses or other charges;

(b) where the premiums under the contract are not at a uniform rate throughout the period for which they are payable, the premiums to be valued shall be not greater than such premiums as would be determined on the principles set out in sub-paragraph (a) above modified as appropriate to take account of the variations in the premiums payable by the policy holder in each year;

save that a premium to be valued shall in no year be greater than the amount of the premium payable by the policy holder.

(2) Where the terms of the contract have changed since the contract was first made (the terms of the contract being taken to change for the purposes of this paragraph if

[163] Regulation 57(1) provided for a net premium method of valuation in cases where further specified premiums were payable under the contract and benefits were determined from the outset in relation to the total premiums payable. Regulation 57(3) related to contracts under which each premium paid increased benefits or the amount of a premium payable in the future was not determinable until it was paid, and in this case allowed both the future premiums and the corresponding liability to be left out of account so long as adequate provision was made against any risk that the increase in the company's liabilities resulting from payment of future premiums might exceed the amount of those premiums. By virtue of Regulation 54, if any alternative method of valuation to that in Regulation 57 was used (or if any alternative methods of calculation to those in Regulations 55, 56 or 58-64 were used) to determine the amount of the long term liabilities, it was required that the alternative method should result in liabilities (or provision for liabilities) of no lesser amount, in aggregate, than the amount calculated in accordance with Regulations 55-64. See also footnote 24 regarding the aims of a net premium method of valuation in terms of providing for more than contractual liabilities.

the change is indicated in an endorsement on the policy but not if a new policy is issued), then, for the purposes of paragraph (1) above it shall be assumed that those changes from the time they occurred were provided for in the contract at the time it was made.

(3) Where under a contract (not being a linked long term contract)–

(a) each premium paid increases the benefits (other than benefits arising from a distribution of profits) provided under the contract, or

(b) the amount of a premium payable in future is not determinable until it comes to be paid[164]*,*

future premiums and the corresponding liability may be left out of account so long as adequate provision is made against any risk that the increase in the liabilities of the company resulting from the payment of future premiums might exceed the amount of the premiums.

270 Regulation 59(1) specified that in determining the rates of interest to be used in calculating the present value of future payments or receipts regard should be had to the yields on existing assets attributed to long term business and, to the extent appropriate, to the expected yields on sums to be invested in the future.

271 Regulation 59(2) specified that the assumed yield on an asset should not exceed the actual yield, calculated in the prescribed way and reduced by 7.5%. Zillmerisation was permitted, but not required, under Regulation 58, allowing the maximum annual premium valued under Regulation 57 to be increased by no more than 3.5% of the relevant capital sum under the contract. In making provision for expenses under Regulation 61, some credit could be taken for the difference between the fraction of future premiums left out of account pursuant to Regulation 57(1).

272 Regulation 62 required provision to be made to cover any increase in liabilities caused by policyholders exercising options under their contracts.

The intended relationship between the IC Regulations 1981 and the professional guidance (and the DAA letters issued by GAD)

273 The development of the regulations relating to the determination of liabilities contained in Part VI of ICR 1981 had been the subject of a Joint Actuarial Working Party (JAWP) established in 1981 consisting of representatives of the F&IA and GAD and attended by officials from the DoT[165].

274 In October 1983, the F&IA issued for the first time an additional guidance note for appointed actuaries on the determination of liabilities and solvency margins under ICR 1981 known as 'Guidance Note 8' or 'GN8'.

164 Certain of the contracts entered into by Equitable came within sub-paragraphs (a) and (b) of paragraph (3) of regulation 57.

165 The then Government Actuary stated in 1988 that the JAWP was chaired by the Government Actuary, with representatives of the F&IA and GAD and 'an observer' from the DTI. The JAWP was supported by a 'Valuation Research Working Party' which developed valuation methods and assumptions and reported on technical questions. The then Government Actuary indicated that the JAWP offered a means of close cooperation between the supervisors (represented by GAD) and the profession (through the F&IA). The JAWP had been set up as a means of formal consultation with the F&IA when the valuation regulations were first drafted, but was '*retained as a permanency*', which (in addition to developing and amending the regulations) considered such matters as methods of valuation and tests to be applied by GAD, for example, to mismatching reserves (JIA 116 (1989) 27-100 at paragraph 2.15).

275 Speaking at a meeting of the Faculty of Actuaries in 1982 to discuss an exposure draft of the additional guidance notes for appointed actuaries[166], a directing actuary at GAD, who had been involved in the development of ICR 1981, highlighted the extent to which government departments depended upon the support of the actuarial profession in the function of supervision.

276 He noted that it would be impossible to operate the '*uniquely liberal system of supervision*' in the UK, which had no controls over premium rates, policy conditions and almost total freedom of choice of investments '*without the existence of a tightly knit actuarial profession maintaining high accepted standards of professional conduct laid down in part in the specific Guidance Notes.*' Later in his speech, the directing actuary commented that the valuation regulations had been, essentially, a compromise.

277 He also noted that ICR 1981 could not have existed in the form in which it was enacted, '*which in critical respects specify requirements in terms of* '*actuarial principles*' *not defined or with phrases such as* '*where appropriate*' *or* '*to the extent appropriate*' *unless their interpretation was to be spelt out in guidance.*' He considered the guidance notes and the Regulations taken together[167]; explaining that the guidance notes must be:

> *...capable of being justified as flowing from the requirements, even though they may be in general terms, of the Regulations themselves and if the desired standard is felt to go beyond what can properly be required under professional guidance on this basis, it may well be necessary to amend the Regulations. Inevitably however, the more the standards have to be spelt out in detail in the Regulations, the less flexibility that can be achieved.*

Thus, it appears to have been intended that the detail of the standards should be set by guidance notes produced by the profession, provided that the guidance did result in '*the desired standard*'[168].

278 The GAD directing actuary noted that the regulator's powers of intervention hinged on the solvency margin, which in turn depended on an assessment of the minimum basis for the calculation of liabilities in accordance with ICR 1981: '*It is here that the need for the standard to be spelt out as precisely as possible, albeit in actuarial terms, most strongly arises*'.

279 In relation to Regulation 54, concerning the fundamental principles for the determination of the amount of the long term liabilities, the directing actuary explained that it was intended to fulfil two distinct functions, the first of which was as a long-stop provision for topping up reserves calculated on minimum standards prescribed in other regulations:

> *In the first place the regulation unequivocally leaves the responsibility for ensuring an adequate level of appropriate reserves on prudent assumptions with the Appointed Actuary. The regulation thus requires the actuary, where appropriate, to strengthen the*

---

166 TFA 38 (1981-1983) 219-243 at pages 235-238.

167 A similar point was made by the Government Actuary in 1990 when describing the UK supervisory regime to a summer school for European actuaries (paragraph 8.2 of the paper referred to in footnote 91).

168 Another actuary present at the meeting expressed concern that a proliferation of professional standards might lead to a reduction in reliance on the professional judgment of actuaries (although he was comforted that the Exposure Draft emphasised judgment) '*I think that we must restrict guidance to the minimum necessary to give comfort to the laity and the authorities and, where possible, rely on professional discussion in this Hall and in Staple Inn, duly reported in our transactions and journals*' (D.D. McKinnon at page 242 ibid).

reserves calculated in accordance with the minimum standards laid down in the other Regulations and also provides justification for him doing so, ... An obvious area where Regulation 54 might result in the strengthening of reserves ... is in regard to with-profits business where the requirement for a net premium valuation, criticised though it has been, goes some way to protecting the interests of with-profits policyholders but may still not result in sufficient provision for future bonus.

He explained that the second function of Regulation 54 was to ensure that prudent standards were applied for each class of business and to each of the elements of the basis of calculations without going into elaborate detail to prescribe how this should be done in each case.

280 As was acknowledged by the Government Actuary in a paper presented to the *Groupe Consultatif* summer school in 1990[169], notwithstanding the existence of the regulations concerning the valuation of liabilities and the professional guidance issued to actuaries by the F&IA, there were still considerable areas in which the appointed actuary was expected to exercise his or her judgment. He noted that:

This is not done in isolation, since the DTI has to be satisfied that what has been done is in accordance with the regulations. On this the DTI accepts the advice of GAD.

The Government Actuary went on to explain that, as a matter of practice, GAD laid down working standards for the interpretation of the regulations which were, in some cases, promulgated to appointed actuaries in a letter from the Government Actuary (i.e. through the series of DAA letters issued from 1985 onwards referred to in paragraph 76 and in subsequent sections of this Part of the report). He explained:

The intention is not to impose particular methods or assumptions on actuaries but to require them to demonstrate that what they are doing is prudent, should it produce lower technical reserves than would be implied by the GAD working standard. In forming its views GAD plays an active role in professional affairs and draws widely on research work being carried out within the profession.

281 ICR 1981 was amended in 1982[170] to enlarge the descriptions of property by reference to which benefits under linked long term contracts could be determined and, in 1983, in relation to insurance advertising[171]. Further amendments are noted below.

The Insurance Companies Act 1982

Introduction and overview

282 As noted, the ICA 1982 consolidated the ICA 1974, the ICA 1980 and the ICA 1981 (the ICA 1981 having been made in order to implement the First Life Directive and to incorporate the changes introduced to implement the First Non-Life Directive[172]). The 1982 Act came into force on 28 January 1983, subject to transitional and saving provisions in Schedule 4.

169 Paragraphs 9.1 and 9.2 of the paper referred to in footnote 91.
170 By the Insurance Companies (Amendment) Regulations 1982 SI No. 675.
171 By the Insurance Companies (Advertisements) (Amendment) (No. 2) Regulations 1983 SI No. 396.
172 Which had been implemented in 1977 by means of regulations made under section 2(2) of the ECA 1972, making modifications to the ICA 1974.

283 The five parts of the ICA 1982 dealt with the following:

Part I	Restrictions on carrying on insurance business and conditions for authorisation of insurance companies
Part II	Regulation of insurance companies which had authorisation, including the new margin of solvency requirements, transfers and winding up
Part III	Conduct of business regulation
Part IV	Special classes of insurers
Part V	Supplementary provisions, including powers to make regulations and orders, criminal offences and interpretation.

284 Schedule 1 set out the classes of business to be treated as 'long term business' for the purpose of the ICA 1982. It included:

Class I — Life and annuity

Effecting and carrying out contracts of insurance on human life or contracts to pay annuities on human life, but excluding (in each case) contracts within Class III below.

Class III — Linked long term

Effecting and carrying out contracts of insurance on human life or contracts to pay annuities on human life where the benefits are wholly or partly to be determined by reference to the value of, or the income from, property of any description (whether or not specified in the contracts) or by reference to fluctuations in, or in an index of, the value of property of any description (whether or not so specified).

Class IV — Permanent health

Effecting and carrying out contracts of insurance providing specified benefits against risks of persons becoming incapacitated in consequence of sustaining injury as a result of an accident or of an accident of a specified class or of sickness or infirmity, being contracts that –

(a) are expressed to be in effect for a period of not less than five years, or until normal retirement age for the persons concerned, or without limit of time, and

(b) either are not expressed to be terminable by the insurer, or are expressed to be so terminable only in special circumstances mentioned in the contract.

---

173 The DTI became the responsible government department from 1983 onwards.

285. The main functions in relation to prudential regulation under the ICA 1982 continued to be vested in the Secretary of State, administered by the Insurance Division of the DoT/DTI173 with advice from GAD. As under earlier Acts, many of the provisions were dependent upon subordinate legislation being made by the Secretary of State. The ICAS Regulations 1980 and IC Regulations 1981 (each of which had by then been amended) were continued in force as if made under the ICA 1982.

286 The following concentrates on the provisions of Part II of the ICA 1982 in relation to prudential regulation. Reference is also made to Part I which included the power of the Secretary of State to withdraw authorisation and illustrates the range of change effected by the First Life and First Non-Life Directives. The following centres on provisions of particular significance to insurance companies which conducted long-term business and which were mutual companies (for example, provisions exclusively concerned with general business are not described).

Classification and authorisation of insurance companies

287 For the purpose of the ICA 1982, insurance business was divided into long term business (covering the classes specified in Schedule 1, which included Classes I (life and annuity), III (linked long term) and IV (permanent health)) or general business (the classes specified in Schedule 2).

288 The classes of business specified in the two Schedules to the ICA 1982 reflected those required to be adopted under the First Life Directive and First Non-Life Directive and were intended to cover the entire field of insurance business. The expression 'insurance business' had been defined for the first time in the ICA 1981, section 34.

289 That definition was consolidated in section 95 of the 1982 Act. It did not provide an exhaustive definition of 'insurance business' but rather dealt with 'borderline cases' in order to make it clear that they were within the meaning of the term. Among the specified activities '*the effecting and carrying out of contracts to pay annuities on human life*' was referred to (in section 95(d)).

Authorisation by the Secretary of State

290 The basic rule that only those authorised under the legislation could carry on insurance business in the UK was preserved. Companies authorised to conduct insurance business in the UK of a particular class or classes under the former legislation were to continue to be so authorised. Separate requirements were established for authorisation by the Secretary of State of UK companies, those from other EEC states and for companies from outside the EEC[174], in order to comply with the requirements of the two EEC Directives. Under the Directives, a non-EEC company which maintained its solvency margin in one EEC state could obtain exemption from certain requirements in another and this was reflected in the drafting of the requirements for authorisation of such companies in the UK. The detailed procedures for obtaining authorisation were left to be dealt with in regulations[175].

291 The Secretary of State was required to give written reasons for any refusal of authorisation[176] (implicitly providing a basis for an application to the courts for

174 Sections 7-9 of the ICA 1982.

175 The information to be submitted by applicants was prescribed in regulation 29 of ICR 1981 and Schedules 4 and 5 for long-term and general business respectively.

176 Section 5(2) of the ICA 1982. An application for authorisation was to be determined within six months of the applicant's proposals being submitted. A DTI briefing paper for new ministers dated April 1992 indicated that authorisation was almost never refused by the Secretary of State under section 5(2). Instead, companies were persuaded to modify or withdraw their applications.

an aggrieved applicant by way of judicial review), thereby fulfilling the requirements of the two Directives that precise grounds should be given for any refusal of authorisation and that there should be a right to apply to the courts in the event of a refusal[177]. In relation to the involvement of unfit persons in specified positions in the company as a bar to authorisation, the pre-existing category of persons (director, controller, manager) was extended to include 'main agents' (sections 2-10).

Withdrawal of authorisation

292 The power of the Secretary of State to terminate authorisation to carry on insurance business of a particular class where the company ceased to carry on that class of business or did not commence to conduct it having been issued with authorisation (under section 9 of the ICA 1974) was replaced with more elaborate provisions contained in sections 11-13 of the 1982 Act.

293 On specified grounds, the Secretary of State was empowered to issue a direction withdrawing authorisation in respect of new business. This would allow a company to continue paying claims and only after all its business had been run-off would its authorisation be finally withdrawn under section 13 (the company having ceased to carry on insurance business or business of the particular class).

294 The power to withdraw authorisation arose either where the company requested it or where one of the three grounds in section 11(2) applied. These comprised:

(a) that it appeared to the Secretary of State that the company had failed to satisfy an obligation under the ICA 1982;

(b) that a ground existed which would pose a bar to issuing authorisation; or

(c) that the company had ceased to be authorised in the member state where its head office was located or where it had made a financial deposit under section 9(2).

295 Prior to giving a direction under section 11 (otherwise than at the request of the company) the Secretary of State was required to serve notice on the company stating that he was considering doing so and inviting the company to make written representations to him within one month, with the opportunity for the company to make oral representations to an officer of the DoT (section 12). After giving a direction under section 11, the Secretary of State was required to give written reasons for doing so (again, providing a basis for an application to the courts by way of judicial review)[178].

General effect of Part II of the ICA 1982

296 Part II provided for the regulation of insurance companies and included requirements imposed on insurance companies and powers for the Secretary of State to intervene. The general effect of Part II was to consolidate the amendments and modifications to Part II of the ICA 1974 in respect of the Secretary of State's powers of intervention (described in paragraphs 76 et seq in relation to the predecessor provisions of the ICAA 1973), in order to implement the First Non-Life Directive and the First Life Directive, including new financial requirements, limitations on the Secretary of State's intervention powers and provisions to strengthen to some degree the protection afforded to policyholders.

177 See article 12 of the First Life Directive.
178 Section 11(3) of the ICA 1982 and article 26.3 of the First Life Directive.

Application of Part II of the ICA 1982

297 All insurance companies which carried on insurance business in the UK, whether established within or outside the UK, were subject to Part II, other than four categories of entity which were wholly or partly excluded from its ambit, or excluded in respect of certain activities (friendly societies, trade unions or employers' associations, members of Lloyd's and those conducting banking business). General business contracts of prescribed descriptions under which benefits in kind were provided by the insurer could also be excluded by regulations made under the ICA 1982.

Restriction of business to insurance

298 In response to requirements of the two Directives a new restriction was introduced, prohibiting insurance companies subject to Part II from carrying on any activities otherwise than in connection with or for the purpose of insurance business, whether in the UK or elsewhere. Contravention of this requirement could provide grounds for intervention by the Secretary of State under section 37 of the ICA 1982, but did not constitute a criminal offence (section 16).

Accounts and statements and the appointed actuary

299 Sections 17 to 26 of the ICA 1982 re-enacted the following provisions originally introduced by the ICAA 1973, which had been consolidated in ICA 1974, in respect of insurance companies subject to Part II of the ICA 1982, with modifications in relation to the required frequency of the actuarial investigations and to take account of the position of non-EEC companies:

(a) **annual accounts:** the requirements regarding deposit of annual accounts and balance sheets (and other supporting documents) in prescribed forms[179] were re-enacted (section 17 of the ICA 1982[180]);

(b) **annual actuarial investigation:** the frequency of the compulsory actuarial investigation of the financial condition of a company carrying on long term business was increased from triennially to annually. In addition, where any rights of with-profits policyholders related to particular parts of the company's long-term fund, the actuary was required to determine the excess of assets over liabilities for each part. As under the former provisions, a statement of long term business was to be prepared at least once in every five years and the value of assets and the amount of any liabilities was to be assessed in accordance with any applicable valuation regulations[181] (section 18[182]);

(c) **appointed actuary:** the requirements were re-enacted for the appointment of an actuary by a company carrying on long term business, with written notification to be given to the Secretary of State of the name and qualifications of the appointee (section 19[183]);

(d) **annual statement of business:** the requirement for annual preparation of a statement of business in a prescribed form by companies conducting prescribed classes of insurance business[184] was re-enacted (section 20[185]);

179 At the time of enactment of the ICA 1982, these were contained in the ICAS Regulations 1980.
180 Derived from section 13 of the ICA 1974.
181 The applicable regulations at this time were ICR 1981, Parts V (assets) and VI (liabilities), which continued in force by virtue of section 17 of the Interpretation Act 1978.
182 Derived from section 14 of the ICA 1974 (section 3 of the ICAA 1973) and consolidating amendments made to section 14 of the 1974 Act by section 17 of the ICA 1981.
183 Derived from section 15 of the ICA 1974 (section 3 of the ICAA 1973).
184 The ICAS Regulations 1980 (Regulation 15 and Forms 41-51 related to long-term business).
185 Derived from section 16 of the ICA 1974.

(e) **audit of accounts**: the requirement for the accounts and balance sheet of insurance companies to be audited in the prescribed manner by a person of the prescribed description[186] was re-enacted (section 21[187]);

(f) **deposit of documents with the Secretary of State:** the detailed requirements for the deposit of documents (normally within six months after the close of the period to which the account related), numbers of copies, signature etc., were re-enacted and extended to enable regulations to be made about the signatories of documents deposited with the Secretary of State[188] (section 22[189]);

(g) **rights of shareholders and policyholders**: their rights to receive copies of deposited documents on application to the company were re-enacted (section 23[190]);

(h) **periodic statement of business**: the power to prescribe classes or descriptions of business for which statements of business should be made at such intervals and for such period as might be prescribed[191] was re-enacted (section 25[192]);

(i) **undesirable transactions**: power to prescribe classes or descriptions of agreements or arrangements which appeared to the Secretary of State as '*likely to be undesirable in the interests of policyholders*', with a requirement that the company (or any 'subordinate company'[193]) which entered into such an agreement or arrangement furnish the Secretary of State with a statement of the terms of the agreement or arrangement within a prescribed time limit (section 26[194]); and

(j) **proper accounts and records by non-EEC companies:** section 27 of the ICA 1982 contained a new requirement[195] under which companies with a head office outside the Community were required to keep proper accounts and records of their insurance business carried on in the UK.

300 Detailed requirements for the contents of accounts and statements prepared under sections 17, 18 and 20 were prescribed in the ICAS Regulations 1980 as amended[196], and in respect of the valuations specified in section 18(4), in ICR 1981.

186 Regulation 21 of the ICAS Regulations 1980 (as amended).
187 Derived from section 17 of the ICA 1974.
188 The relevant regulations were SI 1980 No. 6 (see paragraphs 235 et seq) as amended by the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1981 SI No. 1656 in relation to the prescribed signatories, subsequently replaced as described in paragraph 341.
189 Derived from section 18 of the ICA 1974 as amended by section 18(1) of the ICA 1981.
190 Derived from section 19 of the ICA 1974.
191 'Prescribed' was defined in section 96(1) as meaning prescribed by regulations made under the ICA 1982.
192 Derived from section 21 of the ICA 1974 (section 5 of the ICAA 1973).
193 As defined in section 31(4) of the ICA 1982.
194 Derived from section 22 of the ICA 1974.
195 Derived from section 22A of the ICA 1974, introduced by section 18(2) of the ICA 1981.
196 By the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1982 SI No. 305.

Assets and liabilities attributable to long-term business

301 Sections 28 to 31 of the ICA 1982 re-enacted provisions of the ICA 1974 which had been revised and strengthened by the ICA 1981. They were primarily of relevance to proprietary companies or those which conducted general business in addition to long term business.

302 The basic rule was maintained that the assets and liabilities attributable to long-term business were to be separately accounted for, with the assets constituting a fund separated from any general business (section 28). Assets of this separate fund were to be used exclusively to meet liabilities on long term business, protected from transfers within the company, mortgages and charges or use for dividends, unless the funds were adequate to meet the long term business liabilities (section 29).

303 As amended by the ICA 1981, the provisions in relation to allocations to policyholders required that where policyholders were entitled to share in any surpluses (as under with-profits policies), the share of the surplus allocated to policyholders from one year to the next could not be reduced beyond a specified percentage unless notice was first given to the Secretary of State and an approved statement was published in the London, Edinburgh and Belfast Gazettes (section 30). The pre-existing restriction was maintained on the proportion of long term funds invested in shares in subordinate companies, loans to such companies and shares in and loans to connected persons[197], made by the insurance company or a subordinate company. In aggregate such investments etc. could not exceed five per cent of the amount of the long term fund (section 31).

Financial resources and the margin of solvency

304 Sections 32 to 35 dealt with the system of solvency margins required under the First Non-Life Directive and the First Life Directive, which had initially been embodied in primary legislation by amendments to the ICA 1974 as sections 26A-26D, introduced by the ICA 1981 (see paragraphs 240 et seq above).

305 **The margin of solvency:** under section 32, every insurance company subject to Part II of the ICA 1982 with its head office in the UK or whose UK business was restricted to reinsurance[198] was to maintain a margin of solvency of such an amount as was prescribed or determined in accordance with regulations (those regulations being designed, in turn, to give effect to the requirements of the two EEC Directives[199]).

306 The relevant regulations continued to be ICR 1981 (Regulations 3-13 and Schedules 1 and 2; Regulations 5 to 8 related specifically to the determination of the margin of solvency for the various classes of long term business). This margin was known as the 'required minimum margin' or RMM. It is to be noted that section 32 created a continuing obligation to 'maintain' the margin, rather than to demonstrate that it was available at particular times. If the solvency margin was not maintained, the Secretary of State could request the company to submit to him a plan for the restoration of a sound financial position, which was to be modified if the Secretary of State considered it to be inadequate, and then put into effect by the company (section 32(4)).

[197] 'Connected person' was defined for this purpose in section 31(5) as being a person (other than a subordinate company) who or which controlled, or was the partner of someone who controlled, the insurance company; was a company controlled by the insurance company; or a director of an insurance company (or a director's husband, wife or child).

[198] The Directives did not deal with those conducting only reinsurance business, but the UK legislators chose to provide for them.

[199] See article 19 of the First Life Directive in relation to the 'minimum solvency margin' and its determination.

307 Further provision for failure to maintain a *minimum* margin was made in section 33. It has been suggested[200] that in the event of failure to maintain the solvency margin, the powers of the Secretary of State under sections 32(4) and 33 were to be used before his more general powers of intervention under sections 37-45 could be relied upon, although there was no express requirement to this effect. For companies carrying on long-term business before 1 January 1982 which did not thereafter obtain authorisation for any other class of long term business, section 32 (and section 33) did not apply until 15 March 1984 (section 99(1) and Schedule 4).

308 **Failure to maintain the minimum margin**: The 'minimum margin' in section 33 corresponded to the 'guarantee fund' in the EEC Directives[201] (and was described as the 'guarantee fund' in regulation 9 of ICR 1981). Where the margin of solvency fell below the prescribed minimum level, at the request of the Secretary of State, the company was required to submit a short-term financial scheme to him, to which he could propose modifications if he considered it inadequate; the company was then required to give effect to the scheme.

309 **Form and situation of assets**: A basic principle of the EEC Directives was that the assets representing the reserves which an insurance company required to meet its liabilities should be localised in the country where business was conducted and should be in the same currency as the liabilities[202]. Regulations made for the purpose of section 35 gave effect to that principle. The relevant provisions were regulations 25-27 of ICR 1981.

Unlimited liabilities

310 The provisions of the earlier legislation which rendered void any contract entered into by an insurance company under which it assumed liabilities of an uncertain maximum amount unless the contract was exempted by regulations, was maintained in section 36. However, commencement of this provision was postponed until regulations were made under it[203]. It appears that no such regulations were ever made and section 36 was eventually repealed without ever having been commenced.

Secretary of State's powers of intervention

311 Sections 37-48 consolidated the intervention powers of the Secretary of State under sections 28-41 of the ICA 1974[204], which had been amended by sections 22-24 of the ICA 1981. The basic

200 This submission is made in the annotations to section 32(4) of the ICA 1982 published in the Current Year Law Book. The notes compare section 32(4) with section 45(2)(b). Section 45(2)(b) contained one of the three exceptions to the general rule in section 45(2) that the residual power under section 45(1) should not be exercised in such a way as to restrict the company's freedom to dispose of its assets (see paragraph 328). Section 45(2)(b) permitted the section 45(1) intervention power to be used to restrain free disposal of assets in circumstances where the company had failed to satisfy an obligation to which it was subject by virtue of sections 33-35 of 1982 Act (or the equivalent provisions of the ICA 1974). Under section 45(2) as originally enacted, in cases where the only default by a company related to its solvency margin, it was implicit that section 45(1) could not be relied upon *in a way which would restrict asset disposal* unless the company's solvency margin had fallen below the minimum required under section 33 (and possibly, unless it had also failed to provide or implement a short-term financial scheme requested by the Secretary of State under that section). Further, section 45 could not be relied on if its purposes could be achieved by reliance on sections 38 to 44 (section 37(6)). However any wider limitation on reliance on section 45(1) or on sections 37-44 by virtue of sections 32(4) and 33 is not apparent. (The exceptional grounds in section 45(2) were later expanded to include cases where a company had failed to satisfy the solvency margin requirements of section 32, see paragraph 603.)

201 Articles 20.1 and 21.2 of the First Life Directive: the 'guarantee fund' was to consist of one third of the minimum solvency margin, subject to a specified minimum amount.

202 See article 17.2 of the First Life Directive and the definition in article 5(b) of 'matching assets'.

203 Schedule 4, paragraph 6.

204 Initially introduced as sections 12-25 of the ICAA 1973. See paragraphs 114 et seq above.

structure of the intervention powers was maintained (i.e. the grounds for exercise, followed by the measures themselves), although the grounds for exercise were made more elaborate to create distinct grounds for intervention by way of certain of the powers, particularly in the light of the restrictions on member states' powers to intervene by way of restricting free disposal of assets other than in exceptional circumstances.

312 The power for the Secretary of State to intervene by imposing restrictions on new business[205] had been repealed by the ICA 1981[206], which had consequential effects for the remaining intervention provisions.

Section 37 – grounds for intervention under sections 38-45

313 Section 37 consolidated the grounds for intervention under section 28 of the ICA 1974[207], with the following changes which had been introduced by sections 22, 36 of and Schedules 4 and 5 to the ICA 1981.

314 **Limitation on exercise of certain intervention powers:** in order to conform with the Directives[208], limitations were placed on the Secretary of State's powers to intervene by way of imposing requirements for the maintenance of assets in the UK and the custody of assets by a trustee (under sections 39 and 40 of the ICA 1982). By virtue of section 37(3), those forms of intervention could only be exercised where:

(a) the Secretary of State had given a direction under section 11 to withdraw authorisation in respect of new business;

(b) it appeared to the Secretary of State that the company had failed to satisfy the new 'minimum margin' requirements or provisions concerning the value of assets to be maintained in the UK or regarding the form and situation of assets under sections 33-35[209]; or

(c) an account or statement submitted to the Secretary of State showed that the company's liabilities had been calculated otherwise than in accordance with the valuation regulations (or accepted accounting concepts if no such regulations applied).

315 **Two new grounds for intervention**: under section 37(2), the five grounds for intervention listed in section 18(1) of the ICA 1974[210] were supplemented by two new grounds. The additional grounds comprised:

(a) that it appeared to the Secretary of State that there had been a substantial departure from a proposal or forecast submitted to the Secretary of State under section 5 of the ICA 1982 when the company applied for authorisation; and

(b) that the company had ceased to be authorised to effect contracts of insurance generally or of a particular description in a member state

---

205 Section 13 of the ICAA 1973, consolidated in section 29 ICA 1974. See paragraph 120 above.
206 Section 23(1) of the ICA 1981 and Schedule 5 to that Act.
207 Derived from section 12 of the ICAA 1973, summarised in paragraph 114 above.
208 See article 21.2 of the First Life Directive, which contained a prohibition on restraining the free disposal of assets of authorised undertakings.
209 Or under the equivalent earlier provisions of sections 26B, 26C or 26D of the ICA 1974 which had been inserted in that Act by the ICA 1981.
210 Derived from section 12(1) of the ICAA 1973 summarised in paragraph 114 above. The original grounds related to: (a) policyholders' reasonable expectations; (b) failure to fulfil obligations under the relevant legislation; (c) furnishing misleading information; (d) inadequate reinsurance arrangements; and (e) existence of a ground which would amount to a bar to authorisation being issued.

where it had its head office or had made a financial deposit under section 9(2).

316 The seven grounds for intervention under section 37(2) applied to the powers under section 38 (requirements about investments); section 41 (limitation of premium income); section 42 (special actuarial investigations); section 43 (acceleration of provision of accounting information); section 44 (power to obtain information and production of documents) and section 45 (the residual power to intervene on solvency or PRE grounds)[211].

317 Section 37(5) of the 1982 Act preserved the provisions of section 12(4) of the ICAA 1973[212], giving the Secretary of State greater flexibility to intervene[213] in relation to recently authorised companies. The additional ground on which the Secretary of State might require a company to produce documents[214], namely where he considered it desirable in the general interests of those who were or might become policyholders, was preserved in section 37(4)[215].

318 **Repeal of ground for intervention**: section 28(2) of the ICA 1974[216] had given a general ground for intervention in respect of concerns regarding solvency, in the case of companies conducting long term business, in circumstances where the Secretary of State was not satisfied that the value of the assets exceeded the amount of the liabilities. Section 28(2) had been repealed by section 22(2)(e) and Schedule 5 to the ICA 1981.

319 **Policyholders' reasonable expectations:** the first ground for intervention, under section 37(2)(a), where the Secretary of State considered the exercise of the intervention power to be desirable for protecting policyholders or potential policyholders against the '*risk that the company may be unable to meet its liabilities, or, in the case of long term business, to fulfil the reasonable expectations of policy holders or potential policy holders*', was repeated from the earlier legislation without amendment (and, as before, no explanation was given of the meaning of 'policyholders' reasonable expectations'). The wide (but residual) power of intervention based on PRE then included as section 45 of the ICA 1982[217] continued to be subject to the general restriction that it could only be relied upon where the intended purposes of intervention could not be appropriately achieved by reliance on other specific intervention powers or by reliance on those powers alone (section 37(6)). (The residual intervention power was made subject to an additional limitation under section 45(2) as described below.)

Repeal of power of intervention by way of restrictions on new business

320 The first of the Secretary of State's powers of intervention under the former legislation, enabling him to require the company not to effect new contracts of insurance[218], had been repealed by the ICA 1981[219].

[211] Section 37(2) did not apply to the intervention powers under sections 39 or 40, for which special provision was made in section 37(3) (as described in paragraph 314).
[212] Paragraph 117 above.
[213] By way of his powers under sections 38, 41, 42, 44(1) or 45, whether or not any of the grounds in 37(2) or (4) existed.
[214] Under section 44(2)-(4) of the ICA 1982.
[215] Section 12(3) of the ICAA 1973, see paragraph 116 above.
[216] Section 12(2) of the ICAA 1973, see paragraph 115 above.
[217] Which had been revised so as to limit the use of the power in such a way as to restrict the company's freedom to dispose of its assets in the light of the EEC requirements, as explained below.
[218] Under section 29 of the ICA 1974 (section 13 of the ICAA 1973).
[219] Section 23(1) of the 1981 Act.

Section 38 – requirements about investments

321 A new limitation was placed on the Secretary of State's power to intervene by way of requiring a company not to invest in or to realise certain investments. In order to conform with the requirements of the two EEC Directives that state control over insurance companies' investments should only extend to the reserves required to meet liabilities and not to 'free reserves'[220], section 38(3) specified that this intervention power would not apply to any surplus of assets over liabilities determined in accordance with the relevant regulations.

Section 39 – maintenance of assets in the UK

322 The provisions enabling the Secretary of State to require that assets of an equal value to the whole or a specified proportion of the company's domestic liabilities was preserved (with the definition of 'domestic liabilities' being slightly revised). As noted above, the grounds on which the Secretary of State was entitled to rely on this power were restricted to those set out in section 37(3).

Section 40 – custody of assets

323 The power of the Secretary of State to require, in conjunction with the exercise of the power under section 39, that assets be placed in the custody of a trustee was also preserved, but subject to restricted grounds for exercise under section 37(3).

Section 41 – limitation of premium income

324 The power to intervene by way of restricting the aggregate amount of premiums to be received by the company in a specified period (thereby placing a limit on new business) was preserved.

Section 42 – actuarial investigation

325 The Secretary of State's power to require a company which carried on long term business to cause a special actuarial investigation[221] to be undertaken by the appointed actuary in respect of all or any specified part of that business was re-enacted with minor revisions.

Sections 43 and 44 – accelerated accounting information and provision of information of documents

326 The powers of the Secretary of State to require a company to deposit accounts and statements (under sections 22 and 25) earlier than their normally required times or to provide specified information or documents were repeated from the earlier legislation[222].

Section 45 – residual power to protect policyholders

327 Section 45(1) repeated the original drafting of the wide power of the Secretary of State to take '*such action as appears to him to be appropriate for the purpose of protecting policy holders or potential policy holders of the company against the risk that the company may be unable to meet its liabilities or, in the case of long term business, to fulfil the reasonable expectations of policy holders or potential policy holders*'[223]; a power which was to be employed only where other powers of intervention (under section 38-44) could not '*appropriately achieve*' those aims (section 37(6)).

328 In order to conform with the prohibition in the EEC Directives[224] on restraining the free disposal of assets by a company, a new limitation was placed on this residual power by section 45(2). The power conferred by section 45(1) could only be exercised

220 See article 21.1.
221 See paragraphs 125 and 126 regarding section 18 of the ICAA 1973 (consolidated in section 34 of the ICA 1974 and later slightly amended by section 36 of and Schedules 4 and 5 to the ICA 1981).
222 See paragraphs 127 and 128 regarding sections 19 and 20 of the ICAA 1973 (consolidated in sections 35 and 36 of the ICA 1974).
223 See paragraphs 129 and 130 regarding section 21 of the ICAA 1973, consolidated in section 37 of the ICA 1974.
224 See article 21.2 of the First Life Directive.

in such a way as to restrict the company's freedom to dispose of it assets in three specified circumstances:

(a) after the Secretary of State had given a direction under section 11 to withdraw authorisation in respect of new business;

(b) where it appeared to the Secretary of State that the company had failed to satisfy the new 'minimum margin' requirements or provisions concerning the value of assets to be maintained in the UK or regarding the form and situation of assets under sections 33-35[225]; or

(c) where an account or statement submitted to the Secretary of State showed that the company's liabilities had been calculated otherwise than in accordance with the valuation regulations (or accepted accounting concepts if no such regulations applied).

(These circumstances were equivalent to the limited grounds on which, by virtue of section 37(3), the intervention powers under sections 39 and 40 (regarding maintenance of assets in the UK and custody of assets) could be exercised.)

Prior notice in cases of involvement of unfit persons

329 Section 46 of the 1982 Act preserved the requirements[226] for the Secretary of State to give written notification to the person concerned and to allow that person to make representations, followed by an equivalent notice served on the company and invitation to make representations, before exercising an intervention power under sections 38-45 based on the ground of the unfitness of a person for the position he or she held[227].

Power to bring civil proceedings on behalf of an insurance company

330 The Secretary of State's power to bring civil proceedings in the public interest was preserved[228] in section 48 with minor consequential amendments.

Transfers of long term business

331 Sections 49 and 50 re-enacted with minor revisions the provisions of the former legislation (described in paragraph 95 in relation to sections 26 and 27 of the ICAA 1973) enabling a transferor or transferee company to apply to the court to sanction a scheme for the transfer of long-term business, without obtaining the consent of all the affected policyholders. This was seen as providing one potential means of averting the worst effects of the liquidation of a business. The provisions were also relied on when an insurance company wished to sell its long term business to another company.

Insolvency and winding up

332 Sections 53-59 re-enacted the provisions of the former legislation on winding up of insurance companies with minor revisions. They came into force in 1985 when rules were made under section 59[229]. They included provisions (in addition to those for the winding up of companies generally under the Companies Acts):

225 Or under the equivalent earlier provisions of sections 26B, 26C or 26D of the ICA 1974 which had been inserted in that Act by the ICA 1981.
226 The former provisions of section 23 of the ICAA 1973 (section 39 of the ICA 1974) are noted in paragraphs 133 and 134 above.
227 Other than as 'controller' of the company.
228 Section 25 of the ICAA 1973; section 41 of the ICA 1974.
229 See section 99 of and paragraph 15 of Schedule 4 to the ICA 1982, which postponed commencement of these provisions until rules under section 59 had come into operation. The Insurance Companies (Winding-up) Rules 1985 SI No. 95 were made for this purpose. Those Rules included a form of reference to PRE in relation to the valuation of non-linked life policies in Schedule 2. Under paragraph 1(2) of that Schedule, the court was to make an allowance in the calculations for the situation where, on the basis of the company's established practice, the policyholder had an expectation of receiving benefits additional to the minimum guaranteed under the contract.

(a) for ten or more policyholders to present a petition for the winding up of an insurance company;

(b) for the Secretary of State to petition for the winding up of an insurance company on three specified grounds[230], namely that:

 (i) the company was unable to pay its debts within the meaning of specified sections of the Companies Act 1948;

 (ii) the company had failed to satisfy an obligation to which it was subject by virtue of the ICA 1982 or predecessor legislation; and

 (iii) the company had failed to keep proper accounts or to produce records as required under section 12 of the Companies Act 1976 and the Secretary of State was unable to ascertain its financial position;

(c) making special provision in respect of the winding up of insurance companies with long-term business, prohibiting voluntary winding up and ensuring that the required separation of assets relating to the long term fund and any general business continued into the winding up arrangements;

(d) requiring the liquidator to carry on the long-term business unless the court ordered otherwise, with a view to that business being transferred as a going concern to another company; with powers for the court to appoint a special manager of the business, to reduce the amount of the contracts made by the company in the course of its long term business and to appoint an independent actuary to investigate and report on that business;

(e) for the winding up of a company from which business had been transferred in conjunction with the winding up of the transferee company, where the transferor (or its creditors) had claims against the transferee; and

(f) in place of winding up in the case of a company unable to pay its debts, the court was empowered to reduce the amount of the contracts of the company on such terms and conditions as the Court thought fit.

Secretary of State approval of managing director or chief executive of an insurance company and of a controller of a company

333 Sections 60 and 61 re-enacted the requirements[231] for the Secretary of State to be notified of the proposed appointment of a managing director or chief executive or of a prospective new controller[232] of an insurance company.

334 This enabled the Secretary of State to object if necessary on the grounds that the person was not a 'fit and proper person' to take up the appointment or become a controller, and potentially provided grounds for intervention under section 37(2)(e)[233].

335 Notice of change of controller, director or manager was also to be given to the company by the person concerned; the company was then required to give

---

[230] Section 54(1) of the ICA 1982.
[231] See paragraphs 149 to 154 regarding sections 33 and 34 of the ICAA 1973 (consolidated in sections 52 and 53 of the ICA 1974).
[232] Originally defined in section 7(4) of the ICA 1982 (from 1 July 1994 defined in a new section 96C of that Act, see footnote 413).
[233] See paragraphs 313 et seq regarding section 37 of the ICA 1982 and paragraphs 114 and 170 regarding the predecessor provisions, in particular, of section 12(1)(e) of the ICAA 1973 (consolidated in section 28(1)(e) of the ICA 1974).

written notice to the Secretary of State under section 62[234]. ICR 1981 contained prescribed forms for the notices to be given under these requirements. Sections 63 and 64 made provision for the Secretary of State to be notified of changes of managing director and chief executive of companies from outside the UK and of changes of main agents.

Miscellaneous provisions, section 68 orders and offences

336 Minor ancillary provisions in relation to the obligations of the Secretary of State to deposit documents with the registrar of companies were preserved (section 65). He continued to be empowered to direct, by order, that certain business should be treated as being or not being ordinary long term business (section 67). The Secretary of State was also empowered to extend or shorten any financial year of an insurance company (section 69).

337 Section 68 re-enacted the power of the Secretary of State to modify, by order, certain of the provisions of the primary legislation and related regulations concerning regulation of insurance companies (a section 68 order). This power was important to insurance companies as it provided a mechanism by which the Secretary of State could authorise implicit items, such as the present value of future profits, to be used (to a limited extent) in demonstrating that the required minimum margin was satisfied.

338 Section 71 provided for a number of offences in relation to default in compliance with specified provisions of Part II and was mainly derived from the ICAA 1973 (and ICA 1974).

Part V of the ICA 1982

339 Part V included provisions related to the Secretary of State's wide ranging powers to make subordinate legislation in relation to various provisions of the ICA 1982 (section 97); his power to make valuation regulations (section 90); detailed provisions in relation to criminal proceedings including the criminal liability of directors (section 91); and a number of new defined terms in the general interpretation provision (section 96). As noted, 'policyholders' reasonable expectations' was not defined.

The practical application of the ICA 1982 in later years and the fate of the Act

340 Information about the practical application of the regulatory regime under the ICA 1982 during the early 1990s is included in the first section of Phase 4. Following successive amendments (certain of which are referred to below), the ICA 1982 was repealed with effect from 1 December 2001 by the Financial Services and Markets Act 2000 (Consequential Amendments and Repeals) Order 2001[235], which was made by the Treasury in exercise of its powers under the FSMA 2000.

The Insurance Companies (Accounts and Statements) Regulations 1983

341 The ICAS Regulations 1980 were amended by a series of statutory instruments between 1981 and 1983 to update the requirements for accounts and statements in the light of changes introduced by the ICA 1981 and the EEC Directives, in relation to such matters as the prescribed signatories of deposited documents[236], to introduce new definitions, to make provision for returns by non-

234 Re-enacting the provisions of section 35 of the ICAA 1973 (section 54 of the ICA 1974), see paragraph 104.
235 SI 2001 No. 3649.
236 SI 1981 No. 1656, referred to in footnote 188.

UK companies[237] and in relation to the margin of solvency requirements[238].

342 The Insurance Companies (Accounts and Statements) Regulations 1983[239] (the ICAS Regulations 1983) came into operation in March 1984 to replace, with modifications, the ICAS Regulations 1980.

343 The principal new requirements under the ICAS Regulations 1983 for deposited documents related to companies carrying on long term business and included a statement of benefits enjoyed by the appointed actuary (such as shares in the company and pecuniary interests in company transactions) and a statement of any arrangements by which management services were received from or provided to another company. In relation to long term business, these Regulations incorporated changes concerning such matters as the margin of solvency, requirements for further analyses of premium income, expenses, assets and new business and a new form for the abstract of the actuary's report. The prescribed qualifications for appointed actuaries and auditors[240] were unchanged.

Guidance for appointed actuaries – revisions to GN1 1979-1985

344 The guidance for appointed actuaries in GN1 was reissued as versions 1.2 (in 1979), 1.3 (1983), 1.4 (1984) and 1.5 (1985). Few significant changes were made other than to update references to the legislation in the light of the enactment of the ICA 1982 and to revise the name of the responsible government department (to refer to the 'Department of Trade and Industry') in the 1983 version. In the version issued in 1985 (1.5), the reference to the failure by an appointed actuary to work within the framework indicated in the guide being regarded as prima facie evidence of unprofessional conduct was removed from the text of the document[241].

Guidance for Appointed Actuaries – the first version of GN8

345 Whilst GN1 dealt with the appointed actuary's general responsibilities in relation to long term business, GN8 focused on the determination of liability regulations in Part VI of ICR 1981 and the actuary's role in relation to solvency margins.

346 As noted above, a number of new requirements had been imposed which had implications for the work of the appointed actuary. Part VI of ICR 1981 had made provision for the determination of long-term liabilities of insurance companies and governed the required valuations when an actuarial investigation was undertaken pursuant to the ICA 1982.

347 One of the required outcomes of such an investigation was for the actuary to provide a certificate that the long-term liabilities of the company did not exceed the value of its liabilities[242]. Part VI of ICR 1981 had introduced a statutory requirement for 'resilience testing' in

237 SI 1982 No. 305, see footnote 196.
238 The Insurance Companies (Accounts and Statements) (Amendment) Regulations 1983 SI No. 1192.
239 SI 1983 No. 1811.
240 In Regulations 28 and 30 respectively. Regulation 29 required the company to annex a statement to the accounts giving prescribed information about the actuary, including particulars of any shares held in the company, any pecuniary interest in company transactions, his or her remuneration and any emoluments as a director.
241 From January 1990, this principle was set out in the general guidance on professional conduct standards issued to actuaries by the F&IA (as it is in the current professional conduct standards for actuaries). See the additional note of Advice on Professional Conduct (APC3) issued by the Institute of Actuaries in January 1990.
242 Regulation 18 and Part II of Schedule 6 to the ICAS Regulations 1980.

Regulation 55, that in determining the amount of the company's long term liabilities account was to be taken of '*the nature and term of the assets representing the long term fund and the value placed upon them and shall include appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities*'. In addition, the ICA 1982 and Part II of ICR 1981 had made provision for the maintenance of margins of solvency by insurance companies.

348 GN8 was issued by the F&IA in October 1983 to give additional guidance to appointed actuaries in relation to certain aspects of their professional responsibilities when undertaking the required valuations; giving guidance on dealing with the determination of liabilities and solvency margins and in relation to 'resilience testing' under Regulation 55.

349 By the time GN8 was first published, the DTI had indicated that it would require a certificate from the appointed actuary in relation to applications from companies for orders under section 68 (enabling implicit items to count towards the solvency margin), although the form of the certificate had not been announced.

350 The stated aim of GN8 was to draw actuaries' attention to their professional responsibilities relevant to the required valuations, rather than to interpret ICR 1981. The comments made by the GAD directing actuary to a meeting of the Faculty of Actuaries in 1982 suggest that this professional guidance was intended to fulfil a key function in the overall regulatory regime (see paragraphs 273 et seq).

351 The guidance emphasised that the paramount requirement was that in regulation 54 (see paragraph 266 The appointed actuary should use prudent bases determined according to actuarial principles and professional considerations as set out in earlier guidance notes.

352 Paragraph 2.1.3 stated:

> *Actuarial principles require the actuary to pay due regard in his valuation to the future interests of with-profits policyholders notwithstanding the fact that Regulations 55-64 do not specify the point. This may well necessitate his making other investigations to satisfy himself as to the pace of emergence of surplus.*

Thus from 1983 the future interests of policyholders, if not their 'reasonable expectations', were built into the professional guidance for appointed actuaries regarding the required valuations. However, no reference was made to the 'reasonable expectations of policyholders' in the subordinate legislation on valuations until some time later[243].

353 The requirements of Regulations 55-64 were described as '*minimum criteria*' and the actuary was to interpret them in a prudent way, individually and as a whole. Guidance on resilience testing was given only in very general terms: that it was necessary for the actuary to use '*professional judgment*' when applying Regulation 55, cross referring to the guidance in GN1 paragraphs 6.6-6.9 (which again related to general factors), rather than providing any specific hypothetical situations, or

243 Such a reference was included in regulation 64 of the Insurance Companies Regulations 1994 SI No. 1516 on the determination of long term liabilities, in relation to the actuarial principles to be used (which were to have *'due regard to the reasonable expectations of policy holders'* (with no reference to potential policyholders)). From 1992 onwards, GN1 referred to the need for the actuary to have regard to policyholders' reasonable expectations in his or her assessment of the company's long-term liabilities (paragraph 6.3 of GN1 version 3.0, see paragraph 514(g) below).

potential adverse investment conditions, which the actuary should consider.

354 Whilst there was no statutory requirement for the actuary to do so, the guidance in GN8 required the actuary to advise the company of the action required of it to maintain the margins of solvency prescribed in Part II of ICR 1981, and the action the company should take in the event that it was reasonably foreseeable that it would be unable to meet its long term liabilities.

1984 Service Level Agreement between the DTI and GAD and supervision in practice

The 1984 Service Level Agreement

355 In 1984, the arrangements between the DTI and GAD in relation to GAD's role in scrutinising returns submitted by companies carrying on long term business and providing the DTI with related advice were formalised in a 'service level agreement' (SLA) which came into effect on 1 July 1984. The agreement outlined the division of tasks between the DTI and GAD and the basic requirements for the methodology to be used and required progress reports to be given in relation to the scrutiny process. The outcome of the process was for GAD to provide the DTI with a scrutiny report intended to enable the DTI to assess the need for action by the Secretary of State as prudential regulator.

356 The underlying approach stated in the agreement was that formal action on behalf of the Secretary of State should always be taken by the DTI. GAD was permitted to make direct enquiries of companies, but it was not to make enquiries of auditors, nor in the first instance, of appointed actuaries.

357 GAD was given the major share of the responsibility for the examination of returns relating to long term business and pursuing technical questions arising from them with the companies.

358 The DTI was clearly to remain the point of contact for insurance companies under the regulatory regime, covering such matters as new authorisations, directions, notices of requirements, concessionary orders, notifications of change of control and of the appointed actuary and receipt of the statutory returns, and it retained responsibility for scrutinising annual reports and accounts in relation to shareholder matters.

359 Under the 1984 SLA it was agreed that:

(a) the DTI would pass on to GAD copies of returns from the company, reports to policyholders and other relevant documentation and supporting information such as business plans and policies;

(b) on receipt of the annual returns the DTI was to carry out an initial check of the main documents to ensure that they were complete;

(c) some of the forms were then to be computer processed and passed on to GAD;

(d) the DTI was to advise GAD of significant errors and omissions (and GAD was to notify the DTI if it found any such matters in the returns which needed to be taken up urgently) and the DTI was to be responsible for pursuing these with the company concerned;

(e) the DTI was also to pass on the quarterly returns and supporting documents; and

(f) the DTI was to notify GAD if in its view the company should be given a higher priority rating or there were other matters which appeared relevant to the examination of the return in relation to long-term business.

360 The main obligations of GAD under the 1984 SLA included:

Initial scrutiny

(a) as soon as possible after receipt of the annual return from the DTI, GAD was to carry out an initial scrutiny in order to advise the DTI of any serious solvency or compliance problems and to allocate a priority to the case in the range 1-4 as described in Annex A to the agreement, with 1 being the most urgent and those in category 4 seen as a low priority for whom detailed examination would be undertaken at least once in every three years;

(b) GAD was to notify the DTI immediately if it appeared that the company had failed to meet its long term business solvency margin or was otherwise in financial difficulty;

(c) GAD was to examine the various certificates in the returns and notify the DTI of serious cases of non-compliance; examine the non-computerised parts of the returns and notify the DTI of significant errors or omissions; and make an initial examination of the form showing the valuation result and distribution of surplus to ensure that the requirements of section 30 on allocation of surpluses to with-profits policyholders had not been breached;

(d) GAD was to provide the DTI with a quarterly list showing current and previous priority ratings of all companies;

Detailed examination and report to DTI

(e) GAD was to undertake a detailed examination of the annual returns, reporting to the DTI on significant matters arising from the returns or from correspondence or discussion with the companies or their actuaries; the main objective of each examination was to form a view on the company's solvency and margin of solvency as at the date of the return and compliance with statutory requirements and any undertakings given by the company; for 'priority 1' cases the detailed examination was to be carried out '*within days*' of GAD's receipt of the return, for 'priority 3' cases it was '*normally*' to be carried out within ten months;

(f) on completion of the detailed examination GAD was to provide a scrutiny report to the DTI on significant matters which had emerged or been raised by the company, advising the DTI if GAD was of the view that any formal action was required; the SLA gave details of the matters to be addressed in the report to the DTI aimed at identifying major issues, developments or weaknesses which might require some form of action or intervention;

(g) GAD was to provide the DTI with a monthly progress report on the examination of annual returns, completion of initial checks and final reports on outstanding issues.

361 At the stage of the detailed examination, GAD was permitted to contact the company or (with its agreement) the company's appointed actuary to obtain clarification of points relating to the long-term business.

362 However, if the DTI had already been in correspondence with the company following its initial examination of the company's return, GAD was to agree with the DTI which department

should pursue matters further with the company. Any correspondence between GAD and the company or its advisers or notes of meetings were to be copied to the DTI. GAD was to make recommendations to the DTI about any action which should be taken in relation to matters arising from the returns. The SLA made it clear that GAD was not to initiate any such action or commit the DTI to any particular decision in the course of its discussions with companies. Nor was GAD to approach any company's auditors.

363 The 1984 Agreement (clause 45) stated that it was to be reviewed in early 1986 (other sources suggest that this review may not have taken place). A new SLA was agreed between the DTI and GAD in 1995 (see paragraphs 744 et seq below).

Supervision in practice as at 1988

364 A paper presented by the Government Actuary, E.A. Johnston, to the Institute of Actuaries in 1988[244] described the role of GAD in the day-to-day supervision of insurance companies at that time, the relationship between GAD and appointed actuaries and GAD's relationship with the F&IA.

365 In 1988 just over 80 people in the DTI and GAD were working on life and non-life work, including six and a half full time equivalent qualified actuaries dealing with life assurance matters[245]. The costs were recovered through fees charged to insurance companies. At the end of 1987 there were 281 companies writing long-term business and 168 different appointed actuaries (as some were appointed to more than one company).

366 The then Government Actuary explained that a full examination of the returns in a complex case could take more than a week. The objective of the full examination was to monitor that the legislation had been complied with, which entailed checking that the returns had been made out correctly, that the appointed actuary's valuation accorded with the regulations and guidance notes[246], that the solvency margin was held and that other statutory requirements had been met.

367 A further aim of the detailed examination was to look at the company 'dynamically', using the returns and any other available information to assess how the financial state of the company was developing[247] and to seek to identify potential problems or dangerous trends. At the time the paper was written, with-profit companies had been receiving increased attention in order to identify cases where over-distribution might be occurring. It was explained that this work paralleled rather than duplicated the work of the appointed actuary in terms of the actuary's valuation and the financial condition report[248] which the actuary was presumed to make to the board of the company, but which the supervisory authorities did not see.

368 Where the detailed examination and any follow-up queries revealed matters of concern, the procedure moved to a second stage during which '*DTI and GAD work*[ed] *as a team*'. The first step would normally be to seek further information; there might then be discussion with the company, especially if its plans seemed unsuitable or matters were moving in a direction likely to cause difficulty.

244 JIA 116 (1989) 27-100 at paragraphs 2.1-2.17.
245 By 1990, the total staff employed by GAD comprised some 30 qualified actuaries, 12 trainee actuaries and about 25 support staff (according to paragraph 5.1 of the paper referred to in footnote 91).
246 Apparently a reference to GNI and GN8.
247 See further below (paragraphs 825 et seq) regarding the practice of 'dynamic solvency testing' and financial condition reports aimed at assessing the ability of long-term insurance businesses to withstand changes in the economic environment.
248 There was no statutory requirement for such a report to be prepared or considered by the company, but from 1996 onwards it was recommended practice under GN2 that such a report, addressed to the board of the company, should be prepared by the appointed actuary (paragraphs 825 et seq).

369 Ultimately, it might be necessary to consider whether there were grounds for formal intervention. The Government Actuary explained that GAD played a major part at this stage, in terms of internal discussions with the DTI, assisting with correspondence and attending meetings and dealing with the actuary on actuarial issues. Often this type of work arose from events between valuations, such as major restructurings.

370 As regards the relationship between GAD and appointed actuaries, the then Government Actuary said:

> *Contact between GAD and actuaries is crucial to the smooth functioning of the Appointed Actuary system. It is not GAD's function to second-guess the company actuary. That Department's responsibility is to advise the DTI on the state of the company in relation to the legislation. For this purpose, the input to GAD is the finished work of the Appointed Actuary. It would be very unusual for GAD to investigate the condition of an office itself.*

371 He went on to explain that the normal aim of the supervisors was that the management of a company should address any problem. The company's actuary would be expected to carry out any necessary investigation and advise management as required. The DTI expected management to take 'full note' of the results of any actuarial investigations and of the appointed actuary's advice and act accordingly.

372 The then Government Actuary described the F&IA as providing professional backup essential to the system, with responsibility for education, qualification standards, research and professional discipline. He stated that the appointed actuary system called for close co-operation between the supervisors (represented by GAD) and the profession (through the F&IA) and explained that this was achieved both informally and formally through such means as the JAWP[249].

The Financial Services Act 1986

373 The Financial Services Act 1986 (the FS Act 1986) is relevant to conduct of business regulation and is not described here other than by way of background, to explain the extent to which it applied to life assurance business and in order to refer to some of the amendments it made to the ICA 1982.

General background and effects of Part I of the FS Act 1986

374 The FS Act 1986 effected a complete overhaul of the statutory framework for the regulation of investment business. It was enacted some ten years after it had first been proposed that the previous legislation (the Prevention of Fraud (Investments) Act 1958) should be revised to bring it into line with modern conditions.

375 In the wake of the collapse of four licensed dealers in securities in 1981, Professor Gower was appointed by the Secretary of State to undertake a review of the protection needed by investors and to advise on the need for new legislation. Professor Gower recommended[250] the replacement of the former legislation with a comprehensive statutory regime for the regulation of investment business '*based so far as possible on self-regulation subject to government surveillance*'.

[249] See paragraph 273 and the footnote thereto.
[250] Review of Investor Protection, Cmnd 9125 (January 1984).

376 Much of the Government White Paper which preceded the Act and eventually the FS Act 1986 itself, followed Professor Gower's recommendations. The basic model was for the establishment of a practitioner-based body matching criteria specified in the legislation, which would in part operate through a number of self-regulating organisations (SROs) recognised by the new body.

377 The FS Act 1986 provided for the establishment of a new regulatory authority 'the Securities and Investments Board Limited' (SIB). Under section 114, the Secretary of State was empowered to delegate to the SIB (as a 'designated agency'[251]), by order, specified functions under the Act in relation to the regulation of investment business. The SIB began to 'recognise' the SROs with effect from 17 May 1987, when the SIB assumed responsibility for the functions listed in a delegation order[252]. Most of the relevant provisions of the Act came into force on 29 April 1988 (known as 'A Day').

378 Section 4 of the FS Act 1986 made it an offence to carry on investment business without authorisation or exemption under the Act. There were two means of obtaining authorisation: either directly from the SIB or through membership of an SRO[253].

379 Chapter V of Part I of the FS Act 1986 dealt with conduct of business regulation. Criminal offences were created in relation to the making of misleading statements, market manipulation and investment advertising by unauthorised persons.

380 The SIB (following the delegation arrangements) was empowered to make rules and regulations to regulate conduct of business. The provisions included civil remedies by way of actions for damages by those who suffered loss on account of a contravention of the requirements (section 62). Part VI included a number of intervention powers which were to be exercisable by the SIB under the delegation arrangements. Chapter IX provided for the creation of a Financial Services Tribunal to which an appeal against the exercise of those powers could be made.

Impact on the ICA 1982

381 Part II of the FS Act 1986 and Schedule 10 to the Act adapted the investment business regime to life assurance in a way which took account of the regulation of insurance companies under the ICA 1982. The broad effect was that only the life assurance marketing and pension fund management activities fell within the scope of the investment business regime[254].

382 The opportunity was taken within Part II to make a number of amendments to the ICA 1982, including an amendment to the definition of 'controller' in section 7(4)(c)(ii) of the 1982 Act to reduce the specified percentage of voting power controlled from one third to 15 per cent (section 134). This ensured that the definitions of 'controller' in ICA 1982 and the FS Act 1986 were consistent.

383 A new section 21A was inserted in the 1982 Act, designed to facilitate communication between auditors of insurance companies subject to Part II

[251] By virtue of the Financial Services Act 1986 (Delegation) Order 1987 SI No. 942.

[252] Articles 3,5,6,7 and 8 and Schedule 3 to SI 1987 No. 942. Certain functions were subject to the reservation that they were to be exercisable concurrently by the Secretary of State and the SIB. Schedule 1 listed functions which were not to be transferred to the SIB.

[253] Equitable was a member of two SROs: the Life Assurance and Unit Trust Regulatory Organisation Limited (LAUTRO), in relation to its sales activities, and the Investment Management Regulatory Organisation Limited (IMRO) in relation to its fund management. The general manager of Equitable was appointed as the first chairman of LAUTRO.

[254] Equitable's accounts for 1988 stated that the management report included more information than in the past and that the Society supported '*the general thrust of the regulations stemming from the Financial Services Act to require more openness from the life assurance industry*'.

of the ICA 1982 and the Secretary of State. Section 21A provided that no duty to which such an auditor might be subject should be regarded as contravened by reason of the auditor communicating in good faith to the Secretary of State any information or opinion on a matter of which the auditor had become aware in his or her capacity as company auditor and which was relevant to the functions of the Secretary of State under the 1982 Act (section 135). The regulations which were later made by the Secretary of State under section 21A(2) and (3) to impose duties on auditors to communicate certain information are referred to below[255].

384 A new section 31A was also added to the ICA 1982 requiring insurance companies to secure that they had adequate arrangements in force to avoid unfairness between separate insurance funds, said to enshrine in the legislation the '*single most important principle of investment management of dealing fairly between different clients*'[256] (section 136).

385 The funds which were relevant for this purpose were those required to be maintained under section 28 (separating assets relating to the long term business from any relating to general business) and 'identified funds'. 'Identified funds' were defined as assets representing receipts from a particular part of a company's long term business which could be identified as such by virtue of accounting or other records maintained by the company.

386 Section 78(2) of the ICA 1982, relating to linked long term policies and the property and indices to which they could be linked was also amended to allow the Secretary of State to prescribe quantitative limits, expressed in terms of the proportion of the benefits under such policies which could be determined by reference to property of a specified description or a specified index (section 137). It was said that this would enable the range of permitted links to be extended.

Transfer of functions under and repeal of the FS Act 1986

387 On 7 June 1992, many of the functions of the Secretary of State under the FS Act 1986 were transferred to the Treasury, although some were to be exercisable by the Secretary of State and the Treasury acting jointly or concurrently. The relevant transfer order contained express provisions[257] to ensure that the delegations which had been made to the SIB as a designated agency were preserved and that the Treasury could assume the powers from the designated agency in circumstances where the Secretary of State would have been entitled to resume them. The FS Act 1986 was repealed (with minor savings) as from 1 December 2001 by the Financial Services and Markets Act 2000 (Consequential Amendments and Repeals) Order 2001[258].

Policyholders' reasonable expectations for taxation purposes: the Finance Act 1989

388 An allowance was made for the costs of meeting policyholders' reasonable expectations within section 82 of the Finance Act 1989, which related to the calculation of profits of insurance companies for the purposes of the Income and Corporation

255 The Auditors (Insurance Companies Act 1982) Regulations 1994 SI No. 449, referred to at paragraph 697.
256 Hansard Debates, House of Lords 28 July 1986 Vol 479, col 663.
257 Article 6 of the Transfer of Functions (Financial Services) Order 1992 SI No. 1315.
258 SI 2001 No. 3649 (articles 3(1)(c) and 292).

Taxes Act 1988. Section 82 permitted so much of any surplus as was held by the company to meet the reasonable expectations of policyholders[259] to be treated as a liability of the company for the purpose of the calculation of its profits for tax purposes (thereby reducing the amount of the profits subject to taxation), subject to limited exceptions. Section 82(1)(a) specified that:

> *... if, at the end of the period, the company has an unappropriated surplus on valuation, as shown in its return for the purposes of the* [ICA 1982], *then, subject to subsection (3) below, the closing liabilities of the period may include such amount, forming part of that surplus, as is required to meet the reasonable expectations of policy holders or annuitants with regard to bonuses or other additions to benefit of a discretionary nature.*

389 The exception in subsection (3) related to amounts which had been reserved for policyholders or annuitants before 14 March 1989 but had not been allocated to them or expended on their behalf before that date.

390 Section 82 of the Finance Act 1989 remained in force in this form until it was substituted in respect of accounting periods beginning on or after 1 January 2003 by the Finance Act 2003[260].

Guidance for Appointed Actuaries – revisions to GN1 and GN8 1987-1990 and guidance on resilience testing from GAD (DAA1)

GN1

391 Further versions of GN1 were issued in 1987 (version 1.6), 1988 (version 2.0) and 1990 (version 2.1).

392 Of the changes to GN1 introduced during this period the most significant appear to be those made in 1988 when the new version 2.0 was produced, in which a new section 8 was added giving guidance on the written reports the appointed actuary was required to prepare following an actuarial investigation under section 18 of the ICA 1982.

393 The guidance stated that it was the professional duty of the appointed actuary to report in writing to the directors on the results and implications of the investigation, whether or not any allocation of profits was involved, before providing the statutory report to the DTI. Section 8 went on to give guidance on the approach to be adopted and the matters to be covered in the appointed actuary's report to the company directors, including requirements for the actuary:

(a) to take all reasonable steps to ensure that the directors were in a position to consider a suitable written report from the actuary if there was reason to believe that the company planned to announce a specific allocation of profits in anticipation of the results of the results of an actuarial investigation (paragraph 8.2);

[259] No reference was made in the Finance Act 1989 to 'potential policyholders', suggesting that it was not considered necessary to reserve sums in order to meet the expectations of prospective policyholders.

[260] The replacement provision in section 82B(2) of the Finance Act 1989 now refers to so much of the unappropriated surplus as is required to meet the 'duty of fairness' (to treat its policyholders and annuitants fairly with regard to terminal bonus) being treated as a deduction from profits.

(b) in reporting on and making recommendations in respect of any proposed allocation of profits, to consider specified matters affecting the company's financial position, carry out appropriate financial investigations and provide directors with the necessary information to enable them to judge the appropriateness of the allocation and understand its implications for the future conduct of long term business (paragraph 8.3); and in particular (without prejudice to the generality of this requirement) the actuary was required:

- if the report anticipated the results of an annual actuarial investigation under section 18 of the ICA 1982, to '*indicate and discuss how in the context of the statutory requirements, the allocation will be financed*' (paragraph 8.3.1);

- to discuss the relationship between the proposed allocation and the relevant experience and indicate whether, in the actuary's opinion, the continuance of a distribution policy which (in its relationship to relevant experience) was consistent with the allocation proposed, could lead in due course to an unsatisfactory position and, if so, to explain how this could appropriately be avoided (8.3.2); in the case of with-profit business, the actuary's comments were required to cover '*bonus prospects, with particular reference to the projected development of outgo on and asset cover for unreserved terminal bonus and the like in different investment scenarios'* (8.3.3); and

- to justify his or her recommendations regarding the allocation of profits and its consequences for the conduct of the company's long term business by reference as appropriate to the actuary's appraisal or assessment of (a) relevant experience, (b) the company's financial and business objectives, and (c) the company's continuing ability to meet its statutory solvency requirement, and:

> *... his interpretation of the reasonable expectations of the company's policyholders having regard to* [(a), (b) and (c)]. *He should assume that among the conditions for the fulfilment of those expectations are:*
>
> *(i) that, in the recognition and allocation of profits in accordance with the company's terms of participation in its policy in respect of* [the nature and timing of allocation of profits to policyholders and/or shareholders], *groups of participating policies are appropriately and equitably distinguished having regard inter alia to the terms of the policies, their duration and their relevant pooled experience; and*
>
> *(ii) that the company conducts its affairs, including its new business and investment strategies, with due regard for its financial resources* [Paragraph 8.3.4].

GN8

394 Versions of GN8 were issued for 1984-85 (version 1.1), 1985-86 (version 1.2), in 1988 (version 2.0) and in 1990 (version 2.1).

395 In version 1.2 two paragraphs were added. The first (paragraph 1.4) specified that it was the appointed actuary's duty to report in writing to the company,

at the appropriate level of authority, on the results and implications of any valuation carried out for statutory purposes and to advise on the conditions in which the company might reasonably be expected to be able to maintain current rates of bonus for any with-profits policies, allowing for any changes in rates envisaged as a result of the valuation (this paragraph was removed in version 2.0).

396 The second new paragraph (1.5) stated that it was the actuary's professional duty to make timely and reasoned disclosure to the company and to the DTI if, for some exceptional reason, the actuary was unable to comply fully with the additional guidance notes (in GN8).

Government Actuary's letter to Appointed Actuaries on his 'working rule' for resilience testing (DAA1) and Temporary Practice Note from the F&IA

397 On 13 November 1985 the then Government Actuary wrote to the appointed actuaries of insurance companies indicating the standard or 'working rule' he would be applying for resilience testing when considering the suitability of the actuary's statutory valuations and advising the DTI on the solvency position of each insurance company (DAA1).

398 This entailed comparing the company's reserves with the ability to meet the requirements of ICR 1981 (other than Regulation 55) given an immediate rise or fall of 3% in the rate of interest and a fall of 25% in equity prices (and a similar fall in property values). This working rule was later said[261] to have been '*effectively endorsed*' in Temporary Practice Note No. 2 (TPN2, issued by the F&IA to actuaries in May 1986).

399 Over the years up to 2000 a number of further DAA letters were issued by the Government Actuary to appointed actuaries on the subject of resilience testing in which the tests and hypothetical scenarios evolved and became considerably more complex[262], as mentioned below. The guidelines contained in the DAA letters had no statutory force, but were considered to set a benchmark for a minimum acceptable standard[263] for resilience testing.

400 Resilience testing was considered to play an important part in securing prudent provision for the liabilities of insurance companies. A later working party of the F&IA which investigated resilience reserves[264] noted that numerous working parties had looked at the fundamental valuation regime and most had concluded that their results were heavily dependent upon the resilience regime which was applied to them.

Proposals to strengthen the appointed actuary system and a view of the role of the actuary in the UK supervisory regime as at 1990

Consultation paper on proposals to strengthen the system

401 In March 1990 the DTI consulted on proposals to strengthen the appointed actuary system[265]. Whilst it was noted that generally the system had worked well it was open to question whether '*such an*

[261] In a 'Dear Appointed Actuary' letter sent to appointed actuaries by the Government Actuary dated 31 July 1992 (DAA4).
[262] Eventually reverting to more straightforward tests in 2001, at least on a temporary basis, in guidance issued by the FSA shortly after the transfer to it of functions in relation to prudential regulation of insurance companies.
[263] As noted above, the memorandum produced by the F&IA for the House of Commons Treasury Committee Inquiry into Equitable and the Life Assurance Industry, dated February 2001, states (at paragraph 8.2) that, in practice, DAA letters set a minimum acceptable standard for appointed actuaries in determining provisions for particular risks in the valuation of liabilities.
[264] The Resilience Reserves Working Party report of October 2000 (paragraph 2.10), referred to in paragraphs 995 et seq.
[265] Consultation Paper: 'Strengthening the Appointed Actuary System', Insurance Division of the DTI, 13 March 1990.

important part of the UK's insurance supervision should continue to rest so largely on non-statutory professional rules and custom and practice, without any backing of law'.

402 The DTI had considered whether, in the circumstances, it should take legislative action in relation to the appointed actuary system and set out the essential elements of the professional rules in regulations, but the view had been reached that it was not desirable to take over the role of the profession in this way and that it would destroy the flexibility of the system which was seen as one of its main strengths. The DTI did, however, conclude that '*some reinforcement is necessary to prevent serious problems arising in the future*'.

403 The paper proposed two means to strengthen the system: the first was to introduce into the Regulations a requirement for the appointed actuary to certify compliance with the Guidance Notes issued by the professional bodies, or to identify any departures[266]. The second was that an actuary should not be appointed as an 'appointed actuary' without a practising certificate issued by one of the two professional bodies[267].

Programme of visits to appointed actuaries

404 On 7 November 1990 the Government Actuary wrote to appointed actuaries to inform them that officials from the DTI and GAD were beginning a rolling programme of visits to life insurance companies, intended to cover all authorised life insurance companies in the UK over a three year period. The letter stated that the aims of the visits were:

(a) to strengthen the appointed actuary system by achieving closer contacts between appointed actuaries and senior officials of GAD and the DTI, explaining that GAD wished to be satisfied that the role of the appointed actuary was well understood within the company and that the appointed actuary was well placed to perform his or her professional duties; and

(b) to improve the supervisory process by looking at the company's plans prospectively rather than relying on the retrospective view given in the returns to the DTI made under the ICAS Regulations 1983, indicating that officials would wish to discuss with appointed actuaries and senior management the company's business plans over the next five years with particular reference to solvency aspects and any requirements for additional capital.

405 Although discussion at the meetings was mainly to be about actuarial matters, it was indicated that wider issues would be discussed. The letter explained that in order to maintain effective supervision it was becoming increasingly necessary to understand aspects which were not covered in the DTI returns, for example any group corporate structure, any service agreements between the insurance company and any other companies in a group and the sources of the company's business. It was suggested that it would be necessary for the company's senior management, including its chief executive, to be present for at least part of the visit, particularly when business plans and group structure were to be discussed. (The DTI wrote simultaneously to the chief executives of insurance companies enclosing a copy of this letter.)

266 With effect from 1 January 1994, the certificate to be given by the appointed actuary under Schedule 6 to the ICAS Regulations 1983 was required to include a statement (if it was the case) that guidance notes GN1 and GN8 had been complied with, following an amendment made by the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1993 SI No. 946.

267 This proposal was accepted by the actuarial profession and a system for issuing certificates was introduced at the end of 1992. The requirement for an appointed actuary to possess a practising certificate was first referred to in version 4.0 of GN1 issued in 1994 (at paragraph 2.1).

The Government Actuary's view of the role of the appointed actuary in 1990

406 Speaking at a summer school attended by European actuaries in 1990[268], the Government Actuary placed considerable emphasis on the professional role of the appointed actuary in the system of supervision in the UK. In considering the distinctions between the regimes which applied in the UK and in other parts of Europe he said that in the UK there was '*emphasis generally on certification by professionals rather than prescription of rules by the supervisor and detailed checking to see that they were satisfied*'. He noted that the actuary was responsible for determining the mathematical reserves for life business, for ensuring the continuing financial viability of the company, and that the actuary had a major part to play in safeguarding the reasonable expectations of policyholders. He went on to observe that:

> *The Actuary's responsibilities are seen as going well beyond a simple requirement to report in the annual returns to the supervisory authority on his regular investigations into the financial condition of the company. Clearly the Actuary has responsibilities to the company as his principal, but he is also regarded by his profession as having an overriding obligation to the supervisory authority, by reason of his position, which gives him a clear responsibility to safeguard the rights and interests of policyholders. The Guidance Notes envisage that there could be occasions on which the Appointed Actuary might need to advise the DTI directly of a situation where the company is following a course of action which would lead him to qualify a subsequent actuarial certificate. In practice this has happened only rarely but the threat is important in ensuring that company management takes notice of what the Appointed Actuary says.*

The Second Life Directive 90/619/EEC

407 The Second Life Directive of 8 November 1990 (the Second Life Directive) built on the right of establishment in the First Life Directive and was described as supplementary to it[269]. It was primarily concerned with the next stage in the EEC's programme in relation to the freedom to render services, allowing companies based in one member state to offer their services to customers in other member states.

408 In essence, this Directive permitted an insurer to accept unsolicited business (or 'own initiative business') from residents of another EEC state even though the insurer did not hold authorisation in that country. The Directive's description of 'own initiative business' in article 13 included unsolicited intermediary business, but contained an option which allowed the member state to restrict 'own initiative business' to cases where there had been no contact with the prospective policyholder, even via an intermediary.

409 Article 5 of the Second Life Directive amended article 23 of the First Life Directive. It required member states to ensure that their supervisory authorities had the power to supervise cross-border activities of companies within their country, including the power to carry out 'on the spot' investigations at the premises of the company and to take any measures appropriate and necessary to ensure that the company was in conformity with the laws and regulations relevant to it.

---

268 See paragraphs 1.6, 3.2, 4.3 and 4.5 of the paper referred to in footnote 91.

269 Although it had a slightly narrower ambit; for example it did not apply to pension fund management.

410 The limited ability provided by the Second Life Directive for insurance companies throughout the Community to accept business from policyholders in other member states was superseded by the implementation of the Third Life Directive which was issued in 1992. However, provisions of the Second Life Directive regarding the law of contract[270] and cancellation[271] were carried over into the Third Life Directive regime.

411 The Second Life Directive was implemented in the UK mainly through amendments to the ICA 1982 introduced by the Insurance Companies (Amendment) Regulations 1993[272] which came into force on 20 May 1993.

Further amendments to ICR 1981 and other subordinate legislation 1985-1990

412 Miscellaneous amendments were made to ICR 1981 in 1985[273]. Those of substance primarily related to the margin of solvency and valuation provisions and introduced a number of refinements, for example to clarify the relationship between the required margin of solvency and the minimum guarantee fund, to amend the calculation of future profits to enable the average number of years remaining on policies to be weighted by reference to the actuarial value of their benefits, as well as dealing with certain reinsurance issues.

413 In 1988[274], consequential amendments were made to ICR 1981 in relation to references to unit trust schemes in the light of repeals and replacement provisions introduced by the FS Act 1986. Amendments were also made to the ICAS Regulations 1983 for this reason[275]. In 1991[276] ICR 1981 was amended in relation to long-term contracts linked to unit trusts, to prohibit the linking of benefits to anything other than authorised unit trust schemes or recognised schemes within the meaning of the FS Act 1986. Schedule 13 to ICR 1981 was also amended in relation to the securities by reference to which benefits under linked long term contracts could be determined[277].

414 Specific rules for the winding up of insurance companies were made in 1985[278] under section 365(1) of the Companies Act 1948 and section 59 of the ICA 1982, to provide for such matters as the identification of assets and liabilities of the long term business and methods of valuation. In 1986 the rules were amended[279] in the light of the enactment of the Insolvency Act of that year.

270 As regards the law of contract, article 4 of the Directive included a default provision that the law of any insurance contract entered into by parties in different member states was to be the law of the member state in which the policyholder had his or her habitual residence (known as the 'law of the member state of the commitment' and defined in article 2(e)), unless the law of the member state permitted the choice of law of another country or the policyholder was an individual and a national of another member state and the parties agreed to choose the law of another country. In the UK this was put into effect by amendments to the ICA 1982 and the Contracts (Applicable Law) Act 1990.

271 Member states were to ensure that policyholders who entered into own initiative contracts were given a period of between 14 and 30 days to cancel unless the contract was for a period of six months or less (article 15). These provisions were implemented in the UK by SI 1993 Nos. 1327 and 1092.

272 SI 1993 No. 174.

273 By the Insurance Companies (Amendment) Regulations 1985 SI No. 1419.

274 The Insurance Companies (Amendment) Regulations 1988 SI No. 673.

275 By the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1988 SI No. 672.

276 By the Insurance Companies (Linked Contracts) (Amendment) Regulations 1991 SI No. 2511.

277 The Insurance Companies Regulations 1981 (Amendment) Regulations 1991 SI No. 1999.

278 The Insurance Companies (Winding-Up) Rules 1985 SI No. 95.

279 The Insurance Companies (Winding-Up) (Amendment) Rules 1986 SI No. 2002.

415 Section 49 of the ICA 1982 regarding sanction of the court for transfer schemes relating to long term business was amended through subordinate legislation with effect from January 1988[280] in order to implement the Directives[281] on mergers and divisions of public limited liability companies in so far as they applied to life insurance companies. The effect was to make certain mergers or divisions where the transferor was a public company subject to Companies Act provisions on compromises and arrangements, in addition to the provisions of the ICA 1982.

416 The Insurance Companies (Amendment) Regulations 1990[282] implemented the Non- Life Directive 88/357/EEC by introducing amendments to the ICA 1982, ICR 1981 and the ICAS Regulations 1983.

Consideration of PRE 1981-1990 and the first report of the F&IA joint working party on PRE

417 As noted above, there appears to have been only limited debate on the meaning and effects of the phrase *'reasonable expectations of policyholders or potential policyholders'* before it was introduced into the legislation in 1973. However, that debate got under way very shortly after the ICAA 1973 was introduced, as illustrated by a note prepared by the DTI on the policy issues arising from the 1973 Act which explained that the reference to PRE '*may present difficulties of interpretation and policy is likely to evolve from cases*'[283].

418 Nonetheless, it was considered that the reference to 'potential policyholders' was important as it demonstrated '*the forward looking use of the powers which is contemplated and implying the desirability of early intervention to secure recovery rather than merely minimising the effects of expected deterioration*'. Notes prepared by GAD in the period leading up to the preparation of the Bill which preceded the ICA 1982 on the need for amendments to then existing legislation confirmed the view that, in interpreting the PRE ground for intervention in relation to long-term business, the Secretary of State was required to look beyond the fulfilment of contractual liabilities to the satisfaction of the additional expectations of participating policyholders. The note then suggested that '*thinking on the issues of policyholders' reasonable expectations has developed further*'[284].

419 Nonetheless, in sections 37(2)(a), 37(6) and 45 of the ICA 1982 the earlier provisions of the legislation on PRE were simply repeated, subject to the new restriction in section 45(2), arising from the requirements of the First Life Directive, in relation to the prohibition on the exercise of the residual PRE intervention power in a manner which would restrict free disposal of assets by the company (subject to limited exceptions).

420 During the 1980s extensive consideration was given by the DTI to the origins and meaning of the term PRE, most commonly in the context of the balance to be struck between the interests of shareholders and policyholders. For example, in 1986 a major insurance company was proposing to change its articles of association to omit the reference to a

284 Note prepared by GAD dated 11 January 1980.

90:10 split between policyholders and shareholders. This led DTI officials to undertake research into what the term meant and its origins, although this failed to produce any precise definition and the simple conclusion was reached that the powers were wide ranging and could be used in a variety of circumstances[285].

421 Counsels' opinions were obtained by the DTI in the latter part of the 1980s, generally in connection with PRE in the context of a proposed restructuring by a proprietary life company and concerns about the balance of interests between policyholders and shareholders.

422 Those opinions confirmed what appeared to be the commonsense reading of the PRE provisions, that they were directed at something wider than enforceable legal or equitable rights and that such matters as the company's statements of previous practice could give rise to expectations which were, objectively assessed, 'reasonable'. It was indicated that one matter which a policyholder might reasonably expect was that the balance between policyholders of different classes (and not just the balance between shareholders and policyholders) would not in any substantial respect be altered in a manner adverse to any class[286].

423 Correspondence between officials in the DTI, GAD and the Solicitor's Office during 1988[287] in connection with a draft submission which was being prepared for the then Parliamentary Under Secretary of State for Corporate and Consumer Affairs, shows that an issue had arisen about whether or not section 45(2) of the ICA 1982 (the prohibition on the use of the PRE intervention power in a manner which would restrict the company's freedom to dispose of its assets save in specified exceptional cases) posed an obstacle to the Secretary of State intervening[288] in cases where a proprietary company was increasing significantly the proportion of profits distributed to shareholders.

424 The officials appear to have concluded that section 45(2) should not be interpreted as presenting such an obstacle (although the issue did not appear in the final version of the submissions to the Parliamentary Under-Secretary of State). A number of arguments were put forward to support this conclusion, mainly based on the officials' understanding of the intended effects of article 21.2 of the First Life Directive (from which section 45(2) was derived) and the way in which that provision had been applied in other parts of Europe. A directing actuary at GAD noted[289] that:

(a) he had always considered that article 21 was concerned solely with investments;

(b) like much of the First Life Directive, article 21 was '*a straight carry-over*' from the Non-Life Directive, but the issue of appropriation of profits did not normally arise with non-life business;

[285] Internal DTI memorandum dated 18 April 1986. A later covering note from the then Head of Insurance at the DTI, dated 21 June 1988, re-circulating the 1986 memorandum to other officials who had wished to know what had been said publicly about PRE in the past stated that it would enable the recipients to *'share equally in the poverty of past reference'* to reasonable expectations. A more informative view about the justifiable expectations of policyholders as an objective of actuarial valuation, rather in terms of the statutory meaning of PRE, was contained in the presidential address given by M.H. Field to the Institute of Actuaries in 1986 (JIA 114 (1987) 1-14) referred to in paragraph 429.

[286] Joint Opinion of Counsel, 8 January 1987, paragraph 8(6), page 8.

[287] Dated 21 June 1988; 27 June 1988; 6 July 1988 and 8 July 1988.

[288] For example by way of issuing a direction to the company as to the allocation of surplus between policyholders and shareholders.

[289] In a note dated 21 September 1987 circulated with the memorandum of 6 July 1988 to the DTI.

(c) '[c]*ertainly, the existence of article 21.2 has not prevented other Member States from prescribing limits to the share of profits that may be allocated to shareholders*'.

An adviser in the DTI's Solicitor's Office considered that it '*seemed both legitimate and necessary, in order to give proper effect to the Directives, to interpret the word "assets" in a reasonably restricted way, that is, so as not to include surplus profits available for distribution*'[290]. He was of the view that a very wide interpretation of section 45(2) would '*all but emasculate the section 45(1) power*'[291]. It appears that the DTI did, on occasion, rely on section 45 to prevent the payment of a dividend by an insurance company[292], but it is not known whether or not any of the exceptional circumstances specified in section 45(2) existed when it did so.

425 By 1988 consideration was being given by the DTI, with advice from GAD, to the need for guidelines to be issued on the policy to be applied by the Secretary of State in using the powers of intervention on PRE grounds, what the criteria for their use should be and what should be said publicly.

426 GAD recognised the need for guidelines but considered that there was also a need for flexibility in the exercise of powers and this could be endangered by '*saying too much in public*'. GAD presumed that, in practice, the DTI would only wish to intervene in extreme cases. GAD suggested that in some cases the powers could only be exercised effectively if more formal responsibilities were placed on appointed actuaries[293].

427 GAD later drew attention to the need for issues relating to fairness between different classes of policyholders to be addressed (and not just those between shareholders and policyholders) and predicted that this could be an area in which there would be an increase in the number of cases where the DTI would be asked to intervene on PRE grounds[294].

428 Those deliberations culminated in a memorandum produced by DTI officials for the then Parliamentary Under-Secretary of State, dated 9 September 1988, concerning the criteria for the use of PRE powers (and whether they should be announced). This memorandum included the following points:

(a) the DTI's powers should be used to ensure that policyholder funds were properly managed in accordance with the interests of policyholders (with an equitable balance between policyholders and any shareholders) and that funds were administered prudently and with the level of skill and competence that did not depart significantly from the range which it would be reasonable to expect from the company in the circumstances of the case;

(b) the DTI did not consider, as a matter of law, that policyholders can or should have

290 Memorandum dated 8 July 1988.
291 A further issue raised in the officials' correspondence regarding the proposed contents of the draft submissions to the Parliamentary Under Secretary of State was whether it would be worthwhile exploring with the SIB and LAUTRO the extent to which those bodies would use powers under the FS Act 1986 to prohibit misleading advertising by insurance companies, rather than the DTI attempting to stop such advertising by giving directions under section 45. In a memorandum of 21 June 1988 a DTI official said that he '*would hope that we can leave this role to the SIB/LAUTRO*'.
292 See paragraph 6 of the Treasury's evidence to a House of Commons Treasury Select Committee on Pension Mis-selling in 1998 referred to in footnote 304.
293 Memorandum from GAD to DTI dated 8 July 1988.
294 Memorandum from GAD to DTI dated 8 September 1988.

reasonable expectations of any particular rate of return as such;

(c) the DTI's powers should be used to ensure insurance companies did not engage in practices which are obviously unfair. The position as between various classes of policyholders was mentioned and the example was given of the concern expressed by the supervisory authorities in Australia at the habit of some companies to gear the generosity of their bonuses to the fierceness of the competition for new types of policy. It was suggested that greater financial awareness among consumers could lead to an increased volume of complaints about 'unfairness' and that the Department should not be over-zealous in the pursuit of possible unfairness. It was said that '*there is a large margin of appreciation between fairness and unfairness and we should only consider intervening when the unfairness is obvious and blatant*';

(d) no comprehensive statement on the criteria for use of the PRE powers should be made but there might be advantage in speaking selectively on certain aspects. It was suggested that if companies were led to believe that certain areas of conduct were not, as a matter of policy, to be patrolled closely this might be considered to give them licence. However, it was noted that there could be advantages in making it clear to policyholders that they could not expect a particular rate of return, that it could fall as well as rise in the light of the general investment climate;

(e) a perceived gap in the legislation should be closed. This related to the situation where the company was demonstrably 'able' to meet PRE but chose not to do so; a problem which was described as arising from faulty drafting in the ICA 1982. The memorandum suggested that the legislation be amended to delete the reference to the company being '*unable*' to fulfil PRE, and that this point might join other proposals for inclusion in the Companies Bill which was then contemplated. However, it was acknowledged that this change was not urgent (and it appears that it was never made).

No legislation was pursued as a result of the memorandum to the Minister; nor does it appear that any ministerial announcement on PRE was made at this time.

429 In his presidential address to the Institute of Actuaries in 1986, M.H. Field considered the justifiable expectations of policyholders as an objective of actuarial valuation (JIA 114 (1987) 1-14). He commented on issues surrounding four 'important and justifiable' expectations of policyholders:

(a) that the company was operated soundly and competently, conformed to proper standards of practice, was free of conflicts of interest and had a negligible risk of fraud;

(b) that the company was financially sound, noting that no regulatory system could be absolutely secure and that imposing high standards of financial soundness entailed a cost to policyholders; that maintaining the required solvency margins, for example, could result in a reduction in investment income to the company;

(c) expectations about what the policyholder would receive in terms of a lump sum or pension, observing that those expectations were shaped by companies and their intermediaries, and noting how far products had moved from their origins (of enabling individuals to cope with risk) and closer towards investment products, questioning whether that was really in the interests of the broad mass of the public; and

(d) that risks would be shared by the general body of policyholders and not borne by individual savers (which was important for the general mass of the public who required the protection which life assurance could bring, but were not generally 'sophisticated investors'). He observed that:

> *I regard the with-profits policy as having the potential to be of continuing valuable service to the community, but with so much of the benefit now being subject to discretionary judgements its simplicity and, perhaps its integrity is in jeopardy. I believe we need to restore the balance.*

As far as the monetary expectations of policyholders were concerned, the President concluded that the concept only had meaning at a given point in time. A number of the other comments in his address showed foresight about issues which were to be considered more extensively much later, including the way in which the costs of meeting guaranteed surrender values should be met in financially deteriorating conditions and his observation that the changes in with-profit policies which had then commenced some 25 years earlier had not been tested in '*violently different economic environments*'.

430 In September 1989 the F&IA set up a joint working party of the Faculty and Institute to consider the issue of PRE at the suggestion of the chairman of the Life Assurance Joint Committee[295]. It was said that the issue of PRE had been especially topical in the preceding few months and it seemed likely to be of continuing general interest and of special interest to companies that demutualised or restructured.

First report of the F&IA joint working party on PRE – 25 April 1990

431 The first of the three reports produced by the Working Party between 1990 and 1993 entitled 'Policyholders' Reasonable Expectations' was dated 25 April 1990[296]. The Working Party had set its own terms of reference which related to how PRE had been used in practice, with recommendations to be made on how PRE should be regarded within the UK actuarial profession and whether or not there should be professional guidance as to its interpretation.

432 Rather than deciding what the expression ought to mean, the Working Party conducted interviews and sought opinions from members of the actuarial profession on how PRE had been interpreted in practice. The interviews were conducted on the basis of complete confidentiality. The Working Party also met with officials from the DTI and from GAD. The first report summarised the results of those interviews and appended a history of PRE, a list of references to PRE in legislation and in actuarial literature and a checklist of matters to be considered in respect of PRE.

433 An issue which emerged repeatedly from the interviews was the level of sophistication which it was appropriate to attribute to policyholders in respect of PRE, it being said that the policyholder generally had '*little understanding of the kinds of technical issue raised by PRE*'.

---

295 A steering group overseeing the work of a number of working parties, a role undertaken by the Life Board of the F&IA in more recent years.

296 The 1990 report was published together with the two subsequent reports in a document dated June 1993 (it is not apparent from that document whether the first two reports were published individually before 1993).

434 The general view was that PRE should be interpreted in the context of the professional advisers acting for policyholders, the courts, the press and '*similarly well informed observers of the life insurance industry*'. The strong view was expressed that PRE was not exclusively of relevance to with-profit offices but arose, for example, in relation to a decision to increase charges for non-profit policies. It was noted that proprietary offices raised particular issues with PRE because of the potential for conflict between shareholders and policyholders.

435 No instances were found of the Secretary of State invoking his powers to intervene on grounds of PRE[297], but the Working Party understood that there were a number of occasions on which the DTI had advised companies of the steps to be taken to avoid such intervention. The appointed actuaries involved in these cases were interviewed by the Working Party and seven brief examples were given of situations in which PRE considerations had arisen, mainly relating to some form of transfer, merger or restructuring and issues concerning the allocation of surpluses or compensation on a demutualisation. One case related to the closure to new business of a mutual company which was considered to be unable to maintain its current level of bonuses due to inadequate financial resources and entailed consideration of whether, prior to closing for new business, the company had been giving new policyholders reasonable expectations concerning their bonuses.

436 In relation to the concepts and principles that emerged from the interviews, the points made included the following:

(a) many life assurance contracts included at least one discretionary element; policyholders might reasonably expect that a life company would behave fairly and reasonably in exercising any discretion which was available to it;

(b) asset shares[298] should provide the starting point for determining maturity benefits;

(c) it was reasonable to expect that a company would change its policies only gradually in relation to matters which affect the returns to policyholders such as the degree to which returns are smoothed[299] over time or the extent to which part of the asset share is retained to finance future expansion;

297 See paragraph 444 regarding the contents of a draft briefing note for ministers dated April 1992 which indicated that intervention under the residual power to impose requirements to protect policyholders against the risks of failure to meet liabilities or PRE under section 45 of the ICA 1982 had taken place on 19 occasions during 1990 in relation to change of control or financial difficulties of companies (and a further 28 times on authorisation).

298 The conclusions in the joint report suggested that the use of asset shares was '*almost universal*' and implied a link between the use of asset shares and providing equity and meeting PRE. The working party report on annuity guarantees (paragraphs 857 et seq) confirmed that by the time that report was written in 1997, the use of asset shares by life offices as a means of calculating maturity payments was '*almost universal*'. However, other comments in this and the later joint reports on PRE and in other documents suggest that there was no single or accepted means of calculating 'asset shares'. A letter sent by GAD to appointed actuaries dated 9 July 1993 indicated that at that time GAD considered 'asset shares' to be an undefined term of imprecise meaning (see paragraph 531). An explanation of 'asset shares' in a more recent actuarial paper was '*the accumulation of premiums less expenses incurred, allowing for the investment return earned for a group of similar policies. In making the calculations, the asset share would normally be charged for the cost of accruing guarantees, life cover and any capital charges. The asset share is a guideline or benchmark rather than an absolute constraint. In practice, there may be good reasons why a particular group of policyholders should be entitled to more than just asset shares, or in some circumstances less, for example because of the effect of smoothing.*' (Paper presented to the Institute of Actuaries on 25 February 2002 by M. Shelley, M. Arnold and P.D. Needleman). That paper suggests (at paragraph 4.4.5) that, even by 2002, the systems in some offices to calculate asset shares were 'only rudimentary'.

299 A 'smoothing adjustment' would normally be made to 'smooth out' peaks and troughs in investment returns, or where the value of the asset share was significantly different from the actual value of the underlying assets.

(d) the Working Party concluded that PRE for with-profit policyholders extended beyond the relationship between maturity payments and asset shares, to the factors which determined the asset shares. Unusual investment policies or acceptance of high risk policyholders at ordinary rates would risk failing to meet PRE unless the company published its intention to do so;

(e) policyholders and their advisers normally expected continuity in all areas of a company's operations including its bonus philosophy;

(f) in general, gradual changes were more likely to be acceptable to policyholders than major discrete changes; communication with policyholders during the currency of their policies played an important part in shaping expectations and might help to avoid problems;

(g) for with-profits policyholders gradual change was acceptable, particularly if it was communicated to policyholders, whereas sudden change was not;

(h) the consensus among actuaries interviewed was that policyholders should be consulted about any proposed radical change in the way in which the company operated (for example following a major downturn in the company's prospects) and that they should be provided with clear information about the available options, such as closure to new business or operating as a closed fund; and

(i) any major change in the level of discretionary charges or benefits should be regarded as a break in continuity which would warrant consultation with policyholders (as an example, a reduction in the level of bonuses in excess of that justifiable on grounds of deterioration in investment conditions would amount to a major change).

437 The Working Party stated that '*in the final analysis*'[300] it was for the Secretary of State to decide whether a company might be unable to fulfil policyholders' reasonable expectations. Interviews with the DTI and GAD confirmed that there was no predetermined view of where the line between reasonable and unreasonable behaviour lay; each case was considered on its individual facts and circumstances.

438 The report suggested that lower prominence was given to the issue of PRE by appointed actuaries where no '*special circumstances*' applied. In their conclusions, the Working Party noted that in normal day-to-day management of a life office, PRE was '*virtually synonymous with equity*' and the almost universal method of measuring it was in asset share calculations, and that it was '*naturally, widely accepted that there are different ways of calculating asset-shares*'.

439 The checklist of factors to be considered in relation to PRE, set out in Appendix 2 to the first report, referred to such matters as:

(a) the contents of sales literature, policy documents, illustrations and quotations;

(b) maturity values in comparison with the industry as a whole and the past record of the company;

(c) the consistency of a proposed course of action with the practice and performance of the industry as a whole and the past practice of the company;

[300] This, of course, disregarded the role of the courts, for example, on judicial review.

(d) the company's memorandum and articles of association;

(e) the question of whether appropriate importance was being attached to expectations of a '*minimal or non contractual kind*', such as options to extend or convert and surrender values; and

(f) whether the proposed course of action was sound and prudent by the normal standards of the insurance business and fair to different classes of policyholders (and how fairness was to be defined, for example, whether asset shares should be used).

440 The Working Party recommended that the subject did not warrant a 'full professional paper', but that a Guidance Note of an advisory kind would be helpful, comprising a summary of part of the first report[301] and the checklist of factors to consider in relation to PRE. As some form of guidance to actuaries on the interpretation of PRE was considered desirable, it was recommended that it could be provided by publication of the first report after discussion by the profession and amendment as necessary.

[301] Section 3 of the report, parts of which are summarised in paragraph 436 above.

Phase 4: 1991-1993

Practice regarding exercise of supervisory powers by the DTI in the early 1990s

Draft briefing paper for ministers

441 A 'snapshot' of the practical position regarding the exercise of supervisory powers by the DTI prior to the introduction of the changes which took place during this phase is provided by a draft briefing paper prepared by the DTI for new ministers dated 7 April 1992[302].

442 The stated purpose of the paper was to explain to ministers the action which was taken in the name of the Secretary of State under the ICA 1982 on a regular basis, because ministers might be asked to give advance approval in serious or controversial cases and because there were considered to be some gaps and weaknesses in the powers which ministers were to be asked to remedy, including by way of new legislation.

443 The paper explained that the DTI's fundamental aim was to protect policyholders and identified the two main approaches behind its work as being the monitoring of solvency of insurers and preventing those who were not fit and proper persons from controlling or managing insurance companies.

444 A table annexed to the paper showed how often the different types of main intervention power (encompassing authorisation) had been used in (then) recent years (apparently in relation to all classes of insurance business subject to the ICA 1982). For example, the table showed:

(a) that during 1990 the residual power to impose requirements for protection of policyholders under section 45 had been used 28 times on authorisation[303], 9 times on change of control and 10 times when financial difficulties had been encountered by a company. It was explained that in recent years the section 45 power had been used for temporary withdrawal of authorisation to write new business, as exercise of the power under section 11 of the ICA 1982 resulted in a permanent withdrawal of authorisation[304];

(b) the powers under section 38 to prohibit investments of a particular kind or to require the realisation of investments, the powers to limit premium income under section 41 and those to obtain information under section 44(1) were all said to have been '*routinely used*', but predominantly on authorisation;

(c) the power for the Secretary of State to petition the court for the winding up of an insurance company under section 54 had been used only 9 times since 1979; it was noted that such action was rarely necessary as the company's directors or creditors normally took action in the event of insolvency;

(d) withdrawal of authorisation under section 11 was said to be '*threatened several times a year*'. It was noted that where such action was contemplated in relation to a director who had been found to be unfit, the person usually resigned so the power did not actually need to

302 By an official of Branch 1 of the Insurance Division of the DTI, which was responsible for such matters as authorisation.
303 A handwritten note indicated that this comment related to limiting transactions with connected persons.
304 A supplementary memorandum produced by the Treasury several years later, in 1998, to respond to questions from a House of Commons Treasury Select Committee on Pension Mis-selling, gave further examples of the use of the power as being to prevent a company from paying a dividend and the control of disbursement of assets released from custody. The supplementary memorandum includes the observation that the effect of section 45 was far greater than the formal exercise of the power suggested in that, in practice, companies discussed with the DTI proposed significant changes which might affect policyholders with the result that potentially unacceptable proposals were abandoned or modified, making the actual exercise of the power unnecessary.

be used. It was suggested that the one month delay to allow for representations where such action was contemplated was a handicap in a financial crisis; and

(e) it was explained that where confidential investigations were undertaken in relation to a company, the powers to secure the production of books and papers under section 447 of the Companies Act 1985 were generally preferred to those under section 44(2) of the ICA 1982 (if the insurance company was subject to the Companies Act 1985) as the powers under the Companies Act were wider.

445 The figures given in the table annexed to the draft briefing paper in respect of the year 1990 are consistent with those shown for that year in a table produced by the Treasury in 1998 as part of its evidence to a House of Commons Treasury Select Committee on Pension Mis-selling. The table produced by the Treasury in 1998 shows the frequency of exercise of powers of intervention over the years 1985 to 1997 and is reproduced as Appendix B.

446 In relation to the power to prohibit a company from writing new business (under section 11 of the ICA 1982) it was noted that there was no formal power to suspend underwriting, only permanently to prohibit it, although suspension could be achieved with the agreement of the company concerned. It was said that a power to suspend authorisation would be useful to enable reorganisations to take place or to allow swifter protective action (since this required one month's notice under the statutory procedure).

447 As regards objections to managing directors, chief executives and other 'controllers', the briefing paper stated that there was no power to force divestment of shares or to secure changes in the management of a company. It was said that this could only be achieved by threatening to stop the company from writing any more business, but that this was not an effective mechanism in cases where the company had already had its authority to effect new contracts withdrawn[305].

448 In describing the use of the powers under the ICA 1982 the draft paper stated:

> *It is well known in the UK industry that we do not use these powers lightly or in any way capriciously. But it is equally well known that we are fully prepared to use these powers if circumstances warrant. In taking intervention action we have to balance the danger of damage caused by premature action against the risk of acting too late. Experience in the last few years has tended to swing the balance of advantage towards earlier and more decisive action.*

449 The draft paper stated that the DTI did not normally disclose to the public the action taken in relation to a particular company as to do so could adversely affect the company and make it more difficult for it to restore a sound financial position, which in turn would be contrary to the interests of policyholders. It was said that this approach sometimes led to unjustified criticism of the DTI for inaction.

---

305 The involvement of an unfit person in an insurance company as a director, controller, manager or main agent constituted a ground for refusal of authorisation under section 7(3) of the ICA 1982 and for the exercise of certain of the Secretary of State's powers of intervention under section 37(2)(e) of the ICA 1982 (see paragraphs 313 et seq regarding section 37 of the ICA 1982 and paragraph 76(e) regarding the predecessor provisions of section 12(1)(e) of the ICAA 1973).

Policy Guidance Notes

450 From September 1991 onwards, the DTI began to issue a new series of 'Policy Guidance Notes'[306] to its staff at Executive Officer (EO) level and above. Copies of the Guidance Notes were also issued to the DTI Solicitor's Branch B1 (referred to as 'Sols B1') and to GAD.

451 The series of Policy Guidance Notes was produced as a result of recommendations made in a '*DTI Insurance Division Business Review and Information Systems Strategy Study*' which had been carried out in 1990 by an actuarial and management consulting firm. The study had suggested that guidelines should be drawn up to help staff in areas of supervision where significant judgmental decisions were required. The guidance was intended to help staff where '*important and publicly visible decisions*' were required, such as the issue and withdrawal of concessions and requirements and decisions on the admissibility of assets, and to meet a perceived need for greater consistency in decisions made which might affect the operations of individual companies. The stated aim was that:

> *The Department should operate, and should be seen to operate, a firm but fair regulatory regime in respect of UK authorised insurance companies. The "message" to the industry and to the public should be that the Department is watching very carefully and is likely to err on the side of caution rather than adopt a relaxed attitude, particularly toward companies in difficulties.*

452 Individual Policy Guidance Notes (or 'Guidelines') were issued on all the main areas of regulation such as authorisation, annual returns, assets and liabilities, failure to maintain solvency margins, intervention powers, concessions (orders under section 68 of the ICA 1982), disclosure and winding up. In general, each of the guidelines followed a common format which included a summary of the relevant legislation and comments on 'best practice'.

453 A section of the Guidelines[307] dealt with the allocation of responsibilities for policy issues between Branches of the DTI and on obtaining advice from GAD, the Solicitor's Office and 'industry experts' in the DTI. Another section contained Guidelines on the Policyholders Protection Act 1975 and the division of responsibility for parts of that Act within the DTI and the circumstances in which information should be provided to the Policyholders Protection Board established under that Act[308].

454 Section 8 of the Policy Guidance Notes contained Guidelines on the Secretary of State's powers of intervention. It included individual Guidelines which provided a general overview of the intervention powers (Guideline 8.1); general guidance on 'notice of requirements' (8.2); guidance on each of the main intervention powers other than the residual power to protect policyholders under section 45 of the ICA 1982[309] (8.3-8.8) and a Guideline entitled 'Non Statutory Intervention' (8.10). These Guidelines were said to have been based on advice from the Solicitor's Branch or prepared by that Branch.

---

306 These replaced an earlier series of Policy Guidance Notes for staff, dating back at least to the time of the ICAA 1973 and were a separate series of documents to the *Prudential Guidance Notes* issued by the DTI to insurance companies (of which those issued from 1994 onwards are mentioned in paragraphs 715 et seq.). Both the internal and external series of notes were, on occasion, referred to in documents as 'PGNs' but in this Part of my report this acronym is used to refer to the Prudential Guidance Notes issued by the DTI externally, to insurance companies.

307 Guidelines 1.1 to 1.6.

308 Guideline 15.1.

309 It appears that an intended Guideline 8.9 on residual intervention powers under section 45 of the ICA 1982 was not issued.

455 Guideline 8.2 explained the legal, procedural and policy requirements in relation to service of 'notice of requirements', which constituted the means by which the Secretary of State's powers of intervention were initiated. Standard draft notices of requirements were included in relation to each of the intervention powers.

456 A Precedents Register was required to be maintained, to include details of unusual requirements which had been imposed, advice received and the background to decisions taken, for reference in subsequent cases. In addition, a record was to be maintained (in a pro forma provided) of the number of occasions on which the powers in sections 38-45 of the ICA 1982 had been used, to enable publication of an Insurance Annual Report.

457 Guideline 8.10 on 'Non-Statutory Intervention' dealt with forms of action which might be taken by the regulator which fell short of the actual exercise of intervention powers under the ICA 1982. The Guideline gave guidance on such action by the DTI as:

(a) accepting undertakings from companies (for example, not to write new business) rather than invoking intervention powers;

(b) suggesting a course of action to a company to alleviate a regulatory concern;

(c) expressing an opinion on the interpretation of legislation (subject to the caveat that only the Courts could decide this);

(d) notifying a new company that its business activities constituted unauthorised insurance business and requesting that those activities cease, rather than mounting a statutory investigation;

(e) requesting information from a company beyond that required to be provided under the Act; and

(f) notifying the appropriate professional body of unprofessional conduct by accountants, lawyers or actuaries.

458 Although described in the Guideline as 'non-statutory' forms of intervention, in the main the examples given might properly be characterised as implicitly authorised under the ICA 1982 (or as being an essential prerequisite to formal action). In some circumstances, certain of these forms of action may have been expressly authorised by the residual power under section 45 of the ICA 1982 to require the company to take action to protect policyholders or potential policyholders.

459 Guideline 10.2, dated July 1992, dealt with disclosure to and liaison with other UK regulators, giving guidance on when and how information or allegations about companies or individuals should be passed on. The principal 'other regulators' were identified as being the SIB and the SROs which, along with the Bank of England and the DTI, participated in a 'College of Regulators'[310]. Guideline 10.2 included the following points:

(a) There was no statutory obligation on the DTI to disclose information to other regulators, but rather there were restrictions under common law[311] and statute[312] (and there were criminal

310 Which provided for co-operation in the supervision of financial conglomerates which were subject to regulation by more than one of the members of the College and nominated a 'lead regulator' (based on the dominant activity of the group concerned) who would call meetings of other members concerned with that group if the need arose.

311 Particularly in relation to confidentiality.

312 See for example paragraph 605 and the footnote thereto regarding section 47A of the ICA 1982. A less extensive restriction on disclosure of information obtained by the relevant government department in relation to insurance companies had formerly been included in section 111 of the Companies Act 1967.

sanctions for disclosure of information in contravention of the statutory requirements).

(b) There were exceptions to the statutory restrictions, but these were 'extremely complex' and advice on disclosure should always be sought from lawyers.

(c) Liaison with other regulators aided the exercise of such functions as supervision of solvency and ensuring that notified persons (i.e. people who had been proposed for or who had recently filled notifiable positions in insurance companies) were fit and proper and that authorisations were properly granted.

(d) The DTI's objectives were to avoid regulatory failures because an issue or company (or group of companies) fell between regulators and to prevent unfit people moving from one regulated area to another.

(e) As 'best practice', when staff in the DTI had adverse information about an individual or a company they were to consider whether there were any circumstances which made it likely that the information would be relevant to other regulators.

(f) The DTI and the SIB had entered into an agreement in April 1991 relating to the exchange of information on investment business (which was annexed to Guideline 10.2), which required both regular and ad hoc exchanges and provided for information to be exchanged between the SIB, SROs and the DTI in such circumstances as doubts about the integrity or competence of management, doubts about the financial soundness of a company in which the regulators had a mutual interest or cases where the use of formal investigation, disciplinary or intervention powers were being considered. The letter from the SIB dated 19 April 1991 annexed to the Guideline, which set out the agreed framework, stated that in relation to a list of named insurance companies[313] the DTI on the one hand and the SIB or the SRO of which the company was a member on the other, would 'normally' inform the other and discuss appropriate action (if any) to protect investors if one of the parties became aware of information *'which appears to it likely to be relevant to the discharge of the supervisory functions of the other'*.

(g) Regular exchanges of information took place about notified persons through a list which was circulated 'widely internally' by the DTI and externally to GAD, the SIB, Lloyd's, the Stock Exchange and the Bank of England.

(h) Where allegations were received about possible improprieties by a person active in the businesses of concern to the regulators, a decision was to be made at or above a specified level (Grade 7) about whether or not that information should be passed on to other regulators.

(i) GAD might be the recipients of allegations which they would pass on to the DTI for action.

(j) Companies would not normally be aware of the exchanges of information which were taking place.

460 The Policy Guidance Notes did not provide instruction or guidance on the examination of annual returns, which was said to be provided in other ways.

[313] Which included Equitable.

Internal teaching material for DTI staff

461 Further insight into the DTI's view of the regulator's powers in the early 1990s is provided in teaching material prepared for DTI staff which was copied to various officials in the DTI in an abbreviated form in 1991[314].

462 The teaching paper contained a commentary on the individual powers under the ICA 1982 and the grounds for their exercise and included a blend of technical and practical advice on the circumstances in which the powers of intervention could be invoked. The paper highlighted distinctions between the use of the powers for life companies and general business companies. It also provides an indication of the regulator's interpretation of the legislation and certain aspects of the policy for applying it in the early 1990s.

463 The paper addressed the Secretary of State's powers of intervention in two categories:

(a) first, those which were exercisable on the (more general) grounds under section 37(2) of the ICA 1982[315], namely the intervention powers relating to investments (section 38); limitation of premium income (section 41); actuarial investigations (section 42); acceleration of annual returns (section 43); supply of information (section 44(1)) and the residual power to take action to protect policyholders (section 45[316]); and

(b) secondly, those which entailed imposing a restriction on the free disposal of assets by a company and were only exercisable on the more restricted grounds under section 37(3)[317], namely intervention in the form of requirements for the maintenance of assets in the UK (section 39) and custody of assets (section 40).

464 In relation to the first group of intervention powers, practical points made in the teaching paper included:

(a) a requirement under section 38 regarding the investment (or realisation of investments) in specified assets was included '*for practically all companies subject to notices of requirement*';

(b) the power under section 41 to limit the amount of premium income a company could receive was considered to be '*imperfect*'; it was difficult to monitor because the drafting of the section did not include a definition of the premium income to which it applied, it was not clear whether a limit could be imposed on both gross and net premium income, and a limit on premium income which was designed to control the growth in liabilities could not take account of price movements (such limits normally being applied for a three year period, during which prices could change considerably);

(c) section 43, under which the Secretary of State could require a company's annual returns and other documents to be submitted earlier than their normally due date was '*not used very often*' and did not feature in the standard notice of requirements; and

314 With a memorandum from an official of I4 Branch of the DTI's Insurance Division dated 16 December 1991.
315 Referred to in paragraphs 315 et seq.
316 Section 45 was included in the first category of powers, although the section itself contained limitations on its use in such a way as to impose a restriction on the free disposal of assets.
317 Referred to in paragraph 314.

(d) the power to require an insurance company to provide specified information under section 44(1) was considered to be extremely useful because it was flexible and covered a very wide range of information. The power was used to require quarterly returns and information to be submitted. It was noted that requests for information had to be 'reasonable' and justifiable, requiring no more and no less than was needed to monitor the company.

In relation to the residual power under section 45, the paper simply outlined the limitations on its use in a manner which would restrict free disposal of assets (under section 45(2)) and its exclusion in cases where other powers could be relied on (by virtue of section 37(6)).

465 In relation to the grounds, under section 37(2), for exercising the first group of powers the paper included the following points:

(a) if reliance was to be placed on the first limb of the ground in section 37(2)(a)[318], '*there should actually be a tangible risk that the company may go broke i.e. there needs to be some evidence pointing to financial failure in the foreseeable future*';

(b) in relation to the second limb of the ground in section 37(2)(a)[319] it was simply said that this criterion of risk was '*even more difficult and intangible*';

(c) the ground in section 37(2)(b)(i)[320] was '*very wide indeed*', covering not only failure to satisfy a requirement of the ICA 1982, but any requirement of the regulations made under the Act or imposed on a company in a notice of requirements;

(d) section 37(2)(c)[321] was also a very wide and flexible provision, enabling the Secretary of State to intervene where a company had supplied misleading or inaccurate information under the ICA 1982, the regulations made under that Act or pursuant to a notice of requirements;

(e) assessment of whether or not any reinsurance programme was adequate or even necessary for the purpose of the ground in section 37(2)(d)[322] could in itself be a difficult question, probably requiring advice from the DTI's industry experts; and

(f) in relation to the ground for intervention based on the involvement of an unfit director or manager under section 37(2)(e)[323] it was stressed that a preliminary notice under section 46 must be served on the director or manager concerned, allowing that person to make written representations (to the Secretary of State) and/or oral representations (to an officer of the DTI); '*this is to allow the unfit person an opportunity to convince us that he is not unfit or, alternatively if he fails in doing so or not does not wish to try, the opportunity to resign*

---

318 That the exercise of the power was desirable for protecting policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities.
319 That the exercise of the power was desirable, in the case of long term business, to fulfil the reasonable expectations of policyholders or potential policyholders.
320 Relating to the failure of a company to satisfy an obligation to which it was subject by virtue of the ICA 1982 or the former legislation.
321 The ground concerning instances where it appeared to the Secretary of State that the company had furnished him with misleading or inaccurate information under or for the purposes of the ICA 1982 or the former legislation.
322 That the Secretary of State was not satisfied that adequate reinsurance arrangements were in force or would be made.
323 Described as being the *'most likely'* reason for relying on section 37(2)(e), which was based on a number of specified grounds on which authorisation of a company might be refused if applied for.

without the company necessarily knowing what has happened'. It was pointed out that the subsequent notice required to be served on the company under section 46(2) must contain the same details in relation to the grounds for potential intervention as those which had been given in the initial notice served on the director or manager.

466 The paper noted that the second group of intervention powers were used much more rarely than the first group, but this had not always been the case. Until the limitations had been imposed in the late 1970s (through the First Non-Life Directive), on the use of forms of intervention which had the effect of restricting the free disposal of assets other than in limited circumstances, maintenance of assets and custody of assets requirements had 'invariably' been included in notices of requirements served on newly authorised companies or which had been subject to a change of control.

Proposals for modernisation of insurance legislation outlined by the DTI in 1991

467 A memorandum prepared by an official of I4 Branch of the DTI dated January 1991 to other officials in the DTI and GAD suggests that some of the legislative changes made in later years had their origins almost a decade earlier.

468 In particular, in 1991 it was suggested that there were arguments in favour of taking insurance regulation out of a government department and vesting it in '*a Commission or whatever, probably encompassing Friendly Society regulation as well*' and that there were various options for '*sweeping up the landscape*' of financial regulation which might or might not include insurance regulation. The memorandum explained that it was an attempt to summarise the topics that might be included in future legislation given '*unlimited Parliamentary time and a free policy rein from Ministers*'. Points made in that memorandum included:

(a) there was uncertainty about whether or not new training programmes and a new Branch 1 structure would turn generalist civil servants into professionally competent enough regulators;

(b) when considering the powers the insurance regulator should have, it was necessary first to decide whether the regulator should be a body which was reactive and answerable to Parliament or proactive and answerable to the courts;

(c) a radical modernisation of the ICA 1982 would entail '*tear*[ing] *up the series of express powers exercisable in defined circumstances with a sweep up residual power of limited use*' and replacing them with a discretionary power, under which continued authorisation would be subject to such conditions as the regulator saw fit to protect the interest of investors;

(d) officials had prepared a paper to compare the two approaches, but in the event there had been no prospect of a bill long enough to modernise insurance legislation and the then Minister for Corporate Affairs had ruled out a radical restructuring;

(e) the submission eventually sent to the Minister by officials had proposed far more limited changes (including a power to suspend authorisation, placing assets in trust if the minimum solvency margin was breached, forcing divestment of shares and removing voting rights of shareholder controllers)[324], but

[324] These proposals had been included in a memorandum from the then Head of the DTI's Insurance Division to the Minister dated 10 October 1990.

the Minister had decided against any amendment, his broad approach being that the DTI had adequate leverage against companies and should act robustly;

(f) the DTI had given consideration to tightening up requirements for proper management and control systems in insurance companies, but had decided that existing requirements were adequate;

(g) the DTI was working with auditors to explore ways of improving the quality of audit and it was suggested that auditors should be placed under an obligation to disclose to the DTI any concerns about their clients, or to require them to report to policyholders as well as to shareholders;

(h) it was suggested that the regime for charging fees should be revised so that the DTI could recover all its costs; the Minister wished to see specific fees charged on authorisation and on notification of changes of control.

Other views on the regulatory regime expressed by the Minister in the early 1990s

469 In a letter dated 22 May 1991, the then Minister for Corporate Affairs described the residual power to take action to protect PRE (under section 45 of the ICA 1982) as being:

> *... designed primarily to protect the position of 'with profits' policyholders, a substantial part of whose benefits are payable at the discretion of the company, as a terminal bonus to which they have no contractual right.*

470 At a meeting with officials from the DTI and GAD on 24 July 1991 to discuss the submissions they had made to the Minister in relation to various companies which were then causing concern[325], the Minister emphasised the importance of the DTI operating and being seen to operate a firm but fair regulatory regime.

471 In his view, the message to the industry and to the public should be that the DTI was watching very carefully and would be likely to err on the side of caution, rather than adopt a relaxed attitude to companies in difficulties. It was noted that the system for reviewing annual returns was being revised to make it more effective in identifying likely risks and that one of the priorities was major companies. The Minister welcomed this, but expressed concern that the returns could only provide a historic picture of the company, seven months earlier[326].

472 In a letter from the Principal Private Secretary to the Secretary of State for Trade and Industry to the Permanent Secretary at the DTI dated 9 January 1992 it was said that the Secretary of State and the Minister for Corporate Affairs remained concerned that the regulators were '*still not concentrating*

[325] Recorded in a memorandum from Principal Private Secretary to the Minister dated 2 August 1991.

[326] An issue which GAD was seeking to address through its rolling programme of visits to appointed actuaries (see paragraphs 404 and 405). GAD also stressed the importance of considering the financial position of a company 'dynamically' to identify potential future problems (see, for example, paragraph 366). A paper given by a GAD actuary at a meeting in Brussels on 23 April 1993 described the UK supervisors' role in examining returns to check for compliance with the legislation, the existence of adequate technical provisions and the required margin of solvency at the year end as being only *'part of the story'*. He said that although the supervisors in the UK were not directly concerned with premium rates, they worked with appointed actuaries to examine the impact of factors such as future expenses and assumed levels of sales on the ongoing financial viability of an insurer. Further, the encouragement to companies to use dynamic solvency techniques (paragraphs 825 et seq) was intended to ensure that insurers were themselves looking forward to risks which might emerge in the future and planning how they might react to them.

enough on "detective work", i.e. proper targeted action in that minority of cases where the warning signs are clear'. Citing the Maxwell case as an example, it was said that it was noticeable that no one regulator had accepted responsibility for looking at the whole picture and no one regulator seemed to have reacted quickly or positively enough in another identified area of concern (equity release schemes).

Freedom with publicity

473 In describing the UK regulatory regime, actuaries from GAD and officials from the DTI continued to make reference to the underlying philosophy of 'freedom with publicity' or variations on that theme. Speaking in 1990, the then Government Actuary suggested that in some ways the system might better be described as 'freedom with responsibility'.

474 Within certain constraints, companies were given freedom as to the type of policies they could write, the premiums charged, investments made and the way in which they carried on business. However, information about their business, income and expenditure, assets and solvency had to be provided in their statutory returns to the DTI and was then placed on public record for anyone to refer to.

475 The then Government Actuary explained that '[i]*n principle, the information which is publicly available should be sufficient to permit another actuary to make an evaluation of the financial state of the company and to estimate the probable level of the future profits which could be attributable to policyholders*'. (See further, paragraph 563 in relation to the concept of freedom with publicity or 'freedom with disclosure', as explained to the Minister in 1994.)

The regulator's approach to discounting, financial reinsurance and complex financial arrangements used by some insurance companies

476 Some insight into the general approach the DTI adopted to the regulation of the use by some insurance companies of complex financial techniques is contained in a draft paper prepared for the then Director of the Insurance Directorate at the DTI, for a speech to be given at a meeting of the (American) National Association of Insurance Commissioners in 1992.

477 The draft paper appears to be directed at issues which had been of particular concern in the context of general insurance, but the observations regarding the proper classification and treatment of reinsurance contracts, the need for transparency by insurance companies and for the regulator to understand the reasons behind transactions are of wider significance.

478 The paper sought to acknowledge the commercial reality of insurance business. It referred to the practice of some insurance companies to choose some combination of explicit discounting (where this was permitted) and financial reinsurance (where reserves could be established net of reinsurance), or implicit discounting or simply under-reserving, if the other approaches were not available or were thought to be a sign of financial weakness. The paper went on to address the way in which regulators should respond to the use of such financial arrangements.

479 It was suggested that the regulator should allow companies to operate in the 'real world', permitting them to set reserves which properly reflected the 'time value' of money, but at the same time the regulator should ensure that this freedom was not abused so as to allow companies to present a '*distorted or over-optimistic picture*'.

480 In particular, the regulator should seek to ensure that companies were not encouraged, or forced, into unnecessary and expensive arrangements which left them reliant upon offshore reinsurers whose security could not be properly assessed or which were simply opaque. The paper outlined a concern that too close regulation could be counter-productive, potentially having the effect of driving insurance companies into engaging in more complex (and undesirable) transactions, simply to circumvent the rules.

481 The UK regulator's approach was illustrated by reference to the line the UK had adopted in negotiations over the preparation of the EC insurance companies accounts directive (Council Directive 91/674/EEC of 31 December 1991, referred to in paragraphs 540 et seq).

482 The draft paper noted that in the course of those negotiations, the UK had faced the almost totally unanimous view that discounting was imprudent and should be prohibited, but the UK had managed to overturn that view so that discounting was eventually permitted, subject to safeguards. The UK had argued that a ban on explicit discounting would have the effect of either forcing companies to rely on implicit discounting or to rely on financial reinsurance which suffered from '*the disadvantage of expense and obscurity*'.

483 It appears that of the alternatives, discounting was considered to be the 'lesser evil'. The draft paper suggested that within prudent limits and with proper disclosure of the assumptions used, discounting was less risky, easier for the market and the regulator to understand and less expensive for the company. If financial reinsurance was to be used, there should be sufficient information in the company's accounts to enable the reader to reconstruct the financial position of the company before the reinsurance was taken into account. Otherwise there could be no guarantee that reinsurance was not being used to present an unduly favourable, or even misleading, picture.

484 The draft paper concluded with the view that:

> *When companies engage in complex, expensive and opaque transactions it is imperative that the regulator should understand why. If he finds it is to circumvent his own regulations he needs to be even more alert. It may be a sign of weakness or wickedness on the part of the company. Or it may be a sign that his own regulations are inconsistent with commercial reality. If it is the latter then extending the scope of the rules may simply result in even more ingenious, expensive and impenetrable devices to get around that too. Regulators must live in the real world too.*

The Third Life Directive 92/96/EEC

Introduction

485 The aims of the Third Life Directive of 10 November 1992 were to complete the internal market in life insurance both as regards freedom of establishment and freedom to provide services, to make it easier for assurance undertakings with head offices in the Community to cover commitments (including life assurance and annuities) situated anywhere in the Community and to provide consumers with the widest possible choice of life assurance products.

486 This Directive applied to all the insurance activities covered by the First Life Directive (and is also known as the 'Framework Directive'). It was repealed (with the successive amendments which had been made to it) by a further Life Directive 2002/83/EC[327].

[327] Of 5 November 2002.

487 The preamble to the Third Life Directive states in paragraphs 5 and 10 that:

> *... the approach adopted consists in bringing about such harmonisation as is essential, necessary and sufficient to achieve the mutual recognition of authorisations and prudential control systems, thereby making it possible to grant a single authorisation valid throughout the Community and apply the principle of supervision by the home Member State ...*
>
> *... the competent authorities of the Member States must have at their disposal such means of supervision as are necessary to ensure the orderly pursuit of business by assurance undertakings throughout the Community whether carried on under the right of establishment or the freedom to provide services ... , in particular, they must be able to introduce appropriate safeguards or impose sanctions aimed at preventing irregularities and infringements of the provisions on assurance supervision.*

The 'single passport'

488 The major change made by the Third Life Directive was to introduce a system of authorisation by the state in which the head office of the insurance company was based (the 'home Member State'), which was to apply throughout the Community[328], sometimes known as the 'single passport' for insurance companies.

489 Other member states were not to require a company which held such authorisation to be authorised by them in order to do business within their country, subject to a procedure under which the company was required to notify the authorities in its home state if it wished to establish a branch in another member state[329].

490 Financial supervision became (virtually) the sole responsibility[330] of the home member state, which was required to monitor the '*financial health of assurance undertakings, including their state of solvency, the establishment of adequate provisions and the covering of those provisions by matching assets*'[331].

491 The 'host state'[332] was required to notify the home state if it had reason to consider that the company's activities might affect its financial soundness[333]. Article 15 of the First Life Directive, as amended by the Third Life Directive, provided:

> 1. *The financial supervision of an assurance undertaking, including that of the business it carries on either through branches or under the freedom to provide services, shall be the sole responsibility of the home Member State. If the competent authorities of the Member State of the commitment have reason to consider that the activities of an assurance undertaking might affect its financial soundness, they shall inform the competent authorities of the undertaking's home Member State. The latter authorities shall determine whether the undertaking is complying with the prudential principles laid down in this Directive.*

328 Article 4, amending Article 7 of the First Life Directive.
329 Article 32, amending article 10 of the First Life Directive.
330 Article 8, amending article 15 of the First Life Directive, which stated that such supervision was to be the *'sole responsibility'* of the home member state.
331 Preamble, paragraph 7.
332 This expression is not used in the Directive.
333 Article 8, amending article 15 of the First Life Directive.

2. *That financial supervision shall include verification, with respect to the assurance undertaking's entire business, of its state of solvency, the establishment of technical provisions, including mathematical provisions, and of the assets covering them, in accordance with the rules laid down or practices followed in the home Member State pursuant to the provisions adopted at Community level.*

3. *The competent authorities of the home Member State shall require every assurance undertaking to have sound administrative and accounting procedures and adequate internal control mechanisms.*

492 The Third Life Directive extensively modified the regimes under the First and Second Directives. It abolished the 'own initiative' provisions by introducing the concept of 'home state' authorisation (subject to compliance with the notification provisions). It also greatly simplified the Second Life Directive's provisions concerning transfer of an insurance company's portfolio of contracts to another member state.

Domestic measures to safeguard the 'general good'

493 The Third Life Directive allowed host states to continue to implement certain of their domestic measures aimed at safeguarding the 'general good', specifically those prohibiting the sale of insurance contracts which conflicted with provisions of the domestic legislation protecting the general good[334] and those requiring companies to comply with the requirements of domestic legislation concerning the form and content of advertising adopted in the interests of the general good[335].

Authorisation, 'sound and prudent management' and 'qualifying holdings'

494 The conditions for authorisation in the First Life Directive were largely unchanged. However, there was an additional requirement for the company to be run by persons of good repute with appropriate professional qualifications or experience (which had formerly been an optional condition) and prior approval or 'systematic notification' of policy conditions, premium scales and technical bases for calculations, was no longer a permissible pre-condition of authorisation[336].

495 Authorisation was not to be issued by the home member state before it had been informed of the identities of any shareholders or members who held 'qualifying holdings' in an insurance company (broadly, holdings of 10% or more of the capital or voting rights or other holding providing a significant influence over the management of the business). Authorisation was to be refused if '*taking into account the need to ensure **sound and prudent management** of an assurance undertaking,* [the competent authorities] *are not satisfied as to the qualifications of the shareholders and members*'[337].

496 The home member state was to be notified of and to monitor the suitability of anyone wishing to acquire a 'qualifying holding' in an insurance company. The competent authorities of that state were given a maximum of three months from the date of such notification to oppose the proposal if, '*in view of the need to ensure sound and prudent management of the assurance undertaking*', they were not satisfied as to the qualifications of the person proposing to take that holding. Other member states could require the home state to

334 Article 28.
335 Article 41.
336 Article 8.3 of the First Life Directive as replaced by article 5 of the Third Life Directive.
337 Article 7 of the Third Life Directive; the implications of this requirement for the UK legislation are set out below.

take appropriate measures where the influence exercised by those with qualifying holdings operated to the detriment of the '*prudent and sound*' management of the company[338].

Restrictions on free disposal of assets

497 In relation to the restrictions on the free disposal of assets[339], an additional circumstance was prescribed in which this might be permitted. In exceptional circumstances, if the competent authority was concerned that the financial position of an insurance undertaking would further deteriorate, such a restriction might be imposed where the solvency margin had fallen below the minimum required by article 19 of the First Life Directive (in the UK legislation, the margin of solvency under section 32 of the ICA 1982), rather than only once the solvency margin had fallen below the lower level of the 'guarantee fund' under article 20 of the First Life Directive (in the UK legislation, the minimum margin under section 33)[340].

Harmonisation and protection of consumers

498 Many issues were harmonised in order to make supervision by the 'home authority' consistent and with the aim of providing the same level of protection for consumers in every member state. These harmonisation measures included changes to the assets which could be used to provide cover for technical provisions, a requirement of localisation of assets anywhere within the Community (rather than in particular member states) and changes to the rules on valuation of assets and determination of liabilities. Clear and accurate information had to be provided to policyholders on a range of matters specified in Annex II.

Assets to provide cover for margin of solvency – subordinated loans or 'hybrid capital'

499 Changes were introduced to the assets which could be used to provide cover for the margin of solvency[341]. In particular, the value of subordinated loan capital and cumulative preference share capital could be taken into account, but only up to 50% of the margin, with no more than 25% to consist of subordinated loans with a fixed maturity, or fixed term cumulative preference share capital and subject to a number of conditions regarding the terms of the instruments.

500 For example, under a subordinated loan agreement, the lender's claims on the insurance company were to rank entirely after all non-subordinated creditors and the agreement could not provide for early repayment, other than on the winding up of the insurance company.

501 The change under the Directive in relation to the use of such loans to provide cover for the margin of solvency did not result in any amendment to the legislation in the UK to permit this.

502 Instead, arrangements were put in place under which companies could apply to the Secretary of State for an order under section 68 of the ICA 1982 to permit the use of a subordinated loan to provide such cover in an individual case. These arrangements, including the intended effect of an order made under section 68 in these circumstances, were set out in a 'Prudential Note 1994/1 – Hybrid Capital: Admissibility for Solvency' issued by the DTI which is referred to in paragraphs 530 et seq.

---

338 Article 14.4 of the Third Life Directive.
339 See paragraph 230 in relation to the First Life Directive.
340 Articles 12 and 27 of the Third Life Directive amending articles 24 and 21 of the First Life Directive.
341 Article 25, amending article 18 of the First Life Directive.

Technical provisions

503 The Directive provided for some harmonisation of the way in which technical provisions[342] were calculated by specifying the basis of the actuarial principles to be used, whilst continuing to allow member states to determine interest rates locally ('prudently' and in accordance with prescribed principles). Limitations were imposed on the nature of the assets (and the extent to which investments could be made in particular types of asset) which could provide cover for the technical provisions, in order to ensure diversification and reduce risks (articles 17-25). The host state was given power to require notification of the technical bases for calculating scales of premium and technical provisions in order to verify compliance with national provisions concerning actuarial principles, although not as a prior condition to the company carrying on its business[343].

504 There had been extensive negotiations between member states on harmonisation of the calculation of technical reserves[344] based on five actuarial principles proposed by *Le Groupe Consultatif des Associations d'Actuaires des Pays des Communautés Européennes*. In summary these proposals were that:

(a) technical provisions should be calculated on a suitable prudent basis, not on a 'best estimate' basis;

(b) the calculation of reserves should take into account all the benefits guaranteed to be available under the conditions of the policy and the detailed calculation should require the technical reserves to be at least as great as any surrender value guaranteed;

(c) the calculation of the technical reserves should take account of the reasonable expectations of policyholders in respect of future bonuses and terminal bonuses (although it should be clear that this did not mean that the company should be able to pay at its present scales indefinitely, but that the method of distribution of bonus would continue to take account of the 'surplus' or 'profit' on interest, mortality, expenses etc in the same sort of way as the present method, whatever that might be);

(d) there should be no discrimination between domestic and non-domestic policyholders; and

(e) the methods of calculating technical reserves for liabilities should be consistent with those for valuing the corresponding assets.

505 The provisions of article 18 of the Third Life Directive[345] regarding the obligation of the home member state to require insurance companies to establish technical provisions (including mathematical provisions) based on prescribed principles were the result of still further negotiation between member states on these proposals and various compromises. No reference is made in the Directive to the term PRE[346].

---

342 Article 17 of the First Life Directive as substituted by article 18 of the Third Life Directive referred to obligations of insurance companies to establish sufficient 'technical *provisions*' including 'mathematical *provisions*', rather than 'technical reserves' and 'mathematical reserves' as in the original drafting of the First Life Directive.

343 Article 29 of the Third Life Directive.

344 As noted in the Penrose Report, Chapter 10, paragraphs 21 et seq.

345 Replacing article 17 of the First Life Directive.

346 Although it was later embodied in Regulation 64 of ICR 1994 on the determination of the amount of the long term liabilities, in relation to the actuarial principles to be used.

506 Put briefly, the principles for determining technical life assurance provisions set out in article 17 of the First Life Directive as replaced by article 18 of the Third Life Directive involved requirements for:

(a) the technical provisions to be calculated by a sufficiently prudent prospective actuarial valuation, taking account of all future liabilities as determined by the policy conditions, including specified matters such as guaranteed benefits, allotted bonuses, options available to the policyholder and expenses; the method used to be prudent in itself, but also to have regard to the method used to value assets; technical provisions to be calculated separately for each contract (but with approximations permissible if likely to produce approximately the same result) with additional provision for general risk; mathematical provisions at least as great as any surrender value guaranteed at the time; the use of a retrospective method of valuation was permissible if it did not result in lower technical provisions than a prudent prospective method (or if a prospective method was not appropriate for the particular contract);

(b) the use of a prudent rate of interest, with the maximum rate to be fixed by the home member state in accordance with specified rules;

(c) the statistical elements of the valuation and allowance for expenses used to be chosen prudently, having regard to the state in which the contract had been concluded, the type of policy and the administrative costs and commissions expected to be incurred;

(d) in the case of participating contracts[347] the method of calculation for technical provisions might take into account, either implicitly or explicitly, future bonuses of all kinds in a manner consistent with other assumptions on future experience and the current method of bonus distribution;

(e) allowance for future expenses permitted to be made implicitly e.g. the use of future premiums net of management charges, with a prudent estimate of future expenses; and

(f) the method of calculation was not to be subject to discontinuities from year to year arising from arbitrary changes to the method or bases of calculation and was to recognise distribution of profits in an appropriate way over the duration of the contract.

507 The Third Life Directive was implemented in the UK from 1 July 1994 by:

(a) the Insurance Companies (Third Insurance Directives) Regulations 1994[348] which amended the ICA 1982;

(b) the Insurance Companies Regulations 1994[349] which replaced ICR 1981; and

(c) the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1994[350] which amended the ICAS Regulations 1983.

508 The Directive was amended by Directive 95/26/EC and was repealed by Directive 2002/83/EC when the various directives on life assurance were consolidated, simplified and clarified.

347 This term is not defined in the Directive, but appears to be used in the sense of 'with-profits' contracts.
348 SI 1994 No. 1696.
349 SI 1994 No. 1516.
350 SI 1994 No. 1515 (subsequently revoked by the Insurance (Accounts and Statements) Regulations 1996 SI No. 943).

Amendments to the ICA 1982 through subordinate legislation in 1991 and 1992

The Companies Act 1989 (Eligibility for Appointment as Company Auditor) (Consequential Amendments) Regulations 1991

509 In 1991, in the light of changes introduced by Part II of the Companies Act 1989 in relation to eligibility for appointment as a company auditor, a consequential amendment was made to section 21 of the ICA 1982 regarding the requirements for insurance companies to be audited in the prescribed manner by a person of the prescribed description.

510 The amendments made by the Companies Act 1989 (Eligibility for Appointment as Company Auditor) (Consequential Amendments) Regulations 1991[351] enabled regulations made under section 21 of the ICA 1982 to apply the updated provisions of Part II of the Companies Act 1989 relating to eligibility for appointment as a company auditor when specifying the requirements for the audit of accounts of insurance companies (using general Companies Acts provisions, subject to such adaptations or modifications as might appear necessary or expedient).

The Insurance Companies (Amendment) Regulations 1992

511 Amendments were made to the ICA 1982 and the FS Act 1986 in November 1992 by the Insurance Companies (Amendment) Regulations 1992[352] to implement various EEC Directives, primarily in relation to non-life business.

512 The amendments made to the ICA 1982 of more general application were those to section 5 (applications for authorisation) and section 61 (approval of proposed controllers) to enable the Secretary of State to act in certain ways in order to implement a direction of the Council or Commission of the European Communities and a new section 63A, which required any controller of an insurance company which had its head office in the UK to notify the Secretary of State if he or she increased their shareholding so as to become the parent undertaking of the company.

Guidance for Appointed Actuaries – 1992 revisions to GN1 and GN8, guidance from GAD ('Dear Appointed Actuary' letters) on resilience testing and survey on 'asset shares' and the assessment of terminal bonus

513 Revised versions of GN1 and GN8 were issued during 1992 following a review of the guidance by a working party of the F&IA. The amendments were described as being largely of a '*tidying-up nature*' as a precursor to the proposed introduction of practising certificates for appointed actuaries in 1992[353], but the revisions made to GN1 in 1992 go beyond that and seem to have been intended to extend the responsibilities of the appointed actuary (or at least to articulate them in greater detail). In addition, the number of references made in the guidance to PRE was increased significantly[354].

351 SI 1991 No. 1997.

352 SI 1992 No. 2890.

353 Notes of the Current Issues in Life Assurance seminar on 6 June 1991: JIA 118, III, 517-521 at page 519. It is understood that the practising certificate system was implemented by the F&IA at the end of 1992 and the requirement for appointed actuaries to possess such a certificate was first referred to in the version of GN1 issued in 1994 (v.4.0). The notes of the 1991 Seminar outline the general criteria proposed for practising certificates (see paragraph 704) and indicate that the timetable for their introduction had originally been January 1993, but it was planned to make this a year earlier, with the Continuing Professional Education requirements being added at a later date.

354 The second joint working party report on PRE of 26 October 1992 referred to below, indicates that the revisions to GN1 in respect of PRE were intended to increase the attention to be given to those expectations; however, it was noted that this created a potential problem for the profession '*in view of the vagueness of the definition of PRE and the limited debate within the profession as to the practical interpretation of PRE*'.

GN1

514 Additions and amendments to version 3.0 of GN1 (1 July 1992) included:

(a) an introductory comment requiring the appointed actuary to ensure, so far as it was within his or her authority, that the long term business of the company was operated on sound financial lines and with regard to its policyholders' reasonable expectations (paragraph 1.1). (It was suggested in the second F&IA working party report on PRE[355] that this requirement in the guidance signalled a material change in the emphasis placed on PRE);

(b) an expansion of the guidance which had appeared in earlier versions of GN1 on the potential for conflict between the appointed actuary's responsibilities to the company and to the DTI and the actuary's duty to advise the company of matters which created a material risk that the long term fund might be insufficient to cover the liabilities, or that the company might fail to meet its obligations under the ICA 1982 in relation to its long term business; and in the event that the company persisted in that course of action, or failed to remedy the position or report it to the DTI, the actuary was under a duty to advise the DTI, having so informed the company (paragraph 3.2);

(c) the appointed actuary was required to advise the company of '*his interpretation of its policyholders' reasonable expectations*'. In the event that a significant change was likely to take place, the actuary was required to take all reasonable steps to ensure that the company appreciated the implications for the reasonable expectations of its policyholders; the appointed actuary was also required to take all reasonable steps to ensure that the company's incoming policyholders should not be misled in their expectations (paragraph 3.3);

(d) the former obligation of the appointed actuary to ensure that he or she was '*at all times*' satisfied as to the sufficiency of the long term fund (and not simply at the time of the statutory investigation) was bolstered with a further obligation: to be satisfied at all times that the company would be able to satisfy '*any obligation to which it is subject by virtue of the* [ICA 1982]' (paragraph 4.1);

(e) the guidance on factors likely to affect the financial position of the company was expanded; the appointed actuary was required to have regard to all aspects likely to affect the company's financial position including the possible effect of contingent liabilities should they crystallise; items were added to the list of factors considered to be of particular importance to the appointed actuary's assessment of the financial position of the company, including options contained in contracts in force or being sold (paragraph 4.2);

(f) the need to provide for the solvency margin was added to the factors to be considered in relation to the setting of appropriate premium rates for new business (paragraph 5.4);

(g) in relation to actuarial investigations, paragraph 6.3 stated that '*when assessing the liabilities of the long-term business of the company he must also have regard to policyholders' reasonable expectations*'[356]; the actuary was required to satisfy him or herself as regards the resilience of the financial position of the

[355] See paragraphs 533 et seq.

[356] The second F&IA joint working party paper noted that this revised wording required the appointed actuary to take PRE into account in valuing long term business liabilities and made recommendations on how this should be dealt with in the actuary's report.

company in all reasonably foreseeable circumstances which might affect that position; the actuary was also required to ensure that appropriate valuation procedures had been correctly carried out and adequately documented (paragraphs 6.1 and 6.2); and

(h) references to the need for the actuary to have regard to the current and likely future taxation position of the company were inserted (paragraphs 4.2(i) and 6.6).

GN8

515 The version of GN8 issued in 1992 (version 3.0) contained few revisions, but included slightly more detailed guidance on Regulations 55 (nature and term of the assets representing the long term fund) and 59 (rates of interest used in valuations) of ICR 1981, although still in general terms. For example, paragraph 3.2.3 stated that the company's reserves, including any resilience reserves, '*should be sufficient to absorb the effect of immediate changes in interest rates and asset values, on a suitably prudent basis ...*', but did not specify any particular hypothetical changes which should be considered.

Guidance from GAD on resilience testing (DAA letters)

516 Following the issue of revised versions of GN1 and GN8 on 1 July 1992, a further DAA letter was sent by the Government Actuary to appointed actuaries of insurance companies (dated 31 July 1992, DAA4) on the topic of resilience testing.

517 The letter stated that GN8 incorporated '*the main content*' of Temporary Practice Note No. 2 (TPN2)[357] which, in turn, was said to endorse effectively the specific parameters for resilience testing which had been propounded by the Government Actuary in his letter to actuaries dated 13 November 1985 (DAA1, see paragraph 397).

518 DAA4 described the earlier recommendations as being, in normal economic circumstances, to test the resilience of the valuation basis against an immediate fall of 25% in the value of equities and properties and an immediate rise or fall in the yield on fixed interest securities of 3%. It was noted that GN8 did not specifically refer to these parameters, but instead required the appointed actuary to use professional judgment to determine an appropriate range of changes in the financial conditions over which to test the resilience of the valuation basis.

519 It was stated that great care had been taken in the wording of GN8, since the actuary was then soon to be required to certify compliance with that guidance in the statutory returns[358] and it was considered inappropriate to include a fixed set of parameters to cover all possible financial conditions.

520 The DAA4 letter stated that it remained the view of the DTI and GAD that, in most financial conditions, the parameters in TPN2 should continue to be the benchmark against which the actuary's valuation basis would be tested, although higher parameters might be appropriate in certain financial conditions.

521 DAA4 went on to express the view that in '*more extreme circumstances*' the parameters outlined in TPN2 might be '*unreasonably strong for offices to have to maintain*', given the reserving standards built into the determination of liabilities regulations.

[357] Which had been issued by the F&IA to actuaries in May 1986.
[358] From 1 January 1994, by virtue of SI 1993 No. 946 (see paragraph 685).

522 It was said that it would be reasonable for companies whose equity portfolios broadly corresponded to the Financial Times All-Share Index to review the resilience test when the dividend yield on that index exceeded 5.25% and a gradual tapering of the 25% parameter '*would be envisaged*'. Actuaries who were considering introducing such a taper of the 25% parameter or any weakening of the other parameters were advised that they should contact GAD straight away to discuss their proposed basis.

523 Actuaries were also advised that they should consider the possibility of more extreme financial conditions in the future and the extent to which the technical reserves, together with the margin of solvency, would be sufficient to satisfy liabilities in such circumstances. Full details of the assumptions which had been used were to be provided in Schedule 4 to the statutory returns[359]. Companies and appointed actuaries were invited to discuss and to clarify the contents of DAA4 with officials at the DTI and GAD.

524 On 30 September 1993 a further DAA letter (DAA6) was sent by the Government Actuary to appointed actuaries on the topic of resilience testing, stating that the investment outlook had changed considerably since DAA4 was written and notifying actuaries of new benchmarks which were considered to be appropriate by the DTI and GAD. For with-profit offices it was advised that three different scenarios for resilience testing should be applied:

(a) a reduction in fixed-interest yields by 20% combined with a fall in the value of equities of 10%;

(b) a reduction in fixed-interest yields by 10% combined with a fall in the value of equities of 25%; and

(c) a rise in fixed-interest yields of 3 percentage points combined with a fall in equity values of 25%.

525 In relation to interest rates, reference was made to the requirements of Regulation 59(6)(b) of ICR 1981 and it was said that the overriding limitation in that provision, that the yield assumed should not exceed the yield on British Government 2½ per cent Consolidated Stock on the valuation date (known as the 'Consols test'), did not apply to the hypothetical yields which arose on the resilience test. However, actuaries were to bear in mind the possible need to fund future reserve strengthening to enable the Consols test to be satisfied at the next valuation if the scenarios were to emerge in practice.

526 The earlier advice was repeated, requiring appointed actuaries to consider the possibility of more extreme financial conditions and the extent to which the solvency margin would be sufficient to meet liabilities in such circumstances and to specify the assumptions used as part of the statutory returns. It was indicated that in the longer term, it was being considered whether further refinement of resilience testing should be applied along the lines adopted in other countries.

527 DAA7 dated 31 March 1994 drew attention to the requirements of paragraph 3.2.3 of GN8 (version 3.0, July 1992) regarding the requirement for the company's reserves to be sufficient to absorb the effect of immediate changes in interest rates and asset values on a suitably prudent basis without prejudicing the company's ability to hold reserves

359 The abstract of the appointed actuary's valuation report.

which satisfied the regulations for valuing liabilities (other than Regulation 55). The requirements of Regulation 59(6)(b) regarding the overriding limitation in the Consols test were set out.

528 DAA7 referred back to the advice in DAA6 to disregard the Consols test when applying the three scenarios (explaining that the Consols test had been devised before the concept of resilience testing was established in 1985). DAA7 noted that the effect of not applying the limitation in the Consols test in the resilience scenarios was that the actuary would need to state that this had been done in the certificate of compliance[360] in respect of GN8, because that guidance required the Consols test to be applied. DAA7 proposed a form for the certificate which could be given by actuaries in relation to compliance with GN8 in these circumstances which would be acceptable to the DTI.

GAD survey on the use of 'asset shares' and the assessment of terminal bonus

529 Reference had been made to the use by life insurance companies of 'asset shares' as a means of assessing bonuses by the 1990s[361] and the suggested use of asset shares as a means of providing equity for policyholders and meeting PRE. However, it is apparent that 'asset share' had no precise meaning and there were no standard means by which assets shares were to be calculated.

530 On 9 July 1993 a letter was sent by a Directing Actuary at GAD to appointed actuaries of companies transacting with-profit business, enclosing a survey requesting information about:

(a) the contents of current literature on the allocation of surpluses to policyholders and the information on the principles for distribution of surpluses in the company's constitution; and

(b) the company's actual methodology in respect of the determination of appropriate levels of final or terminal bonus on with-profit policies.

531 The letter records a growing debate in the life insurance industry over the appropriate method for determining distribution of surpluses in long term funds and GAD's view that there was no clearly accepted definition of the technique known as 'asset shares'; that the '*art or science of asset shares is still not fully developed in actuarial literature*'.

532 In relation to item (b) above, the survey raised a number of questions about the actual practices of life companies with with-profit contracts in relation to the calculation of terminal bonuses and the actuarial techniques which were being used. For example, a brief explanation was requested of how appropriate scales of final or terminal bonus were assessed in various circumstances and whether bonus reserve valuations or other methods were used, how frequently scales of final or terminal bonus were reviewed, how asset shares were determined in relation to various specified factors, how expenses were attributed, what allowances were made in the assessment of final or terminal bonus scales for various specified factors such as any charges made for guarantees in respect of benefits payable on maturity and the material considerations which affected the 'smoothing policy' applied to final or terminal bonus.

360 As required from 1 January 1994, see paragraph 685.

361 In a paper presented in 1989, the appointed actuary of Equitable referred to the use of asset shares in the calculation of final or terminal bonus, referring to the rates needed to lift the guaranteed benefits and declared bonuses to the appropriate asset share as the starting point for the calculation of such bonus rates: 'With-Profits without Mystery', R.H. Ranson and C.P. Headdon, JIA 116 (1989) 301-345 at paragraph 3.2.15.

Second and third F&IA joint working party reports on PRE

Second report – 26 October 1992

533 The second F&IA joint working party report on PRE was dated 26 October 1992, a few months after a revised version of GN1 had been issued in which a considerably greater number of references to 'policyholders' reasonable expectations' had been included (version 3.0 of GN1 dated 1 July 1992, referred to in paragraph 514 above).

534 The second report acknowledged the potential difficulties this could cause for the profession in view of the vagueness of the term, but on balance favoured the strengthening of the guidance in this respect. In order to assist appointed actuaries, the report made a number of recommendations on how they should meet their obligations in relation to PRE.

535 It was suggested that uncertainty over the interpretation of PRE could be reduced by greater disclosure to current and future policyholders and their advisers regarding the company's bonus philosophy and approach to determining discretionary benefits and charges. The recommendations made in the second report included:

(a) **reporting to the board**: all appointed actuaries should report annually to the board of their company regarding their interpretation of PRE and the way this interpretation was being implemented and communicated by the company[362];

(b) **bonus levels**: all appointed actuaries should make available at least internally to the company an analysis of current levels of payouts under with-profits policies, analysed by the source of the profit and stating whether, in his or her opinion, that level would continue[363];

(c) **company literature**: the statements made in the company's with-profits guide should be submitted to the board for formal approval and the appointed actuary should endeavour to ensure that suitably abbreviated summaries were included in all literature for contracts offering with-profits options;

(d) **staff training**: the appointed actuary should provide input to the training given to the company's sales staff to ensure that they accurately represented the company's views on PRE[364];

(e) **discretionary charges and benefits**: appointed actuaries should use their best endeavours to ensure that companies adopted a clear and consistent approach towards discretionary charges and benefits and this should be described in plain English for policyholders;

(f) **assessment of liabilities with regard to PRE**: in reporting the results of the valuation[365] the appointed actuary should include statements on the extent to which the method used took

362 The Working Party had found that very few appointed actuaries reported formally to their boards on PRE.

363 The Working Party had noted that there were some well-known examples of with-profit policies for which payouts were very high in comparison to accumulated premiums at the typical rates of return it had been possible to achieve historically, and that confusion could be caused if the reasons for the high payouts and the likelihood that they would not be sustained indefinitely were not explained.

364 It was suggested that the influence of sales staff was likely to be greater than the company's literature in relation to PRE.

365 It was noted that special factors to be considered in determining the amount of long term liabilities included PRE of discretionary charges and benefits, PRE of terminal bonus and PRE of reversionary bonus rates (and if there was a risk that current bonus levels could not be maintained this should be communicated to policyholders so that their expectations would be modified).

account of PRE, with particular reference to discontinuance and expense assumptions, the relationship between reserves and asset shares and the maintainability of current reversionary bonus rates; and

(g) **written reports to the company board on PRE**: it was suggested that reporting might be undertaken in two stages: first, a document setting out the company's agreed approach to PRE and second, inclusion of appropriate references to PRE in the appointed actuary's report to the board regarding the allocation of profit or surplus. A recommended form for the first of these reports was provided and an outline of the information on PRE to be included in a report to the board on an allocation of surplus was set out in a separate recommendation[366].

Third report – June 1993

536 The third F&IA joint working party report, dated June 1993, provided feedback on the results of a questionnaire which had been sent to the appointed actuaries of the largest 25 with-profit companies, following the completion of a questionnaire at a 'face-to-face' interview with the appointed actuary concerned. The report was the result of a comparison of the responses provided.

537 General points made in the 'feedback exercise' included:

(a) the recommendations in the second report had been too prescriptive, that actuaries were better left to judge the situation in the particular circumstances of their own company;

(b) the structure and modus operandi of individual companies varied such that reliance on the existence of a 'board' (e.g. as the recipient of the appointed actuary's advice) was unsatisfactory, although this seemed to work reasonably well for most mutuals. It was suggested that it would be more helpful to define the 'seat of power';

(c) there was a fairly widespread (but not universal) view expressed by the actuaries interviewed that their company did not have any problem with PRE which, at the extreme, bordered on complacency. Notwithstanding the dominance given to asset shares in the context of PRE some companies did not calculate them in a very rigorous way and were reluctant to reveal them within the company, other than in general terms (see further footnote 298); and

(d) with reducing bonuses, PRE was becoming much more of an issue[367].

538 Responses to the Working Party's questions relating to the recommendations made in the second report and general follow-up questions revealed that:

(a) most companies were doing something about the recommendation that an annual report should be made to the board on the interpretation of PRE, the most common way being to include a section in the annual actuarial report;

366 Suggesting that the report should cover such matters as the company's 'smoothing policy', target ratio of asset shares to guaranteed benefits, the extent to which a proposed declaration departed from the general principles for distribution of surpluses, an analysis of proposed payouts on maturing policies and future trends in profits and smoothing adjustments, rates of investment return required to support current reversionary bonus rates, projected asset shares over a five-year period at alternative levels of future investment return and the implications of these matters for information to be provided to existing and prospective policyholders.

367 One respondent put it that whilst bonus rates were going up the marketing department was pleased to take the lead, but once they were declining it seemed that the actuaries were left to deal with the issue.

(b) by no means did all companies follow the recommendation that the actuary should provide, at least internally, an analysis of current levels of payouts for with-profit policies and the source of profit. Many actuaries did not disclose asset shares and there was seldom a reconciliation between asset shares and payouts; there was considerable variation in the detail in which asset shares were calculated and it was said to be difficult to explain asset shares to the company's board;

(c) very few companies sought formal approval of the board to the with-profits guide and there was a '*notable absence*' of formal processes for ensuring that an appropriate summary of the guide was included in company literature;

(d) the proposal that actuaries should be involved in staff training on PRE was considered to go too far[368], taking the appointed actuary into areas outside his or her responsibilities, although many actuaries did explain PRE '*in general terms*' to their sales and marketing staff;

(e) all actuaries agreed with the principle that they should use their best endeavours to ensure that the company adopted a clear and consistent approach towards discretionary charges and benefits (although opinions had differed about the extent to which discretionary charges could be increased). There were also differing opinions as to whether a plain English explanation for policyholders was possible;

(f) nearly all appointed actuaries were of the view that no explicit reference to PRE should be made in the statutory valuation report[369]; however, most actuaries reported internally along the lines of the Working Party's recommendation in this regard;

(g) the general view of actuaries was to oppose reporting to the board on the company's attitude to PRE in such detail as that suggested in the outline report provided, but nobody had seriously disagreed with the philosophy underlying the recommendation and various simpler approaches had been suggested;

(h) in relation to the proposed report to the board by the actuary on the allocation of surplus, all the respondents provided some of the information recommended by the Working Party; projected asset shares over a five-year period were rarely given in the annual actuarial report (but might be covered in connection with business plans); many actuaries considered that the implications of such a report for the information to be given to existing and prospective policyholders fell outside the terms of reference of an appointed actuary;

(i) fears about guarantees and 'quasi guarantees' caused by old policy literature, for example about with-profit bonds, were raised in response to a question regarding special features of significance; concerns were also expressed about cases where current premium rates were known to be inadequate, where an assumed rate of growth until maturity now

368 One actuary suggested that it would be pointless to explain PRE to the salesforce as some would not understand the issues and might misrepresent them to policyholders.

369 It was to become a statutory requirement, not only that due regard should be had to PRE in the determination of liabilities (under regulation 64 of ICR 1994, see paragraph 613) but eventually, that specific reference should be made to the method by which due regard had been given to PRE in the abstract of the actuary's report (under regulation 25 and paragraph 6(1)(b) of Schedule 4 to the Insurance Companies (Accounts and Statements) Regulations 1996 SI No. 943 (paragraph 788(b)).

appeared excessive or was reliant on bonus rates which were unlikely to be paid;

(j) adequate communication with policyholders was seen as the main way to deal with PRE. Expectations had been given at the point of sale and subsequent bonus announcements and advertisements extolled the bonus performance. When bonus rates were falling it was desirable that the actuary ensured that the company took the necessary action to circulate details of reduced rates to policyholders and, if appropriate, set out the need for further reductions. In this way, expectations could be modified by current conditions and remain realistic. The frequency of review of terminal bonus rates and market value adjustments affected PRE and the company practice in these areas should be clearly defined; and

(k) among the responses to a question concerning 'other comments' the point was made that the appointed actuary's role was advisory rather than executive but that he or she would be concerned to see an adequate system of actuarial protocols in place which would run through the company '*independent of line management*'. Professional guidance on PRE was not seen as desirable.

539 The third joint working party report recommended that no formal professional guidance be given on PRE at that time. However, appointed actuaries should test their own practice against the recommendations made in the second report and the general reactions to those recommendations summarised in the third report.

The Companies Act 1985 (Insurance Companies Accounts) Regulations 1993

540 The Companies Act 1985 (Insurance Companies Accounts) Regulations 1993[370] (the CAICA Regulations 1993) were made to amend sections 255 and 255A of the Companies Act 1985 and to substitute a new Schedule 9A to that Act in order to implement a European Directive on the annual accounts and consolidated accounts of insurance companies[371], in so far as that Directive applied to bodies corporate subject to Part VII of the Companies Act 1985[372].

541 The Directive had been made to co-ordinate the requirements for the annual accounts of insurance undertakings across member states in order to increase comparability and transparency for creditors, debtors, members, policyholders and their advisers.

542 The Directive stated that it was '*urgently required*'. It recorded the major differences between the practices of various member states regarding the form and contents of insurance undertakings' accounts and the disclosures made. It also acknowledged the fundamental importance of the values at which assets and liabilities were shown in the balance sheet and of the disclosures made in the accounts in obtaining a proper understanding of the financial situation of the undertaking and to enable comparability of figures[373].

370 SI 1993 No. 3246.
371 Council Directive 91/674/EEC of 31 December 1991 (which applied to all insurance companies other than small mutual associations with an annual contribution income of no more than 500,000 ECU for three consecutive years).
372 Separate provision was made for insurance companies which were not subject to those provisions of the Companies Act 1985 in the Insurance Accounts Directive (Miscellaneous Insurance Undertakings) Regulations 1993 SI No. 3245.
373 Preamble to the Directive.

543 The Directive prescribed a precise layout for the balance sheet and profit and loss account, the items to be included in each and made requirements for the contents of certain notes to the accounts (for example, in relation to the valuation methods which had been used).

544 Under the Directive, member states were permitted either to impose valuation rules or to leave it to the company to choose between alternative rules set out in the Directive. In calculating provisions for life assurance, use was to be made of actuarial methods '*customarily applied on the market or accepted by the insurance-monitoring authorities*', implemented by any actuary or expert in accordance with conditions laid down by national law '*and with due regard for the actuarial principles recognised in the framework of present and future coordination of the fundamental rules for the prudential and financial monitoring of direct life assurance business*'.

545 To meet the requirements of the Directive, the CAICA Regulations 1993 substituted a new Schedule 9A to the Companies Act 1985 which made new provision for the form and content of the accounts of insurance companies and groups of companies.

546 Part I of the Schedule set out the prescribed formats, the valuation rules to be applied, the rules for determining provisions and the disclosures to be made in the notes to the accounts. Part II of the Schedule adapted the rules in Part VII of the Companies Act 1985 in relation to consolidation of accounts to make them applicable to the special circumstances of insurance groups.

547 The accounts prepared for the purpose of Schedule 9A of the Companies Act 1985 were (and are) required to provide a 'true and fair' view of the company's affairs, in contrast to the annual returns which were prepared for the purposes of the ICA 1982, which were required to be prepared in accordance with the regulations made under that Act, in particular in relation to the valuation of assets and determination of the amount of the liabilities[374].

548 Schedule 9A requires that the company's balance sheet include in the technical provisions a 'long term business provision'. The notes[375] to that balance sheet item require that the item:

> *... shall comprise the actuarially estimated value of the company's liabilities (excluding technical provisions included in Liabilities in item D[376]), including bonuses already declared and after deducting the actuarial value of future premiums.*

The item was also to include unreported claims which had been incurred.

374 See Regulation 4 of the ICAS Regulations 1983 and Regulation 4 of the ICAS Regulations 1996. In relation to the general question of accounting standards for insurance companies, and how provisions should be calculated in order to present a 'true and fair view', the Penrose Report and other sources suggest that this was the subject of considerable debate within the actuarial and accounting professions. Chapter 10 of the Penrose Report (paragraph 37 et seq) describes the application of general company accounting requirements to insurance companies and the implications of the requirement that financial statements should present a 'true and fair view'. The Report notes that insurance companies had largely escaped accounting regulation and that no specific accounting standards had been devised for insurance companies in the United Kingdom (Chapter 10, paragraph 55). In response to the Penrose Report, the Accounting Standards Board issued a new financial reporting standard and the Treasury produced a report in June 2005 on financial reporting for life assurance, which identified the need for further work to be undertaken on various aspects of accounting requirements for life assurance.

375 Note (21) to Section B of Schedule 9A.

376 Technical provisions for linked liabilities, which were provided for separately in note (26).

549 The rules for determining provisions specified[377] that:

(1) *The long term business provision shall in principle be computed separately for each long term contract, save that statistical or mathematical methods may be used where they may be expected to give approximately the same results as individual calculations.*

(2) *A summary of the principal assumptions in making the provision under sub-paragraph (1) shall be given in the notes to the accounts.*

(3) *The computation shall be made annually by a Fellow of the Institute or Faculty of Actuaries on the basis of recognised actuarial methods, with due regard to the principles laid down in Council Directive 92/96/EEC[378].*

550 The guidance issued by the F&IA to the actuary undertaking the required calculations (described in that guidance as the 'reporting actuary') and on the wider implications of Schedule 9A is referred to below. It was permissible for the reporting actuary to be the same person as the appointed actuary, but there was no requirement to this effect[379].

551 The requirements of the CAICA Regulations 1993 applied to insurance companies' accounts for financial years commencing on or after 23 December 1994.

552 The Directive (91/674/EEC) remains in force, subject to amendments made by a further Directive in June 2003[380]. The CAICA Regulations 1993 also continue in force, subject to minor amendments made with effect from January 2005[381] consequent on the consolidation and repeal of the Life Directives[382].

553 In recent years, one of the aims of the FSA has been to try to align the approach in the regulatory returns with the approach in the Companies Act accounts so as to enable reconciliation between the two, thereby increasing the transparency of the figures presented[383].

377 Paragraph 46 of Schedule 9A.
378 i.e. the Third Life Directive (a reference to Directive 2002/83/EC was substituted by the Life Assurance Consolidation Directive (Consequential Amendments) Regulations 2004 SI No. 3379).
379 In the case of Equitable, the roles of chief executive and appointed actuary were combined for the period 1991-1997 (see footnote 94).
380 Council Directive 2003/51/EC.
381 By virtue of SI 2004 No. 3379, see footnote 378.
382 By Council Directive 2002/83/EC.
383 See the FSA Consultation Paper 202, September 2003, paragraph 4.11.

Phase 5: 1994 – 1999

Introduction to Phase 5 – the DTI's view of the concept of 'sound and prudent management' and 'freedom with disclosure'

1994 – a year of change

554 1994 saw considerable reform of the UK legislation relating to insurance, triggered by the need to give effect to the Third Non-Life Directive384 and the Third Life Directive[385] in domestic legislation.

555 This entailed significant amendments to the primary legislation (in particular, the ICA 1982), and the subordinate legislation (including that relating to the valuation of assets and determination of liabilities of long-term insurance businesses (through the replacement of ICR 1981) and in relation to accounting requirements and statutory returns (although the ICAS Regulations 1983 were not replaced until 1996)).

556 Implementation of the changes arising from the Directives provided the opportunity to consolidate amendments which had been made to the subordinate legislation over the years and to make other adjustments for domestic reasons.

557 A paper written by officials in the DTI for the Minister towards the end of 1994, after the changes to the UK legislation had been enacted, entitled 'Insurance Supervisory Powers and Practice', described the regime as it then stood.

The three main 'supervisory weapons'

558 The paper explained the DTI's regulatory objectives as being to supervise the insurance industry effectively so that policyholders were protected against the risks that companies would not meet liabilities or fulfil policyholders' reasonable expectations. The DTI's three 'main weapons' in achieving these objectives were described as being:

(a) **Authorisation:** controlling the entry of new companies into the market, ensuring so far as possible that they were adequately capitalised and had a sound business plan.

(b) **Financial supervision:** requiring insurance companies to submit detailed, comprehensive annual returns in addition to (and containing considerably more detail than) the shareholder accounts required under companies legislation. In particular, the solvency margin which insurance companies were required to maintain was intended to provide a safety margin so that they could suffer a degree of loss and still be able to meet their commitments in full. The asset valuation rules were designed to ensure that companies held a sensible spread of assets and valued them conservatively. Examination of the returns entailed consideration of such matters as assets, liabilities, reinsurance protection, profitability, quality of management and future trends, and was supplemented by visits to companies in order to ensure that '*supervision is forward rather than backward looking*'.

(c) **Sound and prudent management:** it was noted that the implementation of the Third Insurance Directives in the UK in July 1994 had supplemented the pre-existing powers of supervisors to take action in respect of unfit controllers, directors and managers, with the wider concept of 'sound and prudent management' which companies were required to maintain (see paragraphs 570 et seq). It was said that this new concept enabled the DTI to take a view as to whether the management of the company as a whole had the right balance of skills and experience (and not just to assess the fitness of the separately notified key individuals). It was said that this enabled the DTI to take action in a wider set of

384 92/49/EEC.
385 92/96/EEC.

circumstances where it believed that a company was not acting in a prudent way and enabled the DTI to use all its existing powers of intervention in the event of failure by a company to comply with specified criteria of sound and prudent management.

559 The addition of the concept of 'sound and prudent management' to the legislation was described as having considerably strengthened the supervisors' powers. The paper explained:

> '*we are now able to intervene more easily where we have concerns that a company is acting in an imprudent manner, ie it is failing to comply with the criteria of sound and prudent management. In the past, there have been occasions where supervisors have regarded intervention as desirable but have either had no specific power to do so, or considered that the power was not clearly enough defined to allow it to be used*[386]*. These augmented powers are not intended to increase the overall level of supervision of soundly run insurance companies. They are designed to enable us to intervene in cases where previous legislation proved to be inadequate. It remains the case that the main grounds for intervention are the protection of policyholders or breach of an obligation under the legislation.*'

560 The paper went on to describe a case in which the new powers had by then already been used in a 'robust' way. In the case described (which concerned non-life business), the 'sound and prudent management' ground of intervention had been used to withdraw the company's authorisation to write new business, notwithstanding that the company had shown a reasonable standard of solvency in its December 1993 return.

561 In view of considerable uncertainties about the adequacy of the company's reserves to meet a particular potential liability (which had been highlighted in a report from an independent actuary), the DTI considered that the uncertainties about the company's solvency were too great to permit it to continue to write business.

562 It was noted, in relation to the new 'sound and prudent management' ground that there were '*difficult judgements to be made as to when these powers should be invoked and to what extent*', but that in the majority of cases, the DTI was able to rely on its '*informal powers of persuasion*' to ensure that companies took appropriate action before serious problems arose, with the threat of formal sanctions in the background.

Freedom with publicity or freedom with disclosure

563 As regards the underlying philosophy of insurance regulation in the UK, the paper prepared for the Minister in late 1994 described the UK regulatory system as being founded on the principle of '*freedom with disclosure*', *in a freely competitive market place*'. Insurance companies were said to have '*considerable freedom to follow their commercial judgement within a broadly defined and non-intrusive regulatory framework*'.

564 However, insurance companies were required to place on the public record a considerable amount of detail about the business they had accepted and their solvency position. It was noted that not only policyholders, but competitors, brokers, market analysts and journalists had access to the information in statutory returns, resulting in a growth in comparative analyses of data and a market in insurance information '*producing a more informed market in insurance products and their financial security*'.

[386] Apparently an allusion to uncertainties over the ambit of the residual power to impose requirements to protect policyholders under section 45 of the ICA 1982.

565 It was considered that the commercial freedom enjoyed by insurance companies in the UK was one of the strengths of the domestic insurance industry which would help UK companies to compete in the European Single Market. It was stated that in a competitive market it was unrealistic to expect that all failures could be prevented, but that the risk of companies going out of business was '*an acceptable price for an innovative and price competitive market, operating in the interests of its customers*'. The aim of the regulator was to get as much early warning as possible about developing problems '*and take appropriately robust action to prevent or minimise damage to policyholders*'.

Amendments to the ICA 1982 – the Insurance Companies (Third Insurance Directives) Regulations 1994

Introduction and overview

566 The Insurance Companies (Third Insurance Directives) Regulations 1994[387] (the ICTID Regulations 1994) gave effect to the Third Life Directive in terms of revisions to the ICA 1982. They were made by the Secretary of State as designated minister under section 2(2) of the ECA 1972.

567 One of the principal effects of the ICTID Regulations 1994 was to introduce into the UK legislation the principle of home state control, or the 'single passport' for insurance undertakings across the European Community. The Regulations also included provisions reflecting the further harmonisation of the rules regarding authorisation and regulation of insurance undertakings.

568 The ICTID Regulations 1994 came into force on 1 July 1994 and extended to Northern Ireland.

569 Part II of the Regulations contained amendments to the ICA 1982 and comprised six chapters dealing with:

I Restrictions on carrying on insurance business (amending Part I of the ICA 1982);

II Regulation of insurance companies (amending Part II of the ICA 1982);

III Conduct of business regulation (amending Part III of the ICA 1982);

IV Recognition in accordance with insurance directives (replacing the whole of Part IIIA of the ICA 1982[388]);

V Special classes of insurers (amending Part IV of the ICA 1982);

VI Supplementary provisions (amending Schedule 3A to the ICA 1982[389]).

570 The major changes to Parts I and II of the ICA 1982 introduced by the ICTID Regulations 1994 included:

- revisions to the structure and substance of those Parts of the Act to take account of the concept of home state control of insurance companies and to make distinct provision for companies with head offices in various parts of the EC or outside the EC;

- the introduction of the concept of the need for insurance companies to have 'sound and prudent management' based on specified criteria (in a new Schedule 2A);

387 SI 1994 No. 1696.
388 Which had been inserted in the ICA 1982 by SI 1990 No. 1333 (see paragraph 416) implementing the Non-Life Directive 88/357/EEC and later amended by further statutory instruments.
389 Inserted in the ICA 1982 by SI 1990 No. 1333.

- revision to the incorporate the concept of 'sound and prudent management' in the specified grounds for refusal of authorisation, withdrawal of authorisation, or intervention by the Secretary of State and other changes to the provisions on authorisation and intervention arising from the Third Life Directive;

- a new power for the Secretary of State to suspend authorisation of an insurance company to carry out new business '*forthwith*' in cases of urgency (section 12A);

- new obligations for insurance companies to secure the adequacy of their assets in terms of their safety, yield and marketability and to ensure the adequacy of the premiums payable to meet commitments under long term • extending the circumstances in which the Secretary of State's powers might be used in such a way as to restrict the free disposal of assets by a company to include those where the company had failed to maintain the margin of solvency under section 32 or to secure the adequacy of its assets under the new section 35A (sections 37(3)(d) and 45(2)(d));

- new intervention powers for the Secretary of State:

  – to seek an injunction to restrain a company from disposing of or otherwise dealing with its assets (section 40A);

  – to appoint a competent person to conduct a general investigation into whether the specified criteria of sound and prudent management were being fulfilled by a company or would be fulfilled with an intended new controller of the company (section 43A);

  – to require the company to provide a report from an actuary, accountant or other professional person regarding specified matters (section 44(2B);

- revisions to the residual power of intervention under section 45 to give the Secretary of State the additional power to require a company to take action to ensure fulfilment of the new sound and prudent management criteria (where this objective could not be appropriately achieved through reliance on other specified powers) and to make changes in relation to restrictions on the free disposal of assets;

- recasting the provisions on transfers and winding up of insurance businesses to take account of the position of companies operating in other countries; and

- a new prohibition on a controller of a UK insurance company acquiring a 'qualifying holding' in that company or its parent unless written notice had been served on the Secretary of State and no objection had been raised.

Sound and prudent management ground to refuse authorisation and criteria

571 A new limitation was imposed on the power of the Secretary of State to issue authorisation to a company on grounds of failure to fulfil specified criteria of 'sound and prudent management'[390]. A new section 5(1A) was inserted in the ICA 1982 by Regulation 5 of the ICTID Regulations 1994:

> *The Secretary of State shall not issue authorisation under section 3 above to an applicant which is a UK or a non-EC company if it appears to him that the criteria of sound and prudent management are not or will not be fulfilled with respect to the applicant.*

390 In the light of article 7 of the Third Life Directive.

572 'UK company' and 'non-EC company' were defined in a new section 5(4) of the ICA 1982, inserted by Regulation 5(2), covering insurance companies issued with authorisation in the UK under the ICA 1982, other than those conducting only reinsurance or certain other limited forms of insurance business.

573 The term 'criteria of sound and prudent management' was also defined in the new section 5(4) to mean the criteria set out in the new Schedule 2A to the ICA 1982 which was inserted by Regulation 5(3).

574 The criteria specified in that schedule related to the integrity and skill of those directing, managing or controlling the company, their sufficiency in number and the manner in which business was to be conducted. The criteria included:

- that the business of the insurance company was carried on with integrity, due care and the professional skills appropriate to the nature of its activities;
- that each director, controller, manager or main agent of the company was a fit and proper person to hold that position;
- that the company was directed and managed by a sufficient number of persons who were fit and proper persons to hold their positions;
- that the company conducted its business in a sound and prudent manner; and
- that the company was not to be regarded as conducting its business in a sound and prudent manner:
  - – unless the company maintained adequate accounting and other records of its business and adequate systems of control of its business and records (which arrangements were not to be considered adequate unless they enabled the business of the company to be prudently managed; and in determining whether any systems of control were adequate, the Secretary of State was to have regard to the functions and responsibilities for those systems which were held by the directors, controllers, managers or main agents of the company);
  - – if the company failed to conduct its business with due regard to the interests of policyholders and potential policyholders;
  - – if the company failed to satisfy an obligation under the ICA 1982 or (in the case of a UK company) an obligation to which it was subject by virtue of the law of another EEA State[391] in which it conducted insurance business; or
  - – if the company failed to supervise the activities of a subsidiary undertaking with due care and diligence and without detriment to the company's business.

Additional grounds for withdrawal of authorisation in respect of new business and new power to suspend authorisation in urgent cases

575 Two new grounds for the withdrawal of authorisation in respect of new business were added to section 11(2) of the ICA 1982[392] by Regulation 10. The Secretary of State was empowered to withdraw authorisation in respect of new business if:

[391] A state which was a contracting party to the Agreement on the European Economic Area signed at Oporto on 2 May 1992 as adjusted by the Protocol signed at Brussels on 17 March 1993, with special provision for Liechtenstein (Regulations 5(2) and 50(1)(g) of the ICTID Regulations 1994).

[392] See paragraph 293 above.

(aa) the company was a UK company and it appeared to him that it had failed to satisfy an obligation to which it was subject by virtue of the law of another EEA State which gave effect to the insurance Directives or was otherwise applicable to insurance activities in that State;

(ab) the company was a UK company or a non-EC company and it appeared to him that any of the criteria of sound and prudent management was not or might not be fulfilled by the company (or had not or might not have been fulfilled in the past).

576 Further, Regulation 11 inserted a new section 12A into the ICA 1982, giving the Secretary of State power to direct that the authorisation of a UK company or non-EC company to carry out new business generally or of a specified description be suspended *'forthwith'* if it appeared to him that one of the grounds in section 11(2) (as extended) for the withdrawal of authorisation in respect of new business existed and that the authorisation should be suspended '*as a matter of urgency*'.

577 The company was entitled to make representations in writing to the Secretary of State within one month (and orally to an officer of the DTI if it so wished) which the Secretary of State was required to consider before deciding whether to confirm the direction. The direction would lapse two months after it was given unless it had been confirmed by the Secretary of State within that period.

New classes of insurance long term business, single authorisation by home state and amendment of rule on composite insurance businesses

578 Chapter I also added two new classes of long term business[393] to the list in Schedule 1 to the ICA 1982 (Regulation 3).

579 Regulation 4 inserted a new definition of an 'EC company' which was to be excluded from the authorisation requirements under section 2 of the ICA 1982 provided that conditions set out in a new Schedule 2F had been complied with[394], giving effect to the principle of a 'single passport'.

580 The limitation on the authorisation of a combination of long term and general business under section 6 of the ICA 1982 was slightly relaxed to permit authorisation of a combination of long term business and any class within the 'accident and health' group of general business (Regulation 6).

Part II of the ICA 1982 on regulation of insurance business – EC companies

581 Again to give effect to the principle of home state control, EC companies were removed from the ambit of most of the provisions of Part II of the ICA 1982 on regulation of insurance business (regulation 13)[395].

Adequacy of assets and premiums

582 New sections 35A and 35B were inserted in the ICA 1982 regarding the adequacy of assets and premiums (Regulations 17 and 18).

583 Under the new section 35A(1), a UK company was required to secure that its liabilities under contracts of insurance were '*covered by assets of appropriate safety, yield and marketability having regard to the classes of business carried on*' and without prejudice to the generality of this

393 Collective insurance and social insurance.
394 Relating to authorisation of the company by its home state and notification and certification of matters to the Secretary of State by the supervisory authority of the company's home state.
395 Exceptions to this exclusion (i.e. where provisions of Part II of the ICA 1982 continued to apply in some way to an EC company) related to the special requirements under Part I of Schedule 2F for EC companies carrying on business in the UK; restrictions on disclosure of information under sections 47A, 47B and Schedule 2B and the winding up provisions of sections 54-59.

requirement, to secure that '*its investments are appropriately diversified and adequately spread and that excessive reliance is not placed on investments of any particular category or description*'.

584 Separate obligations were imposed in relation to linked long term contracts, which included a requirement for the company to secure that liabilities in respect of linked benefits were covered by assets of a description prescribed by regulations made under section 78[396].

585 The new section 35B required an insurance company to satisfy itself, before entering into a long term insurance contract, that the aggregate premiums under the contract and the income to be derived from them and any other resources of the company available for the purpose (without jeopardising its solvency in the long term) would be '*sufficient, on reasonable actuarial assumptions, to meet all commitments arising under or in connection with the contract*'.

Revised and additional grounds for intervention under section 37 of the ICA 1982

586 Several substantive and consequential amendments were made to section 37 of the ICA 1982 regarding the grounds on which the powers of the Secretary of State to intervene under the subsequent provisions of Part II of the Act could be exercised (Regulation 19).

587 The grounds for intervention under section 37(2)[397] (which applied to the Secretary of State's intervention powers under section 38 and 41-45) were supplemented by a new ground in relation to 'sound and prudent management':

(aa) *that the company is a UK or non-EC company and it appears to [the Secretary of State] that any of the criteria of sound and prudent management is not or has not been or may not be or may not have been fulfilled with respect to the company.*

The 'criteria of sound and prudent management' were set out in Schedule 2A to the ICA 1982 and are summarised in paragraph 574 above.

588 As noted above, section 37(3) restricted the Secretary of State's powers to intervene by way of imposing requirements for the maintenance of assets in the UK and the custody of assets by a trustee under sections 39 and 40, other than on exceptional specified grounds (in order to give effect to the earlier limitations in the Directives on restrictions on the free disposal of assets by insurance companies[398]). Section 37(3) was amended by Regulation 19:

(a) to take into account a new intervention power which had the effect of restricting the free disposal of assets under section 40A (see paragraph 595);

(b) to include a new exceptional ground for intervention under section 37(3)(a) to encompass the Secretary of State's power to give a direction to suspend a company's authorisation in urgent cases under the new section 12A[399]

[396] Regulation 43 of and Schedule 10 to the Insurance Companies Regulations 1994 SI No. 1516 specified, by description, the property and stipulated the indices by reference to which linked benefits were to be determined.
[397] See paragraph 315 above. The seven original grounds for intervention under section 37(2) of the ICA 1982 had been supplemented by an eighth ground in relation to Swiss insurance companies in January 1994 by the Insurance Companies (Switzerland) Regulations 1993 SI No. 3127.
[398] Under the Directives, free disposal of assets by an insurance company could only be restricted in exceptional specified circumstances which were slightly extended by the Third Life Directive. See paragraphs 230 and 497 above.
[399] See paragraph 576 above.

(c) to include further exceptional grounds for intervention under a new section 37(3)(d), namely where it appeared to the Secretary of State that the company had failed to comply with the obligation to maintain the margin of solvency under section 32[400] or the obligation to secure the adequacy of the company's assets to cover its liabilities under the new section 35A[401].

589 A new section 37(4A) was inserted which specified that the Secretary of State's powers to intervene under the new section 43A (on general investigations by competent persons)[402] or under section 44 (to obtain information or production of documents) were exercisable to obtain information to enable him to perform his functions under the ICA 1982 (apparently to make it clear that these sections could be relied on even where none of the more general grounds for intervention under section 37(2) existed).

590 Consequential amendments were made to section 37(5) in relation to the more extensive powers of the Secretary of State to intervene under specified sections of Part II of the ICA 1982 in respect of companies which had been authorised or had been subject to a change of control within the preceding five years.

591 The provisions were extended to apply in cases where the Secretary of State had been notified of a person's intention to acquire a 'notifiable holding' (under the new requirements of section 61A, referred to below) within the preceding five years.

592 Section 37(6), which restricted the Secretary of State's powers to intervene under the residual power of section 45 in relation to PRE to circumstances where the objectives could not be appropriately achieved by reliance on other invention powers, was not affected by any of the above changes.

Maintenance of assets of a specified value in a specified location

593 The provisions of section 39 of the ICA 1982 empowering the Secretary of State to impose a requirement for the maintenance of assets in the UK were replaced to take account of the effects of the Third Life Directive. UK companies could be required to maintain assets of a value equal to the whole or a specified proportion of the amount of their EC liabilities in the European Community (rather than an amount related to their domestic liabilities being maintained in the UK) (Regulation 21).

Prohibition on disposal of assets

594 The Secretary of State was given powers under a new section 40A to apply to the court to obtain, on specified grounds, an injunction to prohibit a UK company from disposing of, or otherwise dealing with, its assets to the value of the liabilities of its business in the EC (Regulation 22).

595 The specified grounds on which the court might grant an injunction were those in section 37(3) (namely, the exceptional circumstances in which the Secretary of State could intervene to restrict the free disposal of assets by a company under sections 39, 40 or 40A such as withdrawal or urgent suspension of authorisation, failure to satisfy the obligations in respect of the minimum margin or to maintain the margin of solvency, or calculation of liabilities in the company's accounts otherwise than in accordance with the valuation regulations).

400 Formerly, the particular powers of intervention which were subject to section 37(3) could not be relied on unless the company's solvency margin had fallen below the amount of the minimum margin (or 'guarantee fund') under section 33. See paragraph 497 regarding the change in the Directives.
401 See paragraph 583.
402 Referred to in paragraph 597.

596 If an order was made, the court was empowered to make subsequent orders to provide for incidental, consequential and supplementary matters as necessary to enable the Secretary of State to perform his functions under the ICA 1982.

General investigation by a competent person or persons

597 Regulation 23 inserted a new section 43A in the ICA 1982 empowering the Secretary of State to appoint one or more competent persons to make an investigation into, and to report to him on whether, the criteria of sound and prudent management[403] were being fulfilled by a UK (or non-EC) company, or whether they would be fulfilled if a person who had notified the Secretary of State of his or her intention to do so, became a controller of such a company.

598 Obligations were imposed on directors, managers, controllers, agents, actuaries, auditors and solicitors of a company under investigation to produce documents, attend before and otherwise assist the person conducting the investigation. The person conducting the investigation was given power to enter premises occupied by the company provided prior written notice was given (unless he or she had reason to believe that documents would be removed, tampered with or destroyed if such notice was given).

Powers to obtain information and reports by an actuary, accountant or other professional

599 The powers of the Secretary of State under section 44 of the ICA 1982 to require the provision of information and production of documents by a company were extended by Regulation 24.

600 A new section 44(2B) empowered the Secretary of State to require a UK (or non-EC) company to furnish him, at a specified time, with a report by a specified person, being an actuary or an accountant or other person with relevant professional skills, on any matter about which the Secretary of State had required or could require the company to provide information under section 44(1).

601 A power of entry to premises occupied by a UK or non-EC insurance company was also given to any person authorised by the Secretary of State for the purpose of obtaining information or documents (new section 44(4A)).

Residual power to impose requirements for the protection of policyholders

602 The residual power under section 45(1)[404] was recast by Regulation 25(1) to enable the Secretary of State to intervene not only to protect policyholders or potential policyholders against the risk that the company might be unable to meet its liabilities or to fulfil their reasonable expectations, but also:

> *... in the case of a UK or non-EC company, for the purpose of ensuring that the criteria of sound and prudent management are fulfilled with respect to the company.*

603 Amendments were also made to section 45(2) in relation to the exceptional circumstances in which the power under section 45(1) might be used in such a way as to restrict a company's freedom to dispose of it assets, equivalent to those which had been made to section 37(3).

604 The new exceptional grounds were those where a direction had been given under the new power to suspend authorisation in cases of urgency under section 12A; those where the company had failed

403 Summarised in paragraph 574 above.
404 Which continued to be subject to the limitation in section 37(6) that it was only available where the purposes of section 45 could not appropriately be achieved by exercise of powers under sections 38 to 44 or by exercise of those powers alone.

to satisfy the margin of solvency requirement under section 32; or where it had failed to secure the adequacy of assets to cover its liabilities under section 35A (Regulation 25(2)).

Restrictions on disclosure and privilege from disclosure

605 Section 47A[405] of the ICA 1982 was replaced and a new Schedule 2B to the Act was inserted, imposing restrictions on disclosure of information relating to the business affairs of any person which had been obtained by the Secretary of State for the purpose of the discharge of his functions under the 1982 Act without the consent of the person from whom the information was obtained, and if different, from the person to whom the information related (Regulation 26).

606 Exceptions applied if the information had been made available to the public from other sources, or if the information was in summary form or was so framed that information relating to any particular person could not be ascertained. Further exemptions related to disclosures made to enable or assist the Secretary of State to discharge his functions under the 1982 Act or rules or regulations made under it and disclosures made to certain other government departments, bodies or officials in connection with specified statutory functions. Criminal sanctions were imposed for disclosures made in contravention of these requirements.

607 Section 47B, under which a document was exempt from disclosure to the Secretary of State under section 44(2)-(4) of the ICA 1982 in cases where production of the document by the person concerned could be refused in High Court proceedings on grounds of legal professional privilege, was extended to apply where the document was sought under the new section 43A (general investigation by a competent person) (Regulation 27).

Transfers of insurance business

608 In relation to an application to the court made on or after 1 July 1994 to sanction the transfer of an insurance business, sections 49 to 52 of the ICA 1982 were replaced with a new section 49 and Schedule 2C to the ICA 1982 (Regulation 28). Part I of the new schedule provided for transfers of long term business (and Part II dealt with transfers of general business).

609 The provisions of Schedule 2C were more elaborate than those they replaced and provided for the possibility that the transferor or the transferee company might be an undertaking with a head office outside the UK and that the transferor might have concluded contracts of insurance in other countries.

610 Section 52A of the ICA 1982 as originally introduced into the ICA 1982[406] concerned cases where general business was proposed to be transferred to a UK insurance company from a company established in another member state, empowering the Secretary of State to certify, if he was satisfied that it was the case, that the UK insurance company possessed the necessary margin of solvency after taking the proposed transfer into account.

611 Regulation 29 substituted a new section 52A which related to both general and long term business and empowered the Secretary of State to issue such a certificate when a transfer to a UK company or to a non-EC company supervised by the Secretary of State was contemplated. The court was prohibited from sanctioning a transfer unless the Secretary of State (or the supervisory authority of the state in which the transferee was situated) had certified that the transferee company possessed the necessary margin of solvency after taking account of the proposed transfer (paragraph 3(1)(b) of Schedule 2C).

[405] Which, together with section 47B, had been inserted in the ICA 1982 by section 25 of the Companies Consolidation (Consequential Provisions) Act 1985.

[406] By Regulation 9 of SI 1990 No. 1333, (see paragraph 416).

Winding up

612 The grounds on which the Secretary of State could petition the court to wind up an insurance company were slightly revised by Regulation 31. In 1990 section 54 of the ICA 1982 had been amended to include an additional ground for winding up in relation to companies conducting general business[407] in circumstances where the company had failed to comply with an obligation to which it was subject by virtue of the law of another member state giving effect to the general insurance Directives. These provisions were extended to make them applicable to non-compliance with the law of another EEA State[408] which gave effect to general or long term insurance Directives or which was otherwise applicable to the insurance activities of the company in that State.

Changes of director, controller or manager

613 Sections 60 to 64 of the ICA 1982 made provision for the Secretary of State to object to the appointment by an insurance company of a managing director or chief executive, or to a person becoming a controller of a company[409] and contained requirements for the Secretary of State to be notified by the company of changes in the directors, controllers, managers and main agents and of such other matters as might be prescribed. (Notice of prescribed matters was also required to be given to the insurance company by controllers, shareholder controllers, directors and managers.)

614 Those provisions were revised by Regulations 32-35 of the ICTID Regulations 1994 and a new Schedule 2D was inserted in the 1982 Act which made further provision for the situation where a new managing director, chief executive or controller of an insurance company was proposed, or where a controller proposed to acquire a 'notifiable holding'.

615 Section 60(3) was amended by regulation 32 so as to include an additional ground on which the Secretary of State might serve notice of objection to a person whom the company proposed to appoint as managing director or chief executive:

> *... where the insurance company is a UK or non-EC company, that it appears to him that, if that person were appointed, the criteria of sound and prudent management would not or might not continue to be fulfilled in respect of the company.*

The layout of section 60(3) was revised (by the creation of new subsection (3A)), but the substance of the remaining provisions of section 60 was preserved.

616 Equivalent revisions were made to section 61 regarding objection by the Secretary of State to a person proposing to become a controller (otherwise than by appointment as a managing director or chief executive), enabling the Secretary of State to serve notice of objection on 'sound and prudent management' grounds (Regulation 33).

617 Regulation 34 created a new section 61A which enabled the Secretary of State to serve notice of objection if a controller of a company intended to acquire a 'notifiable holding' in the company. A notifiable holding was defined[410] as being voting rights or shares which, if acquired by the person, would result in that person becoming a 10 per

407 New sections 54(1)(bb) and 54(2)(bb) had been inserted by Regulation 8 of SI 1990 No. 1333.
408 See footnote 391.
409 The effect of such an objection being to debar the company from making the appointment or the proposed controller from taking control.
410 In section 96(1) together with the new section 96C, inserted in the ICA 1982 by the ICTID Regulations 1994.

cent shareholder controller, a 20 per cent shareholder controller, a 33 per cent shareholder controller, a 50 per cent shareholder controller or a majority shareholder controller[411].

618 The controller was prohibited from acquiring the holding if the Secretary of State notified his objection within three months. Such an objection could be raised on the grounds that it appeared that the controller was not a 'fit and proper person' or it appeared that the criteria of 'sound and prudent management' might not be fulfilled. The provisions of section 61(2)-(4) applied, requiring preliminary notice to be given by the Secretary of State that he was considering giving notice of objection and inviting the person concerned to make written and oral representations.

619 Section 62(1) was replaced with a new section which required those who became or ceased to be 10, 20, 33 or 50 per cent shareholder controllers or majority shareholder controllers[412] to give notice to the company within seven days of having done so (in addition to such notice being required of those who became or ceased to be controllers[413] as under the original provisions) (Regulation 36). The obligation of the company to notify the Secretary of State within 14 days of such changes coming to the company's knowledge (and of other matters of which notice was required to be given to it) was preserved.

Offences under Part II

620 Consequential amendments were made to section 71 of the ICA 1982 on offences under Part II to take account of the new requirements.

Other changes made by the ICTID Regulations 1994

621 Chapter III of Part II of the ICTID Regulations 1994 made changes to Part III of the ICA 1982 on conduct of business regulation, including changes in respect of information and statutory notices to be provided to policyholders and potential policyholders (inserting or amending sections 72A, 72B, 74 and 75).

622 Chapter IV of Part II replaced the whole of Part IIIA of the ICA 1982[414] and inserted two new Schedules (2F and 2G) concerning recognition in the UK of insurance companies which had their head office in one of the other states of the European Economic Area and the recognition of UK companies in those states.

623 Changes were also made to the provisions on special classes of insurers in Part IV of the ICA 1982 and to Schedule 3A[415] regarding the law applicable to insurance contracts concluded in various states.

411 A 'shareholder controller' was defined as a person who was a 'controller' by virtue of section 96C(2) (being one of five categories of 'controller' as defined in section 96C(1)), namely a person who alone or with associates held 10% or more of the shares in the company or its parent, or was entitled to exercise, or control the exercise of, 10% or more of the voting rights at a general meeting of the company or of its parent, or was able to exert significant influence over the management of the company or of its parent by virtue of a holding in shares or entitlement to exercise or to control the exercise of voting power at a general meeting of the company or the parent. A '10 per cent shareholder controller', '20 per cent shareholder' and the related expressions were defined in section 96C(3) to mean a shareholder controller in whose case the percentage referred to in section 96C(2) was 10 or more but less than 20; 20 or more but less than 33; etc.

412 See previous footnote.

413 Defined in the new section 96C as the managing director or chief executive of the company or its parent; a person in accordance with whose directions or instructions the directors of the company or its parent were accustomed to act; a person who satisfied the 'shareholder controller' requirements of section 96C(2) referred to in footnote 411; or in the case of a non-UK company, a person who alone or with any associates was entitled to exercise, or controlled the exercise, of 15% or more of the voting power at a general meeting of the company or its parent.

414 Which had been inserted in the Act by SI 1990 No. 1333 (see paragraph 416).

415 Inserted in the Act by SI 1990 No. 1333.

624 Part III of the ICTID Regulations 1994 made amendments to the FS Act 1986, for example in relation to the application of the rules for self-regulating organisations as they applied to EC companies, to provide powers of intervention in respect of such companies and to extend the powers of the SIB to obtain information from 'authorised persons' and certain specified 'recognised bodies' under that Act.

Further amendments in 1994 and eventual repeal of the ICTID Regulations 1994

625 Further amendments were made to the ICA 1982 and to the ICTID Regulations 1994 by the Insurance Companies (Amendment) Regulations 1994[416] which came into force on 30 December 1994. The further revisions were mainly minor or technical and are not of relevance here.

626 The ICA 1982 was amended in 1995 by the Insurance Companies (Reserves) Act 1995, which inserted a new section 34A. This section required insurance companies which carried on general business of prescribed descriptions to maintain an 'equalisation reserve' in relation to that business. Tax relief was provided in relation to the reserve, under section 166 of the Finance Act 1996.

627 The ICTID Regulations 1994 were repealed along with the ICA 1982 with effect from 1 December 2001 by the Financial Services and Markets Act 2000 (Consequential Amendments and Repeals) Order 2001[417].

The Insurance Companies Regulations 1994

628 The Insurance Companies Regulations 1994[418] (ICR 1994) came into force on 1 July 1994 at the same time as the ICTID Regulations 1994. ICR 1994 was made under the ECA 1972 and various provisions of the ICA 1982. They consolidated ICR 1981 with the amendments which had been made to it over the years[419] and parts of other subordinate legislation[420] and included amendments to implement the Third Life Directive.

629 As originally enacted ICR 1994 consisted of twelve parts[421] and seventeen Schedules. Those of most relevance to the prudential regulation[422] of life insurance business were:

Part I:	commencement and definitions;
Part II:	authorisation, with the information to be submitted in connection with authorisation of long term business set out in Schedule 1;
Part IV:	margins of solvency, with the minimum guarantee fund set out in Schedule 5;
Part V:	currency matching and localisation;
Part VI:	change of control, with Schedule 6 specifying the particulars to be given

416 SI 1994 No. 3132.
417 SI 2001 No. 3649.
418 SI 1994 No. 1516.
419 Certain of the amendments made to ICR 1981 up to 1990 are referred to in paragraphs 412 et seq. Further minor amendments were made by the Insurance Companies (Amendment) Regulations 1992 SI No. 445 and by the Insurance Companies (Cancellation No. 2) Regulations 1993 SI No. 1092, including amendments to the form of the statutory notice to be sent to long-term policyholders in relation to cancellation under section 75 of the ICA 1982.
420 Part of the Insurance Companies (Credit Insurance) Regulations 1990 SI No. 1181 and Regulation 13 of SI 1992 No. 2890, (referred to in paragraph 511).
421 Part X which dealt with credit insurance business was revoked by the Insurance Companies (Reserves) Regulations 1996 SI No. 946 which introduced equalisation reserves for general insurance companies.
422 ICR 1994 also dealt with matters relevant to conduct of business regulation such as the contents of advertisements.

by an insurance company in relation to proposed managing directors, chief executives and other 'controllers' when giving notice under section 60(1) or 61(1) of the ICA 1982;

Part VII conduct of business, including not only matters relating to insurance advertisements and information given by intermediaries, but also provisions concerning the prescribed assets and indices to which benefits under linked long term contracts could be linked, with the list of permitted links set out in Schedule 10;

Part VIII: valuation of assets, with the value of the assets of 'dependants' (subsidiary undertakings of an insurance company) set out in Schedule 11 and assets which could be taken into account only to a specified extent set out in Schedule 12; and

Part IX: determination of liabilities.

630 The substantive changes introduced by ICR 1994 were comparatively minimal, since many of the basic requirements of the earlier EEC Directives on such matters as the margin of solvency and the guarantee fund had been embodied in ICR 1981, and a number of the harmonisation measures in the Third Life Directive were already broadly reflected in some form in the UK provisions.

631 However, changes were made to Regulation 64[423] on the determination of liabilities, including an express requirement that the actuarial principles used in valuing long term liabilities should have due regard to PRE.

632 The following outlines the provisions of ICR 1994 which concerned the margin of solvency and guarantee fund, matching and localisation, valuation of assets and determination of liabilities for UK life companies (other than pure reinsurers).

Margin of solvency and guarantee fund – Part IV and Schedule 5

633 Part IV largely reproduced Part II of ICR 1981, with some additions. In simplified terms, the margin of solvency for non-linked life assurance and annuities (classes I, II and IX) under Regulation 18 was the sum of:

(a) 4% of the mathematical reserves reduced by not more than 15% for liabilities which were reinsured; and

(b) 0.3%[424] of the capital at risk reduced by not more than 50% for reinsured liabilities.

634 For linked long term assurance, permanent health insurance, capital redemption, managed funds and collective insurance (classes III, IV, VI, VII and VIII), the calculation was as in (a) in the preceding paragraph, but the required percentage was reduced to 1% for contracts in classes III, VII and VIII if the company bore no investment risk.

635 For companies in those three classes the required margin of solvency was zero if the company bore no investment risk and the term of the contract (expired and unexpired) was no more than five years, or if management expenses were not subject to a fixed upper limit for a period of more than five years (Regulations 19 and 20).

423 The equivalent provision to Regulation 54 of ICR 1981.
424 This percentage was reduced in the case of short-term contracts (of no more than five years) which provided only for benefits payable on death within a specified period.

636 Where a company carried on more than one class of long-term business such that more than one margin of solvency calculation applied, those margins were to be aggregated in order to arrive at the company's required margin of solvency (Regulation 17(4)).

637 In general, the 'guarantee fund' (or minimum margin for the purpose of section 33 of the ICA 1982), was one third of the margin of solvency, subject to a minimum (in the case of a mutual) of 600,000 ECU (the 'minimum guarantee fund') (Regulation 22 and Schedule 5).

638 In the case of long term business, the minimum guarantee fund or at least half of the guarantee fund (whichever was larger) was required to be covered by explicit items[425] such as share capital and reserves that were not attributed to any general business and the excess of the assets representing the fund over the liabilities (in so far as this excess did not form part of the mathematical reserves[426] assessed in relation to assets at market value).

639 Regulation 23 made specific provision for determining the extent to which the value of a company's assets exceeded its liabilities in connection with the required calculations of the margin of solvency, the guarantee fund and the minimum guarantee fund, in addition to all other applicable regulations[427].

640 The extent to which implicit items could be taken into consideration in the margin of solvency calculations continued to be dependent upon an order being made by the Secretary of State under section 68 of the ICA 1982 (Regulation 23(5)). Implicit items consisted of:

(a) an allowance for future profits of up to 50% of the product of the estimated annual profit and a factor representing the average outstanding term of the policies subject to a maximum of ten years (Regulation 24);

(b) an allowance, where zillmerising was appropriate but had not been used or had been used only partially, of not more than 3.5% of the relevant capital at risk or at a rate equal to the loading for acquisition costs included in the premium, subject to a reduction for any Zillmer adjustment which had already be made in the valuation (Regulation 25);

(c) hidden reserves[428] resulting from an underestimation of assets and overestimation of liabilities (other than the mathematical reserves) which were not of an exceptional nature (Regulation 26).

Matching and localisation – Part V

641 The currency matching and localisation rules in Part V required that where an insurance company's liabilities in a particular currency exceeded 5% of its total liabilities, at least 80% of those liabilities were to be covered in the same currency. If the liabilities were in sterling, the assets could be held in any member state; if they were to cover liabilities in any other currency, the assets were to

425 Regulation 22(3) referred to '*items that are not implicit items*' rather than to 'explicit items' (and defined 'implicit items' in Regulation 23(5) as being the future profits, Zillmer adjustment and hidden reserves valued in accordance with Regulations 24-26).

426 'Mathematical reserves' were defined in Regulation 2(1) as in ICR 1981 (see paragraph 265), save for a new exclusion in relation to 'deposit back arrangements': '*the provision made by an insurer to cover liabilities (excluding liabilities which have fallen due and liabilities arising from deposit back arrangements) arising under or in connection with contracts for long term business*'.

427 Regulation 23(1).

428 In a paper entitled 'Statutory Regulation of Long Term Insurance Business' prepared for the F&IA by William M. Abbott and revised by Nick C. Dexter in 2000 it was said that 'hidden reserves' were most relevant to non-UK companies as they adopted a different approach to the valuation of assets and liabilities, but in principle the concept might be used to disapply the admissibility limits relating to particular assets.

be held in the EC or in the country of the currency concerned (Regulations 27 and 31).

642 Index linked liabilities, business conducted by a UK company outside the EC and pure reinsurance business were excluded from the matching and localisation provisions (Regulations 28 and 32(1)(b) and (c)).

Valuation of assets – Part VIII and Schedules 11 and 12

643 Part VIII of ICR 1994 was made under the power of the Secretary of State to make valuation regulations under section 90 of the ICA 1982 and consolidated the law previously in force in relation to assets under Part V of ICR 1981[429] with amendments. Regulations on the valuation of assets had first been made in 1974[430] and had become progressively more complex over the years.

644 The interpretation regulation in Part VIII included a number of new or revised definitions[431] and ran to some eight pages; however, the general approach of the regulations remained as being to specify the manner in which assets were to be valued and to impose limitations on the extent to which certain assets could be taken into consideration when determining the solvency of a company. The basic aims remained as being to ensure that there was no undue concentration of risk in particular kinds of asset or overvaluation of assets which could endanger solvency.

645 Part VIII applied to the valuation of assets for the purposes of the following provisions of the ICA 1982: sections 29(7) (declaration of dividends), 31 (restrictions on transactions with connected persons), 32 (margin of solvency), 34 (companies supervised in other member states), 35 (form and situation of assets), 38 (requirements about investments), 39 (maintenance of assets in the UK) and 45 (residual powers to impose requirements to protect policyholders) and in relation to investigations under sections 18 and 42 of the 1982 Act.

646 Part VIII did not apply to the determination of the value of linked assets in relation to contracts providing for the payment of property linked benefits to the extent that the assets were held to comply with the requirements of section 35A of the ICA 1982 (regarding the adequacy of assets), to match liabilities in respect of such benefits[432].

647 Part VIII applied to both long term business and general business. In broad terms, the approach to valuation of assets (set out in Regulations 46-56) was to require that assets be valued as at a prescribed amount (for example, at their market value) or as not being greater than a specified amount, in the latter case, subject to an overriding requirement that this should be no more than the amount which, in all the circumstances of the case, was likely to be

429 See paragraph 194. Guidance in implicit items under the former provisions of regulations 10-13 of ICR 1981 in a Prudential Guidance Note for appointed actuaries, issued on 5 October 1984, explained that under-estimation of the value of an asset might occur because of an express requirement of ICR 1981 which had the effect of excluding or limiting the value of certain assets which could be counted towards the margin of solvency. Paragraph 32 of that guidance stated that allowing items which were explicitly excluded under the Regulations to be counted towards the margin of solvency would be '*tantamount to nullifying the effect of those regulations*'. Consequently, it was envisaged that concessions to allow inadmissible assets would '*rarely if ever be given*'.

430 In SI 1974 No. 2203, see footnote 56 and paragraph 167.

431 To allow for the valuation of assets in respect of such items as derivative contracts and stock lending transactions, to make provision for assets relating to regulated financial institutions and with revised definitions for secured debts and dependants (subsidiary companies).

432 Section 35A(2) and (3) made special provision for assets to match liabilities under linked long term contracts, requiring the assets to be of descriptions prescribed in regulations made under section 78 (Regulation 43 and Schedule 10 to ICR 1994 on permitted links were made for the purpose of section 78).

realisable (Regulation 45(4), which was extended in the following year, see paragraph 684)[433].

648 Regulation 48 on the valuation of debts and other rights was substantially revised from its predecessor provision[434]. Debts in respect of premiums which were due but had been outstanding for more than three months were to be disregarded[435]. The value attributed to land was to be no greater than the open market sale value assessed within the preceding three years by a qualified valuer (Regulation 49). The value of computer equipment was to be written off over four years and of other office machinery over two years (Regulation 50). Regulation 55 made provision for the valuation of rights under derivative contracts (for which no specific provision had been made in ICR 1981)[436].

649 The rules on the extent to which assets could be taken into account (known as the 'admissibility rules'[437]) were substantially revised (Regulation 57 and Schedule 12). The admissibility rules limited the extent to which most assets could be taken into account, based on the company's *'aggregate exposure to such assets'*. If the aggregate exposure exceeded the *'maximum admissible value'* for assets of the particular description, the excess value was to be left out of account.

650 The 'maximum admissible value' of various assets for a company carrying on long term business was included in Part I of Schedule 12. The limits were assessed by reference to the 'long term business amount' (initially defined as being, broadly, the sum of the company's long term liabilities and one sixth of its margin of solvency (or 800,000 ECU if greater), less specified deductions for such items as liabilities in respect of property linked benefits). Part I of Schedule 12 prescribed percentages of the long term business amount in relation to various descriptions of assets; assets of a value which exceed this percentage were to be disregarded in assessing the value of the company's assets for solvency purposes. For example, unsecured debts due from any one unincorporated body of a value greater than 1% of the long term business amount were to be left out of account.

651 The aim of the admissibility rules was to reduce the amount which could be taken into account for solvency purposes where there was considered to be too great a concentration of holding of a particular type of asset or holding with a particular party.

652 The admissibility rules were most strict in relation to assets considered to present the greatest risks. Certain assets were excluded from the admissibility rules, such as approved securities, debts due under reinsurance contracts and debts in respect of premiums.

653 As noted in paragraph 684, Regulation 57 of and Schedule 12 to ICR 1994 were replaced in 1995 and a revised definition of the 'long term business amount' was included in the new Schedule 12 (which was then re-amended in 1996). Under the amended definition, the long term business amount was defined as being the amount of the company's long term insurance liabilities (net of reinsurance ceded and excluding property-linked

433 In regulations 46 and 47 and Schedule 11.
434 Regulation 41 of ICR 1981.
435 Implementing article 21.1(vii) of the Third Life Directive.
436 'Derivative contracts' were defined in Regulation 44(1) as '*a contract for differences, a futures contract or an option*'. Article 21.1(iv) of the Third Life Directive referred to '*derivative instruments such as options, futures and swaps*' and required that they be valued on a prudent basis.
437 Reflecting articles 20-22 of the Third Life Directive, which required prudence and diversity in the investments and other assets used as cover for technical provisions, and imposed limits on the kinds of asset and degree of investment in specified kinds of investment.

liabilities), together with the (entire) amount of the margin of solvency (less any implicit items) and the amount of any deposit-back in connection with reinsurance in respect of long term business.

654 In the main, separate provision was made in relation to assets which supported linked long term business. As noted, assets required to match liabilities in respect of property linked benefits were excluded from Part VIII of ICR 1994. The benefits under such contracts entered into on or after 1 July 1994 were to be determined wholly by reference to the value, or fluctuations in the value, of the property listed in Part I of Schedule 10 (Regulation 43(1)).

655 Although assets held to cover index linked benefits were subject to the asset valuation rules in Part VIII, most descriptions of assets used to cover the liabilities under such contracts were initially excluded from the admissibility rules under Regulation 57 (by Regulation 57(14)). Regulation 57 was then substituted in 1995 and the assets used to cover the liabilities under contracts providing for index-linked benefits were made subject to the counterparty exposure limits under the asset admissibility rules. Index linked benefits were to be determined by reference to fluctuations in an index which met the description in Part II of Schedule 10 (Regulation 43(2)).

Determination of liabilities regulations – Part IX

656 In common with Part VIII, Part IX was made under the Secretary of State's power to make valuation regulations under section 90 of the ICA 1982. It re-enacted, with amendments, the provisions of Part VI of ICR 1981 which had first introduced regulations in relation to the determination of liabilities[438].

657 Part IX applied in respect of the determination of liabilities for the purposes of the same provisions of the ICA 1982 as those for which Part VIII on valuation of assets applied (see paragraph 645), and for the purpose of section 37(3) (exceptional grounds for intervention in relation to sections 39, 40 and 40A, which included the submission by the company to the Secretary of State of an account or statement which specified an amount of any liabilities which appeared to the Secretary of State to have been determined otherwise than in accordance with valuation regulations).

658 Part IX applied to the determination of property-linked liabilities (unlike Part VIII, from which valuation of assets held to match such liabilities was excluded (see paragraph 646)).

659 It has been noted that, although the effect of the liability regulations was to restrict the actuary's freedom to choose a valuation basis, the actuary still retained a very considerable degree of flexibility of choice in comparison to that available to actuaries in many other countries of the European Union[439].

660 Regulation 60 re-enacted the basic requirements in relation to the determination of liabilities for long term and general insurance business previously contained in Regulation 52 of ICR 1981, with a new exception in relation to cumulative preference shares (which were dealt with in Regulation 23(3) of the 1994 Regulations).

661 Although, as noted in paragraph 195 there were no financial reporting standards specifically for insurance business, Regulation 60 stated that:

(1) *Subject to this Part of these Regulations, the amount of liabilities of an insurance company in respect of its long term and general business shall be determined in accordance with generally accepted accounting concepts, bases*

[438] See paragraphs 261 et seq.
[439] The paper entitled 'Statutory Regulation of Long Term Insurance Business' referred to in footnote 428.

and policies or other generally accepted methods appropriate for insurance companies.

(2) *In determining under paragraph (1) above the amount of the liabilities of an insurance company, all contingent and prospective liabilities shall be taken into account but save as provided in regulation 23(3) of these Regulations not liabilities in respect of share capital.*

662 'Long term liabilities' were defined as under regulation 50 of ICR 1981 to mean '*liabilities of an insurance company arising under or in connection with contracts for long term business*', but with the addition of a reference to the expression including liabilities arising from 'deposit back arrangements'[440] (Regulation 58).

663 A new requirement was imposed on companies under regulation 61 in relation to liabilities under derivative contracts (and contracts with equivalent effect), to make sufficient provision on prudent assumptions for the effect of possible adverse changes in the value of the assets to which the contract related[441].

664 As noted above, Regulation 64 (derived from regulation 54 of ICR 1981), which contained general requirements for the determination of the amount of the long term liabilities, included for the first time a reference to the 'reasonable expectations of policyholders' in relation to the actuarial principles to be used.

665 Regulation 64 was intended to impose overriding obligations in relation to the determination of the amount of a company's liabilities. It required, without prejudice to its generality, compliance with the more detailed provisions of Regulations 65 to 75 in determining the amount of the long term liabilities. Regulation 64 provided:

(1) *The determination of the amount of long term liabilities (other than liabilities which have fallen due for payment before the valuation date) shall be made* ***on actuarial principles which have due regard to the reasonable expectations of policy holders*** *and shall make proper provision for all liabilities on prudent assumptions and shall include appropriate margins for adverse deviation of the relevant factors.* (Emphasis added.)

(2) *The determination shall take account of all prospective liabilities as determined by the policy conditions for each existing contract, taking credit for premiums payable after the valuation date.*

(3) *Without prejudice to the generality of paragraph (1) above, the amount of the long term liabilities shall be determined in compliance with each of regulations 65 to 75 below and shall take into account, inter alia, the following factors:*

   (a) *all guaranteed benefits, including guaranteed surrender values;*

   (b) *vested, declared or allotted bonuses to which policy holders are already either collectively or individually entitled;*

   (c) *all options available to the policy holder under the terms of the contract;*

   (d) *expenses, including commissions.*

440 Defined in regulation 2(1) as meaning, in relation to a contract for reinsurance, an arrangement whereby an amount is deposited by the reinsurer with the cedant (i.e. the insurance company which has arranged reinsurance).

441 Article 21.1(iv) of the Third Life Directive specified that such instruments could be used as cover for technical provisions '*in so far as they contribute to a reduction of investment risk or facilitate efficient portfolio management*'.

666 It is to be noted that paragraph (1) of Regulation 64 required provisions to include appropriate margins for adverse deviation of relevant factors[442]. Paragraphs (2) and (3) were also new and mirrored the provisions of the first principle for the determination of technical provisions under the Life Directives[443], which required a prudent prospective actuarial valuation which included the specified items listed in paragraph (3) of Regulation 64.

667 Regulation 54 of ICR 1981 (from which Regulation 64 of ICR 1994 was derived) had specified that the amount of the long term liabilities should *'in the aggregate not in any case be less than the amount calculated in accordance with regulations 55 to 64 below'* (see paragraph 266). The reference to '*in the aggregate*' in respect of the determination of the amount of the long term liabilities was not replicated in Regulation 64 of ICR 1994, which did not, in general, envisage the use of alternative valuation methods to those prescribed in the Regulations[444].

668 However, Regulation 67 of ICR 1994, which made specific provision for the valuation of future premiums, provided that if any alternative valuation method to those described in Regulation 67 had been used to value future premiums, it should be demonstrated that the alternative method resulted in reserves which were no less, in aggregate, than those which would result from the application of the methods specified in Regulation 67 (see paragraph 679 regarding Regulation 67(4)).

669 It is difficult to assess the practical impact of the inclusion of a reference to '*the reasonable expectations of policyholders*'[445] in the regulation which set out the fundamental requirements for the determination of long term liabilities. Its predecessor provision (Regulation 54 of ICR 1981) which had not included this term had been considered to provide a means of strengthening reserves where necessary in relation to the interests of with-profits policyholders if the net premium valuation basis did not result in sufficient provision for future bonuses[446].

---

442 Implementing item A.(iii) of article 17.1 of the First Life Directive as replaced by article 18 of the Third Life Directive which specified that a prudent valuation was not a 'best estimate' valuation and should include appropriate margins for adverse deviations of relevant factors.

443 Item A.(i) of article 17.1 of the First Life Directive as replaced by article 18 of the Third Life Directive.

444 Regulation 54 of ICR 1981 had referred to the amount of the liabilities being '*in the aggregate not... less than the amount calculated in accordance with regulations 55 to 64 below*'. Thus if any valuation methods other than those prescribed in regulations 55 to 64 had been used for the 'main valuation' a second valuation, compliant with those regulations, would be needed in order to demonstrate compliance with regulation 54. In effect, regulations 55 to 64 provided a minimum 'benchmark figure' against which the aggregate figure for the liabilities produced by the main valuation was to be tested. In calculating the 'benchmark figure' in accordance with regulations 55 to 64 offsetting of provisions or margins required by those individual regulations was not permitted. The guidance in early versions of GN8 concerning regulation 54 of ICR 1981 (e.g. in paragraph 3.1.1 of version 1.0) advised that the actuary should interpret the tests in regulations 55-64 in a prudent way, satisfy him or herself that, within the aggregate liability produced by his or her valuation, the various provisions and margins required by those regulations could be provided for in full, whether explicitly or implicity, and that, if he or she considered that one provision or margin required by the regulations for one category of contract was excessive, it was not permissible to offset part of it against another provision or margin required by those regulations for that or another category of contract, except in one specified circumstance. Under regulation 64 of ICR 1994 only one valuation was envisaged (subject to regulation 67(4) in respect of future premiums, see paragraph 679) and that valuation was required to be conducted taking account of specified factors and in accordance with the detailed regulations (65 -75), without offsetting of any margins required by those regulations. The updated guidance to appointed actuaries in GN8 version 4 issued at the end of 1994 in relation to regulation 64 of ICR 1994 advised (in paragraph 3.1.1) that offsetting a perceived excess in one provision or margin required by regulations 65- 75 for '*any element of the basis*' against another provision or margin required by the regulations was not permissible, save in one specified exceptional circumstance.

445 It is to be noted that no reference was made in Regulation 64 to 'potential policyholders', suggesting that the expectations of prospective policyholders' were not considered to be relevant in this context.

446 See the comments of the GAD actuary quoted at paragraph 279.

670 The professional guidance issued to appointed actuaries by the F&IA had made reference to the need for actuaries to consider policyholders' reasonable expectations in some way from the time GN1 was first issued in 1975 and by 1992, that guidance referred to the need for the actuary to have regard to policyholders' reasonable expectations when assessing long term liabilities[447].

671 The inclusion of the expression in the legislation in 1994 appears to have been intended to give the concept greater significance. Although doubts continued to be expressed about the ambit of the phrase, it appears to have been accepted that it was intended to encompass something more than contractual liabilities, and was of particular significance for policyholders' expectations in relation to discretionary items, such as reversionary and terminal bonus.

672 A note of a meeting between DTI and GAD officials regarding the drafting of ICR 1994 in or around April 1994[448] indicates that it had been proposed that the words '*which have due regard to the reasonable expectations of policyholders* ***and to the value placed on assets***' should be included to amplify the reference to 'actuarial principles', in order to make it clear that proper allowance should be made in the valuation for future bonuses.

673 The final words of this proposed additional drafting (quoted in bold text) did not appear in ICR 1994, as it had been considered that those words would '*steer the actuary towards requiring a reserve for terminal bonus*'[449]. It was considered that the remaining requirement (to have regard to the reasonable expectations of policyholders in the actuarial principles used) would be '*sufficient to supervise this area adequately, and it will allow the use of the investment reserve for accrued terminal bonus*'.

674 The Penrose Report[450] indicates that even ICR 1994 did not require *recognition* of liabilities by reference to policyholders' reasonable expectations, but simply that liabilities which were recognised should be quantified for the purpose of the statutory returns taking into account, inter alia, policyholders' reasonable expectations (noting that Skerman's[451] original approach to policyholders' reasonable expectations was to cater for them through the use of a net premium basis for valuation and not by treating them as liabilities).

675 Whether or not policyholders' reasonable expectations were to be treated as 'liabilities' under ICR 1994, if the additional reference to them was to serve any function, it is to be assumed that it was intended that policyholders' reasonable expectations should be a factor which could affect the amount or composition of the technical provisions which a company was required to make.

---

447 See paragraph 514(g) (and paragraph 352 regarding the requirement introduced in 1983 for actuaries '*to pay due regard to the future interests of with-profit policyholders*' in their valuations under paragraph 2.1.3 of GN8).

448 The note appears to have been prepared by another GAD actuary. It refers to the deletion of a paragraph proposed to be numbered (7) in the draft regulation concerning the method of calculation (Regulation 65 in the enacted version of ICR 1994) because of a '*genuine concern that the regulation as drafted required companies to reserve for final bonuses, even though we have made it clear that this was not the intention. (We want UK companies to be able to continue their present practices with regard to the cover for the solvency margin, which will thus enable them to use the investment reserve for this purpose.)*'. The note goes on to state that in order to ensure that the reasonable expectations of policyholders would be covered and proper allowance was made in the valuation for future bonuses, it had been decided to include the additional phrase quoted in the paragraph above, to amplify the meaning of 'actuarial principles'.

449 The note indicates that this was the view of the three actuaries representing the actuarial profession on the implications of the originally proposed additional drafting, although each of them had interpreted it in a different way.

450 Chapter 10, paragraph 19. This view is based in part on the definition of 'long term liabilities' in Regulation 58 as being those arising '*under or in connection with contracts*'.

451 In his 1966 paper on 'A Solvency Standard for Life Assurance Business': JIA 92 (1966) 57-84.

676 Describing the changes then shortly to be introduced by ICR 1994 at a meeting of the Institute of Actuaries in April 1994, a GAD actuary explained that there would no longer be any reference to specific reserves for future bonuses; instead the actuary would have to have regard to PRE. '*There was, however, no intention of requiring a general strengthening of reserves in this area.*'[452]

677. Regulation 65 on methods of calculation of long term liabilities was entirely new and was made to implement obligations under the Third Life Directive. It required the amount of the long term liabilities to be determined separately for each contract by a prospective calculation, permitting a retrospective calculation only if a prospective calculation could not be applied to the particular type of contract or benefit or where a retrospective calculation would produce an amount at least as great as a prudent prospective calculation[453].

678 That Regulation also required that the method of calculation of the amount of the liabilities and the assumptions used should not be subject to discontinuities from year to year arising from the arbitrary changes. It required that liabilities for with-profits contracts should have regard to the level of premiums under the contracts, to the assets held in respect of those liabilities, and to the custom and practice of the company in the manner and timing of the distribution of profits or the granting of discretionary additions.

679 Regulation 67 dealt with the valuation of future premiums. The first three paragraphs of the regulation repeated the provisions of Regulation 57 of ICR 1981[454] which entailed a net premium method of calculation in most cases. A new paragraph (4) was added which provided:

> *An alternative valuation method to that described in paragraphs (1)-(3) above may be used where it can be demonstrated that the alternative method results in reserves no less, in aggregate, than would result from the use of the method described in those paragraphs.*

680 Regulation 69 which dealt with the rates of interest to be used in calculating the present value of future payments by or to an insurance company was revised from its predecessor provision (Regulation 59 of ICR 1981), in light of the provisions of the Third Life Directive which set out limits and requirements for the rules to be made by member states in relation to the prudent choice of an interest rate[455] in determining the amount of the technical provisions.

681 Regulation 72 regarding options replaced Regulation 62 of ICR 1981[456]. The wording of paragraph (1) was revised to require that provision should be made '*on prudent assumptions*' to cover any increase in the liabilities caused by policyholders exercising options under their contracts[457]. Paragraph (2), regarding the calculation of the required provision for options under which the policyholder could secure a guaranteed cash payment within twelve months after the valuation date, re-enacted the provisions of Regulation 62(2) of ICR 1981 without amendment.

452 JIA 121, III, 597-601 at page 597.
453 Implementing items A.(i) and (ii) of article 17.1 of the First Life Directive as replaced by article 18 of the Third Life Directive.
454 See paragraph 269.
455 Item B. of article 17.1 of the First Life Directive as replaced by article 18 of the Third Life Directive.
456 See paragraph 272.
457 The Report of the FSA on the Review of the Regulation of Equitable from 1 January 1999 to 8 December 2000 submitted as evidence to the inquiry conducted by Lord Penrose (16 October 2001) (the Baird Report), at paragraph 3.22.5 describes the interpretation of Regulation 72 as being at the heart of the debate on reserving between Equitable and the Treasury (and later, the FSA). See paragraph 978 regarding the amendments made to Regulation 72 in May 2000 by the Insurance Companies (Amendment) Regulations 2000 SI No. 1231.

682 Regulation 75 which replaced Regulation 55 of ICR 1981[458] regarding the impact on the determination of liabilities of the nature and term of the assets representing the long term fund, contained revised and expanded provisions. The changes were intended to clarify the need to ensure the adequacy of the assets to meet obligations under long term contracts as they arose and the liabilities as determined in accordance with regulations 65-74.

Amendments to ICR 1994

683 ICR 1994 was amended later in 1994[459] and in 1995[460]. Revisions made in 1995 included a substituted Regulation 45(4) (which extended to all valuations under Part VIII the overriding rule that assets should not be valued at an amount greater than that at which they were expected to be realised), a new regulation 47A (relating to certain sale and repurchase transactions), the replacement of certain of the asset valuation regulations (Regulations 51-53 and 55-57), the replacement of Schedule 12 (which was substantially amended and contained a revised definition of the 'long term business amount', which was re-amended in the following year), and minor revisions to the determination of liability regulations (Regulations 58, 60, 61, 62, 64 and 69).

684 ICR 1994 was amended by six other statutory instruments[461] before they were revoked with effect from 1 December 2001 by article 460 of the Financial Services and Markets Act 2000 (Consequential Amendment and Repeals) Order 2001[462]. The amendments made in 2000 by the Insurance Companies (Amendment) Regulations 2000[463] are referred to below (paragraphs 969 et seq).

The Insurance Companies (Accounts and Statements) (Amendment) Regulations 1993 and 1994

1993 amendment regulations to the ICAS Regulations 1983 (appointed actuary certificate of compliance with professional guidance)

685 The Insurance Companies (Accounts and Statements) (Amendment) Regulations 1993[464] revised the certificate which the appointed actuary was required to give under Schedule 6 to the ICAS Regulations 1983 in connection with the statutory returns, as had been proposed in the consultation paper issued by the DTI in 1990 regarding the need to strengthen the role of the appointed actuary system[465].

686 With effect from 1 January 1994, the actuary's certificate was required to include a statement (provided it was the case) that the two guidance notes issued by the F&IA: GN1 and GN8 dated July 1992, had been complied with. Thus, the professional guidance to actuaries was given some acknowledgment within the statutory regime (but without making it a statutory requirement to comply with it).

458 Which had led to the practice of 'resilience testing'.
459 By the Insurance Companies (Amendment No.2) Regulations 1994 SI No. 3133, which came into force on 31 December 1994, to make consequential amendments to ICR 1994 in the light of amendments made on 30 December 1994 to the ICA 1982 by SI 1994 No. 3132 (referred to at paragraph 625), implementing aspects of the Agreement on the European Economic Area.
460 By the Insurance Companies (Amendment) Regulations 1995 SI No. 3248 which came into force on 31 December 1995.
461 The Insurance Companies (Amendment) Regulations 1996 SI No. 942; the Insurance Companies (Amendment No. 2) Regulations 1996 SI No. 944; the Insurance Companies (Amendment) Regulations 1998 SI No. 2996; SI 2000 No. 1231 (see footnote 457) and the Banking Consolidation Directive (Consequential Amendments) Regulations 2000 SI No. 2952.
462 SI 2001 No. 3649.
463 SI 2000 No. 1231.
464 SI 1993 No. 946.
465 See paragraphs 401 et seq.

1994 amendment regulations to the ICAS Regulations 1983

687 The third main set of regulations enacted to give effect to the Third Life Directive (and the Third Non-Life Directive) in the UK was the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1994[466] (the ICASA Regulations 1994). Their primary purpose was to implement the Directives to the extent that they affected the form and content of the annual returns required to be submitted by insurance companies under the ICA 1982 as prescribed in the 1983 Regulations. They also contained amendments consequent upon the consolidation of ICR 1981 by ICR 1994.

688 The ICASA Regulations 1994 were made by the Secretary of State as designated Minister under section 2(2) of the ECA 1972 and under various provisions of the ICA 1982. They came into force on 1 July 1994, the same date as the other two main sets of regulations made in 1994.

689 Changes were made by the ICASA Regulations 1994 to a number of provisions of the ICAS Regulations 1983, including the prescribed forms, to take account of the European Economic Area Act 1993[467] and to exclude 'EC companies'[468] from the obligation to submit annual returns to the Secretary of State, save in exceptional circumstances (regulation 2).

690 The ICASA Regulations 1994 required that additional information be given in the returns in relation to derivative contracts, subordinated loan capital[469] and cumulative preference shares, with a new prescribed form to provide an analysis of derivative contracts, a new statement of additional information on such contracts and amendments to other prescribed forms (Regulations 9 and 15 inserting a new Regulation 22B and Form 13A in the ICAS Regulations 1983).

691 Regulation 17 of the ICASA Regulations 1994 imposed a new requirement for the abstract of the valuation report prepared by the appointed actuary (under Schedule 4 to the ICAS Regulations 1983) to describe the investment guidelines of the long term fund, including the use of derivative contracts and the method by which allowance had been made for derivative contracts in determining the long term liabilities.

692 Additional information was required to be provided in relation to 'shareholder controllers'[470]. The company was required to provide, in respect of each person who was a shareholder controller at the end of the financial year, a statement of the percentage of shares that person held and the percentage of the voting power that he or she was entitled to exercise (under a new Regulation 22C inserted in the ICAS Regulations 1983 by Regulation 10 of the ICASA Regulations 1994).

466 SI 1994 No. 1515.

467 Which made provision for the general implementation in the UK of the Oporto Agreement relating to the establishment of the European Economic Area (dated 2 May 1992, as adjusted by the Brussels Protocol of 17 March 1993) and specified that UK legislation which was limited by reference to the European Communities should, in general, have effect with the substitution of a corresponding limitation relating to the European Economic Area.

468 i.e. companies with their head office situated in and authorised by a member state other than the UK.

469 See paragraphs 499 and 715 et seq regarding the changes introduced by the Third Life Directive in relation to the value of subordinated loans and cumulative preference share capital being treated as an asset which could (within specified limits) count towards the required margin of solvency and the arrangements in the UK for a company to rely on a subordinated loan for this purpose if a successful application had been made by the company to the Secretary of State for an order under section 68 of the ICA 1982. The change to the ICASA Regulations 1994 referred to above simply required that additional information be provided about such loans (it did not permit their use for margin of solvency purposes).

470 As defined in section 96C of the ICA 1982, see footnote 410.

693 Regulation 18 of the ICASA Regulations 1994 required an additional statement to be included in the certificate to be given by the directors of the company under Schedule 6 to the ICAS Regulations 1983, in the form of a list of any published guidance[471] with which the company's internal systems of control complied or in accordance with which the return had been prepared (new paragraph 6A of Schedule 6 to the 1983 Regulations).

694 The requirements for the certificate to be given by the appointed actuary were also revised to require an additional statement (if it was the case) of his or her opinion that the premiums for contracts entered into during the financial year were sufficient to enable the company to meet its commitments in respect of those contracts and, in particular, to establish adequate mathematical reserves (new paragraph 9(a)(v) of Schedule 6 to the 1983 Regulations).

695 The requirements for qualifications of auditors under Regulation 30 of the ICAS Regulations 1983 were amended to specify that the auditor of an insurance company's accounts for the purpose of section 21 of the ICA 1982[472] should be a person eligible for appointment as the company's auditor under section 25 of the Companies Act 1989, other than a person to whom section 34(1) of the Act applied[473] (Regulation 14). The requirements relating to qualifications of appointed actuaries in Regulation 28 of the ICAS Regulations 1983 were not amended.

696 The ICAS Regulations 1983 were revoked together with the ICASA Regulations 1994 and other amending regulations in respect of any financial year ending on or after 23 December 1996 by the Insurance Companies (Accounts and Statements) Regulations 1996[474] referred to below.

The Auditors (Insurance Companies Act 1982) Regulations 1994

697 Section 21A of the ICA 1982 (inserted in that Act by the FS Act 1986[475]) was designed to enable auditors of insurance companies to communicate to the Secretary of State any matters which came to their attention which were relevant to the Secretary of State's functions under the 1982 Act.

698 Section 21A(2) and (3) empowered the Secretary of State to make regulations to specify circumstances in which an auditor would be under a *duty* to communicate a matter to the Secretary of State, if it appeared to him that any auditor or class of auditor was not subject to satisfactory rules made or guidance issued by a professional body in this respect. The matters to be communicated could include matters relating to persons other than the insurance company.

699 The Auditors (Insurance Companies Act 1982) Regulations 1994[476] were made for the purpose of section 21A(2) and (3), to specify the circumstances in which an auditor of an insurance company was under an obligation to communicate a matter to the Secretary of State.

[471] The Prudential Guidance Notes (or 'PGNs') issued by the DTI to insurance companies referred to in paragraphs 715 et seq below were considered to be 'published guidance' with which directors of insurance companies were required to certify compliance.
[472] See paragraph 509 regarding the amendment of section 21 in 1991 by SI 1991 No. 1997.
[473] Namely, a person whose only appropriate qualification was authorisation granted by the BT under section 13(1) of the Companies Act 1967.
[474] SI No. 1996 No. 943.
[475] See paragraph 383.
[476] SI 1994 No. 449.

700 In effect, such an obligation arose where the auditor became aware of matters which gave him or her reasonable cause to believe that they were or might be of material significance for determining whether any of the Secretary of State's powers of intervention under sections 38 to 45 of the ICA 1982 should be exercised.

701 With effect from 16 July 1996, the Auditors (Insurance Companies Act 1982) Regulations 1994 were amended[477], inter alia, to place the auditor under obligations to communicate information to the Secretary of State in additional circumstances. These additional circumstances were those in which the auditor had reasonable cause to believe that:

(a) the authorisation of the company concerned[478] could be withdrawn under section 11 of the ICA 1982, other than on grounds of sound and prudent management under section 11(2)(ab);

(b) there had been, or might be or might have been, a failure to fulfil any of the criteria of sound and prudent management and that the failure was likely to be of material significance[479];

(c) there had been, or might be or might have been, a contravention of any provision of the ICA 1982 and that contravention was likely to be of material significance; or

(d) the company's continuous functioning might be affected;

or where the circumstances were such as to preclude the auditor from stating in his or her report that the company's annual accounts had been properly prepared in accordance with the Companies Act 1985 or section 17 of that Act.

Guidance for Appointed Actuaries - 1994 revisions to GN1 and GN8

702 As noted above[480], from 1 January 1994 the certificate to be given by the actuary as part of the statutory returns was required to include a statement of compliance with the guidance notes GN1 and GN8, giving the professional guidance a degree of statutory recognition.

GN1

703 A revised version of GN1 (version 4.0) was issued in December 1994, following the various changes to the ICA 1982 and the subordinate legislation which had been introduced in July of that year. On this occasion PRE did not feature in the revisions, which related to such matters as:

(a) the new requirement for an actuary to possess a practising certificate[481] in order to act as an appointed actuary (paragraph 2.1);

(b) a requirement for the appointed actuary to certify, inter alia, that GN1 and GN8 had been complied with (and stating the effective dates of the Guidance Notes); if sufficient information on issues relating to the financial position of the company had not been made available to ensure compliance with GN1 and GN8 the actuary was required to qualify the certificate (paragraphs 4.1 and 4.3);

477 By paragraph 5(4) of Schedule 4 to the Financial Institutions (Prudential Supervision) Regulations 1996 SI No. 1669 which inserted an additional paragraph (1A) in Regulation 3.

478 The 'company concerned' included a company which was closely linked by control to the company subject to audit by the auditor.

479 'Of material significance' was defined to mean of material significance for the purpose of determining whether any of the powers conferred on the Secretary of State by sections 38 to 45 of the ICA 1982 should be exercised.

480 See paragraph 685 regarding SI 1993 No. 946.

481 See paragraph 704 regarding the proposed criteria for the issue of practising certificates.

(c) to advise that any appointed actuary who became doubtful as to the proper course to adopt in relation to a potentially significant problem should seek help and advice through the Professional Guidance Committee[482] (replacing the previous reference to the Honorary Secretaries of the Institutes) (paragraph 1.2);

(d) the new requirement for the certificate to be given by the appointed actuary to include a statement of the adequacy of the premium rate *'on reasonable actuarial assumptions, to meet all commitments under or in connection with the contract'* as required by section 35B of the ICA 1982[483], noting that the certificate was retrospective (relating to contracts written during the financial year) and that reserves would have been set up to allow for any anticipated losses such that this requirement should not in itself make any demands on the actuary (paragraph 5.2);

(e) to specify a basis for assessing the minimum provision to be made for future expenses of continuing the existing business (paragraph 6.4);

(f) requirements for the appointed actuary to be aware of the possible effects of derivative instruments used by the company when choosing the valuation basis (paragraph 6.6) and to advise the company that appropriate guidelines should be given to investment managers regarding the use of derivative contracts (paragraph 6.11);

(g) a requirement that the appointed actuary should be satisfied that the margins in any published valuation of the liabilities, including those required by statute, were adequate having regard to the actuary's own assessment of the risks inherent in the conduct of the company's business (paragraph 6.13); and

(h) in respect of the actuary's written report to the DTI, the appointed actuary was required to use best endeavours to ensure that the financial results were presented in a way which demonstrated the true underlying position of the company and that the results were not distorted by any undisclosed valuation methods or assumptions (paragraph 8.1).

704 The F&IA began to issue practising certificates at the end of 1992. The criteria for the issue of practising certificates were intended to address both the experience and knowledge and the 'good character' of the actuary, and incorporated the statutory criteria[484]. According to the proposals outlined before their introduction[485] the criteria for issue of practising certificates were to require an appointed actuary:

(a) to be a fellow of the Faculty or the Institute of Actuaries;

(b) to be at least thirty years of age;

(c) to have undertaken appropriate Continuing Professional Education (CPE);

482 A committee of the F&IA. Its current terms of reference are: '*to assist the Professional Affairs Board (PAB) by guiding members of the profession in all professional matters, particularly those relating to interpretation of and compliance with professional guidance...*'.

483 Section 35B was inserted in the ICA 1982 by the ICTID Regulations 1994. Under paragraph 9 of Schedule 6 to the ICAS Regulations 1983 (regarding the certificate given by the actuary to be annexed to the returns) as amended by Regulation 18(5) of the ICASA Regulations 1994 the actuary was required to state (if it was the case) '*that, in his opinion, premiums for contracts entered into during the financial year and the income earned thereon are sufficient, on reasonable actuarial assumptions, and taking into account the other financial resources of the company that are available for the purpose, to enable the company to meet its commitments in respect of those contracts and, in particular, to establish adequate mathematical reserves*'.

484 In regulation 28 of the ICAS Regulations 1983.

485 JIA 118, III, 517-521 at page 519.

(d) to have appropriate practical experience;

(e) to have undertaken a professionalism course if recently qualified;

(f) to have had no adverse tribunal[486] finding; and

(g) to be 'Form B satisfactory'[487], i.e. 'fit and proper' (later described as an 'appropriate person', similar to the 'fit and proper' requirement for insurance company directors).

It was intended that appointed actuaries would receive a certificate automatically on application, which was to include an undertaking by the actuary to notify relevant changes in circumstances, for example if the person's CPE record was not up to date or if there had been changes affecting their 'fit and proper' status.

705 The DTI commented informally on the proposals for the practising certificate system established by the F&IA[488].

706 By 1994, GN1 had become a significantly longer document than when first introduced in 1975 and imposed even greater obligations on the appointed actuary in relation to the regulation of the company's business. Nonetheless it continued to contain substantial elements of the original guidance, drafted in broad and general terms. It also continued to envisage that the appointed actuary might hold more than one role within a company, such as that of a director.

GN8

707 The version of GN8 issued in 1994 (version 4.0) was considerably updated and expanded in the light of ICR 1994.

708 The advice on Regulation 64 of ICR 1994 (corresponding to that on Regulation 54 of ICR 1981) was extended in view of the new drafting in Regulation 64 which specified that the actuarial principles used to determine the amount of the long-term liabilities must have due regard to policyholders' reasonable expectations and include appropriate margins for adverse deviation of the relevant factors.

709 Actuaries were advised that it was permissible to group categories of contract (e.g. those with similar kinds of benefit, including options and guarantees which were considered to be sufficiently homogeneous) in deriving a valuation basis (paragraph 2.1); two separate paragraphs then dealt with policyholders' reasonable expectations and resilience testing.

710 In relation to policyholders' reasonable expectations, paragraph 2.3 stated:

> *When carrying out the valuation in compliance with Regulations 65 to 75[489], this should be interpreted as requiring the valuation basis to be sufficiently strong to enable an appropriate level of reversionary bonus to emerge (and similar bonuses which are added periodically over the term of the contract)* ***but not as requiring implicit or explicit provision for any element of terminal bonus or any final payment of additional bonus****. The actuary*

486 Apparently a reference to the disciplinary tribunal of the F&IA.
487 Apparently a reference to the Form B which had appeared in Schedule 6 to ICR 1981, requiring particulars to be given of a proposed controller or newly appointed director or manager.
488 According to a letter from an actuary who been involved in developing the system of practising certificates for the F&IA to the DTI, dated 21 November 1991.
489 Which contained details of the minimum criteria for the determination of liabilities.

would, however, be expected to make other investigations in order to be satisfied that the life fund is able to support a proper level of future terminal bonus having regard to the bonus smoothing policy followed by the company. (Emphasis added.)

711 In relation to the need to provide appropriate margins for adverse deviations of the relevant factors under Regulation 64, paragraph 2.4 of version 4.0 of GN8 repeated earlier guidance on Regulation 54 of ICR 1981, that the appointed actuary should consider the resilience of the valuation to changes in circumstances with special reference to more extreme changes to which the office might be vulnerable – but did not give specific examples of changes to be considered.

712 The requirement under Regulation 64(1) to '*include appropriate margins for adverse deviation of the relevant factors*' gave effect to part of the provisions of article 18 of the Third Life Directive (amending article 17 of the First Life Directive) and applied to all the assumptions used in the valuation. Regulation 64(1) created an additional requirement to that under Regulation 75 of ICR 1994 (to take account of possible future changes in the value of assets) which gave rise to resilience testing and resilience reserves and which had been a UK requirement which had been part of the original UK determination of liabilities regulations (Regulation 55 of ICR 1981).

713 Much of the guidance on individual regulations was expanded or revised. In relation to Regulation 75[490], paragraph 3.6.3 stated that the company's reserves (including any additional reserves required under Regulation 75) should be sufficient to absorb the effect of changes in interest rates and asset values on a suitably prudent basis without prejudicing the company's ability to hold reserves which satisfied Regulations 64-74 in the changed conditions.

714 When assessing any additional reserves required by Regulation 75, any derivative contracts were to be revalued taking those changes into account. In relation to with-profits business, paragraph 3.6.4 specified that actuaries were to ensure that '*the liability in the changed investment conditions adequately covers policyholders' (revised) reasonable expectations and (more generally) that the valuation basis satisfies regulation 64 (excluding the reference to regulation 75)*'.

Prudential Guidance Notes and 'Dear Director' letters from the DTI

Prudential Note 1994/1 – Hybrid Capital: Admissibility for Solvency

715 From 1994 onwards the DTI began to issue a series of guidance notes to insurance companies on topics of interest or concern, described as 'Prudential Notes' or 'Prudential Guidance Notes' (PGNs). The first, numbered 1994/1, dealt with 'hybrid capital', the subordinated loans which had been the subject of changes introduced by article 25 of the Third Life Directive, allowing the value of such loans to count towards the cover for the margin of solvency, subject to certain limits[491].

716 In the UK, no 'blanket' permission was included in the legislation to allow companies to use subordinated loans for these purposes. Instead, a company had to make an application to the Secretary of State for an order under section

490 Which required the nature and term of the assets representing the liabilities to be taken into account when determining the amount of the long term liabilities, including prudent provision against the effects of possible changes in the value of the assets on the ability of the company to meet its obligations under long term contracts as they arose and the adequacy of the assets to meet the liabilities determined in accordance with Regulations 65-74.

491 See paragraphs 499 to 502.

68 of the ICA 1982 to permit this on a case by case basis.

717 Prudential Note 1994/1 explained the meaning of 'hybrid capital' as being essentially loan capital, but with a number of conditions which removed some of the lender's usual rights, allowing the loan to be treated like the proceeds of a share issue for regulatory purposes. The note stated that the Department's main concern was to ensure that companies had sufficient risk capital to meet unexpected pressures on business and that it would view applications to count loan capital as part of the solvency margin in that light.

718 Prudential Note 1994/1 described four categories of capital which would satisfy the requirements of the First Life Directive: three specified types of subordinated loan capital and in the case of a mutual, a 'subordinated members' account'[492].

719 The note explained the detailed requirements for hybrid capital, including the required limitations on the usual lender's rights and the extent of the subordination and imposed additional requirements to those in the Directive. In order to protect the interests of with-profit policyholders in the long term fund, the loan was not to constitute a liability attributable to that fund.

720 Furthermore, the lender's rights were to be subordinated to all other creditors in the event of winding up. The note repeated the limits on the use of subordinated loans in meeting the solvency margin as set out in the Third Life Directive (up to 50% of the required margin of solvency with no more than 25% in aggregate being covered by fixed term instruments).

721 Prudential Note 1994/1 explained that under insurance companies legislation, the value of hybrid capital instruments could not count for the purpose of providing the required margin of solvency because the instruments gave rise to liabilities which would offset the value of the funds raised. However, section 68 of the ICA 1982 gave the Secretary of State[493] discretion to modify or disapply specified provisions of the Act and regulations made under it.

722 It was envisaged that a section 68 order made in those circumstances would vary the terms of Regulations 23 and 60(2) of ICR 1994, so that the liability to repay the loan would be excluded from the margin of solvency calculations (up to the appropriate proportion of the margin of solvency).

723 Insurers *'wishing to take advantage of the opportunity offered'* were invited to apply to the DTI for a section 68 order[494]. The procedure and timescale for such applications were explained in the note.

'Dear Director' letters

724 From 1 December 1994, the DTI began to issue a series of letters to the chief executives of insurance companies known as 'Dear Director' or 'DD' letters. The first, referenced DD1994/1, drew the company's attention to two new series of PGNs on 'Systems of Control' (in relation to the new 'sound and prudent management' obligations under the ICA 1982 as amended) and 'Preparation of Returns'.

---

492 Which, under the Third Life Directive, could also count as cover for the solvency margin and, unlike subordinated loans, could count against the entire margin. The Prudential Note described the members' account as being a loan made by a member of the company (subject to a number of significant specified conditions), intended to be part of the core capital of the company, to be available to meet losses.

493 Prudential Note 1994/1 referred to the discretion being that of the DTI.

494 Equitable considered the possibility of taking out a subordinated loan in 1993 but did not proceed at that time. The company eventually obtained an order under section 68 of the ICA 1982 in respect of a subordinated loan of £346 million on 19 August 1997.

725 These two series of guidance notes were intended to be treated as 'published guidance' for the purpose of the requirement that the directors should include in their certificates as part of the statutory returns, a list of, inter alia, the published guidance with which the company's systems of control complied or in accordance with which the return had been prepared[495].

726 Companies were advised that it was not compulsory to comply with the guidance, but that it was compulsory to have adequate systems of control in place (and to comply with, for example, the valuation regulations). Appendices to the letter described the background to the two types of guidance and listed guidance on those and other topics which the DTI had issued or intended to issue.

727 The first DD letter enclosed a copy of PGN 1994/6 on systems of control over investments, counterparty exposure and the use of derivatives and asked companies to provide a 'state of play' report summarising the extent to which the company's systems already complied with PGN 1994/6 and any remedial action being undertaken if they did not.

728 The next such letter, DD1994/2 (16 December 1994), circulated PGN 1994/7 on asset valuation. Subsequent DD letters dealt with such matters as guidance on valuation of reinsurance recoveries (DD1994/3), clarification of the accounting treatment which should apply to financial reinsurance arrangements in preparing the statutory returns to the DTI (DD1995/1) and the contents of directors' certificates in relation to years starting on or after 1 January 1995 (DD1995/2), which annexed an updated list of the published guidance considered to be relevant for this purpose.

729 The last of those letters explained that what the DTI was looking for from the directors' certificates in so far as they applied to the 'preparation of returns guidance' was an assurance that a responsible individual or team had read the guidance and had understood its implications and that the company had a reasonable system for valuing assets and assessing derivatives which was consistent with the guidance.

Departmental consideration of PRE and Ministerial statement in 1995

730 From around 1989 onwards a number of individual cases came to the attention of the DTI and GAD in which the meaning of PRE was considered to be of particular importance. Seven such cases had been outlined in the first F&IA joint working party report of April 1990 and individual cases of concern continued to emerge, commonly relating to the balance between the interests of policyholders and those of shareholders in relation to the division of profits.

731 Counsel's opinion had been obtained by the DTI (and by the insurance companies concerned) on a number of occasions[496]. A draft DTI document dated 11 April 1995 summarised the main principles to emerge from the advice the DTI had obtained from counsel. This included advice to the effect that:

(a) policyholders may have a 'reasonable expectation' for the purposes of the ICA 1982 notwithstanding that it went beyond enforceable legal rights;

(b) the subjective expectations of a particular policyholder or even the generality of

[495] Paragraph 6A of Schedule 6 to the ICAS Regulations 1983 inserted by the ICASA Regulations 1994 (see paragraph 693).
[496] References to or copies of opinions and notes of advice indicate that advice from counsel had been provided in 1987, 1989 and 1993.

policyholders were not relevant (and the 'expectations' in question included those of potential policyholders, who by definition could have no state of mind about the affairs of the company); the word 'reasonable' imported an objective test relating to a hypothetical reasonable policyholder;

(c) the hypothetical policyholder could have an expectation of the manner in which the business of the company would be conducted notwithstanding that the generality of policyholders were wholly ignorant of the relevant facts. If this were not so, the Secretary of State would be unable to exercise his intervention powers if the information which led him to act was not available to the generality of policyholders and a company would be less amenable to regulation the more secretively it behaved. The Secretary of State's powers to intervene depended upon the information which was available to him at the time and not necessarily that which was available to policyholders;

(d) action by a company would certainly be contrary to the reasonable expectations of policyholders if their policies had been marketed to them on a basis which was inconsistent with that action;

(e) PRE related to more than the amount of any declared bonuses; a hypothetical policyholder could reasonably expect that the balance between policyholders and shareholders or between different classes of policyholders would not be, in any substantial respect, altered in a manner adverse to them (or to any class of them). 'Adverse' referred to the balance between groups and not to the anticipated return before and after the relevant action by the company. Policyholders might therefore be adversely affected even if they would be better off after the relevant action, if the facts showed that they would have been better off by a larger margin had the balance of competing interests been left undisturbed; and

(f) factors relevant to the determination of PRE in any particular case depended upon:

(i) past practice of the company;

(ii) written or oral statements made by the company at the point of sale, in marketing literature, policy documentation, with-profit guides etc; and

(iii) industry practice as understood through media commentary.

(Advice had also been given on 'orphan estates'[497] suggesting a division between policyholders and shareholders in a 90:10 proportion as a starting point based on industry practice.)

732 In view of the increasing number of cases in which PRE was emerging as an issue, from at least 1994 onwards, correspondence took place within the DTI and between the DTI and GAD about the need to establish some principles relating to PRE against which to judge the different cases. The possibility of a public statement or even further legislation was suggested.

[497] Loosely meaning assets held in excess of those to meet liabilities (and meeting PRE, including terminal bonus); often used in a context of most relevance to proprietary offices rather than to mutuals (but Equitable's policy was to pay out any such surplus in any event). Sometimes referred to as a company's 'free estate' or simply its 'estate'.

733 Eventually a public statement on PRE was made, in the form of an answer to a Parliamentary Question given by the then Minister for Consumer Affairs on 24 February 1995[498], following the announcement by a major insurance company of its proposal to restructure its long-term funds in a manner which was considered to be consistent with the response given by the Minister.

734 The statement was directed at the position of with-profit proprietary offices which had accumulated a surplus in their long term funds and the issue of the division of that surplus between policyholders and shareholders, advocating division in the proportion 90:10, unless there was clear evidence to support a different allocation. The principles were outlined in very general terms:

> *The Department considers that policyholders' reasonable expectations in respect of attribution of surplus are influenced by a range of factors, notably:*
>
> *(a) the fair treatment of policyholders vis-á-vis shareholders;*
>
> *(b) any statements of the company as to its bonus philosophy and the entitlement of policyholders to share in profits, for example, in its articles of association or in company literature;*
>
> *(c) the history and past practice of the company;*
>
> *(d) general practice within the life insurance industry.*

It was said that the Department would assess any similar proposals from other life offices having regard to the facts and the principles set out in the statement.

735 It appears that little or no detailed guidance was issued at this time in relation to the question of the interpretation of PRE for policies containing guarantees or options, although there had been statutory requirements under the Regulations to make proper provision for them for many years. Nor was there any published guidance from the DTI, GAD or the profession on how reserves should be made for them[499].

736 The working party set up by the Life Board of the F&IA in 1997 to consider reserving for annuity guarantees, the letter sent to managing directors of insurance companies by the Treasury in December 1998[500] in relation to PRE and guaranteed annuity option costs, the DAA letters sent to actuaries by GAD on reserving for guarantees and the position statement on annuity guarantees issued by the Life Board in March 1999 are all referred to in paragraphs 854 et seq.

Internal audit of insurance supervision and IT strategy in 1994

737 During 1994 the Internal Audit Directorate of the DTI undertook an audit of insurance supervision and IT strategy. An 'end of audit meeting' was held on 14 June 1994 (prior to the preparation of the audit report) and was attended by audit staff and senior officials in the DTI.

498 Hansard Debates, House of Commons, 24 February 1995, columns 390-391.
499 For most years from 1993 onwards, the guaranteed annuity rates contained in certain policies issued by Equitable between 1956 and 1988 exceeded the then current annuity rates, but no reserve was being made for them until the time of the 1998 returns (which would have been submitted after the advice in DAA11 had been promulgated, see paragraphs 882 et seq.). As at 1998, some 100,000 Equitable policies containing GARs remained in existence (according to a joint counsel's opinion obtained by the company at that time).
500 Withdrawn following the decision of the House of Lords in *Equitable Life Assurance Society v Hyman* [2002] 1 AC 408.

738 The report of that meeting is prefaced with the comment that although it concentrated on weaknesses, the internal auditors had identified several areas of strength, including management of change (for example in relation to the Third Life Directive), the programme of visits to companies[501], the professional expertise provided by GAD and the system for the initial analysis of returns. Those strengths were also to be referred to in the audit report.

739 The report of the June 1994 meeting shows that audit findings[502] had been made in respect of such areas as:

(a) increasing the degree of specialist expertise at Higher Executive Officer (HEO) level in the DTI's Insurance Division;

(b) ensuring that information obtained from and about companies was readily available, possibly using the computer system Insurance Division Information System (IDIS) to store key items of data;

(c) updating lists of advisers and completing the Policy Guidance Notes[503] manual;

(d) various improvements to the systems for dealing with annual returns and setting deadlines for companies to respond to queries regarding their returns;

(e) in cases where companies were failing to notify changes or were late in doing so or in submitting their returns[504], standard letters should be issued to companies warning that formal action would be taken;

(f) using formal action against companies rather than informal action in some instances;

(g) in relation to the supervision of long term business, although the responsibility rested with the DTI, in practice any required action arising from annual and quarterly returns was determined by GAD; the DTI agreement[505] should be reviewed regularly (possibly annually) to ensure that the DTI was receiving the right information and advice from GAD at the right time, with a view to ensuring that the DTI was discharging its responsibilities in relation to the supervision of companies conducting long-term business in an effective manner; it was suggested that there might be a case for GAD actuaries concerned with this work to be 'housed' within the DTI or employing external actuaries if GAD was unable to provide a service of *'acceptable timeliness'*[506];

(h) there appeared to be a lack of active monitoring by the DTI of the agreement between the DTI and GAD[507];

---

501 See paragraphs 404 et seq.

502 Audit recommendations were not made in respect of all the findings noted in the report of the June 1994 meeting and it appears that some of the initial findings and proposed recommendations may have been revised following further discussions with officials in the DTI.

503 See paragraphs 450 et seq.

504 The DTI management response to this item noted that most companies had the same year end and there were only a limited number of experienced auditors, making it difficult for all companies' returns to be submitted on time.

505 Apparently a reference to the 1984 service level agreement referred to at paragraphs 355 et seq.

506 The DTI's Insurance Division's management response to this finding indicated that the situation was under review. It stated that there were '*difficulties in relying on GAD*' and that it was '[i]*mportant for supervisors to realise that they are responsible for supervision and not just* [a] *post box*'. It was also noted that DTI would have liked to have had GAD 'in house' (and that this had been suggested six or seven years earlier but had been rejected by GAD as it was concerned that its expertise would be dissipated). It was noted that employing external actuaries would be expensive.

507 See paragraphs 355 et seq regarding the 1984 agreement. The management response to this item stated that it was agreed that '*clarification of the informal arrangements is necessary*'.

(i) responsibilities between the DTI and GAD relating to the supervision of long-term business did not appear to be as clear-cut as they should be; this appeared to be because the agreement between the DTI and GAD was not being enforced;

(j) there was some evidence that the responses GAD received to queries raised with companies on their annual returns were not copied to the DTI[508];

(k) the system for quarterly returns for long-term business was almost wholly reliant on examination by GAD, but there was no system for regular reports by GAD on the progress of the examinations[509];

(l) a qualitative and not just a quantitative analysis of the visits programme to companies was needed; and

(m) in relation to the IDIS system, a large part of the supervision process seemed to fall outside the scope of IDIS; the system faced obsolescence (as neither the hardware nor the software were likely to be supported in the future); the system lacked a 'plain English' description of its capabilities; the data quality was poor and in some cases the output was not directly relevant; and performance monitoring, testing and training were needed or required improvement.

740 The findings of the internal audit and the proposed recommendations were discussed with officials in the DTI over the following months.

741 A memorandum from the Director of the Insurance Division to DTI Internal Audit of 30 September 1994 indicates that the DTI's Insurance Division was '*content to accept most of the recommendations and the underlying analysis*', although there were a few areas in which changes to the recommendations were suggested by the Insurance Division. The final internal audit report was issued in November 1994.

742 In response to the audit report the DTI prepared an 'action document'[510] showing how each of the recommendations which had been accepted was being implemented or had been implemented. It appears from that document that the final recommendations included points concerning:

(a) he need for renegotiation of the agreement between the DTI and GAD (see the following section regarding the 1995 service level agreement which addressed a number points raised during the internal audit);

(b) regular (at least annual) review of the agreement with GAD should be undertaken;

(c) the allocation of priority ratings for companies should be reviewed to ensure the most effective use of supervisory resources;

(d) the implementation of a 'bring forward' system for letters to companies which required a reply; the DTI was also to operate such a system for major requests for information from companies made by GAD and the DTI was to remind GAD if further details were not supplied within a reasonable time;

508 The DTI's Insurance Division's management response noted that there was a '*a desire in GAD for more independence*' and a debate as to whether GAD should copy all correspondence to the DTI or just the outcome (with a potential for embarrassment to the DTI if it was not aware of what GAD was doing).

509 The DTI's Insurance Division's management response suggested that a 'bring forward' system was needed rather than monthly reports.

510 A copy of the action document was attached to a memorandum from the Head of DTI Internal Audit to the Director of Insurance Division, dated 11 May 1995.

(e) initial assessment of annual returns for companies conducting long-term business should be completed within six weeks;

(f) targets should be set for the annual review of the DTI training strategy;

(g) a qualitative review of the programme of visits to companies should be undertaken and the frequency of visits to companies should be varied to reflect their anticipated value to the supervisory process; and

(h) improvements should be made in relation to management information, sources of advice and information, record keeping and in relation to the IDIS system.

743 An DTI memorandum of 22 May 1995 indicates that by the time it was written, all the recommendations in the final audit report had been implemented.

1995 Service Level Agreement between the DTI and GAD

744 As noted above, the service level agreement (SLA) entered into between the DTI and GAD in 1984 indicated that the agreement was to be reviewed in 1986, but it does not appear that any further agreement was concluded at that time.

745 A new agreement, on broadly similar lines to the 1984 SLA, was entered into between the DTI and GAD in March 1995. The 1995 SLA related to the supervision of insurance companies conducting long term business and the supervision of the long term business of composite companies.

746 The language used in the 1995 SLA was more 'colloquial' than that in the earlier agreement and in general, less concise. Four references to 'policyholders' reasonable expectations' were made in the 1995 agreement.

747 As before, the focus was on scrutiny of the statutory returns and the need for the DTI to form a view on insurance companies' present and future solvency. The main outcome of the process continued to be the provision of scrutiny reports on individual companies by GAD to the DTI, to enable the DTI to form a view on the company's solvency, compliance with the statutory requirements and, on this occasion, to identify any failure by a company to meet PRE. However, the need for advice and services from GAD in relation to wider aspects of the prudential regime, particularly in relation to issues of solvency, was also provided for.

Main principles

748 The respective roles of the parties were recorded with some care. The section of the agreement on 'Main Principles' stated that the primary role of the DTI as set out in its 'mission statement' was to:

> *... regulate the insurance industry effectively (within its duties and powers set out in the Act) so that policyholders can have confidence in the ability of the UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations.*

749 One of GAD's primary functions was to advise the DTI on the fulfilment of those aims. As in the first SLA, it was made clear that the DTI retained sole responsibility for all executive decisions. The distinction in the parties' roles was given emphasis by a statement that GAD recognised that its function was advisory and that it had no responsibility for the exercise of the Secretary of State's powers under the Act.

750 The SLA recorded the importance of a close working relationship between the DTI and GAD in which '*both sides*' would keep each other fully informed, with the DTI copying all relevant correspondence[511] with companies to GAD. GAD was to be notified of all changes of control of companies and changes of appointed actuaries.

751 GAD was to accompany the DTI on all visits to companies and was to attend all meetings between the DTI and companies unless 'special circumstances' arose. GAD was allowed to hold meetings with companies on actuarial issues at GAD, but was to notify the DTI of the meetings and offer the Division the opportunity to attend.

Detailed activities

752 The detailed activities required of GAD under the 1995 SLA were set out in three separate sections. Section A of the 1995 SLA concerned the examination or scrutiny of annual returns (described with slightly less precision than in the earlier agreement). Section B dealt with authorisation of new companies and section C with 'other supervisory matters'.

753 The description of the detailed activities was prefaced with a statement that it did not provide an exhaustive description of the services to be provided by GAD to the DTI (in this context reference was made to the DTI rather than to its Insurance Division): '*In particular, as section B and C[512] make clear, GAD will stand ready to comment and advise where appropriate on all issues when asked to do so by the DTI[513].*'

Section A – examination or scrutiny of annual returns

754 Section A refers to five levels of priority to be used in the scrutiny process (as opposed to the four levels described in the 1984 SLA), but the meaning of each priority level was not explained within the document. In practice, GAD supplemented the SLA by issuing internal criteria for setting the priority ratings as part of their internal guidance. This is dealt with in more detail in chapter 5 of Part 1 of the report.

755 The document proceeded on the basis that most company year ends were on 31 December, but if the year end of a company differed, *'the same principles'* were to apply. A general timetable of events was then set out.

Scrutiny programme

756 By September of each year the parties were to agree a programme for the order in which returns were to be examined by GAD. If it was known that a visit to the company was to take place during the year, GAD was to make every effort to carry out the scrutiny and report to the DTI before the visit. The parties were to agree any topical issues affecting the life assurance industry in the forthcoming year which needed to be addressed in the scrutiny.

Initial action (prior to September)

757 The DTI was to be responsible for ensuring that GAD received copies of the statutory returns and the shareholders' accounts and for chasing late returns (which were normally due to be deposited within six months of the close of the period to which they related – it was aimed to provide GAD with appropriate copies within four working days of receipt). The DTI was to inform GAD of the visits to be carried out in the next year and of any extensions of time given to companies for the submission of their returns.

---

511 Letters of complaint from policyholders would not be copied to GAD (unless there were actuarial issues involved) and it appears that notification of management changes were not to be copied to GAD.

512 See paragraphs 766 et seq.

513 Section C of the SLA indicates that all documents received by DTI from life offices were to be copied to GAD and GAD was to be '*always free to comment on any document*' (see paragraph 769).

758 The role of GAD during the initial process was to deal with the following matters and provide the DTI with a '*clear overview of the scrutiny programme*' by mid September:

(a) report to the DTI[514] immediately if the initial scrutiny of a company raised any serious concern, of which the following 'main examples' were given:

- (i) a company had failed to meet its solvency margin or was in financial difficulties;
- (ii) the company had failed to provide the necessary directors', actuary's and auditor's certificates or any of the certificates had been significantly qualified;
- (iii) significant data errors or omissions existed;
- (iv) section 30 of the ICA 1982 (allocation of surplus to with-profit policyholders) appeared to have been breached;
- (v) it appeared that a company was not complying with its 'Notice of Requirements'[515] or an undertaking it had given to the DTI; and
- (vi) there appeared to be any other clear breaches of the Act or Regulations.

(b) send a report to the DTI by the end of August covering all initial scrutinies, consisting of:

- (i) a priority rating for each company based on GAD's view of its financial strength;
- (ii) an indication of the solvency cover for the company; and
- (iii) a target date for full scrutiny of the company's return.

759 The DTI and GAD were to use their best endeavours to agree, by mid September, the scrutiny programme including both timetabling and allocation of priority ratings. GAD was not required to wait for the scrutiny programme to be agreed before starting detailed scrutiny of what it perceived to be the most urgent cases (which would generally be 'priority 1' cases).

The detailed scrutiny process

760 The required outcome of the detailed scrutiny process was to provide the DTI with a means, in the form of a report, of identifying companies which:

- (a) were not complying with statutory requirements;
- (b) were failing to meet the statutory requirements, or were in danger of doing so in the near future; and
- (c) appeared '*not to be meeting policyholders' reasonable expectations*'.

761 The scrutiny report was required to contain a basis for action in relation to individual companies where any of the fundamental requirements listed above were not being met, or if trends in the returns pointed to problems arising in the near future. It was also to contain a basis for '*informed longer term discussion*' with individual companies on problems which might arise in the future if '*current trends in key performance indicators continue*[d]'.

514 Again, at this point the SLA referred to the DTI rather than specifically to its Insurance Division.
515 'Notices of Requirements' were served on companies by the Secretary of State in relation to authorisation, change of control and the exercise of intervention powers under sections 38-45 of the ICA 1982 to require a company to take, or refrain from, certain action (see paragraph 455 regarding the internal DTI guidance).

These key performance indicators were said to include:

(a) cover for the solvency margin and trends in free asset ratios[516];

(b) actuarial issues, for example a change in the strength of the valuation basis or issues about matching;

(c) the volume and mix of new business being written;

(d) trends in expense ratios;

(e) trends in lapse rates;

(f) assets: *'worrying exposures'*, investment strategy and impact on bonus strategy; and

(g) significant developments during the year.

762 The scrutiny report was to follow a prescribed format, referred to as being set out in an annex to the SLA (unless a different format had been agreed between GAD and DTI in an individual case).

763 The broad aim was to provide detailed reports for all companies:

(a) with **priority ratings 1 to 3**: by the end of March of the following year, with priority 1 and 2 cases being given priority within that period;

(b) with **priority 4** rating: by the end of May[517]; and

(c) with **priority 5** rating: the cases would not be given full scrutiny in the year in question, but were to receive a fuller initial scrutiny.

764 It was envisaged that this programme, including the ratings and timetable, might need to be amended to allow *'some fine tuning'* for example, due to the level of the stock market at the balance sheet date. The DTI and GAD were to agree revised target dates where it was necessary to make amendments to the programme.

Action arising from detailed scrutiny and monitoring of progress

765 GAD was required:

(a) (normally) to be responsible for taking up points arising from the detailed scrutiny of the returns with the company or its actuary; however, GAD was always to consider whether it was more appropriate for the DTI to do so and to recommend accordingly;

(b) to chase for responses from companies within six weeks and to respond to points arising from replies from companies within two weeks;

(c) to make appropriate recommendations to the DTI if GAD considered that the Secretary of State might need to exercise his powers; it was stressed that GAD was not to initiate any such action or commit the DTI to any particular decision or course of action; and

(d) to circulate a report to the DTI at the end of each month on the progress of the scrutiny programme.

Sections B and C – other areas in which services from GAD were required

766 Sections B and C of the 1995 SLA outlined additional areas in which GAD's assistance or advice was or might be required.

---

516 In simple terms a 'free asset ratio' is the amount by which a company's free assets exceed its required minimum margin, expressed as a percentage of its total assets as determined for the purpose of its regulatory returns.

517 Apparently, May of the following year.

767 Section B dealt with services and advice to be provided by GAD in relation to the authorisation of new life offices, explaining that the purpose of the authorisation procedure was to form a view on whether the company would remain solvent until its fourth year of operation and that it would be managed and controlled by fit and proper persons.

768 GAD's main role was to evaluate the financial projections and to provide its opinion to the DTI as to whether the solvency requirements would be met. GAD's services were to include commenting on successive drafts of the applications and attending meetings with the companies which intended to make, or had made, an application for authorisation.

769 Section C dealt with 'other supervisory matters', covering the need for advice on all areas with an impact on the solvency of a life office aside from the scrutiny of returns and the authorisation process, noting that it was '*not possible in a document of this nature to anticipate all of the instances in* [the] *future where GAD's advice will be sought*'. All documents received from the life office were to be copied to GAD[518]. The SLA stated that the DTI:

> *... will request advice from the GAD when there are issues which might affect, for example, the financial security of a life office, policyholders' reasonable expectations, or where the issues raised are actuarial or professional. However, GAD are always free to comment on any document if it believes that there are issues that should be brought to I Division's attention. These other areas of responsibility include: ...*

770 The document went on to identify six particular areas and referred to required response times and similar 'level of service' requirements in relation to each. These specific areas included transfers of portfolios; requests by companies for concessions under section 68 of the ICA 1982[519]; quarterly returns; company visits; and miscellaneous correspondence including requests for interpretation of legislation.

771 GAD was to provide such other services as might be agreed from time to time including '*input to policy development as appropriate*' and representation at meetings, for example, of the F&IA or in relation to the EU.

Fees

772 The level of fees to be paid by the DTI to GAD was to be the subject of a separate agreement to be negotiated annually.

773 The 1995 SLA was superseded by the agreement between the Treasury and GAD in 1998 referred to below (paragraphs 909 et seq).

The Insurance Companies (Accounts and Statements) Regulations 1996 (and the Deregulation (Insurance Companies Act 1982) Order 1996)

Introduction

774 In December 1996[520], the Insurance Companies (Accounts and Statements) Regulations 1996[521] (the ICAS Regulations 1996) revoked and replaced the ICAS Regulations 1983 and the various regulations

518 It is not clear whether this was intended to refer only to a situation in which advice from GAD was being sought by the DTI, or that all such documents would be copied to GAD routinely. The reference to GAD being *'free to comment on any document'* in the quoted section suggests the latter.

519 Which might arise, for example, where a company wished to rely on implicit items or hybrid loan capital in its margin of solvency calculations: see paragraphs 337 and 715 et seq.

520 Most of the provisions of the ICAS Regulations 1996 came into force on 23 December 1996, other than Regulation 34 which came into force on 30 April 1996 and substituted various provisions of the ICAS Regulations 1983 until they were revoked (the substitute provisions related to the meaning of *'receivable'* in Regulation 3, the value of assets and liabilities in Regulation 4 and the required additional information on derivative contracts in Regulation 22B).

521 SI 1996 No. 943.

which had amended them. They were made by the Secretary of State in the exercise of various powers conferred on him by the ICA 1982.

775 Notwithstanding the emphasis placed on PRE in various parts of the legislation and in the guidance issued to appointed actuaries by the F&IA, up until 1996 there was no requirement for insurance companies to provide any specific information in their statutory returns about the manner in which the company had taken PRE into account.

776 Such a requirement was included in the changes introduced by the ICAS Regulations. Those changes also included a requirement for the abstract of the appointed actuary's valuation report to include a new statement in a prescribed form (Form 57) described as a 'matching rectangle'[522], as further described in paragraphs 797 et seq.

777 This form was to be provided in relation to each fund or group of funds, showing how assets had been notionally allocated to corresponding long term liabilities (subject to specified exceptions), dealing with with-profit and non-profit policies separately and with separate forms prepared for each interest rate used in the valuation.

778 General changes from the ICAS Regulations 1983 made by the ICAS Regulations 1996 included the following:

(a) reorganisation and updating of the prescribed forms for the statutory returns to take account of then current commercial practice;

(b) transfer of several of the long term business forms which had appeared in Schedule 3 to the ICAS Regulations 1983 to Schedule 4 to the ICAS Regulations 1996, making those forms the responsibility of the appointed actuary and no longer subject to audit;

(c) a reduction of reporting in certain areas through the introduction of increased de minimis thresholds; and

(d) the omission of a prescribed form for a quinquennial statement of long term business as required by section 18(3) of the ICA 1982 in anticipation of an order being made under the Deregulation and Contracting Out Act 1994 (the DCOA 1994), abolishing the requirement for such a statement.

The Deregulation (Insurance Companies Act 1982) Order 1996

779 Under section 1 of the DCOA 1994, Ministers of the Crown were given power to remove or reduce burdens on businesses and individuals (but without removing any necessary protection), by amending or repealing an enactment contained in an Act passed before or in the same session as the 1994 Act.

780 The Deregulation (Insurance Companies Act 1982) Order 1996[523] was made by the Secretary of State under those powers, following consultation with representative organisations and others as required by section 3 of the DCOA 1994. The Order came into force concurrently with the ICAS Regulations 1996 on 23 December 1996 and provided for:

---

522 In terms of the statutory regime, matching rectangles provided the regulator with a means of establishing or checking the interest rates used in the valuation. They were described in general terms in a paper presented to the Institute of Actuaries in 1989 as '*a powerful tool for understanding the interactions within a life and pensions company. They also provide an excellent control on the interface between the work of accountants – which largely relates to assets – and to the valuation work of actuaries – which largely relates to liabilities*.' They consisted of a balance sheet which was not presented simply as two columns, but was broken down more fully into a two dimensional table in which the row and column totals corresponded to the liability and asset entries in a traditional balance sheet. The matching rectangle showed the collection of assets used to match each classification of liability (C.M. Johnson: JIA 116 (1989) 673-690 at pages 684-685). Form 57 was in such a format. Appendix D contains copies of the prescribed form as it appeared in the ICAS Regulations 1996 and as it appeared in the amendment regulations of the following year (see paragraph 800).

523 SI 1996 No. 2102.

(a) the repeal of section 18(3) of the ICA 1982 (which required companies to which Part II of that Act applied which carried on long term business to prepare a statement of that business every five years);

(b) the repeal of section 42(1)(c) of the ICA 1982 (which empowered the Secretary of State to require a company to prepare a statement of its long term business);

(c) the repeal of section 22(2) of the ICA 1982 (which required insurance companies to deposit with the Secretary of State details of persons who had acted as intermediaries (under section 74) and who were connected with the company); and

(d) the amendment of sections 22(1), 42 and 82 of the ICA 1982 so that the insurance company could choose whether to deposit five printed copies of every account, balance sheet, abstract, statement and other document which comprised the annual returns and the abstract of any special actuarial investigation report (as originally required) or only one printed copy of each of the required documents, together with a copy of each document in a form approved by the Secretary of State.

Requirements for annual returns of long term insurance companies under the ICAS Regulations 1996

781 The general objectives of the ICAS Regulations 1996 were later described[524] as being:

(a) to demonstrate that the solvency margin requirements had been met and that the directors, appointed actuary and auditor had certified compliance with various requirements;

(b) to provide the regulator with backing data with which to form its own assessment of the value given to the company's assets and liabilities and the potential for fluctuations;

(c) to standardise the treatment of reporting certain information to facilitate interpretation of the situation of individual companies and to enable comparisons to be made between companies;

(d) to establish a body of data which could provide 'screening tests' or an early warning system for problem areas or problems within particular companies; and

(e) to satisfy the concept of '*freedom with publicity*'.

782 The annual returns required under the ICAS Regulations 1996 were in six parts corresponding to the Schedules in the Regulations (two of which related to general business). Those relevant to long term business comprised:

Schedule 1: Balance sheet and profit and loss account (Forms 9 to 17);

Schedule 3: Long term business: revenue account and additional information (Forms 40 to 45);

Schedule 4: Abstract of the valuation report prepared by the appointed actuary (Forms 46 to 61);

Schedule 6: Certificates by the directors and appointed actuary and report of the auditors.

---

524 In a paper entitled 'Statutory Regulation of Long Term Insurance Business' prepared for the F&IA by William M. Abbott and revised by Nick C. Dexter in 2000.

Basis of values and amounts stated

783 The value or amount given for any asset or liability shown in the documents required to be prepared under the ICAS Regulations 1996 was to be that determined in accordance with Parts VIII and IX of ICR 1994[525] unless otherwise provided (Regulation 4). Every account, balance sheet, note, statement, report and certificate that a company was required to prepare under section 17(1)-(3) of the IC Act 1982 (annual accounts and balance sheets) was to be prepared in the manner prescribed in the ICAS Regulations 1996 and to '*fairly state the information provided on the basis required in these Regulations*' (Regulation 5 of the ICAS Regulations 1996).

Balance sheet, profit and loss account and revenue account

784 Regulations 6 and 7 required that the balance sheet and profit and loss account should comply with the requirements of Schedule 1 and identified the required prescribed forms for the various classes of business. The revenue account of a company carrying on long term business was required to be in Form 40 in Schedule 3, with additional information provided in Forms 41 to 45 in that Schedule (Regulations 8 and 17).

Abstract of actuary's valuation report (including PRE information and matching rectangles)

785 The abstract of the actuary's report of the annual actuarial investigation under section 18 of the ICA 1982 was to comply with the requirements of Schedule 4 and contain the information specified in that Schedule, together with such of Forms 46 to 49 and 51 to 58 as might be appropriate (Regulation 25). Schedule 4 and the forms prescribed in that Schedule required that extensive information be provided about an insurance company's long term business.

786 Schedule 4 required that information be given on issues set out in 23 numbered paragraphs of the Schedule, with the answers numbered accordingly in the abstract.

787 In relation to each category of contract which comprised accumulating with-profits contracts, paragraph 4(1)(a) required that the abstract contain a full description of the benefits, including various specified factors, such as the circumstances in which, and the method by which, any charge might be deducted from the benefits on payment of a claim and a full description of any 'material options'. Paragraphs 4(1)(b) and (c) required that details be provided of material options contained in other kinds of non-linked contracts.

788 Paragraph 6 related to the general principles and method adopted in the valuation, and required specific reference to matters which included:

(a) the method by which account had been taken of derivative contracts in the determination of the long term liabilities;

(b) **the method by which due regard had been given to the reasonable expectations of policyholders** as required by Regulation 64 of ICR 1994 and by which account had been taken in the custom and practice of the company in the manner and timing of the distribution of profits or the grant of discretionary additions over the duration of each policy, as required by Regulation 65(6) of ICR 1994;

(c) where the net premium method had been used[526], whether and to what extent it had been modified, the purposes for which any such modification had been made and whether any modifications on account of zillmerising conformed to Regulation 68 of ICR 1994;

[525] See paragraphs 643 et seq.

(d) whether any negative reserves had arisen and the steps taken to ensure that no contract of insurance was treated as an asset as required by Regulation 73 of ICR 1994;

(e) whether any specific reserve had been made for future bonuses and if so at what rate or rates; and

(f) **the basis of the reserve made for any guarantees and options.**

789 Paragraph 7 of Schedule 4 required information to be given on the rates of interest and tables of mortality and morbidity which had been assumed in the valuation for each category of contract. Subparagraph 7(6) required that a description be provided of the scenarios of future changes in the value of assets which had been tested in order to take account of the nature and terms of the assets held in determining the amount of the long term liabilities in accordance with Regulation 75 of ICR 1994.

790 Subparagraph 7(7) required information to be given on any reserves which had been made pursuant to Regulations 75(a) (ability of the company to meet its obligations under long term contracts as they arose) and 75(b) (adequacy of the assets to meet the liabilities determined in accordance with Regulations 65-74 of ICR 1994). Subparagraph 7(8) required further information to be given in relation to the test for the purpose of 75(b) which produced the most onerous requirement (whether or not a reserve was required).

791 Paragraph 10 required information on the assumed levels of inflation of expenses and the bases used in the valuation to allow for such future inflation.

792 Where any rights of policyholders to participate in profits related to particular parts of the long term business fund, a revenue account in the format of Form 40 was required for each such part and information was to be given on the methods applied in apportioning the investment income, increase or decrease in the value of assets brought into account and expenses and taxation (unless the information was provided elsewhere).

793 Paragraph 14(1) required information to be provided about the principles on which the distribution of profits among policyholders and shareholders was based (as described in the constitution of the company, board resolutions, issued policies, advertisements, documents required to be issued by a regulatory body authorised under the FS Act 1986 and other relevant documents).

794 Paragraph 14(2) required a broad statement of the company's aims in relation to the distribution of profits among policyholders, including the company's aims in relation to:

(a) policies which matured or were surrendered and claims arising on death;

(b) the appropriate and equitable treatment of groups of participating policyholders;

(c) smoothing[527];

---

526 Paragraph (1) of Regulation 67 of ICR 1994 required a net premium method to be used for most contracts unless paragraph (3) of that regulation applied or, under paragraph (4), an alternative method could be shown to produce equally strong reserves (see paragraph 269 regarding the provisions from which paragraphs (1)-(3) of regulation 67 were derived and paragraph 679 regarding paragraph (4)). See further below regarding the amendment of regulation 67 by SI 2000 No. 1231 to permit the use of a gross premium method where the policyholder was not entitled to participate in profits (paragraph 975).

527 This expression does not appear to be defined in the ICAS Regulations 1996.

and the methods used to ensure that those aims were achieved. (Where different principles or bonus policies applied to different categories of with-profit policies issued by the company, the required information was to be given in respect of each category.)

795 Paragraphs 15 and 16 required information to be provided in respect of bonuses allocated to each category of contract and the practice of the company in relation to any bonus payments to be made in the period up to the next actuarial investigation, including the basis of calculation and the form in which the bonus was payable.

796 Paragraphs 17-20 dealt with Forms 46 and 46A (summary of changes in long-term and industrial business); Forms 47 and 47A (analysis of business in force); Forms 48 and 49 (separate statements of assets covering long term liabilities (other than linked liabilities) in respect of each fund or group of funds for which separate assets were appropriated); and Forms 51-54 (which required separate valuation summaries to be completed in respect of each fund (and category of contract) for which a surplus was to be determined, analysed in various ways).

797 Paragraph 21 required statements in the form set out in Form 57 (the 'matching rectangle') for each fund or group of funds for which separate assets were appropriated in respect of long term liabilities, except unit liabilities in respect of property linked benefits, investment liabilities in respect of index linked benefits and any reserve in respect of tax on unrealised capital gains. Form 57 was included in Schedule 4 with instructions for its completion.

798 The matching rectangle in Form 57 was required to show a notional allocation of assets to corresponding liabilities, with separate forms to be complete for with-profit and non-profit contracts in each of the categories; (i) life assurance and annuity business; (ii) pension business; (iii) permanent health business and (iv) other business.

799 The matching rectangles were intended to enable the DTI to check the interest rates which were being used in the valuation and a separate form was to be used for each rate of interest used. The forms were to cover 90% of the remaining liabilities after excluding the specified items concerning linked policies and any tax reserve. In its originally prescribed format, the final line of the matching rectangle was required to show the values attributed to the assets in the 'worst case' resilience test referred to in paragraph 7(8) of Schedule 4 (see paragraph 808 regarding the changes made in 1997).

800 The prescribed format for the matching rectangle in Form 57 (and the instructions for its completion) were replaced for financial years ending on or after 31 December 1997 by the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1997[528] which made other amendments as noted in paragraphs 807 et seq. Appendix C contains copies of Form 57 as originally prescribed and as substituted in 1997.

801 Form 57 (both the 1996 and 1997 versions) was intended to demonstrate that:

(a) the valuation rates of interest were supported by the investment returns earned on the assets notionally allocated to each group of contracts (on the basis that the value of such assets equalled the mathematical reserves, including any resilience reserve, for that group of contracts) and thus satisfied Regulation 69 of ICR 1994; and

[528] SI 1997 No. 2911.

(b) in the most extreme resilience test scenario, the changed value of the notionally allocated assets (but possibly reallocated among different groups of contract) still covered the changed mathematical reserves (excluding any resilience reserves) calculated using valuation rates of interest that were supportable in that scenario and which complied with the relevant regulations.

Information on derivative contracts

802 Regulation 23 required additional information to be provided on derivative contracts in the form of a statement annexed to the balance sheet, profit and loss account and revenue account.

Signing of documents

803 All the documents relating to the business of the company were to be signed by at least two directors and by the chief executive[529]. The abstract of the appointed actuary's report under section 18 of the ICA 1982 was to be signed, additionally, by the appointed actuary who had made the investigation on which the abstract was based (Regulation 27). It is understood that, in practice, these provisions have generally been interpreted as requiring that only the appointed actuary should sign the actuary's report.

Certificates of directors and actuary and opinion of company auditor

804 As under the ICAS Regulations 1983, all insurance companies were required to annex to their accounts a certificate from the directors and an opinion of the company auditor; in the case of companies carrying on long term business, they were also to annex a certificate from the appointed actuary (Regulations 28 and 29). These documents were required to contain statements prescribed in Schedule 6 to the ICAS Regulations 1996.

805 Part I of Schedule 6 dealt with the directors' certificate which was to be signed by the same directors as those who had signed the account documents[530] and include statements about specified matters[531]. If any of the required statements could not truthfully be made by the directors they were to be omitted. Part II of the Schedule dealt with the certificate to be given by the appointed actuary[532], to which the actuary was to add any qualification, amplification or explanation as he or she considered necessary. Part III dealt with the auditors' report, which was to state his or her opinion on specified matters[533] (which did not include the prescribed forms which comprised the abstract of the actuary's valuation report under Schedule 4) and which was to be qualified, amplified or explained if the information

529 Or the secretary if any, if the company had no chief executive.
530 Regulation 28(a).
531 These included statements to the effect that the return had been prepared in accordance with the Regulations; that proper accounting records had been maintained; that an adequate system of control had been established over the company's transactions and records; and that a margin of solvency had been maintained throughout the financial year in question and a statement in the form of a list of published guidance with which the systems of control complied and in accordance with which the return had been prepared.
532 Covering such matters as the actuary's opinion as to whether proper records had been kept by the company; that the mathematical reserves (plus any additional surplus shown in Form 14 and specified in the certificate) constituted proper provision at the year end for the long term liabilities; that the liabilities had been assessed in accordance with Part IX of ICR 1994; the actuary's opinion on the sufficiency of the premiums for contracts entered into during the financial year to meet commitments under those contracts; and, by way of a list, that the professional guidance notes which had been complied with (in place of the earlier requirement which had referred only to compliance with GN1 and GN8).
533 Such as whether the balance sheet, profit and loss account and revenue account had been prepared in accordance with the ICAS Regulations 1996; whether or not it was reasonable for the directors to make the statements given in their certificates; the extent to which, in giving the opinion, the auditor had relied on the certificate of the actuary with respect to the mathematical reserves and the required minimum margin and the identity and value of any implicit items (for which authorisation had been given by an order made by the Secretary of State under section 68 of the ICA 1982).

or explanations the auditor had received did not allow the auditor to express one of the required opinions. If the auditor referred in the report to any uncertainty, he or she was to state whether that uncertainty was material to determining whether the company had available assets in excess of the required minimum margin.

Qualifications of appointed actuary and company auditor

806 The requirements concerning the qualifications of the appointed actuary, the information to be supplied about the appointed actuary and the qualifications of the auditor were substantively unchanged from those in the ICAS Regulations 1983 as amended (Regulations 30, 31 and 32).

Amendment and lapse of the ICAS Regulations 1996

807 The ICAS Regulations 1996 were amended by the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1997[534], which applied to documents submitted to the Secretary of State in respect of any financial year ending on or after 31 December 1997.

808 The 1997 Regulations made a number of detailed amendments which affected the disclosure requirements for both the accounts documents and the abstract of the actuary's valuation report and slightly reduced the scope of the audit report. New prescribed forms were introduced and a number were replaced including Form 57, the 'matching rectangle', notionally attributing assets to liabilities, as it was widely felt that the originally prescribed form had proved unsatisfactory.

809 For financial years ending on or after 31 December 1997 the layout of Form 57 was revised, although similar information was required to be shown. In the revised form, the last four columns were intended to demonstrate, under the 'worst case' scenario, how asset values changed and were reallocated between groups of contract and how the associated supportable valuation rates of interest altered.

810 The last line of the form disclosed the mathematical reserves for the contracts before and after the scenario change, with the difference being the release of the resilience reserve and the effect of changing the valuation rate of interest used in the resilience scenario[535].

811 Separate forms continued to be required for each rate of interest used in the valuation (and as before, one form could include all contracts valued at the same rate provided they came within specified categories, such as the 'sterling liabilities of life assurance and annuity business').

812 The ICAS Regulations 1996 were further amended by the Insurance Companies (Amendment) Regulations 2000[536] as referred to below. They lapsed on 1 December 2001 with the repeal of the ICA 1982 by the Financial Services and Markets Act 2000 (Consequential Amendments and Repeals) Order 2001[537].

534 SI 1997 No. 2911.
535 Appendix D includes a copy of Form 57 as substituted in 1997.
536 SI 2000 No. 1231 (referred to in paragraph 683).
537 SI 2001 No. 3649 (referred to in paragraph 683).

Guidance for Appointed Actuaries: GN1, GN2 (dynamic solvency testing) and GN8 in 1996 and GN7 (the reporting actuary) in 1997

GN1

813 An updated version of GN1 was issued in September 1996 (5.0)[538]. The main changes related to the three areas of guidance outlined in the following paragraphs (which entailed still further references to PRE).

814 **The extent of the appointed actuary's responsibility** (section 3 of GN1): earlier versions of the guidance had stated that the two aspects of an appointed actuary's appointment, namely his or her appointment and remuneration by the company and his or her duties to the DTI, would '*seldom ... conflict in a material way*'. Version 5.0 acknowledged that '[these] *responsibilities may be in conflict from time to time but it would be seldom that any such conflict could not be resolved by discussions internal to the company*'.

815 Paragraph 3.2 of GN1 was expanded and slightly revised. This paragraph dealt with the actuary's responsibilities in circumstances where there was a material risk that the long term fund would be insufficient to cover the company's liabilities or that the company would fail to meet obligations under the ICA 1982 in relation to long-term business.

816 According to the covering letter issued with the revised guidance, the aim of the amendments was to clarify the circumstances and sequence of events to be followed before the appointed actuary informed the DTI. The revised paragraph set out three possible reasons for such a risk arising:

(a) because of a particular course of action being, or proposed to be, followed by the company;

(b) because of a failure by the company to take appropriate action in response to a change in circumstances; or

(c) because a particular situation had arisen, perhaps outside the control of the company.

Earlier guidance was then repeated, that in such circumstances the appointed actuary should inform the company accordingly; if the company failed to take action to remedy the position and did not advise the DTI of the situation, then the appointed actuary was under a duty to do so after so informing the company (notwithstanding the contents of the F&IA's Memorandum on Professional Conduct)[539].

817 A new paragraph 3.4 was added in relation to the statutory requirements for insurance companies to fulfil the criteria of sound and prudent management[540]. It was stated that these criteria included the need for insurance business to be conducted with due regard to the interests of policyholders and potential policyholders and that in formulating his or her advice to the company, the appointed actuary was required to take account of those interests.

538 This guidance was reissued in a slightly corrected form in February 1997 (with the same version number), in which the layout of one paragraph (5.8) was revised, apparently, to make the intended meaning clearer.

539 In 1994, the Government Actuary (then president of the Institute of Actuaries) expressed the view that '*the whistle-blowing role of the appointed actuary is significant, but most effective if it does not ever have to be used. The appointed actuary acts not so much as an arm of the supervisor, but instead of a supervisor, by providing the management of the company with an internal control mechanism which obviates the need for heavy regulatory intervention .... Clearly the relationship* [with the senior management of the company] *is not a simple one, but the role is of as much to the benefit of the company as the supervisor. There should rarely be a true conflict of interest*'. (This extract of the address was circulated within the DTI on 18 July 1994).

540 See paragraph 574 regarding the criteria set out in Schedule 2A to the ICA 1982.

818 **Premium rates and conditions** (section 5): two new paragraphs were added. The first (paragraph 5.7) related to contracts which specified that particular terms were to be determined by the appointed actuary or by the company on the advice of the appointed actuary. In determining such terms or when advising the company, the appointed actuary was required to have regard to policyholders' reasonable expectations and to '*existing legislation*' including, where relevant, that covering unfair contract terms.

819 The second addition to section 5 was a new paragraph concerning unit linked business (paragraph 5.8), which noted that unit pricing, fund charges and deductions in respect of taxation were all key elements of policyholders' reasonable expectations; all discretionary elements affecting these matters should be applied consistently with policyholders' reasonable expectations and equitably to any policyholders who were directly or indirectly affected.

820 **Internal matters** (section 9): paragraph 9.3 of the guidance was expanded. This paragraph concerned the relationship between a director who was an actuary (which I refer to as a 'director-actuary') and the company's appointed actuary.

821 The additional guidance made clear that the presence of a director-actuary on the board of the company did not lessen the responsibilities of the appointed actuary in any way or make it any less necessary for the appointed actuary to have direct access to the board.

822 The guidance envisaged that director-actuaries might give actuarial advice to the board formally or informally. However, if a director-actuary did so in a way which could encroach on the role of the appointed actuary, the director-actuary was required to ensure that the appointed actuary was informed of that advice and given the opportunity to present properly reasoned comments to the board.

823 A further version of GN1 was issued on 1 December 1998 (version 5.1). A few minor deletions were made, the most significant of which was the deletion of the advice to appointed actuaries to seek help and advice through the Secretary of the Professional Affairs Board if doubtful about the proper course to follow when facing a potentially significant problem. References to the DTI and to the Secretary of State were replaced with references to the 'Supervisory Authority'.

824 GN1 now stated that policyholders' reasonable expectations were 'clearly influenced by policy literature and other publicly available information such as own charge illustrations'. Version 5.1 of GN1 was replaced by version 6.0 on 1 December 2001.

GN2 – Dynamic Solvency Testing and Financial Condition Reports

825 In March 1996 a new series of Guidance Notes for appointed actuaries was issued, 'GN2: Financial Condition Reports', the first version of which came into effect on 25 March 1996.

826 The status of this guidance was 'recommended' rather than mandatory[541]. The aim of GN2 was to suggest a possible format for a Financial Condition Report and to outline how 'Dynamic Solvency Testing' (DST) would *'normally be used'* to derive the background information underlying such a report.

827 DST was described in GN2 as the '*principal technique*' which enabled appointed actuaries to assess the ability of an office to withstand changes in the external economic environment and in the particular experience of the office.

[541] See paragraph 178.

828 DST involves projecting the company's revenue account and balance sheet forward and then changing each of the important assumptions in turn, to establish the company's sensitivity to changes in a particular assumption or in a combination of assumptions in the future, having allowed for plausible action by management[542]. DST is intended to provide a means by which the management of an insurance company can plan for various scenarios which might emerge in the future.

829 The production of GN2 followed on from the work of a further joint actuarial working party of the F&IA on DST which had reported in November 1993 at the Blackpool Life Insurance Convention[543]. The work undertaken by the Working Party was discussed at a Current Issues in Life Assurance seminar in April 1994[544], at which there appears to have been debate about whether the production of a financial condition report should be mandatory and whether the report should automatically be made available to the supervisory authorities (and, if so, whether it would be possible to maintain its confidentiality). Nonetheless, some of those present saw DST as 'fundamental to the role of the life office actuary'. There was discussion about whether deterministic[545] or stochastic modelling[546] should be used and a request was made for detailed guidance on the form that a financial condition report should take[547].

830 Correspondence between the DTI and GAD in June and July 1994[548] in relation to the findings of the Working Party on DST suggests that there was considerable interest in DST. GAD suggested that information of the kind contained in a financial condition report would be of *'enormous value to the regulator'*.

831 However, it was considered that the value of such a report would be diminished if it were to become a statutory requirement to deposit the report with the regulator, as companies would be concerned that the regulator might react prematurely to the information contained in it and would therefore produce a 'sanitised version' of what was originally intended to be a 'management tool'. GAD noted that:

> *DST is essentially a management tool rather than a method of assessing liabilities and therefore seems to have little direct relevance to the solvency margin review. ... DST is more useful as part of a package of requirements for judging the adequacy of a company's capital and reserves to meet its solvency requirements in the future over different scenarios i.e. a form of medium-term resilience test.*

---

542 In contrast, resilience testing considers the impact of various changes in conditions instantaneously at the date of the valuation.

543 In the extract of the presidential address given in 1994 mentioned in footnote 539, the Government Actuary had also stressed the benefits of DST. The extract referred to the position in Canada, where there was said to be a strong emphasis on the role of the appointed actuary in reporting to the board of the company on the future financial condition of the company. The Government Actuary expressed the view that DST was an *'invaluable tool in exposing the weakness in the company's financial condition and in focusing management attention on strategies to reduce risk and increase resilience. It also provides the appointed actuary with a basis for discussing strategy with the Board and senior management in a way which is dynamic and relevant to the business decision-making process, rather than being defensive or regulatory in its emphasis.'*

544 JIA 121 III, 597-601.

545 Mathematical models involving specific selected assumptions which of themselves have no element of randomness.

546 Mathematical models in which, for each run of the model, the values for key assumptions (e.g. interest, inflation, mortality, and lapse rates) are selected randomly from statistical distributions. These runs are repeated many times so that the likelihood of a variety of outcomes can be investigated.

547 The speaker had noted that, based on his experience, it could be difficult to reduce the amount of information in the report to an intelligible level.

548 Memoranda from the Director of the DTI's Insurance Division dated 20 June 1994 (which was copied to GAD) and from GAD to the Director of the Insurance Division dated 6 July 1994.

832 GN2 recommended that the financial condition report should be addressed to the board of the company or the appropriate group with responsibility for policy formation for the company concerned (paragraph 1.3). It was stressed that the report should be '*expressed in a form which is accessible to its readers*' and that important information should not be concealed inadvertently, for example through undue length or complexity (paragraph 1.4).

833 GN2 recommended that the appointed actuary should address the actions open to the company to deal with particular circumstances and make recommendations where appropriate. GN2 envisaged the use of both deterministic and stochastic techniques to appraise the various risks or whatever techniques the actuary considered appropriate to the company's business (paragraph 1.7).

834 Section 2 of the guidance provided an outline of the main points which were normally to be addressed in a Financial Condition Report, among which were the methods and assumptions which had been used and any changes in those methods and assumptions since the last similar report.

835 Section 3 provided guidance on DST and included examples of the areas in which testing of variations in assumptions should be undertaken, noting that there '*would need to be specific reasons for not testing variations in the* [...] *assumptions*' about future investment conditions, levels of new business, expenses and persistency (paragraph 3.4.1).

836 Among the list of assumptions suggested as being of '*considerable importance in some companies but not in others*' was the assumption about the exercise of options by policyholders (paragraph 3.4.2). A further list of factors (in paragraph 3.4.3) which the appointed actuary needed to be alert to as potentially affecting the company included such matters as:

(v) impending major claims or litigation that might affect the company;

(vii) unusual contracts or relationships which may have financial implications;

(viii) risks created by deficient product literature or policy documentation; and

(x) the effect in different scenarios of options and guarantees in the insurance liabilities.

For each scenario tested, provision was to be made for all elements of the statutory liability including an appropriate level of resilience reserve (paragraph 3.4.4).

837 The conclusion of GN2 stated that:

> *The very least that it is reasonable for a Board to expect of the advice from the Appointed Actuary is that the company does not unknowingly run foreseeable risks which could jeopardise its financial well-being.*

838 The first version of GN2 on Financial Condition Reports remained in effect up to 30 December 2002 when it was replaced with version 1.1.

839 A paper produced for the F&IA in 2000[549] suggested that GN2 had become best practice, with most appointed actuaries by then producing a report on the impact of different '*likely potential scenarios*' on the financial condition of the company.

[549] 'Statutory Regulation of Long Term Insurance Business' prepared for the F&IA by William M. Abbott and revised by Nick C. Dexter in 2000.

840 One of the recommendations made in the Corley Report[550] was that the provision of an annual Financial Condition Report should be made mandatory through GN1, although GN2 should remain as recommended practice[551].

GN8

841 GN8 was updated in September 1996 (version 5.0). Additional guidance was given on Regulation 70 of ICR 1994, which required the use of prudent rates of mortality and disability when determining the amount of the company's long term liabilities.

842 The additional guidance referred to the need to take account of future improvements in mortality[552] where this would increase the required reserve. For assurance and sickness business, allowance was to be made for the incidence of mortality and morbidity arising from known diseases where the impact might not have been reflected fully in the mortality or morbidity experience current at that time (paragraph 3.4).

843 The guidance on Regulation 71 of ICR 1994, concerning the need to make prudent assumptions for expenses when calculating liabilities, was also expanded following discussions between the F&IA and the DTI and GAD. The additional subparagraphs (3.5.4.1 and 3.5.4.2) explained the circumstances in which explicit provision would and would not be necessary in relation to the costs of new business and how the additional provision should be calculated where it was required.

844 Revised and additional guidance was given on Regulation 75 of ICR 1994, which required the actuary to take into account the nature and term of the assets in determining the amount of the long term liabilities.

845 The new guidance explained that Regulation 75(a) required the appointed actuary to consider mismatching provisions from the point of view of cash flows, whilst Regulation 75(b) required a test of the resilience of the overall reserves to satisfy Regulations 65 to 74 in changed investment conditions. The overall provision to be established was to be equal to the greater of these two amounts. Additional guidance was then given on how the two calculations, under paragraphs (a) and (b) of Regulation 75, were to be undertaken (paragraphs 3.6.1, 3.6.3 and 3.6.4).

846 Version 5.0 of GN8 was superseded in March 2001 by version 6.0 which is mentioned below.

Guidance in GN7 and the reporting actuary

847 The F&IA issued guidance concerning the Companies Act accounts of insurance companies and the role of actuaries and their relationship with auditors in Guidance Note 7 (GN7). The version of that guidance issued in 1997 (version 3.0) took account of the new Schedule 9A inserted in the Companies Act 1985 by the CAICA Regulations 1993[553]. The classification of the guidance in GN7 was 'recommended practice' rather than 'mandatory', or a 'practice standard', as in the case of GN1 and GN8.

848 The guidance noted that the technical provisions for long term insurance under Schedule 9A came within the scope of audit, unlike those in the regulatory returns where the auditor, in giving his or her opinion, was permitted to rely on the

550 Paragraph 35 and paragraph B of Appendix 8.

551 Version 6.0 of GN1 which was issued on 1 December 2001 required the appointed actuary to prepare and submit to the board either a financial condition report in accordance with GN2 or a report *'in whatever format he or she considers necessary to ensure that the board is sufficiently well informed of the foreseeable risks which could jeopardise the insurer's financial position'* (paragraph 6.1).

552 The Penrose Report (paragraphs 85 and 86 of Chapter 6) suggests that many life offices, including Equitable, were slow to take account of improvements in life expectancy which had been taking place up to that time.

553 See paragraphs 540 et seq.

certificate issued by the appointed actuary[554].

849 The stated aim of GN7 was to explain the professional duties of the various parties in relation to the financial statements under Schedule 9A. GN7 also referred to the relationship between the appointed actuary and the company's auditors in respect of the preparation of the statutory returns under the ICA 1982.

850 GN7 referred to the actuary who made the computation of the long term business provision[555] for the purpose of the Companies Act accounts as the 'reporting actuary'.

851 The guidance included the following points in relation to the role of the reporting actuary (and the auditor):

(a) the directors of an insurance company remained legally responsible for all statements made in the financial statements required under the Companies Act, although they were entitled to rely on the professional expertise of the reporting actuary to calculate the amounts which were required to be calculated by an actuary under Schedule 9A;

(b) the making of computations under Schedule 9A required the exercise of professional judgment by the reporting actuary;

(c) it was perfectly proper for the directors to give instructions to the reporting actuary regarding the broad approach to the calculation of the long term business provision, but the reporting actuary should be aware that readers of the financial statements would be placing reliance on the figure shown (and the actuary was reminded of his or her professional duties to third parties);

(d) '*in many instances*', the reporting actuary and the appointed actuary would be the same person (but this need not be the case);

(e) the reporting actuary would need to be familiar with accounting principles and current audit practice since the computations were made under the framework of the Companies Act where a different methodology to that appropriate for the solvency test might be applicable;

(f) the reporting actuary should ensure that the auditor was aware of the approach he or she proposed to adopt to the accounting principles in SSAP 2[556] as there was particular uncertainty as to their application;

(g) the reporting actuary could choose to base the calculation of the long term business provision on the equivalent mathematical reserves calculation made by the appointed actuary (but the reporting actuary would retain full responsibility for the calculation). Reference was then made to the need to modify[557] the amounts calculated by the appointed actuary to comply with the Modified Statutory Guidance Note[558];

---

554 It was said that the accountancy bodies recognised that the valuation and certification of the long term liabilities under the ICA 1982 were the sole professional responsibility of the appointed actuary; hence the actuary's certificate and Schedule 4 of the statutory returns (abstract of the valuation report) were not subject to audit.

555 See paragraphs 549 and 550

556 Statement of Standard Accounting Practice 2: Disclosure of accounting policies, issued by the Accounting Standards Committee in 1971; since superseded by Financial Reporting Standard (FRS) 18 – Accounting Policies issued by the Accounting Standards Board.

557 The statutory basis for calculation of the long term liabilities under the ICA 1982 was modified for the purposes of the Companies Act accounts, particularly as regards the treatment of reserves. This was known as the 'modified statutory basis'.

558 Association of British Insurers (ABI) Guidance Note – Accounting for Insurance Business (Excluding Accounting for Investments) 1995.

(h) the reporting actuary might reach different professional judgments to those of the appointed actuary, but should defer to the appointed actuary on matters regarding PRE;

(i) where the reporting actuary relied on *'other areas within the company'* to produce information on which to base his or her calculations, although that information would be subject to audit, it would be inappropriate for the reporting actuary to place too much reliance on the auditor for its accuracy and completeness as the auditor may have carried out work at a *'different level of materiality'* to that required by the reporting actuary; (further, the auditor might well consider it inappropriate to extend the scope of the audit work to give comfort to the actuary, since the auditor might be required to express an independent view on the work of the reporting actuary);

(j) although the statutory role of the reporting actuary was limited to the long term business provision, actuarial advice might be needed to calculate other elements of the balance sheet and profit and loss account;

(k) an important part of the reporting actuary's work was the preparation of a report to the directors on the approach to the computation of the long term business amount and the material assumptions used; the actuary's report should not only address the amounts computed, but it should also make recommendations about disclosures;

(l) actuaries involved in the preparation of published financial statements should be familiar with Audit Guideline 311[559];

(m) in order to form an opinion as required by the legislation, the auditor must assess, understand and where appropriate challenge the assumptions underlying the work of the reporting actuary; an actuary advising an auditor in supporting a reasonable challenge to the work of the reporting actuary would not be in breach of the Memorandum on Professional Conduct[560].

852 In relation to the role of the appointed actuary (and the auditor) the guidance:

(a) required the appointed actuary to be prepared to advise the directors on the evidence of compliance (or lack of compliance) with the Prudential Guidance Notes[561];

(b) noted that there were certain areas in which the work of the appointed actuary and that of the auditor overlapped, most particularly in checking the accuracy of policy data and the valuation of assets; the guidance advised that it was inappropriate for the appointed actuary to place too much reliance on the work of the auditor unless the work had been undertaken in accordance with 'a *specifically scoped assignment*' outlined in a formal letter of engagement;

(c) advised that the auditor might wish to discuss with the appointed actuary any financial condition report which the appointed actuary had prepared, in order to understand the appointed actuary's view of the future development of the company's finances and the risks to which the long term fund was exposed, but this did not imply that the financial condition report was subject to audit.

559 Issued by the Audit Practice Committee (later the Audit Practice Board).
560 The current Professional Conduct Standards of the F&IA require that members of either Institute avoid any action which would unfairly injure the professional reputation of any other member.
561 See paragraphs 693 and 724 regarding the requirements for directors' certificates to list certain Prudential Guidance Notes issued by the DTI if they had been complied with.

853 The version of GN7 referred to above was not revised until December 2004.

Working party on annuity guarantees and guidance on annuity guarantees, reserves and terminal bonus calculations 1997-1999

854 With falling rates of interest during the early part of the 1990s, the advantage to policyholders of taking benefits in guaranteed annuity form as opposed at the current annuity rate was apparent[562].

855 However, it was not until the late 1990s that there were public signs that consideration was being given to the impact of annuity guarantees and the reserves which companies made for them, although GAR options had commonly been available in some form in connection with with-profit policies since at least the 1950s.

856 The following outlines some of the events and key correspondence regarding the issues surrounding GARs, the reserves made for them and the issue of differential bonus calculations.

The Annuity Guarantees Working Party report

857 In January 1997, the Life Board of the F&IA set up a working party to consider the issues surrounding GARs. The terms of reference of the Annuity Guarantees Working Party (AGWP) stated that:

> *Currently there is no accepted practice for reserving for these guarantees and there is no published research to guide Appointed Actuaries in setting reserves. The DTI have not published any guidance or regulations specific to annuity guarantees.*

858 The AGWP was to:

(a) determine the different kinds of GAR which had been issued and obtain an indication of the volume of business;

(b) determine the current practice regarding reserving for guarantees;

(c) research the cost of such guarantees under different scenarios of investment return and mortality;

(d) consider PRE issues;

(e) consider and recommend appropriate reserving bases for annuity guarantees, taking account of DTI general guidance and regulations; and

(f) prepare a report summarising its conclusions.

859 The AGWP completed its report in November 1997. The introduction to the report noted that, collectively, insurance companies had over ú35 billion of liabilities to which GARs applied. It stated that, with relatively low interest rates and improving mortality, the guarantees were potentially very valuable, yet there had not been 'any attempt to consider appropriate reserving standards in the light of the Insurance Company Regulations'.

860 The AGWP:

(a) conducted a survey of life companies carrying on pensions business in order to ascertain the extent of the guarantees currently in force and the practices of companies in reserving for them;

562 In the case of Equitable, the guaranteed annuity rate exceeded the current rate from October 1993 until May 1994 and from May 1995 onwards. The interest rate offered on GARs in policies issued by Equitable between 1975 and 1988 (when the company ceased to offer them on new policies) was 7%. As at December 1998, Equitable had some 100,000 GAR policies still in existence (according to a joint opinion of counsel dated 18 December 1998 obtained by the company).

(b) analysed the implications of the guarantees in terms of the statutory requirements for reserving; and

(c) considered two alternative approaches to measuring the value of the guarantees, using stochastic investment models or a market based approach using financial instruments to 'hedge' the guarantees.

861 Questionnaires had been issued to 85 insurance companies. Of the 66 companies which had responded, 41 had issued GARs. It was estimated that the 66 respondents represented at least 90% of the total market liabilities. Key findings from the survey included the following:

(a) almost all the companies had ceased offering GARs on new policies, but in the majority of cases the guarantee continued to apply to the premiums being paid on existing policies which contained GARs;

(b) 51% of the companies held no reserves for guarantees[563], the remainder calculated the liability on the basis of the greater of the value of the cash option and the value of the guaranteed annuity on the valuation basis;

(c) few companies made explicit allowance for the effect of future premiums to which the GAR applied;

(d) a number of companies said that no allowance for the effect of GARs was made in the resilience test for the resilience reserve;

(e) the majority of companies took no account of GARs in setting investment guidelines; and

(f) the majority of companies made no allowance for GARs when establishing maturity values; a small number had made adjustments to asset shares or had made specific adjustments to terminal bonus rates[564].

862 The AGWP report noted in passing that the whole question of reserving for with-profits business (leaving aside the effect of GARs) was not a precise science and that alternatives to the net premium valuation method had been considered by other working parties, which raised issues which went '*far beyond*' the scope of the AGWP paper[565].

863 In relation to the action which should be taken in respect of reserving for GARs under with-profits contracts, the AGWP made no recommendations, but offered three '*possible approaches for consideration*', none of which it considered to be entirely satisfactory. These comprised:

(a) allowing for guarantees in the same way as unit-linked business, by setting aside additional reserves related to prudent estimates of the cost over and above existing, unadjusted, with-profit reserves;

---

563 The joint counsel's opinion obtained by Equitable in December 1998 records that the company had notified the DTI in its annual returns from 1993 to 1997 that it made no explicit provision for GARs. The advice expressed the view that whether ICR 1994 required any reserve at all was a matter for *'actuarial judgment on which we are not qualified to comment'*, although the parameters within which that judgment was to be made were a matter of law. The view expressed in that advice was firmly rejected by the prudential regulator and GAD.

564 Starting with the 1994 bonus declaration, Equitable had declared different final bonuses for GAR policyholders based on whether or not they elected to take benefits in guaranteed annuity form. The Society's intention was to ensure that policyholders received the same level of benefits, whether they took those benefits in guaranteed annuity form or at the current rate.

565 A separate F&IA working party, which reported early in 1998 on the net premium method of valuation, recommended the retention of this approach as a minimum standard for with-profits business, but a gross premium method for non-profit business, leading to the amendments to ICR 1994 made by SI 2000 No. 1231 referred to in paragraph 975.

(b) recognising the cost of GARs as effectively increasing the guaranteed sum assured on some prudent basis and then recalculating the net premium reserves on this basis; or

(c) the third option was: *'reviewing whether and to what extent the guarantee will be covered by terminal bonus adjustments. Providing that terminal bonus adjustments will be used and are sufficient to cover guarantees in all circumstances, there is an argument for not reserving for such guarantees – no explicit provision is made for terminal bonuses and hence the provision for guarantees is simply part of this implicit provision subject to the existence of appropriate terminal bonus margins.'*

864 The AGWP considered that the first option was the most prudent, recognising however that the adverse impact on published survey ratios for an office adopting this approach in isolation[566] might make it unattractive.

865 The second approach was said to be somewhat arbitrary in its effect on the overall strength of the valuation basis, whilst the third approach could be viewed as unsound as it made no explicit provision for an explicit guarantee[567].

866 The AGWP survey had requested comments on PRE issues, but relatively few had been made. The AGWP noted that if maturity payments were in some way linked to asset shares (as appeared to be almost universal practice), an office's approach to spreading the costs across generations of policyholders and across policy types was likely to be of most significance. (The survey had revealed that most offices had made no allowance for the cost of guarantees either through adjusting asset shares or terminal bonuses.) Some respondents had made the point that allowing for the cost of guarantees in 'payouts', particularly through adjustments to terminal bonus only as and when guarantees bite, would be contrary to the spirit of the guarantees and hence contrary to PRE.

867 The report noted that other offices practised or intended to consider exactly such an approach: appendix 2 to the AGWP report indicated that four of the 29 companies that responded said that they would consider adjusting terminal bonus rates to compensate for a guarantee which was biting.

868 The report recommended that life offices needed to consider some (apparently fundamental) issues in relation to GARs such as their likely cost and sensitivity to changes in future conditions and how the costs of meeting them should be provided for, whether by adjustments to asset shares, adjustments to terminal bonus or implicitly against the company's estate[568].

---

566 Suggesting, perhaps, that if such an approach were to be a universal requirement, it might be less unattractive (but this was not explored).

567 Equitable had adopted this third approach, in terms of making adjustments to terminal bonus payments and not making any specific provision for guarantees. The Society's justification for not reserving for GARs had been that reserving could reflect actual and expected experience as to whether policyholders elected to take benefits in guaranteed annuity form. According to the Society, up to and including the end of 1997 the number of policyholders so electing was virtually nil. Equitable made the point that it had notified the DTI (and later the Treasury) of the absence of any specific provision for GARs, by means of a note in the annual returns which appeared from the time of the 1993 returns.

568 See footnote 497.

869 The report of the AGWP discussed the use of stochastic methods to assess the costs of guarantees, using variable interest rates. As an alternative, it was suggested that financial instruments such as 'options to swap', or 'swaptions', might be used to protect the fund against the impact of guarantees, by eliminating or setting an upper limit on the interest rate risk.

870 It was suggested that a '*promising approach*' might be to purchase an option to swap floating rate interest payments for a fixed rate payment at a specified date for a specified period. It was said that there was a very large liquid market for trading such swaptions, particularly at the shorter dates, and illustrative prices were given.

871 The conclusions of the report stated that there was '*limited evidence*' that insurance companies had started to address issues such as the opportunity to take account of guarantees in setting bonus rates and the impact this might have on PRE.

872 It was noted that many companies had not worked out their approach to reserving for guarantees and with low interest rates and improving mortality, they would need to do so in the near future. The AGWP had felt unable to recommend an approach to reserving as 'the variation between products and the approaches of different companies to managing guarantees [were] so great'.

GAD questionnaire on annuity guarantees – June 1998

873 The AGWP report is dated November 1997. On 20 June 1998, GAD wrote to appointed actuaries with its own questionnaire, having expressed the view to the Treasury (to which prudential regulation functions had by then been transferred[569]) that the regulatory returns did not provide sufficient information about companies' exposure to GARs.

Treasury letter on guaranteed annuity option costs and PRE (and terminal bonus) – 18 December 1998

874 Following on from the survey conducted by GAD, on 18 December 1998[570] the Insurance Directorate at the Treasury wrote to all managing directors of insurance companies authorised to carry on long term business, noting that the results of that survey had indicated that exposure to guaranteed annuity options (GAOs) was relatively widespread in the industry and had the potential to have a significant financial impact on a number of companies.

875 The stated purpose of the letter was to give some guidance to companies on the Treasury's interpretation of PRE in the context of GAOs[571]. The letter was said to contain the Treasury's considered view, but to be '*without prejudice to any decision of the courts which might affect it*'.

876 According to the letter, as a starting point, the Treasury took the view that:

> *'policyholders entitled to some form of annuity guarantee or option on guaranteed annuity terms could reasonably be expected to pay some premium, or charge, towards their option or guarantee.'*

877 Having made clear the Treasury's view that in relation to linked contracts any costs of meeting a guarantee which could not be covered by accumulated charges made to the policyholder would fall to be met by the insurer, the letter went on to suggest that in the case of participating[572] policies:

---

569 See paragraph 908.
570 DD1998/5.
571 Whilst noting that the nature of the guarantees offered by companies varied widely.
572 With-profits.

... any charge could be deemed to be met out of each premium received (or the investment return to be credited by way of bonus), and hence would impact on the assessment of bonuses, including in particular any terminal bonus that would normally be payable to the policyholders. Generally we consider that it would be appropriate for the level of the charge deemed to be payable by participating policyholders for their guarantee (or annuity option) to reflect the perceived value of that guarantee (or option) over the duration of the contract. This could be achieved in some cases through some reduction in the terminal bonus that would be payable if there were no such guarantee (or option) attached to the policy. However the selected treatment by each office would need to depend on the wording of the contract involved and how it had been presented to policyholders.

Under the majority of participating policies which have been written it appears that any guarantee or annuity option is applicable to at least the guaranteed initial benefit under the policy and any attaching declared bonuses. As a consequence of this, we would expect that for most companies the present guaranteed cash benefits (including declared bonuses) would be converted, as a contractual minimum, to the annuity on the guaranteed terms. However as indicated above, it would appear possible, depending on the particular circumstances relating to the contract, that any terminal bonus added at maturity may be somewhat lower than for contracts without such options or guarantees, and that this terminal bonus could in some cases be applied at current annuity rates.

878 The letter went on to deal with the apportionment of any 'residual cost' which fell to be met by the insurer in respect of GAOs (for both participating and non-participating contracts), specifying that they should be met from the long term fund and any shareholder funds.

879 Where the long term fund was to be used, in the first instance the cost would be met out of any estate; thereafter the insurer might wish to consider adjusting future bonus allocations for some or all participating policyholders (or making a transfer to the long term fund from any shareholders' fund).

880 The letter then highlighted that the appropriateness of any such adjustments to bonus allocations for participating policyholders would need to be assessed by each office in the context of the reasonable expectations of all[573] their policyholders, and that this assessment would be influenced by such matters as policy documents and representations made through marketing literature, bonus statements or elsewhere.

881 The letter appeared to suggest that ex post facto charges might be made to GAR policyholders who exercised their options[574]. The guidance in the letter was suspended by the FSA[575] on 27 July 2000, seven days after judgment was given by the House of *Lords in Equitable Life Assurance Society v Hyman*[576].

---

573 The inclusion of '*all*' appears to suggest a need for companies to be aware of the potentially competing interests of different classes of policyholders when deciding on their approach.

574 Subject to the caveats mentioned above regarding the appropriateness of any such adjustments in the context of PRE (paragraph 880) and any decision of the courts (paragraph 874). Those involved at the time have told me that the letter was interpreted by Equitable as providing support for its approach of making adjustments to terminal bonuses.

575 To which the Treasury had, by then, delegated its prudential regulation functions in relation to insurance (with effect from 1 January 1999).

576 [2002] 1 AC 408.

Dear Appointed Actuary letter from the Government Actuary: DAA11, January 1999

882 On 11 January 1999[577], the Government Actuary wrote to appointed actuaries, following up on the letter from the Treasury to managing directors of 18 December 1998, on the specific issue of reserving for GAOs (DAA11).

883 The letter stated that the Government Actuary considered that Regulation 64 of ICR 1994 required life offices to calculate their liabilities, and hence to reserve, on the basis of all the benefits offered under the contract and that long term liabilities should be determined on '*actuarial principles*' and '*make proper provision for all liabilities on prudent assumptions*'. In addition to reserving for all guaranteed annuity benefits companies should, in his view, have been reserving fully in respect of any facility for policyholders to select an alternative form of benefits:

> *In general it would not in my view be prudent to assume that policyholders will choose a benefit form that is of significantly lower nominal value to them...*

He then went on to suggest that some limited allowance '*of a few percentage points of the reserve*' could be made in some cases for the possibility that some policyholders might prefer to take their benefit in some other form. This statement was clarified in a subsequent DAA letter of 22 December 1999 (DAA13, mentioned below). This clarification explained that the Government Actuary had been referring to a few percentage points of the reserve for the contract and not to a reserve for the guaranteed annuity rate.

884 Paragraph 7 of the Government Actuary's letter stated:

> *Where the levels of terminal bonus are to be adjusted with the aim of bringing the value of the guaranteed annuity option closer to the value of the alternative benefits, there might at first sight appear to be some room for argument that it was not necessary to reserve on the assumption that almost all policyholders will take the guaranteed annuity benefit. However, it needs to be remembered that, although the benefits formally 'guaranteed' under the alternative form of benefit may be lower than those under the guaranteed annuity option, the company's discretion in setting the value of the terminal bonus applied to the alternative form is limited as a result of the guaranteed annuity. It is likely that close to 100% of policyholders will exercise the annuity guarantee unless the company maintains terminal bonus at a level which ensures that the value to the policyholder of the alternative benefit is at least equal to the value of the guaranteed annuity. Accordingly, this constraint will need to be reflected in the valuation assumptions made about either the proportion of policyholders opting for the alternative benefit or the value of that alternative benefit. Consequently any reduction in the reserves held by the insurer by more than a few percentage points below the full value of the guaranteed annuity for this reason would require very careful justification by the actuary.*

885 The paragraph quoted above appears to envisage that it might be permissible to make some form of adjustment to ensure parity been the two alternatives, consistent with the Treasury's letter dated 18 December 1998 (see paragraphs 874 et seq), albeit that the subject of the Government Actuary's advice was the valuation assumptions that should be adopted.

[577] Several later references to this letter (including those in DAA13) refer to it being dated 13 January 1999; however, they appear to relate to the same letter.

886 The letter went on to record that the Government Actuary did not consider it prudent to use past experience alone, of a 25% take up of benefits in the form of a tax free cash lump sum, as a basis for reducing the percentage of benefits assumed to be taken in guaranteed annuity form. It was likely that policyholders and their advisers would see the annuity guarantees as valuable and something to be used in full.

887 The Government Actuary went on to advise that companies should assess the extent to which a resilience reserve was required to cover their annuity guarantees. The need to hold substantial mathematical reserves to cover guaranteed annuity options was not a sound argument for reducing the stringency of the resilience test applied.

888 The Government Actuary drew attention to the requirements of paragraphs 4(1) and 5(1) of Schedule 4 to the ICAS Regulations 1996 which required that the abstract of the actuary's valuation report include a description[578] of the benefits under the contracts, including any 'material options' and indicated that he would expect such a description to provide an indication of the form of any annuity guarantee offered. In addition, he advised that actuaries should provide a description of the way in which reserves for any annuity guarantees and options had been determined (including an indication of the interest rate and mortality assumptions used), in order to comply with paragraph 6(1)(h) of Schedule 4.

889 The Government Actuary made clear that annual returns should include sufficient information to enable the FSA and GAD to make an assessment of the extent of the guarantees offered, the reserving basis adopted by the company and hence the scope for the annuity guarantees to have an impact on the financial position of the company.

890 The Government Actuary concluded the letter with a statement (as contained in the letter from the Treasury of 18 December 1998) that it contained his considered view and was '*without prejudice to any decision of the courts which may affect it*'.

F&IA position statement on annuity guarantees

891 In March 1999, in the light of considerable press comment about annuity guarantees, the F&IA issued a 'position statement' for use within the F&IA, to enable its Officers, Council members and senior members of staff to answer questions from members of the actuarial profession, members of the public and the press. The document stated that it did not contain formal guidance and nor should it be taken as a full expression of the profession's views on the subject.

892 The statement expressed the '*full support*' of the profession for the position set out in the letter from the Treasury of 18 December 1998 and the clarification and guidance given by the Government Actuary in his letter of 13 January 1999 (see footnote 577).

893 The statement noted that it had been suggested in the press that insurance companies had not reserved fully for annuity guarantees, and that the profession was '*unaware of any specific examples of this*' but would be concerned to ensure that any such cases were as a result of reasonable professional differences of opinion. If not, they would be subject to the profession's disciplinary procedures.

894 In relation to the question of whether companies had reserved adequately for the guarantees, it was stated that the appointed actuary of each insurer had a duty to ensure that sufficient reserves were held to meet that insurer's obligations under its

[578] In the case of accumulating with-profits contracts under paragraph 4(1)(a) of the Schedule a '***full** description of the benefits, including ... any guaranteed investment returns ... and; any material options*' was required.

own approach; in doing so, the appointed actuary should have regard to the Government Actuary's letter of January 1999, as well as the requirements of the Regulations and the profession's guidance in GN1 and GN8.

895 The position statement offered alternative ways of dealing with GAOs. For an insurer with no constraints caused by policy conditions, marketing literature or other representations, the first alternative was to:

> *… ensure that the value of the cash benefits and the value of the pension benefits remain the same, by working out the amount of the guaranteed annuity but then re-expressing the cash option on the basis of the current annuity rates.*

This was identified as producing no cost to the office unless terminal bonus rates fell to zero.

896 The next alternative was to allow the value of the guaranteed annuity and the cash option to move apart, leading to a significant cost to the office. The third option was an intermediate position between the two extremes, for example, by applying the guaranteed annuity rate to only a part of the benefits.

897 The paper urged insurers to explain their position so that each policyholder, particularly those close to retirement, would have a clear idea of how the guarantees might affect them.

Dear Appointed Actuary letter from the Government Actuary: DAA13, 22 December 1999

898 Having reviewed, initially, the returns submitted by insurance companies following his letter of 13 January 1999 (DAA11), the Government Actuary wrote again to appointed actuaries to provide further '*clarification*' of the reserving standards which would normally be expected to be seen in future returns to the regulator, having noted that some aspects of his earlier advice had been interpreted in a variety of ways in the recent returns.

899 In a letter of 22 December 1999 (DAA13), the Government Actuary reiterated his earlier advice about the assumptions which could prudently be made about the take up rate of guaranteed annuity options, bearing in mind that the alternative offered a significantly lower nominal value to policyholders. He clarified his earlier reference to an allowance of '*a few percentage points*' being made to reduce the liability for guaranteed annuities in respect of policyholders who chose to take alternative benefits.

900 In his view, an allowance in excess of 5% would not be considered to represent '*a few percentage points*'. Whilst there might be a stronger case for making an allowance for policyholders choosing to take a proportion of their benefits in the form of a tax free cash lump sum, in his view it would not be prudent to assume that more than 20% would take the maximum cash lump sum permitted.

901 The Government Actuary also indicated that he was reviewing the level of disclosure made by each company in their 1998 returns, regarding the assumptions made to determine the level of reserve for contracts containing a guaranteed annuity, saying: '*For the avoidance of any doubt, we would expect to see full disclosure of the proportions of policyholders assumed to take any available guaranteed annuity, along with the underlying mortality and interest rate assumptions*', adding that GAD would expect to see prudent assumptions for future mortality improvements.

Proposals to reform prudential regulation and transfer of functions in relation to insurance to the Treasury

902 In a statement to the House of Commons on 20 May 1997, the then Chancellor of the Exchequer announced in broad terms the government's proposals to reform the regulation of the financial services industry, to create a single statutory regulator with a single set of statutory powers.

903 The Chancellor noted that the distinctions between different types of financial institution: banks, securities firms and insurance companies, were becoming increasingly blurred and that many of them were regulated by a plethora of different supervisors. The supervision of banking and financial services was to be merged under an enhanced SIB, underpinned by statute. On 28 October 1997, the SIB changed its name to the Financial Services Authority.

904 These proposals eventually led to the enactment of the Bank of England Act 1998 and the FSMA 2000. The background to the latter is described in Phase 6.

905 As a preparatory step towards the implementation of the government's proposals to create a single financial regulator, with effect from 5 January 1998 the functions of the Secretary of State in relation to various aspects of insurance regulation which had been administered by the DTI were transferred to the Treasury. This was achieved through the Transfer of Functions (Insurance) Order 1997[579], an Order in Council made under the Ministers of the Crown Act 1975.

906 The functions transferred to the Treasury included those under the ICA 1982 and the PPA 1975, although certain functions under the 1982 Act were to be exercisable concurrently by the Secretary of State and the Treasury[580]. Functions under the FS Act 1986 which had been retained by the Secretary of State, or which were exercisable by the Secretary of State and the Treasury jointly as a result of changes made in 1992[581], were also transferred to the Treasury.

907 The transfer of functions order made consequential modifications to a number of enactments, including the ICA 1982, to replace references to the Secretary of State with references to the Treasury.

908 The Treasury assumed responsibility for the prudential regulation of insurance companies on 5 January 1998, pending the enactment and coming into force of the FSMA 2000. Staff in the Insurance Division of the DTI were seconded to the Treasury, Insurance Directorate until certain functions relating to prudential regulation were contracted out by the Treasury to the FSA with effect from 1 January 1999.

1998 Service Level Agreement between the Treasury and GAD

909 A service level agreement (SLA) was entered into between the Treasury and GAD, signed by the parties on 29 October and 6 November 1998.

910 Most of the terms of the new SLA replicated those of the agreement between the DTI and GAD signed in March 1995[582], with the references to the DTI and

579 SI 1997 No. 2781.
580 Examples of such concurrently held functions were the powers to require the production of documents under section 44 of the ICA 1982 and to petition the court for the winding up of an insurance company under section 54.
581 By SI 1992 No. 1315, see footnote 257.
582 See paragraphs 744 et seq.

to its Insurance Division substituted with references to the Treasury and its Insurance Directorate respectively.

911 Section 22(1) of the ICA 1982 continued to require that company returns be deposited with the Treasury within six months after the close of the period to which they related – meaning, for the majority of companies with a financial year end in December, that they were to be submitted by the end of June in the following year.

912 However some changes were made in the new SLA. These included:

(a) a new Annex A, which provided a description of the five priority ratings, indicators and target periods for scrutiny (a transcription of which appears in Appendix D to this document);

(b) the timescales for production of detailed scrutiny reports for all companies with priority ratings 1 to 3 were reduced by three months; they were to be received by the Treasury (from GAD) by the end of December in the year in which the returns had been received by the Treasury, with priority 1 and 2 being given greatest priority within that period and completed by the end of October (for companies with December year ends);

(c) the timescale for completion of detailed scrutiny reports for priority 4 cases was reduced by two months: they were to be received by the Treasury by the end of March of the following year;

(d) GAD was to endeavour to complete '*a scrutiny*' of the remaining priority 5 cases by the end of May (replacing a statement in the 1995 SLA that such cases would not receive a full scrutiny in the year in question, but would receive a fuller initial scrutiny);

(e) the position regarding companies with year ends other than December was clarified. Detailed reports were to be provided within a comparable timescale according to the priority awarded to them (as indicated in Annex A);

(f) in relation to action arising from the detailed scrutiny, a requirement was added for GAD actuaries to be available on request to discuss with supervisors any issues concerning individual companies arising out of their detailed scrutiny;

(g) in section C, which dealt with 'Other supervisory matters', having repeated the requirement that GAD should be notified of changes of appointed actuaries, it was specified that GAD would liaise with the Treasury over any action that was needed where there was any concern about the reasons for the change in the appointed actuary. All new appointed actuaries, who had not previously held such a position, were to be interviewed by the Government Actuary and a note of the meeting was to be forwarded to the Treasury; and

(h) a new item was added to the list of 'other areas of responsibility'. GAD was to provide appropriate training for insurance supervisors on request.

913 It appears that the 1998 SLA between the Treasury and GAD continued to be relied on in relation to services provided by GAD to the FSA following the contracting out of functions referred to in the next two sections[583].

[583] The Baird Report refers to the '*GAD SLA*' as being '*the service level agreement between GAD and the DTI (originally, then the Treasury and now the FSA as the prudential regulators) dated 6 November 1998*'.

The Contracting Out (Functions in Relation to Insurance) Order 1998

914 From 1 January 1999, the FSA was to assume day-to-day responsibility for most aspects of prudential regulation of insurance companies, prior to relevant functions being formally vested in it under the FSMA 2000 with effect from 1 December 2001. The means by which this was achieved was through the contracting out order referred to in this section, an authorisation issued by the Treasury to the FSA for the purpose of that order, and the SLA between the Treasury and the FSA outlined in the next section, which set out the terms and conditions upon which the functions were to be exercised by the FSA and the service standards to be achieved.

915 In November 1998 the Contracting Out (Functions in Relation to Insurance) Order 1998[584] (the Contracting Out Order) was made by the Treasury under sections 69 and 77(2) of the DCOA 1994 to permit the statutory functions specified in that Order to be exercised by or on behalf of such person, or the employees of such person, as might be authorised by the Treasury.

916 The Contracting Out Order came into force on 18 November 1998. In effect, it enabled the Treasury to 'contract out' most of the functions which had been transferred to the Treasury by the Transfer of Functions (Insurance) Order 1997[585]. This included specified functions under the ICA 1982, the PPA 1975, the FS Act 1986, the Policyholders' Protection Act 1997, ICR 1994 and other legislation.

917 Certain of the Treasury's functions under the ICA 1982 were not included in the Contracting Out Order[586], in particular the powers to make regulations and the power under section 68 to disapply or modify specified sections of Part II of the ICA 1982 and related subordinate legislation (which was of relevance to applications by companies for concessions in respect of implicit items and subordinated loans to provide cover for the margin of solvency).

918 The Contracting Out Order was enacted as a further interim step pending the enactment and coming into force of the FSMA 2000, a draft Bill for which had been published for consultation in July 1998.

December 1998 Service Level Agreement between the Treasury and the FSA

919 Before 18 December 1998, when the SLA between the Treasury and the FSA (the FSA SLA) was entered into, the FSA was discharging certain functions under the FS Act 1986 and the Banking Act 1987[587], whilst the Treasury was responsible for the discharge of functions under the ICA 1982 and other legislation relating to insurance business.

920 The purpose of the FSA SLA was to set the terms and conditions on which the FSA and its employees were to exercise functions under, inter alia, the ICA 1982 following authorisation being granted to the FSA by the Treasury in pursuance of the Contracting Out Order. It set the standards to be met by the FSA in exercising those functions and provided for monthly service charges to be paid by the Treasury to the FSA. The FSA SLA came into effect on 1 January 1999.

584 SI 1998 No. 2842.
585 SI 1997 No. 2781, see paragraphs 905 et seq.
586 Which the Treasury was not, therefore, empowered to contract out.
587 From 1 June 1998, in consequence of amendments made to that Act by the Bank of England Act 1998 (a date referred to as 'N1').

Functions contracted out to the FSA by the Treasury

921 The functions the FSA was to be authorised to exercise were listed in the schedule to the authorisation[588] which the Treasury issued to the FSA pursuant to the Contracting Out Order (a draft of which was stated to be annexed to the FSA SLA). The functions which were contracted out to the FSA under the authorisation included those of the Treasury under the ICA 1982:

(a) to grant authorisation to carry on insurance business and to suspend or withdraw authorisation (section 3);

(b) to receive the regulatory returns of insurance companies (section 22);

(c) to require a company in breach of its margin of solvency to submit a plan for the restoration of a sound financial position (section 32(4));

(d) to require a company which failed to maintain its minimum margin of solvency (as defined in the legislation) to submit a short term financial scheme (section 33(1) and (2));

(e) to impose requirements about investments (section 38);

(f) require the maintenance of assets in the UK (section 39);

(g) to impose requirements with respect to the custody and disposal of assets (section 40);

(h) to limit the premium income (section 41);

(i) to require a company to make an actuarial investigation into its financial condition (section 42);

(j) to require a company to submit its annual returns early (section 43);

(k) to obtain information and require the production of documents (under certain of the provisions of section 44); and

(l) the residual power to impose requirements for the protection of PRE (section 45).

922 The authorisation was for a period of two years and was subject to the provisions of sections 69(5)(b) and (c) of the DCOA 1994 (which specify that such an authorisation may be revoked at any time by the Minister or office-holder[589] by whom it was given and shall not prevent the Minister, the office-holder or any other person from exercising the function to which it relates). The FSA SLA stipulated that it was to be terminated with immediate effect if the authorisation was revoked (clause 6.2).

The Service Standard Specification – Schedule 1 to the FSA SLA

923 Schedule 1 to the FSA SLA contained a 'Service Standard Specification'. This set out the aims and objectives which the FSA was to adopt in respect of services it was authorised to exercise on behalf of the Treasury and defined standards and performance measures which the FSA was to use its best endeavours to achieve.

924 The aims and objectives of the service standards reflected the proposals for the role of the FSA as a single financial services regulatory body contained in the draft Financial Services and Markets Bill published in July 1998. Those proposals included such matters as:

[588] The authorisation containing the schedule of functions was signed on behalf of the Treasury on 18 December 1998, the day on which the FSA SLA was entered into.

[589] Defined by section 79(1) of the DCOA 1994 to include the holder of an office created or continued in existence by a public general Act or whose remuneration is paid out of money provided by Parliament.

(a) maintaining confidence in the UK financial system;

(b) promoting public understanding of the financial system, including an awareness of the risks associated with various kinds of investment; and

(c) securing an appropriate degree of protection for consumers, having regard to such matters as differing degrees of risk involved in different kinds of investments or other transactions, differing degrees of consumer experience and expertise and the general principle that 'consumers should take responsibility for their own decisions'.

It was noted that these objectives might be amended during the passage of the legislation but they '*serve*[d] *to inform the general approach the FSA proposes to take during the period prior to the new legislation coming into force*[590]'. This was to include the FSA's approach to carrying out the functions which it was to exercise on behalf of the Treasury for insurance supervision.

925 In relation to insurance, the FSA's aim was required to be:

> ... *effectively to regulate the insurance industry so that policyholders*[591] *can have confidence in the ability of UK insurers to meet their liabilities and fulfil policyholders' reasonable expectations ...*

The FSA was also to play a part in maintaining and improving international co-operation within the EC and more widely in relation to insurance regulation.

926 The FSA's '*key supporting objectives*' were to include:

(a) to ensure that persons or companies who were not fit and proper or appropriately resourced or otherwise not able to satisfy the criteria for authorisation did not carry on business in the UK;

(b) to carry out the regulation of insurance companies efficiently and effectively;

(c) to meet the industry's reasonable requests for prompt and clear responses to requests for information and advice;

(d) to keep the cost and inconvenience of regulation for insurers as low as was commensurate with effective protection of the customer;

(e) to co-operate with the Treasury in seeking to deliver efficient operation of the single market, including assistance in EU negotiations in relation to EC law.

927 A section of the FSA SLA headed 'Insurance Supervision Work Programme' identified key areas of work on which resources were to be deployed during 1999, covering three broad areas:

(a) the conduct of ongoing regulatory and related work to specified standards;

(b) initiatives to support the development of more effective and efficient regulatory procedures; and

---

590 The date on which the new legislation was to come into force giving the FSA direct statutory responsibility for both prudential and conduct of business regulation of insurance companies was referred to as 'N2' (this date was 1 December 2001, pursuant to the FSMA 2000).

591 Defined in clause 1 of the FSA SLA to include potential policyholders where appropriate.

(c) preparations for the coming into force of the new regulatory regime.

928 The requirements for each of these three areas were then described in greater detail in relation to various sub-categories of work, with performance measures outlined for many of them. In respect of the first of the broad areas of work, the sub-categories comprised:

- 'Authorisation, fit and proper checking, perimeter';
- 'Supervision';
- 'International'; and
- 'Policy issues and case work'.

929 In respect of 'Supervision', the FSA's general responsibilities were to include the prudential supervision of some 350 non-life companies, 200 life companies and 40 composite insurance groups and:

> *Protecting policyholders against the risk of company failure and, more specifically, to protect them against the risk that UK authorised insurers might be unable to pay valid claims. In the case of life insurance companies this includes the risk that they will be unable to meet policyholders' reasonable expectations. The Treasury and FSA agree that it is neither realistic nor necessarily desirable in a climate which seeks to encourage competition, innovation and consumer choice, to seek to achieve 100% success in avoiding company failure. The FSA will therefore pursue its supervisory objectives by aiming to minimise, but not eliminate, the risk of company failure by identifying early signs of trouble, and taking preventative action.*

930 Key tasks for the '*supervisory resource*' included monitoring the financial soundness of insurers to see that they were run in a sound and prudent manner by fit and proper people, based mainly on scrutiny of financial returns and other information (with the assistance of GAD, particularly in the case of life insurance companies) and site visits.

931 In relation to performance measures it was stated that the supervisory process was in an '*ongoing state of development*'. Changes had been made to the examination procedure in the preceding six months and further changes were to be expected in the context of the development of more effective and efficient regulatory procedures (described in a later section on policy issues).

932 In respect of the way in which the supervisory process was expected to be conducted for the 1998/99 supervisory year, performance measures were set out in Annex A of Schedule 1 to the FSA SLA. Those measures were to be kept under review and amended from time to time as agreed between the Treasury and the FSA. Annex A set out target timescales for various activities such as receipt and processing of returns, with five priority ratings (which do not appear to be defined) and shorter timescales for higher priority cases.

933 In respect of 75% of the cases, the annual examination process was to be completed within nine months of receipt, with 100% to be completed within 12 months. In respect of life companies, in 90% of the cases any necessary follow-up action was to be taken within two weeks of completion and review of the GAD scrutiny (with the remaining 10% to be dealt with within six weeks). '*Timely and satisfactory outcomes*' to ongoing and future proposals for '*life industry restructuring and inherited estates*' were to be secured in 100% of cases.

934 In respect of 'General policy issues', the FSA was to provide the Treasury (on request or on its own initiative) with timely advice on such matters as the development of government policy initiatives with a bearing on the insurance industry; the proposed content of draft speeches or statements prepared for the Treasury, other ministers or senior officials; Parliamentary business; matters relating to the implementation of the Policyholders Protection Act 1997; matters relating to insurance law; specified tasks of investigation and enforcement and '*other relevant subjects, raised either by the Treasury or the FSA*'.

935 It was recorded that whilst the FSA was to have day-to-day responsibility for supervising insurance companies, certain of the powers required to carry out this function were to remain with the Treasury until the coming into force of the '*proposed relevant provisions of the Financial Services and Markets Bill'*.

936 As noted above, one of the provisions of the ICA 1982 which had been excluded from the Contracting Out Order and which the Treasury was therefore unable to authorise the FSA to exercise was section 68, the power to disapply or modify specified sections of Part II of the ICA 1982 and related subordinate legislation.

937 A section[592] of the Service Standard Specification dealt with the services the FSA was to provide in connection with section 68 orders. Those services included providing the Treasury Financial Services team and the Treasury Solicitor's Department with:

(a) a draft order;

(b) advice giving background, recommendation and timing for the Order; and

(c) a draft letter for the Treasury to send to the insurer to accompany the Order (containing specified information).

938 The Treasury was then to consider 'the Order', clarify any points with the FSA and/or the Treasury Solicitor's Department and if satisfied, make the Order and dispatch it. The Treasury was to maintain a separate record of Orders and letters issued and advise the FSA at the end of each month of the correspondence which had taken place.

939 It was noted that there were other '*supervisory Orders*' with a bearing on specific companies which would come within the responsibility of the FSA after the proposed new legislation was in force, but which until then could not be made by the FSA and would be '*taken forward by the Treasury using the same principles of co-operation, consultation, and good administration which are to apply to s68 Orders.*'

940 A section of the FSA SLA concerning 'Proposed secondary legislation on insurance matters' required the FSA to advise the Treasury on how legislation might keep pace with market developments, while remaining effective and without imposing an undue burden on the insurance industry.

941 The FSA was to provide the Treasury with statements of the policy to be achieved where subordinate legislation was required and was to support the preparation of new legislation needed to implement European Directives through secondary legislation.

942 As part of the initiatives to support the development of more effective and efficient regulatory procedures, during 1999 the FSA was to:

592 Paragraphs 16-18 of Schedule 1 to the FSA SLA.

(a) review and where necessary undertake an interim update of non-life and life insurance supervisory procedures and internal guidance to ensure a consistent and properly documented approach;

(b) prepare sectoral and market analyses to improve understanding of the context in which insurance companies operated;

(c) undertake specific projects in response to market developments;

(d) pursue the enhancement of a risk-based approach to insurance supervision against the FSA's '*broader canvas of financial regulation*' with a view to aligning the methodology and categorisation with other sectors of the financial industry (to the extent possible); a particular focus of this work was to be on the development of a risk rating system which could be implemented within two years of the proposed legislation coming into force; and

(e) the implementation of a comprehensive training and development programme to develop the skills and competencies of insurance and friendly society supervisors and specialists.

Responsibility within the FSA for the provision of services in relation to the prudential regulation of insurance companies pursuant to the FSA SLA

943 Responsibility for the functions which the FSA had been authorised by the Treasury to exercise was delegated by the FSA to its Insurance Supervisory Committee[593].

944 That Committee was responsible for considering the exercise of any power or discretion under the ICA 1982 which the FSA had been authorised to exercise in relation to any insurer, and for making recommendations to the Treasury to exercise supervisory powers which the FSA had not been authorised to exercise, in particular those under section 68 of the ICA 1982. GAD attended meetings of the Committee for papers on which it had a particular contribution to make.

945 The staff who had been seconded from the DTI to the Treasury in January 1998 moved to the FSA and combined with the supervisory staff of the Friendly Societies Commission to form the Insurance and Friendly Societies Division of the FSA. The IFSD had day-to-day responsibility for the supervision of insurance companies and continued to obtain actuarial advice from GAD.

Further guidance from GAD on resilience testing in 1998 and 1999

946 On 24 November 1998 the Government Actuary wrote to all appointed actuaries regarding the resilience test for life insurers (DAA10), to update the three scenarios for testing which had been set out in his letter of 30 September 1993[594]. He noted that increased volatility in equity markets had produced extreme daily fluctuations in the Financial Times Stock Exchange (FTSE) 100 Share Index and the FTSE All Share Index, such that the resilience tests which had been used since 1993 could produce '*unreasonable results*'.

947 This volatility was combined with a significant fall in the yields on gilts. The Government Actuary noted that a working party of the F&IA was considering possible revisions to the resilience test for the future, but their proposals were unlikely to come forward for several months. He therefore outlined a temporary amendment to the second of

593 The Baird Report, Chapter 2 section 2.6.
594 DAA6, see paragraph 524.

the September 1993 tests[595], substituting it with a more complex test in the event that the FTSE 100 Index fell below 4,500. (The first and third tests set out in the September 1993 DAA letter were not amended.)

948 On 30 September 1999, the Government Actuary again wrote to appointed actuaries regarding the resilience tests (DAA12) to set out a further revision to test (2). In place of the formula described in the November 1998 letter, test (2) was to comprise a combination of:

(a) a 10% fall in fixed interest yields; and

(b) a fall in the value of equities of the greater of:

  (i) 25%, subject to the fall being restricted to such as would not produce a price/earnings ratio on the FTSE Actuaries All Share Index lower than 75% of the inverse of the long term gilt yield before the assumed fall in paragraph (a); and

  (ii) 10%.

949 Shortly before the Insurance Companies (Amendment) Regulations 2000 came into force in May 2000, the Government Actuary wrote yet again to appointed actuaries to revise the resilience tests, in anticipation of changes to be made to ICR 1994 by the 2000 Regulations in relation to the assumed rate of interest on future investments, as noted below.

F&IA joint working parties on an alternative to the net premium valuation method of statutory reporting

1996 statutory valuation working party report

950 One of four joint working parties set up in 1993 by the F&IA through the operation of the JAWP to report on various aspects of statutory valuation considered the question of possible alternatives to the net premium method of valuation for reporting for regulatory purposes (the NPWP).

951 The NPWP consisted of members of the F&IA and GAD, with observers from the DTI. It was asked to look at alternative valuation methods used for supervisory purposes in other countries, make recommendations as to whether there should be a move to another method for supervisory purposes in the UK and if so, to recommend a method to be used and to consider the effects for reserves such as the resilience reserve.

952 The NPWP presented its report to the Faculty of Actuaries in January 1996 and to the Institute of Actuaries in February 1996[596]. In summary, it recommended that the net premium method of valuing liabilities should be replaced by a comprehensive gross premium system for all types of policies.

953 Perceived disadvantages of the net premium method were said to include:

(a) that it was not appropriate for many modern types of business, e.g. single premium with-profits business and flexible annuities;

(b) that the method was artificial, it made no explicit allowance for renewal expenses or future bonuses, in particular for terminal

595 Which required resilience to be tested against assumptions of a reduction in fixed-interest yields of 10%, combined with a fall in equity values of 25%.
596 British Actuarial Journal (BAJ) 2, III, 527-621 (1996).

bonus, which represented a significant part of PRE;

(c) the substantial use of equity-type investments did not sit easily with the net premium method;

(d) the value of liabilities did not always act consistently with changes in investment conditions which presented a difficulty with then current resilience reserve calculations;

(e) the method did not deal well with alterations to policies; and

(f) it was sometimes necessary to use a gross premium or cash flow method to take account of particular circumstances (and mixing the use of the net premium method with those other methods was unsatisfactory).

954 In relation to PRE, the NPWP noted:

> *It may also be argued that the regulations do not deal sufficiently rigorously with PRE and, in particular, future bonuses. The new regulations do specify that due regard has to be paid to PRE, a requirement that has been in actuarial Guidance Note GN1 for some time. It is not expected that the inclusion of PRE in the regulations will change companies' approach to the valuation of with-profits policies. Under conventional with-profits policies, the use of the net premium method makes an implicit reserve for reversionary bonuses by using a suitably low rate of interest. However, it is not clear how this implicit approach relates to the actual level of reversionary bonuses declared, nor does the method make any direct provision for terminal bonuses, which currently make up a large part of the proceeds of claims under with-profits policies.*

955 The replacement method proposed in the 1996 report involved the calculation of a 'statutory solvency reserve', based on the requirements of the Third Life Directive, with an appropriate allowance for tax, and a 'realistic policy liability', which would be a realistic gross premium valuation liability incorporating some prudent margins.

956 As regards the proposed statutory solvency reserve, the NPWP considered that no specific provision for terminal bonus need be made. Under the realistic policy valuation, the valuation was to reflect PRE and:

> *... in particular, make adequate provision for the level of bonuses, including terminal bonuses that the office would expect to pay, following its current practices, consistent with the assumptions used in the valuation.*

957 It was recommended that the realistic policy liability should be published, as a realistic valuation of the benefits which policyholders could reasonably expect in the future, calculated using realistic assumptions of future experience. It was proposed that reserves for both the statutory solvency reserve and the realistic policy liability should be published in the returns to the DTI and made available to the general public.

1998 statutory valuation working party report

958 A further working party was established (the SVWP) to build on the work of the NPWP and, in particular, to determine whether the idea for a statutory solvency reserve put forward in the 1996 report could be developed into a system of solvency valuation superior to the approach set out in the then current valuation of liability regulations.

959 The report of the SVWP presented to the F&IA in 1998[597] indicated that the reaction of members of the F&IA to the proposals in the NPWP's 1996 report to publish a realistic policy liability in the annual supervisory returns had been generally unfavourable, although the prospect of overhaul of the net premium method had received greater (but not universal) support.

960 The SVWP considered the approach to valuation which should be adopted in respect of various classes of business and made separate recommendations in relation to each. It noted that the overall strength of the reserves would be affected, to a very considerable extent, by the form and parameters for the resilience test (which, at the time of the report, were being considered by a separate working party).

961 For non-linked, non-profit business, it was recommended that the net premium standard should be replaced by a gross premium or cash flow approach. In the case of '*conventional with-profits business*', the SVWP recommended that the net premium standard for valuation should remain, however a requirement for a PRE surrender value should be made explicit (and regulations governing the treatment of altered policies should be liberalised).

962 For accumulating with-profits business the SVWP took the view (believed to be shared by the supervisory authority and GAD), that the variety of reserving bases for accumulating with-profit business then being used was unsatisfactory and could not be allowed to continue. The SVWP recommended that changes to ICR 1994 and/or GN8 were '*certainly needed, and should be introduced at the earliest practicable opportunity*'.

963 The report included, as Appendices E and F, possible changes to individual determination of liability regulations of ICR 1994 and to the guidance in GN8 which would accommodate the SVWP's recommendations.

964 The changes suggested by the SVWP to Regulations 64, 67 and 72 of ICR 1994 in Appendix E were largely[598] adopted and put into effect by the Insurance Companies (Amendment) Regulations 2000 referred to below and are not repeated here.

965 A separate recommendation made by the SVWP that the reinvestment rate of 6% in regulation 69(9)(a) should be reviewed in the light of economic trends was adopted when ICR 1994 was revised in 2000. Proposed changes to the ICAS Regulations 1996 to accommodate the results of gross premium valuations in the prescribed forms were also adopted and put into effect by the Insurance Companies (Amendment) Regulations 2000.

966 Similarly, the changes to GN8 suggested in Appendix F to the SVWP's report were substantially embodied in the revised version of GN8 (6.0) which was issued in March 2001 and is mentioned below.

967 The 1998 SVWP report stated that in recent years there had been a growing recognition within the profession of the need to '*interpret and safeguard*' PRE. It was said to be a common theme of various sections of the report that the mathematical reserves might not have kept pace with the development of the concept of PRE.

---

597 Presented in March 1998 to the Faculty of Actuaries and April 1998 to the Institute of Actuaries: BAJ 4, IV, 803-864 (1998).
598 Although not entirely (and the proposed drafting was revised).

968 It was said to be in consequence of the considerable emphasis that the SVWP had given to PRE in its deliberations that it had recommended that the major part of the practical implementation of its proposals should be through amendments to GN8, rather than through amendments to ICR 1994. The SVWP considered such an approach to be advantageous, given the relative ease of amending GN8, as opposed to amending the Regulations.

Phase 6: 2000 – 2001

The Insurance Companies (Amendment) Regulations 2000

969 ICR 1994 was amended on a number of occasions[599] before they were revoked on 1 December 2001[600]. Of the changes made in the intervening years, those under the Insurance Companies (Amendment) Regulations 2000[601] (the ICA Regulations 2000) were of particular significance. The ICA Regulations 2000 came into force on 29 May 2000.

970 The ICA Regulations 2000 amended various regulations relating to the determination of liabilities under Part IX of ICR 1994:

- Regulation 64 regarding the general basis for determination of long term liabilities;
- Regulation 67 regarding valuation of future premiums;
- Regulation 69 regarding rates of interest; and
- Regulation 72 regarding options.

971 In addition, the ICA Regulations 2000 made a consequential amendment to Schedule 4 of the ICAS Regulations 1996 in relation to the required contents of the abstract of the appointed actuary's valuation report.

972 As noted above, these revisions largely flowed from the recommendations of the SVWP which had undertaken a review of statutory valuation of long-term business and reported in 1998.

Amendment to Regulation 64 of ICR 1994 – determination of long term liabilities

973 A new item was added to the list of matters under Regulation 64(3)[602] which, without prejudice to the general requirements of Regulation 64(1)[603], the appointed actuary was required to take into account in determining the amount of the long term liabilities.

974 The additional item was discretionary charges and deductions, in so far as they did not exceed the '*reasonable expectations of policyholders*' (Regulation 2(a) of the ICA Regulations 2000). This was described as a '*clarificatory amendment*' in the explanatory notes to the 2000 Regulations.

Amendments to Regulation 67 of ICR 1994 – valuation of future premiums

975 Regulation 67 of ICR 1994, which described the methods by which future premiums were to be valued (and required, in general, that a net premium valuation method should be used[604]), was amended so as to limit its application to contracts under which the policyholder was entitled to participate in any surplus.

599 See paragraph 683 and the footnotes thereto.
600 By SI 2001 No. 3649 (referred to in paragraph 683).
601 SI 2000 No. 1231, see paragraph 613.
602 See paragraph 644 in which paragraph (3) of regulation 64 as originally enacted is quoted.
603 Namely, that the amount of the long term liabilities should be determined on actuarial principles which had due regard to PRE and made proper provision for all liabilities on prudent assumptions that included appropriate margins for adverse deviation of relevant factors.
604 Regulation 67(1) required that a net premium valuation method should be used where further premiums were payable under the contract and benefits were determined at the outset in relation to the total premiums payable. For contracts under which each premium increased the benefits or those where the amount of premium payable in the future could not be determined until it was paid (such as certain of the contracts entered into by Equitable), Regulation 67(3) permitted future premiums and the corresponding liability to be left out of account so long as adequate provision was made against any risk that the increase in liabilities resulting from the payment of future premiums might exceed the amount of those premiums. Paragraph (4) of Regulation 67 allowed an alternative method of valuation to be used to that described in paragraphs (1)-(3) of that regulation provided that it could be demonstrated that the alternative method would result in reserves no less, in aggregate, than those which would result from the use of the methods described in paragraphs (1)-(3).

976 The aim of this amendment was to allow a gross premium method to be used for non-profit contracts[605]. Amendments were also made to paragraph (2) of Regulation 67 to provide alternative methods of valuation where the terms of an insurance contract were changed (regulation 2(b) of the ICA Regulations 2000).

Amendment to Regulation 69 of ICR 1994 – rates of interest

977 Paragraph (9)(a) of Regulation 69 of ICR 1994, which set upper limits on the assumptions made about yields on investments to be made more than three years after the valuation date, was revised to take account of changes to the indices referred to in that paragraph, following a fall in interest rates (Regulation 2(c) of the ICA Regulations 2000).

Amendments to Regulation 72 of ICR 1994 – options

978 Paragraph (1) of Regulation 72 of ICR 1994 (and its predecessor provision, Regulation 62(1) of ICR 1981) imposed a general requirement that provision should be made to cover any increase in liabilities caused by policyholders exercising options under their contracts.

979 From 1994, the Regulation had stated that such provision was to be made on '*prudent assumptions*'. Paragraph (2) of Regulation 72 made more detailed provision regarding the calculation of the amount of the required provision for certain kinds of options, namely those where the policyholder had an option to secure a guaranteed cash payment within twelve months of the valuation date. However, as originally drafted, Regulation 72 did not provide any detail of how the calculation was to be undertaken in other cases (beyond the stipulation, from 1994 onwards, that it should be made '*on prudent assumptions*').

980 Regulation 2(d) of the ICA Regulations 2000 added new paragraphs (3)-(5) to Regulation 72 to make detailed provision regarding the calculation of provisions for other kinds of option, which were not catered for by paragraph (2). The new paragraphs (3) and (4) of Regulation 72 provided:

(3) Where a contract includes an option whereby the policy holder could secure a cash payment, but paragraph (2) above does not apply, the provision for that option shall at all times be such as to ensure that, if the assumptions adopted for the valuation of the contract are fulfilled in practice –

(a) the resulting value (and therefore the provision) is not less than the amount required to provide for the payment which would have to be made if the option were exercised; and

(b) the payment when it falls due is covered from resources arising solely from the contract and from the assets covering the amount of the liability determined at the current valuation.

(4) For the purposes of paragraph (3) above, the amount of a cash payment secured by the exercise of an option shall be assumed to be –

(a) in the case of an accumulating with-profits policy[606], the lower of –

605 According to the explanatory notes to the ICA Regulations 2000.

606 The definitions in the new paragraph (5) of regulation 72 provided that an 'accumulating with-profits policy' meant *'a with-profits policy which has a readily identifiable current benefit, whether or not this benefit is currently realisable, which is adjusted by an amount explicitly related to the amount of any premium payment and to which additional benefits are added in respect of participation in profits by additions directly related to the current benefit, or a policy which has similar characteristics'*. A 'with-profits policy' was given the same meaning as in the ICAS Regulations 1996, namely a contract falling within a class of long term business as specified in Schedule 1 to the Act which was eligible to participate in any part of any established surplus.

(i) *the amount which would reasonably be expected to be paid if the option were exercised, having regard to the representations of the company; and*

(ii) *that amount, disregarding all discretionary adjustments; and*

(b) *in the case of any other policy to which this regulation applies, the amount which would reasonably be expected to be paid if the option were exercised, having regard to the representations of the company, without taking into account any expectations regarding future distributions of profits or the granting of discretionary additions in respect of an established surplus*[607] *or in anticipation thereof*.

981 Whilst this amendment specified, for the first time, particular ways in which the provision for certain contracts containing options was to be made, it did not alter the basic requirement (which had existed since 1981) that provision should be made for '*any increase in liabilities*' caused by policyholders exercising options under their contracts.

Amendments to Schedule 4 of the ICAS Regulations 1996 – revised instructions for prescribed forms where the net premium method was not used

982 Consequential amendments were made to Schedule 4 of the ICAS Regulations 1996 (regarding the abstract of the valuation report prepared by the appointed actuary) to revise the instructions for the completion of Forms 51-54[608] to allow for cases in which the net premium method of valuation had not been used.

Further guidance for appointed actuaries on resilience testing from GAD (and the FSA) in 2000 and 2001 and the Resilience Reserves Working Party report

DAA14

983 On 15 May 2000, shortly before the ICA Regulations 2000 came into force, the Government Actuary wrote to appointed actuaries again on the topic of resilience testing (DAA14). The letter noted that the revisions to ICR 1994 were to include a revised formula for determining the yield on investments which were to be made more than three years in the future, with consequent effects on shorter term assumptions.

984 The letter went on to state that the effect of two of the scenarios promulgated in the Government Actuary's letter of 30 September 1993[609] as amended by his letter of 30 September 1999[610] appeared to be unnecessarily severe, given that ICR 1994 as amended allowed for the effect of a sustained reduction in interest rates.

985 DAA14 stated that from the date of the ICA Regulations 2000 coming into force (29 May 2000), for with-profit offices, the second of the three scenarios to be used as a benchmark by GAD would comprise a combination of:

(a) a fall in the value of equities of the greater of:

(i) 25%, subject to the fall being restricted to such as would not produce a price/earnings ratio on the FTSE Actuaries All Share Index lower than 75% of the inverse of the long

[607] Paragraph (5) provided that 'established surplus' had the same meaning as in section 30(4) of the ICA 1982, namely *'an excess of assets representing the whole or a particular part of the fund or funds maintained by the company in respect of its long term business over the liabilities, or a particular part of the liabilities, of the company attributable to that business as shown by an investigation to which section 18 above applies or which is made in pursuance of a requirement imposed under section 42 below'*.

[608] Forms 51-54 were the prescribed forms for the valuation summaries of non-linked contracts (other than accumulating with-profit policies), accumulating with-profit policies, property linked contracts and index linked contracts.

[609] DAA6, see paragraph 524.

[610] DAA12, see paragraph 706.

term gilt yield (as defined in regulation 69(9)) before the assumed fall in paragraph (b), and

(ii) 10%;

(b) for fixed interest securities:

(i) a fall in the yields on risk-free securities of less than five years outstanding term to redemption and on short-term deposits to the level which is calculated under Regulation 69(9) for future investments (or remain constant if already at or below this level),

(ii) the yields on risk-free securities of at least fifteen years' duration remaining constant, and

(iii) a fall in the yields on risk-free securities of more than five but less than fifteen years' outstanding term to redemption to levels obtained by interpolating between the figures given by (i) above and the 15 year gilt index yield (or remain constant if already at or below this level);

(c) a fall in property values of 20%; and

(d) a rise in the real yields on indexed gilts of 10% (e.g. from 2% to 2.2%).

986 DAA14 noted that in arriving at these benchmarks, GAD had been mindful of the existence of the professional working party[611] and had endeavoured not to anticipate its recommendations; for this reason, core features of the previous tests had been retained.

987 The Baird Report (paragraph 3.24.10) noted that where assets and liabilities were well matched, then the changes in investment conditions described in the above resilience tests might require little reserves. However, if assets and liabilities were not well matched or the liabilities included onerous options or guarantees, the tests could require significant reserves[612].

DAA15, DAA15A and the FSA letter of 4 December 2001

988 The guidance from the Government Actuary on resilience testing was replaced on a temporary basis (intended to be until 31 May 2002) by a further DAA letter issued on 10 September 2001 by the Head of Actuarial Department of the FSA[613] (DAA15).

989 The contents of DAA15 were said to constitute guidance for the purpose of section 157 of the FSMA 2000, which had come into force on 18 June 2001, empowering the FSA to give guidance consisting of such information and advice as it considered appropriate with respect to such matters as the operation of rules made under the Act.

990 DAA15 stated that the FSA had decided that the guidance on resilience testing should be modified and simplified. In place of the set of scenarios previously recommended by the Government Actuary as revised over the years, the letter advised that the actuary should, as a minimum, consider the scenario of a fall in the value of equities of the greater of:

611 Apparently a reference to the Resilience Reserves Working Party mentioned below.

612 Paragraph 3.24.11 of the Baird Report notes that in the case of Equitable, the tests described in DAA14 had a significant effect on the reserves required to be made. On 11 August 2000, the company's appointed actuary estimated the effect would be to reduce net explicit assets by some £600 million.

613 To which the GAD staff involved in prudential regulation of insurance companies had transferred (on 26 April 2001), in order to provide the FSA with 'in house' actuarial advice (paragraph 2.8.9 of the Baird Report).

(a) 25%, subject to the fall being restricted to such as would not produce a price/earnings ratio on the FTSE Actuaries All Share Index lower than 75% of the inverse of the long term gilt yield (as defined in Regulation 69 of ICR 1994 and rule 5.11 of the Interim Prudential Sourcebook for Insurers), and

(b) 10%.

At the same time, the actuary was to make the 'prudent assumption' that company earnings might fall by 10% (shortly after the above fall in equity values), but that dividends would remain unaltered when assessing the corresponding rate of interest at which the liabilities should be valued.

991 A further letter was issued by the Head of Actuarial Department of the FSA to appointed actuaries on 24 September 2001 (DAA15A), indicating that the suggested minimum figure of 10% in subparagraph (b) of the 10 September 2001 letter should not be regarded as an absolute figure which was to be applied in all circumstances.

992 Instead, appointed actuaries were to apply their professional judgment which could well lead, in some circumstances, to a lower figure being assumed.

993 DAA15A was described in a further letter from the FSA to appointed actuaries of 4 December 2001 as '*emergency guidance*', issued against a background of unusual market conditions of extreme volatility following the attack on the World Trade Centre on 11 September 2001, aimed at avoiding the risk that insurance companies might sell equities for short term technical reasons in a way which could be damaging to the interests of policyholders.

994 The FSA letter of 4 December 2001 restored the guidance as set out in the letter of 10 September 2001 on a temporary basis until 31 May 2002.

The Resilience Reserves Working Party report

995 A further working party established by the F&IA, the Resilience Reserves Working Party (RRWP), examined resilience reserve requirements under the UK regulatory framework. The RRWP produced an interim report in May 1998 and presented its final report at the Life Convention in November 2000.

996 The RRWP's report noted that the requirement to make an allowance for the resilience of an office to changes in financial circumstances had been implicit for many years[614], and that an approach outlined in 1985[615] had formed the cornerstone of what had been required by the regulators since then, albeit amended to remove the effects of particular unintentional features.

997 The aim of the RRWP was to use actuarial techniques which had become commonplace since 1985 to find a more robust framework for identifying what needed to be tested and to try to make recommendations regarding a way forward. Its terms of reference were '[t]*o consider whether the Government Actuary should be asked to revise the standard of the resilience test as set out in his letter to Appointed Actuaries dated 30 September 1993 and amplified in his letter to Appointed Actuaries dated 29 October 1996, and if so for what reasons*'. The Government Actuary's letters of 24 November 1998, 30 September 1999 and 15 May 2000 were also taken into account.

614 An express requirement for insurance companies to make *'appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities'* had existed since the coming into force of Regulation 55 of ICR 1981 in October 1982, see paragraphs 267 and 268.

615 Apparently a reference to the 'working rule' first outlined by the Government Actuary in DAA1 (referred to in paragraph 397).

998 One of the issues considered by the RRWP was the purpose of the resilience test. The view was expressed that this was an issue over which the profession might not display a 'common understanding'.

999 As a 'working hypothesis' it was assumed that the purpose of resilience testing was to provide comfort to regulators that no life assurance company meeting the test scenarios was likely to require statutory intervention within the period from the date on which the returns were calculated until the date on which the next returns were due.

1000 The RRWP decided to look at the probability of events occurring within 12 months of the valuation date, and described the test as effectively '*a short term stress test of solvency*'.

1001 The RRWP noted that '*as currently constructed the impact of a resilience test is merely to make the statutory test* [of solvency] *more harsh. It does not provide an advance warning of statutory insolvency'* (although it was noted that it was unlikely that a company would fail the statutory insolvency test without first having failed the statutory solvency test with the resilience test applied).

1002 The RRWP also noted that most of the 'numerous' working parties which had looked at the fundamental valuation regime had found that their results were, in practice, heavily dependent upon the nature of the resilience regime which was applied to them.

1003 Much of the RRWP report was concerned with methodology for resilience testing and an examination of the efficacy of alternative models for solvency investigations. Ultimately the RRWP selected an approach which looked only at short term investment fluctuations and identified four specific risks which it considered to be worthy of investigation:

(a) a fall in equity values, accompanied by a fall in fixed interest yields for terms of less than 15 years;

(b) a fall in gilt yields;

(c) a fall in equity values and a rise in gilt yields; and

(d) a rise in equity values coupled with a fall in gilt yields.

Illustrations were given of the application of the proposed tests and proposals were made for the treatment of other investments such as property.

1004 The RRWP concluded that the tests it had proposed, although complex, were '*somewhat simpler to use than to write down*'. It was acknowledged that the tests would not eliminate the need for the actuary to apply professional judgment if '*post balance sheet events were to expose imprudence in any assumption*'.

1005 However, the RRWP was of the view that the tests it proposed would meet the needs of the profession, the regulators and the industry. It was recommended that the outcome of all the tests should be reported in the briefest summary form '*in Schedule 4*' (i.e. in the abstract of the actuary's valuation report forming part of the statutory returns under the ICAS Regulations 1996). No change was recommended to the then existing requirement that only the most onerous resilience test should be the subject of '*the full rigours of Form 57*' (i.e. the matching rectangle[616]).

616 See paragraphs 797 et seq and Appendix C.

Revisions to GN8 in 2001

1006 A revised version of GN8 (6.0) came into effect on 12 March 2001. The covering letter from the F&IA[617] described the revised guidance as being required to take account of changes introduced by the ICA Regulations 2000 and of other issues '*arising from the conclusions of the statutory valuation working party* ... [including] ... *new requirements for provisions for surrender values or other options available to policyholders, as well as a number of other technical amendments*'. The changes made to GN8 largely followed the proposals outlined in Appendix F to the 1998 SVWP report referred to above[618].

1007 The covering letter suggested that version 6.0 of GN8 incorporated, among other changes, amendments regarding the valuation of with-profit business which was not subject to a net premium method of valuation. However, such guidance as appeared on that topic was brief.

1008 The amendments made in version 6.0 included guidance on certain of the determination of liability regulations of Part IX of ICR 1994 which had not been addressed in the earlier versions of GN8, such as Regulation 66 (avoidance of future valuation strain); Regulation 67 (valuation of future premiums, as revised by the ICA Regulations 2000) and Regulation 72 (on options, which had also been revised by the 2000 Regulations).

Additional guidance on Regulation 65

1009 Additional guidance was given on Regulation 65 of ICR 1994 (which, in general, required a prospective calculation of long term liabilities). Paragraph 3.2.2 of GN8 version 6.0 provided specific guidance in respect of with-profit business not subject to a net premium valuation.

1010 That paragraph repeated general requirements for with-profits policies (that the appointed actuary should ensure that the reserve was sufficient to provide for future reversionary bonus, including the cost of any shareholders' share of the surplus associated with the declaration of such a bonus (including tax where appropriate)), and, in addition, required that the rates for future bonus to be assumed for this purpose were to be selected '*having regard to current rates of bonus and to changes in the rates of future bonus which would be consistent with the reasonable expectations of policyholders in the event that experience were to follow the valuation basis*'.

1011 This appears to be the extent of the specific advice on 'with-profits business not subject to a net premium valuation' (but see paragraphs 1017 to 1020 regarding the guidance on Regulations 72 and 75, which were of particular relevance to such business).

1012 The guidance does not specify the circumstances in which a net premium method would *not* be used for with-profits business, as to which see the comments on Regulation 67 in paragraph 975 and footnote 604[619].

1013 Additional guidance was also given in connection with Regulation 65 on assessing the adequacy of the reserve in relation to permanent health insurance business, generally requiring the use of a method which made specific allowance for claim inception rates and the duration of sickness.

[617] Dated February 2001.
[618] Paragraph 963.
[619] The amendments to GN8 proposed in Appendix F to the 1998 report of the SVWP indicated that the additional guidance on Regulation 65 was intended to apply to business which was subject to Regulation 67(3) which allowed for the use of a specified alternative method for certain contracts under which each premium increased the benefits or where the amount of the premium payable in the future could not be ascertained in advance, provided certain conditions were met.

Guidance on Regulation 66

1014 For the first time, GN8 included guidance on Regulation 66 of ICR 1994 regarding avoidance of future valuation strain, which was said to be of particular importance in the assessment of the non-unit reserves for linked contracts.

Guidance on Regulation 67

1015 Reference was also made to Regulation 67, but without any detailed commentary. The guidance simply stated that:

> *Regulation 67(1) requires the use of a net premium method for certain categories of with-profits business. It does not apply to non-profit business, which may be valued on a gross premium or a net premium method.*

1016 The second sentence reflected the amendment which had been made to Regulation 67 by the ICA Regulations 2000 (see paragraph 975).

Guidance on Regulation 72

1017 The guidance noted that Regulation 64(3)(c) required that all options available to the policyholder be taken into account in determining the amount of the long term liabilities and that Regulation 72(1) required that provision should be made on prudent assumptions to cover any increase in liabilities caused by policyholders exercising options under their contracts. The guidance went on to state (in paragraph 3.8.2):

> *Where an optional benefit is of greater value than the basic benefit under the valuation assumptions then a prudent allowance should be made in the valuation for the proportion of policyholders likely to exercise the option. Where the optional benefit is likely to be the most attractive alternative to the policyholder and the most costly option to the company, then it will normally be appropriate to assume that all policyholders exercise the option. However, where there are advantages to policyholders in not exercising the option, for example tax treatment, or a preference for a cash sum alternative to an annuity, then it may be appropriate to make allowance for a proportion failing to exercise the option. In making such an allowance past experience may only be taken into account to the extent that it is deemed likely to remain relevant under the other valuation assumptions. In addition, any such allowance must be sufficiently prudent to allow for possible future changes in circumstances.*

1018 The guidance went on to state (in paragraphs 3.8.5 and 3.8.6):

> *Regulation 72(4) refers to an amount which would reasonably be expected to be paid if the option were exercised, having regard to the representations of the company. This may be interpreted as referring to the level of that amount in the event of a significant level of policy discontinuances. Regulation 72(4)(a)(ii) refers to an amount obtained by disregarding all discretionary adjustments. This means disregarding all such adjustments, both positive (such as terminal bonus) and negative (such as market value adjustment factors), but does not mean that it is necessary to disregard automatic adjustments (such as surrender penalties) that are applied to discontinuance values in any financial conditions.*
>
> *When considering reasonable expectations with regard to discontinuance values, the Appointed Actuary must take account of representations made by the company to policyholders, including those in marketing literature and the company's With-Profits Guide, and also the practice of the company*

in determining discontinuance values, with particular regard to:

(a) the relationship between the discontinuance values and the value of the underlying assets, and

(b) any circumstances of which the policyholder can reasonably be expected to be aware in which discontinuance values might be reduced due to losses not directly related to the investment return earned by the company on those assets.

Additional guidance on Regulation 75

1019 Additional guidance was given on Regulation 75, which required that the nature and term of the assets representing the long term liabilities be taken into account when determining the amount of the long term liabilities and that prudent provision be made for possible future changes in the value of those assets.

1020 A new paragraph 3.9.6 of GN8 stated that the appointed actuary should ensure that the '*liability*'[620] in the changed investment conditions would adequately cover '*policyholders' (revised) reasonable expectations ...*'.

1021 Version 6.0 of GN8 was replaced by version 6.1 with effect from 1 December 2001.

Background to the introduction of the Financial Services and Markets Act 2000

General background

1022 As noted above[621], the proposals which eventually led to the enactment of the FSMA 2000 were outlined in broad terms by the then Chancellor of the Exchequer in a statement made to the House of Commons on 20 May 1997 in relation to the Bank of England, in which he announced the government's wider intentions to reorganise the financial sector and establish a single financial regulator for a considerable part of the UK financial services sector.

1023 The Chancellor stated that '[the] *financial services industry needs a regulator which can deliver the most effective supervision in the world*', and that '[o]*ne cannot ensure the success of British financial services in the 21st century without modernising arrangements for the protection of investors*'.

1024 The Chancellor noted that the distinction between different types of financial institution, '*banks, security firms and insurance companies – are becoming increasingly blurred*', and that many were regulated by a plethora of different supervisors, increasing the costs and reducing the effectiveness of supervision[622]. He considered that regulators needed to look at the businesses of financial institutions in a consistent way, to bring the regulatory structure more closely into line with '*today's increasingly integrated financial markets*'.

1025 The Chancellor proposed that the SIB (which changed its name to the FSA five months later) should become the single financial regulator underpinned by statute, with the then current regime of self-regulation being replaced by a new and fully statutory system '*which will put the public first, and increase public confidence in the system*'. He requested that the SIB 'project manage' the process of implementation of the proposals, working with the SROs and the financial industry.

---

620 See paragraphs 674 to 676 regarding the question of whether the cost of meeting PRE was to be treated as a liability of an insurance company for the purpose of ICR 1994.
621 At paragraph 902 and 903.
622 Hansard Debates, House of Commons, 20 May 1997, column 510.

1026 In July 1998, the Treasury published 'Financial Services and Markets Bill: A Consultation Document' which included an incomplete draft of the Bill, a document containing an overview of the proposed regulatory reform and draft Explanatory Notes.

1027 The consultation exercise was reported to have attracted responses from over 220 firms and bodies with an interest in the regulation of financial services. A number of further consultation documents and drafts of proposed subordinate legislation were published by the Treasury in relation to particular aspects of the proposals.

1028 The draft Bill was subject to 'pre-legislative scrutiny'. In February 1999 the Treasury Select Committee of the House of Commons published a report on the draft Bill[623]. Aspects of the Bill were considered by a Joint Committee of both Houses of Parliament before being introduced into the House of Commons on 17 June 1999. Following a fairly difficult passage through Parliament, the Bill received Royal Assent on 14 June 2000.

1029 The main cause of contention over the Bill does not appear to have been the basic principle of the establishment of a single regulator, but rather the proposed extent of the FSA's powers and the need for controls over those powers to ensure fairness and public accountability. These issues were the subject of considerable debate and resulted in extensive amendments to the Bill[624].

1030 The Act gave power to the FSA to undertake authorisation and regulation of those engaged in investment business, including stocks and shares, unit trusts, life assurance and personal pensions.

1031 The FSA assumed responsibility for the work of nine separate regulatory bodies[625] and the SROs were dissolved. The categories of business subject to regulation was not greatly varied. Despite the shift towards regulation through detailed rules made mainly by the FSA, rather than by primary or secondary legislation, the FSMA 2000 is underpinned by an extensive network of secondary legislation which contains much of the detailed provision[626].

1032 Only five provisions of the Act came into force on the date of Royal Assent, the remainder were brought into force on various dates appointed by the Treasury[627]. As outlined above, implementation of the regime under the FSMA 2000 was undertaken in stages, with the main implementation date of 1 December 2001.

1033 Neither the FSA, nor the new bodies created under the FSMA 2000 (some of which are mentioned below), are subject to my powers of investigation under the 1967 Act[628].

Regulatory objectives and functions of the FSA

1034 Under section 2(2) of the FSMA 2000, the FSA is given four regulatory objectives:

623 Financial Services Regulation, Third Report from the Treasury Committee, Session 1998-99, HC 73.
624 It has been reported that the Bill was subject to some 2,500 amendments prior to enactment.
625 In addition to the former functions of the SIB, the FSA assumed responsibility for work formerly undertaken by the Supervision and Surveillance Division of the Bank of England; the Treasury; the Building Societies Commission; the Friendly Societies Commission; the Registry of Friendly Societies; and the three SROs: the Securities and Futures Authority, the PIA and IMRO. Lloyd's of London is also subject to external supervision by the FSA. More recently, the FSA has assumed responsibility for regulation of mortgage lending and for general insurance regulation (formerly the responsibility of the General Insurance Council). The FSA has been described as a 'super-regulator'.
626 More than 80 statutory instruments were identified as being required even before the main implementation date on 1 December 2001 and some 136 statutory instruments have been made under the FSMA 2000 to date.
627 Section 431 of the FSMA 2000.

(a) market confidence;

(b) public awareness;

(c) the protection of consumers; and

(d) the reduction of financial crime.

In discharging its general functions under the FSMA 2000, the FSA is required to act in a way which, so far as is reasonably possible, is compatible with its regulatory objectives and which it considers most appropriate for the purpose of meeting those objectives.

1035 Under section 2(4) of the FSMA 2000, the general functions of the FSA are:

(a) the making of rules under the Act;

(b) preparing and issuing codes under the Act;

(c) the giving of general guidance; and

(d) determining the general policy and principles by reference to which it performs particular functions.

1036 Under section 2(3) of the FSMA 2000, in discharging its general functions the FSA is required to have regard to:

(a) the need to use its resources in the most efficient and economic way;

(b) the responsibilities of those who manage the affairs of authorised persons;

(c) the principle that the burden or restriction which is imposed on a person, or on the carrying on of an activity, should be proportionate to the benefits, considered in general terms, which are expected to result from the imposition of that burden or restriction;

(d) the desirability of facilitating innovation in connection with regulated activities;

(e) the international character of financial services and markets and the desirability of maintaining the competitive position of the UK;

(f) the need to minimise the adverse effects on competition that may arise from anything done in the discharge of those functions; and

(g) the desirability of facilitating competition between those who are subject to any form of regulation by the FSA.

1037 In addition to its functions under the FSMA 2000, the FSA was given regulatory powers under other legislation including enactments relating to building societies, friendly societies and industrial and provident societies, the Enterprise Act 2002, the Unfair Terms in Consumer Contracts Regulations 1999[629] and the Financial Services (Distance Marketing) Regulations 2004[630].

[628] As noted at the outset of this Part of the report, the actions of the FSA in respect of the prudential regulation of insurance companies are relevant to this investigation only in so far as they relate to functions 'contracted out' to the FSA by the Treasury during the period from 1 January 1999 until immediately before the FSMA 2000 came into force on 1 December 2001.
[629] SI No. 2083 as amended by the Unfair Terms in Consumer Contracts (Amendment) Regulations 2001 SI No.1186.
[630] SI 2004 No. 2095.

The role of the Treasury

1038 The FSMA 2000 confers a number of functions on the Treasury, including powers to make orders and regulations and to arrange independent inquiries. The Treasury's order-making powers include powers to specify the activities which are to be subject to regulation under the Act and those to exempt persons from the general prohibition on carrying on a regulated activity without being authorised under the Act[631].

1039 The FSA is required to report annually to the Treasury on the discharge of its functions and regarding its opinion on the extent to which its regulatory objectives have been met. That report must be laid before Parliament (and the FSA must hold an annual public meeting to enable the report to be considered)[632]. The Chairman and other members of the governing body of the FSA are appointed and liable to removal from office by the Treasury (paragraph 2(3) of Schedule 1 to the FSMA 2000).

1040 The FSA describes its relationship with the Treasury as being one under which it is accountable to Treasury Ministers and through them, to Parliament, but that it is '*operationally independent of the Treasury*'. The relationship between the Treasury and the FSA was set out in a published exchange of letters between the Chancellor of the Exchequer and the Chairman of the FSA dated 13 December 2001.

1041 In his letter, the Chancellor described his proposals for the use of his powers, '*without in any way compromising the FSA's statutory independence*', as covering such matters as:

- directing the FSA to cover particular issues in its public annual report, including how the FSA had dealt with major regulatory cases or issues which had arisen during the year (subject to statutory restrictions on disclosure and any market sensitivities);

- establishing whether the FSA was providing value for money, through periodic independent review under section 12 of the FSMA 2000 as necessary;

- periodically reviewing the *'panoply of statutory instruments which sit under the* [FSMA 2000]'; and

- the power to launch a statutory inquiry into possible serious regulatory failure (but emphasising that the failures of individual firms were not, in themselves, evidence of regulatory failure by the FSA[633]).

The Financial Services and Markets Tribunal, the Ombudsman Scheme and the compensation scheme

1042 Part IX of the FSMA 2000 (and Schedule 13 to the Act) established an independent tribunal, known as the Financial Services and Markets Tribunal, to determine issues referred to it by an aggrieved party under various provisions of the FSMA 2000 in respect of decisions of, or action taken by, the FSA, including decision notices and supervisory notices and in relation to applications for permissions to undertake regulated activities under Part IV.

---

631 Sections 22 and 38 of the FSMA 2000.

632 Paragraphs 10 and 11 of Schedule 1 to the FSMA 2000.

633 The Chancellor added that '[the] *Government believes that it is right for the FSA to set the maintenance of confidence in the financial system as a target, rather than the avoidance of failure of firms per se'.*

1043 Appeals on a point of law arising from a decision of the Tribunal may be made, with the permission of the Tribunal, to the Court of Appeal (or to the Court of Session in Scotland). The Lord Chancellor is responsible for appointing a panel of people to act as chairmen of the Tribunal (paragraph 3(1) of Schedule 13 to the FSMA).

1044 Part XVI of the FSMA 2000 established a single Ombudsman Scheme, bringing together at least five former dispute resolution schemes. The Scheme is administered by a body corporate (the Financial Ombudsman Service Limited) and deals with complaints made against authorised persons (or against those who had been authorised persons at the time of the act or omission to which the complaint relates) in relation to activities regulated by the FSMA 2000.

1045 The stated aim of the Scheme is to provide a means by which certain disputes can be resolved '*quickly and with minimum formality by an independent person*'. The Chairman and other members of the Board of the Ombudsman Scheme are appointed and liable to removal by the FSA acting, in the case of the Chairman, with the approval of the Treasury (paragraph 3(2) of Schedule 17 to the FSMA 2000).

1046 Part XV of the FSMA 2000 created a single compensation scheme to replace the Investor's Compensation Scheme, the Policyholders Protection Board Scheme and three other compensation schemes.

1047 The compensation scheme is administered by a body corporate (the Financial Service Compensation Scheme Limited – the 'scheme manager' for the purpose of section 212 of the Act) and financed by a levy on authorised persons.

1048 The FSA is responsible for the appointment and removal of the Chairman and other members of the board of the compensation scheme management company acting, in the case of the Chairman, with the approval of the Treasury (section 212(4) of the FSMA 2000).

Some implications of the FSMA 2000 for prudential regulation of long term insurance business

1049 Effecting and carrying out contracts of insurance is an activity of a 'specified kind' which is a 'regulated activity' for the purpose of the FSMA 2000[634].
