1050 The effects of the FSMA 2000 for the prudential regulation of long term insurance include:

- the repeal of the ICA 1982, the FS Act 1986, the PPA 1975, the Policyholders Protection Act 1997, the Insurance Companies (Reserves) Act 1995 and related subordinate legislation, mainly with effect from 1 December 2001[635];

- the vesting of responsibility for prudential regulation and conduct of business regulation in a single regulator and the gradual harmonisation of rules for regulation of insurance business with those applied to other parts of the financial sector;

---

634 Contracts of insurance are described in general terms in Schedule 2 to the FSMA 2000 as being within the scope of regulated activities for the purpose of the Act. Effecting a contract of insurance as a principal and carrying out a contract of insurance as a principal are 'specified kinds of activity' which are 'regulated activities' for the purpose of the FSMA 2000 by virtue of article 10 of the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 SI No. 544 (made by the Treasury in exercise of powers under, inter alia, section 22 of the FSMA 2000).

635 By SI 2001 No. 3649 (referred to in paragraph 683).

- (for most purposes) the replacement of the relevant legislation with rules made by the FSA[636] set out as 'rule making instruments'[637], consolidated in the FSA Handbook, a lengthy (and constantly evolving) document which contains 'business standards' for, inter alia, insurance business in 'prudential sourcebooks' (initially in 'interim prudential sourcebooks' specific to individual financial sectors, but now being combined into an 'integrated prudential sourcebook' of general application);

- the designation of the Institute of Actuaries (but not the Faculty of Actuaries) as a 'designated professional body' for the purpose of section 326 of the FSMA 2000[638] (actuaries supervised by the Institute are thereby entitled to undertake certain regulated activities without breaching the general prohibition on carrying on a regulated activity unless authorised or exempt under the Act); and

- specific provision in the legislation:

  – to the effect that an actuary (or auditor) appointed for the purpose of rules made under the FSMA 2000 does not contravene any duty merely through providing the FSA with information or his or her opinion on any matter, provided that the actuary (or auditor) acts in good faith and reasonably believes that the information or opinion is relevant to the functions of the FSA[639]; and

  – to impose a duty on the actuary who is acting or has acted for an authorised person to communicate information or his or her opinion to the FSA in specified circumstances[640].

1051 Guidance for appointed actuaries such as that in GN1, GN2, GN7 and GN8 continues to be issued by the F&IA. In versions of the guidance issued at the end of December 2004, references to legislation have largely been replaced by references to the FSA Handbook and Interim Prudential Sourcebook for Insurers.

1052 Since the issue of that guidance, the Integrated Prudential Sourcebook for Insurers has been produced.

636 Generally, made by the FSA under section 138 of the FSMA 2000.
637 Under section 153 of the FSMA 2000, any power of the FSA to make rules is to be exercisable in writing and must specify the provision under which the rule is made. The instrument by which rules are made by the FSA is described as 'a rule-making instrument'. The Treasury has limited power to make supplementary rules in relation to insurance business for the purpose of preventing certain persons who are not authorised under the Act from doing anything which would lessen the effectiveness of certain 'asset identification rules' (section 142).
638 By virtue of the Financial Services and Markets Act 2000 (Designated Professional Bodies) Order 2001 SI No. 1226.
639 Section 342(3) of the FSMA 2000 (see paragraph 383 regarding the former provisions in relation to auditors under section 21A of the ICA 1982).
640 By virtue of the Financial Services and Markets Act 2000 (Communications by Actuaries) Regulations 2003 SI No. 1294. Comparable provision was made in relation to communication of information by auditors to the FSA, by the Financial Services and Markets Act 2000 (Communications by Auditors) Regulations 2001 SI No. 2587, to replace the provisions of SI 1994 No. 449 (referred to in paragraphs 697 et seq) which was revoked when the relevant provisions of the FSMA 2000 came into force.

Transcript of instructions for completion of form 57 in Schedule 4 to SI 1996 No. 943

Instructions for completion of Form 57

1. The word 'Total' or the name of the fund shall be shown against the heading 'Category of assets'. The corresponding code box shall contain '10' for the total assets and, in the case of separate funds, code numbers corresponding to those allocated on completion of Form 13.
2. Separate forms shall be prepared for sterling and non-sterling liabilities. The box marked 'Stg/NonStg' shall be completed by the insertion of 'Stg' for sterling liabilities and 'NonStg' for non-sterling liabilities.
3. Separate forms are required for with profit and non-profit contracts within the following types of business
   (i) life assurance and annuity businesses
   (ii) pension business
   (iii) permanent health business
   (iv) other business

   The box marked 'L&GA/Pens/PHI/Other' shall be completed by the insertion of 'L&GA', 'Pens', 'PHI' or 'Other' respectively for each of the types (i), (ii), (iii) and (iv) specified above. The box marked 'WP/NP' shall be completed by the insertion of 'WP' for with profits policies or 'NP' for non-profit policies both as defined in Regulation 3.
4. Separate forms shall be prepared for each rate of interest used in the valuation and may include all contracts valued at the same rate. The rate of interest shall be shown against the heading 'Rate of Interest' and in the corresponding code box.
5. The forms specified above shall exclude the liabilities described in paragraph 21(1)(a) to (c) of schedule 4, and must cover at least 90% of the remaining long term liabilities.

   The balance of the remaining long term liabilities shall be shown in a separate form in which columns 3 and 4 may be left blank, and details of the contracts covered by the form shall be given in a note. The word 'Balance' shall be shown against the heading 'Rate of Interest' and the corresponding code box shall contain '98'.
6. A summary of all the separate forms shall be produced as a separate form in which columns 2, 3 and 4 may be left blank. The word 'Total' shall be shown against the heading 'Rate of Interest' and the corresponding code box shall contain '99'.
7. The risk adjusted yield in column 2 for each asset shall be calculated as in Regulations 69(3) to (6) of the Insurance Companies Regulations 1994, taking account of any adjustment considered necessary because of Regulation 69(7). Where a number of assets with different risk adjusted yields are held, the weighted average risk adjusted yield shall be calculated using as weights the value of the asset applicable for entry into column 1.
8. The value of each asset shown in column 1 shall be the value attributed to it in Form 13 and the assets will be grouped according to instruction 1 to Form 48 including adjustments in respect of accrued interest as required by that instruction.
9. Where the valuation has been carried out at a net rate of interest the figure in column 3 shall be the next rate grossed up at the corresponding effective rate of tax.

10. The mathematical reserve in column 5 will include any increase in reserve resulting from the bonus declaration for the year and shall be net of reassurance ceded.

11. The entries shown at line 39 shall be those applicable to the scenario described in the answer to paragraph 7(8) of Schedule 4, and details of any material changes to the notional allocation of assets made in investigating that position shall be given in a supplementary note.

Instructions for completion of Form 57

1. The word "Total" or the name of the fund shall be shown against the heading "Category of assets". The corresponding code box shall contain "10" for the total assets and, in the case of separate funds, code numbers corresponding to those allocated on completion of Form 13.
2. Separate forms shall be prepared for sterling and non-sterling liabilities. The box marked "Stg/NonStg" shall be completed by the insertion of "Stg" for Sterling liabilities and "NonStg" for non-sterling liabilities.
3. Separate forms are required for with profit and non-profit contracts within the following types of business

    (i) life assurance and annuity businesses

    (ii) pension business

    (iii) permanent health business

    (iv) other business
4. The box marked "L&GA/Pens/PHI/Other" shall be completed by the insertion of "L&GA", "Pens", "PHI" or "Other" respectively for each of the types (i), (ii), (iii) and (iv) specified above. The box marked "WP/NP" shall be completed by the insertion of "WP" for with profits policies or "NP" for non-profit policies both as defined in Regulation 3.
5. Separate forms shall be prepared for each rate of interest used in the valuation in pursuance of regulation 69(12) of the Insurance Companies Regulations and may include all contracts valued at the same rate, subject to instructions 2 and 3 to this Form. Contracts valued at a lower rate of interest but subject to the same apportionment of assets may also be included provided that the rationale for such inclusion is given in a supplementary note. Each of the valuation rates of interest used shall be itemised against the heading "Valuation rate(s) of interest". The highest valuation rate of interest used shall be shown in line 31 or 32 as appropriate and in the code box headed "Valuation rate of interest".
6. The forms specified above shall exclude the liabilities described in paragraph 21(1) (a) to (d) of Schedule 4, and must cover at least 90% of the remaining long term liabilities.

    The balance of the remaining long term liabilities shall be shown in a separate form in which lines 31 and 32 shall be left blank, and details of the contracts covered by the form shall be given in a supplementary note. The word "Balance" shall be shown against the heading "Valuation rate(s) of interest" and the corresponding code box shall contain "98".
7. A summary of all the separate forms shall be produced as a separate form in which lines 31 and 32 shall be left blank. The word "Total" shall be shown against the heading "Valuation rate(s) of interest" and the corresponding code box shall contain "99".
8. The risk adjusted yield in columns 2 and 6 for each asset included in column 1 and 5 respectively shall be that calculated as in Regulations 69(3) to (6) of the Insurance Companies Regulations 1994, taking account of any adjustment considered necessary because of Regulation 69(7). Where a number of assets with different risk adjusted yields are held, the weighted average risk adjusted yield shall be calculated using as weights the value of the asset applicable for entry into columns 2 and 6.

9. The value of each asset included in column 1 shall be the value attributed to it in Form 13 and the assets will be grouped according to instruction 1 to Form 48 including adjustments in respect of accrued interest as required by that instruction.

10. Where the valuation has been carried out at a net rate or rates of interest the figure in line 31 shall be the net rate grossed up at the corresponding effective rate of tax in respect of the highest valuation rate of interest used in the Form.

11. The mathematical reserve in line 33 will include any increase in reserve resulting from the bonus declaration for the year and shall be net of reassurance ceded.

12. The entries shown in columns 3, 4, 5 and 6 shall be those applicable to the scenario described in the answer to paragraph 7(8) of Schedule 4. The entries in column 3 shall be the value of the assets shown in column 1 according to the changed assumptions of that scenario. The entries in column 4 shall be the value of assets on the changed assumptions for each type of asset notionally re-allocated to cover the mathematical reserve or other liability, net of reinsurance, in the resilience scenario. The entries in column 5 shall equal the sum of the entries in columns 3 and 4.

13. The entries in line 29, column 1 shall equal the entries in line 33, column 1. The entries in line 29, column 5 shall not be less than the entries in line 33, column 5.

Appendix D

Service Level Agreement 1998 between the Treasury and GAD

Annex A – Allocation of Priority for Detailed Scrutiny of Life Insurers

Priority	Description	Other indicators (note: these indicators are subordinate to the description, and are merely to give some broad assistance. They are no substitute for judgement, both where a higher or lower priority may be justified)	Target
1	As at present, the allocation of priority 1 will denote a company which either is not demonstrating that it holds the required minimum margin or else where there are significant problems which lead GAD to believe that it does not meet the requirements under proper bases.		Within two weeks
2	This priority denotes those companies that there are significant and substantial concerns.	1 The cover for the RMM is less than 1.25x 2 There is evidence of material non-compliance with the valuation regulations	Within four months
3	This priority denotes companies where there are sufficient concerns to warrant early attention, or there are other reasons to require scrutiny early in the cycle.	1 The cover for the RMM is less than 1.5x 2 There is evidence of a non-trivial, but not material non-compliance with the valuation regulations 3 The company was in priority 1 or 2 for the previous year 4 A company visit is scheduled for September to January (or equivalent for non-December companies) 5 The company had commenced trading, but was authorised for less than eighteen months at the valuation date.	Within six months
4	Companies which warrant a full scrutiny for any reason, but would otherwise not fall within a category to ensure this.	1 The cover for the RMM is less than 2 x 2 The company was in priority 3 in the previous year 3 There is evidence of non-compliance with less important regulations 4 The company did not receive a full scrutiny in either of the previous two years 5 A company visit is scheduled for February to August (or equivalent for non-December companies).	Within nine months
5	Companies which do not qualify for priority 4 or higher after the initial scrutiny	Cover for the RMM is more than 2 x, and scrutiny within the last two years	Within eleven months

Appendix E

The Government paper on 'the regulatory regime pursuant to which Equitable Life was regulated during the period 1973 to 2001'.

This appendix contains the paper submitted by the bodies under investigation describing the relevant regulatory regime. It is reproduced here in its original form, with the exception that some minor linguistic editing has been necessary.

Introduction

1 Until 1 December 2001, when the Financial Services and Markets Act 2000 ('the FSMA') came into force, life insurance companies such as Equitable Life were subject to two regulatory regimes: prudential regulation and conduct of business regulation.

2 Prudential regulation is concerned essentially with the solvency of insurance companies, and the soundness and prudence of their management. Conduct of business regulation relates primarily to the marketing and sale of a company's products and the provision of related advice to current and potential policyholders.

3 Conduct of business regulation does not fall within the Parliamentary Ombudsman's remit and the conduct of business regulation of Equitable Life is accordingly not within the scope of the present investigation.

4 This paper describes the regime for the prudential regulation of life insurance companies pursuant to which Equitable Life was regulated during the period under investigation. Part I describes the background to the regulation of life insurance business in the UK prior to the introduction of the Insurance Companies (Amendment) Act 1973 ('the 1973 Act'). Part II describes the regulatory regime that was introduced under the 1973 Act, and subsequent events leading up to the Insurance Companies Act 1982 ('the 1982 Act'). Part III describes the regulatory regime that was put in place pursuant to the 1982 Act. That regulatory regime then remained in place (subject to some changes which are considered in Part IV) until the FSMA came into force on 1 December 2001. Part V deals with the changing identity of the relevant prudential regulator, and its relationship with the Government Actuary's Department ('GAD').

5 The philosophy which has guided the prudential regulation of life insurance companies in the UK from its inception is the doctrine of 'freedom with publicity'. In summary:

(1) From as early as the nineteenth century, it was recognised that, whilst it was desirable for there to be some prudential regulation of life insurance business to safeguard policyholders' interests, it was also desirable not to restrict commercial freedom. It was also recognised that excessive prudential regulation could have an inhibiting effect on the development of an innovative and competitive life insurance market in the UK.

(2) The doctrine of 'freedom with publicity' was developed, whereby life insurance companies would make their affairs public through financial information being placed in the public domain. This approach was perceived as providing an appropriate balance between commercial freedom and innovation on the one hand and policyholder protection on the other.

(3) Over the course of the twentieth century, the extent of the financial information required to be disclosed by life insurance companies, and the regularity with which that information had

to be disclosed, was gradually increased. At the same time, sophisticated actuarial professional practices were developed to try to safeguard policyholders' interests.

(4) The doctrine of 'freedom with publicity' was subject to policy consideration prior to the passing of the Insurance Companies (Amendment) Act 1973, and the view taken was that the policy should continue.[643] Indeed when contrasted with the prescriptive approach to prudential regulation adopted by some EEC countries at that time (in areas such as premium rates, policy conditions and choice of investments) the view was that this had led to higher charges and poorer service in those countries, whereas the UK's more liberal approach had *'paid off handsomely in terms of an enterprising innovating industry with substantial overseas earnings'*.[644].

(5) Under the 1973 Act, the regulatory regime placed an increasing amount of reliance on the insurance companies' actuaries through the introduction of the Appointed Actuary system. In addition, a greater role was given to the prudential regulator in scrutinising the financial returns submitted by insurance companies, and, from 1981, in ensuring that appropriate margins of solvency were maintained. But at its heart, the regulatory regime remained one based on insurance companies' freedom of action rather than on prescriptive rules covering, for example, product design or premium rates.

(6) It was not seen as necessary to change the basic policy approach at the time of the passing of the Insurance Companies Act 1982,[645] nor when the insurance regulations were reviewed in 1994/95[646].

(7) Not only was this approach favoured in the UK, but it came to be substantially accepted by the European Community as striking the right balance between competing policy objectives. Thus the doctrine of 'freedom with publicity' also lay behind some of the provisions of the First to Third Life Insurance Directives.[647]

(8) Throughout the period under review, the doctrine of 'freedom with publicity' accordingly remained a fundamental principle of prudential insurance regulation of insurance companies in the UK.

6 Judged on its own terms, it is fair to say that the policy of 'freedom with publicity' was generally successful. It contributed to the development of a highly innovative and competitive life insurance market in the UK. At the same time, during the last quarter of the twentieth century, the UK insurance industry enjoyed a high degree of stability under the policy with few corporate failures.

7 The regulatory approach built on the principle of 'freedom with publicity' (and augmented with requirements for limited disclosures to the prudential regulator and professional duties for the Appointed Actuary) was longstanding, endorsed by

643 As is evident in communications among officials and with departmental lawyers at the time and in statements to Parliament at the time that the Bill was being debated.
644 Minute dated 27 February 1973 to Minister.
645 As is clear from statements made to Parliament at the time that legislation was passed and contemporaneous briefs on the Insurance Companies Bill.
646 Representations were in fact taken from industry on the general policy approach during a consultation in 1994. The conclusion was that there were 'no compelling reasons for a change' and that there were *'many advantages of* [the] *traditional approach'*, conclusions with which '[a] *very large majority'* of those who responded to the consultation agreed.
647 For example, those limiting the circumstances in which regulators could prohibit life insurance companies from disposing of their assets, and provisions which forbade prescriptive rules as to premium rates, policy conditions and choice of investments.

the domestic and European legislatures and perfectly legitimate for the government to adopt. Moreover, it was a policy decision that had important ramifications for (i) the amount of financial information to which the prudential regulator was to have regard; (ii) the extent of the prudential regulator's interference in the affairs of the companies it regulated; and (iii) the level of resources that were made available to the prudential regulator.

8 Thus, the amount of financial information to which the prudential regulator was expected to have regard was always carefully circumscribed. Whilst various statutory instruments gradually increased the amount of financial information that life insurance companies were required to disclose to the prudential regulator, at the same time it was perceived that a balance had to be struck, so as to ensure that the regulatory burden imposed on life insurance companies was not so great as to stifle innovation and competition. For example, during the 1990s the DTI's Insurance Division had an objective: *'To keep the cost and inconvenience of regulation for insurers as low as is commensurate with effective protection of the consumer'*.[648]

9 Likewise, when the concept of 'policyholders' reasonable expectations' ('PRE') was first introduced into legislation in 1973, the Government of the day pointed out that the new legislation was not to be operated so as to curtail market competition and innovation.[649] Subsequent statutes made clear that intervention by the prudential regulator on the grounds of PRE was a 'residual' power, or 'long-stop' measure that was only to be used if the regulator's purpose could not be achieved by any of the other powers of intervention;[650] and one that should be used sparingly by the regulator, and not in such a way so as to restrict a life insurance company's freedom to dispose of its assets (save in very limited circumstances).[651]

10 The doctrine of 'freedom with publicity' also had implications for the resources and skills that were made available to the prudential regulator. Given the importance attached by the statutory regime to the role of the Appointed Actuary, it made sense for the prudential regulator to work closely alongside the UK actuarial profession, including outsourcing a scrutiny and advisory role to GAD (from 1984 onwards by way of a series of Service Level Agreements). It also meant that prudential regulation of the UK insurance industry could be resourced on a more streamlined basis.

Part 1 – the background to prudential regulation of life insurance business in the UK prior to 1973

The start of prudential insurance regulation in the UK

11 Substantive legislation to control the prudential regulation of life insurance companies was first introduced in the nineteenth century, following a large number of business failures and mergers that took place in the first half of that century.

12 The 1853 Select Committee on Assurance Associations, chaired by the Rt Hon James Wilson MP, took evidence from a number of leading actuaries and insurance men of the day. John Finlaison, the Actuary and Principal Accountant of the Check Department of the National Debt Office (the nearest there was at that time to a

648 MINIS 94, Objective 10.
649 See paragraph 37.
650 See section 37(6), and the heading to section 45 of the 1982 Act.
651 See section 45(2) of the 1982 Act. This was required to give effect to EEC law, and in particular Article 21 of the First Life Directive, described in Part III.

Government Actuary), was an advocate of a free market. As the first President also of the Institute of Actuaries (from 1848 to 1860), Finlaison argued that the right approach was to rely on the professional expertise of actuaries and to protect the public by giving official recognition to the Institute of Actuaries and controlling entry to the profession by examination. As a result no substantive legislation was introduced.

13 However, the collapse of both the Albert Life Assurance Company and the European Assurance Society in 1869 prompted renewed political concern over the lack of any prudential regulation of the activity of life insurance companies. Legislation was introduced into the House by Mr Stephen Cave, as Vice-President of the Board of Trade, and this became the Life Assurance Companies Act 1870 ('the 1870 Act'). In introducing the Bill, Stephen Cave observed that 285 pure life insurance companies had been formed up to that point, of which only 111 had survived.

14 The 1870 Act required that a separate account should be kept of all receipts in respect of life assurance and annuity contracts of an insurance company and that this fund should be regarded as the absolute security for the life insurance policies. This approach gave particular safeguards in the case of composite insurance companies, which were also carrying on general insurance business, but also entailed, in the case of pure life insurance companies, separation of the life and annuity business transactions from any shareholders' funds. This was the origin of the long-term business fund, which continues to form part of the legislative structure to the present day.

15 The 1870 Act also required regular investigations to be carried out by an actuary into the financial condition of a life insurance company. Existing companies had to be looked at every 10 years and new companies every 5 years, unless more frequent reviews were required under the company's constitution. A key feature of prudential regulation, which has remained in its essential form up to the present day, was that the annual accounts of the company, together with the abstract of the actuarial valuation when carried out, had to be deposited with the Board of Trade, which then made these available to the public through the Registry of Joint Stock Companies.

16 In 1870 few countries had any statutory regulation of life insurance companies. Sprague (1872) compared the new UK legislation with that recently introduced in Massachusetts and New York, which had the expressed objective of securing the solvency of all life insurance companies. Sprague believed that this could never be absolutely secured; nor was it a desirable objective. In his view it was best to allow insurance companies a good deal of freedom, but require them to make their affairs public by way of regular financial returns.

The early 20th century

17 The 1870 Act concerned only life insurance business, and it was not until 1907 that prudential regulation was extended to any general insurance business with the passage of the Employers' Liability Insurance Companies Act 1907. Two years later, in 1909, the then President of the Board of Trade, Winston Churchill, introduced a Bill to replace the Life Assurance Companies Acts 1870 to 1872 and to extend the regulatory regime to cover also fire, accident and employers' liability insurance and bond investment business.

18 The principles set out in the resulting Assurance Companies Act 1909 were essentially the same as in the 1870 Act. Separate funds were to be maintained for each class of general insurance business, although separation of assets was not necessarily implied. A new certificate was introduced in which the company had to state that, where there was more than one fund, no part of any such fund had been applied directly or indirectly for any purpose other than the class of business to which it related.

19 The actuary's valuation statement, which now appeared in the Fourth Schedule to the Act, was only slightly modified from the format in which this had previously appeared in the 1870 Act, although separate statements were now required for ordinary branch business, industrial life assurance and sinking fund business. The same split was applied to the tabulation of business in force required under the Fifth Schedule to the Act.

20 The legislation continued to rely on 'freedom with publicity' and the Board of Trade was inclined towards non-interventionism. For much of the time this was a successful policy but there were a number of problem companies and a small number of life insurance company insolvencies. The first important failure to occur since the passing of the 1870 Act was the National Standard Life Assurance Company Limited, which was forced to wind up in 1916.

The post-war period and the early influence of Europe

21 The process of developing a single insurance market in Europe started within the Organization for European Economic Co-operation (OEEC), the predecessor of the OECD, in the mid 1950s. At this time an Insurance Sub-committee was established to explore ways in which the European insurance market might be opened up and international trade in insurance encouraged.

22 Reports were commissioned by the Sub-committee from Professor Campagne, which were produced in 1957 and 1961. These reports advocated the adoption of minimum standards for solvency of insurance companies, with Professor Campagne advocating minimum margins of solvency based on 25% of annual premium income for general insurance business and 4% of mathematical reserves[652] for life insurance business.

23 Following the establishment of the European Economic Community by the Treaty of Rome in 1957, the Conference of EEC Insurance Supervisory Authorities began to address the same problems as those already under consideration by the OEEC. The objective was to move as quickly as possible towards the ideal of a free market in insurance within the EEC. The first stage was to establish the credentials which insurance companies must demonstrate before being allowed to establish branch operations in other EEC countries and write business there.

[652] Mathematical reserves are based on a mathematical calculation of the basic reserves required to meet all prospective guaranteed liabilities, including additional measures of prudence.
[653] France, Germany, Italy, Belgium, Netherlands and Luxembourg.

24 The UK was closely involved in the OEEC/OECD developments, but not in the early EC discussions, which at that time concerned only the original 6 members.[653] In the course of the 1960s, UK representatives attended three active OECD Committees on insurance matters.[654]

Market turmoil in the 1960s

25 The 1960s saw some significant developments in the insurance market in the UK. On the life insurance side there were some noteworthy new products, in particular the beginnings of unit-linked business and various types of guaranteed income bonds. Pension business was also beginning to grow strongly, subject to a variety of constraints imposed by the Inland Revenue. A number of new insurance companies began to spring up to exploit these opportunities.

26 In general insurance there was an intensification of competition, with a number of new motor insurance companies trying to enter the market. The fraudulent activities associated with the demise of Fire, Auto and Marine raised concerns within Government circles; as did the collapse of Vehicle & General in the late 1960s, which led to a substantial inquiry conducted by the Board of Trade.

27 During the mid to late 1960s the Board of Trade had sought advice from ASTIN, the general insurance section of the International Actuarial Association, and from a leading UK general insurance actuary (Bobby Beard), on how to make material improvements to the information available to the prudential regulator concerning general insurance companies. This led to the general insurance sections of the Insurance Companies (Accounts and Forms) Regulations 1968 and, in particular, to the requirement for general insurance companies to supply information, by each year of origin, relating to the year by year settlement of claims and the amounts estimated to be outstanding.

Part II – the introduction of the 1973 Act

28 At the beginning of the 1970s, the prudential regulation of life insurance business still relied fundamentally, as it had done for 100 years, on the company actuary, whose responsibility it was to value the liabilities and to ensure the adequacy of the assets constituting the long-term business fund to cover the liabilities and to give a good return to the with-profit policyholders. However, under regulations which had been introduced in 1958 and remained in force into the 1970s, a full actuarial valuation was only required every 3 years, with a simple certificate from the actuary in the intervening years to confirm the adequacy of the long-term business fund.

The Appointed Actuary

29 The Insurance Companies (Amendment) Act 1973 introduced for the first time the concept of the 'Appointed Actuary'. The idea was to upgrade the statutory requirement for an actuary to carry out a valuation of the assets and liabilities every 3 years, and an approximate valuation each year, into a requirement to designate a specific professional person within the company (the Appointed Actuary) who could be relied on by the prudential regulator to monitor the financial position of the company on a continuous basis.

30 The provisions in the 1973 Act, which were consolidated into the Insurance Companies Act

[654] The Buol Committee on life insurance technical reserves; the Homewood Committee on general insurance technical reserves; and the de Florinier Committee on solvency margins. The latter made little progress, since it awaited the outcome of the other two committees; Buol reported in 1972.

1974, did not specify in any detail the role which the Appointed Actuary was intended to fulfil. However, discussions took place with the UK actuarial profession, which agreed to issue guidance to its members on how to fulfil the responsibilities of the Appointed Actuary to a life insurance company. A Joint Committee (of the Institute of Actuaries and the Faculty of Actuaries) on Financial Standards drew up the first draft of the guidance (entitled *'Actuaries and Long-Term Business'*), which was issued in May 1975. This later came to be known as GN1 (Guidance Note 1), being the first of what was to become an extensive series of guidance notes for actuaries involved in different areas of professional activity. Compliance with GN1 was mandatory.

31 When the Appointed Actuary system was introduced, there was no requirement for a life insurance company to hold an explicit solvency margin. It was, however, regarded as the professional responsibility of the Appointed Actuary to monitor the overall financial position of the company and to ensure that the size of the long-term business fund, and the way in which it was invested, were such as to ensure that the future liabilities of the company towards policyholders, including meeting their reasonable expectations (as to which see below), could be met with a high degree of probability. The 1973 Act required the Appointed Actuary to carry out a formal investigation into the financial condition of the company once a year. In addition, the profession made it the Appointed Actuary's duty to monitor the financial position on a continuous basis. Thus, GN1 stated that the Appointed Actuary was to take all reasonable steps to ensure that he was, at all times, satisfied that if he were to carry out an investigation the position would be satisfactory.

32 A cornerstone of prudential regulation thus became reliance on the Appointed Actuary, who was close to the company and had a professional responsibility to monitor its financial position on a day-to-day basis and to establish prudent mathematical (or technical) reserves. There was no regulation of policy conditions or premium rates, since this was seen to be properly the responsibility of the company, acting on the advice of its Appointed Actuary, and it was considered that regulatory intervention would inhibit competition. Having the Appointed Actuary at the heart of the company (with full right of access to the Board, which was a requirement of GN1) was intended to provide protection for policyholder interests, as well as a strong internal system of financial control and risk management. This structure was reflected both in the legislation and associated regulations and in the extensive mandatory professional guidance to which Appointed Actuaries were subject.

33 Each new Appointed Actuary was invited, following the notification to the prudential regulator of their appointment, to come for a meeting with the Government Actuary. Such meetings were informal in nature, being an opportunity to establish personal contact and to discuss the nature of the Appointed Actuary's relationship with the Board and other senior executives of the company. The agenda ranged over each of the areas covered by GN1, such as product design, premium setting, investment policy, valuation and data systems, and sought to explore what influence the Appointed Actuary expected to be able to bring to bear in each area and what arrangements had been put in place to ensure that the Appointed Actuary was able to comply with GN1.

34 It is worth noting that this system of regulation has been widely recognised as successful, and many other countries around the world have introduced variants of the Appointed Actuary system. This includes a number of European countries (e.g. the *verantwortlicher Aktuar* in Germany and Switzerland, and the Appointed Actuary in Belgium, Denmark, Italy and the Republic of Ireland).

Introduction of PRE

35 Another new feature of the 1973 Act was the first mention in statute of the term *'policyholders' reasonable expectations'* ('PRE'), although the term was not specifically defined. The origins of this term, in its application to life insurance regulation, are thought to lie in a paper which Ronald Skerman, then Chief Actuary of Prudential, prepared for discussions in Europe and which was then tabled at a discussion at the Institute of Actuaries in the mid 1960s. His purpose was to articulate the criteria for a solvency test of a life insurance company. He argued that provision should be made within the determination of the company's liabilities for ensuring that the *'reasonable expectations of policyholders'* were met.

36 The 1973 Act gave the prudential regulator the power to intervene in the affairs of a company if there were grounds to believe that PRE were not being met. One of the Government's main policy concerns when considering the 1973 legislation was that the Boards of proprietary life insurance companies might favour the interests of shareholders over and above the interests of policyholders by 'milking' the surplus accruing in the long-term business fund for the shareholders' benefit. The concept of PRE was therefore introduced, at least in part, to enable the interests of policyholders to be protected beyond their strict contractual entitlements.[655] A further purpose was to support a regulatory requirement for the use of a *net premium valuation*, which had the effect of preventing a life insurance company from treating the bonus loadings in the premiums as an immediate contribution to surplus and supporting the gradual declaration of reversionary bonuses in an appropriate way over the duration of each policy. Thus PRE, in its original intention, was not concerned with the expectations of different cohorts of policyholder interests within a mutual life insurance company.

37 The notes on clauses presented to Parliament when the Bill was introduced show the intentions of Ministers in this regard. These notes explained that the new power of intervention on grounds of PRE would only be exercised *'where it was obvious that PRE were not going to be fulfilled'*, and that this would *'stop well short of seeking to ensure that with-profit policyholders received value for money under their contracts or a particular level of bonus... regardless of the amount of surplus revealed by the periodic actuarial valuation'*[656]. This is consistent with statements made by a senior DTI official at the time that Ministers had accepted that *'no system we could contemplate would eliminate the occasional failure or give absolute protection'* and that the aim should be to give policyholders *'a reasonable measure of protection'*, his view being that which prevailed when the matter was passed to the Parliamentary Under Secretary of State. These sentiments strongly echoed those of Sprague, advocated 100 years earlier.

---

655 DTI minute dated 3 November 1971; instructions dated 29 September 1972 to departmental lawyer; and paragraphs 18 and 19 of instructions to Parliamentary Counsel.

656 See the notes on clauses to the Bill.

38 Consistent with this, Ministers took the decision when the 1973 Act was being drafted that regulation of life insurance companies by the prudential regulator would be based principally on an analysis of companies' annual regulatory returns, in the case of life insurance companies to be in large part carried out by GAD as actuarial adviser to the prudential regulator, and that any regulatory action taken on PRE grounds would be reactive to what was found in the regulatory returns. In substance, the responsibility for proper treatment of PRE devolved on the Appointed Actuary, This responsibility was reflected in a number of specific provisions relating to PRE being included in GN1.

39 A further indication of what was intended by Ministers in relation to PRE is provided by a speech made by the Minister of State to the Faculty of Actuaries on 16 February 1976, when he said:[657]

> *What expectations might be reasonable, in any particular case, will have to be determined in the light of the circumstances, but it is certainly our expectation that companies which charge large premiums, with a loading for bonuses, will, in fact, make profits to be shared with their policyholders, and will not take credit for the value of future bonus loadings so that they can hold smaller reserves than would a non-profit company. On the other hand, we do not envisage any general intervention in the determination of the amount of surplus to be disclosed by companies, or the manner in which it is distributed between policyholders of different generations or different classes. We would hope that this could continue to be left to the directors, acting on the advice of their Actuaries, particularly in view of the strengthening of the Actuary's role in the legislation and of the description of that role in the joint guide, which is the main subject of this evening's discussion.*

40 Pursuant to the 1973 Act, statutory regulations were passed, identifying the content of the regulatory returns, and also the basis upon which assets were to be valued. There were initially no substantive rules regarding the valuation of liabilities, but such rules were introduced in 1981.

41 Whilst the 1973 Act marked a significant increase in the extent of prudential regulation, the fact that the regulatory regime did not guarantee zero failure was underlined by the collapse of Nation Life in 1974, and by a clutch of other small life insurance companies getting into difficulty in 1974: Lifeguard, Capital Annuities and London Indemnity & General. These events had their origin before the introduction of the 1973 Act, however, and they were in fact a significant factor leading to the development of the Act. They also gave added impetus to the development of professional guidance to Appointed Actuaries on how to fulfil their responsibilities after the Act had been put in place.

Part III – the introduction of the 1982 Act and the regulatory regime imposed

The First Life Directive

42 The Insurance Companies Act 1981 and the subsequent Insurance Companies Regulations 198[658] ('ICR81') were designed to implement the First Life Directive,[659] which had been adopted by the EC in 1979. The Insurance Companies Act 1981 was then consolidated into the Insurance

Companies Act 1982, along with the pre-existing regulatory regime introduced under the 1973 Act. To understand the regulatory framework that was put in place by the 1982 Act, it is therefore important to understand the reasons for and the scope of the First Life Directive.

43 As the first recital of that Directive made clear, its aims were to open up the life insurance market to the extent of allowing companies from one EC member state to establish a branch in another member state: 'freedom of establishment'. Consistent with this, the Directive sought to eliminate certain divergences that existed in national legislation concerning the prudential regulation of life insurance companies, and to coordinate the financial obligations required of life insurance companies. It specified the classes of business for which companies must obtain authorisation and also set out some minimum conditions for the granting (and withdrawal) of authorisation.[660]

44 The Directive required the establishment of technical reserves in respect of the liabilities arising from the whole of a company's in force business, and for these to be covered by equivalent and matching assets localised in the country where the business was written.[661] The calculation of the technical reserves, and the valuation of assets, including restrictions on the extent to which different assets could be used to match the technical reserves, were to be carried out in accordance with rules laid down in national regulatory legislation. A formal valuation was required to be carried out, and the results of this to be submitted to the prudential regulator, on an annual basis.[662]

45 The Directive also introduced a requirement for companies to maintain an explicit margin of assets over liabilities, referred to as the solvency margin, to reduce the risk of insolvency and to provide a cushion against adverse business fluctuations.[663] The required solvency margin was calculated on a prescribed basis[664] that was intended, in a very broad-brush way, to reflect the risks to which a company's capital was exposed; and was subject to an overall minimum called the minimum guarantee fund.[665]

46 The required solvency margin could be represented by explicit items and (to a limited extent and subject to the consent of the prudential regulator) by implicit items. Explicit items included capital, free reserves and surplus in the company's balance sheet. Implicit items included hidden reserves such as undisclosed undervaluation of assets[666], items relating to zillmerising[667]; and, in the case of life insurance companies, the present value of future profits[668]. The mechanism used in the UK to grant consent for, and give effect to, an implicit item in a particular case was the issuance by the prudential regulator of an order under section 57 of the 1974 Act (and subsequently section 68 of the 1982 Act)[669].

669 Regulation 10(4) of ICR81.

47. The Directive provided prudential regulators with limited powers of intervention in certain circumstances. In particular, prudential regulators were authorised: (i) if a company was unable to establish sufficient localised technical reserves, to prevent the free disposal of assets within a Member State;[670] (ii) if a company was unable to cover its required solvency margin, to require the submission of a plan for the restoration of a sound financial position;[671] and (iii) if a company's solvency margin fell below the guarantee fund[672], to require the submission of a short-term finance scheme and prevent the free disposal of assets.[673] The Directive also provided that, in the first and third cases, the prudential regulator might take all measures necessary to safeguard the policyholders' interests.

48 Furthermore, the Directive allowed prudential regulators to withdraw authorisation (thus requiring a company to close to new business) if: (i) the conditions for admission were no longer fulfilled;[674] (ii) the company had been unable to take the measures in any restoration plan or finance scheme that it had submitted to the prudential regulator;[675] or (iii) the company failed seriously in its obligations under the national regulations[676]. Any decision to withdraw authorisation or suspend business had to be supported by precise reasons from the prudential regulator; and provision had to be made to allow the life insurance company to apply to the court to challenge any such decision.[677] Furthermore, pursuant to Article 21 of the Directive, the prudential regulator was prohibited from preventing the disposal of assets, save in certain exceptional circumstances (such as where regulatory solvency had been breached; or the company was to be closed to new business).

49 From this it can be seen that one of the consequences of the First Life Directive was the introduction of a prudential regulatory regime across Europe that adopted a similar approach to regulation as had previously existed in the UK: with powers of intervention that were narrowly circumscribed, in order to avoid excessive regulatory requirements impeding the development of a single market in insurance within Europe. As set out further below, this approach was subsequently strengthened, at a European level, by the introduction of the Third Life Directive (under which, amongst other things, requirements for prior approval by the prudential regulator of products and premium rates were prohibited).

The Insurance Companies Act 1982

50 The provisions of the First Life Directive were incorporated into UK legislation by the Insurance Companies Act 1981, which was subsequently consolidated into the Insurance Companies Act 1982.

Continuation of the Appointed Actuary scheme

51 As under the previous legislation, the 1982 Act (by section 19) required each life insurance company to appoint an actuary, known as the Appointed Actuary. The appointment of an Appointed Actuary had to be notified to the prudential regulator within 14 days of its having been made. Regulatory approval was not required for the

actuary's appointment; nor did the prudential regulator have power to oppose the appointment of a particular individual or to seek an actuary's removal;[678] nor was there any statutory prohibition on the Appointed Actuary holding any other office within the company.[679] However, section 96(1) of the 1982 Act made it clear that an Appointed Actuary had to hold 'prescribed qualifications', which included a requirement that the actuary must have attained the age of 30 and be a Fellow of the Institute of Actuaries or the Faculty of Actuaries; subsequently it became a requirement of the UK actuarial profession that an Appointed Actuary must hold a 'practising certificate' from the Faculty and Institute of Actuaries. It also remained established practice for the appointee to be interviewed by the Government Actuary on first appointment.

52 Section 18 of the 1982 Act required the Appointed Actuary to make an annual investigation of the company's financial condition. The report, which would normally be presented to the Board, had also to be included in abstract in the company's regulatory returns.[680] The investigation was to include a valuation of liabilities of the company attributable to its life assurance business; and a determination of any excess over those liabilities of the assets representing the fund or funds maintained by the company in respect of that business.[681]

53 Provision was made in the 1982 Act for the basis of valuation of liabilities and assets and the form of the abstract of the Appointed Actuary's valuation report to be set out in delegated legislation. This was subsequently done in ICR81 and the Insurance Companies (Accounts & Statements) Regulations 1983[682] ('ICASR83'). The latter were a modified version of the earlier reporting requirements and included Schedules carried over from the former primary legislation. The abstract of the Appointed Actuary's valuation report, for example, now appeared in Schedule 4 to these regulations.

54 The determination of liabilities regulations in ICR81 were developed by means of a joint consultative process between DTI, GAD and the UK actuarial profession. As noted above, these were new, no valuation of liabilities regulations having previously been promulgated under the 1973 Act. The Joint Actuarial Working Party (JAWP) was established, with members from GAD and from the profession, chaired by the Government Actuary. DTI had the status of observer, so as to retain its independence of action in drafting the regulations and avoid being irrevocably committed to the recommendations coming from JAWP. The discussions in JAWP made it possible for the leadership of the profession better to understand DTI and GAD's concerns. They also allowed DTI and GAD to obtain feedback on the potential effect of the regulations, and a degree of 'buy-in' from the profession to what was being proposed.

55 Section 22 of the 1982 Act required each life insurance company to submit the abstract of the Appointed Actuary's valuation report to the prudential regulator each year (the regulatory returns), along with the annual report and accounts required under the Companies Acts (the Companies Act accounts). As noted above, the

content of the regulatory returns was prescribed by delegated legislation, and these tended to be considerably longer and more detailed than the Companies Act accounts (during the latter half of the 1990s those for Equitable Life ran to some 400 pages for each year).

56 The regulatory returns were the main source of information from which the prudential regulator, acting on advice from GAD, formed a view as to a life insurance company's current and future regulatory solvency.

Principal regulatory actuarial and accounting provisions

57 Section 32 of the 1982 Act required life insurance companies to hold assets which exceeded their liabilities by at least the margin prescribed by ICR81. That was known as the required margin of solvency and had in principle to be maintained throughout the year, not just at year-end, although it was normally only required to be demonstrated at the year-end. Ensuring continuous solvency was a responsibility of the Appointed Actuary. In accordance with the First Life Directive, in the event that a life insurance company failed to meet the required solvency margin: (i) the prudential regulator could require the company to submit a plan for the restoration of a sound financial position; (ii) the prudential regulator could require the company to modify any such plan; and (iii) the company then had to give effect to that plan.[683]

58 Pursuant to ICR81 the technical reserves were to be calculated in accordance with generally accepted actuarial methods and assumptions, as prescribed by the regulations, and the required solvency margin, the guarantee fund and minimum guarantee fund were to be calculated on the basis laid down in the First Life Directive.[684] Regulation 54 of ICR81 provided that the determination of life insurance business liabilities should be made on prudent actuarial principles, and should make proper provision for all liabilities on prudent assumptions with regard to the relevant factors. Initially there was no explicit statutory requirement that such liabilities be assessed having regard to PRE. However, the *net premium valuation* method was prescribed in regulation 57, using cautious assumptions, and under regulation 59(6) it was not permitted to take into account expected future returns on equities in excess of the current dividend or rental yield. These requirements, taken together with the applicable valuation of assets regulations, meant that implicit provision was appropriately made for future bonuses including future terminal bonuses. More explicit reference to PRE was made in amendments to the determination of liabilities regulations introduced in 1994. Zillmerisation[685] of the reserves was permitted (but not required) under regulation 58. The ICR81 requirements as to the valuation of life insurance business were amplified after their introduction by another mandatory professional guidance note, GN8 (entitled 'Additional Guidance for Appointed Actuaries on Valuation of Long-term Business').

Prudential regulator's powers of intervention

59 Under section 11 of the 1982 Act, the prudential regulator had the power, either at the request of the company or on any of certain specified grounds, to issue a direction withdrawing a company's authorisation to conduct new business. The specified grounds were: (i) that it appeared to the prudential regulator that the company had failed to

683 See Section 32(3).
684 See Regulations 5 and 9 of ICR81.
685 Zillmerisation was a technique that could be used for regular premium policies to spread the initial costs incurred in writing the policy over the duration of the contract in proportion to the premiums due. It operated by means of an increase (subject to specified limits) in the future regular premiums for which credit was taken in the net premium valuation.

satisfy an obligation to which it was subject by virtue of the Act (for example, failure to maintain the required margin of solvency pursuant to section 32);[686] (ii) that there were grounds on which the prudential regulator would have been prohibited from issuing authorisation to the company (for example, if share capital was not fully paid up; or the directors, controllers, managers or main agents of the company were not 'fit and proper' persons);[687] or (iii) that the company had ceased to be authorised to effect contracts of insurance in the country where its head office was situated.[688]

60 In accordance with the First Life Directive, before giving a direction to the company under section 11 of the 1982 Act, the prudential regulator had to serve on the company a written notice stating that it was considering giving a direction and the grounds on which this was being considered.[689] The company could, within one month of that notice being served, make written (or, if the company requested, oral) representations to the prudential regulator. The prudential regulator was then required to take those representations into account before giving a direction.[690]

61 In addition to the power under section 11 of the 1982 Act to withdraw authorisation from a life insurance company, section 37 provided that the prudential regulator could intervene (using a range of powers set out in sections 38 to 45 of the Act) in a limited number of circumstances. In particular, those circumstances included:

(1) If the company had failed to satisfy an obligation to which it was subject by virtue of the 1982 Act (for example the failure to maintain the required solvency margin in accordance with section 32);[691]

(2) If the company had furnished misleading or inaccurate information to the prudential regulator;[692]

(3) If no adequate arrangements were in force or would be made for the reinsurance of insured risks (where the prudential regulator considered that such a class of risks should be reinsured);[693]

(4) If there were grounds on which the prudential regulator would have been prohibited from issuing authorisation to the company: for example if share capital was not fully paid up; or the directors, controllers, managers or main agents of the company were not 'fit and proper' persons. (However, before exercising any powers on the grounds of unfitness or impropriety of certain persons, the prudential regulator had to give notice to that person and allow them to make representations which then had to be taken into account);[694]

(5) If the company had substantially departed from any business proposal submitted at the time it sought authorisation;[695] and

690 Section 12(6).
691 Section 37(2)(b).
692 Section 37(2)(c).
693 Section 37(2)(d).
694 Section 37(2)(e) and section 48.
695 Section 37(2)(f).

(6) If the company had ceased to be authorised to effect contracts of insurance in the country where its head office was situated.[696]

62 In addition to these closely circumscribed grounds of intervention, there was a further general ground of intervention pursuant to section 37(2)(a): to protect policyholders or potential policyholders against a risk that a life insurance company might be unable to meet its liabilities, or to fulfil the reasonable expectations of policyholders or potential policyholders.

63 As with the 1973 Act, there was therefore an explicit statutory reference to the concept of PRE, although there was no statutory definition of this concept. The concept of PRE was subsequently the subject of a Faculty and Institute of Actuaries Working Party report, and guidance was provided by the DTI in a Ministerial statement in February 1995 (as to which see further below).

64 The powers of intervention given to the prudential regulator pursuant to sections 38 to 45 of the 1982 Act were also, for the most part, closely circumscribed. They included:

(1) a power, under section 38, to require a life insurance company not to make, or to realise, certain investments;

(2) a power, under section 41, to limit the aggregate premium income of the company;

(3) a power, under section 42, to require the Appointed Actuary to investigate all or a specified part of the company's business, and to publish an abstract of that investigation;

(4) powers, under sections 43 and 44, to accelerate deposit with the prudential regulator of the regulatory returns; and to obtain information or require the production of documents.

65 There was also a power, expressly described in the heading of the section as a 'residual power', contained in section 45 of the 1982 Act, which enabled the prudential regulator to take such action as appeared to be appropriate for the purpose of protecting policyholders or potential policyholders of a life insurance company against the risk that the company might be unable to meet its liabilities, or to fulfil the reasonable expectations of policyholders or potential policyholders.

66 Express limits were imposed on that residual power in order to comply with the First Life Directive.[697] Thus, section 45(2) of the 1982 Act provided that the power could not be exercised by the prudential regulator in such a way as to restrict a company's freedom to dispose of its assets (e.g. by preventing a distribution of assets to policyholders), except where: (i) the prudential regulator had exercised powers under section 11 to withdraw authorisation and close the company to new business; or (ii) the prudential regulator believed that the company had failed to maintain the required solvency margin; or (iii) where the company had submitted accounts which had not been prepared in accordance with valuation regulations or generally accepted accounting practices.

67 Other express limits were also imposed on the section 45 power of intervention by the 1982 Act. Thus section 37(6) made it clear that this power should only be used in the event that policyholder protection could not be appropriately achieved by

[696] Section 37(2)(g).
[697] In particular, Article 21(2).

the exercise of the prudential regulator's more specific powers as set out above. There was also an implied constraint on the use of this power, as recognised by the Parliamentary Ombudsman in her first report on the 'Prudential Regulation of Equitable Life', in that the exercise of intervention powers might bring about consequences which the prudential regulator would otherwise want to avoid, including the possibility of adverse consequences for policyholders.[698]

68 Finally, pursuant to section 54 of the 1982 Act, the prudential regulator could apply to wind up a company if (i) the company was unable to pay its debts as and when they fell due; (ii) the company had failed to satisfy an obligation to which it was subject by virtue of the 1982 Act (e.g. the obligation to maintain the required solvency margin in accordance with section 32); or (iii) the company had failed to keep proper accounts in accordance with its obligations under the Companies Acts. Further rules dealt with the continuation of life insurance business of insurance companies in liquidation, and made provision for the reduction of contracts as an alternative to winding up.[699]

Part IV – subsequent developments in the regulation of life insurance companies under the 1982 Act

The introduction of resilience testing

69 In 1985, the Government Actuary issued guidance to Appointed Actuaries on the interpretation of the requirement under regulation 55 of ICR81 to establish *'appropriate provision against the effects of possible future changes in the value of the assets on their adequacy to meet the liabilities'.* This required life insurance companies to be able to demonstrate that their reserves were sufficient to continue to comply with all the other determination of liabilities regulations after one of a series of shock scenarios affecting the value of the assets. The process of establishing the sufficiency of the reserves in such scenarios came to be known as 'resilience testing'. The hypothetical scenarios included an immediate fall of 25% in the value of equity investments (and a comparable fall in the value of property) and significant movements in fixed interest yields, either up and down. Monies set aside to ensure the company could cope with the adverse investment scenarios were known as the 'resilience reserve', albeit that part of the margins used to satisfy resilience tests could be met by crediting 'excess' margins held elsewhere within the overall valuation basis used to calculate the basic policy reserves.

70 The requirement for Appointed Actuaries to conduct such a resilience test was subsequently incorporated into GN8 but without specifying the scenarios to be considered. At the same time, GAD developed and kept under review guidelines as to the changes in equity prices and fixed interest yields that it might be prudent to take into account. The guidelines were published as letters (known as *'Dear Appointed Actuary'* or 'DAA' letters) sent to all Appointed Actuaries, the first such letter relating specifically to the resilience test being issued in July 1992.

71 While not mandatory, such guidance provided the de facto standard for prudent resilience testing. GAD would question Appointed Actuaries on whether the aggregate reserves they had established met this standard. DAA10 from the Government Actuary, issued on 24 November 1998, amended the benchmark scenarios for resilience test 2. It said that, while the revised test was

698 See *'Prudential Regulation of Equitable Life'*, Part II, paragraph 34.
699 See sections 56 and 58 of the 1982 Act.

necessarily more complex, it was intended to avoid the unreasonable stringency which might apply if equity markets fell below their current levels.

The introduction of the Second Life Directive, and further consideration of PRE

72 In 1990 the Second Life Directive[700] was adopted by the EC, and was implemented in the UK in 1993. This extended the freedom of establishment provided by the First Life Directive to 'freedom of services', whereby an insurance company established in one EC member state could sell its products on a cross border basis in other member states. However, such cross-border business remained subject to authorisation by the prudential regulators in those other member states if they so wished.

73 In 1990 DTI issued a consultation document which proposed ways in which the Appointed Actuary system could be strengthened and JAWP was reconvened at this time to review the effectiveness of the existing system and generally to take this process forward. This led in due course to the introduction of the practising certificate regime by the UK actuarial profession and the setting up of various research initiatives within the profession. These included the establishment of professional working parties, on which GAD was represented, 1) to consider the meaning of PRE, 2) to investigate alternatives to the net premium method of valuing liabilities as the statutory minimum valuation basis and 3) to review the impact of guarantees within annuity contracts. The first working party reported in 1993 and the latter two towards the end of the 1990s; all three are mentioned further below.

74 It will be recalled that the concept of PRE had been first introduced in the 1973 Act, and re-enacted in the 1982 Act; and although there had been some Ministerial statements about the content of PRE when the 1973 Act was introduced, no statutory definition of what constituted PRE had been given.

75 It was generally accepted within the UK actuarial profession and the life insurance industry that PRE extended beyond the expectation simply that contractual liabilities or other legal rights would be met. Most with-profits policies contain some element of discretionary annual reversionary bonuses and also terminal bonuses, and it was seen as reasonable that holders of such policies should expect companies to behave fairly and responsibly in exercising their discretion to distribute such discretionary bonuses in a reasonably consistent way. For with-profits business, the profession developed the concept that policyholders were entitled to expect that benefits would, at least broadly, reflect their 'asset share' (effectively the proportion of the fund attributed to each policyholder[701]).

76 Over time asset share (subject to a smoothing process, that is averaging out the peaks and troughs of stock market movements) came to be regarded by the life insurance industry as providing the starting point for determining what the total benefit payable at maturity should be. If policyholders received something like their asset share, then PRE could generally be said to have been fulfilled. DTI did not fully accept this argument, mainly because it was usually a precursor to life insurance companies arguing that, once PRE according to this definition had been delivered to policyholders, the rest of the surplus could be

700 Council Directive 90/619/EEC.

701 More precisely, 'asset share' represents the actuarially adjusted accumulated value of premiums paid, less deductions for expenses, tax and other charges, plus allocations of business profits or losses, accumulated at the actual rate of investment return achieved.

allocated to shareholders. It was also the case that the policy wording of many with-profits contracts went much wider than this in promising bonuses not only in respect of the surplus emerging on the with-profits business but also a share in the profits emerging from the non-profit business.

77 Under pressure to give more guidance to the life insurance industry on how PRE should be interpreted, the prudential regulator always took the line that this was a matter for the Courts to decide. However, there were no test cases. Following on from discussions on PRE in JAWP, the UK actuarial profession set up a PRE working party. This sat between 1990 and 1993 and reported in that year. It carried out a series of interviews with Appointed Actuaries and attempted to distil principles.

78 Consistent with the prudential regulator's view that the interpretation of PRE was a matter for the courts to decide, no formal guidance was issued following the working party's recommendations. However, some of the principles identified still served to inform Appointed Actuaries as they prepared reports for their Boards. The working party's report indicated that, for with-profits business, policyholders were entitled to expect that the total benefits paid under the contract would reflect the accumulated value of premiums paid less expenses and the cost of risk benefits in accordance with the actual experience of the company. Thus, asset share would provide the starting point for determining maturity benefits. The degree to which returns were smoothed over time, and the extent to which part of the asset share was retained to finance future expansion, would vary considerably between companies. It was reasonable to expect that a company would change its policy in these areas only gradually; a sudden move from a passive to an active terminal bonus policy could be considered unreasonable.

79 Some case history began to be built up subsequently from agreements that life insurance companies reached with DTI to restructure their long-term business fund, merge ordinary business and industrial business or demutualise. One early case of a company trying to extract shareholder value by attributing a significant part of the 'inherited estate' to shareholders (the *United Friendly* case) involved detailed discussions between DTI and that company as to how section 30[702] of the 1982 Act should apply to it, and led to DTI obtaining legal advice from counsel regarding the balance of interest of shareholders and policyholders in that company's inherited estate. The prudential regulator's view of PRE was further developed subsequently from numerous demutualisations which took place during the 1990s, and from other life fund restructurings (for example, the relatively recent *Axa* case in 2000; and the earlier *London Life* case, in respect of which a court judgment was given which considered the competing interests affecting policyholders in a transfer of business).

80 Following on from the *United Friendly* case, a Ministerial statement on the subject of PRE was made by Jonathan Evans, the Consumer Affairs Minister, on 27 February 1995. This set out the view of DTI of the factors which influenced PRE in respect of the attribution of surpluses in with-profits funds (albeit in the specific context of an inherited estate and with regard to shareholders' expectations in a proprietary company, rather than PRE between policyholders in mutual companies). These factors were: the fair treatment of policyholders vis-a-vis shareholders; any statements made by the company as to its bonus

702 Section 30 imposed restrictions on the amount by which the proportion of the total distributed surplus allocated to policyholders could be reduced between successive valuations.

philosophy and the entitlement of policyholders to a share in profit (for example, in its Articles of Association or in company literature); the history and past practice of the company; and general practice within the life insurance industry.

81 GN1 contained a number of specific provisions relating to PRE. It made it clear that an important aspect of the Appointed Actuary's role was the duty to advise the Board on the interpretation of PRE. In general terms, it required such advice to have regard to the broad nature of the company and its approach to the treatment of policyholders both individually and (where appropriate) as a group vis-a-vis shareholders. When a significant change of approach was likely to take place, the Appointed Actuary was required take all reasonable steps to ensure that the company appreciated the implications for PRE. It was also incumbent on the Appointed Actuary to take all reasonable steps to ensure that the company's incoming policyholders should not be misled as to their expectations.

82 With regard to bonus declarations, the Appointed Actuary had to justify any recommendations regarding the allocation of profits and its consequences (if any) for the conduct of the company's business, by reference, as appropriate, to the Appointed Actuary's interpretation of the reasonable expectations of the company's policyholders, having regard to: (a) his appraisal of the relevant experience; (b) his understanding of the company's financial and business objectives; and (c) his assessment of the company's continuing ability to meet its statutory solvency requirements. Such expectations were influenced by policy literature and other publicly available information, such as own expense charge illustrations.

83 The Appointed Actuary was to assume, among the conditions for the fulfilment of these expectations: (i) that, in the recognition and allocation of profits in accordance with the company's terms of participation and its policy in respect of the nature and timing of allocations of profits, groups of with-profits policies were appropriately and equitably distinguished having regard, inter alia, to the terms of the policies, their duration and their relevant pooled experience; and (ii) that the company conducted its affairs, including its new business and investment strategies, with due regard to its financial resources.

84 The Appointed Actuary also had specific responsibilities under GN1 with respect to terminal bonus. In particular, the Appointed Actuary was required to include in his report to the Board on the statutory valuation comments on bonus prospects, with particular reference to the projected development of outgo on, and asset cover for, unreserved terminal bonus in different investment scenarios.

85 It was a statutory requirement for the Appointed Actuary to list in the regulatory returns the professional guidance notes that had been complied with. Compliance with GN1 was a mandatory professional requirement.

86 Equitable Life had a particular approach to asset shares and equity between policyholders, which was the subject of a paper presented to the Institute of Actuaries for discussion at a sessional meeting in March 1989.[703] This extended the concept of asset shares to say that, as a mutual company, Equitable Life could only achieve full equity between policyholders by allocating bonus in such a way as to give each cohort of members their 'effective asset share'.

---

The introduction of the Third Life Directive

87 In 1992 the Third Life Directive[704] was adopted by the EC, and was implemented in the UK in 1994.

88 The Third Life Directive further harmonised national legislation in order to provide for the mutual recognition of authorisation and prudential control systems for life insurance companies.[705] This made it possible to grant a single authorisation valid throughout the EC and apply the principle of prudential regulation by the home member state. The prudential regulator in a member state in which a company authorised in another member state operated was no longer permitted to exercise control over the company's operations in its state. The Directive thus completed the process of securing full freedom of services, which was the ultimate objective of the single insurance market.

89 The Directive required the calculation of the technical reserves of a life insurance company to be based on actuarial principles, common to all member states, and as recommended by the *Groupe Consultatif des Associations d'Actuaires dans les Pays des Communautés Européennes*. These principles included limiting the rates of interest that could be used in the valuation, but did not prescribe the valuation method to be used, the choice of which was left open to member states to decide.[706] The Directive introduced a requirement for 'admissibility limits' in relation to assets but prevented member states from requiring companies to invest in particular assets. It amended the asset matching and localisation rules introduced by the First Life Directive so that these applied across all member states.[707] It also permitted the required solvency margin to be covered (within limits and subject to specified conditions) by subordinated loan capital (and cumulative preference share capital) for the first time[708]. This was not subject to the consent of the prudential regulator under the Directive but such consent was nonetheless made a requirement in the UK, again implemented by means of the issuance by the prudential regulator of an order under section 68 of the 1982 Act.

90 The Directive prohibited the prior approval by the prudential regulator of products or premium rates,[709] instead relying on the required solvency margin, the rules concerning the technical reserves and the valuation of assets, and other prudential provisions, to afford adequate protection to policyholders. It established minimum requirements for information provided to potential policyholders at the point of sale,[710] and introduced various provisions intended to protect the 'general good' of policyholders. Whilst the Third Life Directive permitted member states to impose explicit reserving requirements for terminal bonus, it did not require this[711], and it remained the norm throughout the EC instead to adopt the UK approach of using a net premium valuation and prudent interest rate assumptions for valuing the liabilities, which, taken together with appropriate valuation of assets regulations, made implicit provision for future terminal bonuses (to the extent that these existed in other member states)[712].

704 Council Directive 92/96/EEC.
705 See in particular Recital 5 of the Third Life Directive.
706 See Article 18, amended Article 17(1)B.
707 See Article 18, amended Article 17(3) and Annex 1.
708 See Article 25(1).
709 See Articles 29 and 39.
710 See Annex 2.
711 See Article 18, Amended Article 17(1)D.
712 See paragraph 58.

91 The provisions of the Third Life Directive in part reflected extensive lobbying undertaken by DTI and GAD throughout the EC in the early 1990s, advocating a more flexible approach to prudential regulation of life insurance companies, which placed greater emphasis on a principles-based approach rather than the very detailed and prescriptive rules which had been used previously by the prudential regulators in a number of member states and by their companies and their actuaries. This lobbying had also sought to explain and promote the Appointed Actuary system as an effective mechanism for allowing such an approach to prudential regulation of life insurance companies, in response to which a number of other EC countries adopted a variant of that system.

92 The provisions of the Third Life Directive were incorporated into UK legislation by way of amendment of the 1982 Act, and the replacement of ICR81 by the Insurance Companies Regulations 1994[713] ('ICR94'). Reporting requirements were also updated with the replacement of ICASR83 with the Insurance Companies (Accounts & Statements) Regulations 1996[714] ('ICASR96').

93 The degree of amendment introduced by these new regulations was in practice relatively modest, reflecting the fact that the old regulations already contained many of the provisions now required by the Third Life Directive. However, significantly, regulation 64 of ICR94 for the first time expressly required the Appointed Actuary to take account of PRE,[715] when assessing a life insurance company's liabilities for the purpose of preparing the regulatory returns; and this was accompanied by new disclosure requirements introduced by paragraph 6(1)(b) of Schedule 4 to ICASR96. Furthermore, a non-exhaustive list of factors to be taken into account in determining the life insurance business liabilities was set out in ICR94, which included: (i) all guaranteed benefits, including guaranteed surrender values; (ii) vested, declared or allotted bonuses to which policyholders were already entitled; (iii) all options available to the policyholder under the terms of the contract; and (iv) expenses including commissions.[716]

94 Some other significant changes were also made to both the 1982 Act and the regulations at this time. A list of 'criteria of sound and prudent management' was introduced into the 1982 Act, together with a requirement for these to be met as a pre-requisite for authorisation[717]. Several new powers of intervention for the prudential regulator were introduced including a power to conduct general investigations[718], and the grounds for the exercise of intervention powers was broadened to include a breach of the criteria of sound and prudent management[719]. Explicit requirements relating to both the adequacy of assets and the adequacy of premiums for life insurance business were also introduced[720]. A significant change introduced by ICASR96 was a new requirement for the regulatory returns to include a 'matching rectangle'[721], which enabled the prudential regulator and GAD to check more easily compliance of the rates of interest used in the valuation with regulation 69 of ICR94.

713 SI 1994 No 1516.
714 SI 1996 No 943.
715 See Regulation 64(1). Contrast the previous provisions of ICR81, Regulation 54.
716 See Regulation 64(3). This effectively implemented Article 18, Amended Article 17(1)A(i).
717 Sections 5(1A), 5(4) and Schedule 2A.
718 Section 43A.
719 Section 37(2)(aa).
720 Sections 35A and 35B.
721 Form 57.

95 Successive changes were also made subsequently to ICR94 in particular. These regulations were amended 8 times during the period 1994 to 2000. Amendments made in 2000 included a significant change to regulation 72, the effect of which was that the reserve held for any policy could not be less than the amount which could reasonably be expected to be paid under an option available to the policyholder to secure a cash payment under the policy. For recurrent single premium contracts of the type written by Equitable Life this amount had to be calculated having regard to both the likely current surrender value and the discounted prospective value of benefits (allowing for expected future annual bonuses under the conditions prevailing at the valuation date)[722]. This amendment established for the first time an explicit reserving standard for contracts of this type, and implicitly (through the resilience test too) required some allowance to be included in the reserve for accrued terminal bonus.

96 Together the 1982 Act, ICR94 and ICASR96 (as successively amended) contained all the statutory provisions relating to the prudential regulation of insurance companies until the coming into force of the FSMA and the introduction of the Interim Prudential Sourcebook by the Financial Services Authority (FSA) on 1 December 2001. These were, however, supported by a number of other documents. These included guidance notes issued by the UK actuarial profession, in particular GN1 and GN8; a series of 'Prudential Guidance Notes' ('PGNs') issued by the prudential regulator to companies[723]; market letters (called 'Dear Director' letters) issued by the prudential regulator to companies; and Dear Appointed Actuary letters issued by the Government Actuary to Appointed Actuaries on specific reserving issues, including the resilience test (as to which see above).

Other developments in the 1990s

97 During the first half of the 1990s, GAD had actively promoted the value of encouraging life insurance companies to carry out dynamic financial analysis. This involved the testing of a company's ability to withstand possible future adverse conditions (in addition to those already required under the regulations and mandatory professional guidance to be considered in the resilience test), making use of cash flow projections on a variety of assumptions. Partly as a result of this encouragement, the UK actuarial profession introduced guidance note GN2 (entitled *'Financial Condition Reports'*) in March 1996.

98 A working party on the net premium method of valuation reported in the spring of 1998. The working party concluded that the net premium method of valuation continued to be an appropriate minimum standard for the valuation of conventional with-profits business for regulatory purposes. This was due to the fact that alternative valuation methods (which had been known about for many years and were widely reported in the actuarial literature) had associated problems, not least from a regulatory perspective, including the capitalisation of future profits. However, the working party recommended that the alternative gross premium method would be more appropriate for non-profit business, and that a new reserving standard should also be introduced for accumulating with-profit contracts. These recommendations were subsequently accepted by the prudential regulator and implemented through amendment of ICR94[724].

722 Regulation 72(4).
723 These included a number of PGNs interpreting 'sound and prudent management' in a variety of different contexts.

99 The annuity guarantees working party was established as current market annuity prices rose during the 1990s, and reported in November 1997. This working party identified a number of possible approaches to reserving for annuity guarantees in relation to with-profits business, which it 'set out for consideration'. These were:

(1) to allow for the guarantees in the same way as for unit-linked business, by setting aside additional reserves related to prudent estimates of the cost over and above existing, unadjusted with-profits business reserves;

(2) to recognise the cost of the guarantees as effectively increasing the guaranteed sum assured on a prudent basis and recalculating net premium reserves on that basis;

(3) to review whether, and to what extent, the guarantees could be covered by terminal bonus adjustments. Providing that such adjustments would be used and were sufficient to cover the guarantees in all circumstances, there was an argument for not reserving for such guarantees.

100 None of these approaches was deemed entirely satisfactory. The first was described as the 'most prudent' but would have an adverse impact on the reported level of cover for the required solvency margin. The second was arbitrary in its effect. The third (which was that which Equitable Life in fact adopted up to 1997) *'could be viewed as unsound because no explicit provision was made for an explicit guarantee'*. The report concluded that, with low interest rates and improving life expectancy (which compounded the effect of falling interest rates), companies would need to give careful consideration to how to reserve for the guarantees.

101 As part of its research, the working party conducted a survey of life insurance companies' actual current practices with regard to reserving for annuity guarantees. The responses provided to that survey were confidential. However, these prompted GAD, which had been represented on the working party, to recommend that the prudential regulator, through GAD, should conduct its own survey on annuity guarantees in June 1998. It was the response of Equitable Life to this survey which revealed its differential terminal bonus policy to the prudential regulator.

Part V – the changing identity of the prudential regulator, and its relationship with GAD

The relevant prudential regulator

102 Until 4 January 1998, DTI was responsible for the prudential regulation of insurance companies. Immediate responsibility rested with DTI's Insurance Directorate. This worked closely with GAD as its actuarial adviser.

103 Following the Government's decision to establish a single financial services regulator, the functions and powers which had formerly been carried out by DTI were transferred to HM Treasury (HMT) by the Transfer of Functions (Insurance) Order 1997[725]. From 5 January 1998 until 1 January 1999, HMT assumed direct responsibility for the prudential regulation of insurance companies. Staff in the former DTI Insurance Directorate temporarily joined HMT pending transfer to the Financial Services Authority. GAD continued to perform the same advisory role to HMT as it had done with DTI.

---

724 The amendment introduced with respect to accumulating with-profit contracts is as described in paragraph 95.
725 SI 1997 No 2781.

104 Responsibility for the prudential regulation of insurance companies was, in most respects, contracted out to FSA from HMT with effect from 1 January 1999 (although some of the regulatory powers under the 1982 Act remained exercisable by HMT). The Contracting Out (Functions in Relation to Insurance) Order 1998[726] effected the transfer, backed by a Service Level Agreement between HMT and FSA. GAD continued to provide advice to FSA.

105 On 1 December 2001 the FSMA came into force, at which time FSA became the prudential regulator.

The relationship of GAD with the relevant prudential regulator

106 GAD began to provide actuarial advice on insurance matters to the prudential regulator in the 1960s. This included advice on individual companies, on new applications for authorisation to write life insurance business and on policy issues, either of a general nature or relating to the affairs of particular companies. This continued up to the transfer of the GAD actuaries involved in this work to FSA in April 2001.

107 Throughout this period, GAD acted solely as an adviser to the prudential regulator. All powers under the statute were retained by the prudential regulator, with GAD having no authority to instruct a company or its Appointed Actuary to take any actions, but only to provide advice to the prudential regulator to assist it in the fulfilment of its regulatory responsibilities.

108 In 1984 DTI Insurance Division entered into a Service Level Agreement with GAD. This laid down the respective responsibilities of DTI and GAD. It was the responsibility of GAD to monitor the financial position of each life insurance company, including examination of annual regulatory returns, quarterly regulatory returns (where applicable, generally in relation to newly authorised companies) and other information; and to discuss matters with the company, and in particular with the Appointed Actuary, to clear up any uncertainties and, if possible, to resolve any disagreements. GAD would then report to DTI with an assessment of the financial situation of the company and the extent of its compliance with the relevant regulations, including any recommendations for further action.

109 The main output of GAD's scrutiny of each life insurance company's regulatory returns was a 'detailed scrutiny report' for the prudential regulator. These reports were prepared throughout the year in an order of priority determined shortly after receipt of all the returns as part of an 'initial scrutiny' process and agreed with the prudential regulator. For the majority of companies submitting their returns by the end of June (6 months after the valuation date as provided for by the legislation)[727] GAD aimed to complete all the initial scrutinies by the end of August. Detailed scrutiny reports were then prepared on a rolling basis, with the aim being to complete reports in all cases classified as urgent (priority 1 or 2) by the end of October. The detailed scrutiny reports were intended to provide the prudential regulator with a means of identifying and considering actions it might take in relation to those companies which were found not to be complying with the regulations, had failed to meet regulatory solvency requirements or were in danger of not meeting them in the near future, or appeared not to be meeting PRE.

[726] SI 1998 No 2842.

[727] A minority of companies had accounting year ends other than 31 December and for these there was a corresponding timetable for initial scrutinies and detailed scrutinies.

110 As part of a programme of strengthening the regulatory process, a much expanded new style of detailed scrutiny report was introduced from 1993. This was accompanied by a revised Service Level Agreement signed in 1995, and an increase in the resources GAD was permitted to apply to this work in the later years.

111 A further revised Service Level Agreement was put in place in 1998 following the transfer of DTI' s responsibility for prudential regulation of insurance companies to HMT.

112 Satisfying the requirements of the primary legislation, regulations and mandatory professional guidance was unequivocally the responsibility of the Appointed Actuary. In considering whether the Appointed Actuary had met his statutory and professional obligations, GAD had regard to standards generally accepted within the UK actuarial profession and to specific research carried out by the profession. In some key areas of interpretation of the determination of liabilities regulations, GAD developed its own working rules to define what was acceptable. These were issued as guidance to Appointed Actuaries in the form of Dear Appointed Actuary letters and set out details of what GAD considered to be good practice in relation to particular actuarial issues.

113 Following on from the implementation of the 1973 Act, GAD was proactive in establishing, and was represented on, a number of professional working parties. It was also proactive in initiating market surveys, and in speaking at major actuarial events to ensure that the prudential regulatory perspective was presented.

This report contains references to, and extracts from, legal opinions and advice and their contents obtained by the Equitable Life Assurance Society and provided by it to -

(a) the public bodies responsible for the prudential regulation of insurance companies in the course of normal exchanges between a regulated body and its regulators for the specific purpose of allowing those regulators to fulfil their regulatory functions; and

(b) Lord Penrose in the course of normal exchanges between the Society and Lord Penrose and his Inquiry team for the specific purpose of allowing Lord Penrose to fulfil his terms of reference.

After the House of Commons had ordered the report of Lord Penrose to be published on 8 March 2004, all the documents obtained by Lord Penrose were retained by the Treasury.

In turn, I obtained this material from the Treasury for the specific purpose of carrying out my investigation into the prudential regulation of the Society, following my decision to carry out such an investigation which was reported to Parliament on 19 July 2004.

I acknowledge that the Society has waived privilege in this material only for the above specific purposes and that the Society does not intend any wider or general waiver of privilege by not objecting to the inclusion of, or extracts from or references to, this material in this report as published.

Contents

Introduction

In this Part of my report, I set out a chronology of events.

The aim of this chronology is to describe the information, exchanges, meetings and discussions which occurred during the period covered by this report.

The account given in this Part of my report has been derived from the policy and operational files of the bodies whose actions were under investigation, as well as from the working documents, email accounts, and other electronic records of some of the officials, actuaries, and legal advisers who were involved in the prudential regulation of the Society during the relevant period.

The chronology does not include every event of potential relevance to the subject matter of this report. It is focused only on the information that those involved in the prudential regulation of the Society had before them at the relevant time or on the actions of those regulators during the period covered by this report.

Thus, while we have reviewed the internal papers of the Society, of the auditors of the Society, and of a range of other relevant parties (including the administrators of the Principal Civil Service Pension Scheme), this material is only included within the chronology where we have established conclusively that it was before those undertaking the prudential regulation of the Society, either by being provided to them or being known by them through other means.

There are three other stylistic matters which the reader should bear in mind. These are:

(i) that, while every effort has been made to ensure that the language cited from documents or discussions remains as close to the original as is possible, certain editorial or linguistic changes have had to be made on occasion for the sake of clarity. I am satisfied that these minor changes do not detract from the accuracy of the account provided;

(ii) that, except where changes have had to be made to ensure clarity, we have retained within direct quotations the acronyms used by others. The reader is referred to the Glossary and List of Acronyms set out in Part 1 of this report, if any of those acronyms are unclear; and

(iii) that notes have been included within a number of the entries set out within the chronology. Those notes provide further explanation of the subject matter of the relevant entry or entries and/or give cross-references to other entries on the same subject and/or record subsequent submissions made to me in respect of the content of those entries. For the avoidance of doubt, it is not suggested by including notes in this fashion that the subject matter or content of those notes was known to the relevant officials and/or advisers at the time.

There are two final important considerations which should be borne in mind by the reader concerning the content of this Part of my report.

The first is that most of the material which is cited within this chronology was never intended to be placed in the public domain, with much of it being of the nature of contributions to a drafting process or to emerging thinking.

While I have included everything that I consider to be relevant in order to show the full consideration that was given at the time of the matters within the terms of reference for the investigation, the reader should bear in mind that draft documents or opinions do not reflect the concluded views of those writing those documents or expressing those opinions.

No greater reliance on this material should therefore be placed than that intended by its inclusion within this chronology – namely, as part of a series of events, discussions, and other actions relevant to the prudential regulation of the Society.

Finally, the chronology of events contains numerous references to what could be seen as strong or controversial opinions held by those involved in the prudential regulation of the Society about other people.

Those references, again, were not intended to have a wider circulation nor, often, were those who were the subject of the views expressed given any notice at the time that such opinions were held about them and their actions.

Thus, the reader should bear in mind that those holding the opinions that were expressed and are recounted in this report did not have the benefit of any response to them from those affected, which might have informed their view or led to those opinions being qualified or changed.

Such opinions as are set out within this chronology cannot therefore be taken to be a factually accurate record of or concluded judgement about the actions or qualities of those other persons.

1982–1988

01/01/1982	The Insurance Companies Regulations 1981 (ICR 1981) come into effect.
04/01/1982	The Equitable Life Assurance Society (Equitable) write to inform the Department of Trade and Industry (DTI) that they had appointed a new Appointed Actuary, with effect from 1 January 1982.
29/06/1982	**Equitable submit their 1981 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1981, prepared in accordance with the provisions of the Companies Acts 1948 to 1980 and dated 14 April 1982.
28/01/1983	The Insurance Companies Act 1982 (ICA 1982) comes into force.
02/02/1983	**DTI carry out an examination check of the Society's 1981 returns.** DTI conclude that this *'does not reveal anything unsatisfactory'*. They recommend that the Society's priority rating remains at 3. An official (Officer A) passes the initial check to the regulatory line supervisor with responsibility for Equitable (Line Supervisor A).
07/02/1983	Officer A passes some further comments on the 1981 returns to Line Supervisor A. These include: *This is a mutual and there is no information on the free assets position for 1981, while for the last four years the profits realised is shown under "capital and free reserves". The position of the company appears to be sound with long term assets at £773,026K. Net premium income is up by £28,511K. Major part of the premium income during the last four years (1977–1980) was based on single premium business but the current year's (1981) was mainly derived from regular premium business.* The Line Supervisor responds that he has no comments.
25/02/1983	**The Government Actuary's Department (GAD) complete their scrutiny of the Society's 1981 regulatory returns.** GAD tell DTI that they have no comments on the returns.
June 1983	**Equitable submit their 1982 regulatory returns to DTI.** (Note: the relevant DTI file is no longer available.)
15/03/1984	The Insurance Companies (Accounts and Statements) Regulations 1983 (ICAS Regulations 1983) come into force.
16/06/1984	Every insurance company is sent by DTI a letter setting out new arrangements between DTI and GAD for the scrutiny of returns.
28/06/1984	**Equitable submit their 1983 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1983, prepared in accordance with the provisions of the Companies Acts 1948 to 1981 and dated 11 April 1984.
September 1984	Every insurance company is sent by DTI a copy of their *'Guidance Notes on the Preparation of Annual Returns'*. These notes are reproduced in Part 4 of this report. DTI say that the guidance is *'designed to assist insurance companies and their advisers in the preparation of returns to the Department and attempt to clarify points which may not be immediately apparent from the relevant legislation'*.

19/09/1984	**GAD complete both the A1 and A2 'Initial Scrutiny' key checks on the Society's 1983 regulatory returns.** GAD note that the company have maintained their required solvency margin. They reduce Equitable's priority rating from 4 to 5 and note that mortality rates are *'a little tight in places but there are adequate margins elsewhere'*. They identify no items of concern and no items to notify to DTI, to be taken up immediately with Equitable. GAD add the comment that: *'The company's investment reserve is £345m compared with* [non-linked liabilities] *of £1023m and* [linked liabilities] *£37m – massively solvent!'*. GAD also prepare a *'Form B'*, tabulating some key figures disclosed in the 1982 and 1983 returns. (Note: Initial Scrutiny checks comprised: form A1 (key checks, usually carried out by a trainee actuary at GAD, covering completeness of returns, certificates, solvency and compliance); Form A2 (key checks (Actuary), carried out by the GAD scrutinising actuary, which included new rating and a space to record any aspects of the returns which caused concern (from 1988, aspects which *'look worrying'*) or which needed to be notified to DTI, to be taken up with the company immediately); Form B (some key statistics drawn from the returns). The design of the forms changed over time.)
27/06/1985	**Equitable submit their 1984 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1984, prepared in accordance with the provisions of the Companies Acts 1948 to 1981 and dated 3 April 1985.
23/07/1985	**GAD complete the A1 Initial Scrutiny check on the Society's 1984 returns.** GAD note the cover for the required minimum margin is 8.53. They do not identify any concerns.
24/07/1985	**GAD complete the A2 Initial Scrutiny check on the Society's 1984 returns.** GAD raise Equitable's priority rating from 5 to 4 and note that the question *'Do the reserves for maturity guarantees look reasonable?'* is not applicable. GAD identify some missing and inadequate information in the returns, but record some of this as *'trivial'*. GAD note that only a *'trivial'* proportion of the major classes of business is reinsured. They also note some queries about unit-linked policy expense charges and about the expense reserve, but also that these need not be pursued. GAD identify no items of concern and no items to notify to DTI, to be taken up immediately with Equitable. GAD also prepare a *Form B*, tabulating some key figures disclosed in the 1982, 1983 and 1984 returns.
02/08/1985	GAD write to Equitable highlighting the new procedure under the 1984 Service Level Agreement whereby GAD have responsibility for scrutinising returns in respect of long term insurance business. GAD continue: *In order to assist us in providing advice to Insurance Division on your society's returns for the year ending 31 December 1984 we would be grateful for the comments of the actuary appointed to your society under section 19 of the Insurance Companies Act 1982, on the matter set out in the remainder of this letter. We would be glad to hear directly from him if that would be more convenient for your society. This matter has come to our attention during our initial scrutiny of the returns; further matters may arise when a detailed scrutiny is carried out.* GAD then set out the issue on which the Appointed Actuary is asked to comment: *The reply to paragraph 5 to Schedule 4 (which refers us back to the 1982 returns) indicates that no explicit provision for tax on unrealised capital gains was made, nor was any explicit provision made for any mismatching between the nature and term of the assets held and the liabilities valued. It was no doubt considered that the excess of available assets (Form 14.51) was sufficient to meet these liabilities.*

With the implementation of the long-term business solvency margin, operative from 15 March 1984, it is necessary to make a clear distinction between liabilities and margins, and foot note 3 to Form 14 is designed to achieve this where the long term fund in the Revenue account is brought in at less than the full value allowed by the Asset Valuation Regulations.

GAD continue:

Would the actuary please state the provision, included in line 51 of Form 14, which should be shown as a foot note to that form and included in (a)(ii) of the actuary's certificate and in the mathematical reserve shown in Form 9. Alternatively if the actuary is satisfied that provision is made for tax on unrealised capital gains, in the circumstances of the society ceasing to transact new business, and for any mismatching reserve in relation to assets taken at their Form 13 value within the mathematical reserves established in Schedule 4, paragraph 5 would need to be rewritten.

GAD conclude by asking Equitable to:

Please send to the Department of Trade any amendments to the 1984 returns which are made as a result of the points in this letter, so that they can be placed on public record.

GAD also state that:

It would be helpful, for the 1985 returns, if detailed answers to question 5 of Schedule 4 could be given, rather than referring back to a previous return. This will enable specific replies to questions 5(1) (a) to (g) and 5(2) (a) and (b) to be clearly identifiable.

09/08/1985 Equitable's Appointed Actuary responds to GAD. The Appointed Actuary explains:

When making the statement in the 1982 returns that no explicit provision for tax on unrealised capital gains was made it was not intended that this should be taken to mean that provision was made in the excess of available assets.

This applies also to the 1983 and 1984 returns as indicated by the absence of a foot note to Form 14.

He continues: *'In my opinion no additional reserve for tax on unrealised capital gains or for mismatching of assets and liabilities was necessary'*.

The Appointed Actuary then provides amended answers to question 5 of Schedule 4, saying:

I note that it would be helpful if specific replies to questions 5(1)(a) to (g) and 5(2)(a) and (b) could be given. I attach as an appendix to this letter answers to question 5 of Schedule 4 in this form. I have taken the opportunity to expand on the answer to 5(1)(e) to reflect the above and in 5(1)(a) to take account of your comments.

Against this, a Chief Actuary at GAD (Chief Actuary A) writes: *'? Not formal amendments to returns'*. He also records a number of queries on the amended information. Against the statement that no mismatching reserve is required, he notes *'???'*. Against the statement that no additional reserve has been made for prospective liability for tax on unrealised capital gains, he notes *'why not?'*.

(Note: no reply to this letter was sent at the time, but see 18/08/1986, 04/03/1987 and 23/03/1987.)

14/11/1985 Every Appointed Actuary is sent by the Government Actuary a copy of his first Dear Appointed Actuary letter (DAA1) on valuation returns in relation to solvency margins. The Government Actuary says that scrutiny of the 1984 returns has shown that many actuaries had not appreciated the impact of the changes brought in from March 1984. Actuaries had been

	sent letters drawing their attention to aspects of the 1984 returns which did not meet the relevant requirements, and DTI, with GAD, are following these up on a company by company basis. He draws attention to guidance issued by DTI in September 1984; he explains more fully the background and expresses the hope that misunderstandings can be cleared up in time for the preparation of the 1985 returns.
27/05/1986	**GAD complete their examination of the Society's 1984 regulatory returns.** GAD write to DTI, saying: *The Society is in a strong financial position, with the required minimum margin being covered 8½ times, though this overstates the excess since the society did not show any provision for capital gains in mismatching reserves.* [Chief Actuary A] *wrote to them in August 1985.* *The actuary's main report used a bonus reserve method to value the liabilities but he has provided a supplementary report using a net premium valuation on a strong basis complying with* [Regulations 55-64 of the ICR 1981]. *This society distributes surplus generally every three years in the form of reversionary bonuses, the last distribution being in 1982. The long term fund is currently providing surpluses of £40m or so every year without any transfer from investment reserves so that the distribution as at 31 December 1985 is likely to need only a moderate transfer.* *I have no further questions for the society.*
26/06/1986	**Equitable submit their 1985 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1985, prepared in accordance with the provisions of the Companies Act 1983 and dated 2 April 1986.
30/06/1986	Equitable send DTI £5,000 in respect of Insurance Fees for their 1985 returns.
21/07/1986	**GAD complete the A1 Initial Scrutiny check on the Society's 1985 returns.** GAD note that the cover for the required minimum margin is 5.15. They do not identify any concerns.
30/07/1986	**GAD complete the A2 Initial Scrutiny check on the Society's 1985 returns.** GAD reduce Equitable's priority rating from 4 to 5. They note that the parameters used in valuing or testing unit-linked contracts are too low, but that there is not much of this business in force compared with the total. GAD note that Equitable have again not provided sufficient information in relation to any explicit provision for tax on unrealised capital gains or any mismatching reserve (see 02/08/1985) and suggest *'Possibly take up* [this issue] *at early stage'*. They identify no other items of concern and no items to notify to DTI, to be taken up immediately with Equitable. The relevant GAD file includes a computerised *Form B*, tabulating some key figures disclosed in the 1981 to 1985 returns. GAD also produce a computerised *Form C1 – Non-linked companies*. This Form includes further key figures disclosed in the 1981 to 1985 returns.
18/08/1986	GAD write to Equitable's Appointed Actuary with one query on the Society's 1985 returns, explaining that *'we are paying particular attention to the replies to Question 5(1)(a) of Schedule 4 of companies' 1985 returns'*. That question asked for *'the basis of the provision made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'*.

GAD state:

> *It would be most helpful if you could clarify one aspect of your company's answer to that question. Does the answer mean that in the assumed changed investment conditions the Society would be able to set-up mathematical reserves which satisfy the relevant Regulations without making any call on the excess value of admissible assets of £445,456,000 shown in line 51 of form 14? In other words is the assumed fall in asset values covered entirely by the reduction in the amount of the liabilities in the changed conditions compared with the mathematical reserves actually set up in Schedule 4.*

08/09/1986 Equitable apply to DTI for a section 68 Order to allow them to make returns on business identified as 'personalised funds' in aggregate form. Equitable explain that they have recently extended their range of 'personalised funds' and, as they are required to show each fund separately in four different forms in the returns, this *'could result in a significant increase in the content of these Forms'*. The Appointed Actuary says that a section 68 Order *'would simplify the preparation of the returns and in my opinion would not detract from the information given'*.

(Note: a section 68 Order was made by the prudential regulators on the application, or with the consent, of an insurance company which directed that all or any of the relevant statutory requirements should not apply or should apply with modified effect to that company for a specified period.)

09/09/1986 Equitable's Appointed Actuary replies to GAD's letter of 18/08/1986. He confirms that:

> *... in the assumed changed investment conditions the Society would be able to set up mathematical reserves which satisfy the relevant Regulations without making any call on the then value of the assets represented by the excess value of admissible assets shown ...*

He continues:

> *I am sorry this was not clear. I had taken it that the answer to Question 5(2)(a) covered this point. I can, however, now see that my answer to this question could be taken as indicating the book values would be maintained at current levels in changed investment conditions by recourse to the excess value of admissible assets. When answering Question 5(2)(a) I had assumed that the book value would be written down to reflect the changed investment conditions.*

GAD note that:

> *The answer to* [our] *letter of 18/08 looks satisfactory. He appears to say that* [the] *Society could set up adequate reserves without recourse to* [the Investment] *Reserve ...*
>
> *In* [the returns] *he says that assets are taken at book value in Form 58* [valuation result and distribution of surplus]. *He had assumed that then book values would be written down under the new investment conditions and no recourse to* [the Investment] *Reserve would be needed i.e. these revised book values would exceed mathematical liabilities.*
>
> *It seems that the answer* [in the returns] *needs amending to make it clear what he is saying.* (See 23/03/1987 and 15/09/1987.)

12/09/1986 A GAD actuary who has taken on responsibility for Equitable (Scrutinising Actuary A) informs DTI that GAD have no objection to Equitable's 'personalised funds' being aggregated for the purpose of the returns. (See 08/09/1986.)

14/10/1986 DTI send Equitable the section 68 Order allowing Equitable to include details of their 'personalised funds' in aggregate form. The Order is subject to the following conditions:

a) The actuary shall state in his annual report that the nature of the contracts relating to Personalised Funds is such that there is absolute matching between assets and liabilities for each individual fund.

b) The Society shall include a note stating the existence of this Order in any accounts and statements deposited with the Secretary of State in accordance with section 22 of the Act.

17/10/1986	GAD inform Equitable's Appointed Actuary that they will consider the 1985 returns, with DTI, in the light of the additional information provided in Equitable's letter of 09/09/1986. GAD copy the letters of 18/08/1986 and 09/09/1986 to DTI. GAD state that they wish DTI to: *... consider whether some amendments to the returns are required. In my view para 5(1)(a) is not as clear as it might be and* [the Appointed Actuary] *admits that it relies on a particular interpretation of the answer in paragraph 5(2)(a). I do not think that his interpretation is the normal one because it is not usual to write down the book values of assets until the market values fall below them.* GAD continue: *If you agree with my thoughts perhaps you would advise me how you would wish matters to proceed. Will you take up the matter with the company or would you prefer me to do it? Alternatively could you accept the 1985 returns as they stand provided the company undertakes to make suitable alterations to the wording in preparing the 1986 returns?*
29/10/1986	DTI reply to GAD to say that they agree that: ... [the Appointed Actuary's] *interpretation ... does not appear to be the normal one. In the circumstances we would be content for the company to make amends in the 1986 returns. Since you are already in touch with* [the Appointed Actuary] *about this may I accept your offer to take up the point directly with him.*
12/11/1986	GAD write to Equitable's Appointed Actuary, saying: *Further to my letter of 17 October the Department of Trade and Industry has advised me that it would be content for the company to make amends in the 1986 returns. If you are agreeable to reconsider the answers to paragraphs 5(1)(a) and 5(2)(a) when preparing the next set of returns it would not be necessary to pursue the matter in relation to the 1985 returns.* *Could you please let me know if this method of proceeding is acceptable to you so that I may advise DTI accordingly* [?]
27/11/1986	Equitable's Appointed Actuary replies to GAD, saying that he is happy to proceed as was proposed in their letter of 12/11/1986.
04/03/1987	Scrutinising Actuary A sends a note to Chief Actuary A headed *'Equitable Life – 1985 Returns'*. The Scrutinising Actuary refers to queries raised in 1986 about the 1985 returns and to two points arising from the 1984 returns, namely: • a query about sterling reserves; and • Equitable's letter of 09/08/1985, which did not explain why no capital gains provision had been made and to which GAD had not replied. The Chief Actuary records on the note that he recalls that a letter had gone missing and that he and the Scrutinising Actuary have discussed and now agree to leave the point about sterling

reserves to the next set of returns, to take up some minor points on the telephone, and to reply in writing to the letter of 09/08/1985.

23/03/1987 [entry 1]	GAD write to Equitable's Appointed Actuary referring to a telephone conversation on 13 March 1987 about the letter of 09/08/1985. GAD note that: *... you consider there are sufficient margins in the mathematical reserves to cover any potential tax on unrealised capital gains, taking into account that the major proportion of the liabilities relate to gross funds. I understand that you are happy to make specific reference to this in the next set of Returns.*
23/03/1987 [entry 2]	**GAD complete their detailed scrutiny of the Society's 1985 regulatory returns.** GAD provide DTI with a one and a half page *'final report'*. GAD state: *The Society declared a triennial bonus at the end of 1985. The cost of these bonuses (which included a transfer of £125 million from investment reserve) has resulted in a reduction of available free assets. At the same time the required minimum margin increased during the year by 35% due to a corresponding increase in the mathematical liabilities. These changes have resulted in a reduction in the cover for the* [required minimum margin] *to 5.2 X (previously 8.5 X). The society has announced that it will be declaring bonuses on an annual basis in future ...* *The Company has valued its liabilities on a bonus reserve basis as in previous years. It has also provided details of a net premium valuation in accordance with the regulations.* With reference to the letter to Equitable (12/11/1986), GAD say: *'After consultation with D.T.I. it was agreed to leave the 1985 returns unchanged subject to an undertaking to amend this paragraph* [about their mismatching reserve] *in the 1986 Returns'*. As regards the lack of an additional reserve for tax on unrealised capital gains, GAD explain: *The actuary has pointed out that as most of the liabilities relate to gross funds, any tax provision would be small and is amply covered by the margins in the valuation basis. He intends to refer to this in the next set of Returns. We recommend that DTI should accept the Returns as they stand on this point.*
11/05/1987	DTI provide briefing for a visit by a Minister to Equitable. DTI describe Equitable as *'probably the oldest and most respectable of all UK life insurance companies'*. They note that there are *'no supervisory questions outstanding with the Society, with which we are content to have little contact'*.
26/06/1987	**Equitable submit their 1986 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1986, prepared in accordance with the provisions of the Companies Act 1983 and dated 2 April 1987. Equitable also send DTI a declaration under section 94A of ICA 1982 (note: this gave DTI the power to charge fees from insurance companies to recover, to the extent possible, the costs of the prudential regulation of such companies). Equitable pay Insurance Fees of £5,200 in respect of their 1986 returns.
08/09/1987	**GAD complete the A1 Initial Scrutiny check on the Society's 1986 regulatory returns.** GAD note that the cover for the required minimum margin is 5.38. They do not identify any concerns.
15/09/1987	**GAD complete the A2 Initial Scrutiny check on the Society's 1986 regulatory returns.** GAD give Equitable a priority rating of 5 (unchanged from the previous year). They note that

Equitable have provided the information needed on unrealised capital gains and any mismatching reserve (see 23/03/1987). GAD identify no items of concern and no items to notify to DTI, to be taken up immediately with Equitable. GAD produce two forms (*'Form B'* and *'Form C1'*), tabulating key figures disclosed in the 1982 to 1986 returns.

22/09/1987 **GAD provide DTI with their final report on the Society's 1986 regulatory returns.** GAD state that the point raised with Equitable on the 1985 returns (see 12/11/1986) has been dealt with. GAD record that cover for the required minimum margin has increased to 5.38 and that they have no new questions for Equitable. GAD say:

> *It is interesting to note that for 1986 the Society has made reductions in the bonus rates for reversionary bonuses on all classes of policies. To compensate for these reductions the Society has increased the rates of Terminal Bonuses paid on all policies. We understand that this means that there is unlikely to be any overall reduction in benefits payable at maturity of a policy.*
>
> *The Society has valued its liabilities on a bonus reserve basis as in previous years, and has provided full details of an alternative net premium valuation basis in accordance with the regulations.*

13/10/1987 DTI provide briefing for the Permanent Secretary of the Treasury, prior to a lunch with Equitable on 19/10/1987. DTI repeat that Equitable are *'probably the oldest and most respectable of all UK life insurance companies'*. They provide some core statistics for 31/12/1986 (being free assets of £475m, long term business fund of £2,305m and net premium income of £397m). DTI add:

> *The Society appears to be sound and has expanded steadily with the underlying trend of expenses being satisfactory. Its strong solvency position makes it low priority in the companies supervised by* [DTI]. *Consequently contact with the Society is infrequent and there appear to be no important current issues.*

DTI suggest two issues which might be pursued at the meeting – Equitable's assessment of changes in the industry following the FS Act 1986, and what growth in business Equitable foresee when new personal pensions begin.

29/04/1988 The FS Act 1986 regulatory regime comes into force.

28/06/1988 **Equitable submit their 1987 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1987, prepared in accordance with the provisions of the Companies Act 1983 and dated 30 March 1988.

Equitable send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £6,000 in respect of their 1987 returns.

30/06/1988 On the introduction of new personal pension policies in response to changes to the legal framework for pensions, Equitable cease to offer guaranteed annuity rates on new policies sold after this date (other than in respect of a small number of group schemes). Certain classes of policyholders continue to enjoy the right to pay further premiums in the future to which the annuity guarantee contained within their original policy would apply.

(Note: I understand that Equitable's move was consistent with a general industry trend away from including such guarantees in pension policies.)

22/07/1988 **GAD complete the A1 Initial Scrutiny check on the Society's 1987 regulatory returns.** GAD note that cover for the required minimum margin is 3.95.

23/08/1988	**GAD complete the A2 Initial Scrutiny check on the Society's 1987 regulatory returns.** GAD raise Equitable's priority rating from 5 to 4. They identify no items that are worrying and no items to notify to DTI, to be taken up immediately with Equitable. They note three other matters:

> *(1) AIDS reserve not set up ... Write about this!*
>
> *(2) Look* [at] *much higher cost of bonus in 1987?*
>
> *(3) Query Form 48* [analysis of assets which are matching liabilities in respect of property-linked benefits other than holdings in authorised unit trusts or internal-linked funds] *assets and related benefits with* [a named company] *(these look to be linked ...).*

GAD also complete an *'AIDS Category – Initial scrutiny'*. They note that the *'Sums assured at risk'* are £7,798m and the Society's free reserves are £390m. In the notes section, GAD write:

> *No specific AIDS reserve set up. Actuary states margins are sufficient. Query basis.*

GAD produce two forms (*'Form B'* and *'Form C1'*), tabulating key figures disclosed in the 1983 to 1987 returns.

26/08/1988	GAD write to Equitable's Appointed Actuary and ask about the reserving basis used in the 1987 returns to provide for future AIDS mortality. On GAD's copy of the letter, someone has written: *'You might get a dusty answer!'*.
21/09/1988	Equitable's Appointed Actuary replies to GAD's letter of 26/08/1988. He explains that Equitable have not set up an explicit reserve as:

> *The question of whether or not an explicit reserve against a contingency should be established at the present time for the Society's business seems to me a matter of equity. To take such action effectively retains monies from policyholders now leaving the fund which may, in the event, not be required ... In my view the information currently available on the effects of AIDS is so speculative that I find it difficult to justify penalising contracts leaving the fund at this time.*
>
> *I did of course check that such action was prudent and can confirm that the additional reserve ... in respect of all of the sums at risk is only a small percentage of the future bonus reserve within the valuation. It is thus clear that future bonuses would comfortably be able to take the additional strains which would arise on that basis. You may also take reassurance from the point that a significant proportion of the Society's procuration expenses are written off in the year of acquisition. The loadings fall into surplus as the contract matures but could have been anticipated.*

14/11/1988	Every Appointed Actuary is sent by GAD a copy of DAA2 on reserving for AIDS.

1989

18/01/1989 GAD write to Equitable's Appointed Actuary in reply to his letter of 21/09/1988. GAD head the letter *'Returns as at 31 December 1987'*. GAD explain: *'I understand from your letter that there are sufficient margins between your published valuation basis and a corresponding net premium valuation basis to make overall provision for future additional mortality on Projection F of AIDS Bulletin No 2'*. GAD continue by saying: *'We would be interested to learn what mortality basis your experience corresponds to?'*

GAD also refer to the considerable sums assured in certain categories – Level Term Assurance and Miscellaneous (mainly Income Benefits and Temporary Assurances) – and state:

> *In view of the large sums assured at risk we suggest that these categories of contract are significant for the purpose of Section 2.1.1 of Guidance Note GN8. In keeping with the Government Actuary's recent letter to all appointed actuaries* [see 14/11/1988], *we will be looking for you to set up reserves for these categories in the 1988 returns which would include specific provision for future AIDS mortality ...*

GAD ask Equitable to provide further details of their new approach to temporary assurance business.

14/03/1989 DTI provide briefing for the visit of a Minister to Equitable on 22 March 1989. This follows the format that was used for the visit by the Permanent Secretary of the Treasury on 19/10/1987 (see 13/10/1987). DTI set out some updated statistics for 31/12/1987 (being free assets of £390m, long term business fund of £2,862m and net premium income of £500m) and state that:

> *The Society appears to be sound and has expanded steadily with the underlying trend of expenses being satisfactory. Its strong solvency position makes it low priority in the companies supervised by Insurance Division. Consequently contact with the Society is infrequent and there appear to be no important current issues.*

20/03/1989 Equitable's Appointed Actuary and another of the Society's actuaries (who later becomes Appointed Actuary) present *'With Profits Without Mystery'* to the Institute of Actuaries.

The abstract to the paper is as follows:

> *The paper describes the philosophy of with-profits business which has been developed in the authors' office, as a practical illustration of the running of such business in modern conditions. A description is given of how the philosophy is implemented in the main areas of actuarial management, including valuation methods, bonus distribution, product design and expense control. The discussion is extended to address a number of topics which are the subject of current debate including the financial strength of offices, future bonus prospects and disclosure of expenses.*

The paper is published on the website of the actuarial profession at http://www.actuaries.org.uk/files/pdf/library/JIA-116/0301-0345.pdf

(Note: in his witness statement to the Penrose Inquiry (provided in May 2003), Directing Actuary A stated:

> *I read "With Profits Without Mystery" and attended the debate at the Institute of Actuaries just before being promoted to Directing Actuary* [in April 1989]. *(By way of background, I should explain that Institute papers were distributed to members about two to three weeks before they were presented for discussion. After an initial brief introduction by the President, a previously appointed "opener" would give his views on the paper, and this would be followed by other members of the profession who wished to*

speak. There would also be an official "closer" of the discussion. GAD did not hold a formal discussion of Institute papers amongst themselves, but papers like that on the Equitable would be discussed by those members of staff with a direct interest in the company.) The Equitable was generally seen as being a special company due to its historical significance as the first life insurance company, and the fact that actuarial thinking basically started with William Morgan, its first actuary. Nevertheless, I concluded that the culture of the Equitable, as expressed in the Paper, did not fit easily with the new solvency margin regime introduced in 1984, and it would need careful monitoring. While I sympathised with the philosophy that the current generation of policyholders owned the company (being a mutual), nevertheless the fact that the Equitable's culture also meant that policyholders would receive a reasonable approximation to the value they had built up in the company on the maturity of their policies, thereby inhibiting the building up of an estate, meant that the solvency margin (or at least the explicit component of the solvency margin) would need to be met largely from the investment reserve held back to fund terminal bonuses.

1989

He continued:

With other mutuals, an estate had normally been built up by past under-distributions of bonuses to policyholders, whether deliberately or otherwise – for example, in the latter case through perhaps not having some kind of asset share technique – while in a proprietary company the solvency margin could also be covered by shareholders' funds, and in extremis through calls for increased levels of shareholder capital, although raising this has its own difficulties. The irony was that those companies which had under-distributed to policyholders and shareholders in the past were most able to meet the new solvency margin requirements. I did not participate in the debate as I felt, as a regulator, it would not be appropriate to discuss the affairs of an individual company in public.

I could envisage that, in the event of a deep, sustained fall in the stock market, the "With Profits Without Mystery" culture, in relation to bonus declarations, might need to change, much more quickly than for other companies with an estate, if the company were to maintain its required solvency margin. In the event of closure to new business, other issues would have to be confronted, including the need to adjust the investment mix so that the assets closely matched the likely incidence of outgo. The Equitable would be no different in this regard from any other company. The Appointed Actuary of a company transacting long term business has to set up reserves which enable the company to be run off satisfactorily in the event of closure to new business, including any cost overruns in the first few months of closure due to redundancies and the costs of the closure of branches. Most of the Equitable's business was recurrent single premium business. By the nature of single premium business, no future premiums can be deemed to be collected under the contract, and the Institute paper indicates that the Equitable wrote off all their new business expenses in the year of inception, thus causing no strains of that nature in future.)

03/04/1989 Equitable's Appointed Actuary writes to GAD in reply to their letter of 18/01/1989. The Appointed Actuary explains that he has some difficulty in saying with precision what the Society's AIDS mortality experience is, due to the limited sample size, but over recent years it has been considerably lighter than the valuation basis. The Appointed Actuary provides information about the Society's approach to temporary assurance and says that he notes *'your comments about the Government Actuary's recent memorandum and will take appropriate action in respect of the 1988 returns'.*

13/04/1989	GAD acknowledge Equitable's letter of 03/04/1989. GAD thank the Appointed Actuary for the helpful and interesting information on the Society's actual mortality experience and note *'that you will be making some changes on the reserving basis for term assurances in the 1988 returns'*. There appears to be no other correspondence on the 1987 returns.

Submission of the 1988 regulatory returns

29/06/1989 **Equitable submit their 1988 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1988, prepared in accordance with the Companies Act 1985 and dated 29 March 1989. Equitable also send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £6,500 in respect of their 1988 returns.

These documents include the following information about Equitable's business and their financial position as at 31 December 1988.

Companies Act annual report and accounts
In the *President's Statement*, Equitable say that growth of new premium income at £320m had exceeded their target. They say that such growth in the business can be accommodated financially primarily because of the Society's relatively low selling costs.

1989

Equitable say that they had adjusted final bonus rates slightly by increasing payments on older policies and decreasing payments on newer ones. The President explains: *'I can assure members of the care taken by your Board in the discussions leading to bonus decisions aimed at achieving a proper balance between the interests of members whose policies are due for payment in the near future and of those whose interest in the financial well-being of the Society is longer term'.*

Equitable explain that they believe it is increasingly important that *'existing and new clients should understand the nature of the policies they buy and the business principles which we adopt in relation to those policies. We hope that, through our sales literature, and the information provided by our representatives, there are few policyholders who are unclear about their policies'.*

In the *Management Report*, Equitable say that one element of their philosophy is to provide *'unit-linked policies for those who wish to take their own investment risk and to offer for those requiring a higher degree of security a with-profits range of products where that risk is both shared and controlled'.*

Equitable say that they carry out a full examination of their expense position every year and this continues to demonstrate that *'the Society's expenses are properly covered by the allowances contained in the premiums paid under new and existing policies'.*

Equitable set out the new regular premium income for 1987 and 1988, which shows a total increase over the period of 43%. They explain:

> *Much of this success lies in the fact that, unlike many competitors, the Society saw distinct advantages in clients having an "old style" retirement annuity policy as a part of their portfolio of retirement benefits and we brought the benefits of retirement annuities to the attention of existing policyholders and the public alike. Awareness of those attractions led to an unprecedented volume of business in the weeks prior to the introduction of personal pensions, sales of which have been at a healthy level. The personal pension contract itself is in all essentials the same as its predecessor, enabling those in our traditional self-employed market and the newly created employee market alike to have confidence in its "no penalty" nature and the consistent track record of performance.*

In the *Statement of Bonuses* section of the report and accounts, Equitable state that their with-profits business is essentially a *'managed fund'*, with investment returns passed to policyholders through reversionary and final bonuses. Equitable say that the level of guaranteed benefits including declared reversionary bonuses tended to impose constraints on the proportion of the portfolio that could be invested in assets other than fixed interest stocks. Equitable say that they have considered recent and prospective investment conditions and have taken into account the balance of liabilities and assets when deciding to maintain reversionary bonuses at the same level as for 1987. For its recurrent single premium pensions business, which constitutes the bulk of its business, the Society's declared reversionary bonus has been maintained at 7.5%.

<u>The returns</u>
Equitable's regulatory returns are submitted in two parts. The first part covers Schedules 1, 3 and 6 to the ICAS Regulations 1983, being: balance sheet and profit and loss account; long term business revenue account and additional information; and certificates. The second part of the returns covers Schedule 4 and is the abstract of the valuation report prepared for the Society by its Appointed Actuary. This part of the returns includes various forms that provide details and analysis of mathematical reserves, long term business, composition and distribution of surplus and the calculation of solvency margins.

<u>Schedule 1 (Balance sheet and profit and loss account)</u>
Schedule 1 of Equitable's returns is made up of Forms 9, 10, 13, 14 and 16. Form 9 (Statement of solvency), drawing on figures presented in other parts of the returns, summarises the Society's financial position at 31 December 1988 as follows:

Long term business admissible assets	*£4,214,952,000*
Total mathematical reserves (after distribution of surplus)	*£3,544,522,000*
Other insurance and non-insurance liabilities	*£52,722,000*
Available assets for long term business required minimum margin	*£617,708,000*
Required minimum margin for long term business	*£160,755,000*
Explicit required minimum margin	*£26,793,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£590,915,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£456,953,000*

<u>Schedule 3 (Long term business: revenue account and additional information)</u>
Schedule 3 of Equitable's returns consists of Forms 40 to 51. Equitable include various notes to the Forms giving further information about and/or explanation for the figures provided.

Form 45 (Expected income from admissible non-linked assets) shows that 45% of Equitable's non-linked admissible assets are invested in equities, 14% in land and 35% in fixed and variable interest securities.

Equitable disclose in Form 46 (Analysis of admissible non-linked fixed interest securities) that the gross redemption yields on assets invested in fixed interest securities issued or guaranteed by any government or public authority and with durations of less than 15 years are consistently higher than for those not issued or guaranteed by any government or public authority.

The notes to this part of the returns include a statement that no provision has been made for the contingent liability for corporation tax on unrealised capital gains for non-linked business, which is estimated not to exceed £10m.

Equitable also state that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each individual Personalised Fund required by the ICAS Regulations 1983. (See 14/10/1986.)

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
Equitable present two valuations of their long term liabilities. The results of the first valuation, which in this report I have called their *main valuation*, are carried forward unadjusted from Form 58 to Forms 9 and 14 in Schedule 1 of the returns. This valuation uses a bonus reserve (or gross premium) method. This appears in the body of Schedule 4 of the returns. They carry out the second valuation, which I have called their *appendix valuation*, using a net premium method. Equitable state that the purpose of this second valuation is to demonstrate that the aggregate mathematical reserves in the main valuation are not less than the amount calculated in compliance with Regulations 55 to 64 of ICR 1981. This second valuation appears as an appendix to Schedule 4.

Schedule 4 – main valuation (text)
Equitable's main valuation provides the information required by paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 54 of ICR 1981.

In response to paragraph 3 of Schedule 4 – which required that the following information should be given: *'For each category of non-linked contract, other than those fully described by the entry in column 1 of Form 55, a full description of the benefits including any premium rate guarantees and options'* – Equitable provide ten pages of information about their non-linked contracts.

Paragraph 3(xi) includes:

> *The details of the general annuity and pensions business described as with profit immediate annuity are as follows.*
>
> *The basic contract provides guaranteed benefits increasing at 3½% per annum, which are enhanced by the addition of bonuses, including final bonus.*
>
> *Under an alternative version of the contract earnings in excess of 3½% per annum up to a maximum of 10% per annum may be anticipated. Annuity payments will remain level if the specified level of earnings were precisely achieved in practice.*

In paragraph 3(xiii), Equitable provide a description of their retirement annuity contract, stating:

> *Pensions business with profits contracts described as retirement annuity, individual or group pension are deferred annuities, the premiums being of the recurrent single premium (or variable premium) type. The premiums provide a cash fund at the pension date, to which is applied a guaranteed annuity rate.*

In paragraph 3(xiv), Equitable provide a description of their personal pension plan contract. The description includes:

> *With profits retirement benefit segments are deferred annuities, the premiums being of the recurrent single premium (or variable premium) type. The premiums provide a cash fund at the pension date used to purchase benefit. There is no guarantee of annuity rates to be applied to the cash fund.*

In paragraph 3(xv), Equitable provide a description of their *'Pensions business termed 2nd series individual pension'*, explaining that they are contracts effected since 1 July 1988. The description includes the same statement as for their personal pension plan contract (see above) that premiums provide a cash sum to which no guarantee of annuity rates apply.

At the end of this section, Equitable set out the *'principal guarantees of terms'* that apply to their policies. The first of these is *'Guaranteed annuity options',* which are described as follows:

> *These are associated both with endowment assurances and certain deferred annuities. In the case of endowment assurances an extra premium is charged.*

The other principal guarantees set out are: *'Conversion option'*; *'Option to maintain or increase sum assurance without evidence of health'*; *'Protection option'*; *'Option to effect further policies without evidence of health'*; *'Guarantee of rates'*; *'Guarantee of terms on taking benefits other than at the prescribed terminal date'*; and *'Waiver of contribution facility'*.

1989

For their *'Guarantee of rates'*, Equitable explain:

> *Recurrent single premium or variable premium with profits deferred annuities issued to individuals and* [certain other policies] *carry a guarantee of terms for future premiums.*

For their *'Guarantee of terms on taking benefits other than at the prescribed terminal date',* Equitable explain:

> *Recurrent single premium or variable premiums with profits deferred annuities carry a guarantee of the terms that will apply in the event of retirement, whenever it occurs, or death.*

In response to paragraph 4 of Schedule 4, Equitable provide 31 pages of information about their linked contracts.

Under paragraph 5 – which required that information be provided on the general principles and methods adopted in the valuation – Equitable disclose that they have tested the ability of the Society to hold reserves which satisfy Regulations 54 and 56 to 64 of ICR 1981 in the changed investment conditions described in DAA1 (see 14/11/1985). Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

In addition, Equitable state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains is held in respect of policies where benefits are linked to the Society's internal funds. They also disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £10m. The returns state that the Society consider that there are sufficient margins in the valuation basis to cover this amount and, accordingly, they hold no specific reserve.

In paragraph 5(1)(f), Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on unit-linked annuities.

In paragraph 6(1) – which required that information be provided on the rates of interest and tables of mortality and disability assumed in the valuation – Equitable disclose that, for certain non-profit deferred annuities – which does not constitute a large proportion of its business – the valuation rates of interest used were those assumed in the premium basis. Equitable do not elsewhere in the returns disclose the rate used in the premium basis.

Paragraph 7(b) of Schedule 4 required that information be provided on *'the method by which provision is made for expenses after premiums have ceased or where no future premiums are payable or where the method of valuation does not take credit for future premiums as an asset'*. In response to this, Equitable disclose that they maintain a general expense reserve of £10.5m but that this mainly relates to any shortfall of future premium loadings to meet future expenses on regular premium business. They state that no other explicit provision is made for future expenses on their recurrent single premium business or for business where premiums had ceased or were no longer payable. Equitable do not explain the method by which they have made provision in the main valuation for expenses on recurrent single premium business.

In paragraph 7(d) – which required that information be provided where contracts have not been valued in accordance with Regulation 57(1) – Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

In response to paragraph 11 of Schedule 4, the returns state:

> *The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund.*

In response to paragraph 12 of Schedule 4 – which asked: *'Whether there is any reference to the principles on which the distribution of profits among policyholders and shareholders is made in the constitution of the company or in provisions made thereunder, in any policy issued by the company or in any advertisement by the company and, if so, a description of the principles and a reference to the document in which they are expressed'* – the returns state:

> *The Society has no shareholders and the principles upon which the distribution of profits among the policyholders is made are determined by the Directors in accordance with the Society's Articles of Association.*

Paragraph 13 of Schedule 4 asked for *'Particulars of the bonus allocated to each category of contract, including the basis of calculation and the circumstances and the form in which the bonus is payable'*. In response, Equitable set out the level of bonus declared for 1988 and record that they had set reversionary bonus for the main policy classes at 7.5%.

In paragraph 13(b), Equitable also disclose that some retirement annuity and individual pension policyholders have been offered loans under a *'loanback'* arrangement.

Paragraph 16 asked for *'A statement of the practice regarding any bonus payments (in addition to those for which the company had become contractually liable) to be made on claims arising in the period up to the next investigation together with the rates at which such bonus payments are to be determined'*. In response, Equitable set out how final bonuses are calculated for the various classes of business.

Schedule 4 – main valuation (forms)
In Form 55 (Valuation summary of non-linked contracts), Equitable set out the mathematical reserves held for the various types of non-linked contracts along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56 (Valuation summary of linked contracts), Equitable set out the mathematical reserves held for the various types of linked contracts along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them. Equitable disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58 (Valuation result and distribution of surplus), Equitable set out the valuation result and the composition and distribution of the fund surplus.

Schedule 4 – appendix valuation (text)
Equitable explain that the appendix valuation:

> *... was undertaken solely for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to the ICAS Regulations 1983. They say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 – which, having had *'regard to the purpose of the valuation'*, has not been provided) is identical to that given in the main valuation.

In response to paragraph 5(1)(a), Equitable make the same statement as in the main valuation, that: *'In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'*.

As in the main valuation, Equitable state, in paragraph 5(1)(e), that a reserve for the prospective liability for tax on unrealised capital gains is held in respect of policies where benefits are linked to the Society's internal funds. They also disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £10m and they consider that there are sufficient margins in the valuation basis to cover this amount and, accordingly, no specific reserve is held.

As in the main valuation, in paragraph 5(1)(f) Equitable state that they do not consider it necessary to hold a specific reserve for the guarantee they offered on unit-linked annuities.

In paragraph 5(1)(g), unlike in the main valuation report, Equitable disclose that retirement benefits on their retirement annuity business could be taken at any age between 60 and 75. The Society explains that policyholders normally select a retirement age at the outset of the policy but can choose to change this subsequently without penalty. Equitable state that they have valued this business on the basis that benefits will be taken at age 60 (or on the valuation date for those aged 60 or over). Equitable also explain that personal pension business has a similar option, but that this is exercisable between the ages of 50 and 75. They state that this business has been valued on the basis that benefits will be taken at age 50 (or on the valuation date for those aged 50 or over).

As in the main valuation, in paragraph 7(b) Equitable disclose that they maintain a general expense reserve of £10.5m but that this relates mainly to regular premium business. Equitable again disclose that they make no other explicit provision for future expenses on their recurrent single premium business or for business where premiums had ceased or were no longer payable. Equitable do not explain the method by which they have made provision in the appendix valuation for expenses on recurrent single premium business.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

24/07/1989	**GAD complete the A1 Initial Scrutiny check on the Society's 1988 regulatory returns.** GAD note that the cover for the required minimum margin is 3.84. They do not identify any concerns. (Note: GAD's A1 and A2 Initial Scrutiny checks (and accompanying forms) and the detailed scrutiny reports for the 1989 to 1999 returns are reproduced in Part 4 of this report.)
11/09/1989	**GAD complete the A2 Initial Scrutiny check on the Society's 1988 regulatory returns.** GAD reduce Equitable's priority rating from 4 to 5. GAD answer '*yes*' to the question '*Do the interest rates used look supportable in terms of Regulation 59?*'. They identify no items that are worrying and no items to notify to DTI, to be taken up immediately with Equitable. Accompanying the Initial Scrutiny check are two forms ('*Form B*' and '*Form C1*'), tabulating key figures disclosed in the 1984 to 1988 returns. There appears to be no other correspondence on the 1988 returns.
07/12/1989	Every Appointed Actuary is sent by GAD a copy of DAA3 on reserves for HIV and AIDS.

1990

10/01/1990	DTI provide briefing to the Permanent Secretary of the Treasury, ahead of his dinner with Equitable the following day, in the form of an extract of Equitable's reports and accounts. DTI explain that the general comments in their earlier briefing for the Permanent Secretary's previous visit to Equitable (see 13/10/1987) still apply.
19/02/1990	Equitable's Appointed Actuary and another of the Society's actuaries (who later becomes Appointed Actuary) present '*With Profits Without Mystery*' to the Faculty of Actuaries. The official record of the discussion that took place on this paper is published on the website of the actuarial profession at http://www.actuaries.org.uk/files/pdf/library/TFA-042/0139-0186.pdf
22/05/1990	A DTI official provides a Minister with a copy of Equitable's latest accounts and a short background note, ahead of the Minister's lunch the next day with some of the Society's Board Members. The note reiterates comments made in advance of the previous ministerial visit (see 14/03/1989), namely: *The Society appears to be sound, and has expanded steadily, with the underlying trend of expenses being satisfactory. Its strong solvency position makes it low priority in the companies supervised by Insurance Division. Consequently, contact with the Society is infrequent, and there appear to be no important issues.*

Submission of the 1989 regulatory returns

29/06/1990 **Equitable submit their 1989 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1989, prepared in accordance with the Companies Act 1985 and dated 28 March 1990. These documents include the following information about Equitable's business and their financial position as at 31 December 1989.

<u>Companies Act annual report and accounts</u>
In the *President's Statement*, Equitable again say that they have experienced significant increases in new business and that the total value of assets under management increased by £1.5bn to £5.7bn.

Equitable's President says that recurrent single premium policyholders had been sent with their bonus notice a letter outlining the Society's change in approach to determining final bonus. The President explains:

> *The Society has taken a positive lead within the life assurance industry in trying to strip away the cloak of mystery behind which the with-profits bonus system has been hidden. So far we have received high marks for effort but less uniformly high acclaim for simplicity of explanation. We accept that we have a duty to enable the public to know what they are being offered and we are confident that the public will buy good products they understand.*

Equitable's President continues:

> *Our principles for operating with-profits business are essentially very simple. The policy results we can pay depend on our investment performance and the efficiency of our business operations. The investment returns are averaged over time to provide a greater degree of security than is sought by those investing in either unit-linked policies or unit trusts and to avoid very large differences in policy results over short periods of time. We also aim to give a fair return to each policyholder whether the policy runs the originally planned term or not and to hold back the minimum by way of reserve consistent with prudent management.*

In the *Management Report 1989*, as in the President's Statement in the 1988 annual report and accounts, Equitable state that they are *'unusual in that our relatively low cost of sales has enabled us to expand fast without financial burden to our existing members'*. Under *'New Business'*, the report says that new regular premium business for the year was £234m and new single premium business was £408m, the latter being an increase of 212% on the previous year. Equitable provide a table illustrating the growth in new premium income over recent years and explain that:

> *... by far the major contributor to new business was the Society's personal pension plan which benefited immensely from the public's increased awareness of pensions. In addition the Society received a significant amount of new premium income in the form of increments on old style retirement annuity contracts which are no longer available to new policyholders, vindicating, as the President has reported, the Society's strategy of telling policyholders of the advantages to be gained from such contracts.*

The report also sets out developments on *'Investments'*, *'Services and Systems'* and *'Staff'*.

The *Statement of Bonuses* section of the report runs to two pages and covers the levels of bonus declared and the changes that have been made to the system of allocating final bonus. For their main line of business, Equitable again maintain declared reversionary bonus at 7.5%.

On final bonus, Equitable write:

> *The addition of final bonus is intended to increase the guaranteed policy benefits and attaching declared bonuses to the appropriate total level having regard to the Society's experience over the period for which the policy in question has been in force. An important feature of our approach is that the Directors aim to achieve the highest possible benefits. In particular, we do not consciously retain earnings to build up the "strength" of the office or to maintain unnecessary reserves ...*
>
> *Under recurrent single premium contracts the policy is essentially building up a fund of money, although the contractual benefits may be expressed as payable at some future date (e.g. at age 60). Part of that fund at any time will consist of the value of the guaranteed benefits (those secured by the premiums paid and declared bonus additions). The remaining, unguaranteed, part represents the final bonus that would be paid if the policy benefits became payable immediately.*

Equitable then go on to explain the new system, saying:

> *Previously the Society has determined the final bonus element under a recurrent single premium contract at any time by reference to a specific scale of rates. That has now been changed to bring the system more into line with the "accumulating fund" nature of the contract. Each year the Society will announce a rate of growth at which the total policy benefits were built up over the year of the declaration, together with a second rate to apply for the period beyond the date of the declaration.*
>
> *The guaranteed part of the total benefits continues to grow, as before, through the operation of the basic contract terms and declared bonus additions. The final bonus element of the policy value at any time is the difference between the total value and the value of the guaranteed part.*

Equitable provide illustrations of how the new system works for a personal pension contract and a bond. The illustration for the personal pension states that the contract includes a guaranteed *'roll-up rate'* of 3.5%.

Equitable state that policy proceeds for policies maturing after 1 April 1990 will be greater than was the case for comparable policies maturing the previous year.

The returns
Equitable's returns are again submitted in two parts covering Schedules 1, 3 and 6 and Schedule 4 to the ICAS Regulations 1983.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1989 as follows:

Long term business admissible assets	*£5,805,205,000*
Total mathematical reserves (after distribution of surplus)	*£4,703,112,000*
Other insurance and non-insurance liabilities	*£128,083,000*
Available assets for long term business required minimum margin	*£974,010,000*
Required minimum margin for long term business	*£204,385,000*
Explicit required minimum margin	*£34,064,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£939,946,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£769,625,000*

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

Form 45 shows that 55% of Equitable's non-linked assets are invested in equities, 12% in land and 26% in fixed and variable interest securities (compared with 45%, 14% and 35%, respectively, in 1988).

As in their 1988 returns, Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority and with durations of less than 15 years are consistently higher than for those not issued or guaranteed by any government or public authority.

The notes to this part of the returns include a statement that no provision has been made for the contingent liability for corporation tax on unrealised capital gains for non-linked business, which is estimated not to exceed £28m.

Equitable also state again that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns answers the questions set out in paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 54 of ICR 1981.

In response to paragraph 3 of Schedule 4, Equitable provide ten pages of information about their non-linked contracts. Most of the information about the contracts remains unchanged from the previous returns.

The description of Equitable's with-profits immediate annuity business (paragraph 3(xi)) is changed from the previous year's returns and no longer mentions that guaranteed benefits increase by 3.5% each year. The relevant part reads:

> *The basic contract provides level guaranteed benefits, which are enhanced by the addition of bonuses, including final bonus.*
>
> *Under alternative versions of the contract the guaranteed payments may be arranged to increase at 3½% per annum or to decrease at a rate of up to 6½% per annum (in ½% steps).*

The descriptions of Equitable's retirement annuity, personal pension plan and individual pension plan contracts (paragraphs 3(xiii), 3(xiv) and 3(xv)) are the same as the previous year's returns.

The description of Equitable's principal guarantees of terms at the end of paragraph 3 is the same as the previous year's returns. As in their 1988 returns, Equitable disclose that certain deferred annuity policies carry guaranteed terms under which future premiums could be paid. Equitable also, again, disclose that they applied a guaranteed annuity rate to the accumulated cash fund generated by these policies.

In response to paragraph 4, Equitable provide 31 pages of information about their linked contracts. Most of the information about the contracts remains unchanged from the previous returns.

As in their 1988 returns, in paragraph 5 Equitable disclose that they have tested the ability of the Society to hold reserves which satisfy Regulations 54 and 56 to 64 of ICR 1981 in the changed investment conditions described in DAA1. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

Equitable again state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains is held in respect of policies where benefits are linked to the Society's internal funds. Equitable also repeat here that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £28m. They consider there are sufficient margins in the valuation basis to cover this amount and, accordingly, they again hold no specific reserve.

As in their 1988 returns, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in their 1988 returns, in paragraph 6(1) Equitable disclose that for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

As in their 1988 returns, in paragraph 7(b) Equitable disclose that they maintain a general expense reserve of £10.5m, which relates mainly to any shortfall of future premium loadings on regular premium business. Equitable again disclose that they make no other explicit provision for future expenses on their recurrent single premium business or for business where premiums had ceased or were no longer payable. Equitable again do not explain the method by which they have made provision in the main valuation for expenses on recurrent single premium business.

As in the previous returns, at paragraph 7(d) Equitable say:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

As in their 1988 returns, in paragraph 11 Equitable state that they have *'no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'*.

As in their 1988 returns, in paragraph 12 Equitable simply state that *'the principles upon which the distribution of profits among policyholders is made are determined by the Directors in accordance with the Society's Articles of Association'*.

In paragraph 13 of Schedule 4, Equitable set out the levels of declared bonus and disclose that they again had set the reversionary bonus for the main policy classes at 7.5%.

As in their 1988 returns, in paragraph 13(b) Equitable disclose that some retirement annuity and individual pension policyholders have been offered loans under a *'loan back'* arrangement.

In response to paragraph 16, Equitable describe their new system for determining final bonus. For the Society's main policy classes (being: *'retirement annuities, personal pension retirement benefits, individual and group pension arrangements, annuities in payment and recurrent single premium deferred annuities'*), Equitable state the following:

> *... the final bonus entitlement as at 31 December 1989 is that amount required to increase the proportion remaining in force on the date of benefit payment of the annuity entitled to participate in course of payment or of annuity or other benefit ranking for bonus from 31 December 1989 or earlier and existing bonus additions (included new declared bonus) valued at that date in accordance with the contract terms to a total policy value on that date calculated as the sum of:*
>
> > *(a) The proportion remaining in force on the date of benefit payment of the annuity entitled to participate in course of payment or of annuity or other benefit ranking for bonus from 31 December 1988 or earlier and declared bonus additions valued as at that date in accordance with the contract terms, together with final bonus additions calculated on the scale introduced on 1 April 1989, increased by 20% for the calendar year 1989;*
> >
> > *(b) The sum of the proportion remaining in force on the date of benefit payment of all the purchases of annuity entitled to participate in course of payment or of annuity or other benefit applied for bonus in the calendar year 1989, valued at the date of application, each increased by 20% p.a. for the proportion of the year from the date of application of the individual purchase to 31 December 1989.*

<u>Schedule 4 – main valuation (forms)</u>
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. They again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of the fund surplus.

Schedule 4 – appendix valuation (text)
As in the 1988 returns, Equitable explain that the appendix valuation:

> *... was undertaken solely for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to the ICAS Regulations 1983. Equitable say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 – which, having had *'regard to the purpose of the valuation'*, has not been provided) is identical to that given in the main valuation.

In response to paragraph 5(1)(a), Equitable make the same statement as in the main valuation, that: '*In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'*.

As in the main valuation Equitable state, in paragraph 5(1)(e), that a reserve for the prospective liability to tax on unrealised capital gains is held in respect of policies where benefits are linked to the Society's internal funds. Equitable disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £28m. Equitable say that they consider there to be sufficient margins in the valuation basis to cover this amount and, accordingly, they again hold no specific reserve.

As in the main valuation, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offered on unit-linked annuities.

As in their 1988 returns, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their personal pension and retirement annuity business.

As in their main valuation, in paragraph 7(b) Equitable disclose that they maintain a general expense reserve of £10.5m but this relates mainly to regular premium business. They again disclose that they make no other explicit provision for future expenses on their recurrent single premium business or for business where premiums had ceased or were no longer payable. Equitable do not explain the method by which they have made provision in the appendix valuation for expenses on recurrent single premium business.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

06/07/1990 **GAD complete the A1 Initial Scrutiny check on the Society's 1989 regulatory returns**. GAD note the cover for the required minimum margin is 4.77. They do not identify any concerns.

10/07/1990 **GAD's new scrutinising actuary with responsibility for Equitable (Scrutinising Actuary B) completes the A2 Initial Scrutiny check on the Society's 1989 regulatory returns**. He gives Equitable a priority rating of 5 (unchanged from the previous year) and identifies no items that are worrying and no items to notify to DTI, to be taken up immediately with Equitable. GAD note a drop in the yields of the assets shown on Form 45 (expected income from admissible non-linked assets). No answer is given to the question *'Do the maturity guarantee reserves look reasonable?'*. Accompanying the Initial Scrutiny check are two forms (*Form B* and *Form C1*), tabulating key figures disclosed in the 1985 to 1989 returns.

11/07/1990	GAD note that Equitable's 1989 returns show a rise in premiums receivable, compared with their 1988 returns, of £418m. GAD's new Chief Actuary for Equitable (Chief Actuary B – who had been the previous Scrutinising Actuary) queries this with Scrutinising Actuary B, asking *'Can you reconcile Equitable's increase of £418,000k in premiums receivable!'*.
23/07/1990	In response to Chief Actuary B's question, the Scrutinising Actuary says: *'We will query this* [at] *the detailed scrutiny stage'* (see 04/12/1990).
07/11/1990	Every insurance company is sent by the Government Actuary a letter announcing the introduction of a rolling programme of visits by DTI and GAD officials to life insurance companies.
14/11/1990	GAD meet Equitable's Appointed Actuary and another actuary (who later becomes the Society's Appointed Actuary). According to GAD's note of the meeting, prepared on 22 November 1990, the purpose of the meeting was:

> *... simply to obtain information about the financial position at the year end ie amount of available assets,* [required minimum margin]*, cost of 1990 bonus, amount of new business written in 1990. I had asked for the meeting as a result of comments made by* [Equitable's Appointed Actuary] *to* [a Directing Actuary at GAD (Directing Actuary A)] *and by other people.*

Equitable state at the meeting that, at a recent date (GAD note that this possibly refers to the end of October 1990), their total assets exceeded liabilities and mathematical reserves by £55m. GAD note that '[the] *1989 returns showed a margin between the published bonus reserve basis and a net premium valuation basis of £340*[m]. *This would be higher at 31 December 1990 (say £375m)'*. Equitable say that they consider that some £325m new business strain could be released in a net premium valuation. They also consider that higher valuation rates of interest could be used in this valuation, thus releasing more free assets. Making these adjustments would increase the excess of liabilities over assets, before declaring any bonus, from £55m to £755m.

Equitable explain that they are considering not paying any reversionary bonus for 1990 (but would pay an interim bonus to policies maturing in 1991). They ask if GAD would be revising the resilience test in the light of the fall in market values of assets since the beginning of 1990. Equitable raise the possibility of applying for a section 68 Order.

GAD's note of the meeting continues:

> *When he informed me of the current position, ie that free assets were £55m assuming the same valuation basis as last year,* [the Appointed Actuary] *asked me whether I had any qualms about the position of Equitable. I had to say that I did. He asked why? I replied that I had not looked at the figures in detail although I knew it was possible to weaken the valuation basis. However, the society had to comply with the valuation regulations and my main concern was whether it would be able to do this if the market fell any further (or even remained at its present level). What about next year, for example?* [The Appointed Actuary] *said he took my point and he thought that if the market fell by a further 20% they would have problems and he would have to consider what action should be taken. He implied that at such a point he would have to consider reducing the level of new business taken on.*

GAD's note concludes with two comments:

> *1.* [Equitable's Appointed Actuary] *states that the Society is solvent. However, as he is considering not paying a reversionary bonus this year (while at the same time paying terminal bonuses) he must be feeling very uneasy about the current position of the Society.*
>
> *2. We are carrying out a detailed scrutiny of the 1989 returns in order to get a better feel for the position of the society, and in particular for what margins there are in its current valuation basis and in the alternative net premium basis.*

22/11/1990 GAD send DTI the note of the meeting held on 14/11/1990. GAD add, in a covering note marked '*Confidential*':

> *From what* [the Appointed Actuary] *says it appears that if he valued the assets on a weaker basis, which still complied with the regulations, there would currently be adequate free assets to cover the* [required minimum margin], *without a S68 order for implicit items being taken into account. Even if the Society declared reversionary bonuses for 1989 at the same rate as those for the previous year there would appear, on a weaker valuation basis, to be sufficient free assets remaining to cover the* [required minimum margin]. *Whether the Society is strong enough to declare a reversionary bonus for 1989 and still have sufficient available assets to provide for future contingencies is a matter for the Society's Actuary and its Board.* [Note: the references to '1989' should have read '1990'.]
>
> *We are carrying out a detailed scrutiny of the 1989 returns, and will advise you if any further points arise.*

Following receipt of this, a DTI official notes:

> *If the Equitable is not going to declare a bonus we need to warn the Minister before it becomes public. Will there be publicity? What about Equitable's advertising? Does it need to be changed?*

04/12/1990 GAD write to Equitable's Appointed Actuary with some queries arising from the **1989 returns**, including why the number of 'Other Creditors' and pension surrenders has increased considerably, whether there are any surrender/transfer guarantees relating to pension business fund contracts and '*... what investment return is required to support (i) the current reversionary bonus rates and (ii) the current reversionary and terminal bonuses*'.

05/12/1990 GAD provide DTI with a one page note explaining that they have completed their scrutiny of the **1989 returns**. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) GAD say that 1989 was exceptional for Equitable because, during the year, new business growth had set a record. GAD continue:

> *The Society declared unchanged bonus rates and 94% of the total cost of the bonus was financed by a transfer from the investment reserves. If the property values remain depressed and the equity market does not show any bullish tendencies in the* [1990s] *and beyond, we think that the Society may have problems in maintaining the current bonus rates on its with-profit life and pensions contracts.*
>
> *The 1989 valuation basis was satisfactory. There was a significant margin in the published mathematical reserves.*

Against the last sentence an official has written an unclear comment which reads '*not* [unclear] [unclear] *now*'.

GAD enclose a copy of their letter to Equitable of 04/12/1990 but add: '*... we do not anticipate that the replies will affect our view of the solvency position*'. Behind this note are two pages of manuscript calculations. On the first of these is written '*156 – loss on 1990 investments!*'.

17/12/1990 Equitable's Appointed Actuary replies to the various queries raised in GAD's letter of 04/12/1990. He says that the increase in the amount of pension surrenders arises for two main reasons. First, because of '*a general increase in the level of retirements under our pension contracts. The cash commutations paid at retirement are included in the ... figure*'. Secondly, because of:

> *A relatively high level of internal transfers from one type of pension arrangement to another – in particular, transfers from individual FA70 schemes* [i.e. defined contribution occupational pension schemes pursuant to the terms of the Finance Act 1970] *to personal pensions, which is being encouraged for the smaller cases because personal pensions are simpler to operate than FA70 schemes.*

Equitable explain that:

> *Our pensions contracts generally carry guarantees of the amount that will be paid in the event of actual retirement (whether on the originally stated pension date or otherwise) or death. There are, however, no guarantees on withdrawal in other circumstances, e.g. transfer to another pension provider. It is our aim to pay full value in those circumstances also but there are no guarantees in the matter.*

In response to the question about the required investment return, Equitable say:

> *(i) The rates of declared bonuses announced at 31 December 1989 require earnings of 11¼% p.a. for our pensions business and around 8% net for our life business.*
>
> *(ii) As you know, for the bulk of our business we do not have final bonus scales in conventional form. Rather, we announce a "total growth rate" in policy values which gives the total accumulated policy value at the declaration date. The final bonus element in that value is the difference between the total value and the value of the guaranteed policy benefits at that date. The question of what rate of growth is needed to support "current reversionary and final bonuses" is not, therefore, meaningful in our case. The "total growth rates" for 1989 were 20% gross and 16½% net. There is no implication, however, that these rates will be repeated in future years. Indeed for actual payments out under pensions business we have been rolling forward 31.12.89 values at 15% pa for most of this year but have recently cut that to 12% pa. You will also have seen from our With Profits*
> *Brochure that we emphasise that future bonuses must depend primarily upon future investment returns.*

19/12/1990 [entry 1] GAD thank Equitable for their letter of 17/12/1990 and say: '*The information you have provided is most helpful and we have no further queries on your 1989 returns*'.

19/12/1990 [entry 2] GAD send DTI's Head of Life Insurance Division (Head of Life Insurance) two notes. The first is from Chief Actuary B, following the meeting with Equitable on 14/11/1990. The note begins by saying that:

> *There is one point which we think you may need to consider following our meeting with Equitable. If, as seems possible, the society decides not to declare reversionary bonuses this year you would need to consider whether or not there is a risk that the society may be unable to fulfil the reasonable expectations of present and future policyholders.*

1990

It continues:

In the event of the society not paying the reversionary bonuses this year, we understand that the intention is to pay interim reversionary bonuses at the 1989 rates in respect of 1990 on all policies maturing in 1991, thus making up for the effect of not declaring reversionary bonuses in 1990. The society intends to maintain payment of terminal bonuses at the appropriate level on policies maturing. This means that for policies maturing in 1991 there would be no adverse effect apart from any changes in the rates of terminal bonuses that might occur. We do not have any information at this stage about the society's likely intentions in respect of policies maturing later than 1991. In our view what happens at the end of 1991 and later will be largely determined by what happens to the stock market during 1991 and later.

The note then says:

So far as policies maturing in 1991 are concerned, in our view the course of action which the society has suggested it may take does not affect their reasonable expectations – there is likely to be no big change in total bonus payments at maturity. The total bonus payments added to policies maturing in 1992 or later are likely to be more affected by stock market changes occurring in 1991 and later years than by whether or not the society pays a reversionary bonus at the end of 1990. The society may be able to declare a double reversionary bonus at the end of 1991 if the fund can afford it through good investment performance, or again, a special maturity bonus for 1990 may be awarded for claims in 1992, and so on. In effect, total maturity proceeds would be maintained though (on the latter scenario) less would come from reversionary bonuses, with the company having missed awarding one such bonus in 1990.

Chief Actuary B concludes:

Hence, on balance, we do not think that the society's possible course of action, in itself, leads to a risk that the society may be unable to fulfil the reasonable expectations of such policyholders. If the society had another bad year (or this year's performance is worse than anticipated) and the company was unable to establish sufficient mathematical reserves on current guaranteed levels of benefits (including past reversionary bonuses) within the resources of the company, that would be a different matter.

At present we do not have enough information about the society to be more specific and indeed, unless the society makes more signals, we do not suggest that further information should be sought. The society is our longest established life company and is well respected in the market.

The second note is from Directing Actuary A. He begins by stating:

After the meeting held yesterday with the actuarial profession, in which there was general agreement that the resilience test under regulation 55 would continue to be calculated on the basis of a 25% fall in the value of equities in current market conditions and present economic and political circumstances, we discussed the position of Equitable, given that decision. You mentioned that you were concerned about their current advertising. This was in the context that, if the Equitable were unable to pay a reversionary bonus this year, policyholders who had taken out policies on the basis of recent advertisements (which highlighted the returns achieved by the Equitable over the past 10 years), might have justification for wondering whether their reasonable expectations would be, or were being, met. You would like the Equitable to examine their advertising to ensure no such complaint could be justified.

It was agreed, therefore, that the most appropriate way of getting this point over to the Equitable would be for me to telephone [the Chief Executive]*, informing him both about the decision taken at the meeting yesterday and also to put the point to him about the company's current advertising.*

The note continues:

When I telephoned [Equitable's Chief Executive] *earlier this morning, his secretary told me that he was in a Board meeting which would last most of the day. I wondered then if in fact the Board meeting was deciding on what reversionary bonuses should be paid this year.* [The Chief Executive] *eventually telephoned me back late in the afternoon, and I explained that I was telephoning him, rather than* [the Appointed Actuary] *because, although the first point was one on which I would normally speak to* [the Appointed Actuary]*, the second was one on which it would be more appropriate to speak to him.*

I explained that, on the first issue, I wanted as a matter of courtesy to tell him the result of yesterday's discussions, which confirmed the conversation I had with him a week ago at the Actuaries Club Dinner when I told him what I thought would be the outcome of our discussions with the profession. He said that he was very grateful for letting him know.

The note continues:

I then went on to say that, on the second point, some officials in DTI had expressed some concern that, if the Equitable were to forego a reversionary bonus this year, some policyholders might wish to complain that they had been misled by the Equitable's recent advertising. I said that I was sure that he, [the Chief Executive]*, would be very mindful of the question of advertising and marketing, with his intimate connections with LAUTRO. I told him that what I was trying to indicate in general terms was that if the company was of the view that it was unlikely to declare a reversionary bonus at the year end, it would be helpful if the company were to examine its advertising and marketing literature to ensure that it felt it was not misleading prospective policyholders in the run-up to the announcement.*

[The Chief Executive] *took these comments in the kindest possible way. He said that he was clearly anxious that the company did not mislead any potential policyholders, that it had been their intention to concentrate on the actual payouts over the last 10 years and it was the company's continued intention to ensure that policyholders maturity proceeds continued to reflect the full performance of the company over the period of the policy, even if a year's reversionary bonus were foregone. However, as a result of the Board meeting which he had just left, he thought he could put my worries at rest by telling me what the outcome of the meeting was.*

The note goes on to say:

It appears that [Equitable's Appointed Actuary] *had presented a paper to the Board which sets out the constraints on bonus policy which emanate from the valuation of liabilities regulations themselves. The company accepts that the regulations are a matter of fact, and have to be abided by. (He also told me that he had passed on to the Board my comments at last week's dinner that it would be very difficult for the UK to weaken its valuation regulations at the present time when we are having to defend them to other Member States in the context of the Single Market after 1992.)*

He then went on to tell me that the view of the Board was that the crunch position for the company would really probably come next year. The Board had received a report from their investment committee which examined the most likely, and the worst likely, outturn for 1991. As far as the most likely outturn was concerned, the view of the

Committee was that the investment performance of the company would be quite strong. While there were some pessimistic underlying economic indicators for next year, the report concluded, and the Board accepted, that the most likely outturn for the year was likely to be optimistic. What the company wishes to avoid is to declare a reversionary bonus this year, and then to be unable to declare a reversionary bonus next year when there is an investment upturn. In his view, although the board has not taken any final decisions yet, he considers that it is "pretty unlikely to be in a position of not being able to declare a bonus this year" given the optimistic assessment of investment returns achievable by the company next year.

[Equitable's Chief Executive] *told me that there was clearly a risk in this strategy, but there is a risk in all bonus declarations taken in similar circumstances. I did not enquire of* [the Chief Executive] *what the likely financial position of the company would be at the end of this year in terms of Form 9 solvency margin – I know that* [the Chief Executive] *had to go to another urgent meeting at that time and also I do not consider the telephone to be the best medium for discussing such matters.*

1990

The note concludes:

In summary, therefore, it seems most likely that the Equitable will declare a reversionary bonus this year, having taken an optimistic view of investment return likely to be achieved by the company in 1991. On that scenario, they would anticipate that they will be able to continue to pay a reversionary bonus next year. There is clearly some risk in this strategy, and if the Equitable goes ahead with a bonus distribution this year and the market subsequently falls considerably, we will need to hold some urgent talks with the company's actuary, as we would, of course, with other companies that take similar decisions and who are in a similar financial position to (or an even less strong position than) the Equitable.

20/12/1990 Equitable's Appointed Actuary applies to DTI for a section 68 Order for a future profits implicit item of £250m, for possible use in their 1990 returns. He provides financial calculations in support of this application, suggesting that Equitable could seek an Order up to the value of £562.8m.

These calculations include, for the estimated annual profits, the following:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.85	*92.2 (a)*	*–*	*56.2*	*36.0*
31.12.86	*153.9*	*–*	*56.1*	*97.8*
31.12.87	*254.7*	*65.0 (b)*	*65.3*	*124.4*
31.12.88	*259.2*	*–*	*61.4*	*197.8*
31.12.89	*337.4*	*–*	*89.9*	*247.5*
				703.5

Average annual profit = 703.5/5 = £140.7m

Notes: *(a) £92.2m represents one-third of the surplus for the triennium ending 31 December 1985.*

(b) £65.0m of the surplus arising in 1987 was an exceptional item arising from a change from a policy year to a calendar year method of bonus allocation for the bulk of the Society's with profits business.

GAD tick the figures supplied in column (A).

The calculations state that the average period to run for the Society's in-force contracts is eight years. The Appointed Actuary explains:

The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.

The calculations suggest that the maximum figure permissible for future profits is 50% of £140.7m multiplied by eight years – that being £562.8m.

27/12/1990 DTI ask GAD for their views on Equitable's application for a section 68 Order.

1991

04/01/1991	GAD provide their views to DTI on the Society's application for a section 68 Order and state that the amount requested '*... is less than 50% of the maximum amount allowed in accordance with the calculations based on the guidance notes. We are satisfied with the calculations and advise you to issue the order*'. GAD attach copies of Equitable's letter of 17/12/1990 and their reply of 19/12/1990. They state that GAD are satisfied with Equitable's answers to their questions in the letter of 04/12/1990 and '*... consequently our detailed scrutiny of Equitable's 1989 returns is closed*'.
11/01/1991	DTI send Equitable's Appointed Actuary a section 68 Order for a future profits implicit item of £250m, for use in the 1990 returns.
31/01/1991	DTI write to Equitable's Appointed Actuary with a set of papers that DTI had received from a policyholder concerning his complaint about the information he had been given when seeking to clarify two policies he had with Equitable. DTI comment that: *The various administrative errors evidently gave* [the policyholder] *little confidence in your Society. Moreover it is of concern that these errors and the faults in the administration system and records of the Society may have affected other policyholders of the Society.* *I should be grateful for confirmation of the measures taken by the Society to rectify the position and to ensure that none of the policyholders of the Society were adversely affected. I look forward to receiving your comments.*
21/02/1991	Equitable's Appointed Actuary writes to DTI in reply to their letter of 31/01/1991. He acknowledges that the policyholder is justified in his complaint. Equitable explain the steps taken to rectify the problems that affected him and a '*small number*' of other contracts. They assure DTI that their actions have kept the effect on policyholders to a minimum.
28/03/1991	Equitable write to DTI to give notice of the appointment of their Appointed Actuary as Chief Executive with effect from 31 July that year, following the retirement of the current Chief Executive on 30 June 1991. Equitable state that the Appointed Actuary is currently Deputy Chief Executive and Joint Actuary. DTI forward the letter to GAD.
04/04/1991	Scrutinising Actuary B passes the letter of 28/03/1991 to Chief Actuary B with a note: '*I think GAD's policy (as far as I know) is against the two offices of Chief Executive and Actuary to be combined. We should inform* [the Government Actuary] *about it*'.
10/04/1991	Chief Actuary B advises the Government Actuary of the forthcoming appointment of a new Chief Executive at Equitable and that the person already holds the post of Appointed Actuary. The Chief Actuary says: '*I understand that you have written about a similar position at* [another major life company]'.
11/04/1991	Equitable provide DTI with the Form A declaration (required under section 60 of ICA 1982, which provided that insurance companies must notify changes of controllers or senior managers of such companies to the prudential regulators for approval) in respect of the appointment of their new Chief Executive.
17/04/1991	In response to the note of 10/04/1991, the Government Actuary writes:

> *I think we would certainly want to discourage him from holding both positions, other than on a very temporary basis. It would be appropriate for DTI to write asking what* [Equitable's] *intentions are regarding the appointed actuary position, bearing in mind the fact that it is not now generally thought desirable for the same person to be* [Chief Executive] *and* [Appointed Actuary]. *If they get a dusty response I will speak to* [him].

19/04/1991	GAD's Chief Actuary B writes to DTI about the letter of 28/03/1991: '*As it is not now thought desirable for the same person to be both Chief Executive and Appointed Actuary I think it would be best to clarify the society's intentions*'. Line Supervisor A notes on DTI's copy of this memorandum that consent (i.e. to the appointment of the person as Chief Executive) should be withheld until the position is clarified with Equitable.
26/04/1991	DTI's Line Supervisor A writes to Equitable. He says: *Since* [the person] *is currently the Appointed Actuary for the Society and it is considered desirable that the same person should not be both Chief Executive and Appointed Actuary, please would you confirm what the Society proposes regarding the Appointed Actuary.*
30/04/1991	Equitable's Appointed Actuary telephones in response to DTI's letter of 26/04/1991. Line Supervisor A notes that the Appointed Actuary explained that, although Equitable have several good in-house actuaries, it was considered they needed 12 months or so senior management experience before assuming the role of Appointed Actuary. Accordingly, Equitable would prefer the proposed Chief Executive to retain the role of Appointed Actuary for about 12 to 18 months.
02/05/1991	Equitable write to DTI to confirm their position, following the telephone call. The Society say that they are of the view that the Appointed Actuary role should be regarded and operated at a senior and influential level. Equitable confirm that the Society does not currently have an actuary with the desired seniority but that they expect to have an appropriate person for the role of Appointed Actuary in 12 to 18 months' time: *Accordingly, rather than moving away from the general approach and resorting to a purely technical interpretation of the Appointed Actuary's role, we regard it as substantially more satisfactory in professional and business terms for* [the person] *to continue to undertake the Appointed Actuary role for a limited period longer, as mentioned above.*
08/05/1991	DTI pass Equitable's letter of 02/05/1991 to GAD with a note: '*Provided it is a limited period I am prepared to accept the proposed arrangement. Have you any further comments*'.
10/05/1991	Chief Actuary B passes the letter to the Government Actuary and comments: '*This letter confirms that* [the person] *intends to keep the* [Appointed Actuary] *role for 12-18 months, which I think can be regarded as temporary (just)*'. The Government Actuary in turn comments: '*Thank you. I think we can accept this*'.
13/05/1991	GAD inform DTI that Equitable's new Chief Executive intends to retain the Appointed Actuary role for a further 12 to 18 months, in addition to the new post. GAD conclude: '*As this is intended to be for a limited period we have no further comment to make*'.
16/05/1991	DTI reply to Equitable's letter of 02/05/1991 to say that the Secretary of State has no objection to the proposed appointment of the new Chief Executive '*... subject to the understanding that*

[the incumbent] *will only retain the Appointed Actuary role for a further 12 to 18 months as indicated in your letter*'.

31/05/1991	Equitable write to DTI in reply to the letter of 16/05/1991. Equitable say that it appears that the Secretary of State's acceptance of the Society's appointment of Chief Executive is conditional on the person only continuing in the role of Appointed Actuary for a further 12 to 18 months. Equitable state:

> *Whilst it is certainly the Society's current intention to separate the roles and appoint another Appointed Actuary in that timescale, we would not wish a condition to that effect to apply to* [the person's] *appointment as Chief Executive.*
>
> *In making no objection to* [the] *appointment, the Secretary of State appears to accept that* [the individual] *is a "fit and proper person". We cannot see that this will change if for some at present unforeseen reason,* [the person] *does not cease to be the Appointed Actuary within the timescale mentioned. There is, we believe, a point of principle here.*
>
> *Naturally we recognise certain advantages in splitting the roles, which as I have indicated we intend to do, but would appreciate your acceptance of* [the person's] *appointment of Chief Executive without the condition implied by your letter of 16 May 1991.*

Line Supervisor A passes the letter to the DTI Line Manager with responsibility for Equitable (Line Manager A), with a note:

> *I do not think we can accede to* [DTI's acceptance of the appointment without condition]. *GAD consider 18 months is exceptional! Suppose* [he] *falls ill – no Chief Executive – no Appointed Actuary – a successor should have been groomed by now to take on role of Appointed Actuary. I suggest we initially telephone* [Equitable] *to express our views – I could not contact* [the company] *today.*

11/06/1991	Equitable's Appointed Actuary writes to GAD's Directing Actuary A, marking the letter '*PRIVATE AND CONFIDENTIAL*'. The Appointed Actuary refers to discussions they had had, when sitting together at lunch during a recent Institute of Actuaries seminar, about a number of things, including:

> *... the recent valuation and bonus declarations. It is very difficult, if not impossible, for your colleagues and yourself to get any "feel" from the published results of the kinds of discussions about actuarial management going on within life offices and it occurred to me that you would find copies of some of our relevant board papers helpful "background" reading. They extend beyond the purely appointed actuary role to that of financial and actuarial management. Some of the figures were seen by* [Chief Actuary B] *at a meeting before the year end* [see 14/11/1990].
>
> *The papers are of course confidential and offered as a good will gesture to promote greater understanding and I should prefer restricted circulation within your department.*
>
> *I realise, of course, that you cannot forget your supervisory role when reading these papers but I hope you will be able to accept them as an example of "steering" a board to acceptable conclusions. I have to hope also that I have not given a hostage to fortune!*

The Appointed Actuary encloses with the letter Board papers from September and November/December 1990 (referred to by Equitable's Chief Executive in the conversation on 19/12/1990) and from January and February 1991, which were relevant to Equitable's recent valuation and bonus declarations. He also encloses a paper, dated March 1991, to the Equitable Board on investment considerations for 1991. These papers are reproduced in full in Part 4 of this report.

In the disclosed September 1990 paper entitled '*Valuation and Bonus Declaration at 31 December 1990*', the Appointed Actuary explains: '*The recent falls in world stockmarkets could mean that we may face a more difficult position at the end of this year than has applied for some time. Although the current position is very uncertain, it seems highly likely that the earnings on the fund at market value will represent a negative return over 1990. In view of that position, I feel it appropriate to begin discussion of some possible alternative courses of action rather earlier than normal*'.

The Appointed Actuary goes on to discuss: the Society's approach to smoothing the return on the with-profits fund; the rate of bonus that he would like to declare; and the benefits of allotting bonus in the form of final bonus. On the final point, the Appointed Actuary advises that final bonus:

> *... is not guaranteed, requires no capital to finance it and is only paid out on policies leaving the fund. Hence it is very well suited to the situation where future earnings are being anticipated. If it eventually emerges that we have "got it wrong" the damage is limited and room for future manoeuvre is retained.*

The Appointed Actuary then advises the Board:

> *In technical terms, any presentational problems created by declaring a bonus can almost certainly be mitigated by weakening the valuation basis. There are, however, constraints on the extent to which that can be done. Once done there is then also no leeway available in a future year. Further technical measures are also available to help the DTI Return presentation (but not the Company Act balance sheet). The use of such measures has to be publicly stated and could be construed as a sign of weakness. Again, these are largely "one off" measures.*

The Appointed Actuary says that, if Equitable choose to allocate the entire bonus in the form of final bonus, their solvency position would be around £300m stronger.

The Appointed Actuary concludes by summarising the points made, as follows:

- *unless there is a significant upturn in markets, it will be an uncomfortable year end for bonus purposes*
- *interest rates have been relatively high for the whole year and policyholders might expect benefits based on returns ranging from about 12% to about 15%*
- *that could argue for maintenance of declared rates at last year's level of £7.50%*
- *it might be possible technically to produce the required surplus for such a declaration but this would necessarily be a "one off" operation. A bad year in 1991 would almost certainly lead to even greater discomfort at the end of 1991*
- *declaration of a marginally lower rate would not really provide adequate savings in surplus. Declaration at a significantly lower rate would be difficult to justify and would inevitably look weak*
- *we now show policyholders how their policy values roll up from year to year at an overall rate of return. It should not really matter to what extent that roll up rate is consolidated by way of declared bonus or left in unconsolidated or final bonus form providing policyholders have confidence in us*
- *allotting the 1990 return in wholly unconsolidated form would retain a significant amount of freedom, freedom which might eventually be required in respect of 1991*
- *it seems to me, at this point in the year, that a case could be made either for maintaining declared rates at £7.50% or for having no declared bonus at all. Both courses of action contain significant risks. Maintaining declared rates would result in*

> *a significant technical and financial weakening of the Society whilst having no declared rate would run significant public relations risks. There seems no objective basis for an intermediate position and such a position would bring in train both types of risk.*

In the introduction to the disclosed November/December 1990 paper entitled '*Valuation and Declaration at 31 December 1990*', the Appointed Actuary says that there has been no significant improvement in investment conditions since his last paper to the Board. He says that '*consequently, it becomes increasingly likely that we shall not be "*[bailed]* out" by a dramatic improvement in conditions before 31 December 1990*'.

Under *'Solvency and DTI requirements'*, the Appointed Actuary writes:

> *The current regulatory regime does not permit the sort of action taken at the end of 1974; there are now significant constraints. Any consideration of the position needs to begin with an understanding of those constraints.*

(Note: in response to the economic conditions during 1974 and in order to be able to maintain consistent rates of bonuses whilst maintaining an adequate solvency position, Equitable had changed their valuation basis. These changes included increasing the valuation rates of interest used from an average rate of just under 6% in the 1973 valuation to 10% in 1974. In his witness statement to the Penrose Inquiry, Directing Actuary A said: *'I do not know what specific sort of action, as happened in 1974, is referred to ... but I can guess ... In general terms, the paper is referring to the fact that, since 1974, the UK had adopted new regulations governing the value of assets and liabilities, and had introduced a solvency margin regime. These placed considerable constraints on companies which did not exist in 1974; similarly, in 1974, a degree of flexibility was given to supervisors not allowed when the paper was written in 1990. I believe that regulators in 1974 allowed companies to value liabilities on a much weaker basis than would be allowed today, consistent with the yields available then. Reading from current newspapers, it seems the FSA is making some special arrangements now, to stop companies from having to sell equities at the present time and so further depress the market. No similar action was envisaged by DTI in 1990'*.)

Equitable's Appointed Actuary explains:

> *The primary requirement is for the office to demonstrate an excess of assets over valuation liabilities. In fact there must be excess assets at least equal to the so-called "minimum guarantee fund" which, in the Society's case, is 1/6th of the solvency margin (i.e. around £40m out of some £240m projected at 31 December 1990). If the actual excess of assets over liabilities is greater than the "minimum guarantee fund" but less than the required solvency margin, then a special dispensation can be obtained from the DTI (called a S68 order) to bring so-called "implicit items" into account. In our case we could use an estimate of future surplus. The use of such orders might be regarded as showing a weak position by external commentators.*
>
> *Assets must be valued on the basis set out in regulations which is, effectively, a market valuation. There is no room to manoeuvre on that side of the comparison. Any difficulties on the public presentation can, therefore, only be overcome by changing the value placed on the liabilities.*

The Appointed Actuary says that he has:

> *... freedom in the value placed on the liabilities, subject to the following regulatory constraints:*

(a) the reserves established must, in my professional opinion as the Appointed Actuary, represent a proper level of provision for the liabilities based on "prudent assumptions";

(b) the reserves must, in any event, be no lower than those produced on a basis laid down in regulations, coupled with additional requirements specified by the Government Actuary in relation to AIDS and "mismatching". Mismatching is concerned with looking at the situation if there is a ±3% change in interest rates associated with a 25% fall in the value of equities and property. We must demonstrate that our reserves are at a level such that the assets backing those reserves would still cover reserves satisfying the valuation regulations in the changed conditions.

It is not necessarily the case that a valuation satisfying constraint (b) above will also satisfy constraint (a). In current conditions it is, however, unlikely that, given a free hand, I should want to place a value on the liabilities higher than that on the statutory basis.

Equitable's Appointed Actuary states that he has:

... carried out projections on a range of bases to assess the effect of further market movements over the remainder of the year. These indicate that, except in the event of a further sharp fall in markets before 31 December 1990, I should be able to set liability reserves at a level which would enable a bonus to be declared at last year's level and still satisfy all the regulatory requirements. Looking at this year alone, it is, therefore, fairly unlikely that we shall be unable to do what we should like.

Under the heading '*Looking ahead to 31 December 1991*', the paper includes projections of the position in the following year under different capital movement assumptions. The Appointed Actuary explains: '*In the projections I have assumed capital movements of -10%, 0% and +10%, in 1991. The income yield on the fund will be around 7% at current levels and so these movements are broadly equivalent to overall earnings of -3%, 7% and 17% respectively*'. The projection for 1991 is presented as follows:

		Capital movements in 1991		
		+10%	*0%*	*-10%*
	+5%	*90 and 91 declarations covered*	*90 and 91 declarations covered*	*90 or 91 declarations covered (but not both)*
Capital movement in December 1990	*0%*	*90 and 91 declarations covered*	*90 or 91 declarations covered (but not both)*	*neither declaration affordable but still solvent at 31.12.91*

The Appointed Actuary goes on to discuss the Society's approach to smoothing the returns and the form of the allocation of bonuses.

In the disclosed January 1991 paper entitled '*Valuation and Declaration at 31 December 1990*', the Appointed Actuary re-examines the issues discussed in his earlier papers. He reports that the first draft figures show a return on the Society's investments of -8½%.

Equitable's Appointed Actuary states:

> *As previously discussed, it is intended to increase the rate of interest used to value the liabilities in order to reflect the high asset yields resulting from current depressed asset values. I anticipate that the reduction in liability reserves arising from that will enable bonuses to be declared at 1989 levels without any transfer from the Investment Reserve. Indeed, I would expect the liability reserves, including new declared bonuses, to be substantially below the closing fund of £5582m. That is, there will be a larger margin between asset and liability values in the DTI "Form 9" than simply the amount of the Investment Reserve. Work is in progress on a detailed evaluation of the position and it is intended to provide further figures at the board meeting.*

The Appointed Actuary sets out a '*Review of the market*'. From the bonus declarations already made by certain other companies, he says that:

> *(a) There is no evidence of an industry-wide move to cut declared bonus rates.*
>
> *(b) Offices generally are acting to smooth out, to a significant extent, the effects of low 1990 earnings. Indeed,* [a named other insurance company] *has publicly spoken of earnings of 14% p.a. over each of the next 4 years and their 1991 results appear to imply at least that level of earnings deemed for 1990.*

Under the heading '*Considerations of the appropriate action for the Society*', Equitable's Appointed Actuary reports the following:

> *In previous discussions we have felt that a deemed rate of growth in the region of 11/12%, which is consistent with the earnings underlying our declared rates, might be appropriate for 1990. The actual outcome for 1990 and the actions of our competitors to date reinforce my view that this would represent a degree of smoothing consistent with our stated approach to with profits business and the market ...*
>
> *Application of a total growth rate of 12% for pensions and endowment assurance business would give the following changes in total policy proceeds on 1 April 1991 compared with those a year earlier:*

Term	*Change in policy results 1990 – 91*	
	Personal pension	*Endowment assurance*
	%	*%*
5	*-8.1*	*N/A*
10	*-9.4*	*-1.3*
15	*-2.6*	*+0.3*
20	*+0.4*	*+2.3*
25	*+1.4*	*+3.4*

> *From the results quoted for other offices in paragraph 6 it would appear that these results should broadly maintain our competitive position, and might marginally improve it.*
>
> *As noted above, there is no general market move to cut declared rates. Dramatic action, such as passing the declaration altogether, would, in my view, carry an unacceptably high risk of a collapse in confidence. The only circumstances in which it might be appropriate to re-open that question would be in the event of a dramatic collapse in markets during*

the next few weeks. (One office ... has publicly stated that it is awaiting further developments in the Gulf before finalising its bonus announcement.)

I have previously argued that current conditions give no logical basis for a cut in declared rates. That remains my view. If we were to be one of the few offices to make a reduction in declared rates whilst maintaining the overall level to be allotted, then the publicity that would attract could well counteract the effects of the overall announcement which, as noted above, seems likely to be reasonably competitive. We might, therefore, attract considerable adverse publicity for a relatively trivial financial benefit this year.

The course of action described above is not, of course, without risk. Although it has been possible to reduce the liability valuation to permit a declaration at last year's level, the scope for further weakening in the face of another year of low earnings would be seriously constrained. In crude terms, the viability of the action described above relies upon the achievement of better investment returns in the relatively short-term future. We are at risk of needing to take drastic action if those better returns do not materialise.

As discussed in December, one can look at projected scenarios for 1991 in order to put those risks into perspective. In broad terms 1991 earnings would need to be:

(a) At around 15% to allow the Society to declare again at 1989 rates and present a similar level of strength to that at 31 December 1990.

(b) At least 8% to enable a declaration to be made at the 1989 level, but showing a weaker position than at 31 December 1990.

(c) At least 0% to avoid problems in demonstrating solvency. This would imply no 1991 declaration.

Our discussion of the investment outlook in December led to the firm view that an estimated return of 13.6% for 1991 should be used as the basis for the consideration of bonus and solvency matters. That view then leads to the conclusion that it is appropriate to take the risks inherent in the course of action described above in current conditions.

The Appointed Actuary concludes by saying that he expects to be recommending to the Board at the following month's meeting that declared bonuses should be the same as for 1989 and that final bonuses should be based on a total rate of return of 12% (11.5% for recurrent single premium business).

In the disclosed February 1991 paper entitled '*Valuation and Bonus Declaration at 31 December 1990*', the Appointed Actuary provides an update on the valuation and makes recommendations regarding the bonus declaration.

The disclosed March 1991 '*Investment Considerations 1991*' Board paper includes a section under the heading of '*Comparison with our competitors*', in which the Appointed Actuary reports:

As in previous years, [a named company] *and* [another company] *stand out as taking a more "aggressive" stance than other offices with all, or virtually all, their with profit funds invested in equities and properties. Because of that approach, the market conditions of 1990 are likely to have resulted in a lower return for them than for offices, such as the Society, holding a proportion of their assets in fixed interest stock, deposits etc. However, as we have seen from previous analyses, their ability to take this more aggressive stance has, over longer periods, been to their advantage. No doubt that is a major contributory factor to their ability to produce competitive with profits results. Both these offices have* *a strong balance sheet or "Form 9" position and should have had little difficulty weathering the poor investment conditions of 1990.*

Equitable's Appointed Actuary notes:

The Society does not currently have, nor is likely, given our policy of full distribution, to attain the strength to pursue such an aggressive investment policy as [those companies]. *We shall, for the foreseeable future, need to continue with a more "balanced" portfolio. A recent survey of the With Profits Guides of 17 offices indicated that at 31 December 1989 the Society's investment mix was fairly typical of the group as a whole.*

Under the heading '*Implications of and risks associated with the recent bonus decisions*', the report states:

In putting the Society's financial position into context at the recent declaration, I indicated that a return of around 15% would be needed in 1991 in order to "stand still". That is, to be able to declare again at the same bonus rates at 31 December 1991 and present a no weaker position to the DTI than at 31 December 1990. If the 1991 return fell to around 8% we would begin having problems in maintaining declared bonuses and demonstrating solvency. In those circumstances the balance sheet position would clearly be significantly weaker than at the end of 1990.

At the December 1990 Investment Committee, the firm view was expressed that the most likely return for 1991 was around 13½%. On that basis, it was agreed that the risks associated with the declaration decisions were acceptable. It is, however, clear that a return much below the most likely estimate could lead to an uncomfortable position in the sense of our published position being sufficiently weak to attract adverse comment, unless most other offices were similarly placed. At some point we could also begin to attract closer scrutiny from the DTI.

1991

Equitable's Appointed Actuary says:

The signs so far this year are, of course, encouraging. If at some point, however, achievement of a return of the order of 13-14% began to appear in jeopardy, then we should need to take a serious look at the potential solvency position at the year end. That may lead to the need to increase the yield on the fund rapidly so as to increase the rate of interest that can be used to discount the liabilities. For example, it may then be necessary to direct new money towards fixed interest stocks, possibly combined with some switching of existing holdings. Clearly such action, which may be in conflict with other investment objectives, would only be taken if absolutely necessary.

The weakening of the liability valuation at 31 December 1990 reflected the depressed asset values at that time. As capital values regain a more normal relationship with, say, their 31 December 1989 values, I shall be forced by the regulations to begin strengthening the basis again since the liability valuation discount rate is related to the running yield on the assets. That will imply writing-up of the fund by amounts in excess of those needed merely to cover new declared bonuses at future declarations. Clearly, the higher the income yield on the fund in any one year, the greater the room for manoeuvre we shall have in the liability valuation.

He continues:

The above discussion is essentially concerned with declared bonuses and the solvency implications. The position on overall policy proceeds also carries investment implications. These are now considered.

If, in broad terms, we regard the 31 December 1989 position as one of balance between policy values and asset values, then in 1990 we allocated growth of 12% against actual *fund earnings of around -8½%. There is, thus, a shortfall of some 20% for the year to be recovered from future earnings in order to restore a position of balance. If we allocated 12% again for 1991 then actual earnings would need to be around 30% to achieve a balanced position again by 31 December 1991. In practice the "recovery" is likely to be achieved over a number of years. It is, however, important to remember where we are. The fact that we have got through the difficulties of 1990, and smoothed a substantial part of the effects of that for our policyholders, does not mean that we are starting 1991 from a neutral base.*

The conclusion to be drawn is that the higher the return at market value achieved this year and next the more comfortable. A balance, therefore, needs to be struck between selecting assets expected to perform well in the short-term and those where the returns will emerge over longer timescales. That is, the deliberate sacrifice of return in the short-term needs to be controlled.

The Appointed Actuary's report concludes with the following recommendations to the Board:

(a) There is no need at the present time for any re-arrangement of the portfolio on actuarial grounds.

(b) The level of investment in index-linked securities should continue to be monitored against the growing liabilities under index-linked annuity contracts.

(c) In determining strategy, we clearly need to look to maximise overall returns. Whilst continuing our usual approach of balancing long and short-term considerations, a reasonable degree of emphasis should be placed on producing high returns in the short-term. That implies, for example, that whilst committing a "normal" proportion of new money to assets like property with an initially low, or zero, yield would be consistent with that view, investing an unusually high proportion in that way would be inconsistent.

(d) There need be no specific actuarial constraints on investment strategy at present, beyond that mentioned in (b) above. If at any point there appears a risk of not achieving a return at least of the order of 13-14% there should be an immediate formal reassessment of investment strategy for the remainder of the year. In such circumstances some actuarial constraints may need to be imposed.

(e) If investment considerations are neutral, higher-yielding stocks should be purchased in preference to lower-yielding, as this will assist the solvency position.

The Directing Actuary, in an undated note to Chief Actuary B, says:

To respect [the Appointed Actuary's] *"preference" I don't think we need show these to DTI unless the situation in due course warrants it.*

I will need to review them again before I go to the President's "appointed actuaries" meeting on 27/9. Please bring them forward on 23/9.

14/06/1991 GAD's Directing Actuary A writes to Chief Actuary B about the issue of the appointment of Equitable's Chief Executive while remaining Appointed Actuary. The Directing Actuary says that '*Reading the papers through, I am struck by how this exchange has got out of hand simply by slightly changing the emphasis of certain phrases*'. The Directing Actuary points out that the Government Actuary's statement '*Bearing in mind the fact that it is not now generally thought desirable for the same person to be* [Chief Executive] *and* [Appointed Actuary] ...' (see 17/04/1991) had been changed by the Chief Actuary to read '*As it is not now thought desirable for the same person to be both Chief Executive and Appointed Actuary ...*' (see 19/04/1991).

Directing Actuary A continues:

> *What is required is a mechanism to defuse the situation, and especially* [DTI's Line Supervisor A's] *latest note on the Equitable's letter of 31/5. I have already spoken to* [Equitable's Appointed Actuary] *at the Institute seminar on 6/6, not knowing of this correspondence. I told him that provided plans were being put in place to bring along a new actuary in a year or two, I was relaxed (NB* [the Appointed Actuary] *retires – or is of retiring age – in the not too distant future). He knows our concerns and respects them. However, if someone hasn't matured as quickly as they had hoped, there is no point DTI getting up-tight.* [The Appointed Actuary] *now sees this issue as a point of principle for him – and I take his point.*
>
> *We should explain to* [Line Supervisor A] *that Equitable is not a one-man show, likely to be dominated by* [the Appointed Actuary]. *There are several good actuaries in the company, and they are unlikely to fall into the kinds of problems we have seen elsewhere purely because he holds two key posts. DTI should accept the company's assurances that they will separate the two posts as quickly as it is prudent to do so.*

17/06/1991 DTI write to Equitable, noting the Society's:

> *... current intention to separate the roles of Appointed Actuary and Chief Executive within the time frame suggested by* [Line Supervisor A]. *In the light of that and the points made during our conversation I am happy to confirm our acceptance of* [the person's] *appointment without condition.*

18/06/1991 DTI's Line Manager A replies to Line Supervisor A's manuscript note on Equitable's letter of 31/05/1991. He explains that he had spoken to Equitable the previous evening and that, during that discussion, the Society had again raised objections to the imposition of a condition. The Line Manager says:

> *If the Appointed Actuary is also the Chief Executive and therefore responsible for taking the decisions on the direction of the company there is, almost by definition, a conflict of interest. The Appointed Actuary is most unlikely to blow the whistle on his own decisions taken as Chief Executive!* [Equitable] *took the point but said that* [they] *would still prefer our acceptance to be unconditional. I said we were prepared to lift the condition but nevertheless we noted the company's intention to find a new Appointed Actuary within 12-18 months and that we would not be constrained from raising the point again at the end of that timescale if no appointment had been made. On that basis I wrote the letter* [of 17/06/1991].

Submission of the 1990 regulatory returns

27/06/1991 **Equitable submit their 1990 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1990, prepared in accordance with the Companies Act 1985 and dated 27 March 1991.

Equitable also send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £10,000 in respect of their 1990 returns.

These documents include the following information about Equitable's business and their financial position as at 31 December 1990.

Companies Act annual report and accounts
In the *President's Statement,* Equitable note that the Society continues to grow rapidly with the President being '*in no doubt that this is a direct consequence of the confidence existing and new policyholders have in the quality and integrity of the Society's approach to business*'. Equitable say that their recent bonus declaration *'demonstrated vividly the way the with-profits system protects policyholders from the full effect of short-term falls in asset values',* while noting that: *'Over a long period bonus additions to policies must reflect actual trends in investment and operating experience of the Society. Those who choose with-profits rather than unit-linked policies clearly recognise that smoothing out of peaks is a price worth paying for the avoidance of a trough'.*

In the *Management Report,* Equitable state that new premium income had increased by 30% to £836m, breaking previous levels, with single premium new business policies increasing by 42% to £578m. On investment performance, Equitable say that investment returns for 1990 had been negative for the first time since 1974. However, Equitable also say that policyholders are protected by the with-profits bonus system from the full effect of short-term falls in asset values.

In the section on bonuses in the *Directors' Report*, Equitable disclosed that, in the light of poor investment returns and having regard to prudent actuarial principles, they have valued their liabilities using a higher valuation rate of interest than in 1989.

Equitable's *Annual Report* no longer contains a *Statement of Bonuses* giving detail on specific rates of bonus for major classes of business. Instead, policyholders are directed to one of Equitable's booklets, available from branch offices on request. Policyholders are also directed to the Society's *With-profits Guide* for a description of its approach to with-profits business.

The returns
Equitable's returns are submitted in three parts, covering: Schedules 1, 3 and 6; Schedule 4; and Schedule 5 (Statement of long term business by the appointed actuary). Schedule 5, required to be submitted every five years, sets out in detail the Society's in-force business.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1990 as follows:

Long term business admissible assets	*£5,932,451,000*
Total mathematical reserves (after distribution of surplus)	*£5,361,777,000*
Other insurance and non-insurance liabilities	*£157,748,000*
Available assets for long term business required minimum margin	*£412,926,000*
Required minimum margin for long term business	*£233,182,000*
Explicit required minimum margin	*£38,864,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£374,061,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	£179,744,000

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

Form 45 shows that 47% of Equitable's non-linked assets are invested in equities, 13% in land and 27% in fixed and variable interest securities (compared with 55%, 12% and 26%, respectively, in 1989).

Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority and with durations of less than 15 years are consistently higher than for those not issued or guaranteed by any government or public authority.

In the notes to this part of the returns, Equitable disclose that they have estimated their contingent liability for corporation tax on unrealised capital gains for non-linked business to be nil.

Equitable state that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns answers the questions set out in paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 54 of ICR 1981.

In response to paragraph 3, Equitable provide ten pages of information about their non-linked contracts. Most of the information about the contracts remains unchanged from the previous returns.

Equitable again disclose, in paragraph 3(xii), that they applied a guaranteed annuity rate to the accumulated cash fund generated by certain types of with-profits pension policies, stating for the first time that the guarantees applied to policies issued prior to 1 July 1988.

The description of Equitable's principal guarantees of terms at the end of paragraph 3 remains unchanged from the previous year, with the exception of a minor amendment to the description of *'Options to effect further policies without evidence of health'*. As in previous years, Equitable disclose that recurrent single premium and variable premium deferred annuity policies carry guaranteed terms under which future premiums could be paid.

In response to paragraph 4, Equitable provide 31 pages of information about their linked contracts. Most of the information about the contracts remains unchanged from the previous returns.

As in previous years, in paragraph 5 Equitable disclose that they have tested the ability of the Society to hold reserves which satisfy Regulations 54 and 56 to 64 of ICR 1981 in the changed investment conditions described in DAA1. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

Equitable again state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. Equitable state that the contingent liability for tax on unrealised capital gains in respect of other business is estimated to be nil, and accordingly no other additional reserve is made for any prospective liability for tax on unrealised capital gains.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 6(1) Equitable disclose that for certain non-profit deferred annuities, a small class of business, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

As in previous years, in paragraph 7(b) Equitable do not explain the method by which they have made provision in the main valuation for expenses on recurrent single premium business. Unlike in previous years, Equitable do not maintain a general expense reserve for any shortfall of future premium loading on regular premium business.

As in previous years, at paragraph 7(d), Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

As in previous years, in paragraph 11 Equitable state that they have *'no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'.*

As in previous years, in response to paragraph 12 of Schedule 4 Equitable simply state that they distribute profits in accordance with the principles determined by their Directors and their Articles of Association.

Paragraph 13 sets out the level of bonus declared for 1990 and records that Equitable had again set the reversionary bonus for its main policy classes at 7.5%. As in previous years, Equitable disclose that some retirement annuity and individual pension policyholders have been offered loans under a *'loanback'* arrangement.

In response to paragraph 16, Equitable again describe their system for determining final bonuses. (See 29/06/1990.)

<u>Schedule 4 – main valuation (forms)</u>
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts along with information on the numbers of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. Equitable disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of the fund surplus.

<u>Schedule 4 – appendix valuation (text)</u>
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to the ICAS Regulations 1983. They say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 to the ICAS Regulations 1983 which, having had *'regard to the purpose of the valuation',* has not been provided) is identical to that given in the main valuation.

In response to paragraph 5(1)(a), Equitable make a similar statement to that made in the main valuation and in previous years, that: *'In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'.*

As in the main valuation, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their recurrent single premium with-profits pension business.

As in the main valuation, in paragraph 7(b) Equitable do not explain the method by which they have made provision for expenses on recurrent single premium business. Unlike in previous years, Equitable do not maintain a general expense reserve for any shortfall of future premium loadings on regular premium business.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

Schedule 5 (Statement of long term business by the appointed actuary)
For the 1990 returns, Equitable provide the information required by Schedule 5 to the ICAS Regulations 1983. The Schedule requires a statement – *'in such one of the forms set out in Forms 65 to 70 as is appropriate to that category of contract, or, in the case of a category of contract to which none of these forms is appropriate, in such form and containing such particulars as are sufficient to enable an independent assessment of the liabilities of the company's long term business to be made'* for each product listed in Form 55 and Form 56 of the returns. The Schedule runs to 130 pages.

1991

Most of the information provided by Equitable uses Forms 65 to 70 set out in the Regulations. Some of the forms completed include supplementary notes.

For the *'General Annuity Fund, Deferred annuities with guaranteed cash options – with uniform premiums'*, Equitable include the following notes:

> *The policy is written for cash with a guaranteed annuity option.*
>
> *The terms of the annuity option are such that they would not be exercised under foreseeable conditions.*
>
> *Typical rates of guaranteed annuity applicable to this business are:*
> *Men at 65 – £9.92%*
> *Women at 65 – £8.56%*

The returns show that this class of business totals more than £29m. The same note is included for the *'Pension Business Fund, Deferred annuities with guaranteed cash options – with uniform premiums'.* The returns show that this class of business totals more than £98m.

For the *'Pension Business Fund, Individual pension arrangements – variable premiums'*, Equitable include the following notes:

> *Examples of the guaranteed annuity rates applicable to this business are:*
> *Men – at 60 £10.26%, at 65 £11.55%*
> *Women – at 60 £9.34%, at 65 £10.33%*
>
> *These rates are for a single life annuity payable monthly in advance payments guaranteed for 5* [years].

The returns show that this class of business totals more than £771m. For *'Pension Business Fund, Retirement annuities – variable premiums'*, Equitable do not provide any notes on the rates of annuity guarantee applicable.

01/07/1991	Equitable's Appointed Actuary also becomes Equitable's Managing Director and Chief Executive.
24/07/1991	**GAD complete the A1 Initial Scrutiny check on the Society's 1990 returns.** GAD note the cover for the required minimum margin is 1.77 (reduced from 4.77 the previous year). They do not identify any concerns.
26/07/1991	GAD's Directing Actuary A writes to Equitable's Appointed Actuary to acknowledge receipt of the papers sent on 11/06/1991. The Directing Actuary marks the letter *'Private and Confidential'*. He says that he looks forward to seeing the Appointed Actuary at the President's meeting at the end of September and thanks him *'for the insight your papers give us; I will ensure they get an extremely limited circulation'*.
29/07/1991	**GAD complete the A2 Initial Scrutiny check on the Society's 1990 returns.** GAD raise Equitable's priority rating from 5 to 3 but identify no items that are worrying and no items to notify to DTI, to be taken up immediately with Equitable. As part of the check, GAD note: *(1) Deteriorating cover for the* [required minimum margin] *(2) Loss of working capital for future expansion.* Accompanying the Initial Scrutiny check are two forms (*Form B* and *Form C1*) tabulating key figures disclosed in the 1986 to 1990 returns.
27/08/1991	Equitable write to Scrutinising Actuary B at his home address, following a telephone call he made to the Society posing as a potential policyholder. Equitable provide the Scrutinising Actuary with details about their with-profits bonds.
29/08/1991	An actuary at GAD (who later becomes the Directing Actuary with responsibility for Equitable) attaches a note to the letter of 27/08/1991 addressed to Scrutinising Actuary B and Chief Actuary B: *I do not see how this contract can be valued by a net* [premium valuation] *method as there are no overall guaranteed benefits on maturity (only accrued benefits from past premiums). A rate of interest of 5½% would in any case be extremely weak, leaving much reduced scope for future bonuses.*
12/09/1991	The same GAD actuary as in the entry for 29/08/1991 above writes to DTI about the introduction by a named other life insurance company of a guarantee on their with-profits bond that no market value adjustment would be applied if the policy were surrendered after ten years. The GAD actuary says: *Generally we are aware that a number of companies are now issuing this type of contract. These include for example Equitable Life and others which apparently held reserves below the face value of the units at the end of last year.* *This practice can only be justified if they currently apply market value adjustments on surrenders, and can reasonably hope to earn a positive rate of return (in addition to future bonus declarations that may be "reasonably expected") over the period to death or "maturity" of the policy.* *Furthermore, we have to be satisfied that they can still set up adequate reserves under changing investment conditions, including a 25% fall in the value of equities and a 3% variation in yields on fixed interest securities.*

08/11/1991	Equitable's Appointed Actuary applies to DTI for a section 68 Order for a future profits implicit item of £300m, for possible use in their 1991 returns. The Appointed Actuary provides financial calculations in support of the application, suggesting that the Society could seek an Order up to the value of £405.2m.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.86	*153.9*	*–*	*56.1*	*97.8*
31.12.87	*254.7*	*65.0 (a)*	*65.3*	*124.4*
31.12.88	*259.2*	*–*	*61.4*	*197.8*
31.12.89	*337.4*	*–*	*89.9*	*247.5*
31.12.90	*422.5*	*557.0 (b)*	*26.6*	*(161.1)*
				506.4

Average annual profit = 506.4/5 = £101.3m

Notes: *(a) £65.0m of the surplus arising in 1987 was an exceptional item arising from a change from a policy year to a calendar year method of bonus allocation for the bulk of the Society's with profits business.*

(b) Surplus was increased by £557.0m as a result of changes in valuation bases during 1990.

GAD circle the figure of £557m included in column (B).

The calculations state that the average period to run for the Society's in-force contracts is eight years. The Appointed Actuary explains:

> *The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.*

The calculations suggest that the maximum figure permissible for future profits is 50% of £101.3m multiplied by eight years – that being £405.2m.

13/11/1991	DTI's new line supervisor (Line Supervisor B) asks GAD for their views on the Society's application for a future profits implicit item.
19/11/1991	GAD's Chief Actuary B writes to Equitable's Appointed Actuary with a series of questions on the Society's 1990 returns. The Chief Actuary asks:

(1) for details of figures shown in the returns for debts due from other companies;

(2) why Equitable, for the first time, have split the long term business returns for premiums and expenses, revenue and claims into various sub funds, and whether GAD are correct in assuming that the change will not reflect the previous methods of distributing surplus to with-profits policyholders. GAD's Chief Actuary B notes: '*... that you have not completed separate Forms 58 for these sub-funds. Would you please confirm that this is correct bearing in mind the requirements of Section 18 (2) (b) of I.C.A. 1982?*';

(3) why there has been an increase in Equitable's '*other management expenses*';

(4) why Equitable have not included any contingency reserves in the 1990 valuation (when £10.5m had been included in 1989);

(5) for the product details of Equitable's with-profits bond and if there were any guarantees within the first five years of this contract;

(6) '*In paragraph 5(a) of the Appendix to Schedule 4 of your report you refer to the resilience test which you have carried out in connection with the valuation using the net premium method. I note your comments and that you would not need to have recourse to assets shown at line 51 of Form 14 of the Returns. There is however a substantial difference in the mathematical reserves shown at line 11 of Form 14, and the amount of the reserves arrived at using the net premium method of valuation. I would therefore like to know the amount of the mismatching reserve which you would have needed to set up had you used the net premium method in arriving at the amount shown in line 11 of Form 14*';

(7) what the cost was of the change in the published valuation basis as at 31/12/1990, when compared with the basis used for publication at the previous valuation; and

(8) '*I am wondering what the figures for the Society will look like in the December 1991 Returns. Can you advise us what the position is likely to be at the year end, including the likely amount of the available assets shown at line 25 of Form 9?*'

20/11/1991 **GAD complete their detailed scrutiny of the Society's 1990 regulatory returns.** GAD send DTI a two page note setting out their findings. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) GAD explain that Equitable have continued to expand rapidly, with new premium income rising by 30%, new regular premiums by 10% and single premiums by 42%, the latter due to the success of the with-profits bond.

GAD explain that, in common with other companies, Equitable have experienced falls in the market values of equities and other assets. As a result:

> *... the actuary has decided to weaken the valuation basis of the with-profits business. The rates of interest he has used are within the limits laid down in the regulations and could be supported by the yields shown* [in the returns] *although the margin is small. We are asking a few questions about the valuation basis and we will comment in detail after the replies from the Society.*

GAD also explain that:

> *The cover for the required minimum margin is reduced from 477% (1989) to 177%* [for] *this year. The main reason for this is the fall in value of the assets (referred to ... above). Part of the fall has been covered by a release of £214m from the mathematical reserves arising from the weakening in the valuation basis. Other reasons for the reduction in cover for the* [required minimum margin] *are (a) growth of new business and (b) maintenance of unchanged bonus rates on with profit policies.*

GAD conclude that Equitable are a major player in the recurrent single premium personal pensions market. They attach a copy of their letter to Equitable of 19/11/1991.

22/11/1991	Equitable's Appointed Actuary writes to GAD in reply to the queries in their letter of 19/11/1991. In relation to the questions, as numbered in the earlier entry, the Appointed Actuary:

(1) provides the details requested;

(2) explains that the Society has split the long term business returns for premiums and expenses, revenue and claims into various sub funds to ensure that changes in reserves during 1990 resulting from changes in valuation bases did not affect Equitable's liability to corporation tax. He adds that all with-profits policyholders continue to participate in the surplus of Equitable's long term business fund, and the Appointed Actuary says that he is *'able to confirm that it was correct to complete only one Form 58 for 1990 in compliance with Section 18(2)(b) of I.C.A. 1982'*;

(3) explains that *'other management expenses'* have risen in absolute terms, but, in relative terms, the rise from 1989 to 1990 was only from 34% to 38% of total expenses. The Appointed Actuary says that he is *'satisfied that, taking account of the level of expenses in 1990, the Society's reserves continue to make sufficient provision for future expenses'*;

(4) explains that, from 1976 to 1989, the Society held a general reserve which was primarily for the estimated shortfall of future premium loadings to meet future expenses on contractual regular premium contracts effected before 1976. But:

> *Since 1976 the composition of the Society's business has changed substantially from being mainly contractual premium business to the current position in which recurrent single premium contracts comprise the major part of the business. At the 1990 year-end I came to the conclusion that there was sufficient provision in total reserves for future expenses without the need for a separately identifiable reserve in respect of contractual premium contracts which had become an unnecessary complication;*

(5) encloses a copy of the Society's booklet for the product particulars of the with-profits bond and says: *'There are guarantees within the first 5 years of the contract, details of which can be found in the enclosed booklet ... and* [in the 1990 returns]';

(6) states: *'If the Society had shown mathematical reserves in line 11 of Form 14 of the amount calculated using the net premium method of valuation, I would have needed to set up an additional mismatching reserve of £450m'*;

(7) explains that, if their published reserves had been calculated as at 31/12/1990 using the basis used for publication at the previous valuation, the Society's reserves would have been £557m higher;

(8) explains that the Society would:

> *... need to publish a substantially stronger valuation at the end of 1991, either by explicit strengthening of the basis or the inclusion of an explicit mismatching reserve, than at 31 December 1990 reflecting the reduction in yields during the year.*
>
> *My current view is that it is unlikely that the* [solvency] *position at the end of 1991 will be any stronger than at 31 December 1990, although the underlying liability valuation will, of course, be substantially stronger.*

Equitable's Appointed Actuary undertakes to provide more detailed information about the year end position when this becomes available (see 12/05/1992). GAD subsequently forward a copy of this letter to DTI (see 23/12/1991).

25/11/1991	GAD write to Equitable's Appointed Actuary to say that the information supplied *'is most helpful, and we will be studying this in more detail a little later'*.

1991

11/12/1991	GAD provide DTI with their views on Equitable's application for a section 68 Order (08/11/1991). GAD state that the amount requested: *... is less than the maximum allowed in accordance with the calculations based on the guidance notes.* *We have no comments on the calculations and we recommend you to issue the S68 order for the implicit item of £300m as requested by The Society.*
16/12/1991	DTI send Equitable's Appointed Actuary a section 68 Order for a future profits implicit item of £300m, for use in the 1991 returns.
23/12/1991	GAD forward a copy of Equitable's letter of 22/11/1991 to DTI.

1992

17/01/1992 GAD write to Equitable's Chief Executive to announce that they intend to visit in the near future. GAD explain that this is part of the DTI's and GAD's rolling programme of visits to insurance companies authorised to write long term business, that it is the intention to visit all offices within three years, and that no significance should be attached to the order in which the visits take place.

GAD say:

> *We would like to discuss the following main areas:*
>
> 1. *Board of Directors*
> 2. *Management Structure*
> 3. *Future Plans and Strategy*
> 4. *The role of the Appointed Actuary*
> 5. *Decision Taking*
> 6. *Corporate Structure*
> 7. *Administration*
> 8. *Distribution Systems*
> 9. *Investment Policy*
> 10. *Bonus Policy*

29/01/1992 Equitable's Chief Executive and Appointed Actuary writes to GAD to confirm the visit for 05/03/1992. The Chief Executive adds: '*Have you asked* [Directing Actuary A] *whether he wants to attend? At one time he did express an interest in so doing but this is essentially a domestic matter for yourselves*'.

(The meeting is postponed (see 02/03/1992). It takes place on 19/05/1992 and the Directing Actuary does attend.)

31/01/1992 [entry 1] **GAD write to DTI with a *'Post Scrutiny Report'* on the Society's 1990 regulatory returns**, in the light of Equitable's letter of 22/11/1991. GAD explain that:

- they have no additional comments on the figures that Equitable have provided for debts due from other companies;
- the long term business returns for premiums and expenses, revenue and claims were split for tax reasons and '*will not affect the distribution of surplus to with-profits policyholders. This is reasonable*';
- they are satisfied with Equitable's *'assertion'* that sufficient provision has been made in the valuation of liabilities for future expenses;
- that, as the last two years' returns have shown that most of Equitable's business is now recurrent single premiums and regular premium business is dwindling, '*the need for a general reserve to augment the mathematical reserve is not necessary*';
- they are seeking more information on with-profits bonds, enclose a copy of their letter to the Society (see 31/01/1992 [**entry 2**]) and undertake to comment on the valuation basis of the bonds when Equitable have replied;
- they are satisfied with the information Equitable have given about the mismatching reserve and the cost of the change in the valuation basis; and
- they will be in touch again when they hear further about the position as at 31 December 1991.

31/01/1992 [entry 2] GAD write to Equitable's Appointed Actuary, to ask about the Society's with-profits bonds:

> *I note that the current practice on surrender is to pay the full value of the guaranteed fund and bonuses standing to the credit of the policy ... Although you do not guarantee to pay this amount I am surprised that the reserves held are lower than the current surrender values. I would be glad if you would please comment on this.*

GAD continue:

> *I wonder what your surrender experience is like on these Bonds and also whether you have any limit in mind on the amounts of single premiums which your Society will undertake on these contracts?*

13/02/1992 Equitable's Appointed Actuary replies to GAD's letter of 31/01/1992. The Appointed Actuary explains that the guarantee of '*full value*' payment on the with-profits bond applies only at certain specific dates set out in the policy document and that the valuation basis takes account of those dates. However, although Equitable's current practice is to pay out *'full value'* on early surrender:

> *... we do not guarantee this. I do not see that the reserving basis for the bonds needs to take any particular account of this practice.*
>
> *For 1990 business it was convenient to value this class on similar bases to other business which obviously led to some release of premiums into surplus. We could, of course, easily have done something different since this class is trivial in relation to the whole. For 1991 we shall be valuing new business of this type so as to avoid such releases.*

The Appointed Actuary explains that the Society is currently experiencing a very low rate of surrender on this business and that:

> *We incur no initial strains on this business and, since we have told our policyholders that future bonuses will be at a level which can be supported by future investment conditions, there should be no commercial reason to put limits on the volume of business transacted. If our surrender experience deteriorates or if financial conditions worsened significantly, we should certainly impose surrender penalties.*

Equitable's Appointed Actuary says that the Society will not view this class of business as a source of surplus. He adds that the 1990 valuation basis *'needs to be considered over the total business and not class by class'.*

The GAD actuary who had commented previously on this type of business (see 29/08/1991 and 12/09/1991) passes Equitable's letter to Scrutinising Actuary B with a note:

> *We cannot insist that he uses reserves* [equal to or greater than surrender values] *where latter are not* [guaranteed]. *Would be a different matter if <u>all</u> business were like this.*

14/02/1992 GAD acknowledge Equitable's letter of 13/02/1992. GAD say that they have no further points on the Society's 1990 returns.

24/02/1992 GAD write to DTI, enclosing copies of the letters of 31/01/1992 and 14/02/1992. GAD say that they '*are satisfied with the valuation basis of with-profits bonds and this may please be treated as the end of our scrutiny of 1990 returns*'.

25/02/1992 DTI's Director of Insurance writes to GAD's Directing Actuary A about life companies' bonus rates. The Director of Insurance says that he and Directing Actuary A had *'discussed briefly whether it would be possible to compile a simple table showing the changes between 1991* *and 1992 in the major life companies' bonus rates (reversionary and terminal), as a cross indicator of current and prospective pressures on life funds*'.

The Director of Insurance says that DTI do not routinely receive the with-profits guides of all the insurance companies they regulate. He asks GAD to put together a table showing the main bonus rates for with-profits policies. The Director says: '*I foreswear judgement on what precisely we will do with this information until I have seen what it reveals. But I would not rule out using this comparative data as an input into the questioning of life companies' future plans on our visit programme*'.

02/03/1992	GAD telephone DTI's Head of Life Insurance to say that the proposed visit to Equitable on 05/03/1992 has been postponed. (It is not clear by whom.) GAD suggest a new date in May 1992.
04/03/1992	GAD confirm with Equitable the arrangements for the rearranged meeting on 19/05/1992.
12/03/1992	DTI's Line Manager A writes to the Director of Insurance, having seen a copy of his minute (see 25/02/1992 about companies' bonus rates. The Line Manager provides the Director with a copy of the most recent *Money Management* survey on endowment policies. He says that DTI have contacted the magazine and were told that the bonus rates for 1992 would appear in their May 1992 edition. On 7 April 1992 the Director of Insurance informs Line Manager A that he would like to see the article when it is available. An undated subsequent note records this as being '*done*'.

12/05/1992 Equitable's Appointed Actuary writes to GAD about the forthcoming 1991 returns and, in particular, to advise them of the Society's likely solvency position, as requested by GAD in their letter of 19/11/1991. The Appointed Actuary says that the '*Form 9 position as at 31 December 1991 was as follows*':

	£m
Admissible assets	*7,452*
Mathematical reserves	*6,991*
Other liabilities	*112*
Available assets for minimum margin	*349*
Implicit items	*–*
Total of available assets and implicit items	*349*
Required minimum margin	*298*
Excess of available assets and implicit items over required minimum margin	*51*

The Appointed Actuary states:

> *During 1991 the Society continued to attract relatively large volumes of new annual premium and single premium business (including additional recurrent single premiums). The total amount of such premiums in 1991 was about £1400m. Taking account of this fact I decided to strengthen the valuation bases for recurrent single premium policies in order to ensure that there was no immediate release of surplus in respect of 1991 premiums. In effect we put the valuation of 1991 new business back on to the premium basis which has been our traditional approach. That strengthening of the valuation bases increased reserves by about £150m. The general basis is also fairly strong because new business expenses are effectively written off as incurred. They will be recouped as the business matures but there is no accepted method of "zillmerising" recurrent single premium business, which is about 80% of our business in force.*

> *As in previous years I will be publishing a net premium valuation as an appendix to my valuation report to demonstrate compliance with the Valuation of Liabilities Regulations. The total net premium reserves shown will be £6,459m which, if they were to be shown in line 11 of Form 14, would require an additional mismatching reserve of £450m.*

He continues:

> *I am monitoring on a regular basis the Society's expenses and the effect of new business on the Society's financial position, and continue to be satisfied that no undue strain is being caused. New business will, of course, provide little or no contribution in the short-term to the Society's solvency margin. I believe that the underlying strength of the Society's business is being masked in* [the returns] *by our success in attracting business.*

Equitable point out that they are not using the future profits implicit item of £300m approved in December 1991. They say that an implicit item up to £650m could have been justified and continue:

> *If we were to compare the excess of available assets and future profits implicit item (for which credit could have been but was not taken) over the required solvency margin at the 1990 and 1991 year-ends, there was an increase from £580m as at 31 December 1990 to £701m as at 31 December 1991. Although a somewhat artificial measure in some respects, I believe it helps to demonstrate the underlying soundness of the Society's financial position.*
>
> *I regard my prime professional role as ensuring that prudent provision has been made for meeting future liabilities, that the various statutory and non-statutory requirements have been satisfied and that a demonstration of solvency can be achieved. I do not regard it as a priority to show the best possible position in Form 9* [i.e. the statement of solvency] *even though there is the real possibility of attracting adverse comments from so called "financial experts". This is, of course, comment to which we are well used.*

The Appointed Actuary continues:

> *Having said that, however, we monitor regularly the Society's ongoing financial position and possible positions in the future. In particular, the investment policy and its appropriateness taking account of the financial constraints of the business are reviewed. We have decided, for example, that in view of some uncertainty that equities will "perform" over the next year or so to invest the greater proportion of new monies into fixed interest investments during 1992. That will increase investment income and reduce the dependence upon capital appreciation for bonus declaration purposes at the year-end.*

Equitable invite GAD's comments on their letter before Equitable finalise their 1991 returns.

14/05/1992 Chief Actuary B passes Directing Actuary A a copy of Equitable's letter of 12/05/1992. The Chief Actuary sets out background comments in preparation for the forthcoming meeting with Equitable, along with their solvency position using Equitable's bonus reserve valuation and the alternative position using net premium reserves.

Chief Actuary B attaches a note of the interest rates used in the 1989 and 1990 valuation bases. He notes that '*the margins were very thin in 1990, with an average interest rate used of 7.12%*'. He says that GAD do not know the basis used in 1991 but they could seek this information during the meeting with Equitable, now arranged for 19/05/1992. He notes that the strengthening of the valuation basis in 1991 increased reserves by £150m whereas the weakening in 1990 reduced reserves by £557m.

In relation to initial expenses of new business, Chief Actuary B says:

A comment made in [the Appointed Actuary's] *letter is that 80% of the business is single premium business. He states that initial expenses will be recouped as the business matures as there is no accepted method of "zillmerising" single premium business. The business is mainly with profits pensions. I thought that a reasonable valuation rate of interest would allow the company to recover initial expenses right away – the main danger being a release of the bonus loading. We should query this.*

Regarding the level of new business, the Chief Actuary notes:

Comment is made about the effect of the new business on the Company's financial position, and [the Appointed Actuary] *states that new business provides little or no contribution to the solvency margin. Could it be that the level of new business is reducing the solvency margin too much?*

He also notes:

At the end of 1990 the company had over £100m of single premium With Profits Bonds in force. These were valued on an acceptable basis, although the reserves held were less than current surrender values (not guaranteed). This led to some release of premiums into surplus. I do not know how much of this class of business was written in 1991. We should ask about the effect of this on surplus.

Chief Actuary B adds that he had expected to see an increase in the excess assets in 1991 with the increase in market values and was surprised to see a fall. He suggests they discuss this with Equitable. He also raises the continuing position of one person holding the dual positions of Chief Executive and Appointed Actuary: '*This was queried by DTI and the company hoped to appoint a new Appointed Actuary in 12-18 months after 1 July 1991. I wonder what is happening on that issue?*'.

Scrutinising Actuary B, in an attachment to the note, records some further comments about Equitable:

1. Strength of Equitable: It provides a good service at a reasonable cost. Expenses are the lowest in the industry. It does not pay commission. Adverse publicity about commission and its associated problems have made Equitable very attractive to a lot of investors.

2. Weakness: Free asset ratio is low and when 1991 results are published a lot of [Independent Financial Advisers] *will question the strength of Equitable. We will be asked to comment about it by the National Health Service and the Treasury because Equitable underwrites both* [Additional Voluntary Contribution] *schemes.*

3. Equitable has used up investment reserves quickly in paying very good bonuses.

4. [Equitable's Appointed Actuary] *says that single premium business will release profits when it matures but with-profits business will probably be surrendered early rather than reach maturity when the interest rates will rise.*

5. Recurrent single premium business is exposed to cancellation as soon as there is adverse publicity about the strength of Equitable.

6. [The Appointed Actuary's] *position as Chief Executive and Actuary may create problems because there is nobody to blow the whistle when things go wrong.*

Behind this note are two pages from '*With Profits Without Mystery*', the paper that two of Equitable's actuaries presented to a meeting of the Institute of Actuaries on 20/03/1989 and to the Faculty of Actuaries on 19/02/1990. The paper had included, as an appendix, historical data setting out the market value of Equitable's fund and their investment reserve, for 1972 to 1987. GAD's copy of this appendix is annotated with figures for 1988 to 1991.

GAD copy their note to DTI's Line Supervisor B. The Line Supervisor adds her own comments in manuscript. She notes that the alternative position showing net premium reserves is '*to meet the requirements in the* [Regulations]'. She highlights that the total reserve in the net premium valuation, including the resilience reserve, is £6,909m, which compares with Equitable's published reserve of £6,991m. Line Supervisor B adds:

> [Chief Actuary B] *thinks they have been paying too much in bonuses ...*
>
> [The Regulations] *require a net premium reserve valuation. But* [the Appointed Actuary] *can use the bonus reserve method providing it can be demonstrated that* [the] *published basis gives as big reserves as* [the] *net basis.*

15/05/1992

DTI prepare briefing for their forthcoming visit to Equitable (on 19/05/1992). They note that Equitable '*is the oldest of all UK life insurance companies. Mutual company, founded in 1762. Transacts life assurance, annuity and pension business in the form of guaranteed, participating and unit linked contracts*'. DTI attach GAD's note of 14/05/1992 and comment:

> *... considerable reduction in Excess Assets between 1989 and 1991. 1990 Returns showed rapid expansion – total new premium income increased 30% to £836m. New regular premiums, at £258m, were up 10% on previous year and single premiums increased 42% to £578m (due partly to success of Society's with profits bond).*
>
> *Society has experienced falls in the market value of equities and other assets, and the actuary has decided to weaken valuation basis of* [with-profits] *business. Reduction in cover for* [required minimum margin] *is due to fall in value of assets, growth in new business, and maintenance of unchanged bonus rates on* [with-profits] *policies.*
>
> *GAD meeting with Equitable on 14.11.90 noted that they were considering not paying any reversionary bonuses for 1990. In the event a bonus was declared for 1990 at same rate as for 1989.*

DTI's note also highlights some other recent issues, including: that Equitable have set up branches in the Republic of Ireland and Germany (note: GAD's scrutiny report on the 1993 returns recorded that a new branch was not established in Germany until 1993 – see 15/11/1994); that they do not appear to be using the future profits implicit item of £300m, agreed in December 1991, in their 1991 returns; and that:

> [One individual] *is* [Managing Director]*/Chief Executive and Appointed Actuary as from July 91 ... We were not happy with one person holding both positions, and regarded this as a temporary situation – see attached correspondence. Perhaps we could ask about this at the meeting.*

19/05/1992

DTI (Head of Life Insurance and Line Supervisor B) and GAD (Directing Actuary A and Chief Actuary B) meet Equitable's Appointed Actuary to discuss a number of issues. DTI prepare a note of the meeting, which is then amended by GAD. The note records discussion of a number of matters, including the following.

<u>The role of the Appointed Actuary</u>
Both DTI and GAD express concern that the Managing Director is also the Appointed Actuary, as this could lead to a conflict of interest, as '[where] *the jobs were separate, and the Appointed Actuary thought that management was not doing its job, he could come direct to DTI*'. However:

> [The Appointed Actuary and Chief Executive] *did not perceive any conflicts of interest but said that if a conflict arose he would drop one of the jobs. His view was that the* [Appointed Actuary] *should be a generalist rather than a backroom "number cruncher". He felt that the position of* [Appointed Actuary] *was weakening in some companies, and*

1992

> *that the calibre of the newer entrants was lower because their job was so specialised and fragmented.*
>
> [The Appointed Actuary and Chief Executive] *was due to retire in 3 to 4 years time, by which time the* [Managing Director] *and* [Appointed Actuary] *roles would be separated again. He was considering whether any of the present actuaries was qualified to take on the* [Appointed Actuary] *role but the appointment of a new* [Appointed Actuary] *was at least a year off. He agreed with* [Directing Actuary A] *that the* [Appointed Actuary] *should be part of the senior management team. The problem was that there was at present nobody within the company to take over this role. The Equitable usually found the* [Appointed Actuary] *from its in-house actuarial team, but was prepared to recruit someone from outside if necessary.*
>
> [The Appointed Actuary and Chief Executive] *had been an executive director for some time, and had been a member of the investment committee, which was a "sub-set" of the Board, for about 14 years.*

<u>Equitable's investment strategy</u>
After an outline is given of Equitable's process of devising their investment strategy, GAD ask if Equitable found their investment policies were constrained by the valuation regulations. The Appointed Actuary responds that *'the liability regulations were only an irritant, i.e. a constraint, in the sense that they had to comply with them, but their main problem was funding the amount of surplus they needed at the right time'*.

<u>Equitable's bonus policy</u>
Equitable's Appointed Actuary says that 80-85% of their business was single premium with-profits policies which included a guaranteed interest rate of 3.5%. DTI ask if Equitable reserved for future terminal bonuses. The Appointed Actuary responds that:

> *... the company knew at all times the terminal bonus for each policy on the books. There was a notional terminal bonus reserve earmarked which was called the investment reserve. All the with-profits pension customers had annual statements which showed the notional accrued terminal bonus figure, but they were told that this bonus was not guaranteed.*
>
> [The Appointed Actuary] *explained that all the assets belonged to the current generation of members, and that they did not want to build up reserves for future generations.*

The note records that:

> [Chief Actuary B] *noted that if the value of equities had fallen, the company would need to cover their solvency margin.* [The Appointed Actuary] *said they would first look after their members' interests, and check that there would be enough surplus. They would then do the solvency tests.*
>
> [Directing Actuary A] *asked what the mechanism was for determining bonuses.* [The Appointed Actuary] *explained that he presented a paper to the Board in April. In September/October a further paper was presented about bonuses, and the actual bonus declaration from the Board issued in the following February. In 1992 the bonus was expected to be about 9½-10%.*
>
> *It was necessary to look at what was being notionally earned on fixed interest in respect of the Fund. In 1990 the rate that could be earned on deposits (gilts) was 12%. The bonus was 11%, which comprised 3½% guaranteed bonus, and 7½% declared bonus, totalling 11%. This included a 1% terminal bonus. In 1991 the notional rate earned was 14% and the bonus was 12%, which included a 2% terminal bonus.*

The note records that:

> [The Appointed Actuary explained that at] *the end of 1990 the valuation of the liabilities was weakened but in 1991 the liabilities had been valued more strongly, but were still well within the DTI regulations.* [Directing Actuary A] *noted that he liked Equitable's philosophy for its policyholders, but felt that its solvency strength was arguable.*
>
> [Directing Actuary A] *asked if there was a built-in mechanism for reducing reversionary bonuses if the need arose.* [Equitable's Appointed Actuary] *said they looked at the following options available: (i) non-declaration of bonuses; (ii) implicit items; (iii) to stop writing new business.*

On '*Future Plans*', Equitable say that they prepared a plan of their future objectives every three years. They agree to provide a copy of the current version to the regulators once it was finalised; it was only in draft at that time. DTI's note records that: '*The plan emphasised four important concepts that the Equitable stood for: (i) It was a mutual company; (ii) It operated at the top end of the market; (iii) It only sold direct, and (iv) It was innovative, and aimed for growth*'.

Under '*Distribution Systems*', DTI record that '*Out of the first premium, 10% went to the salesman, 20% to the branch, 5% to admin, and 5% to marketing*'.

At the conclusion of the meeting, Directing Actuary A '*noted that he would be concerned about Equitable's performance if there were dramatic falls in the market. Also there was the problem of who would take over when* [the Appointed Actuary and Chief Executive] *retired*'.

(Note: the meeting note contained no reference to 'zillmerising' or any explicit reference to the reason for the fall in excess assets in 1991 — see 14/05/1992.)

21/05/1992

GAD's Directing Actuary A writes to Equitable's Appointed Actuary to thank him for the '*valuable insights which you gave us at our meeting*', but also to express disappointment that GAD and DTI had not met some of Equitable's management team '*which is a prime purpose of these company visits*'. Directing Actuary A goes on to say: '*Nevertheless, I think we all came away knowing a lot more about the company's approach to mutuality, while reinforcing in our minds the unique position of the Equitable in the UK life industry*'.

28/05/1992

Equitable's Appointed Actuary sends GAD information about the Society's management structure, management company accounts and corporate objectives, as provided at the meeting on 19/05/1992. He explains that the '*actuarial management*' area is under the control of a very experienced, practical senior actuary who has four actuaries reporting to him, and expresses the wish that this will give GAD a feel of how the actuarial management is now being spread.

The Appointed Actuary writes: '*With hindsight, it might have been better to have some junior colleagues present at our meeting, but nothing we discussed would have been unfamiliar to them. I do try to run a very open area*'.

He explains that the Society has developed a new form of internal '*management company accounts*', saying that these are:

> *... an attempt to pull together into one document the various financial implications of what we do and which previously would have appeared, either directly or indirectly, in various papers to the board on a variety of topics.*

The Appointed Actuary continues:

> *The various loadings on which the "management expenses fund" is based are well documented internally and have effectively been in the current form for many years ...*

The accounts will be produced for me on a monthly basis, before the end of the following month, and submitted to the board on a formal basis each quarter.

The documentation enclosed with the letter includes information about the Society's management structure, a profit and loss account for the period ended 30 April 1992, the balance sheet as at 30 April 1992 and notes on the account.

Equitable's Appointed Actuary provides GAD with a copy of a Board paper entitled '*Revenue – Report on First 3 Months*', dated 22 April 1992. On the market value of the fund, the paper says:

The estimated market value of the fund at 31 March 1992 was £7,748m. That compares with a figure of £7,368m at 31 December 1991.

The increase in the market value of the fund over the first 3 months of 1992 represents an annualised rate of return of around 6.9%. That reflects the improvement in capital values during January and February followed by a decline during March. If at 31 March 1992 market values had been at the levels to which they increased following the General Election, the assets would have been around £125m higher. In that event, the increase in the market value of the fund since 31 December 1991 would have represented an annualised rate of return of about 14%.

The excess of market value of assets over liabilities at 31 December 1991 was £375m. By 31 March 1992 that was estimated to have grown very slightly to £377m before allowing for any accrued declared bonus cost.

He encloses a copy of the draft corporate objective, saying that, once finalised, it would then be sent to the regulators. The Appointed Actuary also encloses a copy of their current '*statement of intent*'.

The Society's Appointed Actuary concludes by saying that:

I enjoyed the meeting and hope that you and your colleagues got out of it what they were looking for. As you know, I am normally prepared to be very open about all of our activities and no doubt you will come back to me if anything needs further explanation or expansion.

15/06/1992 Equitable's Appointed Actuary writes to GAD about the forthcoming 1991 returns, following their letter of 12/05/1992. He explains that, after taking account of possible adverse comment on the unnecessarily 'weak' solvency position, the Society has looked again at its presentation in the annual returns for 31 December 1991 and has decided to make some changes. The Appointed Actuary says that he has concluded that the value for published mathematical reserves contains margins which were not necessary on the grounds of reasonable prudence. He had therefore reduced the mathematical reserves by £139m to £6,852m. The Appointed Actuary explains:

That reduction in reserves has been facilitated primarily by retaining the same valuation bases for general annuity and pensions recurrent single premium business as was used at 31 December 1990. The strengthened basis which I described in my letter of 12 May 1992 has been retained for recurrent single premium life business including with-profits bonds.

The Appointed Actuary summarises the position at 31 December 1991, taking into account the reduced mathematical reserves, as follows:

	£m
Admissible assets	*7,452*
Mathematical reserves	*6,852*
Other liabilities	*112*
Available assets for minimum margin	*488*
Implicit items	*–*
Total of available assets and implicit items	*488*
Required minimum margin	*298*
Excess of available assets and implicit items over required minimum margin	*195*

The Appointed Actuary explains that the appendix to the returns would show net premium reserves of £6,453m. If these reserves were shown in the body of the returns, an additional mismatching reserve of £390m would be required. He states that the reduction of the mismatching reserve, compared with that shown in their letter of 12/05/1992:

> *... arises because we have looked again at the minimum reserves we should need to establish in the revised conditions of the mismatching test. From that review we concluded that, in our previous calculations, we had applied the regulations in an unduly stringent manner so as to produce reserves above those indicated by the minimum basis.*

Equitable's Appointed Actuary concludes:

> *Having taken the view previously that it was not a priority to show the best possible* [solvency position], *I have on reflection come to the conclusion that there is nothing to be gained from presenting such an apparently weak ... position as set out in my letter of 12 May 1992. The revised presentation will show a position of broadly comparable "strength" to last year. The mathematical reserves to be shown in our annual return continue to represent prudent provision for meeting future liabilities and satisfy the various statutory and non-statutory requirements governing the valuation of liabilities.*

19/06/1992 GAD write to Equitable's Appointed Actuary to state that they have no need for more information on the forthcoming 1991 returns prior to their submission and that '*any further queries will come up after we have studied the full returns*'.

Submission of the 1991 regulatory returns

29/06/1992 **Equitable submit their 1991 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1991, prepared in accordance with the Companies Act 1985 and dated 25 March 1992.

Equitable also send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £13,100 in respect of their 1991 returns.

These documents include the following information about Equitable's business and their financial position as at 31 December 1991.

Companies Act annual report and accounts
The *President's Statement* reports that:

> *1991 was a year of impressive progress. Total new business figures for the first time went above £1bn, up a third on 1990. Such success during a period of economic recession demonstrates the validity of the Society's approach to business.*

Equitable also report that their ratio of expenses to total premium income had reduced for the third year running from 7.6% in 1990 to 7.2%. Equitable also say that they had established a branch operation in the Republic of Ireland and state their intention to become a major force in the European market.

In the *Management Report,* Equitable state that they had pursued a relatively cautious investment policy in 1991 and that the longer term perspective did not lead them to make any other significant changes to their asset mix brought forward from 1990. In the section on bonuses in the *Directors' Report*, Equitable disclose that, in the light of prevailing investment conditions and having regard to prudent actuarial principles, they had undertaken some strengthening of the liability valuation.

The returns
Equitable's returns are submitted in two parts covering Schedules 1, 3 and 6 and Schedule 4 to the ICAS Regulations 1983.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1991 as follows:

Long term business admissible assets	*£7,452,253,000*
Total mathematical reserves (after distribution of surplus)	*£6,851,959,000*
Other insurance and non insurance liabilities	*£112,063,000*
Available assets for long term business required minimum margin	*£488,231,000*
Required minimum margin for long term business	*£292,829,000*
Explicit required minimum margin	*£48,805,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£439,426,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£195,402,000*

Equitable do not use in their returns the future profits implicit item that has been agreed by DTI.

1992

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

Form 45 shows that 51% of Equitable's non-linked assets are invested in equities, 11% in land and 27% in fixed and variable interest securities (compared with 47%, 13% and 27%, respectively, in 1990).

As in previous years, Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority at certain durations are consistently higher than for those not issued or guaranteed by any government or public authority.

As for the previous year, in the notes to this part of the returns Equitable disclose that they have estimated their contingent liability for corporation tax on unrealised capital gains in respect of non-linked business to be nil.

Equitable state that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns answer the questions set out in paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 54 of ICR 1981.

In response to paragraph 3, Equitable provide 13 pages of information about their non-linked contracts. This section is longer than for the previous returns, due to Equitable's new overseas contracts. Most of the information about the existing contracts remains unchanged from the previous year.

As in previous years, in paragraph 3(xiii) Equitable again disclose that they applied a guaranteed annuity rate to the accumulated cash fund generated by certain types of with-profits pension policies, stating that the guarantees applied to policies issued prior to 1 July 1988.

As in previous years, Equitable provide a description of their principal guarantees of terms. Equitable disclose that recurrent single premium and variable premium deferred annuity policies carry guaranteed terms under which future premiums could be paid.

In response to paragraph 4, Equitable provide 33 pages of information about their linked contracts. Most of the information about these contracts remains unchanged from the previous year.

As in previous years, in paragraph 5 Equitable disclose that they have tested the ability of the Society to hold reserves which satisfy Regulations 54 and 56 to 64 of ICR 1981 in the changed investment conditions described in DAA1. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

Equitable again state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. Equitable state that the contingent liability for tax on unrealised capital gains in respect of other business is estimated to be nil, and accordingly no other additional reserve is made for any prospective liability for tax on unrealised capital gains.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 6(1) Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

1992

As in previous years, in paragraph 7(b) Equitable do not explain the method by which they have made provision in the main valuation for expenses on recurrent single premium business.

As in previous years, at paragraph 7(d) Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

As in previous years, in paragraph 11 Equitable state that they have *'no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'*.

As in previous years, in response to paragraph 12, Equitable simply state that they distribute profits in accordance with the principles determined by their Directors and their Articles of Association.

Paragraph 13 sets out the level of bonus declared for 1991 and records that Equitable has set the reversionary bonus for the main policy classes at 6.5%. This compares with 7.5% reversionary bonus in the previous three years. As in previous years, Equitable disclose that some retirement annuity and individual pension policyholders have been offered loans under a *'loanback'* arrangement.

In response to paragraph 16, Equitable describe their system for determining final bonus.

<u>Schedule 4 – main valuation (forms)</u>
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. Equitable again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of the fund surplus.

<u>Schedule 4 – appendix valuation (text)</u>
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to the ICAS Regulations 1983. They say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation',* has not been provided) is identical to that given in the main valuation.

As in previous years, in response to paragraph 5(1)(a), Equitable make the same statement as in the main valuation, that: *'In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'.*

As in the main valuation, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their recurrent single premium with-profits pension business.

Unlike in the main valuation and the appendix valuation in the previous year, in paragraph 7(b) Equitable explain the method by which they had made provision for future expenses on their recurrent single premium business:

> *General annuity and pension business: An annual loading of 1% increasing by 5% per annum compound of the basic benefit was reserved for with profits retirement annuity, United Kingdom personal pension retirement benefit, United Kingdom group and individual pension business, deferred annuities of the recurrent single premium or variable premium type, Guernsey personal pensions and group pensions, International personal pensions and Irish personal pensions.*

<u>Schedule 4 – appendix valuation (forms)</u>
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

30/07/1992	GAD's Directing Actuary A sends DTI's Director of Insurance a note on *'Free Asset Ratios at 31December 1990 & 1991'*. Directing Actuary A attaches tables setting out the free asset ratios of certain major with-profits companies. On mutual companies, the Directing Actuary says: *The companies on whom we have been keeping a close watch for a number of years – e.g. Equitable Life,* [and two other named companies] *– remain companies which cause serious concern.* The Directing Actuary concludes: *... I should add that in preparing this minute, it has not been possible to examine the reserving basis used by each actuary. That will need to be done at the detailed scrutiny stage. It would seem quite likely, however, that when free asset ratios are as low as they are at the present time, there are not likely to be large hidden margins in the valuation bases after the resilience test has been taken into account.*
31/07/1992	Every Appointed Actuary is sent by the Government Actuary a copy of DAA4 in which the Government Actuary sets out the two scenarios against which Appointed Actuaries should test the resilience of the valuation basis. He states that full details of the assumptions used should be provided in companies' returns.
03/08/1992	**GAD complete the A1 Initial Scrutiny check on the Society's 1991 regulatory returns.** GAD note the cover for the required minimum margin is 1.67 (reduced from 1.77 the previous year). They do not identify any concerns.
10/08/1992	**GAD complete the A2 Initial Scrutiny check on the Society's 1991 regulatory returns.** GAD raise Equitable's priority rating from 3 to 2. In response to question 3, *'Do the interest rates used look supportable in terms of Regulation 59'*, GAD answer *'Yes'*. GAD also write: *'10% for* [immediate annuities] *very high – query'.* GAD identify three aspects that look worrying: *(1) Low* [free asset ratio] *(2) Other management expenses* *(3) Transfer from* [investment reserve]. GAD identify no items to notify to DTI, to be taken up immediately with Equitable. Accompanying the Initial Scrutiny check are two forms (*Form B* and *Form C1*) tabulating key figures disclosed in the 1987 to 1991 returns.
19/08/1992	Line Supervisor B sends the Head of Life Insurance a draft note (which was copied to GAD) to the Secretary of State for Trade and Industry's Private Office, in relation to a proposed visit to Equitable. Under the heading *'Background'*, Line Supervisor B says: *The 1990 returns showed rapid expansion in new premium income, due partly to the success of the Society's with-profits Bond. Its solvency margin, whilst well covered, has reduced in recent years mainly due to falls in the market value of equities.*
21/08/1992	GAD's Directing Actuary A provides comments to DTI's Head of Life Insurance on the draft note of 19/08/1992. The Directing Actuary says: *There is one aspect of* [Line Supervisor B's] *minute to you ... which makes me feel uncomfortable.*

... when referring to the December 1990 solvency position, it is stated that the solvency margin was well covered, but that it had reduced in recent years mainly due to falls in the value of equities. Since 1990, however, the solvency margin position has worsened, and is a cause for some concern, as I indicated in my minute of 30 July 1992 to [the Director of Insurance] *on free asset ratios. Equitable Life will be one of the first companies we will be talking to in our imminent discussions with appointed actuaries.*

26/08/1992 DTI amend the note to the Minister's Private Office to state that Equitable's solvency margin *'which had reduced in recent years has been further eroded this year mainly due to falls in the market value of equities, and we will be discussing the company's position with its Appointed Actuary in the next week or so'.*

27/08/1992 GAD write to Equitable's Appointed Actuary about the effect of current market conditions on life insurers. GAD point out that, if the current weakness in investment and foreign exchange markets continues, it could lead to a further reduction in the free asset ratios of companies. GAD say that they are, therefore, arranging meetings with a number of Appointed Actuaries to discuss the circumstances of their particular companies, and those meetings may be followed up in due course by meetings with DTI.

GAD continue:

We would like to hold a meeting with you, the purpose of which would be to discuss, on a technical basis, the current and projected financial position of your company given the present economic conditions and what actions you might contemplate. We [would] *also like to discuss your company's bonus policy in the context of the company's intended investment strategy, and of the methods that you use to determine the appropriate levels of bonus rates and resilience reserves.*

GAD say that the meeting is to cover the following four broad topics:

1. Under the heading *'Financial Position'*:

[We] *would like to see and discuss both the current and projected financial positions of your company (including the effect on the financial position of assuming a pessimistic investment scenario over the next two years). We would also like to discuss the possible courses of action contemplated that could if necessary be taken to improve the company's financial situation. It would be helpful if we could have a copy prior to the meeting of any relevant report or business plan that has been prepared for this purpose.*

2. Under the heading *'Bonus Policy'*:

[We] *would like to discuss the methods that you use to set the level of your bonus rates (including how you calculate asset shares and how they relate to total payouts), the investment return required to support current bonus rates (including unitised with-profit) and how you satisfy yourself that those levels are justified. We also wish to discuss with you the level of bonuses that you expect to recommend for 1992 and their sustainability over the next few years in the event of only low rates of investment return being available.*

3. Under the heading *'Investment Policy'*:

[We] *would like to know what investment return has been earned on the with-profits fund over the last five years and discuss the expected rates of return over the next few years that are being assumed. Also, we would like to know whether any significant changes of investment mix or policy are planned or have taken place this year.*

4. Under the heading *'Resilience Reserves'*:

> [We] *wish to understand better how you currently perform the resilience test and what margins remain in your valuation bases after applying the test. We would also like to discuss what modifications you may wish to make to that test at the end of 1992.*

28/08/1992 GAD's Directing Actuary A circulates a note within GAD, following the letter to Equitable of 27/08/1992 (and similar letters sent to other companies). The Directing Actuary says that DTI wish to attend the meetings with Appointed Actuaries.

Behind this note on the relevant GAD file is an undated note about these meetings. On the timings of the meetings, the note says:

> *For many companies, the present criteria for the allocation of a Priority rating is adequate, but in the present state of the market, and in light of the fact that many with profits offices have been over-distributing surplus in recent times, we should give greater consideration to the amount of asset cover provided.*
>
> *If* [the free assets ratio is greater than] *10%, allocate priority #3*
>
> *If* [the free assets ratio is less than] *5%, arrange to talk to* [the Appointed Actuary] *before end September*
>
> *If* [the free assets ratio is less than] *10%, arrange to talk to* [the Appointed Actuary] *before end November*

On the issues that GAD should cover at the meetings, the note says:

> *Ask what plans the* [Appointed Actuary] *has to cope with the situation where equities do <u>not</u> yield the 11% or so assumed by dividend policy over the next few years.*
>
> *Apply pressure to the* [Appointed Actuary] *to provide realistic reports to the Board on future earnings aspirations, and through the* [Appointed Actuary] *to the Board to reduce bonus levels*
>
> *Enquire about asset share technology and methodology*
>
> *Discuss investment mix, strategy, "what if?" scenarios*
>
> *Refute argument (at least for the larger companies) that they can sell equities and go into gilts*
>
> *Ask for a plan of operations to restore a satisfactory asset-cover situation*
>
> *Suggest that the company might <u>apply</u> for an Implicit Item to provide a fall-back in the event that the situation deteriorates still further*

08/09/1992 [entry 1] GAD confirm with Equitable the meeting arranged for 15/09/1992.

08/09/1992 [entry 2] DTI's Line Supervisor B telephones an Independent Financial Adviser who has heard that DTI are investigating Equitable and are requiring them to submit quarterly returns because of their solvency position. The Line Supervisor explains that the cover for Equitable's solvency had reduced and suggests that the Adviser should compare the Society's 1991 returns with previous ones. The Line Supervisor's note of the call concludes: *'Said I couldn't comment on quarterlies situation. Said all* [companies] *had been affected by fall in equities, including Equitable'.*

10/09/1992 Equitable send GAD ten pages of financial data as background for the meeting on 15/09/1992. This includes the following information:

1) Equitable's valuation position at 31 July 1992

Equitable provide information about their estimated solvency position as at 31 July 1992 under the valuation methods used in their appendix and main valuations, being:

a) Minimum statutory reserves (including mismatch)

	£m
Market value of assets	*8,012.5*
Estimated liabilities	*7,255.6*
Available assets	*756.9*
Required minimum margin	*308.0*
Excess (deficiency) of available assets	*448.9*
Yield on assets hypothecated to minimum statutory reserves	*7.9%*

The position is, therefore, somewhat stronger than that at 31.12.91. It should also be remembered that no account is being taken of "future profits".

b) Published reserves (31.12.91 basis)

	£m
Market value of assets	*8,012.5*
Estimated liabilities	*7,630.4*
Available assets	*382.1*
Required minimum margin	*323.0*
Excess (deficiency) of available assets	*59.1*

On this basis the published position would look weaker than at 31.12.91 due to the low investment return experienced so far this year.

2) the projected positions for 31 December 1992 and 31 December 1993

On the projected position to 31 December 1992, Equitable provide the following information:

Assumptions: – asset values and yields at 31.7.92 levels i.e. no capital growth on existing and new investments

– all new monies invested in gilt-edged stocks during the period 1.8.92 to 31.12.92

a) Minimum statutory reserves (including mismatch)

	£m
Market value of assets	*8,552.4*
Estimated liabilities	*7,646.1*
Available assets	*906.3*
Required minimum margin	*322.6*
Excess (deficiency) of available assets	*583.7*
Yield on assets hypothecated to minimum statutory reserves	*8.1%*
Cost of £1% bonus	
– increase in liabilities	*71.2*
– increase in minimum margin	*2.8*
	74.0

5.5% bonus could be declared whilst maintaining a similar "Form 9" position to that published at 31.12.91.

b) Published reserves (31.12.91 basis)

	£m
Market value of assets	*8,552.4*
Estimated liabilities	*8,166.8*
Available assets	*385.6*
Required minimum margin	*343.5*
Excess (deficiency) of available assets	*42.1*
Cost of £1% bonus	
– increase in liabilities	*62.3*
– increase in minimum margin	*2.5*
	64.8

Only a minimal bonus could be declared if it was decided to publish on this basis.

On the projected position to 31 December 1993, Equitable provide the following information:

Assumptions: – asset values and yields at 31.7.92 levels i.e. no capital growth on existing and new investments

– all new monies invested in gilt-edged stocks during 1993

– bonus rate of 5.5% declared for 1992

a) Minimum statutory reserves (including mismatch)

	£m
Market value of assets	*10,065.9*
Estimated liabilities	*9,111.0*
Available assets	*954.9*
Required minimum margin	*378.3*
Excess (deficiency) of available assets	*576.6*
Yield on assets hypotheticated to minimum statutory reserves	*8.4%*
Cost of £1% bonus	
– increase in liabilities	*86.0*
– increase in minimum margin	*3.4*
	89.4

A reasonable level of declared bonus could again be supported.

b) Published reserves (31.12.91 basis)

	£m
Market value of assets	*10,065.9*
Estimated liabilities	*9,968.6*
Available assets	*97.3*
Required minimum margin	*412.6*
Excess (deficiency) of available assets	*–315.3*
Cost of £1% bonus	
– increase in liabilities	*80.0*
– increase in minimum margin	*3.2*
	83.2

3) declared bonuses from 1985 to 1991

Equitable give the rates of declared bonus for 1985 to 1991. They say that they have actively managed the rates of bonus in the light of falling interest rates. The rates of declared bonus are:

1985	*13.00%*
1986	*12.25%*
1987	*11.25%*
1988	*11.25%*
1989	*11.25%*
1990	*11.25%*
1991	*10.25%*

4) policy values set against their asset shares for the years 1989 to 1991

Equitable provide the following information on '*Policy Values v Asset Shares*':

	31.12.89	*31.12.90*	*31.12.91*
	£m	*£m*	*£m*
Assets at market value	*5,705*	*5,785*	*7,368*
[Proportion] *of unrecouped strains (1)*	*150*	*150*	*179*
	5,855	*5,935*	*7,547*
Aggregate policy values (2)	*6,100*	*7,340*	*9,086*
– as % of assets	*104%*	*124%*	*120%*

A position of balance at 31.12.89 led to total policy values above asset values following the poor 1990 earnings.

Alternative view of 31.12.91 position:

	£m
Adjusted assets	*7,547*
Office reserves	*6,852*
Discounted future bonus	*627*
	7,479

This presentation indicates that asset values cover the discounted face value of total policy values. A charge on future earnings would, therefore, enable nominal policy values to be maintained.

Notes:

(1) The unrecouped strains are the as yet unrecouped new business financing strains accumulated with interest, which are deemed to be a loan repayable when members leave the fund.

(2) Aggregate policy values are the present values of guaranteed benefits plus final/terminal bonuses at the rates then current.

GAD highlight some of the information provided. GAD mark with a question mark Equitable's statement that total policy values as at 31 December 1991 are £9,086m and represent 120% of Equitable's assets at market value. GAD also note that the *'alternative view of 31.12.91 position'* involves the discounting of terminal bonus values.

5) the investment return for with-profits policyholders for the years 1987 to 1993
Equitable provide the investment returns deemed to be available to the with-profits fund. These are:

Year	*Return*	
1987	*8.9%*	
1988	*15.1%*	
1989	*26.0%*	
1990	*–11.3%*	
1991	*14.0%*	
1992	*4.3%*	– *implicit in projection* [for 31 December 1992]
1993	*7.1%*	– *implicit in projection* [for 31 December 1993]

Under these figures, Equitable note that: *'A significantly higher return is being earned on 1992 new money due to the concentration on fixed interest investments this year'.*

6) their investment strategy
Equitable set out the proportion of assets allocated to the different types of investments. This shows a change in the distribution of their assets towards a larger proportion held as fixed interest assets.

1992

7) some commercial factors
Under the heading '*Commercial Factors*', Equitable state:

a) Contracts incorporate modest guarantees (3.5% for pensions, 0% for life).

b) Expenses are rigorously controlled to be within the contract loadings.

c) The Society has stated consistently that future bonuses will reflect future investment conditions.

8) their mismatching reserve calculations
Equitable set out the mathematical reserves required:

a) under their *'Published net premium'* valuation;

b) in investment conditions where interest rates increase by 3% and equity and property values decrease by 25%; and

c) in investment conditions where interest rates decrease by 3% and equity and property values decrease by 25%. Equitable state that the total reserves required in a) are £6,452.57m.

For the scenario set out in b), Equitable state:

The total reserves required are £6,843.00m. Therefore a mismatching reserve of £390.43m is required in addition to the published net premium reserves.

For the scenario set out in c), Equitable state:

The total reserves required are £6,816.58m. Therefore a mismatching reserve of £364.01m is required in addition to the published net premium reserves.

Under the heading '*Summary*', Equitable say:

> *As the mismatching reserve required in the +3%/–25% test is greater than that required in the –3%/–25% test, the mismatching reserve is £390.43m.*

	£m
Published net premium reserves	*6,452.57*
Mismatching reserve	*390.43*
Minimum statutory reserves	*6,843.00*
Published gross premium reserves	*6,851.96*

15/09/1992 DTI (Line Supervisor B) and GAD (Scrutinising Actuary B and Chief Actuary B) meet Equitable's Appointed Actuary. GAD open the meeting by explaining that:

> *... DTI were concerned about the position of with profit offices in the event of a poor investment performance in 1992 and 1993.*

The Appointed Actuary brings to the meeting papers setting out financial projections and information about past performance. A note of the meeting is prepared by GAD following receipt of Equitable's letter of 17/09/1992 (see entry below). GAD's note includes comments on that letter.

In their note, GAD draw out some of the figures in the financial projections provided, including that:

> *... the projected position at 31 December 1992 assuming that assets/yields are at July 1992 levels i.e. no capital growth on existing and new investments. These figures assume all new monies are invested in gilts and take into account the effect of new business in the rest of 1992. On the minimum statutory basis there would be mathematical reserves of £7646M (*[excluding] *1992 bonuses) against assets of £8552M. Available assets would be £906M to cover a* [required minimum margin] *of £323M and to meet the cost of bonuses (estimated at £400M at current levels).*
>
> *On a similar basis the projected figures at end of 1993 were provided, but assuming a bonus rate of 5.5% is declared at 1992. The result at the end of 1993 is available assets of £955M, to cover a* [required minimum margin] *of £378M and to meet the cost of 1993 bonuses (estimated at £492M at current levels).*

GAD also note that the projections show that:

> *... when equities are at a FTSE level of 2200 and properties fall by about 8% from their July levels ... In this scenario at the end of 1992 available assets would be £608M to cover* [the required minimum margin of] *£321M and the cost of 1992 bonuses. The excess would* <u>*not*</u> *be sufficient to maintain bonuses at their current level.*
>
> *Under similar assumptions, but assuming no bonuses declared for 1992, the position at the end of 1993 would be available assets of £1073M to cover* [the required minimum margin of] *£360M and bonuses (the cost of 1 years bonus at current levels is £440M).*

GAD's note continues:

> [The Appointed Actuary] *said that the society believed in active management of declared bonus rates in the light of falling interest rates. Bonus rates had been reduced in the past years and they felt able to reduce them again if necessary (they did not use* [independent

1992

financial advisers]). *He mentioned that so far no decision had been taken on 1992 bonus rates. The Board of Equitable has been briefed on all eventualities including a nil bonus rate scenario for this year.*

On Investment Policy [the Appointed Actuary] *said that currently all new monies were being invested in gilts and other fixed interest securities. There had also been a switch in 1992 of £300M of assets from equities to fixed interest.*

There had been a negative return on investment in 1990 of –11.3%. So far this had not been recovered, although the return in 1991 was 14%.

[The Appointed Actuary] *included in the papers he gave to GAD, a note of how the calculations for the resilience test were carried out. We raised the question of whether the society would be likely to seek modifications to the test at the end of 1992, [the Appointed Actuary] had given little thought to this issue.*

[The Appointed Actuary] *refers in his letter of 17 September to possible changes that might be made at the end of 1992 to weaken the valuation basis. He thinks that possible weakening in the basis could release up to £150M. An implicit item for future profits would provide them with an additional margin of at least £500M.*

GAD conclude their note by saying:

In [the Appointed Actuary's] *view the society incorporates modest guarantees into its contracts (3½% per annum growth on pensions). He implied that the liability valuation regulations were too stringent. Hence they forced the society into safeguarding themselves by investing in fixed interest securities when they felt that equities were a better long-term investment.*

Our view is that the society has over-distributed in the last few years, compared with the return on investments. This has eroded the level of free assets available in the society, which are needed to provide for market changes in the value of assets.

1992

17/09/1992 Equitable's Appointed Actuary writes to GAD following the meeting. He provides additional information about the possible 1992 and 1993 year end positions, assuming that the FTSE 100 Index stands at 2200 at those dates. The Appointed Actuary says that, in these projections, *'the Society is well able to meet the regulatory requirements though the implications for bonuses would have to be considered carefully'*. The Appointed Actuary notes that GAD had asked at the meeting about *'the extent to which the Society's minimum statutory reserving basis might be weakened by removing "unnecessary" margins'*. In response, the Appointed Actuary says that:

- the AIDS reserve of £50m might be excessive, given downward revision of estimated mortality;
- some weakening might be possible *'on account of zillmerisation though I would not expect any resulting release of reserves to exceed more than about £100m'*; and
- there could be some margins in the application of the resilience test arising from the Government Actuary's letter of 31/07/1992 and from the process of asset hypothecation.

GAD sideline the point about some weakening potentially being possible on account of zillmerisation.

Equitable's Appointed Actuary also points out that, looking ahead to the end of 1992 and 1993, the Society has available a more substantial margin through a future profits implicit item. The Appointed Actuary anticipates that, even on the assumptions in the projections provided, an implicit item of at least £500m could be justified at 31 December 1992.

The additional projected financial positions provided are as follows. For 31 December 1992:

Assumptions: – asset values and yields at 31.7.92 levels except that equities/properties at FTSE 100 "2200" level no capital growth on existing and new investments

– all new monies invested in gilt-edged stocks during the period 1.8.92 to 31.12.92

Minimum statutory reserves (including mismatch)

	£m
Market value of assets	8,221.9
Estimated liabilities	7,614.3
Available assets	607.6
Required minimum margin	321.4
Excess (deficiency) of available assets	286.3
Cost of £1% bonus	
– increase in liabilities	76.6
– increase in minimum margin	3.0
	79.6

For 31 December 1993:

Assumptions: – asset values and yields at 31.7.92 levels except that equities/properties at FTSE 100 "2200" level no capital growth on existing and new investments

– all new monies invested in gilt-edged stocks during 1993

– no bonus declared for 1992

Minimum statutory reserves (including mismatch)

	£m
Market value of assets	9,734.9
Estimated liabilities	8,661.9
Available assets	1,073.1
Required minimum margin	360.3
Excess (deficiency) of available assets	712.8
Cost of £1% bonus	
– increase in liabilities	77.2
– increase in minimum margin	3.1
	80.3

29/10/1992 **GAD complete their detailed scrutiny of the Society's 1991 regulatory returns.** GAD write to DTI with a report on the results of their work. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) GAD note:

The company continued to expand rapidly in 1991. Total premiums received amounted to £1,715m [against £1,345m in 1990 and £1,040m in 1989]. *Most of these premiums are either single premiums or renewable single premiums on pension schemes. Contractual annual premiums in force at the end of 1991 amounted to only £75m.*

The total assets of the company were £7,452m at the end of 1991. It is difficult to give a picture of growth of the company in terms of total assets as there have been fairly large changes in the market values of assets in the past 2 years. However if we exclude transfers from investment reserve [the return] *shows an increase in the fund of £953m in 1990 and £1,208m in 1991.*

GAD report that the 1991 returns show that the Society had total available assets of £488m to cover a required minimum margin of £293m (compared with £413m to cover the required minimum margin of £233m in the 1990 returns, and £974m to cover the required minimum margin of £204m in the 1989 returns). GAD point out that Equitable were *'one of the companies which we have seen recently in connection with their low cover for the* [required minimum margin] *in 1991 and future prospects'*. GAD explain the Society's approach of publishing its valuation result using a bonus reserve basis with an alternative net premium basis shown as an appendix, *'in order to comply with the regulations'*. GAD say that their comments relate to the appendix net premium valuation.

GAD advise DTI that:

At the end of 1991 the U.K. equity market was at about the same level as that at the end of 1989. Also some guilt prices were at a higher level in 1991. It is therefore reasonable to compare these two year ends rather than the 1990 position when markets were very depressed.

Total available assets in 1991 were £488m compared with £974m in 1989. The net transfer from investment reserve in non-linked funds in the two years was £185m. Hence total non-linked assets must have fallen in value by £301m.

GAD say that:

A comparison of the net premium valuation bases used at the end of the year shows a weakening in the 1991 bases as compared with 1989. This is true of a number of companies. What we have compared here is the average valuation rate of interest employed by the actuary with the average rate of interest earned on the corresponding hypothecated assets (using the highest yielding assets first).

GAD advise DTI that:

There appears to be little or no margin in the interest rates used in the 1991 valuation and we have asked the actuary a question relevant to this point.

GAD continue:

Why has this situation arisen? We know from our recent talks with [the Appointed Actuary] *that the with profits assets earned –11.3% in 1990 and +14.0% in 1991. These rates take into account both capital changes and interest earnings, so the return on with profit assets was only about +3% for the two years. This is after making allowance for the high rates of interest that the company needs to earn on its non-profit contract (up to 10%) and the 3½% p.a. guarantees given on with profit contracts.*

Total bonuses paid to policyholders cost £432m in 1989 and £456m in 1991. The actual net transfer from investment reserve to the fund on non-linked assets in the two years was £185m.

In order to pay bonuses in the two years the company needed to earn 11¼% per annum on the assets backing the with profit contracts. The amount earned would include interest income and capital gains. In fact the company earned about +3% over the two years instead of the required +23%, and this is the main reason why the available assets have been reduced and the valuation basis has been weakened. A major part of the bonuses have been paid out of (i) a weakening of the valuation basis and (ii) transfers from investment reserve.

GAD note that:

... despite the lower cover for the [required minimum margin]*, the company still had over 60% of its non-linked assets invested in equities and property. We understand from recent discussions with* [the Appointed Actuary] *that they are now investing more in gilts.*

The company's new business figures have increased in the past few years and we wonder whether this has given rise to any significant strains on the fund. We have asked a question about this in our letter to the company.

On the same day, GAD write to Equitable's Appointed Actuary to explain that GAD have completed their examination of the 1991 returns. GAD ask the Society to:

(1) [explain] *... how the with profit immediate contract works in practice? How do the reversionary bonuses and final bonus payments affect the amount of annuity paid each year?*

(2) [explain why the return] *shows that the proportion of reserves not matched by assets in the same currency is 7.7% whereas in the previous year it was shown as nil. Is this a change in policy and, if so, may we please have an explanation for this? What currencies and what types of investment are represented by the 7.7% figure, and what liabilities are they deemed to cover?*

(3) [clarify a paragraph of the returns.] *Would you please provide us with an example of how this works in practice including the effect of both reversionary and final bonuses?*

(4) [provide] *a matching rectangle showing what assets you would hypothecate to the net premium mathematical reserve shown in the appendix of Schedule 4?*

(5) [advise] *... the amount of the valuation strain in respect of the additional business written in 1991. Please include in this category all the additional benefits and their related premiums undertaken in 1991 including those on existing contracts where these additional benefits and the premiums received in 1991 were not taken into account in the 1990 valuation. This should include all new annual premium business, all single premiums business and all regular premiums received in 1991 on policies which were undertaken in earlier years but where reserves set up in 1990 did not take account of future premiums.*

On the last point, GAD state: '*... we wish to know (i) the reserves set up at the end of 1991 (ii) the total cost of any bonuses allocated during 1991 and provided for in the 1991 returns (iii) the cost of any claims paid in 1991 (iv) the total premiums received in 1991 and (v) the total related expenses incurred in 1991*'.

GAD attach a copy of this letter to their note to DTI. Line Supervisor B, on her copy of GAD's note, comments that the fall in total available assets from £974m in 1989 to £488m in 1991 is a '*big difference!*'.

04/11/1992 DTI's Head of Life Insurance passes his copy of GAD's note of 29/10/1992 to DTI's new Line Manager with responsibility for Equitable (Line Manager B) and adds:

This paints a worrying picture. Over-distribution by a company with a (deliberately) small coverage of its [required minimum margin] *and a (continuing) policy of high equity exposure. I think we should ask GAD for a fuller assessment of the position and of the options available to the company in the event of a significant further downturn in the market (unless we have this already, in which case I should like to see it).*

Line Manager B adds a further note to Equitable's line supervisor:

[Please] *ask one specific question. If the investment yield (dividend + capital) is zero in 92 what would the position of the company be at end 92? How long could it continue with present bonuses in the face of a zero yield?*

These comments are later passed on to GAD (see 14/01/1993).

06/11/1992 Equitable's Appointed Actuary writes to GAD with a detailed reply to their letter of 29/10/1992 about the 1991 returns. In response to the five questions posed by GAD in their letter, the Society's Appointed Actuary:

(1) provides details of Equitable's immediate annuity with-profits product, including an example of how annuity payments are determined by bonus rates. The Appointed Actuary explains: *'You will see from the example of an annuity anticipating future bonuses of 6½% p.a. that the guaranteed benefits are reduced by a factor of 1/1.065 each year in anticipation of 6½% per annum bonuses. The total annuity value carried forward from one 31 December to the next is also divided by 1.065 for the same reason and by 1.035 to take account of 3½% interest guaranteed implicitly in the annuity rate used to calculate the initial level of annuity'*;

1992

(2) explains that the proportion of reserves not matched by assets in the same currency had been overstated and the correct figure should have been 2.9% (or zero in their appendix valuation). He says:

There has been no change of policy as regards the Society's investment policy which had led to sterling liabilities exceeding sterling assets for non-linked business. The proportion of non-linked assets comprising non-sterling assets was about 15% at both 31 December 1990 and 31 December 1991. The increase in the proportion required in paragraph 9 of my valuation report is the result of differences between the relative changes in asset values and reserves during 1991.

We do not in general hypothecate specific assets to specific liabilities. For your information, however, the distributions by investment type and country of origin of the £1,075m of non-linked assets held on 31 December 1991 are shown below.

Fixed interest	*13%*	*Europe*	*39%*
Cash	*4%*	*North America*	*21%*
Equities	*83%*	*Far East/Australia*	*38%*
		Other	*2%*
	100%		*100%*

(3) provides the following example:

For each with profits policy or benefit a total value as at 31 December 1990 was held (for policies or benefits effected in 1991 this value was zero). That value was increased by the overall rate of return of 12% to which was added for each premium paid in 1991, the immediate value of guaranteed benefit secured by the premium increased by a proportionate part of 12% corresponding to the proportion of 1991 for which the benefit *participated in profits. The value calculated in this way is the total value as at 31 December 1991, and is used to calculate claim values in the period 1 April 1992 to 31 March 1993. At the next bonus declaration the 31 December 1991 will be rolled forward to 31 December 1992 in the same way as described above.*

Total claim values are calculated in the period 1 April 1992 to 31 March 1993 by increasing the 31 December 1991 total value by the additional final bonus rate on a proportionate daily basis. To this value is added for each premium paid after 31 December 1991 the value of the guaranteed benefit at the premium payment date increased by growth at the additional final bonus rate for the period of participation in profits.

The amount by which the total claim value exceeds the value of guaranteed benefits (including declared bonus) at the claim date is the final bonus element of that total claim value.

For example if a pension policy had a total value brought forward of £10,000 as at 31December 1990 and a premium payment secured guaranteed fund of £7,300 on 1December 1991, the total value as at 31 December 1991 would have been

10,000 x 1.12 + 7,300 x (1 + 0.12 x 30/365) = £18,572

If a further premium had been paid on 2 March 1992 securing guaranteed fund of £3,050, the total claim value on 1 April 1992 would have been

$$18{,}572 \text{ x } \left(1 + 0.11 \text{ x } \frac{92}{366}\right) + 3{,}050 \text{ x } \left(1 + 0.11 \text{ x } \frac{30}{366}\right) = £22{,}163.02$$

A couple of additional examples are also to be found in Appendix B attached to this letter.

1992

(4) provides the following table of ‘Assets hypothecated to net premium reserves’:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
Land	–	–	*708.76*	*708.76*
Gilts and other fixed interest	*605.29*	–	*1,207.31*	*1,812.60*
Variable interest securities	–	*79.63*	*6.52*	*86.15*
Equities	–	–	*2,793.17*	*2,793.17*
Debts	–	–	*22.39*	*22.39*
Other income producing assets	–	–	*530.37*	*530.37*
	605.29	*79.63*	*5,268.52*	*5,953.52*
Linked assets				*499.13*
				6,452.57

(5) explains that:

For valuation purposes the Society's records are in general held in grouped form according to the year of maturity or retirement. The data which you have requested is not, therefore, readily available and would take a great deal of time and effort to produce for you.

It seems to me that you are trying to assess the effect of new business on the Societys financial position in 1991. To assist you in this respect, therefore, we have compiled an analysis of the financial impact of 1991 new business. Please find that analysis in Appendix D of this letter.

New business is defined as new level annual premium and single premium business and new and incremental recurrent single premium business. Regular recurrent single premium renewals are not included.

The results of that analysis shows that new business did not produce a strain during 1991. This was due mainly to the fact that the valuation bases for recurrent single premium business released monies at outset in a similar way to the release produced by a zillmer adjustment.

The information set out in Appendix D is as follows:

New Business Analysis	*£m*
New business premiums received less expense loadings	*1,062.7*
Initial expense loadings from new business premiums received	*14.3*
Cost of reserves/benefits	*(984.3)*
Acquisition expenses	*(72.6)*
	20.1

12/11/1992 GAD reply to Equitable's Appointed Actuary saying that they will consider his letter of 06/11/1992 in detail shortly. GAD's Chief Actuary B asks Scrutinising Actuary B to review Equitable's letter.

11/12/1992 Equitable's Appointed Actuary writes to DTI to apply for a section 68 Order for a future profits implicit item of £360m, for possible use in their 1992 returns. The Appointed Actuary provides financial calculations in support of the application, suggesting that the Society could seek an Order up to the value of £766.8m.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.87	*254.7*	*65.0 (a)*	*65.3*	*124.4*
31.12.88	*259.2*	*–*	*61.4*	*197.8*
31.12.89	*337.4*	*–*	*89.9*	*247.5*
31.12.90	*422.5*	*557.0 (b)*	*26.6*	*(161.1)*
31.12.91	*596.5*	*(13.2) (c)*	*59.5*	*550.2*
				958.8

Average annual profit = 958.8/5 = £191.7m

Notes: *(a) £65.0m of the surplus arising in 1987 was an exceptional item arising from a change from a policy year to a calendar year method of bonus allocation for the bulk of the Society's with profits business.*

(b) Surplus was increased by £557.0m as a result of changes in valuation bases during 1990.

(c) Surplus was reduced by £13.2m as a result of changes in valuation bases during 1991.

The calculations state that the average period to run for the Society's in-force contracts is eight years. The Appointed Actuary explains:

> *The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.*

The calculations provided suggest that the maximum future profits permissible is 50% of £191.7m multiplied by eight years – that being £766.8m.

15/12/1992 DTI ask GAD for their views on the application. DTI query whether the request should have been made earlier in the year, around the time that the Society submitted its 1991 returns to the regulators.

23/12/1992 GAD inform DTI that they have '*... no comments on this application and it should be reasonable for you to issue the relevant S68 Order*'.

1993

07/01/1993	Equitable, in error, send DTI's Line Supervisor B a letter addressed to a financial adviser. Equitable ask DTI to destroy the letter. DTI nevertheless retain a copy of a paper attached to the letter, setting out some observations by Equitable on the financial strength of life companies. The paper, dated September 1992, had been prepared as a result of '*a growing preoccupation amongst intermediaries and financial commentators with the "financial strength" and the solvency ratio of life offices, and the implications for future bonuses*'. The Society's paper discusses free asset ratios, concluding in summary that it '*depends upon a number of complex variables and is not necessarily a reliable indication of anything*'. Line Supervisor B sends a copy of Equitable's paper to Line Manager B and to GAD. The Line Supervisor says that she retained the paper because '*it looked interesting. It's basically saying that having a low free asset ratio doesn't necessarily mean that a life office is in trouble*'. There is no record of any reaction by GAD.
12/01/1993	DTI send Equitable the section 68 Order for a future profits implicit item of £360m, for use in the 1992 returns. DTI remind Equitable that, in accordance with the Guidance Notes which were issued in 1984, before including the item in the forthcoming returns the company must update the calculations to demonstrate that they still support the amount used.
14/01/1993	DTI check with GAD to see if they had received a reply to their letter to Equitable of 29/10/1992. DTI ask GAD for their comments on the point made by the Head of Life Insurance on 29/10/1992, which was: *This paints a worrying picture. Over-distribution by a company with a (deliberately) small coverage of its* [required minimum margin] *and a (continuing) policy of high equity exposure. I think we should ask GAD for a fuller assessment of the position and of the options available to the company in the event of a significant further downturn in the market.* DTI also ask for GAD's comments on the point made by Line Manager B, which was: *If the investment yield (dividend + capital) is zero in 92 what would the position of the company be at end 92? How long could it continue with present bonuses in the face of a zero yield?*
18/01/1993	GAD's new scrutinising actuary (Scrutinising Actuary C) passes DTI a copy of Equitable's letter of 06/11/1992 to DTI. He says: *I also understand that you would like our comments on this response. I will try to let you have that as soon as I can. As you know, I have only just taken on responsibility for this company and it may take a little while to become adequately familiar with it.* *I also have your note of 14 January quoting comments from* [Head of Life Insurance and Line Manager B]*, which I will also deal with.*
05/02/1993	Line Supervisor B passes GAD's note of 18/01/1993 and the copy of Equitable's letter of 06/11/1992 to Line Manager B. In response, the Line Manager comments: '*I hope* [the Scrutinising Actuary's] *advice will be more digestible*'.
19/02/1993	DTI chase GAD for their comments on Equitable's response of 06/11/1992.
23/02/1993	GAD's Scrutinising Actuary C prepares a brief note of the Society's position. He sets out Equitable's cover for the required minimum margin from 1987 to 1991, along with the bonuses declared for 1990 and 1991, and notes that:

- 80-85% of policies are single premium with-profits;
- there is a 3.5% guarantee on pensions business;
- investment reserve is a notional terminal bonus reserve; and
- annual premiums in force only £75m at 31 December 1991.

02/03/1993	Equitable write to DTI asking for a certificate to confirm that they meet the minimum solvency requirements. Equitable say that they need the certificate to support a tender for an unspecified contract that they are submitting. DTI discuss this with Equitable and agree to provide '*a* [very] *basic certificate saying solvency was OK*'.

03/03/1993 [entry 1] GAD provide DTI with their comments on Equitable's response of 06/11/1992. GAD say that Equitable's replies to their questions (about the 1991 returns):

> *... seem satisfactory. The operation of the bonus system (as described in the responses to Questions 1 and 3) seems complex, and even more difficult for policyholders to understand than that of most companies, but there is nothing inherently unsound about it.*

In response to the comments by DTI, passed on in the note of 14/01/1993, GAD say that they think it is useful to draw attention to some '*unusual features*' of Equitable. GAD explain that Equitable are the leading non-commission-paying office and a mutual with a reputation for one of the lowest cost ratios in the UK industry. GAD point out that Equitable have a very high proportion of with-profits business and, even more unusually, that 80%-85% of their with-profits business is by single or recurrent single premiums, with the annual premiums in force being very modest in relation to the size of the office. GAD state this can be:

> *... both a strength and a weakness. A strength because it has only to secure the benefits bought by premiums already paid, and needs less by way of protection for the future premiums to be received under the contracts. A weakness because it will have less by way of "free reserves" and is therefore more vulnerable to changes in asset values.*

GAD note that Equitable have always published a bonus reserve valuation, and that the above feature of their products makes this more appropriate than the net premium approach. GAD add:

> *It also means that, although in general a bonus reserve valuation will reveal an <u>apparently</u> weaker position, in terms of* [the required minimum margin] *cover, than a net premium valuation, in the case of the Equitable the two results will be similar. This is borne out by the reported results in Schedule 4 and its Appendix.*

GAD note from reports of earlier meetings that, in setting bonus rates, Equitable have considerable regard to gilt yields. GAD comment that this is not entirely consistent with the bonus system or the asset mix but conclude that it no doubt explains what in retrospect was an overdistribution in 1990. GAD add:

> *It seems possible from the* [required minimum margin] *cover ratios that the overdistribution followed a period of some <u>under</u>distribution; but without going back into previous history in detail I could not be sure.*

GAD continue:

> *As a result the company will have downward pressure on bonuses even in years when there are adequate investment returns (income plus capital). We have written to the company (copy attached) asking for an estimate of the position at the end of 1992, together with details of their bonus distribution and the rate earned on the fund in 1992.*

GAD discuss the options for Equitable in the event of a significant downturn in the market. GAD explain:

> *Clearly to reduce declared bonuses, perhaps even to zero, is their first line of defence. They have reduced bonuses before and have clearly thought about doing so again. They could do this without substantially reducing payouts (which might not be justified by stock market levels) through changes to Terminal Bonus rates. (However they appear not to have the protection against market falls that most companies have in their* [terminal bonuses]*, because these do not represent a high proportion of their total payouts. Again this stems from the contract design.) As we have seen in earlier discussions, in adverse conditions there is some scope to weaken the valuation basis and the company could use the Section 68 Order that it has received (it will no doubt continue to apply for such an Order each year as a precaution).*

GAD conclude by saying:

> *Overall, I suspect that Equitable could survive a short-term fall in market levels, even a substantial one, as well as most companies. Their portfolio, however, must leave room for concern, were there to be a prolonged period of depressed share values. Their recent shift towards fixed interest securities will ease the difficulties, although they would argue at the expense of the expected ultimate benefit to policyholders.*

Line Supervisor B passes GAD's note to Line Manager B with her own note, which says: '*Below is a helpful update on Equitable's position. It will be interesting to see what their solvency looks like at the end of 92*'. The Line Supervisor also notes that she had recently read in the press that Equitable were reducing their bonuses.

03/03/1993 [entry 2] GAD write to Equitable's Appointed Actuary. GAD apologise for the fact that GAD had not written since their letter of 12/11/1992. GAD say:

> *There seems little point in asking further questions on the matters relating to the 1991 Returns. However we should be interested in your initial estimate of the actual position at the end of 1992 – in particular, what is the required minimum margin and what assets are available to cover this? What rate was actually earned on the fund in 1992? We would also like details of your bonus distribution, now or when it is announced (I have not spotted any announcement from The Equitable, but such things are easy to miss).*
>
> *In your letter of 6 November to* [Chief Actuary B]*, in Appendix C, you gave details of the hypothecation of assets to the net premium reserves. In due course we shall be asking for similar information as at 31 December 1992, and in addition will be seeking details of the yield on the various assets thus hypothecated. We shall also be interested in the corresponding analysis to Appendix D* [New Business Analysis] *for 1992. I thought it might be helpful to you to mention these matters now.*

09/03/1993 Equitable's Appointed Actuary responds to GAD's letter of 03/03/1993. He sets out the Society's estimated solvency position at the end of 1992, '*which as one would expect has improved since the end of the previous financial year. We have strengthened the liability valuation by around £100m this year and the 1992 figures are after that strengthening*'. The figures provided are:

	[Estimated] *31.12.92*	*31.12.91*
	£m	*£m*
Market value of assets	*9,414*	*7,340*
Liabilities	*8,554*	*6,852*
Available assets	*860*	*488*
Required minimum margin	*355*	*293*
Excess assets	*505*	*195*

The Appointed Actuary explains that Equitable had earned 17% on their assets in 1992 and he adds:

> *We have traditionally followed an internal discipline of linking the earnings passed on through declared bonuses to the general level of fixed interest rates. This year we have reduced declared rates further to a level equivalent to earnings of 8¾% pa.*

Equitable's Appointed Actuary encloses with his letter a copy of the press release on bonus rates for 1992, issued on 3 March 1993. He explains that, for pension policies, the Society had awarded an overall rate of return of 10% in respect of benefits bought on or before 31 December 1991 and 12% for benefits bought in 1992. The Society had reduced the reversionary bonus for pension business from 6.5% to 5%. The Appointed Actuary also encloses a copy of the Society's '*Bonuses*' booklet, '*which may be of help in providing further detail on our bonus systems*'. The Appointed Actuary explains that the information GAD would be seeking later in the year will be readily available from Equitable's internal analysis.

11/03/1993 [entry 1] GAD send DTI a copy of Equitable's letter of 09/03/1993. GAD do not enclose a copy of the booklet on bonuses, '*which is in any case similar to ones we have seen before*'. GAD add:

> *The letter does not, in my view, call for any further comment, and I do not propose to write to the company again until we carry out the scrutiny as at 31 December 1992. In the meantime, we regard the 1991 scrutiny as fully completed.*

DTI's Line Supervisor B notes that the estimated solvency position for 1992 '*looks a lot healthier than last year's*'.

11/03/1993 [entry 2] DTI write to Equitable, in reply to the Society's letter of 02/03/1993, enclosing the required solvency certificate.

26/04/1993 DTI's new Head of Life Insurance and another official meet Equitable for lunch, prompted by their announcement of a new branch in Germany. They discuss a number of technical matters associated with Equitable's business in Europe but also the issue of the FS Act 1986 and cost disclosure. On the latter, DTI record that:

> [Equitable] *have done their own "mock up" of a specimen disclosure statement, slightly modifying that in the OFT's blue report and will send us a copy. The effect of a company's current surrender philosophy could be illustrated by projections using own charges, own surrender philosophy and standard rates of return assumptions. They seemed less concerned than some that these indications would, by reason of market pressure or otherwise, amount to effective guarantees.*

29/04/1993 A DTI official writes to the Head of Life Insurance and Line Manager B, following a telephone call she had received from Equitable about the asset valuation reserve guidance notes. Equitable had said that the company has some index options which did not fall within the current admissible assets and wanted to know how they should go about getting a section 68 Order in order to be able to take these into account.

Submission of the 1992 regulatory returns

29/06/1993 **Equitable submit their 1992 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts for 1992, prepared in accordance with the Companies Act 1985 and dated 24 March 1993.

Equitable also send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £17,000 in respect of their 1992 returns.

These documents include the following information about Equitable's business and their financial position as at 31 December 1992.

Companies Act annual report and accounts
In their *President's Statement*, Equitable explain that, in common with most other financial institutions, Equitable believe they are probably entering a period of low investment returns and that bonuses, particularly reversionary bonuses, would have to reflect this. Equitable say the reductions in bonus they are making are in line with the market and that they are maintaining their competitive position in terms of the real returns provided to policyholders.

Equitable's President goes on to say:

> *In The Equitable we pride ourselves on allocating earnings from our investments across all classes and durations of contract in as fair and consistent a manner as possible. The fundamental philosophy is that each generation of policies should receive benefits commensurate with the earnings produced during its lifetime. Beyond the bounds of normal commercial prudence, it would be alien to our culture to hold back benefits from one generation to build reserves for a future generation. As we say in our literature, for new policyholders future bonuses must depend primarily upon the earnings produced on the investment of the new premiums. Any deliberate cross subsidies between generations would not be "equitable". I believe that we can rightly claim that for as long as comparative tables of policy results have been published, the Society can demonstrate that it has provided consistently good value across all types and durations of product.*

In their *Management Report*, Equitable explain that they had recently sent with-profits policyholders notices of their bonuses and statements together with a letter explaining Equitable's approach to bonuses for 1992. They state that the 1992 bonus declaration had once again demonstrated how the with-profits system smoothed fluctuations in investment performance and that Equitable had taken the opportunity of the good investment returns in 1992 to recover part of the '*support*' previously given by the smoothing process, particularly in respect of 1990 when investment returns were poor and below the returns allocated to policies.

In their *Directors' Report*, Equitable state that, in light of the current investment conditions, in particular the lower gilt yields, they had reduced reversionary bonuses to a level consistent with these gilt yields, which was their traditional approach.

The returns
Equitable's returns are again submitted in two parts covering Schedules 1, 3 and 6 and Schedule 4 to the ICAS Regulations 1983.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1992 as follows:

1993

Long term business admissible assets	*£9,564,764,000*
Total mathematical reserves (after distribution of surplus)	*£8,557,223,000*
Other insurance and non-insurance liabilities	*£164,195,000*
Available assets for long term business required minimum margin	*£843,346,000*
Required minimum margin for long term business	*£356,625,000*
Explicit required minimum margin	*£59,438,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£783,908,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£486,721,000*

Equitable do not use in their returns the future profits implicit item that has been agreed with DTI.

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

Form 45 shows that 43% of Equitable's non-linked assets are invested in equities, 8% in land and 40% in fixed and variable interest securities (compared with 51%, 11% and 27%, respectively, in 1991).

As in previous years, Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority are, for certain durations, higher than for those not issued or guaranteed by any government or public authority.

In the notes to this part of the returns, Equitable disclose that a provision has been made for the contingent liability for tax on unrealised capital gains in respect of non-linked business, which they estimate to be £1.2m.

Equitable state that they have been granted a section 68 Order which permits them to include in aggregate form details of their '*Personalised Funds*' in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns answers the questions set out in paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 54 of ICR 1981.

In response to paragraph 3 of Schedule 4, Equitable provide 14 pages of information about their non-linked contracts. Most of the information about the contracts remains unchanged from previous years.

As in previous years, in paragraph 3(xii) Equitable again disclose that they applied a guaranteed annuity rate to the accumulated cash fund generated by certain types of with-profits pension policies, stating that the guarantees applied to policies issued prior to 1 July 1988.

As in previous years, Equitable provide a description of their principal guarantees of terms. Equitable disclose that recurrent single premium and variable premium deferred annuity policies carry guaranteed terms under which future premiums could be paid.

In response to paragraph 4, Equitable provide 35 pages of information about their linked contracts. Most of the information about the contracts remains unchanged from the previous year.

As in previous years, in paragraph 5 Equitable disclose that they have tested the ability of the Society to hold reserves which satisfy Regulations 54 and 56 to 64 of ICR 1981 in the changed investment conditions described in DAA1. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

Equitable again state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. Equitable also disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £1.2m. The returns state that the Society considers that there are sufficient margins in the valuation basis to cover this amount and, accordingly, they hold no specific reserve.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 6(1) Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

As in previous years, in paragraph 7(b) Equitable do not explain the method by which they have made provision in the main valuation for expenses on recurrent single premium business.

As in previous years, at paragraph 7(d) Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

As in previous years, in paragraph 11 Equitable state that they have '*no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund*'.

As in previous years, in response to paragraph 12, Equitable simply state that they distribute profits in accordance with the principles determined by their Directors and their Articles of Association.

Equitable disclose in paragraph 13 that they had set the reversionary bonus for the main policy classes at 5.0%, compared with 6.5% in 1991. As in previous years, Equitable disclose that some retirement annuity and individual pension policyholders have been offered loans under a '*loanback*' arrangement.

In response to paragraph 16, Equitable describe their system for determining final bonus.

<u>Schedule 4 – main valuation (forms)</u>
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts, along with information on number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. Equitable again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of the fund surplus.

1993

<u>Schedule 4 - appendix valuation (text)</u>
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to ICAS Regulations 1983. They say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had '*regard to the purpose of the valuation*', has not been provided) is identical to that given in the main valuation.

As in previous years, in response to paragraph 5(1)(a) Equitable state: '*In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued*'.

As in the main valuation, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their recurrent single premium with-profits pension business.

Unlike in the main valuation, in paragraph 7(b) Equitable explain the method by which they had made provision for future expenses on their recurrent single premium business.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

30/06/1993 **GAD complete the A1 Initial Scrutiny check on the Society's 1992 regulatory returns.** GAD note that the Society's cover for the required minimum margin is 2.36 (increased from 1.67 the previous year, and compared with the 2.42 estimated by Equitable on 09/03/1993). GAD do not identify any concerns.

05/07/1993 [entry 1] **GAD complete the A2 Initial Scrutiny check on the Society's 1992 regulatory returns.** GAD reduce Equitable's priority rating from 2 to 3 and note that a trivial amount of reinsurance is not with UK authorised companies. Under '*Aspects which look worrying*', GAD identify the valuation basis for unit-linked business, although they note that this is not a major class. Under '*Other notes*', GAD note that the proportion of assets invested in fixed interest securities has risen from 26% to 38%. GAD identify no items to notify to DTI, to be taken up immediately with Equitable.

Accompanying the initial scrutiny check are two forms (*Form B* and *Form C1*) tabulating key figures disclosed in the 1988 to 1992 returns. GAD also produce a new '*Form B – Initial Scrutiny Form*'. As with the previous version, this includes certain key figures disclosed in the returns.

05/07/1993 [entry 2] Equitable's Chief Executive/Appointed Actuary writes to the Government Actuary following a press report that GAD are to launch an investigation into the way life companies distribute bonuses to their policyholders. The Chief Executive says that the Society has a very open bonus system and so the consequences of such a survey are likely to be to their advantage. However, he expresses concern that the intended survey was announced first in the press rather than direct to companies' Chief Executives, that it may further weaken confidence in the industry, and that it may be a precursor of tighter regulation, for example of bonus rates.

The relevant press article quotes the Government Actuary as saying:

> *The Department of Trade and ourselves are considering sending out a questionnaire to get information on two fronts – what companies say to policyholders when they market the contracts, and what their actuaries actually do when deciding on bonus allocation and distribution among their different types of policyholder.*

The article also reports:

> *There are two main areas of concern, says* [the Government Actuary]. *First, the Department of Trade is worried that proprietary companies, those that have outside shareholders, may be putting the interest of shareholders above those of policyholders and giving them more than their fair share of company profits ...*
>
> *Second, it will investigate whether marketing pressures may be causing certain groups of policyholders to receive less than they deserve, while other groups may be getting more.*

07/07/1993 [entry 1] The Government Actuary replies to Equitable's letter of 05/07/1993. He explains that the survey had been announced at a recent conference on current issues in life assurance and that there was no intention to weaken confidence in the industry or to introduce tighter regulation. The Government Actuary adds:

In one sense there is nothing new in this, since GAD and the DTI have always taken a close interest in policyholders' reasonable expectations. Indeed, this has been the central issue in many Section 49 Transfers [i.e. transfers of the whole or part of a company's long term business]*, in the setting up of sub-funds, in changes to the proportion of surplus going to shareholders and in a number of other areas. We have been signalling for some time that asset share calculations would be one of the aspects on which we would seek to focus during the next round of company visits. On top of this, there have been particular pressures on companies because of falling investment returns and some evidence that proprietary companies are under more than usual pressure to demonstrate value to shareholders. These and other factors pointed to the need to focus on this area and for DTI to be seen to be doing something positive to indicate that it has policyholders' reasonable expectations very much in mind.*

The Government Actuary concludes by saying:

It is certainly no part of our remit to weaken confidence in the industry, but we do want to ensure that policyholders' reasonable expectations are given their due place in the thinking of all life offices, and not just the best ones. In my view a debate on these issues can only be a healthy thing.

Lastly, I should reassure you that there is no intention of making any fundamental changes to the style of supervision. As I have already mentioned, PRE has always played an important part in the thinking of DTI and GAD and will continue to do so. We are keen to ensure that best practice prevails but have no intention of introducing statutory regulation on bonus rates.

07/07/1993 [entry 2] Equitable's Appointed Actuary writes to DTI seeking their views on the possibility of raising subordinated loan capital from policyholders through the issue of bonds.

09/07/1993 Every insurance company is sent by DTI's Head of Life Insurance a letter in which he explains:

The Department has an ongoing responsibility to keep itself informed of developments within the life insurance industry, and a particular responsibility to protect policyholders' reasonable expectations. In this context we wish to gain a clearer picture of current industry practice in respect of bonus methodology.

We have therefore asked the Government Actuary's Department to conduct a survey of leading UK offices which write with-profits business, in order to obtain more detailed information about companies' bonus philosophies, and the actuarial techniques used in assessing bonus payments.

DTI enclose a letter from GAD to Appointed Actuaries, giving more detail on the survey and attaching the questionnaire. In that letter, GAD explain:

As I am sure you are aware, there is a growing debate within the life insurance industry over the most appropriate method for determining the distribution of surpluses arising in the long-term funds of with-profit offices. Actuaries have introduced some new methodologies for assessing bonuses including the technique known as "asset shares", although there is no clearly accepted definition of how these asset shares are calculated, and the art or science of asset shares is still not fully developed in actuarial literature. Moreover, there is no information available in the DTI returns about how appropriate rates of bonus are assessed.

GAD continue:

Accordingly, we have decided to conduct a survey of leading U.K. offices transacting with-profits business to ascertain how they determine and distribute surplus arising in their *long-term funds for policies becoming payable on surrender, death or maturity. This survey is intended to obtain more detailed information about companies bonus philosophies and the actuarial techniques applied in the assessment of appropriate final or terminal bonuses to be paid on (non-group) with-profit policies than is available elsewhere.*

The survey is sub-divided into two broad headings, (i) the content of current marketing literature, combined with information on the principles of distribution in the constitution of the company and (ii) the company's actual methodology in respect of the determination of appropriate levels of final or terminal bonus payable on with-profit policies.

Within the first heading, we are seeking information about references in current marketing literature, including those contained in offices' with-profit guides, to a number of specific aspects regarding the allocation of surplus to policyholders. For the purpose of this section of the survey, we are asking by way of example about references in any specific or general marketing literature and product particulars in respect of the current series of endowment assurance contracts. However, if there have been recent changes of significance in your marketing literature to references to the allocation of surplus between policyholders and shareholders, we would be grateful if you would draw this to our attention by suitable responses to the relevant questions, as we would also if different principles are applied for other classes of with-profits policies (both conventional and unitised, if appropriate).

Under the second heading of the survey, we have asked a number of questions about the methods and rationale by which rates of final or terminal bonus are assessed for endowment assurance contracts (though, again, additional information should be provided if differences of approach apply to other contracts). We have included some specific questions about the methods of determination and allocation of surplus arising from various potential sources.

GAD also state that they '*would not wish to rule out the possibility of publication of a summary of the results, though, if we did so, we would ensure that the responses of individual participating offices could not be identified*'.

20/07/1993 Equitable write to GAD enclosing their completed questionnaire for the with-profits survey. Within their responses to part (i) of GAD's survey (about marketing literature and principles of distribution), Equitable say that their Articles of Association give:

... the Society's Directors absolute discretion as to bonus allocations. Beyond that, there is no statement of bonus philosophy in the Society's constitution.

... The main statement of the Society's long-standing philosophy on bonus distribution in marketing literature is contained in ... the With Profits Guide ...

The Society explains further that their With-Profits Guides give no specific information on the period and magnitude of smoothing or the likely frequency of changes to final bonus rates. However, general comments in the Guide could be expected to lead policyholders to expect relatively infrequent changes to the latter.

Equitable enclose copies of their Articles of Association, their With-Profits Guide (dated May 1993), product particulars for endowment assurances (dated March 1993) and for personal pensions (dated October 1992), and the current version of their leaflet on bonuses (dated May 1993).

Equitable provide the detailed information sought in part (ii) of GAD's survey (about actual methodology for determining final or terminal bonuses). Equitable explain in particular:

- that, for surrenders, '*the full policy value (including final bonus) is normally adjusted to ensure that the surrender value paid does not exceed the underlying asset share. The level of adjustment required is monitored monthly*';
- that, when determining the annual expense level attributed to with-profits contracts for recurrent single premium business, '*allowance is made for an implicit fund charge of ½% pa. That is, the gross rate of accumulation ... is taken to be ½% pa higher for conventional contracts, such as endowment assurances, than for recurrent single premium contracts*';
- that, when assessing appropriate final or terminal bonuses, Equitable make no allowance for a charge for the guarantee provided in respect of benefits payable on maturity or for a contribution to an '*estate*';
- that Equitable do not discriminate between different contracts in their smoothing process;
- that the smoothing of final or terminal bonuses '*is determined by the relationship between the accumulation rates determined each year and actual investment earnings. That smoothing is also reflected in the comparison of the aggregate total policy values with actual asset values. In normal circumstances the Directors look to apply a 3 to 5 year averaging cycle but expect to apply that more flexibly in more unusual circumstances*'; and
- that, when valuing their assets for the above comparison, '*allowance is made for the accumulated new business strains which will be recouped from future premium loadings*'.

Equitable add: *'Part of the Society's stated philosophy is to achieve a reasonable degree of stability in proceeds with gradual, rather than sudden, changes in proceeds. The approach to smoothing needs to reflect that philosophy, particularly in volatile investment conditions'.*

21/07/1993	GAD thank Equitable for replying so quickly to the with-profits survey. GAD tell the Society that it was the first to respond.
23/07/1993 [entry 1]	DTI write to Equitable in response to their letter of 07/07/1993 about subordinated loans. DTI explain that, in principle, what Equitable suggest does not pose any fundamental problems, but Equitable would need to pursue specific issues with their DTI supervisor.
23/07/1993 [entry 2]	DTI's Line Manager B writes to an Equitable policyholder who had complained that Equitable's bonus policy was fundamentally flawed (in relation to the final bonuses paid on policies of different terms) and that their President's statements and published final bonus tables had been calculated to mislead investors. The Line Manager points out that '*life companies are in general reducing their bonuses and Equitable Life are not out of line with industry trends*'. Line Manager B explains that more sophisticated analytical methods have '*convinced many companies that their bonus policy has been tilted against longer-term policyholders*' and that companies are now redressing the balance to ensure equity for all policyholders.
03/08/1993	DTI's Line Manager B writes again to an Equitable policyholder (see 23/07/1993 [**entry 2**]). He explains that: '*The Secretary of State does have extensive powers to intervene in the affairs of insurance companies if, in his opinion, this is necessary to protect the reasonable expectations of policyholders*'. However, the Line Manager says that he does not consider on this occasion that it would be appropriate to use these powers, as '*Equitable appear to have taken the view that equity amongst all policyholders is best served by setting final bonus rates which are very similar (in terms of % per year of policy term) for policies of all terms*'.

Line Manager B continues that he '*would be very surprised if this turned out to be an unreasonable approach*' and that '*it is very much in line with the approach taken by the market generally*'. Line Manager B suggests that the policyholder may wish to pursue the matter with the Insurance Ombudsman and he provides their details.

16/08/1993 Following a similar exercise in the previous year, GAD's Directing Actuary A sends DTI's Director of Insurance details of the free asset ratios for companies as at 31 December 1992. In relation to mutual insurance companies, the Directing Actuary says that there are ten companies that they should have discussions with (being those with the lowest free asset ratios). Equitable are one of those companies.

The Directing Actuary concludes by saying:

> *Finally, and very importantly, free asset ratios as published in the DTI returns reflect the reserving basis used by the actuary in determining the company's liabilities. The ratios shown in the tables, therefore, do not take account of the varying strengths in those reserves, and some caution should be expressed when using them to indicate the relative financial strengths of companies.*

09/09/1993 Equitable's Appointed Actuary writes to DTI (wrongly addressed to GAD's Scrutinising Actuary C), enclosing a copy of the correspondence he has had with the department about hybrid capital/subordinated loans. The Appointed Actuary explains that Equitable are not short of capital for their business expansion and are not particularly attracted to paying 1.5% or 2% over gilt rate to the normal investment market just to '*strengthen*' the balance sheet. He says, however, that there would be:

> *... a significant attraction to policyholders in having access to an interest paying deposit type contract – and I would certainly rather give our members fatter returns rather than fund managers generally. The ensuing strengthening of the balance sheet would be a useful by product.*

The Appointed Actuary asks if DTI would be willing to support an application for a section 68 Order.

23/09/1993 DTI copy the letter of 09/09/1993 about hybrid capital to GAD's new Chief Actuary with responsibility for Equitable (Chief Actuary C) and ask for his advice.

24/09/1993 DTI's Director of Insurance asks officials for a list of those companies where the 1992 returns show a significant deterioration in solvency cover. The Directing Actuary says:

> *I leave it to your judgement as to how precisely to define "significant", but for non-life companies I am thinking of at least a five percentage point deterioration, and for life at least two or three. Clearly "significance" becomes greater if the company is actually close to the minimum required margin (or double it for non-life).*

The Director says that he is not concerned for this purpose with:

- *companies that are already on our lists of companies causing concern;*
- *subsidiaries in groups where group accounting concessions operate, unless there are particular problems in a group you want to draw to my attention;*
- *very small companies which are not of commercial or regulatory significance.*

30/09/1993 [entry 1] Every Appointed Actuary is sent by the Government Actuary a copy of DAA5 on reserving for AIDS.

30/09/1993 [entry 2]	Every insurance company is sent by the Government Actuary a copy of DAA6 on the resilience test. This supplements DAA4 sent on 31/07/1992. The letter is issued because the investment outlook has changed following the UK's departure from the Exchange Rate Mechanism. The Government Actuary explains that, for with-profits offices, the resilience of the valuation should now be tested against three rather than two scenarios, and that the revised guidance is to be used for the returns submitted in respect of 31 December 1993. An associated briefing note says that the new test does not represent a weakening over the previous test recommended by GAD.
01/10/1993	Equitable write to the Parliamentary Under-Secretary of State for Corporate Affairs, confirming the invitation to lunch with the Board on 27 April 1994. A handwritten note on the letter records that the visit is subsequently postponed until 26 October 1994.
08/10/1993 [entry 1]	GAD's Chief Actuary C seeks the views of GAD's three Directing Actuaries on Equitable's proposal in their letter of 09/09/1993. He suggests that the proposal could be contrary to the intentions of *'the Directive'* and hence in breach of section 16 of ICA 1982.
08/10/1993 [entry 2]	The office of the President of the Board of Trade writes to confirm acceptance of Equitable's invitation to attend a lunch with Equitable's Board on 23/02/1994.
14/10/1993 [entry 1]	GAD provide DTI with some preliminary thoughts on hybrid capital, in the light of Equitable's letter of 09/09/1993. GAD query if such deposits might be banking business and thus in breach of section 16 of ICA 1982. GAD state that it would be particularly important to subordinate the rights of depositors to those of policyholders. They suggest that the requirements of the conduct of business regulators may be of significance, particularly with regard to the way the product is marketed. GAD also set out some specific questions for Equitable, including: '*As the rate of interest would presumably need to be fairly high, perhaps above the market rate, how would the issue of these deposits benefit the security and, more importantly, the reasonable expectations of members generally?*'.
14/10/1993 [entry 2]	GAD write to Equitable to explain that GAD have passed the letter of 09/09/1993, together with their comments, to DTI for them to reply.
20/10/1993	In response to DTI's request of 24/09/1993, GAD send DTI information on the changes in insurance companies' solvency cover as between the 1991 and the 1992 returns. Of the 22 mutual companies listed, Equitable are recorded as having the third most improved cover for their required minimum margin from the 1991 to the 1992 returns – a percentage change of 41.83%.
22/10/1993	Gibraltar's Financial Services Commission write to DTI about the way that Equitable's branch in Guernsey are marketing a product in Gibraltar. The Commission express concern that Equitable are not offering *'best advice'* but that they can do nothing about this.
26/10/1993	A DTI official (and former Line Manager with responsibility for Equitable (Line Manager A)) writes to the Head of Life Insurance with the results of the exercise to establish which companies had shown a significant deterioration in their 1992 solvency cover compared with 1991. (See 24/09/1993.) The official attaches a list of companies supervised and explains that slightly less than half have experienced a reduction in their solvency margin. He suggests that the Director of Insurance's criteria for identifying companies should be modified to exclude:

> *a. companies in "intensive care". These are slightly different from those we report as "causing concern". Rather they are the companies which we recognise as weak or as having special problems, but which we do not actually report to the Minister, mainly because they have managed to struggle on over a number of years, mainly on the strength of "drip fed" capital. Reporting that they are in difficulties would be misleading. We nevertheless regard them as high priority and are in regular touch. Such companies are* [five named companies] *and many others. Almost all fall into* [the Director of Insurance's] *third category – small without much commercial significance (although their regulatory significance is high); and*
>
> *b. managed pension fund subsidiaries; these cause few problems. The business they do results in very little financial strain and they can, in fact, survive on very thin margins.*

Using this modified criteria and GAD's note of 16/08/1993, the official highlights 16 companies which *'we should be paying special attention to in the remainder of 1993 and 1994'*. This list includes Equitable, with a note that they are one of eleven companies *'from* [Directing Actuary A's] *free asset ratio list'*, but also one of four from this list which have shown a marked improvement in terms of solvency.

The official draws attention to Directing Actuary A's *'disclaimer about the various reserving bases used by different actuaries making it difficult to compare the strength of one office with another'*.

29/10/1993 Line Supervisor B writes to Line Manager B in response to GAD's note of 14/10/1993 about Equitable's hybrid capital proposal. She states that another DTI official does not think the proposed deposits could be regarded as banking business, but: *'His advice generally is to tread carefully ... (unless we as supervisors are totally convinced that Equitable is so strong that* [the] *proposal will be 100% beneficial)'*. She notes that, as supervisors, DTI would need to consider any section 68 Order. She states that there is no harm in getting more information from Equitable, and she attaches a draft letter to the company.

1993

01/11/1993 DTI write to Equitable's Appointed Actuary in response to his letter of 09/09/1993. DTI seek fuller details of Equitable's proposal, including how interest rates would be determined, how Equitable would finance the interest payments and what the repayment rights of both the depositor and Equitable would be. DTI also ask:

> *As the rate of interest would presumably need to be fairly high, perhaps above the market rate, how would the issue of these deposits benefit the security and, more importantly, the reasonable expectations of members generally?*

DTI conclude by saying:

> *Our view is that it would be particularly important that the rights of the* [depositors] *should be subordinated to those of the with-profits policyholders in respect of their reasonable expectations to future bonuses, not just their guaranteed benefits, and that this was clearly understood by the* [depositors].

05/11/1993 GAD write to Equitable's Appointed Actuary. GAD refer to the very useful series of discussions on the effect of market conditions on life insurers which they have held with a number of Appointed Actuaries towards the end of 1992 (see 15/09/1992). GAD seek a further meeting with Equitable to take account of any developments over the last year. GAD set out the matters they wish to pursue under four main topics:

<u>Financial position</u> – saying GAD wish to discuss both the current and projected position. GAD ask for a copy, prior to the meeting, of any relevant report or business plan.

Bonus policy – saying GAD wish to confirm their understanding of how Equitable set their annual reversionary bonus rates and the investment return required to support current bonus rates; to discuss the likely bonuses for 1993 and their sustainability over the next few years in the event of low rates of investment return; and to obtain information about the relationship of current payouts to asset shares and the period over which it is intended to smooth these payouts. GAD add that they may wish to clarify some points from Equitable's response to the with-profits survey.

Investment policy – saying GAD wish to discuss what rates of return Equitable are assuming for their projections and bonus policy.

Resilience reserves – saying GAD wish to discuss the potential effect of the modifications to the resilience test, as set out in the Government Actuary's letter of 30/09/1993.

The meeting takes place on 30/11/1993 (see entry below).

15/11/1993 Equitable ask DTI whether the questions in their letter of 01/11/1993 are of general application to any life company or just to Equitable.

18/11/1993 A DTI official advises, in relation to the letter of 22/10/1993 from the Gibraltar Financial Services Commission, that this is an issue of marketing rather than prudential regulation and, if there is a regulatory gap, then this would be a matter for Gibraltar.

25/11/1993 Equitable's Appointed Actuary provides GAD with some background documents ahead of the meeting on 30/11/1993. Those documents are in five categories, being:

1) Standard & Poor's insurance rating analysis for Equitable dated November 1993

The rating given is *'AA (Excellent)'*, which is explained as: *'Insurers rated "AA" offer excellent financial security. Capacity to meet policyholder obligations is strong under a variety of economic and underwriting conditions'*.

The rationale for the rating includes that:

> *On the basis of its published valuation, ELAS appears to have relatively weak free asset and investment leverage ratios: 2%-5% (since 1990) and above 920%, respectively. However, free assets are understated by the use of a very conservative valuation basis. Adjusted to a more conventional reserving basis, the free asset ratio is much stronger, near 10% in 1992, with investment leverage at a much more moderate level around 480%.* [Standard & Poor's] *expects these levels of strength to continue.*

It continues:

> *Because of substantial holdings of equity assets, high profit distribution to policyholders, and mutual status, ELAS's free asset base appears slightly more susceptible to sharp investment or economic fluctuations than some peers. However,* [Standard & Poor's] *believes this apparent susceptibility is balanced by ELAS's existing capital strength, limited sales of products with significant reserving strain, and the ability to maintain a favourable balance between policyholder reversionary and terminal bonuses.*

Under the heading *'Management and Corporate Strategy'*, the report says:

> *The Society minimizes any cross-subsidy of one group of policies by another. Its commitment to fairness has led to a high level of distribution and a strict limitation on any retention of today's policyholder profits for the security of future policyholders. This implies a lower level of published free assets than some competitors, though* [Standard & Poor's] *notes the use of a relatively strong valuation basis that significantly understates the level of the Society's free assets compared with other major U.K. offices.*

Under the heading *'Capitalisation'*, and in relation to Equitable's main valuation presented in their regulatory returns, the analysis says:

> *... on the basis of the published valuation, which uses a gross premium basis, ELAS had a modest free asset ratio at December 1992 of 5.1%* [and a] *ratio of available asset/minimum required margin of 236.5% ...*

The analysis goes on to say that Equitable's main valuation basis:

> *... understates the level of the Society's free assets, and that underlying financial strength is considerably stronger than published figures suggest.*

The analysis explains that the reason for this view is because:

> *Using an appropriate alternative net premium valuation for year-end 1992, ELAS would have a much stronger free asset ratio of about 10%* [and] *ratio of available assets/minimum margin near 340% ...*

<u>2) Monthly business statistics for the period ending 31 October 1993 (presented to the Equitable Board on 25 November 1993)</u>

These monthly business statistics comprise of seven reports, being:

- Revenue Analysis – Global Business
- The Equitable Life Assurance Society Balance Sheet
- "Equitable Management Company" – Global Business Profit & Loss Account
- "Equitable Management Company" – Non UK Business Profit & Loss Account
- Investment of net addition to fund
- UK with profits investment performance
- UK Linked business investment performance.

<u>3) Paper entitled *'Bonus Declaration at 31 December 1993'* (presented to the Equitable Board on 25 November 1993)</u>

The paper says that earnings on the with-profits fund are expected to be high at around 20 to 25%. However, it says that, due to the fall in interest rates, some of the return is spurious, and: *'If we took, as a board measure of the <u>intrinsic</u> return on assets for 1993, a weighted mix of the overall equity returns and the income yield only on fixed interest, the outcome would be a return of around 17%'*. The paper then advises that:

> *The relatively high level of nominal earnings in 1993, coupled with some relaxation on the regulatory side, as described in the quarterly review of revenue considered last month, means that, virtually irrespective of the bonus decisions taken this year, our published position at 31 December 1993 will be significantly "stronger" than last year. The presentational implications of our decisions are therefore much less important than has been the case in recent years. This year we can focus predominantly on fundamentals in formulating decisions and that is to be welcomed.*

Under the heading *'Total policy values'*, the paper says:

> *For our main classes of business, total policy values and, hence, final bonuses, are determined by rolling forward the value at the end of the previous year, together with subsequent premiums, at a "total growth rate". The key decision which the board needs to take regarding bonuses is the level of that total growth rate which then needs breaking up into declared and final bonus rates. The determination of appropriate bonus rates for other products is essentially a technical exercise.*

For 1990 and 1991 the total growth rate was 12% p.a. For 1992 a rate of 10% was applied to the benefits in force at the start of the year and 12% to premiums applied within the year i.e. for new money. That was in reflection of the relatively high earnings in 1992 and the need, on the older business, to recover part of the over-distribution in respect of 1990. Policy pay-outs are currently being determined by rolling forward 31 December 1992 values, together with subsequent premiums, at 10% p.a.

It continues:

For 1993 we need to decide what is the appropriate rate or rates in the light of the earnings position described ... above. An intrinsic return comparable to that earned in 1992 would indicate that similar total growth rates are appropriate – i.e. around 12% p.a. we also need to bear in mind that total policy values are still above the value of the underlying assets. To some extent 1993 might be regarded as the converse of 1990. Allocation of a relatively modest rate of around 12% when "usable" earnings are about 17% will restore a position of balance between assets and policy values. If earnings in future years are at relatively low levels the opportunity for such action may not recur for some time.

4) Paper entitled *'Revenue – Review of First 9 Months'* (presented to the Equitable Board on 27 October 1993)

The paper sets out the premium and investment income received and the payments made to policyholders.

Under the heading *'Earnings and solvency position'*, the paper says that the earnings on the with-profits fund for the first nine months of 1993 is 17.3%. The paper then explains that:

The relatively high earnings level to date has been associated with corresponding falls in income yields on both fixed interest securities and equities. The board are reminded that, in solvency terms, the effect of high earnings can be offset by the effects of the corresponding reduction in the income yield on the assets. As income yields fall, the discount rate which can be used in valuing the liabilities also falls. Purely on technical grounds, therefore, the liability valuation can grow as the capital values of the assets rise.

As discussed on previous occasions, the statutory minimum basis for liability reserves is laid down in regulations. These regulations have been supplemented by informal requirements specified by the Government Actuary. Although those requirements are not mandatory, most offices, including the Society, have chosen to set reserves at a level which meant the informal requirements were satisfied. That is, the requirements have led to an effective minimum basis somewhat stronger than the bare statutory minimum. That is the basis on which we have discussed "Form 9" presentations. The Government Actuary has recently announced a modification to those requirements in the face of a general view that the original requirements were unduly stringent in current investment conditions.

The paper continues:

As mentioned above, these additional requirements are not mandatory and [the Appointed Actuary] *may consider it appropriate either to challenge the requirements as inappropriate or set a basis somewhat stronger than that indicated by the requirements. To paint a picture of the range of outcomes the estimated "Form 9" position is shown below on 3 different bases – the valuation basis used at 31.12.92, the minimum indicated by the new requirements, and the traditional "premium basis" valuation used in 1989 and earlier years. The actual 31.12.92 position is also shown for comparison:*

	31.12.92 basis	30.9.93 positions Current GAD "minimum" basis	31.12.89 basis	31.12.92
	£m	*£m*	*£m*	*£m*
Assets at market value	*11772.9*	*11772.9*	*11772.9*	*9496.6*
– inadmissible assets and other adjustments	*–111.1*	*–111.1*	*–111.1*	*–96.1*
Asset value for DTI purposes	*11661.8*	*11661.8*	*11661.8*	*9400.5*
– mathematical reserves	*–9671.8(a)*	*–10136.7(a)*	*–10591.1(a)*	*–8557.2(b)*
Available assets	*1990.0*	*1525.1*	*1070.7*	*843.3*
– minimum statutory solvency margin	*–396.5*	*–411.2*	*–434.2*	*–356.6*
"Free" assets	*1593.5*	*1113.9*	*636.5*	*486.7*
Cost of £1% declared bonus	*56.4*	*59.3*	*63.4*	*N/A*

(a) excluding accrued declared bonus

(b) including cost of declared bonus

Continued use of the 31.12.92 basis is probably not tenable in view of the reduction in yields this year. If [the Appointed Actuary] *considered that use of a basis of similar strength to that indicated by current guidelines was appropriate, then that represents a point broadly mid-way between the 31.12.92 and 31.12.89 bases. At this level our published "strength" would be substantially greater than at 31.12.92. The figures indicate that a move back to our traditional basis is now possible but might result in an unacceptably "weak" published position at this stage. It should, however, be remembered that there is a hidden margin in the inadmissible assets. If either we sold the FTSE option before the year end or obtained a dispensation allowing us to bring it into account, some £60-70m would be added to the DTI value of assets and, consequently, the "free" assets.*

5) Paper entitled *'Cost Management and Control – Report on the First Nine Months'* (presented to the Equitable Board on 27 October 1993)

The paper comments on the accounts of the Equitable Management Company.

30/11/1993 GAD (Chief Actuary C and Scrutinising Actuary C) and DTI (Line Supervisor B) meet Equitable's Appointed Actuary. Scrutinising Actuary C's note of the meeting records the documents sent by Equitable prior to the meeting, including the *'recent very full report (paid for by Equitable!) from Standard & Poor's ... giving the company a very good rating'*. He also records the Appointed Actuary's view that some of the topics set out in GAD's letter of 05/11/1993 *'were not areas about which we as regulators had the right to enquire. Having said that, he was willing in practice to discuss anything we wished'*.

The Scrutinising Actuary notes that the meeting first discussed the likely bonus at the end of 1993 and that the Appointed Actuary had reported a further reduction in the declared rate of at least 1% leading to a bonus rate of 4% or less. This would need 7.5% to support, which approximated to the return on the gilt portfolio. The Scrutinising Actuary notes that the Appointed Actuary had said that he was expecting this to eliminate the recent excess of payouts over asset shares and that future bonuses would depend primarily on the returns earned on future premiums. The Scrutinising Actuary comments that this indicated possible further reductions and that Equitable *'appeared to be moving to a lower proportion of the total bonus payout being guaranteed (ie declared as distinct from terminal)'*.

Scrutinising Actuary C records that the meeting then turned to valuation issues and that the Appointed Actuary had indicated that the position at the end of 1993 would be significantly stronger than at the end of 1992, and that the new business strain expected in 1993 was only approximately £25m. GAD's note continues:

> *There was a discussion on the resilience test and* [the Appointed Actuary] *commented that as markets were currently moving the new tests were becoming tighter. Pensions business has a guaranteed annuity rate at about 7% but this was not as onerous as it appeared since, because "old" policies had been given the benefit of more modern features and options, it would be reasonable (in his view) for the allocation of final bonus to be conditional on the waiving of this guarantee.* [Chief Actuary C] *asked particularly about the resilience test in the context of the net premium valuation described in the Appendix to Schedule 4, since it was not explicitly mentioned there;* [the Appointed Actuary] *was sure that resilience had been allowed for, but promised to investigate and confirm.*

Scrutinising Actuary C notes that, in conclusion, the meeting had discussed investment policy and that the Appointed Actuary had explained that Equitable's investment decisions were *'a result of the judgement of the investment team and not driven by resilience concerns'*. At the meeting Equitable undertake to provide GAD with some further papers (see 07/04/1994).

DTI's copies of the papers Equitable provided to GAD prior to the meeting contain annotations made by Line Supervisor B at the meeting.

On the Board paper entitled *'Cost Management and Control – Report on the First Nine Months'*, Line Supervisor B notes:

> *Solvency position will be tightening. Guarantees – don't reserve for them ... We have no guarantees that bite.* [Chief Actuary C]*: PRE?*

On the Board paper headed *'Revenue – Review of First 9 Months'*, Line Supervisor B notes that the current GAD minimum basis incorporates the resilience reserve.

On the Board paper headed *'Bonus Declaration at 31 December 1993'*, Line Supervisor B notes that Equitable are likely to declare a reversionary bonus rate for 1993 of around 4% and that *'GAD said they'd be happy with* [this]*'*.

03/12/1993 Equitable apply for a section 68 Order for a future profits implicit item of £420m, for possible use in their 1993 returns. Equitable provide financial calculations in support of the application, suggesting that they could seek an Order up to the value of £966m.

These calculations include, for the estimated annual profits, that:

Year ending	(A) Total surplus	(B) Exceptional items	(C) Surplus arising from solvency margin	(A)-(B)-(C) Ordinary surplus
	£m	£m	£m	£m
31.12.88	259.2	–	61.4	197.8
31.12.89	337.4	–	89.9	247.5
31.12.90	422.5	557.0 (a)	26.6	(161.1)
31.12.91	596.5	(13.2) (b)	59.5	550.2
31.12.92	330.5	(89.4) (c)	46.4	373.5
				1207.9

Average annual profit = 1207.9/5 = £241.5m

Notes: (a) Surplus was increased by £557.0m as a result of changes in valuation bases during 1990.

(b) Surplus was reduced by £13.2m as a result of changes in valuation bases during 1991.

(c) Surplus was reduced by £89.4m as a result of changes in valuation bases during 1992.

The calculations state that the average period to run for the Society's in-force contracts is eight years. The Society's Appointed Actuary explains:

> *The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.*

The calculations suggest that the maximum future profits permissible is 50% of £241.5m multiplied by eight years – that being £966m.

07/12/1993 [entry 1] DTI inform the Society's Appointed Actuary that the questions in the Department's letter of 01/11/1993 apply to all life companies seeking to raise hybrid capital. DTI say that the questions are '*particularly relevant to with-profit offices, because of the need to take into account policyholders' reasonable expectations*'. There is no evidence of a further reply by Equitable.

DTI ask GAD for their views on Equitable's application for a section 68 Order.

07/12/1993 [entry 2] GAD produce a question by question summary of the responses to the survey on bonus distribution practice (see 09/07/1993). GAD's summary is largely factual and does not refer to companies by name. GAD do not include any further analysis of the responses or seek to draw any general conclusions.

09/12/1993 GAD provide DTI with comments on the application made on 03/12/1993. GAD say that it is Equitable's regular practice:

> *... to apply for such an Order shortly before the year end as a precautionary measure. So far as I can see they have never used it, and are most unlikely to do so as at 31 December 1993, but no doubt they feel that it is a useful protection against adverse market movements (for example) right at the end of the year. As usual the amount of the implicit item sought is well below the maximum allowed by the Regulations; on this occasion it is under half that maximum.*

1993

We suggest that you issue the Order in the usual way.

13/12/1993 DTI send Equitable the section 68 Order for a future profits implicit item of £420m, for use in the 1993 returns. DTI remind Equitable that, in accordance with the Guidance Notes which were issued in 1984, before including the item in the forthcoming returns, the company must update the calculations to demonstrate that they still support the amount used.

14/12/1993 Equitable apply to DTI for a section 68 Order to allow them to value a call option related to the FTSE 100 Index. Equitable give the current value of the option as approximately £35m.

21/12/1993 DTI write to Equitable in response to their letter of 14/12/1993. DTI state that they do not anticipate any undue difficulty in granting the requested Order. They ask, however, why Equitable have purchased this option and what part it plays in their portfolio management. DTI say that they understand from a report of the meeting on 30/11/1993 that Equitable may have some corresponding written options and seek details of these also.

23/12/1993 DTI's Head of Life Insurance writes to the Chief Executives of all life companies to ask for an assessment of their potential liability to compensation claims from policyholders who had received inappropriate advice about transfer or opt-out from occupational pension schemes. DTI seek in particular:

- the best available indication of the total policies sold since 1988;
- the percentages obtained through a direct sales force, independent financial advisers and appointed representatives;
- the percentages of business represented by both transfers and opt-outs from occupational schemes; and
- the best provisional estimate of the potential cost of compensation.

30/12/1993 Equitable write to DTI to explain that their Chief Executive is on holiday and will reply to the letter of 23/12/1993 on his return.

1994

01/01/1994	The Personal Investment Authority (PIA) becomes responsible for the regulation of the conduct of business by its member companies.

04/01/1994 Equitable write to DTI in response to their letter of 21/12/1993 about the requested section 68 Order. Equitable explain that they had set up the call option to provide some protection against substantial falls in UK equity values during the months leading up to the end of 1993. Equitable say this provides them with additional exposure to the benefits accruing from increasing equity values, but with limited downside risk. Equitable add that there is no corresponding written option.

05/01/1994 DTI's Line Manager B sends a note to the Head of Life Insurance headed *'1992 Returns – "Problem Companies"'*. The Line Manager notes that a meeting has been arranged for 6 January 1994 about these companies (which are those listed in Line Manager A's note of 26/10/1993). Line Manager B explains that he supervises two of them, including Equitable, but advises that the meeting clashes with another meeting he has already arranged. He explains that GAD held a mainly actuarial discussion with Equitable that Line Supervisor B had attended (see 30/11/1993). The Line Manager continues:

> *At the time* [Line Manager A's] *list was drawn up, both* [Equitable and the other company] *seemed rather marginal candidates for inclusion, a view confirmed by the recent contacts. They are both well-managed and reasonably successful; neither appears to be anywhere near the slippery slope at present. I believe that they need no special attention before submission of the 1993 returns.*

Line Manager B concludes: *'In the light of the above I have not asked* [Line Supervisor B] *to attend your meeting in my place although I believe she is available if you should need her'*.

18/01/1994 DTI write to the Chief Executives of all life companies, following up their letter of 23/12/1993 about potential liabilities in respect of pension mis-selling. DTI explain:

> *This letter gives you guidance on how the Department expects companies (including branches where appropriate) to reserve for any such mis-selling of personal pension contracts in future Companies Act accounts and DTI returns.*

DTI state:

> *Where a life office believes that it is likely to have a liability in respect of the mis-selling of pension business, the Department believes that such liability should be recognised in one or both of the following ways, depending on the specific circumstances:*
>
> - *the liability may be recorded as part of the mathematical reserves;*
> - *a provision may be made in the accounts, in accordance with generally accepted accounting practice.*

DTI go on to clarify that:

> *Such liabilities should not be omitted on the understanding that they can be covered by the solvency margin.*

DTI add: *'It is recognised that there may be considerable difficulty in assessing the extent of any liability, but this does not remove the obligation of the office to compute the best estimate of the amount, based upon available data and reasonable enquiries'*.

They advise that companies and Appointed Actuaries should consider if sums should be set aside to cover expenses in carrying out investigations into mis-selling.

DTI state:

> *Where the accounts or returns do not show explicitly the amount of the provision made resulting from mis-selling (eg. because it is included, in whole or in part, within the appointed actuary's valuation basis), companies will need to supply this additional information to the Department, and the directors and auditors will, of course, need to satisfy themselves as to the total provision made in accordance with normal procedures.*

Finally, DTI advise:

> *If the position when the DTI returns are submitted (no later than six months after the balance sheet date) is significantly different from the position when Companies Act accounts are drawn up, the returns should be adjusted as appropriate for such post-balance sheet events or other factors which result in changes being required to the provision estimates. Reference should also be made to any action taken by the shareholders to maintain the required solvency margin, if that has been necessary.*

20/01/1994 Equitable's Chief Executive writes to DTI in response to their letter of 23/12/1993. He provides the following answers to the questions raised by DTI:

- the total number of transferred personal pension plans currently in force is 37,678;
- Equitable sell only through their own directly employed sales force but *'much of the business was unsolicited and in "execution only" form'*;
- Equitable cannot provide the detail requested, but they expect the number of opt-outs from occupational pension schemes to be minimal, as their policy is not to accept such cases in normal circumstances; and
- Equitable currently have no known liability for transfer compensation, and consequently no provision will be allowed for in their 1993 returns. He points out that they *'do, of course, have significant free assets since our business is predominantly with-profits'*.

The Chief Executive adds that he believes:

> *... the impact on the Society's business caused by personal pensions transfers will not be significant. We ensure as far as we can that the policies for which we have a liability are valid policies which satisfy client needs. If there is any subsequent information to suggest otherwise, I will, of course, let you know.*

01/02/1994 Equitable's Chief Executive writes to DTI, having now received the further letter of 18/01/1994. The Chief Executive says:

> *The Society has no known liability for compensation for mis-selling of personal pension transfers and I see no need to make any provision in the Companies Act accounts. Given the general standard of the sales process in the Society, I should be very surprised if there were any significant liabilities anyway. If one did emerge, I should expect to include it in the mathematical reserves. Your point about informing the Department of any such provision in the DTI returns is noted.*

03/02/1994 Line Supervisor B writes to a DTI legal adviser enclosing the correspondence on Equitable's requested section 68 Order for their call option. The Line Supervisor asks the adviser to prepare the appropriate Order.

1994

09/02/1994 The DTI legal adviser raises with Line Supervisor B some queries about Equitable's requested section 68 Order. The adviser says that she assumes Equitable's need for a section 68 Order derives from the fact that the financial instrument is a contract for difference, rather than an option and she suggests, therefore, that it might be helpful to see the terms of the agreement. The adviser continues:

> *Before I let you have a draft Order, I think we need further confirmation that* [the bank] *is an "approved counterparty" as defined in the draft 1994 Regulations (Reg 50(1)).*

15/02/1994 DTI telephone Equitable regarding the queries DTI have about Equitable's requested section 68 Order (see 09/02/1994). DTI are told they will be called back. (There is no record of such a follow-up call. However, also see 17/02/1994 [**entry 1**].)

16/02/1994 DTI's Line Supervisor B provides the office of the President of the Board of Trade with briefing for his lunch with Equitable on 23/02/1994.

17/02/1994 [entry 1] Equitable provide DTI with the documentation requested on the call option. Equitable also explain:

> *Several of the forms in the Society's annual returns to the DTI are dependent on the outcome of the Society's application for this Section 68 Order. As work on the 1993 returns is in progress, it would be helpful if you could indicate when you expect to be able to let us know whether or not our application has been successful so that we may plan accordingly.*

(Note: Equitable recorded internally that other offices had obtained section 68 Orders and that it was surprising that DTI were not being more efficient in dealing with their request.)

17/02/1994 [entry 2] DTI's Director of Insurance writes to the Head of Life Insurance in response to the briefing of 16/02/1994. The Director asks whether the Head of Life Insurance knows anything about Equitable's overseas business or their future plans, as this is what the President of the Board of Trade was likely to be interested in.

DTI's Line Supervisor B provides slightly expanded briefing for the President (which is agreed with the Head of Life Insurance). In the background section, DTI state:

> *The latest returns submitted to DTI show its solvency position to be strong. In late 1993, the company received an "AA" rating from Standard & Poor's for its excellent claims paying ability.*

On mis-selling, DTI refer to the survey on possible mis-selling of pensions and note Equitable's response that they *'did not see a need to make any provision for compensation in its accounts, given the high standard of selling techniques in the Society'*.

Under the heading *'Deregulation'*, DTI state:

> *BACKGROUND – Insurance division deregulation subjects put forward are:*
>
> > *a) removal of the need for a five-yearly statement of life assurance business* [i.e. Schedule 5 of the returns]
> >
> > *b) removal of the need for an annual statement of insurance companies' connected intermediaries.*
>
> *LINE TO TAKE – we have consulted interested parties on these proposals and have received universal support for the removal of (b) above. Regarding (a), some consulting*

1994

actuaries have argued for its retention. We are considering the possibility of retaining some information from the present statement in the annual returns.

22/02/1994 DTI's Line Supervisor B provides the Head of Life Insurance with further briefing for the visit on 23/02/1994, which the Head is now attending on behalf of the President. She supplies solvency figures for 31 December 1991 and 31 December 1992. She refers to Equitable's correspondence about hybrid capital and a section 68 Order on their call option. She notes the visit to Equitable on 30/11/1993, which had been to discuss:

> *... financial issues, eg resilience testing, bonus policies, investment strategy (follow-up to similar meeting a year before).*

Line Supervisor B adds:

> *Managerial issue:* [The same person] *is currently* [Managing Director] *and* [Appointed Actuary]. *At our visit in May 1992, we expressed concern about possible conflict of interests of two roles. He did not see this as a problem. He is due to retire in c1995/6, by which time the two roles would be separated again.*

The Line Supervisor attaches to the note a copy of Equitable's 1992 annual report and accounts, prepared in accordance with the Companies Act 1985, and a copy of Standard & Poor's rating report for the Society.

23/02/1994 [entry 1] The Head of Life Insurance attends the lunch with Equitable. In a note to Line Supervisor B, the Head of Life Insurance records that he was asked to talk about supervision and he *'touched briefly on our philosophy of supervision; the way we operated; and current issues such as the Third Directives, FSA-related topics such as disclosure and personal pensions, and deregulation'*. The Head of Life Insurance's note continues:

> *I also described our interest in the future structure of the life industry, and our concern that the apparent over-capacity in the market should be reduced in as orderly a way as possible. This last point aroused considerable interest; several Board members (notably* [Equitable's President]*) were in favour of the Department taking a very active and interventionist approach to reduce the number of companies. Their motives were not entirely disinterested;* [Equitable's President] *said that he thought there was too much competition in the life insurance sector, and that Equitable would be glad if the DTI removed some competitors, so that the Equitable's market share could go up! I said that I did not see this as the DTI's role, a better response was greater disclosure, which a company like the Equitable, with low costs and no commission paid to intermediaries, should be able to benefit from.*

He also records: '[Equitable's Appointed Actuary] *had not realised that it was DTI rather than GAD which supervised his company. I explained the position, and told him that you were his supervisor. He was grateful for this information!'*.

23/02/1994 [entry 2] DTI's Line Supervisor B writes to the legal adviser in response to her queries of 09/02/1994. She provides the documentation sent by Equitable on 17/02/1994. She comments that the American bank which wrote the option satisfies the draft 1994 regulations. She asks the official to prepare the section 68 Order.

02/03/1994 The DTI legal adviser sends Line Supervisor B a draft section 68 Order.

09/03/1994 DTI send Equitable the section 68 Order in respect of the call option, to be used in Equitable's 1993 returns and with effect until 30 June 1994.

24/03/1994	GAD's Scrutinising Actuary C prepares some *'Detailed Scrutiny Notes'* for Equitable's 1992 returns.

Under *'Standard reporting items'*, the Scrutinising Actuary notes the cover for the required minimum margin. He also includes two tables providing a *'recent history'* of new business and of expenses. The tables cover the years 1989 to 1992.

Under *'Initial scrutiny notes'*, the Scrutinising Actuary reiterates the comments provided in the *'Aspects which look worrying'* and *'Other notes'* sections (see 05/07/1993 [**entry 1**]), those being: '[Unit-linked] *parameters include a generously high real growth assumption (however this is not a major class)'* and *'Fixed Interest proportion has risen to 38% (was 26%)'*.

Under *'Review of file'*, the Scrutinising Actuary notes that the minute of 3 March 1992 and the note of the meeting held on 30 November 1992 *'should be noted in particular'*. (Note: It appears that the correct references are to the comments to DTI on 03/03/1993 and the note of the meeting on 30/11/1993.)

Scrutinising Actuary C includes the remarks '*Nil*' under the headings of *'Report & Accounts'* and *'Returns – Schedules 1 – 3'*.

Under *'Returns – Schedule 4'*, the Actuary notes that, according to Equitable's letter of 09/03/1993, they had strengthened their valuation basis by about £100m. He also notes that reversionary and terminal bonus rates have again been reduced.

Finally, under *'Miscellaneous'*, the Scrutinising Actuary notes that Equitable consider their liabilities for mis-selling of personal pensions to be negligible. The Scrutinising Actuary states that he has checked Equitable's reply to GAD's survey on *'With Profits Policies: Distribution of Surpluses'* and there is *'nothing to note'*.

28/03/1994	**GAD complete their scrutiny of the Society's 1992 regulatory returns.** GAD write to DTI with a report on the results of their work. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) GAD provide a two page report and say that Equitable have *'again had a successful year overall'*. GAD note that Equitable:

> *... publish, rather unusually, a Bonus Reserve Valuation (BRV) and then, as an Appendix to Schedule 4, a Net Premium Valuation (NPV) in accordance with the Regulations. The reserves on the BRV are always demonstrated to be higher than those required using the NPV.*

GAD explain that the bonus reserve valuation shows cover for the required minimum margin of 2.36 (compared with 1.67 in 1991). GAD note that the net premium valuation shows cover of about 3.9. However, they *'have one or two questions about the NPV valuation basis'*. GAD state they are:

> *... satisfied that the BRV (and hence the overall returns as formally deposited) is, in aggregate, adequate according to the Regulations. As at the end of 1992 it was on a similar basis to 1991 but with some minor strengthening, amounting to some £100m overall.*

GAD draw attention to the fact that Equitable's business is largely with-profits and nearly all on a single or recurrent single premium basis. GAD say: *'As we have discussed before – see in particular my minute of 3 March 1992 – this makes it difficult to compare Equitable with other with profits companies'*.

GAD continue:

> *We have been concerned in the past that they have over-distributed and weakened their reserves. More recently matters seem to have been brought under better control. The*

situation as at 31 December 1992 is more satisfactory than the previous year, and as you will know from recent reports (eg the notes of the meeting held on 30 November last) we expect the position as at the end of 1993 to have improved still further. Reversionary and terminal bonus rates were reduced at the end of 1992 and it has just been confirmed that reversionary bonuses have been reduced again from the end of 1993.

GAD set out two tables showing the recent history of new United Kingdom business and of expenses. GAD explain that Equitable have responded to the letters about liability for mis-selling of personal pensions *'indicating that they expect any such liability to be negligible; from our knowledge of the company we would have no reason to doubt this'*. GAD conclude that they still had some questions on the 1992 returns:

... relating to particular features of the NPV basis which might appear somewhat weak. We have also asked the actuary for some formal information about bonuses, and also for his indication of the position as at the end of 1993.

On DTI's copy of this note, they have underlined the words *'formal information'* and written *'OK'*.

GAD attach a copy of their letter to Equitable, in which they take up outstanding questions on the 1992 returns. GAD say that they have noticed recent press comment regarding Equitable's bonus announcement and ask for a copy of all the new rates of bonus. GAD also ask to be provided with a copy of the Society's most recent With-Profits Guide. GAD add: *'It occurs to me that you may have regular mailing lists of recipients of these two items, and if you could add my name to those lists it might save some routine correspondence in the future'*.

GAD refer to *'a most useful meeting here last November* [see 30/11/1993] *at which several points were cleared up'*. GAD ask Equitable:

(1) *'In the Appendix (where the net premium results are set out) you mention in para. 5(a) on page 98 that resilience reserves could be set up without recourse to the Form 14 line 51 assets. However you do not give an indication of the amount of any resilience reserve which would be required on the* net premium *basis and which is not covered by the* net premium *liabilities. Could you please advise this amount as at 31 December 1992, and ensure that the corresponding figure is disclosed in future returns'*;

(2) to provide the figure for the growth rate of non-unit reserves, if the real rather than gross rate of return were used;

(3) to explain the origin of a deduction in the capital gains tax reserve shown in Form 56, column 12; and

(4) *'Finally, the rate of 9% used to value the non-profit immediate annuities seems on the high side. Could you please supply more details of the assets that are deemed to be backing these liabilities, and their yields, having regard to Regulation 59(2) and (6)(a).'*

GAD conclude:

It would also be helpful if you could let me have a preliminary estimate of the position as at the end of 1993, in a similar form to that in your letter of 9 March 1993; that is to say, an estimate of your Required Minimum Margin and the available assets, and also the rate earned on your fund during 1993. An indication of the quantum of strengthening of the valuation basis, as referred to in ... the documents we had for the November meeting, would be appreciated also.

31/03/1994 Every Appointed Actuary is sent by the Government Actuary a copy of DAA7 on the Appointed Actuary certificate and compliance with Guidance Notes 1 and 8.

07/04/1994 Equitable's Appointed Actuary responds to GAD's letter of 28/03/1994. The Appointed Actuary encloses a copy of the Society's booklet entitled *'Bonuses'* which details the most recent bonus rates. He explains that the Society will supply the With-Profits Guide when it has been updated and that, as they do not have a mailing list for this, he has added GAD's name to the distribution list for all future press releases which would include one on the bonus declaration each year.

The Appointed Actuary also encloses copies of the Board papers he had undertaken to send at the meeting with GAD on 30/11/1993, being reports on Equitable's valuation and bonus declarations for 1993 prepared for the Board's meetings in November 1993 and January and February 1994. The Appointed Actuary explains that he has included only the actuarial part of the January report, as the rest deals with commercial aspects of the declaration which he considers it would not be appropriate to release.

In response to GAD's four questions in their letter of 28/03/1994, Equitable's Appointed Actuary explains that:

(1) The resilience reserve required on the net premium basis would have been £462m.

GAD's Chief Actuary C annotates the letter at this point: '[Scrutinising Actuary C], *What was the difference between the* [bonus reserve valuation] *and* [net premium valuation] *reserves. Your minute to DTI implies £450m. Perhaps you should ask* [the Appointed Actuary] *to explain the statement in para 5(a)* [regarding Equitable's provision for long-term liabilities] *on* [page 98]'. Someone adds two further annotations: *'After adding "cost of* [reversionary bonus] *allocated" (see attached sheet) the difference is £476m which is (just) OK'* and *'(This is now OK)'*.

The Appointed Actuary adds that he is supplying this figure on a confidential basis, but is not prepared to publish it in future returns. The Appointed Actuary explains that the resilience of the office's mathematical reserves is a matter for his professional judgment, subject to the required disclosure in the regulations and to require publication of the precise level of reserves needed to satisfy the GAD 'test' would impose a far more explicit level of disclosure on them than on offices publishing net premium office valuations. He says that *'GAD have previously indicated that they feel the Society provides much fuller information than the norm in this area. To require even more from us seems unreasonable'*. (Note: I have seen no evidence of any correspondence in the files which suggests that GAD had previously indicated this.)

Equitable's Appointed Actuary concludes: *'In any event, we may well change this form of presentation and move away from publishing a full net premium valuation when the new regulations are implemented with effect from 1 July 1994'*.

(2) No additional non-unit reserves would have been necessary if a real rate of return of 2% rather than 3% had been assumed. GAD's Chief Actuary C annotates the letter at this point: *'I am surprised by this statement. But let it pass?'*.

(3) It is the Society's practice to set up a specific reserve for tax on unrealised capital gains on life funds. But, at 31 December 1992, the figure for unrealised capital gains was negative and accordingly the returns showed a deduction in the tax reserve.

Chief Actuary C annotates the letter at this point:

> [Scrutinising Actuary C], *We have challenged this in the past. He is effectively treating losses* [brought forward] *as an asset. If all units were liquidated at the valuation date there would be insufficient assets available to cover the amount paid out. It may be more equitable to price in this way but it is not prudent when setting reserves to give a value to* [brought forward] *losses. I think you should challenge* [the Appointed Actuary] *on this issue.*

(4) The valuation of the assets backing the non-profit annuities in the 'office' reserve was based on the Appointed Actuary's professional judgment. The Appointed Actuary explains that, within this group, there are different categories of annuities. He considers that the valuation rate used is suitable, as some assets actually yield a higher rate. Chief Actuary C annotates the letter at this point: *'I suggest that you ask him to comment in relation to the net premium basis'*.

Finally, the Appointed Actuary provides the following current estimate of the Society's Form 9 solvency position at the end of 1993:

	£m
Admissible assets	*13,385*
Mathematical reserves	*11,448*
Other liabilities	*218*
Available assets	*1,719*
Implicit items	*–*
Available assets + implicit items	*1,719*
Required minimum margin	*458*
Excess assets	*1261*

19/04/1994 GAD's Scrutinising Actuary C writes to DTI, enclosing a copy of Equitable's letter of 07/04/1994. The Scrutinising Actuary says that Equitable have:

> *... provided full answers to our questions, but we are asking further questions (copy enclosed) although we are generally satisfied with* [the Appointed Actuary's] *response. We note his comments regarding disclosure of some of this additional information.*

Scrutinising Actuary C comments:

> *If the resilience reserve of £462m is added to the net premium reserves ... the total ... is almost the same as the reserve on the "office" basis. Accordingly the cover for the* [required minimum margin] *on the corrected net premium basis is almost identical to that on the Bonus Reserve basis of 2.36 times. However, this is based on a net premium valuation basis which is weaker than that used by most offices.*

He concludes:

> *Based on the figures at the end of the letter, the published cover for the* [required minimum margin] *(on the Bonus Reserve Valuation) at the end of 1993 will be about 3.75 times. The Board papers supplied reveal that bonus rates were reduced by less than was justified by the Equitable's usual approach of relating declared rates to prevailing interest rate levels, primarily on account of the good performance of the assets during 1993. The actuary recommended a smoothing of the reduction but has warned his Board that further reductions will be needed at the end of 1994 if interest rates do not rise during the year.*

GAD write to Equitable's Appointed Actuary to pursue some further questions arising from Equitable's response to points (3) and (4) in their letter of 07/04/1994.

On (3) (the deduction in the capital gains tax reserve), GAD say that:

> *... for statutory reserving purposes it does not seem to us to be prudent to take credit for tax relief on unrealised losses. If the amount had instead been treated as an asset it would have been inadmissible, and if all units had had to be liquidated on the valuation date there would be insufficient assets to cover the amounts paid out. I hope that you will agree to follow our interpretation if the point should arise again.*

On (4) (the valuation of the assets backing non-profit annuities), GAD say:

> *You will appreciate, I am sure, that our primary concern is with the net premium valuation published in the Appendix to Schedule 4, rather than with the office basis. This question was posed in the context of the net premium assumption (where 9% was also used), and I am sorry if that was not clear. Could you please now provide the information that we are seeking; the yields shown in Forms 45 and 46 do not, after allowing for the 7½% margin, seem to support the 9% assumption.*

25/04/1994	Equitable's Appointed Actuary writes to GAD in response to their further questions on the 1992 returns. On GAD's original question (3) (28/03/1994), the Appointed Actuary says that the Society's approach is *'mainly a consequence of the requirements for compiling the returns and is designed to avoid linked assets and unit liabilities being brought forward into Form 9* [of the returns] *at different values'*. He does not agree that it is not prudent for either statutory or commercial purposes. On GAD's original question (4), the Appointed Actuary provides the information sought for the net premium valuation. The Appointed Actuary explains that the average valuation rate used is supported by the average yield on assets. He repeats that valuation of the assets backing the non-profit annuities was based on the Appointed Actuary's professional judgment. In an undated note on the letter, GAD's Scrutinising Actuary C writes '[no further action] *agreed with* [Chief Actuary C]'.
27/04/1994	The Life Assurance and Unit Trust Regulatory Organisation (LAUTRO) write to Equitable in reply to their letter of 05/04/1994. LAUTRO assure Equitable that the verification visit to check Equitable's Training and Competence Scheme will be conducted as quickly and efficiently as possible and with the aim of causing minimum disruption.
24/05/1994	Equitable send GAD an updated copy of their With-Profits Guide (dated May 1994).
25/05/1994	Equitable write to DTI to notify them of the Society's intention to take advantage of the Third Life Directive to provide life insurance throughout Europe and to add to the range of products offered by its existing branches in the Republic of Ireland and Germany. As required by the Regulations, Equitable provide notice of their proposed changes to the requisite details of each branch and ask DTI to take the necessary action to enable them to begin writing the new business from 1 July 1994.
27/05/1994	DTI acknowledge Equitable's letter of 25/05/1994 and say that they will be in touch if DTI need any clarification.
07/06/1994	GAD copy Equitable's letter of 25/04/1994 to DTI. GAD say: *'We have no further questions for the actuary, and this scrutiny* [of the 1992 regulatory returns] *is regarded as complete'*. There is no record of a response being sent at this time to Equitable.
15/06/1994	Equitable write to GAD's Directing Actuary A to confirm the arrangements for lunch with their Appointed Actuary on 19/07/1994.

22/06/1994 DTI advise Equitable and the regulatory authorities in the Republic of Ireland and Germany that DTI have no objections to the proposed changes. On the same day, DTI send a copy of Equitable's letter of 25/05/1994 to GAD. DTI explain that they have no guidelines as to how involved GAD should be in the process, but invite them to look at the product particulars. On receipt of the letter, GAD's Scrutinising Actuary C says to Chief Actuary C: *'This is no doubt interesting but I do not see that there is anything for GAD to do here. Do you agree?'*. In reply, the Chief Actuary writes:

> *Maybe not in this case, but we should consider the financial implications of the changes and comment. As it happens the* [information] *supplied ... is inadequate as it does not take* [account] *of the transfer to reserves ...*
>
> *This is typical of* [Equitable's Appointed Actuary]*, to provide only what the legislation strictly asks for when in fact we need the transfer to reserve to be regarded as an expense. Perhaps you should suggest to DTI that the* [information] *supplied is inadequate, therefore they ought to seek our advice before accepting the proposed changes.* (GAD later do this – see 22/08/1994.)

Submission of the 1993 regulatory returns

27/06/1994 **Equitable submit their 1993 regulatory returns to DTI.** Accompanying those returns are copies of the Society's annual report and accounts, prepared in accordance with the Companies Act 1985 and dated 23 March 1994.

Equitable also send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £19,460 in respect of their 1993 returns.

These documents include the following information about Equitable's business and about their financial position as at 31 December 1993.

Companies Act annual reports and accounts
In their *'President's Statement'*, Equitable explain that the 28% investment return in 1993 to some extent masked a significant fall in interest rates. Hence Equitable had decided to increase the overall rate of return granted to policies but reduce the rate of declared bonus to a level broadly supportable by fixed interest securities at current rates of interest.

In their *'Management Report'*, Equitable explain that they had recently sent with-profits policyholders statements of their 1993 bonuses, together with a letter explaining Equitable's approach to bonus allocation. Equitable say that the 28% return for 1993, which took full credit for the changes in market values of fixed interest securities, fell to 17% for the purpose of *'averaging'* once *'transitory'* changes in the market value of fixed interest securities were excluded. Equitable had, for many years, linked reversionary bonuses to yields on fixed interest securities. In the light of the sharp reductions in such yields, the Board had decided to reduce reversionary bonus appropriately.

In their *'Directors' Report'*, Equitable reiterate that they had reduced reversionary bonuses to a level consistent with gilt yields.

The returns
Equitable's returns are again submitted in two parts covering Schedules 1, 3 and 6 and Schedule 4 to ICAS Regulations 1983.

GAD's copy of the 1993 returns (the first year for which their original copy is still available) includes various annotations which were made by GAD's new Scrutinising Actuary with responsibility for Equitable (Scrutinising Actuary D) during the scrutiny programme. I am satisfied that these annotations were made on or around 24/10/1994, at the time Scrutinising Actuary D prepared his *'Detailed Scrutiny Notes'*. These annotations correspond to the items listed in those notes, some of which are notified to DTI and later pursued with Equitable. However, for ease of reference, mention of these annotations is made here.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1993 as follows:

Long term business admissible assets	*£13,382,406,000*
Total mathematical reserves (after distribution of surplus)	*£11,447,681,000*
Other insurance and non-insurance liabilities	*£218,185,000*
Available assets for long term business required minimum margin	*£1,716,540,000*
Required minimum margin for long term business	*£458,014,000*
Explicit required minimum margin	*£76,336,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£1,640,204,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£1,258,526,000*

GAD annotate the form with the figures, on the appendix valuation basis, for *'Total mathematical reserves (after distribution of surplus)'* and *'Total of available assets and implicit items',* being, respectively, £11,125,463,000 and £2,038,758,000.

Equitable do not use in their returns the future profits implicit item that had been agreed with DTI.

GAD note with a question mark the figure of £12,443,000 included in Form 13, line 32 (Analysis of admissible assets) for debts in insurance companies not authorised to transact insurance business in the United Kingdom. GAD also note with a question mark the figure of £53,950,000 included for share options and debenture options.

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

In the Form 40 (Revenue account) included in the returns for Equitable's Pension Business Fund, GAD circle and note with a question mark the figure included for taxation of minus £6,970,000.

GAD annotate Form 42 (Analysis of claims) with the corresponding figures from the previous year's returns. For life assurance contracts and the claims payable on death, the figures show that claims are up 29% on the previous year.

Form 45 shows that 43% of Equitable's non-linked assets are invested in equities, 7% in land and 43% in fixed and variable interest securities (compared with 43%, 8% and 40% respectively in 1992). GAD have annotated the returns with these earlier figures. GAD tick the figures provided for the yield on fixed interest securities. GAD also annotate the form with the total yields shown on line 12 that were included in the 1989 to 1992 returns.

As in previous years, Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority are, for certain durations, higher than for those not issued or guaranteed by any government or public authority. Against line 1 of Form 46, GAD note with a question mark the gross redemption yield for securities issued or guaranteed by any government or public authority with a redemption period of one year or less (the figure being 1.40%). These assets are stated to have a value of £238,000.

In the notes to this part of the returns, Equitable disclose that no provision has been made for the contingent liability for tax on unrealised capital gains in respect of non-linked business, which is estimated to be £42m.

Equitable state that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns answer the questions set out in paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 54 of ICR 1981.

In response to paragraph 3, Equitable provide 18 pages of information about their non-linked contracts. Most of the information about the contracts remains unchanged from previous years. The increase in information from the previous returns is largely due to a new section on German policies.

On GAD's version of the returns, they note the changes that have been made and the new information provided. GAD tick the following paragraph (3(xiv)):

> *Pensions business with profits contracts described as retirement annuity, transfer plan, individual or group pension are deferred annuities, the premiums being of the recurrent single premium (or variable premium) type. The premiums provide a cash fund at the pension date, to which (for policies issued prior to 1 July 1988) a guaranteed annuity rate is applicable.*

1994

GAD also tick paragraph 3(xvi), which describes Equitable's personal pension business. This paragraph includes text which says:

> *Pensions business termed individual pension (2nd series) are individual pension plans effected since 1 July 1988 ...*
>
> *With profits retirement benefit segments are deferred annuities, the premiums being of the recurrent single premium (or variable premium) type. The premiums provide a cash fund at the pension date used to purchase benefit. There is no guarantee of annuity rates to be applied to the cash fund.*

As in previous years, Equitable provide a description of their principal guarantees of terms. GAD tick or mark as being new each of the descriptions provided.

In response to paragraph 4, Equitable provide 38 pages of information about their linked contracts. Most of the information about the contracts remains unchanged from the previous year. GAD tick or mark as being new each of the descriptions provided. GAD also write: *'"Special Group Pension Arrangement" omitted'*; and, in relation to the policies issued with links to the Equitable Pelican Unit Trust only: *'Comment re A(v) omitted'*. GAD note that, in relation to the description of unit-linked international personal pension plan retirement benefit, the cross referencing to another type of contract is *'Not Revised'*.

Equitable disclose in paragraph 5 that they have tested the ability of the Society to hold reserves which satisfy Regulations 54 and 56 to 64 of ICR 1981 in the three scenarios of changed investment conditions described in DAA6. The relevant sentences have been marked *'new'* by GAD. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

As in previous years, Equitable state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. They also disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £42m. Equitable say that they consider there are sufficient margins in the valuation basis to cover this amount and, accordingly, they again hold no specific reserve. GAD tick this paragraph and note that the figure for the previous year was £1.2m.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity. GAD tick this paragraph.

As in previous years, in paragraph 5(1)(g) Equitable state:

> *The premium rate guarantees and options under the Society's policies are described in paragraph 3. Where the right to effect further policies without medical evidence of health is carried a reserve equal to one year's extra premium deemed or actually charged was set up. It was considered unnecessary in current conditions to make explicit provision for the other guarantees and options described in paragraph 3.*

1994

As in previous years, in paragraph 6(1) Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere in the returns disclose the rates used in the premium basis. GAD tick this paragraph.

As in previous years, in paragraph 7(b) Equitable do not explain the method by which they have made provision in the main valuation for expenses on recurrent single premium business.

As in previous years, at paragraph 7(d) Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

GAD tick this paragraph.

As in previous years, in paragraph 11 Equitable disclose: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'.* GAD tick this paragraph.

As in previous years, in paragraph 12 Equitable state: *'The Society has no shareholders and the principles upon which the distribution of profits among the policyholders is made are determined by the Directors in accordance with the Society's Articles of Association'.* GAD tick this paragraph.

In paragraph 13, Equitable disclose that they had set the rates of reversionary bonus for the main policy classes at 4.0% (compared with 5.0% for 1992). GAD annotate this section with figures for the bonuses declared in the previous year. As in previous years, Equitable disclose that some retirement annuity and individual pension policyholders have been offered loans under a *'loanback'* arrangement. GAD tick this paragraph.

In paragraph 16, Equitable describe their system for determining final bonuses. In part (vi), Equitable set out how they allocate final bonus for retirement annuities, personal pension retirement benefits, individual and group pension arrangements and recurrent single premium deferred annuities. Equitable disclose, on page 71 of the returns, that:

> *Where the contract terms guarantee any increase in benefits by way of interest or other addition for the period from 31 December 1993, or such later date of purchase of benefits as applies, to the date of payment of benefits, the amount of final bonus allotted by the operation of (1) and (2) above is reduced by the amount of any such increase.*

Equitable then disclose, also on page 71 but running on to page 72 of the returns, that:

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

Scrutinising Actuary D marks both of these paragraphs as *'New'.* The Scrutinising Actuary also comments on those paragraphs in his *'Detailed Scrutiny Notes',* prepared on 24/10/1994, where he says *'New rules reducing final bonus, see page 71'.*

(Note: this paragraph was also sidelined in pencil (rather than the red ink used by Scrutinising Actuary D). The marking of this paragraph is consistent with those other markings made by Scrutinising Actuary E in respect of the 1995 returns, during his scrutiny of those returns (see 28/06/1996)). (See also the 1994 returns at 30/06/1995.)

<u>Schedule 4 – main valuation (forms)</u>
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. Equitable disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of the fund surplus. GAD have annotated this form with equivalent figures from the appendix valuation.

Schedule 4 – appendix valuation (text)
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 55 to 64 of the Insurance Companies Regulations 1981.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to the ICAS Regulations 1983. Equitable say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation',* has not been provided) is identical to that given in the main valuation.

As in previous years, in response to paragraph 5(1)(a), Equitable state: *'In these conditions the Society would be able to set up reserves which satisfy* [Regulations 54 and 56 to 64 of ICR 1981] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'.* GAD tick this paragraph.

As in the main valuation, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity. GAD tick this paragraph.

As in previous years, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their recurrent single premium with-profits pension business. GAD tick this paragraph.

As in the previous year but unlike in the main valuation for this year, in paragraph 7(b) Equitable explain the method by which they had made provision in the appendix valuation for future expenses on their recurrent single premium business.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis. GAD note changes from the previous year's returns to some of the interest rates and mortality tables used.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

01/07/1994 The Insurance Companies (Third Insurance Directives) Regulations 1994 (the ICTID Regulations 1994), the Insurance Companies Regulations 1994 (the ICR 1994) and the Insurance Companies (Accounts and Statements) (Amendment) Regulations 1994 (the ICASA Regulations 1994) come into force. (See paragraph XX of Part 2 of this report.)

07/07/1994 **GAD complete the A2 Initial Scrutiny check on the Society's 1993 regulatory returns.**

In response to question 3, *'Do the interest rates used look supportable in terms of Regulation 59 – for with profit business?',* GAD answer *'Yes',* and write: *'On NF'.*

In response to question 5, *'Do the unit linked parameters look reasonable?',* GAD answer *'Yes',* and write: *'except g=8%, i=5% again.'*

In response to question 10, *'Is all reinsurance with UK authorised companies?',* GAD answer *'Yes',* and add: *'All but a trivial amount'.*

In response to question 12, *'Have the company set up any identifiable provision to meet potential exposure to Personal Pensions transfer problems?'*, GAD answer *'No'*, and write: *'but* [these are] *very unlikely to be significant'*.

GAD identify no worrying aspects and no items to notify to DTI, to be taken up immediately with Equitable. GAD give Equitable a priority rating of 3 (unchanged from the previous year).

15/07/1994 **GAD complete the A1 Initial Scrutiny check on the Society's 1993 regulatory returns.** GAD note the cover for the required minimum margin is 3.75 (increased from 2.36 the previous year). In response to check number 24, *'Does* [Form] *13.86* equal* [Form]*47.4?'*, GAD answer *'No'* and write *'Equals* [Form]*47 + Line 1 of* [Form] *48'*. They do not identify any concerns. Accompanying the Initial Scrutiny check is a Form B Initial Scrutiny Form, which includes certain key figures disclosed in the 1990 to 1993 returns.

22/08/1994 GAD provide DTI with comments on Equitable's letter of 25/05/1994. GAD say that they do not wish to comment in detail, but:

> *... we notice that in one or two areas the information supplied is not really adequate; for example the projected revenue accounts for the Irish business do not include an entry for "increase in reserves" and therefore give a rather misleading impression of the planned progress.*

GAD suggest that, in future, such applications should be sent to GAD for comment before approval. GAD return the files of *'product particulars etc.'*, having retained copies of some of the material.

08/09/1994 DTI write to Equitable to propose a further visit by DTI and GAD as part of their three year rolling programme of meeting life insurance companies. DTI list the main subject areas they would like to cover as being:

1. *The business plans of the company for the next five years, with particular reference to solvency and any requirements which there might be for additional resources.*
2. *Marketing philosophy.*
3. *Corporate/Management structure.*
4. *Reinsurance programme and security.*
5. *Investment policy and asset management.*
6. *Management systems and procedures.*
7. *Implications of the regulatory changes following the Third Directives — especially sound and prudent management, derivatives, reinsurance of linked liabilities.*
8. *The role of the Appointed Actuary.*
9. *Resilience testing and asset shares.*
10. *Bonus Philosophy.*
11. *Potential liabilities in respect of personal pensions.*

DTI propose that the visit should take the form of a series of meetings in a single day with appropriate members of the Appointed Actuary's team. DTI say they would be pleased to receive any internal papers that would facilitate discussion (for example, structure charts or corporate plans).

15/09/1994 Further to GAD's suggestion of 22/08/1994, Line Supervisor B seeks approval for the policy of asking GAD to comment before DTI grant approval in relation to the establishment by companies of operations overseas.

The following day, Line Manager B agrees, but says that DTI would need to give GAD strict deadlines in which their comments would need to be provided.

30/09/1994	Equitable write to DTI to apply for a section 68 Order to remove the restriction on the level of Eurobonds they can hold. On the same day, Equitable notify DTI that they intend to offer a new product through their Republic of Ireland branch and provide notice of the changes to the requisite details.
03/10/1994	DTI's Line Manager B writes to Line Supervisor B, in response to Equitable's letter of 30/09/1994 requesting a section 68 Order. The Line Manager says: *I don't want to be bothered with s68/s78 orders unless absolutely necessary (i.e. impending year end).* [Please] *reply that we are content for Equitable to proceed on the basis* [Equitable's Appointed Actuary] *proposes and that an order will follow in due course.* *In practice I hope an order won't be necessary because the* [regulations] *will have changed.* (Note: a section 78 Order was the same as a section 68 Order (see 08/09/1986) but applied only to linked long term policies.)
05/10/1994	The regulatory authority in the Republic of Ireland advise DTI that Equitable have notified them of the changes to their requisite details.
11/10/1994	DTI pass Equitable's letter of 30/09/1994 to GAD and seek their comments.
12/10/1994	DTI inform Equitable that a section 68 Order will be issued in due course. (Note: it is not clear if this Order was issued at this time — see 30/11/1994.)
13/10/1994	DTI write to Equitable to seek a response to their letter of 08/09/1994.
14/10/1994	GAD's Scrutinising Actuary D provides DTI with comments on Equitable's letter of 30/09/1994. He observes that the new product Equitable intend to offer is described in the literature provided as a life assurance contract. However, the Scrutinising Actuary says that it is broadly equivalent to Equitable's critical illness policy, but without life cover, and is therefore Class IV (permanent health) business. The Scrutinising Actuary notes that Equitable are authorised to write both Class III (linked long term) and Class IV business and therefore there could be no objection to the changes. The Scrutinising Actuary suggests, however, that DTI should clarify how Equitable regard the product.
17/10/1994	DTI's Line Manager B writes to the Minister for Corporate Affairs, enclosing a draft speech for his visit to Equitable on 26/10/1994. The Line Manager advises that, should the Minister talk about deregulation, this might be met with *'hollow laughter'*, as on the day of his visit the Securities and Investments Board were due to announce details of their policy for compensation to be paid by insurance companies in respect of mis-sold personal pensions. The Line Manager notes: *'We expect that the industry is not going to be very pleased with the* [conduct of business] *regulator on this occasion (although Equitable itself should not be significantly affected)'.*
18/10/1994	GAD's Scrutinising Actuary C informs Equitable's Appointed Actuary of his imminent departure from GAD, and introduces his successor. On the same day, DTI ask Equitable if they regard the new product that they wish to sell in the Republic of Ireland as Class III or IV. DTI explain that they have no objection to the change in details provided by Equitable.

20/10/1994	DTI confirm to Equitable that DTI and GAD would visit on 09/12/1994. DTI add to the list of topics to discuss (see 08/09/1994) *'the likely financial position of Equitable Life at the end of the year'*.

24/10/1994

GAD's Scrutinising Actuary D prepares *'detailed scrutiny notes'* for the 1993 returns. His note contains seven sections:

- *'Standard reporting items'* — under *'New business'*, GAD detail 19 policy types (13 being overseas business), and remark that the Society's expenses are *'still low'*;
- *'Initial scrutiny notes'* — GAD state that there are *'nil of note'*;
- *'Review of file'* — GAD set out details of the section 68 Orders requested or issued and the introduction of operations internationally;
- *'Report & Accounts'* — GAD note some details from Equitable's 1993 Companies Act annual report and accounts, including that Equitable do not consider that they need to make any provision for pension mis-selling and that Equitable have provided comments on their bonus philosophy;
- Under *'Returns — Schedules 1 — 3'*, GAD's note records (with original emphasis):

	Form 41	*Form 44*
General Annuity [single premium]	*50046*	*38049*
Pension [single premium]	*565689*	*460312*

  - ***Above table seems odd.***
  - ***F13.32 new debt from dependant unauthorised insurance company of £12.4m***
  - *Share options and debenture options £53.95m*
  - ***Negative tax on*** [pension business fund] ***does not relate to form 40 note***
  - *Life death claims up 29%, probably in linked business*
  - *Non linked surrenders, forfeitures and pups by about 4.0% life and 6.8% pensions*
  - *Unit linked 10.8% life and n/a pensions.*
  - *Recurrent* [single premium] *figures are not available.*
  - *Doubtful figures in form 46 line 1 but not material.*

Each of these issues is noted on GAD's copy of the Society's returns (see 27/06/1994). The three issues highlighted in bold by GAD are subsequently pursued with Equitable, and notified to DTI, as a part of GAD's scrutiny of Equitable's returns. (See 15/11/1994 [**entry 1**].);

- Under *'Returns – Schedule 4'*, GAD's note records:
  - ***Where is "Special Group Pension Arrangement"?***
  - ***Unit Linked Annuity A(v) link to Pelican*** [unit trust] ***no longer mentioned. This must be an oversight.***
  - *New FTSE link over twelve month periods as determined by Society.*
  - [Capital gains tax] *deduction now 13% (was 10%) on Pelican links*

1994

- ***Description of unit linked international personal pension retirement benefit now refers to terms of Guernsey version whereas previously it was referred to international investment plan benefit.***
- *Comments on the valuation basis:*
  - o *Major Medical Cash reserve for unit linked not stated, but contract may not actually have any in force. But it is described.* ***Check there were no such*** [in-force]***, and that basis will be similar.***
  - o *FTSE links based on value of matching call options and deposits.*
  - o *Interest rates look high ... must be justified by a* ***matching rectangle***
  - o ***Term mortality rates A67/70 -3?*** *This is OK for "2nd series" with the refunds etc, but what about 1st?*
  - o ***Annuity basis a(90)?***
- *Run-off expense provisions:*
  - o ***Unit prices grow at 8% => assets grow at 8.6875% or 8.75%; inflation of expenses is at 5%. No 25% drop referred to.***
- *Bonus rate changes:*
  - o *New rules reducing final bonuses, see page 71.*
  - o *Various changes in bonus rates.*
- *Use of asset shares:*
  - o *Not used in the normal sense.*

Again, each of these issues in bold is noted on GAD's copy of the returns (see 27/06/1994). The eight issues highlighted by GAD in the list above are subsequently pursued with Equitable, and notified to DTI, as part of GAD's scrutiny of Equitable's returns. (See 15/11/1994 [**entry 1**].)

- *'Miscellaneous'* — GAD's note includes:

  Personal pensions liabilities? Not us!!!

1994

25/10/1994 [entry 1] DTI's Line Supervisor B provides briefing for the visit by the Minister for Corporate Affairs to Equitable on 26 October 1994. This briefing is substantially the same as that provided for the proposed visit of the President of the Board of Trade, on 23/02/1994 (see 17/02/1994 [**entry 2**]). The Line Supervisor says:

> *The latest returns to DTI show its solvency position to be strong. In late 1993, the company received an "AA" rating from Standard & Poor's for its excellent claims paying ability.*

The Line Supervisor refers to the survey on possible mis-selling of pensions and notes that Equitable *'did not see a need to make any provision for compensation in its accounts, given the high standard of selling techniques in the Society'.* The Line Supervisor expresses no concerns about Equitable.

On current insurance issues that may arise during the visit, the Line Supervisor says, under the heading *'Deregulation':*

> *Background – DTI has issued a consultative document proposing major changes in the content of the annual prudential returns by insurance companies.*

Line to take – The consultation period ends this month. Feedback so far has been reasonably positive. In particular, we have proposed to abolish the tedious chores of producing a quinquennial statement of long-term business [i.e. Schedule 5 of the returns] *and annual statement of connected parties. Many other changes have been proposed to reflect the requirements of the 3rd Insurance directives and to make returns more relevant to current market conditions and practices.*

25/10/1994 [entry 2] On the same day, DTI's Head of Life Insurance writes to the Chief Executives of all life insurance companies. He notes that the Securities and Investments Board have announced the criteria and procedures for assessing whether compensation should be made to people who were wrongly advised to transfer or opt out of an occupational pension scheme. DTI ask Equitable (and other companies) to submit, by the end of February 1995, a revised estimate of their potential liability for compensation payments in the light of the Securities and Investments Board's requirements.

DTI say that they may seek periodic updates in the light of experience over the next year or so. In relation to who should pay for any compensation, DTI advise:

Each office will also need to consider where the costs should fall on its funds. The precise arrangements will vary according to the circumstances of each office. The first principle is that as a general rule compensation payments should not be made out of funds to the extent that these are required to meet the contractual entitlement of policyholders. Beyond that, the reasonable expectations of participating policyholders must be taken into account. For this purpose, the following general considerations appear to the Department to be relevant (and we would expect directors to follow similar principles in deciding how to attribute losses arising from other instances of compensation or regulatory action):—

i. With profits funds which (in normal circumstances) stand to profit from the sale of pensions business can reasonably be expected to bear a corresponding share of the costs associated with that business. However:-

ii. Compensation costs should not be regarded as a normal expense of the business for the purposes of assessing bonus rates; and

iii. The Department would expect proprietary offices to consider whether it is appropriate that some part of the compensation cost be met from outside the long-term fund, to enable the reasonable expectations of policyholders to be fulfilled.

(DTI later have to chase Equitable for a response to their letter — see 13/04/1995.)

07/11/1994 Equitable write to DTI in reply to their letter of 18/10/1994. Equitable dispute that the new product is Class IV and say that they treat comparable products in the UK as Class I (life and annuity) and Class III and would expect to treat the new product in the Republic of Ireland in the same way.

15/11/1994 [entry 1] **GAD provide DTI with their detailed scrutiny report on the Society's 1993 regulatory returns.** (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) The report follows a new standardised format adopted by GAD and has 13 sections, as follows:

(1) Summary
Under *'Key features'*, GAD state that cover for solvency remains healthy at 3.75, expenses remain low, new business continues to grow (with the emphasis remaining on pensions business), and a new branch was opened in Germany in 1993, adding to existing Guernsey and Republic of Ireland branches.

GAD comment that Equitable, *'no doubt influenced by the favourable figures they can properly demonstrate'*, voluntarily introduced the disclosure regime early in July 1994.

Under *'Action points'*, GAD explain that they have pursued eleven points with Equitable in the light of the Society's returns, including:

- that there is a surprising sum due from a dependant insurance company not authorised in the UK, of which GAD were not aware;
- that the treatment of single premiums in the returns appears inconsistent;
- that interest rates used in the valuation look high;
- that a mortality table looks *'light'*;
- that an annuity table looks *'too heavy'*;
- that the expense reserves are determined on an optimistic basis. GAD note that this has been the case before, and that they are trying to determine how great Equitable's exposure is; and
- that the amount of resilience reserve required is not given, only that it can be met.

(2) <u>Background</u>
GAD refer to Equitable's pride in the Society's position as the oldest mutual life assurance society in the world and the fact that Equitable have never paid commission to third parties. GAD explain that Equitable have a:

> *... somewhat unusual approach to bonuses, unit linked products (which often have discretionary surrender values) and valuation using a gross premium bonus reserve method. The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by the regulations.*
>
> *Although Equitable applies for a section 68 Order for an implicit item each year, it has never used this order, it being a precaution only. It does however also enjoy an order exempting full description of its personalised funds in the return. There is also an order in relation to* [a] *call option for FTSE links on some policies.*

GAD also note that *'The Appointed Actuary and Managing Director posts are both held by* [the same person]'.

(3) <u>New business</u>
GAD provide details of the new products Equitable have developed and two tables setting out the regular and single premiums which Equitable have received for the various classes of policies sold from 1989 to 1993. GAD add a commentary:

> *These figures are somewhat strange, however, in that a great volume of pension business is regarded as recurrent single premium. This is reported in the year of issue as regular premium, in accordance with the guidance notes, but it does not appear in form 43* [of the returns] *as regular premium. In 1993 the effect was for* [£225.9m] *new regular premium to appear in form 44* [of the returns] *but not in form 43. It is also therefore impossible to reconcile form 41* [of the returns, on analysis of premiums and expenses] *and form 43.*

On her copy of the report Line Supervisor B adds two comments: *'Should we ask for revised forms?'* and *'GAD doesn't mention* [Form] *43 in letter to* [a named company] — *query this with GAD.'*

(4) <u>Expenses</u>
GAD provide a table showing the history of expenses from 1989 to 1993. They comment that, compared with the industry as a whole, Equitable's expenses are low. (Note: following scrutiny of the 1990 returns, GAD had queried a rise in Equitable's management expenses — see

1994

19/11/1991 and 22/11/1991. GAD's A2 Initial Scrutiny check of the 1991 returns had identified Equitable's other management expenses as a worrying aspect, although it appears that this was not pursued at the time.) GAD add:

> *There is no provision for mis-selling of personal pensions. This is due to the selling methods which are based upon largely approaches from prospective policyholders. It remains to be seen whether this is correct, but it is true that their exposure is likely to be very much lower than typical in the industry.*

(5) Claims and withdrawals
GAD note an increase in death claims, but comment that this does not indicate any particular problem. GAD also note that the Society's persistency rates are quite good but that the *'prevalence of recurrent single premium contracts prevents proper analysis ...'*.

(6) Financial results
GAD explain that, on the bonus reserve basis (i.e. the main valuation), a surplus of £481m arose, compared with £331m in 1992.

(7) (Non-linked) assets
GAD provide tables showing Equitable's mix of assets at the year end. GAD reproduce a table from Equitable's 1994 With-Profits Guide showing assets attributable to with-profits business. GAD comment that the most noteworthy feature of the latter is the shift towards a higher fixed interest component. They note that, on Equitable's own figures, the Society's total investment return for 1993 was 28.3%.

(8) Valuation and solvency
Under *'Strengths and/or weaknesses'*, GAD explain:

> *The bases used for the gross premium valuation are primarily a tool to support the method of determining distributions. They are not particularly relevant to supervision. The adequacy of the valuation is demonstrated by publishing a net premium valuation on the minimum basis necessary to meet the regulations and except where explicitly stated otherwise comments and figures in this report are based upon this alternative basis.*

GAD observe that:

> *The net premium bases have a number of apparent weaknesses, though in the light of the cover for the required minimum margin there is little concern as to the solvency. If, however, the reserves are too thin, it may lead to inappropriate conclusions being drawn by policyholders and prospective policyholders as to the financial strength of the society. We are therefore seeking confirmation of the prudence of certain of the assumptions.*

GAD report that:

> *The rates of interest used are somewhat high in comparison with form 45. As this form does not provide sufficient information to draw a firm conclusion, we are seeking further information.*
>
> *Some mortality tables look a little on the optimistic side, and again further information on their justification is required.*
>
> *There is a somewhat weak reserving basis for unit linked expenses, which does not meet the standards this department normally expects. We normally expect the differential between the rate of growth of unit linked assets, and hence the prices, before all changes and taxation to be no more than 2% higher than the rate of inflation of renewal expenses. For this company the difference is about 3.7%. We are trying to determine the extent of exposure here to an adverse experience in costs.*

Under *'Changes since the previous year'*, GAD note that:

- expense allowances on linked business have been increased, but costs are increasing only very slowly and expense allowances on unitised with-profits have also been increased;
- some mortality tables have been strengthened;
- the revised resilience test has been incorporated; and
- interest rates have been reduced, but not generally by quite as much as the fall in asset yields.

GAD provide three tables showing Equitable's liabilities for linked and non-linked business and a valuation summary. The latter contains figures relating to both the bonus reserve (i.e. the main valuation) and the net premium (i.e. the appendix valuation) valuations for the years 1991, 1992 and 1993, and is presented as follows:

	1991 BRV £m	*1992 BRV £m*	***1993 BRV £m***	*1991 NPV £m*	*1992 NPV £m*	***1993 NPV £m***
Non-linked liability	*6,349.1*	*7,864.9*	***10,466.5***	*5,950.1*	*7,388.8*	***10,144.3***
Linked liability	*502.9*	*692.3*	***981.2***	*502.5*	*692.3*	***981.2***
Total liability	*6,852.0*	*8,557.2*	***11,447.7***	*6,452.6*	*8,081.1*	***11,125.5***
Long term assets ... (net of other [liabilities]*)*	*7,340.2*	*9,400.6*	***13,164.2***	*7,340.2*	*9,400.3*	***13,164.2***
Available assets	*488.2*	*843.3*	***1,716.5***	*887.6*	*1,319.4*	***2,038.8***
(% of liability)	*7.0*	*9.7*	***14.7***	*13.5*	*16.0*	***18.0***
Implicit items	*0**	*0**	***0****	*0**	*0**	***0****
Total amount available	*488.2*	*843.3*	***1,716.5***	*887.6*	*1,319.4*	***2,038.8***
Required Minimum Margin	*292.8*	*356.6*	***458.0***	*276.8†*	*337.6†*	***445.1†***
Cover	*1.67*	*2.36*	***3.75***	*3.2†*	*3.9†*	***4.6†***

The notes to the table are:

> ** Section 68 order (for £420m in 1993) not used*
>
> *† Estimated figure. The cover makes no allowance for the absence of a reserve to meet the resilience test. The amount required in 1992 was £462m, which wipes out the difference between the* [bonus reserve valuation] *and* [net premium valuation] *and reduces the surplus under the* [net premium valuation] *to only some £18m without recourse to the investment reserve which was £839m. As a result the cover for the required minimum margin would only have been about the 2.4x shown under the* [bonus reserve valuation].

Line Supervisor B annotates her copy of GAD's report at this point: *'Why does Equitable have to do things different from everyone else?!'*.

Under *'Cover for the solvency margin'*, GAD conclude:

> *... the cover for the required minimum margin remains substantial, and gives no cause for concern in itself. The only issues therefore revolve around whether the valuation basis itself is of sufficient strength. This is covered* [under '*Strengths and/or weaknesses*'] *above, but particular care is needed in reviewing the figures for the* [net premium valuation]*, as the resilience reserve is omitted, and the figure is not known.*

(9) Bonuses
GAD note that the cost of Equitable's declared bonus, under the appendix basis, is £300.4m. GAD say that Equitable's final bonus system *'is somewhat different to the normal terminal bonus'*, and explain that it:

> *... is a little unusual. It consists of a declaration of bonus which is not reversionary, in that it may be withdrawn, and/or reduced in future. However, it has a lot of features in common with reversionary bonuses. It is declared in a similar way as a percentage of benefit, and the amount paid at the end of the policy's normal span is the sum of the annual "declarations", subject to the proviso that a previously granted bonus can be withdrawn.*

GAD quote Equitable's own description of the final bonus system which GAD say is from the Society's With-Profits Guide. (Note: the description was in fact from Equitable's Bonuses booklet (dated February 1994). This mistake was repeated in GAD's scrutiny reports for 1994 and 1995.) The relevant quote reads:

> *Final bonuses are also determined and applied retrospectively. The final bonus is calculated so as to top up the growth arising from the policy guarantees and the declared bonus rate for the year to the overall rate of return announced for the year. Final bonuses do not add a guaranteed element to the contract, and the final bonus element of a policy can be varied up or down in future.*

GAD provide three tables of statistics showing changes in reversionary and final bonus rates. GAD also reproduce a table, from Equitable's With-Profits Guide, of the actual investment returns on gross market value and the rate allocated in fixing bonuses:

	1989	*1990*	*1991*	*1992*	*1993*
Actual	*24.1%*	*-8.3%*	*13.50%*	*17.1%*	*28.80%*
Allocated	*20%*	*12%*	*12%*	*10%**	*13%*

** 12% on new benefits secured during the year*

1994

GAD explain that Equitable follow a policy of full distribution:

> *... with a basis designed to make up the implied guaranteed rate to a total earned rate. Part is in the form of the non-cancellable reversionary bonus and the rest in the form of final bonus.*
>
> *The policy is to link declared reversionary bonus rates to the redemption yields on fixed interest stock. This has produced a series of reductions in recent years as yields have fallen, but the system of final bonus effectively balances this in total returns. Policyholders' reasonable expectations are therefore influenced downwards in line with yields.*

GAD make no reference to the *'New rules reducing final bonuses'* (see 24/10/1994).

(10) Unit-linked funds
GAD set out key statistics about these funds.

(11) Reinsurance
GAD state that Equitable make little use of reinsurance.

(12) Compliance
GAD state that they know of no significant compliance problems.

(13) Miscellaneous
GAD repeat that Equitable have made no provision for mis-selling of pensions.

GAD's scrutiny report runs to 14 pages.

As a result of their detailed scrutiny of the Society's 1993 returns, GAD write to Equitable to ask them to clarify eleven points. These points are those highlighted in their *'detailed scrutiny notes'* dated 24/10/1994. GAD's questioning about Equitable's 1993 returns is as follows:

> *1 Form 13 line 32 includes a sum of £12.4m due from a dependent unauthorised insurance company. Who is this due from, how does it arise, and what is the relationship between this unauthorised insurer and Equitable?*
>
> *2 We are unable to understand the size of discrepancy between form 41 and form 44 for amounts of single premium for General Annuity and Pension business. In the case of Pensions business, this seems to be over £100m. or about 19% of the form 41 figure. What accounts for this difference please?*
>
> *3 There is no note to form 40 regarding the management agreement with University Life. Although we appreciate this is referred to in the Appointed Actuary's report, could it be included as a note to form 40 in future please?*
>
> *4 Can you please confirm that the "Special Group Pension Arrangement" described in previous returns has terminated, or alternatively where does it now appear?*
>
> *5 The Unit-Linked Annuity A(v) is not stated as linked to the Pelican Unit Trust in this year's return. Are we right in assuming this is an oversight?*
>
> *6 The International Personal Pension Retirement Benefit is now cross-referred to the Guernsey version instead of the International Investment Plan benefit (page 47 of Schedule 4 refers). Is this correct?*
>
> *7 The interest rates used in the valuation seem high compared to the rates in form 45 on simple inspection. Could you provide a matching rectangle in respect of the net premium valuation basis in the context of regulation 59?*
>
> *8 The mortality table used for term assurances post 1982 is more optimistic than is normally used in valuations. Whilst this may* [not] *be of relevance particularly to the 2nd series, can you please comment considering the Society's recent experience on the basis used?*
>
> *9 Various annuity contracts are valued on the a(90)* [mortality] *table. How does the society's recent experience compare to this table? Are you satisfied that this table is still sufficiently prudent?*
>
> *10 Can you please advise how much the reserves in the net premium valuation would rise were the following scenario to occur:*
>
> - *An immediate fall of 25% in the value of unit-linked funds*
> - *Future investment returns before tax and management charges of 10% p.a.*
> - *Inflation of maintenance expenses of 8% p.a.*
>
> *11 What was the amount of additional resilience reserve required under the net premium basis in respect of the most onerous scenario tested?*

GAD explain that the first three of their questions are for the Society, with the remaining questions being for its Appointed Actuary.

15/11/1994 [entry 2]	DTI pass Equitable's letter of 07/11/1994 to GAD and seek their comments. Scrutinising Actuary D seeks advice from Chief Actuary C before replying.
18/11/1994	GAD write to DTI to respond to their request for advice on whether a critical illness policy Equitable propose to sell in the Republic of Ireland should fall into insurance Class IV. GAD suggest that DTI may wish to seek legal advice, but their view is that Equitable's policies are Class IV business. GAD recommend that DTI write to Equitable to say that the business appears to be Class IV type. GAD also explain: *The consequences for the company if the business is class IV are that the unit linked version would require a 4% solvency margin instead of 0%, and the treatment for tax purposes would be different for both versions. This may alter the reserves required.*
22/11/1994	Equitable's Appointed Actuary replies to GAD's letter of 15/11/1994. The response to each of the questions about the Society's 1993 returns is as follows: In response to question 1, Equitable say: *'The amount represents the dividend due (together with associated tax credit) from University Life as at 31 December 1993. I regret that this was erroneously included in line 13.32 rather than 13.30'.* GAD tick this response. In response to question 2, Equitable say: *'Under our current range of pension products, the original contract terminates at the point of retirement and, if an annuity is to be secured with the Society, a new contract is issued. The relevant fund appears as a single premium in form 41 and the immediate annuity issued is shown in form 44. Our older contracts, such as retirement annuities, were written to provide an annuity at retirement, although we offer a full "open market option" as for our current products. Our accounting practice is to include the fund available on retirement in claims and the fund retained with the Society (if any) to secure an annuity in premium income – i.e. a consistent treatment to that for our current products. Form 41 reflects that practice. Where, however, funds are left with the Society to secure an annuity, that is normally achieved by endorsement of the original policy and, consequently, the annuity in payment does not appear in form 44'.* GAD tick this response. In response to question 3, Equitable say: '*We will arrange to include an appropriate note to form 40 in future returns'.* GAD tick this response. In response to question 4, Equitable say: *'I confirm that the plan surrendered during 1993'.* GAD tick this response. In response to question 5, Equitable say: *'Subparagraph (d) of A(v) states "Equitable Pelican Unit Trust" (page 24) so I regret that I do not understand this comment'.* GAD note next to this answer: *'My mistake – meant reference to switch to* [international] *fund'.* In response to question 6, Equitable say: *'The cross-reference in paragraph B(xviii)(b) should be to paragraph B(xvii)(b) not to paragraph B(xvi)(b). I apologise for this error'.* GAD tick this response.

1994

In response to question 7, Equitable provide the following information:

> *The non-linked net premium liabilities of £10150.9m can be matched by hypothecated assets from form 45 as follows:*

Asset	*Value*	*Yield*
	£m	*%*
Land	*834.8*	*7.55*
Debts	*17.9*	*6.58*
Fixed interest	*5,000.5*	*6.55*
Other income producing assets	*488.6*	*5.12*
Other [variable] *interest*	*13.8*	*4.72*
Equities	*3,461.3*	*3.28*
Index-linked	*334.0*	*2.66*
	10,150.9	*average = 5.32*

> *The maximum permitted valuation interest rate in accordance with regulation 59 is 4.82% and the actual weighted average valuation interest rate, before tax, is 4.78%*

GAD note: *'Seems OK, but the averaging should only be assets'*.

In response to question 8, Equitable say: *'The bases used are essentially the same as in the premium bases for these contracts. Our analysis of surplus reveals consistent mortality profits from these classes and our returns from the* [Continuous Mortality Investigation] *Bureau indicate an experience consistently lighter than that assumed in the valuation basis. I am, therefore, satisfied that the basis is satisfactory'*. GAD tick this response.

In response to question 9, Equitable say: *'In recent years the Society's mortality experience for purchased life annuities has been quite close to a(90). The analysis of surplus has tended to show either a modest surplus or stain from year to year. I think we are, perhaps, just about at the point were a slight strengthening to a(90) -1 may be appropriate and we are reviewing that as part of our general review of our bases in preparation for the 31 December 1994 valuation'*.

In response to question 10, Equitable say: *'On the basis you describe, an additional sterling reserve of approximately £12m would have been required'*. GAD tick this response.

In response to question 11, Equitable say: *'If we had published our office valuation at the level of the net premium valuation in the appendix to Schedule 4, we should have needed to establish an additional resilience reserve of £236m'*. Against this answer, GAD write that the difference between the main and appendix valuations is £322.2m.

23/11/1994 GAD write to DTI enclosing a copy of Equitable's letter of 22/11/1994. GAD state:

> *In view of the nature of the net premium valuation for this company, which is published to demonstrate the adequacy of the published main bonus reserve valuation, and the undoubted adequacy of the reserves in aggregate, we are satisfied with the replies received.*

GAD conclude: *'We regard this scrutiny as complete'*.

GAD enclose a file note headed *'Effect of Resilience Test on Apparent Solvency'*. This updates the table set out in their scrutiny report (see 15/11/1994 [**entry 1**]) to take account of the further information received from Equitable. The table is as follows:

	1992 BRV	***1993 BRV***	*1992 NPV*	***1993 NPV***
	£m	***£m***	*£m*	***£m***
Non-linked liability	*7,864.9*	***10,466.5***	*7,388.8*	***10,144.3***
Linked liability	*692.3*	***981.2***	*692.3*	***981.2***
Resilience Reserve	*0*	***0***	*462.0*	***263.0***
Total liability	*8,557.2*	***11,447.7***	*8,543.1*	***11,388.5***
Long term assets ...				
(net of other [liabilities]*)*	*9,400.6*	***13,164.2***	*9,400.3*	***13,164.2***
Available assets	*843.3*	***1,716.5***	*857.2*	***1,775.7***
(% of liability)	*9.7*	***14.7***	*10.0*	***15.6***
Implicit items	*0**	***0****	*0**	***0****
Total amount available	*843.3*	***1,716.5***	*857.2*	***1,775.7***
Required Minimum Margin	*356.6*	***458.0***	*356.1†*	***455.6†***
Cover	*2.36*	***3.75***	*2.4†*	***3.9†***

** Section 68 order (for £420m in 1993) not used*

† Estimated figure.

The table shows the resilience reserve figure for 31 December 1993 as £263m rather than £236m. Using the correct figure very slightly increases the estimated cover.

GAD write to Equitable in response to their letter of 22/11/1994. GAD apologise for raising question number 5. GAD explain:

> *The variation I had noticed is in the footnote on pages 19 and 20 referring to the introduction of a switch option in 1984. It is purely a "for the record" comment, and not of great significance.*

GAD say that they are puzzled by Equitable's reference to an average valuation rate of interest in their response to question 7. GAD say:

> *Although regulation 59 provides for the averaging of asset yields, it does not appear to allow the same method to apply to liability interest rates. While I appreciate that your valuation is not attempting to distort the results by using an averaging method, I do feel it does not accord with regulation 59, which requires in paragraph 8 that "In no case shall a rate of interest ... exceed the adjusted overall yield on assets". This requirement is carried forward into the 1994 regulations in regulation 69(11).*
>
> *If you disagree with my interpretation, please let me know. Otherwise, may I suggest that, in setting the bases for the 1994 net premium valuation, you hypothecate assets to each category of contracts for which a different interest rate is used.*

GAD note that Equitable are considering strengthening the mortality basis for annuities in 1994.

29/11/1994 DTI's Line Supervisor B writes to Line Manager B to comment on the visit to Equitable arranged for 09/12/1994. She refers to GAD's scrutiny report (15/11/1994) and their commentary on *'New Business'*. She states:

> *Equitable's method of gross premium valuation (which they translate into a net premium valuation for the purposes of the DTI returns) seems to mean that GAD have to "translate" their figures to double-check on the cover for the* [required minimum margin]

<table>
<tr><td></td><td>— as per [GAD’s scrutiny report]. I don’t know of any other companies that do this — it seems to make more work for GAD! However, GAD’s comments of 23/11 show that they are happy with the adequacy of the reserves. Have you any comments on the scrutiny which I could pass to GAD before the visit?

In response, the Line Manager states that he thinks that just two or three other companies use a bonus reserve valuation. He also refers to GAD’s comment in their scrutiny report (in the section on the strength and/or weaknesses of Equitable’s valuation) on the prudence of certain of the assumptions. The Line Manager queries if GAD have followed this up. He comments:

The point which concerns me a little is that, as from the 1994 returns, it is not sufficient for the actuarial liabilities to be estimated prudently. Each of the assumptions which goes into the actuarial calculation has itself to be prudent. Equitable need to be alive to this.</td></tr>
<tr><td>30/11/1994</td><td>Equitable apply to DTI for a section 68 Order which will exempt them from the limit of Eurobonds they can hold. This is the second application — see 12/10/1994. DTI’s Line Supervisor B passes the letter to Line Manager B with a note: ‘presumably there will be no need to do a S.68 order [because] the [Regulations] amendments are almost there?’. The Line Manager replies: ‘Keep fingers crossed!’. (Note: it appears that no section 68 Order was issued — see the note of the meeting on 09/12/1994.)

Equitable write to GAD in reply to their letter of 23/11/1994. Equitable say that they wished to comment on the interpretation of Regulation 59 of ICR 1981. Equitable write:

I can see how a literal reading of 59(8) has led to the point you make. I have, however, tended to feel that, reading regulation 59 in total, it is reasonable to interpret the “rate of interest” in 59(8) as permitting the possibility that this rate may itself be an average liability valuation interest rate.

If this interpretation is not valid, then the wording of 59(9) is somewhat curious in that it presents hypothecation as something one <u>may</u> chose to do but, by implication, <u>need</u> not. Under your interpretation, except in the unlikely case of there being only one valuation interest rate for all contracts, hypothecation would seem to be mandatory.

Interestingly, 59(9) itself talks of “the rates of interest to be used in valuing a particular category of contracts ...” which seems to imply that, even where one is choosing to hypothecate, that need not be down to a level where there is a single valuation interest rate for the block of business in question.

Equitable say that they would be interested to receive any further comments that GAD may have on this point.</td></tr>
<tr><td>01/12/1994</td><td>Every insurance company is sent by DTI’s Director of Insurance a ‘Dear Director’ letter (DD1994/1). The letter encloses a copy of Prudential Guidance Note 1994/6, ‘Guidance on systems of control over the investments (and counterparty exposure) of insurance companies with particular reference to the use of derivatives’. DTI request a ‘state of play’ report by 31 March 1995 ‘summarising the extent to which your company’s systems already comply with Guidance Note 1994/6 and, if necessary, what remedial action is being undertaken’.</td></tr>
<tr><td>02/12/1994</td><td>GAD write to Equitable to say that GAD disagree with the Society’s interpretation of the regulations on valuation rates of interest. GAD say:

We do not agree with your interpretation of regulation 59. Paragraph 8 is quite specific in saying that in no case shall a valuation rate of interest exceed the weighted average yield on the assets. Paragraph 9 introduces an optional relaxation allowing hypothecation for</td></tr>
</table>

the purposes of valuing a particular category of contracts to prevent paragraph 8 proving excessively onerous. There is no mention anywhere in paragraph 8 or elsewhere in regulation 59 of the restriction applying only to the average valuation interest rate. Any interest rate used in the valuation which exceeds the limit in regulation 59(8) is therefore in [breach] *of the requirement that "in no case shall a rate of interest exceed the adjusted overall yield on assets". The position will be even clearer under the new regulations and the draft professional guidance notes.*

GAD continue:

The points you raise are very interesting, but we feel there are valid explanations without interpreting regulation 59(8) (or what is now 69(11)) in the way you suggest.

Regulation 59(9) does not require hypothecation, in that it is quite acceptable to apply paragraph 8 to all categories of contract based upon the fund yield.

We also do not feel that regulation 59(9), by using rates of interest, conflicts with our interpretation. It is not uncommon for actuaries to use two rates of interest for valuing a single contract, especially where there is a material reinvestment issue involved. This may be particularly relevant for, say, deferred annuities written on younger lives, or widows' annuities in payment, where assets may not be available of long enough term, and a reinvestment covered by 59(9) is unavoidable. It is of course quite acceptable for more than one interest rate to be used for contracts with the same hypothecated assets, provided each rate is less than the maximum supportable in terms of the yield on those assets.

GAD conclude:

For these reasons we believe our interpretation of regulation 59 is correct, and all interest rates used in valuing liabilities should be supportable in terms of the regulation by a particular set of assets, which may be all the assets. We trust that in considering your bases for the net premium test in the 1994 valuation you will verify that each interest rate can be supported in terms of the new regulation 69(11), with the application of paragraph 12 if required.

06/12/1994 [entry 1] DTI ask Equitable to provide details of their critical illness policy.

06/12/1994 [entry 2] DTI's Line Supervisor B writes to Line Manager B to brief him for the visit to Equitable on 09/12/1994. The Line Supervisor identifies five recent issues:

1) The section 68 Order application regarding Eurobond holdings.

2) Whether Equitable's critical illness policy is Class III or IV.

3) In relation to GAD's scrutiny of Equitable's 1993 returns, the Line Supervisor says: *'You had a query about prudence* [see 29/11/1994] *– as from the 94 returns, it will not be sufficient for actuarial liabilities to be estimated prudently – each of the assumptions which goes into actuarial calculation itself has to be prudent, and* [Equitable] *needs to be alive to this. GAD suggests that you bring this issue up – under 3rd* [Life Directive] *item on* [the] *agenda'.*

4) The section 68 Order on the call option (see 09/03/1994), which is effective until 30 June 1994.

5) The solvency cover in the 1993 returns. Line Supervisor B says: *'1993 returns form 9 shows* [the required minimum margin] *covered 3.75 times (ie by* [bonus reserve valuation] *method). Converted to* [net premium valuation method] *method over is 3.9 times'.*

To this list the Line Supervisor adds, in manuscript: *'Role of* [the Appointed Actuary]: *concern re* [Managing Director/Appointed Actuary] *all in one person'.*

07/12/1994	Equitable write to GAD in response to their letter of 02/12/1994. Equitable say that they *'do not wish to prolong this correspondence unduly since, on this occasion, it relates only to our "appendix" demonstrations of compliance with the regulations'.* Equitable say, however, that: *'the issue will become more pertinent under the new regulations and I shall give further consideration to that'.* Equitable make two further observations: *(1) Your interpretation depends on the point that there is no explicit mention that "the valuation interest rate" can be a weighted average. My view, no doubt coloured by the fact that in the actuarial literature the valuation rate of interest typically refers to the average rate, is influenced by the fact that the regulations do not explicitly say that the average rate may not be used for a block of business.* *(2) Looking back through my files I see that a similar presentation to that in paragraph 7 of my 22 November 1994 letter has been provided on a number of occasions in the past without being questioned by your predecessors.* Equitable conclude by saying they will *'give the matter further consideration in relation to the 31 December 1994 valuation'.*
09/12/1994 [entry 1]	Equitable provide DTI with details of their critical illness policy to be sold by their Republic of Ireland branch.
09/12/1994 [entry 2]	DTI (Line Manager B and Line Supervisor B) and GAD (Scrutinising Actuary D and Chief Actuary C) meet Equitable's Appointed Actuary/Chief Executive and their Investments Manager. DTI prepare a note of the meeting. They summarise discussion on 13 broad topics, including: (1) <u>Corporate objectives</u> Equitable provide a copy of their Mission Statement and corporate targets for 1994. They explain that they see themselves as primarily a pensions office. (2) <u>Marketing philosophy</u> Equitable explain that they employ a high calibre sales force. They say there have been: *... no problems with LAUTRO.* [Equitable's Appointed Actuary] *was very pleased with how the PIA was developing. Equitable only had half a compliance officer — no need for any more because each branch manager was a compliance person. They saw no point in over-selling products.* Equitable's Appointed Actuary explains that he keeps an eye on the mix of with-profits and linked business. GAD's Chief Actuary C asks if recurrent single premium products were not *'quasi-annual'.* The Appointed Actuary replies that he *'saw these as effectively annual. All marketing costs were based on the fact that the premium was renewed annually – but there were no penalties if the client stopped paying'.* In response to a question from GAD, Equitable confirmed that they applied a penalty on the surrender of a policy. Equitable provide details of the growth in business between 1984 and 1993: *... annual premiums went from £79m to £323m and single premiums from £45m to £1087m. Equitable was top of the new business league for annual premiums in '93 with £320m. They were about 4th from the top for single premiums ...*

(3) Management systems and procedures
Equitable provide details of their internal structures and IT systems.

(4) Role of the Appointed Actuary
Equitable's Appointed Actuary explains that he would continue in his position as Appointed Actuary and Managing Director until Spring 1996 and that *'there had been no problem combining both roles'*. Chief Actuary C notes that combining the two roles might be more of a problem for a proprietary office. The Appointed Actuary confirms that the two roles would be split after his departure *'more for personality than regulatory reasons — it was difficult to find an all-rounder. The two successors would almost certainly come from within the company'*.

(5) Aetna/Fuji case
Under this heading, DTI's note records: *'For single premium products – from the beginning of 1995 110% of surrender value would be paid – at present it was 101%'*.

(6) Pensions mis-selling
Equitable explain that they had received a lot of business from people contracting out, but these were viewed as 'execution only', i.e. no advice had been given. DTI's note records that the Society *'never advised people to opt out'*.

(7) Overseas activities
Equitable outline their current activities in the Republic of Ireland and Germany and the possibility of writing business in Italy, France, Spain and Austria.

(8) Bonus philosophy
Equitable explain that the declared bonus rate for 1994 would be held at 4% and that there is a guaranteed roll-up in policies of 3.5%. GAD ask what Equitable's technique for smoothing was. The Appointed Actuary explains that Equitable:

> *... looked at what was deemed the return on gilts for the year. They had to meet the guaranteed roll up of 3.5% plus the guaranteed addition of 4%. Any balance of the deemed return was the non guaranteed bonus. For '94 he would be asking the board to deem an intrinsic value of 10%. In '93 they had earned 29% on assets. 17% was available for distribution and 13% was distributed. They took a broad approach to smoothing. Policyholders were notified of the present value of their fund — this consisted of the premiums paid, the guaranteed interest added, and the guaranteed bonus. The terminal bonus element was accrued for the life of the policy.*
>
> [The Appointed Actuary] *said it was expected they would "overshoot" in '94 — they were not worried — but DTI may be! They did not do a market adjustment* – [the Appointed Actuary] *saw this as a "young actuary's idea"! It was determined in relation to indices. They tried to keep the total guarantees in line with what would have come in if investments were wholly fixed interest.*

GAD's Scrutinising Actuary D comments *'that it looked like over-distribution, compared with market values'*. Line Supervisor B's handwritten notes taken at the meeting also record that Chief Actuary C also asks: *'do you raise people's expectations?'*, and record that the answer given is *'No'*.

(9) Solvency
The Appointed Actuary provides an estimate of the solvency position at 31 October 1994. He explains that he:

> *... was not concerned at how small the free assets got. If there was a negative free asset ratio, he would use the implicit item which he applied for every year. If they couldn't declare a bonus, they wouldn't — but he said a well-managed with profit office could not*

go bust! In the past, you minimised the free assets and strengthened other areas. A vigorous expanding office may have a low free asset ratio — yet a dead-end office might have a high one!

(10) Investment management
Equitable outline their investment policies. They explain that *'they had targets to outperform the all-share Index each year by 0.5% without taking significant risks'*, but that in 1994 *'they would not have as good a year against the industry as a whole'*.

DTI refer to their Prudential Guidance Note 1994/6 on systems of controls over investments and say that they would welcome feedback from Equitable on it.

(11) Reinsurance – resilience testing – implicit items – valuation bases
Equitable's Appointed Actuary explains that the Society do not go for financial reinsurance, and that, on resilience testing, *'they followed DTI/GAD guidelines but not slavishly. He thought that some younger* [Appointed Actuaries] *treated them like tablets of stone!'*. GAD ask why Equitable do not show the implicit item in their returns. In reply '[the Appointed Actuary] *said that using it would make them look weak!'*. Equitable also explain that:

> *... they always went for the weakest possible valuation. The weakest one was the gross premium valuation. GAD noted that recurrent single premiums were very similar to the net premium valuation method.* [The Appointed Actuary] *said they took no account that 90% of the recurrent single premiums would be renewed.*

(Note: it does not appear from DTI's note of the meeting that there was any specific discussion of DTI's Line Manager B's concerns about the prudence of each of the assumptions in Equitable's valuation (see 29/11/1994 and 06/12/1994 [**entry 2**]).

At the meeting, Equitable provide the following documents:

– *'Equitable Life – Estimated Solvency Position at 31 October 1994'*
The information in this document is as follows:

> *If the Society had published a "Form 9" at 31 October 1994 the estimated position would have been as follows:*

	£m
Admissible assets less "other insurance and non-insurance liabilities"	*13,088.5*
Mathematical reserves (after distribution of surplus at 1993 rates)	*12,041.3*
Available assets for minimum margin	*1,047.2*
Required minimum margin	*478.9*
Excess of available assets	*568.3*

– *'Equitable Life – Development Expenditure'*
This document sets out the Society's expenditure on information technology over the years 1989 to 1995, totalling £70m, and when repayment of the amounts borrowed to cover that expenditure is expected. Full repayment is anticipated by 1999.

– *'New Business Financing'*
The information in this document is as follows:

> *For "annual premium" type business, acquisition costs exceed the charges in the premium received in the first year and are recouped over the life time of the policy. Loans are required from the main fund to finance the costs of year one.*
>
> *Single premium business requires no such financing.*

The "loan account" has been monitored for some 20 years, from the time the Society developed its current sales force.

The net loan plus interest to the end of 1988 had amounted to £147.9m.

The movement since then has been:

	Interest on brought forward loans	*Strain on new business in year*	*Received from existing business*	*Outstanding loan at year end*
1989	*35.6**	*58.1*	*21.6*	*220.0*
1990	*-18.5**	*44.6*	*27.2*	*218.9*
1991	*30.8*	*37.6*	*32.4*	*254.9*
1992	*28.0*	*58.0*	*51.2*	*289.7*
1993	*22.3*	*55.5*	*66.0*	*301.5*
1994 to end of year	*13.4*	*52.7*	*52.1*	*315.5*

** Based on "fund returns". Now use rate of interest negotiated with our bankers.*

On DTI's copy, Line Supervisor B has written: *'£300m is part of the assets'.*

– *'Equitable Life – Recurrent Single Premium Pension Bonus Rates'*
Equitable provide the following table:

Year	*Declared bonus rate* %	*Equivalent return** %
1985	*9.25*	*13.1*
1986	*8.50*	*12.3*
1987-90	*7.50*	*11.3*
1991	*6.50*	*10.2*
1992	*5.00*	*8.7*
1993	*4.00*	*7.6*

** The "equivalent return" is a combination of the declared rate and the basic accumulation rate of 3½% p.a. guaranteed within the contract.*

– *'Managing Director's Report'*
This document provides a brief summary of certain areas of the business. Under the heading *'New Regulations for Liability Calculation'*, the report states:

The DTI is introducing new regulations which will be effective for the year end. Some of these stem from the Life Directive. There are no points of significance for the Society.

– *'Pension Transfer Problems'*
This note sets out the background to the pension transfers and opt-outs mis-selling review, its effect on Equitable, and the potential number of mis-selling cases.

– *'The Equitable Management Company –Accounts for the Period Ended 30 September 1994'*
This document, which is presented to the Board every three months, is made up of the following reports:

1) *Global business profit and loss account*
2) *Global business balance sheet*
3) *Non-UK business profit and loss account*

4) *Non-UK business balance sheet*
5) *UK business full 'Equitable Management Company' accounts*

– *'Monthly Business Statistics – Period Ending 31.10.94'*
This document, which is presented to the Board every month, is made up of the following reports:

1) *Revenue Analysis – Global Business*
2) *The Equitable Life Assurance Society Balance Sheet*
3) *"Equitable Management Company" – Global Business Profit & Loss Account*
4) *"Equitable Management Company" – Non UK Business Profit & Loss Account*
5) *Investment of net addition to fund*
6) *UK with profits investment performance*
7) *UK Linked business investment performance*

Report 6, *'UK with profits investment performance',* includes:

'Overall Returns 31.12.93 to 31.10.94		*Year to Date*	*Annualised*
Total return (capital & income) of with profits assets		*(4.6)%*	*(5.4)%*
Total return of non fixed interest element of with profits assets		*(2.8)%*	*(3.3)%*
Gross Redemption Yield of 10 year gilt at start of year			*6.3%*
Projected 1994 returns		*– Pessimistic*	*(1.1)%*
(on asset-split at start of year)		*– Most likely*	*11.4%*
		– Optimistic	*20.7%'*

(Note: the figures in brackets in the above table are negative.)

Below these figures, Line Supervisor B, in noting comments made by Equitable's Appointed Actuary, has written: '*If we want to deem 10% earned – above concentrates the mind!*'.

– *'The Society's Corporate Objectives'*
The corporate objectives of the Society include the mission statement of *'Growing more contented customers'* and its principles of operation being:

a) *We are a mutual Society, providing a service at cost to our clients*
b) *We aim to attract clients from the upper end of the market. Through packaged arrangements such as group pension plans we also offer the benefit of Equitable products to a wider community*
c) *We control the selling and marketing of our products, operating only through our own sales force and without payment of commission to third parties*
d) *We are, and are seen to be, an innovative organisation.*

– Standard & Poor's press release of 5 December 1994 entitled *'The Equitable Life Assurance Financial Strength Rated "AA" (Excellent) By S&P'*
The press release says:

> *The rating reflects the society's strong market position where a very focused approach and highly efficient distribution system have fostered excellent new business growth and contributed towards ELAS' remarkably good expense performance. Furthermore, S&P regards capital strength as excellent, while investment performance over recent years has continued to be strong.*

On Equitable's regulatory solvency position, Standard & Poor say:

> *Although ELAS uses a conservative valuation methodology, S&P still believes that it shows a significant degree of capital strength. The Society's published returns display a strong level of capitalisation, despite a significant strengthening of the valuation in 1993, with the free asset ratio rising to 9.40% and coverage of the required minimum margin to 3.7 times (x), from 5.09% and 2.4x, respectively, in 1992. An alternative net premium valuation, more comparable with peers, would increase the free asset ratio to almost 12% and coverage of the required minimum margin to over 4.4x. While these levels can be expected to decline in 1994, as investment values fall, S&P believes that the society's capital strength will remain substantial.*

<u>– Insurance Security Analysis Service's analysis of Equitable and comparative market data</u>
The rating given is *'B+'*. The commentary explains that *'The company continues to perform well, although its free assets are relatively low for a with-profits office. A repeat of last year's rating has been made'.*

Under *'Solvency & Security'*, commenting on the Companies Act accounts for 1993 the rating states:

> *A transfer of £1.18 billion of capital appreciation was made in 1993 from investment reserve to the long-term business fund to support a significant strengthening of the liability valuation in the light of markedly lower interest rate levels and to enable bonuses at the appropriate levels to be declared, but the amount of Investment Reserve remaining at 31st December 1993 had doubled to £1.7 billion. The free asset ratio increased and the adjusted ratio, allowing for with-profits business, almost doubled to twelve per cent, although this is still well below the level for most with-profits offices.*

13/12/1994 [entry 1] DTI thank Equitable for their hospitality on 09/12/1994. DTI's letter ends:

> *Looking at our files, it appears that we have not yet received a request for a Section 68 Order for a future profits implicit item. If you require such an Order for the 1994 returns, grateful if you could send in the necessary information as soon as possible.*

13/12/1994 [entry 2] Equitable's Appointed Actuary writes to DTI's Line Manager B to express the hope that the visit gave DTI as much information about Equitable as they were expecting. The Appointed Actuary invites DTI staff to visit Equitable's Head Office to look at their new IT systems. He adds: *'You can then meet some other colleagues which would help demonstrate that there are other people here besides myself, just to pick up on* [Chief Actuary C's] *comments!'.*

15/12/1994 Equitable apply to DTI for a section 68 Order for a future profits implicit item of £500m, for possible use in their 1994 returns. Equitable provide financial calculations in support of the application which suggest they could seek an Order up to the value of £2,141.1m. Given the proximity of the year end and to save time, Equitable copy the application to GAD.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total Surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.89	*337.4*	*–*	*89.9*	*247.5*
31.12.90	*422.5*	*557.0 (a)*	*26.6*	*(161.1)*
31.12.91	*596.5*	*(13.2) (b)*	*59.5*	*550.2*
31.12.92	*330.5*	*(89.4) (c)*	*46.4*	*373.5*
31.12.93	*480.9*	*(1,066.7) (d)*	*178.5*	*1,369.1*
				2,379.2

Average annual profit = 2379.2/5 = £475.8m

Notes: *(a) Surplus was increased by £557.0m as a result of changes in valuation bases during 1990.*

(b) Surplus was reduced by £13.2m as a result of changes in valuation bases during 1991.

(c) Surplus was reduced by £89.4m as a result of changes in valuation bases during 1992.

(d) Surplus was reduced by £1,066.7m as a result of changes in valuation bases during 1993.

The calculations state that the average period to run for the Society's in-force contracts is now nine years. The Society's Appointed Actuary explains:

The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.

The calculations suggest that the maximum future profits permissible is 50% of £475.8m multiplied by nine years — that being £2,141.1m.

19/12/1994 GAD write to DTI, recommending that the section 68 Order is granted. GAD say, however, that they do not agree with Equitable's detailed calculations. GAD explain:

The calculation includes "Exceptional Items" relating to basis changes. The Guidance Note requires that exceptional losses should be omitted to the extent that there are similar exceptional profits. Furthermore it suggests that there is no intention to allow basis strengthening to be allowed as an exceptional item. The note does however talk of "net strengthening", and it would seem a little unreasonable to omit the surplus arising from a weakening and disallow the cost of re-strengthening in a later year; this is made more clear when it is realised that a simultaneous change would be offset. However, the requirement that a loss must only be disallowed to the extent that there is similar profit being disallowed must be right, and we should ensure this is pointed out to [Equitable's Appointed Actuary].

GAD continue:

In the current calculation, there is a large strengthening of reserves added to the surplus for 1993, and only about half this amount in a disallowed profits from weakening. I have reworked the figures to eliminate all the exceptional items, and this permits a maximum implicit item of £1,590.3m, which is still comfortably more than the £500m being requested. If the exceptional profit were eliminated, but the losses were not, then the figure would still exceed the request, being some £1,088.9m.

20/12/1994 [entry 1]	Equitable's Appointed Actuary writes to GAD to raise a query about the use of future profits implicit items. The Appointed Actuary explains that '[for] *various reasons we have, to date, decided not to make use of these orders in preparing our returns. I have, however, felt for some time that it would be professionally sound to recognise the ability to obtain and make use of such an order when considering the application of the resilience test'.* He suggests that, in relation to the Society's 1993 returns, it would have been reasonable to say that the additional margin of £236m indicated by the resilience test was well below the amount of the available future profits implicit item, and thus that no additional explicit reserve was required. He asks GAD for their views.
20/12/1994 [entry 2]	DTI send GAD a copy of Equitable's letter of 09/12/1994 about their Republic of Ireland branch. DTI ask whether, in the light of this further information, GAD still think that the product should be classified as Class IV business.
29/12/1994	DTI send Equitable the section 68 Order for a future profits implicit item of £500m, for use in the 1994 returns. DTI add:

We have the following comment on the calculations supporting your application, which I would be grateful if you could note for future calculations. Your calculation included "exceptional items" relating to basis changes. The DTI Guidance Note (October 1984, paragraph 10) on implicit items requires that exceptional losses should only be omitted to the extent that there are similar exceptional profits.

1995

03/01/1995 Equitable's Chief Executive writes to DTI's Head of Life Insurance on a taxation problem the Society are having in Germany. The Chief Executive begins his letter: *'As we know each other it seems natural to write to you ... I will, of course, understand if, however, you feel it is appropriate to pass this letter to somebody else for attention'.* The Chief Executive says that his concern is that *'following the 3rd Life Directive and subsequent legislation ... there is discrimination being exercised in Germany against foreign insurance companies which stems from tax rather than insurance law'.* He explains that: *'... unlike German life assurance companies, each year the Society will be liable to tax on the total assets held in respect of our German business';* and *'the reason why German life assurance companies are exempt from the tax seems to be that they are required by their insurance regulators to appoint trustees to look after their assets and where such a framework exists the assets are not subject to tax'.* Equitable's Chief Executive asks the Head of Life Insurance to take the matter up with the German regulators, or in any other way that he feels is appropriate.

04/01/1995 [entry 1] GAD write to Equitable in reply to their letter of 20/12/1994 about future profits implicit items and the resilience test. GAD say they:

> *... have considerable sympathy with the professional argument you have made. There are, however, further explicit requirements in the regulations, some of which derive from European legislation. These will, I think, have the effect of limiting severely your ability to use the future profits implicit item in the way you suggest.*

GAD explain:

> *The principal requirement is that in regulation 64(1) of the Insurance Companies Regulations 1994 which necessitates that the assumptions used in determining the long term liabilities "shall include appropriate margins for adverse deviation of the relevant factors". This needs to be read in conjunction with regulation 75 which further requires that the liabilities "include prudent provision against the effects of possible future changes in the value of the assets".*
>
> *I believe these regulations have the effect of requiring the majority of the professionally required resilience reserve to form part of the mathematical reserves shown in form 14, or else the appropriate part of the entry in line 51 of form 14 needed to make the mathematical reserves sufficient must be stated.*

They continue:

> *This, of course, relates only to the resilience reserve attributable to the liabilities themselves, and the assets supporting those liabilities. This may not be quite as stringent as your suggestion in one respect, namely that this need does not extend to the solvency margin.*

GAD conclude that:

> *The position which meets your definition of "resilient" would seem then to become as follows:*
>
> *a) the assets covering the mathematical reserve, including any resilience reserve necessary, are sufficient to cover at least the liabilities in the changed conditions (except the requirements of regulation 75)*
>
> *and*

1995

> b) *the assets covering the mathematical reserves and solvency margin in current conditions are sufficient to cover at least the mathematical reserves and the amount of fund required by regulation 22(3) to be covered by explicit items (which for Equitable Life will be one-sixth of the total required minimum margin for the foreseeable future)*
>
> *and*
>
> c) *the future profits position in the changed conditions would be sufficient to support an implicit item to cover the balance between the cover provided by the assets and the required minimum margin.*
>
> *The first of these three paragraphs would seem to be sufficient to cover the requirements of that part of the actuary's certificate covering the determination of the liabilities, whilst the professional responsibilities of the Guidance Notes are, in my view, satisfied by the other two paragraphs.*

04/01/1995 [entry 2] GAD write to DTI to state that, in the light of Equitable's letter of 09/12/1994, GAD are satisfied the policy falls within Class IV.

13/01/1995 DTI's Head of Life Insurance writes to his German counterpart at BAV (the German Supervisory Office for Insurance, based in Berlin) to take up the issue raised by Equitable in their letter of 03/01/1995 (having first checked that this does not cause another DTI official any difficulty). The Head of Life Insurance also writes to Equitable to say: *'I have put a ferret down the BAV rabbit hole and will let you know what emerges'.*

25/01/1995 Equitable write to DTI in reply to their letter of 29/12/1994. Equitable confirm that, in the calculation of average profits, exceptional losses were only excluded to the extent that those losses could be set against similar exceptional profits.

Equitable say: *'As you are aware, in 1990 the Society moved from an approach using valuation bases which reflected the assumptions made in the premium bases to a more active approach in which the valuation bases reflected the yield on assets at market value. As a result of that change reserves decreased by £557.0m in 1990'.*

Equitable continue:

> *When in 1991, a figure for average profits over the five years 1986 to 1990 was calculated in support of the Society's application to take credit for a future profits implicit item, it was not clear as to whether an adjustment should be made to profits for the £557.0m release of reserves described above.*
>
> *On the one hand, surplus had been increased by £557.0m from a change in valuation approach and, in accordance with the Guidance Notes on implicit items, such an exceptional profit should be excluded. It would then be consistent to also exclude any exceptional losses resulting from changes in valuation bases in subsequent years from the calculation.*
>
> *On the other hand, however, paragraph 10 of the Guidance Notes state that "it is not intended, however, that any adjustment should be made for the effect on surplus of a net strengthening of reserves". If, therefore, the effect on surplus arising from a strengthening of reserves should be excluded then, on the grounds of consistency, it would seem logical that the effect on surplus arising from a weakening of reserves should also be excluded.*

Equitable ask for DTI's advice *'so that, in future, the Society's calculations will accord with the DTI's views on this subject'.*

30/01/1995	DTI copy Equitable's letter of 25/01/1995 to GAD and seek their views.
01/02/1995	DTI's Line Supervisor B passes the correspondence that DTI have had with Equitable about the Society's critical illness policy to an adviser in DTI's legal department (Legal Adviser A). The Line Supervisor asks for his views.
02/02/1995	Legal Adviser A advises Line Supervisor B that in his view the policy is Class IV not Class I or III.

07/02/1995 [entry 1] GAD write to DTI with some comments on Equitable's letter of 25/01/1995. GAD begin by saying that: *'to understand the guidance notes, it is useful to remember the effect of an implicit item, and why it might reasonably be allowed. The purpose is to allow an office to hold less assets against the required minimum margin than would otherwise be required, on the grounds that over the life of the policies, based upon past experience, a surplus will be generated'.*

GAD advise:

> *Changes of valuation basis can have various causes, but there are two main points to consider. A release of surplus from a weakening of the valuation basis is non-recurring, and indeed may even be at the expense of future surplus. It is therefore an exceptional item of surplus, and should properly be disregarded in the calculation.*
>
> *A valuation strain arising from a basis strengthening could also be regarded as an exceptional item of deficit arising, but this is inappropriate if the reserve strengthening were required to meet the regulations, in particular to establish a prudent basis. This would tend to indicate that previous surpluses were overstated, for whatever reason. In general, therefore, the cost of reserve strengthening should not be excluded from the calculation.*

GAD continue:

> *These comments relate more relevantly to significant changes of basis, such as Equitable made in 1990 ... Most companies do make smaller changes from time to time, and these often are cancelling in effect from year to year. This will be less common under the 1994 regulations but will still occur. It seems unreasonable to exclude a surplus that arises from the release of a reserve the cost of setting up of which was included in a previous year. It is appropriate for reserve weakenings and strengthenings which relate to a similar item, such as the interest rate basis, should be allowed to be offset, so that the weakening need not be disregarded to the extent that the cost of strengthening the same assumption is included in a different year in the comparison ...*
>
> *It would not, of course, generally be appropriate in the context of the Insurance Companies Regulations 1994 to allow a strengthening of mortality basis and a weakening of interest basis to be offset in this way.*

07/02/1995 [entry 2]	DTI write to Equitable in reply to their letter of 09/12/1994 about their critical illness policies. DTI explain: *'Our view is that the principal objective of these policies is the provision of* [permanent health insurance] *benefits and that they should therefore be classified as Class IV. The ultimate decision on this type of issue would of course lie with the courts'.*
09/02/1995	The German regulatory authority reply to DTI's letter of 13/01/1995. The regulatory authority say that the background to the issue is the treatment of mathematical reserves and reserves for the return of contributions with regard to trade tax. The regulatory authority explain that they had presented the facts to the relevant ministry but its reply could be influenced by any legal repercussions which might occur if Equitable were to appoint a trustee on a voluntary basis, as

they understand that a trustee could not be nominated under English law. The regulatory authority ask DTI for their interpretation of the applicable law.

Having sought legal advice, DTI's Head of Life Insurance responds on 27 March 1995. His short letter says '[DTI] *are not aware of any reason in English law why a UK life insurance company should not appoint a trustee in Germany, if both parties are willing'.*

(Note: I have found no evidence that DTI informed Equitable of this response.)

16/02/1995	Equitable's Chief Executive writes to DTI's Head of Life Insurance to set out some concerns that the Society has about another taxation issue concerning the rules for business written in Europe. He begins his letter: *'Following our luncheon earlier this week with your colleagues at which we discussed the role of the DTI as our "supporting agency", I have already found a problem I hope you can help us with'.* The Chief Executive explains: *... the simple changes required to the taxation rules for life offices have been so complicated by regulations that the legislation will not have the effect needed by the industry to take advantage of the current opportunities in Europe. The proposed regulations are so severe that we may well need to close our branches in Germany, Guernsey and the Republic of Ireland.* Equitable's Chief Executive says that he has written to the Financial Secretary to the Treasury to request a change to the applicable regulations, but asks the Head of Life Insurance to use his influence to *'ensure that something happens'.*
28/02/1995	Equitable write to DTI in response to their letter of 07/02/1995 about the Society's critical illness policies. The Society continues to dispute that these policies should be viewed as Class IV. Equitable point out that they write the same business in the UK and *'you have not yet challenged us on that'.* Against this, Line Supervisor B has written *'but we are now!'* on this letter.
02/03/1995	DTI's Line Supervisor B writes to Line Manager B enclosing a copy of GAD's note of 07/02/1995. The Line Supervisor says: *'I keep looking at this and putting it back in my tray! It all looks* [very] *involved!'.* She asks if she should send the note itself to Equitable or request GAD's Scrutinising Actuary D to draft a reply. She adds as a postscript: '[A GAD actuary] *was saying to me yesterday that the calculation of the implicit item was essentially flawed, and he didn't fuss too much about* [very] *technical details. But perhaps that's just* [him]*!'.* On the same day, the Line Supervisor seeks views from DTI's Legal Adviser A and GAD's Scrutinising Actuary D on Equitable's letter of 28/02/1995.
03/03/1995	DTI's Line Manager B says in response to the Line Supervisor's note of 02/03/1995: *'Hmm! Tends to make the eyelids droop!'.* The Line Manager suggests that she should ask GAD to draft a reply.
07/03/1995 [entry 1]	DTI's Line Supervisor B writes to GAD in response to their note of 07/02/1995. The Line Supervisor says: *I am having problems with how to put your comments into a letter! Equitable's arguments are all very theoretical as they don't even use their implicit item!* *I would be most grateful if on this occasion you could prepare a draft reply to* [Equitable's Appointed Actuary] *which I can "top and tail".*
07/03/1995 [entry 2]	DTI's Head of Life Insurance writes to Equitable's Chief Executive in response to his letter of 16/02/1995. The Head of Life Insurance explains that he has spoken to the Inland Revenue and the Association of British Insurers. He suggests that there is little scope to effect the changes in

1995

the taxation rules Equitable are seeking but that the Association of British Insurers are exploring options and that Equitable should notify the Association of British Insurers of their concerns.

07/03/1995 [entry 3]	DTI's Legal Adviser A comments on Equitable's letter of 28/02/1995 about their critical illness policy. Legal Adviser A takes the view that it is Class IV.
08/03/1995	GAD write to DTI in relation to two issues. First, GAD confirm their view that Equitable's critical illness policy should be classified as Class IV. Secondly, in relation to the calculation of future profits implicit items GAD provide a draft reply to Equitable's letter of 25/01/1995, reflecting the points in GAD's note of 07/02/1995.
15/03/1995	Equitable write to the President of the Board of Trade to highlight the taxation issue referred to in Equitable's letter of 16/02/1995.
20/03/1995	The German regulatory authority write to DTI about the sale by Equitable, in Germany, *'of single premium annuity insurance policies with immediate effect, where the annuities payable monthly are guaranteed for life at a level which precludes participation in surpluses'.* The regulatory authority point out that the yields required to meet the policies are unrealistic in Germany: *From my position I cannot assess to what extent the provisions on the interest rate of reserves applicable in the United Kingdom have been observed. It does however appear possible that the undertaking has not complied with the provisions of Article 19 in conjunction with Article 18(1)(c) of the Third Life Insurance Directive. The German press quotes the undertaking's marketing manager ... as saying ... that no distinction is made between British and German people, or between men and women. The application of such a policy to annuities would in Germany be contrary to the actuarial principles which apply.* *In connection specifically with the requirement on German life insurance undertakings to observe the new mortality ratios in annuity insurance and partially to reduce their guarantees in future policies, there is also naturally a competition policy aspect to this case and it has attracted considerable attention in the press. There is room for doubt, particularly in so far as Equitable Life's product is to a considerable extent sold to women, as to whether the premiums received will suffice to meet the commitments entered into.*
21/03/1995 [entry 1]	A DTI official advises Line Manager B that he and DTI's Director of Insurance, along with GAD's Directing Actuary A, are shortly visiting the German regulatory authority and could discuss the letter of 20/03/1995 at their meeting. The note is copied to Directing Actuary A. In an undated note, GAD's Scrutinising Actuary D informs the Directing Actuary that Equitable price German annuities on an a(90) select mortality table but do distinguish between men and women, although GAD are currently researching the position further. He points out that *'as* [Equitable] *only have one in force policy, they aren't too bothered about the reserve! Nonetheless, it seems under full control'.*
21/03/1995 [entry 2]	DTI's '*Sponsorship Section*' visit Equitable's offices. DTI's conclusion from the visit is that Equitable have great confidence in themselves as market leaders, based not just on up-to-date IT systems but also refined business processes and a programme of culture change amongst staff. In a note made on 5 April 1995, Line Manager B remarks that *'it would have been* [very] *nice to have known about this visit in advance'.*

1995

23/03/1995 DTI write to Equitable in reply to their letter of 25/01/1995. The letter largely repeats GAD's note of 07/02/1995.

DTI's reply crosses with a chasing letter of the same date from Equitable's Appointed Actuary. In relation to the Society's solvency position presented in Form 9, the Appointed Actuary says:

> *As at 31 December 1994 the excess of available assets over the required minimum margin will be of the order of £400m which will present a marginally stronger position than at the end of 1991. I am, however, considering the possibility of making use of the Section 68 order for a future profits implicit item which was enclosed with your letter of 29 December 1994. Our accounts for 1994 will be published in the new format under the Insurance Accounts Directive. Given such a significant change, and in particular the new asset of "deferred acquisition costs" it seemed an appropriate time to make full use of the margins available to us in the DTI returns. Hence both sets of documents may be described as "true and fair"!*

The Appointed Actuary informs DTI that: *'In 1994, the Society's valuation bases were changed with the result that overall there was a release of reserves. The Society's current approach to the treatment of profits and losses arising from valuation basis changes will for the five years 1990 to 1994 be the more conservative of the two possible approaches, as was the case for five year periods ending prior to 1993'.*

The Appointed Actuary repeats his request for advice on the treatment of profits or losses arising from such changes to the valuation basis.

DTI later note on Equitable's letter that they had provided the advice requested.

27/03/1995 [entry 1] Equitable write to DTI in reply to their letter of 23/03/1995. Equitable say that this has provided the information DTI were seeking on the treatment of profits or losses arising from valuation basis changes. Equitable explain that: *'By far the major part of changes in reserves due to valuation basis changes over the last five years has been due to changes in valuation interest rates reflecting the movements in asset yields'.* They acknowledge that a few valuation bases have been strengthened, the cost of which should have been excluded from their calculations submitted in previous years. Equitable continue:

> *Those costs were, however, relatively small and I can confirm that they had no material effect on the applications for a future profits implicit item submitted by the Society in previous years.*
>
> *When the Society submits its application for a Section 68 Order in respect of a future profits implicit item based on the average profits for the years 1990 to 1994, the effects of the strengthening of reserves other than those due to changes in interest bases will be excluded from the calculation of those average profits.*

27/03/1995 [entry 2] DTI's Line Supervisor B seeks advice from Line Manager B about how to respond to Equitable's letter of 28/02/1995 about the critical illness policy.

In an undated note, Line Manager B says to Line Supervisor B that he deduces from the note that no one at DTI agrees with Equitable that the business should be classified as Class III. The Manager informs her that he has asked Legal Adviser A about the solvency implications of classifying the business as Class IV. He also says that they could discuss the issue with GAD's Scrutinising Actuary D when he is at DTI to discuss problems at another company.

28/03/1995 Equitable write to DTI enclosing a 12 page *'State of Play Report at 31 March 1995'* on their internal control systems, sent in response to DTI's 'Dear Director' letter of 01/12/1994. The Society's report sets out Equitable's systems of internal control and considers the extent to which they comply with the guidelines contained in Prudential Guidance Note 1994/6. The report concludes that Equitable's systems are adequate to ensure the safekeeping of the assets held on behalf of policyholders and that, where areas of weakness are identified, Equitable take corrective action.

30/03/1995 DTI inform the German regulatory authority that they have received notice from Equitable of changes to the requisite details of their German branch, and have no objections to these.

31/03/1995 Equitable write to GAD following a press report, from which it appears that GAD have decided to take no action following their survey of bonus distribution practice (see 09/07/1993). Equitable welcome the press report, if it is accurate, but state that it was *'discourteous'* for the results of the survey to be disseminated in this way.

03/04/1995 [entry 1] GAD write to Equitable in response to their letter of 31/03/1995. GAD say that they explained to the journalist in question that:

> *... the grounds for intervention available to the Secretary of State are prescribed in the ICA 1982, as amended, and if higher bonuses are awarded than have been earned, this is principally a matter for commercial judgement provided the reasonable expectations of the other policyholders are not affected.*

GAD deny that they are disseminating the results of the survey through the press and add:

> *In fact, during the conversation I told* [the journalist] *that it was decided not to publish the results of the survey due to the difficulty of not laying ourselves open to the charge that one could identify particular companies' practices.*

03/04/1995 [entry 2] The Financial Secretary to the Treasury writes to Equitable in response to their letter of 16/02/1995 in relation to overseas life insurance business and the tax treatment of policyholders.

06/04/1995 [entry 1] Equitable write to GAD to thank them for the clarification and to accept that they misinterpreted the situation. Equitable suggest that there is still merit in GAD reporting the progress of such exercises direct to the participants. The letter is copied to DTI.

06/04/1995 [entry 2] DTI's Line Supervisor B prepares a note for Line Manager B, setting out the case for recommending Equitable's Chief Executive and Appointed Actuary for an honour. The Line Supervisor gives brief details of his career with Equitable and some background to Equitable's activities. Under *'Grounds for Recommendation',* the Line Supervisor writes:

> *The Society has a good reputation. No known pension sales malpractice or LAUTRO compliance problems. Financial Strength rating by Standard + Poor's 5/12/94 of Double A rating.*
>
> *GAD comment on 1993 returns – expenses of Society remain low, with comfortably the best ratios in the industry. Cover for solvency margin is substantial.*

(Note: during the relevant period, it was common practice for public bodies – especially those like DTI which had a 'sponsorship' role for an industrial sector or sectors in addition to their other functions – to consider whether to put individuals forward for recognition through the honours system.)

11/04/1995 DTI's Head of Life Insurance writes to the Director of Insurance to recommend Equitable's Chief Executive and Appointed Actuary for an honour in the 1996 New Year list. The Head of Life Insurance explains:

... the Equitable's achievements and reputation are undeniable; and there is a case for recognising through the honours system the Managing Director of a company which has so conspicuously got it right, both in terms of commercial results and in terms of avoiding the poor reputation which the sector as a whole suffers from.

The Head of Life Insurance suggests the following citation:

[The individual] *has been Managing Director and Appointed Actuary of the Equitable Life since July 1991, after service with the company in various capacities since 1953.*

The Equitable Life has a well deserved reputation as a life office which has not only achieved outstanding results (regularly topping tables for high investment returns and low charges); but has also managed to avoid the poor image which currently afflicts the life industry generally, as a result of poor selling methods and breaches of regulatory rules. In particular, the Equitable Life does not pay commission to intermediaries (the main cause of inappropriate sales within the industry); the proportion of policies surrendered early is one of the lowest in the industry; and the payments for early surrender are among the highest.

The Equitable Life is also an industry leader in the application of Information Technology to improving services to clients; and is the chosen partner for [a leading retailer's] *new venture to distribute life insurance through its stores.*

As Managing Director, and very much the driving force behind the Equitable Life, [the individual] *can claim the main credit for these achievements. In addition, he is that rare specimen – an actuary who can communicate effectively in plain English.*

The Head of Life Insurance copies his suggested citation to GAD's Directing Actuary A for comment.

13/04/1995 DTI write to Equitable seeking a reply to DTI's letter of 25/10/1994 on potential liability for compensation payments for pension transfers and opt-outs.

19/04/1995 [entry 1] DTI's Line Supervisor B passes a copy of the letter of 20/03/1995 from the German regulatory authority to Line Manager B and to GAD's Chief Actuary C. The Line Supervisor asks: *'Should we be taking this up with Equitable Life?'.*

19/04/1995 [entry 2] DTI write to Equitable to reiterate their view that the critical illness policy is Class IV rather than Class III.

19/04/1995 [entry 3] Equitable write to DTI to respond to their letter of 13/04/1995. Equitable apologise for not replying to the earlier letter of 25/10/1994. They say:

It is simply not possible to quantify, even crudely, the potential liability for compensation payments, given the uncertainty of the rules. My stance on that has not changed although we believe that our exposure is likely to be relatively small.

We are therefore making no explicit provision against this contingency in the accounts although I have "over estimated" the technical liabilities by £50m as a very full implicit provision. Our auditors have given a "true and fair" certificate on our accounts in the new Insurance Accounts Directive in the full knowledge of our approach.

21/04/1995 GAD write to DTI in reply to their request for advice on the letter from the German regulatory authority. GAD suggest seeking Equitable's comments on what has been said, as it appears Equitable are adopting an aggressive marketing stance, contrary to what they said at the company visit. (Note: DTI's note of the visit – see 09/12/1994 – made no reference to

Equitable's marketing stance.) GAD end their letter: *'No doubt* [Equitable's Chief Executive] *will provide you with a satisfactory explanation which you could consider passing on to the German supervisor, if that is felt to be appropriate'.*

Line Supervisor B passes the note to her Line Manager who replies: *'Don't do it! Let's wait to see* [a DTI official's] *report of the Berlin meeting'.*

24/04/1995 [entry 1] DTI's Line Supervisor B notes that the following is added to the submission in support of a recommendation that Equitable's Chief Executive should receive an honour:

> *1993 returns – Funds under Management of £13 billions*
>
> *" " – New premium income was £920 millions*
>
> *Standard & Poor press release of 5/12/1994 rated Equitable's financial strength as "AA" (Excellent).*

24/04/1995 [entry 2] Equitable telephone DTI. According to Line Supervisor B's note of the call, Equitable's Appointed Actuary says that he accepts the points made in DTI's letter of 19/04/1995 regarding the critical illness policy. The Appointed Actuary asks if DTI would be inclined to accept that the product was Class III if there were a death benefit. The Line Supervisor says that this would be unlikely. The Society's Appointed Actuary '*admits that he had been trying to avoid putting it in Class IV for tax reasons'* and asks if Equitable could keep the existing business in Class III for the 1994 returns, as it was *'de minimis'* (i.e. of minor importance). The Line Supervisor agrees to this.

26/04/1995 Equitable write to DTI enclosing details of some changes they intend to make to the premium bases for Irish and German temporary assurances and annuities. Equitable explain that the new premium bases are being introduced to bring them into line with the bases already used, or those about to be used, in the United Kingdom. DTI copy the letter to GAD and ask if GAD have any comments.

28/04/1995 GAD's Scrutiny Strategy Working Party (a group, established in June 1994, made up of GAD actuaries and DTI supervisors and including Chief Actuary C and Line Manager A) report to Directing Actuary A and DTI's Head of Life Insurance on their work on the production of comparative information on the life insurance industry. The Working Party say that they have considered two possible approaches: to include comparative information within each company's detailed scrutiny report or to produce an annual report on the life insurance industry. The latter approach is recommended and the Working Party attach a suggested format for such a report.

Under *'Objectives'*, the Working Party report:

> *The longer-term objectives identified in our December 1994 report, relating to comparative information, were to provide DTI with:*
>
> *a) an understanding of how a company is performing in relation to its peers, and any problems this may cause if current trends in performance indicators continue*
>
> *b) the basis of understanding the problems facing the various sectors of the industry*
>
> *c) industry-wide analyses of certain key aspects of performance*

It was recognised that an annual report could be designed to meet these basic objectives but that it need not be restricted to these. In particular, such a report provided an opportunity to give a far wider perspective on the industry as a whole, something for which DTI had been looking for some time.

Following initial discussions with DTI, it became clear that the aim should be to provide a report that could be used for reference purposes by senior DTI management, and which would build into a useful series of documents over a number of years. In addition, the report was also seen as potentially useful to the GAD actuaries. They could cite the report when completing detailed scrutiny reports, to enable them to make more informed comments on a given company's relative performance.

The following items are listed as being useful potential contents:

- *an executive summary of the key points emerging from the report, generally at industry level but also commenting on individual companies or sectors, if required*
- *a background section, focussing on significant developments in the industry during the year*
- *analyses of new business, expenses and persistency*
- *analyses of free assets, maturity payouts and bonuses*
- *analyses of free assets and valuation bases*
- *remarks on compliance, press comment, etc.*
- *changes in composition of the industry, including new authorisations, take-overs, closures, mix of UK/overseas business, etc.*
- *views, opinions and predictions for the future.*

The Working Party report that some initial work has already been undertaken to produce a dummy report for the 1993 returns and that this would be progressed over the following three months. They say that feedback on the dummy report is to be given in August 1995, ahead of the commencement of work on the report on the 1994 returns.

The Working Party also hold a meeting on this day, at which there is a general discussion on the period with which companies are permitted to file their DTI returns. The minutes record: *'It was generally agreed that a reduction in this time would greatly improve the effectiveness of the detailed scrutiny process. However, it was recognised that this was not achievable without a change in legislation, and was, therefore, an impractical requirement, at least for the time being'.*

08/05/1995	The German regulatory authority write to DTI, enclosing a copy of a letter from Equitable about the mortality table and interest rates used for their German annuity plan (see 20/03/1995). Equitable have explained that they base the plan on the mortality table used in England and had no reason to assume that it could not be used for their German business. The regulatory authority ask DTI for a copy of the table. They comment that, in their view and in accordance with the Third Life Directive, Equitable should use a mortality table that takes into account the mortality of the annuitant in the country where they are selling the product.
16/05/1995	DTI write to Equitable to check that the 'state of play' report sent on 28/03/1995 also covers University Life.
19/05/1995 [entry 1]	Equitable confirm to DTI that, subject to certain specified provisos, the report does cover University Life.

19/05/1995 [entry 2]	Equitable's Chief Executive writes to DTI's Head of Life Insurance raising again Equitable's concerns about the taxation rules applying to overseas business. The Chief Executive encloses a copy of correspondence with a Minister and says Equitable have made no real progress. The Chief Executive asks the Head of Life Insurance to exert any influence he can. The Head of Life Insurance later notes on the letter that he does not see what more he can do at this stage.
19/05/1995 [entry 3]	GAD write to DTI to comment on Equitable's letter of 26/04/1995 in relation to the proposed bases for Irish and German business. GAD say that they are: *... concerned at the proposed reserving basis for mortality. I am particularly concerned at the term assurances, where a table of adjustments to the base table is provided. We would only consider this appropriate for the UK if current experience were produced to support the basis, and are more concerned for Eire. I note that* [Equitable's Appointed Actuary] *says the table of future improvements will not be used, but there is still the table headed "Age adjustments for* [Equitable] *experience". In addition the AIDS adjustment is unusual.* GAD recommend that these points are pursued with Equitable. GAD also note that they have no reason to challenge Equitable's view that they should use a UK mortality table for their business in Germany.
01/06/1995	DTI seek comments from GAD on the letter from the German regulatory authority of 08/05/1995.
05/06/1995	GAD write to DTI to acknowledge that Equitable have accepted the view that their critical illness policy is Class IV. But GAD question the comment made by Line Supervisor B (see 24/04/1995 [**entry 2**]) that the addition of a death benefit would not make the policy Class III. Line Supervisor B passes the note to Line Manager B and says she is loath to bring this up again, as Equitable have agreed to re-classify the policy as Class IV. The Manager's advice is: *'Let sleeping dogs lie!'*.
08/06/1995 [entry 1]	DTI write to Equitable in response to their letter of 26/04/1995. DTI ask Equitable to provide details of the experience they rely on when setting the mortality basis of the valuation reserves, and the grounds on which they have made specific age adjustments for the Republic of Ireland.
08/06/1995 [entry 2]	GAD provide DTI with comments on the German regulator's letter, requested on 01/06/1995. GAD advise that: *... it is our view that the mortality table for the premium basis is not covered by the 3rd Life Directive, and indeed is not subject to supervision of itself. We broadly concur with the BAV statement if applied to reserving bases; we would expect a UK Appointed Actuary to have regard to the local experience though we take the view that, where the amounts involved are not significant, the use of a UK table can be acceptable on de minimis grounds.*
16/06/1995	Equitable write to DTI in reply to their letter of 08/06/1995. The Society explains that it is relying on the UK experience, but that it will keep the matter under review as the business develops. Line Supervisor B passes a copy of the letter to GAD and seeks their comments.
28/06/1995	Equitable's Appointed Actuary writes to DTI, saying:

The Society has included a future profits implicit item of £249,985,000 in Form 9 of its annual returns to the DTI for the 1994 financial year. I am applying on behalf of the Society, therefore, for a further order under Section 68 of The Insurance Companies Act 1982 to allow that future profits implicit item to be counted towards the Society's required solvency margin on 31 December 1994.

Against this Line Supervisor B has written: *'I think he must mean 31/12/95?'.*

The Appointed Actuary says that the Society has used the future profits implicit item *'for the purpose of achieving equality between the total net value of policyholders' assets included in Form 9 (i.e. lines 21 + 31 – 24) and the corresponding total net asset value shown in the Society's Companies Act accounts'.*

The Appointed Actuary provides calculations in support of Equitable's application. These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.90	*422.5*	*557.0*	*26.6*	*(161.1)*
31.12.91	*596.5*	*(13.2)*	*59.5*	*550.2*
31.12.92	*330.5*	*(46.0)*	*46.4*	*330.1*
31.12.93	*480.9*	*(1015.2)*	*178.5*	*1317.6*
31.12.94	*520.0*	*1245.9*	*19.3*	*(745.2)*
				1291.6

Average annual profit = 1291.6/5 = £258.3m

Note: *In 1990 and 1994 surplus was increased as a result of changes in valuation interest bases. In 1991, 1992 and 1993, surplus was decreased as a result of changes in valuation interest bases. Those changes in surplus are included as exceptional items in column (B) above.*

The calculations state that the average period to run for the Society's in-force contracts is nine years. The Appointed Actuary explains:

The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.

The calculations suggest that the maximum future profits permissible is 50% of £258.3m multiplied by nine years – that being £1,162.4m.

Submission of the 1994 regulatory returns

30/06/1995 **Equitable submit their 1994 regulatory returns to DTI.** Whilst in the same format as in previous years, the returns are now required to be made with regard to the new valuation regulations as contained within ICR 1994. Accompanying the returns are copies of the Society's annual report and financial highlights and its statutory accounts, prepared in accordance with the Companies Act 1985 and both dated 22 March 1995.

Equitable also send DTI a declaration under section 94A of ICA 1982 and pay Insurance Fees of £20,250 in respect of their 1994 returns.

These documents include the following information about Equitable's business and about their financial position as at 31 December 1994.

Companies Act annual report and financial highlights
In their *President's Statement,* Equitable explain that 1994 had demonstrated the benefit of the with-profits system in smoothing out fluctuations in investment returns. Equitable say that they had been able to maintain the rates of reversionary bonus even though they had suffered negative investment returns. They also comment that possible pensions mis-selling costs are unlikely to be material.

In their *Management Report,* Equitable explain that with-profits policyholders have recently received notices of their bonuses and statements together with a letter explaining the approach to bonus allocation in 1994. They note that, in common with other such funds, Equitable's investment return for the year was negative and that it was in such conditions that the benefits of the with-profits system, with its ability to smooth short term peaks and troughs of investment performance, became apparent. They explain that the Directors had decided to allocate an overall rate of return of 10% for recurrent single premium with-profits pensions business. Equitable say their reversionary bonuses had mirrored gilt yields for many years and fallen in recent years as gilt yields declined. Equitable had maintained the reversionary bonus for 1993 as it was consistent with yields at the end of 1994.

Companies Act statutory accounts
Equitable's statutory accounts include a *Directors' Report for 1994.* The report includes an example of how bonuses are allocated to policies, which is as follows:

> *... the rate of declared bonus for personal pension plans for 1994 was £4% (1993 – £4%) which, with the rate of roll-up already guaranteed by the policy, gave an overall allocation of benefits in guaranteed form of just over 7½%.*
>
> *The total return allocated to this type of policy was 10% which was the rate which had applied for determining actual pay-outs during the course of 1994. The amount in excess of 7½% was in the form of final bonus which is a non-guaranteed addition and may be varied at any time before the policy benefits become contractually payable.*

The returns
Equitable's returns are again submitted in two parts covering Schedules 1, 3 and 6 and Schedule 4 to the ICAS Regulations 1983.

GAD's copy of the 1994 returns includes various annotations which were made by Scrutinising Actuary D during the scrutiny programme. For ease of reference, mention of these annotations is made here. However, I am satisfied that the annotations were made on or before 25/07/1995, at the time GAD prepared their A2 Initial Scrutiny check.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1994 as follows:

Long term business admissible assets	*£13,551,281,000*
Total mathematical reserves (after distribution of surplus)	*£12,377,514,000*
Other insurance and non-insurance liabilities	*£256,265,000*
Available assets for long term business required minimum margin	*£917,502,000*
Future profits	*£249,985,000*
Total of available assets and implicit items	*£1,167,487,000*
Required minimum margin for long term business	*£494,616,000*
Explicit required minimum margin	*£82,436,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£835,066,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£672,871,000*

GAD annotate the form with the figure, on the appendix valuation basis, for *'Total mathematical reserves (after distribution of surplus)'*, being £12,077,193,000.

Equitable use for the first time a future profits implicit item of £250m.

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

Form 45 shows that 47% of Equitable's non-linked assets are invested in equities, 8% in land and 40% in fixed and variable interest securities (compared with 43%, 7% and 43% respectively in 1993). A note to the Form explains that one of the yields shown in the Form (that for variable interest securities shown in line 5) would be higher if calculated in accordance with Regulation 69(6) of ICR 1994. GAD note that the yield would be 4.24% under the new regulations (rather than the figure of 2.76% stated in the Form). They also add the total yield shown on line 12 from the previous returns.

As in previous years, Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority are, for certain durations, higher than for those not issued or guaranteed by any government or public authority. GAD circle the gross redemption yields stated for fixed interest securities not issued or guaranteed by any government or public authority with redemption periods of between one to five and five to ten years. They also circle the figure supplied for the total yield for this group of assets and question whether it is *'low?'*.

In the notes to this part of the returns, Equitable disclose that no provision has been made for the contingent liability to tax on unrealised capital gains for non-linked business, which they have estimated as £21.9m.

Equitable disclose that they have been granted a section 68 Order permitting them to take into account a future profits implicit item with a value not exceeding £500m. The Society state that it has included an item of £249,985,000.

Equitable state that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
Under the new valuation regulations, the calculation of the mathematical reserves must comply with Regulations 64 to 75. It is no longer possible to hold reserves calculated under a basis that does not comply with these regulations even where, in aggregate, the reserves are higher than if calculated in accordance with the regulations. As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns answers the questions set out in paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 64 of ICR 1994.

In response to paragraph 3 of Schedule 4, Equitable provide 20 pages of information about their non-linked contracts. Most of the information about the contracts remains unchanged from previous years. The increase in information from the previous returns is largely due to new German policies. GAD tick the descriptions provided, or otherwise note where there has been an addition or change in the information provided from the previous year.

As in previous years, Equitable provide a description of their principal guarantees of terms. GAD tick or mark as being new each of the descriptions provided.

In response to paragraph 4, Equitable provide 47 pages of information about their linked contracts. Most of the information about the contracts remains unchanged from the previous year. GAD tick the descriptions provided or otherwise note where there has been an addition or change in the information provided from the previous year.

In paragraph 5, on the general principles and methods adopted in the valuation, Equitable disclose that personal pension business has been valued on the basis that benefits are taken at age 55. This is the first time during the period under investigation that the retirement age assumption for personal pension business is disclosed in the main valuation.

Equitable disclose, in paragraph 5(1)(a), that they have tested the ability of the Society to hold reserves which satisfy Regulations 64 to 74 of ICR 1994 in the three scenarios of changed investment conditions described in DAA6. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 64 to 74 of ICR 1994] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

GAD tick this paragraph.

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

As in previous years, Equitable state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. They also disclose that the contingent liability for tax on unrealised capital gains in respect of non-linked business is estimated not to exceed £22m. The returns state that Equitable consider that there are sufficient margins in the valuation basis to cover the discounted value of this amount and, accordingly, they again hold no specific reserve. GAD note on the returns the figure for the previous year.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity. GAD tick this paragraph.

As in previous years, in paragraph 5(1)(g) Equitable state:

> *The premium rate guarantees and options under the Society's policies are described in paragraph 3. Where the right to effect further policies without medical evidence of health is carried a reserve equal to one year's extra premium deemed or actually charged was set up. It was considered unnecessary in current conditions to make explicit provision for the other guarantees and options described in paragraph 3.*

GAD tick this paragraph.

As in previous years, in paragraph 6(1) Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used are those assumed in the premium basis. Equitable, again, do not elsewhere in the returns disclose the rates used in the premium basis.

Unlike previous years, in response to paragraph 7(b) of Schedule 4 to the ICAS Regulations 1983 (which asks in respect of non-linked contracts for a description of *'the method by which provision is made for expenses after premiums have ceased or where no future premiums are payable or where the method of valuation does not take credit for future premiums as an asset')*, Equitable explain the method by which they had made provision in the main valuation for future expenses on their recurrent single premium business:

> *For recurrent single premium business the valuation rates of interest shown in Form 55* [the valuation summary of non-linked contracts] *are net of a ½% interest rate reduction as a provision for future expenses.*

GAD mark this statement as *'New'*.

As in previous years, at paragraph 7(d) Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

GAD tick this paragraph.

As in previous years, in paragraph 11 Equitable disclose: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'.*

As in previous years, in paragraph 12 Equitable state: *'The Society has no shareholders and the principles upon which the distribution of profits among the policyholders is made are determined by the Directors in accordance with the Society's Articles of Association'.*

In paragraph 13, Equitable disclose that they had set the reversionary bonus for the main policy classes at 4.0%. As in previous years, Equitable disclose that they offered loans under a *'loanback'* arrangement to some retirement annuity and individual pension policyholders. GAD note that the wording of this paragraph has been revised.

In paragraph 16, Equitable set out their system for allocating final bonus. GAD tick various parts of this description, note the rates of bonus applying in the previous year, and mark where the wording is revised or new.

The returns again contain, at paragraph 16 (vi), the statement:

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

(Note: as for the 1993 returns (see 27/06/1994), in GAD's copy of the 1994 returns this paragraph has been sidelined in pencil. This marking is consistent with that made by Scrutinising Actuary E in the 1995 returns, during the scrutiny of the 1995 returns. (See 28/06/1996.))

<u>Schedule 4 – main valuation (forms)</u>
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts, along with information on number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. Equitable again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of fund surplus.

<u>Schedule 4 – appendix valuation (text)</u>
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5, 6, 7, 9, 17 and 18 of Schedule 4 to the ICAS Regulations 1983. They say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation',* has not been provided) is identical to that given in the main valuation.

As in previous years, in response to paragraph 5(1)(a), Equitable state: *'In these conditions the Society would be able to set up reserves which satisfy* [Regulations 64 to 74 of ICR 1994] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'.*

(Note: on GAD's copy of the returns, the words *'at line 51 of Form 14'* have been underlined in pencil (rather than the red ink used by Scrutinising Actuary D during his scrutiny of these returns). This marking is consistent with that made in the 1995 returns by Scrutinising Actuary E during his scrutiny of those returns. (See 28/06/1996.))

As in the main valuation, in paragraph 5(1)(e) Equitable state that no reserve is made for any prospective liability for tax on unrealised capital gains in respect of non-linked business. GAD sideline this statement.

As in the main valuation, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their recurrent single premium with-profits pension business. Equitable state that, for the purposes of the statutory minimum valuation, they now assume a retirement age for personal pension policies of 55 (increased from the previously assumed retirement age of 50).

As in the previous years, in paragraph 7(b) Equitable explain the method by which they have made provision in the appendix valuation for future expenses on their recurrent single premium business.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis. GAD note changes from the previous year's returns to some of the interest rates and mortality tables used.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

05/07/1995 DTI ask GAD for their views on Equitable's section 68 Order application. DTI query if Equitable mean to use the Order, if granted, in their 1995 returns rather than their 1994 returns.

12/07/1995 A GAD actuary and member of their Scrutiny Strategy Working Party provides some analysis to another GAD actuary on the emerging draft *'Free assets & valuation bases'* section of their 1993 dummy report on the life insurance industry. (Note: the copy of the note that I have seen does not include all of the attachments referred to within the document.) The analysis held on file with this document includes data on the average gross valuation interest rates used by companies in their 1992 and 1993 returns. GAD's data shows:

1992		*1993*	
Lowest valuation interest rate	*3.74%*	*Lowest valuation interest rate*	*3.44%*
Highest valuation interest rate (excluding Equitable)	*6.87%*	*Highest valuation interest rate (excluding Equitable)*	*5.51%*
Equitable	*9.52%*	*Equitable*	*7.20%*

In commenting on GAD's work to attempt to evaluate the relative strength of companies' valuation bases (which is not attached to the document; however, see 30/08/1995), the GAD actuary says:

> *The "strength ratio" figures appear remarkably sensible. Equitable is silly because it uses a bonus reserve valuation method, I think.*

(Note: in relation to the GAD's comment that *'Equitable is silly'*, the bodies under investigation have told me that: *'This refers to the fact that the result of the calculation was odd for Equitable, as its "strength ratio" was not comparable to those for other companies* *because the valuation interest rates used in its calculation were those used in the bonus reserve valuation (the main valuation). These interest rates were significantly higher (and the "strength ratio" therefore correspondingly lower) than those for other companies, which used a net premium valuation, as reflected in the table shown in this entry. This was naturally the case, because the bonus reserve valuation allowed explicitly for future reversionary bonus whereas the net premium valuations used by other companies made implicit allowance for future reversionary bonus, in part through the use of a significantly lower valuation interest rate'.)*

17/07/1995 GAD provide DTI with comments on Equitable's section 68 Order request. GAD suggest that Equitable probably did mean to refer to using the Order in their 1994 returns, as the guidance note on implicit items requires a company using one to submit an application with the returns, covering at least the amount in the returns. GAD tell DTI that they assume, however, that this is also an application for the 1995 returns. GAD say:

> *This is a similar request to previously, in that not all the allowable amount is claimed. It is worth noting that Equitable are now, in part, using the order.*

GAD continue:

> *There does seem to be some confusion still regarding the exceptional items. The surplus or deficit arising from changes in the interest rates in the valuation basis appears to have been excluded from the calculation, but the covering letter refers to previous correspondence and states they are included. The conclusion of our (protracted) correspondence with* [Equitable's Appointed Actuary] *earlier this year* [see exchanges on the issue between 25/01/1995 and 27/03/1995] *was as described in his letter, and not as in the calculations. The result however does not impact the £500m requested implicit item, and this can properly be granted.*

GAD also comment that DTI need not take any action in response to the information Equitable supplied (see 16/06/1995) regarding Irish and German term assurances. However, that information *'is on record if there is any challenge from our friends in Germany'.*

24/07/1995 **GAD complete the A1 Initial Scrutiny check on the Society's 1994 regulatory returns.** The design of the form has changed and there is no longer an entry showing cover for the required minimum margin. GAD identify no concerns.

25/07/1995 **GAD complete the A2 Initial Scrutiny check on the Society's 1994 regulatory returns.** GAD note that the priority rating is 3, unchanged from the previous year. They note that the mortality rates look reasonable *'but thin'* and that Equitable have not set up any identifiable provision to meet personal pension transfer problems. Under '*Aspects which look worrying'*, GAD write *'Mismatching?'.* GAD also note:

> *Derivatives – investigate*
>
> *Ethical fund general investments*
>
> [paragraph] *4(2)(c)* [of Schedule 4 to the returns] *omitted*
>
> [capital gains tax] – *"sufficient margins"*
>
> *Check into mis-selling.*

GAD identify no items to notify to DTI, to be taken up immediately with Equitable. Accompanying the Initial Scrutiny check is a Form B – Initial Scrutiny Form, which includes certain key figures disclosed in the 1991 to 1994 returns.

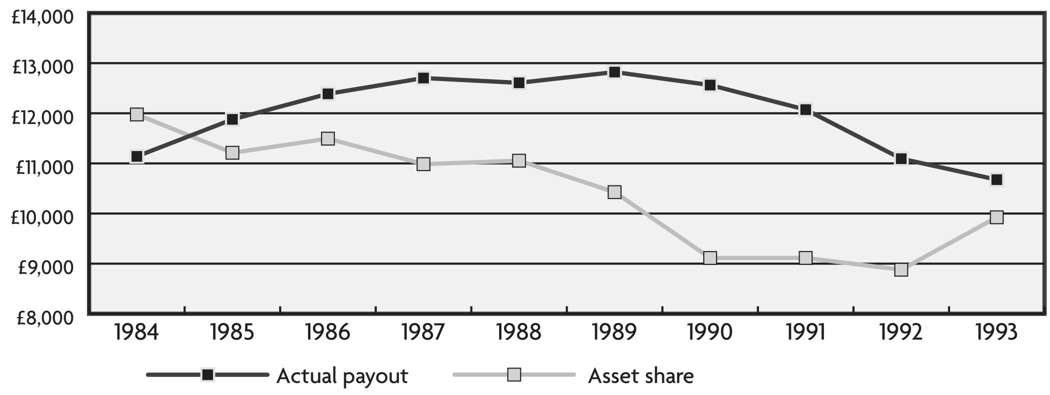
(Note: the Initial Scrutiny check was dated 25 July 1996, but this seems to have been a mistake.)

31/07/1995	DTI send GAD a copy of a draft letter to the German regulatory authority in response to their letter of 08/05/1995. The draft is based on the comments provided by GAD on 08/06/1995. DTI ask for any further comments. The final version, which was sent the same day, says: *Our view is that the mortality table for the premium basis is not explicitly covered by the Third Life Directive. Nor is it subject to supervision except insofar as it influences the adequacy of reserving bases which are indeed covered by Article 18(1)(c) of the Directive. We would expect a UK Appointed Actuary to have regard to the local experience – though as discussed between* [Directing Actuary A] *of the Government Actuary's Department and* [an official of the German regulatory authority] *(following your letter to us of 20 March 1995) we take the view that, where the amounts involved are not significant, the use of a UK mortality table would be acceptable. Where the volume is significant, (and unless the company's own experience in Germany justified an alternative assumption) we would expect the company to use a local table, or a suitably adjusted UK table that gave similar results.*
01/08/1995 [entry 1]	GAD's Directing Actuary A writes to Equitable's Appointed Actuary, inviting him to a reception *'for friends and colleagues whom I have had the pleasure of knowing over my actuarial career'* on the occasion of his retirement. (Note: I have been told that an invitation was also sent to approximately 200 other people in the actuarial profession and the insurance industry.)
01/08/1995 [entry 2]	DTI write to Equitable enclosing a section 68 Order, permitting them to include a future profits implicit item in their 1995 returns with a value not exceeding £500m. DTI point out that, before including any implicit items in the forthcoming returns, Equitable are required to update the calculations to ensure that the amount adopted is still justified.
02/08/1995	Line Supervisor B adds a note to DTI's copy of the letter of 01/08/1995 to record a telephone call from Equitable: *They weren't actually asking for a S.68 Order – just updating 94 calculations!* *But they will want an Order for £500m. He'll drop me a line confirming this ...*
03/08/1995	Equitable write and confirm to DTI that the information provided in the Society's letter of 28/06/1995 had been *'to demonstrate that the amount of £500m in the Section 68 order dated 22 December 1994 did not exceed that resulting from the revised calculations at 31 December 1994'*. The Society confirms that it is Equitable's intention to include a future profits implicit item in Form 9 of their returns for 31 December 1995, and that they would have applied for the Order on the basis of the calculations enclosed with the letter of 28/06/1995. Equitable explain that, in future when submitting their returns and updated calculations for one year, they would seek a section 68 Order for the subsequent year. Line Supervisor B notes on the letter: *'No action – but confirms my query re their reference to end '94 returns'*.
04/08/1995	Equitable's Appointed Actuary writes to GAD's Directing Actuary A to decline his invitation, as he would be away. The Appointed Actuary expresses the hope *'that we can get together for lunch some time'*.
30/08/1995	GAD's Scrutiny Strategy Working Party meet to discuss, amongst other matters, their 1993 dummy annual report on the life insurance industry. The attendees include Chief Actuary C and

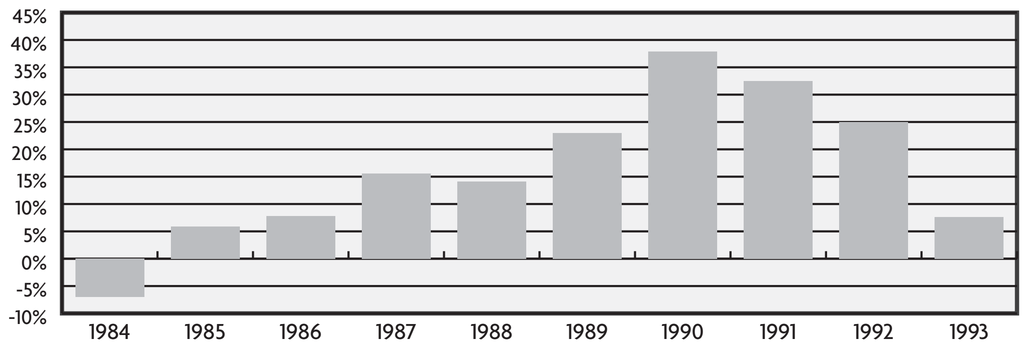
DTI's Line Manager A. Some of the completed draft sections of the report are circulated before the meeting.

For the section of the annual report on *'Maturity Payouts'*, GAD provide a description of the work undertaken so far, rather than the proposed draft text of this section. GAD explain that they have attempted to collate information on maturity payouts and to establish theoretical asset shares so that a comparison between the two can be made. GAD set out the '*heroic*' assumptions which they have used in conducting this analysis, for possible discussion by the Working Party. The results of this preliminary work are presented as follows:

Comparison of actual average maturity payout and theoretical asset share for the years 1984-93 for a £50 per month 10 year endowment policy

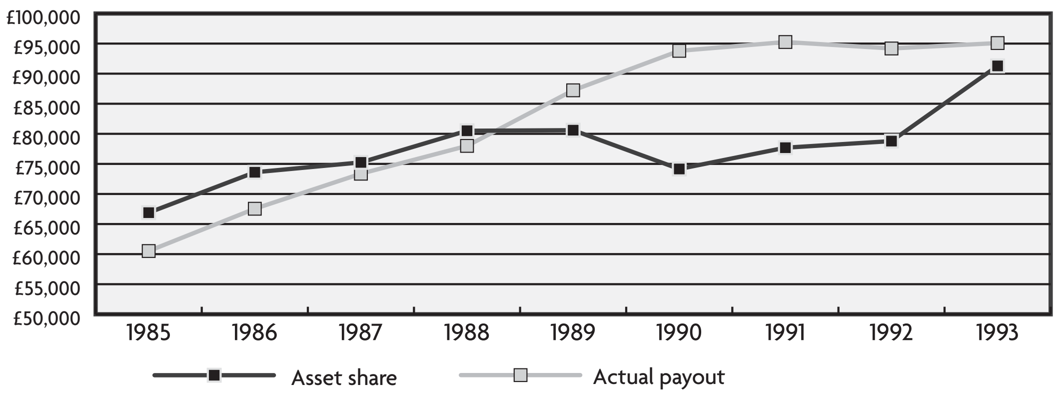


% departure of actual average maturity payout from theoretical asset share for the years 1984-93 for a £50 per month 10 year endowment policy

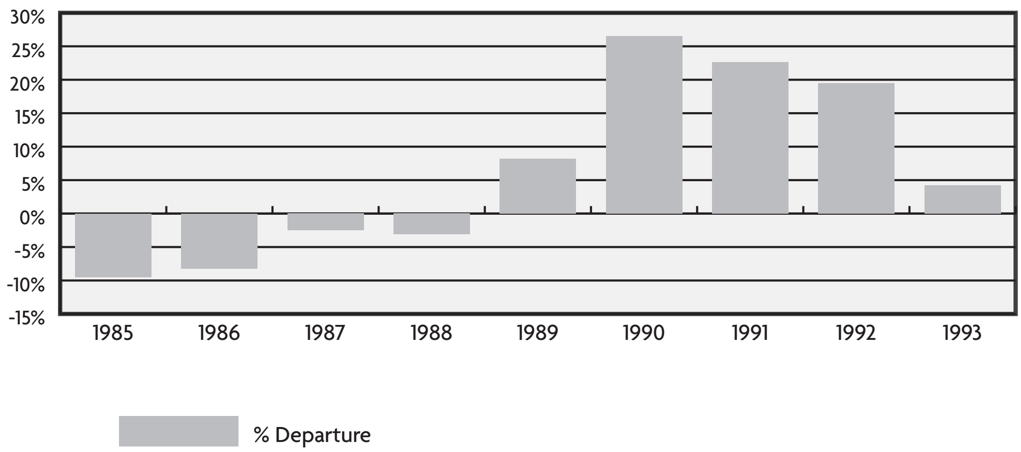


1995

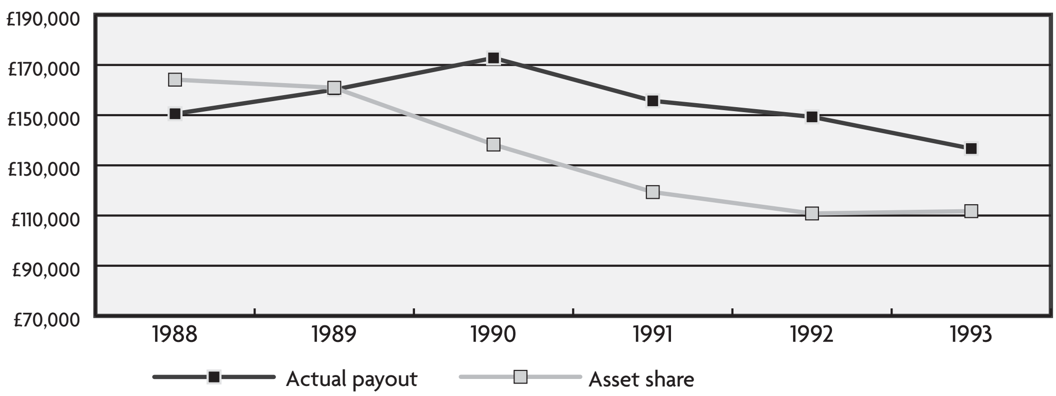
Comparison of actual average maturity payout and theoretical asset share for the years 1985-93 for a £50 per month 25 year endowment policy



% departure of actual average maturity payout from theoretical asset share for the years 1985-93 for a £50 per month 25 year endowment policy

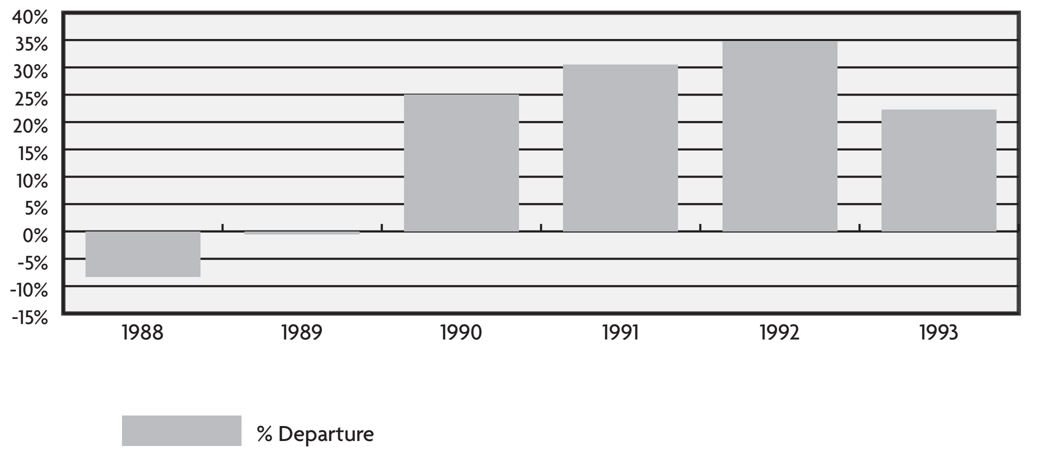


Comparison of actual average maturity payout and theoretical asset share for the years 1988-93 for a £200 per month 15 year pension policy



1995

% departure of actual average maturity payout from theoretical asset share for the years 1988-93 for a £200 per month 15 year pension policy



In the section on *'Free assets & valuation bases'*, GAD say: *'A broad-brush attempt has been made to assess the relative strengths of the valuation bases adopted by the major with profit offices'*. GAD explain the method they have used to do this as being:

> *First, the yield on the total non-linked assets shown in Form 45 has been adjusted upwards by stripping out the lowest yielding assets until such time as sufficient assets remain to exactly match the total non-linked liabilities, net of reinsurance, from Form 55.*
>
> *Second, an average valuation rate of interest in respect of the non-linked liabilities has been calculated. This is based on a weighted average of the actual rates used for the various classes of business, the weights being the corresponding net of reinsurance valuation reserves. Taxable business has been grossed up. For simplicity, a tax rate of 25% has been used throughout.*
>
> *Finally, the adjusted asset yield, reduced by the 7½% margin in the valuation of liability regulations applicable in 1993, is divided by the average valuation interest rate, and the result expressed as a percentage.*

The resulting percentages, which might be called "basis indices", provide a crude measure of the strength of the valuation basis used. The higher the basis index, the stronger (i.e. more cautious, less worrying) the valuation interest basis relative to the minimum prescribed by the regulations. The basis index figures for 1993 are shown in [an appendix], *and the companies with the highest and lowest figures are shown in* [the table below].

The dummy report then includes the following table:

Basis indices giving a crude measure of the strength of valuation bases used in 1993

Strongest:	*Sector*	*Ratio (%)*	*Weakest:*	*Sector*	*Ratio (%)*
[a company]	[...]	*162.3%*	[a company]	[...]	*107.9%*
[a company]	[...]	*154.1%*	[a company]	[...]	*105.2%*
[a company]	[...]	*153.0%*	[a company]	[...]	*104.0%*
[a company]	[...]	*148.5%*	[a company]	[...]	*103.9%*
[a company]	[...]	*143.7%*	[a company]	[...]	*103.6%*
[a company]	[...]	*139.9%*	[a company]	[...]	*96.3%*
[a company]	[...]	*139.1%*	[a company]	[...]	*94.8%*
[a company]	[...]	*136.7%*	[a company]	[...]	*91.7%*
[a company]	[...]	*135.5%*	[a company]	[...]	*90.7%*
[a company]	[...]	*131.3%*	Equitable	[mutual]	*66.8%*

I have seen from GAD's supporting documents that they had also calculated that the strength of Equitable's valuation basis for 1992 was 66.1% and for 1989 it was 69.4%. (However, see also the note at the end of this entry.)

GAD's report continues:

Within the limit of approximations inherent in the above method, a 100% figure indicates that the basis just complies with the regulations. Any company below 100% would normally have been closely monitored in the course of its detailed scrutiny, usually by examination of a "matching rectangle" to allow for hypothecation of different types of asset to different classes of business.

The highly simplified nature of the above approach requires these figures to be treated with caution. For example, the figure of 66.8% for Equitable Life results from their philosophy of effectively reserving for all future terminal bonus at currently declared rates. This should be regarded as indicative of strength rather than weakness, although the company is still out of line with the rest of the market.

The report says that GAD have repeated this analysis for the previous year to provide an indication of whether companies have strengthened or weakened their valuation bases. The report states that Equitable have strengthened their valuation basis by 1% between 1992 and 1993. For the period from 1989 to 1993, the report says that Equitable's valuation basis has been weakened by 4%.

At the meeting of the Working Party, GAD's Chief Actuary C asks DTI's Line Manager A to provide any further feedback on the report that he receives from DTI.

(Note: in relation to GAD's measurement the strength of Equitable's valuation bases, the bodies under investigation have told me that:

The dummy 1993 report was an internal GAD pilot and was not provided to the prudential regulator. This included an incorrect explanation for Equitable's low "basis index" of 66.8% that this "results from their philosophy of effectively reserving for all future terminal bonus at currently declared rates". The correct explanation is in fact that ... the valuation interest rates used in the calculation of Equitable's basis index were those *used in its bonus reserve valuation (the main valuation), which were significantly higher than those used by other companies, which used a net premium valuation.*

The comment should have referred not to Equitable reserving for future terminal bonus – which, in line with other companies, it did not do – but rather to the valuation on which the figure for Equitable was based making explicit provision for future reversionary bonus, unlike the valuations used by other companies. However, the essential point made – that the figure for Equitable was not comparable to those of other companies – was correct.

The error was corrected for the 1994 report, the first provided to the prudential regulator. This used the valuation interest rates used in Equitable's net premium valuation (the appendix valuation) to determine its "basis index", resulting in the marked increase in this index to 96.3% for 1994 recorded in the entry for 03/11/95. Had this approach also been used for the 1993 calculation, the corresponding index for 1993 would have been 99.6% (and 100.9% if allowance was additionally made for the resilience reserve required in the appendix valuation in that year).

No weight should be placed on the 66.8% basis index figure for 1993. It was not comparable to those of other companies, a point recognised by GAD at the time and stated in the 1993 dummy report. When it was adjusted to a basis comparable to other companies, it was close to 100% and did not give rise to any concern.

It would have been quite inappropriate for GAD to be influenced by the unadjusted index for 1993 when conducting its detailed scrutiny of the 1994 returns. This was because the 1993 index compared the weighted average valuation interest rate and the adjusted yield on the assets matching the reserves in the main valuation. That comparison was of no significance for the main valuation. This is because the main valuation was not required to comply with regulation 59 of the Insurance Companies Regulations 1994. It was required to comply only with the aggregate reserves test in regulation 54 of those Regulations.

The bodies under investigation have also told me it should be noted that: *'the charts selected for this entry all show maturity payouts for regular premium contracts only. By contrast, the bulk of Equitable's business was recurrent single premium. These charts therefore have very little significance for Equitable. This comment also applies to the corresponding charts provided in the reports prepared by GAD for subsequent years'.)*

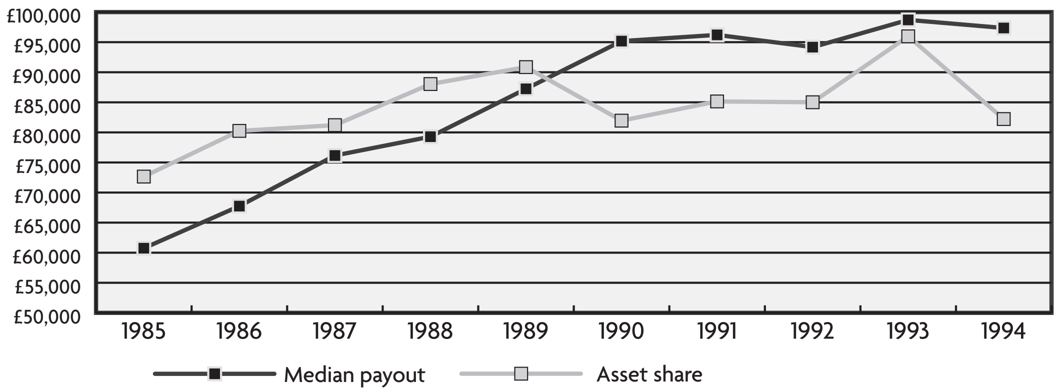
07/09/1995	Equitable apply to DTI for a section 68 Order exempting them from producing a Schedule 5 quinquennial statement of business within their 1995 returns. Equitable point out that it is intended to abolish this requirement from 1 January 1996, and that, in the meantime, companies had been invited by DTI to seek such an Order, if they wished.
25/09/1995	DTI send Equitable the requested section 68 Order.
28/09/1995	Equitable send DTI statistics on the business they have transacted in the Republic of Ireland and Germany (as required by the ICR 1994).
30/10/1995	GAD's Scrutiny Strategy Working Party meet to discuss progress on the production of their 1994 annual report on the life insurance industry. (Note: Scrutinising Actuary D is now a member of the Working Party.) GAD's note of the discussion records that Line Manager A asks for approximately 15 copies of the report for DTI. It is noted that GAD would need about 10 copies and it is agreed that 30 copies should be printed, *'which would give a few spares'*. It is agreed that copies of the report are to be prepared and distributed on 03/11/1995.

03/11/1995 According to the minutes of a meeting of GAD's Scrutiny Strategy Working Party held on 23/02/1996, GAD provide to DTI copies of their 1994 annual report on the life insurance industry *'as planned'*.

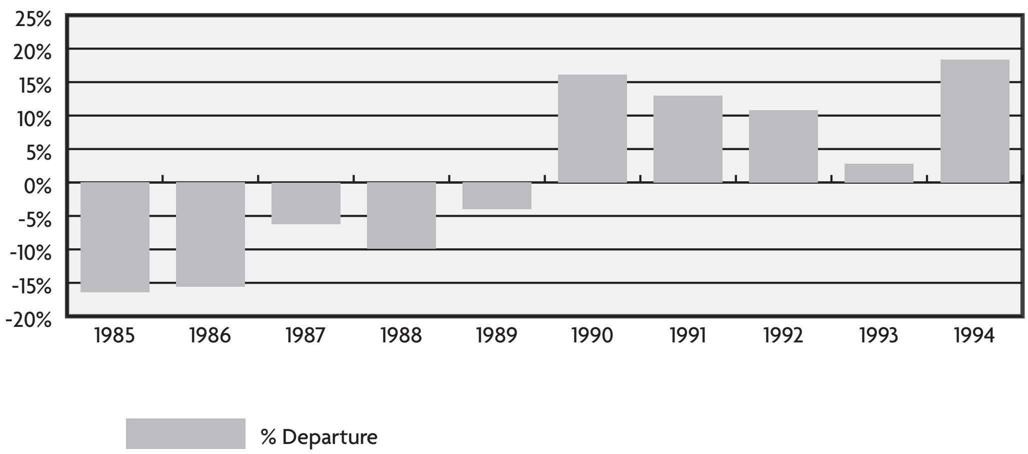
(Note: the bodies under investigation have been unable to provide me with a copy of this report. However, I have seen GAD's detailed analysis which underpinned this report, along with certain tables and charts which appear to have been prepared for use in the main body of the report.)

As in the 1993 dummy report (see 30/08/1995), GAD undertake a comparison of maturity payouts against their own estimate of theoretical asset shares. GAD produce the following charts:

Comparison of actual median maturity payout and theoretical asset share for the years 1985-94 for a £50 per month conventional with-profits 25 year endowment policy (£)

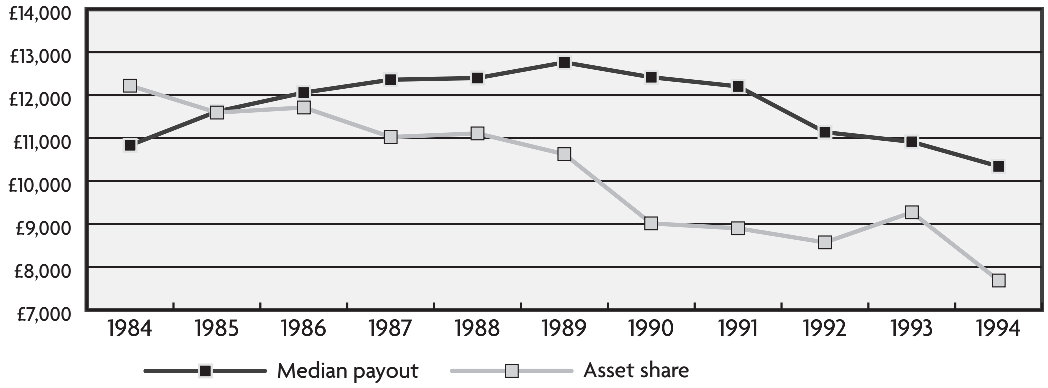


% departure of actual median maturity payout from theoretical asset share for the years 1985-94 for a £50 per month conventional with-profits 25 year endowment policy

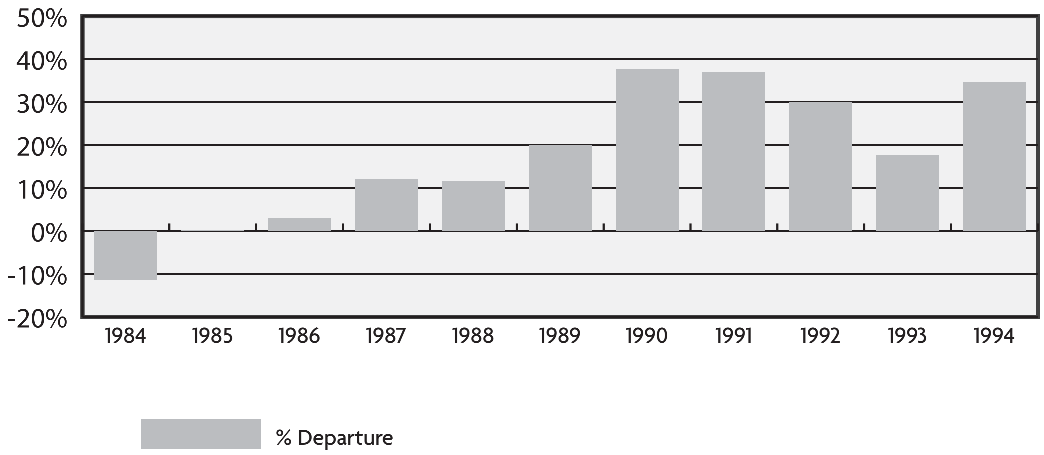


The supporting data shows that GAD calculate that, for endowment policies (based on contributions of £50 per month for 25 years), the with-profits industry median payout is £97,142. GAD calculate this to be 118% of the theoretical asset share. For Equitable, GAD calculate that they are paying £87,887. GAD show this to be 107% of the theoretical asset share.

Comparison of actual median maturity payout and theoretical asset share for the years 1984-94 for a £50 per month conventional with-profits 10 year endowment policy (£)

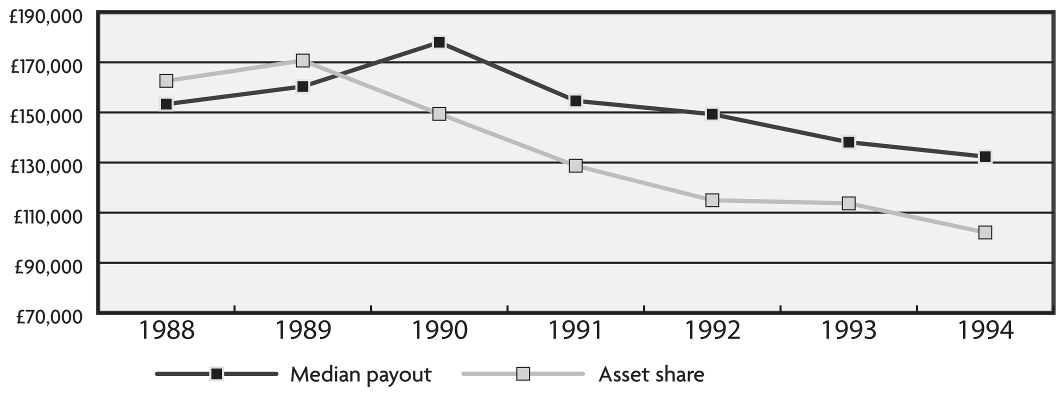


% departure from actual median maturity payout from theoretical asset share for the years 1984-94 for a £50 per month conventional with-profits 10 year endowment policy

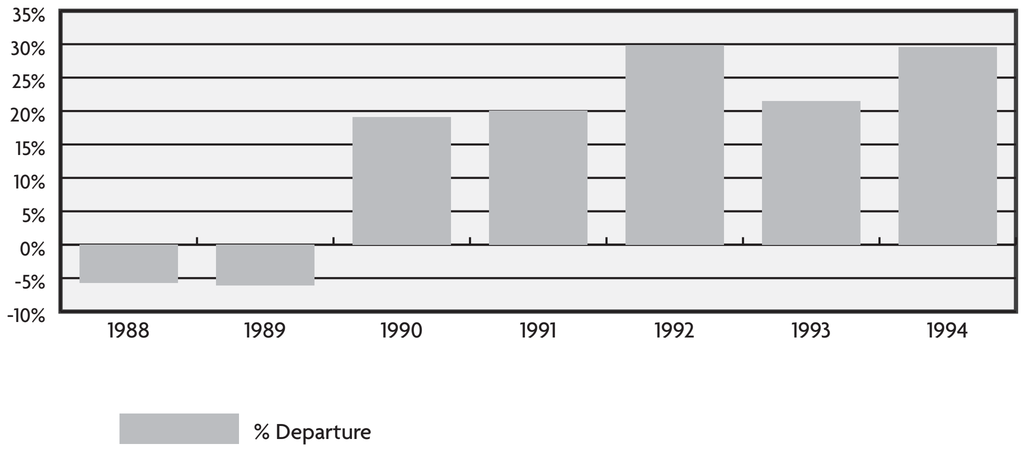


The supporting data shows that, for endowment policies (based on contributions of £50 per month for ten years), GAD calculate that the with-profits industry is paying a median maturity value of £10,322. GAD show this to be 134% of the theoretical asset share. For Equitable, GAD calculate that they are paying £10,575. GAD show this to be 138% of the theoretical asset share.

Comparison of actual median maturity payout and theoretical asset share for the years 1988-94 for a £200 per month conventional with-profits 15 year pension policy (£)



% departure of actual median maturity payout from theoretical asset share for the years 1988-94 for a £200 per month conventional with-profits 15 year pension policy



The supporting data shows that, for pension policies (based on contributions of £200 per month for 15 years), GAD calculate that the with-profits industry is paying a median maturity value of £133,605. GAD show this to be 131% of the theoretical asset share. For Equitable, GAD calculate that they are paying £145,338. GAD show this to be 142% of the theoretical asset share.

GAD carry out a similar analysis of the strength of companies' valuation bases as that used in the 1993 dummy report (see 30/08/1995). However, for these returns GAD assess the strength of Equitable's appendix (i.e. net premium) valuation, rather than the Society's main (i.e. gross premium) valuation which was not comparable to the valuation method used by most other life insurance companies. Their analysis again shows that Equitable have the weakest valuation basis with a figure of 96.3% (a figure of 100% being one that GAD had previously described as indicating that the valuation interest rates used only just complied with the regulations). I have seen from GAD's supporting documents that they had also calculated the strength of Equitable's net premium valuation basis for 1993, and that it was 102.1%.

(Note: the bodies under investigation have told me that it should be noted that: *'the charts selected for this entry all show maturity payouts for regular premium contracts only. By contrast, the bulk of Equitable's business was recurrent single premium. These charts therefore have very little significance for Equitable. This comment also applies to the corresponding charts provided in the reports prepared by GAD for* [other] *years'.)*

06/11/1995	DTI's Line Supervisor B receives a note of a telephone call from an Equitable policyholder asking what DTI were doing about Equitable's poor financial position, as reported recently in a newspaper. The official who dealt with the call explains that he *'took the usual line that we do not reveal any regulatory action we take or may consider taking'*.
08/11/1995	Line Supervisor B obtains a copy of the article in question. The article suggests that Equitable were being secretive about their financial strength and were refusing to reveal the amount of cash they held in reserve. The Line Supervisor passes the article to Line Manager B, commenting: *I know* [Equitable] *has a different way of calculating their reserves than most* [companies] *– but surely their financial strength <u>can</u> be ascertained from the DTI returns – albeit ... not necessarily from Form 9. Otherwise how* [would Standard & Poor's] *be able to give them such a good rating?*
09/11/1995	DTI send GAD a copy of the article. DTI seek advice, saying: *I know* [Equitable] *has a different way of calculating their reserves than most companies, and there has been press criticism of their apparent low free asset ratio in the past. But surely there is a way for an advisor or commentator to see that they are financially strong? (Presumably Standard & Poor's know what to look for – or they wouldn't have given them a good rating.) Can one point to anything particular in the DTI returns, apart from Form 9?* There is no evidence of a reply from GAD. Line Supervisor B passes Line Manager B a newspaper article about problems with the selling of managed annuities. The Line Manager comments: *'Interesting, but if it comes to the crunch I think it is for the PIA rather than us'*. The Line Supervisor passes to Line Manager B a copy of an article, which had appeared in a financial journal on 21/09/1995, criticising Equitable's practice of imposing high penalties on policyholders seeking to transfer their pension funds to another provider. Line Supervisor B comments: *'I meant to show you this earlier.* [Equitable] *is suffering from a poor press recently!'*. The Line Manager comments in return: *'There seems to be a prima facie case that these penalties run counter to PRE.* [Please] *ask for GAD's comments. Is this a standard industry practice?'*. The Line Supervisor passes the papers to GAD seeking their comments. It appears that GAD advise DTI to check the position directly with Equitable.
06/12/1995	DTI write to Equitable to seek their comments on the article in the financial journal about transfer penalties. DTI say the article *'refers to an* [independent financial adviser's] *client who was over 60 with a pension fund of £470,000. When he wanted to take out* [a pension in a small self-administered scheme], *the article says that the Equitable Life imposed a 15% penalty'*. DTI ask Equitable to confirm whether this is factually correct.
08/12/1995	GAD write to Equitable to suggest that the 1994 returns show that Equitable make *'significant use of derivatives on a regular basis'*. GAD explain that it will help them in their examination of the returns to understand better the investment guidelines and controls that Equitable apply. GAD ask a series of detailed questions about Equitable's approach.

14/12/1995 [entry 1] Equitable write to DTI in response to their letter of 06/12/1995 about the article in the financial journal. Equitable say:

> *The article to which you refer was unfortunately a biased piece of journalism. You will be aware that the Society's pension plans guarantee full value on retirement or earlier death. There are no guarantees on surrender or transfer for deferred benefits. What we do pay is a value based on the underlying assets – the adjustment made is expressed as a deduction from the full retirement fund value on the day of transfer. In that respect, the adjustment is a financial adjustment and is certainly not a penalty.*

Equitable enclose a copy of their leaflet *'The Society's Approach to Transfers and Switches from With-Profits Personal (and Other) Pension Contracts'.* The leaflet says:

> *The Society has not guaranteed the amount of a surrender (or transfer) value since 1762. Our approach today to surrender of with-profits policies is still to offer no guaranteed values.*
>
> *What we do offer, however, is a clear and unequivocal statement of the procedure for calculating the transfer and to apply it systematically and fairly across the board. The general approach is to take the benefits currently attaching to the policy as the starting point for the calculation.*
>
> *For with-profits it is the full value of the fund value attaching or, when markets are running behind the rate of build up of the with-profits fund, the Society's estimate of the market value of the assets supporting the fund value.*

In explaining the background to with-profits business, in contrast to unit-linked policyholders who take their own investment risk, the leaflet says:

> *For with-profits business, the policyholder joins in a common managed fund whose returns are averaged. Each policyholder benefits at the same rate as other policyholders in the class. On occasions the averaged return allotted falls behind the return actually earned in the period, while at other times it exceeds the return earned, depending upon market conditions. On contractual termination of the policy, the full averaged return allocated is paid out regardless of the market value.*

The leaflet continues:

> *In other words, with-profits policyholders share the risk between them. Whilst it would be desirable to pay out full value on non-contractual termination there are financial conditions when to do so would be to favour the outgoing policyholder at the expense of those remaining in the fund. That would be quite inequitable – hence the use of the MVA.*

The leaflet states:

> *The Society's with-profits pension policies guarantee that the full policy value is available on retirement at any age or prior to death.*

And explains:

> *We are able to offer those guarantees because we can model the expected number of policies coming into payment and so estimate the cost implications. In this way, by sharing the investment risks amongst the pool of with-profits policyholders, the guarantees implicit in the system can be honoured.*

The leaflet then says:

> *We are unable to offer such a guarantee of the value available if a client selects against the other with-profits members by choosing to discontinue the policy and to transfer from the with-profits fund because no reasonable allowance can be made for such self-selection in the estimates. Such guarantees would open up the possibility for clients to time the withdrawal of funds to maximise the benefits of smoothing, thereby gaining at the expense of the remaining policyholders. For example, it would be possible to withdraw when the returns allocated are greater than those actually earned. The inevitable result would ultimately be a reduction in policy values for those clients who, as the majority, continue their policies until retirement or maturity. That would clearly be unfair.*

Equitable set out in their leaflet a comparison of the annual returns on the with-profits fund against the smoothed returns allotted.

Under the heading *'Current basis',* Equitable say that, as at September 1995, their financial adjustment is calculated as follows:

> *Up until 31 December 1993, the accumulated returns allocated were broadly in balance with the accumulated return earned over various periods of time. During 1994, the Society earned about -4% on its assets but allocated 10% for the year. In other words, earnings for 1994 ran 14% behind allocations. To date, in 1995, 11% has been earned and policies have accumulated at about 7%, hence earnings have run 4% ahead of allocations. The basis currently used is therefore to deduct 10% of the 31 December 1994 value from the current claim value to reflect the shortfall of earnings in 1994 compensated in part by excess earnings in 1995 to date. This adjustment is therefore intended to bring the value on surrender or transfer broadly in line with the market value of the underlying assets.*

Equitable's leaflet concludes:

> *The approach demonstrates the Society's stated practice of giving policyholders fair returns based on their participation in the with-profits fund. It is worth remembering that the following basic features of our contract remain true:*
>
> - *full value on death for our main pension contracts;*
> - *full value on retirement at any age;*
> - *full value for existing funds which remain with the Society should premiums have to stop for any reason.*

14/12/1995 [entry 2] Equitable write to GAD in response to their letter of 08/12/1995. Equitable confess:

> *... to some surprise at having received it. As shown in our 1994 Returns our maximum exposure to derivatives at 31 December 1994 was £15.8m and had not been materially different during the year. That is only around 0.1% of our assets. I would hardly have called that "significant".*

Equitable enclose a copy of their *'State of Play Report at 31 March 1995'* which they had submitted to DTI on 28/03/1995. Equitable say this should answer GAD's questions.

18/12/1995 DTI pass a copy of Equitable's letter of 14/12/1995 on transfers to GAD and ask if they have any comments. DTI record that answer as being *'No!'* (however, see 24/01/1996).

1996

23/01/1996[entry 1] **GAD provide DTI with their detailed scrutiny report on the Society's 1994 regulatory returns.** (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) The report uses the detailed format adopted for the 1993 returns (see 15/11/1994 [**entry 1**]) and comprises 13 sections as follows:

(1) Summary
Under *'Key features'*, GAD state that Equitable are the seventh largest company, measured in terms of long term business. GAD explain that Equitable are classified as priority 3, unchanged from the previous year. They note that: *'Rather unusually, especially since the recent disappearance of* [another mutual company], *the company publishes a gross premium bonus reserve valuation, and a net premium comparison'*. GAD also note that Equitable have used a *'small'* future profits implicit item for the first time; that their pensions business *'is somewhat unusually structured in that it is almost all on a recurrent single premium basis';* and that *'reserving bases are weak, by design, to maximise the free asset ratio. Nonetheless, this has fallen in 1994'*.

Under *'Action points'*, GAD note that they had derived much useful information the previous year from Equitable's With-Profits Guide. However, as GAD only have the May 1994 edition, they have requested a later version. (Note: GAD had previously asked Equitable to send this document routinely, and Equitable had agreed to do so: see 28/03 and 07/04/1994). GAD state that they *'have also raised a number of areas of greater or lesser concern, pre-eminent amongst which are mortality bases for annuitants and interest rates used in the valuation'*.

(2) Background
GAD repeat information included in the Background section of their report on the 1993 returns, namely that Equitable are the oldest mutual life assurance society in the world, that they never pay commission to third parties, and that they have a:

> *... somewhat unusual approach to bonuses, unit linked products (which often have discretionary surrender values) and valuation using a gross premium bonus reserve method. The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by the regulations.*

GAD note that, as well as using a future profits implicit item for the first time in 1994 to the value of £250m, Equitable have obtained a section 68 Order in the sum of £500m for use in the 1995 returns.

GAD explain that Equitable have been active overseas in recent years (in Guernsey, the Republic of Ireland and Germany) and that these branches are producing ever increasing amounts of new business. GAD state:

> *The impression we have been given is that the Equitable regard this as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders, for example. The mutual concept is extended to all policyholders, and indeed is even part of Equitable's dealing with UK non profit policyholders.*

GAD also note that they and DTI visited Equitable in December 1994 (see 09/12/1994 [**entry 2**]) and that: *'The Appointed Actuary and Managing Director posts are both held by* [the same person], *who is due to retire within a few years (though it is dangerous to speculate exactly when!)'*.

(3) New business
GAD provide details of the new products Equitable have developed and produce two tables setting out the regular and single premiums which Equitable have received for the various classes of policies sold from 1990 to 1994. GAD produce a third table, showing the year on year increase in new business over the same period.

In a commentary on the figures, GAD state that *'new business results for Equitable are once again strong'* and '[there] *will have been a material strain in 1994 associated with the new business, especially in a year of declining market values of assets'*. GAD explain that the sales figures are *'somewhat strange, however, in that a great volume of pension business is regarded as recurrent single premium. This is reported in the year of issue as regular premium, in accordance with the guidance notes, but it does not appear in form 43* [of the returns] *as regular premium'*.

GAD add:

> *The annual report on the industry showed Equitable as one of the success stories of 1994. It was ranked only 27th for new life business, but was 1st in pensions and 3rd in the combined table. In terms of growth, it ranked 8th, and was the top mutual office. It held the same place over the period 1989 to 1994 ...*

(4) Changes in business in force
GAD produce a table showing the recent history of regular premiums. They comment that there has been a continued rise in regular premiums, which is helpful in keeping the expense ratio low. GAD note that this is *'clearly a virtuous circle'*.

Under *'Claims experience'*, GAD produce a table showing the recent history of mortality rates. They comment:

> *It is not possible from the DTI return to form any view on the mortality experience of annuitants. This was the subject of correspondence with the company in recent times, partly prompted by an enquiry from the BAV on the business being written in Germany. We are returning to this issue again in the light of recently published data.*

Under *'Persistency experience'*, GAD produce tables showing lapse rates and surrender and paid up conversion rates.

(5) Expenses
GAD produce a table showing the history of expenses from 1990 to 1994. GAD comment that Equitable again compare very well with the industry as a whole and that their expense ratios have now reached *'astonishingly low levels'*. GAD explain:

> *Equitable is well known as a non-commission paying office, and prides itself in its low expense ratio. It is a very positive marketing message, and a key attraction of the Society with its customers. It helps explain the positive sales figures in a poor time for most of its competitors, and* [is] *part of a virtuous circle.*

(6) Non-linked assets
GAD produce tables showing Equitable's mix of assets at the year end, their recent history of allocation of new money (based on Equitable's own figures), their recent history of yields, and the assets attributable to with-profits business (Note: this was said to be taken from Equitable's *'latest available'* With-Profits Guide, although the later guide, dated July 1995, was available at that time). They comment again that the most noteworthy feature of the latter is the shift towards a higher fixed interest component. They calculate from information contained in the returns that the rate of return from investment for 1994 was -5.0%. Against this, GAD note Equitable's own figure for the return on the with-profits fund of -4.2%.

(7) Unit-linked funds
GAD provide brief details of this class of business.

(8) Valuation and solvency
Under *'Strengths and/or weaknesses'*, GAD first provide an overview:

> *It is known from the company visit at the end of 1994 that Equitable's Actuary has decided that the interests of the Society are best served by using a weak valuation basis to show as strong a free asset position as is possible. This means that the valuation basis is selected at the limits of the regulations. This requires us to exercise particular vigilance in ensuring that users of the returns are not misled. Additionally, the Equitable has a full distribution policy. Although one should not, perhaps, be critical of this per se, it does mean that the Society is more vulnerable than many to adverse conditions. The low free asset ratio means that there is comparatively little to spare if the reserves do prove inadequate.*
>
> *There are, however, a number of hidden strengths in the valuation. Principal amongst these is the treatment of recurrent single premium pensions business. This is assumed to pay no more premiums, and this is an extremely strong basis, though arguably only in line with the best practice. If the business were treated as regular premium, margins in future premiums and charges on the funds built up might allow some lower reserves. It is likely that some credit is being taken implicitly for this in the expense reserves ...*

GAD go on to discuss four particular areas:

Mortality — GAD explain that they are satisfied with the bases used for Assurances, Annuities — pension, and German business. For Annuities — general, GAD explain that Equitable use a mortality table *'well in excess of recent industry experience, and although the Appointed Actuary claimed to be able to justify this last year, we are pressing him quite vigorously on this point this year'*.

Valuation rates of interest — GAD produce tables showing the interest rates used for major classes and compare those with assets and yields. The scrutiny report is as follows:

> *The following table summarises the interest rates used, in general terms, for major classes (with liabilities in excess of £50m).*

Classes	*Net Interest Rate*	*Gross Interest Rate**	*Approximate Liability (£m)*
UK with profit assurances	*3.25%*	*4.06%*	*270*
UK unitised with profit assurances	*4.25%*	*5.31%*	*633*
UK with profit general annuities in payment	*5.75%*	*5.75%*	*155*
UK non profit general annuities in payment	*8.50%*	*8.50%*	*90*
UK pensions with profit – regular premium	*5.00%*	*5.00%*	*208*
UK pensions unitised with profit style	*5.75%*	*5.75%*	*7,499*
UK pensions non profit – main classes	*8.50%*	*8.50%*	*1,481*

** grossed up at 20% tax for with profit assurances and 25% for non profit assurances.*

Comparing this table with the assets and yields as below, gives rise to some doubts as to the sufficiency of higher yielding assets, particularly [once] *a yield differential for risk is included.*

Category of Assets	*Value of Admissible Assets (£m)*	*Yield*
Land	*1,014*	*6.82%*
Gilts etc	*3,380*	*8.92%*
Other fixed interest	*1,313*	*7.51%*
Indexed Gilts	*300*	*4.24%*
Other variable interest	*12*	*5.34%*
Equities	*5,834*	*3.34%*
Debts secured on land	*16*	*7.70%*
Other	*253*	*4.78%*

It is far from clear how this asset yield pattern will allow such a high rate of interest for the with profits business, if the non profit business takes the highest yielding assets to support its valuation rate. We are therefore seeking a thorough matching rectangle in the format under the proposed new Accounts and Statements regulations.

Expenses – GAD state that these are well controlled and falling and that *'There is little reason to question the low expense allowances in the valuation, therefore. A substantial hidden margin in respect of the pensions recurrent single premium business covers any apparent shortfall'.*

Resilience and special reserves – GAD explain:

The Equitable takes advantage of its use of a bonus reserve gross premium valuation to hide its resilience reserve. The difference between the net premium valuation and the gross premium valuation results is its resilience reserve (or at least a substantial part of that difference). They do not disclose how much. This will be asked for yet again. Other reserves seem to be on a reasonable basis.

Under *'Changes since previous year'*, GAD note that Equitable made small amendments to the reserves held for future bonuses under the net premium basis and that interest rate bases were revised to absorb some of the effect of rising interest rates and falling asset values. They note: *'Pension annuitant mortality was strengthened from a very weak basis to an acceptable one. The old basis would not, given recent publications, have continued to be defensible'.*

Under *'Summary of results for main classes'*, GAD provide three tables showing liabilities for linked and non-linked business and a valuation summary. The latter covers the years 1992, 1993 and 1994 and includes figures from both the main and appendix valuations. For 1994, this information is presented as follows:

	1994 BRV £m	*1994 NPV £m*
Non-linked liability	*10,932.1*	*10,651.2*
Linked liability	*1,095.7*	*1,095.8*
Bonus Reserves	*349.6*	*330.2*
Total [mathematical] *reserves*	*12,377.5*	*12,077.2*
Additional Reserves	*0*	*????‡*
Other liabilities	*256.3*	*256.3*
Total liability	*12,633.8*	*????‡*
Long term assets	*13,551.3*	*13,551.3*
Shareholders' assets	*0*	*0*
Available assets	*917.5*	*????‡*
Implicit items	*250.0*	*250.0*
Total amount available	*1,167.5*	*????‡*
Required Minimum Margin	*494.6*	*????‡*
Cover	*2.36x*	*????‡*
Free asset ratio	*3.1%*	*????‡*

> *‡ The amount of resilience reserve is not known for 1994. It is possibly sufficient to make the difference between the* [bonus reserve valuation] *and* [net premium valuation] *zero, but we have no way of telling until the answer to our enquiry is received.*

GAD's table shows that, under the bonus reserve valuation, Equitable's free asset ratio had fallen from 9.4% in 1993 to 3.1% in 1994.

Under *'Cover for the solvency margin'*, GAD comment:

> *It is not possible at present to calculate the net premium basis cover for the required minimum margin, but the gross premium cover is stated as higher. The cover with the implicit item included amounts to 2.36x, and if the implicit item had not been included it would have been 1.85x. The market reaction to the free assets falling to the level shown in our table (3.12%) as opposed to the free asset ratio often used including the implicit item (4.97%) might have been similar to that when* [another mutual life company] *revealed a low figure. Note that the section 68 order actually allowed an item up to £500m.*
>
> *The cover may not be huge, but it is adequate, provided the Appointed Actuary can satisfactorily defend his basis from the questions we have raised.*

(Note: the returns stated that the mathematical reserves established using the gross premium valuation method as presented in the main body of Schedule 4 of the returns were at least as high as would be required when using an appropriate valuation method. The returns did not state that the cover for the required minimum margin under the gross premium valuation was higher.)

(9) Financial results
This section is made up of the following table:

Surplus emerging

Gross Premium Basis	*1990*	*1991*	*1992*	*1993*	*1994*
Surplus emerging (£000s)	*422,489*	*596,501*	*330,523*	*480,935*	*519,981*

(10) Bonuses

Under *'Cost of bonuses declared'*, GAD include the following table:

Cost in £000s (on Gross Premium Valuation)	*1990*	*1991*	*1992*	*1993*	*1994*
Reversionary Bonus	*268,534*	*304,459*	*298,582*	*317,509*	*349,647*
Terminal and other bonuses in anticipation of a surplus	*154,725*	*151,565*	*167,898*	*165,053*	*173,541*
Total Distributed	*425,249*	*458,015*	*468,472*	*484,555*	*525,182*

GAD repeat the description of Equitable's final bonus system used in their report on the 1993 returns (see 15/11/1994 [**entry 1**]). GAD also repeat Equitable's own description of their final bonus system and again provide three tables of statistics showing changes in reversionary and final bonus rates. GAD reproduce Equitable's table of the actual investment returns on gross market value and the rate allocated in fixing bonuses, updated to include 1994:

	1990	*1991*	*1992*	*1993*	*1994*
Actual	*–8.3%*	*13.5%*	*17.1%*	*28.8%*	*–4.2%†*
Allocated	*12%*	*12%*	*10%**	*13%*	*10%†*

' 12% on new benefits secured during the year*
† figures from annual report, not With-Profits Guide'

GAD repeat their comments on Equitable's distribution policy made in their report on the 1993 returns (see 15/11/1994 [**entry 1**]), stating again that the reductions in reversionary bonus rates over recent years have influenced policyholders' reasonable expectations downwards in line with yields.

(11) Reinsurance
GAD state that Equitable make little use of reassurance.

(12) Compliance
GAD state:

> *Although the Equitable take a highly esoteric line on a number of issues, and are inclined to argue their case rather longer than most, they have a culture which would not permit the continuation of a compliance breach.*
>
> *There are some small omissions from Schedule 4 relating to a new fund and question 4(2)(c)* [of Schedule 4 of the returns]. *These are not all mentioned in our letter, and we do not feel they are of sufficient significance for DTI action, especially as elsewhere the actuary does provide the information on derivatives (under 4(2)(a)).*

They are reporting business believed by us and DTI to be class IV as class III, but have undertaken to revise this in future. This will have trivially understated the required minimum margin.

Under *'PIA and other compliance problems'* GAD note that: *'Although they have had a few issues, we understand, they are not significant'*.

(13) Miscellaneous
On mis-selling of pensions, GAD comment:

It looks from the outside as if it is almost impossible for Equitable to conceive that any of their salesmen could have mis-sold anything – or at least they could not publicly acknowledge it! There is no explicit provision, but we understand from Equitable's reply to [DTI's] *letter* [see 19/04/1995] *that £50m has been set aside by an "over-estimation" of the liabilities, and this has been accepted under the "true and fair view" accounts sign-off, despite the lack of any sophisticated supporting calculations.*

GAD also explain that they have asked Equitable about the Society's use of derivatives (see 08/12/1995) as this was quite high. (Note: but see Equitable's reply of 14/12/1995.)

Finally, GAD comment that Equitable were probably the first insurance company to publish their accounts in the new statutory form. GAD note:

Deferred acquisition costs of £219.1m are shown in the accounts. These are not, of course, admissible in the DTI return. It is a matter of debate how meaningful these deferred acquisition costs are in any life assurer, and here less than 60% of acquisition costs are deferred. The total figure represents almost 19% of the "Fund for Future Appropriations" in Equitable Life.

GAD's scrutiny report runs to 20 pages. DTI's Line Supervisor B copies the report to the Head of Life Insurance and to Line Manager B.

23/01/1996 [entry 2] GAD write to Equitable with questions from their scrutiny of the 1994 returns. GAD:

(1) ask for a copy of the current With-Profits Guide and request that Equitable send a further copy whenever the document is updated;

(2) challenge the mortality tables used by Equitable which GAD consider to be over-optimistic. GAD also ask Equitable to *'indicate how you feel the future improvement in annuitant mortality is catered for in this choice of basis, and what margins you believe are included for adverse deviations'*;

(3) seek additional information, in the form of a matching rectangle, to support the rates of interest used in the alternative net premium valuation contained in the appendix to Schedule 4 of the returns (and enclose a copy of a draft form for the presentation of the results);

(4) ask, in relation to the net premium valuation, *'what would be the increased reserves on that basis if explicit provision were made for the resilience test referred to* [in the returns]'; and

(5) say that they were *'unable to find a description of the Ethical Fund in accordance with the regulations'*.

24/01/1996 GAD write to DTI with comments on the papers relating to Equitable's application of a market value adjustment to policy transfers (see 18/12/1995). GAD point out that Equitable apply a market value adjustment for transfers, but unlike some other companies do not do this for retirements, even when they are not on the originally selected date. GAD note:

This is more generous therefore, but it does mean that transfers, which do suffer an MVA if one is generally applicable, look less generous than retirements. The justification for this is that retirement is not normally selected just for market conditions, but transfer can be.

If you try to justify Equitable's stance from rights of transferring policyholders against those of retiring policyholders, it looks unfair and even unreasonably protectionist. However, it would be impossible to allow unfettered unadjusted transfer, and therefore the only way to avoid this comparison being less than happy would be to level down — that is to remove the freedom from MVA (from future policies) on retirements other than on a fixed date. That would diminish the rights of the majority, and is not, I feel, a line which DTI would wish to take.

DTI note on this that there is no need to write again to Equitable.

21/02/1996 [entry 1] Equitable write to GAD in reply to their letter of 23/01/1996 about the 1994 returns. Equitable:

(1) enclose a copy of their current With-Profits Guide (dated July 1995) and state that GAD will be sent future updates;

(2) provide information about the mortality basis used in the valuation, and explain that Equitable would be strengthening the basis for the 1995 returns;

(3) comment that, were they to follow literally the instructions on the form for presenting information on rates of interest in the net premium valuation, Equitable would have to complete around 30 forms in all. Equitable state that they have put their internal records into the format of the draft forms *'which involves net and gross business on the same basis (apart from tax) being treated together and some minor classes being amalgamated with larger classes on similar ... valuation bases. That results in 10 different forms ...'*, which they enclose;

(4) explain that, had they published the net premium valuation, Equitable would have needed to show an explicit resilience reserve of £171m in the 1994 returns; and

(5) explain that their ethical funds are invested in the Equitable Ethical Unit Trust, which is described in the returns.

An unsigned analysis carried out by GAD of Equitable's letter includes on (2): *'OK for now, general comments only to* [Equitable's Appointed Actuary]'. On (3):

Supplied approximately in the requested format except that, surprise surprise, the resilience reserve is omitted.

OK apart from the missing resilience line. It is probably pushing it a bit to complain and I intend to turn a blind eye.

On (4), that the resilience reserve required is £171m, the comment is: *'OK'*. On (5), the note reads: *'I did not know there was such a unit trust – hence the confusion. Now OK'*.

21/02/1996 [entry 2] DTI's Line Manager B returns his copy of GAD's scrutiny report on the 1994 returns to the Line Supervisor. On this, the Line Manager notes:

I propose to invite myself to see Equitable to discuss

1) Plans for Permanent [Insurance] *+ development of overseas business*

2) Asset/liability management.

23/02/1996 GAD hold a meeting of their Scrutiny Strategy Working Party. DTI's Line Manager A attends and provides feedback from DTI on GAD's 1994 annual report on the life insurance industry. GAD's

1996

minutes record: '[Line Manager A] *said that he had found the report extremely useful, both in relation to specific companies and for wider purposes, such as briefing officials and answering parliamentary questions. However, he was not convinced that his colleagues at DTI used the report to anything like the same extent. The GAD actuaries used the report in writing detailed scrutiny reports, but* [Chief Actuary C] *said that he wished they would use it more'*.

05/03/1996 GAD write to Equitable with comments on their letter of 21/02/1996. GAD note that Equitable intend to strengthen the mortality basis for 1995 and offer some advice about what mortality tables to use. GAD add: *'Annuity mortality bases are a matter that GAD keeps under constant review for all offices with a material portfolio, and we shall undoubtedly return to this issue in future years'*. GAD raise no objections to Equitable's amalgamation of information on rates of interest *'provided that the valuation rate of interest given is the highest for liabilities grouped together'*. GAD acknowledge Equitable's information on the resilience reserve and add:

> *We do need to know this figure every year, but I appreciate that you do not wish to publish it at present. It would assist me if you could write to me with this figure at about the time you submit the return, as this may avoid correspondence later in the year.*

GAD send DTI an update on their scrutiny report for the 1994 returns. GAD revise the valuation table to take account of Equitable's figure for the resilience reserve under a net premium valuation, as follows:

	1994 NPV £m
Non-linked liability	*10,651.2*
Linked liability	*1,095.8*
Bonus Reserves	*330.2*
Total [mathematical] *reserves*	*12,077.2*
Additional Reserves	*171.0*
Other liabilities	*256.3*
Total liability	*12,504.5*
Long term assets	*13,551.3*
Shareholders' assets	*0*
Available assets	*1,046.8*
Implicit items	*250.0*
Total amount available	*1,296.8*
Required Minimum Margin	*490†*
Cover	*2.65x*
Free asset ratio	*4.1%*

† Estimated figure.

GAD conclude:

> *We are now satisfied with the valuation basis. The net premium cover for the required minimum margin is greater than that for the published basis, and a priority of 4 could have been justified.*
>
> *The scrutiny is now complete.*

15/03/1996 The Securities and Futures Authority ask DTI about a proposal that Equitable become the controller of a stock broking business.

25/03/1996	Equitable write to GAD, in response to their letter of 05/03/1996. Equitable suggest that GAD's comments on mortality tables appear to imply that: *... GAD decides what is a professionally satisfactory choice of basis and then sees how close offices come to that. That carries the unfortunate impression that the GAD feel the only people capable of exercising true professional judgment are themselves.* Equitable conclude: *I would much prefer to see the GAD/DTI taking a far tougher line on whom they allow to become appointed actuaries rather than adopting an increasingly interventionist approach to overcome the deficiencies of some appointees.* GAD copy the letter to DTI's Line Supervisor B who notes, against the concluding comment: *'Nice one!'*.
01/04/1996	DTI ask Equitable for brief details of the rationale for the proposal that they become the controller of a stock broking business (see 15/03/1996).
03/04/1996	GAD reply to Equitable's letter of 25/03/1996. GAD point out that DTI rely heavily on GAD when satisfying themselves that regulations are being complied with and that GAD's independent review underpins rather than undermines the Appointed Actuary system. GAD reassure Equitable that: *'We do not seek to substitute our judgement for that of the Appointed Actuary, but rather, as you suggest, to seek confirmation that relevant factors have been taken into account and that the conclusions are reasonable'*. GAD continue that this *'requires us to decide whether the basis is within the range actuaries generally would consider to be acceptable, and not to set our own basis. However, we have to start from somewhere, and in particular we do use guideline mortality tables to determine whether to make further enquiries'*. GAD add: *As you say, it would be unfortunate if GAD were giving the impression of some form of monopoly over professional judgement. We do, however, sometimes express a view to Appointed Actuaries when we feel this might assist their consideration of an issue. My observation was merely intended, in the context of your previous letter, to point out a possible advantage of moving to the latest tables, which you indicated you were considering, and no more than that. I am sorry if you felt any criticism of your professional judgement was implied, and assure you that none was intended.* GAD say: *I feel you may have misunderstood the reference I made to a "material portfolio". This was not a reference to, say, market share, but to the size of the portfolio in relation to free assets, for example. I was referring to those companies where an improvement in mortality of annuitants might cause a financial strain material for either solvency margins or policyholders' bonuses ...* GAD continue: *This might particularly be the case where the actuary has elected to use a basis that is near to the minimum. Thus "material" should be read perhaps more in the sense used by the accountancy profession. You will appreciate that the mortality experience of your annuity portfolio could be material, because significant improvements above those implicit in the table you use might produce a large financial effect.* GAD also comment on Equitable's request that GAD should take a tougher line on whom they allow to become Appointed Actuaries:

> *... the "gatekeeper" to the role is really the profession, through the system of practising certificates. If there is to be a tightening then it would be for the profession to give effect to it. Neither DTI nor GAD has any powers in this respect.*

GAD copy the letter to DTI. Line Supervisor B notes that it is a good letter and that the statement that DTI rely heavily on GAD for advice is *'true!'*.

10/04/1996	DTI's Head of Life Insurance writes to Equitable's Chief Executive (and to Chief Executives of all other life companies) to ask for a revised estimate of their liability for pension mis-selling and comment on the financial implications for the Society.
15/04/1996	Equitable's Appointed Actuary writes to GAD in reply to their letter of 03/04/1996. The Appointed Actuary says that: *'In general I was reassured by your comments'*. The Appointed Actuary explains that he shares GAD's concerns about the need to manage the risk of future improvements in mortality on an annuity portfolio and adds: *That was one of the reasons why we introduced our with profits annuity some years ago. Any unexpected improvement for that class could, of course, be reflected in the bonus rate granted. You may be interested to know that around two thirds of our current immediate annuity new business is with profits.* Equitable's Appointed Actuary also expresses surprise at GAD's comment that neither they nor DTI have any powers to secure better quality Appointed Actuaries. He says: *Although I accept that the Act does not require approval of Appointed Actuary appointments, there would appear to be an avenue of influence under the "sound and prudent management" criteria. That is via the requirement that any office "is directed and managed by a sufficient number of persons who are fit and proper persons to hold the positions which they hold".* Against this, Scrutinising Actuary D writes: *'This wouldn't pass review'*.
19/04/1996	Equitable provide DTI with the details requested on 01/04/1996 in relation to the Society taking a controlling interest in a stock broking business.
02/05/1996	DTI write to the Securities and Futures Authority, in response to their letter of 15/03/1996, to say that, as the prudential regulators for Equitable, DTI have no concerns about the proposal.
06/05/1996	Equitable's Appointed Actuary telephones DTI to advise them that, by the end of the year, sale of all permanent health insurance business would be transferred to the Permanent Insurance Company (Permanent Insurance) (in which Equitable hold a majority shareholding) *'via S.49'*. The officer who took the call (identity unknown) records: *'I mentioned about EC policies + contacting supervisors re S.49 transfers.* [The Appointed Actuary] *didn't think there were any but was grateful for this* [information]'.
20/05/1996	DTI send the British Consul General in Munich information about the Society ahead of a speech that he was to give at an Equitable dinner. Under *'Key Features'*, DTI say that Equitable are the seventh largest company in terms of long term business assets, that expenses remain amongst the lowest in the industry and that '[the] *Appointed Actuary and Managing Director posts are both held by* [the same person]'.
28/05/1996	Permanent Insurance write to DTI to explain that they intend to begin issuing policies in the Republic of Ireland and that the policies will be sold using Equitable's sales force.

31/05/1996	Equitable ask DTI to provide a letter stating that they have no objection to the Society registering a representative office in the United Arab Emirates.

05/06/1996 DTI's Sponsorship Secondee Unit send Equitable notes of a meeting that had been held on 2 May 1996 to discuss insurance industry competitiveness. Under the heading *'Working with Government & Regulators'*, Equitable's Appointed Actuary is quoted as saying:

> *DTI valuation regulations have now gone too far ...*
>
> *Regulation has not caused Equitable to change its approach, but it has put up its costs.*
>
> *Believes that, despite regulations, very little advice is actually given.*

14/06/1996 Equitable write to DTI in reply to their letter of 10/04/1996 about liability for pension mis-selling. Equitable say that their comments remain as in their letter of 19/04/1995, but also explain that they aim to complete a review of all transfers and opt-outs by 1 July 1997. Equitable would thus have a much clearer idea of their potential liability by the end of 1996, but still believe their exposure is likely to be relatively small.

18/06/1996 DTI's Director of Insurance writes to Equitable's Chief Executive and Appointed Actuary to congratulate him on his appointment as a Commander of the British Empire in the Birthday Honours. The Director of Insurance says:

> *I am sure your many friends and admirers in the industry and elsewhere — among who I would count myself — will regard this as a well deserved recognition of a lifetime's service to England's oldest life insurer, and to the high standards for which you have been rightly renowned for so many years. The Equitable's achievements in recent years show that high ethical and customer standards can be fully compatible with the more conventional measures of commercial success.*

26/06/1996 Equitable apply to DTI for a section 68 Order for a future profits implicit item of £600m, for possible use in their 1996 returns. Equitable provide financial calculations in support of the application suggesting that they could seek an Order up to the value of £2,212.6m.

> *Equitable say that they have 'included in its 1995 annual returns a future profits implicit item of £263,731,000 for the purpose of achieving equality between the total net value of policyholders' assets included in Form 9 (i.e. lines 21 + 31 – 24) and the corresponding total net asset value shown in the Society's Companies Act accounts'.*

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.91	*596.5*	*(13.2)*	*59.5*	*550.2*
31.12.92	*330.5*	*(46.0)*	*46.4*	*330.1*
31.12.93	*480.9*	*(1015.2)*	*178.5*	*1317.6*
31.12.94	*520.0*	*1245.9*	*19.3*	*(745.2)*
31.12.95	*662.8*	*(462.3)*	*119.5*	*1005.6*
				2458.3

1996

Average annual profit = 2458.3/5 = £491.7m

Note: *In 1994 surplus was increased as a result of changes in valuation interest bases. In 1991, 1992, 1993 and 1995, surplus was decreased as a result of changes in valuation interest bases. Those changes in surplus are included as exceptional items in column (B) above.*

The calculations state that the average period to run for the Society's in-force contracts is nine years. Equitable explain:

The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible retirement age, or immediately if that age has already been attained.

The calculations suggest that the maximum future profits permissible is 50% of £491.7m multiplied by nine years – that being £2,212.6m.

Submission of the 1995 regulatory returns

28/06/1996 **Equitable submit their 1995 regulatory returns to DTI**. Accompanying those returns are copies of the Society's annual report and financial highlights and its statutory accounts, prepared under the Companies Act 1985 and dated 27 March 1995.

These documents include the following information about Equitable's business and their financial position as at 31 December 1995.

GAD's copy of the 1995 regulatory returns and Companies Act reports and accounts include various annotations. I am satisfied that those annotations were made by Scrutinising Actuary E during the scrutiny programme, on or around 18/07/1996, when Scrutinising Actuary E completed the A2 Initial Scrutiny check. However, for ease of reference, mention of these annotations is made here.

Companies Act annual report and financial highlights
Equitable provide information on their Directors. GAD note that there are five executive directors and eight non-executive directors.

In their *President's Statement to Members*, Equitable explain *'While we have been at the forefront of those raising bonus levels when investment returns increase, we have not been afraid in the past to reduce bonus levels to reflect reduced investment returns where this was appropriate'* and that they had been able to maintain bonus rates (both reversionary and terminal) at the 1994 levels, as there had been no justification on investment grounds to reduce them. Equitable argue that *'This is in contrast to some of our competitors, who have decreased bonus rates this year having deferred the decision from an earlier year'*.

GAD mark some of the statements made in the President's Statement, including that:

- they had secured a record level of new business;
- their expense ratio had fallen from 5.5% to 4.8%;
- Equitable are *'satisfied that we can safely and securely continue to develop our business and maintain the interests of our policyholders without the need for any injection of shareholder capital'*;
- they have continued to develop the business outside the United Kingdom; and
- on bonus policy that, *'There should be no deliberate holding back of profits from one generation to the next'*.

In their *Management Report*: *an appraisal of the Society today*, Equitable provide a statement of the principles on which they operate. Under *'Investment Performance'*, Equitable say:

> *A full distribution policy does not lead to investment considerations different from those applying to life assurance companies generally. The asset mix from time to time reflects relative price movements and preferences on investment grounds over the years rather than blind adherence to any particular "culture". Over many years there have not been any particular technical restrictions placed on the investment team.*

GAD sideline the following table which appears in this section under the heading *'The factors contributing to the cost-effective internally financed growth'*:

Acquisition Expense Ratio 1994

Lowest – The Equitable Life	*18.08%*
Nearest competitor	*45.52%*
Average	*101.90%*

1996

GAD also highlight that the fund charge for internal-linked funds had been reduced to 0.5%.

In their *Management Report, features of 1995*, Equitable provide information on: *'New Business and Sales'; 'Investment'; 'Bonus Declaration'; 'Customer Service'; 'Systems and Consultancy'; 'Staff';* and *'Looking Ahead'*.

GAD note that the Society has operations in Germany and the Republic of Ireland and an international branch based in Guernsey.

Under the *'Bonus declaration'* section, Equitable note that with-profits policyholders had recently received notices of their bonus statements, together with a letter explaining Equitable's approach to bonuses for 1995. Equitable note that in 1995, when investment returns on their with-profits assets had been 16.6%, the Directors had decided to allocate an overall rate of return of 10% for recurrent single premium business, the same as in 1994 when the investment returns on the with-profits funds had been –4.2%. Equitable say that this demonstrated how the with-profits system smoothed out the relative peak of performance in 1995, as well as the troughs in earlier years.

Companies Act statutory accounts
In their *Directors' Report for 1995*, Equitable provide an example of how bonuses are allocated to policies. The example (using a personal pension plan policy) includes mention of the 3½% *'roll-up rate'* guaranteed by the policy.

GAD make various annotations against the figures provided in the Profit and Loss Accounts and the Balance Sheets.

The returns
Equitable's returns are again submitted in two parts covering Schedules 1, 3 and 6 and Schedule 4 to the ICAS Regulations 1983.

Schedule 1 (Balance sheet and profit and loss account)
As in previous years, Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 16. Form 9 summarises the Society's financial position at 31 December 1995 as follows:

Long term business admissible assets	*£16,502,548,000*
Total mathematical reserves (after distribution of surplus)	*£14,915,189,000*
Other insurance and non-insurance liabilities	*£153,979,000*
Available assets for long term business required minimum margin	*£1,433,380,000*
Future profits	*£263,731,000*
Total of available assets and implicit items	*£1,697,111,000*
Required minimum margin for long term business	*£586,275,000*
Explicit required minimum margin	*£97,713,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£1,335,667,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£1,110,836,000*

GAD tick some of the figures provided and note the cover for the required minimum margin with and without implicit items (being x2.89 and x2.44), along with the equivalent figures for the previous year (being x2.36 and x1.85).

Equitable use a future profits implicit item in their 1995 returns of £263.4m.

In Form 13, GAD circle the figure disclosed for investments in dependent non-insurance companies and query what companies these are.

Form 13A (Analysis of derivative contracts) includes a note which reads: *'Included in column one are convertible securities of £185,274,823, warrants of £22,345,129 and partly paid securities of £4,963,931'*. GAD circle these figures and question whether they should be shown on this Form. However, GAD also write: *'Seems acceptable, following Prudential Note 1995/2'*.

In Form 14 (Long term business liabilities and margins), GAD circle the previous year's figure for liabilities due to *'Other creditors'*.

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 51, which have been supplemented by various notes providing further information about/explanation for the figures provided.

In the version of Form 40 (Revenue account) relating to *'Ordinary Long Term (Life, General Annuity and Permanent Health Fund)'*, GAD circle the figures provided for the value of non-linked assets brought into account. Next to this GAD write: *'as necessary!'*.

In the annex to Form 40, Equitable disclose the principles and methods applied. Under *'Increase/Decrease in the value of assets brought into account'*, Equitable disclose:

> *The increase/decrease in the value of linked assets brought into account has been allocated directly to the relevant part of the fund. In respect of other assets the allocation is such as to give in each case, a "fund carried forward" of at least the amount of the mathematical reserves (including those arising from a distribution of surplus at the end of the financial year) in respect of the business attributable to the part of the fund in question.*

GAD underline the second sentence and write: '*ie. allocation from investment reserves as necessary!'*.

In Form 41, Equitable provide information on premiums and expenses. GAD annotate the forms with corresponding figures from the previous year's returns. They also add some corresponding figures taken from Form 44.

In Form 43, Equitable provide a summary of the changes in ordinary long term business. The instructions to this Form say that figures for annual premiums shall not include any recurrent single premiums. GAD underline the words *'any recurrent single premiums'*.

In Form 44, Equitable provide an analysis of their new ordinary long term business. GAD make various annotations on the Forms, checking the figures provided. In relation to UK non-linked with-profits pension business and Equitable's regular premium contracts, GAD calculate the total amount of business to be just over £307m. Against this they note: *'But FORM 43 excludes recurrent* [single premiums] *+ shows only 1,398k!'*.

1996

Form 45 shows that 50% of Equitable's admissible non-linked assets are invested in equities, 7% in land and 38% in fixed and variable interest securities (compared with 47%, 8% and 40% respectively in 1994). The Form also shows the expected yield on those assets. GAD tick some of the figures and add the total yield percentage shown on line 12 from the previous year (being 5.51%).

As in previous years, Equitable disclose in Form 46 that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority are, for certain durations, higher than for those not issued or guaranteed by any government or public authority. GAD tick the Form.

In the notes to this part of the returns, Equitable disclose that no provision has been made for the contingent liability to tax on unrealised capital gains on non-linked business, which they have estimated as £37.4m. GAD underline that no provision has been made and sideline the paragraph.

Equitable disclose that they have been granted a section 68 Order permitting them to take into account a future profits implicit item with a value not exceeding £500m. The Society states that it has included an item of £263,731,000 for the purpose of *'achieving equality between the total net value of policyholders' assets included in Form 9 ... and ... total net asset value shown in the Society's Companies Act accounts'.* GAD underline the quoted part of this sentence.

Equitable state that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 49, 50, 51 and 57, instead of the separate details for each Personalised Fund required by the ICAS Regulations 1983.

Equitable state that they have been granted a section 68 Order permitting them not to submit a statement of their long term business as at 31 December 1995 (i.e. a Schedule 5 of the returns).

<u>Schedule 6 (Certificates by directors, actuary and auditors)</u>
Three Equitable Directors provide the certification required by Regulation 26(a) of the ICAS Regulations 1983. Equitable's Appointed Actuary provides the certification required by Regulation 26(b) of the ICAS Regulations 1983. As required by Regulation 27 of the ICAS Regulations 1983, Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

<u>Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)</u>
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

<u>Schedule 4 – main valuation (text)</u>
Schedule 4 of Equitable's returns provides the information required by paragraphs 1 to 19 of Schedule 4 to the ICAS Regulations 1983 and includes Forms 55 to 58 and Form 60. Equitable state that this valuation conforms to Regulation 64 of ICR 1994.

In response to paragraph 3, Equitable provide 23 pages of information about their non-linked contracts. Most of the information about the contracts remains unchanged from previous years. GAD make various annotations to this section of the returns.

As in previous years, Equitable disclose that certain deferred annuity policies carry guaranteed terms under which future premiums could be paid. In paragraph 3(xiv) Equitable also, again, disclose that they applied a guaranteed annuity rate to the accumulated cash fund generated by certain types of with-profits policies, stating that the guarantees applied to policies issued prior to 1 July 1988. GAD tick the paragraph and underline *'prior to 1 July 1988'.*

As in previous years, Equitable provide a description of their principal guarantees of terms. GAD tick each description.

In response to paragraph 4, Equitable provide 48 pages of information about their linked contracts. GAD tick some of the descriptions provided or otherwise note where there has been an addition or change from the previous year.

As in the previous year, on the general principles and methods adopted in the valuation set out in paragraph 5(1), Equitable disclose that personal pension business has been valued on the basis that benefits are taken at age 55. GAD tick this paragraph.

As in previous years, in paragraph 5(1)(a) Equitable disclose that they have tested the need for resilience reserves against the three scenarios contained in DAA6. They state the changed conditions examined were: *'an immediate 20% fall in property values combined with (1) a 20% reduction in fixed interest yields and a 10% fall in equity values; (2) a 10% reduction in fixed interest yields and a 25% fall in equity values; (3) a rise in fixed interest yields of 3% and a 25% fall in equity values'*.

GAD underline *'immediate 20% fall in property values'* and write against it *'not needed in all scenarios!'*.

As in previous years, Equitable disclose that they have tested the ability of the Society to hold reserves which satisfy Regulations 64 to 74 of ICR 1994 in the three scenarios of changed investment conditions described in DAA6. Equitable state:

> *In these conditions the Society would be able to set up reserves which satisfy* [Regulations 64 to 74 of ICR 1994] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued.*

GAD tick this paragraph.

(Note: the entry at line 51 of Form 14 was the excess of the value of admissible assets representing the long term fund over the amount of those funds and represented the difference between the market value and book value of those funds.)

As in previous years, Equitable state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

As in previous years, in paragraph 5(1)(d) Equitable set out the rates of future bonus valued for each class of business. GAD add corresponding figures from the previous year and write: *'<u>Mainly unchanged</u> (at levels <u>much lower</u> than 1993)'*.

In paragraph 5(1)(e), Equitable disclose that a reserve for the prospective liability to tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. They also disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £37m. GAD underline this figure and add next to it the previous year's figure of £21.9m.

As in previous years, Equitable continue: *'It is considered that there were sufficient margins in the valuation basis to cover the discounted value of the liability. Accordingly, no other additional reserve was made for any prospective liability for tax on unrealised capital gains'*. GAD sideline these two sentences and note them with a question mark.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity. GAD tick this paragraph.

As in previous years, in paragraph 5(1)(g) Equitable state that they do not consider it necessary to hold an explicit provision for the guarantees and options described in paragraph 3, except where the right to effect further policies without medical evidence of health is carried. GAD tick this paragraph.

As in previous years, in paragraph 6(1) Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used are those assumed in the premium basis. Equitable, again, do not elsewhere in the returns disclose the rates used in the premium basis.

As in the previous year, in response to paragraph 7(b) of Schedule 4 to the ICAS Regulations 1983, in respect of their life assurance, general annuity and pension business, Equitable state:

> *For recurrent single premium business the valuation rates of interest shown in form 55* [the valuation summary of non-linked contracts] *are net of a ½% interest rate reduction as a provision for future expenses.*

As in previous years, at paragraph 7(d) Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 60 of this report.*

GAD sideline this paragraph.

As in previous years, in paragraph 11 Equitable disclose: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'.*

As in previous years, in paragraph 12 Equitable state: *'The Society has no shareholders and the principles upon which the distribution of profits among the policyholders is made are determined by the Directors in accordance with the Society's Articles of Association'.*

In paragraph 13, Equitable disclose that they had set the reversionary bonus for the main policy classes at 4.0% (unchanged from the previous year). GAD tick or mark as new the information in this section. As in previous years, Equitable disclose that they offered loans under a *'loanback'* arrangement to some retirement annuity and individual pension policyholders. GAD sideline this paragraph.

In paragraph 16, Equitable set out their system for allocating final bonus. GAD make various annotations to this section. The returns, again, contain the statement at paragraph 16(vi):

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

GAD sideline this paragraph.

Schedule 4 – main valuation (forms)
In Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them. GAD note some of the changes from the previous year to the rates of interest and mortality tables used.

In Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them. Equitable again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 58, Equitable set out the valuation result and the composition and distribution of fund surplus.

Schedule 4 – appendix valuation (text)

Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994.*

Equitable's appendix valuation provides the information required by paragraphs 1, 5 to 7, 9, 17 and 18. Equitable say that the information required for the other paragraphs (apart from paragraph 19 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation',* has not been provided) is identical to that given in the main valuation.

As in previous years, in response to paragraph 5(1)(a), Equitable state: *'In these conditions the Society would be able to set up reserves which satisfy* [Regulations 64 to 74 of ICR 1994] *without needing to have recourse to the assets whose current value is shown at line 51 of Form 14* [in Schedule 1] *of these Returns. No provision was made for any mismatching between the nature (including currency) and term of the assets held and the liabilities valued'.*

GAD underline the words *'at line 51 of Form 14 of these Returns'* and write: *'i.e. margin between* [bonus reserve valuation] *liability +* [net premium valuation] *liability covers mis-match reserve'.*

As in the main valuation, in paragraph 5(1)(e) Equitable state that no reserve is made for any prospective liability for tax on unrealised capital gains in respect of non-linked business. GAD sideline this statement.

As in previous years, in paragraph 5(1)(f) Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity. GAD tick this paragraph.

As in previous years, in paragraph 5(1)(g) Equitable disclose the ages that retirement benefits could be taken on their recurrent single premium with-profits pension business. Equitable state that they assumed a retirement age for personal pension policies of 55. GAD underline the number.

As in the previous years, in paragraph 7(b) Equitable explain the method by which they had made provision for future expenses on their recurrent single premium business.

<u>Schedule 4 – appendix valuation (forms)</u>
In the appendix version of Form 55, Equitable set out the mathematical reserves held for the various types of non-linked contracts on the appendix valuation basis. GAD note changes from the previous year's returns to some of the interest rates and mortality tables used.

In the appendix version of Form 56, Equitable set out the mathematical reserves held for the various types of linked contracts on the appendix valuation basis.

02/07/1996 DTI's Line Supervisor B asks Legal Adviser A for advice on the proposed sale of critical illness policies through Permanent Insurance. She queries in particular if the use of Equitable's staff to sell Permanent's products might breach section 16 of ICA 1982.

03/07/1996 DTI provide Equitable with a certificate confirming that the company meet the statutory solvency requirements to trade in Dubai.

04/07/1996 DTI'S Legal Adviser A advises the Line Supervisor that, provided Equitable sell Permanent's products with their own products, section 16 would not be breached.

08/07/1996	**GAD complete the A1 Initial Scrutiny check on the Society's 1995 regulatory returns**. GAD identify no concerns.
10/07/1996	DTI's Line Manager B asks Legal Adviser A for advice on whether the use of Equitable's staff to sell Permanent's products would breach section 16 of ICA 1982.
18/07/1996	**GAD complete the A2 Initial Scrutiny check on the Society's 1995 regulatory returns**. GAD reduce Equitable's priority rating from 3 to 4. GAD identify a number of matters: • the AIDS reserve is contained within the reserve for future bonus in the main valuation; • unit costs have not been updated from the previous year (except for annuities); • it remains the case that not all reassurance is with UK authorised companies; and • the company has not set up any identifiable provision to meet exposure to personal pension transfer problems. Against this is a note *'April 1995 letter indicated that technical liabilities "overstated" by £50m'*. GAD also note: *S68 Order permitted implicit future profits item of up to £500m. £263,731K used — cover for* [required minimum margin] *of 2.89* [Company] *provides* [management] *services to University Life ... + Permanent* [Insurance]. [Paragraph] *4(2)(c)* [of Schedule 4 of the returns] *still omitted ... - (covered in 4(2)(a))* *Reduced management charges for Funds!* *Unchanged expense allowance for linked contracts, but <u>raised</u> allowances for annuities.* *New reinsurance treaty with connected* [company] *for Major Medical Cash Plans. – No current reassurance seems to be in place.* GAD identify no worrying aspects and no items to notify to DTI, to be taken up immediately with Equitable. Accompanying the scrutiny check is a Form B Initial Scrutiny Form, which includes certain key figures disclosed in the 1992 to 1995 returns. GAD tick some of the figures provided.
22/07/1996	DTI's Legal Adviser A provides advice to the Line Manager in response to his note of 10/07/1996 on whether Permanent Insurance's plans to sell policies in the Republic of Ireland using Equitable's staff would breach section 16 of ICA 1982. He advises that he does not believe that it could be said that the sale of policies was for the purposes of, or in connection with, Equitable's insurance business. Therefore, Section 16 of ICA 1982 would apply.
23/07/1996	Equitable's Appointed Actuary writes to GAD's Scrutinising Actuary D (who about this time becomes a Chief Actuary (Chief Actuary D) and retains responsibility for Equitable), enclosing the latest version of the With-Profits Guide (dated July 1996). The Appointed Actuary adds: *I should also like to take this opportunity to thank you for your kind letter about the award I received in the Queen's Birthday Honours. It was a surprise as well as an honour, as you can imagine.* *As you indicate, I hope the award will be interpreted as a recognition of the standing and regard in which the Equitable is held. Many have contributed to that and to the work we have all been doing to benefit the industry's clients. The award should, in that way, be shared by all involved.*

26/07/1996	DTI send GAD a copy of Equitable's application for a section 68 Order of 26/06/1996. On GAD's copy of the letter, a new Scrutinising Actuary (Scrutinising Actuary E) has annotated the following statement with a question mark: *In 1994 surplus was increased as a result of changes in valuation interest bases. In 1991, 1992, 1993 and 1995, surplus was decreased as a result of changes in valuation interest bases. Those changes in surplus are included as exceptional items in* [the calculation of average annual profit]
30/07/1996 [entry 1]	GAD write to Equitable's Appointed Actuary, to thank him for his letter of 23/07/1996 and to inform him that Scrutinising Actuary E would now have day to day responsibility for Equitable.
30/07/1996 [entry 2]	Equitable give formal notice to DTI that they intend to sell permanent health insurance policies (wholly reassured through Permanent Insurance) in the Republic of Ireland. Equitable supply details of the proposed changes to the requisite European Community and United Kingdom details.
05/08/1996	DTI send GAD a copy of Equitable's letter of 30/07/1996 and ask for their comments on the changes of requisite details. DTI explain that there had been previous correspondence on this issue (see 02/07/1996, 04/07/1996, 10/07/1996 and 22/07/1996) and that Legal Adviser A *'did have doubts about the border line between the two companies being "blurred" for regulatory purposes'*. Line Supervisor B also sends a copy of Equitable's letter to the Legal Adviser *'in case he has any further comments about the "blurring" of regulatory boundaries between companies!'*.
09/08/1996	Equitable inform DTI that they intend to establish two branches in Malta and require two solvency certificates for the years 1994 and 1995 for submission to the Maltese authorities.
13/08/1996	DTI provide Equitable with a certificate covering both years.
21/08/1996	GAD advise DTI that Equitable's application for a section 68 Order for a future profits implicit item (see 26/06/1996) is *'well within the maximum figure calculated and can be properly granted'*. GAD also say that they could see no problem with the proposed changes to the requisite details for Equitable's Republic of Ireland business. GAD suggest that the possible problem about the blurring of regulatory boundaries does not really exist, as an amendment to the requisite details *'indicates that the contract sold will be "similar in nature" to the UK version written by Permanent Insurance, of which details were provided, but we infer that it will actually be an Equitable contract — albeit wholly reassured with Permanent Insurance'*.
23/08/1996	GAD write to DTI about the detailed scrutiny programme for the 1995 returns. GAD say that they have completed the initial scrutinies for all life insurance companies and have prioritised the order of the detailed scrutinies, for agreement by DTI. The attached list gives the target date for the detailed scrutiny of Equitable's returns as December 1996. GAD also say: *I am also enclosing a copy of the criteria we are currently applying in determining priorities. These are as agreed with* [Line Manager A] *at the Scrutiny Strategy Working Party, and you will note that we have replaced the old "priority 5" category with two new categories.* *"Priority 5" now conveys the meaning that the company is not such that GAD considers a scrutiny desirable, bearing in mind our limited resources, but that we will reconsider the position later in the year, when we have a greater feel for the time and resources available. "Priority 6" will be reserved for those companies to be omitted from the 1995 programme when this review takes place.*

25/08/1996	DTI's Legal Adviser A replies to the Line Supervisor's minute of 05/08/1996. The Adviser says: *'These companies are making my head spin! It appears from the literature that they are not, as they have said, selling Equitable products which are reassured through Permanent. They are selling Permanent products so it looks as if Permanent will require branch authorisation for Ireland. Are we not back to square one?'.*
28/08/1996	In response to GAD's proposed programme for the detailed scrutiny of all life companies' 1995 returns, DTI's Line Manager B suggests that the target date for completion of Equitable's detailed scrutiny is advanced from December to October (with a corresponding demotion of one of two suggested companies that come under the responsibilities of Scrutinising Actuary E). (Note: in his witness statement to Penrose, Scrutinising Actuary D/Chief Actuary D said that the scrutiny report was completed early because of an impending visit to Equitable as part of DTI's rolling programme of visits. A meeting between DTI, GAD and Equitable took place on 08/11/1996.)
11/09/1996	DTI send Equitable the section 68 Order for a future profits implicit item of £600m, for use in their 1996 returns. DTI remind Equitable that, in accordance with the Guidance Notes which were issued in 1984, before including the item in the forthcoming returns the company must update the calculations to demonstrate that they still support the amount used.
15/10/1996	DTI write to Equitable to arrange the next visit to Equitable as part of DTI's and GAD's three year rolling programme. (DTI and GAD last visited Equitable, under this programme, on 09/12/1994.) DTI set out the main subject areas they would like to discuss: (1) The business plans for the next five years, with particular reference to solvency and any requirements which there might be for additional resources. DTI ask for a copy of Equitable's most recent business plan. (2) Equitable's purchase of Permanent Insurance. (3) Equitable's experience of doing business in Europe. (4) Equitable's *'managed annuity'* product. (5) Use of genetic information in the underwriting of long term business products. (6) Equitable's potential liability for compensation relating to personal pension transfers, opt-outs and non-joiners. DTI also seek a guided tour of the *'paperless office'* which Equitable have established. DTI propose that *'the visit should take the form of a series of meetings with appropriate members of your team to discuss these areas, and would hope to cover them all adequately in a single day'*. DTI explain that it is not essential for Equitable to send any documentation in advance, other than the business plan referred to above, but that they would be pleased to receive any internal papers which might facilitate the discussions, such as structure charts and corporate plans. The visit is arranged for 08/11/1996.
29/10/1996	Every Appointed Actuary is sent by the Government Actuary a copy of DAA8 on his recommended AIDS reserving policy. The guidance includes clarification of the changed investment condition scenarios that are expected to be tested in the resilience test.

01/11/1996 [entry 1] **GAD provide DTI with their scrutiny report on the Society's 1995 regulatory returns.** (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) The report uses the detailed format adopted for the 1993 and 1994 returns (see 15/11/1994 [**entry 1**] and 23/01/1996 [**entry 1**]) and comprises 12 sections as follows:

(1) Summary
Under *'Key features'*, GAD state that Equitable are the seventh largest company, measured in terms of long term business. GAD explain that Equitable are classified as priority 4 (reduced from priority 3 the previous year). They note that:

> *Unusually, the company publishes a gross premium bonus reserve valuation — and a net premium comparison. For the second year, Equitable has used an implicit profits item in Form 9, amounting to about £264m.*

GAD note that, in a year when the industry struggled, Equitable achieved record sales and that their main line of business is pensions *'somewhat unusually structured, with almost all on a recurrent single premium basis'*. They note that expenses *'remain the lowest in the industry, and the ratios continue to fall'*. GAD also note that:

> *Reserving bases are fairly weak, by design, to maximise the disclosed free asset ratio, while permitting fair bonus distributions to the current generation of policyholders. The* [required minimum margin] *was shown as comfortably covered by a factor of 2.89 at the end of 1995 (cf 2.36 at end 1994) — the factor would be 2.44 without crediting the implicit future profits item.*

Under *'Action points'*, GAD state that they have raised no points directly with Equitable, but that, at the planned visit (see 08/11/1996 [**entry 2**]), it would be interesting to discuss:

> *1. Details of the continued fall in its actual overhead expense levels, and its potential ability to continue on this creditable path.*
>
> *2. How the company views the sustainability of its present contract structures — largely based on accumulating funds to which regular bonuses are added. What scenario tests has it performed in relation to possible falls in asset values, and how would it react to sustained unfavourable market movements?*
>
> *3. The increased investment in non-insurance companies — £75.4m in shares and £18.7m in debt (previously, £49.3m and £2.8m respectively).*

(2) Background
GAD repeat information included in the Background section of their reports on the 1993 and 1994 returns, namely that Equitable are the oldest mutual life assurance society in the world, that they never pay commission to third parties, that they demonstrate *'a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another'*, and that they use a bonus reserve valuation method. GAD note that, as well as using a future profits implicit item for the first time in 1994, Equitable obtained an Order in the sum of £500m for 31 December 1995 and have used £264m. GAD explain that Equitable have been active overseas in recent years (in Guernsey, Republic of Ireland and Germany) and that these branches are producing ever increasing amounts of new business. GAD state, as in their report on the 1994 returns:

> *Equitable regard this as an exercise in extending the numbers of people who can benefit from the Society as an institution. It is almost like missionary work, rather than a purely commercial move in the interests of UK policyholders. The mutual concept is extended to all policyholders, and is even part of Equitable's dealing with UK non profit policyholders.*

GAD also note that they and DTI visited Equitable in December 1994, that a further visit is planned for 08/11/1996, and that: *'The Appointed Actuary and Managing Director posts are both held by* [the same person], *but the Board is chaired by a non-executive ... and the total Board of 13 includes 8 non-executives'.*

(3) New business
GAD provide details of the new products Equitable have developed and produce two tables setting out regular and single premiums Equitable have received for the various classes of policies sold from 1991 to 1995. The tables show that regular premium business has increased by 10.5% and single premium business by 30.4% since the previous year. GAD produce a third table, showing the year on year increase in new business over the same period. GAD provide no commentary on the figures.

(4) Changes in business in force
GAD produce tables showing:

- *Recent history of regular premiums*
- *Claims experience*
- *Persistency experience*
- *Recent history of combined surrender, lapse & paid-up conversion rates.*

GAD identify no concerns.

(5) Expenses
GAD produce a table showing the history of expenses from 1991 to 1995. They comment that Equitable's expense ratios keep improving and have again reached *'astonishingly low levels'*. GAD note, as in the scrutiny report for the 1994 returns, that Equitable are a non-commission paying office and pride themselves on their low expense ratio. They state that the revealed total of *'other management expenses'* has continued its *'amazing fall'*. GAD suggest: *'It would be interesting to determine at the next visit exactly how this has been achieved'*.

(6) Non-linked assets
GAD produce a table showing Equitable's *'Recent history of asset mix'*. They state:

> *Increased investment in non-insurance companies has been noted — £75.4m shares and £18.7m in debt at the end of 1995 (previously, £49.3m and £2.8m respectively), and it would be interesting to receive details of these holdings.*

GAD produce a table showing Equitable's *'Change in portfolio over the last year'*. They identify no concerns.

GAD produce a table showing Equitable's *'Investment performance'*. This states a return on investments in 1995 of 16.5%. GAD comment:

> *1. The Equitable's own figure for its with profits fund was a rise of 16.6%.*
>
> *2. The overall result is close to expectations, based on known market movements and after allowing for investment expenses having absorbed about ½%.*
>
> *3. A slightly higher figure might have been hoped for in relation to a with profits fund, but it may be that the expanded overseas equity portfolios (referred to in the 1996 With-Profits Guide) were biased towards far eastern markets that performed poorly in 1995.*

(7) Unit-linked funds
GAD provide details of this class of business.

(8) Valuation and solvency

Under *'Strengths and/or weaknesses'*, GAD first provide an overview, which is similar to that provided in their report on the 1994 returns:

> *The company produces its published Return on the basis of a gross premium valuation, with some allowance for future bonuses, but the results of a net premium valuation are also shown in the Returns. It is known from the company visit at the end of 1994 that Equitable's Actuary has decided that the interests of the Society are best served by using a weak valuation basis to show as strong a free asset position as is possible. This means that interest bases are selected near the limits of the regulations. Detailed matching rectangle data was sought in relation to the 1994 Returns and was found acceptable.*
>
> *Additionally, the Equitable tries to provide a fair bonus allocation to each generation of policyholders — without holding back an excessive estate. The result is that lower free asset margins are revealed than might have been expected for such a well thought of institution. It may be noted that the Society has, for the last two years, found it desirable to utilise a future profits implicit item to improve the disclosed free assets position — although at nowhere near the maximum that could be justified under the guidelines.*
>
> *There is one obvious hidden strength in the valuation — the treatment of recurrent single premium pensions business, under which it is assumed that no more premiums will be received. Although arguably only in line with the best practice, this is an extremely strong basis. If the business were treated as regular premium, margins in future premiums and charges on the funds built up might allow lower reserves. It is likely that some credit is being taken implicitly for this in the expense reserves ...*

GAD go on to discuss four particular areas:

Mortality — GAD explain that they are satisfied with the bases used for Assurances and German business. For Annuities — general, they explain that Equitable use:

> *... the a(90) table with a two year down rating. This follows discussions last year with the Appointed Actuary about the inadequacy of a one year down rating, which he claimed to be able to justify last year. It would seem desirable to keep pressing him quite vigorously on this point — as longevity improves.*

For Annuities — pension, GAD explain that Equitable's table is out of date. However, *'this is close to the effect of using the more recent table with a fair adjustment for improving mortality, and we are not currently minded to press the Actuary regarding use of this table'*.

Interest rates — GAD produce tables showing the interest rates used for major classes and compare these with assets and yields. They comment that the assumptions made are acceptable.

Expenses — GAD state that these are well controlled and continue to fall. They repeat that: *'There is little reason to question the low expense allowances in the valuation. Increased provision has been made this year for the cost of paying annuities. A substantial hidden margin in respect of the pensions recurrent single premium business could cover any apparent shortfall elsewhere'*.

Resilience and special reserves — GAD explain:

> *The Actuary indicates that the resilience reserve required in relation to his net premium valuation would be covered by the difference between the bonus reserve gross premium valuation liability and the net premium valuation liability.*
>
> *This difference is revealed as £436m, and we have no reason to doubt its adequacy — although managing the distribution of bonuses and consequent growth in guaranteed liabilities in respect of the very substantial (over £8.6bn) portfolio of unitised with profit type business is a potential problem to be monitored.*

(The actual resilience reserve that would have been required at the end of 1994 was disclosed in correspondence with the Actuary as £171m.)

Other reserves seem to be on a reasonable basis, although the failure to set up a specific reserve in relation to the contingent liability for tax on capital gains of £37.4m is dubious — relying on other margins in the valuation basis.

Under *'Changes since previous year'*, GAD note that Equitable had revised their interest rate bases to reflect falling interest rates and rising asset values and that they had strengthened annuitant mortality and expense reserves following correspondence on the 1994 returns.

Under *'Summary of results for main classes'* GAD produce three tables, showing liabilities for non-linked and linked business and a valuation summary.

Under the table for non-linked business, GAD explain that they presume that, in the bonus reserve valuation, any additional reserve required for AIDS is covered by the bonus margin. They note that most of the margin between the total bonus reserve and net premium valuations would be needed to cover resilience.

Under the table for linked business, GAD note that the appendix valuation included an additional AIDS reserve of just £11,000.

The valuation summary shows, under the main valuation, that Equitable's cover for the required minimum margin is 2.89, compared with 2.36 in 1994. As in the scrutiny report on the 1993 returns (see 15/11/1994 [**entry 1**]), there is no estimated figure for the appendix valuation. The table shows Equitable's free asset ratio has risen to 5.13%, from 3.12% in 1994.

Under *'Cover for the solvency margin'*, GAD comment:

It should be appreciated that this bonus reserve valuation includes only an allowance for modest levels of future bonuses, with the result that the disclosed liability is actually very similar to that that would be derived from an acceptable net premium valuation with due allowance for resilience reserves.

Thus, the picture shown above may reasonably be compared directly with other offices who prepare Returns on standard net premium valuation bases. Without the implicit future profits item, cover for the [required minimum margin] *would be by a factor of 2.44. This is satisfactory.*

(9) Financial results
GAD provide the following table:

(£000s)	*1991*	*1992*	*1993*	*1994*	*1995*
Surplus emerging (Form 58)	*596,501*	*330,523*	*480,935*	*519,981*	*662,848*

(10) Bonuses
Under *'Cost of bonuses declared'*, GAD include the following table:

£000s	*1991*	*1992*	*1993*	*1994*	*1995*
Reversionary Bonus	*304,459*	*298,582*	*317,509*	*349,647*	*417,361*
Terminal and other bonuses in anticipation of a surplus	*151,565*	*167,898*	*165,053*	*173,541*	*245,487*
Total Distributed	*456,024*	*466,480*	*482,562*	*523,188*	*662,848*

GAD provide a description of Equitable's final bonus system similar to that used in their reports on the 1993 and 1994 returns. GAD reiterate Equitable's own description of their final bonus system. GAD produce three tables of statistics showing changes in reversionary and final bonus rates and reproduce Equitable's table of earned investment returns on gross market value and the rate allocated in fixing bonuses, updated to include 1995:

	1990	*1991*	*1992*	*1993*	*1994*	*1995*
Earned	*–8.3%*	*13.5%*	*17.1%*	*28.8%*	*–4.2%*	*16.6%*
Allocated	*12%*	*12%*	*10%**	*13%*	*10%*	*10%*

' 12% was applied to new benefits secured during the year'*

Under *'Distribution policy',* GAD state:

> *The society follows a policy aimed at providing each generation of policyholders with a return that reflects earnings on assets during his or her membership of the fund, whilst avoiding short term fluctuations. Thus, total bonuses are intended to reflect a smoothed total earned rate. Part is allocated in the form of non-cancellable reversionary bonuses and the rest is in the form of final bonus.*

GAD make no reference to the effect of Equitable's bonus policy on policyholders' reasonable expectations.

(11) Reinsurance
GAD state that Equitable make little use of reinsurance.

(12) Compliance
Under *'DTI compliance problems'*, GAD state:

> *The Equitable is a highly ethical institution and likes to think of itself as being beyond reproach, although it has recently given ground in relation to mortality assumptions in relation to annuity liabilities.*
>
> *I am unconvinced of the value of its gross premium bonus reserve valuation, and would be happier to see a clearer exposition of its ability to react to possible falls in the value of assets — bearing in mind its exceptionally large exposure to unitised with profit type liabilities. It would be helpful to learn what scenario testing it undertakes.*
>
> *No serious reporting omissions are noted, although the Actuary continues to rely on the comments made about derivatives under 4(2)(a) rather than include a specific response to 4(2)(c). (Usage of real derivatives is minimal, with the majority of entries in Form 13A relating to quasi-derivatives, i.e. convertible bonds, warrants and partly paid shares.)*

Under *'PIA and other compliance problems'*, GAD state:

> *Although the Equitable might be expected to be beyond reproach, we understand that an over-estimation of pension liabilities of £50m has been incorporated into its reserves as a provision against possible costs arising from pensions mis-selling.*
>
> *No other problems are known.*

GAD's scrutiny report runs to 16 pages. Line Supervisor B copies the report to the Head of Life Insurance and to Line Manager B.

01/11/1996 [entry 2] Every insurance company is sent by DTI's Director of Insurance a letter requesting state of play information on money laundering, close matching of linked benefits, counterparty exposure on derivatives and controls on investments of linked funds.

05/11/1996	DTI write to Equitable to set out three matters to discuss under 'Any Other Business' at the visit now planned for 08/11/1996: *1. Details of the continued fall in the company's actual overhead expense levels, and its potential ability to continue on this creditable path.* *2. How the company views the sustainability of its present contract structures — largely based on accumulating funds to which regular bonuses are added. What scenario tests has it performed in relation to possible falls in asset values, and how would it react to sustained unfavourable market movements?* *3. The increased investment in non-insurance companies — £75.4m in shares and £18.7m in debt (previously, £49.3m and £2.8m respectively).*
08/11/1996 [entry 1]	DTI prepare a brief manuscript note for the meeting on 08/11/1996, summarising some of the correspondence since April 1995. DTI refer to a number of matters, including the discussions over Equitable's critical illness policy, their activities in non-UK markets (Malta, Republic of Ireland, United Arab Emirates), particular investment activities and *'June 1996 CBE for* [Equitable's Chief Executive and Appointed Actuary]*!!'*.
08/11/1996 [entry 2]	DTI (Line Manager B and Line Supervisor B) and GAD (Chief Actuary D and Scrutinising Actuary E) meet Equitable's Appointed Actuary/Chief Executive, Company Secretary and another employee. DTI prepare a note of the meeting, which is amended by GAD. Although DTI had suggested a series of meetings (see 15/10/1996), only one meeting takes place. DTI and GAD record discussion under six main areas: <u>Reports to Equitable's Board</u> Equitable's Appointed Actuary explains the cycle of reports presented on a monthly and quarterly basis and provides figures on Equitable's premium growth, expenses, turnover, profits of administration and marketing departments and expense ratios (the latter presently running at 4.8%, compared with 7.5% in early 1995). These show also that, over the past year, there had been 25% more new business on annual premiums and 30% more on single premiums. DTI and GAD note that recurrent single premiums are classed as annual. In response to a question from Scrutinising Actuary E, the Appointed Actuary agrees that Equitable's falling expenses are partly the result of high software expenditure several years ago. The note records: *'There was some discussion on the "financial condition" report. On the concept of dynamic solvency testing,* [Equitable's Appointed Actuary] *said that you needed dynamic management – there was a need to manage the business actively'*. <u>Bonuses</u> Scrutinising Actuary E asks if the company built up a terminal bonus reserve. In reply '[the Appointed Actuary] *said not — terminal bonuses were "instantaneous"! Declared rates were always broadly linked to the gilt rate for guaranteed benefits. Final bonuses were paid out of what was left. He noted that a "lively" life company would have smaller free assets than a moribund one!'*. The Scrutinising Actuary comments that he was not clear what Equitable's bonus declarations said. In relation to accumulated with-profits business, the Appointed Actuary explains *'that all bonus statements showed a build-up of guaranteed benefits — then also showed the non-guaranteed benefits. In the DTI returns, the terminal non-guaranteed bonus was not shown as a liability — not in the reserves'*. DTI and GAD record Equitable's Appointed Actuary as noting that:

1996

... every actuary valued as weakly as possible, to make the business look stronger. [Scrutinising Actuary E] *suggested that gross premium reserving was not really any stronger than a standard net premium valuation method.* [The Appointed Actuary] *agreed — but said the Board was used to this method and happy with it. At the AGM, someone had asked about the "orphan estate", and was told that it was all paid out!* [The Appointed Actuary] *explained that they never guaranteed a surrender value on any business.* [Scrutinising Actuary E] *noted that they had to be very careful with their bonus statements — to ensure that customers were not misled about the benefits.*

Future plans/Permanent Insurance
Equitable's Appointed Actuary sets out the Society's plans to grow its health and sickness products. He explains that business in the Republic of Ireland is buoyant. DTI's Line Manager B notes:

... that the Department's lawyers were not happy about [Equitable's] *sales force selling another company's products — section 16 implications. He was relaxed about this issue.* [The Appointed Actuary] *said he hadn't thought about section 16 ...* [Line Manager B] *said that it would be no problem if* [Equitable] *owned the whole of Permanent* [Insurance].

The Appointed Actuary explains that the Society's German branch was losing about £2m per annum at present and that Equitable would be deciding whether or not to pull out in the next few weeks. He explains that Equitable were thinking of doing business in Italy, Austria and Malta. Line Manager B suggests Gibraltar.

Equitable's 1995 returns
GAD's Chief Actuary D queries Equitable's investments in a non-insurance subsidiary. The Appointed Actuary explains that the companies involved are not subsidiaries in a real sense, as Equitable have majority holdings in them for investment purposes. These are carefully controlled through the investment committee.

The Appointed Actuary explains that the Society *'had sold all its software to its consulting company and had lent the company £10m to pay for the software! They had also lent £6m to the unit trust subsidiary. He promised to provide more detail'*.

Equitable's Appointed Actuary explains that the Society had put £50m in technical reserves for personal pensions mis-selling. The Appointed Actuary says that he thinks that:

... about £10-15m would be needed. This didn't include staff costs. All policyholders had been written to. 35,000 cases to review, of which 10,000 were priority. 6,000 cases had been done. Very little evidence of real mis-selling. Some policyholders were "mis-remembering" details! About £449K had been paid on 28 cases so far. Where possible, [the Society] *was enhancing benefits. 50 staff were progressing cases — at a cost of about £1.5m. In August, the PIA enforcement team came — 4 people for a week.* [The Appointed Actuary] *thought they had misunderstood the issues, and had sent them away! It was hoped that all cases would be settled by Autumn 97.*

Selling
The Appointed Actuary explains that Equitable would begin telephone sales.

Business plans
The Appointed Actuary explains that Equitable have no new business targets or plans to increase their sales force.

Under Any other business, the Appointed Actuary explains that Equitable might apply for a section 68 Order for a subordinated loan. He also explains, as regards his retirement, that he would stay *'until all the changes had been consolidated'*.

A copy of the note is passed to Chief Actuary C. He underlines the Appointed Actuary's statements that a lively life company would have smaller assets than a moribund one, and that every actuary valued as weakly as possible. He also underlines Scrutinising Actuary E's comment that Equitable had to be very careful not to mislead customers with their bonus statements.

27/11/1996	Equitable write to DTI seeking their views on a subordinated loan. The Society says it could raise finance from the market but was interested in the possibility of raising finance by the sale of bonds to Equitable's own policyholders. Equitable say that this would be cheaper and would provide benefits to policyholders. Equitable ask DTI to indicate if, in principle, they would agree to the necessary application for a section 68 Order.
December 1996	At around this time, GAD prepare an update to their 1994 annual report on the life insurance industry using information disclosed in companies' 1995 returns. (Note: GAD did not produce a full report for this year due to *'particular resource constraints within GAD during 1996'*. The bodies under investigation have been unable to provide me with a copy of this update. However, as for the 1994 report (see 03/11/1995), I have seen GAD's detailed analysis of the parts of the report which were updated.) GAD update their comparison of maturity payouts against their own estimates of the theoretical asset shares. For endowment policies (based on contributions of £50 per month for 25 years), GAD calculate that the with-profits industry median payout is £97,496. GAD calculate this to be 113% of the theoretical asset share. For Equitable, GAD calculate that they are paying £86,739. GAD show this to be 101% of the theoretical asset share. For endowment policies (based on contributions of £50 per month for ten years), GAD calculate that the with-profits industry is paying a median maturity value of £10,004. GAD show this to be 125% of the theoretical asset share. For Equitable, GAD calculate that they are paying £10,221. GAD show this to be 127% of the theoretical asset share. For pension policies (based on contributions of £200 per month for 15 years), GAD calculate that the with-profits industry is paying a median maturity value of £126,199. GAD show this to be 132% of the theoretical asset share. For Equitable, GAD calculate that they are paying £131,239. GAD show this to be 137% of the theoretical asset share. GAD update their analysis of the strength of companies' valuation bases. GAD use the same method as that used in the 1993 dummy report (see 30/08/1995). Their analysis again shows that Equitable's net premium valuation basis is the weakest across the industry, with a figure of 89.9% (a figure of 100% being one that GAD had previously described as indicating that the valuation interest rates used only just complied with the regulations). I have seen that GAD looked back and assessed the strength of Equitable's net premium valuation basis for 1990. GAD's analysis produces a figure of 93.2% for that year.
05/12/1996	Equitable apply to DTI for a section 68 Order to allow Equitable to include details of their *'Personalised Funds'* in aggregate form. This is a replacement for the Order issued on 14/10/1986. The need for a new Order arises because the Insurance Companies (Accounts and Statements) Regulations 1996 (the ICAS Regulations 1996) were due to come into force (see 23/12/1996). (Note: Equitable's *'Personalised Funds'* were self-invested pension funds. As at 31 December 1995, there were 33 funds, totalling £7.7m.)
06/12/1996	DTI send GAD a copy of Equitable's letter of 27/11/1996 and ask whether they have any comments on the proposed subordinated loan.

16/12/1996	Equitable write to DTI, to respond to the letter from DTI of 01/11/1996 seeking state of play information about a number of issues, including money laundering, the matching of linked benefits, exposure to derivatives and controls of investments of linked funds.
17/12/1996	DTI seek advice from GAD on Equitable's application to renew the section 68 Order issued in 1986.
23/12/1996	The ICAS Regulations 1996 come into force.

1997

08/01/1997	GAD confirm to DTI that a section 68 Order to allow Equitable to include details of their 'Personalised Funds' in aggregate form (05/12/1996) is *'still required — but now only for 3 Forms as suggested by* [Equitable's Appointed Actuary]' and that it '[seems] *OK to issue* [the Order] *in this case'*.
31/01/1997	DTI send Equitable the section 68 Order applied for on 05/12/1996 and revoke the section 68 Order issued on 14/10/1986.
14/02/1997	GAD advise DTI on Equitable's letter of 27/11/1996 about a subordinated loan. GAD question if the bonds Equitable have in mind fall within the concept of members accounts envisaged by the Third Life Directive. GAD warn that DTI and Equitable would *'find themselves in difficulty over a very short term if the concept were ever to fail'*. GAD say that they would be troubled if such a pool of bonds were treated as perpetual. GAD also advise that: *... we would always feel uncomfortable that the Society could "market" such a product, even if the risks were clearly explained, and then treat the proceeds as free capital and not be obliged to hold full reserves within the long term fund to cover the repayment liability.* GAD conclude: *Despite our general misgivings as expressed ... above, we believe that it might be possible within the terms of the* [Third Life] *Directive for Equitable to issue a tranche of "term subordinated loans" to its members — but the DTI would need to be satisfied that early redemptions were strictly limited or that bonds surrendered would be taken up under an agreement with an underwriting bank or that some similar arrangement was in place to ensure that solvency cover could not suddenly evaporate. Such term debt could, of course, only count for up to 25% of the Required Margin of Solvency.* *You should of course ascertain the views of your legal advisers on this proposition.*
14/03/1997	Equitable fax DTI about a subordinated loan. Equitable explain that they plan to raise £150m in Dollars, £100m in Deutschmarks and £50m in Yen *'essentially for investment purposes, not to finance developments'*. Equitable say that the process is about to start with a planned completion date of mid-May. It would therefore be helpful to know fairly early on if the DTI would find difficulty with such an approach. Equitable also ask *'whether the practice followed by preceding borrowers of setting up a subsidiary for the purposes of raising the loan was a DTI requirement. Since we already have power to borrow we hope to avoid that complication'*. Against this, Line Supervisor B notes: *'I'm sure this isn't a requirement'*.
19/03/1997	DTI seek advice from GAD on Equitable's fax of 14/03/1997.
24/03/1997	GAD advise DTI as follows: *With reference to the letter from* [Equitable's Appointed Actuary] *of 14 March ... and the question raised regarding the need to establish a subsidiary company for the purposes of issuing subordinated debt, it is my understanding that this arose from a DTI view that it would not be possible to satisfactorily issue such debt from within the Long Term Fund.*

GAD continue:

If an insurance company issued subordinated debt through a Long Term Fund, the view is that it is not possible to achieve a proper degree of subordination to protect the interests of the Long Term policyholders. Issuance by a subsidiary company seems to have been the most satisfactory way of overcoming the problem of achieving acceptable subordination.

01/04/1997 DTI's Validation and Compliance Unit write to DTI supervisors to point out that they are obliged to provide certain statistical reports, derived from companies' European Statistical returns. DTI's records show that Equitable's statistical return for 1995 has not been received.

08/04/1997 Equitable's Appointed Actuary asks DTI for advice as to how recurrent single premiums should be analysed between 'annual' and 'single' premiums for the purposes of the statutory returns. The Appointed Actuary explains:

As I think you will know, we capture policyholders' intentions regarding premium maintenance at the new business stage and that analysis is used, in part, as the basis for remunerating our field force. Our published new business figures reflect that same analysis.

It is, therefore, straightforward for us to prepare Form 47 using that same analysis. That will give a helpful consistency with the analysis shown in our statutory accounts.

We are, however, finding it extremely difficult to arrive at a meaningful "in-force" annual premium on recurrent single premium business for the purpose of Form 46. There are really two main difficulties:

(i) Our internal definition of "annual" and "single" is based on an expression of client intention and is held on an entirely separate system, which is primarily used for field force remuneration, from our main data system. That system has a variety of internal rules, including grouping of similar contracts (e.g. retirement annuities and personal pensions) and limitations on what can be treated as "annual", which would make translation of that information back to interpret the premium records on the main data system from which the in-force data needs to be drawn extremely complex.

(ii) Even if the problems in (i) could be overcome the data would be subject to significant distortion because our internal rules operate on a policy year rather than calendar year basis. Thus a policyholder paying (in our terms) a level premium each year but varying the timing within the policy year could create a sequence of "ons" and "offs" in the DTI data.

Equitable's Appointed Actuary continues:

We have investigated this matter in depth but can see no practical solution. If, therefore, we are to adopt a realistic presentation in Form 47, which I think we would all agree to be highly desirable, we shall need to request a modification of Instruction 3 to Form 46.

I should, therefore, like to request that a section 68 order be granted allowing us not to include recurrent single premiums within the "annual premium" figures in Form 46 of the Returns.

14/04/1997	DTI's Line Supervisor B passes to an official copies of Equitable's fax of 14/03/1997 and GAD's advice of 24/03/1997. The Line Supervisor says that she can find no reference to a requirement to set up a subsidiary in the relevant guidance note (Prudential Guidance Note 1994/1 *'Hybrid Capital: Admissibility for Solvency'* (PGN 1994/1)). The Line Supervisor asks if it is *'possible to achieve a proper degree of subordination when a company issues subordinated debt through the Long Term Fund'*.
16/04/1997	Equitable telephone DTI to ask about the procedures for seeking section 68 Orders, in the context of their pursuit of a subordinated loan. Equitable also query whether it is necessary for any loan to be issued by a subsidiary. DTI suggest that any such loan might have to be issued through a subsidiary due to section 16 of ICA 1982, but that *'there might be other reasons'*. DTI say that they would want to take advice on the issue and they ask Equitable in the meantime to submit an application for a section 68 Order, including any relevant background information.
18/04/1997 [entry 1]	DTI telephone Equitable in response to their call of 16/04/1995. DTI draw the Society's attention to GAD's and DTI's views regarding the 'proper degree of subordination' and to PGN 1994/1. Equitable respond that they have incorporated the requirements of PGN 1994/1, but would check this with their solicitors.
18/04/1997 [entry 2]	Equitable's solicitors send DTI draft term sheets for the proposed subordinated loan. The solicitors also send DTI a copy of Equitable's *'Memorandum and Articles of Association'*.
22/04/1997	DTI write to GAD about Equitable's proposed subordinated loan. DTI say that their own advice, in the light of PGN 1994/1, is that there should be proper subordination and that for a mutual this was best achieved through a subsidiary company. However, Equitable's view is that they already comply with the terms of PGN 1994/1 as regards subordination. DTI ask GAD for their comments.
24/04/1997 [entry 1]	Line Supervisor B asks a DTI legal adviser for comments on Equitable's proposed subordinated loan. The Line Supervisor explains that *'GAD's response is that they don't know how the principle of subordination is supposed to work. As far as he's concerned, there are no assets held outside the long term fund of the company'*. The Line Supervisor asks for advice on whether or not a mutual should set up such a loan through a subsidiary.
24/04/1997 [entry 2]	Equitable provide GAD with specimen forms showing how they propose to treat recurrent single premiums in the returns (see 08/04/1997).
25/04/1997	A DTI legal adviser provides comments on Equitable's proposed subordinated loan. The legal adviser points out that PGN 1994/1 makes clear that responsibility for achieving effective subordination rests with the company and their legal advisers. He advises that the paperwork Equitable have provided shows that they have had regard to PGN 1994/1 and that they *'have indeed achieved the necessary degree of subordination'*. He advises DTI to draw Equitable's attention to one part of PGN 1994/1 (on ensuring that the documentation secures that the note holders' (i.e. bondholders') claims on the assets of the company were subordinated to the liabilities assessed in respect of all long term business policies) and suggests that they have explicit regard to this in their documentation. He adds that, in principle, it does not seem necessary to issue the loan through a subsidiary company; this is not required in PGN 1994/1. He notes GAD's concern that there are no assets held outside the long term fund. If that were the case:

... we should put that point to the company and see what response it elicits. If in that context we are able to say that the usual practice is for the issue to be by a subsidiary company and to identify adequate reasons for that (I am bound to say that from the papers which I have seen no clear rationale for that proposition emerges) I see no harm in doing so.

29/04/1997 [entry 1] GAD write to DTI about Equitable's proposed subordinated loan, having seen the legal advice received (see 25/04/1997). GAD express their uncertainty about how the proposals would operate, *'bearing in mind the requirement that the loan (capital and interest) should not constitute a liability attributable to the long term fund'*. GAD query how Equitable would make interest payments and eventual capital repayment if they hold no assets outside the long term fund. GAD advise that others have used a subsidiary to achieve the necessary subordination. GAD suggest DTI raise these points with Equitable. GAD conclude:

It should be appreciated by the DTI that the potential sums involved in these proposed issues are substantial ... ie a possible total of £325m, and this amount of gearing could cause problems to the Society unless the terms are reasonable and proper subordination to policyholder rights is achieved.

29/04/1997 [entry 2] Line Supervisor B asks an official to chase Equitable for their 1995 European Statistical returns which were due by 30 September 1996 (see 01/04/1997).

30/04/1997 [entry 1] DTI ask Equitable for their 1995 European Statistical returns.

30/04/1997 [entry 2] GAD inform Equitable that they agree to the requested section 68 Order allowing Equitable to treat recurrent single premiums in Form 46 of the returns in the way they propose (see 08/04/1997). GAD say:

... I understand that [Chief Actuary D] *has agreed that we would recommend to the DTI that they should accept your request for a Section 68 Order in this regard – <u>on a temporary basis</u>. (The volume of pensions business sold by the Society subject to variable premiums is so large that it would be unreasonable to allow it a permanent exemption from disclosure in Form 46* [of the returns, on summary of changes in ordinary long term business].

An exemption from the inclusion of recurrent single premium pensions business in Form 46 for the 1996, 1997 and 1998 Returns has been suggested – with the expectation that the Society will be able to provide meaningful data in Form 46 from 1999.

GAD copy their letter to DTI. In an accompanying note, GAD inform DTI that:

... on the telephone [Equitable] *have agreed that it should be possible to have in place appropriate record systems by the end of 1998 — to generate an acceptable presentation for the Returns at the end of 1999.*

We therefore recommend that you grant a Section 68 Order ... for three years only.

(Note: GAD's compliance issues on the scrutiny report had included the failure by Equitable to produce meaningful in-force premium figures for renewable single premium business. Against this, Line Supervisor B had written *'wouldn't call this a compliance <u>problem</u>'* – see 16/12/1997.)

30/04/1997 [entry 3] DTI's Line Supervisor B writes to a new Line Manager with responsibility for Equitable (Line Manager C), relaying GAD's continuing concerns that Equitable's proposed subordinated loan should be issued through a subsidiary. The Line Supervisor asks if it would help to have a meeting with Equitable. The Manager's advice is that, as she is not available for a meeting, Line Supervisor B should write instead.

30/04/1997 [entry 4]	Equitable inform DTI that Equitable's Chief Executive and Appointed Actuary is to retire on 31/07/1997. Equitable notify DTI who is to succeed him as Chief Executive (but not as Appointed Actuary). Equitable undertake to advise later who the Society's new Appointed Actuary would be.
30/04/1997 [entry 5]	Equitable write to DTI. Equitable refer to the auditing profession's concern about their ability to audit statements in the directors' certificate on money laundering and the operation of the internal linked fund. Equitable say that they understand that DTI are issuing section 68 Orders taking these matters outside the scope of the audit opinion. Equitable ask for such an Order in respect of Equitable. Equitable also set out some revised wording for their subordinated loan documentation, taking account of the fact that it is not being issued through a subsidiary. DTI's Line Supervisor B notes that the revised wording makes no reference to assets held outside the long term fund, and asks for GAD's comments. GAD's Scrutinising Actuary E notes on the letter: *'I still do not see how these issues can be made to satisfy* [paragraph 25 of PGN 1994/1 (on the requirement of documentation to satisfy that a loan should not constitute a liability attributable to the long term fund and the rights of the note holder are to be met from assets held outside the long term fund)]'.
30/04/1997 [entry 6]	Equitable ask DTI for guidance on how to present immediate annuities in the returns.
01/05/1997 [entry 1]	Equitable send DTI copies of their 1995 European Statistical returns. Equitable explain that these had been sent on 6 August 1996 and enclose a copy of their letter from that date.
01/05/1997 [entry 2]	DTI reply to Equitable's solicitors' letter of 18/04/1997 about the subordinated loan. DTI refer to the statement in PGN 1994/1 that responsibility for achieving effective subordination rests with Equitable and their advisers. They query how Equitable would make interest payments and eventual capital repayment if they held no assets outside the long term fund. DTI state that the taxation clause in the summary of terms and conditions does not appear to comply with PGN 1994/1.
06/05/1997	Equitable's solicitors provide DTI with comments on their letter of 01/05/1997. The solicitors explain that, in their view, the revised wording in Equitable's letter of 30/04/1997 provides the necessary degree of subordination. The solicitors suggest that the taxation clause is of academic interest only, but that in any event it satisfies PGN 1994/1.
08/05/1997	DTI remind Equitable that any announcement about the new Chief Executive would need to be given with the proviso that the appointment is subject to approval by the Secretary of State.
09/05/1997	A DTI official writes to Line Manager C and another official about subordinated loans issued by mutuals. The official notes that a subordinated loan taken out by a mutual was likely to constitute a liability on the long term fund. However, DTI had already issued section 68 concessions to mutuals *'despite the apparent lacking of the safeguard that would be in place in a proprietary company'*. The official suggests that DTI: *... should not change what has become our policy, namely that we are prepared to consider offering section 68 concessions to enable mutuals to count subordinated loan capital toward their* [required minimum margin], *subject to considering each individual proposal and satisfying ourselves that the proposal is reasonable, particularly in relation to there being adequate subordination ...* The official also suggests that DTI should not insist on the issue being effected through a subsidiary.

The official says that, if DTI were to adopt this approach, it would be necessary for him to amend PGN 1994/1 to reflect this.

12/05/1997 [entry 1] GAD write to DTI about Equitable's proposed subordinated loan. GAD note the inability of a mutual to satisfy PGN 1994/1 but add:

> *Since other mutual offices have already by-passed* [PGN 1994/1] *successfully (even though the advance from a subsidiary must still have actually become a liability of the Long-Term Fund), and it seems to be accepted in principle that mutual offices should be able to benefit from the issuance of Hybrid Capital, it would seem that the DTI needs to review the application to mutual offices of* [PGN 1994/1]. *We would, however, emphasise the desirability of retaining this Paragraph to apply to proprietary offices.)*

GAD explain that they have discussed this problem with a DTI official who is expecting a meeting to clarify DTI's approach. GAD also raise concerns about the proposed taxation clause on the grounds that it *'introduces the possibility of generating interest strains that are greater than it may be reasonable to accept as falling within the permitted guidelines'*. GAD add:

> *... to the best of my knowledge, this is the first UK insurance company to consider raising capital in this way. It is therefore a new problem, and we would wish to be assured that such a clause did not introduce an unacceptable level of volatility to the obligation undertaken by the company. If the DTI were to be convinced that these clauses are indeed "of academic interest only" as suggested by* [Equitable's solicitors] *then it might decide not to make the existence of such a clause a reason for refusing to grant a Section 68 Order.*

12/05/1997 [entry 2] GAD telephone Equitable to advise them on how to present immediate annuities in the returns.

12/05/1997 [entry 3] DTI's Company Law Directorate write to DTI's Inspector of Companies, with a copy to Line Supervisor B. DTI set out the procedure that they follow when companies repeatedly breach Part VI of the Companies Act 1985 (which deals with disclosure of interest in shares), including sending progressively stronger letters, warning that the Department might take action for non-compliance. DTI explain that a first letter is usually sufficient to prevent further breaches. However:

> *... there are some investors who have become multiple offenders and we have now reached a position with the Equitable Life Assurance Society where it has committed its fourth offence within a period of twelve months, and, indeed, its third offence since the beginning of the year. The Equitable Life Assurance Society does not seem to take its responsibilities under part VI sufficiently serious enough.*

DTI seek views, especially from Line Supervisor B, as to what further action should be taken.

16/05/1997 DTI's Line Manager C writes to a DTI official in response to his note about subordinated loans (see 09/05/1997). The Line Manager agrees *'that we should not change our policy on mutuals' access to* [subordinated loan capital]. *I also share your view that there would appear to be no clear reason why we should insist on this taking place through a subsidiary'*.

On the same day, Line Manager C writes to Equitable's solicitors. The Line Manager explains that, while the revised wording in Equitable's letter of 30/04/1997 is more appropriate, it still did not address the issue of how the rights of a note holder could be met from assets outside the long term fund. The Line Manager also repeats concerns about the taxation clause, in the light of the comments by GAD on 12/05/1997.

27/05/1997	Equitable remind DTI that they were awaiting two section 68 Orders. (see the applications made on 08/04 and 30/04/87 [**entry 5**]).
28/05/1997	Equitable's solicitors write to DTI in response to their letter of 16/05/1997. The Society's solicitors explain: *I do not think it is helpful, in the descriptive wording which is to be included in the term sheet, to specify that the rights of the Noteholders will be met from assets outside the long term fund. As I have said, that will be the effect of the actual subordination wording contained in the bond, but to insert that wording as part of the description in the term sheet would, in my view, arguably be misleading because it may give rise to the notion that there are indeed assets held outside the long term fund of the Society which are available to meet the rights of the Noteholders. In the case of a mutual there are of course unlikely to be any such funds.* The solicitors also explain that they do not consider that there is any foreseeable exposure for Equitable from the taxation clause.
29/05/1997 [entry 1]	DTI ask GAD for their comments on the letter received from Equitable's solicitors the previous day.
29/05/1997 [entry 2]	Every Appointed Actuary is sent by the Government Actuary a copy of DAA9 on reserving for guarantees provided under the pensions mis-selling review.
01/06/1997	GAD advise DTI on the letter of 28/05/1997 from Equitable's solicitors. They note that the solicitors still believe the proposal satisfies PGN 1994/1, even though they acknowledged that there were unlikely to be any assets of a mutual company outside the long term fund. GAD say: *... it is only honest that all parties should acknowledge that the Long Term Fund is involved — and the DTI has already accepted the reality of the situation. We think that the adoption of clever legal wording to try to avoid the issue should be discouraged.* GAD set out the advice that they have given in respect of another mutual pursuing a subordinated loan as to how to show the loan in their returns. GAD also explain that they have reviewed the information Equitable's solicitors have provided on the taxation clause. GAD suggest that there are now only concerns in relation to the Deutschmarks issue. GAD also suggest that DTI seek guidance from other sources as to whether there would be any major additional liability falling on Equitable, while noting that Chief Actuary D *'remains somewhat uncomfortable about this proposed issue'*.
03/06/1997	DTI's Head of Life Insurance provides briefing to a Minister for a visit to Equitable. The Head of Life Insurance writes: *The Equitable Life is one of the leading UK life insurance companies, with particular strength in pensions business. Generally speaking, it has a well deserved reputation for giving good returns to policyholders, and has so far escaped the worst of the criticism aimed at the life insurance sector in recent years. However, its heavy involvement in pensions business means that it is not immune from the problems of the* [Securities and Investments Board]*/PIA Pensions Review.* DTI's Head of Life Insurance expresses no concerns in relation to matters relevant to the prudential regulation of the Society.

05/06/1997	DTI's Head of Legal Services writes to DTI's Company Law Directorate in response to their note of 12/05/1997. She advises them to send Equitable a further warning letter or to consider starting a criminal investigation. She copies her note to Line Supervisor B who notes: '[An official] *suggested that the Grade 7 ... should get in touch with* [Equitable's] *Compliance Officer + find out if they have proper systems in place. Threaten to visit* [company]. [The official] *likened it to a driving offence!*'.
06/06/1997	DTI advise Equitable that the Secretary of State had no objection to the appointment of their new Managing Director. DTI send Equitable the section 68 Order requested on 30/04/1997, exempting Equitable's auditors from auditing statements in the directors' certificate on money laundering and the operation of the internal linked fund.
10/06/1997	DTI ask GAD for their comments on a draft they have prepared in relation to Equitable's application for a section 68 Order to permit them not to include the recurrent single premiums within the 'annual premium' figures in the returns. GAD suggest some small amendments to the wording of the Order.
13/06/1997	DTI's Line Supervisor B writes to DTI's Company Law Directorate in response to their note of 12/05/1997. She says '*we do not think that the matter warrants action under the Insurance Companies Act Schedule 2A under the criteria of "sound and prudent management"*'. The Line Supervisor suggests that the matter is pursued through the Companies Act legislation. The Line Supervisor goes on to suggest '*that the issue is taken up by your head of section who could contact the company's Compliance Officer ... and find out if they have proper systems in place to comply with the notifications procedure. (We know that Equitable Life have very sophisticated computer systems – we have had a tour of their "paperless office" – which should easily be able to cope with this)*'. DTI's Line Supervisor B sends Equitable the section 68 Order allowing Equitable not to include the recurrent single premiums within the '*annual premium*' figures in Form 46 of the 1996, 1997 and 1998 returns. The Order requires the Society to include a note in its returns saying: *The Secretary of State has issued an Order dated 13 June 1997 under section 68 of the Act to the effect that figures in Form 46 exclude recurrent single premiums from the annual premium figures as the Company cannot at present calculate a meaningful figure.*
16/06/1997	DTI write to Equitable's solicitors, acknowledging that servicing the subordinated loan would necessarily require drawing on the long term fund. DTI discourage Equitable from adopting complex legal wording to avoid the issue. DTI reiterate their concerns about the taxation clause insofar as it affects the Deutschmark issue.
24/06/1997	DTI's Company Law Directorate write to Equitable regarding Equitable's breach of Part VI of the Companies Act 1985. DTI state that: *... having considered the circumstances explained in your letter* [of 28 April 1997] *and having noted your investigation of the matter, has decided not to take any further action on this occasion.* *However, the Department is not prepared to tolerate a further breach of the provisions of Part VI by The Equitable Life Assurance Society. Accordingly, in the event of any future contravention, I will have no other option but to refer the matter to the Department's Investigations and Enforcement Directorate in order that consideration be given to the taking of prosecution action ...*

25/06/1997	Equitable confirm that the contents of DTI's letter of 24/06/1997 have been noted and attach details of the procedures currently in place to identify disclosure situations.
27/06/1997	DTI copy Equitable's letter of 25/06/1997 to DTI's Head of Legal Services.

Submission of the 1996 regulatory returns

30/06/1997 [entry 1] **Equitable submit their 1996 regulatory returns to DTI**. Accompanying these returns are copies of the Society's annual report and financial highlights and its statutory accounts, prepared in accordance with the Companies Act 1985 and both dated 26 March 1997.

These documents include the following information about Equitable's business and their financial position as at 31 December 1996.

GAD's copy of the 1996 regulatory returns and Companies Act reports and accounts includes various annotations. I am satisfied that those annotations were made by Scrutinising Actuary E during the scrutiny programme on or around 07/08/1997, when the Scrutinising Actuary completed the A2 Initial Scrutiny check. However, for ease of reference, mention of these annotations is made here.

<u>Companies Act annual report and financial highlights</u>
In their *'President's Statement to members'*, Equitable make particular mention of three achievements in 1996, being:

- a record level of new United Kingdom annual premium income of £400m.
- total new premium income had exceeded £2bn for the first time (including single premiums of £1.59bn).
- a fall in the expense ratio to 4.3%.

GAD note these facts.

The President explains that the Society's approach to bonus distributions was an important aspect of their status as a mutual organisation. He says it had always sought to ensure that each generation of with-profits policyholders received the returns they deserved on their investments with the company. (GAD underline this point.) The distributions had been *'full and fair'*. The President explains that Equitable had not built up surplus assets in order to boost their *'free assets'* and so their free asset ratio was *'inevitably, and rightly, lower'* than some of their competitors. (GAD underline this point.) He argues that their low free asset ratio was a reflection of their full distribution policy and not an indication of financial weakness. Equitable's President demonstrates that their assessment of the financial strength of the Society is supported by an expert third party and reports that the *'AA (Excellent)'* rating awarded by the international rating agency Standard & Poor's in 1993 had been confirmed in each subsequent year. The President states that he *'would like again to put on record your Board's continued strong commitment to maintaining The Equitable as a mutual society'*.

In their *'Management Report: An appraisal of the Society today'*, Equitable explain that, because the Society was self-financing without any shareholder capital, it looked to their members to provide development capital which it expected to repay through its bonus policy. Equitable explain that the prime need for capital was to finance the up-front costs of new business and the occasional major investment in new systems. They explain how existing members provided a loan to cover the acquisition costs of new members and that this was repaid from charges over the lifetime of those policies. Equitable also state that a full distribution policy did not lead to investment considerations that were any different from those applying to life offices generally. They go on to say: *'Over many years there have not been any particular technical restrictions placed on the investment team'*. GAD underline this sentence.

In their *'Management Report: Features of 1996'*, Equitable set out their investment aim, *'to provide good returns for our policyholders by prudent investment of their funds'*, and discuss the issue of investment risk. They explain:

By implication, with-profits policyholders have indicated a desire for some guarantees and for some protection to their policy values from the short-term volatility of investment markets. The investment risk is controlled by holding a range of assets in several different categories and the guarantees are provided with the help of a suitable proportion being held in U.K. government securities. The assessment of future risk is, however, difficult and it is not possible to define precisely in advance what level of overall risk is implied by a particular investment strategy. Nor can risk be considered solely in absolute terms, since we are in competition with other providers and the "success" of the Society's investment returns will be largely measured by the results delivered to policyholders compared with those provided by our competitors. Nevertheless, techniques are available which enable a reasonable assessment to be made both of absolute and relative risk, and these are utilised in the management of the Society's portfolio in pursuit of its investment objectives.

The report goes on to explain that the Society had earned 10.7% on its with-profits assets at market value in 1996, with the result that the average annual return over the last 4 years had been 13% – around 1% per annum higher than would have been obtained on 15-year gilts. The Directors had decided to allocate an overall rate of return of 10% to recurrent single premium pensions business. Equitable say that for many years reversionary bonuses had followed the trend in gilt yields and that the declared rates in 1993 were consistent with the then current gilt yields. As yields had subsequently remained broadly at that level, Equitable had maintained reversionary bonuses at the same level, in 1994, 1995 and 1996.

GAD note the return earned on the Society's with-profits assets and the rate of return allocated for 1996. GAD also note that Equitable had decided to use an interim rate of return for 1997 of 9%. Next to this GAD write: *'too high? Unless supported by capital appreciation'*.

Companies Act statutory accounts
The Directors' Report for 1996 includes explanation of the financial results of the Society along with the valuation and bonus declaration made. GAD make various annotations against the Notes on the Accounts.

The returns
The new accounts and statements regulations, ICAS Regulations 1996, came into force during the year. These had altered the format of the information given in the returns and introduced some further disclosure requirements in respect of both the forms and the abstract to the actuary's valuation report. Some forms were also transferred from Schedule 3 to Schedule 4.

Equitable's returns are submitted in one part covering Schedules 1, 3, 4 and 6 to these regulations.

Schedule 1 (Balance sheet and profit and loss account)
Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14 and 17. Form 9 summarises the Society's financial position at 31 December 1996 as follows:

Long term business admissible assets	*£19,131,286,000*
Total mathematical reserves (after distribution of surplus)	*£17,572,128,000*
Other insurance and non-insurance liabilities	*£138,980,000*
Available assets for long term business required minimum margin	*£1,420,178,000*
Future profits	*£312,794,000*
Total of available assets and implicit items	*£1,732,972,000*
Required minimum margin for long term business	*£685,282,000*
Explicit required minimum margin	*£114,214,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£1,305,964,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£1,047,690,000*

GAD tick some of the figures and circle the future profits figure.

In Form 13, Equitable set out their admissible assets. GAD make various notes on the forms.

In Form 14, Equitable set out their long term business liabilities and margins. GAD note that the excess of the value of admissible assets representing the long term business funds over the amounts of those funds, shown on line 51, is *'DOWN!'* from the previous year. The figure for 31 December 1996 is £1,420m and the figure for 31 December 1995 is £1,433m.

Schedule 3 (Long term business: revenue account and additional information)
Schedule 3 of Equitable's returns consists of Forms 40 to 45.

In Form 40, Equitable set out information for the *'Long term business: Revenue account'*. GAD tick some of the figures provided.

In Form 41, Equitable set out information for the *'Long term business: Analysis of premiums and expenses'*. GAD note on this Form the previous year's figures for *'Management expenses in connection with acquisition of business'* (which had increased from £82,376,000 to £88,457,000) and *'Management expenses in connection with maintenance of business'* (which had decreased by £14,000 to £30,208,000).

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 of Equitable's returns provides the information required by paragraphs 1 to 23 of Schedule 4 to ICAS Regulations 1996 and includes Forms 46 to 49, 51 to 58, 60 and 61.

Schedule 4 – main valuation (text)
Equitable state that this valuation is made in conformity with Regulation 64 of ICR 1994.

In response to paragraph 4 of Schedule 4, Equitable provide ten pages of information about their non-linked contracts.

Equitable begin by describing their accumulating with-profits contracts and disclose, in paragraph 4(1)(a)(i), the following as being applicable to all such contracts:

> *The Society reserves the right to pay less than the full identifiable current benefit attributable to a policy where the contract is terminated by the policyholder at a time other than one at which the policy benefits can be contractually withdrawn. It is the Society's current practice only to make an adjustment to the full identifiable current benefit in circumstances where the policyholder is exercising a financial option against the Society, for example by requesting a transfer to another provider, and the full policy value exceeds the underlying share of assets. The current method of adjustment is to pay only a proportion of the full final bonus in such circumstances but there is no guarantee that the amount of the adjustment cannot exceed the full amount of final bonus.*

GAD underline *'to pay less than the full identifiable current benefit attributable to a policy'* and have written next to this: *'Define "full identifiable current benefit"'*.

GAD also underline *'the full policy value exceeds the underlying share of assets'* and *'there is no guarantee that the amount of the adjustment cannot exceed the full amount of final bonus'*. They sideline this part of the paragraph and write *'Is this reasonable?'*.

Equitable go on to disclose in paragraph 4(1)(a)(ii) that, for all accumulating with-profits contracts:

> *The valuation method is a prospective valuation of the benefits contractually payable and the resultant mathematical reserves may well be less than the full current benefit. That result is not, however, a consequence of taking explicit account of the position described ... above in the valuation method.*

GAD underline *'the resultant mathematical reserves may well be less than the full current benefit'* and against this have written:

> *I presume that "full current benefit" includes the non-guaranteed bonus.*

and

> *In the resilience scenario, it would be hoped that the liability would be no less than the guaranteed benefits!*

Equitable explain that they have four main categories of accumulating with-profits contracts. These categories are listed as: *'Life savings plans'*; *'Life protection plans'*; *'Pension contracts – old series'*; and *'Pension contracts – new series'*.

For their Life Savings Plans, Equitable disclose that the full fund is guaranteed to be available on surrender at certain dates, typically the *'5th and subsequent policy anniversaries'*. GAD underline the quoted words, and on the next page of the returns, query whether a full or partial guarantee of fund applies to Equitable's with-profits bonds.

For *'Pension contracts – old series'*, Equitable disclose that virtually all contracts include a 3.5% guaranteed rate of accumulation (i.e. the guaranteed investment returns). GAD underline this figure. The returns disclose that the full accumulated fund is guaranteed to be available on retirement at ages permitted by the relevant legislation, *'e.g. between ages 60 and 75 in the case of retirement annuity contracts'*. GAD underline *'between ages 60 and 75'* and write *'a wide spread!'*. Equitable also state: *'Some older contracts contain minimum guaranteed rates for annuity purchase at retirement'*.

For *'Pension contracts – new series'*, Equitable say that the contracts are identical to *'old series'* contracts, except *'There are no guaranteed investment returns or bonus rates other than a return of the investment contents paid'*.

GAD note that Equitable offer Major Medical Cash Plans. Next to the description, GAD write *'how do these operate? (an additional benefit funded by cancellation of units) – see* [page] *5 of 1995* [Schedule] *4'*.

In response to paragraph 5 of Schedule 4, Equitable provide 63 pages of information about their linked contracts. GAD note the business series that are open to new business and mark as new the contracts introduced in 1996.

The description of the general principles and methods adopted in the valuation is now provided in paragraph 6 of Schedule 4 of the returns. The information supplied by Equitable includes that, for accumulating with-profits deferred annuities:

> *The liability was calculated by discounting the cash fund purchased to date plus declared and attaching bonus cash fund with an allowance for future bonus.*

GAD underline this sentence. The information disclosed in the returns continues:

> *For with profits retirement annuity and personal pensions benefits ... the benefits have been valued on the basis that the benefits will be taken at age 60 or, if that age has been attained, at the valuation date.*

GAD sideline this and the preceding sentence and write next to it: *'i.e. can be less than current face value of benefits'*.

Equitable then disclose that, for with-profits Managed Pension Policies, the *'current full value of the guaranteed fund and attaching declared bonus was reserved'*. GAD underline the quoted words and place three ticks next to the paragraph.

In paragraph 6(1)(b), Equitable disclose:

> *The valuation method makes specific allowance for rates of future reversionary bonus additions, the levels of which are consistent with the valuation interest rates employed having regard to the Society's established practices for the determination of declared bonus rates. The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

GAD sideline the last sentence and underline the words *'implicitly covered by the excess of admissible assets over mathematical reserves'*.

In paragraph 6(1)(e), Equitable set out the rates of future bonus valued for each class of business. GAD add corresponding figures from the previous year or otherwise note where figures are unchanged or new. Equitable then state:

> *The reserves for future bonus under personal pensions contracts are such that, after allowing for any costs associated with the review of past sales of pensions transfers and opt-outs, future bonuses at the above rates could be supported if the valuation assumptions were met.*

GAD underline the words *'after allowing for any costs associated with the review of past sales of pensions transfers and opt-outs'*.

In paragraph 6(1)(f), Equitable state that a reserve for the prospective liability for tax on unrealised capital gains (losses) is held in respect of policies where benefits are linked to the Society's internal funds. They disclose that the contingent liability for tax on unrealised capital gains in respect of other business is estimated not to exceed £47.7m. Equitable state that they hold no reserve for this, as they consider there were sufficient margins in the valuation basis to cover the discounted value of this liability. GAD underline this figure and add next to it the previous year's figure of £37.4m. GAD sideline the sentence which says that no reserve was made. GAD have also written:

> *This is not really acceptable is it?*

In paragraph 6(1)(g), relating to investment performance guarantees, Equitable state that, in current conditions, they do not consider it necessary to hold a specific reserve for the guarantee they offer on a unit-linked annuity. GAD underline the words *'in current conditions'*.

In paragraph 6(1)(h), relating to the reserves for all other guarantees not covered by paragraph 6(1)(g), Equitable state:

> *The premium rate guarantees and options under the Society's policies are described in paragraph 4. Where the right to effect further policies without medical evidence of health is carried a reserve equal to one year's extra premium deemed or actually charged was set up. It was considered unnecessary in current conditions to make explicit provision for the other guarantees and options described in paragraph 4.*

That is, Equitable state that they do not consider it necessary to hold an explicit reserve for, amongst others, annuity guarantees.

In paragraph 6(1)(i), Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those used in the premium bases. Equitable, again, do not elsewhere disclose the rates used in the premium bases.

In paragraph 6(2), Equitable state that, in determining the provision needed for resilience reserves and tax on unrealised gains, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 7(4), Equitable state that the mortality tables for annuity contracts shown in Forms 51 and 54 have sufficient implicit allowance for future reductions in rates of mortality. Against this, GAD have written *'Check'*.

In paragraph 7(5), Equitable explain that they consider the reserves for future bonus within the valuation to be fully able to withstand any future strains which would arise if there were significant changes in mortality or morbidity experience. They say that, accordingly, the Society does not consider it necessary to establish any additional reserves in this respect.

The information required to be provided in relation to resilience testing and establishment of resilience reserves is changed from previous years. In paragraph 7(6), Equitable set out the resilience scenarios tested (i.e. the scenarios described in DAA6). In paragraph 7(8), Equitable state that no resilience reserve has been provided for. GAD underline this. The Society goes on to disclose, in paragraph 7(8)(a), the changes made to valuation assumptions and methods in the resilience scenarios:

> *It was assumed that the valuation has been undertaken using the net premium method as described in the appendix following Form 61 of this report with the following changes:*
>
> > *(i) the interest rates are as stated in Form 57;*
> >
> > *(ii) for all accumulating with profits business, an annual loading of 0.2‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pensions business, ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*
> >
> > *(iii) the mortality table used for accumulating with-profits pensions business was adjusted to AM80 ult – 5 years.*

GAD underline the words *'using the net premium method'* and *'AM80 ult – 5 years'*.

In paragraph 7(8)(b), Equitable explain how they had hypothecated assets to liabilities for the resilience test. In paragraph 7(8)(c), they state that, from the application of the most onerous resilience scenario, liabilities changed by £3,278m and assets allocated to match those liabilities changed by £3,273m. GAD question which of the scenarios tested was the most onerous for Equitable.

In paragraph 8(b), Equitable state that *'For accumulating with profit* [pension] *business the valuation rates of interest shown in Form 52 are net of a ½% interest rate reduction as a reserve for future expenses'*. GAD underline this sentence and note that the rate is unchanged from the previous year.

In paragraph 8(d), Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 61 of this report.*

GAD sideline this paragraph.

In paragraph 13, Equitable disclose: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'*.

As now required by paragraph 14 of Schedule 4 to ICAS Regulation 1996, Equitable set out a statement of their aims with regard to bonus distribution and of how they maintain equity between different generations of policyholders. They refer to the Directors' absolute discretion as to timing and nature of bonus distributions, given to them by the Society's Articles of Association.

In response to paragraphs 14(1)(d), (e) and (f), Equitable's returns disclose:

> *Any literature, including documents the Society is or has been required to issue by any regulatory body authorised under the Financial Services Act 1986, advertisements or other communications with policyholders, dealing with the distribution of bonuses, have stated that the principles underlying the Society's approach are as follows:–*
>
> - *that bonuses are primarily influenced by the investment earnings on the invested premiums and that, in particular, future bonus rates will be mainly determined by future investment conditions*
> - *that all with profits policyholders participate in common funds of assets (one for each currency of the policy) and that bonus systems aim to pass the earnings on those assets on to policies of different types and terms in a consistent and fair manner*
> - *that with profits policyholders stand in the position of proprietors and share in any profits or losses which arise from the transacting of non-participating business*
> - *that the bonus systems aim to pass on to each generation of policyholders the value of the assets which their policies have built up; in particular, that there should be no deliberate holding back of returns to build up an "estate" of assets which belongs to no-one*
> - *that changes in bonus rates should reflect the underlying trend of investment returns rather than mirroring short-term fluctuations; that is, changes in rates should be gradual whenever circumstances permit.*

In response to paragraph 14(2), Equitable's returns disclose that:

> *The Society's aims in relation to the distribution of profits amongst policyholders flow from the principles described above. In particular:*
>
> *(a) Policies reaching their contractual termination date should receive, subject to smoothing, the full value of the assets secured by their invested premiums. On early surrender the aim is also generally to pay out a "full value" amount except where the policyholder is exercising a financial option against the office. In such circumstances the aim is to ensure that the continuing policyholders are not disadvantaged and that is achieved by paying a surrender value which approximates to the unsmoothed value of the assets attributable to the surrendering policy where that is below the "full value" amount.*
>
> *(b) Policies of all types and terms should be treated in a consistent fair manner.*
>
> *(c) Fluctuations in investment returns should be smoothed over reasonable periods, unless conditions are so exceptional that such an approach would be seriously inequitable, so that bonus rates can progress in an orderly manner.*

The returns continue by stating that the principal method by which these aims are achieved is by comparing the current and projected value of assets with total policy values.

In paragraph 15, Equitable disclose that they had set the reversionary bonus for the main policy classes at 4.0%. GAD note that most of the reversionary bonus rates are unchanged from the previous year.

As in previous years, Equitable disclose that they offered loans under a '*loanback*' arrangement to some retirement annuity, individual and group pension policyholders. GAD note that this description is unchanged from the previous year.

In paragraph 16, Equitable set out final bonus rates. GAD note the comparable rates from the previous year or where the description provided is unchanged or new.

The returns, again, contain the statement, at paragraph 16(viii):

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

In paragraph 21, Equitable explain that they risk-adjusted the yields on assets other than land and equity shares by restricting them to 10%, which is that available on the highest yielding risk-free security they hold. Equitable also explain that, where it was considered appropriate, they risk-adjusted yields on land and equity shares.

<u>Schedule 4 – main valuation (forms)</u>
In Form 46, Equitable provide information on changes in their ordinary long term business. GAD circle the figures provided for annual premiums on United Kingdom non-linked pensions business and have written: *'These omit all renewable premiums!'*.

In Form 47, Equitable provide an analysis of their new ordinary long term business. GAD make various annotations to these forms, checking the figures provided.

In Form 48, Equitable provide figures for their expected income from admissible assets not held to match liabilities in respect of linked benefits. This form shows that 52% of Equitable's non-linked assets are invested in equities, 6% in land and buildings and 38% in fixed and variable interest securities (compared with 50%, 7% and 38% respectively in 1995).

Next to the yield percentage figures on the form GAD have written *'? Expected'* and annotate the form with the following figures:

Type of asset		*Yield %*	*GAD's figure*
Land and buildings		*7.30*	*7.0*
Fixed interest securities	*Approved securities*	*7.67*	*7.4*
	Other	*7.32*	*7.9*
Variable yield securities	*Approved securities*	*3.79*	*3.6*
(excluding items shown at line 16)	*Other*	*5.25*	*5.5*
Equity shares and holdings in collective interest schemes		*3.17*	*3.5*
Loans secured by mortgages		*7.33*	*8.0*
All other assets	*Producing income*	*4.65*	*5.5*
	Not producing income		
Total		*5.08*	

GAD circle the figure for other fixed interest securities of 7.32% and have written *'Query – see Line 24* [of Form 49]'.

In Form 49, Equitable provide an analysis of their fixed interest and variable yield securities. Equitable disclose that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public authority are, for certain durations, higher than for those not issued or guaranteed by any government or public authority. GAD circle the gross redemption yield figure of 5.25% provided for other fixed interest securities with redemption periods of between 10 and 15 years and note that this is very low.

In Form 51, Equitable set out the mathematical reserves held for various types of non-linked contracts (excluding accumulating with-profits), along with information on the number of contracts in force, the benefits valued and rates of interest and mortality assumptions used in valuing them.

In Form 52, Equitable set out the mathematical reserves held for accumulating with-profits contracts, along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them. Columns 11 and 12 of the Forms detail the current benefit value and discounted value of the Society's liabilities. GAD note that the difference between these figures (which is almost entirely accounted for by the valuation of Equitable's UK pensions business) is £638m.

In Form 53, Equitable set out the mathematical reserves held for the various types of property-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death and the rates of interest and mortality assumptions used in valuing them. Equitable also disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 54, Equitable set out the mathematical reserves held for the various types of index-linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

The new Regulations require that matching rectangles (i.e. the notional allocation of assets to each category of non-linked liabilities to show the valuation rates of interest that are supportable) are provided in Form 57. Equitable provide 34 Form 57s, each Form covering a different interest rate and class of business. GAD annotate the first Form (which gives the total values of assets notionally allocated) with corresponding asset figures taken from Form 48. The total value of assets notionally allocated is given as £15,679,987,000. On the Form, GAD have written (the figures being in units of £000s):

[Non-linked] *Liability*	*15,151,688*
Bonus	*503,622*
	15,655,310
+ [Statutory reserves] *on Linked*	*21,380*
	15,676,690
+ [Statutory reserves] *on Index Linked*	*3,248*
	15,679,988

GAD have also written *'N.B. No Resilience Reserve'*.

In Form 58, Equitable set out the valuation result and the composition and distribution of fund surplus.

Schedule 4 – appendix valuation (text)
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994.*

Equitable's appendix valuation provides the information required by paragraphs 1, 6 to 8, 10, 11, 20 and 22. The Society states that the information required by the other paragraphs of the ICAS Regulations 1996 is the same as that provided in the main valuation (apart from paragraph 23 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation'*, has not been provided).

In their description of the general principles and methods adopted in the valuation (paragraph 6), for accumulating with-profits deferred annuities Equitable disclose that the liability was calculated *'by discounting the cash fund purchased to date plus declared and attaching bonus cash fund'*. GAD have underlined the words quoted. Equitable then disclose that they have valued benefits assuming retirement ages of 60 for both retirement annuity business and personal pension business.

For with-profits bonds, Equitable disclose that *'The liability was calculated by discounting the guaranteed fund and attaching bonuses'*. GAD underline the words quoted.

In paragraph 6(1)(b), Equitable state that the valuation rates of interest were chosen with due regard to policyholders' reasonable expectations and their established practices for determining reversionary bonuses. As in the main valuation, Equitable also disclose that:

> *The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

GAD underline the words *'are implicitly covered by the excess of admissible assets over mathematical reserves'* and next to it write *'How well?'*.

As in the main valuation, in paragraph 6(1)(f) Equitable disclose that a reserve is held for the prospective liability for tax on unrealised capital gains in respect of policies where benefits are linked to the Society's internal funds. They also disclose that the contingent liability for tax on unrealised capital gains in respect of non-linked business is estimated not to exceed £47.7m. Equitable state that they hold no reserve for this, as they consider there are sufficient margins in the valuation basis to cover the discounted value of this liability. GAD also underline the figure provided in this appendix valuation, note the previous year's figure of £37.4m and write *'Not really acceptable?'*.

As in the main valuation, and as in previous years, Equitable state that, in current conditions, they do not consider it necessary to hold a reserve for the guarantee they offer on a unit-linked annuity. Next to this, GAD write *'Investigate further?'*.

In paragraph 6(1)(h), Equitable state:

> *The premium rate guarantees and options under the Society's policies are described in paragraph 4.*
>
> *Where the right to effect further policies without medical evidence of health is carried a reserve equal to one year's extra premium deemed or actually charged was set up.*
>
> *It was considered unnecessary in current conditions to make explicit provision for the other guarantees and options described in paragraph 4.*

That is, Equitable state that they do not consider it necessary to hold an explicit reserve for, amongst others, annuity guarantees.

In response to paragraph 7(8) of Schedule 4, Equitable disclose that their valuation includes a resilience reserve of £501m. GAD circle and underline this figure and write: *'Is this a grossed up figure – considering the assets allocated to it. Check* [Form] *57!'*.

The Society goes on to disclose, in paragraph 7(8)(a), the changes made to valuation assumptions and methods in the resilience scenarios, including that:

> *... for all accumulating with profits business, an annual loading of 0.2‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pensions business, ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

As in the main valuation, Equitable disclose in paragraph 7(8)(c) the changes to their liabilities and assets resulting from the application of the most onerous resilience scenarios. GAD query which of the scenarios produces this result and write *'presume (c)?'*.

As in the main valuation, in paragraph 21 Equitable explain that they risk-adjusted the yields on assets other than land and equity shares by restricting them to 10%, which is that available on the highest yielding risk-free security held by Equitable. Against this figure, GAD write *'High?'*.

Schedule 4 – appendix valuation (forms)
In appendix Form 51, Equitable set out the mathematical reserves held on the appendix valuation basis for various types of non-linked contracts (excluding accumulating with-profits), along with information on the number of contracts in force, the benefits valued, and the rates of interest and mortality assumptions used in valuing them. GAD note changes from the previous year's returns to some of the interest rates used.

In appendix Form 52, Equitable set out the mathematical reserves held on the appendix valuation basis for accumulating with-profits contracts, along with information on the number of contracts in force, the benefits guaranteed, and the rates of interest and mortality assumptions used in valuing them. GAD make various annotations on these forms, including:

- for some life assurance and general annuity business, GAD note that Equitable have used a valuation interest rate of 2.5% in the appendix valuation compared to *'Nil used in* [the gross premium bonus reserve] *valuation'*. GAD note that there is a *'£54m discount'* on the current benefit value of liabilities. GAD also note that the corresponding figure used in the previous year was 4.0%.
- for some pensions business, GAD note that Equitable have used a valuation interest rate of 5.0% in the appendix valuation compared to *'4.75%* [discount] *used in* [the gross premium bonus reserve valuation]'. Below the figures provided for the rates of interest used, GAD write *'High?'*. GAD note on the form the discounted value of liabilities is *'-£1,246m below face value!'*.
- for Equitable's German life assurance and general annuity business, GAD circle the rates of interest disclosed and write *'High?'*. They also note that the difference between the current benefit value of liabilities and the discounted value is *'£2.07m'*.
- for Equitable's Guernsey life assurance and general annuity business, GAD circle the rates of interest disclosed and write *'High?'*. They also note that the difference between the current benefit value of liabilities and the discounted value is *'£1.7m'*.
- for Equitable's Guernsey pensions business, GAD circle the rates of interest disclosed and they note that the difference between the current benefit value of liabilities and the discounted value is *'£4.2m'*.
- for Equitable's Republic of Ireland life assurance and general annuity business, GAD note that the difference between the current benefit value of liabilities and the discounted value is *'£1.5m'*.
- for Equitable's Republic of Ireland pensions business, GAD circle the rates of interest disclosed and they note that the difference between the current benefit value of liabilities and the discounted value is *'£9.7m'*.
- for the total of the Society's accumulating with-profits business, GAD note that the difference between the current benefit value of liabilities and the discounted value is *'£1,320m'*.

In appendix Form 53, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of property-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They also disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In appendix Form 54, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

In appendix Form 57, Equitable provide matching rectangles on the appendix valuation basis covering the different classes of their business. As with the main valuation, GAD annotate the first Form (which gives the total values of assets notionally allocated) with corresponding asset value figures taken from Form 48. Equitable state that the total value of assets notionally allocated is £15,174,191,000. On the Form, GAD have written the following (the figures being in units of £000s):

[Non-linked] *Liability*	*14,675,207*
Bonus [Reserve]	*474,207*
	15,149,414
+ *Sterling* [reserves] *on Linked*	*21,380*
	15,170,894
+ *Sterling* [reserves] *on Index Linked*	*3,298*
	15,174,192
+ [Resilience] *Reserve*	*+501,000?*

Notes to the returns
In the notes to the returns, disclosed at the end of Schedule 4, Equitable disclose that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 43, 45 and 55.

Equitable also disclose that they have been granted a section 68 Order permitting them to take into account a future profits implicit item with a value not exceeding £600m. The Society states it has included an item of £312,794,000 for the purpose of *'achieving equality between the total net value of policyholders' assets included in Form 9 ... and ... total net asset value shown in the Society's Companies Act accounts'*. As for the previous returns, GAD underline the quoted part of this sentence.

Equitable state that no provision has been made for the contingent liability for tax on unrealised capital gains for non-linked business, which they have estimated as £47.7m. GAD sideline this paragraph and underline the figure of £47.7m.

The notes to the returns also disclose that Equitable had been issued a section 68 Order *'to the effect that figures in Form 46 exclude recurrent single premiums from the annual premium figures as the Company cannot at present calculate a meaningful figure'*. GAD sideline this note.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 28(a) of ICAS Regulations 1996. Equitable's Appointed Actuary provides the certification required by Regulation 28(b) of ICAS Regulations 1996. Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

30/06/1997 [entry 2] Equitable apply to DTI for a section 68 Order for a future profits implicit item of £700m, for possible use in their 1997 returns. Equitable provide financial calculations in support of the application, suggesting that they could seek an Order up to the value of £2,252.4m. Equitable explain that they have included a future profits implicit item of £312.8m in their 1996 returns.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.92	*330.5*	*(46.0)*	*46.4*	*330.1*
31.12.93	*480.9*	*(1015.2)*	*178.5*	*1317.6*
31.12.94	*520.0*	*1245.9*	*19.3*	*(745.2)*
31.12.95	*662.8*	*(462.3)*	*119.5*	*1005.6*
31.12.96	*802.5*	*(256.1)*	*151.2*	*907.4*
				2815.5

Average annual profit = 2815.5/5 = £563.1m

Note: In 1994 surplus was increased as a result of changes in valuation interest bases. In 1992, 1993, 1995 and 1996, surplus was decreased as a result of changes in valuation interest bases. Those changes in surplus are included as exceptional items in column (B) above.

The calculations state that the average period to run for the Society's in-force contracts is now eight years. Equitable explain:

The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible retirement age, or immediately if that age has already been attained.

The calculations suggest that the maximum future profits permissible are 50% of £563.1m multiplied by eight years – that being £2,252.4m.

03/07/1997 Equitable's solicitors explain to DTI that Equitable now propose a subordinated loan of £350m of Sterling Perpetual Notes and that: *'In line with market practice, the issuer will be a wholly owned subsidiary of the Society and the issue will be guaranteed by the Society'*. (This replaces the previous proposal to raise a smaller amount in Dollars, Deutschmarks and Yen — see 14/03/1997.) The solicitors enclose the proposed terms, and comment that they are very similar to recent issues by other companies, including mutual companies. The solicitors ask that DTI give their application for the necessary section 68 Order priority treatment, as the timing of the issue is very tight.

04/07/1997 DTI ask GAD for comments on the letter from Equitable's solicitors of 03/07/1997. DTI note that *'Equitable has changed tack on the subordinated loan issue!'*.

07/07/1997 GAD tell DTI that they would not wish to make definitive comment until GAD have seen the draft offer document, but they are *'happy to confirm that the terms of the proposed issue appear to be acceptable and in line with precedent'*. GAD raise one further query about the taxation clause. Against this, Line Supervisor B notes that she has checked the point with Equitable's solicitors who have said that there is not a problem.

10/07/1997 Equitable's solicitors send DTI a copy of the draft offer document. The Society's solicitors copy this to GAD.

11/07/1997 [entry 1]	Equitable's solicitors send DTI a copy of a Trust Deed used by another mutual life company and explain that they propose to conform with this in all material respects. Equitable copy this to GAD.
11/07/1997 [entry 2]	GAD send DTI some suggested text for inclusion in the loan agreement. This reads: *Liabilities due to policyholders must be calculated so as to fully meet their reasonable expectations, as determined by the appointed actuary to the company, with the appointed actuary also treating the Loan for this purpose as if it did not exist as a liability of the long term fund at that time.* GAD say that this wording '*... would be very suitable for us. It also helps to reinstate the concept of Para 25 of Prudential Note 1994/1 in the circumstance of a winding up*'.
14/07/1997	DTI fax Equitable's solicitors the proposed text.
15/07/1997	Equitable's solicitors point out to DTI that the insurance company winding up rules applied and so they did not agree with the suggested amendment. DTI seek advice from GAD and comment: *... do you think they have a point? The (Winding-Up) Rules 1985 refer to policyholders expectations — but presumably the suggested inserted paragraph defines the Appointed Actuary's responsibilities re PRE prior to the Court making a direction?.*
16/07/1997 [entry 1]	DTI note that GAD's Chief Actuary D accepts Equitable's solicitors' point. DTI also note: '*This is a Perpetual loan — only applies on winding up — there are PRE rules for this*'.
16/07/1997 [entry 2]	Equitable's solicitors send DTI three further documents relating to Equitable's proposed subordinated loan. Equitable's solicitors ask for DTI's indication that they would approve the necessary section 68 Order by the following day.
17/07/1997	DTI copy GAD one of the documents (the draft loan agreement) and seek their comments. Equitable's solicitors fax DTI information on the interest rate applicable to the proposed bonds. DTI ask GAD for their comments on this also.
18/07/1997 [entry 1]	DTI tell Equitable's solicitors that they agreed in principle to the issue of the necessary section 68 Order, but warn that, if there were any changes to the offer, the Order could not be issued until they had reviewed those.
18/07/1997 [entry 2]	**GAD complete the A1 Initial Scrutiny check on the Society's 1996 regulatory returns**. GAD note that, in accordance with the section 68 Order issued on 06/06/1997, there were no statements in the auditor's report relating to money laundering.
22/07/1997	Equitable's solicitors send DTI amended subordinated loan documents. The Society's solicitors explain that the changes had been made solely to allow Equitable to sell bonds in the United States. They also inform DTI that the interest rate for the loan had been set at 8%.
25/07/1997	GAD comment to DTI: '*To the best of our understanding, we are prepared to accept that the revisions made to the Offering Circular do not have any impact on subordination to interests of policyholders*'. GAD conclude: *In our opinion therefore, these revisions should not change the provisional agreement of the DTI to provide a Section 68 Order allowing the Society to leave this loan out of account as a liability on its return, subject to the normal limits.*

29/07/1997	DTI's Line Supervisor B asks the Head of Life Insurance if, following GAD's comments, he agreed that she should confirm to Equitable's solicitors that DTI still agreed in principle to the issue of the section 68 Order. The Head of Life Insurance gives his agreement and the Line Supervisor advises Equitable's solicitors accordingly.
31/07/1997	An Equitable actuary writes to GAD with a query about future profits implicit items. He refers to the correspondence with DTI in 1995 (see exchanges on the issue between 25/01/1995 and 27/03/1995 [**entry 1**]). The actuary seeks GAD's further views on the inclusion, in their profit calculations, of increases or decreases in reserves due to changes in interest rate bases. The actuary explains that he is writing at the request of Equitable's Appointed Actuary, but also that he would be taking on that role from 01/08/1997.
01/08/1997	Equitable appoint a new Managing Director and a new Appointed Actuary.
06/08/1997	Equitable's solicitors send DTI the finalised documents relating to the subordinated loan.
07/08/1997	**GAD complete the A2 Initial Scrutiny check on the Society's 1996 regulatory returns.** The form for the A2 check is now more detailed, reflecting the amendments to the returns following the introduction of the ICAS Regulations 1996 and includes the following: <u>Strength of valuation basis</u> In response to the question: *'Are the interest rates in* [Form] *57 (including those in line 39) supported by the risk adjusted yields on the matching assets – for with-profits business?'*. GAD circle *'Yes'* and against this write: *'But?* [accumulating with-profits] *Line 39'*. In response to the question: *'Do the with-profits rates in line 29 and 39 appear to make provision for PRE?'*, GAD circle both *'Yes'* and *'No'*. GAD note that they *'might query'* Equitable's mortality rates for annuities, and note that Equitable have *'surprisingly raised their unit growth assumption'*. They confirm that Equitable have applied the resilience test in accordance with the Government Actuary's latest guidance. GAD judge the overall interest basis as *'adequate'* to *'weak'* and the valuation basis as *'adequate'* to *'weak'*. <u>Solvency position</u> In response to the question: *'Taking into account the individual characteristics of the company, is the absolute level of cover for the* [required minimum margin] *shown in* [Form] *9 best described as very healthy (A), healthy (B), adequate (C), of concern (D) or negative/such as to require immediate action by DTI (E)?'*. GAD circle *'C'*. Against this they write: *'As a major* [with-profits] *office is unlikely to be insolvent — but may be building higher expectations than can be met'*. GAD describe the trend in the level of cover over recent years as *'Flat'*. <u>Suitability of assets</u> GAD answer *'Yes'* to the question: *'Does the hypothecation of assets to liabilities in* [Form] *57 look reasonable?'*. <u>Operating results</u> GAD answer that the absolute level of surplus/deficit and its trend over recent years do not give current cause for concern. They record that the absolute level of sales and its trend over recent years do not give current cause for concern. Next to their answer, GAD write: '[Very] *high!'*.

PRE issues
GAD record that it is not clear whether the answer given by Equitable in paragraph 4(1)(a)(ii) of Schedule 4 of the returns is satisfactory. (In the paragraph referred to, Equitable had written: *'The valuation method is a prospective valuation of the benefits contractually payable and the resultant mathematical reserves may well be less than the full current benefit'*. In the margin of the returns, next to this statement, the scrutinising actuary wrote in pencil: *'I presume that "full current benefit" includes the non-guaranteed bonus'*; and *'In the resilience scenario, it would be hoped that the liability would be no less than the guaranteed benefits!'*.)

Current issues
GAD note that it is not clear if Equitable have set up any identifiable pensions mis-selling reserve, but that GAD understand that Equitable hold £50m in technical reserves. GAD note that Equitable have completed the new style returns *'adequately'* and against this have written: *'Review Forms 57'*.

Aspects that look worrying
GAD note *'Substantial unitised* [with-profits] *– high declared bonuses but reduced reserves could rely too much on application of MVA. [*[Company] *would be in more comfortable position if held back more as terminal bonus.]'*.

Other notes
GAD identify the following:

(1) Review Pension/Annuity mortality assumptions.

(2) Consider raised level for assumed unit growth.

(3) Review [unitised with-profits] *reserves in resilience scenario.*

[(4) [outstanding] *review of Implicit Profit item calculation.]*

The last point is noted on the form as *'Dealt with'*.

GAD identify no items to notify to DTI, to be taken up immediately with Equitable. They raise Equitable's priority rating from 4 to 3. Accompanying the scrutiny check is a Form B Initial Scrutiny Form, which includes certain key figures disclosed in the 1993 to 1996 returns. GAD circle the figure of 8.5% for the growth assumption used for unit-linked business.

08/08/1997 GAD's Scrutinising Actuary E prepares a note for the Government Actuary about Equitable, ahead of the Government Actuary's meeting with the Society's new Appointed Actuary. The note says:

> *As a mutual* [Equitable] *makes a strong play of not building an excessive estate — and this leads to it declaring high "non-guaranteed" final bonuses on its substantial accumulating with profit contracts ... There may be some doubts about the practical ability of the Society to apply an MVA in all the circumstances covered by the resilience test (as assumed in the valuation) – but they insist that their bonus declarations give them the necessary flexibility.*

Chief Actuary D adds:

> [The individual] *has been heir-apparent to the* [Appointed Actuary] *post for some time. He seems very competent, & having served on a working party he chaired I think he will cope well, & be a bit less "prickly" than* [the previous Appointed Actuary]*!*

11/08/1997 Equitable write to DTI to confirm the appointment of the new Appointed Actuary of Equitable and of University Life with effect from 01/08/1997.

13/08/1997	Equitable's solicitors seek an update from DTI on the section 68 Order for the subordinated loan.
14/08/1997	The Government Actuary writes to Equitable's Appointed Actuary to welcome him to his new role and to suggest an introductory meeting. The Government Actuary encloses copies of GAD's Dear Appointed Actuary letters.
19/08/1997	DTI's Line Supervisor B passes the letter from Equitable's solicitors, dated 06/08/1997, to Line Manager C, and notes on it that the '[section] *68 order* [is] *ready for you to sign ...*'.
20/08/1997	DTI send Equitable's solicitors the section 68 Order, dated 19/08/1997, for the subordinated loan.
22/08/1997	GAD's Scrutinising Actuary E writes to Equitable's Appointed Actuary in response to his letter of 31/07/1997. The Scrutinising Actuary says:

> *It seems to me that the calculation of a maximum allowable Future Profits Implicit Item is not an exact science, particularly for a with-profit office that carries a large and variable margin in Line 51 of Form 14.*
>
> *For a company that has sold a large amount of participating business, it seems obvious that potential insolvency is unlikely – unless such a company were to grant bonuses in relation to capital gains on assets that were later found to evaporate. However, I would obviously feel uncomfortable if it seemed that a major part of future surplus might be needed to maintain solvency – rather than be available to pay bonuses in line with the reasonable expectations of policyholders.*
>
> *I suspect that part of the margin carried in Line 51 of Form 14 by such a with-profit office may be being retained to cover accumulating but unreserved-for terminal bonus payments, and it seems to me that the best way to interpret the guidance on Future Profits Implicit Items is to accept the judgement of the Appointed Actuary as to the amount of surplus that is distributable each year. Thus, the Form 58, Line 35 figure is the basic amount on which I focus for this purpose.*
>
> *Clearly, "exceptional items" that affect the disclosed figure must be adjusted for, but <u>these do not include</u> changes in the amount of liabilities due to modifications made in valuation interest rates that reflect similar changes in asset yields — that result in an offsetting variation in asset values. It appears that the "exceptional items" shown in Column B in the Table provided in Section 1 of the Appendix to* [Equitable's] *letter of 30 June relate solely to valuation interest rate changes. These items should only be considered to be "exceptional" to the extent that such interest rate changes were not matched by variations in yields on your asset portfolio arising from market movements – although it must be recognised that a switch in asset allocation strategy that modified the portfolio yield would require special consideration.*

Scrutinising Actuary E goes on to say:

> *Although I have in some cases been concerned about the "double counting" of income arising from assets representing the explicit components of the solvency margin, I am not sure in the case of Equitable that such income is necessarily taken credit for in the surplus shown in Form 58 – however.*

The Scrutinising Actuary asks Equitable to review their submission in the light of his comments. He concludes: '*I have no doubt that, however we look at the figures, we will have no difficulty in agreeing to the previously requested figure of £700m*'.

GAD's file contains a page of calculations prepared by Scrutinising Actuary E in respect of the future profits implicit item. These are set out as follows:

£000s	*1991*	*1992*	*1993*	*1994*	*1995*	*1996*
[Long Term] *Fund*	*6,992,749*	*8,562,056*	*11,450,888*	*12,377,514*	*14,915,189*	*17,572,128*
[Form] *14* [line] *52*	*347,441*	*838,513*	*1,713,333*	*917,502*	*1,433,380*	*1,420,178*
[Form] *14* [line] *12*	*140,790*	*4,833*	*3,207*	–	–	–
[Appreciation] *Credited* [Form] *40* [line] *3*	*399,000*	*140,000*	*1,180,000*	*(583,513)*	*798,125*	*669,016*
[Form] *14* [line] *51* (*A*)		*491,072*	*874,820*	*(795,831)*	*515,878*	*(13,202)*
[Form] *58 Surplus* (*B*)		*330,523*	*480,935*	*519,981*	*662,848*	*802,539*
Exceptional?		*(46,000)*	*(1,015,200)*	*1,245,900*	*(462,300)*	*(256,100)*
<u>Consider</u> Real Surplus Emerging? (*A*) + (*B*)		*821,595*	*1,355,755*	*-275,850*	*1,178,726*	*789,337*
Total	*3,869,563*					
Surplus on Solvency Margin	*514,900*					
	3,354,663 ÷ 5		*= £670,933,000*		*cf £563.1m claimed*	

However, some of this surplus is clearly being retained to cover terminal bonus liabilities that are not fully reserved for.

[Sum of] *(B) above*	*£2,796.7m ÷ 5*	*= <u>£559.3m</u>*	*x 4 = £2,237.2*
[Sum of] *Surplus on Solvency Margin*	*514.9m*		
	£2,281.8m ÷ 5	*= <u>£456.4m</u>*	*x 4 = £1,825.6*
			<u>cf £700m claimed</u>

01/09/1997 Equitable inform GAD that they are happy to go along with the approach suggested in the letter of 22/08/1997 and have sent DTI revised calculations to support their request for a future profits implicit item for 1997. Equitable's calculations suggest that the maximum future profits implicit item that could be allowable is £2,222m.

02/09/1997 GAD tell DTI that Equitable's Appointed Actuary has taken full account of the comments made in their letter of 22/08/1997 and that they are *'comfortable with the figures shown and that it is totally reasonable to grant a Section 68 Order'*. This will allow a future profits implicit item of £700m to be counted towards Equitable's required solvency margin in their 1997 returns.

03/09/1997 DTI's Line Supervisor B asks an official to issue the section 68 Order.

25/09/1997 The DTI official advises Line Supervisor B that he is unable to issue the section 68 Order because of a problem with the IT system.

26/09/1997	The Government Actuary meets Equitable's Appointed Actuary (at GAD's offices). His note of the meeting sets out Equitable's arrangements for actuarial work. The Government Actuary concludes: *Overall, this is a company with a strong actuarial tradition, where the appointed actuary has a strong position in relation to all aspects of the business. Expense levels remain one of the lowest in the industry and new business is still quite buoyant, although now heavily pensions orientated, with quite a lot of AVC business, for example from the NHS and Civil Service pension schemes, for which the Equitable is a preferred FSAVC provider.*
30/09/1997	Every insurance company is sent by DTI's Head of Life Insurance a letter asking them to provide details of their provision for potential liabilities for mis-sold personal pensions.
14/10/1997	DTI send Equitable the section 68 Order for a future profits implicit item of £700m, to be counted in their 1997 returns. DTI point out that, before including any implicit items in the forthcoming returns, Equitable are required to update the calculations to ensure that the amount adopted is still justified.
24/10/1997	Equitable reply to the letter from DTI of 30/09/1997 seeking details of their provision for potential liabilities for mis-sold personal pensions. Equitable explain that, as at 30 September 1997, they had 36,013 potential cases (compared with 34,999 as at 31 December 1996), with an estimated compensation liability of £85m (compared with £50m as at 31 December 1996). Equitable explain that one reason for the increased estimates is that: *... the 31 December 1996 figures treated a block of business, which had been classified as "execution only" under LAUTRO guidelines, as outside the scope of the review. Following subsequent discussions with the PIA those cases have been brought back into the review and subjected to loss assessment.* Equitable note that the cost would be met from the long term fund and therefore, in practice, by the generality of policyholders. Equitable say that, by 30 September 1997, they had made offers of compensation of £11m. They explain that, as their review progresses, Equitable should have a much greater degree of confidence in the provision to be established at 31 December 1997 than was the case at 31 December 1996 and that '[accordingly], *we are likely to show the provision more explicitly on our 1997 published statements*'. Comments on the letter suggest that, in comparison with other offices, some of Equitable's estimates of the proportion of cases assumed to require compensation are low, other estimates of the assumed average amount of compensation on some individual cases are high. A further comment is that Equitable's figures generally appear *'very "rounded"'*.
17/11/1997	The National Health Service write to DTI to say that they are reviewing their AVC arrangements and are considering appointing Equitable as the AVC provider for all their pension schemes. They ask DTI if there have been any points of contention within the last three years, or whether there are any material factors the Secretary of State should be aware of before a decision is made.
25/11/1997	DTI's Line Supervisor B seeks the views of the Head of Life Insurance and Line Manager C on the letter of 17/11/1997 from the NHS. She says: *'To my knowledge there are no outstanding supervisory "points of contention" with Equitable Life (and would we say anything if there were?)'*. The Line Supervisor notes some recent issues that have arisen, including:

Personal pensions mis-selling – Equitable appears to be getting on well with this – as at 30/9/97 compensation offers of £11m had been made. Total provision at 30/9/97 is £85m, including non-priority cases.

New Chief Executive from 1/7/97 and separate Appointed Actuary. Previously [Chief Executive] *was also the* [Appointed Actuary].

Issue of £350m subordinated loan capital August 1997.

Future profits implicit item agreed for 1997 returns of £700m.

Line Supervisor B notes that, at 31 December 1996, Equitable's cover for the required minimum margin was 2.53. Against this, an official notes that, without the future profits implicit item, it would be 2.07.

The Line Manager advises the Line Supervisor to reply to the NHS, confirming Equitable's solvency position and indicating that DTI are not aware of any matters that should be brought to the Secretary of State's attention.

26/11/1997

DTI's Line Supervisor B informs the NHS that, on the basis of Equitable's 1996 returns, and in the absence of interim information, she would say that the company was financially sound. The Line Supervisor adds that there are *'no outstanding issues of a material nature pertaining to DTI's regulation of the Equitable Life Assurance Society'*. Line Supervisor B bases the wording in her letter on one sent in respect of another company. She informs Line Manager C that, in that letter, DTI had referred to strong solvency cover of more than 600%. She explains that she has omitted this from the letter about Equitable as *'their solvency cover* [without] *the implicit item is 207%, which isn't that hot'*.

December 1997

GAD send DTI their annual report on the life insurance industry for the year ending 31 December 1996.

The purpose of the report is described as follows:

The idea of an annual report on the life assurance industry emerged from the work undertaken by the joint GAD and DTI Scrutiny Strategy Working Party. It was seen as a means of providing comparative information to enable more informed comments on relative performance to be made in the detailed scrutiny report written annually on each individual company. However, it was recognised that even more importantly, an annual report also provided the opportunity to give a far wider perspective on the industry as a whole, and act as a useful reference source.

The primary purpose of the report is, therefore, to act as an internal reference document for DTI and GAD senior management, providing a commentary on significant developments within the industry during the year, and an indication of likely future developments. It is also designed to provide detailed comparative information between companies to allow potentially weak companies to be identified. Finally, where relevant, any significant variations between different sectors of the industry can be identified.

The disclaimer says that: *'The views expressed in this report are not those of any individual, but neither do they represent "official" GAD or DTI thinking. They are meant to contribute to thinking on the past and present developments of the industry'*.

On *'New Business'*, the report notes that Equitable are top of the table for pensions sales with a new business index of £512m (£226m more than the second placed company) and are also top for total new business, with an index of £581.2m (the second placed company having a new business index of £573.4m). The report says: *'Equitable are in a dominant position in the pensions market, as they are known for low charges and generally attract high premiums per* *case'*. On distribution channels, GAD explain that the profile for mutual companies is similar to that of the industry, with 50% of sales made through independent financial advisers and approximately 40% through direct sales.

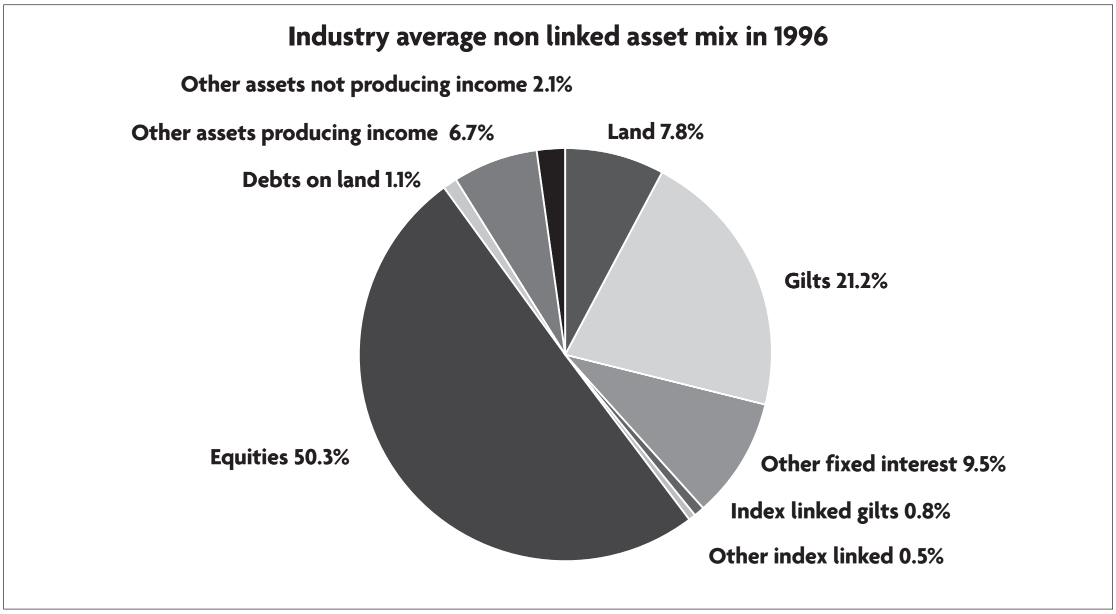
The report discusses mortality trends and the work of the Continuous Mortality Investigation Bureau (an independent industry body which monitors mortality experience). On mortality experience for people who have taken out life insurance, GAD say the main features demonstrated are:

> *A rapid improvement in overall mortality ...*

On mortality experience for pensioners and annuitants, GAD say:

> *The main point here is to note that the rate of improvement in mortality has been much faster than expected.*

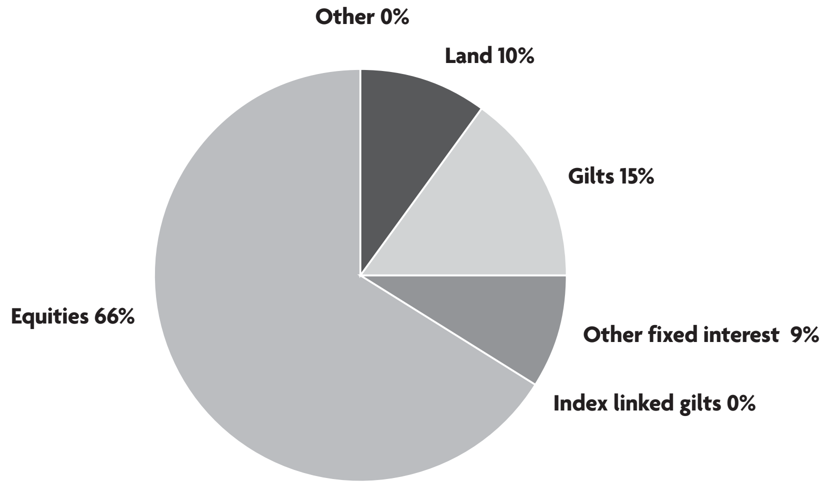
On *'Assets'*, GAD provide a breakdown of the average non-linked asset mix, presented as follows:



1997

GAD also produce an estimation of the breakdown of the portfolios that are held by companies to support their with-profit liabilities (including the free estate). They explain: *'This estimate has been based on the assumptions that fixed interest assets are held to match fixed liabilities and that most miscellaneous assets are held against other miscellaneous liabilities, while real assets are mainly allocated to match with-profit liabilities'*. The report includes the following chart:

Average mix of assets backing with profit liabilities of major with profit offices in 1996



GAD say:

> *It is concluded that with-profit liabilities at the end of 1996 were matched by about 75.6% of real assets (10.2% property and 65.4% equities) and by over 24% held in fixed interest securities (14.9% gilts and 9.2% other fixed interest holdings).*
>
> *This represents a marked reduction of 5.5% in the real asset proportion over the last year. Bearing in mind known market movements, this change would seem to result from deliberate cautious policy changes – and may reflect real tightness in the financial position of certain offices.*

On investment performance, GAD say that the average estimated investment return on non-linked assets is 10.4%. The report includes a table setting out the estimated returns achieved by individual companies, which for Equitable shows an estimated return of 10.34%.

GAD's report includes a chapter on maturity payouts. In the summary, and under the heading *'Impressions'*, GAD say:

> *While maturity payouts on shorter term policies have fallen sharply over the nineties, and fell generally between 1995 and 1996, the longer term policies have seen a comparatively level performance over the 1990s. However our projections of underlying asset shares, although a very crude indicator of the future, implies further sharp drops are likely. The sharp movements in the early 1990s on 10 year policies were in many ways a reflection of the upswing from the late 1980s (as companies recognised underpayment to policyholders fuelled by favourable investment markets) having to be hastily reversed as lower inflationary expectations brought lower expectations of investment return. At the same time reversionary bonus rates (as opposed to terminal rates) were also under downward pressure for the longer term policies, driven by the same fears of lower*

investment earnings. The process caused some angst over the speed with which companies could drop reversionary bonus, though the process has been eased by unexpectedly favourable equity markets in the most recent years. Overlaid on this have of course been differing competitive pressures on short term savings vehicles (such as a ten year endowment) and longer term mortgage repayment vehicles (such as a 25 year endowment). Criticism has been made by some of the mutuals over what they perceive as a belated move to more generous payouts from the proprietary companies, which has increased the competitive squeeze on the mutuals.

Companies generally have paid well over simple asset shares (defined below) in recent years, either by their particular experience but more likely by miscellaneous surplus and their estates, with such generosity encouraged by competitive pressures and dividend demands in the proprietary companies. The steady switch from conventional with profit business to unitised with profit options within a unit linked policy may well reduce the competitive pressures on what will become, in time at least, closed conventional series.

GAD provide the following *'Warnings'* about the information presented in this chapter:

This section of the report looks purely at [ordinary business] *conventional with profit policies. Comparisons of Industrial Branch maturity payouts are unfortunately not published in any of the trade magazines, which hinders any useful review.* [Ordinary business] *unitised with profit business, though very significant, is comparatively young and gives little maturity pay out information with only a handful of companies now capable of showing ten year (pension) results. This class is therefore considered in Section 9 on bonus rates.*

The companies considered are the 28 conventional with profit companies that have appeared in the most recent magazine surveys. These are practically all within the "top 66" group that underlies the bulk of this annual report but conversely there are a number (around 10) of "top 66" companies that have not bothered to appear (or avoided appearing) in the magazine surveys. It is these 28 companies that are used for median and leaders and laggards tables in this section.

By concentrating on the major companies who bother to enter surveys one does still capture the bulk of the business in existence, but the considerable number of companies no longer contributing to the surveys must reduce the benefit of our review. (This is indeed a complaint made by the magazines themselves). As noted those not disclosing results are not just the second rank companies outside the top 66 companies but large groups such as [three named companies] *and others. While occasional lapses are not suspicious one presumes studied non appearance is because these are often poorly performing offices. (The same effect can potentially be true of the more minor series of policies in the better offices). Such an effect, the self selecting exclusion of poorly performing offices from surveys, means magazine trends of average pay outs must be treated with caution as the later years have higher proportions of those offices who did well. The tables below provide historical data solely for the offices reviewed in 1996, i.e. offices that appeared in the latest surveys, and thus avoid the problem of distorted trends. However the picture is slanted to a band of more successful offices, as some self selection is present by weaker offices being excluded throughout.*

On *'Assets Shares'*, GAD's report explains:

The retrospective roll up of premiums, known as asset shares, is becoming a reasonably common device by which companies gauge the balance of bonus distributions between differing terms of policies. (It is only in some companies that such simple asset shares are looked upon as the sum total of policyholders' PRE). A graph of asset shares representing the roll up of premiums for the same period as the maturing policies year by year shows *a similar picture to a managed fund unit linked policy, i.e. a volatile picture driven by each year's investment returns. However, the gap between asset shares and the typical smoothed maturity payout can give an indication of the level of miscellaneous surplus and earnings on the estate that companies are distributing to their policyholders. We have therefore created a series of simple asset shares representing the roll up of premiums after the average expense levels identified in section 5, and using investment returns as shown by broadly based indices as the typical with profit asset mix analysed in section 7. The calculations are necessarily crude but do accord with other more theoretical work in actuarial papers of asset shares before the addition of miscellaneous surplus. The main caveats are*

- *using the average industry acquisition expense for policies of different term overcharges the shorter terms and undercharges the longer terms.*
- *the asset mix treats all equity investment as in the UK, with none overseas*
- *the average asset mix could theoretically be a mixture of more conservative mixes for policies close to maturity and more speculative mixes for earlier policies.*

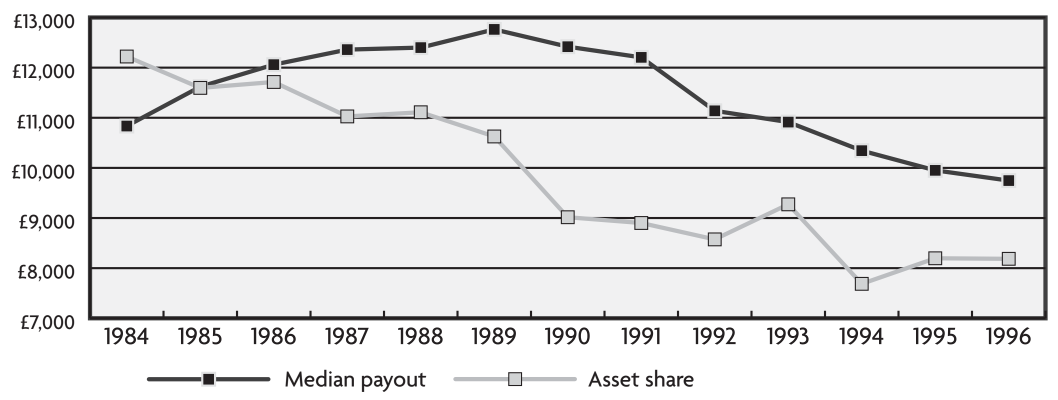
GAD set out maturity payouts for 10 and 25 year endowments and 15 year pensions using data from market surveys published in Money Management. They describe the trends in payout levels and particular aspects of certain companies. GAD then set out their *'Asset Share Comparison'*.

Under the heading *'Theoretical asset share to actual payouts'*, GAD say:

> *On a more speculative basis we can consider the median pay out of the top companies to our calculated progression of simple asset shares, which have no additional miscellaneous surplus added and represent merely a roll up of the contractual premiums less expenses. This comparison is made for a 10 year endowment, a 25 year endowment and a 15 year pension respectively in* [the figures below].

GAD present the following figures:

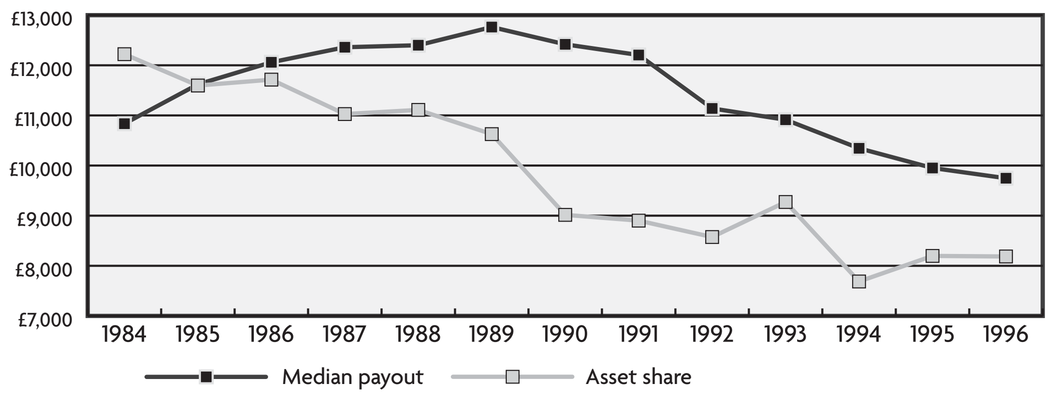
Comparison of actual median maturity payout and theoretical asset share for the years 1984-96 for a £50 per month conventional with-profits 10 year endowment policy (£)



An appendix to the report states that, for 10 year endowment policies, the average maturity payout as a percentage of asset share is 117%. For Equitable, the percentage is 121%.

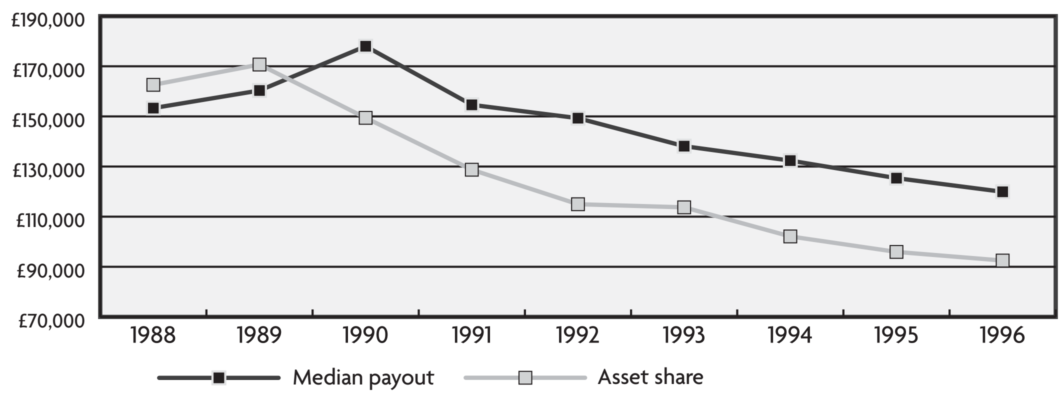
1997

Comparison of actual median maturity payout and theoretical asset share for the years 1985-96 for a £50 per month conventional with-profits 25 year endowment policy (£)



An appendix to the report states that, for 25 year endowment policies, the average maturity payout as a percentage of asset share is 106%. For Equitable, the percentage is 96%.

Comparison of actual median maturity payout and theoretical asset share for the years 1988-96 for a £200 per month conventional with-profits 15 year pension policy (£)



1997

An appendix to the report states that, for 15 year pension policies, the average maturity payout as a percentage of asset share is 127%. For Equitable, the percentage is 130%.

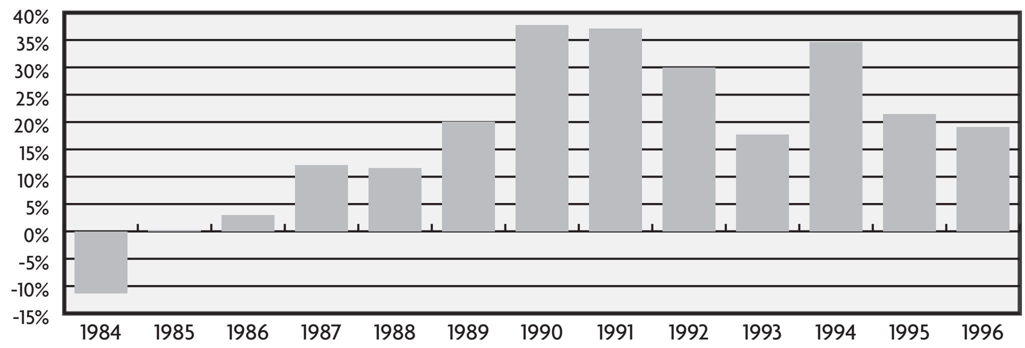
GAD say:

> *Bearing in mind the caveats of sub section 1 and problems arising where terminal bonus declarations are infrequent, there is as expected a noticeable smoothing of maturity payouts. The general effect is of payouts roughly tracking asset shares but at a considerable excess over asset shares in the 1990s. There is a range of possibilities at work here, including the introduction of more accurate methods of setting terminal bonus, competitive pressures in a harsher market and dividend demands in the proprietary companies.*

> *The real interest is whether this apparent situation will continue, as companies recognise the amount of miscellaneous surplus and estate they can distribute; or whether, as at least some companies currently arguing over the attribution of their estates contend, payouts are bound to fall closer to asset shares.* [A named company] *has separately complained bitterly in public about over paying companies setting unrealistic long term hopes. All of this goes to the heart of PRE arguments and the division of prior surplus not yet distributed.*
>
> *It is worth noting that if one pushes these simple asset shares on into the years after 1996 then relatively continuous falls in the underlying asset share is revealed year on year, an effect particularly sharp on the longer terms such as the 25 year term. The revealed excesses of current payouts to these crude asset shares described below, and the terminal bonus cover reviewed in section 9 both mean such a future needs a lot of care in management, and may foretell a future reduction in the perhaps over comfortable terminal bonus cushions that were common for offices at the beginning of the 1990s.*

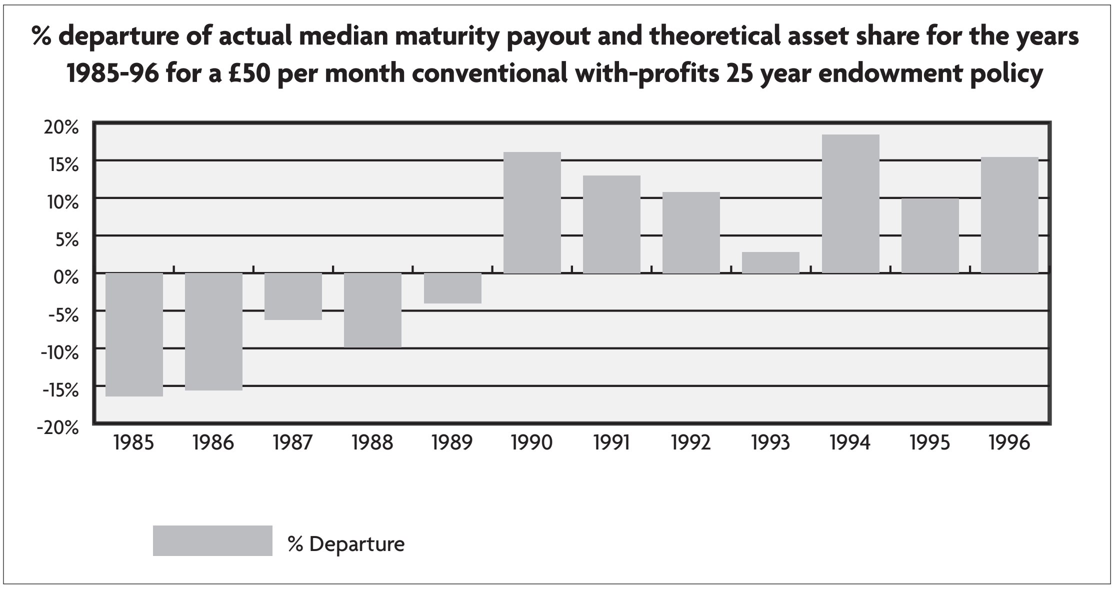
Under the heading *'Excess of actual payouts over asset share'*, GAD present the following chart:

% departure of actual median maturity payout and theoretical asset share for the years 1984-96 for a £50 per month conventional with-profits 10 year endowment policy



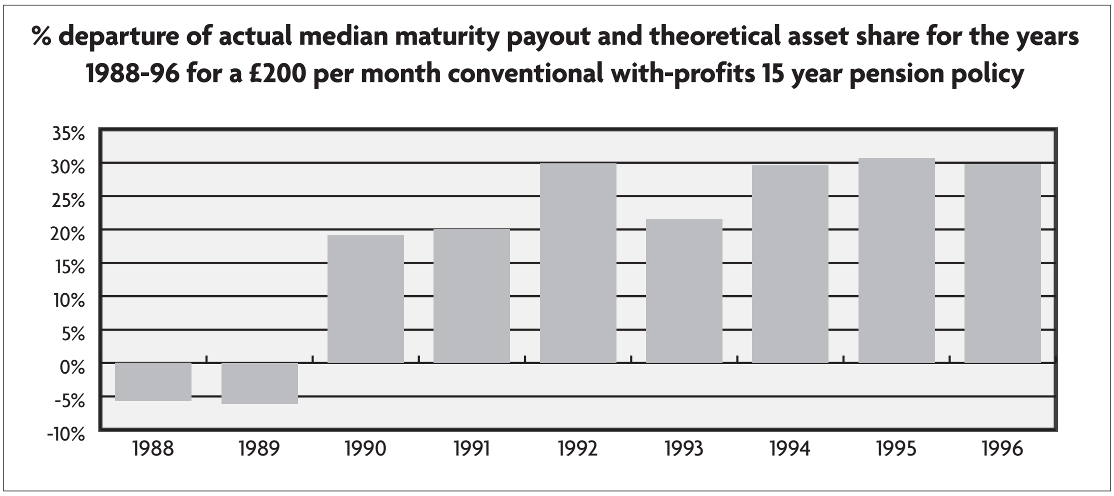
GAD explain: '*With the 10 year contract the excess payment has been present for far longer, though as noted the simple asset shares above are not helped by heavy acquisition costs included in the calculation. None of the top 66 pay under the 1996 base asset share amount of £8,186. With such excesses it is probably no coincidence that the 10 year contract was previously particularly singled out as needing correction by companies in public statements*'.

For 25 year endowment policies, GAD present the following chart:



GAD explain: '*The excess has arisen in the 1990s and implies quite severe earlier under payment to policyholders in the 1980s. If one trusts the crude calculation basis of these simple asset shares, then there has been a significant change in the approach of companies in the last 10 years, possibly for the reasons above with perhaps a more accurate analysis of what is due to policyholders uppermost. By 1996, with a simple asset share of £87,279, the top 66 companies paying below our asset share are* [four named companies], *Equitable and* [another company]. *One reasonably common thread between these companies might be a lack of profitable non profit business to boost payouts and relatively modest estates with a similar effect*'.

For 15 year pension policies, GAD present the following chart:



GAD explain: '*The more restricted survey results means the plot of the excess can only be carried back to 1988. The picture does however closely follow that of the ten year endowment. Even with the greater spread of results noted in sub section 2 above for this contract, only* [a named company] *pays under our simple asset share of £92,486 for 1996*'.

1997

In the chapter on *'Free Assets'*, GAD report:

> *In past years' annual reports, a broad-brush attempt was made to assess the relative strengths of the valuation bases adopted by the major with-profit offices by comparing the yield on total non-linked assets, adjusting this by stripping out the lowest yielding assets until exactly sufficient assets remain to match the total net non-linked liabilities, and comparing the resulting yield with an average valuation rate of interest used in respect of this business calculated as a weighted average of the actual rates used, the weights being the corresponding net of reinsurance reserves.*
>
> *This analysis has not been repeated this year, partly because the calculation of the average valuation rate of interest is a very labour intensive exercise, but mainly because there is serious doubt that the level of approximation inherent in the above approach is too great to produce meaningful results. In these circumstances, it seemed that a major manual data extraction exercise from the returns was not the best use of available resources.*

GAD continue:

> *It is hoped that for the 1997 report, a more sophisticated approach might be used based on the information now given in Form 57 of the returns under the new regulations, once a whole year's experience has been gained in using and summarising the information provided. For this year, however, we have restricted the report to providing just the ratios themselves, with appropriate comments on the relative strength of the valuation basis where this is known from first hand knowledge of the company concerned.*
>
> *The strength of the valuation basis is, of course, analysed in considerable detail in individual companies' detailed scrutiny reports. The reader is therefore advised when extracting individual figures from this report to also look at the detailed scrutiny report to put the figure into context.*

GAD say that four companies have used implicit items in their 1996 returns, one of which is Equitable. They say that this is unchanged since 1994. GAD say that the free asset ratio for Equitable excluding the implicit item is 3.8%. Under the heading *'Winners and losers'*, GAD provide a table of companies with the highest and lowest free asset ratios. Equitable are listed as being the sixth lowest, with a ratio of 5.5%. (Using free asset ratios that exclude implicit items moves Equitable to joint fourth lowest in the table.) GAD report that:

> *Both Equitable Life and* [the company with the fourth lowest free asset ratio] *use the gross premium (bonus reserve) method of valuation, so that the free asset ratios quoted for these companies are not strictly comparable to the others. This method of valuation produces larger reserves because explicit allowance is made for future expenses and bonuses, thereby reducing the free asset ratio. If these ratios were recalculated using the net premium method used by all the other companies, their relative position would improve to some extent.*

On the *'Overall picture'*, GAD provide a chart of the percentage change in free asset ratios from 1995 to 1996 and explain:

> *The most notable feature ... is the lack of significant change in free asset ratios compared with 1995. This is in fact not surprising given the economic conditions prevailing during 1996. These were such as to give a typical with-profit office, with a standard spread of investments, a rise in asset values of around 4.75% and a total gross return of around 10.75%. Although this may seem quite a good return, most companies actually require a return of at least this level to sustain their position. Overall, therefore, it was to be expected that free asset ratios would be little changed during the year. Individual companies' ratios will have changed largely as a result of factors specific to them.*

GAD comment on the changes in the free asset ratios of certain companies. They say that Equitable's free asset ratio had fallen over the year, *'but this is as much to do with the company's policy of not maintaining a large amount of free assets as anything else'*.

(Note: the bodies under investigation have told me that it should be noted that: *'the charts selected for this entry all show maturity payouts for regular premium contracts only. By contrast, the bulk of Equitable's business was recurrent single premium. These charts therefore have very little significance for Equitable. This comment also applies to the corresponding charts provided in the reports prepared by GAD for* [other] *years'.)*

09/12/1997 DTI, having received advice from GAD, inform a correspondent from Germany that '[being] *a member* [of Equitable] *does not involve any obligations other than the obligation to pay the premium'*.

(Note: this statement was to be the subject of criticism in the Penrose Report (Chapter 16, paragraph 215).)

16/12/1997 **GAD provide DTI with their Scrutiny Report on the Society's 1996 regulatory returns**. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) The report uses a detailed format similar to that adopted for the 1993, 1994 and 1995 returns (see 15/11/1994 [**entry 1**], 23/01/1996 [**entry 1**] and 01/11/1996 [**entry 1**]). It comprises 15 sections as follows:

(1) Executive summary
GAD say that Equitable are highly regarded, the oldest mutual life assurance society in the world and pay no commission to intermediaries. They achieve outstanding new business growth, based largely on their reputation for low expenses. GAD note:

> *About 65% of its liabilities relate to unitised with-profits business, for which it endeavours to show competitive annual accumulations of benefits reflecting the total investment returns achieved, but, because guaranteed bonuses include credit for a measure of asset appreciation, future bonus declarations of the Society would seem to be vulnerable to any sustained stock market downturn. It has a modest free estate.*
>
> *Some questions have been raised about the strength of the reserves established.*

(2) Key features
GAD set out some key statistics and observations, including:

- the cover for Equitable's required minimum margin is 2.53;
- their priority rating is 3;
- new business has more than doubled over the last five years;
- expense ratios are the lowest in the business and persistency experience is good;
- Equitable have achieved a '*mediocre*' investment return of 10.3% in 1996; and
- *'The gross premium bonus reserve valuation published does not appear to be any stronger than its permissible net premium valuation'*.

(3) Action points
GAD explain that they have asked the Appointed Actuary:

> *... about the provisions made: (1) for resilience, (2) for possible* [capital gains tax]*, and (3) for pensions mis-selling in the net premium valuation.*
>
> *He has also been asked to supply data comparing total accumulated assets shares for contracts in force with the total assets available.*

(4) Background
GAD reiterate information included in the Background section of their reports on the 1993, 1994 and 1995 returns, namely that Equitable are the oldest mutual life assurance society in the world and that they never pay commission to third parties. GAD explain that: *'This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method'*. GAD also say that:

> *The DTI returns also show the results of applying a net premium basis with assumptions close to the minimum permitted by regulations.*

GAD note that Equitable obtained a section 68 Order for a future profits implicit item of £600m for the 1996 returns and have used £312.8m. They also note that, in 1995, Equitable purchased a controlling interest in Permanent Insurance and bought out the minority shareholders in June 1997.

GAD explain that Equitable have increased their overseas activity in recent years (in Guernsey, Republic of Ireland and Germany) and that this was producing increasing amounts of new business. GAD state, as in their reports on the 1994 and 1995 returns, that Equitable regard this as *'missionary work'*.

GAD note that the last visit to Equitable was made in November 1996 (see 08/11/1996 [**entry 2**]), and that in 1997 Equitable took out a £350m subordinated loan.

(5) New business
GAD set out the new products Equitable have developed and the sources of their business. GAD produce tables showing the recent history of new regular premiums and new single premiums and a new business index. GAD comment that Equitable continue to produce exceptionally strong new business figures and that a very large proportion of the business *'is of the "accumulating with-profit" type, which is newly identified in the 1996 Returns'*.

GAD note that, as Equitable are not able to produce meaningful in-force premium figures for renewable single premium business, with the agreement of DTI the annual premiums recorded in Form 46 of the returns ignore this business.

(6) Changes in business in force
GAD provide a table showing *'Recent history of regular premiums received'*. They note:

> *While the revised Regulations were intended to help give appropriate recognition to renewable single premium business and classify it as regular premium business, the flexible nature of Equitable's products has made it difficult for them to quote a basic regular premium payment. As a somewhat perverse result, for 1996 the Returns of Equitable actually show lower regular pension premiums and higher single premiums.*

GAD produce tables showing: *'Claims experience'*; *'Persistency experience'*; and, *'Recent history of combined surrender, lapse & paid-up conversion rates'*.

GAD note that, although pensions is the major class of Equitable's business, persistency data was not available, due to the flexible nature of the contracts written.

(7) Expenses
GAD produce a table showing the history of expenses from 1992 to 1996. They comment that Equitable's expense ratios keep improving and have again reached *'astonishingly low levels'*. GAD note that Equitable claim to have invested £50m in redeveloping all operating systems over recent years, but that no exceptional costs were observed in 1996.

(8) Non-linked assets
GAD produce tables showing Equitable's: *'Recent history of asset mix'*; *'Recent history of asset mix attributable to UK with-profits business'*; *'Movement in asset values during the year'*; and, *'Investment performance'*.

The latter shows a return of 10.3%. GAD comment:

> *This return is slightly disappointing for the portfolio held, but includes a write-down in the value of investments in dependants. However, the return claimed in the Society's accounts for assets matching with-profit liabilities of 10.7% is competitive.*

(9) Assets held to match linked liabilities
GAD provide details of internal linked funds, other assets matching property-linked liabilities, mismatching to property-linked liabilities, assets matching index-linked liabilities and PRE. On the latter, GAD comment:

> *Where a fund invests in an Equitable Unit Trust, the annual management charge is reduced by ½%, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.*

GAD observe no particular problems.

(10) Valuation basis
GAD explain that Equitable:

> *... produces its published Return on the basis of a gross premium valuation for non linked business, with some allowance for future bonuses, but the results of a net premium valuation are also shown in the Returns – with a negligible liability difference.*
>
> *The Equitable tries to provide a fair bonus allocation to each generation of policyholders – without holding back an excessive estate. The result is that lower free asset margins exist than might have been expected for such a well thought of institution. It may be noted that the Society has, for the last three years, found it desirable to utilise a future profits implicit item to improve the disclosed free assets position – although at nowhere near the maximum that could be justified under the guidelines.*
>
> *There is one hidden strength in the valuation – the treatment of recurrent single premium pensions business, under which it is assumed that no more premiums will be received. Although in line with the best practice, this is a strong basis – particularly for property linked contracts. If such business were treated as regular premium, margins in future premiums and charges on the funds built up might allow somewhat lower reserves.*

GAD note, as in previous years, that a hidden strength in the valuation is the treatment of recurrent single premium pensions business, under which it is assumed that no more premiums will be received. GAD go on to discuss six particular areas:

Interest – GAD provide a table showing the valuation interest rates used for major classes. They state that *'Forms 57 show that matching assets are available'*.

Mortality – GAD explain that the bases used are reasonably conservative and that '[the] *Appointed Actuary insists in his report that these tables contain sufficient allowance for future reductions in rates of mortality'*.

Expenses – GAD state that the total provisions were more than adequate and that the Actuary's contention that no additional provisions are needed to cover the continued sale of new business or to cover closure seemed acceptable.

Resilience and special reserves – GAD explain:

> *A resilience reserve requirement is reported of £501m, but this has not been allowed for in Line 29 of Form 57 and bearing in mind that this must be largely covered by equity assets, it is thought that a grossed up figure of £668m should have been provided for.*
>
> *This is being queried.*

Other factors – GAD explain that the parameters used for establishing sterling reserves for unit-linked products seem rather weak. *'However, potential expense strains are not thought to be great for this company and the standard annual expense inflation rate assumption they use is only 4%, so no question has been raised on this occasion'.*

GAD add:

> *The failure to set up a specific reserve in relation to the contingent liability of £47.7m for tax on capital gains on non-linked assets is dubious – relying on other margins in the valuation basis. This is being queried.*
>
> *A pensions mis-selling reserve of £50m was included within the future bonus provision in the bonus reserve valuation, but it is not clear that any such provision was established in the net premium valuation. This is also being queried. [Recent correspondence suggests that the required provision had risen to £85m by 30 September 1997.]*

Overall strength — GAD state:

> *The Society informs its holders of accumulating with profit contracts of the amount of their accumulating final bonus (although clearly stating that it is not guaranteed), but only holds reserves for a discounted sum compared with the current guaranteed value.*
>
> *It is stated in the return that final bonus additions (the accumulated amount of which are not revealed) are implicitly covered by the amount of excess admissible assets over the mathematical reserves – shown in the 1996 Return as being about £1.4bn (including the* [required minimum margin]*). However, since the reserves already value current guaranteed benefit values at a combined discount of some £1.3bn, it seems likely that the total current "asset shares" (including final bonuses indicated to members) exceed total current admissible assets. The Actuary is being asked to clarify his view of the situation!*
>
> (11) Financial results

GAD provide an overview:

> *The Bonus Reserve Gross Premium valuation shows available assets covering the* [required minimum margin] *by a factor of 2.53, and the net premium valuation would show a similar picture.*
>
> *Without the implicit future profits item of about £312.8m, cover for the* [required minimum margin] *would be reduced to a factor of 2.07. Further, we are not clear that provisions made against the market value of assets for resilience and prospective capital gains tax are as strong as they should be.*
>
> *Because of the large proportion of business written on a participating basis and the high level of annual emerging surplus, there are not considered to be any actual potential solvency problems for the Society, but it does seem that, in the event of a marked fall in asset values, the Society might find itself in a position where it had to cut back severely the level of payout to members.*
>
> *It would seem desirable for the Society to hold back more of its emerging surplus by declaring lower guaranteed bonuses – although it could still attempt to pay out generous final bonuses to members (preferably without raising expectations too much in advance with its declarations of "non-guaranteed final bonuses").*

Against this last point, DTI's Line Supervisor B notes *'Policyholders must find this confusing!'*.

Under *'Summary of results for main classes'*, GAD produce three tables showing liabilities for non-linked and linked business and a valuation summary. The valuation summary shows, under the main valuation, that Equitable's cover for the required minimum margin is 2.53 (compared with 2.89 in 1995). There is no figure for cover under the appendix valuation. The table shows that Equitable's free asset ratio has fallen to 3.84% (from 5.13% in 1995). GAD comment:

> *The Net Premium Valuation generated a lower non-linked liability of £14,675,209,000 and a lower reserve for declared bonuses of £474,207,000 but was shown to require a resilience reserve of £501m.*
>
> *Thus, the total Long Term liabilities for ... the* [net premium valuation] *would be £17,705,214,000, ie most of the apparent margin between the* [bonus reserve valuation] *and* [net premium valuation] *policy liabilities is needed to cover resilience, and the* [bonus reserve valuation] *does not produce any material extra margins.*

GAD produce a further table showing composition and distribution of surplus. They make no comments on this.

(12) <u>Bonuses</u>
GAD produce tables showing the cost of bonuses declared and the recent history of key bonus rates. They repeat the description of Equitable's bonus system and quote from Equitable's own description. Against this, Line Supervisor B writes: *'Perhaps this confuses* [policyholders]*?'*.

GAD reproduce Equitable's table of earned investment returns on gross market value and the rate allocated in fixing bonuses, updated to include 1996:

	1990	*1991*	*1992*	*1993*	*1994*	*1995*	*1996*
Earned	*-8.3%*	*13.5%*	*17.1%*	*28.8%*	*-4.2%*	*16.6%*	*10.7%*
Allocated	*12%*	*12%*	*10%**	*13%*	*10%*	*10%*	*10%*

' 12% was applied to new benefits secured during the year'*

Under *'PRE'*, GAD state that Equitable:

> *... tries very hard to achieve an equitable distribution to each generation of its policyholders, whilst avoiding short term fluctuations in benefits – with the result that it has not accumulated any material unallocated estate compared with accumulated asset shares (if any – see Section 10.7).*
>
> *However, it reserves the right to penalise early surrenders, even in relation to guaranteed bonuses added under unitised contracts, and it might be desirable for this possibility to receive greater prominence in the literature distributed. Further, with such a large proportion of unitised business and with the level of guaranteed bonuses declared taking account of some asset appreciation, it would seem to be desirable that policyholders were given some greater warning about the possible implications for future bonuses of a substantial market setback.*

Against this, Line Supervisor B notes:

> *Take up with company? I discussed this briefly with* [Scrutinising Actuary E] *– concern is that* [the company] *has no estate – no cushion. Should not perhaps be giving bonuses to new* [policyholders]. *But the markets are up at present.*

(13) <u>Reinsurance</u>
GAD state that Equitable make little use of reinsurance.

(14) Compliance
Under *'DTI compliance problems'*, GAD state:

> *The Society is not able to produce meaningful in-force premium figures for renewable single premium business, and a Section 68 Order has been given on a temporary basis (up to the end of 1998)* [see 30/04/1997] *allowing the Society to exclude recurrent single premiums from the annual premiums recorded* [in the returns].

Against this, Line Supervisor B has written *'I wouldn't call this a compliance problem'*.

Under *'PIA and other compliance problems'*, GAD state:

> *A pensions mis-selling reserve of £50m was included within the future bonus provision in the bonus reserve valuation, although it is not clear that any such provision was established in the net premium valuation and this is being queried.*
>
> *Recent correspondence suggests the required provision had risen to £85m by 30.9.1997.*

(15) Professional requirements
GAD certify that their report conforms with the requirements of the Institute and Faculty of Actuaries as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct and has been prepared in accordance with the Service Level Agreement approved in March 1995.

GAD's scrutiny report runs to 19 pages. Line Supervisor B copies the report to Line Manager C and to the Head of Life Insurance.

GAD write to Equitable to pursue five issues arising from their scrutiny of the 1996 returns.

(1) GAD point out that Equitable do not state what test they have applied in assessing the required resilience reserve. GAD query if the figure indicated in the report on the net premium valuation (£501m) should be grossed up.

(2) GAD state that they are not convinced that it is acceptable for Equitable to assert that other margins are available to cover the discounted value of the prospective liability for tax on unrealised gains. GAD invite Equitable to comment on this point and to advise what other margins are considered to be available.

(3) GAD note the provision for £50m for pensions mis-selling in the bonus reserve valuation and ask where the corresponding provision is in the net premium valuation.

(4) GAD say:

> *It is stated in the return that final bonus additions are implicitly covered by the amount of excess admissible assets held over the mathematical reserves – shown in the 1996 Return as being about £1.4bn. (including the* [required minimum margin]*). However, since your reserves already value current guaranteed benefit values at a combined discount of some £1.3bn, it seems likely that the total current "asset shares" (including the final bonuses indicated to members) exceed total current admissible assets. Is this a correct deduction? Please provide a figure for the accumulated asset shares for all in-force accumulating with-profit contracts at end 1996.*

(5) GAD ask Equitable to explain if:

> *... the policy reserves for any accumulating with profits policies were lower than the basic surrender values available at the valuation date (ie excluding any amounts in respect of final bonus from these values)? If so how much was the total of such differences?*

1998

05/01/1998	Responsibility for prudential regulation passes from DTI to HMT.

13/01/1998 Equitable write to GAD in reply to the five points in their letter of 16/12/1997:

(1) Equitable state which of the resilience scenarios tested was the most onerous and used for the resilience reserve. They undertake to specify this in future. They confirm that the figure used is the grossed up amount.

(2) Equitable reiterate that there are substantial margins in the expense reserves and point to the parts of their returns which show these. They say:

> *The prospective liability to tax on unrealised gains will essentially relate to earnings to be distributed as final bonus on* [basic life and general annuity] *business. As such the potential tax liability might reasonably be argued to be a charge on the Investment Reserve and, accordingly, not need to be provided for within the mathematical reserves in any event.*

Equitable ask for GAD's comments on this view.

(3) Equitable state that the provision of £50m was similarly held within the mathematical reserve for personal pension business.

(4) Equitable explain that they do not understand GAD's question. Equitable say:

> *A comparison of the totals of columns 11 and 12 on form 52 shows that the discounted value of accumulating with profits benefits is £638m less than the full "face value", not £1.3bn less as you state. I am also not clear as to the meaning you attach to the highlighted words "current guaranteed". The face value of benefits is the current value of guaranteed benefits <u>if</u> a contractual event (eg death) occurred at the valuation date. In most cases there is no contractual right to receive the current accumulated benefit at the valuation date.*

Against this paragraph, GAD note that current benefits are discounted by £638m *'for* [gross premium valuation], *but £1,320m in* [net premium valuation]'.

Equitable acknowledge, however, that GAD are:

> *... correct in deducing that at 31.12.96 the total face value of policies including accrued final bonus was in excess of the value of the assets attributable to with profits business. Those assets will include items like the accumulated new business strains and so are higher than a pure share of the Form 9 admissible assets.*

Equitable continue:

> *Regarding your final sentence, I am not clear whether you are asking about unsmoothed or smoothed asset shares. Because of the flexibility of our contracts we do not calculate unsmoothed asset shares for every policy. However, given the way we operate the business the totality of unsmoothed asset shares will be close to the value of the assets attributable to with profits business. If, however, you are asking about smoothed asset shares, then our bonus systems mean that the policy value, including final bonus, is effectively a smoothed asset share. Thus the total of such asset shares will be the total face value of policies including accrued final bonus, as discussed above.*

Equitable then state that the total figure for accumulating with-profits contracts at 31 December 1996 was £14.7bn.

(5) Equitable explain that their accumulating with-profits policies do not include guaranteed surrender values as such, but that:

> *... there are ranges of dates between which benefits may be taken at full value (eg on retirement). The valuation method takes account of such options which explains why the discounted value of benefits is 95% of the face value, when the typical outstanding period to selected pension date would lead one to expect a much more substantial degree of discounting.*

They add:

> *You may be interested to know that, in the light of the reduction in yields in 1997 and the loss of tax credits on UK dividends, I expect that the reserves at 31 December 1997 for accumulating with profits business will, including resilience reserves, need to be greater than the face value of benefits.*

GAD sideline this paragraph.

16/01/1998 GAD write to Equitable in reply to the five points in their letter of 13/01/1998:

(1) GAD thank Equitable for confirming that the resilience reserve required of £501m is the grossed up value. GAD say:

> *It would be easier to follow what has been done if Forms 57 of your Returns included the resilience reserve as a liability in Line 29 – presumably giving a total initial liability of £15,675,191,000 and a corresponding value for initial matching assets.*

GAD point out that Equitable's figure in the body of their returns for the fall in value of assets and liabilities does not correspond with the figure in the net premium valuation.

(2) GAD state:

> *We accept that there are margins that will emerge from expense reserves in future years, but are still not convinced that it is appropriate to use these to cover the discounted value of the prospective liability for tax on unrealised gains on assets shown at market value in Form 9.*

GAD continue:

> *With regard to your more general point, in the Statement of Solvency as set out in Form 9 total liabilities are set against the total market value of admissible assets. This automatically includes any amount that is considered to be an "investment reserve", irrespective of the use to which it might be put. We believe that liabilities must also allow for any tax payable on chargeable gains, though it is naturally possible to reduce this tax liability in resilience scenarios.*

GAD ask Equitable to reconsider this matter for their next returns.

(3) GAD note that the pensions mis-selling provision of £50m was included within the mathematical reserves for personal pensions business in the net premium valuation. They state: *'We consider that the existence of such reserves should be disclosed in the valuation report, and it would clearly be helpful if it were also disclosed where such reserve is held. Please review for the next Return'.*

(4) GAD explain that the figure for the discounting of reserves of £1.3bn is taken from the figures supplied in the net premium valuation. GAD say that this *'is the valuation basis that we consider to be most informative. [Indeed, I am unclear as to why the Society persists with providing the gross premium bonus reserve alternative.]'*

GAD continue:

> *It is my understanding that bonus notices from Equitable relating to accumulating with-profits business include details of accumulated non-guaranteed final bonuses. I do not think that it is possible to derive from your Returns the amount to which such final bonus expectations have accumulated at the valuation date, and my emphasis on the level of accumulated "current guaranteed" benefits was merely intended to highlight this missing information. I naturally accept your point that even the amount of the current face value of guaranteed benefits is not immediately payable at the valuation date.*
>
> *I am grateful for the clear answers given in your second and third paragraphs, confirming my deductions about the overall financial position of the Society. The total figure for the face value of all accumulating with-profit policies including accrued final bonus of £14.7bn is £3.8bn above the net premium reserve carried for this business, and this margin clearly well exceeds the amount of available free assets shown in Form 9. I am happy to confirm that this does not necessarily cause me any concern, but the lack of any unutilised free estate does bring to prominence the importance of not building up policyholder expectations too far – with the implication that it might then be considered necessary to hold reserves for anticipated final bonus additions. I am sure that you are acutely aware of this.*

Line Supervisor B underlines and sidelines the comment about the lack of an unutilised free estate and policyholders' expectations. On her copy of GAD's scrutiny report on the 1996 returns, the Line Supervisor records concern that Equitable have no estate and queries if they should be giving bonuses to new policyholders (see 16/12/1997). She further records that the above is GAD's response.

(5) GAD state that they assume Equitable's answer relates to the reserves held in the bonus reserve valuation, whereas their question related to the net premium valuation. GAD repeat their request that Equitable confirm:

> *... that available surrender values at the valuation date under accumulating with profit policies, excluding any amount which may be attributed to final bonuses, did not exceed the discounted reserves held in the net premium valuation.*

GAD send copies of Equitable's letter of 13/01/1998 and this reply to HMT. GAD explain that they will provide their final thoughts on the scrutiny after they have considered Equitable's next reply.

04/02/1998 Equitable write to GAD in reply to the five points in their letter of 16/01/1998:

(1) Equitable give an explanation for the discrepancy in the figures. They query if GAD's suggestions for completing the returns are consistent with the ICAS Regulations 1996.

(2) Equitable note GAD's comments and undertake to consider the matter for the 1997 returns.

(3) Equitable explain that their approach in the 1996 returns reflected the difficulty of quantifying the amount of the possible liability. Equitable say they now have more data and that they *'will be showing an explicit reserve in the 1997 returns'*.

(4) Equitable explain that:

> *The bonus reserve valuation published is the one the Appointed Actuary considers appropriate to the requirements of regulation 64(1). The fact that it is based on a bonus reserve method is partly due to historical precedent (it was the method developed by William Morgan to carry out the first ever actuarial valuation of a life office) but, more importantly, because successive actuaries have felt it better suited to the nature of our*

business. The net premium valuation is published purely to demonstrate compliance with regulation 67(4).

Equitable suggest that the figures given by GAD in their letter of 16/01/1998:

> *... somewhat misrepresent the position because you are comparing the excess of total policy values (including final bonus) over the net premium reserves with the Form 9 "free assets" which are based on the bonus reserve valuation. Also, as noted in my previous letter the admissible assets are, in commercial terms, a conservative view of the assets properly attributed to the with profits policyholders.*

Equitable explain that they *'take great care on our bonus statements to emphasise that the final bonus element of the current policy value is not guaranteed in any way' and that 'In the years we have been using this form of presentation we have, as you say, been acutely aware of the need not to build-up inappropriate expectations'. Equitable continue and say that they 'do, however, feel very strongly that giving full policy values (as well as the current value of guaranteed benefits) is very useful for policyholders in planning their affairs'.*

Equitable suggest that some declared bonuses are being kept imprudently high by some offices, particularly on with-profits bonds *'partly due to a failure of* [those] *offices to communicate the developing terminal bonus position adequately to their clients'*. They continue by saying that '[an] *annual presentation of the overall position, such as that used by the Society, avoids such pressures and allows a more disciplined approach to reversionary bonuses. I think it would do a grave dis-service both to policyholder communications and the sound management of offices if quoting current policy values including terminal/final bonuses effectively became outlawed for the reasons implied by your penultimate sentence'.*

(5) Equitable state:

> *I apologise for misunderstanding your question but the approach described in ... my response applied equally to the net premium valuation. (The degree of discounting is slightly higher due to the higher interest rates.)*

05/02/1998 HMT's Line Supervisor B tells the Head of Life Insurance that an ex-National Lottery regulator who had been subject to press criticism had been linked in a newspaper article to Equitable. She had checked and found that he had been appointed a director in 1995. The Line Supervisor explains that she is checking further to see if there are any 'fit and proper' implications. The Head of Life Insurance replies that *'It may be that his failings as regulator don't make him unfit to be one of many directors – but the case needs to be reviewed, and it may be that Equitable themselves will want him to go'.*

10/02/1998 GAD's insurance sections hold a regular monthly meeting. Amongst other matters, they discuss annuity guarantees. GAD's minute records the following:

> [A Directing Actuary] *explained that this subject had become relevant due to the current low interest rate environment for both short and long term stocks, and with the additional factor that mortality rates were lower than when guarantees were given.*
>
> [A GAD Scrutinising Actuary and member of the Annuity Guarantees Working Party] *outlined the response by the Institute Working Party on this matter, although the* [Working Party] *had not met since the Brighton conference in November 1997. The three aims of the working party were to:*
>
> *a) Identify what the risk was.*
>
> *b) Find methodologies for reserving for that risk.*
>
> *c) Survey the industry to determine what actuaries were thinking on their reserving basis.*

The findings demonstrated that a problem existed, with roughly 50% of companies recognising they had a problem and of those, a further 50% reserving properly, leaving 75% of companies not reserving adequately.

It was agreed that a GAD circular letter should be sent to companies to provide information on this subject, with the [Working Party] *questionnaire being used as a template.*

23/02/1998	Equitable inform HMT that they have received no reply to their letter of 01/09/1997 about their application for a section 68 Order for a future profits implicit item of £700m, for use in their 1997 returns.
24/02/1998	HMT send Equitable a copy of their letter of 14/10/1997 enclosing the requested section 68 Order.

27/02/1998 GAD write to Equitable in reply to the five points in their letter of 04/02/1998:

(1) GAD state:

We and, I confidently believe, most actuaries have accepted that long term liabilities to be incorporated into Forms 57 include any required resilience reserve – and such reserve is normally included with other liabilities that do not require a discount rate to be applied.

(2) & (3) GAD note Equitable's comments.

(4) GAD say that they:

... note your reasons for sustaining the bonus reserve valuation for conventional with-profit business, but I would point out that the overall result compared with the net premium valuation (that we monitor) would now appear to be little different. I calculate that, including the required resilience reserve, the liability that would have been shown in Line 23 of Form 9 using your alternative net premium valuation as at 31.12.1996 was £17,567,234k, i.e. less than £5m lower than the reserves produced using the bonus reserve valuation figures.

GAD reassure Equitable that no consideration was being given to outlawing the type of bonus notice they currently issue, but that it would be a matter for concern if any holders of accumulating with-profits contracts were ever to feel that they had been misled. GAD add:

It is clearly in the best interests of the whole industry for all participants to be wary of either granting over-generous guaranteed bonuses or of building up any false expectations in relation to final bonuses. The manner in which Equitable operates as a mutual – giving the best possible returns to each generation of policyholders, with the consequent lack of any substantial unutilised free estate, does mean that you do not have much of a cushion to enable you to protect holders of such contracts from the natural effects of future falls in the market value of assets. We remain confident that your company is fully aware of this.

(5) GAD note Equitable's comments, but add:

I am not clear that you have directly answered my question "can you confirm that available surrender values at the valuation date under your accumulating with-profit policies, excluding any amount which may be attributed to final bonuses, did not exceed the discounted reserves held in the net premium valuation?"

GAD copy this letter to HMT. GAD say that there are no compliance points in relation to the 1996 returns for HMT to follow up, although Equitable have agreed to some presentational changes for the 1997 returns (see 04/02/1998, point 3). GAD continue:

I also confirm that, even though our correspondence is not yet concluded about their accumulating with-profit business, we are basically satisfied with the prudence of their reserving bases as adopted for the 1996 returns.

The position revealed is very tight, since Equitable operates on the basis that, as a mutual, it should endeavour to give full value to each generation of policyholders. It therefore does not accumulate any meaningful free estate. Hence our desire to ensure that it does not build up any false expectations for its policyholders, because it would be hard for it to establish reserves for any greater liabilities than those it currently recognises.

GAD conclude that HMT may now regard the scrutiny of the 1996 returns as complete.

12/03/1998

Equitable write to GAD in reply to their letter of 27/02/1998. In response to the outstanding points from the correspondence:

(1) Equitable explain that they are happy to adopt whatever approach GAD require, but observe that there seems to be *'some general confusion'* on the point, with one other company interpreting the requirement in the same way as the Society. They suggest that HMT clarify the guidance notes on this point at the next update.

(4) Equitable note GAD's comments with interest. Equitable add:

The relationship between the bonus reserve valuation result and the net premium result is not surprising where the view taken about the appropriate level of the bonus reserve valuation is similar to the regulatory requirements (including resilience testing).

The point may become clearer in the 1997 returns. As mentioned previously, I shall be showing essentially "full value" bonus reserve liabilities (ie no discounting of the accumulating with profits "current benefits") since I consider that to be appropriate to current conditions. The net premium reserves will be lower. Conditions at 31 December 1997 were, however, such that an explicit resilience reserve will be needed in addition to the bonus reserve liabilities in order to satisfy the GAD guidelines. The net premium valuation will naturally require a larger resilience reserve, the difference between the two resilience reserves being equal to the difference between the two sets of mathematical reserves.

(5) Equitable explain that they now understand GAD's question to relate to any surrender. Equitable say that they could not *'state categorically that the non-contractual surrenders we were actually paying on 31 December 1996 were, in all cases, lower than the mathematical reserves held'*. They add that they are not clear as to the relevance of the point as:

The surrender values being paid were only "available" because we were prepared to pay them on the low incidence of early non-contractual terminations being experienced. If we had been experiencing a significant volume of surrenders we should have exercised our right to reduce further the values paid – possibly to below the level of the mathematical reserves in all cases – in order to protect the fund.

21/04/1998

GAD write to Equitable's Appointed Actuary in reply to their letter of 12/03/1998. GAD state that the new guidance note would make the approach to showing the resilience reserve clear. GAD note Equitable's comments on questions 4 and 5 and add:

The whole area of the appropriate bonus methodology to be used for accumulating with-profits business, the expectations built up for policyholders and the establishment of proper reserves has become more difficult as a greater proportion of investment returns is being derived from asset appreciation — which could prove to be ephemeral.

GAD describe Equitable's Appointed Actuary as Actuary to a leading office in the field which has been writing this type of business for longer than anyone else. GAD invite him to visit to discuss these topics. The meeting is set for 28/05/1998. On HMT's copy of this letter, Line Supervisor B notes that GAD would let HMT know the outcome. The Line Supervisor notes further: *'28/5 — discuss how he runs his bonus policy'*.

08/05/1998 [entry 1]	In response to a letter from HMT's Head of Life Insurance, Equitable provide an update on their potential liability for pensions mis-selling. Equitable say that, in their 1997 returns, they expect to show a total provision of £75m, minus whatever actual redress is paid out in the first quarter of 1998.

08/05/1998 [entry 2] An HMT official writes to the Head of Life Insurance about the service level agreement in place between HMT and GAD. The official says:

> *This is the first time I have read this document and there are many parts of it that appear to me to be surprising and open to question. In places it reads much more like a set of rules designed to ensure that Insurance Directorate does not default on its obligations to GAD rather than the other way round. There is no provision for termination of the agreement, few standards are set out, and there is no time limit. In fact, if this agreement was submitted by a company requiring authorisation as a services agreement eg for third party administration, we would probably require it to be re-written!*
>
> *Given the sensitivities involved it may be difficult to do this but there is one part that is difficult to accept. This is A16. This allows GAD to write to the company without any reference to us unless they consider it appropriate for us to do so. In my view GAD should never write to a company without prior reference to us and express agreement on our part that they should do so; and they should copy such letters to us as soon as they have been sent.*
>
> *Basically I think this agreement is out of date and will be outmoded when we enter the FSA. There seems little to be gained by revising it at this stage. But what is the purpose of renewing it if it will be replaced by an FSA/GAD agreement. And is it really appropriate for us to renew it without reference to the FSA given that we are now getting into the mode of becoming more integrated with the FSA?*

28/05/1998 GAD (Scrutinising Actuary E and Chief Actuary D) meet Equitable's Appointed Actuary. GAD do not make a formal record of the meeting. However, the Scrutinising Actuary's notes of the meeting show that they discuss Equitable's bonus declaration strategy, individual savings accounts and Permanent Insurance. With respect to the first of these topics, Scrutinising Actuary E notes:

> *Non* [guaranteed] *element could be negative.*
>
> *Particular problems with Bonds rather than pensions* [business].
>
> *Has company done specific market research on policyholder understandings? Analysed telephone queries.*
>
> *Further discussion to take place on reserves. – Equitable.*
>
> [Regulation] *69, max interest rate. – Permanent* [Insurance]*?*
>
> *Discussed PRE surrender test.*

Equitable's Appointed Actuary prepares his own note of the meeting. He records:

The meeting was fairly unstructured and went through somewhat of a ragbag of not particularly well thought through concerns that [GAD] *have. However, their main points seem to be:*

(i) Declared bonus rates are still too high.

(ii) That offices have been incautious in distributing recent high capital returns and have not made sufficient allowance for the fact that such returns may reflect a "one off" adjustment to a lower yield basis or could be reversed to a significant degree by a change in sentiment.

(iii) That the way benefits have been presented to policyholders restricts the ability of offices to make significant changes to terminal bonuses without severely damaging policyholders' perceptions of them.

The Appointed Actuary notes that, although GAD had general concerns about the industry, GAD:

... appeared to have some specific concern that we were more exposed to the above risks than most other offices. That was partly due to our "full distribution" approach and also to some anecdotal evidence that policyholders believed their full fund value to be guaranteed.

The Appointed Actuary records that he strongly refuted the suggestion that Equitable were more exposed, citing Equitable's disciplined approach to declaring reduced bonuses; their realistic views on investment prospects *'that had led to a deliberately cautious approach to setting bonuses over the last couple of years'*; and the information provided to policyholders. He also notes that GAD:

... asked about the current relationship of total policy values to underlying assets and I said that I thought currently assets were around 105% of policy values.

He concludes:

It is difficult to judge exactly what [GAD] *were hoping to gain from the meeting but they stated at the end that they were considerably more reassured about our approach than they had been at the start.*

The Appointed Actuary notes that, at the end of the meeting, there was some general conversation about other issues, including the proposals from the Working Party on the statutory valuation basis and reserving for annuity guarantees.

08/06/1998 GAD write to Equitable following the meeting on 28/05/1998. GAD say:

I think that there is little more to be said or done at this stage in relation to the reserving bases that are appropriate for accumulating with-profits business, but it is clear that we are agreed that great restraint should be exercised in relation to the setting of guaranteed bonus levels at a time when a large part of investment returns is being derived from capital gains.

GAD note the openness of Equitable's current bonus structure and the clarity of the notes included in their bonus notices. GAD explain that they still remain wary that some of Equitable's policyholders may not appreciate that levels of non-guaranteed final bonus might actually be reduced from one declaration to the next. They note that the only research Equitable had done into policyholders' understanding of the notices was an analysis of telephone enquiries received, and question whether the analysis remained relevant.

GAD write to HMT enclosing a copy of their letter to Equitable. GAD confirm that their discussions:

... did not conclude that any particular strengthening of their reserves was needed in relation to accumulating with-profits business, although I remain somewhat concerned that not all holders of such contracts (with this and other offices) appreciate what could happen at future bonus declarations if we saw a sudden downturn in the market value of assets. The whole industry is relying on a soft landing, so that reductions can be achieved gradually and without trauma.

16/06/1998	Equitable inform HMT that they intend to do business in Greece. Equitable ask HMT to forward the required notice and certificate to the Greek authorities. HMT copy the letter to GAD for their comments.

18/06/1998 GAD inform HMT that they intend to conduct a survey of companies about annuity guarantees. GAD say:

> *You may like to see the attached questionnaire that we propose to send to life offices requesting further information about some of their pension contracts. We are aware from a recent similar survey by the actuarial profession that there is a potential issue for a number of companies which have provided guarantees of the basis on which they will convert lump sums under various pension contracts to an annuity income stream.*
>
> *Most of these guarantees were given on bases (for mortality and interest rates) which looked relatively conservative at the time they were given. However, with increasing life expectancies, and significant reductions in yields on gilts in recent years, a number of these offices may now be significantly exposed to additional liabilities in respect of these guarantees.*
>
> *Unfortunately, most of the company returns do not provide sufficient information at present about this particular exposure. Our questionnaire is therefore designed to elucidate further information on these guarantees from each office. This can then be analysed here so that we can identify those companies where further discussion may be needed as part of the ongoing supervisory process.*
>
> *I hope that there are no perceived difficulties over our collecting this general information. We shall certainly inform you of our findings, and of course highlight for you any companies where there may be a particularly significant problem.*

19/06/1998 [entry 1]	GAD advise HMT that it would be reasonable to provide the Greek authorities with the requested notice and certificate.
19/06/1998 [entry 2]	HMT give their agreement for GAD to conduct the survey. GAD send out the survey questionnaires on the following day (see below).

20/06/1998 Every insurance company is sent by a GAD Directing Actuary, who also has responsibility for Equitable, (Directing Actuary B) a letter, headed *'Reserving for Annuity Guarantees'*. The Directing Actuary says:

> *We are aware that a number of companies have included various forms of annuity guarantees on some of their pension products. Detailed information on the nature and extent of these guarantees is not though specified as having to be provided for all contracts in the returns.*

Directing Actuary B explains that, given trends in recent years in mortality and market interest rates, a number of the guarantees may be of increasing significance to the financial management of life insurers. Consequently, GAD are seeking further information about the nature of the annuity guarantees written, methods of reserving for them, and other related issues. The Directing Actuary encloses a questionnaire and asks for it to be completed and returned by 31/07/1998.

Submission of the 1997 regulatory returns

26/06/1998 [entry 1] **Equitable submit their 1997 regulatory returns to HMT**. Accompanying those returns are copies of the Society's annual report and financial highlights and its statutory annual report and accounts, prepared in accordance with the Companies Act 1985 and dated 25 March 1998.

These documents include the following information about Equitable's business and their financial position as at 31 December 1997.

<u>Companies Act annual report and financial highlights</u>
In their *President's Statement*, Equitable state that new premium income had exceeded £3bn for the first time and that their expense ratio had fallen for the ninth successive year to 4.1%. Equitable also state that *'in recent years we have been able to reduce the charges on many of our contracts, not just for new policies but also for existing contracts, and we were able to make further reductions during 1997'*. They also disclose that they had achieved a total return of 17.2% for their with-profits fund. The Board had decided to increase the total rate of return allocated to policies in the year but that reversionary bonus should reduce to reflect the lower returns which could be expected if inflation remained low. Equitable state that they operated a policy of full and fair distribution of profits and aimed to ensure that each generation of policyholders received a full and fair return on the amount they had invested, taking into consideration the investment and other experience over the duration of their contracts. As part of this policy, Equitable deliberately avoided the build-up of unnecessary free reserves that were sometimes termed an 'orphan estate'. Equitable disclose that they had raised £350m in subordinated loans during 1997 and commented that their ability to do so on favourable terms demonstrated the high regard in which they were held. The President reports that Standard & Poor's had reconfirmed their *'AA (Excellent)'* rating awarded to Equitable.

In their *Management Report*, Equitable say that one of their principles was to operate a policy of full distribution of profits and to avoid the unfairness created by the retention of profits earned by one generation of policyholders for the benefit of successors. Equitable say that they aimed at fair bonuses between all classes and durations of policy. Equitable explain that new systems of expense control had led to productivity gains for the benefit of policyholders. For 1994 to 1996, a rebate of charges had been made at the end of each calendar year where the aggregate contribution by the policyholder in the year exceeded £5,000. For 1997, the rebate was extended to all pension policyholders regardless of the amount contributed. Equitable state that, despite having a full distribution policy, investment strategy was *'driven by investment, rather than technical, considerations'*. They explain that the average annual return for the with-profits fund over the past four years had been 10.1% per annum which was around 1% per annum higher than would have been obtained on 15 year gilts (a proxy for risk free investments), while inflation had averaged 3.0% per annum.

On their bonus declaration, Equitable reiterate the aim of providing each generation of policyholders with full and fair returns on their investment. On the interim bonus for 1997, they say that:

> *In last year's report the general trend towards lower average returns, in a climate of relatively low inflation, was described. Taking account of that trend the rate of return to apply to claims in 1997 was set at 9% ...*

On the bonus declaration for 1997, Equitable explain:

> *Investment returns in 1997 were higher than expected at the start of the year and final bonus rates were increased for policies leaving the fund during the year. In the light of the actual earnings and taking account of the likely future position, the Directors decided to allocate a return of 13% p.a. to with-profits recurrent single premium pension*

contracts for 1997. That is the highest return allocated since 1993 and represents a very substantial real rate of growth for the year.

However, Equitable then go on to say:

The general trend towards lower returns remains unchanged. Indeed the growth in asset values and the reduction in yields over 1997 make lower returns in future more, not less, likely. For policies becoming claims in 1998 the Directors have, accordingly, decided to revert to the rate of return of 9% p.a. introduced at this time last year.

Equitable also explain that, in view of the likely future outlook, they had reduced the rate of declared reversionary bonus (i.e. guaranteed bonus) to 6.5% (down from 7.5%).

Companies Act statutory accounts
The Directors' Report for 1997 includes explanation of the financial results of the Society along with the valuation and bonus declaration made.

The returns
Equitable's returns are submitted in one part covering Schedules 1, 3, 4 and 6 to the ICAS Regulations 1996.

GAD's copy of the 1997 returns includes various annotations. I am satisfied that these were made by Scrutinising Actuary E during the scrutiny programme on or around 20/08/1998, when the Scrutinising Actuary prepared the A2 Initial Scrutiny check. However, for ease of reference, mention of these annotations is made here.

Schedule 1 (Balance sheet and profit and loss account)
Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14, 15 and 17. Form 9 summarises the Society's financial position at 31 December 1997 as follows:

Long term business admissible assets	*£23,827,839,000*
Total mathematical reserves (after distribution of surplus)	*£21,900,091,000*
Other insurance and non-insurance liabilities	*£176,198,000*
Available assets for long term business required minimum margin	*£1,751,550,000*
Future profits	*£371,083,000*
Total of available assets and implicit items	*£2,122,633,000*
Required minimum margin for long term business	*£845,457,000*
Explicit required minimum margin	*£140,910,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£1,610,640,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£1,277,176,000*

GAD add the figure for total mathematical reserves after distribution of surplus under the appendix valuation of £21,857,343,000.

In Form 13, Equitable set out their admissible assets. GAD circle the lack of an entry for investments in other group participating interests and the figure for the previous year of £62m.

In Form 14, Equitable set out their long term business liabilities and margins. GAD circle the figure of £400m included as the *'Amount of any additional mathematical reserves included in line 51 which have been taken into account in the appointed actuary's certificate'*.

GAD also write on Form 14 that the *'£350,000,000 Sub Loan ignored as a liability!'*. At some point, this annotation has been partially erased.

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 45.

In Form 40, Equitable provide a revenue account. GAD tick some of the figures provided.

In Form 41, Equitable provide an analysis of premiums and expenses. GAD annotate the form with some of the corresponding figures from the previous returns. GAD circle the figure for other management expenses of £7,279,000 (up from £2,514,000 the previous year).

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 of Equitable's returns provides the information required by paragraphs 1 to 23 of Schedule 4 to the ICAS Regulations 1996 and includes Forms 46 to 49, 51 to 58, 60 and 61.

Schedule 4 – main valuation (text)
Equitable state that this valuation is made in conformity with Regulation 64 of ICR 1994.

In response to paragraph 4, Equitable provide ten pages of information about their non-linked contracts. Most of the description provided is identical to that supplied in the previous returns.

GAD note the description for *'Pension contracts – old series'* that some older contracts contain annuity guarantees.

In response to paragraph 5, Equitable provide 66 pages of information about their linked contracts. GAD note where some of the information is unchanged or new.

In the description of the general principles and methods adopted in the valuation (which is largely unchanged from the previous returns), Equitable again state that, for accumulating with-profits deferred annuities:

> *The liability was calculated by discounting the cash fund purchased to date plus declared and attaching bonus cash fund with an allowance for future bonus.*

GAD again underline this and write *'can be less than current face value'*. The information provided in the returns continues:

> *For with profits retirement annuity and personal pensions benefits ... the benefits have been valued on the basis that the benefits will be taken at age 60 or, if that age has been attained, at the valuation date.*

In paragraph 6(1)(b), the returns again include the statement:

> *The valuation method makes specific allowance for rates of future reversionary bonus additions, the levels of which are consistent with the valuation interest rates employed having regard to the Society's established practices for the determination of declared bonus rates. The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

GAD again underline and sideline the final sentence.

In paragraph 6(1)(e), Equitable provide the values used for the rates of future bonus. GAD annotate the returns with figures from the previous year.

In paragraph 6(1)(f), Equitable disclose that they have explicitly made a provision of £75m for their prospective liability for tax on unrealised capital gains (in relation to business other than that linked to their internal funds), which they estimated as not exceeding £75.2m. GAD mark this paragraph with a large tick and write: *'NEW previously stated that other* [valuation] *margins were adequate to cover discounted liability'.*

In paragraph 6(1)(g), relating to investment performance guarantees, as in previous years Equitable state that they do not consider it necessary in current conditions to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in previous years, in paragraph 6(1)(h) relating to the reserves for all other guarantees not covered by paragraph 6(1)(g), Equitable state:

> *The premium rate guarantees and options under the Society's policies are described in paragraph 4. Where the right to effect further policies without medical evidence of health is carried a reserve equal to one year's extra premium deemed or actually charged was set up. It was considered unnecessary in current conditions to make explicit provision for the other guarantees and options described in paragraph 4.*

That is, Equitable state that they do not consider it necessary to hold an explicit reserve for, amongst others, annuity guarantees. GAD underline the final sentence and they also note that the description is unchanged from the previous returns.

In paragraph 6(2) Equitable state that, in determining the provision needed for resilience reserves, they have taken account of the fact that the long term fund has been valued at book value.

Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

As in their 1996 returns, Equitable explain in paragraph 7(5) that they consider the reserves for future bonus within the valuation to be fully able to withstand any future strains which would arise if there were significant changes in mortality or morbidity experience. Equitable say that, accordingly, the Society does not consider it necessary to establish any additional reserves in this respect.

In paragraph 7(6), Equitable disclose that they have tested the need for resilience reserves against the three scenarios contained in DAA6. They state that the most onerous scenario tested is scenario c (a rise in fixed interest yields of 3%, a 25% fall in equity values, a 20% fall in property values and a 25% increase in index-linked yields).

Equitable disclose that a resilience reserve of £325m was provided for. GAD note that this disclosure is *'NEW'* and that the figure for the previous year was nil.

In paragraph 7(8)(a), Equitable disclose the changes made to valuation assumptions and methods in the resilience scenarios. They explain that, in the resilience scenario, they had used the appendix (net premium) valuation method rather than the main (gross premium) valuation method but with some changes to the valuation described in the returns. As in their 1996 returns, Equitable disclose that the changes include, for all accumulating with-profits pension business:

> *... an annual loading of 0.5‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pensions business ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

Equitable also disclose that, in the resilience scenario, they had reduced the reserve for their potential liability for tax on capital gains to £5m. GAD note that they had elsewhere in the returns made a provision of £75m for this liability.

In paragraph 8(b), Equitable state that *'For accumulating with profit business the valuation rates of interest shown in Form 52 are net of a 0.25% interest rate reduction as a reserve for future expenses'*. GAD note that the figure used in the previous valuation was 0.5%.

In paragraph 8(d), Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 61 of this report.*

GAD sideline this paragraph.

In paragraph 13, Equitable disclose: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'*.

In response to paragraph 14 of Schedule 4, Equitable set out a statement of their aims with regard to bonus distribution and of how they maintained equity between different generations of policyholders. The information provided is the same as for the previous year. They refer to the Directors' absolute discretion as to timing and nature of bonus distributions, given to them by the company's Articles of Association. Equitable highlight that bonuses were primarily influenced by earnings on premiums and that their policy of full distribution to each generation of with-profits policyholders meant that there was no deliberate holding back of returns in order to build up an *'estate'*.

In paragraph 15, Equitable disclose that they had set reversionary bonus for the main policy classes at 3.0%. As in previous years, Equitable disclose that they offered loans under a *'loanback'* arrangement to some retirement annuity, individual and group pension policyholders.

In paragraph 16, Equitable set out final bonus rates. The returns, again, contain the statement, at paragraph 16(viii):

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

In paragraph 21, Equitable explain that they risk-adjusted the yields on assets other than land and equity shares by restricting them to 8%, which is that available on the highest yielding risk-free security held by Equitable. GAD underline this figure, note that the corresponding figure for the previous year was 10% and they write *'still HIGH?'*. Equitable also explain that, where they considered this appropriate, they risk-adjusted yields on land and equity shares.

<u>Schedule 4 – main valuation (forms)</u>
In Form 46, Equitable provide information on changes in their ordinary long term business.

In Form 47, Equitable provide an analysis of their new ordinary long term business.

Form 48 shows that 53% of Equitable's non-linked assets are invested in equities, 6% in property and 35% in fixed and variable interest securities (compared with 52%, 6% and 38% respectively in 1996). GAD tick some of the figures provided.

In Form 49, Equitable disclose that the gross redemption yields on some fixed interest securities backed by a government guarantee are, for certain durations, higher than for those not backed by a government guarantee.

In Form 51, Equitable set out the mathematical reserves held for various types of non-linked contracts (excluding accumulating with-profit business) along with information on the number of contracts in force, the benefits valued and rates of interest and mortality assumptions used. GAD annotate the forms with corresponding rates of interest used in the previous returns.

In Form 52, Equitable set out the mathematical reserves held for accumulating with-profits contracts along with information on the number of contracts in force, the benefits guaranteed, and the rates of interest and mortality assumptions used in valuing them. The Scrutinising Actuary notes on the form some of the rates of interest used in the previous year. (Note: a GAD actuary has also identified – at an unknown time – those policies listed which include annuity guarantees.)

In Form 53, Equitable set out the mathematical reserves held for the various types of property-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 54, Equitable set out the mathematical reserves held for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

In Form 57, Equitable provide matching rectangles illustrating the notional allocation of assets to each category of liabilities, showing the valuation rates of interest supported and the ability of the matching assets to cover the reserves in the resilience scenarios.

In Form 58, Equitable set out the valuation result and the composition and distribution of fund surplus. GAD annotate the form with corresponding figures using the appendix valuation.

<u>Schedule 4 – appendix valuation (text)</u>
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994.*

Equitable's appendix valuation provides the information required by paragraphs 1, 6 to 8, 10, 11, 20 and 22. The Society states that the information required by the other paragraphs of Schedule 4 to the ICAS Regulations 1996 is the same as that provided in the main valuation (apart from paragraph 23 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation'*, has not been provided).

In paragraph 6, Equitable disclose that they have assumed a retirement age for personal pension policies of 60.

In paragraph 6(1)(b), Equitable again state that the valuation rates of interest have been chosen with due regard for policyholders' reasonable expectations and their established practices for determining reversionary bonuses.

As in the main valuation, in paragraph 6(1)(f) Equitable disclose that they have made explicit provision for their estimated contingent liability for tax on unrealised capital gains in respect of non-linked business of £75m. Against this, GAD place a tick and write *'GOOD'*.

As in the main valuation and previous years, Equitable state that they do not consider it necessary in current conditions to hold a specific reserve for the guarantee they offer on a unit-linked annuity.

As in the main valuation, Equitable state that they do not consider it necessary in current conditions to make provision for guarantees and options described in paragraph 4. That is, Equitable state that they do not consider it necessary to hold an explicit reserve for, amongst others, annuity guarantees. GAD note this statement.

In response to paragraph 7(8) of Schedule 4, Equitable disclose that a resilience reserve of £1,022m is required on the appendix valuation basis. GAD add the previous year's figure to the returns.

As in their main valuation and the previous returns, Equitable disclose in paragraph 7(8)(a) the changes made to valuation assumptions and methods in the resilience scenarios, including that:

> *... for all accumulating with profits business, an annual loading of 0.5‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with-profits pension business, ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

As in the main valuation, Equitable explain that they risk-adjusted the yields on assets other than land and equity shares by restricting them to 8%, which is that available on the highest yielding risk-free security held by Equitable. GAD also underline this figure, note that the corresponding figure for the previous year was 10% and write *'still HIGH?'*. Equitable also explain that, where they considered this appropriate, they risk-adjusted yields on land and equity shares.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 51, Equitable set out the mathematical reserves held on the appendix valuation basis for various types of non-linked contracts (not accumulating with profit), along with information on the number of contracts in force, the benefits valued and rates of interest and mortality assumptions used. GAD annotate the Forms with some of the rates of interest used in the previous returns.

In the appendix version of Form 52, Equitable set out the mathematical reserves held on the appendix valuation basis for accumulating with-profits contracts, along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them. GAD annotate the Forms with some of the rates of interest used in the previous returns. On the Form for United Kingdom pensions business, GAD write:

> *£811m below face value*
>
> *(*[previously] *£1,246m discount)*

GAD circle the figure provided of pension transfers and opt-out mis-selling provision of £75m.

On the Form for the total business, GAD write:

> *DISCOUNT £900m*
>
> *[*[previously] *£1,320m discount]*

In the appendix version of Form 53, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of property-linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. Equitable also disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In the appendix version of Form 54, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

As with the main valuation, Equitable provide appendix Forms 57, demonstrating the notional allocation of assets to liabilities on the appendix valuation basis. GAD annotate the total Forms with corresponding asset value figures taken from Form 48.

Equitable state that the total value of assets notionally allocated is £19,492,522,000. On the Form, GAD have written the following (the figures being in units of £000s):

	[Appendix valuation]	[Main valuation]
F51 Liabilities	*4,409,068*	*4,546,985*
F52 Liabilities	*13,484,257*	*14,011,088*
F53 Sterling Liabilities	*21,815*	*21,815*
F54 [Mortality and Expenses]	*4,537*	*4,537*
[Reversionary] *Bonuses*	*475,517*	*508,098*
	18,395,194	*19,092,523*
CGT Reserve	*75,000*	*75,000*
Resilience Reserve	*1,022,000*	*325,000*
	19,492,194	*19,492,523*

Notes to the returns
In the notes to the returns, included at the end of Schedule 4, Equitable disclose that they have been granted a section 68 Order to include in aggregate form details of their *'Personalised Funds'* in Forms 43, 45 and 55.

Equitable disclose that they have been granted a section 68 Order permitting them to take into account a future profits implicit item, with a value not exceeding £700m. The Society states that it has included an item of £371,083,000 for the purpose of *'achieving equality between the total net value of policyholders' assets included in Form 9 ... and ... total net asset value shown in the Society's Companies Act accounts'*.

Equitable disclose that they have been granted a section 68 Order enabling the Society to disregard amounts owing under the subordinated loan, up to an amount not exceeding 50% of the required solvency margin. GAD sideline this paragraph.

The notes to the returns also disclose that Equitable had been issued a section 68 Order *'to the effect that figures in Form 46 exclude recurrent single premiums from the annual premium figures as the Company cannot at present calculate a meaningful figure'*.

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 28(a) of the ICAS Regulations 1996.

Equitable's Appointed Actuary provides the certification required by Regulation 28(b) of the ICAS Regulations 1996. The Appointed Actuary certifies:

> *... that the mathematical reserves as shown in Form 14, together with an amount of £400 million (being a part of the excess of the value of admissible assets representing the long term business funds over the amount of those funds shown in Form 14) constitute proper provision at 31 December 1997 for the liabilities (other than liabilities which had fallen due before 31 December 1997) arising under or in connection with contracts for long term business including the increase in those liabilities arising from the distribution of surplus as a result of the investigation as at that date into the financial condition of the long term business.*

Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

26/06/1998 [entry 2] Equitable apply to HMT for a section 68 Order for a future profits implicit item of £850m, for possible use in their 1998 returns. Equitable provide financial calculations in support of the application, suggesting that they could seek an Order up to the value of £2,674m.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.93	*480.9*	*0.0*	*0.0*	*480.9*
31.12.94	*520.0*	*0.0*	*19.3*	*500.7*
31.12.95	*662.8*	*0.0*	*0.0*	*662.8*
31.12.96	*802.5*	*0.0*	*0.0*	*802.5*
31.12.97	*895.6*	*0.0*	*0.0*	*895.6*
				3342.5

Average annual profit = 3342.5/5 = £668.5m

GAD tick the figures included in column (A) and the total ordinary surplus.

The calculations state that the average period to run for the Society's in-force contracts is again eight years. Equitable explain:

> *The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.*

The calculations suggest that the maximum future profits permissible is 50% of £668.5m multiplied by eight years – that being £2,674m.

08/07/1998 HMT send the Greek authorities the necessary documents to allow Equitable to provide services in Greece. HMT inform Equitable that they have done so.

17/07/1998 **GAD complete the A1 Initial Scrutiny check on the Society's 1997 regulatory returns**. GAD identify no concerns.

The Society's response to GAD's *Reserving for Annuity Guarantees* survey

29/07/1998	**Equitable return their completed questionnaire on reserving for annuity guarantees**, in response to GAD's letter of 20/06/1998. In this, Equitable say that they have four products containing an annuity guarantee (a retirement annuity, an individual pension, a transfer plan and a group pension), all sold between 1956 and June 1988. Each is classified as: *'Recurrent single premium with profits'*. Equitable state that the mathematical reserves for these products, at the most recent valuation date (31 December 1997), total £6,539m but that this figure includes no reserves for the annuity guarantee. Against this an unidentified official writes: '?'. Equitable further state that *'No explicit provision is made for annuity guarantees'* and *'No explicit provision* [for annuity guarantees] *is made in setting the resilience reserve'*. Equitable confirm that they make no general allowance for the guarantees when establishing maturity values and take no significant account of the guarantees when determining investment policy and matching guidelines. In response to the question: *'On with profits contracts is your approach to setting terminal bonus rates for a cohort of policies influenced by whether or not an annuity guarantee is biting?'*, Equitable reply *'Yes'* and explain: *For any policy for which the annuity guarantee is biting, the amount of terminal bonus is reduced to pay for the cost of the guarantee. For all but a few small policies the "cost" of the annuity guarantee is covered by this adjustment.* GAD's Scrutinising Actuary E sidelines this statement. Equitable also confirm that policyholders are not advised of any available options to receive a guaranteed annuity when they reach retirement. Against this an unidentified official writes: '?'. Equitable further confirm that, if a policyholder selects an annuity different from the one on which a guarantee is offered, the amount of annuity is not determined on the same basis as would have applied. Equitable state that annuity guarantees raise no other issues for them as a company. They add as a final comment: *The cost of annuity guarantees has more than adequately been covered by the terminal bonus cushion to date for all but a few small policies, as described ... above. As the business to which annuity guarantees apply ages, the increasing terminal bonus cushion will make it increasingly unlikely that guarantees will actually bite.* Scrutinising Actuary E sidelines this response and writes: *'Is this acceptable?'*. GAD's Chief Actuary C (who has resumed responsibility for Equitable) annotates his copy of Equitable's completed questionnaire with a number of calculations.
30/07/1998	Equitable inform HMT that the Society would begin providing services in Greece on 3 August 1998.
11/08/1998	Equitable provide HMT with details of their review on pension mis-selling. Equitable explain that, in a small number of cases, they would be unable to complete the review in the time required. They accordingly intend to provide the policyholders with a guarantee that, once the review is completed, they would pay any appropriate compensation. Equitable enclose a copy of their letter to the PIA explaining their actions. Equitable state that their guarantee is not one that they need to reserve for. They add: *'As you will know from the reports already submitted by our Managing Director, I have established provisions within our mathematical reserves at*

31 December 1997 which make full allowance for the expected compensation payable on both priority and non-priority cases'.

13/08/1998 [entry 1] HMT pass GAD a copy of Equitable's letter of 11/08/1998 and ask for their comments.

13/08/1998 [entry 2] GAD's Chief Actuary D sends HMT a paper headed *'Guaranteed annuity options – matching and ancillary considerations'.*

The Chief Actuary explains that a guaranteed annuity rate effectively combines an annuitant mortality table and a rate of interest. But:

> *With the passage of time, the mortality table has become imprudent, in that it assumes too high a rate of mortality. This did not initially cause any problems, as the interest rate was modest, and the overall rate was below current rates. More recently, with significant falls in long gilt yields, this counter-balance has disappeared, or at least fallen to very modest levels.*
>
> *Companies now face a significant problem with regard to these options.*

The Chief Actuary suggests that insurance companies have in effect written derivatives for their policyholders' benefit and that one solution to the current problems is for companies to buy an equivalent option from the investment markets. This has a number of complications, but he states:

> *Whatever is the technical position, it must be remembered:*
>
> - *these GAOs exist in large numbers, and threaten solvency in many cases and policyholders' actual, if not necessarily reasonable, expectations in more*
> - *derivatives are a natural way to protect the interests of policyholders*
> - *there is a risk of these becoming the regulator's problem!*

Chief Actuary D discusses policyholders' reasonable expectations. He explains that there are two views in the industry:

> *Terminal bonus is determined as the amount necessary to raise policy proceeds to asset share (plus or minus a bit). If a GAO applies, then the policy proceeds can be measured as the cost of an annuity of that amount (on a realistic not a prudent basis). Therefore terminal bonus can be restricted to keep the cost of GAO down. This cannot justify a lower reserve, however, as the terminal bonus is not itself reserved for.*
>
> *Alternatively, the terminal bonus has been described, and therefore a policyholders' reasonable expectation created, based upon the open market option, and to the extent that a GAO applies to the full sum, the full pain must be borne.*
>
> *There is probably no solution to this issue on an industry basis, as it probably is a function of policy wordings, marketing material, with profits guides and similar items.*

Under *'Investment Policy'*, the Chief Actuary says:

> *The presence of guarantees of all kinds serves to restrict investment freedom. This is surely one of those things which fall within policyholders' reasonable expectations. Where there are GAOs on some policies and not on others, to what extent is it in accordance with PRE to:*
>
> - *buy derivatives, and charge the cost generally to the estate which may need to be built up again from current or future policyholders*

- *buy derivatives, but charge the cost to assets shares of the GAO policies*
- *buy derivatives, but charge the cost to asset shares of all policies*
- *invest more heavily in fixed interest securities, earmarked to those policies with GAOs, which therefore have probably lower asset share growth*
- *invest more heavily in fixed interest securities leaving the probably lower returns to impact asset share growth generally*
- *treat emerging losses as a charge to the estate, which may need to be built up again from current or future policyholders*
- *treat emerging losses as a hit on asset shares on GAO policies*
- *treat emerging losses as a hit on asset shares on all policies*
- *There is no easy answer, and again it may be necessary to look carefully at each case.*

The Chief Actuary also discusses the required minimum margin of solvency. He explains: *'The required minimum margin will rise naturally as reserves are held, but to the extent derivatives remove the need for mathematical reserves in a resilience test or mismatching test, there will be a reduced additional requirement'*. He suggests that any contract with a guaranteed annuity option requires a full 4% margin on all associated mathematical reserves.

Chief Actuary D concludes by suggesting that the matters discussed could be explained at a forthcoming conference on valuation developments and linked to a Dear Director or Dear Appointed Actuary letter.

14/08/1998

GAD inform HMT that Equitable are probably correct to say that the guarantee referred to in their letter of 11/08/1998 does not require reserving. GAD advise that, to be sure, HMT should ask Equitable for further supporting papers.

20/08/1998

GAD complete the A2 Initial Scrutiny check on the Society's 1997 regulatory returns.

The form for the A2 check follows the same, more detailed, format adopted for the 1996 returns and includes the following:

<u>Strength of valuation basis</u>
GAD note that the interest rates used are *'just about'* supported by the risk-adjusted yields on the matching assets. On Equitable's annuity mortality rates, GAD say that they *'thought about querying in 1996 Return, but did not'*. They note that other management expenses, at £7.3m, are material. GAD confirm that Equitable have applied the resilience test in accordance with the Government Actuary's latest guidance. They judge the overall interest basis as *'adequate'* and the valuation basis as *'adequate'* to *'weak'*. However, GAD state that *'Enormous Growing Liability for terminal bonus on* [unitised with-profits] *business is not reserved for, so that FORM 9 margin overstates strength!'*.

<u>Solvency position</u>
GAD note that the absolute cover for the required minimum margin is *'adequate'* and refer to their comments about Equitable's growing liability for terminal bonus and to the fact that Equitable had raised £350m from the subordinated loan.

<u>Operating results</u>
GAD circle both yes and no to whether Equitable's absolute level of sales or the trend over recent years give cause for concern and comment '<u>[very] *high*</u> *and negligible estate*'.

PRE issues
GAD do not answer the question as to whether the answer given by Equitable in paragraph 4(1)(a)(ii) of Schedule 4 of the returns is satisfactory.

Current issues
GAD note that Equitable have not set up any identifiable pensions mis-selling reserve and comment that *'In* [company] *response, £75m stated to be included (FORM 52)'*. GAD state that Equitable are known to have material exposure to annuity guarantees and note: *'Adjusts terminal bonuses – so no value to policyholders! No additional reserves considered necessary'*.

Aspects that look worrying
GAD query whether Equitable's position on annuity guarantees is satisfactory.

Other notes
GAD initially note that Equitable appear to have failed to disclose provision for pensions mis-selling as promised in their letter of 04/02/1998 – but then appear to be satisfied that provision has been made in the returns. GAD also identify the following:

> *(2) Review annuitant mortality assumptions*
>
> *(3) Issue of £350m Subordinated Loan appears to be sole reason for increase in available assets over year.*

GAD identify no items to notify to HMT, to be taken up immediately with Equitable. They lower Equitable's priority rating from 3 to 4.

Accompanying the Initial Scrutiny check is a Form B Initial Scrutiny Form, which includes certain key figures disclosed in the 1994 to 1997 returns.

(Note: there was no formal detailed scrutiny, given the events that unfold from July 1998 onwards, following the annuity guarantees survey, until comment on them is combined with the scrutiny of the 1998 returns: see 20/05/1999.)

27/08/1998 HMT's Line Supervisor B asks Equitable for further papers about their guarantee on mis-sold pensions. She also explains that day-to-day supervision of Equitable has passed to a new Line Supervisor (Line Supervisor C).

28/08/1998 A PIA official writes about emerging press interest in annuity guarantees. The official notes that the subject also raises solvency questions which HMT are looking at. The note is copied to the new Director of Insurance at HMT (who took up post the previous year), who later copies it to the Head of Life Insurance and to Line Manager C and to GAD.

01/09/1998 GAD write to HMT about monitoring *'the behaviour of companies towards policyholders who have ... a guarantee which is valuable at maturity'*. GAD set out the circumstances under which a company would be obliged to tell a policyholder about a guarantee and suggest that this would depend on whether, under the terms of the FS Act 1986, the company was offering advice or not. GAD explain that, if the company were offering advice, it would be obliged to offer best advice, and the PIA are the relevant authority to monitor that. GAD add that the powers under ICA 1982 are not applicable to advice *'unless the general obligations are relied upon'*.

GAD advise that HMT have a duty to ensure that policyholders' reasonable expectations are met. GAD say that HMT appear to have a number of options, but recommend the following *'best course of action'*:

- *circulate all companies referring to the issue of annuity options and guarantees and identifying the avoiding of these obligations as unacceptable behaviour;*
- *all companies should be asked to report on the procedures in place to ensure guaranteed rates are applied in maturity option quotations, and that the existence of options is made known (is this going a step too far?);*
- *any policyholder or* [independent financial adviser] *complaint should be the trigger for a visit to review the procedures;*
- *any subsequent failures should result in a Section 43A investigation, to include a sample review of files;*
- *identification of a substantial problem would necessitate action, including a review of cases and "fit and proper" action.*

GAD conclude:

> *A more proactive course, reviewing companies routinely, would seem to be too intensive in resources to be practical. It is also arguably a significant overreaction to few if any recorded incidents. It is open therefore to criticism as a misuse of powers.*

03/09/1998 HMT's Head of Life Insurance thanks GAD for their note of 01/09/1998. The Head of Life Insurance says: *'This is something which had begun to worry me, but I had not got beyond the unfocused feeling that we would need to do something. Your note helpfully clarifies the issues'*. He suggests a meeting of HMT and GAD officials to discuss these issues.

HMT's Head of Life Insurance writes to FSA's Managing Director of Financial Supervision (Managing Director A). He notes that there had been a good deal of recent press interest in guaranteed annuities. The Head of Life Insurance explains the action HMT and GAD had taken on annuity guarantees. He explains that: *'When it became clear that a number of companies had issued policies with these guarantees'* GAD, on their behalf, had written in June 1998 to all life companies seeking detailed information about their annuity guarantees and how they reserved for them. He says that the results were now being analysed by GAD and that they were *'also considering the implications for the fulfilment of policyholders' reasonable expectations'*. HMT copy the note to FSA's Director of Investment Business:

> *... since his division* [conduct of business] *will no doubt have an interest in some aspects of* [these] *issues (eg the extent to which companies are informing policyholders of the existence of a guarantee at the time when they come to make choices about annuities on retirement). This is an example of an issue on which we will need to work closely together to ensure a seamless regulatory approach.*

08/09/1998 [entry 1] Equitable provide HMT with the papers requested on 27/08/1998, about their guarantee on compensation for mis-sold pensions. The Society also points out that it has had no response to its application on 26/06/1998 for a section 68 Order for a future profits implicit item.

08/09/1998 [entry 2] Equitable send GAD a copy of their latest With-Profits Guide (dated August 1998), saying that they are doing this '[as] *usual, at around this time of year'*.

15/09/1998 GAD inform HMT that they are *'comfortable with the figures'* used in Equitable's application for a section 68 Order (see 26/06/1998 [**entry 2**]) and that it would be reasonable to grant the Order.

In the same note, GAD raise the issue of the reduction of terminal bonuses for policies which included annuity guarantees. GAD explain:

> *It should be recognised that guaranteed annuity rates based on a(55) ult and 7% interest rates (as offered by Equitable in a substantial number of cases) would, based on current life expectations, require the availability of investment yields in the regions of 9%. Such investment returns are not currently available, so that it would normally be presumed that the inclusion of such a minimum guaranteed annuity rate in a contract would give additional value.*
>
> *However, Equitable apparently considers it acceptable to reduce the terminal bonuses payable in such cases to nullify any additional value – and thus is suffering negligible strains and does not see any need to establish any special reserves.*

GAD say:

> *We suggest that it is desirable for HMT to explore this subject further. We suggest that you write to the Society indicating that you have noted the manner in which they are dealing with maturing pension contracts that contain guaranteed annuity rates, and request that they supply copies of relevant marketing literature or other evidence that gives support to their approach of reducing terminal bonuses in such cases — since you wish to be satisfied that the reasonable expectations of policyholders are being met.*

21/09/1998

HMT ask Equitable to *'supply copies of relevant marketing literature or other evidence that gives support to this approach of reducing terminal bonus in such cases* [where the annuity guarantee is biting] *as we will wish to be satisfied that policyholders' reasonable expectations are being met'*.

25/09/1998

HMT send Equitable the section 68 Order for a future profits implicit item of £850m, for use in their 1998 returns. HMT point out that, before including any implicit items in the forthcoming returns, Equitable are required to update the calculations to ensure that the amount adopted is still justified.

29/09/1998

Equitable write to HMT in reply to their letter of 21/09/1998. Equitable explain that a key underlying factor is that they guarantee *'full value'* benefits whenever retirement occurs within a wide permitted age range. Because of the wide ranging nature of the guarantee:

> *... it was always clear to us that the guarantee could become a valuable one in a period of sustained low interest rates. In a mutual with profits fund the key question is, of course, how the potential costs of guarantees should be reflected in bonus rates.*

Against this HMT's Line Supervisor C writes: *'Is it?'*.

Equitable set out a number of reasons why they did not think that it would be practical or fair to try to set bonus rates so that the same final bonus would be paid, irrespective of whether or not benefits were taken in cash (the open market option) or in guaranteed annuity form. Equitable explain that they had decided that the fairer course:

> *... was to introduce a system of different final bonus entitlements depending on whether the benefits were taken as an open market option cash fund or by utilising the guaranteed annuity option, so as to produce, as far as possible, benefits of equivalent value under the two approaches.*

Equitable add:

> *Until recently the likelihood of the guaranteed annuity option producing a higher level of income was small but recent declines in interest rates now make it more likely that the guaranteed annuity option will produce a higher level of income, if a client requires a form of annuity allowed for under the option. We have yet to decide whether to absorb the costs of that within the with profits fund generally or to introduce a small differential between the bonuses allotted to contracts carrying a guaranteed annuity option and those that do not. The Appointed Actuary will, of course, also be taking the position into account in setting his reserving basis at the end of the year.*

Against the penultimate sentence of this paragraph, Line Supervisor C writes: *'Is this what they said in the questionnaire*[?] *Seems different*'. On another copy of the letter, GAD's Chief Actuary C writes against the last sentence: *'Why did he not do this at the end of 1997?*'.

Equitable say that they have always described their approach to bonuses *'in the most general* terms in marketing literature'. They add:

> *... the comments we have made about bonuses have focused on principles such as fair treatment between different classes of business, that bonuses are primarily determined by the level of investment returns over a contract's lifetime, and that our aim is to pass on the smoothed earnings achieved on the contributions made during a policy's term.*

Equitable explain that they reinforce these messages when they write to policyholders explaining bonus decisions and that they *'make it very clear that final bonus is allotted only at the point of retirement, that the amount can vary and that any amount shown is not guaranteed'*. They add:

> *The approach of having a different final bonus entitlement where a guaranteed annuity option is exercised was first introduced at the end of 1993 and has been disclosed in the returns prepared for the DTI each year since then.*

Equitable continue:

> *In practice, the prevailing level of current annuity rates during 1994 and early 1995 meant that the final bonus entitlement was the same whether or not a guaranteed annuity option was taken. At the end of 1995, when conditions were such that the approach could give a different final bonus entitlement on some cases, a note was added to annual statements to indicate that that was the case. An example of the 1995 statement is also enclosed. The same approach was adopted for the 1996 statements and, with the exception of some policies for which the note was omitted in error, for the 1997 statements. Thus all clients with policies containing guaranteed annuity rates have had at least two annual statements explaining that a different final bonus entitlement could apply, as well as having had the more general material describing our bonus philosophy as set out in the preceding page of this letter.*

Equitable copy their letter to HMT, in view of the meeting arranged for 02/10/1998 (see below [entry 1]).

30/09/1998 HMT send Equitable an urgent fax requesting copies of policy documents containing guaranteed annuity rates.

01/10/1998 Equitable send HMT a copy of the retirement annuity policy document in use during the 1980s, prior to the withdrawal of guaranteed annuity contracts. Equitable state that they believe this to be representative of the *'significant number'* of different policy documents which include annuity guarantees. They point out that the description of the entitlement to bonuses in the policy is *'a very general one and cross-refers to the Society's rules and regulations*'. Equitable accordingly also enclose a copy of Article 65 of their Articles of Association. This states that the amount of any bonus which may be declared or paid and the amount to which any policyholder may become entitled *'shall be matters within the absolute discretion of the Directors, whose decision thereon shall be final and conclusive'*.

The explanatory note to the policy document states:

> *The principle benefit secured by the Policy is pension provision by application of the premiums to secure an annuity or further annuities which participate in the profits of the Society and which together form the basic pension on retirement. The annuity available may be increased if the annuity rates available when the pension payments begin exceed those guaranteed in the policy. The pension may begin at any time chosen between the ages of 60 and 70 with the option of extending the period to an age not later than age 75 and it is not necessary that the date chosen should coincide with the actual retirement date. The date must be notified to the Society in the month preceding the pension being required. In the event of death before the pension has commenced, the Society will pay the full value of the Fund built up under the Policy to the date of death.*

02/10/1998 [entry 1] HMT (Head of Life Insurance, a new Line Manager with responsibility for Equitable (Line Manager D) and Line Supervisor B) and GAD (Directing Actuary B and Chief Actuary C) meet Equitable's Chief Executive, Appointed Actuary and Investment Manager to discuss the Society's approach to deciding the benefits which policyholders with annuity guarantees would receive, and the solvency implications of reserving for those guarantees. HMT prepare a note of the meeting.

Equitable's Chief Executive reaffirms that the Society's approach to deciding policyholder benefits had been set out in recent correspondence with HMT and that he believed that its approach *'aimed to give all clients a fair return from the Equitable'*. He acknowledges that Equitable had received a bad press recently, but says that this was due to the media not having a full grasp of the facts. The Chief Executive says that he had received 25 letters of complaint and a few hundred enquiries about the issue. The note records: *'Ahead of the recent press coverage there had been no complaints from policyholders whose policies with GAO options had recently matured'*.

HMT's note says:

> *With respect to the specific charge of clawing back terminal bonuses to pay for GAOs the Equitable's response is that the company wants all policyholders in the mutual to be treated equally. On maturity policyholders receive either GAO benefits or cash of an equal benefit. In the current environment of plunging annuity rates it would be disproportionate to give, what are now, high annuity rates to one set of policyholders based on the same cash amount received by another set of policyholders without the GAO.*
>
> *There was, according to the company, considerable variation as to how the effected contracts were expressed at inception. Firstly for the earlier policies sold (pre 1980s) the concept of a terminal bonus did not exist, later when terminal bonuses were first introduced this bonus was a much smaller proportion of total benefits than what they would be for a policy sold today. Furthermore, the provision of a terminal bonus has always been at the discretion of the Directors and they have the powers within the Equitable's constitution to vary terminal bonuses for different cohorts of policyholders.*

GAD's Chief Actuary C says that *'when the GAO was offered to policyholders the literature could be interpreted to suggest that the policyholder was expecting to receive the higher of the two figures (unadjusted cash fund converted using current annuity rates or GAO)'*. In response, Equitable's Chief Executive claims that Equitable had not departed from any promises given, and that Counsel had recently advised that they were acting fully within their rights. The Chief Executive adds:

If the policy document states that a policyholder is entitled to additional benefits then the policyholder receives them. Currently a policyholder receives the greater of the guaranteed fund x guaranteed annuity rate or assets share x guaranteed annuity rate (the asset share being adjusted by the cost of providing the GAO). Subsequent to the submission of the GAD questionnaire annuity rates had fallen further in the market. This had meant that there were now policies where guaranteed fund x guaranteed annuity rate were biting, so these policyholders were getting a larger share of Equitable's assets than an equivalent policyholder with no GAO taking the cash benefit.

Only this year has guaranteed fund x guaranteed annuity rate bitten, they have not yet decided how to divide up funds with respect to this; [Chief Actuary C] *said it could be interpreted as an additional bonus.*

Equitable's Chief Executive explains that he would be concerned about policyholders' reasonable expectations if treating one set of policyholders more favourably affected the expectations of the remainder of Equitable's policyholders.

HMT's note records:

The company agreed that many of their policies allowed the payment of additional premiums, but this was not seen as a risk because of the treatment taken with respect to asset shares. However, switches of policies into the Equitable were currently a risk but the company was looking to impose endorsements on any switches in to stop these policyholders gaining disproportionate benefits.

Under the heading *'Solvency/Reserving'*, HMT's note records Equitable's Chief Executive as explaining that:

... no provision had been made for GAOs as at 31 December 1997 since it had only been recently that the guarantees were biting on the guaranteed fund. The Equitable does not as a matter of course reserve for GAOs that exist on policies; the recent practice has only been to reserve once the guarantees bite.

In response, GAD's view is that:

Whilst no reserve needs to be held on that part of the bonus that is discretionary (effectively the terminal bonus) ... guarantees should be provided for in the valuation basis (they should be reserved for whether or not they are biting).

Equitable's Appointed Actuary argues that *'two thirds of policyholders take the cash benefit, so it would not be appropriate to reserve fully for all the guarantees if only a small proportion of policyholders chose the guarantee'*. Chief Actuary C *makes the point that 'as the guarantees became more valuable it would seem logical to assume that a higher proportion of policyholders are going to take the GAO'.*

Equitable say that the need to reserve for the annuity guarantees *'could have severe consequences for the company and that they may have to switch from equities to gilts to maintain solvency'*. They continue: *'However in the current economic environment such a strategy would in itself harm the company as it would have to sell stocks which have fallen by c20% and buy gilts at inflated levels'*. Equitable's Investment Manager adds that: *'a flight to quality in current volatile markets was reducing gilt yields. Furthermore the abolition of* [advance corporation tax] *had exacerbated this. Further falls in the discount rate are going to hit Equitable and the life insurance industry heavily'*.

Equitable agree to provide a revised assessment of the reserves required for the annuity guarantees and to undertake a reassessment of their solvency. Options for identifying *'extra resources'* are discussed, including the possibility of reducing declared bonuses. HMT and GAD agree to consider the status of Equitable's future profits concession, following this assessment.

02/10/1998 [entry 2] HMT draw up initial working arrangements for the Insurance Directorate Supervisory Committee. The proposed terms of reference for the Committee are to:

- take decisions on the exercise of HMT's powers under the ICA 1982 and subordinate legislation (including decisions not to exercise powers in circumstances where they might be expected to be exercised);
- keep the use of all powers/discretion under review; and
- act as a forum for discussing/advising on casework raising novel or contentious issues, and supervisory policy generally.

09/10/1998 GAD write to HMT suggesting that there is a need to offer guidance to companies on policyholders' reasonable expectations in the context of annuity guarantees. GAD explain that, as a first step, they could say that policyholders with such guarantees could reasonably expect to pay some premium or charge towards the cost. GAD add:

> *The level of the charge deemed to be payable by participating policyholders for the annuity options and guarantees (applicable normally under the terms of the contract to at least the guaranteed initial benefit and attaching declared bonuses) would we understand generally be assessed by reference to their perceived value over the duration of the contract. The selected treatment by each office would though depend on the wording of their contracts and how these are presented to policyholders.*
>
> *This could therefore result in some reduction of the final bonus that would otherwise be payable if there were no such options or guarantees in the policy.*
>
> *As a consequence of the above, we would expect that for most companies the present guaranteed cash benefits (including declared bonuses) would be converted, as a contractual minimum, to annuity on the guaranteed terms. However, the appropriate final (or terminal) bonus may be somewhat lower than for contracts without such options or guarantees, and could be converted at current annuity rates.*

GAD also comment further on the points in Chief Actuary D's note of 01/09/1998. They cite six companies who seek to avoid letting policyholders know of the existence of annuity guarantees. GAD add:

> *Equitable Life also fall in this category, although we know that they do apply the guaranteed funds at the guaranteed rate where this would exceed the annuity derived from applying the "open market option" funds, including discretionary bonus, at current annuity rates.*

19/10/1998 HMT provide briefing for the Economic Secretary, who has expressed concern about Equitable and their exposure to annuity guarantees. HMT say that it was common practice in the 1970s and 1980s to include guaranteed annuity rates in pension contracts. HMT also say that:

> *The guarantee was set at a relatively low level and at the time the contracts were written the guarantee appeared unlikely to have any value. However, the recent dramatic falls in the yields on long term gilts on which annuity rates are based, along with increasing longevity of policyholders, means that the guaranteed rates are currently above, or comparable with, the annuity rates available in the market.*

Under the heading *'Equitable Life's position'*, HMT say:

> *Equitable Life is a very long-established mutual insurer with a high reputation for efficient and economical service, along with good investment returns to policyholders. It is one of the companies that has sold a large number of pension contracts which contain guaranteed annuity options which are set at a level above that currently available in the market.*

HMT continue:

> *Meeting the cost of the guarantees is putting a significant strain on the company's resources and, as a mutual, it does not have the option of obtaining a capital injection from shareholders to relieve this strain. We have discussed the situation with the company and it has been agreed that it will submit to HMT updated information regarding its liabilities for GAOs and its resulting financial position in order that we can monitor this and take any action that becomes necessary to protect policyholders' interests. It is feasible that the company could have to consider some form of demutualisation, for instance through merger with another company, depending on how serious the financial situation proves to be.*

HMT note that: *'Equitable Life has recently been heavily criticised in the press for the approach it is taking to fulfilling the guarantee contained in its pension contracts – adjusting the levels of terminal bonus paid to policyholders to take account of the cost of the guarantee'*. HMT report:

> *We have discussed the situation with the company, and our initial view, on the evidence we have seen to date, is that the company's approach appears to be consistent with the terms of the contracts sold, and that the company is endeavouring to fulfil the reasonable expectations of all its policyholders. In particular, the company is fully aware that any increase in the level of bonuses for policyholders with annuity guarantees would very likely lead to reduced bonuses for other policyholders. We are continuing to explore the position with the company.*

HMT say that they propose to provide guidance to the industry shortly *'to the effect that making some charge for the options is acceptable provided this does not conflict with the overriding requirement to meet policyholders reasonable expectations'*.

22/10/1998 HMT produce an update paper on the effect of current market conditions on UK life insurers. They refer to an undated paper submitted to a previous meeting of the Tripartite Standing Committee (a Committee of senior officials from HMT, FSA and the Bank of England). That paper says:

> *Most UK life insurers are reasonably well-placed to maintain an adequate financial position in current market conditions and allowing for further volatility in equity markets (although a fall on the scale of 1974 would create more serious problems).*
>
> *There are 8 fairly well-known offices that we are monitoring particularly carefully.*

One of the companies listed is Equitable. HMT go on to say: *'The two offices causing most concern at present are* [a named other insurance company] *and Equitable Life. These are likely to need some form of additional capital support if present conditions continue. We are in discussions with them about their view of their exposure, and options for remedial action'*.

In their analysis, HMT explain that there are a number of factors which help to protect life insurance companies against adverse investment conditions. These are listed:

> *(a) Our regulations require liabilities to be evaluated at relatively conservative long-term interest rates.*
>
> *(b) Allowance is also made in this evaluation for the effects of a 25% fall in equity values, and a 20% reduction in current gilt yields (the so-called "resilience test", the parameters for which are set from time to time in guidance from GAD).*
>
> *(c) For with-profit contracts, the bonuses (both declared bonus at year-end and final bonus payable on claims) may be reduced (though normally with some degree of smoothing).*
>
> *(d) Surrender values for most non-linked contracts are discretionary and could be reduced significantly, particularly in adverse investment conditions.*
>
> *(e) With unit-linked or index-linked contracts, all of the investment risk is normally borne by policyholders (or by investment banks in the case of some guaranteed bond products).*
>
> *(f) In extreme conditions, some modification of the solvency rules could be considered, though there are EU constraints to be observed.*

HMT note: *'As part of the regulatory framework there is an appointed actuary for each life insurer who is responsible for monitoring the ongoing financial condition of that company. The actuary is required to advise the board of directors on appropriate action to be taken if an unsatisfactory situation is developing, and if this is unsuccessful, the actuary is required to inform the regulators accordingly'*.

HMT recognise that:

> *Companies most at risk are likely to be those with a combination of:*
>
> *(i) Weak free asset ratios at end-97 (and few implicit margins),*
>
> *(ii) Significant exposure to annuity guarantees (which become more onerous with falling gilt yields),*
>
> *(iii) Pension mis-selling costs not yet fully recognised including the effect of any* [Investor Compensation Scheme] *levy, and*
>
> *(iv) Dependence on high investment returns to sustain bonus rates (some reduction in bonuses may now of course be expected but this is normally subject to smoothing).*

HMT say that the eight companies identified are those companies which HMT believe, based on current information, to be vulnerable on account of these factors. HMT conclude:

> *There are various strategies that can be followed by offices to improve their financial condition and to protect the interests of investors. These include:*
>
> *(a) Re-balancing the investments by switching from equities to gilts or corporate bonds with good credit ratings.*
>
> *(b) Reduction in overhead costs by trimming or even eliminating the sales distribution network.*
>
> *(c) Merger or take-over by other stronger company.*
>
> *(d) Reduction in bonus rates and in discretionary surrender values.*

An annex to the undated paper gives details for each office. On Equitable, HMT say that the Society:

> *... is a very long-established mutual insurer with a high reputation for efficient and economical service to policyholders, along with good investment returns for policyholders through discretionary bonus additions. In addition to a sizeable UK operation, they have also opened a branch in Germany a few years ago. They have always operated on the basis that "capital" should not be built up unnecessarily but should instead be returned to departing policyholders.*

HMT continue:

> *As a result, they are not well placed to weather difficult investment conditions. They are also impacted by a substantial exposure to annuity guarantees on a large number of their policies.*

HMT's update paper explains that recent improvements in equity markets and an increase in the yields on bonds are likely to result in *'fairly slight'* improvements to the financial positions of most companies. The update states that:

> [Another named insurance company] *and Equitable Life have each been asked to produce some more detailed figures to show their solvency position as at 30 September 1997. We expect these by the end of this month, and will study them with the help of GAD. We will then be able to consider with these companies what further action if needed.*

An annex to the update provides the following figures:

i.	*Equitable's free reserves as at 31 December 1997*	*1*	*£1,752m*
ii.	*Current additional cost of annuity guarantees*	*2*	*£1,000m to £2,500m*
iii.	*Possible further cost of pension mis-selling*	*3*	*£5m*
iv.	*Estimated current free reserves*	*4/5*	*£700m to –£750m*
v.	*Solvency margin requirement at 31 December 1997*	*6*	*£845m*

The notes to the figures are:

> *1) Free Reserves shown above exclude any item for future profits (which is allowable within limits as part of "own funds").*
>
> *2) Costs of Annuity Guarantees estimated by GAD from recent survey. (The range for Equitable reflects some present uncertainty about the nature of their guarantees).*
>
> *3) Additional possible cost for pension mis-selling is broad estimate based on industry averages (with no allowance for* [the Investor Compensation Scheme]*).*
>
> *4) No allowance has been made for margins in the liabilities that may be released.*
>
> *5) Effect of current investment conditions compared with 31/12/97 is assumed to be neutral or offset by margins as in Note 4 above.*
>
> *6) No allowance has been made for discretionary bonuses that may be payable at year end, or for profits earned during the year.*

26/10/1998	HMT's Line Manager D drafts a submission to the Economic Secretary to the Treasury, seeking approval for a letter to be sent to every insurance company giving guidance on methods which HMT consider are acceptable for meeting the costs of annuity guarantees. The Line Manager says that Equitable's approach of reducing terminal bonuses received by policyholders taking their annuity at the guaranteed rate specified in the policy *'is in line with this general guidance'*. She seeks confirmation from HMT lawyers that they are content with it. In a handwritten note, the head of the Treasury Advisory Division's insurance department (Legal Adviser B) records that she had discussed the matter with Line Manager D and had suggested some drafting amendments. (Note: I have been told that Legal Adviser B declined to provide advice on the guidance without full instructions containing representative samples and information about industry practice.)
27/10/1998	GAD produce a preliminary report on the results of the survey on reserving for annuity guarantees. GAD say that a number of companies hold substantial reserves for the guarantees. Equitable are one of two notable exceptions and they seem to be *'particularly vulnerable because the relevant business is approaching 30% of their total'*. GAD identify Equitable as one of 12 offices with potential solvency margin problems and one of 5 that could be *'technically insolvent'*. GAD state: *'We shall certainly need to raise the issue of annuity guarantees with each of these offices as part of the scrutiny process for their returns'*. GAD identify Equitable as one of seven companies that do not tell policyholders about the existence of a guaranteed option and one of eight that are considering whether they should reduce the final bonus payment to policyholders with guarantees to reflect part or all of the cost.
29/10/1998	HMT and GAD finalise the new Service Level Agreement.
30/10/1998	Equitable provide GAD with the information requested at the meeting on 02/10/1998. Equitable explain that, in the first nine months of 1998, only 3% of retirement annuities had been used to secure a conventional non-profit annuity. Equitable explain: *All retirement cases are checked to determine whether, if a conventional non-profit annuity is required, the guaranteed annuity rate will produce a higher level of income. Currently that is so in around 30% of cases and clients are advised accordingly, even if their intention is known to be to take some other form of annuity. Interestingly, to date no such clients have actually chosen to take advantage of the guaranteed annuity rate – all have preferred a more modern form of annuity.* Equitable estimate that, in a worst case scenario (i.e. where 100% of annuities which produce a higher income are taken in their guaranteed form), the cost to Equitable would be an additional £170m. But given their analysis of experience so far in 1998, they consider the more likely commercial cost would not exceed £50m. They explain that more generally they believe the figure of £7-10bn, quoted as the likely cost to the industry, to be totally unrealistic. Equitable say: *Such figures appear to have been computed as simply 20-30% (being the typical margin between guaranteed and current rates) of the liability figure of £35bn quoted in the working party's report. In practice, I believe that offices will generally fall into one of three main categories:* *(a) those that reduce the bonus rates for the class so that the open market option cash fund to which the guaranteed annuity rate is applied is lower than would otherwise be the case;* *(b) those that operate bonus systems similar to the Society;* *(c) those for whom the form of the guarantee is so restrictive that in practice only a small minority of clients will exercise it.*

Each of those approaches will significantly reduce the true cost, i.e. the value of additional benefits beyond those the policy would otherwise provide, which will fall to be met by shareholders or other policyholders.

Equitable set out some reserving issues, saying that:

... the additional reserve held in respect of guaranteed annuity rates should bear some relationship to a suitably prudent assessment of the commercial cost of those rates being exercised. To require a much higher level of reserving, e.g. one where the additional reserves were an order of magnitude greater than the expected commercial cost, would seem inappropriate for the following reasons:

i) The level of reserving will be interpreted by commentators as being broadly equivalent to the commercial cost. It would be particularly ironic for the Society if, having attracted criticism for an approach which minimises the impact on policyholders not having or not exercising guaranteed annuity options, those policyholders were then to read comments to the effect that annuity guarantees were going to "cost" the office, say, £500m.

ii) The purpose of reserving is to protect the interests of policyholders. It would be difficult to reconcile that purpose with an excessively prudent level of reserving in this area which, for example, pushed an office towards an extremely conservative investment strategy, thereby damaging the future prospects of those same policyholders. This point is particularly relevant in current financial conditions both because constraints on investment strategy would be more likely to arise than in other conditions, and because the current state of markets make it a particularly disadvantageous time at which to switch from equities into fixed interest securities.

Equitable conclude by saying that: *'A prudent approach to assessing the value of the option would be to assume that all eligible benefits would be taken in guaranteed annuity form where that would produce a higher income than the full open market option cash fund could secure on current rates. As indicated above, that would lead to a reserve of £170m in current conditions which would be at least 3-4 times the expected true commercial cost and, probably, a substantially higher multiple than that'.*

November 1998 GAD send HMT their annual report on the life insurance industry for the year ending 31 December 1997. The report follows a similar format to that used for the previous year. The report's purpose and disclaimers are unchanged. (See December 1997.)

The executive summary says, under the heading *'Provision for Annuity Guarantees'*, that:

The increasing longevity of annuitants, and the sharp fall in long term bond yields that has recently been experienced, has brought to light a new major problem for a number of offices in relation to guaranteed annuity rates that had been incorporated in pensions contracts - largely sold in the 1970s and 1980s. These guarantees are now proving to be very onerous, and large increases in provisions are needed.

Some general data is given in Appendix 4, showing total reserves held at the end of 1997 for annuity guarantees was nearly £3.8bn (when long gilts yielded about 6.4%). With yields now below 5%, this problem requires, and is being given, careful scrutiny on a case-by-case basis by HMT and GAD. A need for further increased provisions is likely to result.

On new business, the report notes that Equitable remain the largest writer of new pensions business (with a new business index of £613.7m). For total new business, Equitable move from first to second place (with a total new business index of £743.4m).

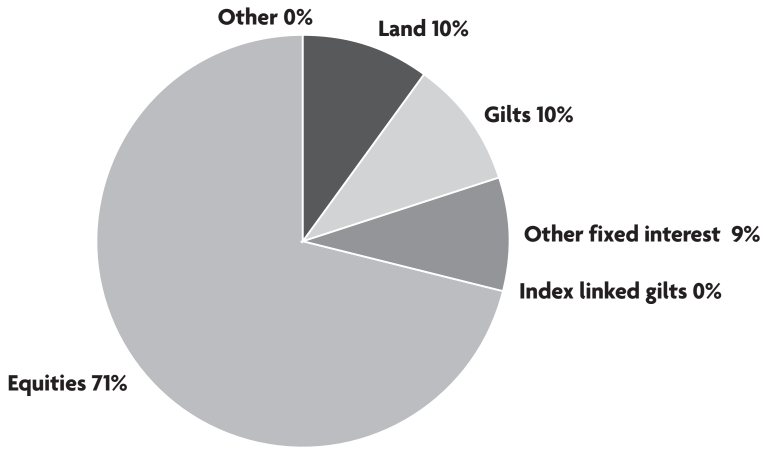
On mortality, the report repeats the material in the 1996 annual report, noting that the rate of improvement had been much faster than expected.

On *'Non-linked assets'*, GAD report:

> *Prospective long term yields have fallen substantially over the year, so that valuation interest rates should have been cut and liabilities substantially increased. Rises in terminal bonuses but falls in reversionary bonuses are a natural consequence of market movements. Strong asset performance should have been enough to sustain most Free Asset Ratios, but the recognition of lower prospective yields may be increasing valuation strains – especially in relation to guaranteed annuity rates.*

GAD again produce an estimation of the breakdown of the portfolios that are held by companies to support their with-profit liabilities (including the free estate). The report includes the following chart:

Average mix of assets backing with profit liabilities of major with profit offices in 1997



On investment performance, GAD say that the average estimated investment return on non-linked assets was 18.48%. The report includes a table setting out the estimated returns achieved by individual companies, which for Equitable shows an estimated return of 19.55%.

GAD again report their comparison of maturity payouts against their own calculations of the theoretical asset shares. In the background section to this part of the report, GAD note that Equitable have the largest in-force unitised with-profits pension liabilities. GAD explain:

> *For unitised with profit business (UWP), recent bonus additions have increasingly relied on capital gains rather than investment income, and this is beginning to cause reserving problems. UWP is a comparatively young product with, in theory, flexible bonuses. The product uses market value adjustments (MVAs) to protect companies against fluctuations in stock markets, except at defined moments or periods when no MVA is applicable – such as maturity. However, competition has meant a range of minimum bonus guarantees on earlier products, and annual bonus rates have been sustained at a level that is today high in comparison to the potentially reduced future investment returns. Terminal bonus cushions on UWP business have not therefore developed to any extent and the business would need considerable support in statutory reserving terms from the rest of the with profit fund, unless market value adjusters can be reflected in the valuation. Proposed*

amendments to HMT regulations tighten up standards in this area, with the effect of increasing reserves for certain offices.

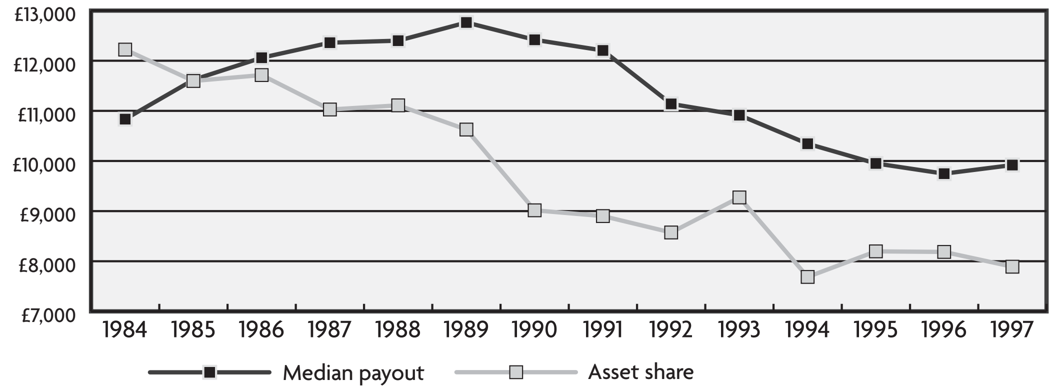
Thus, as offices project their future bonus policy, they may start to see greater problems in sustaining high, but volatile, equity investment in a total environment of more modest assumptions of future investment returns – unless they can rapidly reduce the expectations of policyholders in relation to guaranteed levels of benefits.

On '*Underlying trends, comparisons of Asset Shares*', GAD provide a similar explanation to that provided in the previous annual report, that being:

... a retrospective roll up of premiums, known as asset shares, is becoming a common device by which companies gauge the balance of bonus distributions between differing generations of policies. (In many companies such simple asset shares are looked upon as a floor to policyholders' PRE.) ... However, the gap between asset shares and the typical smoothed maturity payout can give an indication of the level of miscellaneous surplus and earnings on the estate that companies are distributing to their policyholders.

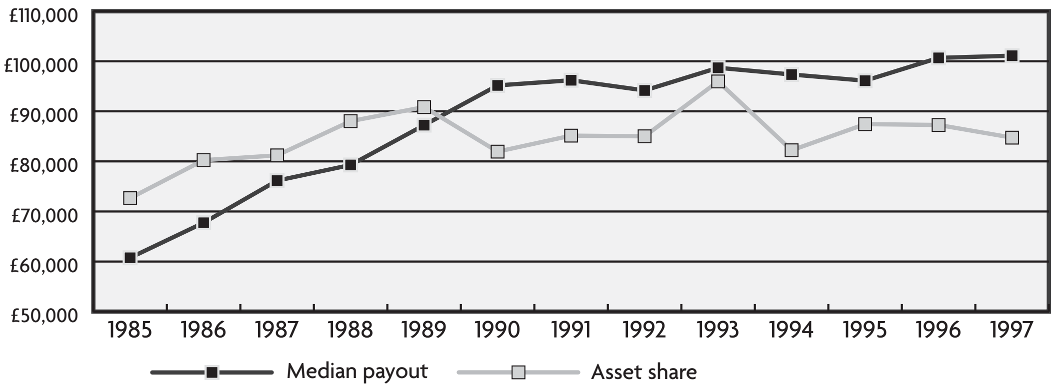
GAD repeat the main caveats set out in their previous annual report. GAD's report presents the following results of their analysis:

Comparison of actual median maturity payout and theoretical asset share for the years 1984-97 for a £50 per month conventional with-profits 10 year endowment policy (£)



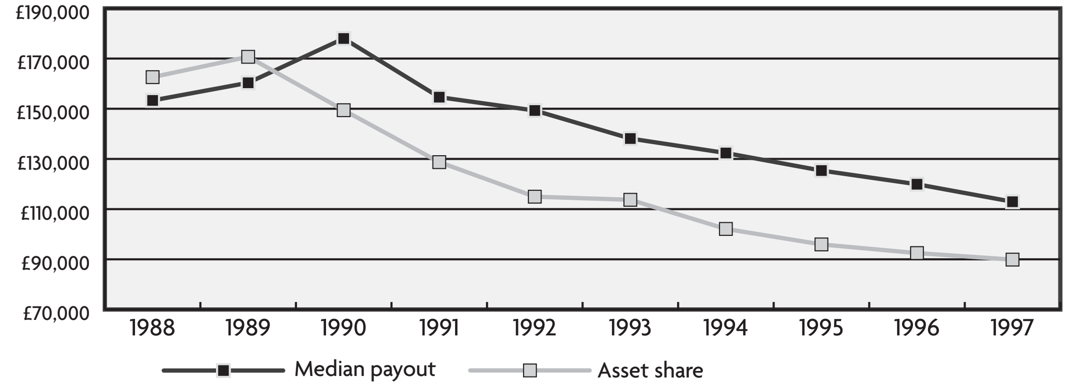
The appendix to GAD's report shows that they calculate that Equitable's maturity payout of £9,926 for this type of business is 126% of the theoretical asset share.

Comparison of actual median maturity payout and theoretical asset share for the years 1985-97 for a £50 per month conventional with-profits 25 year endowment policy (£)



The appendix to GAD's report shows that they calculate that Equitable's maturity payout of £86,355 for this type of business is 102% of the theoretical asset share.

Comparison of actual median maturity payout and theoretical asset share for the years 1988-97 for a £200 per month conventional with-profits 15 year pension policy (£)



The appendix to GAD's report shows that they calculate that Equitable's maturity payout of £109,211 for this type of business is 122% of the theoretical asset share.

GAD then report:

> *Bearing in mind the caveats that opened this Part of the Annual Report, and problems arising where terminal bonus declarations are infrequent, there is, as expected, a noticeable smoothing of maturity payouts. The general effect is of payouts roughly tracking asset shares, but at a considerable excess over these basic asset shares in the 1990s. There is a range of possibilities at work here, including the introduction of more accurate methods of setting terminal bonus, competitive pressures in a harsher market and dividend demands in the proprietary companies.*
>
> *The real interest is whether this situation can continue, as companies recognise limits to the amount of miscellaneous surplus and estate that they can distribute; or whether, as at least some companies currently arguing over the attribution of their estates contend, payouts are bound to fall closer to asset shares.* [A named insurance company] *has separately complained bitterly in public about over paying companies setting unrealistic long term hopes. All of this goes to the heart of PRE arguments and the division of prior accumulated surplus.*

GAD's report considers *'Possible future actual payouts'*. It states:

> *The precise excess actual payouts over our crude basic asset share is of less interest than the general trend of actual payouts into the future. The investment return on a typical with profit fund has been in the region of 17% per annum over the last 25 years. This compares to inflation over the same period of 6% per annum and thus has delivered a real return of 11% per annum. The likelihood of lower future inflation and a slowing of what has been an astounding real rate of return (i.e. the 11% p.a.) mean that a different future is likely. Our crude asset shares can be pushed forward on assumptions of investment returns and expenses to plot a possible picture of the likely path of real payouts. This is given in figure 12.10 below.*
>
> *This forecast accords with more precise and calibrated work elsewhere. Namely, while the shortest terms have a forecast of a relatively gentle decline in future payouts, the reverse is true for longer term contracts. These could see a comparatively steep fall in underlying asset share values in the next few years – as modest investment years replace the good investment years of the past.*

It is quite possible that such trends, if borne out in practice, will pose other problems in relation to the longer term policies – not just falling payouts disappointing policyholders. The past accumulation of guaranteed bonuses, and future compound bonuses on top, mean that on quite plausible future investment scenarios these guaranteed endowment maturity values or guaranteed pension values will exceed accumulated asset shares.

While this conforms to the concept of with profit business – smoothed returns underpinned by guarantees the industry will need to be careful in negotiating such a scenario. Put bluntly, the industry is likely to face a future where its terminal bonus cushions are far thinner, and the management of real guarantees becomes more important.

(Note: the bodies under investigation have told me that it should be noted that: *'the charts selected for this entry all show maturity payouts for regular premium contracts only. By contrast, the bulk of Equitable's business was recurrent single premium. These charts therefore have very little significance for Equitable. This comment also applies to the corresponding charts provided in the reports prepared by GAD for* [other] *years'.)*

03/11/1998 GAD provide HMT with comments on Equitable's letter of 30/10/1998. GAD disagree with Equitable's analysis on the grounds that it *'does not take account of the key point that the existence of a guaranteed annuity rate increases the level of cash that needs to be paid in substitution for that annuity (as otherwise policyholders would not agree to take the cash sum in place of the guaranteed annuity)'.*

GAD advise that:

... appropriate mathematical reserves need to be established for the full value of these guaranteed benefits and the associated obligations to policyholders in accordance with Part IX of ICR94, including in particular Regulation 64. It is not acceptable in this context to regard these guarantees as covered by a "first charge" against a final bonus for which no provision is made. This has clearly not yet been recognised by Equitable Life (and they have not even attempted as we requested at the meeting to quantify the reserves on this basis).

I believe that you should write to them along the above lines ... and invite them back to a further meeting in the very near future to explain how they propose to establish the appropriate level of mathematical reserves. If they are unable to meet this obligation, then intervention under either Section 37 or Section 11 may be warranted.

The issue over the adequacy of their mathematical reserves is quite separate from that of whether their interpretation of how the guaranteed annuity rates should be applied is consistent with policyholder reasonable expectations. Even if the Equitable's interpretation of PRE is accepted, then, as explained above, we believe that substantial additional mathematical reserves are needed for the guaranteed annuities ...

While we accept as a general reserving standard at present that no provision is needed for discretionary final bonus, this cannot apply to the extent that the company is obliged to pay a final bonus, in order to "buy out" the guaranteed annuities.

GAD state that £170m *'commercial cost'* would be quite inappropriate as an estimate of the additional mathematical reserve that is needed. GAD continue:

Where companies have identified the existence of annuity guarantees on a block of contracts, then we believe that appropriate mathematical reserves do need to be established on a satisfactory basis in accordance with Part IX of ICR94, including regulation 64. It is not acceptable to regard these guarantees as a "first charge" against a final bonus for which no provision has been made. Indeed we believe that this principle is generally accepted by the actuarial profession and is being followed by all other companies.

Consequently, we believe that the mathematical reserves do have to reflect the full value of the guarantees that have been given.

GAD conclude:

I believe that we need to write to them urgently making the above points and inviting them to a meeting in the next few days to explain how they propose to fund the mathematical reserves that are required.

05/11/1998 HMT write to Equitable, repeating the points made in GAD's note of 03/11/1998, including the references to Regulation 64. HMT seek an urgent meeting to agree a way forward. HMT say that this would offer an opportunity to discuss further issues concerning policyholders' reasonable expectations arising from Equitable's treatment of guaranteed annuities.

On the same day, HMT's Head of Life Insurance advises FSA's Managing Director and Head of Financial Supervision (Managing Director A) of HMT's intention to provide guidance to companies on meeting the cost of guaranteed annuity options. The Head of Life Insurance refers to Equitable's *'controversial policy of paying the guaranteed annuity rate only on the guaranteed sum built up in the fund (ie not on the discretionary terminal bonus)'*. He says that their preliminary view is that Equitable are entitled to do this, but that their principal concern is over Equitable's ability to reserve adequately for the guarantees. The Head of Life Insurance concludes: *'The information received to date is unconvincing, and raises serious questions about the company's solvency'*.

(Note: after the House of Lords judgment this note was leaked to The Guardian newspaper (see 19/12/2000 [**entry 13**]). Commenting on the last point in the note, FSA's then Line Manager wrote: *'We were subsequently satisfied that* [the Society] *was solvent and it remains solvent today'*.)

06/11/1998 [entry 1] HMT's Director of Insurance writes to the Head of Life Insurance Division having seen GAD's *'very helpful'* note of 03/11/1998. The Director of Insurance says:

We agreed that we should seek an urgent meeting with Equitable probably in advance of replying to [Equitable's Appointed Actuary] *raising the points* [GAD's Directing Actuary B] *has highlighted. The purpose of the meeting would be to make it clear to the Equitable that we need to satisfy ourselves:*

a) that the Equitable is taking a proper view of the liabilities which arise under the policies in question. This [seems] *to me to cover not only the actuarial issues to which* [Directing Actuary B] *draws attention but also the question of whether the Equitable's interpretation of the legal rights arising under these policies is one which the courts would support. As you know I think we may need to require the Equitable to provide to us (to the extent they have not already) samples of policy documents, promotion literature etc etc in accordance with criteria specified by us. I have no reason to believe that the Equitable have "cherry picked" the documents they have provided so far but equally I would not wish it to be possible for anyone to suggest that they had. Our legal advisers will no doubt be able to express a view on the security of the Equitable's legal position, but it may be appropriate for us, if there is any doubt, to seek Counsel's opinion too.*

b) To take a view on whether the approach being taken by the Equitable, even if secure as a matter of contract law, is consistent with its obligation to "conduct its business with due regard to the interests of policyholders" as required by [paragraph 7] *of Schedule 2a to the Insurance Companies Act and more generally whether it accords with PRE.*

06/11/1998 [entry 2]	FSA's Chairman writes to HMT's Director of Insurance to ask for advice about questions which had been put to FSA about guaranteed annuity rates and, particularly, about Equitable's approach. These include whether Equitable were right in their view that they could fund a guarantee by reducing bonuses, or whether that was inappropriate and should be prevented by the regulators; whether there had been a failure of prudential supervision if the with-profits fund could not bear the cost of these guarantees; and what would happen if the funds were not available to pay up, except by reducing the size of the fund below a level which actuaries felt was required to deal with other policyholders' reasonable expectations. In these circumstances, '[would] *not regulators then be invited to pay Peter by robbing Paul, and how would these decisions be made?*'.
09/11/1998	FSA write to HMT in response to their note of 05/11/1998. FSA comment that it is *'critical'* that HMT seek further information to test their view that Equitable are entitled to pay the GAR only on the guaranteed sum and not on the terminal bonus.
11/11/1998 [entry 1]	Equitable write to HMT in reply to their letter of 05/11/1998. Equitable apologise that they appear to have misinterpreted what was requested at the meeting on 02/10/1998. Equitable explain that, as at 31 December 1997: *... the basic additional reserve on the basis indicated in your letter, before any allowance for cash commutation or any entitlement to pay future premiums, would have been around £675m. The corresponding increase in reserves on the same basis, including the standard resilience tests, would have been at a similar level.* Equitable estimate that, as at 31 December 1998, assuming valuation interest rates of 5%, 5.5% and 6%, additional basic reserves would be £1,375m, £1,160m or £955m, respectively. A manuscript note on the HMT and GAD copy of the letter suggests that *'Reserves if assume 5% interest rate and 20% needed for resilience'* would be £1,650m.
11/11/1998 [entry 2]	GAD's Directing Actuary B asks Scrutinising Actuary E to *'review the various policy documents and literature we have received, in order to see what further information may be needed to assess the reasonableness of their approach on GAOs in terms of PRE'*.
12/11/1998 [entry 1]	GAD's Scrutinising Actuary E produces a note of the *'fundamental questions'* to be raised with Equitable at the meeting now arranged for 13/11/1998. GAD's questions include: *1. When did the Board decide that different final bonus entitlements would apply if a policyholder elected to utilise the guaranteed annuity option? Was it in 1995, when it appears that a Note (2) was first incorporated in the Bonus Statement?* *2. Has the company made the possible variation of final bonuses sufficiently clear to policyholders? The 1998* [With-Profits] *Guide makes a passing reference only (at the bottom of Page 5); Note (2) in the Bonus Statement is very much "small print". Unless further evidence can be provided, it might be felt that previous policyholder expectations have not been adequately modified.* *3. Was the tweaking of bonus policy, in relation to the introduction of a differential final bonus, in itself an action contrary to policyholders' reasonable expectations – that had previously been built on notices and statements referring to the build-up of a policy fund?* *4. The letter of 30th October from* [Equitable's Appointed Actuary] *implies that policyholders who do not elect to take guaranteed annuity benefits are not given credit for the higher "Policy Annuity Value" forgone. How can this be justified in relation to the terms on which the contract was issued?*

The Scrutinising Actuary lists the documents that Equitable should be asked to provide, those being:

> *(1) copies of Board papers relating to the decision that alternative (lower) final bonuses should be added where policyholders elect to take advantage of the guaranteed annuity rate;*
>
> *(2) copies of any communications with policyholders issued prior to the 1995 Bonus Statement that might have indicated that a two-tier bonus allocation could apply;*
>
> *(3) any documents that lend support to the adoption of the two-tier final bonus structure, as a modification of policyholders' previous expectations – that would almost certainly have previously been built on the accumulation of a simple "policy fund", that would ultimately be converted into an annuity.*

Scrutinising Actuary E concludes: *'Even if the two-tier final bonus practice of the company were found to be acceptable, it would seem clear from the policy document already supplied that each policyholder is entitled to a "Policy Annuity Value" that is based on the guaranteed annuity available, whether or not they elect to take such* [a] *guaranteed annuity. The company should be asked to confirm that such a minimum value is paid, notwithstanding the impression given in the letter from* [Equitable's Appointed Actuary] *of 30th October, or alternatively, should justify its current payment policy'*.

12/11/1998 [entry 2] PIA discuss FSA's note of 06/11/1998. A PIA official says that there are marketing as well as prudential aspects to the issue. The official explains that, while PIA have not formed a view on Equitable's actions, their experience of with-profits cases has shown that *'it is difficult to prove a complaint which would restrict a company's flexibility in the way that it declares bonuses'*. The official comments that he has not seen the wording of Equitable's policies, which would clearly be significant. Nevertheless, in his view, while Equitable might just be able to reduce bonuses, *'they are acting in poor faith'* in doing so.

13/11/1998 HMT (Director of Insurance, Head of Life Insurance, Line Manager D, Line Supervisor C and Legal Adviser B) and GAD (Directing Actuary B and Scrutinising Actuary E) meet Equitable's Chief Executive and their Appointed Actuary. The note prepared by HMT records that the meeting noted that the reduction of terminal bonuses where guaranteed annuity options were biting had become a high profile industry issue; that further information from Equitable was required so that the regulators would be able to assess policyholders' reasonable expectations; that Equitable had instructed their solicitors to advise and that Leading Counsel had endorsed their approach; and that Equitable's Chief Executive agreed to provide any Board papers concerning discussion of the policy of reducing terminal bonus.

HMT's note records: '[Equitable's Chief Executive] *confirmed that it was in 1995 in a climate of reducing interest rates that the policy was first applied, there had been plans to introduce the policy earlier in 1993 but subsequent higher interest rates had taken this policy revision off the agenda'*. (Note: it has been put to me by one of the Society's attendees that HMT's record of what was said at the meeting is incorrect. It is suggested that, while the level of interest rates between early-1994 and mid-1995 meant that the differential terminal bonus policy had no practical effect, it is clear that the policy had been introduced in 1993, with effect from 1 January 1994.)

HMT's note records:

> *The company agreed that there had been a case (reported in the media) whereby a policyholder had obtained an extra settlement from the company, this was effectively giving him a biting GAO on top of unadjusted terminal bonus. The company argued that this policyholder received this amount as redress for administrative failings and delays*

encountered in settling the policy. The case was not routine and junior members of the company had given the policyholder misleading information. In additional age was a factor in deciding to give compensation, the policyholder was 73 and wanted to retire. However, the Equitable did not elaborate on why they decided to give compensation in this manner rather than giving an ad hoc payment to cover this.

Equitable's Chief Executive states that he is *'satisfied that the Board had acted correctly in using their discretion to reduce or remove terminal bonuses from policies with biting GAOs'* and that *'terminal bonuses were not guaranteed and the literature has always stated that'*. He also adds that some policyholders had written to the Society in support of its stance. HMT state that *'to properly understand the PRE implications of this we would want to get a feel of what impression had been given to policyholders over the years'*.

There is continuing disagreement on the reserving issue. Equitable's Chief Executive argues that 100% reserving would have *'severe commercial implications from low solvency cover which would have to be reported'*. HMT and GAD argue *'that it was a statutory requirement to reserve on this basis and unless Equitable could put up a compelling argument to the contrary we would expect the company to reserve on this basis'*.

Equitable's Appointed Actuary says he is convinced that the Society remained solvent, and that he was considering a section 68 Order application with respect to the resilience calculations, in order to assume that only 50% of policyholders took the GAR option.

Equitable agree to provide a copy of Counsel's opinion which endorses their differential terminal bonus policy, and they defend their argument about asset shares.

HMT and GAD say that, in order to properly understand the policyholders' reasonable expectation implications, they want to see a selection of the documents sent to policyholders *'to get a feel of what impression had been given to policyholders over the years'*. They agree to select some policy numbers at random from a list of policies that had matured over the last three years.

16/11/1998 [entry 1] GAD's Scrutinising Actuary E writes to Chief Actuary C setting out points discussed that day. This includes the view that *'provided alternative Accumulation Values* [the value applicable to premiums paid for retirement annuity policies set out in Table A of the policy document] *are permissible, then the current practice of the Society* [to apply a lower Accumulation Value where a policyholder takes the GAR option] *would seem to be legally acceptable'*. Scrutinising Actuary E notes that:

We have observed that the possibility of reducing terminal bonuses if policyholders elected to take a guaranteed annuity rate was first mentioned in Schedule 4 of the returns as at the end of 1993 – so the Society clearly became aware of the potential strains fairly early. However, it does not appear to have communicated its intentions to policyholders at that time. It seems that the first Bonus Notice to give any indication that the final bonus might be reduced to take account of the existence of guaranteed annuity rates was that issued in January 1996 covering the end 1995 declaration (in Note (2)). The With-Profits Guide that was issued in July 1995 certainly made no mention of it. [The 1998 With-Profits Guide now includes a reference to special rules applying in some circumstances, such as where particular benefit guarantees apply.]

It is accepted that the Directors have absolute discretion over the amounts of any bonuses to be declared and have the power to modify their methods of allocation from time to time.

It is also recognised that they are reluctant to grant bonuses to particular policyholders that effectively give those policyholders benefits of value materially in excess of *accumulated "asset shares" – to the detriment of the expectations of other policyholders. However, it is still an open question as to whether the different Accumulation Values are consistent with policyholder expectations.*

The Scrutinising Actuary copies his note to HMT.

16/11/1998 [entry 2] HMT write to Equitable to confirm the follow-up action and information required from Equitable after the meeting on 13/11/1998. This includes: literature provided to policyholders; Counsel's opinion; worked examples where some or all of the policy proceeds are taken in cash; an estimate of Equitable's free assets and solvency cover, indicating the level of additional reserves assumed for annuity guarantees; and information on what margins there are in the current reserving basis which might be released.

18/11/1998 Equitable tell HMT that, as at 30 October 1998, '*on the basis of the draft figures, the surplus assets and implicit items, before any reserves for GAOs, are around £2bn, which confirms the comments we made last Friday about the current solvency position'.*

19/11/1998 The Assistant Private Secretary to the Economic Secretary informs Line Manager D that the Minister is unhappy with the proposed guidance sent to her on 26/10/1998. The Assistant Private Secretary explains:

The Minister has commented that surely if people bought a contract, it is a guarantee and they should not now expect to pay for the guarantee themselves. The Minister is minded to think that the shareholder should bear some/all? of the costs themselves.

The Minister has asked about Orphan Assets asking if some appropriate use could be made where they exist. The Minister would welcome a fuller justification and consideration of other issues before she is prepared to agree a way forward.

23/11/1998 [entry 1] Equitable provide HMT with the documents requested on 16/11/1998, including Counsel's opinion on differential bonuses, which had been sought following the regulator's questioning on the issue.

23/11/1998 [entry 2] HMT's Line Manager D provides a brief for a Minister who is visiting Equitable but who holds no responsibility for prudential regulation. HMT urge him not to comment on current exchanges with Equitable. She says: *'There remain a number of unresolved issues surrounding the company's exposure to guaranteed annuity options. Insurance Division within HMT are addressing these matters'.*

24/11/1998 [entry 1] Equitable write to GAD following the meeting on 13/11/1998 and HMT's letter of 16/11/1998. Equitable state that there appears to be some misunderstanding about the precise nature of the policy benefits in question which had not been resolved at the meeting. Equitable seek to clarify the position by setting out some examples of how benefits are calculated when a differential terminal bonus is applied. They suggest that these make clear *'why the vast majority of clients select the cash fund form of benefit'*.

Equitable state that they still feel that their approach to reserving for annuity guarantees under Regulation 64 as previously explained is valid. They add that it is also *'the approach which GAD have tacitly accepted since 1993'* and that the consequences for Equitable of adopting GAD's approach (of reserving on the basis that 100% of benefits are taken in guaranteed annuity form) are *'potentially extremely serious'*. Equitable state that they *'cannot see why prudency with "appropriate margins" necessitates assuming that 100% of benefits will be taken in the most onerous form when that flies in the face of the logic of the situation and the practical experience'*.

Equitable provide information about their estimated solvency cover as at 30 October 1998, as follows:

> *The estimated "Form 9" position (excluding linked business) at 30 October 1998, before taking account of implicit items or making any allowance for additional reserves for guaranteed annuity rates was as follows:*

	£m	*£m*
Value of assets		*24076*
Reserves – Form 58	*21205*	
– resilience	*781*	
		21986
Available assets		*2090*
Required minimum margin		*926*
Surplus assets		*1164*

Equitable say: *'The Society has a section 68 order allowing implicit items of up to £850m to be brought into account. Financial conditions have changed so as to improve the solvency position since 30 October so it is clear from the above figures that there is no question of basic solvency being currently in question. The figures also, of course, include resilience reserves in accordance with the normal GAD guidelines, which I should not necessarily consider appropriate, if very substantial additional reserves were also required for guaranteed annuity rates'*.

Equitable then disclose the reserves required when accounting for annuity guarantees. This is presented as:

	Proportion of benefits assumed taken on guaranteed annuity rate terms			
Reserves	*0%*	*25%*	*50%*	*100%*
	£m	*£m*	*£m*	*£m*
Form 58	*21205*	*21548*	*21892*	*22579*
Resilience	*781*	*644*	*720*	*1201*
Total	*21986*	*22192*	*22612*	*23780*

Equitable then disclose: *'There are some margins in the basis, particularly on assurance mortality, which could be released. I would not, however, anticipate those releasing more than £100m of reserves. Since the bulk of the Society's business is investment in nature it is the regulatory restrictions on yields which primarily govern the strength of the basis. By virtue of the fact that a substantial resilience reserve is required on top of "full face value" reserves, it follows that there are no significant margins in the interest assumptions released'*.

On a copy of the letter, an official has written:

24,076
23,780
£300m
+£100m
850m

Equitable describe the options available to them in the event that reserving at *'the onerous end of the spectrum'* was required. These include:

1998

(i) Passing the bonus declaration, either for all business or for the classes incorporating guaranteed annuity rates.

(ii) Raising capital either through further subordinated debt (limited scope at present) or financial reassurance.

(iii) Trying to obtain some sort of protection based on derivatives. [An option explored by GAD, see 13/08/1998.]

(iv) Publishing a Form 9 where the required minimum margin is only just covered.

(v) Making a sizeable switch from equities to fixed interest or cash.

Equitable go on to explain:

Of the above (ii) is now probably rather difficult to put in place by 31 December and there must be doubts as to how effective (iii) could be. Approaches (i) – (iv) carry very significant PR risks – possibly of a scale which would threaten the continued independence of the Office. Approach (v) will damage the future prospects of policyholders for a number of years.

Equitable conclude by saying that unless they and GAD could come to an agreement on the interpretation of Regulation 64 they would need to consider what steps to take in terms of consulting with the profession.

24/11/1998 [entry 2]	Every Appointed Actuary is sent by the Government Actuary a copy of DAA10 on the resilience test. The Government Actuary explains that, in the light of current volatility in equity markets, GAD have decided to revise the second of the three resilience tests set out in DAA6 (see 30/09/1993 [**entry 2**]).
24/11/1998 [entry 3]	GAD's Scrutinising Actuary E writes to HMT's Line Manager D. The Scrutinising Actuary sets out some points to put to the Economic Secretary, in order to explain in more detail the thinking behind the proposed guidance. He notes the difficulty for insurers such as Equitable who have no shareholders or free estate and for whom the residual cost of the guarantee is relatively high. In their case, the guarantees fall to be met by either the beneficiaries or the remaining policyholders. In response to the note HMT's Head of Life Insurance comments that they should make clear *'that there is not one right answer, & that different solutions are possible, each of them fair'*.
25/11/1998	GAD send HMT a copy of the report of the results of the survey on reserving for annuity guarantees produced on 27/10/1998. GAD caution that the quality of responses was not sufficiently rigorous as to draw conclusions about individual companies, that events have since moved on, and that there is no intention to publish the results in any detail.
26/11/1998	GAD provide HMT with a *'2nd Update'* on the *'Effect of Current Market Conditions on UK Life Insurers'* for them to provide to the Tripartite Standing Committee. This follows the assessment on 22/10/1998. GAD say that they had identified eight companies that should be *'called in'* to discuss their current financial position and state that: *With the possible exceptions of Equitable and* [another named company], *I would expect each of these to be covering their margin of solvency at present, but without much cushion for further adverse movements in market conditions.*

GAD's second update says that:

> *Figures for Equitable Life at 30 October indicate that the company was just solvent assuming that 100% of policyholders exercise their GAOs (the company is disputing the need to assume such a high take up rate). While this is reassuring it should be realised that publication of such a low solvency position is likely to severely undermine the company's reputation in the market and could threaten its survival as an independent entity. Equitable's annual returns are due to be published next July. Discussions are on-going on the appropriate reserving basis to be used and the acceptability of the company's approach to charging policyholders for the cost of the GAOs.*

01/12/1998 GAD provide HMT with comments on the enclosures in Equitable's letter of 23/11/1998. In relation to Counsel's opinion, GAD say:

> *The legal opinions do not wholeheartedly support the actions taken thus far by the Society.*
>
> *Counsel advise that the Board of the Society might have sufficient discretion under their articles to apply different bonus rates to different classes of policyholder and, within any class, to different policyholders depending on the policyholders' choice of benefits subject to any limitations in the contract or statements made to policyholders. <u>We do not disagree with this advice</u>.*

GAD agree with Counsel that Equitable's documentation to date has *'not adequately described the bonus methodology that the Society are now adopting'*. GAD note that the *'question remains as to whether past vesting policyholders have been treated fairly'*, and that Counsel advises that *'the Society ought to be able to defend its position in Court'*. GAD say:

> *We do not feel sufficiently competent to offer an opinion on this legal question. The presentation adopted by the Society in its bonus notices, of the benefits available at maturity, does not appear to have been in strict accordance with the policy conditions, but it is difficult to see how this might have created a breach of contract. It remains possible that policyholders could successfully argue that they were not led to expect a differential terminal bonus rate dependent upon the benefit they chose at vesting.*

GAD provide HMT with comments on Equitable's letter of 24/11/1998. Under the heading *'Reserving Issues'*, GAD describe Equitable's arguments on Regulation 64 as unconvincing, asserting that Regulation 64(3)(c) on *'taking account of options (e.g. in this case to take cash or a different form of annuity) needs to be read in conjunction with Regulation 72 which requires a provision on a prudent basis to cover any <u>increase</u> in liabilities caused by policyholders exercising options'*. GAD continue:

> *There is nothing in the regulations that specifically allows a reduction in liabilities because of the existence of policyholder options (see for example Regulation 74 which considers the effect of voluntary discontinuance) and indeed, in our view, it would not be prudent to make such an assumption.*

GAD set out why they are unconvinced by Equitable's arguments on reserving less than fully for their annuity guarantees. In relation to resilience reserves, GAD write:

> *I would have some sympathy though over the additional provision of £1.2 Bn apparently required by our standard resilience test (and which would not normally be included as a provision in the Companies Act accounts). Nevertheless, we believe that a "fair value" of the guaranteed annuity, assessed on derivative-base methods, would include a significant part of this £1.2 Bn provision. Moreover, they would of course have to find all this amount if the investment scenario postulated in the resilience test were to materialise.*

> *Accordingly, I do not think that we could openly encourage them to reduce this "resilience" provision, albeit that the "advice" in* [the Government Actuary's] *letter is not a regulatory requirement. They would also of course have a PR problem in explaining why they chose a different "resilience test" scenario if they decided to pursue such an avenue. It should also be recognised that in the resilience scenarios which assume a fall in the yield on gilts the guaranteed annuity benefit is more likely to be selected by clients.*

On Equitable's *'Form 9 Position'*, GAD advise that:

> *According to the figures presented in his letter, Equitable would have a surplus of assets over liabilities of some £300M (before any declaration of bonus) if they reserve in full for 100% of the benefits in guaranteed annuity form (or equivalent) including an amount of £1.2 Bn in respect of the standard resilience test. With an implicit item for future profits of around £850M (which may need to be adjusted slightly), they would just have sufficient cover for their required margin of solvency as at 30 October 1998.*

GAD continue:

> *While we recognise that this may not suit them commercially, we believe that this would place them on a consistent basis with other offices. It also indicates that they are very reliant on future surplus, largely arising from significant potential returns on equity investment, in order to fund their future bonuses, including the discretionary final bonuses. They have not provided any figures (admittedly, we had not specifically requested these at present) to suggest that this would be an unfair conclusion. (For example, it would be instructive for us to see a figure for their aggregate asset shares which could be compared with assets, including any inadmissible assets. A copy of any financial condition report by the appointed actuary, under GN2, would also be helpful.)*

Commenting on the options, as identified by Equitable, GAD state that:

> *It seems likely that they will need to consider* [in the short term] *some suitable combination of these for this current year-end. In particular it is difficult to see how they could justify declaring any bonus at this year end.*
>
> *In the medium term, though, I believe that they will need to look for some ongoing form of capital support if they are to remain viable under difficult investment and trading conditions.*

02/12/1998 HMT's Legal Adviser B sends Line Manager D a draft advice note. She explains that her note was not complete legal advice, because *'we are not yet at the stage where that is possible'*.

The Legal Adviser casts some doubt on whether a failure by Equitable to reserve 100% for annuity guarantees would provide grounds for regulatory action. She suggests that Regulation 64 is very wide and sets out an objective standard. Legal Adviser B states that it is not for HMT to decide whether liabilities have been properly provided for, but for a court. She agrees that GAD's and HMT's approach on reserving is within Regulation 64, but says that it is less clear whether Equitable's view is in breach. If Equitable are not in breach, it is not clear on what basis HMT might take action against them.

Legal Adviser B argues that it is for HMT to show a breach, and only where Equitable could be shown to be *'significantly out of sync'* with accepted practice, or were clearly acting unreasonably, would the onus fall on Equitable to demonstrate compliance. On Equitable's Counsel's opinion, she says:

> *... I find it hard to take issue with what he says. He thinks that on balance a Court would accept that Equitable's practices were valid in terms of contract and trust law. However, I understand it to be your view that considerations of PRE may go beyond determining what is a legally acceptable construction of the contract or exercise of a discretion under or in conjunction with the contract. If so, then* [Equitable's Counsel's] *opinions (even if you accept them) are not an end to the matter. You will still wish to make your own examination of the documents, events and policyholders' representations to come to your own view on PRE.*

03/12/1998 HMT and GAD meet Equitable to discuss reserving for annuity guarantees. HMT prepare a note of the meeting. HMT begin the meeting by confirming their position that Equitable *'would need to reserve for all guaranteed benefits under the contracts'*. Equitable's Appointed Actuary argues that Equitable's reserving methodology is:

> *... not new and that GAD should have been aware from the returns that the company was writing GAO business. The reserving basis had been, until now, tacitly accepted.*

In response, GAD *'rejected this argument and countered that whilst they were aware that the Equitable had written GAO business it was not possible to tell the construction of the contracts or the reserving basis from the return'*.

HMT's note records:

> *GAD further commented on the reduction in the resilience reserve given in the solvency illustrations recently supplied to* [GAD's Directing Actuary B]. *They expressed the view that the holding of substantial mathematical reserves to cover guaranteed annuity options did not appear to be a sound argument for reducing the stringency of the resilience test applied. Although the resilience tests specified by the Government Actuary were not legally binding, companies had to be satisfied of the actuarial prudence of the test used. It was explained at the meeting that the Government Actuary could be expected to wish to discuss with* [Equitable's Appointed Actuary] *the basis for any relaxation of the resilience tests applied by the company.*

Equitable's Chief Executive states that *'the reserving basis required was excessively prudent and bore no resemblance to commercial reality and policyholders would be damaged by this (through a change to a more conservative investment policy, passing bonuses or through there being a run on the office)'*. The note of the meeting goes on to record:

> [Equitable's Chief Executive] *asked whether there was any scope for HMT to give any concession on this issue and what would be the consequences of the company not following this requirement*. [HMT's Head of Life Insurance Division] *responded that he could not see any scope for issuing a concession in these circumstances. Furthermore, the requirements derived from EC Directives and there was limited scope to give concessions in these circumstances.* [He] *said that we would take appropriate measures to ensure compliance.* [The Chief Executive] *asked whether there was any scope for appeal,* [the Head of Life Insurance] *said that any scope for appeal would be limited to judicial review,* [the Chief Executive] *said that he might well have to take up this option.*

GAD comment that:

> *... if the company had not been mistaken in its interpretation of the regulations it would not have been in the past so generous in its bonus declarations. Questions were also raised about the prudence of trying to operate a company without an estate.* [Scrutinising Actuary E] *stated that from his interpretation of last year's bonus declaration that a fair proportion of reversionary bonus was paid out of asset value gains.* [Equitable's Appointed Actuary] *argued that since 1986 reversionary bonus rates*

have been managed down although he did admit that it was possible that there had been times when the value of accumulated policyholders' asset shares had been greater than Equitable's assets. Nevertheless he argued that he did not believe that it was in the interests of policyholders for the Equitable to build up a large estate.

Equitable's Appointed Actuary confirms that he has considered reinsurance *'as* [an] *option for protecting the balance sheet'*, but he *'was reluctant to broadcast the Equitable's position to potential reinsurers at this time and he had hoped that the regulatory position might change at this meeting'*. He points out that a reinsurance agreement is unlikely to be in place by the end of the year. HMT *'thought it would be possible to give a concession so that the effect was post dated to cover the 1998 year end position'*.

Equitable's Appointed Actuary continues that he *'was concerned from a professional point of view that he was being forced to adopt a reserving approach that was "wildly prudent" and he thought he would need to consult professionally regarding this'*. GAD say that they do not think that there is a professional issue to consider and that there is *'a distinction between the legal position as required by Regulation 64 and the resilience reserve where there was more scope for professional judgement and interpretation'*.

There is further discussion of the implications for policyholders' reasonable expectations of the differential bonus policy. HMT and GAD tell Equitable that they still have some way to go before coming to a conclusion. They say that they believe policyholders' reasonable expectations would be met in the future if Equitable's Counsel's advice about the wording of annual statements were followed; the issue is whether expectations had been met in the case of policies that have matured: *'... since the way in which the contracts and the company's bonus policy had been described did not appear to be fully in line with the approach adopted by the company'*. HMT request further documentation in order to consider this point.

04/12/1998

HMT's Legal Adviser B sends Line Manager D her advice. She says that: *'The following is not intended to be final or complete legal advice. We are not yet at a stage where that is possible. We await, for example, one more submission from Equitable. But I hope it assists to clarify the issues and to set out my views at this stage'*. The Legal Adviser states:

"Liabilities" are defined in [Regulation] *58 to mean amounts calculated in accordance with Part IX of the Regulations in respect of the items shown at C and D under the heading "Liabilities" set out in* [paragraph] *9 of* [Schedule] *9A to the Companies Act 1985. Broadly,* [Regulation] *64 says that long term liabilities must be determined on actuarial principles, making proper provision for all liabilities on prudent assumptions that shall include appropriate margins for adverse deviation of relevant factors. Pursuant to* [Regulation] *64(2), the determination must take account of all prospective liabilities as determined by the policy conditions for each existing contract. Factors to consider are guaranteed benefits, bonuses to which policy holders are contractually entitled, options available, PRE and the nature and term of the assets representing the liabilities and the value placed upon them. I note that there is provision in* [Regulation] *66 to avoid future valuation strain and in* [Regulation] *72 to cover any increase in liabilities caused by policy holders exercising options under their contracts.*

The advice continues:

[Regulation] *64 is very wide. It also sets out an objective standard. In other words, it is not for HMT to take the final decision as to whether liabilities have been properly determined, but for a Court. Generally speaking, however, there seems to be room for more than one reasonable actuarial view as to "proper provision" and "prudent assumptions". Having said that, it seems to me that any entity which adopts the*

> *GAD/HMT view on reserving would be within* [Regulation] *64. What is not so clear is whether Equitable Life's view (or any position between that of Equitable and HMT) is in breach of* [Regulation] *64. If Equitable is not in breach, I am not clear on what basis HMT might take action against it. (As to what action might be taken, see below.)*

The Legal Adviser notes that *'Equitable seems to agree that the prospective liabilities here are those under the policies themselves and not those under any other available options, and there seems to be no dispute about the amount of the liabilities, but Equitable argues that* [Regulation] *64(2) does not necessarily require provision to back 100% of that amount'*. The advice continues:

> *On first glance, the Equitable position is appealing in purely legal terms.* [Regulation] *64(2) requires that a determination of the amount of long term liabilities "shall take account of all prospective liabilities" under the policies. It does not say in terms that the amount must equal 100% of the value of such liabilities. The overarching general requirement in* [Regulation] *64(1) requires the making of "proper provision for all liabilities on prudent assumptions" which also suggests that provision need not necessarily equal 100% of the liabilities – it might be more or less.*
>
> *However, reading* [Regulation] *64 together with the rest of Part IX and with* [Article] *17 of the First Council Directive 79/267 (as substituted by Directive 92/96) which Part IX is intended to implement, it can also be reasonably argued that Part IX contemplates 100% provision unless there is a respectable actuarial position that the provision might be lower. The tenor of Part IX is cautious and the intent is clearly that determinations should be relatively stringent.* [Article] *17 of the First Directive offers some small support for this view stating, for example, that prudent valuation must not be a "best estimate", but must include appropriate margins.*

The Legal Adviser says that, for this reason, a court *'would accept that Equitable's position is untenable (even though supported by its actuary)'*. However, she adds that, although she is not convinced that a court would accept that Regulation 64 required that prospective liabilities be 100% reserved, the court is likely to accept that *'100% (or thereabouts) is required in this case, if Equitable continues to maintain its position at the low end'*. She discusses what action might be taken if Equitable do not accept HMT's and GAD's position:

> *It appears that Equitable is or will be in breach of the 1994 Regulations, the Insurance Companies (Accounts and Statements) Regulations 1996 and Sections 17 or 18 of* [ICA 1982]. *You say you do not think it will be in breach of Sections 32 or 33* [of ICA 1982] *(solvency and minimum margins). Equitable might be pursued for the breaches, but you are minded to proceed rather by way of intervention under Section 45* [of ICA 1982] *to require full determination of the amount of liabilities on the grounds that the criteria of sound and prudent management are not being met (*[paragraph] *6 of* [Schedule] *2A to* [ICA 1982]*). (Action under section 45 assumes the purpose of intervention cannot be appropriately achieved under sections 38 to 44.) Assuming* [that there is a] *breach, such intervention is unlikely to be successfully challenged in the Courts as long as its terms are not* Wednesbury *unreasonable.*

The advice continues: *'As an aside, the issue of breach raises the question of burden of proof. Is it for HMT to show breach of the 1994 Regulations or for Equitable to show compliance? I think that it is for HMT to show breach. Only where Equitable could be shown to be significantly out of* [step] *with accepted practice or clearly acting unreasonably would the onus fall on it as a matter of fact to demonstrate compliance'*.

Legal Adviser B says that she understands it to be HMT's view that *'considerations of PRE may go beyond determining what is a legally acceptable construction of the contract or exercise of a discretion under or in conjunction with the contract'*. She notes that HMT would wish to examine *'documents, events and policy holders' representations'* in order to come to their own view on what policyholders' reasonable expectations might be. Legal Adviser B records that she had discussed with Line Manager D certain aspects of Counsel's opinion, which may indicate further grounds for Equitable having to increase their reserves. The advice states:

> *It is conceivable that the Unfair Terms in Consumer Contracts Regulations 1994 might also apply. However, the term(s) in question (to the extent they may be viewed as terms of the contract, rather than of a trust) arguably do not themselves cause "a significant imbalance in the parties' rights and obligations ... to the detriment of the consumer". It is the exercise of the discretion which does or might have that effect. One would have to argue that it was the open-ended nature of the discretion which was unfair. I find it difficult to say whether this line of argument might be successful, but nevertheless am left with the feeling that the more profitable lines of examination are those discussed by Counsel and PRE.*

07/12/1998 HMT write to Equitable to record the outcome of the meeting held on 03/12/1998. HMT say that their letter takes account of the regulator's further consideration of the issues, in the light of the points made by the Society at that meeting, and subsequent advice from GAD. Their letter states that:

> *As we indicated at the meeting we consider that Part IX of the Insurance Companies Regulations 1994 (ICR 1994) requires a life office to calculate its liabilities (and hence to reserve) on the basis of all the benefits offered under the contract. Regulation 64 of the Regulations requires long-term liabilities to be determined "on actuarial principles", and to "make proper provision for all liabilities on prudent assumptions". Regulation 64(2) makes clear that the determination must "take account of all prospective liabilities as determined by the policy conditions".*

HMT set out their view that:

> *In the majority of cases, Equitable Life's pension contracts appear to have been written so that the principal benefit provided is an annuity, and there is an option to take benefits in cash form. In the case of such a contract, the effect of Part IX of the ICR 1994 is in our view to require full reserving for the liabilities to provide the annuity benefits to the value already guaranteed under the contract (i.e. to assume that 100% of policyholders take their benefits in annuity form), plus any additional liabilities arising from the cash option. While we accept that the precise wording of Regulation 64(1) which refers to "proper provision for all liabilities on prudent assumptions" may suggest some flexibility in appropriate cases, we are not persuaded that any credit can be properly taken for any reduction in reserving requirements that would result from assuming policyholders would exercise their option to take their benefits in the form of cash. The guaranteed annuity appears to be effectively the benchmark for minimum liabilities, whatever "option" is chosen by the policyholder.*

HMT explain that:

> *To the extent that regulation 64 of the ICR 1994 could be disapplied under section 68 of the Insurance Companies Act 1982, HMT would not be inclined to make such an order. This is because, as indicated above, we consider that "prudence" requires that, even if other options are available and actually selected by the policyholder, reserves should be established at or very close to 100% of the value of the guaranteed benefit.*

HMT argue that, for policies written to provide a cash benefit and which include an option to convert this benefit to an annuity at a guaranteed rate, Equitable should reserve for the terminal bonus up to the level required for the guaranteed annuity, since that level of terminal bonus could no longer be considered discretionary.

In relation to resilience reserves, the letter says:

> *HMT commented that there might be room for debate regarding the level of resilience reserves Equitable Life is required to maintain. The resilience tests specified by the Government Actuary are not legally binding in themselves. Companies could adopt an alternative test provided that they were satisfied of the actuarial prudence of the test used. This said the holding of substantial mathematical reserves to cover guaranteed annuity options did not appear to be a sound argument for reducing the stringency of the resilience test applied. It was explained at the meeting that the Government Actuary could be expected to wish to discuss with* [Equitable's Appointed Actuary] *the basis for, and prudence of, any relaxation of the resilience tests applied by the company, particularly if the basis adopted was not universally accepted by the market.*

In relation to reinsurance, the letter says:

> *Reinsurance was suggested as a possible means of overcoming the difficulties that Equitable Life would face in reserving on the assumption that 100% of policyholders took their benefits in the form of a guaranteed annuity. You pointed out that it would be difficult to put in place such an arrangement before the end of the month. We acknowledged this but indicated that we would be willing to consider the possibility of treating any such reinsurance arrangement as having been effective from the year end provided that at least the broad terms of the agreement were in place by that date and a firm intention to enter into the agreement could be shown.*

(Note: an earlier draft of this letter included a note in relation to the section on reinsurance that *'this paragraph still requires revision by GAD to take account of the technical difficulties of reinsurance identified since the meeting'*. It does not seem that anything about technical difficulties was added. However, the following drafting was removed from the final version of the letter: *'Reinsurance of the guaranteed annuities would enable the company to reserve purely for its liabilities under the cash option within the contracts'*.)

HMT repeat the points about policyholders' reasonable expectations set out in the note of the meeting and refer to the request for additional documentation from Equitable so that HMT could consider the issue further.

HMT conclude: *'We also indicated that we expected an appropriate statement on contingent liabilities to appear in your regulatory returns, related to the risk* [of] *successful challenge to the Equitable Life's bonus practice with regard to guaranteed annuities'*.

08/12/1998 GAD send HMT a note about reserving for annuity guarantees. GAD suggest that:

> *... it could be reasonable to assume that less than 100% of policyholders elected to take the guaranteed annuity provided that the reserve held in respect of those policyholders who are assumed to take an alternative annuity benefit is based on a realistic value of that alternative.*

GAD suggest a mathematical formula that might be applied to Equitable and say they would not object to Equitable being allowed to phase in this formula over a reasonably short period of time. However, GAD recommend that HMT:

> *... obtain some commitment from the Society to reduce declared reversionary bonus for the effected contracts until such time as full provision has been made. We should also require the Society to fully disclose in the HMT Returns the basis that it has adopted.*

GAD refute Equitable's claim that their reserving basis had been tacitly accepted by the prudential regulators. GAD state:

> *There was a suggestion at the last meeting with the Society that they had disclosed their current reserving basis in their Returns and we had not challenged that basis and hence they were entitled to assume that their existing reserving basis was adequate. We dismiss this argument as being without substance. Schedule 4 of the 1997 Returns discloses the existence of the guarantees as "Some older contracts contain minimum guaranteed rates for annuity purchase at retirement". This brief statement gives no indication of the significant exposure to guarantees that actually exists. The Actuary then goes on to say that "It was considered unnecessary in current conditions to make explicit provision for other guarantees and options described in paragraph 4." The other guarantees referred to in this statement include the annuity guarantees. There is no further explanation offered as to how the Actuary reached this conclusion. As the Actuary signed a certificate which confirmed that the liabilities had been determined in accordance with the regulations we had no reason to challenge that Actuary's basis. However we have subsequently been challenging his basis following receipt of the Society's response (dated 29th July 1998) to GAD's questionnaire on guaranteed annuities which disclosed the Society's significant exposure to such guarantees.*

(Note: the note of 03/12/1998 did not only specify the Society's 1997 returns.)

GAD raise the possibility that there might be grounds for seeking to censure Equitable's Appointed Actuary in that he had signed the 1997 returns which had, by doing so, confirmed that the liabilities had been determined in accordance with the regulations. GAD note that the approach adopted by Equitable was, broadly, one of the approaches set out in the November 1997 report of the Annuity Guarantees Working Party. The Working Party had gone on to comment that the approach *'could be viewed as being unsound because no explicit provision is made for an explicit guarantee'*. However, GAD also note that the Working Party had not recommended an approach to reserving *'because of the variation between products and the approaches of different companies to managing the guarantees'* and that they had commented that *'there is no industry consensus on reserving for guarantees'*.

GAD conclude by saying that it might be appropriate for the Government Actuary to discuss the matter with the Society's Appointed Actuary, if HMT felt that they wished to take issue with the Society's reserving stance.

09/12/1998

HMT send the Economic Secretary a further draft of a letter to companies on determining how the costs of annuity guarantees should be met. The briefing provided says:

> *A particular difficulty arises for mutual insurers (such as Equitable Life) that do not have any "orphan assets" or "estate" from which the residual costs of guaranteed annuity options can be met. In this situation, the ultimate residual cost of the guarantees must either be met by the policyholders who benefit from the guarantee or be spread across all with-profit policyholders who share in the overall profits and losses of the relevant business. Unfortunately Equitable Life has given these guarantees on a substantial portfolio of its policies (approximately 25% of its with profits business by liability value) and the level of the guarantee is comparatively high. Consequently, the residual cost of the guarantees is relatively large and will necessarily impact on the total amount of bonuses that can be paid to policyholders.*

10/12/1998

HMT's Head of Life Insurance sends Line Manager D a note of a telephone call with Equitable's Chief Executive. The Chief Executive had told him that Equitable still disagreed with HMT and GAD on what constituted a prudent reserve for annuity guarantees and that they had received *'favourable'* legal advice on the question of reserving and were also seeking Counsel's opinion on the issue.

The Head of Life Insurance records that '[The Society's Chief Executive] *made clear that if we could not reach agreement, the Equitable were prepared to challenge any use of our powers through Judicial Review'*. His note goes on to record that:

> *Meanwhile, they were pursuing the possibility of financial reinsurance. They had approached two reinsurers, both of whom thought that they might be able to help. The Equitable were also considering possible asset reallocation; but they did not see much scope for this before the year end; the markets were not favourable to any major reallocation.*

The Head of Life Insurance outlined the approach to reserving that GAD had set out in their note of 08/12/1998. The Chief Executive's reaction was that this approach did not provide much flexibility.

HMT and Equitable had agreed that there would be another meeting between HMT, GAD and Equitable within the next week or so. Equitable's own record of the call concurs with this account.

11/12/1998 HMT's Legal Adviser B advises the Head of Life Insurance in response to questions that he had raised at a meeting the previous day. The questions were whether:

> *(a) a breach of section 17(1) and (2) of the ICA 82 and the Insurance Companies (Accounts and Statements) Regulations 1996 (*[especially Regulation] *4) would give rise to a mens rea offence or one of strict liability (where intent need not be proved); and*
>
> *(b) if* [HMT] *were of the view that the accounts were in breach of the Regulations, the company allegedly in breach might be required to reissue the accounts in a manner which brought them into compliance.*

The advice provided is as follows:

> *The relevant offence provision appears, by a process of elimination, to be subsection 71(3)(a) of the ICA 82:*
>
> > *"any insurance company which makes default in complying with, or with a requirement imposed under, any provision of this Part of this Act, being a default for which no penalty is provided by the foregoing provisions of this section ... shall be guilty of an offence and liable, on summary conviction, in England and Wales and Scotland to a fine not exceeding level 5 on the standard scale ..."*
>
> *None of the defences in subsections (5) - (7) of section 71 apply.*
>
> *The words "makes default" do not seem to me to suggest intent as do words used in other provisions of section 71 such as "knows to be false" or "intentionally obstructs". I take the phrase to mean "fails to do what ought to be done". This imports the idea of a wrongful act, but need not mean a wilful or intentional act. Indeed the phrase "wilful default" is often used in offence provisions and might have been used here if that was what was meant. Clearly though, if we approach a decision as to whether to prosecute, this is a matter on which Counsel should be instructed.*

The advice continues:

> *As to whether a company might be required to "reissue" or amend accounts when it has breached* [Regulation] *64 of the Insurance Companies Regulations 1994, I can find no provision in the Act or any Regulations which contains such a power. There is a provision in section 22(5) ICA 82 allowing the Treasury to "communicate with the company with a view to the correction of any such inaccuracies and the supply of deficiencies", but this imposes no obligation on the company and in any event it is very doubtful that it would apply to a breach of* [Regulation] *64. Such breach would not be an "inaccuracy" or a deficiency in the sense of a failure to "complete" the account.*

I think a Court would expect that the [Insurance Division] *would prosecute a clear breach of the Accounts and Statements Regulations or, if we considered* [Regulation] *64 to be met, to amend it if we thought that appropriate in policy terms (or to act under section 45 if we considered* [Regulation] *64 insufficient in any particular case). In any event, a decision to intervene to direct that past published accounts should be corrected and republished would have to be supported by good grounds under section 45(1). We will need to discuss any such grounds nearer the time.*

GAD's Chief Actuary C annotates his copy of the advice:

The breach is s18(4).

This leads to a breach of [sound and prudent management] *Sch 2A – Para 8(a).*

S37(2)(aa) gives grounds to exercise powers.

S42(1) could be exercised or s45(1)(b).

(Note: all these references are to ICA 1982.)

15/12/1998 [entry 1] The Economic Secretary confirms that she is content with the further draft of a letter to companies on determining how the cost of annuity guarantees should be met, sent to her on 09/12/1998.

15/12/1998 [entry 2] GAD's Chief Actuary C writes to HMT's Legal Adviser B (copied to HMT's Director of Insurance, Head of Life Insurance, Line Manager D, Line Supervisor C and GAD's Scrutinising Actuary E) in response to her note of 11/12/1998. The Chief Actuary says that GAD are:

... surprised that you believe that there is no power in the Act or any Regulations which would enable HMT to require a company to "reissue" or amend accounts when it has breached reg 64 of the Insurance Companies Regulations 1994. In our opinion there are grounds to require reproduction of the abstract of the actuary's report and resubmission of the returns produced by the company.

The Chief Actuary continues:

There is a failure to undertake the actuarial investigation required by s18(1)(a) of the Act in accordance with s18(4), as the liabilities have not been determined in accordance with the applicable valuation regulations (i.e. Part IX of the Insurance Companies Regulations 1994). Furthermore, the form of the abstract of the actuary's report, required to be made under s18(1)(b), has not been produced in the form prescribed under s18(5) as it does not meet the requirements of [Regulation] *4(a) of the Accounts and Statements Regulations.*

Both of the above counts result in breaches of Paragraph 8(a) of the Criteria of Sound and Prudent Management (Schedule 2A to the Act). S37(2)(aa) of the Act seems to give the grounds to exercise the power under s42(1) of the Act in respect of the first breach. The [Secretary of State] *would thereby have the power to require a company to produce an abstract in accordance with s42(3) of the Act. The second breach would also seem to give the grounds to exercise the power under s45(1)(b) of the Act, which could be used to require a company to resubmit the returns in accordance with the Accounts and Statements Regulations (i.e. to include the correct abstract of the actuary's report) in order to ensure that the criteria of sound and prudent management are fulfilled.*

15/12/1998 [entry 3] HMT (Director of Insurance and Line Manager D) meet FSA (Chairman and Managing Director A) to brief them about Equitable prior to FSA assuming responsibility for prudential regulation. HMT supply a note in advance of the meeting. This appears to be an unsigned and undated note headed *'Financial position at end October 1998'*.

In the note, HMT set out the Society's financial position at the end of October 1998, as follows:

If reserve for 100% of GAOs		*If reserve for 25% of GAOs*	
	£m		*£m*
Assets	*24926*	*Assets*	*24926*
Reserves	*23780*	*Reserves*	*21548*
Assets to cover RMM	*1146*	*Assets to cover RMM*	*3378*
RMM	*926*	*RMM*	*926*
Free Assets	*220*	*Free Assets*	*2452*

> *i.e. the company is just solvent if it reserves fully for its guaranteed annuity options.*

HMT continue:

> *However, it should be noted that the free assets figure makes no allowance for the declaration of bonuses. The cost of annual bonuses, assuming they are maintained at their current level, is £500m, so the company would appear to have insufficient assets to declare a bonus in 1999.*
>
> *Also it should be noted that £850m of the assets available to cover the* [required minimum margin] *are implicit items (allowance for future profits). Only 5/6th of the* [required minimum margin] *can be covered by implicit items. The company is therefore close to breaching this requirement when GAOs are fully reserved for. A relatively small fall in equities or gilt yields could wipe out the company's explicit free assets.*

HMT explain the arguments surrounding the level of reserving required. HMT set out a '*Strategy for Regulatory action*'. This was to form the basis of a further meeting with Equitable before Christmas which would be used to:

- *Clarify that HMT* [are] *not minded to take action against the company for its failure to reserve fully for GAOs in its 1997 returns. (This would be consistent with* [the] *approach taken with other companies);*
- *Formally put the company on notice that the reserving approach that the company is proposing (assuming this remains to reserve for 25-35% of the GAOs) is not acceptable in HMT's view;*
- *Indicate that in the context of settling its year end position it is for Equitable to decide the reserving approach that it intends to adopt in its 1998 returns since it is for the company to comply with the Regulations. But make the company aware that if in FSA's view the returns submitted at the end of June are not compliant, FSA will take action;*
- *Seek an undertaking from the company that it will not declare any further bonuses without prior discussion with HMT. If necessary use the lever/threat of intervention action on the grounds of sound and prudent management to obtain agreement from the company.*

HMT state that intervention action would be likely to take the form of closing the company to new business. HMT say:

- *If we are unable to obtain agreement from the company not to declare further bonuses without prior discussion with HMT we will need to take intervention action immediately.*
- *If agreement is obtained intervention action would only become necessary when the company indicated its intention to declare a bonus which would have the effect of*

making the company breach its [required minimum margin] *if the GAOs were fully reserved for. (The company usually declares bonuses in February.)*

- *If agreement is obtained and no bonus is declared the need for intervention action/prosecution would probably not arise until July when the annual returns were submitted and it was clear from those returns that the GAOs had not been adequately reserved for.*

HMT warn that Equitable could be expected to seek judicial review of any intervention action on reserving for annuity guarantees.

HMT's note concludes, under the heading *'Other regulatory action to be taken'*:

> *In December/January we would analyse the policyholder documentation issued by the Equitable in order to reach a view on whether the company's approach of reducing terminal bonus to meet the cost of GAOs was consistent with PRE in the case of policies maturing before this year end.*
>
> *In January we would seek to issue a Dear Director letter to all life companies setting out our interpretation of the reserving requirements for GAOs (ie that full reserving was required) and that adequate disclosure was required in the returns of the reserving basis used for GAOs.*

According to Line Manager D's note of the meeting, FSA's Managing Director queries the amount of future profits that could be taken into account to cover the required minimum margin, and asks why no action had been taken on Equitable's 1997 returns when they showed no reserving for annuity guarantees. On the latter point, the note records: *'It was explained that the approach taken by the company had not been clear from the return*. [FSA's Managing Director A] *considered it defensible for HMT to have changed its view as the picture filled out and the significance of GAOs changed'*.

HMT's note records:

> [FSA's Chairman] *was concerned that if Equitable were forced to pass a bonus this would amount to commercial suicide. No advisor would subsequently recommend the company's products. It was agreed that it would be commercially very damaging for the company to pass its bonus. At this stage it was not clear whether this would be necessary (for instance there might be some margins in the reserving basis which could be released and the financial position might improve ahead of the date for setting future bonuses). From HMT's perspective it was vital that the company was not permitted to make itself insolvent (assuming 100% reserving for GAOs) by declaring further bonuses.*

The financial position of other companies was discussed and it is noted that:

> *Other companies had seen their financial position severely affected by GAOs but were expected to pull through.*

HMT's note records the following discussion:

> *Equitable had stated its willingness to take the reserving issue to judicial review. However, it was not certain that it would do so in practice.* [FSA's Chairman] *noted that the fiduciary duties of Equitable's directors might point in the direction of seeking a buyer for the business rather than challenging the HMT position and risking intervention action such as being closed to new business. It was clear that Equitable wished to avoid being taken over and it was agreed that a takeover would not be a good result for the company or HMT.*

FSA's Chairman asks if Equitable had any significant exposure to pension mis-selling. HMT explain that: *'It was thought the company's liabilities were small and that the reserves established ... were reasonably generous in comparison with those of other companies'*.

The Chairman also asks about the potential impact of a policyholder challenge to the differential terminal bonus policy. HMT state that Equitable's financial position would not be made worse, assuming they had reserved on a 100% basis. The only additional costs to the Society would arise from topping up payments to policyholders who have already retired.

At the end of the meeting, the note records: *'It was concluded that* [the] *situation was not a happy one but in the circumstances HMT appeared to be taking the only sensible approach'*.

17/12/1998 [entry 1] Equitable provide HMT with a schedule of the items that HMT and GAD had requested at the meeting on 03/12/1998, annotated to show what had been found and was now enclosed. The schedule shows that HMT had sought documents from the previous 40 years, relating to retirement annuity, individual pension plan and transfer plan policies.

17/12/1998 [entry 2] HMT send FSA a copy of the guidance letter on annuity guarantees and policyholders' reasonable expectations, approved by the Economic Secretary and due to be issued the next day. HMT comment that the letter sets out general principles, intended to ensure a consistent and fair approach overall. They note that commentators are likely to view it as relating primarily to Equitable and that '[some] *will see it as support for the Equitable's position; some will see it as a shot across their bows'*.

18/12/1998 [entry 1] Every insurance company is sent by HMT's Director of Insurance a guidance letter, *'Guaranteed Annuity Option Costs and Policyholders' Reasonable Expectations'*. This reflects the draft that had been approved by the Economic Secretary (09/12/1998).

HMT advise that policyholders entitled to some form of annuity guarantee or option on guaranteed annuity terms could reasonably be expected to pay some premium or charge towards the cost of the guarantee or option. HMT explain that:

> *Generally we consider that it would be appropriate for the level of the charge deemed to be payable by participating policyholders for their guarantee (or annuity option) to reflect the perceived value of that guarantee (or option) over the duration of the contract. This could be achieved in some cases through some reduction in the terminal bonus that would be payable if there were no such guarantee (or option) attached to the policy. However the selected treatment by each office would need to depend on the wording of the contract involved and how it had been presented to policyholders.*

HMT further advise that they would expect:

> *... that for most companies the present guaranteed cash benefits (including declared bonuses) would be converted, as a contractual minimum, to the annuity on guaranteed terms. However as indicated above, it would appear possible, depending on the particular circumstances relating to the contract, that any terminal bonus added at maturity may be somewhat lower than for contracts without such options or guarantees, and that this terminal bonus could in some cases be applied at current annuity rates.*

HMT add that *'the appropriateness of any adjustments to bonus allocations for participating policyholders would need to be assessed by each office in the context of the reasonable expectations of policyholders. This assessment will be influenced by their policy documents and any representation made through marketing literature, bonus statements or elsewhere'*.

18/12/1998 [entry 2] GAD write to HMT in response to their note of the meeting with FSA on 15/12/1998. GAD dispute that no action had been taken on the 1997 returns, pointing out that the current discussions on annuity guarantees followed directly from questions that GAD had raised on the reserving bases in the returns. GAD note:

> *It should be remembered by HMT that GAD invited* [Equitable's Appointed Actuary] *to a meeting on 28th May this year (following consideration of their 1996 returns), at which we discussed the reserving bases appropriate to accumulating with-profits business, attempted to clarify certain PRE aspects of the bonus notices being issued by Equitable and urged great restraint in the granting of guaranteed bonuses.*

GAD say that they disagreed with the statement by the FSA Chairman that it would be commercial suicide if Equitable were to award no guaranteed bonuses that year. GAD say:

> *As a non-commission paying office, Equitable does not rely on* [independent financial advisers] *to recommend its products. GAD does not believe that it would necessarily amount to commercial suicide if no additional guaranteed bonuses were granted this year in relation to contracts containing GAOs, provided the reasons were properly explained to policyholders – indeed we consider that such a step is probably necessary for the prudent management of the Society. It should be recognised that this would not prevent the company from indicating further growth in the value of the cash option alternative available under these contracts. [From figures so far provided to us, it is hoped that the financial position of Equitable will not be so tight at the end of 1998 as to inhibit the granting of some additional guaranteed bonuses on other contracts – i.e. naturally including those currently being marketed. Admittedly, this is not yet certain.]*

18/12/1998 [entry 3] Equitable send HMT a copy of Leading Counsel's opinion in support of Equitable's stance on reserving for annuity guarantees. Equitable express the hope that the forthcoming meeting (arranged for 22/12/1998) would lead to a mutually satisfactory outcome. Equitable tell HMT that:

> *On the advice of Leading Counsel the Society has decided to take one or more test cases to the High Court in order to confirm that the Society's Directors have acted entirely properly and within their powers in adopting the system of final bonus additions which applies to policies containing GAOs. Although not directly pertinent to our current discussions, I hope that you will regard this action as a demonstration of the Society's confidence in its position and its determination to maintain it for the future.*

Equitable's Counsel explains that, over the last five years, *'only a tiny proportion of policyholders have elected to take an annuity based on GARs'*. Counsel says that this low take-up will have been *'substantially influenced'* by Equitable's differential terminal bonus policy. Counsel says:

> *This approach has been notified to the Treasury (and previously to the DTI) in the returns made by the Society pursuant to its obligations under Schedule 4 of the Accounts and Statements Regulations for all years from 1993 through to 1997 consistently. To quote from the 1993 to 1995 versions of the return: "It was considered unnecessary in current conditions to make explicit provision for the other guarantees described in paragraph 3", and paragraph 3 stated in relation to Relevant Policies that "the premium provide a cash fund at the pension date, to which (for policies issued prior to 1 July 1988) a guaranteed annuity rate is applicable." The 1996 and 1997 returns adopted the same wording as regards the absence of provision (save that in that case the cross-reference was to paragraph 4), and the cross-reference was to the following statement: "older contracts contain minimum guaranteed rates for annuity purchase at retirement."*

Further, we understand that the Treasury has been well aware of the existence of such policies throughout the relevant period, and that the GARs referred to were higher than CARs, in the light of experience from 1994 onwards. We note that the Society's returns made under Schedule 4 of the Accounts and Statements Regulations for the years 1993 to 1997 quoted verbatim the text of the resolutions of the Society's Board which declared differential final bonuses which adjust such final bonuses for the fact that GARs exceeded CARs: see paragraph 16(vi) of the 1993 to 1995 versions of the return, and paragraph 16(viii) of the 1996 and 1997 returns.

Counsel for the Society continues:

The ICR came into force on 1 July 1994. Thus the obligations imposed on the Society by the ICR have been applicable at all material times – that is at all times when GARs have exceeded CARs. This notwithstanding we are instructed that the Treasury did not seek to take the point now being taken against the Society in respect of the valuation dates falling in 1994, 1995, 1996 or 1997. And yet circumstances giving rise to the alleged necessity to make a reserve will have existed in each of those years (and at the 31 December 1995, 1996 and 1997 valuation dates in particular), if indeed it is necessary on a proper understanding of the ICR to make a reserve at all.

In each of those years, the Society has in good faith declared annual bonuses and allotted and paid final bonuses on the assumption that there was no need to make any such reserve. It is obvious that had the Treasury raised with the Society in any of the years 1994 to 1997 the point of interpretation of the ICR which it now seeks to take, the Society would not have been able to declare and allot bonuses to Relevant Policies at any such level, if at any level at all. Further, the Society's investment strategy over the relevant period would have been different had the Treasury required that the Society make such a reserve. None of this can be undone today. The Society's reliance on the Treasury's previous interpretation of the ICR infects 1998 also, in that the bonus declarations for the year ending 31 December 1997 were made in February 1998, some ten months prior to the 31 December 1998 valuation date in respect of which the present issue arises; and the Society's investment strategy for 1998 is also history.

Equitable's Counsel argues that:

Had the Treasury sought to take a consistent line on this issue from 1994 onwards, it would have been possible for the Society to absorb any need to make reserves progressively, as the downward trend of annuity rates over the 1994 to 1998 period would have dictated a steady increase in reserves. The consequence of the Treasury seeking to impose its interpretation of the ICR on the Society at the end of 1998 for the first time is to require the Society to make a one-off reserve of approximately £1.5 billion, which is massive by any standards, and which threatens the statutory solvency of the institution.

The opinion states that *'it is impossible for the Treasury validly to conclude in the face of these matters that a 100% reserve is necessary in respect of the value of GARs under Relevant Policies'.*

21/12/1998 Equitable send HMT more of the documents they had requested.

22/12/1998 [entry 1]	HMT and GAD meet Equitable. HMT prepare a note of the meeting.

Equitable undertake to articulate the problems they would face if they published a low solvency cover, and to apply for a section 68 Order for a larger future profits implicit item. HMT and GAD promise to send a response to Equitable's Counsel's opinion as quickly as possible and to consider any case Equitable put forward for the phasing in of reserves. HMT stress:

> *... that it was for the Equitable to reserve how it saw fit. However, HMT would take regulatory action if the Annual Returns disclosed that the reserves were inappropriate or if the company's actions imperilled solvency margin cover. The bonus declaration was of particular importance here and if HMT felt that bonus levels declared were imprudent it would take action.*

Equitable's Appointed Actuary states that he *'did not agree that the reserve should be 100% and that the regulatory regime did not require reserving for terminal bonus, this was something that HMT was suddenly applying'*. HMT repeat their position that *'terminal bonus was effectively guaranteed up to the value of the guaranteed annuity'.*

GAD reject the contention in Counsel's opinion that they had tacitly accepted Equitable's reserving practice, saying that *'the information disclosed in the return was limited and gave them no reason to question the validity of the reserving basis'*.

The note records that '[the Appointed Actuary] *believed that HMT's approach would disadvantage policyholders'* and that '[if] *the Equitable had to reserve for the full amount of the guarantees this would seriously constrain investment strategy and low solvency would threaten the company's future'*. Equitable's Chief Executive agrees to write further *'on the consequences of taking this reserving hit as* [HMT] *had some difficulty in accepting all of his arguments'*.

The note goes on to record that there was *'no agreement between HMT and the company on the fundamentals of the argument'*, with Equitable arguing that the approach taken by HMT was not in the interest of policyholders – and with HMT's Head of Life Insurance saying that HMT *'did not want policyholders or potential* [policyholders] *to be misled or disadvantaged by the company mis-reporting its financial position in the annual returns'*. The Head of Life Insurance stresses that *'whilst he expected the company to accept the principle of reserving outlined by HMT we were sympathetic to aiding the company in softening the blow in getting to this position, as we understood there was the potential for policyholders to be adversely affected by a sudden hit of this magnitude'*.

HMT's note of the discussion records that:

> [Equitable's Appointed Actuary] *said that there were margins in the reserving that could be released giving the company approximately c£200m further free assets. The company could apply for a larger implicit item (up to £1.9bn) HMT stated that if a Section 68 Order request was received from the company we were likely to treat this application sympathetically. The company agreed to apply for this larger implicit item before the year end and it could then decide at a later date whether to use some or all of the amount allowed under the concession.* [Equitable's Chief Executive] *felt that it would take a period of 4-5 years to manage the problem down, if the HMT reserve were required.*

Manuscript notes made by HMT's Head of Life Insurance and GAD's Chief Actuary C at the meeting reflect the above concerns and points.

22/12/1998 [entry 2]	Equitable apply to HMT for a section 68 Order for a future profits implicit item of £1.9bn, for possible use in their 1998 returns.

23/12/1998	GAD advise HMT on Equitable's section 68 Order application. GAD say: *I am happy to confirm that we are comfortable that the figures used in relation to the original submission of 26 June remain appropriate and would support the amount now requested.* *[This conclusion is supported by the presumption that had higher reserves been established at the end of 1997, as we now think appropriate, these would have been supported by increased transfers from investment reserve (as carried in line 51 of Form 14) and would not have affected the level of emerging surplus shown in form 58 in that year.]*
30/12/1998	HMT send Equitable the section 68 Order for a future profits implicit item of £1.9bn, for use in their 1998 returns.
31/12/1998 [entry 1]	Equitable press HMT for their views on their Counsel's opinion, following the meeting on 22/12/1998. Equitable explain that Equitable have received an offer in respect of a financial reinsurance arrangement. They enclose a copy of a fax from Irish European Reinsurance Company (IRECO), which confirms that a meeting is to take place on 7 January 1999 where they hope that the remaining issues could be resolved to enable a contract to be drawn up. Equitable also enclose a copy of an internal note, which sets out that: *The reassurance would cover the retirement annuity portfolio with the following costs:–* *a) an annual non-refundable premium of £50,000; and* *b) in the event of a claim, 2% of the claim amount.* *A claim would occur under the reassurance treaty if in any year the guaranteed funds to which guaranteed annuity rates applied (i.e. for those policies for which the option was effected) exceed 25% of the total guaranteed funds for all retirements in that year.* *It is proposed that any claim would be repaid by the Society to the reassurer over a period of about 3 years. That repayment would be taken out of investment returns in excess of those required for the statutory valuation.* (Note: this note was altered before it was sent to HMT. On the original, the final sentence above continued '*... which means that no reserves would need to be set up for this liability*'. The sentence '*As you are aware, we have also been talking to* [another reinsurance company] *but we have had no offer as yet*' was also removed from the copy sent to the regulators.)
31/12/1998 [entry 2]	HMT's Legal Adviser B sends the Head of Life Insurance a first draft of a letter to Equitable about the opinion. She states that the opinion does not cause HMT to change their views, as set out in their letter of 07/12/1998. The Legal Adviser adds: *... we are firmly of the view that returns made by the Society since 1993 could not be viewed as constituting notice to DTI or HMT of the Society's reserving practice. As we noted in the meeting, the statements in the accounts are brief in the extreme and do not disclose the reserving method or the rate of guarantee. Nor does the text of resolutions of the Society's Board reveal that GARs actually exceeded CARs. The problem (which in any event was not significant before 1995) was not revealed until HMT began to consider the responses to the relevant questionnaire in 1998. We raised the matter with the Society and others very soon after that. DTI/HMT was not aware from 1994 that the GARs referred to were higher than CARs.* *The HMT position on reserving is not in any event a change of policy, but a view that in the changing economic circumstances guaranteed annuities must, as a matter of prudence, be fully reserved.*

31/12/1998 [entry 3] HMT's Legal Adviser B writes to GAD, in reply to their note of 15/12/1998. The Legal Adviser clarifies that, in her view, only section 45 of ICA 1982 could be used to require a company to reissue or amend accounts. The Legal Adviser doubts, however, that this would be the appropriate or most proportionate remedy to ensure sound and prudent management or to protect policyholders.

1999

01/01/1999 HMT contract out most of their functions and powers in respect of the prudential regulation of insurance companies to FSA. (Among the powers retained by HMT is the authority to approve section 68 Orders.) Supervisory staff and legal advisers transfer to FSA.

04/01/1999 GAD advise FSA that they have been reviewing the issue of the level of mathematical reserves established by Equitable in respect of annuity guarantees. GAD explain that there are three actions now needed:

- to tell Equitable in writing that GAD are not happy with the fact that they have zero reserves for annuity guarantees in their 1997 returns;
- to seek a number of items of specific information from Equitable about mathematical reserves and asset shares, together with a *'copy of the most recent Financial Condition Report produced by the Actuary in accordance with professional guidance note GN2'*. GAD explain that this information would *'help us to form a better understanding of* [Equitable's] *current financial condition, and resilience to changing investment conditions'*; and
- to provide comments on Counsel's opinion obtained by Equitable (see 18/12/1998 [**entry 3**]).

On the last point, GAD comment that Counsel had overlooked that the prudent assumption of the proportions of policyholders who might exercise each option (a guaranteed annuity or cash/current annuity):

> *... ought to depend on the relative value of these benefits. If the value of the guaranteed annuity is some 20-30% higher than the value of the alternative guaranteed cash, then we believe that almost all policyholders would reasonably be expected to opt for the annuity benefit.*

GAD state that Equitable have offered policyholders an additional discretionary cash sum if they chose the cash benefit over the guaranteed annuity. GAD say that this recent experience is not relevant as Equitable:

> *... cannot sensibly take account in the valuation of the increased proportion therefore taking the cash benefit, since they do not propose to maintain any provision on the balance sheet for this additional cash bonus.*

On the subject of the earlier 1993-1996 returns, GAD:

> *... accept with hindsight that we might have addressed the issue rather earlier by asking some pointed questions about their guaranteed annuities. However, the presentation of their valuation methodology in their returns was somewhat obscure, and required the reader to pick up comments in three quite separate parts of the return and draw certain inferences from them. There was nothing said to indicate that the level or extent of these guaranteed annuities were regarded as significant.*
>
> *For example, the wording in paragraph 5 refers to no explicit provision being made in current conditions for the "other" guarantees in paragraph 3, without clarifying exactly which guarantees have or have not been included, or saying whether allowance had been made implicitly for guarantees within the methodology adopted or within the other valuation assumptions.*

GAD add that *'the materiality of this issue at end-1996 and earlier would have been much lower'*, as market interest rates were then more than 3% higher compared with present levels.

GAD also stress *'that we have not accepted the reserving basis apparently adopted in the 1997 returns, and indeed have not had any direct communication with the company about these returns'*.

GAD dispute that the additional reserve required for annuity guarantees at the end of 1996 would have prevented the declaration of bonuses. GAD state that at no time did Equitable seek to discuss the reserving basis with GAD and HMT.

GAD have *'some sympathy'* with Counsel's argument that, had the regulator taken a consistent line on the issue of reserving from 1994, it would have been possible for Equitable to absorb the need to make reserves gradually. However, GAD note that *'most of the increase in the £1.5bn provision has arisen in 1997 and 1998 …'*. GAD observe that they could consider the question of *'phasing-in'* higher provisions once they had the additional information sought from Equitable.

Legal Adviser B (who transfers to FSA to the position of Chief Counsel, Insurance and Friendly Societies (Chief Counsel A)) sends the Head of Life Insurance a further draft of a letter to Equitable about their Counsel's opinion.

05/01/1999 GAD send FSA an amended version of the proposed letter to Equitable, which includes changes suggested by the Government Actuary.

07/01/1999 FSA's Director of Insurance submits proposed letters of guidance to Appointed Actuaries and Managing Directors and the proposed letter to Equitable about Counsel's opinion to FSA's Chairman for him to note. The Director of Insurance says that the letters make clear that HMT's and FSA's policy in relation to the level of reserve required for annuity guarantees had not changed. The Director of Insurance explains:

> *… we would expect the reserve established to be essentially the same whether the contracts involved are written as an annuity with the option to take a cash fund or the other way round. In addition, the focus is on actuarial prudence which requires a reserve at or within a few percentage points of 100% of the value of the GAO rather than the strict letter of the reserving requirements in the Insurance Companies Regulations 1994. Focus on the latter might encourage the argument that the legal requirements should be waived in this instance on the basis that they are excessively burdensome; and this is an argument we have already considered and rejected.*

The Director discusses three *'options'* for dealing with companies which had submitted their 1997 returns on the wrong basis. He says:

> *We are clear that action to prosecute the companies for supplying improper returns would be a disproportionate response and in any event very unlikely to succeed. We have considered the options available in terms of other intervention action, none of which is attractive, and concluded that the least bad approach is to ask those companies whose 1997 returns were not prepared in accordance with the guidance, and would have shown a materially different financial position if they had been so prepared, to accelerate submission of their 1998 returns. The advantages and disadvantages of the 3 main options are set out below.*

The three *'options'* put forward are:

'Option 1 – Take no action in relation [to] *past returns'*
FSA's Director of Insurance explains:

> *This would involve allowing the currently submitted 1997 returns to remain on the public record although we could still make clear to companies that this did not mean that FSA was accepting as valid the basis on which they had been prepared. This would appear a*

1999

weak regulatory stance and would leave us in a very difficult position in respect of arguments that prospective policyholders might be misled by inaccurate 1997 returns.

This said, arguments could be made that any risk of prospective policyholders being potentially misled is short-term (6 months for the vast majority of companies) and is small in size. We consider the risk small as in the vast majority of cases it appears that any inadequacy in the reserving for GAOs would not have had a material impact on the company's apparent financial strength. In those cases where the impact would have been significant there are other arguments why it is unlikely that prospective policyholders would be misled as to the financial strength of the company:

a) there has been a capital injection or reinsurance arrangements have been put in place since the end of 1997 which means the company is currently in no worse a financial position than its 1997 returns suggested;

b) the company is closed to new business so there are no prospective policyholders; or

c) the company would in any case have been classed as one of the weaker offices so that financial strength would not have been a significant factor influencing the policyholders' choice of office.

In addition it could be argued that there is only a small likelihood of payouts to those who become policyholders between now and June being significantly reduced as a result of companies having to meet additional liabilities for GAOs which were not apparent in their 1997 returns. This is because companies determine their payouts to policyholders on an asset share basis. This involves ensuring the return largely reflects the investment performance of the policyholder's premiums. Any additional cost incurred in respect of GAOs is likely to be met out of a company's free reserves or by an adjustment to the payouts for those existing policyholders with GAOs – thus not affecting the bonuses of new policyholders.

However, it is clear that all the above are complex technical arguments which could not be expected to run well in the media or to be readily accepted by consumer groups.

'Option 2 – Require correction of "misleading" 1997 returns'
FSA's Director of Insurance explains:

This would demonstrate the FSA's willingness to take action where insurance companies fell short of meeting their obligations. However, there are significant doubts about whether the legislation empowers us to require companies to correct their returns where we consider them to have been prepared on an inappropriate basis. Each case would have to be considered on its merits and in many cases we doubt we would have sufficient grounds to intervene. Therefore, it is unlikely that such action would produce a clearer position for the public – certainly in the period before publication of the next returns.

Even if such action could be enforced, we would need to allow companies time to do the necessary work. In practice, companies would be unlikely to be in a position to correct their 1997 returns much before they were superseded by their 1998 returns (at best the end of February assuming the request were issued immediately and instantly accepted by the company). Bearing in mind that the overall financial position in the resubmitted returns might look little different in the majority of cases (see below) and would already be more than a year out of date we believe that the costs of such an approach would be disproportionate to the benefits.

*'Option 3 – Require accelerated 1998 returns from companies who submitted "misleading" 1997 returns'*
FSA's Director of Insurance argues that:

Again this would demonstrate a proactive approach by the FSA and would tackle directly the main concern – i.e. that prospective policyholders might be misled by inaccurate data which had been published by companies in the past.

Under the legislation we could require companies to accelerate preparation of their annual returns by 3 months (so they would be available by the end of March). The difficulty of determining which companies should be asked to provide accelerated returns could be overcome by requiring companies to provide us with information about whether their 1997 returns complied with the line in the guidance and would have appeared materially different had they done so; and, in cases where this applies, whether they have taken steps to strengthen their financial position.

However, other difficulties would remain. The approach brings with it a significantly increased risk of challenge. In particular, on the basis of our discussion with them to date, Equitable Life arguably now have a legitimate expectation that they have until the end of June to settle how they present their 1998 position (subject to their not in the interim declaring a bonus which would threaten their solvency). Therefore requiring Equitable Life to submit an accelerated return would mean a real risk of a successful judicial review. However, leaving them out of any such approach would not be defensible from a consistency perspective. Spreading the focus of regulatory action to a wider group of companies would be helpful to Equitable Life but increases the number of companies with a particular incentive to challenge the guidance and enhances the possibility of a collective industry challenge (something that would clearly have more force than challenge by a single company).

FSA's Chairman ticks the first two paragraphs. Against the last paragraph, he writes: *'I'm not clear why the timing point increases the risk of a _successful_* [judicial review]*, though I can see why it increases the risk of a* [judicial review] *of some kind'*.

FSA's Director of Insurance recommends to the Chairman that he notes that FSA are proposing to follow 'Option 3' – that they *'propose to ask companies to submit their 1998 returns early where their 1997 returns were not prepared in compliance with the line set out in the guidance and where they presented a materially misleading impression as a result'*.

08/01/1999 The FSA's Chairman responds to the Director of Insurance's recommendations of 07/01/1999 that the Chairman notes:

a) the general industry guidance and the specific letter to Equitable Life that we propose to issue;

b) the draft press notice, which I have discussed in general terms with [a HMT official]*;*

c) that we propose to ask companies to submit their 1998 returns early where their 1997 returns were not prepared in compliance with the line set out in the guidance and where they presented a materially misleading impression as a result.

FSA's Chairman writes:

I am content with the letters – subject to one point (marked). On the press handling, it seems to me inevitable that this will get into the public domain, given the interest in certain letters, so I would favour a press release which allows us to get in first, rather than *allowing a company, or lawyer in support, saying "snoutrage". A* [press release] *would also allow us to explain, in a note, the HMT-FSA shift, which will confuse people. If* [an HMT official] *has some powerful countervailing arguments, I will hear them, but my inclination is to go ahead as* [the Director of Insurance] *suggests.*

11/01/1999 FSA write to Equitable in response to their letters of 18 and 31/12/1998 and following their meeting of 22/12/1998. FSA explain that Equitable's Counsel's opinion does not cause FSA to change the views set out in HMT's letter of 07/12/1998. FSA say that, in their view, the company's discretion not to pay additional bonuses is '*substantially fettered*' and that *'prudence would require that the actuary hold a reserve which is within a few percentage points of the reserve required for the guaranteed benefit'*.

FSA reject the view that Equitable's returns since 1993 could be viewed as constituting notice to DTI or HMT of their reserving practice. FSA state:

> *As we noted in the meeting* [see 22/12/1998] *the statements in the returns are brief in the extreme and do not disclose the reserving method, the rate of guarantee or the volume of business affected. (In fact, as an aside, we have some concerns about Equitable's compliance with paragraphs 4(1)* [which requires full description of benefits for accumulating with-profits policies] *and 6(1)* [which sets out the principles and methods to be adopted in the valuation] *of Schedule 4 to the Insurance Companies (Accounts and Statements) Regulations 1996 which we hope will be put to rest in the 1998 return.)*

FSA go on to state:

> *The HMT (now FSA) position on reserving is not in any event a change of policy. Our view remains that guaranteed annuities must, as a matter of prudence, be fully reserved. It is a consequence of the changing economic circumstances that the quantum of reserves required has increased significantly over the last year or two. The Equitable has so far presented us with no reasonable argument as to why ... reserves should be established at a level significantly less than 100% of the value of the guaranteed annuities ...*
>
> *... To the extent that the Society wishes to argue that a requirement of close to 100% would have a severe impact on the Society which would unduly prejudice policyholders, and that such requirement should not in the short term be enforced (and intervention action should not be taken), clear and convincing arguments need to be put to the FSA ...*
>
> *Any such arrangement which fell short of the normal reserving requirement would need to be disclosed in the Society's statutory return, so that potential policyholders and their advisors were not materially misled as to the overall financial position of the Society.*

12/01/1999 FSA send Equitable copies of *'the near-final drafts'* of the proposed letters of guidance to Appointed Actuaries and Managing Directors. FSA explain that the letters were likely to generate particular press interest in Equitable's position and so were being sent to them in advance, in strict confidence, to give them time to prepare for any questions.

13/01/1999 [entry 1] Every insurance company is sent by FSA's Director of Insurance a letter about reserving for annuity guarantees. The Director of Insurance says:

> *... in view of your ultimate responsibility for ensuring that your company establishes proper reserves, I thought I should alert you to* [the Government Actuary's guidance (see 13/01/1999 below)] *and the FSA's views on the action which companies should take.*

FSA's Director of Insurance writes:

> *I am concerned that the 1997 returns produced by some companies may not be fully consistent with the line set out in the guidance and as a result may in some instances*

present a materially misleading impression of companies' financial positions as at the end of 1997. In such cases I think it important that accurate data should be made available as early as possible.

Accordingly I should be grateful if you would discuss with your appointed actuary:

a) whether your company's 1997 returns were prepared in a way that is consistent with the guidance in the Government Actuary's letter;

b) if they were not so prepared, whether this had a material effect on the overall financial position presented in the companys returns, taking account, for example, of the relative importance to the company's business of guaranteed annuities and of the amount of any available margins that may exist elsewhere in the valuation basis.

Where there was a material effect on the overall financial position shown in the 1997 returns, and where the company has not subsequently taken commensurate action to strengthen its financial position, it is the FSA's view that it would be appropriate for such companies to submit their 1998 returns early – and in any case not later than 31 March – so that the FSA and potential policyholders and their advisers can form a proper view of these companies' financial position.

13/01/1999 [entry 2] Every insurance company is sent by the Government Actuary a copy of DAA11, on reserving for annuity guarantees. The Government Actuary writes:

... Part IX of the Insurance Companies Regulations 1994 (ICR 1994) requires a life office to calculate its liabilities (and hence to reserve) on the basis of all the benefits offered under the contract. Regulation 64 of the Regulations requires long-term liabilities to be determined "on actuarial principles", and to "make proper provision for all liabilities on prudent assumptions". Regulation 64(2) makes clear that the determination must "take account of all prospective liabilities as determined by the policy conditions".

The Government Actuary explains that, where there is a guaranteed level of annuity, a company should reserve fully for their liabilities to provide annuity benefits to the value guaranteed. In assessing their liabilities, companies must make a *'prudent assessment'* of the extent to which options are likely to be exercised. He advises:

In general it would not ... be prudent to assume that policyholders will choose a benefit form that is of significantly lower nominal value to them, although some limited allowance (of a few percentage points of the reserve) could in some cases be made for a reduction in the liability on the grounds of the additional flexibility or other perceived advantages to policyholders of any alternative benefits.

The Government Actuary acknowledges that, where companies adjust terminal bonuses to bring the value of the annuity guarantee closer to the value of the alternative benefits, there might be an argument that it was not necessary to reserve on the assumption that almost all policyholders would take the guaranteed annuity benefit. However, the Government Actuary points out that, although the benefits formally '*guaranteed*' under the alternative form of benefit might be lower than those under the annuity guarantee, the company's discretion in setting the value of terminal bonus applied to the alternative benefit *'is limited as a result of the existence of the guaranteed annuity'*. The Government Actuary considers that close to 100% of policyholders would exercise the annuity guarantee, unless the company set terminal bonuses at a level which ensured that the alternative benefit was at least as valuable as the guaranteed annuity. Accordingly:

... this constraint will need to be reflected in the valuation assumptions made about either the proportion of policyholders opting for the alternative benefit or the value of that alternative benefit. Consequently any reduction in the reserves held by the insurer by more than a few percentage points below the full value of the guaranteed annuity for this reason would require very careful justification by the actuary.

The Government Actuary adds that, although in the past many policyholders had exercised their right to take up to 25% of the benefits of their pension policy in the form of a tax-free lump sum, he *'would not consider it prudent to use past experience alone in this regard for reducing the proportion of benefits assumed to be taken in the guaranteed annuity form'*.

The Government Actuary also states that companies needed to assess the extent to which a resilience reserve was required, and that he expected them to apply the tests and advice set out in the letter of 30/09/1993, as amended by the letter of 24/11/1998. The need to hold substantial mathematical reserves to cover annuity guarantees would not, in his view, be a sound argument for reducing the stringency of the resilience test applied. He states that the level of reserves established for annuity guarantees was likely to be a matter that FSA and GAD would review particularly closely in the 1998 returns. He points out:

It should be remembered that Schedule 4 of the Insurance Companies (Accounts and Statements) Regulations 1996 requires the actuary's report in the annual returns to include detailed information about the contracts written ...

The annual returns should include sufficient information for the FSA and GAD to make an assessment of the extent of the guarantees offered, the reserving basis adopted by the company and hence the scope for guaranteed annuity options to impact on the financial position of the company.

13/01/1999 [entry 3] HMT brief the Economic Secretary on the possible responses to the guidance on reserving. HMT explain that the costs of meeting guarantees (estimated to be £8bn) coupled with the costs of the pensions mis-selling review (estimated to be between £8bn and £11bn) would be borne largely by with-profits policyholders. HMT point out that many, if not most, with-profits policyholders would not have been mis-sold pensions or bought guaranteed annuities, and they might reasonably ask why the return on their savings should be reduced as a result of errors of judgement elsewhere in the business.

HMT refer to the lower investment returns in the 1990s. They also explain that an undistributed amount of profits is held as a float or reserve, so that when profitability is poor, payments to policyholders could be smoothed. However, in the 1980s *'payments of terminal bonuses ... to existing policyholders may have been too generous. The companies were competing by highlighting the size of such bonuses'*.

HMT conclude that there was considerable scope for ill will and criticism of companies and their regulation. They say that, in the first instance, FSA should be answerable for their actions. HMT would be answerable to Parliament if it were alleged that the regulatory framework was inadequate, or that the performance of the regulator had been poor or over-zealous.

14/01/1999 FSA issue a press release to accompany the guidance letter. They produce in-house briefing notes in anticipation of follow-up questions. In response to the possible query: *'Have companies in the past failed to set up reserves in line with the guidance now issued?'*, FSA state: *'This is what the current exercise is designed to establish'*.

In response to the possible query: *'Guidance endorses Equitable Life's approach?'*, FSA state:

Guidance does not endorse or criticise any particular company's approach. Do not wish to comment on individual cases. Accept that guidance allows for the possibility of a *company to* [reduce] *terminal bonus in respect of contracts carrying a guaranteed annuity provided this is in line with the reasonable expectations of policyholders.*

In response to the possible query: *'How can it be legitimate for insurers to reduce terminal bonuses?'*, FSA state:

> *Terminal bonus is not normally guaranteed and companies generally make clear to policyholders that the value of any terminal bonus is not guaranteed. Terminal bonus is typically used by insurers to adjust the total benefits received by policyholders to ensure that they reflect a fair return on their investment. Against this background adjusting the level of terminal bonus to take account of the value of the benefit provided by a guaranteed annuity option would not appear to be out of line with normal practice.*

15/01/1999	Equitable seek a declaration by the Court that Article 65 of their Articles of Association (see 01/10/1998) gives them discretion to apply a differential terminal bonus policy when guaranteed annuity rates are higher than current annuity rates.
18/01/1999 [entry 1]	FSA ask Equitable for information about their reserves and asset shares at the end of 1998 '[in] *preparation for the discussions we have agreed to hold about your plans for bonuses this year'*. The information they request reflects GAD's advice of 04/01/1999.
18/01/1999 [entry 2]	A PIA Manager writes to a PIA Director about the press release FSA issued following the letters of 13/01/1999. The Manager comments that this publicises the guidance issued by HMT on 18/12/1998. He expresses concern that FSA *'has issued guidance which represents the position of one part of FSA, when other bits of FSA have not had an opportunity to consider the matter properly. This is particularly relevant as on this occasion when our position may differ from that of the Insurance Directorate'*. The Manager explains that his instinct from a *'selling and marketing'* point of view is to establish how the guarantees were promoted and, if appropriate, *'require firms to honour their promises'*. He notes that HMT's and FSA's approach is to agree that bonus rates can be reduced to policyholders with guaranteed annuities. The PIA Manager states: *It's a clear conflict between conduct of business regulation and prudential supervision ...* *Presumably there is some mechanism within FSA to co-ordinate regulatory activity.*
20/01/1999	FSA's Head of Life Insurance informs Line Manager D and GAD that Equitable hoped to provide the information requested on 18/01/1999 in a couple of days. The Head of Life Insurance reports Equitable's Chief Executive as having said that he expected the Court case to take place in late September, but that an appeal would push it into 2000.
21/01/1999 [entry 1]	Equitable write to FSA in response to their letter of 18/01/1999. Equitable explain that the Board had had some preliminary discussions about the bonus for 1998. Their initial view was that it would be appropriate to make a substantial reduction in declared bonuses to reflect current and prospective financial conditions. Equitable state that they do not have a single document constituting a Financial Condition Report (see 04/01/1999). Equitable explain that: *Currently the main elements of* [Financial Condition Report] *during the course of a year are covered in the following regular reports, supplemented by occasional individual reports on specific topics:* *(i) annual financial projections*

(ii) monthly financial reporting including estimates of the statutory solvency position

(iii) a more detailed quarterly review of revenue experience and solvency

(iv) a monthly analysis of the sensitivity to short-term changes in investment conditions produced to assist the Investment Committee in formulating strategy.

Examples of items (i) – (iv) from the 1998 board papers are enclosed for information.

Equitable enclose copies of reports on *'Projections for 1998-2000'*, *'Revenue – Review of First Six Months'*, *'Solvency Matrix'* and *'Monthly Business Statistics – Period Ending 30/11/98'*. This last report on monthly business statistics included a chart which showed that Equitable's cover for the required minimum margin, excluding any provision for annuity guarantees, had dropped from around 3.5 in July 1998 to below 1.5 in September 1998.

(Note: Equitable did not send FSA a copy of their most recent quarterly review of revenue experience and solvency, *'Revenue – Review of First Nine Months'*, dated 22 October 1998, which showed Equitable's cover for the required minimum margin under the current proposed valuation basis, and excluding any provision for annuity guarantees, to be 1.4 as at 30 September 1998.)

Equitable inform FSA that:

... we have entered into a financial reassurance arrangement with effect from 31 December 1998, as you helpfully suggested in your letter of 7 December 1998 ...

Equitable explain that the details are as outlined in their note of 31/12/1998. Equitable attach draft terms and say they will check direct with GAD that they have the *'intended reserving effect'*.

21/01/1999 [entry 2] FSA's Director of Insurance provides FSA's Board with a pre-Board briefing on their regulatory responsibilities. In advance of the meeting, FSA circulate background papers on inherited estates and on guaranteed annuities. The latter paper notes Equitable's approach to dealing with the cost of meeting guarantees and outlines the guidance issued by HMT (see 18/12/1998 [**entry 1**]). The minutes of the meeting record that the Head of Life Insurance:

... focused on key issues facing the regulator including the attribution of surpluses in with-profit funds in inherited estates, the cost implications of pensions mis-selling, the spiralling cost of meeting annuity guarantees, and insurance liabilities, and systems questions associated with the Year 2000.

22/01/1999 FSA produce a further update for the Tripartite Standing Committee on the *'Effect of Current Market Conditions on UK Life Insurers'* (see 22/10/1998). This reflects earlier comments provided by GAD.

FSA state that *'there are 4 companies giving cause for concern principally as a result of their exposure to guaranteed annuity options ...'*, one of which is Equitable. On Equitable, FSA report the following:

The company's difficulties primarily stem from GAOs. It has some pension mis-selling liabilities but these are relatively small and appear to have been reserved for reasonably fully (£72m provision at end March 1998). The company appeared just solvent at the end of October (available assets of £1,150m to cover a solvency margin of under £1000m) on the basis of the reserving standard in the Government Actuary's recent guidance (the company is disputing the need for such a high reserve). The company is exploring the possibility of reinsurance for its GAO liabilities, and has sought and received an increased *future profits implicit item (£1,900m in lieu of £850). However, at the moment it is questionable whether it will be able to declare its usual annual bonus to policyholders (cost - £500m).*

FSA's update goes on to report:

The company has agreed to discuss with FSA in advance any proposed bonus declaration. Clearly it would be commercially damaging if the company had to pass or limit its bonus in February and to publish a low solvency position in April; there is a significant risk that the company's survival as an independent entity could be threatened in these circumstances.

FSA continue:

Equitable Life has just initiated a court case in an effort to obtain a ruling supporting its practice of limiting the cost of the GAOs by reducing terminal bonus paid to any policyholder exercising the option. Should the case go against the company its financial position would become even more precarious (there would be a potential liability to enhance past settled claims) and it would have to reduce the level of terminal bonus paid to its other policyholders – thus upsetting its status in the market.

Provided the company sets up reserves in accordance with the Government Actuary's standard, the company would be exposed to further falls in long term interest rates only to the extent that its assets and liabilities were mismatched and the reserves proved insufficiently resilient to market moves. With its present portfolio of assets, the company has indicated that a ½% fall in interest rates would increase its basic GAO liability by about £200m. A fall in equity markets would also be potentially damaging as it would reduce the amount of free assets available to the company and hence its ability to declare future bonuses on all its business. This problem would be more acute if the company declared further guaranteed bonuses in the interim. A fall in either gilt yields or equities could also damage the interests of other with profits policyholders if this led to the complete elimination of terminal bonus on policies with guarantees – the cost of the guarantees would have to be recouped from reductions in those other policyholders' terminal bonuses.

26/01/1999 [entry 1] FSA write to Equitable, thanking them for their letter (with enclosures) of 21/01/1999. FSA ask for copies of additional documents (relating to bonus recommendations made to the Board within the past 12 months, and to the valuation carried out by the Appointed Actuary at the end of 1997) which FSA *'would normally expect to see included within the scope of any Financial Condition Report'*. FSA also note that they and GAD have arranged to meet Equitable's Appointed Actuary to discuss the terms of the reinsurance agreement.

Following a telephone conversation between FSA and Equitable earlier the same day, Equitable's Appointed Actuary writes to FSA in response to their request of 18/01/1999 for information about the Society's reserves and asset shares as at the end of 1998. The Appointed Actuary provides the following information to FSA:

You will appreciate that some of the figures are provisional at this stage but final figures are unlikely to be significantly different.

The mathematical reserves and total policy values at 31 December 1998 before allowance for GARs and resilience reserves are as follows:

	Mathematical reserves	*Total policy value*
	£m	*£m*
Retirement annuities	*2978*	*4274*
Individual pensions	*584*	*855*
Transfer plans	*79*	*118*
Group pensions	*866*	*1119*
	4507	*6366*

Notes: *(i) If new declared bonuses were added at the level indicated in the 21 January 1999 letter, the mathematical reserves would increase by £66m.*

(ii) The overall resilience reserve in respect of with profits business at 31 December 1999 is estimated at £920m. If that is apportioned to individual lines of business in a manner consistent with the 1997 Form 57 exercise, the resilience reserve on the above mathematical reserves would be £235m. On this basis Test 3 continues to produce the highest resilience reserve. That would not be the case when reserves for GARs were included, when Test 2 would produce the higher reserves.

(iii) Under our bonus system the total policy values equate to a smoothed asset share. The values shown reflect the overall growth rate of 9% which has applied to pensions business during 1998.

Equitable's Appointed Actuary says that: *'The total mathematical reserves for with profits contracts at 31 December 1998 were £18450m. Addition of declared bonuses at the levels indicated in the 21 January 1999 letter would add £365m to those reserves. As noted above, the resilience reserve on the basis indicated was £920m. Total with profits policy values (i.e. smoothed asset shares) amounted to £23140m. That aggregate smoothed asset share was 103% of the value of the actual assets attributable to with profits business'.*

26/01/1999 [entry 2] FSA's Chief Counsel A replies to a request from the Director of Insurance for comments on a response the latter had drafted to an MP who had received a complaint from a constituent about Equitable and PRE. The Chief Counsel notes that the MP had requested a copy of FSA's guidance on PRE. She comments that, since FSA *'are now providing the guidance letter on PRE to members of the public,* [perhaps] *the letter should be made public like the guidance on reserving'*. The Chief Counsel adds that, in her view, FSA could continue to examine the issue of policyholders' reasonable expectations, even though the matter was now before the courts. However, in addition to seeking information from Equitable, FSA should invite comments from Equitable's policyholders. She also suggests that it would be helpful to see papers relating to Equitable's Court case.

Chief Counsel A copies her response to the Head of Life Insurance and Line Manager D. Both comment that FSA should await the result of the Court case before taking a view on whether to intervene in respect of policyholders' reasonable expectations. Line Manager D reminds her colleagues that the guidance on policyholders' reasonable expectations was already in the public domain, as HMT had issued a press notice (see 18/12/1998 [**entry 1**]).

27/01/1999 [entry 1] GAD inform FSA that they have reviewed the reserving effects of the financial reinsurance agreement which Equitable had sent to FSA on 21/01/1999.

GAD state:

> *The treaty is between Equitable and Irish European Reinsurance Company (*[IRECO] *– which is a Dublin based subsidiary of* [a named company]*). We have no details of the financial strength of* [IRECO] *or of the extent, if any, of any support which* [the parent company] *may be prepared to guarantee to* [IRECO].

Under *'Description of the Treaty'*, GAD advise FSA that:

> *The treaty is a financing arrangement which provides support to Equitable in any year when more than 25% (by value) of the guaranteed business vesting in that year select the guaranteed annuity option – this is called a "Reinsurance Claim Event" and the amount of support provided is called the "Reinsurance Claim". The support provided is the cost of the guaranteed annuity benefit less the fund available, including final bonus. The support is not paid in cash, but a debtor is created in Equitable's balance sheet called "amount due from reinsurers". The treaty limits* [IRECO's] *overall exposure at any time to £100m. When a Reinsurance Claim Event has occurred, Equitable is required to pay a "Recovery Amount" to* [IRECO] *in each preceding year which is offset against this debt until the debt is fully repaid. The Recovery Amount is expressed as 35% of the Reinsurance Claim. In addition, if a Reinsurance Claim Event occurs, Equitable must pay, in cash, a "Risk Amount" of 2% per annum on any outstanding support provided by* [IRECO]*. These two sums together are called the "Adjustment Premium". However the Adjustment Premium payable in any year is in some way limited in relation to the emergence of surplus in that year. (Note: the form of this limitation will need to be clarified with the company.)*
>
> *The cost of this treaty to Equitable is £150K (increasing by* [the retail prices index]*) for each year that the treaty remains in force – the Equitable can cancel the treaty for the future by giving 3 months notice.*
>
> *Either party can cancel the treaty, retroactively to the previous 31st December, if certain events occur – such as insolvency, transfer of business, change of control, failure to meet the obligations under the treaty and if the other party loses more than 50% of its paid-up capital.*
>
> *The treaty can also be cancelled if Equitable changes its practice on GAOs, presumably including if it lost its Court case.*

Under the heading *'The Intention of the Treaty'*, GAD advise FSA that:

> *The intention of the treaty is to enable the Equitable to maintain a reserve, in respect of policies with guaranteed annuity rates, which is equivalent to providing for the additional cost of the guarantees on only 25% of the business rather than the near 100% which we are demanding. We believe that the treaty will not achieve the intended reserving effect for a number of reasons.*
>
> *A reinsurance liability arises in any year when the percentage of policyholders (measured in terms of the value of the underlying guaranteed benefits) choosing the guarantee exceeds 25%. The reinsurer's liability is then calculated as the additional cost of the guarantee on any excess over 25%. This would be satisfactory if the additional cost was correctly defined in accordance with the reserving principles which we believe apply (as set out in the* [Government Actuary's] *letter). Unfortunately the treaty defines the cost as the difference between the cost of the guaranteed annuity benefit and the total funds available to provide for the benefit including final bonus ... We believe that this would result in a requirement to reserve for terminal bonus on the 75% part of the liability which is covered by the reinsurance treaty. This is demonstrated mathematically in the annex. The problem would be resolved if the reinsurance liability were to be expressed as the difference between the cost of the guaranteed annuity benefit and the guaranteed*

funds available to provide for the benefit ... This would increase the reinsurer's exposure, but this could be offset by requiring the Equitable to pay an additional adjustment premium equal to the reinsurance share of the amount of any final bonus allocated ...

GAD continue:

The treaty provides for the treaty to be cancelled retroactively by either party in a number of situations, as described above. On cancellation in these circumstances, the Equitable would be required to immediately repay any outstanding finance and increase its mathematical reserves. This seems to negate the benefit of the arrangement to the Equitable, particularly where the reinsurer has an option to cancel the treaty. These problems might be resolved if:

a) the obligation to repay the outstanding finance was restricted to any surplus funds available after meeting the solvency requirements of the Act (or meeting all liabilities to policyholders in the event of insolvency);

b) the scope of the clause which permits cancellation limited the ability of the reinsurer to terminate the treaty only to events such as insolvency; and

c) the retroactive application was removed.

The treaty limits the total withheld reinsurance claims balance to £100m at any 31 December or otherwise the treaty would have to be restructured. It is difficult to reconcile this with their intention to allow a reinsurance credit in their returns of around £700m. We believe therefore that there should be a commitment for the treaty to be continued, but that the schedule of reinsurance payments to the reinsurer could be revised in the event of this credit of £100m being exceeded.

GAD also provide, as an annex to their advice, a simplified example *'for the purposes of demonstrating that the reinsurance treaty fails to achieve its intended reserving effect'*.

27/01/1999 [entry 2] FSA attend a meeting of the Tripartite Standing Committee. FSA report that some insurance companies are experiencing pressure on their solvency margin, and that a *'major outstanding issue'* is a dispute with Equitable over their reserving policy and the size of their bonus.

28/01/1999 GAD and FSA meet Equitable's Appointed Actuary and an actuarial consultant working for the Society to discuss the reinsurance treaty. GAD raise the three concerns recorded by Chief Actuary C in his note of 27/01/1999, indicating how these could be resolved. According to FSA's note of the meeting, their third concern:

... that reaching the £100m limit on the balance of the reinsurance claims should not provide grounds for cancellation of the treaty was explained ... [The Appointed Actuary] *explained that there was no intention that this should be the case, and it was only intended that the limit should provide a right to review the terms of the treaty. If no agreement could be reached on revising the terms, the treaty would continue unamended. Equitable would look at redrafting the position so that it was clearer.*

GAD raise a fourth concern, that:

... there was no provision which would enable Equitable to demand settlement of any claim under the treaty. It was considered that there should be some provision for Equitable to draw down reinsurance claims money if needed in order for the reinsurance debt to be considered to be a realisable asset. Such a provision was likely to need to be subject to Equitable paying a market rate of interest on the money, received from the

reinsurer. The timeframe within which payment would be required could be very long (e.g. 30 years, 10 years after the vesting of the last GAO contract, or perhaps be linked to when the outstanding claims reached the £100m limit which would in any case prompt a review of the treaty).

FSA's note also records that:

The question was also raised of whether Equitable Life was satisfied that the proposed reinsurer (Irish European Reinsurance Company) was sufficiently financially strong to be able to fulfil the potential obligations under the treaty (i.e. to cover a potential £1b+ liability). Equitable Life appeared to be relying on the company's AAA rating for comfort as to the reinsurer's financial strength. The Actuary was reminded that it was his responsibility to be satisfied with the security of the reinsurance for which he was [taking] *credit in his valuation.*

Equitable's Appointed Actuary asks how the reinsurance arrangements might be presented in the annual returns. FSA record the discussion, as follows:

[Equitable's Appointed Actuary] *was keen not to have to show a £1b+ reserve for GAOs since he thought this would be seized on by the press and interpreted as indicating the real cost of GAOs to the company. This would be damaging when the company had been at pains to make clear that GAOs were unlikely to have a significant financial impact on the company. He would like to show a net reserve figure (after deduction of the reinsurance) in the forms, but would be content to include in Schedule 4 a statement that the reserve had been established at the 25% level because reinsurance provided protection for liabilities in excess of this level. GAD were concerned that this was not consistent with the Directive requirements which required insurers to calculate their gross liabilities and then deduct the liabilities covered by reinsurance. It was also potentially inconsistent with the guidance issued by the* [Government Actuary] *and endorsed by FSA. It was emphasised that FSA's main concern was that the reserving basis should be clear from the annual returns. FSA would explore the implications of the presentation Equitable Life were seeking to adopt before expressing a definitive view on the issue. [Comment: having reviewed the structure of the relevant forms, it is clear that any presentation which did not show separately the gross liability and reinsurance cover would be artificial and hence potentially misleading. In view of the significance of the reinsurance treaty to the company's solvency position it was important that the level of dependence on the reinsurance was clear to readers of the returns.]*

Equitable provide Board papers relating to their bonus declarations and valuations for 1997 and 1998. Equitable indicate that they now expected to reduce the future profits implicit item to the originally agreed £850m.

29/01/1999 GAD telephone Equitable to discuss the valuation bases underlying the draft valuation result shown in one of Equitable's Board papers ('*Valuation and Bonus Declaration as at 31 December 1998*', dated 22 January 1999). In his note of their conversation, Scrutinising Actuary E records that '[the Appointed Actuary] *was, in truth, rather vague as to how he justified the percentages of the total liabilities for which he assumed benefits were being taken in the GAR form*'. The Scrutinising Actuary explains that the Appointed Actuary also:

... revealed ... that the GAR reserve included an allowance of about £450m in respect to future premiums. Thus, the additional reserve held for existing GAR liabilities was actually in the region of £1bn. Under questioning about the effect of moving to 90% of full GAR reserves, he suggested that perhaps another £150m might be needed — but, perhaps, he would then lower the allowance for future premiums to £300m at this time.

He seemed to be gradually accepting the ultimate need for establishing full provisions, but appeared to be hoping that HMT would look kindly on the idea of phasing-in, which he suggested had received a favourable mention at an earlier meeting.

With regard to the draft treaty, it seemed that no further progress had been made, but he expressed satisfaction that no major problems seemed to arise and he seemed to be hopeful that final agreement could be reached next week.

GAD inform FSA that the papers which Equitable had handed over at the end of their meeting the previous day showed that Equitable:

... are sensibly seeking to balance out the considerations of reducing progressively the amount of additional guaranteed benefits that are added each year, with maintaining a reasonably competitive position, and smoothing the bonus declarations from year to year in line with the perceived expectations of policyholders.

The cost of the declared bonus for 1998 would be some £365 Million (compared with £508M in 1997). This would leave the overall financial position of the company as shown in their draft 1998 returns as showing cover of 250% for the solvency margin (ie similar to 31/12/97) assuming that the reinsurance ... is completed (and accepted by FSA as allowing a significant reduction in the reserves for GARs), or 110% if the ... reinsurance is not taken into account. In the latter situation, they would though be able to take credit for a larger future profits implicit item which could boost the apparent solvency margin cover to around 200%, though the explicit cover for the guarantee fund would be very thin.

Therefore, the financial position shown in their 1998 returns is likely to appear as reasonably satisfactory following their proposed declaration of bonus, though they would be potentially close to regulatory action under Section 33 [i.e. on failure to maintain the minimum margin] *if their proposed reinsurance is not completed satisfactorily. Accordingly I believe it would be difficult to object formally to their proposed course of action, though we would need to continue to monitor their position carefully.*

GAD state that the Board papers Equitable had provided at the meeting showed *'graphically'* the variation in their cover for the required minimum margin. They note that, in the autumn of 1998, Equitable had just covered the margin once, with no significant excess cover, even with the then minimal allowance for guaranteed annuities. GAD understand that Equitable:

... do not have much scope to reduce the margins in their valuation basis in those conditions [where investment returns in 1998 are close to 0%], *and they would very likely either have to seek some additional concessions from FSA in their reserving requirements, find some further financial reinsurance or switch their investments from equities to fixed interest. The scope for the two latter options may though be quite limited in practice due to market limitations.*

GAD explain how the figures presented by Equitable allowed GAD to compare the policy values attributed to all with-profits policies with the mathematical reserves held. GAD comment: *'These figures suggest to me that our current reserving standard is not unreasonably harsh, with the possible exception of the resilience reserve requirement on the policies with GARs which will though be dealt with by the proposed financial reinsurance'*.

GAD note that Equitable continue to issue annual notices to policyholders showing a high level of projected benefits, *'thereby generating further expectations'*. GAD propose writing to Equitable to say that GAD have no objection to the Society's current proposed rate of declared bonus, while at the same time voicing concerns about their:

... apparent vulnerability to changing investment conditions. They should also be asked to produce some contingency plans for how they would react if an adverse investment return were to appear over the next 1-2 year period, which reduced their solvency margin cover to close to or even below 100% of the required minimum level.

01/02/1999 FSA write to Equitable after the latter had telephoned to ask about FSA's attitude to Equitable declaring a bonus. FSA say that the paper put to Equitable's Board on 22 January 1999 (see 29/01/1999) confirms that, without reinsurance, Equitable were in a weak position. FSA point out that they had doubts about a number of aspects of the reinsurance treaty and that, without a robust treaty, FSA would not consider it prudent for Equitable to declare a bonus for 1998. FSA note that, if allowance were made for the proposed reinsurance treaty, Equitable's financial position would appear to be significantly stronger:

However, even in these circumstances we consider it necessary for the company to consider carefully the scope for declaring a bonus because of the uncertainties surrounding the financial implications of the court case in relation to the company's payment practice in respect of contracts carrying guaranteed annuity options. In particular it would appear necessary for Equitable Life to consider the prudence of declaring a bonus in the light of the risk of losing the court case and the potential costs that might be incurred as a result. We also consider it necessary for the company to take account of the risk, even after the terms of the reinsurance treaty have been revised as discussed with GAD, of the treaty being cancelled by the insurer ...

FSA add that these points are a matter of judgement for Equitable:

But on the basis of the information you have provided to us (and assuming the reinsurance treaty is revised to resolve the concerns expressed by GAD) we are not minded to object to the proposed bonus declaration.

FSA also explain:

You will appreciate that any decision by FSA not to intervene over the bonus declaration should not be taken as an endorsement of what you propose. Nor is it the end of the matter; we remain concerned about the on-going financial health of Equitable Life, because of the relatively low level of explicit free assets and the apparent sensitivity of the free assets to future rates of investment return. On the basis of the 1997 projections for the solvency position at the end of 1998, it appears that a high rate of return (of the order of 16.5%) is necessary for the company to maintain its free asset ratio. In the circumstances I think it would be helpful to discuss this issue again soon, so that we can gain a better understanding of the key factors influencing the company's longer term solvency position.

FSA conclude by asking Equitable for revenue and solvency projections for 1999 and beyond, as well as contingency plans in respect of any fall in equities.

03/02/1999 Equitable write to FSA and note the points made in their letter of 01/02/1999. Equitable explain that discussions were continuing with the reinsurer to amend the treaty so that it met FSA's concerns. Equitable say that they had considered the position in the *'unlikely event'* that Equitable lost the Court case and would discuss this and FSA's comments about the possible cancellation of the reinsurance treaty with the Board.

Equitable say it would take a little time to produce the requested projections because of competing priorities, but they would be provided as soon as possible. They advise that a response to FSA's letter of 13/01/1999 was well in hand.

08/02/1999	Equitable write to FSA in response to their letter of 01/02/1999. Equitable explain that the figure of 16.5% in the papers FSA have seen was an error and should have read 10.5%.
12/02/1999 [entry 1]	Equitable send FSA a copy of the revised reinsurance treaty. Equitable state: *Since we have managed to strengthen the reassurance terms to address the concerns raised on the first draft, and we have considered and satisfied ourselves on the points raised in ... your letter of 1 February 1999* [the prudence of Equitable declaring a bonus, in the light of the risk of losing the Court case]*, there would now seem to be no impediment to our proceeding with our bonus declaration as planned this month.*
12/02/1999 [entry 2]	Equitable respond to FSA's letter of 13/01/1999. Equitable say that their 1997 returns had not included additional reserves for annuity guarantees at a level consistent with the Government Actuary's recent guidance (DAA11). If those returns had done, however, *'the Society would have made full use of the permission to bring £700m of future profits into account, rather than restricting the use to £371m as in the actual returns. There were also some margins in the liability valuation basis which could have been released'*. Equitable estimate that, with these changes, cover for the required minimum margin would have fallen from 2.5 to 2.0 and add: *'Whether or not such a difference means that there was "a material effect on the overall financial position shown in the 1997 returns" is, of course, a matter of judgement'*. Equitable state that the reinsurance arrangement they have entered into, coupled with use of the future profits implicit item of £850m, would result in a cover for the required minimum margin in the 1998 returns similar to that published at the 1997 year end. Equitable conclude: *I hope you will agree that we have subsequently taken action to strengthen our financial position in the terms described in ... your letter of 13 January and thus that there is no necessity for our 1998 returns to be submitted earlier than normal.*
12/02/1999 [entry 3]	FSA's Managing Director presents a monthly *'Financial Supervision Managing Director's Report'* to FSA's Board. The Managing Director informs the Board that FSA had been considering the position of life companies in the light of the combined effects of the costs of meeting guaranteed annuities and pensions mis-selling. He notes that particular attention was being given to Equitable, adding that Equitable normally declared their annual bonus in February.
16/02/1999	FSA write to Equitable in response to their letter of 12/02/1999. FSA explain that they still had one significant concern: *As drafted, the reinsured is not entitled to request a cash payment of outstanding reinsurance claims until after the termination of the last policy covered by the reinsurance; and then only to the extent of 10% of the outstanding reassurance claims. As a result of the partial nature of the right to settlement, and the long period before payment could be required, the value which could be attributed to the reassurance treaty (and hence offset against the Society's gross liabilities) would be substantially less than the reinsurer's potential liability. The value would have to be heavily discounted to reflect the long delay (probably more than 30 years) between a claim arising and being settled.* FSA suggest a further meeting between Equitable, FSA and GAD.
18/02/1999	Equitable provide a further amended version of the reinsurance treaty with a revised definition for *'Settlement of claims'*.

GAD advise FSA that this did not fully address the points made in the letter of 16/02/1999, *'as only 10% of the reinsurance amount can be called at any one time'*. GAD say that this point would have to be pursued at the meeting (now arranged for 19/02/1999). In reply, FSA say:

> *I hope though that we only ask for further changes if they are absolutely necessary, especially as we have already made requests which go further than what we had indicated in earlier discussions.*

GAD respond to FSA, pointing out that they had indicated to Equitable that they saw difficulty with the discounting that would be required, given the very lengthy settlement period proposed (see 28/01/1999). GAD caution against giving firm agreement to the full effect of the treaty without seeing the final wording. However, GAD explain that they:

> *... certainly agree that we should endeavour to keep any request for further changes to a minimum. Moreover, we ought to be in a position that FSA can give a "no objection" indication to Equitable following the meeting, as any detailed wording changes at this stage should only effect the value of the offset that may be taken into account rather than the principle of the acceptability of the treaty.*

19/02/1999 GAD's Directing Actuary B and FSA's Head of Life Insurance meet Equitable's Appointed Actuary – see 22/02/1999.

FSA's Director of Insurance submits a Weekly Report to Managing Director A. An entry on Equitable records that their bonus declaration was still subject to satisfactory reinsurance arrangements being put in place to offset the liability created by the reserve needed for guaranteed annuities. The report continues:

> *We and GAD are discussing the reinsurance details. If we can be satisfied that the reinsurance is effective, the Equitable Board is likely to approve a 5% bonus on pensions business – a drop of 1.5%, and at the low end of industry declarations for 1999 but better than at one stage seemed possible.*

22/02/1999 [entry 1] GAD write to Equitable to record the outcome of the meeting on 19/02/1999. GAD explain that they:

> *... accept the principle that this agreement will allow a reinsurance offset to be taken in the valuation of liabilities as at 31 December 1998. Our overall objective is therefore to reach a view on the value that may be placed on the reinsurance offset for which credit is taken under the agreement.*

GAD note that the meeting had considered four parts of the draft agreement (settlement of claims, risk amount of adjustment premium, fee payable on cash settlements and the termination clause) to see how each might affect the value that could be placed on the reinsurance offset under the ICR 1994. On *'Settlement of claims'*, GAD say:

> *As presently drafted, we believe that this paragraph would require the reinsurance offset to be treated as a zero yielding "asset" with an average term of about 5 years. Accordingly, it would be available to hypothecate against liabilities of this term valued at a 0% rate of interest.*
>
> *If, instead, it is intended that it might be hypothecated against liabilities valued at some long-term rate of interest under Regulation 69(9), then we believe that this could be achieved by amending the words of this paragraph in the agreement to read "However, at any 31 December, the Reinsured will be entitled to request a cash payment of up to 100% of the outstanding Reinsurance Claims if such assets are required in order to enable the Reinsured to properly satisfy the requirements of s35A(1)(a) of the Insurance Companies Act 1982". Although not discussed at our meeting, this would also seem to*

1999

have the advantage of providing greater protection for policyholders through making a sum of money available from the reinsurer in the event of other assets being insufficient to cover all the liabilities.

Subject to resolution of outstanding queries, GAD conclude that:

... the proposed wording of the reinsurance agreement will have the effect of allowing an appropriate reinsurance offset to be made corresponding to the difference between the gross reserves established and the value of benefits assuming 25% of policyholders take their benefits in the form of a guaranteed annuity. We do of course still need to see the final version of the reinsurance treaty to ensure that the detailed wording is in line with our understanding of the reinsurance agreement.

22/02/1999 [entry 2] FSA write to Equitable to confirm FSA's stance on a bonus declaration, prior to a forthcoming Board meeting. FSA say:

The FSA's position following Friday's meeting is unchanged: subject to the reinsurance treaty having the effect of allowing an appropriate reinsurance offset to be made (i.e. an offset broadly corresponding to the difference between the gross reserves established and the value of the benefits assuming 25% of policyholders exercise the guaranteed annuity option), we are not minded to object to Equitable Lifes proposed bonus declaration. Revision of the provision on the settlement of claims, as discussed on Friday, appears the most important in relation to ensuring the necessary credit can be taken for the reinsurance treaty. Clearly the points in my letter of 1 February remain applicable regarding other factors which we would expect the board to take into consideration in deciding the scope for declaring a bonus.

FSA add that they would write shortly on the issue of the timing of Equitable's 1998 returns.

23/02/1999 The High Court appoints a named policyholder to represent the interests of all policyholders or former policyholders whose policies contain a guaranteed annuity rate in the legal action initiated by Equitable. The High Court appoints Equitable to represent the interests of all other policyholders.

24/02/1999 [entry 1] FSA write to Equitable in response to their letter of 12/02/1999. FSA state:

As I mentioned on the phone last week, we think that the returns might have given potential policyholders a misleading impression as to Equitable Life's financial position at the end of 1997. You indicate that there would have been a net decrease in the coverage of the required minimum margin from 2.5 to 2 times after allowing for the use of margins which existed in the valuation basis and taking account of a much larger future profits implicit item. We consider that such a decrease is material and that some account must be taken for the greater reliance on implicit items that would have been necessary (and apparent in the returns) if a further reduction in the solvency margin coverage was to be avoided.

FSA add that they do not consider the actions that Equitable have taken to address the situation sufficient to make early submission of the 1998 returns unnecessary. FSA ask Equitable to agree by 3 March 1999 to submit their returns by 31 March 1999, otherwise *'we would need to consider taking appropriate regulatory action, in particular whether to require the company to submit its 1998 returns early'*.

4/02/1999 [entry 2] FSA report to the Tripartite Standing Committee that they were still discussing Equitable's plans for reinsurance of some of the risk of policyholders choosing to take up annuity guarantees. If those plans were approved, then Equitable would pay a 5% bonus, which would be at the lower end of market expectations.

24/02/1999 [entry 3]	GAD's Directing Actuary B advises Chief Actuary C and Scrutinising Actuary E that Equitable's reinsurer had offered to include a clause to the effect that interest would be payable to Equitable on any reinsurance balance. The Directing Actuary's view is that, in principle, this seemed acceptable, but that GAD needed to see the draft wording to consider the matter properly.
25/02/1999 [entry 1]	Equitable fax GAD a copy of the amended reinsurance terms. Equitable note that the reinsurer had amended the terms *'so that the outstanding reinsurance claims balance becomes an interest bearing asset if that is required for the purposes of statutory solvency'*.
25/02/1999 [entry 2]	FSA's Line Manager D asks Chief Counsel A whether the names of companies that had been asked (or have offered) to accelerate their 1998 returns could be disclosed to the public. The advice received is that they could not.
26/02/1999 [entry 1]	GAD's Directing Actuary B informs Chief Actuary C and FSA that Equitable would be making further amendments to the draft reinsurance treaty. The Directing Actuary says: *You will now have seen the latest version of the text with just 1 amendment to the settlement of claims clause.* [Equitable's Appointed Actuary] *phoned again this morning, and I said that I was surprised to see no provision now for any "capital" payment in respect of the settlement of claims clause. He offered to go back to the "payable after all the claims have gone off the books" clause, but I said that this seemed very remote, given also the interest on interest that would accumulate over that period.* *Accordingly, we agreed that he would seek to have the payment of 10% per year of "capital" reinstated, in addition to the new "interest amount".* *They are also still discussing the detail of the "termination" clause, and he will contact us again with further details of the revised agreement shortly.* The Directing Actuary also notes that the ratings agency Standard & Poor's have placed Equitable on *'credit-watch'* pending further discussions with the Society.
26/02/1999 [entry 2]	Equitable inform FSA that they agreed to submit their 1998 returns by 31 March 1999.
26/02/1999 [entry 3]	FSA's Director of Insurance submits a Weekly Report to FSA's Managing Director A. The Director of Insurance records that Equitable have now arranged satisfactory reinsurance for their guaranteed annuity rate liabilities and that this had '*cleared the way for them to decide on bonus rates which they will announce (5% for most pension policies) next week*'.
02/03/1999	FSA's Head of Life Insurance advises the Chairman on how to deal with questions about the early submission of returns. The Head of Life Insurance explains that identifying individual companies would breach confidentiality and he suggests that FSA take the following line: *1. Responses to the guidance which we issued in January indicate that life offices are now reserving for guaranteed annuities to a common minimum standard, approved by the Government Actuary. This is an important safeguard for policyholders.* *2. Discussions are continuing with a number of offices over whether it is appropriate for them to bring forward publication of their 1998 returns.* *3. Cannot comment on the position of individual companies.*
03/03/1999	Equitable's solicitors seek FSA's agreement to a modification of the terms of the subordinated loan. The Society's solicitors explain that the modification is for tax reasons.

05/03/1999	FSA ask GAD for their comments on Equitable's solicitors' request. FSA state:

> *I am a bit mystified why we gave this concession in the first place, although I expect you remember the background. I have ordered back copies of files at our end so that I can understand the basis of the original concession.*

10/03/1999 HMT and FSA hold their first quarterly meeting on insurance regulation issues. The minutes record that:

> *... regular meetings would help to provide a structured framework for an exchange of views on current and strategic issues relating to insurance and friendly society regulation and related matters. It was important to remember the high public profile of regulation and the need to ensure Ministers were kept well informed in advance of developments.*

On guaranteed annuities, FSA's Head of Life Insurance explains that there might be a problem with the way in which some companies were reserving for such guarantees, that FSA would need to monitor those companies and might request early submission of the 1998 returns. The Head of Life Insurance notes that '[complications] *may yet arise from some companies who have special circumstances, and the press may pick up on the need for special reporting and misinterpret the reason*'.

18/03/1999 FSA's Managing Director presents his *'Managing Director's Report: Financial Supervision'* to FSA's Board. The Managing Director records that FSA: *'have been reviewing life offices' exposures to guaranteed annuities, following the guidance on reserving for these liabilities issued in January. The company most affected is Equitable Life; after setting aside reserves consistently with the guidance, its free assets were so low that the prudence of paying a bonus this year was questionable. Equitable have now put in place a reinsurance treaty to cover the additional liability for guaranteed annuities, and will declare a reduced bonus of 5% (which is at the lower end of the industry range for 1999). Equitable have also (along with* [another named insurance company]*) agreed to submit their next set of regulatory returns early, so that a comprehensive and up to date picture of their financial position is available to policyholders. Equivalent early submission of returns is being discussed with three other life offices'*.

19/03/1999 FSA's Line Manager D sends the Head of Life Insurance a note headed *'Summary of Positions of Companies with Significant Exposures to Guaranteed Annuity Options (GAOs)'*.

The Line Manager deals with the circumstances of 13 companies. In a covering note she explains that she had sought to list the companies in order of the level of concern to which they gave rise, with the most serious first. The Line Manager's note begins with Equitable.

Line Manager D explains that Equitable's *'financial position has been very severely affected'*. She notes that *'despite having given generous guarantees on a significant proportion of its pensions business'*, Equitable had not established any reserve for annuity guarantees at the end of 1997, that they had no estate to meet unexpected costs, and, as a mutual, no ready mechanism to raise capital.

Line Manager D suggests that Equitable would have to establish a reserve of £2.9bn at the end of 1998, and that they would only just be able to cover their solvency margin, with free assets of less than £100m. She notes that Equitable were seeking to finalise a reinsurance agreement, which would reduce their reserving requirement by some £2bn and increase the cover for their solvency margin to *'a more acceptable'* 2.5. She continues:

> *We remain concerned about the financial viability of the company in the longer term. It has declared high levels of guaranteed bonuses in the past and its ability to honour these*

guaranteed bonuses appears heavily dependent on the company continuing to achieve high investment returns. The company's liabilities for GAOs could also increase significantly if the yields on long gilts [i.e. government bonds with a long period until maturity] *fall further.*

The Line Manager notes that Equitable had agreed to submit their 1998 returns by 31 March 1999 and to provide financial projections for the next three years. She says this information should enable FSA to make a more accurate assessment of the longer term position. She also notes that, should Equitable lose the test case on their differential terminal bonus policy, they could incur significant compensation costs.

In her covering note, Line Manager D explains that Equitable and five other companies can all be described as *'at risk'* from annuity guarantees, and that their statutory solvency position could be threatened if economic conditions deteriorated. She notes that, in most cases, a further fall in long term interest rates would have the most detrimental effect.

The Line Manager explains that, of the other seven companies, five are of slightly lesser concern as, despite substantial exposure to annuity guarantees, they have, or are acquiring, well capitalised parent companies. She explains that she sees no immediate threat to the solvency of the remaining two companies.

23/03/1999

FSA's Head of Life Insurance informs Line Manager D that FSA had agreed to approach one of the six companies described as *'at risk'* from annuity guarantees. (Note: that company was not Equitable.) The Head of Life Insurance asks whether they should also write to one of the five companies that are of slightly lesser concern (see 19/03/1999). Both companies appeared to be operating a differential terminal bonus policy similar to Equitable's.

The Head of Life Insurance copies his note to GAD.

24/03/1999

GAD's Chief Actuary D writes to FSA's Line Manager D in response to the Head of Life Insurance's email of 23/03/1999. Chief Actuary D says:

> *... there is a serious danger in picking on a few companies, perhaps with worse financial positions than average because they are at the front of our thinking, and putting pressure on them to adopt a more generous line. Meanwhile less threatened companies carry on with the same policy on terminal bonus without question.*

In response, the Line Manager points out that FSA had asked Equitable, and one other company, how their differential terminal bonus policies were compatible with PRE. She states that the *'reason for picking on* [the two companies referred to by the Head of Life Insurance] *is concern that we are not acting consistently towards these companies and Equitable* [and the other company identified by Line Manager D]'.

FSA add that, due to resource implications, they had sought information about differential terminal bonus policies and policyholders' reasonable expectations only where such a practice had come to their attention, *'ie we weren't going to go looking for trouble but thought we needed to be seen to do something where the issue was raised. That said I take your point that there is a case for a more systematic approach'.*

In response, GAD's Directing Actuary B comments that most companies were probably awaiting the outcome of Equitable's Court case. He suggests another survey, once the case is resolved.

25/03/1999

GAD suggest that the figure of £2.9bn for Equitable's reserve (in Line Manager D's note of 19/03/1999) had been slightly overstated. GAD say the gross figure was probably closer to £2.5bn. The reinsurance agreement was in fact worth £1.5bn and this would reduce the gross figure to a net figure of £1bn.

Submission of the 1998 regulatory returns

30/03/1999 [entry 1] **Equitable submit their 1998 regulatory returns to FSA**. Due to the early submission of those returns, they are not accompanied as in previous years by copies of the Society's annual report and accounts, prepared in accordance with the Companies Act 1985. These accounts are submitted to FSA on 29/04/1999.

The returns include the following information about Equitable's business and their financial position as at 31 December 1998.

Equitable's returns are submitted in one part covering Schedules 1, 3, 4 and 6 to the ICAS Regulations 1996.

GAD's copy of the 1998 returns includes various annotations. I am satisfied that some of these were made by Scrutinising Actuary E during the scrutiny programme on or around 09/04/1999, when the Scrutinising Actuary completed his Initial Scrutiny note (which was countersigned by Chief Actuary C). However, for ease of reference mention of these annotations is made here.

Schedule 1 (Balance sheet and profit and loss account)
Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14, 15 and 17. Form 9 summarises the Society's financial position at 31 December 1998 as follows:

Long term business admissible assets	*£28,238,041,000*
Total mathematical reserves (after distribution of surplus)	*£26,338,124,000*
Other insurance and non-insurance liabilities	*£225,986,000*
Available assets for long term business required minimum margin	*£1,673,931,000*
Future profits	*£850,000,000*
Total of available assets and implicit items	*£2,523,931,000*
Required minimum margin for long term business	*£1,007,534,000*
Explicit required minimum margin	*£167,922,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£1,506,009,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£1,516,397,000*

In Form 13, Equitable set out their admissible assets.

In Form 14, Equitable set out their long term business liabilities and margins.

(Note: on 07/12/1998, HMT had asked Equitable to include a note on contingent liabilities in the returns relating to the risk of a successful challenge to their bonus practices. I am advised that this note would have been expected to have been made in Form 14 as required by Regulation 13 of the ICAS Regulations 1996. I have been unable to find such a note in Form 14 or anywhere else in Equitable's 1998 returns.)

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 45.

In Form 40, Equitable provide a revenue account. GAD circle the figures provided for interest payable before deduction of tax (being £30,655,000 for 1998 and £15,777,000 for the 1997 returns).

Schedule 4 (Abstract of valuation report prepared by the Appointed Actuary)
As in previous years, Equitable present two valuations of their long term liabilities (their main and appendix valuations). The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns provides the information required by paragraphs 1 to 23 of Schedule 4 to the ICAS Regulations 1996 and includes Forms 46 to 49, 51 to 58, 60 and 61.

Equitable state that this valuation is made in conformity with Regulation 64 of ICR 1994.

In response to paragraph 4, Equitable provide 11 pages of information about their non-linked contracts. Most of the description provided is identical to that supplied in the previous returns.

GAD underline the statement that *'Pension contracts – old series'* contain a guaranteed interest rate of 3.5% and that *'some older contracts'* contain guaranteed annuity rates.

Equitable provide a fuller description than in previous years of the guarantees which existed on some deferred annuity policies, disclosing:

> *For UK retirement annuities the option to purchase an annuity on minimum guaranteed rates at retirement can be exercised at any age between 60 and 75. The form of the annuity is restricted to a single life, level non-profit annuity with no guaranteed period paid quarterly in advance. The minimum guaranteed rates are based on a(55) ultimate mortality and 7% interest except for some older contracts which are based on 4% interest.*

GAD note that this description is new and they underline *'a(55) ultimate mortality and 7%'*.

In response to paragraph 5, Equitable provide 71 pages of information about their linked contracts.

In paragraph 6, Equitable set out the general principles and methods adopted in the valuation.

As in previous years, Equitable state:

> *For with profits retirement annuity and personal pensions benefits ... the benefits have been valued on the basis that the benefits will be taken at age 60 or, if that age has been attained, at the valuation date.*

As in previous years, Equitable disclose:

> *The valuation method makes specific allowance for rates of future reversionary bonus additions, the levels of which are consistent with the valuation interest rates employed having regard to the Society's established practices for the determination of declared bonus rates. The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

As in the 1997 returns, Equitable state that they have made an explicit provision for their liability for tax on unrealised capital gains (in relation to business other than that linked to their internal funds), which they now estimate as not exceeding £97.9m. The provision made is £100m, which they say is shown in the Appointed Actuary's certificate in Schedule 6 of the returns.

In paragraph 6(1)(g) relating to investment performance guarantees, as in previous years Equitable state that they do not consider it necessary, in current conditions, to hold a reserve for the guarantee they offer on a unit-linked annuity.

In paragraph 6(1)(h), Equitable disclose that they had set up reserves for the annuity guarantees on their *'Pension contracts – old series'* business. They explain the assumptions used in establishing these reserves relating to assumed take-up rate of the annuity at a guaranteed rate and cash commutations. Equitable's returns state:

> *The combined effect of the allowances made is to assume that of those policies which survive to retirement date (mortality in deferment based on AM80 ult -5 years) the following proportions of benefits are taken in guaranteed annuity form:*

UK retirement annuities	*70.0%*
UK individual pensions (1st series)	*82.5%*
UK transfer plans (1st series)	*82.5%*
UK group pensions (1st series)	*82.5%*

GAD question the figures used for these adjustments.

Equitable also disclose the interest rate basis used to value the guaranteed annuities, stating that:

> *Annuity benefits have been valued at an average interest rate based on 5% for annuities taken out during 1999 with lower rates of interest assumed for future years to take account of 69(9)(a) of the Insurance Companies Regulations.*

As in previous years, Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

As in previous years, in paragraph 6(2), Equitable state that, in determining the provision needed for resilience reserves, they have taken account of the fact that the long term fund has been valued at book value.

As in their 1996 and 1997 returns, Equitable explain in paragraph 7(5) that they consider the reserves for future bonus within the valuation to be fully able to withstand any future strains which would arise if there were significant changes in mortality or morbidity experience. They say that, accordingly, the Society did not consider it necessary to establish any additional reserves in this respect.

In paragraph 7(6), Equitable disclose that they have tested the need for resilience reserves against the three scenarios contained in DAA6, as amended by DAA10. They state that the most onerous scenario tested is scenario b (a 10% reduction in fixed interest yields, a 25% fall in equity values, a 20% fall in property values and a 10% increase in index-linked yields).

Equitable disclose that a resilience reserve of £600m had been provided for.

In paragraph 7(8)(a), Equitable disclose the changes made to valuation assumptions and methods in the resilience scenarios. They explain that, in the resilience scenarios, they had used the appendix (net premium) valuation method rather than the main (gross premium) valuation method, but with some changes to the valuation described in the returns. As in their 1996 and 1997 returns, Equitable disclose that the changes include:

> *... for all accumulating with profits business, an annual loading of 0.25‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pensions business, ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

Equitable also disclose, in paragraph 8(a)(iv), that, in the resilience scenario, they had reduced the reserve for their potential liability to tax on capital gains to £20m.

In paragraph 8(b), Equitable state that: *'For accumulating with profit business the valuation rates of interest shown in Form 52 are net of a 0.25% interest rate reduction as a reserve for future expenses'*.

In paragraph 8(d), Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 61 of this report.*

In paragraph 9, Equitable provide information on the valuation of their linked contracts. GAD make various annotations on this section.

Paragraph 12(2) of Schedule 4 to the ICAS Regulations 1996 required that:

> *For each treaty of reinsurance where the company is the cedant and under which business is in force at the valuation date—*
>
> *(a) the name of the reinsurer;*
>
> *(b) whether the reinsurer is authorised to carry on insurance business in the United Kingdom;*
>
> *(c) whether the company and the reinsurer are connected;*
>
> *(d) an indication of the nature and extent of the cover given under the treaty;*
>
> *(e) the premiums payable by the company under the treaty during the report period;*
>
> *(f) the amount deposited at the valuation date in respect of the treaty under any deposit back arrangements;*
>
> *(g) the extent to which provision has been made for any liability of the company to refund any amounts of reinsurance commission in the event of lapses or surrender of the contract; and*
>
> *(h) whether the treaty is closed to new business.*

In their returns, at paragraph 12(2)(viii), Equitable in response state:

> *(a) The reinsurer is Irish European Reinsurance Company Ltd.*
>
> *(b) The reinsurer is not authorised to carry out insurance business in the United Kingdom.*
>
> *(c) The Society and the reinsurer are not connected.*
>
> *(d) The reinsurer provides surplus cover for the costs arising from the exercise of guaranteed annuity rates in respect of Retirement Annuity policies, Individual Pension Plans and Transfer Plans issued before 1 July 1988. If, in any calendar year, the proportion of terminations due to retirements exercising the guaranteed annuity option exceeds 25% of the total retirements in that calendar year, as measured by the guaranteed funds for those policies, the reinsurer's gross liability is the value of the guaranteed annuity in excess of the guaranteed policy funds for that proportion of retirements effecting the guaranteed annuity option which is in excess of 25%.*
>
> *(e) The premium payable since the last investigation was £150,000.*
>
> *(f) There is no deposit back arrangement.*
>
> *(g) Not applicable.*
>
> *(h) The treaty is closed to new business.*

GAD mark this section as *'NEW'*.

In response to the information required by paragraph 12(3) of Schedule 4, Equitable state:

> *There were no financing arrangements in force at 31 December 1998.*
>
> *In the event of a claim under the treaty described ... above, the reinsurance would become a financing arrangement. There were no undischarged obligations under this treaty at 31 December 1998.*

In paragraph 13, Equitable say: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'*.

In paragraph 14, Equitable set out a statement of their aims with regard to bonus distribution and how they maintained equity between different generations of policyholders. The information provided is the same as for 1996 and 1997 – with the exception that, in relation to surrender values, Equitable have added the statement:

> *There are, however, no guarantees whatsoever as to the way in which surrender values will be determined.*

GAD mark this sentence as new.

In paragraph 15, Equitable disclose that they had set reversionary bonuses for the main policy classes at 1.5% (previously 3%). As in previous years, Equitable disclose that they offered loans under a *'loanback'* arrangement to some retirement annuity, individual and group pension policyholders.

In paragraph 16, Equitable set out final bonus rates. The returns again contain a description of Equitable's differential terminal bonus policy:

> *If the contract guarantees minimum rates for annuity purchase the aggregate final bonus otherwise applicable is reduced when benefits are taken by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate after such reduction, is equal to the annuity which would be secured by applying the Society's annuity rate for an equivalent annuity in force at the time benefits are taken to the cash fund value of the benefits before that reduction, subject to a minimum value for the final bonus after such reduction of zero.*
>
> *If the contract guarantees minimum rates for annuity purchase and a reduction has been made under the immediately preceding paragraph, then where benefits are not taken in a form to which those minimum rates apply an additional amount of final bonus will be made available to the policyholder at the time benefits are taken equal to the reduction if any made under the immediately preceding paragraph. Such additional amount of non guaranteed final bonus will not constitute a "related bonus" or bonus allotted under the contract.*

In paragraph 21, Equitable explain that they used risk-adjusted yields on assets other than land and equity shares by restricting them to 6%, which is that available on the highest yielding risk-free security held by Equitable. Equitable also explain that, where they considered this appropriate, they risk-adjusted yields on land and equity shares.

<u>Schedule 4 – main valuation (forms)</u>
In Form 46, Equitable provide information on changes to their ordinary long term business.

In Form 47, Equitable provide an analysis of their new ordinary long term business.

Form 48 shows that 51% of Equitable's non-linked assets are invested in equities, 6% in property and 36% in fixed and variable interest securities (compared with 53%, 6% and 38% respectively in 1997). GAD circle the figure of 6.04% as the yield on '*All other assets*' producing income.

As in previous years, in Form 49 Equitable disclose that the gross redemption yields on fixed interest securities issued or guaranteed by any government or public body are, for certain durations, higher than for those not issued or guaranteed by any government or public body.

In Form 51, Equitable set out the mathematical reserves held for various types of non-linked contracts (excluding accumulating with-profits contracts) along with information on the number of contracts in force, the benefits valued, and rates of interest and mortality assumptions used.

In Form 52, Equitable set out the mathematical reserves held for accumulating with-profits policies, along with information on the number of contracts in force, the benefits guaranteed and the rates of interest and mortality assumptions used in valuing them. The Form 52 for *'Pension business'* discloses that the gross total reserve for *'Options and guarantees other than investment performance guarantees'* (i.e. the reserve for annuity guarantees) is £1,593m. The Form also shows that this reserve has been reduced by reinsurance of £809m to a net total reserve of £784m. GAD circle these figures and note that they refer to annuity guarantees.

The Form 52 summarising the totals for all of Equitable's accumulating with-profits business discloses that the valuation has assumed a discounted value of current benefits of £15,739,015,000 (against the current benefit value of £15,740,152,000). This is a discount of just over £1m (and relates only to the Society's School Fees Trust Plan).

In Form 53, Equitable set out the mathematical reserves held for the various types of property-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 54, Equitable set out the mathematical reserves held for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

In Form 57, Equitable provide matching rectangles illustrating the notional allocation of assets to each category of liabilities, showing the valuation rates of interest supported, and the ability of the matching assets to cover the reserves in the resilience scenarios.

In Form 58, Equitable set out the valuation result and composition and distribution of fund surplus. Against the figure of £16,532,642,000 (which had been discounted from the current benefit value by £1m) for *'Mathematical reserves for accumulating with profit policies'*, GAD add the corresponding figure from the appendix valuation of £16,115,623,000 (which had been discounted from the current benefit value by £795m).

<u>Schedule 4 – appendix valuation (text)</u>
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994.*

Equitable's appendix valuation provides the information required by paragraphs 1, 6 to 8, 10, 11, 20, 21 and 22. The Society states that the information required by the other paragraphs in Schedule 4 is the same as that provided in the main valuation (apart from paragraph 23 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 which, having had *'regard to the purpose of the valuation'*, has not been provided).

In paragraph 6, Equitable set out the general principles and methods used in the appendix valuation.

Equitable disclose that they assume a retirement age for personal pension policies of 60.

In paragraph 6(1)(b), Equitable again state that the valuation rates of interest were chosen with due regard for policyholders' reasonable expectations and the Society's established practices for determining reversionary bonuses.

As in the main valuation, Equitable state in paragraph 6(1)(g) that they do not consider it necessary, in current conditions, to hold a reserve for the guarantee they offer on a unit-linked annuity.

In paragraph 6(1)(h), like in the main valuation, Equitable disclose that they had set up reserves for the annuity guarantees on their *'Pension contracts – old series'* business. They explain the assumptions used in establishing these reserves relating to assumed take-up rate of the annuity at a guaranteed rate and cash commutations.

In paragraph 7, Equitable state that a resilience reserve provision of £1,236m had been made. GAD annotate this part of the returns with the corresponding figure from the main valuation and note that the difference between the two figures is £636m. GAD also write:

> <u>*Identical*</u> *with* [unclear] *in liabilities shown by Net* [premium valuation].

As in their main valuation and the previous returns, Equitable disclose in paragraph 7(8)(a) the changes made to the valuation assumptions and methods in the resilience scenarios, including that:

> *... for all accumulating with profits business, an annual loading of 0.25‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pension business, ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

As in the main valuation, Equitable explain that they risk-adjusted the yields on assets other than land and equity shares by restricting them to 6%, which is that available on the highest yielding risk-free security held by them. Equitable also explain that, where they considered this appropriate, they risk-adjusted yields on land and equity shares.

<u>Schedule 4 – appendix valuation (forms)</u>
In the appendix version of Form 51, Equitable set out the mathematical reserves held on the appendix valuation basis for various types of non-linked contracts (excluding accumulating with profit) along with information on the rates of interest and mortality assumptions used in valuing them. GAD annotate the Forms with some of the rates used in the previous returns.

In the appendix version of Form 52, Equitable set out the mathematical reserves held on the appendix valuation basis for accumulating with-profits contracts, along with information on the number of contracts in force, the benefits guaranteed, and the rates of interest and mortality assumptions used in valuing them.

The form covering *'Pension business'* discloses that the gross total reserve for *'Options and guarantees other than investment performance guarantees'* (i.e. the reserve for annuity guarantees) is £1,556m. The Form also shows that this reserve has been reduced by reinsurance of £793m to a net total reserve of £763m. GAD circle these figures and note that they refer to annuity guarantees. GAD also mark some of the policies as *'NEW'*.

This Form also discloses that the valuation of this pensions business had assumed a discounted liability of current benefits of £12,939,338,000 (against the current benefit value of £13,614,745,000). Next to this GAD write: *'£675m below face value'*.

The Form 52 summarising the totals for all of Equitable's accumulating with-profits business discloses that the valuation had assumed a discounted liability of current benefits of £14,945,576,000 (against the current benefit value of £15,740,152,000). This is a discount of just under £795m.

In the appendix version of Form 53, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of property-linked contracts along with information on the number of contracts in-force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They also disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In the appendix version of Form 54, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

As in the main valuation, Equitable provide appendix versions of Form 57 giving the notional allocation of assets to each category of liabilities on the appendix valuation basis, showing the valuation rates of interest and the ability of the matching assets to cover the reserves in the resilience scenarios. On the Form relating to life assurance and annuity business, GAD circle and note with question marks some of the risk-adjusted yields used. GAD also circle some of the risk-adjusted yields used in respect of certain pensions business.

<u>Supplementary notes to the returns</u>
In the notes to the returns, disclosed at the end of Schedule 4, Equitable disclose that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 43, 45 and 55.

Equitable disclose that they have been granted a section 68 Order which permits them to take into account a future profits implicit item. The Society states that it has included an item of £850m and that this is within the maximum amount permitted by the Order.

Equitable disclose that they have been granted a section 68 Order enabling them to disregard amounts owing under the subordinated loan up to an amount not exceeding 50% of the required solvency margin.

The notes to the returns also disclose that Equitable had been issued a section 68 Order *'to the effect that figures in Form 46 exclude recurrent single premiums from the annual premium figures as the Company cannot at present calculate a meaningful figure'*. GAD sideline this note and underline the words *'cannot at present calculate a meaningful figure'*.

<u>Schedule 6 (Certificates by directors, actuary and auditors)</u>
Three Equitable Directors provide the certification required by Regulation 28(A) of the ICAS Regulations 1996. Equitable include in their Directors' certificate the statement that the required margin of solvency had been maintained throughout 1998.

Equitable's Appointed Actuary provides the certification required by Regulation 28(B) of the ICAS Regulations 1996. Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

30/03/1999 [entry 2] FSA note that Equitable have a priority rating of 3 (but see 20/05/1999).

30/03/1999 [entry 3] Equitable apply to FSA for a section 68 Order for a future profits implicit item of £1bn, for possible use in their 1999 returns. Equitable provide financial calculations in support of the application, suggesting they could seek an Order up to the value of £2.96bn.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.94	*520.0*	*0.0*	*19.3*	*500.7*
31.12.95	*662.8*	*0.0*	*0.0*	*662.8*
31.12.96	*802.5*	*0.0*	*0.0*	*802.5*
31.12.97	*895.6*	*0.0*	*0.0*	*895.6*
31.12.98	*838.4*	*0.0*	*0.0*	*838.4*
				3,700.0

Average annual profit = 3700.0/5 = £740.0m

GAD tick these figures.

The calculations state that the average period to run for the Society's in-force contracts is again eight years. Equitable explain:

> *The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.*

The calculations suggest that the maximum future profits permissible is 50% of £740m multiplied by eight years – that being £2,960m.

Equitable explain that they have used a future profits implicit item in their 1998 returns to the sum of £850m.

30/03/1999 [entry 4] GAD reply to FSA's note of 05/03/1999 about Equitable's subordinated loan. GAD had discussed the matter with an accountant at Equitable and are satisfied that there is no good reason why FSA should object to the change, as it is:

> *... largely a change in accounting procedure, and does not have any implications that suggest that the subordination principle is being breached in relation to the original Loan Agreement. The revised position is adequately covered by the existing Section 68 Order.*

GAD offer no comments on the circumstances under which the concession was originally agreed.

	FSA write to Equitable's solicitors to confirm that their proposal would not require any change to the section 68 Order dated 19/08/1997.
30/03/1999 [entry 5]	FSA write to Equitable's Managing Director (similar letters were also sent to all other life companies that are affected by the PIA's review into pensions mis-selling), seeking an update on their liability for pensions mis-selling. FSA explain that, since this information was sought a year ago (see 08/05/1998 [**entry 1**]), there had been a number of developments that were likely to affect companies' liabilities.
01/04/1999 [entry 1]	**GAD complete the A1 Initial Scrutiny check on the Society's 1998 regulatory returns**. GAD identify no concerns.
01/04/1999 [entry 2]	Equitable advise FSA of changes to the requisite details for their branch in Germany, following the marketing of a new product. (Note: Equitable's Appointed Actuary on this day sent IRECO a letter of understanding, not intended to be legally binding. The letter said that *'both parties agree that should the withheld fund exceed £100,000,000 sterling and no solution can be found'* under the terms of the agreement, then the treaty would be cancelled. GAD had previously expressed concerns to Equitable that the treaty could be cancelled and received assurances that this was not the case — see 28/01/1999. Equitable did not disclose the letter of understanding to FSA or GAD, and it did not come to light until 24/09/2001. In June 2004, FSA concluded that the Appointed Actuary had been wrong not to disclose the letter to FSA. They made an order (under section 56 of the Financial Services and Markets Act 2000) prohibiting him from holding a significant management role within a regulated company until May 2010.)
08/04/1999	**GAD complete the A2 Initial Scrutiny check on the Society's 1998 regulatory returns**. The form for the A2 check follows the format adopted for the 1996 and 1997 returns and includes the following: <u>Strength of valuation basis</u> GAD circle both yes and no when answering the question as to whether the interest rates used for with-profits business appeared to make provision for policyholders' reasonable expectations and comment that it would be necessary to *'review implications of discount rates shown for* [unitised with-profits] *business'*. They note that other management expenses, at £8.5m, are material. GAD confirm that Equitable have applied the resilience test in accordance with the Government Actuary's latest published guidance. GAD say that they judge the overall interest basis to be *'adequate'* but refer to their comments about reviewing the implications of the discount rate used. GAD also judge the valuation basis to be *'adequate'*, but comment: *'But, gross* [guaranteed] *annuity reserves have been established assuming that would not be taken in all cases – allowances appear to be greater than suggested in* [the Government Actuary's] *guidance. N.B. Higher gross reserves would have been offset by higher reassurance credit'*. <u>Solvency position</u> GAD note that the absolute cover for the required minimum margin was '*adequate*' and comment: *(1) We still need to be satisfied that* [the reinsurance] *treaty with* [IRECO] *works in the way intended — <u>REQUEST COPY OF TREATY</u> as finally agreed.* *(2) Loss of the Court case on treatment of* [Guaranteed] *Annuities would put position in doubt — would need to cut all bonuses.*

GAD describe the trend in the level of cover for the required minimum margin over recent years as *'flat'* and add *'(Increasing use of* [Implicit Future Profits] *Item has raised line 44 margin* [excess of available assets and implicit items over the required minimum margin]*)'*.

Operating results
GAD note that the level of surplus/deficit emerging and its trend over recent years were not a current cause for concern *'but fall shown for 1998'*. GAD note that the level and trend of capital injection into Equitable were not current causes for concern *'but remember £350m Subordinated Loan issued in 1997'*. GAD note that the amount of reinsurance was material and that there was *'a material exposure to non-UK authorised reinsurers without deposit back'*.

PRE issues
GAD circle both yes and no to the question as to whether the answer given by Equitable in paragraph 4(1)(a)(ii) of Schedule 4 to the returns was satisfactory. GAD comment: *'Reserve is normally less than asset share, but* [surrender values] *only limited to asset share* [and] *normally achieved by reducing terminal bonus i.e. Society would normally pay out more than reserve carried'*.

Current issues
GAD note that Equitable had a material exposure to annuity guarantees and that this was the '[reason] *for early submission of their Return'*.

Aspects that look worrying
GAD identify the following:

(1) Consider 6(1)(h) [assumptions on the take-up rate of guaranteed annuity options] *response.*

(2) Need to examine [the reinsurance] *treaty.*

(3) Possible loss of court case – implications for the Society?

GAD identify items 1 and 2 from *'Aspects that look worrying'* to be notified to HMT, to be taken up immediately with Equitable. GAD raise Equitable's priority rating from 4 to 2.

Accompanying the scrutiny check is a new *'Initial Scrutiny Summary Form'*, which includes certain key figures disclosed in the 1994 to 1998 returns.

09/04/1999 **GAD send FSA a one and a half page report on their initial scrutiny of the 1998 returns.** GAD note that the cover for the required minimum margin is 2.5, although without the future profits implicit item it would have been 1.6.

GAD explain that Equitable reached this position after including additional gross reserves for annuity guarantees of £1,593m, reduced by reinsurance of £809m to a net provision of £784m. GAD observe that Equitable's gross reserve was lower than GAD would have hoped. This was because Equitable had made greater allowances for non-take-up of GARs than might have been expected in the light of the Government Actuary's guidance (DAA11 – see 13/01/1999). GAD comment that they assumed that Equitable were reluctant to disclose any higher figures for their gross liability or the extent of their resultant reliance on reinsurance. GAD note that the solvency implications for Equitable were *'negligible'*, but that GAD needed to consider further the implications for other companies if they accepted Equitable's arguments.

GAD point out that they had not yet seen a copy of the finalised reinsurance treaty and suggest that FSA should urgently request a copy, *'so that we can assess any questions that may need to be raised about the value being placed on the reinsured liability'*.

GAD note that Equitable had made an application for an increased future profits implicit item of £1bn, and explain that they had set a target to complete the combined scrutiny of the 1997 and 1998 returns by the end of June 1999.

12/04/1999	GAD ask FSA for a copy of Equitable's section 68 Order for a future profits implicit item that they have used in their 1998 returns, as they did not have one on file. GAD state that they needed this for the background section of their scrutiny report.
13/04/1999	A trustee of a company pension scheme telephones FSA to express concern about the solvency of Equitable. FSA's Line Manager D advises: *Explained take intervention action if policyholders at risk.* [An Independent Financial Adviser whom the trustee] *had spoken to had a vested interest in casting doubt on* [the] *financial position of Equitable Life. Recommended talking to Equitable Life about the position and not to take any <u>rushed</u> decisions to transfer the occupational pension scheme elsewhere.*
15/04/1999 [entry 1]	FSA ask Equitable for the revenue and solvency projections and contingency plans, requested on 01/02/1999. FSA also ask for a copy of the reinsurance treaty. FSA do not chase Equitable for a copy until 28/09/1999.
15/04/1999 [entry 2]	FSA write to a German resident who had asked whether Equitable were of *'sound financial state'* and whether the British Government offered indemnity to EEC residents in the event of the insolvency of a British insurer. FSA state that Equitable are registered in the UK to conduct life assurance business and have complied with their statutory obligations. FSA add that they do not comment on the financial state of any of their regulated institutions and that the British Government did not offer the sort of indemnity sought to either British or other EEC residents.
20/04/1999	Equitable write to FSA explaining that they were awaiting the final reinsurance treaty but have asked that this be progressed as a matter of urgency. Equitable enclose a copy of the term sheet on which the treaty would be based. Equitable also provide, in strict confidence, a copy of a detailed report for the Board, prepared by the Appointed Actuary, on measures available to Equitable to improve their statutory solvency position. The Appointed Actuary identifies six measures which he says it would seem sensible for Equitable to pursue: increasing the subordinated loan (he says it had always been Equitable's intention to use the maximum permitted level of 50% of the required minimum margin); use of reinsurance; shifting the equity portfolio from lower to higher-yielding stocks; limiting the extent of exposure to development property situations; exploring the merits of a new bonus class for GAR policies while actively encouraging policyholders to give up their GARs; and introducing new policies with no entitlement to declared bonuses. The Appointed Actuary also proposes to apply for the maximum possible future profits implicit item in future and to bring into account in the returns approximately 5/6 of the minimum margin.
21/04/1999	FSA pass a copy of Equitable's letter of 20/04/1999 to GAD. FSA ask: *Am I being pedantic here but if the reinsurance treaty has not yet been finalised can The Equitable take credit for it in their 98 returns?*
26/04/1999	Equitable provide FSA with an update on their liability for compensation as a result of pension mis-selling. Equitable estimate that their liability at 31 March 1999 was nearly £63m and that they held a reserve in their 1998 returns of £70.6m. As at 31 March 1999, the total cost already incurred was nearly £60m.

27/04/1999 GAD write to FSA in response to their query of 21/04/1999. GAD say:

> *We understand that the FSA have agreed in principle that, where there is a letter of intent in place at the valuation date, credit may be taken for the existence of a reinsurance agreement. Indeed we believe that this position was clearly signalled to Equitable in earlier discussions.*

GAD compare the draft term sheet provided on 20/04/1999 with that provided on 25/02/1999. GAD observe that Equitable are now entitled to request interest on the outstanding reinsurance claims amount or request that 10% of this amount is settled in cash. They also note that the annual *'Deposit Premium'* payable by Equitable has increased from £150,000 to £400,000. GAD explain that they are content with the way payments of additional premiums in the event of a claim have now been subordinated to policyholders' rights. GAD say that other aspects of the treaty remain broadly unchanged.

GAD also comment on the report to Equitable's Board sent at the same time. GAD note that such measures as maintaining the future profits implicit item at the maximum level, increasing subordinated debt, making further use of reinsurance *'look to be fairly plausible – but may only have marginal impact, bearing in mind the existence now of the overarching* [reinsurance] *treaty ...'*. GAD further state that applying policy conditions to limit the impact of existing annuity guarantees would have a strong adverse impact on the image of the Society, while inducing policyholders to give up their GARs may be in conflict with statements made in product and marketing literature. GAD acknowledge, however, that *'in principle, a reasonable charge could be made to asset shares to reflect the cost of GAOs'*.

29/04/1999 [entry 1] A PIA official writes to PIA's Head of Policy about some correspondence from MPs on behalf of policyholders with Equitable and another company, who are concerned about not receiving a terminal bonus if GARs were honoured. The PIA official explains that as most, if not all, complaints were about policies sold before the FS Act 1986 came into force, there is little action PIA could take. The official adds:

> *... we are aware that there is a possible conflict between the position taken by the Insurance Directorate in terms of prudential supervision and the conduct of business regulation.*

The official attaches PIA's note of 18/01/1999.

29/04/1999 [entry 2] Equitable send FSA copies of their statutory annual report and accounts and their annual report and financial highlights for 1998, prepared in accordance with the Companies Act 1985 and dated 24 March 1999.

In their *President's Statement*, Equitable say that the year had been unusual, given the unfavourable publicity about their differential terminal bonus policy. They give some background to the issue and report their decision to fund a representative action in the High Court to confirm that their approach was lawful, was within the terms of the guaranteed annuity rate policy document and was within the Board's powers under the Articles of Association. Equitable explain that they adhered to the philosophy of distributing profits fairly to members and without deliberate cross subsidy between different contract types or durations of saving. They therefore strived to ensure that all their members received benefits that represented a fair and highly competitive return on the contributions they had made.

In their *Management Report*, Equitable reiterate that they operated a full distribution policy to avoid the unfairness created by the retention of profits earned by one generation of policyholders for the benefit of successors. Equitable state that, despite having such a full distribution policy, investment strategy was driven by investment, rather than technical, considerations. They report that the return for the with-profits fund in 1998 of 13.3% and the average return of 14.5% over the last four years were significantly in excess of inflation, which averaged less than 3% pa. They explain that, in a reflection of the general trend towards lower average returns in a low inflation environment, the Directors had decided to allocate an overall rate of return of 10% for recurrent single premium pensions business. Equitable state that, in the face of falls in yields during 1998 and the likelihood of a sustained period of future low returns, they had reduced the element of return which was given in guaranteed form (i.e. reversionary bonuses) to 5% for an illustrative contract. Equitable report that, as in 1997, the *'expense rebate'* would be extended to all in-force pension policyholders, regardless of the amount contributed.

29/04/1999 [entry 3] Equitable ask FSA to provide a letter stating that FSA have no objection to the Society applying to the United Arab Emirates Central Bank for consent for Equitable's representative office in Dubai to carry on the business of a financial consultancy in that country.

30/04/1999 Equitable's President writes to the Economic Secretary to the Treasury, after meeting her at a dinner on 21 April 1999.

The President elaborates on concerns he expressed at the dinner about the impact on Equitable of the Government Actuary's guidance on reserving for annuity guarantees (DAA11 — see 13/01/1999). The Society's President explains that Equitable had been including in their accounts a prudent provision of £200m; but the guidance required an additional reserve of no less than £1.6bn in their regulatory returns. He comments that the Economic Secretary had suggested that, if he wrote to her, she would *'ensure the matter was considered in the right quarter of Government'*. The President warns that such a requirement would result in excessive constraints on investment policy and thus lower benefits to policyholders.

Equitable's President acknowledges that FSA and GAD have sought to be as helpful as they can but believes they have limited room for manoeuvre. He suggests that Equitable and others in the industry are being subjected to *'extremely onerous reserving requirements which bear little resemblance to commercial reality'*. He suggests that it might need the intervention of the Economic Secretary to secure *'a more commercial and satisfactory outcome'*.

The President attaches a paper of the same date, prepared by the Society's Appointed Actuary on the cost of reserving for annuity guarantees. The paper reiterates the Appointed Actuary's view that the Government Actuary's guidance is excessively prudent in that the guidance assumed a take-up of annuity guarantees at around 80%. He points out that, for many policyholders, the extra value of exercising a guarantee was outweighed by the attractions of a more modern type of annuity which could only be achieved by taking the cash form. He explains that Equitable's experience to date was that less than 5% of benefits had been taken in guaranteed form.

The Appointed Actuary acknowledges the argument that policyholders only take the cash form of the benefit if there were a discretionary bonus added to it and that companies must therefore reserve for this in advance. However, he states that the existence of an element of discretionary bonus is already *'implicit in the regulatory system'* and allowed for in the required minimum margin and resilience reserve. The Society's Appointed Actuary suggests that the assumption implicit in the guidance:

> *... that there will be no discretionary bonuses available at any time in the future at which the relevant policies mature seems excessively prudent, particularly in view of the margins of prudence already provided in the statutory reserves.*

04/05/1999 [entry 1]	FSA write to the Governor of the Central Bank of the United Arab Emirates, confirming that they have no objection to Equitable applying for consent to carry on the business of a financial consultancy (see 29/04/1999 [**entry 3**]).
04/05/1999 [entry 2]	Equitable send FSA a further paper on solvency (*Projections of the Society's Financial Position*), which Equitable's Board had considered the previous week. The paper is written by their Appointed Actuary. He looks at Equitable's projected solvency position at the end of 1999 and in the longer term having regard to a range of assumptions. He concludes that Equitable remain statutorily solvent under all those different scenarios, that the longer term projections are for an improving technical solvency position, and that the shorter term position could be strengthened by a number of the options previously discussed by the Board. He states that Equitable are actively pursuing these measures. The Society's Appointed Actuary also notes that the impact of an unfavourable outcome to the Court case is difficult to model. However, he does attempt to do so. One of the assumptions applied to an unfavourable *'but not the worst possible'* outcome is that an immediate provision of £400m would be needed to compensate policyholders who had retired between 1995 and 1998. In his summary, the Appointed Actuary says that, in the event of an unfavourable outcome to the Court case: *'the key solvency consideration is replacement or modification of the reassurance arrangement. That too is being actively pursued'*.
05/05/1999	FSA and PIA agree that FSA would deal with queries from policyholders about annuity guarantees and the acceptability of insurers applying a differential terminal bonus policy. FSA agree to take the lead on this, as it is largely an issue of policyholders' reasonable expectations.
11/05/1999	HMT and FSA hold their second quarterly meeting on insurance regulation issues. HMT ask FSA to provide a contribution to a letter of complaint about Equitable.
18/05/1999	FSA write to GAD, following the letter from Equitable's President (see 30/04/1999). FSA explain that the Economic Secretary to the Treasury has remarked that '*she finds Equitable's comment about the need for an additional reserve of £1.6bn odd, and if true, disturbing. She has therefore requested an explanation of the point*'.
19/05/1999	GAD's Directing Actuary B suggests to Chief Actuary C that they need to point out to the Economic Secretary that £1.6bn is *'indeed a reflection of the potential economic value of these GAOs (assessed on a prudent regulatory basis) and is not an unreasonable financial imposition on Equitable'*. The Directing Actuary acknowledges that companies could hold less than the *'fair share of the fund'* in recognition of the discretionary nature of the final bonus, *'for which no provision is normally required'*. However: *... where the company provides a GAO, then this removes much of this discretion for the insurer and it is necessary for the provision in the balance sheet to be increased accordingly.*
20/05/1999	**GAD provide FSA with their scrutiny report on the Society's 1998 regulatory returns**. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) The report uses a detailed format similar to that adopted for the 1993, 1994, 1995 and 1996 returns (see 15/11/1994 [**entry 1**], 23/01/1996 [**entry 1**], 01/11/1996 [**entry 1**] and 16/12/1997), but incorporating revisions agreed in 1998 to reflect changes deriving from the Insurance Companies (Accounts and Statements) Regulations 1996. GAD explain that it combines comment on activity in both 1997 and 1998.

In the heading to the report, GAD state that Equitable have a priority rating of 2.

The body of the report comprises 15 sections as follows:

(1) Key features
GAD set out some key statistics for both 1997 and 1998, including:

- Equitable had available assets of £2.1bn in 1997 and £2.5bn in 1998;
- they had used an implicit item of £371m in 1997 and £850m in 1998; and
- they had a subordinated loan of £346m in both 1997 and 1998.

GAD set out Equitable's required minimum margin. GAD note that the last visit to Equitable had been in November 1996.

(2) Action points
GAD explain that they have raised no points with Equitable as a result of their scrutiny. GAD note however:

- that FSA and GAD needed to consider the final terms of the reinsurance treaty; and
- that FSA needed to decide whether to challenge the assumptions Equitable had used in setting reserves for their annuity guarantees (see section 10 below).

(3) Executive summary
GAD state that Equitable try *'to provide fair benefits to each generation of its policyholders, on maturity or surrender – without holding back any excessive estate'*, but that, as a result, they have lower free asset margins than might be expected *'for such a well thought of institution'*. GAD note that Equitable have used a future profits implicit item for the last five years, and took out a subordinated loan in 1997.

GAD explain that the solvency position has been *'complicated on this occasion'* by the need to carry reserves for annuity guarantees. They state that Equitable's cover for their required minimum margin is 2.51, that this was unchanged since the end of 1997 and that, without the implicit item of £850m, the cover falls to 1.66.

GAD note that, although new business fell between 1997 and 1998, total gross premiums received rose from £3.45bn to £3.7bn. They state that Equitable's expense ratios remain the lowest in the industry. GAD note that Equitable's asset performance is *'a little disappointing'*.

(4) Background
GAD reiterate information included in the Background section of their reports on the 1993, 1994, 1995 and 1996 returns, namely that Equitable are the oldest mutual life assurance society in the world and that they never pay commission to third parties. GAD explain:

> *This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method. (However, the returns also show the results of a net premium valuation on a minimum basis – and the free asset position shown is identical.)*

GAD repeat that Equitable gained a controlling interest in Permanent Insurance in June 1997.

GAD explain that Equitable have increased their overseas activity in recent years (in the Republic of Ireland, Germany and Guernsey) and that these branches are producing increasing amounts of new business; however, Equitable have expressed dissatisfaction with the cost effectiveness of the German branch. GAD note that, from August 1998, Equitable have provided insurance in Greece. GAD state, as in their reports on the 1994, 1995 and 1996 returns, that Equitable regard overseas activity as *'missionary work'*. GAD note that Equitable have provided systems support to other companies.

GAD provide details of Equitable's subordinated loan.

GAD emphasise that Equitable have been:

> *... heavily criticised in the press, of late, for the approach that it is taking of reducing terminal bonuses to meet the costs of guaranteed annuity options attaching to some of its pension contracts. A test case to be brought before the Courts in July 1999 will try to obtain legal clearance for the practice.*

GAD provide details of the four section 68 Orders in force at the end of 1997, being:

- to allow Equitable to use a future profits implicit item not exceeding £700m (see 14/10/1997);
- to allow Equitable to exclude recurrent single premiums from the '*annual premium*' figures in the returns (see 13/06/1997);
- to allow Equitable to aggregate the details of their total personalised funds (see 31/01/1997); and
- to allow Equitable to make use of the subordinated loan (see 20/08/1997).

GAD explain that, for the 1998 valuation, Equitable had also been granted an Order allowing them to take into account a future profits implicit item of up to £1,900m.

GAD note that, following the retirement of Equitable's Appointed Actuary and Chief Executive on 31 July 1997, the roles had been filled by two different people. GAD state that the last visit to Equitable had been made in November 1996 (see 08/11/1996 [**entry 2**]).

<u>Business developments during the year</u>

(5) <u>New business</u>
GAD set out the new products Equitable have developed and the sources of their business. GAD explain that Equitable target *'high net worth individuals'*. They provide tables showing recent history of new regular premiums and new single premiums and a new business index. GAD note that, as Equitable are not able to produce meaningful in-force premium figures for renewable single premium business, the annual premiums recorded in the returns ignore this business and that this has been sanctioned by a section 68 Order.

GAD comment that Equitable *'may have underperformed the industry average in 1998 in terms of increases in new business. This could, though, be put down to the Society's starting position – having achieved excellent growth in 1997'*. GAD note, however, that in 1997 Equitable were reported to be the largest writer of pensions business in the UK.

(6) <u>Changes in business in force</u>
GAD produce a table showing *'Recent history of regular premiums received'*. GAD reiterate that, while revised regulations in 1996:

> *... were intended to help give appropriate recognition to renewable single premium business and classify it as regular premium business, the flexible nature of Equitable's products has made it difficult for them to quote a basic regular premium payment. As a somewhat perverse result, from 1996 onwards the Returns of Equitable actually show lower regular pension premiums and higher single premiums.*

GAD note the rise in gross premiums received.

GAD produce tables showing: *'Claims experience'*; *'Persistency experience'*; and *'Recent history of combined surrender, lapse & paid-up conversion rates'*.

GAD note that, although pensions was the major class of Equitable's business, persistency data was not available, due to the flexible nature of the contracts written.

GAD explain: *'These are excellent results, reflecting the fact that business is largely bought rather than sold!'*.

(7) Expenses
GAD produce a table showing the history of expenses from 1994 to 1998. They comment that Equitable's reported expense ratios have again reached *'astonishingly low levels'* and are the lowest in the industry. GAD state that Equitable's low expense ratio is a positive marketing image, which helps to explain the strong sales figures and is thus *'part of a virtuous circle'*.

GAD note, as an exceptional item, that Equitable claim to have invested some £70m in redeveloping all their operating systems over recent years.

Situation at year end

(8) Non-linked assets
GAD produce tables showing Equitable's: *'Recent history of asset mix'*; *'Recent history of asset mix attributable to UK with-profits business (%)'* (taken from Equitable's 1998 With-Profits Guide); *'Movement in asset values over the last year'*; and *'Investment performance in 1998'*.

The latter shows a return of 13.8%. GAD comment:

> *This return slightly underperforms what might have been hoped for in 1998 – but is probably in line with returns generally achieved. The correspondingly calculated 1997 figure of around 19.1% was somewhat higher than the average return achieved by with-profit offices in that year, of 18.5%. [However, it may be noted that in the Society's accounts the return claimed for* assets matching with-profit liabilities *is lower than the figures generated by us: it was only 17.2% in 1997, and was just 13.3% in 1998.]*

(9) Assets held to match linked liabilities
GAD provide details of internal linked funds, other assets matching property-linked liabilities, mismatching to property-linked liabilities, assets matching index-linked liabilities and policyholders' reasonable expectations (issues on linked funds). On the latter, GAD comment:

> *Where a fund invests in an Equitable Unit Trust, the annual management charge is reduced by ½%, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.*

GAD observe no particular problems.

(10) Valuation basis
Overall strength – GAD explain that Equitable produce their published returns:

> *... on the basis of a gross premium valuation for non linked business, with some modest allowance for future bonuses, but the resilience reserve included is determined such that the total liability is identical with the results of a net premium valuation – that is shown as an Appendix to the Returns, and is largely the basis on which the strength of the reserves is monitored by GAD.*

GAD consider the bases used to be generally acceptable, subject to concerns about the Society's reserves for annuity guarantees. GAD note that Equitable inform holders of *'accumulating with profit contracts of the amount of their accumulating final bonus (although clearly stating that it is not guaranteed), but only holds reserves for a discounted sum compared with the current guaranteed value'*.

GAD state:

> *It is known, having been acknowledged by the Society, that total current "asset shares" (indicated to members as their policy value) exceed total current admissible assets.*

GAD note that Equitable have taken out a reinsurance contract in an attempt to mitigate the strain of carrying reserves to meet annuity guarantees.

Interest – GAD produce a table showing the interest rates used in the net premium valuation for major classes. GAD raise no concerns.

Mortality – GAD explain that the bases used are reasonably conservative and that '[the] *Appointed Actuary states in his report that these tables contain sufficient allowance for future reductions in rates of mortality'.*

Expenses – GAD state that the total provisions seem to be more than adequate, and note the Appointed Actuary's statement that no additional provisions are needed to cover the continued sale of new business or to cover closure.

Resilience – GAD explain:

> *A resilience reserve requirement under the net premium valuation method is reported as £1,236m in 1998 (£1,022m in 1997). Whereas, for the gross premium bonus reserve (GPBR) valuation a resilience reserve is shown of £600m (£325m). The modified resilience reserve figures shown in the published GPBR valuation are designed to ensure that the amount of free assets disclosed is the same as would be shown by the Net Premium Valuation!*
>
> *It may be noted that the most adverse scenario at the end of 1998 involved a reduction of 10% in fixed interest yields combined with a 25% fall in equity values, whereas at end 1997 it had been the combination of a 3% rise in fixed interest yields with a 25% fall in equity values.*

Other factors – GAD note that Equitable have included a reserve of £70m for pensions mis-selling. GAD state that Equitable had established a capital gains tax reserve of £75m at the end of 1997, increased to £100m at the end of 1998, reducing to £20m in the most onerous resilience scenario. (Note: these are both points GAD had queried following their scrutiny of the 1996 returns – see 16/12/1997.)

Options and guarantees – GAD explain that as a result of current economic conditions, annuity guarantees are proving extremely onerous, although Equitable attempt to restrict the ultimate value to policyholders by use of a differential terminal bonus policy. GAD state that this approach is being tested in the Courts, and that loss of the case (by Equitable) *'would result in a need for the Society to reduce its level of terminal bonus additions to a wider group of policyholders – maybe all!'*.

GAD state that, notwithstanding Equitable's approach, the Government Actuary has determined:

> *... that there is a need in the statutory valuation to recognise the accumulated option liability attaching to the minimum level of benefits already guaranteed – without taking credit for any possible future emerging surplus offset.*

GAD note that, accordingly, in the net premium valuation Equitable have set up a reserve of £1,556m, with £793m ceded to the reinsurer. In the bonus reserve valuation, Equitable have set up a reserve of £1,593m, with £809m ceded to the reinsurer.

GAD state that Equitable's assumptions about the take-up of annuity guarantees *'somewhat stretched the concessions offered by the* [Government Actuary]' in the guidance letter of 13/01/1999. GAD produce a table which shows that Equitable have assumed take-up rates of between 70% and 82.5% and refer to three assumptions disclosed in the returns, namely:

> *(1) that allowance of a few percentage points has been made for the additional flexibility and other perceived advantages of alternative forms of benefit available and for the bonus system that the Society operates in relation to these contracts;*

(2) that a modest allowance has also been made for the availability of cash commutation options, and

(3) where it would be advantageous for higher rate tax-payers to commute for cash and buy a purchased life annuity, then a further allowance of a few percentage points has been made.

GAD explain that it is necessary to consider whether Equitable's assumptions should be challenged.

GAD note that Equitable have not supplied any information about how the reinsurance offset has been determined, and in particular what allowance has been made for the premiums payable.

(11) Financial results
GAD provide an overview. GAD note that Equitable's cover for their required minimum margin is 2.51, unchanged since the end of 1997. GAD continue:

Without the implicit future profits item of £850m, cover for the [required minimum margin] *would be reduced to a factor of 1.66. Further, we are still not entirely clear that provisions made to cover the currently guaranteed level of annuity liabilities are as strong as they should be.*

A large proportion of business is written on a participating basis, so that, provided the currently high level of annual emerging surplus continues, the Society should be able to work its way out of its current solvency margin problems. However, it does seem highly desirable for the Society to mitigate the risks posed by a possible downturn in asset values, by holding back more emerging surplus by declaring lower guaranteed bonuses – although it can still pay out appropriate final benefits to its members with declarations of "non-guaranteed final bonuses".

To be fair, the Society appears to be proceeding down this path – although mindful of the need to sustain a competitive position in the marketplace.

Under *'Summary of results for main classes'* GAD produce three tables, showing liabilities for non-linked and linked business and a valuation summary, for the years 1994 to 1998. The valuation summary shows, under the bonus reserve valuation, that Equitable's cover for the required minimum margin in 1997 and 1998 is 2.51 (compared with 2.53 in 1996). There is no figure for cover under the net premium valuation.

The table shows, in summary form, that Equitable's free asset ratio fell to 3.80% in 1997 (from 3.84% in 1996) and then rose to 5.37% in 1998. (Note: however, the detailed data contained within the table indicated that GAD's figure for 1998 was incorrect and that Equitable's free asset ratio had in fact fallen further, to 2.36%.)

In a note to the valuation summary, GAD state:

Although the Net Premium Valuation showed a lower non-linked liability of [£21.5bn] *and a lower reserve for declared bonuses of* [£340.5m] *it was shown to require a resilience reserve £636m higher than the GPBR valuation. Thus, as intended, the total of Long Term liabilities ... for the NPV is identical with the result shown above.*

GAD produce a further table showing composition and distribution of surplus. They make no comment on this.

(12) Bonuses
GAD produce tables showing the cost of bonuses declared and the recent history of key bonus rates. GAD explain that Equitable's:

... method of annual bonus declarations for unitised type contracts is unusual. As well as a declared guaranteed annual bonus, based on a proportion of accrued income and capital appreciation, a further annual bonus is quoted, which is not guaranteed (in that it may be withdrawn and/or reduced in future), but which makes up the total quoted accrued policy value at the valuation date. This non-guaranteed final bonus is declared in a similar way to reversionary bonuses, as a percentage of benefit, and the amount payable at maturity is the sum of these total annual "declarations", subject to the proviso that the final non-guaranteed bonus can be withdrawn.

GAD reproduce Equitable's table from their 1998 With-Profits Guide, showing gross investment returns at market value and the rate allocated in fixing bonuses, updated to include 1997 and 1998:

	1994	*1995*	*1996*	*1997*	*1998*
Earned	*-4.2%*	*16.6%*	*10.7%*	*17.2%*	*13.3%*
Allocated	*10.0%*	*10.0%*	*10.0%*	*13.0%*	*10.0%*
Guaranteed	*7.5%*	*7.5%*	*7.5%*	*6.5%*	*5.0%*

GAD produce tables showing final bonuses for traditional life contracts and deferred annuities, according to duration of the contract.

Under *'PRE (issues on with-profit business)'*, GAD state that Equitable:

... reserves the right to penalise early surrenders, even in relation to guaranteed bonuses added under unitised contracts, and it might be desirable for this possibility to receive greater prominence in the literature distributed. Further, with such a large proportion of unitised business and with the level of guaranteed bonuses declared taking account of some asset appreciation, it would seem to be desirable that policyholders were given some greater warning about the possible implications for future bonuses of a substantial market setback.

(Note: this same point had been made in the scrutiny report on the 1996 returns — see 16/12/1997.)

Under *'Recent history of maturity payouts'*, GAD produce a table of Equitable's payouts from 1994 to 1998, set against the industry average, and a chart showing payouts as a percentage of asset share. GAD comment:

It is clear that, while Equitable strives to be fair to all its policyholders, and pays much more generous surrender values than most other offices, its maturity payouts fall well short of the best in the market, particularly for conventional life contracts.

Nevertheless, the chart ... shows that policyholders seem to be receiving quite fair returns — no doubt helped by the low expense charges levied by the Society.

(13) Reassurance and financing
GAD state that Equitable make little use of traditional reinsurance *'other than for very large sums assured (retention being £400,000 for UK life risks and DM250,000 for German risks), and for supplementary disability and accident risks'*.

GAD repeat details of the reinsurance treaty entered into in order to cover costs arising from the exercise of annuity guarantees and note that this allows Equitable to reduce the reserves they hold for these policies.

(14) Compliance
Under *'HMT compliance problems'*, GAD state *'None observed'*.

Under *'PIA and other compliance problems'*, GAD note that a reserve of £70m has been included for pension mis-selling.

(15) Professional requirements
GAD certify that their report conforms to the requirements of the Institute and Faculty of Actuaries, as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct. GAD also certify that the report has been prepared in accordance with the Service Level Agreement between HMT and GAD, signed in November 1998, as that agreement had been continued between FSA and GAD, following an exchange of letters in December 1998.

GAD's scrutiny report runs to 23 pages.

21/05/1999 [entry 1] GAD's Directing Actuary B suggests to Scrutinising Actuary E that they should ask Equitable to consider other possible scenarios, in addition to those considered in the Board paper sent to them on 04/05/1999 – such as gilt yields at 5% and a 10% fall in equities. The Directing Actuary says that they should also ask the Appointed Actuary to confirm that he had allowed for the expected cost of bonuses as at 31 December 1999, and that the estimated reserves on that date had been calculated on the same basis as the previous year, apart from changes to the valuation rate of interest. The Directing Actuary expresses surprise that, in the *'central scenario'*, which assumed a modest rise in gilt yields to 5% and broadly unchanged equity values, Equitable's mathematical reserves increased by only £1.2bn over 1999, despite a projected cash flow of over £2bn.

FSA write to HMT seeking to address the Economic Secretary's concern about whether it was reasonable to require Equitable to hold such a large reserve for annuity guarantees. The note reproduces undated comments made by GAD. FSA state:

> *Insurance legislation requires insurers to establish reserves for "all guaranteed benefits" on the basis of "prudent" assumptions. It also specifically provides that insurers must reserve for any additional costs of policy options. These requirements form part of the UK's implementation of the EC Third Life Insurance Directive.*

FSA explain that £1.6bn:

> *... is a provision for the additional liabilities the company would face in applying the annuity rates that it has guaranteed to policyholders to the cash benefits arising under its pension contracts (to the extent that these cash benefits are guaranteed).*

FSA say that Equitable's provision is the largest in absolute terms, reflecting their position as the leading United Kingdom provider of individual pensions. FSA explain that the cost of annuity guarantees and the reserving requirement had become significant because of *'the recent falls in long term interest rates'*. FSA go on to explain: *'Where Equitable Life has guaranteed rates in the region of £110 pa per £1000 cash available, the best current market rate for an equivalent annuity is now only of the order of £80 pa per £1000 of cash pension fund'*.

FSA say: *'The reserving standards applied in Treasury returns are almost invariably more onerous than general accounting standards ...'*.

FSA state that it should be noted that the Government Actuary's guidance had been *'widely endorsed within the actuarial profession'*, whilst there were a few actuaries (including Equitable's Appointed Actuary) who thought it unduly onerous and a *'significant number'* who thought that the standard was not strong enough. FSA conclude that they are *'content that the reserving standard ... strikes an appropriate balance'*.

FSA have no comments on the draft of a reply to Equitable's President, prepared by HMT.

21/05/1999 [entry 2]	Equitable ask FSA for confirmation that FSA have acted on Equitable's letter of 01/04/1999.
21/05/1999 [entry 3]	The Consumers' Association write to PIA, expressing their concern at the failure of some pension providers to honour guarantees (by either refusing to pay up or by concealing information) and at the potential for insolvencies. PIA pass the correspondence to FSA.
24/05/1999 [entry 1]	FSA write to Equitable in response to their letter of 21/05/1999. FSA confirm that all the appropriate action has been taken. FSA send a copy of a letter they have written that day to the German regulatory authority, in which they ask if there was anything outstanding.
24/05/1999 [entry 2]	FSA's Line Manager D sends the Head of Life Insurance an extract from GAD's scrutiny report on Equitable's 1998 returns. Referring to section 10, *'Options and Guarantees'*, the Line Manager states: *I think we will have to challenge the GAO reserving assumptions. Making allowance for cash commutation is contrary to specific guidance given by the* [Government Actuary] *and a reserving level of 70% seems unacceptably low. Please can we discuss handling.*
25/05/1999 [entry 1]	FSA write to GAD to say that FSA have agreed that a *'low-profile approach'* should be made to Equitable *'seeking clarification of the GAO reserving (including the determination of the reinsurance offset) and present this as a normal request for clarification of actuarial assumptions'*. FSA ask GAD to draft a letter to Equitable and to show them the draft before finalising and sending it.
25/05/1999 [entry 2]	HMT explain that the Economic Secretary to the Treasury has asked for a fuller reply to Equitable's President's letter of 30/04/1999, and that she wishes to deal in particular with Equitable's assertion that the assumed take-up rate of annuity guarantees is too high.
25/05/1999 [entry 3]	FSA agree to meet The Consumers' Association to discuss their letter of 21/05/1999.
27/05/1999	GAD write to Equitable, having cleared their letter with FSA. GAD explain that, although they had discussed various aspects of Equitable's reserving methodology earlier in the year, a number of points remained about the Society's approach in the 1998 returns. GAD note that Equitable had assumed a reduced take up rate (ranging from 70% to 82.5%) for annuity guarantees in each class of business. GAD ask Equitable to *'clarify exactly how these reduced proportions have been justified, since we find the description given in the returns to be rather imprecise'*. GAD ask Equitable to provide details of *'how the reinsurance offset was calculated in relation to these guaranteed benefits, including an explanation of how allowance was made for the premiums that would become payable if this reinsurance was called on'*. GAD also seek some additional information in the light of the paper to Equitable's Board, provided on 04/05/1999, taking up the points made by Directing Actuary B (see 21/05/1999 [**entry 1**]).
28/05/1999	PIA comment on The Consumers' Association's letter of 21/05/1999. PIA suggest that any refusal to honour a guarantee is a matter for FSA, as prudential regulators, but that any concealing of information from policyholders would be a matter for PIA, as conduct of business regulators.

01/06/1999	FSA explain to PIA that they understood The Consumers' Association's main concern to be that policyholders were not being told, when their policies matured, that those policies contained annuity guarantees, and that policyholders might, therefore, end up buying a lower value market annuity.
02/06/1999	After further discussion of the issues raised by The Consumers' Association, PIA say that the position was unclear. PIA note that there were issues about whether policies had been sold before or after the FS Act 1986 had come into effect; whether advice had been provided at the time of sale and by whom (a representative of the insurer or an independent adviser); and where a company's responsibilities lay. PIA explain that they had sought legal advice on the matter and were awaiting a reply.
03/06/1999	HMT fax FSA a note prepared in response to the Economic Secretary's queries about the reserving standards applied in HMT's regulatory returns.
04/06/1999	FSA send GAD a copy of their note prepared in response to the Economic Secretary's queries about reserving for annuity guarantees.
09/06/1999 [entry 1]	FSA prepare a paper discussing possible outcomes of the Court case and their implications for Equitable and FSA. FSA identify four scenarios: • Equitable win totally; • Equitable win in part (in that it is now acceptable to reduce the terminal bonus, but had not been so in the past); • Equitable win (in total or in part) on contractual grounds, but FSA would have to take a view on the outcome's acceptability from the perspective of policyholders' reasonable expectations; or • Equitable lose (in that reducing the terminal bonus where an annuity guarantee was exercised was unacceptable). On the third scenario, FSA note that they would expect to conclude that Equitable's current practice is consistent with PRE, but they would be more doubtful about past practice because *'bonus notices* [were] *of dubious clarity'*. On the fourth scenario, FSA explain that they would need to determine Equitable's solvency position and serve a notice under section 32 of ICA 1982 if Equitable were in breach of their required minimum margin. FSA state that they would need to consider closing the company to new business or suspending their authorisation if there was a significant risk that Equitable could not meet their liabilities to policyholders or their reasonable expectations. FSA caution that there could be potential for allegations that FSA should have prevented Equitable writing new business earlier. FSA also consider the implications for Equitable of the fourth scenario, under which Equitable's reinsurance treaty would be invalidated. FSA note that, without reinsurance in place, Equitable was likely to only just be able to cover their required minimum margin - even after taking full account of future profits implicit items. FSA note that coverage might be *'slightly more comfortable if the current level of gross reserving for GAOs was accepted, allowance was made for the improvement in the Society's position since the year end ... and some of the solvency boosting measures currently being considered had been put in place'*. FSA also consider other implications for Equitable, such as having to: reduce substantially terminal bonus payments; consider switching assets from equities to gilts; and pay compensation to

policyholders who had taken benefits in guaranteed annuity form and had suffered from reduced terminal bonus payouts as a result.

GAD comment on FSA's paper. GAD explain that it needed to be read alongside the paper presented to Equitable's Board at the end of April 1999 (see 04/05/1999 [**entry 2**]). GAD note that they await a reply to their letter to Equitable of 27/05/1999. They emphasise that, unless Equitable's practices are given full clearance by the Court, they would need to modify or replace the reinsurance arrangement.

09/06/1999 [entry 2] HMT send FSA a revised draft of a reply by the Economic Secretary to Equitable's President's letter of 30/04/1999. The draft explains that HMT's more onerous reserving standards reflect the fact that the regulations required a prudent valuation, which included an appropriate margin for adverse deviation of the relevant factors.

The draft acknowledges the concern that the guidance assumed that nearly all benefits would be taken in the guaranteed annuity form, but suggests that this was an example of the *'prudential principle'*. HMT's draft continues:

> *If, by exercising the option of taking an annuity with a guaranteed rate of return, the policyholder will obtain a return that is in excess of that which may be available elsewhere, then the rational policyholder will exercise that option. It is reasonably foreseeable that the guaranteed annuity rate will exceed the rate which will be available more generally in the annuity market. Past experience and projected experience are less relevant when circumstances may reasonably be foreseen to be going to be different.*

FSA's Line Manager D comments that:

> *... why Equitable have to reserve effectively on the assumption that all GAOs are exercised is somewhat complicated and I don't think the current draft would stand up (Equitable could argue that the annuity benefit is not more valuable to the policyholder in most cases – I won't bore you with the details of why).*

The Line Manager suggests some alternative wording, being that:

> *If the guaranteed benefits under the annuity option are higher than those available in cash form it must be prudent to reserve for the higher value benefit. Low take up of an option in the past does not necessarily mean it is reasonable to reserve on the assumption that take up will remain low in future. This is especially true when past practice is likely to have been influenced substantially by factors that may change (eg the payment of additional bonuses to those not exercising the option when those payments have not been reserved for and therefore cannot be guaranteed to continue).*

11/06/1999 FSA telephone Equitable and ask for copies of material relevant to the Court case.

14/06/1999 [entry 1] The Economic Secretary to the Treasury writes to Equitable's President in reply to his letter of 30/04/1999. The Economic Secretary explains by way of background that:

> *... companies have to err on the side of underestimating the value of their assets' future income and overestimating their liabilities. In this way it is ensured companies have some spare capacity to withstand adverse economic circumstances. The determination of how conservative the assumptions should be has been derived from past experience and is embodied in guidance to appointed actuaries.*

The Economic Secretary's letter includes the wording suggested by FSA (see 09/06/1999 [**entry 2**]) in response to the President's concern that the reserving requirement was excessively prudent.

FSA's Line Manager D informs officials at FSA and GAD that Equitable, subject to legal advice, have agreed to provide the Court papers. She says that the hearing was due to begin on 05/07/1999 and was expected to last two or three days, but that there might be significant delays before a judgment was published.

The Line Manager attaches a revised scenarios paper prepared by FSA. This now describes three scenarios:

- Equitable win totally;
- Equitable win in part (in that it is now acceptable to reduce the terminal bonus, but had not been so in the past); or
- Equitable lose (in that reducing the terminal bonus where a GAR option was exercised was unacceptable).

FSA's discussion of the implications of each outcome reflects the points made in the note of 09/06/1999. FSA also deal with consideration of policyholders' reasonable expectations issues under the second scenario.

14/06/1999 [entry 2] FSA, GAD and PIA meet The Consumers' Association. Prior to the meeting, FSA prepare a briefing note.

FSA state that life insurance companies were required to meet their contractual obligations and PRE. FSA state that they were unaware of any company failing to meet their contractual obligations. Whether or not a reduction in terminal bonuses was consistent with policyholders' reasonable expectations *'will depend on what policyholders were told at the time they took out the contract and subsequently'*. FSA explain that annuity guarantees were an additional benefit for which it was reasonable to make some charge if costs were incurred in providing it.

FSA state that they were not aware of insurance companies deliberately concealing from policyholders their right to take a guaranteed annuity. Complaint mechanisms existed for those who suffered loss as a result of poor or incomplete advice from companies.

FSA note that they had used the GAD survey to identify companies with the most significant exposure to annuity guarantees and that the situation had been discussed in detail with any company that appeared to face a solvency threat. FSA are content that companies are reserving fully for their annuity guarantees liabilities. They note that a number have controlled their liabilities through measures such as reinsurance.

FSA prepare a note of the meeting. FSA observe that there appeared to be much more common ground between FSA and The Consumers' Association than FSA had expected. FSA state that they were able to alleviate the Association's concerns that insurers were not honouring their guarantees. The Association had acknowledged the difficulty of being fair to all policyholders in meeting the costs of annuity guarantees and the appropriateness of the costs being met from the with-profits fund.

15/06/1999 FSA write to the Personal Investment Authority Ombudsman confirming arrangements for a meeting on 23/06/1999 to discuss the complaints the Ombudsman had received concerning Equitable's differential terminal bonus policy. FSA say that they wished to discuss the Personal Investment Authority Ombudsman's jurisdiction over complaints and how those complaints would be handled.

FSA advise PIA that advice about GAR options given to, or withheld from, policyholders by companies after 29 April 1988 – when the FS Act 1986 came into force – would be subject to the conduct of business rules, even if the policy had been sold before that date. Failure by a company to tell policyholders on maturity about their rights to GARs would undoubtedly breach PIA principles.

16/06/1999	Equitable's solicitors provide FSA with a pack of materials relating to the Court case. GAD write to FSA, following a query they had received from a mutual company about how they should present a subordinated loan in their returns. GAD conclude that two different approaches to drafting section 68 Orders appear to have been used, and that those have generally resulted in two different presentations in the returns. The first presentation was a much more explicit one, while the second could lead to a distorted asset/liability picture in circumstances where a company was in financial difficulty. GAD state that Equitable used a slight variation on the first presentation.
17/06/1999	FSA and PIA hold a bilateral meeting, at which they note that Equitable's Court case would be a key milestone on the guaranteed annuities issue. FSA and PIA agree to pilot *'supervisory cooperation'* involving meetings between prudential and conduct of business supervisors to discuss such issues.
18/06/1999	Equitable's solicitors seek confirmation from FSA that they would agree to the modification of the terms of the subordinated loan (see 30/03/1999 [**entry 4**]).
21/06/1999	Equitable write to FSA enclosing a note about contingency plans for the expected Court decision. Equitable identify six possible scenarios, ranging from complete success for Equitable to a ruling that their approach is invalid. Equitable say that their advice was that anything other than complete or qualified success was highly unlikely. Equitable add that they were discussing amendments to their reinsurance arrangement to mitigate the risk that their approach was ruled invalid, and have also been in discussion with other reinsurers regarding other types of arrangements. Under the worst case scenario, Equitable list that the possible effects would include: very high retirements immediately and on an ongoing basis; likelihood of a large volume of surrenders; and an almost certain requirement to make further payments in respect of past retirements.
22/06/1999	FSA prepare a summary of the papers provided by Equitable in relation to the Court case. FSA note that Equitable's argument in support of their differential terminal bonus policy revolves around their asset share methodology for determining payouts and the fact that terminal bonuses were not guaranteed. FSA observe that Equitable do not mention PRE. (Note: it has been suggested to me that FSA's comment related solely to Equitable's opening submission to the Court, as the expert reports served by both sides and the Appointed Actuary's affidavit all dealt with PRE at some length.) GAD also prepare a summary. GAD note that Equitable had discussed the adoption of a two-tier terminal bonus structure by reference to a Board resolution in February 1998. GAD say: *This initially gave me some concern that it had not been formally introduced at the time that GARs first began to bite, in 1993. However, I have now found a copy of 1993 board minutes that clearly explain that for recurring* [single premium] *pension GAR contracts, "the amount of final bonus payable is reduced by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed annuity rate to the cash fund value of the benefits, after that reduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction". This would seem to adequately demonstrate that the Board were cognizant and had taken action on this matter at the earliest moment that it became relevant.*

GAD note that Equitable have argued that if they lost the case they would seek to spread the cost of providing benefits at a higher level amongst policyholders with an annuity guarantee and ensure that payouts to policyholders without such guarantees were not affected. Against this, an official has written *'good grief'*. GAD comment that it is unlikely that the Court would ignore consideration of policyholders' reasonable expectations or ask FSA to consider this aspect. (Note: comments on their note (*Why?*) suggest others did not agree with this assessment.)

GAD suggest that they and FSA should clarify why Equitable were asking the Court to consider their practice up to 31 March 1999, as their subsequent practice was also likely to be questionable. GAD suggest that they should also clarify the extent of the Personal Investment Authority Ombudsman's jurisdiction.

23/06/1999 FSA and GAD meet the Personal Investment Authority Ombudsman. According to a note made by FSA, the meeting was held at the Personal Investment Authority Ombudsman's request to discuss jurisdiction over complaints. The Ombudsman explained that Equitable have accepted that the Ombudsman had jurisdiction prior to 1988 but that they could not arbitrate on matters concerning Equitable's Board policy. While for the most part, complaints about reduced terminal bonus were for the courts to decide, they might still consider complaints of misleading bonus notices. The Personal Investment Authority Ombudsman said that they *'would only look at PRE in terms of misrepresentation – eg if Board deliberately did not change bonus notices even after the Board had decided to adopt a differential* [terminal bonus] *policy'*.

FSA's Chief Counsel A comments that the note had not been cleared with her and was not entirely accurate.

24/06/1999 [entry 1] GAD send FSA some thoughts on what position FSA should take if the High Court referred the issue of policyholders' reasonable expectations (in relation to Equitable's differential terminal bonus policy) to FSA. GAD say:

> *... taking account both of the relative ambiguity of the material presented to policyholders and also the Equitable's long-stated position on the financial management of the society (with no estate being maintained), their position that GAR policyholders should receive benefits equivalent in value to asset share (except where the guaranteed fund applied at the GAR provides larger benefits) is tenable on both counts. While they could have reached an alternative position that gave some higher benefits to these policyholders, I would doubt that we could insist on this if we apply the above test.*

GAD note:

> *Equitable do appear to have ... informed policyholders of their change of practice on the application of GAR's, in annual bonus notices, and each policyholder does have the right to cancel the contract and switch to another provider.*

Against this FSA have written: *'No – this is* [very] *much debatable'*.

GAD also discuss the extent to which illustrations of final bonuses give rise to an expectation of how the GAR would be applied. GAD doubt that a reasonable policyholder would interpret the illustration as being binding in all circumstances. GAD suggest that a more plausible approach would be to regard the final bonus as variable *'in line with underlying investment conditions but not otherwise'* or variable *'subject only to smoothing over some reasonable period of time'*.

24/06/1999 [entry 2] FSA ask PIA if they had yet come to a view on whether they could consider information given to holders of policies bought before 1988.

FSA also ask if PIA had jurisdiction in relation to annual bonus notices issued to policyholders, for both pre- and post-1988 policies. FSA explain that they have: *'for sometime been unhappy with the format of Equitable Life's bonus notices because we think that the way terminal bonus is indicated is potentially mis-leading. A figure is quoted for terminal bonus and this is then added to the guaranteed benefits under the policy to give a total benefits number. You have to read the notes over the page to appreciate that terminal bonus is not guaranteed'*.

FSA say that the annuity guarantee issue has again focused their attention on the issue *'because it is arguable that the format of the notice would have encouraged policyholders to think that their guarantee would apply to the full fund including terminal bonus'*. FSA ask if PIA had any powers to require Equitable to change their bonus notices.

In response, PIA comment that bonus notices were not advertisements but were still communications which could be potentially misleading. PIA consider that it would be easy to argue that notices were issued in the course of relevant business, although this only applied to those issued after 18 July 1994, when Equitable had become a PIA member. PIA also consider that any explanation by Equitable of options available on maturity would be caught by PIA's rules.

PIA conclude that it would be worth looking at the current bonus notices and ask FSA for a copy.

25/06/1999 [entry 1] Equitable write to GAD in reply to their letter of 27/05/1999.

Equitable provide details of the reductions in the assumed take-up rate for the annuity guarantee in each class of business and the reasons for those reductions. Equitable explain that the adjustments combined to produce the overall proportions set out in GAD's letter of 27/05/1999.

Equitable state:

> *The reinsurance offset has been calculated assuming that any guaranteed benefits taken in guaranteed annuity form above 25% are covered by the reinsurer to be paid back from future surpluses. The value of the deposit premium of £400,000 pa has been calculated assuming it increases in line with* [the retail prices index] *and has been deducted from the reinsurance offset. The risk premium of 2% of any outstanding claim amount should the reinsurance be called on is payable out of future surpluses and therefore, as discussed on previous occasions, has not been included in the reserves for guarantees.*

Equitable provide the additional information requested in the light of the paper to their Board (see 27/05/1999). Equitable explain that, under the alternative scenario suggested by GAD (see 21/05/1999 [**entry 1**]), cover for the required minimum margin would be 1.4. Equitable confirm that their projections assume a declared bonus at 0.5% below that for 1998 and that there has been no change in the valuation bases. They explain that the projected cash flow is for non-linked and linked business, while the figures for projected solvency related only to non-linked business.

GAD pass a copy of the letter to FSA.

An undated note written by FSA's Line Supervisor C queries whether Equitable had yet replied to GAD's letter of 27/05/1999. The Line Supervisor writes:

- *What is present bonus notice practice, can we see an example.*
- *What do they think of how old bonuses were reported, don't they think they are vulnerable & that it misrepresents PRE.*
    - o *Did* [Chief Counsel A] *sort out position of various Ombudsmen (*[insurance] *v PIA)*
    - o *Need to make clear we are thinking of PRE.*
    - o *Ask Equitable to flesh out scenarios.*
    - o *Have they considered things envisaged in our scenarios.*

25/06/1999 [entry 2] FSA's Line Manager D writes to the Head of Life Insurance, outlining her own thoughts on the implications for FSA, should they have to express a view on whether Equitable's differential terminal bonus policy was consistent with PRE. The Line Manager explains that FSA's own legal advice (from Chief Counsel A) was that they should assess if it was *'reasonable'* to consider that Equitable's approach was consistent with PRE, rather than whether it was the best possible approach in the context of PRE.

The Line Manager explains that '[further] *analysis of the policy documentation provided by Equitable could be undertaken ahead of the court case, but it was not considered practical to reach a formal preliminary view on PRE until the court judgment had been digested'*. However, Line Manager D indicates her intention to do more work on the PRE issue ahead of the Court case, so that FSA might arrive at a preliminary view relatively quickly after the judgment was given. She adds that, at FSA's meeting with Equitable the following week, they should remind Equitable that PRE remained a live issue.

Line Manager D also explains that she had asked PIA if they had the power to change bonus notices. The Line Manager comments that these notices were currently the main factor supporting the argument that Equitable's approach was not consistent with PRE. The Line Manager says:

> *Even in the context of non-GAO policies the notices appear liable to lead policyholders to have potentially unrealistically high expectations of their total payouts because of the prominence given to the total accumulated benefits figure which includes undeclared terminal bonus. The format of bonus notices is something we have raised with Equitable previously (before the GAO issue arose) but we never made any progress in obtaining changes.*

28/06/1999 GAD comment to FSA that the note by Line Manager D of 25/06/1999 is a useful summary of the current position and a sensible way forward. GAD send FSA a copy of their thoughts of 24/06/1999 and add that they feel the PIA and/or the Personal Investment Authority Ombudsman might have a greater role to play if there were any suggestions of mis-selling by the sales force.

FSA's Line Manager D explains to Chief Counsel A that she has not commented on GAD's thoughts of 24/06/1999, as she did not know where to start or what to make of them. The Line Manager says that she would have expected an actuary to *'argue from a point of principle what constituted PRE rather than look at what might be a convenient result for FSA'*.

29/06/1999 FSA and GAD meet Equitable to discuss the implications of the pending Court case. FSA prepare a note of the meeting. FSA note that the policyholder would be arguing his case from a PRE perspective. Equitable maintain that the core of the case would be the scope of the Director's discretion in relation to bonuses. FSA record that:

> *The Equitable have thought through various outcomes and their implications, these were different to those envisaged by* [FSA]*, but broadly covered the same alternatives. Referring to the document sent under cover of their letter dated 21 June 1999 their lawyers believed that outcomes 1 and 2 were very likely (complete success or success but with some adverse comment in the judgement). Scenario 6 was deemed "inconceivable" (Equitable approach deemed invalid and final bonus rates on cash and annuity benefits must be equalised at the cash level) because it was thought that a Judge could not totally discount the scope for directors to exercise discretion over bonus levels.*

FSA's note continues:

> *The financial implications of scenario 6 had been covered in* [the Appointed Actuary's] *April Board paper* [see 20/04/1999]*, consistently running down all policyholders' bonus levels was not seen as a credible option.* [The Appointed Actuary's] *initial view if business dried up was that whilst it would be a serious commercial problem it would probably strengthen the solvency of the office. He confirmed that none of the mechanisms discussed in the April board paper for strengthening Equitable's financial position had been put in place, they were being retained as contingency plans.*

In relation to the IRECO reinsurance treaty, Equitable's Chief Executive tells FSA that, if the court ruling fell between scenarios 1 to 4, the reinsurance would remain in place, as they would not be forced to change their bonus policy. FSA note Equitable as saying:

> *As a contingency against losing the case the company had been in discussion with reinsurers about increasing the scope of reinsurance cover.* [A named reinsurance company] *had been prepared to offer a form of surplus relief reinsurance and even offered to take over the company's existing reinsurance with* [IRECO]*. However at the eleventh hour* [the company's] *Head Office backed off from the proposal claiming "capacity problems".*
>
> *Following this the company had decided to wait until the outcome of the Court case before talking to other reinsurers, they did not want to tout around the reinsurance market at such a sensitive time.* [Equitable's Chief Executive] *believed that there was room to extend the scope of the existing reinsurance contract if Equitable were to lose the case and that premium rates would be practical and consistent with the existing treaty. GAD made the point that any extension in the scope of these treaties could have implications for the size of the company's future profits implicit item.*

FSA stress that:

> *... even if The Equitable gained a total or partial victory at the Court this would not necessarily be the end of the matter as far as we were concerned; we would need to investigate PRE aspects of the company's policy.* [FSA's Head of Life Insurance] *added that we had some concern about what policyholders had been actually been told in bonus notices and we had not yet reached a view on this.* [Equitable's Appointed Actuary] *said that the Court might assume that we have already examined PRE.* [Chief Counsel A] *did not think that the Court would make such a statement but if it did we would strongly refute it.*

Following discussion of the fact that the Personal Investment Authority Ombudsman had relinquished jurisdiction over complaints relating to the Court case, the Society confirms to FSA that '[it] *had in one or two cases paid unadjusted terminal bonus on biting GAO policies but this had been compensation solely in respect of bad administrative errors the company had made when handling these cases*'.

Equitable confirm to FSA that they had adopted a new approach to bonus payments that had been recommended by their lawyers. Under this approach, Equitable *'award an additional cash sum to policyholders that do not exercise a GAO as opposed to operating the other way around'*. Equitable agree to send FSA their latest bonus notice and accompanying literature.

FSA record that:

> [Equitable] *confirmed that despite the bad publicity business was holding up well, in the first quarter single premium business was up 8% and annual premium business was down 8%, CAT marked ISAs were also selling well. There had also been no increase in lapse rates.* [Equitable's Chief Executive] *regarded his sales force as an important asset and a crucial indicator of the health of the company, turnover of sales staff was still very low. He was concerned for presentational reasons at the lower S&P rating, although he argued that A+ was still a very creditable rating. The lower credit rating was less of an issue for a non* [independent Financial Adviser] *provider such as The Equitable and was considered unlikely to have a direct impact on company financially.*

FSA also record:

> [Equitable's Chief Executive] *confirmed that the company would continue to offer "good value" to policyholders by paying out as much as possible in bonuses. The company would not be building up any hidden estates, e.g. by reducing surrender values. The lack of an estate was a useful deterrent against predators who wanted to demutalise the Society, but this was a secondary outcome from the main historical objective of the Society, which was to pay out fair shares.* [He] *confirmed that a number of suitors had approached the company but he had told them that the company was committed to mutuality.*

(Note: in an interview with the FSA's Baird Inquiry, Chief Counsel A said that, following a meeting with Equitable (which the Baird Report believed to have been the meeting referred to in this entry), she had provided oral advice to FSA and GAD, which had been that: *'... it is probably true to say that if the Court takes a Chancery approach to this matter, that will favour the Equitable's position but, make no mistake, this is very high risk for the Equitable. You can never predict judicial outcomes. At the High Court level, they are more likely to get a judge who would take a Chancery approach, but we can't be certain about that. Courts are more and more inclined now to take a wider policy approach to these matters. There is no relevant case law. If Equitable get the wrong panel or the wrong judge, they could find themselves on the receiving end of a change in judicial approach. The Court ... might not like what the Equitable has done and might be influenced for that reason. Don't jump to conclusions on this'*.)

30/06/1999	Equitable provide FSA with an example of a retirement annuity statement for 1998 and the accompanying leaflet, and a copy of their letter to policyholders updating them on the Court case.
02/07/1999 [entry 1]	FSA write to Equitable's solicitors to confirm that they agreed to the modification of the terms of the subordinated loan and that no amendment was required to the section 68 Order.
02/07/1999 [entry 2]	FSA's Chief Counsel A explains to Line Manager D that the description of her views (see 25/06/1999 [**entry 2**]) was not quite right. The Chief Counsel notes that the steps needed to reach a decision on policyholders' reasonable expectations would be listed in the Line Manager's note to FSA's Managing Director.

02/07/1999 [entry 3] FSA's Head of Life Insurance informs Managing Director A that FSA had met Equitable to review the possible outcomes of the Court case due to begin in three days. The Head of Life Insurance states that the Court's decision *'could leave some issues for the regulator to settle'*. He explains that he would report to him separately on the possible regulatory implications.

05/07/1999 [entry 1] The proceedings in the High Court begin.

Equitable's solicitors send FSA copies of the opposing skeleton arguments and supporting affidavits, and a witness report prepared for the Court by an independent actuarial expert.

The actuarial expert sets out the background to Equitable's practice on annuity guarantees and their differential terminal bonus policy. He explains the concept of policyholders' reasonable expectations drawing on ICA 1982, the terms of the Minister's statement to Parliament in February 1995, HMT's letter of 18/12/1998, GN1, the first report of the F&IA joint working party on policyholders' reasonable expectations and a statement by the F&IA in March 1999. In summary, the actuarial expert notes:

> *Generally HM Treasury regards it as appropriate for GAR policyholders to meet the perceived value of that guarantee, in some cases through some reduction in final bonus, subject to the wording of the contract and how it has been presented to policyholders.*

The actuarial expert says that Equitable's Appointed Actuary's interpretation of the Society's policyholders' reasonable expectations is that they would each receive their smoothed asset share and that Equitable would make a full and fair distribution. He considers this interpretation to be fair and reasonable. He notes that, as Equitable have no estate, if policyholders with annuity guarantees were to receive more than their fair share this could only be at the expense of other policyholders and their reasonable expectations.

The actuarial expert considers Equitable's documentation (policy documents, Article 65 (see 01/10/1998), With-Profits Guides, bonus notices, annual statements, illustrations and statements and reports contained in Equitable's annual accounts). He concludes that *'the PRE to which they give rise is that policyholders will receive a fair return as represented by smoothed asset shares'*.

The actuarial expert charts Equitable's bonus payments from 1989 to 1998. He concludes that Equitable's approach to the smoothing of investment returns had been satisfactory and that there had been no abrupt change in practice and no inconsistency with PRE.

The actuarial expert concludes that he could see no basis for criticising Equitable's approach to policyholders' reasonable expectations or the determination of final bonuses for GAR policyholders. The expert notes the statement by Equitable's Appointed Actuary that if GAR policyholders did expect that they should receive the same final bonus, irrespective of the form in which they took their benefits, he would nevertheless recommend to the Directors that they did not change their current practice. The expert considers this to be a fair and reasonable approach for the Appointed Actuary and the Directors to take.

05/07/1999 [entry 2] FSA produce a further scenarios paper. This discusses, in slightly more detail, the three scenarios identified in the paper circulated by Line Manager D on 14/06/1999.

Line Manager D sends a copy of the paper to Managing Director A. She sets out Equitable's differential terminal bonus policy and the background to the proceedings. The Line Manager explains:

> *... unless the judgement definitely settles the matter, we will need to undertake a significant exercise to determine whether we should intervene to ensure that Equitable*

Life's approach is consistent with PRE pursuant to our powers under the Insurance Companies Act 1982.

In reaching a view on PRE we consider that we will need to address the following series of questions:

a) What is/was Equitable's payment practice?

b) In objective terms, what would policyholders as a class have expected?

c) Is there a difference between the company's practice and policyholders' expectations?

d) Were policyholders' expectations reasonable in all the circumstances?

e) If policyholders' expectations were reasonable, is intervention action by FSA warranted to ensure that policyholders' interests are met?

The Line Manager adds:

[PIA] *are considering the presentation of Equitable Life's bonus notices. It appears to us that the notices may be misleading to policyholders because of the emphasis they place on the projected total fund value which includes terminal bonus although it is not guaranteed.*

Line Manager D attaches to her note a list of suggested responses to possible press enquiries. In answer to the question: *'What would be the implications for Equitable if they lose?'*, she writes: *'Would not expect the judgement to have a significant impact on the level of reserves the company needs to hold to cover its liabilities to policyholders'*.

06/07/1999 FSA write to Equitable, explaining that FSA are still considering the Society's application for a section 68 Order (see 30/03/1999 [**entry 3**]) and hope to be in a better position to assess it *'later in the year'*.

07/07/1999 FSA's Executive Committee meet and suggest that the Director of Insurance circulate to interested members of the Committee the scenarios paper of 05/07/1999 on Equitable's Court case and on the possible consequences for the FSA.

14/07/1999 PIA pass a copy of the advice of 15/06/1999 to FSA. PIA note that the advice *'confirms ... what we all thought'* regarding PIA's jurisdiction over policies sold before 29 April 1988.

15/07/1999 [entry 1] GAD write to Equitable in response to their letter of 25/06/1999. GAD explain that they intend to defer consideration of Equitable's justifications for the proportions of policyholders assumed to take benefits in guaranteed annuity form until after the Court case. GAD caution that they still have some difficulty in accepting that reductions of between 17.5% and 30% are consistent with the *'few percentage points'* referred to by the Government Actuary in DAA11 (see 13/01/1999 [**entry 2**]).

In response to Equitable's projections of their financial position, GAD note that no material changes are assumed in the valuation bases used in the resilience scenario, other than taking due account of changed investment yields. GAD recognise that the figures quoted in the Society's Board paper (see 04/05/1999) relate only to non-linked business. GAD note the indication of the potential outcome in the suggested scenario.

15/07/1999 [entry 2] FSA's Managing Director A presents his monthly report to FSA's Board. He informs them of the progress of Equitable's Court case, indicates that it seemed unlikely that the Court would resolve all of the issues of potential concern and states that FSA were undertaking some contingency planning.

19/07/1999	Equitable write to GAD in reply to their letter of 15/07/1999. Equitable say that the Government Actuary's letter of 13/01/1999 contains several references to relaxing the assumption of a 100% take-up of annuity guarantees and that: *The letter does not imply that the combined effect of all relevant factors should be "a few percentage points" but that each factor should be considered individually.* Equitable also point out that the letter refers to the allowance being '*a few percentage points* ***of the reserve***' rather than of the assumed take-up rate. Equitable conclude: *Looked at in that way, even for the retirement annuities, where I have assumed the lowest take-up rate of 70%, the effective reduction in the overall reserve is less than 10%. That would seem to put a rather different light on the reserving assumptions.*
26/07/1999	FSA meet PIA for a Supervisory Co-operation Meeting. The aim of the meeting is to discuss ways in which they could more effectively supervise firms for which they have joint responsibility. Equitable were selected to be used as an example to see in which areas information could be shared and how it should be communicated. FSA highlight what they feel are the differences between FSA and PIA's visits to companies, those being: • [FSA's] *visits usually took the form of a half-day meeting spent in the boardroom with top management, as opposed to the 50-80 man-hour visits carried out by PIA on the "shop floor".* • [FSA] *had the advantage of a more objective third party contact at the firm in the* [appointed] *actuary. PIA's contact, the compliance officer, was often from an ex-sales background and the fact that his salary was paid by the firm automatically made him less objective.* • *Within* [FSA], *there was a greater emphasis on the Policyholders' Reasonable Expectation aspect of the process.* The note of the meeting records that '[generally], *it was agreed that Equitable Life was easier than many other companies to regulate because the company worked to high standards, had good quality personnel and staff turnover was low*'. It is noted that PIA Investigations were soon to visit Equitable, as part of a themed visit programme on income drawdown products. FSA and PIA decide that, in five areas, it would be possible to share information about Equitable, including: *1) PIA felt that they would benefit from information on the issue of solvency – because this impacts on risk ... and affects how much new business the company can afford to sell and how much pressure is put on salesmen.* *2)* [FSA] *felt they would benefit from more "nuts-and-bolts" type information on products and their selling gained by PIA.*
04/08/1999	FSA inform Equitable that the lack of '*Millennium preparedness*' in one part of the company (Equitable Unit Trust Managers Ltd) is a cause for concern. FSA say that '*should the situation deteriorate, we will need to consider what action, including the possible exercise of our formal powers, may be necessary to protect policyholders and prospective policyholders*'.
11/08/1999	FSA's Line Manager D informs the third bilateral meeting of FSA and PIA that the High Court judgment is expected on 09/09/1999 and that '[evidence] *suggests* [the] *case could still go either way*'.

12/08/1999	FSA's Line Manager D provides the Head of Life Insurance with a note summarising the transcripts of the High Court hearing and key affidavits. The Line Manager says that her impression is that the case could go either way, but that the most likely outcome looked to be a victory for Equitable. Chief Counsel A marks on the note: *'As you say, impossible to call'*.
17/08/1999	GAD write to Equitable and a number of other companies. GAD explain that they intend to introduce changes to the *'valuation of liability'* regulations in ICR 1994, but that, before making recommendations to HMT, they were writing informally to a range of companies seeking further information. GAD add that they are considering changes to the regulations to introduce a new method for assessing an appropriate yield on equities when determining the valuation rate of interest and corresponding changes to the resilience test. GAD attach a draft letter which is to be sent to all Appointed Actuaries which explains this in more detail. (Note: The attached letter was not held on file. It has been suggested to me that this was a draft version of DAA12 which was later issued on 30/09/1999.) GAD seek to arrange a meeting with Equitable to discuss the proposals and invite written comments in advance of this.
20/08/1999	Equitable inform FSA that the final round of testing of their internal and external business processes (in preparation for the new millennium) is under way and is expected to be completed ahead of schedule later that month (see 04/08/1999).
24/08/1999	PIA telephone FSA to seek information about annuity guarantees and the likely impact of the Court case. PIA subsequently confirm that the note to FSA's Managing Director of 05/07/1999 gives them the information required.
27/08/1999	Equitable write to GAD in reply to their letter of 17/08/1999. Equitable comment on the changes to the liability regulations. Equitable acknowledge that a non-contractual surrender value (for example, a transfer or early surrender) is the surrender value a policyholder would reasonably expect. However, Equitable point out that they make clear that they do not guarantee a non-contractual surrender value and that, on occasion, they have *'found it appropriate to apply an adjustment so as to protect the interests of the remaining with-profits policyholders'*. Equitable express concern that the proposed Regulation 72 might require companies to hold reserves for non-guaranteed payments on accumulating with-profits business at or above the level held for guaranteed payments. Equitable also comment on proposed changes to the resilience test. They express concern that the new test 2, contrary to the advice from GAD, might be more, rather than less, severe and that this also would require companies to hold increased reserves.
31/08/1999	GAD write to Equitable in reply to their letter of 27/08/1999. GAD point out that the surrender value a policyholder might reasonably expect depends on *'the representations made to policyholders by the Society, either at the inception of the contract or through subsequent bonus notices or illustrations'*. GAD accept that, accordingly, in the circumstances Equitable describe the reserves required by Regulation 72 could be lower than a policyholder's asset share. GAD dispute that the new resilience test 2 is more rather than less severe.

c31/08/1999	FSA's files contain an undated *'Initial Risk Assessment'* of Equitable as part of a new approach to company assessment. (Note: according to the Baird report, the assessment is prepared by FSA as part of a pilot for the introduction of risk assessment for all companies. It is based on already available information.) FSA's overall assessment is that Equitable are a high financial risk because of the level of benefits guaranteed to policyholders, the low free asset position and the difficulty in raising external finance. FSA note that Equitable are vulnerable to a sustained fall in equity prices. FSA assess organisational, strategic and management risks as low. Environmental risks are also low, with the exceptions of regulatory risks (as the effect of stakeholder pensions on the company's business is uncertain) and reputational risk (as a result of the current dispute over how the costs of annuity guarantees are met). FSA discuss Equitable's management. FSA comment that Equitable have a *'tendency to arrogant superiority'*, which could blind them to the financial risks of guaranteeing high benefit levels. However, FSA note that Equitable are open with them and that *'there are no particular concerns about the level of co-operation that has been shown in the past'*. FSA state that Equitable generally have a good record of compliance with both the prudential and conduct of business regulators. FSA discuss Equitable's solvency position. FSA note that Equitable's relatively low free asset position, together with their mutual status and policy of declaring high reversionary bonuses, means that they are *'highly vulnerable'* to a change in economic circumstances. FSA state that Equitable have taken heed of their concerns about the level of bonuses and taken steps to reduce these this year; further reductions would be needed in future years. FSA note that Equitable use future profits implicit items and have already issued close to the maximum admissible subordinated debt. They state that Equitable have set a reserve of £1.5bn in respect of annuity guarantees, half of which is covered by the reinsurance arrangement, but say that it is arguable that this should have been higher. FSA conclude that Equitable have a strong reputation in the insurance market, which could be tarnished by the outcome of the Court case. Against this, an official has written *'already tarnished'*.
07/09/1999	GAD's Pensions Policy Section write to Equitable to explain that they have been contacted by holders of Equitable's income drawdown policies who had seen the maximum income they could withdraw cut considerably at the first three year review. GAD say it appears that the policyholders have been told that this is due to the actions of GAD (who prepare tables against which maximum and minimum amounts of withdrawal are determined). GAD ask Equitable to not give such a misleading impression, pointing out that the basis of the tables had not changed, and that the cuts had occurred because falls in gilt yields had not been matched by investment returns in the funds. (Note: Equitable's sales of income drawdown policies were being investigated by PIA at the time. The matter was discussed briefly at the meeting on 06/12/1999 and then became the subject of further correspondence from 08/02/2000.)
08/09/1999 [entry 1]	Equitable advise FSA of changes to the requisite details for their branch in the Republic of Ireland, following the marketing of a new product.
08/09/1999 [entry 2]	Equitable write to GAD in response to their letter of 31/08/1999. Equitable welcome GAD's acceptance that the surrender value that a policyholder might reasonably expect could be lower than the asset share. Equitable reiterate their view that the new resilience test 2 is more, rather than less, severe.

08/09/1999 [entry 3]	FSA's Director of Insurance informs FSA's Executive Committee that the High Court judgment is expected the following day.
09/09/1999	Judgment is given in the High Court. The ruling is that Equitable are entitled to operate their differential terminal bonus policy. The representative policyholder is given leave to appeal. GAD send FSA some thoughts on the judgment, particularly in relation to PRE. GAD interpret the judgment as saying that policyholders who selected an annuity at a guaranteed rate in 1994, or shortly after, may have had a reasonable expectation that they would receive a final bonus based only on accumulated investment returns and to which the guaranteed annuity rate would apply. GAD suggest that FSA might need to consider whether to intervene in respect of those policyholders whose expectations had not been met. GAD query if FSA would be expected to express any views to the Court of Appeal.
10/09/1999	FSA's Chief Counsel A provides a summary of the judgment in the High Court by the Vice-Chancellor. The Chief Counsel describes as very significant the recognition that policyholders might have a reasonable expectation of benefits over and above contractually guaranteed benefits. Chief Counsel A notes that, on the issue of breach of contract, the Vice-Chancellor had found against the representative policyholder, in that the effect of Equitable's policy and practice was to allocate final bonuses to GAR policyholders on a conditional basis. She also notes that FSA have some evidence that *'on maturity and when options were being discussed with policyholders, the Equitable did <u>not</u> tell policyholders in terms that terminal bonus was conditional'*. She states that this was a matter for PIA. Chief Counsel A notes that, on the exercise of discretion, the Vice-Chancellor had found that GAR policyholders had a reasonable expectation that they would receive full terminal bonus with a GAR annuity, but that a reasonable expectation did not become a contractual right. Policyholders' reasonable expectations were one of several factors to be taken into account by Equitable's Directors. The Vice-Chancellor had not accepted that, in making their decision, Directors had failed to take their previous practice into account. In assessing the implications of the judgment for FSA, Chief Counsel A states: *... based on the evidence we have examined so far, we would be likely to come to the same conclusion* [that policyholders had a reasonable expectation that they would receive full terminal bonus with a GAR annuity] *... The next step then, would be for us to consider whether, under section 45 of the Insurance Companies Act 1982, action should be taken to ensure that the criteria of sound and prudent management are fulfilled. These criteria, in Schedule 2A to the Act, include:* *a) carrying on the business of the society with integrity (para 1); and* *b) conducting business with <u>due regard</u> to the interests of policyholders and potential policyholders (para 7).* *The* [Vice-Chancellor] *concluded that the directors of the Equitable had properly had regard to PRE; the question for us goes beyond that and is whether sufficient or due regard was had to PRE.* *As we have already discussed, if we were to take the view that due regard was <u>not</u> had to PRE, there is real awkwardness in taking action against the Equitable for all sorts of reasons (which I won't go into here) including the need to rely on grounds which are primarily directed at good management, soundness and prudence, rather than conduct of business as such.*

Chief Counsel A adds that there was *'also a PIA "ring" to this case'*, although she could not comment on the extent to which PIA could or should get involved.

(Note: in April 2001, Chief Counsel A was questioned by the FSA's Baird Inquiry on the point quoted above that *'there is real awkwardness in taking action against the Equitable for all sorts of reasons (which I won't go into here)'*. The transcript of that interview records that Chief Counsel A had explained that:

> *In ... my summary of the Scott judgment, I say that if, assuming the Scott judgment not to have been appealed, that we were to have done our investigation and taken the view that due regard was not had to PRE – obviously, Scott himself took that view ... that PRE had been breached – that in that context it had not been properly considered, there would be a real awkwardness in taking action against the Equitable, for all sorts of reasons which I won't go into here, and I didn't go into in this note because it had been copied around to all and sundry around FSA and it didn't seem to be either the time or place to get into that sort of analysis, including the need to rely on grounds which were primarily directed at good management, soundness and prudence, and I said that there was a PIA "ring" to the case, and part of the reason for that was that Scott found that there had been* [a] *breach of PRE, not with respect to the contract itself, but rather with respect to point of sale documentation and post-point of sale documentation. As soon as you get into that area, obviously someone concerned with prudential regulation starts thinking, "This is starting to feel a bit like conduct of business, getting a bit uncomfortable from the point of view of applying criteria of sound and prudent management".*
>
> *I think that there was still good argument to be made there, that what the Equitable had, was doing, was a sort of globally applied management policy; the arguments were there to be made. But, for me, there was an area of discomfort beginning to creep in. In addition, when the starting point is that the contractual relationship was perfectly fine, legally speaking, but rather PRE was to be derived from the bonus notices and so on, then you are also getting into a situation which is starting to look more like misrepresentation. You start getting into an analysis which is along the lines of, "Well, they didn't have any PRE when they signed up to the contract, but instead that PRE began to build up post-contract. Well, it couldn't have affected their decision, or might not necessarily have reflected their decision at point of sale, but that perception increased returns developed as time went on".*
>
> *How do we as a Regulator respond to that? It starts to look as though the analysis is one of misrepresentation and reliance, and then you start asking yourself about loss, then you start asking about what intervention would be appropriate in that sort of situation, particularly taking into account the interests of other groups of policyholders.)*

Chief Counsel A notes that Line Manager D has decided to defer reaching a decision on whether to take action pending the appeal. The Chief Counsel suggests, however, that FSA check if PIA were adopting the same position.

GAD's Directing Actuary B informs FSA that his understanding of the judgment in relation to policyholders' reasonable expectations differs slightly from those of the Director of Insurance and Chief Counsel A. The Chief Counsel advises the Directing Actuary that, in her view, *'the Court clearly found that PRE had not been fulfilled for holders of GAR options (but the Court also held that that was OK)'*.

13/09/1999 FSA write to GAD to inform them that FSA had suggested to Equitable the possibility of a visit to discuss the broader picture, and that their suggestion had been well received.

14/09/1999	FSA's Line Manager D prepares a note about the High Court judgment. She says that the judgment has had little effect on Equitable. The Line Manager suggests that, while the case was subject to appeal, it would be inappropriate for FSA to reach a view on whether Equitable had had due regard to policyholders' reasonable expectations and, if not, whether FSA should take intervention action.
15/09/1999	FSA write to PIA. FSA say that they are keen to look at the issues arising from the judgment from the perspective of all the FSA constituent bodies, and that any possible action should be considered in the same way. However, no action should be decided or initiated until the Court of Appeal's decision is known. FSA pass to GAD details of the changes to Equitable's Republic of Ireland branch. They suggest that the changes are uncontroversial but seek GAD's views. FSA add: *... more importantly we still have the implicit item concession outstanding* [see 06/07/1999]. *We probably need to make a decision on this as it looks unlikely that the Court decision will be appealed during 1999.*
16/09/1999	FSA's Managing Director A presents his monthly report to FSA's Board. The Board note the High Court judgment.
20/09/1999 [entry 1]	FSA ask GAD when they expected to complete their scrutiny of the Society's 1998 returns. In response, GAD explain that their detailed scrutiny report had been submitted to FSA on 20/05/1999. GAD say that no questions of the *'conventional kind'* had been raised with Equitable but that GAD had left two points outstanding. The first is further consideration of the final terms of the reinsurance treaty. GAD ask if Equitable have yet sent the final wording. The second is the assumptions made by Equitable when reserving for annuity guarantees. GAD refer to the exchange of correspondence from 27/05/1999 and say that GAD need to consider Equitable's last letter of 19/07/1999.
20/09/1999 [entry 2]	FSA write to Equitable to arrange a company visit, pointing out that it is nearly three years since the previous one (see 08/11/1996 [**entry 2**]). FSA note that much of the contact in the last year had been on the issue of guaranteed annuities and that now would be an opportune moment to discuss Equitable's overall position and future plans. FSA set down six matters they would expect to cover: *1. Overview of corporate management structure of Equitable Group.* *2. General market outlook and business strategy.* *3. Marketing approach including product development and distribution.* *4. Role of the Appointed Actuary.* *5. Systems and Controls.* *6. Investment Policy and Asset Management.*
22/09/1999	FSA's Line Manager D prepares a further note summarising the background to the High Court case and the judgment. The Line Manager says that the judgment appears consistent with the guidance on annuity guarantees and policyholders' reasonable expectations, issued by HMT (see 18/12/1998 [**entry 1**]), *'that insurers might charge for the additional costs of the guarantee via a reduction in terminal bonus provided such a reduction was consistent with PRE'*.
23/09/1999	PIA write to FSA, having reviewed a selection of Equitable's bonus notices that FSA had provided to them. PIA tell FSA that they had concluded that the Society's notices were not poorly presented or inaccurate. As a result, PIA did not intend to pursue Equitable for a breach

of the requirement that anything said, written, sent, given or shown to a policyholder or potential policyholder should be clear, fair and not misleading.

PIA add that they have not previously pursued a company in relation to this requirement as PIA's scope:

> *... covers the activities of dealing, arranging deals in, managing and advising on certain types of investments. The ongoing servicing of policies does not seem to fit comfortably within these activities. And we would therefore have to have serious concerns about a document issued in the course of servicing a policy to attempt to breach the firm concerned.*

FSA note: *'A surprisingly unqualified endorsement for the bonus notices'*.

24/09/1999 GAD write to FSA about Equitable's application for a section 68 Order (see 30/03/1999 [**entry 3**]). GAD confirm that *'the calculations provided are in line with the guidance and that the figure of £2,960m appears to be a fair estimate of 50% of "Estimated Future Profits"'*. GAD say that the amount sought (£1,000m) was about a third of the maximum amount that could have been claimed (£2,960m), and substantially less than the amount approved in 1998 (£1,900m). GAD advise FSA that they *'have no real doubts that such a sum can be reasonably accepted by the FSA'*.

However, GAD suggest that FSA should ask the Society's Appointed Actuary to certify:

> *... that the amount applied for does not exceed the present value of future profits that may be expected to arise in the future on the long term business in force on 31 December 1998, in excess of sums that may be required to meet claims recovery premiums payable under the* [reinsurance] *treaty ....*

GAD advise FSA to take the opportunity, when doing this, to ask for a copy of the reinsurance treaty as finally signed.

In the same note, under the heading *'Returns as at 31 December 1998'*, GAD comment on the reserving assumptions made by Equitable in respect of GARs, following their letter of 19/07/1999:

> *We are not inclined to take this matter any further at this time, even though we remain somewhat uncomfortable that* [Equitable's] *assumptions are not fully in line with expectations based on our interpretation of the* [Government Actuary's] *letter on this subject, since, with the reinsurance now in place, a stronger interpretation would raise the Society's gross liability but not its net liability. (It would of course raise to a modest degree the* [required minimum margin] *of the Society.) The topic could be discussed again at the proposed FSA visit.*

GAD conclude that they *'now consider* [their] *scrutiny of these Returns to be closed'*.

On the same day, GAD advise FSA that they have no objections to Equitable's changes to the requisite details of their Republic of Ireland branch.

28/09/1999 FSA ask Equitable to provide certification in respect of the matter suggested by GAD on 24/09/1999. GAD also ask for a copy of the final signed version of the reinsurance treaty.

29/09/1999 Equitable send FSA income and expenditure figures relating to the company's activities in Germany, Republic of Ireland and Greece.

30/09/1999 Every Appointed Actuary is sent by the Government Actuary a copy of DAA12, making further revisions to the second of the three resilience tests (see 30/09/1993 [**entry 2**] and 24/11/1998 [**entry 2**]).

01/10/1999	GAD's Scrutinising Actuary E sets out why he considers the High Court judgment to be more favourable to Equitable on the question of policyholders' reasonable expectations than FSA's Chief Counsel A had implied in her summary (see 10/09/1999). The Scrutinising Actuary notes the conclusion in the judgment that GAR policyholders had a reasonable expectation that they would receive full terminal bonus with a GAR annuity. The Scrutinising Actuary points out, however, that this conclusion only referred to the period *'up to 1994 and perhaps for a while thereafter'* and that the practice followed by Equitable, up to 1994, had been consistent with this. He cites subsequent comments in the judgment which suggested that there was no basis for policyholders taking benefits in fund form to have a similar expectation, or for policyholders to expect Equitable to apply the same rate of bonus to all policyholders. Scrutinising Actuary E cites a further comment in the judgment that there was no basis for concluding that Equitable had failed to take into account policyholders' reasonable expectations when exercising their discretion regarding final bonus. Subject to some doubts about what was done *'for a while'* after 1994, Scrutinising Actuary E concludes that: *'On the basis of this judgement, it would seem to me that sufficient or due regard was and continues to be given to PRE'*.
11/10/1999	FSA and PIA hold their fourth bilateral meeting. FSA's Line Manager D explains the implications of the court judgment for both FSA and PIA. The minutes of the meeting record that: > *Although the judgement was in favour of the Equitable, the* [FSA] *view is that although Equitable had regard to PRE they did not meet it so there is the possibility of intervention. In terms of Conduct of Business issues there may for example be misleading bonus notices supplied to investors or firms may have churned investors into new contracts without guarantees.*
14/10/1999 [entry 1]	Equitable provide FSA with a copy of the final signed version of the reinsurance treaty, dated 11 October 1999. The treaty is reproduced in full in Part 4 of this report.
14/10/1999 [entry 2]	Equitable confirm to FSA that they are happy to include GAD's suggested wording (24/09/1999) in their application for a section 68 Order. On the same day, Equitable seek a section 68 Order to allow them to raise the limit on the admissibility of share holdings in the returns from 2.5% to 5% for the stocks of four companies.
c20/10/1999	In an undated note, FSA write to GAD suggesting some proposed wording in response to Equitable's request of 14/10/1999 regarding limits on the admissibility of share holdings. FSA also request that GAD should review the final version of the reinsurance treaty recently received from Equitable.
21/10/1999 [entry 1]	FSA write to Equitable in response to their letter of 14/10/1999. FSA explain that they have put together a formula to consider requests for section 68 Orders to raise the limit on the admissibility of share holdings. FSA ask Equitable to apply the formula to each of the companies concerned. (Note: In an earlier draft response, FSA had suggested that Equitable should make their application in mid-November when GAD would be in a better position to assess it.) FSA advise GAD of a meeting held that day with PIA to discuss the annuity guarantees issue and Equitable.

FSA explain that PIA are likely to conclude that they do not have the power to act in relation to any misleading bonus notices, as these were not marketing literature. As regards the sales process, PIA needed to establish if there was a material number of policies in their remit to justify an investigation. To this end, FSA would write to Equitable to ask about the number of policies sold after April 1988, when the FS Act 1986 came into force, and the number of top ups sold after June 1988, when Equitable had stopped selling the basic contract written to provide an annuity at a guaranteed rate.

FSA explain that PIA needed to consider the position of other companies. To this end, FSA ask GAD to provide information on companies' exposure to annuity guarantees, drawn from the responses to the survey in 1998 (see 20/06/1998).

21/10/1999 [entry 2] FSA write to the other regulators involved in the supervision of Equitable (PIA's Pensions Review Team and the Investment Management Regulatory Organisation (IMRO)). FSA seek information about recent regulatory activity, including visits and disciplinary action, in preparation for a *'college meeting'* (that is, a meeting of all the regulators involved in the supervision of Equitable) on 26/11/1999.

21/10/1999 [entry 3] FSA's Managing Director A presents his monthly report to FSA's Board, in which he notes that Equitable had won their court case and advises that FSA *'shall await the outcome of the appeal before considering whether any further action by FSA is called for'*.

22/10/1999 GAD advise FSA that the revised certificate for the section 68 Order was exactly in the form required.

GAD confirm that the reinsurance agreement:

> *... is totally in accord with the Draft Term Sheet that was examined in detail in April.* [It is my understanding that the construction of the reinsurance agreement as set out in the draft term sheet was considered to be acceptable at that time.]

29/10/1999 FSA ask Equitable how many policies with GARs the Society had sold after 29/04/1988 when the then current conduct of business regime under the FS Act 1986 came into force. FSA also ask how many GAR policies had been *'topped up'* after April 1988 and if top ups were still being made in 1994 and more recently.

November 1999 GAD send FSA their annual report on the life insurance industry for the year ending 31 December 1998. The report follows a similar format to that used for previous years.

In the Executive summary, GAD note:

> *Once again, the low level of income yields available and the modest growth seen in dividends makes it likely that the strong investment performance of 1998 will only really enhance the free assets of those companies that entered the year already in a healthy position. Further, it is important to recognise that for companies paying terminal bonuses, a proportion of their reported free assets are in fact needed to cover their obligation to provide these bonuses (in respect of which there is no requirement under the regulations to establish explicit reserves) and that apparently increased free assets are in fact largely needed to cover increased hidden obligations to provide these bonuses.*

In the section on *'Free Assets'* and under the heading *'Economic Background & Impact on Life Offices'*, GAD's report states:

> *A standard UK life office would be expected to have secured a rise in capital value of assets of about 10.5% over 1998, an income return of about 4.5% and a total gross investment return in the region of 15.0%.*

Nevertheless:

Since prospective yields have again fallen substantially over the year, valuation interest rates will need to have been reduced further - raising the amount of the disclosed liabilities for all conventional contracts. This in turn will have had an upward impact on required minimum margins. It also remains clear that recent bonuses declared under at least some accumulating with-profit contracts, and those bonuses that seem likely to be declared in the future, are being supported partly by capital gains. To be prudent, most bonus enhancement should be paid in terminal form, and reversionary bonus rates reduced.

Once again, the low level of income yields available and the modest growth seen in dividends makes it likely that the strong investment performance of 1998 will only really enhance the free assets of those companies that entered the year already in a healthy position. Further, it is important to recognise that for companies paying terminal bonuses, a proportion of their reported free assets are in fact needed to cover their obligation to provide these bonuses (in respect of which there is no requirement under the regulations to establish explicit reserves) and that apparently increased free assets are in fact largely needed to cover increased hidden obligations to provide these bonuses.

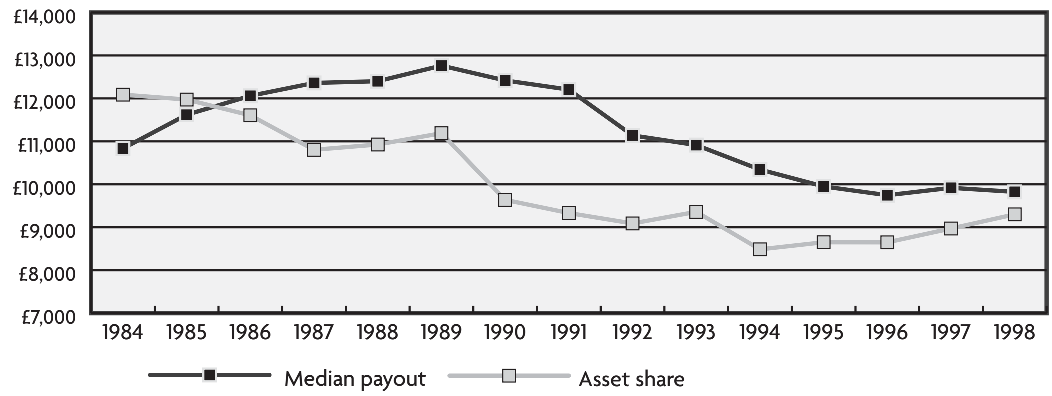
In commenting on the free asset ratios of individual companies, GAD say that Equitable *'purports to carry out a bonus reserve valuation but, in practice, this gives effectively the same answer as a net premium valuation'*.

On maturity payouts for a 10 year endowment policy, GAD report that Equitable and another company show the largest falls in payouts over the five years to 1998. For a 25 year endowment policy, GAD report that Equitable remain *'among the poorer performers'*. In relation to surrender values, however, GAD note that Equitable and four other companies *'all show to advantage'*.

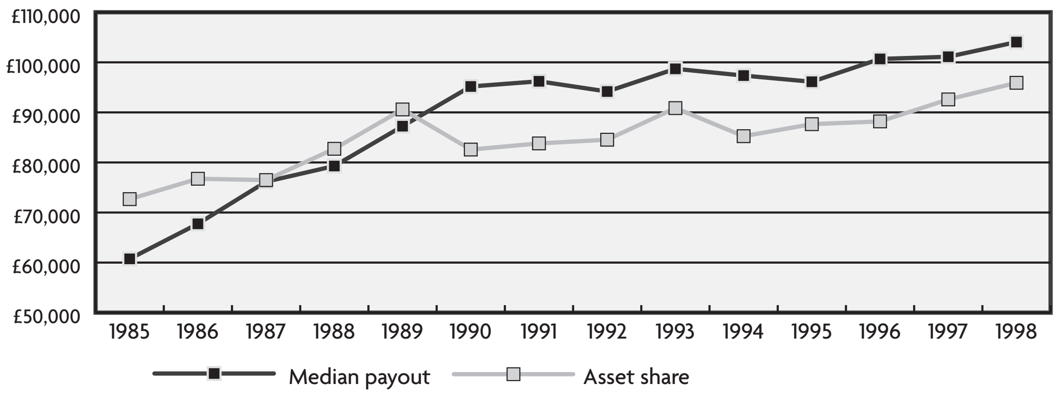
Unlike in previous annual reports, GAD's annual report to FSA does not include a comparison of maturity payouts against their own calculations of theoretical asset shares. However, GAD's report still provides a review of maturity payouts across the industry. An appendix to the report shows that, for an endowment policy with contributions of £50 per month for 10 years, Equitable's maturity payout value is shown as £9,681, against a with-profits industry median of £9,825. For an endowment policy based on contributions of £50 per month for 25 years, Equitable's maturity payout value is shown as £84,418, against a with-profits industry median of £104,049. For a pension policy based on contributions of £200 per month for 15 years, Equitable's maturity payout value is shown as £98,303, against a with-profits industry median of £103,790.

I have seen that GAD still undertake their own analysis comparing maturity payouts to their estimates for the theoretical asset shares. Continuing their previous work, they prepare the following charts:

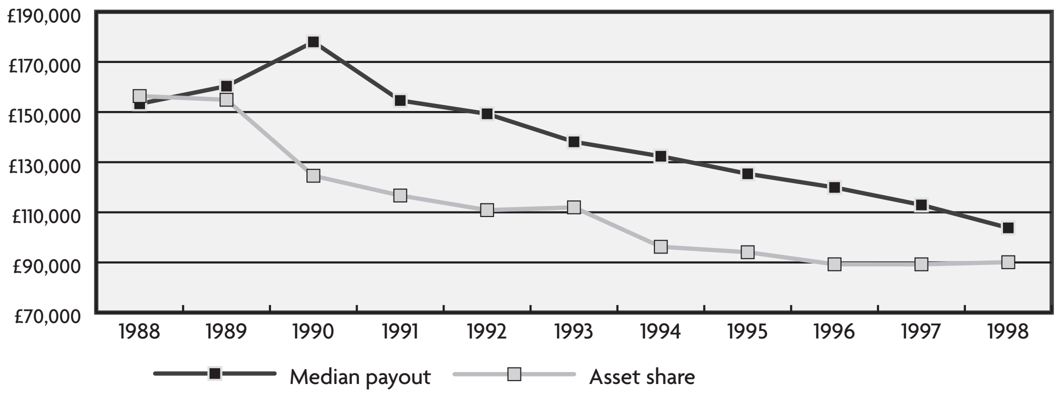
Comparison of actual median maturity payout and theoretical asset share for the years 1984-98 for a £50 per month conventional with-profits 10 year endowment policy (£)



Comparison of actual median maturity payout and theoretical asset share for the years 1985-98 for a £50 per month conventional with-profits 25 year endowment policy (£)



Comparison of actual median maturity payout and theoretical asset share for the years 1988-98 for a £200 per month conventional with-profits 15 year endowment policy (£)



Unlike in previous years, GAD do not appear to have undertaken an analysis of maturity payouts to theoretical asset shares for individual companies.

(Note: the bodies under investigation have told me that it should be noted that: *'the charts selected for this entry all show maturity payouts for regular premium contracts only. By contrast, the bulk of Equitable's business was recurrent single premium. These charts therefore have very little significance for Equitable. This comment also applies to the corresponding charts provided in the reports prepared by GAD for* [other] *years'*.)

03/11/1999 FSA provide a note to the Insurance Supervisory Committee, recommending that HMT should approve Equitable's application for a section 68 Order for a future profits implicit item of £1bn, for possible use in their 1999 returns.

By way of background, FSA explain that:

> *The company whilst solvent is not highly capitalised, this is mainly because the company has a policy of distributing a high level of the company's profits to policyholders. This has meant that the company has not built up an estate.*

FSA refer to Equitable's high profile due to their potential exposure to annuity guarantees and to the court case. FSA explain that Regulation 24 of ICR 1994 specifies the basis of calculation for an implicit item and that:

> *We have routinely given Section 68 Orders to companies for future profit implicit items provided that we have been satisfied that the basis of calculation provided for in Regulation 24 has been correctly carried out ...*

Under their analysis of the application, FSA explain:

> *Whilst there is still some debate at the margins between the company and GAD relating to the precise reserve for the GAOs, we are generally satisfied that the company is adequately reserved for this exposure. The reserve for the GAO exposure has been largely offset through reinsurance.*

FSA note that Equitable face the threat of the appeal. However:

> *... any Court decision on this issue should not effect the financial position of the Equitable as shown in the HMT Annual Return since our Regulations require the company to reserve fully for all GAO policies in any case.*

FSA state that Equitable's detailed calculations show that Equitable could have qualified for a future profits implicit item of almost twice that applied for. FSA note that GAD have reviewed the calculations and *'are content that the concession should be granted'*.

09/11/1999 HMT write to Equitable to explain that, on FSA's advice, they have agreed the application for a section 68 Order for a future profits implicit item. HMT enclose the Order for an implicit item of £1bn, for use in their 1999 returns.

10/11/1999 Equitable write to FSA in response to their letter of 29/10/1999. Equitable explain that they would in due course provide details of policies sold between 29 April and 30 June 1988. Equitable seek clarification of what FSA mean by *'topping up'*.

Equitable refer also to the proposed company visit, now arranged for 06/12/1999, and the forthcoming Court of Appeal hearing. Equitable explain that, at the company visit, they think it would be helpful for FSA to meet the general managers responsible for marketing and investment, in addition to the Appointed Actuary and the Chief Executive. Equitable caution that the Court of Appeal judgment might be delivered on 6 December 1999 and thus that they might have to postpone the visit. Equitable undertake to send copies of the skeleton arguments for the hearing as they become available.

11/11/1999	GAD write to FSA in response to their request for information on companies' exposure to annuity guarantees. The information is drawn in the main from companies' responses to the survey commissioned by GAD in 1998 (see 20/06/1998). GAD state that the information suggests seven companies which PIA might further investigate. Equitable are one of these. GAD explain that the seven companies sell predominantly through a direct sales force, sold products with annuity guarantees after 1988, and are those who, in response to GAD's annuity guarantee survey, had answered *'No'* to either or both of the following questions: • *'On with profits* [contracts] *with an annuity guarantee, do you make a general allowance for the guarantee when establishing maturity values.'* • *'On with profits* [contracts] *is your approach to setting terminal bonus rates for a cohort of policies influenced by whether or not an annuity guarantee is biting.'*
12/11/1999	Equitable write to FSA with a revised application for a section 68 Order to raise the limit on the admissibility of share holdings. Equitable explain that they have applied the formula provided by FSA on 21/10/1999.
15/11/1999	FSA write to Equitable to seek the following information prior to the visit on 06/12/1999: (1) Equitable's latest Financial Condition Report. (2) Structure charts for the Equitable Group and senior management. (3) Details of the Board's sub-committees. (4) Copies of Equitable's latest business plan and papers on future strategy. (5) Details of their investment policy and terms of reference for the Investment Manager. (6) The latest report from the Investment Manager on fund performance, especially the main fund. (7) Equitable's internal audit programme for 1998 and 1999, along with details of any additional special studies conducted in 1999. (8) Internal audit's most recent report to the Board/senior management. FSA request the information by 26 November 1999. The letter incorporates changes suggested by GAD, who were sent on the previous day a draft on which to comment.
17/11/1999	FSA prepare an *'Overall Assessment'* of Equitable, in the light of information received in response to their note of 21/10/1999 and in preparation for the college meeting on 26/11/1999. FSA assess Equitable as medium to high risk, predominantly due to their exposure to annuity guarantees. FSA say that PIA have assessed the parts of Equitable that they supervise as average risk and that PIA's Pensions Review Team have identified no particular concerns on Equitable's handling of the pensions review. FSA note that IMRO have significant concerns and had recently fined Equitable Unit Trusts Managers Limited £80,000 for breaches of IMRO rules in 1998 and had identified further significant compliance issues at a visit in June 1999. Both FSA and IMRO express concern over Equitable's *'slight institutional arrogance about being a mutual'*.

FSA summarise Equitable's present financial position, drawing on the initial risk assessment (see c31/08/1999). FSA observe that Equitable have *'gone too far in distributing surplus to policyholders to the extent that the company is dangerously under capitalised and exposed to a market downturn'*. FSA note that Equitable have taken heed of their concerns about the level of reversionary bonuses and have made some effort to reduce them this year. FSA note that Equitable's reserving basis overall is *'acceptable (but not particularly strong)'*. FSA also note that, while Equitable were not alone in *'being caught out'* by the annuity guarantees issue, they did not wake up to the issue quickly enough and their unclear communication to policyholders had left them open to criticism.

18/11/1999	FSA's Managing Director A presents his monthly report to FSA's Board, in which he notes that the Court of Appeal hearing had been set to commence on 29 or 30/11/1999.
23/11/1999	Equitable's solicitors send FSA copies of the skeleton arguments for the appeal hearing.

24/11/1999

FSA's Legal Adviser A passes Chief Counsel A a copy of an unsigned and undated paper, prepared by FSA, discussing the degree to which companies can assume, for reserving purposes, that policyholders choose to take part of their policy proceeds as a cash sum rather than as an annuity at a guaranteed rate.

FSA cite the Government Actuary's guidance (DAA11 – see 13/01/1999) that assumptions regarding the number of policyholders choosing to take benefits in a form other than an annuity at the guaranteed rate could lead, at most, to a reduction of *'a few percentage points'* in the reserve. FSA explain that when the guidance was formulated:

> *... our thinking internally was that up to a 5% reduction in the reserves could be considered to constitute "a few percentage points". A 5% reduction in reserves generally equates to an assumption that 20% of policyholders take the maximum tax free cash ...*

However, FSA note that a number of companies have interpreted the guidance as permitting an assumption of 10% of policy proceeds being taken in non-guaranteed annuity rate form. Some companies have gone further, *'Equitable Life assuming 20% of the proceeds are taken in other forms ...'*.

FSA note that no action has been taken to criticise the standard of reserving adopted by Equitable (or any other company), and that FSA need to settle their approach before the year end. FSA discuss the possibility of setting a minimum reserving requirement of 90% or 80%. It is noted that the former approach might give the impression that FSA were singling out Equitable for criticism. The latter approach would *'avoid conflict with Equitable'* but move FSA *'an unacceptably long way from the reserving level the guidance was originally intended to indicate'*.

FSA favour retaining their original interpretation of the guidance, but articulating to companies that there are two alternatives:

- to assume up to 5% of policy proceeds are taken in non-guaranteed annuity rate form; or
- to assume up to 20% of policyholders choose to take the maximum tax free cash permitted under the policy.

Chief Counsel A passes the note to Line Manager D. The Chief Counsel says:

> *I thought we had required Equitable to reserve at 95%. Or was the difference covered by the reinsurance?*

The Line Manager responds that Equitable are as bound by the guidance as everybody else. But that the Society's interpretation of a few percentage points had *'proved to be 20%'*. The Line Manager says that FSA knew Equitable *'would go for as high a figure as they thought they could get away with'*. The Line Manager says that, as part of the scrutiny of their annual returns, FSA had asked Equitable *'how they got to an assumption of 20% of the proceeds being taken in non-GAO form'*, but, as yet, FSA had not expressed a view on the Society's arguments as to why this allowance was prudent (see 27/05/1999, 25/06/1999 [**entry 1**] and 15/07/1999 [**entry 1**]).

Chief Counsel A comments in turn:

> *Your paper gives the impression I think that you have implicitly accepted the returns (or decided to do nothing about them).*

25/11/1999	Equitable write to FSA to provide information in response to each of the eight points set out in FSA's letter of 15/11/1999. Under point (1), Equitable provide copies of their letter of 21/01/1999 and the report to their Board sent on 04/05/1999, together with a copy of the latest report to their Board on revenue and solvency matters. Under point (6), Equitable enclose the latest report to their Investment Committee on the investment performance of the main fund, and updated schedules showing the with-profits fund and linked fund performance to 31 October 1999. Under point (7), Equitable explain that they have operated a unit called the *'Systems and Controls Review Group'* which has performed an internal audit role and made regular reports to the Audit Committee. They enclose copies of the Group's terms of reference, a summary of all its reviews, and copies of reports put to the Audit Committee in October 1998 and October 1999.
26/11/1999 [entry 1]	FSA write to Equitable in response to their letter of 10/11/1999. FSA explain that they are discussing with others in FSA whether it would be useful to have Equitable's information about *'top ups'* (i.e. the right of a policyholder to pay further premiums, or to effect new policies, under the same terms as an existing policy). FSA confirm that they would wish to meet Equitable's general managers on the investment and marketing side at the visit on 06/12/1999; they also ask to meet Equitable's head of internal audit. FSA enclose a draft agenda for the visit and confirm receipt of the skeleton arguments.
26/11/1999 [entry 2]	FSA and IMRO attend the college meeting (see 21/10/1999 [**entry 2**]) to discuss Equitable; PIA and their Pensions Review Team send their apologies. FSA prepare a note of the meeting. They summarise IMRO's actions towards Equitable Unit Trusts Managers Limited. FSA note that IMRO view Equitable Unit Trusts Managers Limited's regulatory history as poor and deem them to be a continuing high risk and thus on a ten month visit cycle. FSA reiterate their observations from the Overall Assessment (see 17/11/1999) and note that FSA intend to fill in some of the gaps in their knowledge at the company visit on 06/12/1999. The meeting agrees that those responsible for supervising Equitable should remain in touch.
26/11/1999 [entry 3]	FSA ask PIA to define what is meant by *'top up'*, as it is their definition that is the important one. FSA also query the usefulness of having information on the numbers of top ups, given that most would not have been connected with advice provided by Equitable or their representatives.
30/11/1999	The Court of Appeal hearing begins.

02/12/1999 [entry 1]	The Court of Appeal hearing ends. (The Court of Appeal gives its judgment on 21/01/2000.)
02/12/1999 [entry 2]	PIA write to FSA with comments on the documents provided by Equitable about their Systems and Controls Review Group (see 25/11/1999). PIA suggest that there are some confusing indicators in the documents, both regarding the *'Control Awareness'* of the organisation and the extent to which the Society's Systems and Controls Review Group have tested rather than documented existing control processes. PIA discuss a range of positive and negative factors indicated by the documents. They conclude: *Overall, like you, I read a few more negatives than positives. I formed the opinion that Equitable realise that maintaining strong effective controls is important to them. They seem to have heard some of the buzzwords about best practice. However, they have certainly not articulated in the documents we have seen that they are approaching this topic in a robust and action oriented manner.* PIA suggest that it would be helpful to explore the role of Equitable's auditors.
03/12/1999	Equitable write to FSA. Equitable explain that they sold 22,224 policies with GARs between 29 April and 30 June 1988. They say the level of business was exceptional, due to the imminent withdrawal of the product, and that it is likely that most policies were bought by clients on their own initiative (as Equitable only employed about 300 sales representatives at the time).
06/12/1999	FSA and GAD visit Equitable as a part of the regulators' rolling programme of company visits. The visit had been arranged on 20/09/1999. FSA prepare a note of the meeting. This shows that Equitable give an overview of their corporate management structure and explain the role of the Board and the executive management team. Equitable's Chief Executive reiterates that *'he was keen to run the company on a collegiate consultative basis (the suggestion had been made that his predecessor had been somewhat autocratic)'*. Equitable discuss the general market outlook and their business strategy. They explain that, when deciding their strategy, *'the Society did not use return on equity type analysis – it concentrated on assessing how it could meet the needs of clients and potential clients'*. Equitable discuss their investment policy and asset management. They explain that some income drawdown policyholders were upset at cuts in the amounts they could take from their pensions. Equitable suggest that this might be due to the cap imposed by the Inland Revenue. Equitable agree to look at some examples to see if this is the case. GAD express concern that Equitable's future projections *'did not fully take into account the scenario of a long-term stock market depression – which could have severe implications for the society'*. Equitable provide more information about the work of their Systems and Controls Review Group. They also confirm that the reinsurance treaty now covers group business as well as individual business and that this would reduce the gross annuity guarantees reserve of £1.56bn to a net exposure of £560m. FSA warn Equitable that they and the Government Actuary would be writing to companies before the end of the year, outlining more clearly the expected approach to reserving, and that this could mean that Equitable would need to increase their gross reserves. Finally, Equitable explain that they recognise that declared bonus rates would have to reduce further if the current investment return persisted. However:

… the Society proposed to pause for breath before cutting bonuses further, in order to see if yields would improve. Terminal bonuses were likely to be pushed up, however, if reversionary bonuses remained at 5% since the company would be allocating less than it had earned for the last 4 years.

Following the meeting, FSA and GAD are shown Equitable's paperless administration systems.

08/12/1999	FSA provide a note recommending that HMT approve Equitable's application for a section 68 Order to raise the limit on the admissibility of shareholdings.
10/12/1999	FSA attend a bilateral meeting with PIA. PIA report that they had met to consider the need for further regulatory action against Equitable in relation to guaranteed annuities, and that Line Manager D had attended from FSA. Line Manager D undertakes to provide PIA with Equitable's information on the number of policies sold between April and June 1988 (see 03/12/1999).
13/12/1999	Equitable advise FSA that they do not expect a decision from the Court of Appeal until January 2000.
14/12/1999	HMT write to Equitable to explain that, on FSA's advice, they have agreed their application for a section 68 Order to raise the limit on the admissibility of share holdings. HMT enclose the Order.
16/12/1999 [entry 1]	GAD send FSA a draft of a letter from the Government Actuary to Appointed Actuaries clarifying the guidance on reserving for annuity guarantees. FSA's Line Manager D advises the Head of Life Insurance that the guidance '*looks OK*'. The Line Manager suggests that there should be an accompanying letter from FSA to Chief Executives clarifying that FSA would not ask companies to resubmit 1998 returns if they had not been prepared in accordance with the revised guidance.
16/12/1999 [entry 2]	FSA's Managing Director A presents his monthly report to FSA's Board. The managing Director notes that the appeal hearing had been heard in the first week of December but that FSA did not yet know when the judgment would be given.
20/12/1999 [entry 1]	FSA write to Equitable to announce the introduction of enhanced lead supervision. Under these arrangements, a lead supervisor (Line Supervisor C) is responsible for maintaining an overall assessment of Equitable and producing a co-ordinated supervisory plan. The intention is to ensure that '*supervisory activity is co-ordinated and structured in a way so as to avoid, where possible, overlap and underlap*'.
20/12/1999 [entry 2]	FSA's Line Manager D sends the Head of Life Insurance and Chief Counsel A and GAD (Directing Actuary B and Chief Actuary D) a draft of a letter to Chief Executives to accompany the letter from the Government Actuary (see 16/12/1999 [**entry 2**]). The draft includes a statement that FSA would not ask companies to resubmit 1998 returns if they had not been prepared in accordance with the revised guidance. The draft goes on to state that FSA would compare companies' returns for 1999 and beyond against the '*benchmark*' set by the letter. Where a company's reserving standard fell below the benchmark, FSA would consider publicising this fact '*to ensure that readers of the returns could not be mis-led as to the financial strength of the company concerned*'.
21/12/1999	FSA's Head of Life Insurance explains that he is content with a revised version of the letter to Chief Executives, which retains the points contained in the draft of 20/12/1999.

22/12/1999 [entry 1] FSA's Line Manager D provides Managing Director A with drafts of the letters FSA are preparing to send to all life insurance companies. The Line Manager asks for comments and adds that this:

> *... latest guidance has been shown to the actuarial profession and accepted by them, so should not be particularly controversial. Those companies that reserved at levels below those now being specified are also not expected to raise ... objections (very few reserved significantly below the specified level).*

The Head of Life Insurance explains that he now favours a shorter letter to Chief Executives, which does no more than draw their attention to the Government Actuary's guidance. The Head of Life Insurance explains:

> *This achieves our objective of clarification, and avoids raising questions of possible future intervention which may not otherwise arise, and some of which I think would need to be brokered more widely within FSA if we wanted to trail them in this letter. This simpler approach also deals with* [Directing Actuary B's] *concerns over the role of the profession.*

In response, Chief Counsel A comments:

> *You should be aware that failure to mention possible intervention by way of publication now will make it harder, and perhaps impossible, to publish as proposed next year. Companies would, not unreasonably I think, raise an argument of legitimate expectation based on our past behaviour.*

22/12/1999 [entry 2] Every Appointed Actuary is sent by the Government Actuary a copy of DAA13. The Government Actuary states that, having reviewed the majority of companies' 1998 returns, it appeared that some aspects of the guidance in DAA11 (see 13/01/1999 [**entry 2**]) had been interpreted in a variety of ways. He offers further clarification on the reserving standards that would normally be expected, as *'it is clearly important there should be consistency in the approach taken'*.

The Government Actuary reiterates his view that it would not generally be prudent to assume that policyholders would choose a benefit form that was of significantly lower value than the guaranteed annuity. In DAA11, the Government Actuary had indicated that he would expect any allowance for policyholders making such choices to be limited to *'a few percentage points'* of the reserve. He now clarifies that he was referring to:

> *... the total aggregate allowance that might prudently be made for all other benefit forms (whether cash or other forms of annuity) and that in my view an allowance in excess of 5% would not be considered to represent "a few percentage points".*

He acknowledges that there might be a stronger case for an allowance for policyholders taking a proportion of their benefits in a tax free cash sum. However, he says he does not consider it prudent to assume that more than 20% of policyholders would exercise this option. This would equate to a 5% reduction in the reserve, which is itself the maximum that GAD were likely to accept as prudent.

The Government Actuary states that *'for the avoidance of any doubt'*, GAD would expect full disclosure of the proportions of policyholders assumed to take any guaranteed annuity, along with underlying mortality and interest rate assumptions. They would also expect to see prudent allowance made for future mortality improvement.

On the same day, FSA's Head of Life Insurance sends a copy of GAD's letter to Equitable's Managing Director (and to Managing Directors of all other life companies). The letter is in the simpler form favoured by the Head of Life Insurance. FSA ask any company foreseeing difficulties in complying with the guidance to let FSA know of any such difficulties.

2000

12/01/2000	FSA write to PIA, further to FSA's note of 26/11/1999. FSA enclose a copy of Equitable's letter of 03/12/1999 in which details are given of the number of policies with guaranteed annuities sold after 29 April 1988. FSA note it is likely that most sales were not '*advised*' sales. FSA say that it would be difficult to identify those that were and thus that it was arguable that PIA could justify not pursuing the issue. FSA also note that the question of how a 'top-up' to a policy should be defined remains outstanding and that they needed to reach a view on whether the issue was worth pursuing *'given that ... only a small proportion of "top-ups" are likely to* [have been] *advised sales'*.
14/01/2000	FSA's Director of Insurance advises his Managing Director that the Court of Appeal's decision was expected on 21 January 2000. The Director of Insurance explains that FSA would review the press lines they developed at the time of the first judgment.

21/01/2000

The Court of Appeal overturns the High Court's decision of 09/09/1999 by a split decision, in which the two majority judges give differing reasons for finding in favour of the policyholder. The Court of Appeal finds that Equitable were not entitled under their policies to award differential final bonuses. Equitable are given permission to appeal, and the application of the judgment is suspended in the meantime.

Equitable send FSA a copy of a press release that they have produced, following publication of the Court of Appeal judgment. The press release states that the case had hinged on two key issues; one relating to the nature of the Society's contracts and the other relating to the way in which Equitable's Board had exercised their discretion. Equitable set out a table showing the conclusions on these two issues which had been reached by each of the four judges who have given judgment in the case so far:

Judge	*Contract*	*Discretion*
High Court		
Vice-Chancellor	*FOR*	*FOR*
Court of Appeal		
Master of the Rolls	*AGAINST*	*AGAINST*
Lord Justice Morritt	*FOR*	*FOR*
Lord Justice Waller	*AGAINST*	*FOR*

Equitable say that they *'took the case to the Courts to establish clarity. This has not yet been achieved'*.

FSA advise PIA that the judgment gave no cause for panic. FSA note that the bad publicity was likely to seriously dent Equitable's sales *'but that is not a major disaster'*. FSA explain that Equitable's reserving requirement would not be affected by the judgment, so their financial position was largely unaltered.

GAD advise FSA, on the basis of the summary of the judgment they have seen, that most of the advice in the letter of 18/12/1998 would still be relevant for annuity guarantees. GAD note, in particular, that the statement that there could be a reduction in the terminal bonus to reflect the perceived value of the guarantee over the duration of the contract:

> *... would for example appear to be fully consistent with the comments by* [Lord Justice] *Waller that the society could reduce the level of final bonus for all GAO policies (but must apply the same amount of bonus irrespective of whether the GAO is selected).*

GAD note, however, that the statement that the terminal bonus for policies with a guaranteed annuity might be somewhat lower than the bonus for policies without such a guarantee, and that this terminal bonus could in some cases be applied at current annuity rates:

> *... would no longer appear to be quite correct (albeit that the advice therein is heavily qualified). In particular, the current practice of a number of insurers whereby the terminal bonus is applied at current annuity rates rather than the GAO would no longer appear to be valid where their contracts are worded and presented similarly to the Equitable's.*

GAD suggest drawing this point to companies' attention and asking those companies to describe their bonus policy for policies with annuity guarantees.

GAD discuss the possible effect on Equitable if the judgment were to be upheld. GAD note that the number of policyholders choosing a guaranteed option was fairly low, so the cost to Equitable of increasing the benefits to those policyholders so that they received the same terminal bonus should be marginal.

GAD suggest asking Equitable if the reinsurance agreement would remain in place on its present terms and conditions. GAD comment that the recent supplementary advice on reserving (see 22/12/1999 [**entry 2**]) would now be even more appropriate, as the incentive to take cash rather than a guaranteed option would be much lower as a result of the judgment.

FSA produce in-house briefing notes in anticipation of questions they might receive. In response to the possible query: *'If the judgement is upheld what will the effect be on Equitable Life?'*, FSA's response is that they:

> *Would rather not speculate and do not comment on individual companies' circumstances. However, would not expect the judgement to have a significant impact on the level of reserves the company needs to hold to cover its liabilities to policyholders.*

In response to the possible query: *'Doesn't this show that the FSA failed to act to protect policyholders. Why was it necessary for policyholders to go to court?',* FSA's response is that:

> *FSA did not fail to protect the interests of policyholders. The Equitable itself chose to bring this test case, and was commended by the court for doing so. The key issue raised in this case was the interpretation of the detail of contracts issued by the company and the way discretionary powers were exercised by the directors. Once before the court it was right for the FSA to step back and await the outcome, while ensuring adequate reserves were in place.*

In response to the possible query: *'Lord Justice Morritt suggested that Equitable Life's practice had been "approved" by HM Treasury. Is this true?'*, FSA say:

> *HM Treasury issued guidance at the end of 1998 on the payment practice that it considered companies might legitimately adopt. This indicated that the Treasury accepted that it might be appropriate for insurers to make some charge in relation to the costs of annuity guarantees, and that this might be effected through a reduction in the terminal bonus paid to policyholders, <u>provided this action was consistent with the terms of the contract and policyholders' reasonable expectations</u>. It did not indicate approval or disapproval of any particular approach. However, we will be considering the need for any revision in this guidance in light of the judgement.*

FSA's Director of Insurance advises, separately, that the basic line is '*no comment on the substance while the case is still subject to appeal*'.

22/01/2000 FSA's Chairman asks the Director of Insurance if there was any substance to a report in the press *'that others in the industry think we have been indulgent towards the Equitable?'*.

24/01/2000 [entry 1]	PIA inform FSA that a pensions review monitoring visit had been scheduled to commence on 28 February 2000 and was to last for approximately two weeks. PIA ask if FSA had any comments or information which would be useful to the monitoring team.
24/01/2000 [entry 2]	FSA advise PIA and IMRO that they do not consider that the judgment affects the statutory financial position greatly, as Equitable already had to reserve fully for annuity guarantees that bite. However, FSA comment that the judgment was a severe blow for Equitable and was likely to dampen sales and increase uncertainty.
25/01/2000	FSA's Director of Insurance informs FSA's Executive Committee that the Court of Appeal decision was under consideration.
26/01/2000	FSA ask GAD for a list of companies who replied to the 1998 survey (see 20/06/1998) indicating that they took account of whether an annuity guarantee was biting when setting terminal bonuses. GAD reply that one other company took a similar approach, while replies from others were unclear on the point. GAD suggest writing to all with-profits offices to clarify the position.
27/01/2000	FSA's Director of Insurance responds to the Chairman's query of 22/01/2000. The Director of Insurance says that a number of companies, including Equitable, believe HMT and FSA have taken *'a very tough line on the reserving standards we expect in respect of GAOs'*. The Director of Insurance reminds the Chairman of the guidance which had been issued on 18/12/1998 on annuity guarantees and policyholders' reasonable expectations, and notes: *One of the appeal judges refers to this letter (wrongly) as HMT "endorsing" the Equitable's position. We are reviewing this letter, but at first glance it doesn't seem too bad even in the light of the Court's judgement. But this may have been picked up as an indication of our "indulgence".*
28/01/2000	FSA prepare a preliminary assessment of the judgment which is marked as not being based on considered legal advice. FSA caution that the judgment is subject to appeal, but set out some of the implications for the industry should it stand. FSA note that, while Equitable would need to revise their bonus policy for the future, the new approach need not lead to additional costs for them. FSA explain that the question of compensation to any policyholders whose policies had matured in the last five years could only be assessed in the light of the House of Lords' judgment, and that any reputational damage would only become apparent at a later date. FSA's Returns Reception and Validation Unit provides Line Supervisor C with a list of seven errors in Equitable's 1998 returns. The Unit ask if any of the matters should be taken up with Equitable. The Line Supervisor advises that this is not necessary.
31/01/2000 [entry 1]	FSA's Chief Counsel A writes to Line Manager D summarising the Court of Appeal judgment. The Chief Counsel notes that the three judges found for or against the representative policyholder and for or against Equitable for different reasons. The Chief Counsel says: *'... it is impossible to predict which way the House of Lords will jump'*. Chief Counsel A copies her note to other FSA staff and GAD.
31/01/2000 [entry 2]	FSA send a copy of their preliminary assessment of the Court of Appeal judgment (see 28/01/2000) to the Tripartite Standing Committee, in advance of their meeting on 03/02/2000.
01/02/2000	Equitable's Chief Executive writes to policyholders to bring them up to date and to *'reassure you about a number of misleading comments from third parties reported in the press in*

recent days'. FSA receive a copy of the letter from an FSA employee who is also an Equitable policyholder. Having explained the findings of the High Court and the Court of Appeal, the Chief Executive says:

> *Contrary to many of the reports which have appeared in the press, there would be no significant costs imposed on the Society if the Court of Appeal's decision were upheld in the House of Lords. The speculation regarding financial difficulties and costs to be borne by with-profits policyholders is therefore unfounded. Your Society remains, and will continue to remain, financially secure.*

03/02/2000

FSA attend a meeting of the Tripartite Standing Committee. FSA's Managing Director A reports that there were no immediate concerns resulting from the Court of Appeal ruling and that: '[Equitable's] *short term accounting position would actually be stronger if it received less new business. In addition, the situation was still not finalised, as there was a strong possibility that the House of Lords would overrule the Appeal Court's decision*. [Equitable] *itself was still a strong brand, and therefore likely to be taken over rather than fail. However, failure would have implications for financial stability, and so it needed to be monitored closely'*.

04/02/2000

FSA write to Equitable and 50 other companies who had indicated, in their response to the 1998 survey by GAD (see 20/06/1998), that they sold with-profits policies containing an annuity guarantee. FSA refer to the Court of Appeal's judgment that Equitable's differential terminal bonus policy was unlawful. FSA seek details of those companies' bonus practice.

08/02/2000

FSA's Line Manager D writes to PIA concerning a report to FSA's Executive Committee that Equitable were under investigation for the alleged mis-selling of income drawdown policies. The Line Manager asks for details of the investigation.

Line Manager D notes that Equitable faced a number of current difficulties and *'as prudential and lead supervisors for the group, I think it is particularly important that* [Line Supervisor C] *and myself are kept informed of investigations of this type'*.

PIA advise that the case is quite old. PIA explain that Enforcement carried out a series of theme visits at the end of 1998 and their understanding is that they *'did not find too many problems (so discipline case unlikely ...)'*.

PIA apologise for not keeping FSA informed (adding that: *'this has rather fallen down the priority chain from our point of view, especially given the time frame'*), and undertake to let FSA know of any further developments.

09/02/2000

FSA's Line Manager D writes to PIA to comment that the report they have seen makes the issue look more serious than suggested by PIA in their note of 08/02/2000.

PIA reply *'of course I may have* [misunderstood], *or things could have changed, but my general feel is that Enforcement don't have an appetite for this one'*.

11/02/2000

PIA provide FSA with a copy of an undated report headed *'FSA Internal Sensitive Investigation'*. PIA note that they had not previously brought this to FSA's attention *'as we did not envisage any material prudential concerns for Equitable arising specifically from this investigation'*.

PIA's report refers to potential mis-selling of income drawdown policies, a *'complex, relatively risky product to a vulnerable market'*. The report notes that there had been visits by Enforcement to Equitable and another provider, as the most active firms in the market. The visits had taken place in July. (Note: the report does not specify in which year; other documents suggest the visits had been undertaken in 1998).

PIA's report states:

> *Initial reviews of investors' files revealed serious concerns regarding suitability at Equitable. 7% of files reviewed have been classified by PIA as unsuitable on the basis of the information held in the file and 68% had inadequate evidence to demonstrate suitability. Additional concerns: lack of adequate compliance procedures, high level of execution only transactions and sales of maximum investment plans funded by withdrawals from* [pension fund withdrawal] *contracts.*

PIA's note provides an *'Update'*:

> *22 investors interviewed with inconclusive results. Generally investors told of risks but no account taken of risk attitude. Further visit to Equitable on 13-15 December confirmed no specific training on* [maximum income plans] *and 14 out of 30 execution only cases reviewed considered not* [execution only] *or insufficiently evidenced.*
>
> *Interview transcripts will be issued to investors by 11 February. Case conference during February to determine whether any further investigation is appropriate.*

Other documents suggest that the further visit on 13–15 December had taken place in 1999 and that the case conference was planned for February 2000.

17/02/2000 FSA's Managing Director A presents his Monthly Report to FSA's Board. The report notes that Equitable had been granted leave to appeal to the House of Lords and comments:

> *Equitable does not appear to face any immediate financial risk or any additional threat to its independence. If the appeal judgment was upheld, Equitable would need to revise its bonus policy, but potentially the new approach need not lead to significant additional costs. The reputational damage from the court case will only become apparent at a later date, but interestingly the judgment did not spark a significant surge in calls to the company's policyholder helpline. For now, the moderate reduction in new business that the company has been experiencing will actually help strengthen its finances.*

01/03/2000 FSA's Line Manager D prepares an *'initial crude categorisation'* of the responses to the letter of 04/02/2000. The Line Manager explains to other officials at FSA and GAD that the survey had not identified significant numbers of companies that were following an *'Equitable type approach (or other wise reducing payouts to people exercising a GAO)'* and of which FSA were not previously aware. The Line Manager says that several companies had indicated that they did not reduce bonuses to policyholders exercising a guaranteed annuity option but had not explained how the costs of the guarantees were met. Line Manager D says that she is seeking clarification from those companies on that point.

02/03/2000 [entry 1] FSA's Line Manager D writes to Equitable's Managing Director. (Note: similar letters were sent to Managing Directors of all other life companies affected by the PIA's review of pensions mis-selling.) The Line Manager encloses a questionnaire seeking an update on companies' provisions for potential liabilities from mis-selling. Line Manager D also seeks information on any provisions companies are holding for PIA's proposed review of Free Standing AVCs.

02/03/2000 [entry 2] FSA's Chief Counsel A asks Line Manager D, in response to her summary of 01/03/2000, if the practice of imposing the costs of GARs only on policyholders with annuity guarantees was in breach of policyholders' reasonable expectations and contrary to the Court of Appeal judgment. The Line Manager replies that companies had always declared bonuses by class of policies, and if higher expenses attached to a particular class, they would consider it reasonable for the company to declare a lower level of bonus for that class.

Chief Counsel A copies some of her correspondence to GAD. GAD comment that they had little difficulty in concluding that PRE, as defined by three of the four judges who had so far

2000

considered the matter, had not been breached by Equitable – except to the extent that a breach of contract was itself a breach of those expectations. GAD say that asset share, and other accepted means of determining terminal bonuses, would require some form of deduction for annuity guarantees. Alternatively, any loss to a company arising from such guarantees would usually be allocated to the class which had caused it. In response (on 3 March 2000), Chief Counsel A observes that the ICA 1982 requires that FSA do their own analysis and that the Court's view was only one factor to take into consideration *'(unless the Equitable's methodology is rejected by the* [House of Lords] *in a way that leaves us nothing to consider)'*. Chief Counsel A notes that Line Manager D would *'no doubt be setting up a meeting or some other mechanism to allow proper consideration of the issues when she has completed her fact finding'*.

03/03/2000	FSA write to PIA and IMRO, asking for feedback on any proposed activity and visits concerning Equitable over the last three months. FSA ask whether there were any firm dates for the visits planned by both IMRO and PIA for April/May 2000. FSA refer to their visit in December 1999, the report of which had been circulated. FSA also note that the Pensions Review Team had begun a monitoring visit on 28 February 2000. IMRO later inform FSA that, due to various factors, they had rescheduled their visit to February 2001.
08/03/2000 [entry 1]	FSA meet PIA to discuss Enforcement's investigation of Equitable's sale of income drawdown policies. The note of the meeting suggests that the case conference (see 11/02/2000) was now planned for April 2000 and that the main options for it to consider were further investigation, disciplinary action and requiring Equitable to review their sales of income drawdown policies.
08/03/2000 [entry 2]	FSA's Line Manager D writes to Equitable's Managing Director (similar letters were sent to Managing Directors of all other life companies writing Trustee Investment Bonds/Plans (i.e. pension contracts written for the trustees of occupational pension schemes)) seeking information about these. FSA's concern is that some insurers might be wrongly classifying the business.
09/03/2000	FSA's Line Manager D provides Line Supervisor C and GAD with a copy of the note of the meeting held on 08/03/2000. The Line Manager comments that the outcome of the meeting did not look good for Equitable, *'but it's not disastrous either – from a solvency perspective anyway'*. The Line Manager asks Scrutinising Actuary E whether falls in annuity rates meant that Equitable's investment performance in relation to income drawdown policies was irrelevant.
10/03/2000	GAD write to Equitable to remind them that, at the meeting on 06/12/1999, Equitable had undertaken to check some examples of income drawdown cases to see why cuts had occurred. GAD ask for Equitable's views on some possible explanations, and to clarify how they credit investment returns to with-profits business in the drawdown period.
20/03/2000	Equitable write to GAD in response to their letter of 10/03/2000. Equitable explain that the cut in drawdown payments at the first three year reviews *'has been the result of the significant reduction in the maximum rates of income withdrawal during the intervening three years as determined using the tables provided by GAD'*.
22/03/2000	GAD write to Equitable in response to their letter of 20/03/2000. GAD state that it is clear that the cut in drawdown income has been: *... due to the failure of the investment performance of a mixed portfolio to generate adequate returns to match the implied performance of long term gilts over the relevant*

	period. Recognising that some excess performance was really needed as an offset to mortality drag, this is obviously a disappointing outcome. GAD comment: *I am minded to believe that this has been a rather exceptional period, taking account of the particular pressures that have had such a marked effect on reducing available yields at the long end of the gilt market, and does not totally undermine the concept of income draw down as a way of preserving capital and deferring the purchase of an annuity.* GAD write to FSA in the light of Equitable's letter of 20/03/2000 and their response. GAD comment that there are risks involved in income drawdown policies and that they hope *'that all participants are made fully aware of them at the outset'*. GAD suggest that only pensioners with a large fund, or with other sources of income, *'should reasonably be invited to go down this route'*.
23/03/2000	Equitable provide FSA with details of their Trustee Investment Bonds and similar plans, in response to their letter of 08/03/2000.
24/03/2000	Equitable write to GAD in response to their letter of 22/03/2000. Equitable question if the yield used for income drawdown policies should be based on an average of experience rather than a spot yield at the time of the review.
29/03/2000	Equitable write to FSA in response to their letter of 02/03/2000. Equitable provide their completed questionnaire, updating their potential exposure to compensation claims for pension mis-selling. This shows that they held a reserve of almost £132m within their 1999 returns. Equitable say that they have not made any explicit allowance for the review of Free Standing AVCs, *'because the extent of the review process is still unclear. Based on the details contained in the consultation paper ... we believe the level of redress will be very low relative to the provisions for the pension review'*.
30/03/2000	Equitable apply to FSA for a section 68 Order to raise the limit on the admissibility of shareholdings in one particular company. Equitable say they wish the concession to take effect from 31 December 1999.
03/04/2000	GAD write to Equitable in reply to their letter of 24/03/2000. GAD note Equitable's comments, but explain that GAD could not become involved in the methodology for constructing the tables used for income drawdown policies.
10/04/2000	FSA's Line Supervisor C submits a report to the Insurance Supervisory Committee recommending that HMT do not agree the requested section 68 Order (see 30/03/2000). The Line Supervisor explains that the application is retrospective and that, in line with previous decisions, such concessions could not be granted. The Committee agree this recommendation. FSA inform Equitable of this decision. FSA invite Equitable to resubmit the application for use in the future.
11/04/2000	Equitable write to FSA in response to their letter of 10/04/2000. Equitable explain that they do not wish to resubmit their application for a section 68 Order for use in the 2000 returns, as market movements could make it out of date by the year end. Equitable say: *If no retrospection is to be allowed then it would seem that the concession is only ever going to operate in a somewhat arbitrary and approximate manner. Although the impact*

	on our 1999 Returns will be relatively modest and the point is, therefore, somewhat academic, there does seem to be a point of principle involved. It would be helpful if you could confirm whether there is any scope within the procedures to deal with such a situation – for example, by applying in advance for an "in principle" concession on all stocks that are close to the normal admissibility limit and then confirming the exact increased limit requested when the year end data is known. Equitable seek FSA's further comments.
17/04/2000	FSA write to Equitable, in response to their letter of 11/04/2000. FSA answer the question put by saying: *'We intend to develop this year a generic* [asset valuation rules] *Section 68 Concession that companies can apply for prior to the end of the financial year. This should mean that a company that obtains such an order would then be able to apply the benefit of this concession across all of their relevant share holdings. This should than address the concern raised in your letter'.*
15/05/2000 [entry 1]	Every Appointed Actuary is sent by the Government Actuary a copy of DAA14, making further revisions to the second of the three resilience tests (see 30/09/1993, 24/11/1998 and 30/09/1999.)
15/05/2000 [entry 2]	Every insurance company is sent by FSA a letter informing them of amendments made to ICR 1994.
23/05/2000	FSA's Line Manager D advises the Head of Insurance of possible disciplinary action against Equitable in relation to their sales of income drawdown policies. The Line Manager explains that Enforcement had found that a significant proportion of Equitable's sales had probably been inappropriate, in that investors had not been made aware of the risks they were taking on. The Line Manager says that Equitable's compliance monitoring of sales appears to be *'ineffective/incompetent'.* The Line Manager notes: *'unless Equitable present a credible challenge to the findings ...* [Enforcement] *would expect the* [Enforcement] *Committee ... to support a call for a fine and remedial action (including compensation to investors)'.* Line Manager D explains that Equitable had been asked to comment on Enforcement's report by 23 June 2000 and that: *... given Equitable's relatively precarious financial position we will need to keep close to this so we can assess the financial implications for the firm ahead of any* [Enforcement] *decision. The potential for further reputational damage is also a concern.* *I feel fairly well plugged into* [Enforcement] *on this issue and currently do not see problems in ensuring co-operation with them as things move forward.*
31/05/2000	Equitable's solicitors send FSA copies of their papers relating to the House of Lords' hearing. FSA circulate the papers to GAD.
02/06/2000	FSA's Line Manager D explains to others at FSA and GAD that she does not propose to approach the representative policyholder's solicitors for a copy of his case for the appeal. The Line Manager says that the reasons they would need to give for seeking the papers *'might suggest we would/could do something depending on the outcome of the case. I would not want to generate this expectation and I do not see problems in waiting until the case comes to court and the documents thus become public'.*
05/06/2000	FSA obtain a copy of Equitable's papers for the appeal. FSA explain to GAD that there did not seem to be anything new in them. In response, GAD observe that *'much of Equitable's presentation focuses of course on their firm belief that "asset shares" are the key benchmark,*

and that the bonuses should be adjusted so that the overall value of any benefits taken equates as closely as possible to these asset shares'. FSA note that the House of Lords' judgment on the application of policyholders' reasonable expectations to business decisions about bonus rates was likely to be of considerable interest to FSA and other insurers.

12/06/2000 The House of Lords' hearing begins.

27/06/2000 Equitable apply to FSA for a section 68 Order for a future profits implicit item of £1.1bn, for possible use in their 2000 returns. Equitable provide financial calculations in support of the application, suggesting that they could seek an Order up to the value of £3,304m.

These calculations include, for the estimated annual profits, that:

Year ending	*(A) Total surplus*	*(B) Exceptional items*	*(C) Surplus arising from solvency margin*	*(A)-(B)-(C) Ordinary surplus*
	£m	*£m*	*£m*	*£m*
31.12.95	*662.8*	*0.0*	*0.0*	*662.8*
31.12.96	*802.5*	*0.0*	*0.0*	*802.5*
31.12.97	*895.6*	*0.0*	*0.0*	*895.6*
31.12.98	*838.4*	*0.0*	*0.0*	*838.4*
31.12.99	*931.3*	*0.0*	*0.0*	*931.3*
				4130.6

Average annual profit = 4130.6/5 = £826.1m

The calculations state that the average period to run for the Society's in-force contracts is again eight years. Equitable explain:

> *The periods to run have been reduced to take account of premature withdrawals based on the Society's recent experience of such withdrawals. In respect of retirement annuity and personal pension contracts for which a range of retirement ages is available, it has been assumed that retirement benefits are taken at the lowest possible age, or immediately if that age has already been attained.*

The calculations suggest that the maximum future profits item permissible is 50% of £826.1m multiplied by eight years – that being £3,304.4m.

Equitable explain that they have included a future profits implicit item of £925m in their 1999 returns.

FSA copy the letter to GAD.

Submission of the 1999 regulatory returns

30/06/2000 [entry 1] **Equitable submit their 1999 regulatory returns to FSA**. Accompanying those returns are copies of the annual report and accounts for 1999, prepared in accordance with the Companies Act 1985 and dated 22 March 2000.

These documents include the following information about Equitable's business and their financial position as at 31 December 1999.

<u>Companies Act annual report and accounts</u>
The '*President's Statement*' says that:

> *1999 was a challenging year for The Equitable and I am pleased to say that it was a year of considerable achievement. We cannot, however, escape from the fact that the year was overshadowed by adverse publicity surrounding a single issue – guaranteed annuity rates. This is a complex matter and it is important that our members have a full and accurate explanation of the central points. We have therefore devoted a special section ... in this report to explaining this issue and the background to the recent court actions...*

The '*President's Statement*' also says that a disciplined approach had been taken to the setting of reversionary bonus in recent years, which allowed Equitable to maintain reversionary bonus in 1999 at the 1998 level. Investment returns during 1999 had been relatively high and so the growth allocated to total policy funds had been increased to 12%. The Society's bonus policy provided competitive payouts over a wide range of products and durations as indicated by its standing in surveys by financial publications. This was due in large part to Equitable's approach to mutuality and the fair and full distribution of profits. The statement also considered that the 1999 bonus statements were accompanied by a more extensive and improved explanation of the Society's bonus system.

The '*Management Report'* in the 1999 Companies Act report says that Equitable were able to provide an unbeatable range of benefits to their members, due to their approach to mutuality. This approach is described as (a) the provision of services to members at cost, (b) the full distribution of profits to each generation of policyholders, and (c) the fairest possible allocation of bonuses between all classes and durations of policies.

The report comments that arguments for demutualisation focused on the need for capital to fund growth and to access new distribution channels. Financial inducements were normally provided to existing members to enable this. However, the Society felt that, in its case, these arguments do not apply.

It was said that capital requirements had not placed any restrictions on Equitable's growth plans as demonstrated by the impressive growth in recent years. Substantial investments had been made to make Equitable the most efficient life office in the industry and they did not need the assistance of other companies in distributing their products.

Equitable's policy of full distribution of profits to each generation of policyholders meant that they had traditionally operated with a lower free asset ratio than other offices but this had not placed any restriction on the operation of their businesses. Equitable considered that, compared to other offices, their approach offered greater fairness and better returns to their members who recognised and valued the Society's mutuality. It followed that Equitable had no intention of surrendering their mutual status.

Under expense control, the report said that Equitable had steadily driven down their operating costs over the last decade, even though Equitable had grown considerably. These savings had been passed back to policyholders via reduced charges and increased benefits.

It was recognised that the adverse publicity surrounding the annuity guarantees issue had hit Equitable's sales, but it was said that these had still held up well, decreasing by only 7.9% compared to 1998. It was also noted that the industry in general had been affected by further adverse publicity surrounding pensions mis-selling. Equitable explained that pension sales were also affected throughout the industry, as potential policyholders deferred purchasing pensions in anticipation of the new Stakeholder Pensions.

In the section on guaranteed annuity rates, under the heading '*What effect do the guarantees have on other policies?*' the Society reported:

> *... in some cases the guaranteed annuity will provide a higher pension than would otherwise be available. Where that happens, as with any other policy guarantee, the cost of the additional benefits provided by the guarantee falls on the fund generally. We have projected that the cost of these additional benefits is unlikely to exceed £50 million in total over the coming years, and the experience in 1998 and 1999 was well within our expectations. However, for accounting purposes we have established a provision of £200 million in our balance sheet, to provide an allowance for more extreme future changes in financial conditions and mortality experience which could lead to more policyholders taking benefits in the guaranteed annuity form. These amounts are modest in the context of the Society's total assets and would have no material effect on the level of benefits under other policies.*

The Society also said that the *Hyman* case was expected to be heard by the House of Lords in June 2000 and Equitable expected a ruling soon afterwards. Equitable had established that this case was not the kind to be taken up by the European Court and so the House of Lords' decision would be final.

<u>The returns</u>
Equitable's returns are submitted in one part covering Schedules 1, 3, 4 and 6 to the ICAS Regulations 1996.

GAD's copy of the 1999 returns includes various annotations. I am satisfied that these were made by GAD during the scrutiny programme. Some of the annotations contained in GAD's copy of the returns were made by a GAD trainee actuary on or around 28/07/2000, at the time he completed the A1 Initial Scrutiny key checks. The trainee actuary's annotations are largely the addition of certain corresponding figures from the previous returns. The other annotations were added by Scrutinising Actuary F on or around 14/08/2000, at the time he completed the A2 Initial Scrutiny key checks. However, for ease of reference mention is made here of these annotations.

<u>Schedule 1 (Balance sheet and profit and loss account)</u>
Schedule 1 of Equitable's returns consists of Forms 9, 10, 13, 14, 15 and 17. Form 9 summarises the Society's financial position at 31 December 1999 as follows:

Long term business admissible assets	*£33,110,903,000*
Total mathematical reserves (after distribution of surplus)	*£29,933,754,000*
Other insurance and non-insurance liabilities	*£241,122,000*
Available assets for long term business required minimum margin	*£2,936,027,000*
Future profits	*£925,000,000*
Total of available assets and implicit items	*£3,861,027,000*
Required minimum margin for long term business	*£1,114,310,000*
Explicit required minimum margin	*£185,718,000*
Excess (deficiency) of available assets over explicit required minimum margin	*£2,750,309,000*
Excess (deficiency) of available assets and implicit items over the required minimum margin	*£2,746,717,000*

In Form 13, Equitable set out their admissible assets.

In Form 14, Equitable set out their long term business liabilities and margins.

(Note: as in the previous year, the returns did not include a note on contingent liabilities regarding the risk of a successful challenge to Equitable's bonus practices.)

Schedule 3 (Long term business: revenue account and additional information)
As in previous years, Schedule 3 consists of Forms 40 to 45.

In Form 40, Equitable provide a revenue account.

In Form 41, Equitable provide an analysis of premiums and expenses.

Schedule 4 (Abstract of valuation report prepared by the appointed actuary)
As in previous years, Equitable present two valuations of their long term liabilities. The results of the main valuation are carried forward, unadjusted, from Form 58 to Form 14 and on to Form 9.

Schedule 4 – main valuation (text)
Schedule 4 of Equitable's returns provides the information required by paragraphs 1 to 23 of Schedule 4 to the ICAS Regulations 1996 and includes Forms 46 to 49, 51 to 58, 60 and 61.

Equitable state that this valuation is made in conformity with Regulation 64 of ICR 1994.

In response to paragraph 4, Equitable provide 11 pages of information about their non-linked contracts. Most of the description provided is identical to that supplied in the previous returns.

Paragraph 4(1)(a)(i) requires a description of the circumstances in which – and the methods by which – adjustments could be made to surrender payments. In response, Equitable state, in relation to all accumulating with-profits contracts, that:

> *The Society reserves the right to pay less than the full identifiable current benefit attributable to a policy where the contract is terminated by the policyholder at a time other than one at which the policy benefits can be contractually withdrawn. It is the Society's current practice only to make an adjustment to the full identifiable current benefit in circumstances where the policyholder is exercising a financial option against the Society, for example by requesting a transfer to another provider, and the full policy value exceeds the underlying share of assets. The current method of adjustment is to pay*

2000

> *only a proportion of the full final bonus in such circumstances but there is no guarantee that the amount of the adjustment cannot exceed the full amount of final bonus.*

In response to paragraph 5, Equitable provide 70 pages of information about their linked contracts. GAD note the additional description relating to new types of contracts.

In paragraph 6, Equitable set out the general principles and methods adopted in their main valuation.

For retirement annuity contracts, like in previous years, Equitable state that:

> *... benefits have been valued on the basis that the benefits will be taken at age 60 or, if that age has been attained, at the valuation date.*

For personal pension plan contracts, unlike in the previous year, Equitable state that:

> *... benefits have been valued on the basis that the benefits will be taken at age 55 or, if that age has been attained, at the valuation date.*

GAD mark this sentence as *'new'*.

As in previous years, Equitable disclose:

> *The valuation method makes specific allowance for rates of future reversionary bonus additions, the levels of which are consistent with the valuation interest rates employed having regard to the Society's established practices for the determination of declared bonus rates. The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

GAD note that the rates of future bonuses used in the valuation are unchanged from the previous returns.

Equitable again state that they have made an explicit provision for their liability for tax on unrealised capital gains (in relation to business other than that linked to their internal funds), which they now estimate as not exceeding £143.6m. The provision made is £150m, which they say is shown in the Appointed Actuary's certificate in Schedule 6 of the returns.

GAD note that provision of £100m was made in the 1998 returns.

In paragraph 6(1)(g) relating to investment performance guarantees, as in previous years Equitable state that they do not consider it necessary, in current conditions, to hold a reserve for the guarantee they offer on a unit-linked annuity.

In paragraph 6(1)(h), Equitable disclose that they had set up reserves for the annuity guarantees on their *'Pension contracts – old series'* business. They explain the assumptions used in establishing these reserves relating to assumed take-up rate of the annuity at a guaranteed rate and cash commutations. Equitable state that the *'combined effect of the allowances made is that of these policies which survive to retirement date ... the gross reserves are reduced by less than 5%'*.

GAD note the changes to the mortality assumptions from those used in the previous year. Scrutinising Actuary F notes what the *'GAD* [standard]' mortality tables are and that the assumptions used by Equitable are therefore *'ok'*.

Equitable also disclose the interest rate basis used to value the guaranteed annuities, stating that:

> *Annuity benefits have been valued at an average interest rate based on 5¾% for annuities taken out during 2000 with lower rates of interest assumed for future years to take account of 69(9)(a) of the Insurance Companies Regulations.*

GAD note the change in interest rate from that used in the previous year, which was 5%.

As in previous years, Equitable disclose that, for certain non-profit deferred annuities, the valuation rates of interest used were those assumed in the premium basis. Equitable, again, do not elsewhere disclose the rates used in the premium basis.

As in previous years, in paragraph 6(2) Equitable state that, in determining the provision needed for resilience reserves, they have taken account of the fact that the long term fund has been valued at book value.

In paragraph 7(5), Equitable again explain that they consider the reserves for future bonus within the valuation to be fully able to withstand any future strains which would arise if there were significant changes in mortality or morbidity experience. They say that, accordingly, the Society does not consider it necessary to establish any additional reserves in this respect.

In paragraph 7(6), Equitable disclose that they have tested the need for resilience reserves against the three scenarios contained in DAA6, as amended by DAA10. They state that the most onerous scenario tested is scenario c (a rise in fixed interest yields of 3%, a 25% fall in equity values, a 20% fall in property values and a 25% increase in index-linked yields).

Equitable disclose that a resilience reserve of £1,350m was provided for. Against this, GAD note that the resilience reserve in the previous returns was £600m and have written: *'weakened basis?'*.

In paragraph 7(8)(a), Equitable disclose the changes made to valuation assumptions and methods in the resilience scenarios. They explain that, in the resilience scenarios, they had used the appendix (net premium) valuation method rather than the main (gross premium) valuation method, but with some changes to the valuation described in the returns. As in previous years, Equitable disclose that the changes include:

> *... for all accumulating with profits business, an annual loading of 0.25‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pensions business, ½% pa of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

Equitable also disclose that, in the resilience scenario, they had reduced the reserve for their potential liability for tax on capital gains to £53.2m. GAD note that the provision was reduced to £20m in the previous returns.

In response to paragraph 8(b) of Schedule 4, Equitable's description includes that: *'For accumulating with profit business, the valuation rates of interest shown in Form 52 are net of a 0.25% interest rate reduction as a reserve for future expenses'*.

In paragraph 8(d), Equitable state:

> *A further valuation has been undertaken using the net premium valuation method. The bases employed are in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994. The resultant aggregate liability is less than the aggregate liability on the methods and bases described in this report. The report on the net premium valuation is given in an appendix following Form 61 of this report.*

GAD sideline this paragraph.

In paragraph 9, Equitable provide information on the valuation of their linked contracts. GAD note where certain assumed rates are unchanged from the previous year.

In paragraph 12(2)(viii), Equitable describe the IRECO reinsurance treaty. The description provided is the same as in the 1998 returns, except for an additional statement that the contract also covers certain group business and a change in the premium payable since the last returns to £875,000 (previously £150,000). GAD note both of these changes.

In paragraph 13, Equitable disclose: *'The Society has no business where the rights of policyholders to participate in profits relates to profits from particular parts of the long term business fund'*.

In paragraph 14, Equitable set out a statement of their aims with regard to bonus distribution and of how they maintained equity between different generations of policyholders. The information provided is the same as for the 1998 returns. GAD underline the words *'absolute discretion'* in the statement that:

> *The Society's Articles of Association give the Society's Directors absolute discretion as to the timing and nature of bonus distributions.*

In paragraph 15, Equitable disclose that they had set reversionary bonus for the main policy classes at 1.5%. As in previous years, Equitable disclose that they offered loans under a *'loanback'* arrangement to some retirement annuity, individual and group pension policyholders.

In paragraph 16, Equitable set out final bonus rates. The returns contain the same description of Equitable's differential terminal bonus policy as that provided in the previous returns.

In paragraph 21, Equitable explain that they used risk-adjusted yields on assets other than land and equity shares by restricting them to 6.75%, which is that available on the highest yielding risk-free security held by Equitable. Equitable also explain that, where they considered this appropriate, they risk-adjusted yields on land and equity shares.

<u>Schedule 4 – main valuation (forms)</u>
In Form 46, Equitable provide information on changes to their ordinary long term business.

In Form 47, Equitable provide an analysis of their new ordinary long term business.

Form 48 shows that 58% of Equitable's non-linked assets are invested in equities, 7% in land, 32% in fixed and variable interest securities and the remaining 3% in a variety of other assets.

In Form 51, Equitable set out the mathematical reserves held for various types of non-linked contracts (excluding accumulating with-profits contracts) along with information on the number of contracts in force, the benefits valued, and rates of interest and mortality assumptions used.

In Form 52, Equitable set out the mathematical reserves held for accumulating with-profits policies, along with information on the number of contracts in force, the benefits guaranteed, and the rates of interest and mortality assumptions used in valuing them. The Form 52 for *'Pension business'* discloses that the gross total reserve for *'Options and guarantees other than investment performance guarantees'* (i.e. the reserve for annuity guarantees) is £1,663m. The Form also shows that this reserve has been reduced by reinsurance of £1,098m to a net total reserve of £565m.

Unlike in previous years, the mathematical reserves are not discounted from the current benefit value.

In Form 53, Equitable set out the mathematical reserves held for the various types of property-linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They again disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In Form 54, Equitable set out the mathematical reserves held for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity, and the rates of interest and mortality assumptions used in valuing them.

In Form 57, Equitable provide matching rectangles illustrating the notional allocation of assets to each category of liabilities, showing the valuation rates of interest supported and the ability of the matching assets to cover the reserves in the resilience scenarios. The returns show that some of the risk-adjusted yields of the assets allocated are higher than the 6.75% maximum risk-free rate assumption that, in response to paragraph 21 of Schedule 4 to the ICAS Regulations 1996, the Society says it has used.

In Form 58, Equitable set out the valuation result and composition and distribution of fund surplus.

Schedule 4 – appendix valuation (text)
Equitable explain that the appendix valuation:

> *... was undertaken for the purposes of demonstrating that in aggregate the mathematical reserves determined by the valuation undertaken using the gross premium method, the results of which are reported on the preceding pages, are not less than an amount calculated in accordance with Regulations 66 to 75 of the Insurance Companies Regulations 1994.*

Equitable's appendix valuation provides the information required by paragraphs 1, 6 to 8, 10, 11, 20 and 22. The Society states that the information required by the other paragraphs of the ICAS Regulations 1996 is the same as that provided in the main valuation (apart from paragraph 23 – being a statement of the required minimum margin in the form set out in Form 60 of Schedule 4 – which, having had *'regard to the purpose of the valuation'*, has not been provided).

In paragraph 6, Equitable set out the general principles and methods used in the appendix valuation.

As in the main valuation, Equitable disclose that, for personal pensions plan contracts, the assumed retirement age is 55 (previously 60 (see 30/03/1999)).

In paragraph 6(1)(b), Equitable state:

> *In determining the valuation interest rates due regard has been taken of the reasonable expectations of policyholders concerning the rate of future reversionary bonus additions having regard to the Society's established practices for the determination of declared bonus rates. The balance of the total policy proceeds, consistent with policyholders' reasonable expectations, will be met by final bonus additions at the time of claim. Such additions are not explicitly reserved for in advance but are implicitly covered by the excess of admissible assets over mathematical reserves.*

As in the main valuation, Equitable state in paragraph 6(1)(g) that they do not consider it necessary, in current conditions, to hold a reserve for the guarantee they offer on a unit-linked annuity.

In paragraph 6(1)(h), like in the main valuation, Equitable disclose that they had set up reserves for the annuity guarantees on their *'Pension contracts – old series'* business. They explain the assumptions used in establishing these reserves relating to assumed take-up rate of the annuity at a guaranteed rate and cash commutations.

In paragraph 7, Equitable state that a resilience reserve of £2,142m was provided for.

As in their main valuation and the previous returns, Equitable disclose in paragraph 7(8)(a) the changes made to valuation assumptions and methods in the resilience scenarios, including that:

> *... for all accumulating with profits business, an annual loading of 0.25‰ increasing by 4% per annum compound of the basic benefit was reserved which is considered to be a prudent allowance for ongoing expenses: for accumulating with profits pension business, ½% per annum of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.*

As in the main valuation, Equitable explain that they risk-adjusted the yields on assets other than land and equity shares by restricting them to 6.75%, which is that available on the highest yielding risk-free security held by them. Equitable also explain that where they considered this appropriate, they risk-adjusted yields on land and equity shares.

Schedule 4 – appendix valuation (forms)
In the appendix version of Form 51, Equitable set out the mathematical reserves held on the appendix valuation basis for various types of non-linked contracts (excluding accumulating with profit), along with information on the rates of interest and mortality assumptions used in valuing them.

In the appendix version of Form 52, Equitable set out the mathematical reserves held on the appendix valuation basis for accumulating with-profits contracts, along with information on the number of contracts in force, the benefits guaranteed, and the rates of interest and mortality assumptions used in valuing them.

The Form covering *'Pension business'* discloses that the gross total reserve for *'Options and guarantees other than investment performance guarantees'* (i.e. the reserve for annuity guarantees) is £1,630m. The Form also shows that this reserve has been reduced by reinsurance of £1,079m to a net total reserve of £551m.

This Form also discloses that the valuation of this pensions business has assumed a discounted liability of current benefits of £13,961,655,000 (against the current benefit value of £14,659,684,000).

The Form 52 summarising the totals for all of Equitable's accumulating with-profits business discloses that the valuation has assumed a discounted liability of current benefits of £16,455,227,000 (against the current benefit value of £17,340,835,000). This is a discount of just over £885m.

In the appendix version of Form 53, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of property-linked contracts along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death, and the rates of interest and mortality assumptions used in valuing them. They also disclose that they hold reserves for non-investment options and other guarantees for many of their unit-linked policies.

In the appendix version of Form 54, Equitable set out the mathematical reserves held on the appendix valuation basis for the various types of index-linked contracts, along with information on the number of contracts in force, the value of current benefits, the level of benefits guaranteed on death or maturity and the rates of interest and mortality assumptions used in valuing them.

Like in the main valuation, Equitable provide appendix versions of Form 57 giving the notional allocation of assets to each category of liabilities on the appendix valuation basis, showing the valuation rates of interest and the ability of the matching assets to cover the reserves in the resilience scenarios.

Supplementary notes to the returns
In the notes to the returns, disclosed at the end of Schedule 4, Equitable disclose that they have been granted a section 68 Order which permits them to include in aggregate form details of their *'Personalised Funds'* in Forms 43, 45 and 55.

Equitable disclose that they have been granted a section 68 Order, which permits them to take into account a future profits implicit item. The Society states that it has included an item of £925m and that this is within the maximum amount permitted by the Order.

Equitable disclose that they have also been granted a section 68 Order enabling them to disregard amounts owing under the subordinated loan up to an amount not exceeding 50% of the required solvency margin.

In relation to Form 46, Equitable disclose:

> *Under the Society's recurrent single premium contracts, the amount and frequency of contributions can be changed at any time without penalty, including ceasing future contributions completely. Most policyholders take advantage of this flexibility and there is consequently no precisely identifiable annual premium on recurrent single premium contracts. On Form 46 the annual premiums shown for recurrent single premium contracts are those which are not specifically identified as single premiums.*

Schedule 6 (Certificates by directors, actuary and auditors)
Three Equitable Directors provide the certification required by Regulation 28(a) of the ICAS Regulations 1996. Equitable's Appointed Actuary provides the certification required by Regulation 28(b) of the ICAS Regulations 1996. Equitable's Auditors provide their opinion that Schedules 1, 3 and 6 of the returns have been properly prepared.

30/06/2000 [entry 2] FSA note that Equitable have a priority rating of 3 (but see 24/11/2000).

03/07/2000 FSA advise Equitable that their application for a section 68 Order would be considered in due course.

04/07/2000 FSA's Managing Director A advises the Chairman of a telephone call from Equitable. The Managing Director explains that Equitable are aware of *'straws in the wind'* that the House of Lords would find against them. The Managing Director reports that Equitable have given some thought to what they should do in the event of an adverse decision, including the possibility of resignations by the President and the Chief Executive. Equitable seek FSA's comments.

05/07/2000 FSA's Managing Director telephones Equitable, explaining that FSA are anxious to ensure continuity among executives at Equitable, and that decisions to resign could be taken in such a way as to permit that. The Managing Director also explains that, while it would depend on what was in the judgment, *'on what we know so far it was unlikely that the FSA would be throwing brickbats at Equitable Life'*.

Line Manager D notes that the Head of Life Insurance agrees with these comments.

07/07/2000 GAD recommend to FSA that they should grant Equitable's request for a section 68 Order for a future profits implicit item of £1.1bn. GAD explain:

> *We have reviewed the Actuary's calculations in the light of the 1999 returns and are satisfied that they are consistent with the relevant Regulations and Guidance Note. Although the disclosure seems a little sparse in places there is a significant margin between the £1.1 bn applied for and the £3.3 bn the company could apply for based on the assumptions given.*

GAD note:

> *The Actuary's certificate also confirms that he has taken into account the effect of the GAO* [reinsurance] *treaty in determining the present value of future profits.*

12/07/2000 FSA's Director of Insurance informs FSA's Executive Committee that the House of Lords' decision is expected soon and that work on a press line was under way.

17/07/2000 Equitable seek a meeting with FSA to discuss scenario planning in advance of the House of Lords' decision.

18/07/2000 [entry 1] FSA and GAD meet Equitable to discuss the possible scenarios that Equitable have identified from the expected House of Lords' decision.

According to a note made by FSA, Equitable outline three possible scenarios – Equitable winning, the Court of Appeal judgment being upheld, or Equitable not being allowed to alter the rate of bonus for policies containing annuity guarantees. Equitable comment that this third scenario would be at odds with recent FSA guidance. It had not previously been considered a possibility, but had become one, following submissions during the hearing on behalf of the representative policyholder. Equitable consider it was an unlikely outcome, but, should it arise, it would have a profound effect on solvency and the reinsurance treaty would no longer be valid.

Equitable explain that the scenario has been discussed with the Board, who have agreed that, in those circumstances, Equitable should be put up for sale. Equitable say that they do not think that they would be insolvent, but were carrying out further scenario modelling.

Equitable explain that they are:

> *... keen to avoid any precipitous action from the FSA in the light of this adverse judgement. Mainly because this could have a detrimental effect on the value of the business, for example stopping the company writing business could lead to losses in the field force and this was a valuable asset for the society. Similarly, a need to rush into gilts could also have detrimental effects.*

FSA reassure Equitable:

> *... that we would not rush to take remedial action in these circumstances and understood the importance of maintaining the value of the society. We would, however, need to be convinced that a suitable buyer for the Society was likely to be found quickly.*

FSA note that Equitable think that they would be able to begin substantive sales negotiations with a number of potential partners in August, with a view to completing a sale before the end of the year.

Equitable explain that, if the House of Lords were to uphold the Court of Appeal's judgment, Equitable would have the right to offer a reduced rate of bonuses for all GAR policies, regardless of how the benefits were taken.

18/07/2000 [entry 2] FSA's Director of Insurance informs FSA's Executive Committee that the House of Lords' decision was expected on 20/07/2000.

19/07/2000 FSA's Line Manager D provides the Chairman with briefing on the possible outcomes of the House of Lords' judgment and the implications of those outcomes for Equitable and FSA. The Line Manager sets out three scenarios:

(1) That Equitable win, with or without critical comment on the way they had explained their approach to policyholders.

The Line Manager notes that this would have no direct financial implications for Equitable. FSA would need to consider if Equitable had had due regard to PRE.

(2) That Equitable lose, in that different levels of terminal bonus may not be paid according to whether or not a policyholder chooses to take advantage of an annuity guarantee, but that a GAR policyholder need not receive the same level of bonus as a non-GAR policyholder.

The Line Manager notes that this would allow Equitable to *'ring fence'* the costs of meeting guaranteed annuities amongst policyholders who have GARs. It would allow Equitable to declare one terminal bonus at the lower of the two levels currently available. FSA would need to consider whether the decision had implications for three or four other insurers who had adopted a similar bonus policy to that of Equitable, and whether the guidance issued on 18/12/1998 had been consistent with the judgment.

(3) That Equitable lose *'very badly'*, in that different levels of terminal bonus may not be paid, as in the second scenario, but that, in addition, the existence of GARs in a class of contract should not influence the level of bonuses paid to that class.

Line Manager D draws attention to the third scenario, which is *'not something that has been considered previously'* and would involve the court opining on the apportionment of bonuses between different classes of policyholders, rather than just in respect of GAR policyholders. The Line Manager explains that previous court hearings had focused on the narrow issue of the rights of GAR policyholders; however, *'the hearings in the House of Lords suggest they may consider the issue in its broader context'*.

Line Manager D notes that the financial implications for Equitable would be *'very serious'*. The Line Manager says that Equitable would have to declare one terminal bonus at the higher of the two levels currently available, and that, in view of the impact on market confidence, Equitable would seek a partner. The Line Manager notes that it was expected that there would be no shortage of potential partners. FSA would need to liaise with Equitable over their current and projected financial position and keep in touch with plans for the sale of the business. The Line Manager states that, even if Equitable's solvency margin were breached, it is *'unlikely FSA would need to take any public regulatory action since the company would already be taking steps to ensure its financial position was repaired'*.

Line Manager D notes that FSA would also need to consider the wider implications of such a judgment. She notes that it would be likely that the guidance issued on 18/12/1998 would be inconsistent with the judgment, that up to 20-25 other companies who sold policies with annuity guarantees might be affected, and that there might be implications for other companies with contracts containing unrelated guarantees.

20/07/2000 [entry 1] The House of Lords dismiss Equitable's appeal against the Court of Appeal's decision of 21/01/2000. Their ruling makes clear that Equitable cannot ring fence the problem by opting to reduce bonuses for all GAR policyholders, irrespective of how the benefits are taken. Equitable announce their intention to seek a buyer for the business. The Society sets 20 November 2000 as the formal deadline for bids.

FSA's Chief Counsel A prepares an immediate summary of the judgment. She says that, while it is *'the worst outcome for Equitable'*, the wider implications for other companies who have written policies containing annuity guarantees are unclear. She concludes that the judgment rests *'on the particular terms of the Equitable policy and the particular circumstances giving rise* [to] *an expectation that those terms would be met'*. Chief Counsel A acknowledges that

HMT's guidance on annuity guarantees (see 18/12/1998) would have to be revised *'to make its tone less positive'*, although they are not clear if substantial amendment would be needed.

FSA advise GAD that Equitable have promised to provide a note on their solvency position within a couple of days. FSA note that Equitable intend to reduce policy values immediately by 5% across the board. FSA hold out the prospect that, once Equitable have been sold, policyholders whose policies have matured in the intervening period would be eligible for a top up.

GAD agree that FSA should write to all companies with annuity guarantees on the implications of the judgment. GAD suggest that, in respect of 'ring fencing', the implications may go beyond annuity guarantees.

FSA produce in-house briefing notes in anticipation of questions they might receive. In response to the possible query: *'What action will the FSA take to make sure policyholders with similar contracts with other companies are properly protected?'*, FSA say:

> *Other companies will need to consider the implications of the judgement for their payment practices. We will be discussing their conclusions with them and the basis on which these have been reached.*

In response to the possible query: *'Doesn't this show that the FSA failed to act to protect policyholders. Why was it necessary for policyholders to go to court?'*, FSA state:

> *FSA did not fail to protect the interests of policyholders. The Equitable itself chose to bring this test case, and has been commended for doing so. The key issue raised in this case was the interpretation of the detail of contracts issued by the company and the way discretionary powers were exercised by the directors. Once before the court it was right for the FSA to step back and await the outcome, while ensuring adequate reserves were in place.*

In response to the possible query: *'Suggested that Equitable Life's practice had been "approved" by HM Treasury. Is this true?'*, FSA repeat the answer provided to a similar question at the time of the Court of Appeal judgment (21/01/2000), but state that FSA were now reviewing that guidance in the light of the judgment (having previously said they would consider doing so).

20/07/2000 [entry 2] The Director of FSA's General Counsel's Division (Director of GCD) explains the House of Lords' decision to FSA's Board. Managing Director A confirms that Equitable have decided to put themselves up for sale.

20/07/2000 [entry 3] FSA write to PIA and IMRO to inform them of the outcome of the court case and of Equitable's decision to put themselves up for sale. FSA warn that the terms of the ruling are such that there would be financial consequences for Equitable. FSA also ask for information about any future activity or visits in relation to Equitable.

21/07/2000 [entry 1] HMT ask FSA to consider a number of possible questions that may now be raised. These include:

> *<u>Guaranteed Annuities</u>*
>
> *Timing: how long to sort this out (will regulator be pressing for immediate increases in reserves or has that already been done?) ...*
>
> *<u>Did the regulator get it right?</u>*
>
> *FSA's Q and A suggests companies will need to consider their position and FSA will be in dialogue: but should that already have happened?*

Was the reserving guidance fairer to the companies than it was to the policyholders, appearing to suggest that there was damage limitation through looking to the letter of the contracts. (Newspapers suggest that the Law Lords decision did not turn on the letter of the policy, but on whether a discretion could be exercised in a way that appeared to nullify a provision of a contract.)

Equitable allowed the case to be brought, but should the regulator have been seen to be pushing them to do the decent thing?

Policyholders' reasonable expectations

How has our understanding changed, if at all?

21/07/2000 [entry 2] FSA (Chief Counsel A) prepare a fuller summary of the judgment. FSA's analysis of the implications remain as in the note of 20/07/2000. FSA state that the judgment rests '*on the particular terms of the Equitable policy which had to be read subject to the powers and decisions of the directors in respect of the declaration and payment of final bonuses*'.

21/07/2000 [entry 3] In response to the request of the previous day for information about regulatory activity in relation to Equitable, PIA inform FSA (as Equitable's 'Lead Supervisor') that they have completed a debrief concerning the Society following a supervision visit in June 2000. PIA say there are no issues from the visit that they expect to lead to disciplinary action. PIA also inform FSA that they are to conduct quarterly visits to Equitable from now on.

On FSA's *'Lead Supervisor'* file next to this email and marked with the date '21/07/00' is a copy of PIA's *'Debrief Decision Document'*, dated 21 March 2000, and attached *'Visit Synopsis'*.

24/07/2000 [entry 1] FSA prepare an action plan following the House of Lords' ruling. This includes establishing Equitable's current and projected solvency position; asking companies for their assessment of the implications of the ruling for their business; reviewing the guidance of 18/12/1998, and meeting Equitable within the next two weeks to discuss the sale. On the last point, FSA state:

> *We aim to keep in close touch throughout the process in order to ensure that we can identify at an early stage any regulatory concerns arising from any of the proposed purchasers or the structure of the sale.*

In commenting on the action plan, the Director of Insurance suggests that FSA advise companies that they are reviewing the guidance, and that, until the review is completed, companies should not rely on it.

24/07/2000 [entry 2] PIA write to FSA's Line Manager D seeking her views on various aspects of the House of Lords' ruling, insofar as it affects their review on pensions mis-selling. PIA understand that Equitable would be reducing the value of their with-profits policies. PIA suggest that the immediate implication of this for the review is that the losses experienced by those who have been mis-sold an Equitable policy would increase. PIA presume that Equitable were aware that their reserves would need *'beefing-up'*. PIA ask the Line Manager to bear in mind that there were pension review issues, and that they and colleagues dealing with the review needed to be kept abreast of what was happening. PIA also ask whether a sale of the Equitable business was 100% certain.

In response, Line Manager D confirms that Equitable would need to increase their provision for pension mis-selling but says that she does not think the increase would be significant. The Line Manager says that, while she could not say that a sale was 100% certain, *'it must be close to 99.9%'*. The Line Manager adds: *'The company see a sale as the only option and as far as I can see the only reason it would not go ahead would be if there was no suitable buyer and that appears unlikely'*.

24/07/2000 [entry 3] FSA write to GAD about the implications of the House of Lords' judgment. FSA note that, in Equitable's case, the *'falling away'* of the reinsurance treaty would have a knock-on effect on their reserves, but this was unlikely to be the case for other companies. FSA point out that they were already requiring companies to reserve fully, whether or not they declared a differential terminal bonus. Accordingly, FSA did not consider that there were any reserving implications for companies, other than for any compensation that might now be payable. The only new point was that ring fencing had been ruled out. However, as companies did not have to reserve for terminal bonuses and the ruling would only increase the level of terminal bonuses in the short term, FSA did not consider companies would have to increase their statutory reserves for annuity guarantees.

GAD agree with FSA's analysis, saying:

> *There should be no effect on the level of other insurer's reserves that need to be set up for GAOs and it justifies the tough stance that we took.*
>
> *Equitable was unique in the form of reassurance that it entered into, with its cancellation clause. In retrospect the Actuary is shown to have acted imprudently in taking credit for the reassurance. No doubt he was relying upon the Board's view, based upon legal advice, that they were unlikely to have to change their bonus policy.*

24/07/2000 [entry 4] FSA attend a meeting of the Tripartite Standing Committee. On the consequences of the House of Lords' ruling, FSA's Managing Director A reports that *'there would only be real problems if Equitable Life could not find a buyer by – say – the end of the year. But, currently, that problem did not seem at all likely to emerge'*.

26/07/2000 [entry 1] Equitable provide FSA with the promised information on their current estimated solvency position. The Society's estimated solvency position prior to the House of Lords' decision is disclosed, as follows:

> *An updated position to 30 June 2000, before the House of Lords' judgment but bringing the new regulations and resilience tests into account, was as follows:*

		£m
Value of non-linked assets		*29,930*
Future profits implicit item		*965*
		30,895
Mathematical reserves		
- Basic (including GAR)	*25,705*	
-Resilience	*1,900*	
		27,605
		3,290
Required minimum margin		*1,160*
Excess assets		*2,130*

The operative resilience test is Test 2.

2000

Equitable then disclose their current estimated solvency position:

Having examined both the old and new tests there appears to be somewhat of an anomaly in that, although the rationale for the new Test 2 was that it represented some relaxation to reflect the strengthening of the reinvestment assumption in the new regulations, the new Test 2 is in fact more onerous in these circumstances than the old test (and both are stronger than the new Tests 1 and 3). Having considered that I feel that the old Test 2 provides an adequate margin of resilience as required by Regulation 75. Revised figures as at 30 June 2000 on that basis are as follows (the basic reserves include an allowance of £150m for redress for increased benefits on past retirements):

		£m
Value of non-linked assets		*29,930*
Future profits implicit item		*1,000*
		30,930
Mathematical reserves		
- Basic (including GAR)	*27,-170*	
- Resilience	*2,295*	
		29,465
		1,465
Required minimum margin		*1,240*
Excess assets		*225*

Equitable explain:

Although the above margin is quite thin, a modest relaxation in some of the assumptions would give a significantly improved position. For example, if the equity fall assumed in Test 2 was 20% rather than 25% the excess assets would increase to around £1225m. Such a change could be seen as an offset to the impact of very low dividend yield stocks, such as [two companies]*, which the proposals to use P/E ratios rather than dividend yield in the regulations were designed to mitigate.*

The effective take-up rate of GAR options assumed is such that the gross reserves for GAR policies are reduced by less than 5%. That is in line with the guidance and is, I feel, even in the new circumstances, a very conservative assumption. A modest relaxation in the take-up rate so that reserves were reduced by nearer to 10% would increase excess assets to around £950m. I appreciate that that would not be consistent with the GAD guidance. The current reassurance arrangement does, however, remain in force for 3 months beyond 20 July 2000 and we are discussing the possibility of an amended treaty with a much higher take-up threshold which would give the same reserving effect.

On a continuing basis the position would be unacceptably weak. However, as you said last week, we have effectively implemented a plan to strengthen the position by taking the course of action which we have. Meanwhile I believe it is reasonable to regard the Society as continuing to meet its required minimum margin.

We will now work on some projected figures to confirm that new business has no material impact on the solvency position and I will aim to send those to you next week. If there are any points arising from the above which you would like to discuss before then, please do not hesitate to let me know.

26/07/2000 [entry 2] Equitable announce changes to bonus rates. With-profits policies are credited with no growth for the first seven months of 2000.

26/07/2000 [entry 3] FSA respond to HMT's questions of 21/07/2000. In response to the question about timing for any increases in reserves, FSA explain:

> *Equitable's reserves have come under strain as a result of the judgment but this is not because its liabilities for GAOs have increased but because the value of the assets it was holding to cover them has fallen. It had entered into a reinsurance treaty which provided some £1billion of cover for GAOs but this was conditional on it being able to maintain its differential bonus practice. The collapse of the reinsurance means the company needs to back the liability with other assets and has knock on effects elsewhere in the reserving eg the resilience reserve increases. Equitable is, as far as we are aware, unique in facing this difficulty. Assets which had previously been included in the company's free assets are now having to be used to cover its liabilities, but it expects to be able to show that it is currently covering its solvency margin (just).*

In response to the question *'Did the regulator get it right?'*, FSA answer:

> *On balance we did not do badly and indeed it would have been difficult for any guidance to have been consistent with the full range of different judgements that have appeared, first from the Vice Chancellor and then the Court of Appeal and now finally the House of Lords. The guidance on how the costs of GAOs might be met will need to be reviewed but it is not clear that it was "wrong". It indicated that bonuses could only be reduced if this was consistent with the terms of the contract and what policyholders had been led to expect. In Equitable's case the* [House of Lords] *appears to have concluded that the company's contracts did not allow for a reduction in bonus and it was not what policyholders expected.*

FSA accept that the emphasis of the guidance needed to be changed so that it did not suggest that most policies and policyholders' reasonable expectations would allow differential bonuses. FSA note that if they had *'got it wrong'*, so had the actuarial profession, and that the Institute of Actuaries had fully supported the guidance issued. FSA say that they do not consider that they could have anticipated the House of Lords' ruling and have *'every reason to believe that our guidance* [see 13/01/1999] *on the levels of reserve required was spot on'*.

FSA say that they are not convinced that HMT or FSA could or should have pushed Equitable to alter their bonus practice, which *'was not clearly unlawful'*. FSA say that:

> *The FSA did ensure that Equitable set up adequate reserves to cover their GAO exposure. As a result Equitable decided to enter into the reinsurance treaty in order to avoid having to take alternative courses of action that they considered to be against their policyholders' interests.*
>
> *Equitable had been told that if the court upheld their practice, we would nevertheless consider whether PRE had been breached and whether intervention was appropriate. Obviously FSA's consideration of this issue was suspended whilst the matter was before the courts.*

FSA note that they had warned Equitable that if the Court upheld their practice, they would *'nevertheless consider whether PRE had been breached and whether intervention was appropriate'*, but that this action had been suspended whilst the matter had been before the courts.

In response to the question on '*Policyholders' reasonable expectations'*, FSA note that the judgment had confirmed their view of what the relevant criteria were for determining policyholders' reasonable expectations (what policyholders were told, the company's past practice, and wider industry practice) and it had also confirmed that directors must have regard to those criteria when setting bonuses. However, FSA consider the judgment had made it less clear whether policyholders' reasonable expectations were only one of a number of factors companies had to consider when setting bonuses. FSA add that *'any clarity on this point should not necessarily inhibit us in intervention action which might be appropriate under the Insurance Companies Act 1982 for breach of PRE'*.

FSA conclude: *'Overall we are probably not much further forward in understanding/defining PRE'*.

26/07/2000 [entry 4]	FSA's Executive Committee discuss issues surrounding Equitable.
27/07/2000 [entry 1]	FSA write to Managing Directors of with-profits life companies, asking for their assessment of the implications of the House of Lords' ruling.
27/07/2000 [entry 2]	FSA's Director of GCD writes to Chief Counsel A about the proposed review of the 1998 guidance on guaranteed annuities. The Director suggests that there were three points in the guidance that FSA need to address, following the House of Lords' ruling. First, the Court had not endorsed the view that if a guarantee had not been paid for, a sum could be deducted from the final bonus by way of a notional charge after the event. Secondly, before a charge was made against a policyholder's terminal bonus, it had to be clear that he or she had agreed to this. Thirdly, a charge needed to be made to all those who had the benefit of the guarantee, whether or not they took it up. The Director of GCD adds: *And it needs to be calculated on the basis of the cost of providing the guarantee, not the cost of meeting it. To the extent that the guidance note suggests that the terminal bonus can be reduced by the value of the guarantee, it seems to me to need to be revised.* The Director of GCD suggests that the above was the minimum needed to ensure that FSA brought the guidance into line with the ruling. The Director cautions that, even with these amendments, the guidance might attract the criticism that FSA were encouraging companies to find ways round the ruling. Chief Counsel A circulates the comments. In response, the Head of Life Insurance agrees that, rather than waste time and credibility in justifying the earlier guidance (which he nevertheless considered to be justifiable), FSA should take the House of Lords' judgment as an opportunity to issue a new guidance note.
28/07/2000	**GAD complete the A1 Initial Scrutiny check on the Society's 1999 regulatory returns**. GAD identify no concerns.
31/07/2000 [entry 1]	FSA's Director of Insurance writes to the Head of Life Insurance, Line Manager D and Chief Counsel A and GAD about possible revision of FSA's guidance on annuity guarantees, following the House of Lords' ruling. The Director of Insurance says he believes that FSA would *'face some difficult questions in determining how "wide" an interpretation we need to accommodate in our revised guidance'*. The Director continues to say: *'Too narrow* [an interpretation] *and we could find the court determining some future case in a way inconsistent with our guidance. Too wide and we could be insisting on companies taking an approach inconsistent with current views of PRE ...'*.
31/07/2000 [entry 2]	The German regulatory authority write to FSA. The regulatory authority explain that they had received a number of enquiries from policyholders of Equitable's German branch who were concerned about Equitable's ability to meet their liabilities following the House of Lords' judgment. They ask about any action FSA might be taking in respect of Equitable.

02/08/2000	Equitable write to all their policyholders explaining the House of Lords' ruling, the intention to sell, and the impact on the GAR and non-GAR policies (as announced to the press on 26/07/2000).
04/08/2000 [entry 1]	Equitable write to FSA to confirm arrangements for a meeting on 11/08/2000 to discuss regulatory aspects of the sale process. Equitable refer to correspondence with GAD in 1999 (see 27/08/1999, 31/08/1999 and 08/09/1999 [**entry 2**]) about the new resilience test. Equitable say that: *... new Test 2 is actually more stringent than the old version for our portfolio, contrary to what was understood to be the intention.* GAD's file contains undated and unsigned manuscript notes, which appear to be a commentary on Equitable's calculations and which suggest that some are dubious. Equitable also report to FSA that: '*Discussions with* [IRECO] *for an amended version of the reassurance arrangement to give some degree of support to the statutory solvency position are proceeding well and I hope to be able to give you some further information on that next Friday*'.
04/08/2000 [entry 2]	Equitable write to FSA, further to their letter of 26/07/2000, to provide information on the impact on the Society's solvency position of new business. Equitable say: *In my 26 July letter, excess assets at the end of June were shown to be £225m. On the assumptions set out above, the equivalent figure at the year end assuming no new business would be virtually unchanged at £200m. If new business sales are then factored in there would be a marginal improvement in the position to £210m due to the effect in the resilience test conditions of the considerably less onerous guarantees in most of our new business contracts. These figures do not take any account of any benefit from an amended reassurance treaty for GAR contracts that we are currently negotiating.* *Looking forward another year, I have assumed that equity returns pick up with a total return on equities of 8% p.a. with gilt yields remaining stable. On that basis the end of 2001 would show an improved solvency position with excess assets in the region of £800m, although that does not allow for any declared bonus in respect of 2000.* Equitable express the hope that FSA would find this information reassuring.
07/08/2000	FSA reply to the German regulatory authority's letter of 31/07/2000. FSA explain that FSA are satisfied that Equitable remain able to cover the required margin of solvency, but that their level of cover was less than both FSA and the company would like to see. FSA explain that Equitable are putting themselves up for sale, and that it was anticipated that an injection of capital following the sale would increase the cover for the solvency margin *'to a comfortable level'*. FSA attribute the deterioration in Equitable's solvency position since the judgment as being: *... primarily ... the result of the termination of a reinsurance agreement to cover part of the liabilities under guaranteed annuity contracts* [see 11/08/2000] *... The company is currently seeking to renegotiate the reinsurance arrangement ... and, if it were to succeed in doing so, this would be likely to significantly improve its statutory solvency position.* FSA say that: *Given that Equitable Life is currently meeting its required minimum margin of solvency, we have not considered it necessary or appropriate to take any intervention action in respect of the company. We are monitoring the solvency position closely, but are content that the plans for the sale of the company can be expected to resolve the longer term concerns about the financial position.*

As regards the implications for policyholders of the German branch, FSA state that:

> *... except for a few policies still in force but issued to policyholders whilst the company's German branch was subject to supervision by the BAV (ie prior to the implementation of the Third Life Directive) policyholders of the branch will be in the same position as UK policyholders.*

08/08/2000 FSA ask PIA for an update on the two Enforcement cases of which they are aware. On income drawdown, they ask if Equitable have filed a response to Enforcement's preliminary findings sent in May 2000 (see 23/05/2000) and what the next steps might be. On pensions mis-selling, FSA ask what has happened to a possible Enforcement case that was identified in February/March 2000.

11/08/2000 [entry 1] FSA and GAD meet Equitable and their actuarial consultant, solicitors and financial advisers. According to FSA's note of the meeting, Equitable outline the sale process, which they anticipate being completed by June 2001. FSA warn that this was a tight timetable and that, given their limited resources, FSA might not be able to consider proposals as quickly as Equitable might wish.

Equitable explain that they were close to agreeing a renegotiated reinsurance treaty (Note: the previous treaty was void, given the fundamental change to the GAR bonus policy required by the House of Lords' ruling). On the Society's solvency position, FSA record that:

> *... the figures provided by the Society which took into account the revised reinsurance protection still showed a relatively low coverage of the* [required minimum margin], *with only £1.580bn of explicit assets covering* [a required minimum margin] *of £1.190bn. The figures provided did not allow for reversionary bonuses for the year put at c£500m last year ... it was possible that the decision on the level of bonuses for the year 2000 would be delayed next year. The* [required minimum margin] *coverage quoted was also based on the old resilience test 2. The new test 2 was thought by* [the Appointed Actuary] *to have a very severe effect on the Equitable and was likely to cost them a £600m reduction in the free asset figure.*

It appears that Equitable hand over *'Revised end-June solvency figures based on* [the] *new reinsurance treaty'*, which were as follows:

		£m
Value of non-linked assets		*29,930*
Future profits implicit item		*1,000*
		30,930
Mathematical reserves		
- Basic (including GAR)	*26,620*	
- Resilience	*1,730*	
		28,350
		2,580
Required minimum margin		*1,190*
Excess assets		*1,390*

2000

Equitable say that they believe a section 68 Order in respect of the valuation rate of interest, which had apparently been issued to two other insurance companies, would be of benefit to the Society. FSA say that they would consider any application from Equitable *'on its merits'*.

Equitable agree to provide FSA with monthly updates on solvency, as well as solvency scenario planning, together with sensitivity tests for the projected year end positions for 2000 and 2001.

Equitable's Chief Executive: *'confirmed that as disclosed in a recent newspaper article the Society was charging a MVA of about 20% of terminal bonus (equivalent to an approximate 5% reduction in policy value) for schemes that wanted to transfer out of the Equitable.* [He] *confirmed that this charge was a fairly standard adjustment to discourage transfers out and argued that other companies already did this and that some of them charged more than the Equitable.* [The Appointed Actuary] *confirmed that there had been a slight increase in surrenders since the judgement but most policyholders were taking a "wait and see" approach'*.

Equitable also explain that they were considering hedging their exposure to the interest rate risk of their annuity guarantees. FSA provide some advice on this.

11/08/2000 [entry 2] FSA respond to policyholders who have complained that Equitable misled them as to the possible costs of the GAR litigation. FSA say that they did not believe it would be appropriate for FSA to take further action.

FSA explain that Equitable's initial estimate of £50m had been based on the assumption that the courts would uphold their practice. FSA say that this assumption was not unreasonable at the time and had been supported by the High Court. Although the Court of Appeal had held that Equitable's practice was unlawful, that Court had also suggested that it was open to Equitable to pay differential terminal bonuses according to whether or not a policy contained an annuity guarantee. FSA say that they consider that Equitable were entitled to rely on this in stating that the Court of Appeal judgment would have no significant cost implications if it were upheld in the House of Lords.

FSA conclude that it only became clear that there would be increased costs following the House of Lords' ruling, which had gone further than merely upholding the Court of Appeal's decision.

14/08/2000 **GAD complete the A2 Initial Scrutiny check on the Society's 1999 regulatory returns**. The check is carried out by a new Scrutinising Actuary at GAD (Scrutinising Actuary F).

The form for the A2 check follows a similar format to that used for the 1996, 1997 and 1998 returns and includes the following:

<u>Strength of valuation basis</u>
GAD note that the position *'looks tight'*, when commenting on whether the interest rates used for with-profits business appeared to make provision for policyholders' reasonable expectations and that Equitable *'appear to value some life business* [at] *gross rates:* [but] *these are annuities'*. They note that other management expenses, at £13m, are material. GAD confirm that Equitable have applied the resilience test in accordance with the Government Actuary's latest guidance. GAD judge the overall interest basis and the valuation basis as *'adequate'*.

<u>Solvency position</u>
GAD note that the absolute cover for the required minimum margin is *'adequate' 'before House of Lords ruling!'* and that the trend in the level of cover in recent years has been *'volatile'*.

<u>Operating results</u>
GAD note that the amount of reinsurance is material and that there is '*a material exposure to non-UK authorised reinsurers without deposit back*'.

PRE issues
GAD circle both yes and no to the question of whether the answer given by Equitable in paragraph 4(1)(a)(ii) of Schedule 4 of the returns is satisfactory. They comment: *'Don't* [understand] *it – review* [Scrutinising Actuary E's] *correspondence post 1996 scrutiny'*.

Current issues
GAD say that Equitable are known to have material exposure to annuity guarantees and, in commenting on whether their approach is a cause for concern, GAD state that this would be '[an] *understatement on this occasion'*.

The sections *'Aspects that look worrying'* and *'Other notes'* have been replaced with *'General comments'*, under which GAD make the following comments:

> *Company now for sale.*
>
> *GAO treaty being renegotiated.*
>
> *Implicit item.*
>
> [Subordinated] *loan issued 1997.*
>
> *Review* [unitised with-profits] *reserving basis.* [Scrutinising Actuary E] *queried this following 1996 scrutiny (shown as 4% interest* [in the returns]*).*
>
> [Resilience] *reserve £2.1bn* [net premium valuation] *£1.35bn* [bonus reserve valuation].
>
> [Other management expenses] *£13m.*

The check no longer contains the section *'Items to be notified to HMT, to be taken up immediately with the company'*. GAD retain Equitable's priority rating at 2 *'because of* [company] *sale & adverse House of Lords ruling'*.

Accompanying the Initial Scrutiny check is an *'Initial Scrutiny Summary Form'*, which includes certain key figures disclosed in the 1995 to 1999 returns.

21/08/2000	FSA respond to a policyholder who has complained that Equitable had reduced her final bonus by 20%. FSA explain that this was a penalty for early surrender and, as such, is standard practice and not related to the impact of the House of Lords' ruling. FSA say that they did not propose to investigate the matter further.
22/08/2000	FSA's Chief Counsel A writes to FSA's Central Policy Department, setting out a timetable for internal consultation and agreement to the new guidance on reserving for annuity guarantees.
23/08/2000	FSA's Director of Insurance speaks to FSA's Executive Committee about Equitable and informs them that FSA plan to put out a *'green paper'* on the impact of the House of Lords' judgment.
24/08/2000 [entry 1]	FSA write to the Financial Reporting Council (the statutory body which regulates auditors and oversees the regulatory activities of the professional accountancy bodies) in response to two complaints that the Council had received about statements in Equitable's Annual Report for 1999. FSA say that they consider that the complaints (that Equitable's directors and auditors may not have disclosed sufficient information about the litigation then in progress and the potential financial implications for the company) should be dealt with by the Council.
24/08/2000 [entry 2]	FSA's Line Manager D reports to a bilateral meeting of FSA and PIA on the implications for Equitable and the industry of the House of Lords' judgment. She explains that FSA had sought from with-profits life companies their assessments on the implications of that judgment. The responses indicated a wide range of interpretations, in the light of which FSA were in the process of preparing guidance. The aim was to encourage a consistency of approach to setting

bonus policies and to avoid an *'unnecessarily wide interpretation'* of the judgment which had been, in FSA's view, very case-specific in a number of respects.

The report of the meeting records:

> *It was clarified that the judgment generally did not have solvency implications as the level of reserving had not been effected (it was just that some companies would experience higher real costs). Equitable Life had only experienced a weakening in its financial position because the reinsurance it held for GAOs had been terminated (because it was conditional on the company continuing to pay differential terminal bonuses).*

25/08/2000 FSA respond to a policyholder who had complained that Equitable had misled him as to the possible costs of the GAR litigation. FSA write in similar terms to their letters of 11/08/2000. The policyholder also asked FSA to take a controlling interest in the management of Equitable. FSA explain:

> *Our role in authorising and supervising insurance companies under the Insurance Companies Act 1982 is primarily concerned with ensuring that insurance companies have sufficient funds to meet their obligations to policyholders and are managed in a sound and prudent way by persons fit and proper to hold their posts. We have no evidence to suggest that the management of the Society are failing to meet these requirements or acting without due regard to the interests of policyholders. We have no general power to intervene in the day to day business of insurance companies, or to resolve disputes between companies and their policyholders.*

30/08/2000 FSA's Returns Reception and Validation Unit provides Line Supervisor C with a list of three errors in Equitable's 1999 returns. The Unit ask the Line Supervisor if any of the matters should be taken up with Equitable. FSA's note shows that Equitable have a priority rating of 3.

01/09/2000 [entry 1] Equitable write to FSA, following the meeting on 11/08/2000. Equitable provide a copy of the signed addendum to the reinsurance treaty, a copy of the addendum made last year to bring group business into the scope of the treaty, and a graph showing distribution of their fixed interest holdings over the last five years.

Equitable also provide the first of the requested monthly updates on their solvency position. The Society discloses that:

> *The estimated position as at 31 July 2000, on the same basis used for the 30 June 2000 figures provided at the 11 August 2000 meeting are as follows:*

		£m
Value of non-linked assets		*29,960*
Future profits implicit item		*1,000*
		30,960
Mathematical reserves		
- Basic (including GAR)	*26,665*	
- Resilience	*1,795*	
		28,460
		2,500
Required minimum margin		*1,200*
Excess assets		*1,300*

2000

The figures are little changed from the end-June position. The rise in markets during August should mean a rather stronger position at 31 August 2000.

01/09/2000 [entry 2]	FSA's Line Supervisor C provides a note for the Insurance Supervisory Committee, recommending that HMT should agree to the requested section 68 Order for a future profits implicit item (see 27/06/2000). The Line Supervisor says that Equitable were only seeking a third of the implicit item they could be entitled to, and that they were unlikely to be dependent on the item for coverage of their required minimum margin. The Line Supervisor explains that, while there were a number of uncertainties that could affect the balance sheet, these should not significantly affect the implicit item. The Line Supervisor says that GAD have reviewed and approved Equitable's calculations. Line Supervisor C states: *'In the particular circumstances faced by the Equitable it is important to carefully consider any request from this company that affects the form 9 position'* and *'the Society have provided the detailed calculations in relation to Regulation 24, these have been reviewed and approved by GAD who are fully aware of the context in which this concession would be granted'*.
01/09/2000 [entry 3]	FSA chase PIA for a reply to their query of 08/08/2000. In response, PIA explain: *Pensions review – case being dealt with ... but substantive work not yet started (and won't be for several weeks) because of other priorities. The matter does not appear to require investigation as such, only "prosecution".* [Pension fund withdrawals] – *Equitable's initial response received and detailed consideration of it will begin on 11 September. A further response from Equitable is due by 7 September. Initial response not extensive but is certainly contesting some findings.*
01/09/2000 [entry 4]	FSA's Head of Life Insurance writes to Managing Director A. The Head of Life Insurance refers to FSA's aim of getting early guidance to the life assurance industry on the implications of the House of Lords' ruling, which *'will have to be "green-edged"* [referring to the nature of a government Green Paper], *as we cannot pretend we know how a court will determine any particular case'*. He says that the guidance would be useful to a number of companies and that FSA were keen to encourage a reasonably consistent approach across the industry. He attaches current drafts of the guidance and covering letter and indicates that it would be helpful for the Managing Director to invite comments on the draft from the Financial Services Consumer Panel (a panel appointed by FSA's Board to provide advice on the interests and concerns of consumers and to report on FSA's effectiveness in meeting their statutory objectives) at their meeting to be held on 5 September 2000. (Note: it appears that the issue is actually considered by the Panel on 13/10/2000.)
04/09/2000	Equitable write to FSA to explain their approach to any windfall rights arising from the proposed sale.
11/09/2000	A member of FSA's Insurance Supervisory Committee writes to the Head of Life Insurance about FSA's note recommending agreement to the requested section 68 Order (see 01/09/2000 [**entry 2**]). The member of the Committee says that there are two issues: *First, the amount of the implicit item actually shown in Form 9 for the December 2000 return cannot exceed the amount that could be supported by a new application submitted with that return and bringing in the financial performance of the company in 2000. We expect a sharp fall in surplus in 2000 because of the* [House of Lords'] *judgment and this will need to be brought in to the figures ... In practice, the company may not actually be able to use the figure that we agree now.*

2000

Secondly, if the company does demutualise, the company to which the business is transferred will not be able to take advantage of surplus that has arisen in Equitable in earlier years to generate an implicit item for itself.

The member says that neither of the issues suggests agreement should be withheld, but that it might be useful to remind Equitable about them *'to reduce the possibility of future embarrassment'*.

12/09/2000 FSA's Line Supervisor C writes to Equitable to say that he has asked HMT to issue the section 68 Order for a future profits implicit item. The Line Supervisor points out that the amount of an implicit item shown in the returns for 2000 cannot exceed the amount that could be supported by a new application submitted with those returns. The Line Supervisor adds that any company to which Equitable's business is transferred would not be able to take advantage of the surplus that has arisen in Equitable in earlier years to generate an implicit item.

13/09/2000 HMT send Equitable the section 68 Order for a future profits implicit item of £110m (this is later corrected to read £1,100m), for use in their 2000 returns.

20/09/2000 HMT and FSA hold their seventh quarterly meeting on insurance regulation issues. HMT say that they have noticed that Equitable are still advertising for new business. FSA's Head of Life Insurance replies that Equitable's recent difficulties *'have not affected its solvency position, only its freedom to invest'*. On the possibility of including guidance in the proposed FSA handbook, the Head of Life Insurance says that:

... it will take time to determine what advice to give, as the judgment depended on three factors not present in all companies, so would not want to panic companies but too general a guidance would not be effective. FSA must not be seen to be helping companies "avoid" the judgment.

FSA may take a view on the impact of the judgment on the industry after guidance is issued, but are not at the present time concerned about solvency as regulation ensures that generous reserves are maintained at all times.

21/09/2000 [entry 1] GAD advise FSA on the contents of Equitable's letter of 01/09/2000. GAD explain that they are satisfied with the amendments to the reinsurance treaty. GAD note the information Equitable have provided on their fixed interest holdings, and explain that they do not wish to pursue this matter.

GAD note the solvency position at 31 July 2000. They comment:

Without the future profits implicit item, the excess assets would be just £300m (instead of £1.3 bn). Also the resilience reserve (which we take to have been calculated on the old basis) continues to be substantial, at £1.8 bn. However, we have no questions to raise with the Society on these figures at this time.

21/09/2000 [entry 2] FSA's Managing Director A presents his monthly report to FSA's Board. The report discusses the implications of the House of Lords' ruling and FSA's intention to issue guidance to the industry.

04/10/2000 FSA's public enquiries division pass to PIA a copy of a letter to Equitable complaining about Equitable's advertising campaign, in which Equitable are said to assert that they have delivered consistently strong results since 1762. FSA explain that the FSA's lead supervisor (i.e. Line Supervisor C) has suggested asking for PIA's comments on whether the advertisements had been misleading *'given the current situation of the company'*.

In response, PIA state that, while they could see why the statement (in the advertisement) would cause considerable annoyance to Equitable policyholders, Equitable undertook many business activities and the GAR issue was only part of those activities. PIA say that Equitable had achieved a record of success and had a good reputation, and the GAR issue did not totally overshadow all that. While PIA had not seen the advertisement in question, it appeared to them that the claims had been based on the past rather than the current position. Overall, PIA say that they do not think that they could support the call for the advertisements to be withdrawn.

FSA respond to the letter of complaint on 5 October 2000, noting the comments made.

06/10/2000 The OFT ask FSA if they have any concerns about the proposed acquisition of Equitable by a prospective purchaser (Prospective Bidder A).

09/10/2000 [entry 1] Equitable provide FSA with an update on their solvency position. The Society's estimated solvency position as at 31 August 2000 is disclosed, as follows:

		£m
Value of non-linked assets		*30,790*
Future profits implicit item		*1,000*
		31,790
Mathematical reserves		
- Basic (including GAR)	*26,670*	
- Resilience	*1,760*	
		28,430
		3,360
Required minimum margin		*1,195*
Excess assets		*2,165*

Equitable explain that the improvement since 31 July 2000 reflects the relative strength of the markets.

Equitable provide a *'solvency matrix'*, showing the effect on their required minimum margin of movements in equity values and yields on fixed interest holdings. At best (equity values remaining the same, yields rising by 0.5% or 1%), their cover is 2.8. At worst (equity values falling by 15%, yields remaining the same or falling by 1%), their cover is 0.9.

Equitable enclose a copy of a letter they have sent to policyholders who had, between 1 January 1994 and 19 July 2000, taken benefits from policies which included a GAR. The letter explains how the rectification scheme would be developed.

09/10/2000 [entry 2] Equitable inform FSA that, on 30 June 2000, they ceased to provide insurance services in Greece (see 08/07/1998).

09/10/2000 [entry 3] An FSA official suggests to Line Supervisor C, PIA and GAD that they should meet to discuss how to respond to the letter from the OFT (see 06/10/2000). The official notes that FSA had *'little or no interest in the competition angle to this proposed acquisition'* but they might have other concerns relevant to the OFT's consideration and any recommendation to the Secretary of State. The official attaches to his memo the documents received from the OFT and an appendix setting out the key issues.

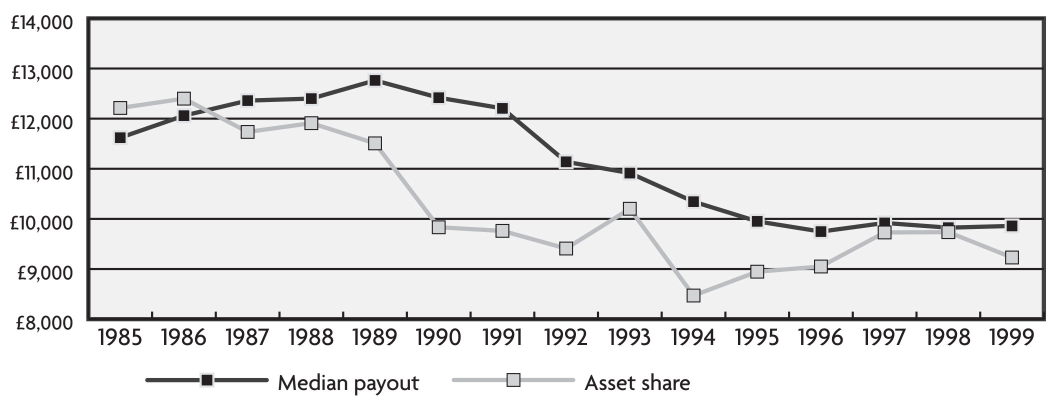
11/10/2000 [entry 1]	GAD write to FSA in response to their memorandum of 09/10/2000 about the proposed bid for Equitable by Prospective Bidder A. GAD's comments relate mainly to the position the combined entity would occupy in the pensions market.
11/10/2000 [entry 2]	FSA's Firms and Markets Committee discuss the progress of Equitable's sale.
12/10/2000	FSA advise the OFT that they have *'not identified any immediate problems that would be likely to be a serious impediment to the proposed acquisition'*. FSA explain that the main issue for FSA, arising from a bid by Prospective Bidder A, would be how the acquisition would be financed.
13/10/2000 [entry 1]	GAD write to FSA's Head of Life Insurance about the production of their 1999 annual report on the life insurance industry. In the light of initial comments from FSA, GAD's proposals for the scope of their report based on companies' 1999 returns is as follows:

- *We will not issue a comprehensive report in the same format as last year.*
- *We will issue separate reports corresponding to the more useful sections of last year's report.*
- *The sections identified for separate reports are new business, expenses, investments (non-linked assets), financial strength (*[required minimum margin] *cover), maturity payouts and bonus rates. We do not intend to report further on free asset ratios, which were covered in* [a GAD actuary's] *memo of 25 September 2000.*

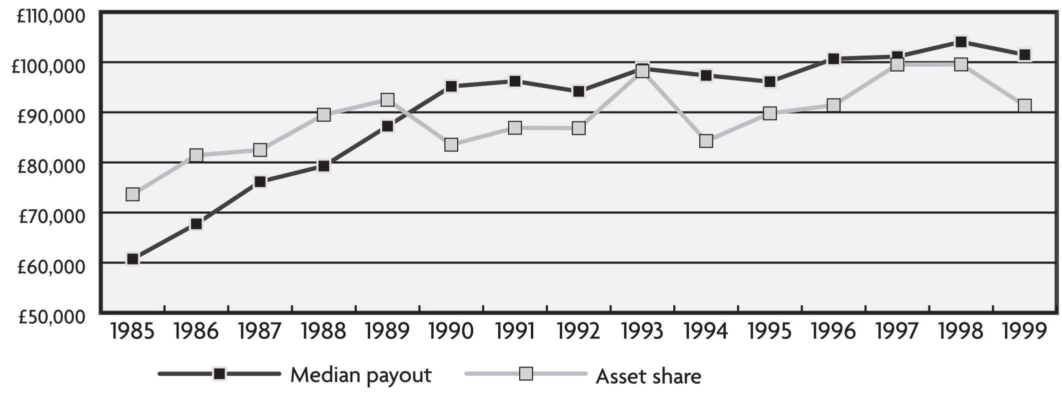
(Note: in the event, GAD only provide reports to FSA on new business, solvency cover and expenses. (See 20/10/2000 [**entry 2**], 03/11/2000 [**entry 3**] and 22/12/2000 [**entry 4**], respectively.) However, I have also seen that GAD continued their analysis of maturity payouts against their own calculations of theoretical asset shares.)

At some point around this time, GAD prepare the following charts:

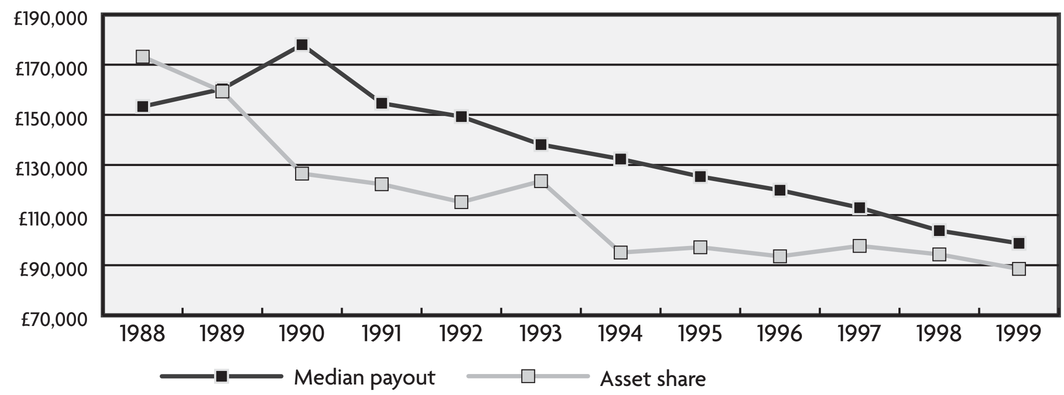
Comparison of actual median maturity payout and theoretical asset share for the years 1984-99 for a £50 per month conventional with-profits 10 year endowment policy (£)



Comparison of actual median maturity payout and theoretical asset share for the years 1985-99 for a £50 per month conventional with-profits 25 year endowment policy (£)



Comparison of actual median maturity payout and theoretical asset share for the years 1988-99 for a £200 per month conventional with-profits 15 year pension policy (£)



(Note: the bodies under investigation have told me that it should be noted that: *'the charts selected for this entry all show maturity payouts for regular premium contracts only. By contrast, the bulk of Equitable's business was recurrent single premium. These charts therefore have very little significance for Equitable. This comment also applies to the corresponding charts provided in the reports prepared by GAD for* [other] *years'*.)

13/10/2000 [entry 2] The Financial Services Consumer Panel meet and are presented with a paper by FSA on the implications of the House of Lords' judgment. FSA seek the Panel's views on their proposed approach to taking the issue forward of issuing guidance and holding a conference of senior lawyers and leading actuaries.

17/10/2000 [entry 1] GAD provide FSA with comments on Equitable's letter of 09/10/2000. GAD note that the solvency cover appeared adequate, but this was largely due to an increase in asset values. GAD note also that if equity values fell by 15%, the required minimum margin would be uncovered. GAD point out that this corresponded to a fall in the FTSE 100 Index to 5,700 from its end August level of 6,672. GAD note that the FTSE 100 Index had already fallen to 6,200 and add that *'this is something which needs monitoring closely!'*.

17/10/2000 [entry 2]	FSA's senior management and Director of GCD meet, following concerns expressed by a leading life insurance company. The company had received legal advice which suggested that their past practice in setting bonuses for guaranteed annuity contracts had been unlawful and they wanted to see the FSA guidance on the issue before deciding on what action to take. According to the note of the meeting prepared by Line Manager D, FSA agreed to produce their *'best stab'* at advice on what the House of Lords' judgment meant and how they have interpreted it in relation to their responsibilities. However, FSA note that the company should not close off the possibility of going to court to obtain a clarificatory ruling. FSA note that the guidance should be agreed with the Financial Ombudsman Service, with whom they might obtain a joint opinion on the most difficult points. FSA agree a proposal by the Director of GCD to hold a debate on the issues surrounding the case with Counsel who had been advising life companies and note that: *'The discussion should be used to identify areas on which there was a common understanding, then FSA might obtain Counsel's opinion on any outstanding points which there was not a consensus'*. FSA's Managing Director A explains to FSA's Firms and Markets Committee that *'many companies appear to be concerned about the implications of the Equitable Life judgement. They were receiving confused legal advice and there was an expectation that FSA would produce guidance on the issue'*.
19/10/2000 [entry 1]	FSA's Managing Director A presents his Monthly Report to FSA's Board. The Managing Director notes that Equitable have received three serious offers of purchase. He records that Equitable have indicated that the bids on the table are high enough to enable with-profits policyholders to gain restitution for the investment growth they lost in the first seven months of 2000, with additional goodwill on top. The Managing Director reports that draft guidance concerning the implications of the House of Lords' ruling is in preparation and that considerable uncertainty existed among other with-profit offices as to the implications for their own bonus policies. The minutes of the meeting record that the Managing Director: *... reported that the situation was becoming more complex and the giving of guidance more difficult. It was hoped to have some further discussions with leading Counsel and to come back to the Board with further information in November.*
19/10/2000 [entry 2]	FSA and GAD meet a second prospective purchaser of Equitable (Prospective Bidder B). It appears that Prospective Bidder B provide a copy of their presentation in advance of the meeting.
19/10/2000 [entry 3]	FSA's Director of GCD writes to certain senior practitioners known for expertise in insurance law to invite them to an informal discussion on the issues surrounding the House of Lords' judgment at FSA's offices on 01/11/2000.
20/10/2000 [entry 1]	FSA's Head of Life Insurance responds to a query from the Chairman about reports in the press that the potential bidders for Equitable might use their orphan estates to help finance any purchase.
20/10/2000 [entry 2]	GAD send FSA's Head of Life Insurance the completed *'New Business'* section of their 1999 annual report on the life insurance industry. GAD's report notes that Equitable have moved from being the third to the fifth largest writer of new business. GAD say this *'reflects a 14% reduction in its* [new business index], *presumably the result of bad publicity arising from its GAO saga'*.
25/10/2000 [entry 1]	FSA attend a meeting of the OFT Merger Panel to discuss Prospective Bidder A's bid.

25/10/2000 [entry 2]	FSA's files contain unsigned manuscript notes, which appear to reflect a discussion with PIA over possible action against Equitable on the sale of income drawdown policies. These indicate that PIA have continuing concerns about Equitable's actions which they are pursuing and which they say are likely to warrant disciplinary action.

27/10/2000

A PIA Enforcement Head of Department writes to PIA's Director of Enforcement seeking agreement to action against Equitable following an investigation into their sale of income drawdown policies.

The Head of Enforcement explains that PIA interviewed investors and reviewed investor files and Equitable's systems and procedures. The Head of Enforcement says that PIA had sent a preliminary findings letter to Equitable in May and have considered their response to this. (Note: I have not seen the findings letter or the response.)

The Head of Enforcement concludes that Equitable's sales process for income drawdown policies had been *'significantly defective'*, which gave rise to a risk of unsuitable sales. He says that '[the] *key defect in the process is that Equitable considers that disclosure of the risks inherent in* [an income drawdown] *contract is an adequate substitute for the assessment of the suitability of* [an income drawdown] *contract for an investor'*. The Head of Enforcement says that he considers that Equitable needed to change their sales process, and review past business to identify unsuitable sales and pay compensation where appropriate. He estimates that the review and compensation could cost in total £41m.

The Head of Enforcement explains that PIA are minded to recommend disciplinary action against Equitable, and to impose sanctions including a public reprimand, a fine of £500,000, and an order to conduct a review of past income drawdown business.

The Head of Enforcement attaches the draft of a proposed letter to Equitable, setting out PIA's concerns and seeking a meeting. He notes:

> *Given the current circumstances of Equitable (the company is up for sale and the House of Lords recently ruled against Equitable in respect of guaranteed annuity options), this matter is highly sensitive.*

The PIA Head of Enforcement copies his note to FSA officials, including the Head of Life Insurance and Line Supervisor C.

30/10/2000

Equitable provide FSA with an update on their solvency position. Equitable say that, as anticipated, the position is broadly comparable with the position in June and July. Equitable provide the following information:

		£m
Value of non-linked assets		*29,935*
Future profits implicit item		*1,000*
		30,935
Mathematical reserves		
- Basic (including GAR)	*26,705*	
- Resilience	*1,885*	
		28,590
		2,345
Required minimum margin		*1,205*
Excess assets		*1,140*

2000

31/10/2000 [entry 1] FSA's Firms and Markets Committee discuss the progress of Equitable's sale and the Chairman's concern over press reports that there was little interest in the purchase of Equitable. FSA note that, although there were only three potential bidders left, it was still thought likely that *'a good sale'* could be achieved.

31/10/2000 [entry 2] Further to their letter of 19/10/2000, FSA's Director of GCD writes to the senior practitioners attending the meeting scheduled for 01/11/2000, enclosing further background papers.

01/11/2000 [entry 1] FSA's Director of Insurance writes to the Chairman following a call from Prospective Bidder A. The Director of Insurance says that *'the main purpose of* [their] *call was to assure me that* [they] *were not behind the current rush of press reports (there seems to be some general attempt to "talk down" the perceived value of the Equitable) and to report on progress'*. The Director of Insurance adds that Prospective Bidder A had *'become convinced that at an operational level the Equitable would represent a very interesting acquisition for* [them]*'*; in particular, acquisition of the sales force would be '*very worthwhile*'. The Director of Insurance says that the bidder remains of the view that Equitable would represent a very interesting acquisition. However:

> [Prospective Bidder A] *are becoming increasingly concerned about the financial implications of a deal. The more work they do in the data room, the more they become convinced that the scale of the shortfall in the Equitable's funds is greater than the Equitable estimate themselves. Moreover they are concerned that the wording of the Equitable's policies would allow policyholders with guaranteed annuity options to increase the scale of their contributions (and hence the scale of the GAO liability) to the detriment of other policyholders in the fund.* [Prospective Bidder A] *are investigating whether this liability can be capped and if so how, but again are more pessimistic than the Equitable directors of this issue.*

The Director of Insurance explains:

> *I am following up with GAD the implications of* [Prospective Bidder A's] *comments as they affect the Equitable's own position ...* [Directing Actuary B] *will talk to the Appointed Actuary today, and we plan to see the company in the next few days. We are in any case due to discuss with them (again) the implications of recent changes to the liability valuation rules for unitised with-profits business introduced in May of this year* [see 15/05/2000] *(which the Equitable believe will have only minimal impact).*

The Director copies his note to other officials in FSA and to GAD's Directing Actuary B.

In response, FSA's Chairman writes:

> *A useful conversation. It does not lower my worry level about the Equitable. I think an early discussion with them is very much indicated.*

01/11/2000 [entry 2] A consulting actuary writes to GAD and FSA expressing concern about some recent advertising by Equitable. The consulting actuary considers that this advertising ignored their current problems and amounted to *'a blatant case of misrepresentation'*. The consulting actuary writes also to the Advertising Standards Authority. GAD's file contains press articles critical of the advertisement.

01/11/2000 [entry 3] FSA host a seminar with senior practitioners to discuss issues surrounding the House of Lords' ruling.

02/11/2000[entry 1]	FSA's Director of Insurance provides the Chairman with a confidential briefing note on the sale of Equitable for his appearance before the Treasury Select Committee on 7 November 2000. The Director of Insurance says that Prospective Bidder A remained the favourite but refers to his note of 01/11/2000 in which he had reported a number of the company's current concerns. The Director explains that FSA were meeting Equitable on 03/11/2000 to discuss the issue of their exposure to existing policyholders with contracts containing annuity guarantees topping up their policies, and the related issue of the changed resilience test. FSA's Director of Insurance notes that Equitable's solvency cover remained fragile, and that a fall in the FTSE 100 Index to 5,700 could lead to their breaching their solvency margin. He says that, should that happen, FSA would need to consider the position carefully. However, *'a decision to stop the Society writing new business would finish the Society off as a sellable enterprise ... It is hard to see that this would be in the interests of <u>current</u> policyholders but the position of those not already in would have to be considered carefully too'*. An FSA official advises the Director of Insurance and others of a telephone conversation with the OFT. The official explains that the OFT were likely to recommend that Prospective Bidder A were told that their bid did not appear to raise issues which needed to be referred to the Competition Commission.
02/11/2000 [entry 2]	GAD write to FSA in response to their note of 01/11/2000. GAD suggest: *'One possibility (that we could discuss with Equitable at some stage) would be to issue an Order preventing them from accepting more than £X million incremental premiums on GAO policies. This would certainly cap the liability and we could seek to ensure that they were fully reserved for this amount of future premiums. It would be much less drastic than a full stop order which would almost certainly kill their chances of a sale to a third party'*. Against this, Line Supervisor C queries what grounds there were to do this, and whether those could be challenged in court. GAD suggest, as second possibility, that Equitable could seek Court approval to limit the liability on policies containing annuity guarantees.
03/11/2000 [entry 1]	GAD and FSA (including a new Line Manager with supervisory responsibility for Equitable (Line Manager E)) meet Equitable and their actuarial consultant to discuss their present financial position and some detailed reserving issues. The meeting was held at FSA and GAD's request. GAD prepare a note of the meeting. The note records that Equitable have implemented a cut in bonus rates and consequent payouts with an aggregate value of £1.5bn and that: *'This is expected to cover the additional cost of paying GAR's on the full "asset shares" as in effect required by the recent* [House of Lords] *judgment'*. Equitable explain that, at present, around 35% of GAR policyholders were taking the guaranteed option. Equitable inform the regulators that they had received advice that they could not withdraw policyholders' rights to pay additional premiums, without giving adequate notice. Equitable say that they have drawn up a proposed scheme of compensation with an aggregate value of £200m for policyholders who have retired since 1994, which is currently being reviewed by an independent actuary and a Law Lord. This would negate any advantage to Equitable. Accordingly, Equitable were including an additional £550m in their reserves (£200m net of reinsurance). Equitable estimate that this might increase to £500m net of reinsurance and *'do not appear to believe that this issue was a serious concern therefore to the potential bidders'*.

GAD raise one *'technical issue'* arising for the 2000 returns. GAD point out that Equitable are applying a variant of the resilience test recommended by the Government Actuary in DAA14 (see 15/05/2000 [**entry 1**]). GAD say that Equitable could either *'present this publicly (which may give rise to some adverse comment) or seek a Section 68 Order (concerning valuation interest rates) which would allow them to apply the standard resilience test'*.

Equitable explain that cover for their required minimum margin was currently 2, but could fall to below 1 if the FTSE 100 Index fell by 10% to 5,750. Equitable confirm that there would not be any simple means to restore the margin of solvency and continue to write new business.

GAD conclude:

> *We believe that the society is covering its minimum capital requirement at present, but has very little room for manoeuvre in the event of even a modest fall in equity values ... With the recent cut in bonus rates ... new policyholders should not have to meet any* [of] *the cost of GARs, as indeed is likely to be their expectation. However, they will be joining a very weak fund.*
>
> *If the sale does not take place, then we shall almost certainly have to lean on them to stop writing new business, and they will very probably also need to rearrange their investment portfolio to a more defensive position. Otherwise, a full liquidation could be envisaged in the event of a substantial fall in equity values.*

FSA also prepare a note of the meeting. FSA note that Equitable were close to finalising a rectification scheme for GAR policyholders who had taken their benefits between January 1994 and 19 July 2000. FSA stress the need for FSA to be *'actively involved in the bidding process'*. Equitable confirm that bidders had received a report prepared by Equitable's actuarial consultants and full disclosure of all relevant materials *'so that a bidder could gain a thorough assessment of the valuation basis'*. FSA ask to see the report by Equitable's consultants and Equitable agree to obtain permission for it to be released. FSA note that Equitable no longer considered it viable to hedge the interest rate risk (see 11/08/2000 [**entry 1**]).

03/11/2000 [entry 2] FSA's Line Manager E passes the Head of Life Insurance a draft response to the complaints that Equitable's recent advertising had been misleading. The Line Manager suggests that there was not much to say, other than that Equitable are solvent and so can advertise, *'unless we thought we had grounds (and were intending) to use intervention powers to stop the firm writing new business'*. The draft response reads:

> *As regulator, the FSA does of course monitor the financial position of insurance companies carefully. However, we understand that Equitable continues to be solvent for Companies Act purposes and indeed continues to maintain the required margin of solvency over its liabilities as required under the Insurance Companies Act 1982. As the Equitable continues to be a going concern, complying with the relevant regulatory requirements, we do not share your view that it should be prevented from marketing its products, which could be damaging to the business. Nor do we believe that at a time when the statutory requirements continue to be met, and when there is a realistic chance of a successful sale of the business, that the newspaper advertisement inviting potential customers to request additional information from the company is misleading.*

In reply, the Head of Life Insurance replies that the response is right. The Head of Life Insurance agrees that this was an issue for FSA *'as it goes to solvency'*, but he copies the suggested response to PIA as it also concerned advertising. PIA comment in turn that they agreed that it *'is not reasonable (and probably illegal) to seek to suspend the legitimate marketing activity of the Equitable if it remains properly constituted and authorised'*. PIA add that, if they believed Equitable were in breach of their prudential requirements, this could affect the position.

03/11/2000 [entry 3] GAD send FSA's Head of Life Insurance the completed *'Solvency Cover'* section of their 1999 annual report on the life insurance industry. GAD list the companies with the strongest and weakest cover for their solvency margins. GAD also list the companies which have used implicit items.

03/11/2000 [entry 4] PIA write to FSA having considered what action, if any, they need to take to establish the population of clients sold contracts containing guaranteed annuity options by Equitable after April 1988 and to assess how they have been dealt with. PIA take the view that, in light of the House of Lords' ruling, guaranteed annuity rate policyholders were unlikely to have been disadvantaged in that they could exercise their options should they choose to do so. Accordingly, PIA did not propose to *'take this potential conduct of business issue any further'*.

06/11/2000 [entry 1] FSA and GAD meet a third prospective purchaser (Prospective Bidder C), their auditors and financial advisers. Both FSA and GAD prepare a note of the meeting. According to GAD's note, the meeting had been called to discuss detailed issues relating to Equitable's statutory solvency position and realistic financial strength. GAD note that they were generally unable to supply answers to the questions raised, since they had no authority from Equitable to divulge confidential information and would also have needed advance notice of the questions.

GAD's note also emphasised that: *'Those present (other than FSA/GAD) had also benefited from the contents of* [Equitable's actuarial consultants'] *Actuarial Appraisal of the Society (which FSA/GAD have not seen). This contains information about aggregate asset shares and embedded values, as well as possible additional information on statutory solvency, which is not otherwise in the public domain'*. GAD note that they had asked for a copy of this report at the meeting held on 03/11/2000 and that Equitable's Appointed Actuary had wished to consult his Board before releasing it.

The bidder asks about FSA's and GAD's view of various financial reinsurance instruments, suggesting that Equitable's agreement had some risks. GAD confirm that they had studied the agreement and did not object. FSA and GAD explain that they did not support arrangements *'which take advantage of regulatory arbitrage'*. The company's advisers point out that Equitable's reinsurance treaty fell into this category. They also express concern that the reassurer had the right to terminate the arrangement if Equitable became insolvent. GAD note that they were examining the treaty in this respect (see section 3 of GAD's scrutiny report on the 1999 returns, 24/11/2000).

The bidder expresses concern that Equitable's annual statements to policyholders, indicating terminal bonus values, had *'created a PRE expectation'*. GAD confirm that Equitable did need to meet PRE, but it was GAD's understanding *'that these statements were purely indicative and not guaranteed. That said we had not given these statements full legal scrutiny. It was, however, agreed that with-profit policyholders could only obtain the benefit of funds available'*.

GAD confirm that they currently have no evidence that Equitable's reserving for unitised with-profits was inadequate, but they would be unlikely to object if the company used a stronger valuation basis.

The bidder asks if the current section 68 Order for a subordinated loan could be continued. In response, GAD state that they could not see any reason why the company should not be able to maintain the loan. However, as the loan would become a liability of the shareholders' fund, the Order would not be suitable for carrying over to the reorganised group.

The bidder's auditors ask why, in the resilience scenario, Equitable effectively added 0.5% to the investment return. GAD, in their record of the meeting, note, by way of comment, that Equitable's returns state that, in the resilience scenario, 0.5% per annum of the benefit value is deducted as a charge for expenses. GAD add:

> *However, we do not know whether the deduction of ½% pa of the benefit value as a charge for expenses in the resilience scenario is in accordance with PRE. These are points we need to clarify with* [Equitable].

The company's auditors also ask *'whether the statutory valuation basis was sufficiently strong to cope with benefits being taken* [market value adjustment-free] *at a wide range of retirement dates (50-75).* [The auditors] *also thought that, in the resilience scenario, the Society assumed that benefits would be taken at age 55 rather than age 50'*. GAD explain that, whilst they were not entirely sure that the auditors were correct in these respects, GAD were unable to answer these questions at that time. In their note of the meeting, GAD comment that the returns provide no evidence of the assumption (as to what age benefits will be taken) being weakened in the resilience scenario. They also comment that it would be *'helpful to ask* [Equitable] *how* [the resilience reserve] *was calculated, to gain greater comfort that the reserving sufficiently reflects the Society's exposure to guaranteed benefits being available over a wide range of retirement dates'*.

06/11/2000 [entry 2] FSA's Managing Director A writes to the Director of Insurance, with a copy to the Head of Life Insurance. The Managing Director thanks the latter for his note on Equitable. The Managing Director refers to recent claims that policyholders had been misadvised about their options when choosing an annuity and asks if FSA needed to explore this. He says that the news on the impact of equity price changes was worrying and asks how far this would show up in the detail of the 2000 returns.

07/11/2000 [entry 1] FSA's Director of Insurance writes to Managing Director A in response to his note of 06/11/2000. The Director of Insurance states that he has been assured that the claims that Equitable misadvised policyholders about their annuity options were wrong. The Director of Insurance points out that the required solvency margin included the requirement to meet the resilience test. If Equitable just covered the margin once, with no significant excess cover, equating to a FTSE 100 Index level of 5,700, they would still be able to survive a 25% fall in equity markets. If no sale were achieved during this time, they would almost certainly have to close to new business. The Director states that *'all this will be pretty clear in the 2000 returns'* and that Equitable would not have the commercial credibility to go on writing new business in the longer term without the capital support to be achieved by a sale '[but] *... the market and the press already know this'*.

In response, the Managing Director comments that the protection of the resilience test would work better if there were a relatively slow fall in equity prices rather than a *'whirlwind'*. Managing Director A comments that the fact that much of Equitable's position would be evident from the 2000 returns would mean the market has to, or can, make decisions for itself.

The Director of Insurance comments in turn that an overnight drop of 35% in equity markets would be *'difficult'*. A steep but not overnight fall would also create problems if insurers needed to move from equities into gilts, of which there was already a shortage. The Director of Insurance notes that Equitable would need to move in this direction ahead of most of the market, which would help them.

07/11/2000 [entry 2] FSA's Director of Insurance provides the Head of Life Insurance with a copy of a paper produced for an informal seminar held on 01/11/2000 to discuss the implications of the House of Lords' judgment. The seminar had been attended by representatives of GAD and FSA, solicitors and Counsel.

The paper summarises the factual background to the judgment. It states that Equitable's 1994 bonus declaration (which would have been issued in March 1995) was the first to make a distinction between bonuses awarded to policyholders with GARs and bonuses awarded to those without. (Note: the paper incorrectly describes the intention of the Society's differential terminal bonus policy, which was to ensure that GAR policyholders received the same level of benefits whether they took an annuity at the guaranteed rate specified in their policy or elected to take an alternative option.) The paper quotes from the declaration:

> *Where benefits are taken in annuity form and the contract guarantees minimum rates for annuity purchase, the amount of final bonus payable is <u>reduced</u> by the amount, if any, necessary such that the annuity secured by applying the appropriate guaranteed rate to the cash fund value of the benefits, after that deduction, is equal to the annuity secured by applying the equivalent annuity rate in force at the time benefits are taken to the cash fund value of the benefits before such reduction.*

The paper states that it appeared that Equitable had not previously notified policyholders of this *'change'* to their practice.

08/11/2000 FSA's Line Manager E tells the Head of Insurance and Line Supervisor C that he understands that Equitable are no longer running their current advertising campaign (see 01/11/2000 [**entry 2**]). The Line Manager expresses the hope that the story would now go away.

09/11/2000 FSA attend a meeting of the Tripartite Standing Committee. FSA's Managing Director A informs the Committee that FSA are seeking advice on *'whether they could issue guidance to insurers on limiting the damage to the industry that could be caused by the House of Lords judgement ...'*.

10/11/2000 [entry 1] FSA's Chairman advises the Director of Insurance of a telephone call from Prospective Bidder C. The company had been very interested in acquiring Equitable, which they believed had an excellent brand name and market positioning, and would fit in well with their own existing operations. But:

> *... they had decided that they were now not prepared to go ahead. They had reached the view that the Equitable's financial position was considerably worse than they had first thought. The hole was significantly larger than they had expected. So, while they had not completely closed the door, they planned to tell the Equitable shortly that they did not wish to proceed ...*
>
> ... [they] *said* [their] *main motive in telling me this was to alert me to the fact that the Equitable's position might be rather more doubtful than we had been led to believe.*

10/11/2000 [entry 2] FSA's Director of Insurance provides an update to FSA's Firms and Markets Committee on guidance on the implications of the House of Lords' judgment.

13/11/2000 [entry 1] FSA's press office write to the Director of Insurance about press interest in the possible consequences of Equitable not being sold. The press office explain that the line taken was that *'a profitable run-off was the worst thing that* [could] *happen (based on current info etc) – ie no disaster in the making etc'*.

FSA's press office add that there had been several press articles criticising Equitable's advertising campaign which quoted their *'wondrous past'* without mentioning the more difficult present. The press office understand that FSA had spoken to Equitable and that they were withdrawing their campaign, *'which is obviously very helpful'*.

13/11/2000 [entry 2] FSA prepare a note about Equitable. FSA relate Equitable's current problems to their sale of with-profits GAR policies in the 1970s and 1980s. FSA explain that, during the 1990s:

> *... as a result of falling interest rates, the GARs began to exceed current annuity rates and GARs held real value. It also became apparent that the increased costs of reserving for these increased GAR benefits could add a significant financial burden on this mutual. As things stood it would also be the case that one set of members would be getting a larger slice of the assets of the mutual than another.*

FSA explain that, in these circumstances, Equitable had introduced their differential terminal bonus policy, which the House of Lords had now ruled against. FSA add that Equitable have possessed no estate and so were unable to absorb the costs of paying GAR policyholders *'unadulterated bonuses'*, as well as their GAR. As a result, Equitable put themselves up for sale.

FSA suggest that the cost to the industry as a whole of reserving for annuity guarantees, in the light of the ruling, was in the region of £10bn. FSA explain that they had issued guidance broadly requiring companies to reserve on the basis that virtually all policyholders would exercise their guaranteed option, if the guaranteed rate were higher than that available on the open market. FSA accept that, in practice:

> *... many policyholders will not fully exercise the GAO because it provides a form of annuity that is unattractive to them (eg because perhaps it only covers a single life, is not index linked, or is paid annually in arrears) and they usually take part of the benefits in the form of a tax free cash sum.*

FSA explain that they have surveyed companies on their assessment of the implications of the ruling (see 27/07/2000) and were considering producing some further guidance.

FSA acknowledge that the case has:

> *... added to concerns already raised about the lack of transparency of with profit policies. Typically a large amount of policy proceeds (as much as 60%) are determined by Directors and are not guaranteed.*

FSA explain that thought is now being given to re-designing this type of policy to make it more consumer friendly.

14/11/2000 [entry 1] FSA's Line Manager E writes to the Head of Life Insurance, copied to others, including officials in GAD. The Line Manager discusses in detail FSA's role in the bidding process for Equitable. He states that FSA should ensure best protection for policyholders in whichever of several scenarios develops. He notes that prospective purchasers had *'serious concerns'* about the *'seemingly unlimited exposure of Equitable to certain liabilities'*.

Line Manager E discusses possible options at the end of the process, including what might happen if no bid to purchase Equitable was made. The Line Manager suggests that FSA:

> *... would need to consider carefully whether we would wish to exercise any powers of intervention (if indeed the powers for us to do so exist in particular circumstances).*

The Line Manager concludes:

> *At this stage, there do not seem to be any grounds for considering action on the basis of insolvency since Equitable is able to meet its contractual obligations.*

The Line Manager adds that, if the position changes, it would be necessary to consider if it was best to leave the company *'self-standing'* or transfer the business to another, with support. However, these would be matters for the Policyholder Protection Board or, in due course, for the Financial Services Compensation Scheme.

14/11/2000 [entry 2] FSA explain to PIA that they have confirmed with Equitable that they are dropping the advertisements which had generated complaints (see 08/11/2000), although Equitable were not stopping advertising altogether. FSA say that they had told Equitable that FSA had taken a *'fairly robust line'* to people who had approached them, namely that Equitable were solvent and continuing to trade, and so it was not a matter for FSA to be concerned about. FSA conclude, however, that they hoped that any future campaign would recognise the sensitivities and be presented with more tact.

15/11/2000 [entry 1] FSA and GAD meet Prospective Bidder B to discuss their financing of the possible acquisition. The company raise queries about Equitable's future profits implicit item, their approach to reserving and their use of the old resilience test. The company ask if FSA/PIA anticipated any further issues with Equitable. FSA explain that they were looking at Equitable, and that this might or might not lead to conduct of business issues.

FSA provide Prospective Bidder C with some requested information following the meeting on 06/11/2000.

15/11/2000 [entry 2] FSA's Managing Director of Financial Supervision explains to the Director of Insurance that Prospective Bidder C have indicated that they do not consider it worth buying Equitable '*at any price. Even if all of any purchase price were paid in to help cover the present hole in Equitable's funds, there would be a great many disgruntled policyholders at the end of the day. This would make it impossible to continue selling to them or to new policyholders under the Equitable banner*'.

The Managing Director says that the company have also said that some of the Society's current policyholders were expecting a restoration of foregone bonuses and perhaps a demutualisation bonus, expectations it would be quite impossible to meet. The Managing Director says that the company had offered to take FSA through the actuarial assumptions they had made in their assessment of a purchase.

FSA's Chairman, in a manuscript addition to the note, states that he thinks it would be helpful to understand Prospective Bidder C's view. The Chairman comments that the prospects for a sale *'look dimmer by the day'* and that FSA needed to address their minds to what they should do if no buyer were forthcoming or one was, but only on terms which were difficult for FSA to accept.

16/11/2000 [entry 1] GAD's Directing Actuary B writes to FSA in response to Line Manager E's note of 14/11/2000 and the scenario that there were no bidders for the Society's business. The Directing Actuary comments that:

> *If all the potential bidders fall away for one reason or another, then the Equitable will be in a very difficult position. They have announced publicly that they believe they need to find a partner with capital if they are to continue as a viable organisation. It would be very difficult for them now to turn round and say "well actually we think we can still succeed on our own"...*
>
> *Moreover, from a regulatory perspective, we know that* [their] *financial position remains very close to the edge of not covering their margin of solvency, there are a number of uncertainties (eg in the viability of their financial reinsurance, and resilience to changes in financial markets – they are unable at present to satisfy one of the recommended resilience tests which they argue is quite strong and they point to a known anomaly in Regulation 69), and we would then also know that it would be difficult to arrange a "rescue" by another insurer in the event of technical insolvency arising.*

Directing Actuary B suggests that, in such a situation, FSA should require Equitable *'to commission an independent investigation of their viability to write new business'*. He explains that this would help to demonstrate to all concerned whether Equitable should, indeed, be allowed to continue writing new business.

16/11/2000 [entry 2] Equitable write to GAD to follow up the meeting on 03/11/2000. Equitable explain that:

> *The reserves held in form 52* [of the returns] *for contracts incorporating GAOs are 95.7% of the reserves that would be held if a 100% take up of GAOs were assumed. The reduced reserves are equivalent to assuming that 85% of benefits are taken up in GAO form. The justification for the 15% rate of 'non-take-up' is the attraction of cash commutation, the availability of more attractive form of annuity than permitted under the GAO, the desire of some clients to transfer to a personal pension to enable benefits to be taken before age 60 and, as at 31 December 1999, the fact that the Society's final bonus system reduced the attractiveness of the GAO.*

In response to FSA's request of 03/11/2000, Equitable provide GAD with copies of three reports prepared by their actuarial consultants for the purposes of a possible demutualisation and sale, which they understood was so that GAD can *'get an overall appreciation of the position as it would appear to a purchaser'*.

The first, dated 25 August 2000, is an actuarial appraisal of Equitable as at 31 December 1999. In their appraisal, Equitable's consultants explain that, for recurrent single premium contracts, it has been Equitable's policy since 1996 to rebate part of the administration charge to policyholders to reflect the low expenses of the office. The consultants state that this amount is added to the fund or given in the form of a premium discount.

Equitable's consultants also explain that, on certain non-contractual claims such as surrenders or switches, Equitable are currently applying a financial adjustment which reduces final bonus by 20%.

The second, dated 23 October 2000, sets out financial projections for Equitable, to illustrate the realistic and statutory financial strength of their business under different investment scenarios. Equitable's consultants note that, for with-profits recurrent single premium business, in the resilience valuation, *'0.5% pa of the benefit has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses'*. They state that the impact of removing the 0.5% deduction *'is to increase liabilities by £950m'*.

The third, dated 8 November 2000, sets out stochastic financial projections for Equitable. Equitable's consultants explain that their stochastic model shows:

> *... that in any one year the fund is solvent on a statutory basis in approximately 90-95% of scenarios. If the assumption is made that the Government Actuary would suspend the requirements to establish a resilience reserve after particularly adverse scenarios then in any one year the fund is solvent on a statutory basis in approximately 96-99% of scenarios.*
>
> *Assuming a resilience reserve is always required then on average 2½% of the scenarios generate new insolvencies in each of the next 20 years. At first sight this seems high but the results are consistent with previous published work which shows that the statutory solvency basis is very prudent and most well capitalised offices would fail this test in very adverse conditions. On further investigation we found that 40% of insolvencies lasted only 12 months or less. Excluding these short term insolvencies reduces the average annual rate of new insolvency to just under 1½%. Alternatively, assuming that the requirement for a resilience reserve is waived, the annual rate of new insolvency reduces to an average of less than 1.0%, or less than 0.5% excluding insolvencies of 12 months or less.*

Equitable's consultants also explain that GAR take-up rates vary *'according to how deep in the money the options are at the time of retirement'*. For the purposes of their modelling, they assume the following take-up rates:

0% if the GAR is "out of the money";

25% if the value of the GAR is between 100% and 125% of policy value;

50% if the value of the GAR is between 125% and 175% of policy value;

75% if the value of the GAR is between 175% and 200% of policy value;

100% if the value of the GAR is greater than 200% of policy value.

Equitable discuss in detail their approach *'to reserving in the conditions of the resilience test'*, as this was an issue that had arisen with prospective purchasers. They say that the recurrent single premium contract had never fitted the valuation regulations particularly well, as these were based on a net premium valuation of level premium contracts. As such, *'over the years, a certain amount of interpretation has been needed to determine minimum reserving requirements, particularly in resilience test conditions'*.

Equitable explain that, in particular, they have included *'an allowance for unrecouped acquisition costs, consistent with the spirit of regulation 68* [of ICR 1994], *which necessarily takes the form of a reduction in benefits'*. Directing Actuary B annotates the letter at this point with *'Zillmer'*.

Equitable explain that they had understood that this approach had been discussed with GAD when the Society's then Appointed Actuary had introduced the practice *'in the early 1990s'*. Equitable say that they cannot find specific correspondence on the matter, but note that the *'detailed discussion of the approach to resilience testing'* had been a major item on the agendas of the meetings held on 15/09/1992 and 30/11/1993. Equitable say that they described the approach in Schedule 4 of the returns from 1996 onwards, following the new regulations requiring greater disclosure about resilience testing. They confirm that the approach *'is only taken on contracts where future premiums are payable'*.

Equitable explain that, as their approach is *'non-standard'*, prospective purchasers were seeking explicit confirmation that GAD considered it reasonable. Equitable set out a number of technical justifications regarding what they have done and ask GAD to comment.

Finally, Equitable state that some prospective purchasers had queried if the future profits implicit item would be available to a new entity. Equitable point out the significance of the item to their statutory solvency position and state that any difficulty here would have a material impact on a prospective sale. They seek GAD's views.

FSA's Head of Life Insurance updates Managing Director A on the sale of Equitable. He explains that Prospective Bidder C have withdrawn, and that the first and second remain genuinely interested. However, each has reservations.

The Head of Life Insurance explains that Prospective Bidder A were primarily concerned about the open-ended nature of the guaranteed annuity liability, given that policyholders were entitled to the guaranteed rate on additional premiums. He explains that Prospective Bidder B had sought clarification of any ongoing regulatory action and of FSA's willingness to grant routine concessions to them as successor company, comparable to those granted to Equitable. The Head of Life Insurance notes that Prospective Bidder B *'gave no indications of particular issues that would be critical to their decision to go ahead'*. He says *'they appeared fairly determined'* and discussions had focused on matters which might affect the price and whether proposals would be acceptable to FSA.

16/11/2000 [entry 3]	FSA's Managing Director A presents his Monthly Report to FSA's Board. He reports that the due diligence process has revealed concerns about how far any liability for guarantees could be capped, since the guarantees appeared also to apply to some future premiums. The Managing Director adds that FSA were exploring with Equitable the implications of this for the sale prospects and for the expectations of future policyholders. The Managing Director also reported that the informal seminar, held on 01/11/2000, had reached a *'general consensus'* that the House of Lords' judgment should be interpreted narrowly and that FSA are reviewing the guidance that it might be possible to give to the industry, with emphasis on the process companies should follow to determine how that judgment affected them.
17/11/2000 [entry 1]	FSA's Managing Director A writes to the Head of Life Insurance in response to his note of 16/11/2000. The Managing Director comments that the bid from Prospective Bidder A *'looks fraught with difficulty for us'*. The Managing Director says the bid from Prospective Bidder B looks more promising, although he did not understand how they *'make the sums add up'*.
17/11/2000 [entry 2]	FSA write to PIA to seek a view on Prospective Bidder A's concern regarding the entitlement of GAR policyholders to pay additional premiums which attract the guaranteed rate. FSA note that, due to the relationship between the profile of many GAR policyholders and the structure of tax legislation, this was an attractive option for many. It is expected to have the effect of shifting the GAR liability *'significantly upwards'*. FSA explain that, as things stand, these additional costs would have to be met from any additional premiums of non-GAR policyholders (about 80% of Equitable's clients) who would, in effect, be subsidising the GAR policyholders. FSA explain that Prospective Bidder A had asked if FSA would take the view that, in those circumstances, this amounted to mis-selling to non-GAR policyholders.
17/11/2000 [entry 3]	FSA advise Prospective Bidder B's representatives that FSA would be prepared to consider granting them a section 68 Order for a future profits implicit item, subject to any request being considered on a case by case basis and being referred to HMT for a decision (but see 12/09/2000).
20/11/2000 [entry 1]	FSA's Line Manager E writes to the Head of Life Insurance following the letter of 17/11/2000 to Prospective Bidder B. The Line Manager suggests that FSA need to be clearer on the issue of future profits implicit items. The Line Manager asks whether FSA ever recommended to HMT that they should not grant a section 68 Order, and for comments on when an Order could be transferred to a successor company. The Line Manager copies his note to other officials. In response, Legal Adviser A explains that he was not aware that FSA have ever refused to grant an Order, although there have been disagreements as to the figure. The Head of Life Insurance also responds with his preliminary view that FSA have as a matter of practice tended to grant section 68 Orders for implicit items, provided the terms of the regulations are met as regards the calculation.
20/11/2000 [entry 2]	PIA write to FSA in response to their note of 17/11/2000. PIA emphasise that *'we are in very difficult territory (Chinese walls and all that)'*. PIA say that the minimum reasonable expectation of existing policyholders from new sales would be asset share. If asset share could not be promised, then the warning that a buyer could get back less must be disclosed; this could make it impossible to sell top ups to non-GAR policyholders. PIA conclude: *'In other words, if it is that bad, "the closed fund" option may be the only option'*.
20/11/2000[entry 3]	Prospective Bidder B's representatives write to FSA to clarify details of how they proposed to deal with the issue of goodwill.

21/11/2000 [entry 1]	FSA's Head of Life Insurance advises his Chairman on whether Prospective Bidder A could use a deadline for bids to put pressure on FSA to reach agreement over one outstanding aspect of the sale. The Head of Life Insurance explains that the current deadline for bids is 27 November 2000, but that this had slipped once and might slip again. The Head of Life Insurance does not consider that Prospective Bidder A could reasonably expect agreement by the deadline. However, he warns that the bidder might present FSA as frustrating the prospect of a satisfactory solution for Equitable's policyholders.
21/11/2000 [entry 2]	GAD's Directing Actuary B suggests to Scrutinising Actuary F that he should ask Equitable if they had considered how they could meet test 2 of the recommended resilience scenarios.
21/11/2000 [entry 3]	GAD and FSA comment on Prospective Bidder B's proposals for dealing with the issue of goodwill.
21/11/2000 [entry 4]	GAD advise FSA that, in their view, it would be possible for a section 68 Order to be granted to a successor company.
22/11/2000 [entry 1]	Equitable provide FSA with an update on their solvency position. The estimated solvency position at 31 October 2000 is disclosed as being:

		£m
Value of non-linked assets		*30,150*
Future profits implicit item		*1,000*
		31,150
Mathematical reserves		
- Basic (including GAR)	*26,885*	
- resilience	*1,970*	
		28,855
		2,295
Required minimum margin		*1,215*
Excess assets		*1,080*

22/11/2000 [entry 2] FSA and GAD meet Prospective Bidder A.

The bidder queries FSA's views on reserving. GAD confirm that there should be a full reserve based on what policyholders are guaranteed. FSA explain that agreeing to any flexibility on reserving could be a problem, in that it could set a precedent. The bidder expresses concern that the assumed 95% take-up rate of GARs was excessively conservative. FSA point out that solvency must be calculated on a statutory, not realistic, basis.

The bidder seek more information about Equitable's compliance issues. They explain that their main concern is *'reputational damage from past wrong doing by a predecessor firm'*.

FSA's Line Manager E writes to the Director of Insurance and other officials, including at GAD. The Line Manager considers the extent to which FSA's powers to discipline and obtain redress for consumers in respect of potential past mis-selling by Equitable would survive a sale.

The Line Manager writes again to the officials. The Line Manager notes that, if a successor company had unlimited ability to scale back the benefits under GAR policies, this would mean that insolvency was always avoided and thus that there was never a trigger for compensation arrangements to kick in. This could potentially put policyholders in a worse position than if the transfer to the new company did not go ahead. Line Manager E considers two ways in which FSA might be able to accept the proposal, in spite of the problem he identifies.

22/11/2000 [entry 3] FSA's Chairman's Committee meet to discuss the guidance on the House of Lords' ruling. The Committee decide to undertake six actions:

> a) [FSA] *to draw up a statement withdrawing the previous guidance and saying that companies should reach their own view on the acceptability of their past and future practice.*
>
> b) [FSA] *to draft a statement of the criteria that supervisors would use in assessing the acceptability of firms' actions that might be issued alongside this statement.*
>
> c) [FSA] *to set down the sorts of supervisory judgements that would have to be made in relation to interpretation of the judgement in order to inform* [the Chairman's Committee's] *decision making on the issue.*
>
> d) [FSA] *to review the current version of the guidance and to make an assessment of the risk of each element being contradicted by the courts.*
>
> e) [FSA] *to bring the current version of the guidance (once assessed as described in (d)) and the draft statements to be prepared under (a) and (b) back to* [the Chairman's Committee] *for discussion.*
>
> f) [FSA] *to consult Counsel on his view of what were the reasonable courses of action available to FSA or related questions about the risks of FSA pursuing particular courses of action.*

23/11/2000 [entry 1] GAD write to Equitable in response to their letter of 16/11/2000. GAD explain that, as well as developing some of the topics under discussion, they were raising some points from the 1999 returns.

GAD raise a number of issues including:

<u>Reserving for annuity guarantees</u> – GAD ask Equitable to explain how their assumption of an 85% take-up rate for annuity guarantees was consistent with the Government Actuary's guidance contained in DAA13 (see 22/12/1999 [**entry 2**]). They ask Equitable to explain their approach to assessing the annuity guarantee liability on future premiums and to justify their use of a 20% decrement in the statutory valuation.

<u>Accumulating with-profits business</u> – GAD ask Equitable to explain why they have assumed in the 1999 returns that personal pension contracts would be taken at age 55, rather than age 60, as assumed in the 1998 returns. They seek confirmation of Equitable's guarantees for personal pension contracts and the extent to which policyholders could take benefits at any time between 50 and 75, without Equitable applying a market value adjustment.

<u>Resilience</u> – GAD seek clarification of Equitable's approach to resilience and the impact of applying a particular approach to the new resilience test 2.

<u>Zillmer adjustments</u> – GAD refer to Equitable's statement in their 1999 returns that for the resilience test for accumulating with-profits pensions business, *'½% pa of the benefit value has been deducted for each year up to the date it is assumed that the benefits will be taken as a charge for expenses'*. GAD explain that:

> *At first sight this seems to be an additional allowance for renewal expenses, but it now appears to be a Zillmer adjustment in respect of unrecouped acquisition costs.*

GAD seek clarification of Equitable's approach and ask in particular:

> *... which margins (not already anticipated or required by the valuation regulations) are available from future premiums or elsewhere to provide the ½% pa allowance? We note from* [the report provided by Equitable's actuarial consultants on 25/08/2000 and passed to GAD on 16/11/2000] *that part of the administration charge on this business is already being rebated to policyholders.*

GAD query if Equitable's approach is consistent with PRE.

Finally, GAD say that they have asked FSA to respond directly to Equitable's query about the availability of a future profits implicit item to a new entity.

23/11/2000 [entry 2] GAD speak to the consulting actuary who complained about Equitable's advertising (01/11/2000). GAD explain that they could not comment on any advice they provided, and that, in any event, they do not advise PIA.

23/11/2000 [entry 3] FSA's Director of Insurance writes to Managing Director A about the latest position on Prospective Bidder A's bid.

The Director explains that, in addition to two specific outstanding issues, the company had concerns about the *'ongoing Enforcement case with the Equitable concerning income drawdown'*. He notes that the company saw this as a *'potential showstopper'* because of the possible damage to their reputation and the cost of changes to compliance arrangements. The Director says that FSA have made clear to the company that they could not discuss the affairs of another company. He suggests a meeting between FSA and PIA to ensure there is a clear understanding of all the issues involved.

23/11/2000 [entry 4] FSA's Director of Insurance advises the Head of Life Insurance of a telephone call from Equitable updating him on the progress towards a sale.

The Director of Insurance notes that Equitable see Prospective Bidder A as very keen and the leading contender, notwithstanding a number of outstanding issues. He explains that Equitable:

> *... expressed some concern that regulatory considerations might make it difficult for* [Prospective Bidder A] *to put forward a firm bid very quickly. I said we were naturally very seized of the need for urgency given the obvious fact that the goodwill in Equitable was effectively a wasting asset but that we could not guarantee to resolve all outstanding problems overnight.*

23/11/2000 [entry 5] FSA's Line Manager E says, following further exchanges in response to his note of 20/11/2000, that he was growing in confidence that HMT could, legally, grant a section 68 Order to a successor company.

23/11/2000 [entry 6] A PIA manager copies a note to FSA's Line Supervisor C, in which the manager explains that PIA would be writing to Equitable to ask if there were other policyholders who had similar claims (he doubts that there would be many). The PIA manager adds:

> *Other* [Equitable] *issues that we have our eyes on ...*
>
> *1) GAO ruling impact*
> *2) GAO selection of annuity type review*
> *3)* [Pension fund withdrawal] *disciplinary action*
> *4) PIA report Aug 2000 response*
> *5) Advertising issues re past performance and poor present.*

2000

24/11/2000 [entry 1] **GAD provide FSA with their detailed scrutiny report on the Society's 1999 regulatory returns**. (A copy of this scrutiny report is reproduced in full within Part 4 of this report.) The report uses a detailed format similar to that adopted for the 1993, 1994, 1995, 1996 and 1997/1998 returns (see 15/11/1994 [**entry 1**], 23/01/1996 [**entry 1**], 01/11/1996 [**entry 1**], 16/12/1997 and 20/05/1999).

In the heading to the report, GAD state that Equitable's priority rating is 2. FSA's copy of the report contains an annotation against this statement: *'Surely 1!'*.

The body of the report comprises 15 sections as follows:

(1) Key features
GAD set out some key statistics for both 1998 and 1999, including:

- Equitable had available assets of £2.5bn in 1998 and £3.9bn in 1999;
- they used an implicit item of £850m in 1998 and £925m in 1999; and
- they had a subordinated loan of £346m.

GAD set out Equitable's required minimum margin. They note that the last visit to Equitable had been in December 1999.

(2) Action points
GAD explain that there were no direct action points for FSA arising from the scrutiny, but that they have written to Equitable *'to raise a number of questions as a result of the scrutiny and other recent discussions'*. GAD attach a copy of their letter of 23/11/2000.

(3) Executive summary
GAD summarise the background to the Court case and its outcome. They explain that, following the ruling, Equitable had had to reduce the level of benefits to all policyholders and make substantial changes to their investment policy (switching from equities to fixed interest securities). GAD note that Equitable had concluded that members' interests would best be served by selling the business, and that there were three companies expected to make final bids. They say that, at the meeting on 03/11/2000, Equitable had explained that, if a sale did not take place, they would stop writing new business and rearrange their investment portfolio to a *'more defensive position'*.

GAD set out five risks to which Equitable are exposed:

Capital risk – GAD note that Equitable's cover for the required minimum margin is 3.46. However, the available assets included the future profits implicit item, disregarded the liability to repay the subordinated loan, and benefited from a reduction of almost £1.1bn in the reserves as a result of the reinsurance arrangement. Without these items, Equitable's cover falls to 1.36 – *'a less satisfactory picture for this large fund'*.

GAD note that Equitable's aggregate asset shares were close to the value of the fund, as they had no estate. As a result, *'lower free asset margins exist than might have been expected for such an institution'*.

Reserve risk – GAD note that it is unclear if Equitable's reserves provided fully for the flexibility of their policies; that they appeared to be using a zillmer adjustment; and that the 2000 Regulations were likely to lead to increased reserves. GAD explain that they have pursued these points with Equitable (see 23/11/2000 [**entry 1**]).

GAD explain that the reinsurance treaty provided Equitable with protection *'should more than 60% (formerly 25%) of the benefits in any calendar year on the contracts which incorporate guaranteed annuity options be taken in guaranteed form. This is not wholly satisfactory from*

2000

a regulatory perspective, as it relies on regulatory arbitrage to achieve the desired result, and would not be available in the event of insolvency. It removes over £1bn. of liabilities from Equitable's balance sheet'.

GAD state that Equitable assumed that 85% of benefits were taken in guaranteed form and that this was *'a weaker assumption than that specified in the guidance ...'*.

Asset risk – GAD note that Equitable are exposed to falls in the equity market and that they would be unable to cover their required minimum margin if the FTSE 100 Index fell to around 5,750.

Strategy risk – GAD note that, without capital support, Equitable would be unable to reinstate the seven months' bonus foregone in 2000 (see 26/07/2000 [**entry 2**]). They state:

> *There are PRE issues here for both GAR and non-GAR policyholders. Indeed, the related question of whether the Society should be continuing to sell non-GAR policies in the same fund as that where the GAR policies reside could be considered to be an environment risk.*

Control risk – GAD state their understanding that PIA are considering enforcement action over the sale of income drawdown policies.

(Note: this was the first time that GAD had used risk assessment as part of their scrutiny.)

(4) Background
GAD reiterate information included in the Background section of their reports on the 1993, 1994, 1995, 1996 and 1997/1998 returns, namely that Equitable are the oldest mutual life assurance society in the world, and that they never pay commission to third parties. As in their report on the 1997/1998 returns, GAD explain:

> *This background is typified by a determination to provide fair bonuses to policyholders, with no deliberate holding back of profits from one generation to another, by unit linked products which often have discretionary surrender values, and by using a gross premium bonus reserve valuation method. (However, the returns also show the results of a net premium valuation on a minimum basis – and the free asset position shown is identical.)*

GAD repeat that Equitable gained a controlling interest in Permanent Insurance in June 1997.

GAD reiterate that Equitable have increased their overseas activity in recent years (in the Republic of Ireland, Germany and Guernsey) and that these branches were producing increasing amounts of new business; they note, however, that Equitable had expressed dissatisfaction with the cost effectiveness of the German branch. GAD note again that, since August 1998, Equitable had provided insurance in Greece. GAD state, as in their reports on the 1993, 1994, 1995, 1996 and 1997/1998 returns, that Equitable regard overseas activity as *'missionary work'*.

GAD note that Equitable have provided systems support to other companies. They provide details of Equitable's subordinated loan.

GAD provide details of the four section 68 Orders in force at the end of 1997:

- to allow Equitable to use a future profits implicit item not exceeding £700m (see 14/10/1997);
- to allow Equitable to exclude recurrent single premium figures from the *'annual premium'* figures in the returns (see 13/06/1997);
- to allow Equitable to aggregate the details of their total personalised funds (see 31/01/1997); and
- to allow Equitable to make use of the subordinated loan (see 20/08/1997).

GAD note that Equitable had obtained new future profits implicit items in 1998 and 1999 (see 30/12/1998 and 09/11/1999), using £850m and £925m of these amounts respectively.

GAD again report that, following the Chief Executive and Appointed Actuary's retirement on 31 July 1997, those positions are now held by different employees. GAD say that a non-executive director chairs the Board.

Business developments during the year

(5) New business
GAD set out the new products Equitable have developed and the sources of their business. They explain again that Equitable target *'high net worth individuals'*. GAD explain that they have corresponded with Equitable about their income drawdown policies (see 07/09/1999, 06/12/1999, 10/03/2000, 20/03/2000 and 22/03/2000). GAD state that they accept Equitable's explanation for the cuts in the maximum income that could be withdrawn, but note again that PIA were now considering enforcement action.

GAD explain that with-profits annuities issued since 1 July 1996 were subject to a maximum permitted rate of decrease of 8.5% and that the actual maximum at 31 December 1999 was 5.5%, up from 5.0% at 31 December 1998.

GAD produce tables showing recent history of new regular premiums and new single premiums and a new business index. GAD note that, in 1997, Equitable were reported as the largest writer of pensions business in the UK.

(6) Changes in business in force
GAD produce a table showing *'Recent history of regular premiums received'*. GAD note the section 68 Order granted on 13/06/1997 permitted Equitable to exclude recurrent single premiums from the annual premium figures. They explain that, in their 1999 returns, Equitable have stated:

> *... that most policyholders take advantage of the flexibility under recurrent single premium contracts to change/cease the level of premium, and consequently there is no precisely identifiable annual premium on these contracts.* [In the returns] *the annual premiums now include recurrent single premiums to the extent that they are not specifically identified as single premiums. Annual premiums brought forward from 1998 have been restated accordingly.*

GAD produce tables showing: *'Claims experience'*; *'Persistency experience'*; and *'Recent history of combined surrender, lapse & paid-up conversion rates'*.

GAD note that, although pensions is the major class of Equitable's business, persistency data is not available, due to the flexible nature of the contracts written.

GAD reiterate their comment in their report on the 1997/1998 returns: *'These are excellent results, reflecting the fact that business is largely bought rather than sold!'*.

(7) Expenses
GAD produce a table showing the history of expenses from 1995 to 1999. They comment that Equitable's reported expense ratios have again reached *'astonishingly low levels'* and are the lowest in the industry. GAD repeat that Equitable's low expense ratio is a positive marketing image which helped to explain the strong sales figures and was thus *'part of a virtuous circle'*.

GAD again note, as an exceptional item, that Equitable claim to have invested some £70m in redeveloping all their operating systems over recent years.

Situation at year end

(8) Non-linked assets
GAD produce tables showing Equitable's: *'Recent history of asset mix'*; *'Recent history of asset mix attributable to UK with-profits business (%)'* (taken from Equitable's 1999 With-Profits Guide); *'Movement in asset values during the year'*; and *'Investment performance in 1998'*.

The latter shows a return of 14.0%. GAD comment:

> *The achieved rate of return of 14.0% over 1999 is encouraging — exceeding an expected return for the year of 12.8%. This follows achieved returns of 13.8% in 1998 and 19.1% in 1997.*

(9) Assets held to match linked liabilities
GAD provide details of internal linked funds, other assets matching property-linked liabilities, mismatching to property-linked liabilities, assets matching index-linked liabilities and policyholders' reasonable expectations (issues on linked funds). On the latter, GAD note:

> *Where a fund invests in an Equitable Unit Trust, the annual management charge is reduced by ½%, and charges are also adjusted where a fund invests in units of another fund to ensure that only one levy is made.*

GAD observe no particular problems.

(10) Valuation basis
Overall strength – GAD explain that Equitable produce their published returns:

> *... on the basis of a gross premium valuation for non linked business, with some modest allowance for future bonuses, but the resilience reserve included is determined such that the total liability is identical with the results of a net premium valuation — that is shown as an Appendix to the Returns, and is largely the basis on which the strength of the reserves is monitored by GAD.*

GAD explain that they have a number of concerns about Equitable's reserving bases, as set out in the Executive summary (see (3) above).

Accumulating with-profits business – GAD explain that reserves for this business are substantial. They dispute a recent report that the industry would need to increase reserves on this business by 10% as a result of the Insurance Companies (Amendment) Regulations 2000. GAD say that, on 03/11/2000, Equitable had explained that the Regulations would lead to an increase in reserves of £300m (less than 2.0%). They note that Equitable consider that the flexibility offered by revisions to GN8 and their *'inherent facility to apply market/policy value adjusters'* give them *'the valuation "freedom" they need'*. GAD explain that, nevertheless, they have asked Equitable *'to confirm the position'* (see 23/11/2000 [**entry 1**]).

GAD explain that many of Equitable's pensions contracts contained a guaranteed rate of accumulation of 3.5%, and that this business *'is in general valued at 4% in the NPV, which results in only modest discounting, and valuation reserves of the order of 95% of face value'*. GAD state that they are asking Equitable to explain why age 55 had been assumed for personal pensions business (see 23/11/2000 [**entry 1**]).

Interest – GAD produce a table showing the interest rates used in the net premium valuation for major classes. GAD explain that the rates are unchanged from 1998, although annuities have been valued at higher rates in response to the higher yields available from fixed interest securities.

GAD state:

> *In the case of accumulating with profits business ... a significant proportion of the backing assets are equities, and this contributes to our concern regarding whether the reserves are adequate to provide fully for the flexibility policyholders have to take benefits at a range of ages, as raised in our letter to* [Equitable].

Mortality – GAD explain that the bases used are reasonably conservative. They note that life annuities have been valued on 'a rather weak basis', although *'the Appointed Actuary states in his report that the mortality tables contain sufficient allowance for future reductions in rates of mortality'*. However, GAD state that, as the liabilities for this class are fairly minor, they would not pursue the point with Equitable at this time.

GAD note that the mortality assumptions for pension annuities and annuity guarantees look *'satisfactory'*.

Expenses – GAD state that the total provisions seemed to be more than adequate, and note the Appointed Actuary's contention that no additional provisions were needed to cover the continued sale of new business or to cover closure. GAD state that they *'see no reason to question his conclusions'*.

Mismatching & Resilience – GAD explain:

> *A resilience reserve requirement under the net premium valuation method is reported as £2,142m in 1999 (£1,236m in 1998). For the gross premium bonus reserve (GPBR) valuation a resilience reserve in 1999 is shown of £1,350m (£600m in 1998). The modified resilience reserve figures shown in the published GPBR valuation are designed to ensure that the amount of free assets disclosed is the same as would be shown by the Net Premium Valuation!*
>
> *It may be noted that the most adverse scenario at the end of 1999 involved a 3% rise in fixed interest yields with a 25% fall in equity values, whereas at end 1998 it had been the combination of a reduction of 10% in fixed interest yields combined with a 25% fall in equity values.*

GAD state that they presume that the *'GPBR resilience reserve is included in the Actuary's certificate provision ...'*.

GAD note that Equitable have used the old resilience test 2 in their demonstrations to FSA of their solvency position following the House of Lords' ruling. GAD explain that Equitable were considering whether to justify this formally *'which may give rise to some adverse comment'* or to seek a section 68 Order to enable them to adopt a *'"synthetic bond"* [a financial instrument whose combined features are comparable to a bond] *concept'*. GAD explain that a number of other companies did this already. However, were Equitable to choose this option:

> *... we would expect them to adopt a common approach in both the base and resilience scenarios, and to be consistent in approach as between one valuation and the next (ie not "picking and choosing" according to which method was the more favourable at the time).*

GAD note that they have asked Equitable for an update on this issue.

GAD also note that Equitable appear to be using a zillmer adjustment, and that they are querying this also (see 23/11/2000 [**entry 1**]).

Other factors – GAD note that Equitable have included a reserve of £132m for pensions mis-selling. They state that Equitable established a capital gains tax reserve of £100m at the end of 1998, increased to £150m at the end of 1999, reducing to £53m in the most onerous resilience scenario.

Options and guarantees – GAD summarise Equitable's approach to reserving for annuity guarantees. They explain that, in their 1998 returns, Equitable assumed a take-up rate of guaranteed annuities of between 70% and 82.5%, which they sought to justify in their letter of 25/06/1999. GAD say that Equitable have not repeated these percentages in their 1999 returns but have explained that *'the combined effect of the allowances made is that of those policies which survive to retirement date the gross reserves are reduced by less than 5%.'*

GAD explain that Equitable have said separately that the underlying assumption is that 85% of benefits would be taken in guaranteed form. As this is '*weaker than the guidance'* of 22/12/1999, GAD have raised this issue in their letter of 23/11/2000.

GAD provide details of Equitable's reinsurance treaty in its original form and as renegotiated after the House of Lords' ruling. They explain that, in the 1999 valuation, this treaty had reduced the liability in the net premium valuation from £1,630m to £551m, and the liability in the bonus reserve valuation from £1,663m to £565m.

GAD note that, in assessing the reserve needed in respect of benefits bought by future premiums, Equitable assume that the premiums reduce by 20% per annum. GAD comment that this *'does not appear to be prudent'* and that they have queried it in their letter of 23/11/2000.

GAD note that the cost of the rectification scheme for policyholders who have retired since 1994 could be up to £200m, and that currently about 44% of retiring policyholders were exercising the GAR.

(11) Financial results
GAD provide an overview. They note that Equitable's cover for their required minimum margin is 3.46 and that, at first sight, this *'looks reasonable'*. However, for the reasons set out in the Executive summary (see (3) above), the picture was less satisfactory.

GAD state that, at the meeting on 03/11/2000, Equitable confirmed that *'aggregate asset shares are close to the value of the fund (ie there is no "estate")'*. GAD explain that, because of this:

> *The £1.5 bn "saved" from the cut in roll-up rates on* [unitised with-profits] *business since the* [House of Lords] *judgement has been re-allocated to finance future GAO support and the likely costs of the rectification scheme.*

GAD note that Equitable's solvency matrix provided on 09/10/2000 showed that the Society would be unable to cover its required minimum margin if the FTSE 100 Index fell by 15% from its end August levels. GAD note that, at the meeting on 03/11/2000, Equitable had said that they had little alternative to a sale if they were to remain open to new business.

Under *'Summary of results for main classes'*, GAD produce three tables, showing liabilities for non-linked and linked business and a valuation summary, for the years 1995 to 1999. The valuation summary shows, under the bonus reserve valuation, that Equitable's cover for the required minimum margin in 1999 is 3.46 (compared with 2.51 in 1997 and 1998). There is no figure for cover under the net premium valuation. The table shows Equitable's free asset ratio rose from 2.36% in 1998 to 5.50% in 1999. (The figure for Equitable's free asset ratio in 1998 was incorrectly reported in GAD's scrutiny report on the 1997/1998 returns – see 20/05/1999.)

GAD comment:

> *Although the Net Premium Valuation showed a lower non-linked liability of £23,057m (£761m less than in the* [bonus reserve valuation]*) and a lower reserve for declared bonuses of £392m (£31m less than in the* [bonus reserve valuation]*), it was shown to require a resilience reserve £792m higher than the* [gross premium bonus reserve] *valuation. Thus, as intended, the total of Long Term liabilities ... for the* [net premium valuation] *is identical with the result shown above.*

GAD produce a further table showing composition and distribution of surplus. They make no comments on this.

(12) Bonuses
GAD produce tables showing the cost of bonuses declared and the recent history of key bonus rates. They reiterate that Equitable's:

> *... method of annual bonus declarations for unitised type contracts is unusual. As well as a declared guaranteed annual bonus, based on a proportion of accrued income and capital appreciation, a further annual bonus is quoted, which is not guaranteed (in that it may be withdrawn and/or reduced in future), but which makes up the total quoted accrued policy value at the valuation date. This non-guaranteed final bonus is declared in a similar way to reversionary bonuses, as a percentage of benefit, and the amount payable at maturity is the sum of these total annual "declarations", subject to the proviso that the final non-guaranteed bonus can be withdrawn.*

GAD reproduce Equitable's table from their 1999 With-Profits Guide showing gross investment returns at market value and the rate allocated in fixing bonuses, updated to include 1999:

	1995	*1996*	*1997*	*1998*	***1999***
Earned	*16.6%*	*10.7%*	*17.2%*	*13.3%*	***16.0%****
Allocated	*10.0%*	*10.0%*	*13.0%*	*10.0%*	***12.0%****
Guaranteed	*7.5%*	*7.5%*	*6.5%*	*5.0%*	***5.0%****

'taken from [Equitable's] *1999 Annual Report'*

GAD produce tables showing final bonuses for traditional life contracts and deferred annuities, according to duration of the contract.

Under *'PRE (issues on with-profit business)'*, GAD reiterate that Equitable:

> *... reserves the right to penalise early surrenders, even in relation to guaranteed bonuses added under unitised contracts, and it might be desirable for this possibility to receive greater prominence in the literature distributed. Further, with such a large proportion of unitised business and with the level of guaranteed bonuses declared taking account of some asset appreciation, it would seem to be desirable that policyholders were given some greater warning about the possible implications for future bonuses of a substantial market setback.*

(Note: this same point was made in the scrutiny reports on the 1996 and 1997/1998 returns – see 16/12/1997 and 20/05/1999.)

GAD note that *'unfortunately'* the House of Lords had ruled conclusively against Equitable's practice of reducing terminal bonuses to meet the cost of guaranteed options, with the consequences set out in the Executive summary (see (3) above). GAD note that the reinstatement of the bonuses foregone in the first seven months of 2000 depended on Equitable being able to find a buyer.

Under *'Recent history of maturity payouts'*, GAD produce a table of Equitable's payouts from 1995 to 1999, set against the industry average. GAD comment:

> *It is clear that, while Equitable strives to be fair to all its policyholders, and pays more generous surrender values than most other offices, its maturity payouts fall well short of the best in the market, particularly for conventional life contracts.*

(13) Reassurance and financing
GAD reiterate that Equitable made little use of traditional reassurance *'other than for very large sums assured (retention being £400,000 for UK life risks and DM250,000 for German risks), and for supplementary disability and accident risks'*.

GAD reiterate details of the reinsurance treaty entered into to cover costs arising from the exercise of annuity guarantees and note that this allowed Equitable to reduce the reserves they held for these policies.

(14) Compliance
GAD state that they have observed no problems.

Under *'PIA and other compliance problems'* GAD note that a reserve of £132m had been included for pension mis-selling, increased from £70m at the end of 1998.

(15) Professional requirements
GAD certify that their report conforms to the requirements of the Institute and Faculty of Actuaries, as set out in their Memorandum of Professional Conduct and Advice on Professional Conduct. GAD also certify that the report has been prepared in accordance with the Service Level Agreement between HMT and GAD, reached in November 1998, as that had been continued between FSA and GAD following an exchange of letters in December 1998.

GAD's scrutiny report runs to 28 pages.

24/11/2000 [entry 2] Legal representatives of Prospective Bidder A write to FSA following the meeting on 22/11/2000. The representatives provide further details of how they intend to approach the reserving issue.

24/11/2000 [entry 3] FSA's Firms and Markets Committee discuss the progress of Equitable's sale which was *'becoming increasingly complex'*. The Committee also note that Equitable were to meet PIA on 27/11/2000 to discuss the Enforcement Department's findings in respect of the sale of income drawdown policies.

27/11/2000 [entry 1] FSA write to Equitable in reply to their letter of 16/11/2000 to GAD. FSA explain that, in their view, it was likely that they would be able to grant a section 68 Order to allow a successor company to take advantage of an implicit item relating to the transferred business. FSA say that the power to make an Order was discretionary, and each case was considered on its merits, but generally Orders had been granted where the relevant requirements had been met. FSA add:

> *... at this stage, I cannot see that we would wish to apply different substantive tests when considering an application from a successor company for a section 68 order in relation to an implicit item for future profits, or that the Treasury would object to our recommendation.*

27/11/2000 [entry 2] An FSA official advises the Director of Insurance of a further meeting with Prospective Bidder A to discuss marketing issues arising from their proposals. The official says that he considered the meeting to have been productive. The official notes, in summary, that, in PIA marketing terms, the company's proposals were workable but would require some 'rule waivers' to deal with an interim situation before the company and Equitable were fully merged. These would need to be approved by the PIA Board. The official notes that the company will now make a case for the waivers, and that a decision by the PIA Board not to approve them would be a *'potential show stopper'*.

27/11/2000 [entry 3] Equitable meet PIA to discuss the position on income drawdown policies. FSA's Line Manager E sits in on the meeting. The Line Manager writes to FSA's Head of Life Insurance to set out what happens. The Line Manager explains that, prior to the meeting, he spoke to PIA's Enforcement Department:

> *... to alert them to our concerns 1. that regulatory action, and in particular punitive fines, would be detrimental to the interests of policyholders, and 2. the potential for regulatory action to disrupt – or even destroy – the sales process. The points were taken but they seemed uncomfortable with the idea that they should take such factors into account.*

The Line Manager says that, at the meeting, there was discussion about whether or not Equitable's representatives fully assessed investors' attitude to risk before recommending an income drawdown policy. Equitable claim they did; the Line Manager considers that the evidence to support this was weak.

The Line Manager explains that for the future, PIA were looking to Equitable to modify their procedures, which they were willing to do. He says PIA were also seeking a review of existing cases. This Equitable were not prepared to do, as they did not consider there had been any mis-selling. Line Manager E notes that the meeting did not really progress this issue, and that there was no mention, privately or in the meeting, of a possible fine (see 27/10/2000).

The Head of Life Insurance thanks him for his note. The Head of Life Insurance comments that Equitable now know FSA's latest thinking and could inform the bidders *'but I'm sure they will put the best gloss on it'*.

27/11/2000 [entry 4] GAD advise FSA on some outstanding issues in Prospective Bidder A's proposals. GAD discuss *'the position of the Equitable and PRE'*. GAD explain that the company intend to scale down or limit the benefits of with-profits policies. GAD question if this could be in accordance with policyholders' reasonable expectations and warn that '[a] *highly adverse reaction is likely from policyholders if the term is given the prominence it deserves'* which could place FSA in an awkward position.

GAD discuss the company's reserving standards. GAD say that policyholders should be sure which guaranteed benefits would not be touched, and such benefits should attract reserving at the usual industry standards. However, GAD observe that the company propose to run Equitable *'in just such a way as is being complained of about its current management – ie over reliance on things turning out for the best'*.

27/11/2000 [entry 5] FSA write to Prospective Bidder B, following the letter of 17/11/2000. FSA confirm their view that it is likely that, legally, a section 68 Order could be granted to a successor company. FSA say that the power to grant such an Order is discretionary and each case is considered on its merits.

28/11/2000 [entry 1] Equitable send FSA a copy of Article 4 of their Articles of Association. This reads:

> *Every policy shall be granted by the Society on the terms that the Society shall only be liable thereunder to the extent of its assets and property from time to time existing, and that no Member of the Society, and no other person who is at any time in any way interested in any policy, shall be liable to any call or contribution, whether in any liquidation of the Society or otherwise howsoever, for satisfying any claim or demand under or in respect of the policy so granted, whether by the grantee thereof or by any other person for the time interested therein.*

Line Manager E writes to officials in FSA and GAD about Article 4. The Line Manager says that he understands from GAD that similar wording appears in Equitable's policies. The Line Manager suggests that, as a result of the wording, Equitable's policyholders were not protected under the Policyholders Protection Act 1975.

28/11/2000 [entry 2] GAD write to FSA with a note on the options facing Equitable should they achieve no sale. The note is set out under three headings – *'Closing to new Business'*, *'Means to improve Statutory Financial Position'*, and *'Means to improve Realistic Financial Position'*. The note states, among other things, that Equitable are *'almost certainly too vulnerable to continue writing business if sale falls through'*. GAD also note that Equitable were known to be vulnerable to any significant fall in equity values, and that they were also reliant on financial reinsurance and an implicit item for future profits.

28/11/2000 [entry 3] FSA write to Prospective Bidder B, in response to their letter of 20/11/2000, indicating that they did not yet have adequate information to form a judgment about their proposals. FSA ask for a specific document and certain information in relation to their approach to goodwill.

29/11/2000 [entry 1] Equitable write to GAD in response to the points raised in their letter of 23/11/2000.

Reserving for annuity guarantees — Equitable state that the advice in the letter of 22/12/1999 was that the effect of assuming a less than 100% take-up rate of annuity guarantees should not reduce the reserves by more than 5%, and that their approach was consistent with this. Equitable acknowledge that the letter indicates that *'at most a 5% rate of non-take-up should be assumed on account of cash commutation'*, but say that it is not clear if this is the only reason that can be taken into account.

Equitable state that, if GAD were saying that the letter of 22/12/1999 should be interpreted as requiring a minimum assumed take-up of 95%, they would reflect this in the 2000 returns. They also query why, if this was the right interpretation, the letter did not say so explicitly, *'rather than using the somewhat complicated formulation referring to total reserves'*.

Equitable explain their approach to assessing their liability to annuity guarantees on future premiums.

Accumulating with-profits business – Equitable explain that they have assumed a retirement age of 55 for personal pension contracts to reflect recent experience and introduce an additional degree of prudence. Equitable confirm that there are no adjustments to guaranteed benefits *'on retirement between 60 and 75, or 50 and 75 respectively'*. They state that the last three returns (1997, 1998 and 1999) have shown the full guaranteed value in the reserves.

Resilience – Equitable explain that applying a particular approach to the new resilience test 2 would reduce the reserve by £300m. Applying a more sophisticated approach to asset hypothecation could reduce the reserve by £750m.

Zillmer adjustments – Equitable state that, in their view, it was possible to calculate a zillmer adjustment in the net premium reserve. They set out the source of the 0.5% margin. Equitable state their view that their practice is consistent with PRE.

On GAD's files, there are nine pages of undated manuscript notes by Scrutinising Actuary F discussing current and outstanding issues involving Equitable.

On the issue of resilience, the Actuary notes:

- *9/92 & 11/93* [see 17/09/1992 and 30/11/1993] *documents on file no help.*
- *28.3.94 letter from GAD to* [Equitable] *they said £462m* [resilience reserve] o*n NPV basis. GAD accepted this.*
- *15.11.94 letter (on 93 Returns) they said £236m* [resilience reserve] *NPV basis* [correspondence] *on using average* [valuation interest] rate.
- *20.12.94 = Interaction* [resilience] *test & implicit item.*
- *01.96 =* [resilience reserve] *@ 12.94? £171m.*
- *11.96 = 12/95 Scrutiny Action Points.*

Sustainability of present contract structure (no notes about this) & reaction to asset value falls? Discuss [meeting].

Recurrent [single premiums] *= valued assuming no more* [unclear] — *extremely strong* [because] *margins in future* [unclear] *could allow lower reserves.*

On the issue of the zillmer adjustment, Scrutinising Actuary F notes:

... [the Appointed Actuary] *says discussed with GAD in early 90 (file note* [Directing Actuary B] *9/91 =* [net premium valuation] *notionally charge expenses on ¾% pa* [deduction] *from bonus)*

- *appears to be a Zillmer* [adjustment in respect of] *unrecouped* [acquisition] *costs ...*

On the second report by Equitable's actuarial consultants (see 16/11/2000 [**entry 2**]) Scrutinising Actuary F notes:

- *explanation of +½ % pa in* [resilience scenario] *(worth £950m!) (Conceptual problem – this ½% pa* [presumably] *comes off future bonus which isn't being explicitly assumed in NPV.)*

29/11/2000 [entry 2] FSA write to Equitable to seek a meeting to discuss various issues raised by prospective purchasers, including the application of Article 4, reserving issues, interim arrangements following announcement of a preferred bidder, and the state of play on compliance issues.

29/11/2000 [entry 3] GAD write to FSA with some thoughts on the prospects for Equitable. GAD suggest that, as Equitable's with-profits policies contain a clause which appears to allow benefits to be reduced in the event of a shortfall of assets to cover liabilities, '*... it looks as if a "solvent" run-off would be easier to achieve, even without any additional capital support being available*'.

GAD consider that Equitable needed an investment return on their closed fund, over the next 30 years, of around 3.5%-4% per annum in order to cover guaranteed benefits. This would rise to around 5% if equities fell by, say, 25%. GAD comment that this analysis allows:

... some rather healthier debate about the prospects for this fund than the more cataclysmic view that might prevail if as a result of a fall in equity markets, [Equitable] *become unable to meet the statutory solvency test. (Some may argue that our test is therefore too tough, but we do have to meet international standards for the protection of consumers, and moreover, the absence of an acceptable takeover offer, even after around 15 expressions of interest, would show that the market too considers the prospects to be too risky for an external investor to consider offering their support.)*

GAD accept that, unless Equitable could earn high rates of future investment returns, there would have to be further cuts in bonus rates of up to 10%. GAD suggest that this might be a reason for the reluctance of bidders to become too closely involved.

29/11/2000 [entry 4] FSA's Head of Life Insurance writes to his Chairman and Managing Director A about the main regulatory issues arising from discussions with Equitable and the potential bidders, particularly Prospective Bidder A. The Head of Life Insurance identifies five matters:

- The company are seeking a condition that '*the sale of the goodwill and the salesforce must be irrevocable at the time of any announcement, irrespective of whether the scheme is ultimately approved*'. The Head of Life Insurance comments that this would be difficult to present to policyholders and that much would depend on whether the company's bid was sufficiently better than any others to justify such a pre-emptive condition.
- How the company's proposals could be compared with the existing closed fund option. He comments:

  > *A peculiar feature of Equitable's constitution is that benefits can be adjusted downwards so that assets can never exceed liabilities; hence the fund can never become insolvent. The affect of this appears to be that the provisions of the Policyholder Protection Act (which would normally pay policyholders 90% of their guaranteed benefits in the event of insolvency) is never triggered.*

  He queries whether the compensation scheme under the Financial Services and Markets Act 2000 (FSMA 2000) replicates the Policyholders Protection Act 1975 in this respect.
- The company is *'nervous'* about the potential effect of a number of outstanding compliance issues.
- The need for PIA to approve the company's sale of Equitable's products.
- The company's queries about FSA's approach to reserving standards.

30/11/2000 [entry 1] FSA's Line Manager E suggests to other officials at FSA and GAD issues to raise with Equitable at a meeting the following day. The Line Manager highlights Equitable's views on the bidding process (including the question: *'are they confident of securing a deal?'*), their contingency plans, their interpretation of Article 4, their response of 29/11/2000 to GAD's letter, PIA issues (including income drawdown policies and ongoing sales of with-profits policies) and the rectification scheme.

The Head of Life Insurance responds that the key issue for him is Equitable's contingency plans in the event of there being no bid.

30/11/2000 [entry 2] Line Manager E writes to the Director of Insurance, following a meeting on 28 November 2000 with Prospective Bidder A. The Line Manager notes that one of the issues raised was whether all the necessary information about current PIA Enforcement cases had been disclosed. FSA noted that it was their understanding that Equitable were keeping bidders up to date but recommended that Prospective Bidder A should seek an update from Equitable on their view of the current position. The Line Manager notes the Director's comments at the meeting that *'it would arguably be odd for PIA to be considering imposing fines in the current circumstances, but that if a reprimand was considered appropriate, it would almost certainly be made public*'.

30/11/2000 [entry 3] FSA's Legal Adviser A writes to Line Manager E in response to his note of 28/11/2000 about the Policyholders Protection Act 1975. The Legal Adviser suggests that the matter might not be as clear cut as the Manager had indicated. The Legal Adviser comments that Article 4 was designed to ensure that Equitable members were not subject to calls, by ensuring that policyholders' claims could only be paid out to the extent that the company had sufficient assets. Legal Adviser A says that he is '*not convinced that it must follow that the* *policyholders' entitlement to benefits are reduced or expunged so that the company has no liability in respect of them'.* He goes on: *'It is merely that they will not be paid – or paid in full – because the company does not have sufficient assets to pay them and no recourse can be had to the members'.* The Legal Adviser notes that drawing firm conclusions without seeing Article 4 in context was not easy.

30/11/2000 [entry 4] GAD's Directing Actuary B advises Scrutinising Actuary F on how to respond to Equitable's comments on their zillmer adjustment in their letter of 29/11/2000.

30/11/2000 [entry 5] FSA (Head of Life Insurance and another official) prepare a note for FSA's Chairman's Committee and Directors' Committee, outlining the options for further action following the House of Lords' ruling. They explain that, on 27/07/2000, FSA had asked companies for an assessment of the implications of the ruling. In responding, a number of companies had called for guidance from FSA on their obligations towards policyholders with GARs, *'due to concerns that a consistent approach should be adopted across the industry and concerns about what the FSA's own approach would be ...'*.

FSA set out the advantages and disadvantages of various courses of action, including taking no action, issuing minimal or fuller guidance, and taking a test case to court. FSA observe that they needed *'to come to a view on how to assess whether insurers are acting in a way consistent with PRE'* and that not to be transparent on this point would expose them to criticism.

FSA suggest that issuing fuller guidance offered the greatest potential benefit of reducing uncertainty, but also carried the highest risk of a successful legal challenge. The note explains that FSA were seeking Counsel's view on the way forward. FSA note that all the options contained an element of risk; however, the extra risk in issuing fuller guidance is, in their view, outweighed by the potential benefits.

01/12/2000 [entry 1] FSA and GAD meet Equitable and their advisers to discuss the sale process and their letter of 29/11/2000.

Prior to the meeting, GAD write to FSA. GAD explain that they have prepared a note on Equitable's letter of 29/11/2000, which they would forward in due course. GAD summarise the *'implications'* of their assessment as follows:

- GAD are looking for *'an increase from 85% to say 90% in the assumed GAR take-up rate'*. However, this would have no effect on the net level of reserves whilst the reinsurance treaty remains in place.
- GAD are unhappy with the 20% rate of decrement in future premiums when assessing the 'future premiums' part of the reserve for annuity guarantees. They estimate, on the basis of information provided by Equitable's actuarial consultants, that if no such decrement were assumed, Equitable's net liabilities would increase by up to £360m.
- GAD believe Regulation 72(3) might require Equitable to assume in future valuations that personal pensions benefits were all taken at age 50. They estimate, on the basis of information provided by Equitable's actuarial consultants, that the effect on Equitable's liabilities would be up to £200m.
- GAD believe the new resilience test 2 would lead to increased reserves of £600m, or £300m if the *'synthetic bond'* concept were used.
- GAD believe that more sophisticated hypothecation of assets in the resilience scenario could reduce the resilience reserve by up to £750m (or less, if a synthetic bond were used).
- GAD explain that they did not accept the use of a 0.5% pa allowance for expenses in the resilience scenario. They state that *'the resilience reserve is therefore weak and not*

in accordance with the guidance. [Equitable's actuarial consultants] s*ay that reserves are £950m lower than they otherwise would have been because of this'.*

GAD note that Equitable's letter of 22/11/2000 showed that, at the end of October 2000, Equitable had assets of £1,080m in excess of the required minimum margin of £1,215m. (Note: this gave Equitable cover for the required minimum margin of 1.89.) Equitable explain that adjusting to take account of the above points increased Equitable's liabilities by £1,010m and thus reduced their excess assets to £70m. (Note: this gave Equitable cover for the required minimum margin of 1.06.) GAD conclude:

> *In other words we estimate that the Society are currently very close to not covering their* [required minimum margin].
>
> *If the GAO Reassurance treaty were terminated, liabilities would increase by about a further £1000m.*

GAD's Chief Actuary C annotates the note to show that the increase in Equitable's liabilities was, in fact, £1,060m, and that thus the excess of assets over the required minimum margin fell to £20m. (Note: this gave them cover for the required minimum margin of 1.02.) The Chief Actuary also points out that, given the 60% threshold, Equitable's liabilities would increase by about £500m if the reinsurance treaty were terminated.

FSA prepare a note of the meeting. FSA record that Prospective Bidder A was now the only potentially realistic bidder, and that there were doubts as to whether this option could proceed because the effect of the Board accepting the bid would be an agreement to sell off the sales force and infrastructure without the prior approval of the membership.

Equitable explain that they are awaiting further guidance from PIA on income drawdown policies and that this was one of the matters concerning the company. FSA's Head of Life Insurance agrees to *'facilitate an open dialogue with Enforcement on this issue'*. FSA thought it would be best to have a proposal on the table before having a tripartite meeting (involving FSA, Equitable and Prospective Bidder A) to discuss prudential and conduct of business issues.

Equitable confirm that the Society had been established as an unlimited liability company and that thus each member could be liable for its liabilities. Equitable's solicitors suggest, therefore, that it was not possible for Equitable to become insolvent under the terms of the Policyholders Protection Act 1975 and that thus they could not claim any assistance under the Act.

GAD and Equitable fail to agree an interpretation of the letter of 22/12/1999. GAD agree to write to Equitable. Equitable state that the take-up of GARs *'was still below 50%'*.

Equitable agree that the use of a 20% *'decrement'* in assessing future premiums that secure GAR benefits needed to be reviewed.

GAD welcome the strengthening of the with-profits reserves. GAD point out that the regulations would shortly, or had recently, required reserves to be set up on the basis of an assumed retirement at the earliest possible date, in Equitable's case at age 50, and so reserves would need to be strengthened further.

GAD note that Equitable might be able to save £750m in the resilience reserve, *'from a more sophisticated approach to asset hypothecation'*, but that further work needed to be done.

GAD argue that the 0.5% zillmer adjustment:

> *... was not in accordance with the regulations. This reduction equated to a c£950m saving in this reserve.* [The Appointed Actuary] *confirmed that this approach had been used since the early 1990's. (This was disclosed in the 1998 and 1999 returns). GAD thought that from conversations with* [the then Appointed Actuary] *at that time it had been agreed that such an approach was not going to be taken.*

Equitable explain that the rectification scheme had been signed off, that it would be put before the Board on 7 December 2000 and that affected policyholders would be contacted shortly thereafter.

FSA note that Equitable *'did not appear to be unduly concerned about* [with-profits] *policyholders who joined the Society after the House of Lords judgement'*, although they accept that they would shortly need to make a decision on whether to carry on writing this business, depending on the outcome of the sale process. Equitable explain that they *'had not considered whether post 20 July* [with-profits] *policyholders could be excessively disadvantaged in a closed fund. This is because after this date the preferential treatment of GAR policyholders was known'*.

FSA note that, if GAR policyholders were more likely to top up their benefits than previously, this would be to the detriment of non-GAR policyholders. Equitable's solicitors consider that *'it might in these circumstances be possible for these policyholders to get a preferential bonus treatment'*.

Equitable confirm that their sales force were adequately briefed and instructed to advise potential with-profits policyholders on Equitable's particular circumstances prior to sale, and that their Board had taken legal advice on the matter.

01/12/2000 [entry 2] GAD provide further comments on Equitable's letter of 29/11/2000, reflecting the points made in their note to FSA, above.

FSA's Line Manager D (who no longer has regulatory responsibility for Equitable) provides comments to the Head of Life Insurance on a draft note by him on the latest position. The former Line Manager asks:

> *Why look at changing* [the Financial Services and Markets Act 2000] *if the conditions of the Equitable Fund take it outside the* [Financial Services Compensation Scheme]*? Why not change the terms of the fund so that if guaranteed benefit levels cannot be maintained the fund has to be wound up and it then does fall within the* [Financial Services Compensation Scheme]*? The change would appear to me to increase the protection afforded to policyholders so be unobjectionable.*

The former Line Manager queries how Equitable might seek a view from policyholders on how to proceed, and if the projected cash injection would be enough to ensure payouts of at least asset share.

01/12/2000 [entry 3] FSA's Firms and Markets Committee note that FSA were to meet with the Takeover Panel (a non-statutory body established to issue and administer the City Code on Takeovers and Mergers) to discuss one aspect of the potential bid for Equitable by Prospective Bidder A.

04/12/2000 [entry 1] GAD write to Equitable following their letter of 29/11/2000 and the meeting on 01/12/2000.

GAD accept that Equitable have met the requirements of the letter of 22/12/1999, in that their reserves have not been reduced by more than 5%. But GAD say that, in their view, to be consistent with the letter of 22/12/1999 it would not be prudent to assume that more than 10% of GAR policyholders would take cash or alternative benefits. GAD accept that this had no effect on the level of reserving while the current reinsurance agreement remained in place.

GAD question Equitable's *'rate of decrement'* on recurrent single premium business and suggest that there should be *'a somewhat stronger assumption'* in the 2000 returns. GAD confirm that, in accordance with new regulations, the valuation should be increased to reflect an assumed age of retirement of 50. GAD acknowledge that Equitable's method of determining the resilience reserve satisfies current guidance.

GAD say that the use of a zillmer adjustment causes them *'particular concern'*. GAD say:

> *In terms of the regulations as they existed before the 2000 amendments, we are doubtful that this ½% p.a. allowance would be wholly consistent with either regulation 67(3) or 72.*

GAD explain that, following amendments to the regulations in 2000, the position *'will become rather clearer'* and that the adjustment would not be acceptable in the 2000 returns.

GAD ask Equitable to explain why, in the resilience scenario, they release a significant part of their reserving basis for expenses.

04/12/2000 [entry 2] FSA's Line Manager E advises the Head of Life Insurance, following a conversation with Prospective Bidder B, that the bidder had withdrawn from the sales process. The Line Manager copies his note to other officials, including the Director of Insurance. The Line Manager reports that Prospective Bidder B had indicated that, since their last meeting (held on 15/11/2000), their due diligence had identified material risks for their shareholders and that, unusually, that risk could not be factored into the purchase price because a lower price simply increased the risks.

04/12/2000 [entry 3] FSA's Line Manager E writes to the Director of Insurance, following a meeting on 29/11/2000 with Prospective Bidder A. The main items discussed are the implication of Prospective Bidder A's proposals for the entitlements of policyholders and associated reserving issues. The Line Manager notes that Equitable's advisers take the view that Article 4 of Equitable's Articles of Association *'had the effect of automatically reducing the company's liability to with-profits policyholders'*. This means that Equitable could never be in debt to policyholders, and so could never be insolvent. As a result, there was no trigger for compensation under the Policyholders Protection Act 1975.

In response, the Director of Insurance queries whether the same applied to non with-profits policyholders. Line Manager E explains:

> *Non-*[with-profits] *policyholders are not members and so are not bound by article 4. It is not clear, though, whether their policies also contain a similar provision. The effect of* [Article] *4 seems to be that the company did not have powers to offer policies that did not have the relevant provision – though that* [would] *not, I think, affect the validity of the policy. We would have to investigate.*

The Director asks: *'Is nothing to do with the* [Equitable] *ever clear?!?'*.

In his note, Line Manager E also explains that Prospective Bidder A was seeking *'comfort or information'* on compliance issues. The Line Manager says that, in addition to action on income drawdown policies, the company wished to know if there were any issues arising out of a PIA monitoring visit in June 2000 and *'whether any action might be contemplated in connection with sales since the House of Lords judgment'*.

04/12/2000 [entry 4] Subsequently, the Director of Insurance advises Line Manager E of a telephone call received that day from Prospective Bidder A. The Director explains that the company had alerted him to some further concerns about a possible bid and that they now might not proceed. Those concerns included the company's analysis that running the business on the *'charges less expenses basis'* currently used by Equitable would produce a negative cash flow for a substantial period. The impact of this would be to depress the purchase price Prospective Bidder A was prepared to pay from around the £1bn previously discussed to around £500m - £600m. This would make the bid look unattractive to Equitable's policyholders and, along with the pre-emptive nature of the deal, could reduce the goodwill associated with the deal. The Director of Insurance records that: *'These factors combined could easily turn the deal into one where the amount of future business that was achievable could be insufficient to justify any bid at all'*.

The Director comments that he was not sure whether the telephone call was a genuine signal that Prospective Bidder A might not make an offer or whether it was intended to *'soften us up'* for a lower bid than had been anticipated. The Director notes, following the earlier news about Prospective Bidder B, that:

> *... we may face a position, as early as* [8 December 2000] *where it is clear that no bid will be made by either party. We (and the Equitable) will need to be ready to respond quickly to that. My preference in that situation would be a very early announcement by the Company that they are closing to new business. In this case we would need to be ready to explain:*
>
> > *a) The regulatory implications*
> >
> > *b) Why we had not closed the company immediately after the House of Lords' judgement (or possibly even before that).*
>
> *... We should also liaise with the* [Association of British Insurers] *since they are likely to get questions about why the industry had not been prepared to "rescue" the Equitable.*

The Director of Insurance copies his note to other officials, including FSA's Chairman. The Chairman comments in response:

> *This matches the impression given to me by* [an Equitable Director]*, and my own instinct all along.*

04/12/2000 [entry 5] In a further note, the Director of Insurance warns Line Manager E that, if a bid were made for Equitable, there would be considerable difficulty in obtaining a decision within FSA to allow Equitable to make an announcement within their preferred timescale.

The Director sketches out some of the considerations that would apply in reaching a decision, in the context of the relevant FSA objectives of protection of consumers and market confidence.

04/12/2000 [entry 6] FSA's Legal Adviser A advises the Director of Insurance on the issue of possible compensation for Equitable policyholders. The Legal Adviser explains that he had asked Counsel to assume that Article 4 of Equitable's Articles of Association meant that, in the event of insolvency, Equitable's liability to their policyholders would never be greater than their assets, and that if their assets were nil, benefits payable under policies would be nil. The Legal Adviser further asked Counsel to advise if, in those circumstances, the draft rules for the compensation scheme replacing the Policyholders Protection Act 1975 would enable compensation to be paid to the Society's policyholders.

Counsel's advice is that the scheme does not enable compensation to be paid. She suggests a way in which the rules could be amended to encompass claims that would otherwise fail.

Legal Adviser A notes that, although Counsel was not asked to advise on the interpretation of Article 4, her reaction, like his, was that it did not have the meaning set out above.

04/12/2000 [entry 7] PIA write to Equitable about their investigation into the sale of income drawdown policies. PIA say that they have considered the proposals in Equitable's letter of 24 November 2000. (Note: I have not seen this letter) and their further comments at the meeting on 27/11/2000.

PIA explain that Equitable's proposed amendments to their sales process were not adequate to meet PIA's concerns, and give reasons why. PIA ask Equitable to resubmit their proposed amendments, taking account of PIA's comments, and in the meantime suspend sales of income drawdown products.

PIA do not accept Equitable's arguments that a review of past income drawdown business was unreasonable. They ask Equitable to submit a project plan for a review of past business.

PIA seek a response by 15 December 2000.

05/12/2000 [entry 1] FSA meet GAD to discuss the latest position. GAD make brief manuscript notes of the meeting. GAD record that Equitable's solvency position under the statutory returns was now '[very] *borderline*'. GAD agree to prepare a note for a meeting of the Tripartite Standing Committee. FSA agree to prepare a fact sheet. FSA agree to research the history of companies which have closed. In this context, GAD note *'What does it mean to run off a closed fund? PRE?'*.

05/12/2000 [entry 2] GAD, in their subsequent draft note for the Tripartite Standing Committee, set out Equitable's current position. GAD explain that, following 15 expressions of interest, only 3 companies had pursued possible bids. But *'after studying the dynamics of the operation, and some reports commissioned from* [Equitable's actuarial consultants]', all were pulling out. GAD note that this meant *'that the Society has been considered by all these independent potential bidders not to be a viable prospect'*.

GAD also note that they are aware:

> *... following some recent discussions with the Society about their present finances that they are only just meeting their minimum capital requirement. While they do have around £2 billion free reserves in their Companies Act accounts, this would be exhausted in the event of equity markets falling by around 20-25%.*

GAD conclude that Equitable '*will have no choice but to close to new business*'.

GAD go on to discuss the implications of this for market confidence and policyholders. They anticipate the effects on policyholders to be:

> *1) The Society will not be able to accept any further business, but it is possible that they may be allowed to accept additional premiums on existing policies. An issue may though arise over whether they should be allowed to accept additional premiums on policies with Guaranteed Annuity Options since this would disadvantage other policyholders (who would have to meet the resulting cost).*
>
> *2) All claims on existing linked and non-participating policies can still be expected to be met in full as they arise.*
>
> *3) Similarly, all guaranteed benefits on with-profit policies will continue to be met in full.*
>
> *4) However, the Society is likely to levy a penalty on most early surrenders of non-linked policies where (as in most cases, we understand) this is allowed under the policy conditions.*
>
> *5) There are also likely to be some further cuts in bonus rates over the next few years as the present levels of discretionary final bonus are too high relative to available assets. In effect, the with-profit policyholders (and members) are sharing in the fortunes (and misfortunes) of the Society.*
>
> *6) Some redistribution of investments may take place over the next few years to reduce the exposure of the Society and its members to movements in equity and property values. (See below). In addition, some limited hedging protection may be available through reinsurance.*

7) There may be some reduction in the level of service offered to policyholders but their administrative operation is already fairly efficient and could in due course be outsourced to a third party if necessary.

8) In the event of unexpectedly adverse investment (or other) conditions arising, then even the guaranteed benefits might need to be reduced proportionately. However, there is an industry compensation scheme that could be expected to ensure that policyholders receive at least 90% of their guaranteed benefits (excluding discretionary bonuses).

In response to GAD's note, FSA's Managing Director A comments that there were three issues to be addressed:

- What FSA's powers were if *'push comes to shove (ie if* [the Society] *has no bidders left and won't voluntarily suspend business)'*. The Managing Director says that, if FSA were not sure how far their powers would go, the safest line to take would be to say that they would have to consider the use of their powers to protect potential policyholders.
- What FSA should say to policyholders about the implications of a cessation of new business. The Managing Director says that this would be primarily a matter for Equitable.
- What FSA should say in response to questions about which other companies might be affected. The Managing Director says that this is, in some way, the most difficult area and suggests:

... the best hope lies in citing the features that distinguish [Equitable] *(lean - has paid out its fat, anything one can say to show that they have proportionately more of the business causing the difficulty etc).*

FSA's Director of Insurance comments in turn:

On POWERS, discussion with GAD has clarified how thin and fragile the company's margin is. I think that we can be reasonably robust along the lines of "I am sure you recognise that, if the situation arises where there is no reasonably probable prospect of a sale you could not continue – and we could not allow you to continue – to write new business".

On what should be said to policyholders, the Director of Insurance agrees that Equitable (and the Association of British Insurers to whom FSA had already spoken) should *'so far as possible take the heat'*. The Director says that FSA should be calm and informative and ensure that there was proper transparency, for example for those considering whether or not to top up their policies. He says that FSA's initial but firm legal advice is that they had no power to interfere in contractual rights, such as the right to top up a policy.

On other companies, the Director of Insurance agrees:

... that we should major on the distinguishing features of the Equitable. In fact the combination of a deliberate avoidance of building up an inherited estate and the fact of being a mutual with consequent problems in raising capital does make the Equitable's case pretty much unique. (We may get some incidental, and much needed recognition that inherited estates are not all bad.)

05/12/2000 [entry 3] FSA's Head of Life Insurance writes to the Managing Director with details of a further review of Equitable's solvency position, in advance of a meeting with Equitable on 06/12/2000. He explains:

Our latest estimate is that the Equitable has free assets of £7m [this has been changed by hand to *'£70m'*] *above the required minimum margin of solvency. (This margin has built into it the "resilience test", which allows for a 25% fall in equities; but even so this margin is uncomfortably tight.) This estimate is £1010 billion* [this has been changed by hand to

2000

'*£1010 million*'] *less than the Equitable's own estimate; the reason for the difference is that GAD have made adjustments* [see 01/12/2000] *to a variety of assumptions in the reserving basis, to bring them into line with what they would normally expect.*

He comments that, on this basis, it was difficult to see how Equitable remained a going concern in the absence of a bid. He states that FSA would have grounds for closing the company to new business under ICA 1982 *'either for failing to meet its required minimum margin of solvency, or because of the risk that PRE would not be met'*.

The Head of Life Insurance outlines some alternatives to closure to new business (seeking renewed interest in a takeover of Equitable or allowing limited forms of new business) but says neither was very promising. He says that the main item for the meeting on 06/12/2000 should be to seek Equitable's own assessment of their financial position and of the situation should no bid emerge.

05/12/2000 [entry 4] FSA's Chairman's Committee consider Equitable's financial position in the event that there is no bid. The Committee note that Equitable would need to close to new business and that it would be preferable that they did so voluntarily. If they did not, *'FSA would need to assess its financial viability. It was considered that FSA would have powers to close the company under section 45 of the Insurance Companies Act 1982'*.

The Chairman's Committee consider the Head of Life Insurance's paper of 30/11/2000, on possible guidance following the House of Lords' ruling. In accordance with the advice received from Counsel, the Committee favour the issue of the shorter form guidance. The Committee note that guidance would generate renewed interest in the ruling, and hence Equitable, and so the timing of its release was an issue. They agree that the paper should be discussed by the Directors' Committee.

05/12/2000 [entry 5] FSA's Line Manager E writes to a policyholder who has asked FSA to investigate the way Equitable have valued their liabilities. The Line Manager concludes:

In our opinion, the Society and its auditors acted in accordance with the prevailing legal opinion at the time when preparing and reviewing the annual accounts. As your letter notes, the management of the Society immediately acknowledged the significant financial implications of the House of Lords judgment when it was handed down. Given that these events are well documented, we do not consider that an investigation would uncover any new information.

06/12/2000 [entry 1] FSA's Chief Counsel A writes to the Director of Insurance in response to his note of 05/12/2000. She explains, that under ICA 1982, FSA could suspend authorisation in urgent cases (section 12A) on the grounds that any of the criteria of sound and prudent management have not been, or may not be, fulfilled, or that an obligation under ICA 1982 has not been satisfied (for example, where the cover for the required minimum margin had been breached).

The Chief Counsel adds:

Although to use the intervention power under section 45(1) ICA [the residual power to protect policyholders] *would otherwise be of doubtful vires in the face of s.12A, if the Company agrees (and it will generally wish to avoid the use of s.12A due to the two month limit and to take advantage of the greater flexibility generally of s.45), s.45 can be used instead to suspend (a "stop order") on the same grounds.*

2000

06/12/2000 [entry 2] FSA and GAD meet Equitable and their advisers.

According to FSA's note of the meeting, Equitable explain that Prospective Bidder A had indicated they were unlikely to make an offer; they would make a formal decision on 7 December 2000. Equitable say that, in the event of there being no bid, they would close the with-profits fund and, probably, the unit-linked business.

FSA's Director of Insurance explains *'the problem we would have'* in allowing Equitable to continue to write unit-linked business because it appeared that those contracts contained provisions by which the value of the policies could be reduced to pay for the wider liabilities of the Society. In the light of this, Equitable agree that they would close to all new business in the event that Prospective Bidder A confirmed their withdrawal. Equitable and FSA discuss arrangements for the announcement of this and for dealing with press enquiries.

Equitable confirm that if there were no sale, no bonus would be declared for this year and the company's investment strategy would gradually move to a more conservative position.

Equitable's solicitors confirm that the subordinated loan is '*safe*', provided FSA did not withdraw authorisation. According to the note, it is also confirmed (it is not clear by whom) that the reinsurance treaty still held good if Equitable stopped writing new business.

Equitable ask if they could be granted any leeway in relation to the PIA's plan to require a review of the sale of income drawdown policies. FSA *'could give no comfort on this but added that it may in the circumstances be possible to review the time scales for any possible review'*.

06/12/2000 [entry 3] FSA's Director of GCD writes to Legal Adviser A. The Director of GCD explains that FSA should be ready by the following morning to exercise formal powers under section 11 or section 45 of ICA 1982 to prevent Equitable from taking on new business.

The Director says that Chief Counsel A has explained that FSA's practice in the past *'has been to threaten to use section 11 but then to proceed by way of section 45. This has been done on the basis that we regard section 45 as more appropriate, but are worried that we could be subject to criticism for using the lesser power in a circumstance that could justify using the more stringent power, with the stronger safeguards, in terms of representations, which would then apply'*.

Chief Counsel A refers the Director to her earlier note that day to the Director of Insurance.

Line Manager E later explains that, following the meeting with Equitable earlier that day, FSA are *'most unlikely to need to use powers (other than with the full consent of* [Equitable]*'*.

06/12/2000 [entry 4] The Director of GCD copies his note to Line Manager E and then writes directly to him. The Director sets out the grounds on which FSA *'could, if need be, exercise formal intervention powers against the Equitable on* [7 December 2000]'. He suggests that there were four grounds:

- that Equitable were unable to meet their liabilities to policyholders. He suggests this was potentially problematic, given the argument that Article 4 of Equitable's Articles of Association *'limits the company's liabilities to policyholders to the amount of its assets'*;
- that action was needed to protect the interests of policyholders and potential policyholders. He notes that closure to new business would protect potential policyholders. However, FSA would need to consider if this were a proportionate response, or whether adequate disclosure of the risks to them in sharing in the cost of annuity guarantees or ring fencing might be available. On the latter option he notes that the Director of Insurance does not consider this to be *'a runner'*;

- that Equitable have not maintained sound and prudent management. He states: *'This must be exercisable, but it would be useful to know exactly what criteria we would say Equitable had failed to meet in this area'*; and
- that Equitable have failed to fulfil the reasonable expectations of long term business policyholders. The Director of GCD states: *'This seems highly likely to be exercisable, but again would be useful to identify and the category of policyholders whose reasonable expectations the company is likely to be unable to meet'*.

The Director of GCD emphasises that the purpose of his note was to enable FSA to *'focus our decision taking on the statutory criteria'*. He says that he was not suggesting that FSA should hesitate from exercising their powers if they believed that to be necessary.

06/12/2000 [entry 5] FSA learn that Prospective Bidder A have confirmed that they would not be bidding for Equitable.

06/12/2000 [entry 6] FSA's Line Manager E prepares a summary of the results of the survey of companies which sold with-profits policies with annuity guarantees (see 04/02/2000), in preparation for the meeting of the Tripartite Standing Committee later that day. Of the 49 companies surveyed, 8 had reduced the terminal bonus, 5 of these following Equitable's approach.

The Line Manager notes that there were a number of special factors that apply to Equitable – they are a mutual with no estate and had a high volume of business containing annuity guarantees, offering generous and flexible terms. The Line Manager says that some, but not all, of these factors apply in other cases.

06/12/2000 [entry 7] FSA and GAD attend the meeting of the Tripartite Standing Committee, called to discuss the emerging situation with regard to Equitable.

In their note of the meeting, HMT observe that '[a] *unique combination of factors contributed to the Equitable's position being different to that of other firms'*. HMT note, in particular, that:

- *It was a mutual, so (in the absence of a buyer) had limited access to capital.*
- *It did not have an estate of surplus assets.*
- *The terms of its guarantees were unusually generous and flexible.*

HMT note that confirmation that there was to be no buyer would mean that Equitable could no longer write new business. HMT state:

> *If the Equitable had not reached that conclusion itself, the FSA would have been looking to step in and prevent them taking new business following any withdrawal by* [Prospective Bidder A]. *But, on the other hand, earlier closure to new business would have destroyed any prospect of a sale.*

06/12/2000 [entry 8] HMT brief the Economic Secretary to the Treasury on the latest position.

HMT explain that an announcement was due soon that Equitable were closing to new business. HMT assessment is that this would pose no threat to market stability but might cause *'a ripple on the gilts market'*. HMT caution that the announcement would feature widely in the press.

HMT set out the need for a sale following the House of Lords' judgment. They explain that *'until the last few days the prospect of a sale on reasonable terms seemed likely'*. They note that Prospective Bidder A was now likely to decide against bidding. HMT explain:

The main reason for the lack of a buyer is that it is impossible to cap the cost of some of the Equitable's guaranteed annuity business, thus raising questions over the proper value of the business.

HMT explain that FSA were encouraging Equitable to put in place a robust process to help meet policyholder needs. HMT state that FSA were cautious about what they could say to policyholders, but recognise the importance of ensuring that policyholders '*are not misled into throwing good money after bad*'. HMT estimate that policyholders were likely to see returns which were about 10% lower than expected before the House of Lords' judgment, but that this would still compare well with many of their competitors.

HMT discuss the role of the regulators, saying:

Should the regulator have taken early action to stop the Equitable writing new business? Maybe. But until a few days ago there was every sign that a successful sale could be achieved and this would have been in the best interests of policyholders. The regulators were just as surprised as the markets at this news that no buyer was to be found.

Does this event show up a deep-seated oversight on the part of the regulator? Probably. But this oversight (failing to ensure that proper risk management processes were in place at the Equitable) was not life threatening until the House of Lords judgment in July. The scope of the judgment was quite unexpected, and the FSA took steps after the judgment to work with affected companies to address the issue.

06/12/2000 [entry 9] FSA's Directors' Committee consider possible guidance on the House of Lords' judgment, following the discussion by the Chairman's Committee (see 05/12/2000 [**entry 4**]). The Committee agrees that a revised version of the shorter form of guidance should be submitted to the Board. Some disappointment was expressed that FSA were only prepared to issue guidance that *'said virtually nothing'*. It was thought that the merits of making guidance available should be comprehensively assessed against the risks to the FSA objectives, rather than just against the legal risk of challenge.

06/12/2000 [entry 10] FSA's Managing Director A provides the Chairman with a 'Supervision Update' following the meeting with Equitable. The Managing Director reports that Equitable had voluntarily recognised the need to stop writing new business. He outlines how Equitable planned to handle the announcement and its timing. The Managing Director says that, where Equitable could not give answers to questions (such as *'what is your bonus for this year'*) he had urged them to *'commit to a clear process and rapid timetable for delivering an answer'*. The Managing Director lists four key issues for FSA:

- that they would have to vet the scripts used by Equitable to check that they were not misleading;
- that they could calm market fears by making a statement that, as Equitable remain solvent, FSA saw no reason for them to hurry to make the necessary shift in assets (reducing equities and increasing gilts). He adds that GAD agreed with this conclusion. The Managing Director proposes to make such a statement, provided further checks show that it would be reasonable on all known facts;
- that they consider the extent to which it would be true to say that no other firms were known to be in the same extreme position; and
- that they are prepared to face the media, which is something he plans to do himself initially.

06/12/2000 [entry 11]	Equitable write to PIA in response to their letter of 04/12/2000. Equitable set out further proposed changes to their procedures for the sale of income drawdown policies. They seek confirmation from PIA by 8 December 2000 that these meet their requirements in full and that, therefore, they would not pursue the suspension of sales of income drawdown policies. Equitable explain they would respond separately on the requested review of past business.
07/12/2000 [entry 1]	Equitable's solicitors advise FSA that they understand the terms of the subordinated loan agreement to mean that the ceasing of new business by Equitable could not trigger a demand to repay the loan. The solicitors state that, if FSA withdrew Equitable's authorisation to write new business, exercising their powers under sections 11 or 13 of ICA 1982, this could trigger a demand for repayment. They note that a demand would have *'a considerable financial impact'* on Equitable. FSA's Head of Life Insurance sends a copy of the advice to Line Manager E and comments: *'Am I missing something? Ceasing of new business must be different from surrendering authorisation'*.
07/12/2000 [entry 2]	FSA's Director of Insurance advises the Head of Life Insurance of a discussion with the Association of British Insurers on how they intend to handle possible reactions to an announcement that Equitable are closing to new business. The Director explains that the Association would emphasise that this development did not indicate a company failure or insolvency, and that Equitable's position appeared to be unique. The Director comments that the Association of British Insurer's line *'looks OK – if pretty thin'*.

Closure of the Society to new business

08/12/2000 [entry 1] **Equitable announce that they will stop writing new business with immediate effect**. Equitable say that they remain solvent and would continue to pay out benefits and accept premiums on existing policies. Equitable announce that they have increased the market value adjustment made on surrenders or transfers of with-profits policies from 5% to 10%.

FSA receive a copy of Equitable's '*Media Q&As*', which sets out answers to questions that might be asked by the press. The document includes this answer to the question: '*Why couldn't you find a buyer for Equitable*':

> *We believe that a combination of the size of Equitable, the intractable nature of the differences in the interests of GAR and non-GAR policyholders, uncertainty over the value of Equitable's client base given what has happened to the Society and general concern from buyers as to the scope to earn adequate returns on pension business as the UK moves into a stakeholder pension world, all made a full acquisition ultimately too difficult.*

In answer to the question: '*Can Equitable afford to pay* [the] *redundancy terms* [of their employees]*?*', Equitable's response is:

> *Yes, statutory reserves always have to cover the cost of possible closure of new business. No immediate redundancies are planned.*

Equitable send FSA a copy of notes Equitable had given to their representatives following the House of Lords' ruling and Equitable's announcement that they were up for sale, to assist those representatives in dealing with questions from policyholders. Equitable apologise for the delay in locating and forwarding this document (the content of which, Equitable say, had been overtaken by events by the time it was sent to FSA). The first section of the notes deals with '*sale issues and addressing client concerns*'. Under the heading '*Concerns*', and subheading '*Security*', Equitable state:

> *Concern: Is the Equitable secure?*
>
> *Response: If the client is sincerely concerned that the Society "might go broke" and be unable to meet a claim the following simple statement may suffice:*
>
> *"All UK insurance companies are subject to strict supervision by the regulatory authorities. They would not allow any company to continue accepting new business if they were not satisfied that it could meet its liabilities."*

The response adds that, in the last resort, the Policyholders Protection Act 1975 protects policyholders.

08/12/2000 [entry 2] An unsigned note sets out the '*line to take*' in response to possible questions to HMT about the closure. This includes the following statements:

- *FSA maintains a watching brief and will not hesitate to step in if need be*; and
- *FSA do not believe Equitable Life's problems go right across the insurance industry. The underlying cause is specific to Equitable's own circumstances*.

08/12/2000 [entry 3] FSA prepare a more detailed note for internal use when briefing journalists. This sets out some of the background to Equitable's present position. FSA's note deals specifically with '*Regulatory Issues*', setting out possible questions and suggested responses.

In response to the question: '*Why didn't the FSA take action sooner — how could you let them keep taking new business?*', FSA answer:

The Company remained solvent and there was a realistic prospect of a sale which would have been in the long term interests of policyholders. So there was no clear reason or basis for taking action.

In response to the question: '*How do you judge policyholders' reasonable expectations (PRE)? How can Equitable have been meeting them in recent months?*', FSA answer:

PRE can not be precisely defined but it is important to remember that this company is owned by its members and With Profit policyholders share in the fortunes of mutuals for good or ill. Generally speaking policyholders have received benefits from this arrangement either through improved investment returns or windfall benefits after demutualisations but it is a two way street.

In response to the question: '*On what grounds would someone launch a legal action against FSA for its action or inaction, or are you just a law unto yourself?*', FSA answer:

Not clear to us that a person could have grounds to bring a case. FSA has acted in good faith and with integrity throughout. No statutory immunity for those functions of the FSA delegated by the Treasury under the Insurance Companies Act 1982. But FSA does have the protection of the common law which would make successful challenge very unlikely.

In response to the question: '*Why didn't you at least require Equitable to explain to prospective policyholders its precarious position?*', FSA say:

We understand that prior to the House of Lords judgement the position as reported to potential policyholders would have been in line with the current understanding of the law — where a differential approach to GARs was justified. Post the [House of Lords] *judgement it is our understanding that potential policyholders were advised about the circumstances surrounding the proposed sale of the company.*

In response to the question: '*Would you like to have more or different powers over insurers?*', FSA say:

It is not clear that there is any deficiency in the regulatory powers available.

08/12/2000 [entry 4] FSA write to GAD. FSA note that, in their '*Media Q&As*', Equitable state that they have reserved to cover closure costs. FSA ask if this is correct.

In response, GAD explain that Schedule 4 of Equitable's 1999 returns shows that their reserves for expenses included costs for redundancy payments and rent due on properties, but no additional sum for costs arising from a closure to new business. GAD note that, generally, Equitable's reserving basis for expenses is strong, but also that a significant part of this was released in the resilience scenario (note: this was a point taken up in GAD's letter of 04/12/2000).

GAD conclude:

We need to be sure that they are indeed covering closure costs in both the main valuation and in the resilience scenario.

08/12/2000 [entry 5] FSA's Chief Counsel Investment Business (Chief Counsel B) advises the Director of GCD on the position of policyholders who bought policies after the House of Lords' ruling on 20/07/2000.

Chief Counsel B sets out the responsibility of those selling Equitable's policies to advise potential policyholders of relevant information. The Chief Counsel considers that there is '*a very strong argument to say that the Equitable was under a duty*' to explain that, as a result of the House of Lords' ruling, there was a risk that Equitable could not sustain their investment returns and performance. In the event of a failure to explain this risk, a policyholder would have the right to take action against Equitable. If Equitable became aware of such a failure, they had a duty to remedy the failure and provide appropriate redress.

Chief Counsel B considers whether FSA could have stipulated to Equitable that it should only sell policies in circumstances where the risk has been explained. He comments:

> *In one sense this would have been unnecessary since, if I am correct, that obligation already existed. It would clearly, however, have been open to the regulators to have pointed out to the Equitable the obligations to which they were subject and to say that action would be taken to prevent further sales unless those obligations were complied with.*

08/12/2000 [entry 6] FSA's Line Supervisor C writes to the Director of Insurance and others. The Line Supervisor refers to complaints from a consulting actuary (see 01/11/2000 [**entry 2**] and 23/11/2000 [**entry 2**]) and one other person about Equitable's recent advertising campaign. The Line Supervisor explains that the complaints had been directed at PIA, who had felt that they did not fall to be investigated by them and so had passed the complaints to FSA. The Line Supervisor explains that FSA's standard response was that Equitable were authorised and solvent, and so should not be stopped from advertising.

Line Supervisor C notes that the advertisements had been placed at a time when there had been a reasonable expectation of a sale, and that they had served as '*hooks*' to prompt a subsequent dialogue with sales staff. The Line Supervisor explains that he was asking Equitable for details of the '*crib sheet*' sales staff had used after 20 July 2000, which would disclose what had been said at this stage.

Line Supervisor C copies his note to PIA. In response, PIA say that the complaints had gone beyond issues of advertising and raised questions about Equitable's right to write new business and what the Society was doing with its with-profits fund. PIA say that they had understood that FSA could provide a '*party line*'. PIA explain that they had no final view on the post-20 July 2000 advertisements, but that, if they needed to assess them, '*we would have to consider whether it was fair to promote the Society's wonderful history and past performance without tempering that with information about the current position. That is a specific point of detail and will need an assessment of the actual words and presentation*'.

08/12/2000 [entry 7] FSA's Head of Life Insurance writes to Managing Director A and others about the possible cancellation of policies bought after 20 July 2000. The Head of Life Insurance says Equitable have concluded they should not offer this to policyholders for two reasons. First, the pension contract was governed by pensions legislation which did not entitle a policyholder to any money back, other than at death or the vesting date. Secondly, if a concession were given for policies taken out after 20 July 2000, there would be pressure for this to extend to policies taken out after the Court of Appeal judgment or earlier.

The Head of Life Insurance concludes that '*the first of these arguments in particular is a powerful one against the FSA seeking to require that the Equitable should make a concession of this kind*'.

08/12/2000 [entry 8] An FSA official provides Equitable's supervisors with advice on policyholders' right to pay top up premiums and on how GARs apply to this. The official concludes that Equitable were right to assert both that policyholders have a contractual entitlement to pay additional premiums (although this would terminate if they failed to pay a due premium) and that GAR provisions would apply to any top up annuities. Equitable were wrong, however, to claim that they could unilaterally terminate the entitlement to pay top up premiums.

08/12/2000 [entry 9]	FSA's Firms and Markets Committee discuss Equitable's closure to new business. The Committee note that Equitable '*would go into solvent run-off and there would be a need to calm any panic reaction by policyholders*'. The Committee query whether there had been proper disclosure by Equitable of their position following the House of Lords' judgment and, if there had not, there might be a need for FSA to consider disciplinary action. They note that the disciplinary case in relation to income drawdown policies was still ongoing and that it could cost Equitable a further £30m.
09/12/2000 [18:35]	Further to discussions on 8 December 2000, Equitable's solicitors send FSA (ahead of their conference with Counsel on 11/12/2000 [**16:00**]) the current version of a note on the various legal issues discussed recently, in particular regarding the application of the Policyholders Protection Act 1975 to Equitable in the light of Article 4 of Equitable's Articles of Association. Equitable's solicitors' note reads: *In the course of our recent discussions with the FSA and, in particular, in the context of our discontinued discussions with* [Prospective Bidder A]*, three specific legal issues have arisen:* *(a) the propriety of the Society's Board of Directors irrevocably approving significant disposals of the Society's business or assets without the sanction of a resolution of its members;* *(b) the legal significance of Regulation 4 of the Society's Articles of Association ("Regulation 4"); and* *(c) the application to the Society of the Policyholders Protection Act 1975 (the "PPA") in the light of the interpretation of Regulation 4.*
10/12/2000 [17:53]	FSA thank Equitable's solicitors for their note and say that, unless they had any immediate questions, they would get back to them after their conference with Counsel. [**17:54**] FSA's Chief Counsel A asks Legal Adviser A to forward the note to Counsel.
10/12/2000 [18:26]	FSA's Chief Counsel A tells Legal Adviser A that the Director of Insurance was content for him to contact Equitable's solicitors to request more information and their analysis on 'top-up' rights of policyholders (i.e. the right of Equitable policyholders to have the guarantees, including any annuity rate guarantees, in their policies apply in respect of any further premiums paid).
10/12/2000 [19:18]	FSA's Director of Insurance says to Line Manager E that the press coverage that he had seen was '*no worse than we might have expected – and perhaps in some respects not as bad*'. However, the Director of Insurance adds that there were three points which caused him some concern, those being: *a) it is suggested that mortgage endowment type policies may not be made paid up but must either be continued in payment or surrendered. Is this really true? Could you check with the company as a matter of urgency please?* *b) a number of advisers are quoted as saying that policyholders are likely to be better off surrendering their policies (and accepting the 10% hit) rather than leaving funds locked in. The argument appears to be that moving funds to another company to avert the effect of the projected ½% to 1% fall in bonus rates consequent on adjustments to the investment mix will pay off for all except those close to maturity. Have we any feel for whether this is reasonable (particularly allowing for commission payments)? It seems inconsistent with the view we have been taking (although quite consistent with the "Don't panic" message which is all we have said publicly).*

c) some are suggesting (as expected) that policies sold after the [House of Lords] *judgment have necessarily been "missold". Can we put any sort of figure on the inflow of funds during this period and the likely net cost of returning premiums + interest and cancelling the relevant liabilities.*

The Director of Insurance says that FSA should give some thought as to how they could assess '*what could we have done better?*' to ensure the relevant lessons are learned.

11/12/2000 [entry 1] Equitable apply to renew the section 68 Order allowing them to raise the limit on the admissibility of shareholdings in certain companies.

11/12/2000 [12:09] FSA's Director of GCD advises the Head of Life Insurance that FSA: '*need to be clear whether early cancellation of a pension cannot be done, because of tax legislation, or whether it can be done, at the cost of losing the tax relief. If it can be, this might be the right course for some policyholders*'.

The Director of GCD also says that FSA: '*should explore whether the* [Inland Revenue] *would be prepared to grant an extra-statutory concession allowing transfers to another provider. There seems no reason why they should not, if the investor remains unable to access the funds*'.

[**13:14**] The Head of Life Insurance agrees to follow up both points. He says that Equitable's preliminary view was that, subject to the Inland Revenue being agreeable, cancellation should not be impossible, although they thought this would be very complex.

The Head of Life Insurance says: '*Even if it is do-able, we need to be clear that it is justifiable to give such an option to policyholders who took out their policy after 20 July, but not to others*'.

[**15:46**] The Director says that, if transfers were possible, such transfers could in principle be open to all annuitants, not just those who had taken their annuity after 20 July 2000.

[**16:05**] Chief Counsel B asks the Head of Life Insurance whether a cost-free transfer to another pension provider should be the alternative, if cancellation were not possible.

11/12/2000 [12:11] The Director of GCD advises Chief Counsel A that, having obtained Equitable's analysis, FSA should obtain Counsel's opinion on whether Equitable could remove the rights of GAR policyholders to receive their guaranteed rate on top ups.

11/12/2000 [12:34] FSA's Chief Counsel B provides advice to Managing Director A on PIA's regulatory approach to advertising. The advice is also sent to other FSA officials. Chief Counsel B advises:

(a) Correct, the regulators have never operated pre-vetting, although the monitoring staff may, and in practice on occasions do, offer views on draft material prior to issue but on the basis that this is without prejudice to the ability of the regulator subsequently to take action.

(b) For others to say, but my experience is that the PIA does engage in active monitoring of advertising. It does so through responding to complaints and allegations from the public and regulated firms and by some more systematic surveys of what is published (for example, at one stage Lautro/PIA subscribed to a service by which it was provided with samples of most direct-mail advertisements sent by postal mail-shot). In practice those "monitoring" advertising may, if the case appears to be sufficiently serious, engage with the regulated firm with a view to (i) the withdrawal or amendment of an advertisement (ii) contacting clients who have purchased. So in practice I do not think (historically) we have merely relied on the rules as a ground for compensation (your point (c)).

11/12/2000 [13:23] Equitable send FSA a copy of a letter that is to be sent to policyholders about closure to new business. The letter includes a copy of Equitable's press notice (of 08/12/2000) about the decision to close to new business and their '*Most Frequently Asked Questions and Answers*'.

FSA send the letter to PIA, having discussed it first, saying that Equitable would like any comments on it as soon as possible, as they hoped to send the letter to their printers that day.

11/12/2000 [15:44] FSA's Line Supervisor C replies to the Director of Insurance's questions of 10/12/2000 [**19:18**] that:

> *a)* [Equitable's Appointed Actuary] *has confirmed that mortgage endowments can be made "paid up" and he will send something to us confirming this. Although this possibly contradicts part of the crib notes to staff that we received on* [08/12/2000] *so we need to double check this.*
>
> *b) Could not really pin him down on this but the surrender rate is being closely monitored.* [The Appointed Actuary] *said* [the] *penalty could increase further if required. A colleague of* [the Appointed Actuary's] *I spoke to said that many other providers have a higher expense charge than the Equitable's which could actually offset the potential 0.5 to 1% reduction in investment return likely to be experienced at* [Equitable].
>
> *c)* [Further information] *to come from* [Equitable as soon as possible] *but the 15,000 policies referred to post 20 July contain both* [with profits] *and non profit policies.*

The Line Supervisor adds: '*It is worth noting that PIA have their wish list of matters they wish to discuss with* [Equitable], *they have held off for the time being but if we are to meet the Society soon perhaps they could also attend the meeting?*'.

Line Supervisor C later [**16:16**] provides an update, having spoken again to Equitable. The Line Supervisor says that Equitable have confirmed that the particular endowments that Equitable sell could not be made paid up. He says that a written explanation is to follow.

[**16:27**] FSA's Director of Insurance thanks the Line Supervisor and says '*I hope the explanation will follow quickly!*'. The Director of Insurance also asks:

> *Do we have/could you put together a very quick outline chronology covering:*
>
> *a) when did* [Equitable] *start including GARs in their policies*
>
> *b) when did they stop*
>
> *c) when did we/GAD first look at the issue of reserving for GARs*
>
> *d) when did we issue guidance on this*
>
> *Do we have/could we get more information on what instructions the sales force were given post* [House of Lords] *judgment on the risks implicit in* [Equitable] *policies given the inevitable shift in investment strategy that would be needed if no sale could be negotiated.*

The Director of Insurance sends a copy of his note to PIA and, on the last point, says that any information or advice that PIA could provide would be welcome.

11/12/2000 [16:00] FSA meet Counsel to discuss the meaning of Article 4 of Equitable's Articles of Association. FSA's note (which was subsequently approved by Counsel) records:

> *Counsel said that he had considered whether it was possible in law for a company to limit its liabilities to the amount of its assets. However, he had not found any authority*

2000

for saying that it was not possible so was advising on the basis that such provision would not be inherently illegal.

Counsel was of the view that there were three possible constructions to be placed on the example article (a relatively common provision in the articles of association of mutuals) which is reproduced in the insurance contracts.

The first meaning was that the company's liabilities were reduced to the amount of the available assets in the way mentioned in paragraph 3.8 of the instructions. If this was the correct interpretation then the [Policyholders Protection Act 1975] *compensation scheme could not apply as there would be no liabilities on which it could bite. The liability of the company was restricted to its assets so if the company was bankrupt there were no legal rights on which the policyholder could claim.*

The second meaning was the one put forward in the instructions, namely that the article dealt with the limitation of the liability of members and did not affect the liability of the company.

The third meaning depended on how "assets" should be construed: construing assets as gross assets rather than net assets.

Counsel advises that the first interpretation is '*alarming and novel*' and takes the view that a court would be unlikely to accept it.

FSA note:

<u>The Second Meaning</u>
Counsel advised that this interpretation made sense in its context. The section in which the article was located was headed "Members". It also made sense in the context of section 74 of the Insolvency Act 1986 which provides:

> *Nothing in the Companies Act or this Act invalidates any provision contained in any policy of insurance or other contract whereby the liability of individual members on the policy or contract is restricted, or whereby the funds of the company are alone made liable in respect of the policy or contract.*

Counsel, however, had a linguistic difficulty with this interpretation because the construction did not appear to give effect to the first three lines which clearly limited the liability of the Society, and not the liability of the Members.

<u>The Third Meaning</u>

Counsel stated that the article referred to "assets and property from time to time existing". It had been assumed that "assets" referred to net assets but it could reasonably be argued that the reference to "assets" here was a reference to "gross" assets. So in the case of a company having gross assets of £100 million and liabilities of £150 million the liability of the company would be restricted to the assets of £100 million.

In Counsel's view this interpretation made sense of the first three lines of the article and would probably not expunge any (or at least all) liability so as to present a problem with the Policyholders Protection Act.

Counsel said that the third meaning was his preferred construction. However, both the second and third meaning could be argued as alternatives so we were not driven to choosing between them. He could not say that the first meaning was not arguable on the wording but that he considered it the least likely construction.

11/12/2000 [16:26]	FSA's Managing Director's Office send senior officials some email enquiries about Equitable that had been sent to FSA's consumer helpline. The Managing Director's Office suggest that FSA should meet the following day to discuss how they were to co-ordinate formulating responses.
12/12/2000 [08:53]	Following a discussion the previous evening with Equitable's supervisors, FSA's press office and PIA, FSA decide to put together a series of questions and answers for consumers which would be posted on their website, used by their helpline, and printed for those who did not have access to the internet. FSA say that, in discussion with PIA, it had been suggested that FSA also needed to consider '*getting messages*' to Independent Financial Advisers as '*there are rich pickings to be had from Equitable policyholders with large funds in the run up to Christmas*'. FSA suggest that a PIA 'Regulatory Update' would be the most effective means to do this but that this would need to be put together '*very quickly and promoted widely*'.
12/12/2000 [09:10]	FSA's Director of Insurance writes to the Head of Life Insurance because '*In the rush last night I did not retain a copy of the briefing I gave to* [Managing Director A]'. The Director of Insurance sets out what he thought was agreed as being: *Q Availability of Compensation* *A The company remains solvent and the possibility of insolvency is remote. However the present compensation scheme, and its successor the Financial Services Compensation Scheme, are designed to provide protection in cases where such a situation does arise* *Q How much?* *A The immediate objective of the scheme would be to arrange for contracts to be transferred to another company to ensure continuity of cover or of payments as the case might be. Where this is not possible the schemes provide for compensation to be paid, generally of 90% of the guaranteed amounts.* [**10:45**] The Director of GCD notes for the record that FSA are able to give this briefing on the advice received from Counsel. He does, however, also note that FSA still needed to check the original purpose of Article 4 of Equitable's Articles of Association to ensure that that would not undermine FSA's position.
12/12/2000 [12:11]	FSA send PIA a copy of Equitable's latest guidance to their sales staff about the position following the House of Lords' judgment, which FSA had received earlier that week. FSA note '*this guidance does not appear to outline the consequences of there not being a sale – it seems to concentrate more on the distribution of windfall benefits*'.
12/12/2000 [12:53]	FSA's Head of Life Insurance prepares a possible FSA statement for policyholders which is to be discussed at a Chairman's Committee meeting that afternoon. The statement includes: *<u>Key Points</u>* *1. The Equitable is not bust. It remains solvent but is not accepting any new business.* *2. Don't panic. Consider your options carefully. But if you have bought a policy since 24th November you have until 22nd December to decide whether to exercise your right to cancel it.* *3. The Equitable's funds remain in place but the returns on with profits policies are likely to be lower because following closure to new business the company will need to make a gradual shift out of equities into lower risk investments.*

<u>Detail</u>
When a life fund closes to new business existing policies are still valid and the company continues to pay out benefits as they fall due. "Closure" just means that the company will not take on new customers. There is a margin of solvency above the level of assets needed to meet funds liabilities. In the case of Equitable, it has assets of some £34 billion to meet its liabilities, which are estimated on a cautious basis.

The Head of Life Insurance seeks comments on it, including from GAD.

[**13:00**] An official suggests that it would be helpful for him to set out to the Chairman's Committee the reasons for making such a statement.

[**13:35**] FSA's Head of Life Insurance writes to GAD's Directing Actuary B, saying: '*We spoke. We need to work up some more substantive material on the implications for the fund, and different categories of policyholder. But the immediate priority is to help policyholders*'.

[**14:03**] The Directing Actuary says that the '*Detail*' paragraph needs to refer to guaranteed liabilities '*since there is no provision in the balance sheet for potential final bonus (including amounts shown as allocated to policies but not guaranteed)*'.

[**14:41**] The Head of Life Insurance sends members of the Chairman's Committee a draft statement as a basis for discussion at a meeting that afternoon, explaining that: '*The background to this is that, despite the public statements so far made by both the Equitable and FSA, we are getting a clear message that policyholders and others feel that they do not have enough information. In the first instance it is for the Equitable to provide more detailed information; but it is consistent with FSA's statutory objectives to ourselves to remind policyholders of the main factors which they need to take into account, and to warn them of the importance of taking advice before acting*'.

After the statement is sent to members of the Chairman's Committee, [**14:59**] an IMRO manager suggests that a paragraph on unit trusts should be added following comment in the press that such investors should move their funds elsewhere.

The IMRO manager also says: '*This particular e-mail may not be the best forum for raising this particular issue, but one of my team members ... was contacted by a friend who has an Equitable personal pension plan and who is coming up for retirement in the next 6 months or so. He is quite concerned about the problems at Equitable and contacted 2* [Indepenadent Financial Advisers] *(as our proposed guidance also advises). It appears that he was informed by both that he should transfer out of the fund. It was also suggested by the* [Indepenadent Financial Advisers] *that policyholders with guaranteed annuities would be the first in the pecking order for payouts.* [The team member's] *information is not complete on this issue and she has spoken to* [two PIA officials] *on this and is trying to get further details of the matter and the* [Indepenadent Financial Advisers] *concerned. It looks like some badly informed/unscrupulous* [Indepenadent Financial Advisers] *may be trying to exploit the situation. Should we also not be doing a guidance for use by* [Indepenadent Financial Advisers] *about the sort of situations in which it would be unwise to advise a transfer?*'.

12/12/2000 [13:41] A member of FSA's Insurance Supervisory Committee sends Committee Members a paper on the impact of the merger of two large pharmaceutical companies on insurance companies who have, or would apply for, section 68 Orders on the admissibility limits of shareholdings. The Committee member notes that the merger was due to be sanctioned in the United Kingdom on 20 December, with share dealing commencing on 27 December 2000.

2000

The Committee member explains:

> *This clearly leaves us with a problem over existing Section 68 orders and year end positions. Existing concessions in respect of* [shares held for two companies] *will become void as the two companies will no longer exist, and to restore at least part of the position (any new concession can only offer 5% for the combined company rather than potentially 5% for each of the current two constituent parts) will require an amendment under S68(3) to add* [shares in the merged company]. *Even if there was sufficient cover in Treasury (and here) over the Xmas period to handle such amendments, there is realistically not enough time to receive and process requests within 2 working days.*
>
> *On anticipatory orders the* [Insurance Supervisory Committee], *at its meeting on 4 December, has already agreed that it would not recommend a S68 concession for the combined stock before the merger happens, but an application post-merger would not need to go back to the Committee. This leaves, I think, two options:*
>
> > *(a) We adopt a fairly hard-hearted, but consistent, approach which offers no company an anticipatory or amending order, which will leave all those with concessions at the moment of having to drop back to only being able to count 2.5% of the combined stock at the year end (this would also leave them in no different a position as companies holding no concession). Although not finalised, current responses from supervisors suggest 15 companies will be so affected. FTSE concessions have basically been sought for* [free assets ratio] *reasons, and so this approach ought not to raise solvency concerns - although an awkwardness, of course, is that all the concessions issued during the year for* [the two companies who are to merge] *will have been pointless.*
> >
> > *(b) We consider the option of offering, post-year end, a reporting concession. This would, of course, require overturning the now long-standing* [Insurance Supervisory Committee] *policy not to consider such requests. I think to follow this option would require some very compelling reasons, which I am not at all sure flow from* [this] *situation. It may also, unhelpfully, trigger other requests for FTSE concessions that did not quite get to us before the year end.*

The Committee member concludes:

> *Personally I favour option (a) as probably the fairest, if not the most popular, but no doubt others will have views. Obviously* [the Insurance Supervisory Committee] *need to consider and agree an approach, and despite being already over-burdened I suggest we add it to Monday's agenda.*

12/12/2000 [15:48] Equitable send FSA some generic advice for policyholders on whether or not they should continue to pay premiums. The advice states: '*You should be aware that the following sections contain information which may assist you in your decision as to whether to continue paying premiums. These are guidelines only – for advice regarding your individual circumstances you should refer to your financial adviser*'. For recurrent single premium contracts (which, at that time, formed approximately 70% of Equitable's business), the advice states:

> *Under these types of contract, the client can pay premiums of any amount and at any time.*
>
> *(i) With profits retirement annuities, with profits individual pension plans written before July 1988 (both types have GARs)*
>
> > *These policies have guaranteed annuity rates which provide a minimum income irrespective of prevailing annuity rates. In order to preserve those terms for future contributions, the terms of the policy require a payment to be made each year. For policies with a monthly premium there is an additional condition such that if a*

2000

premium is unpaid on the due date the policy will be made paid up and no future contributions would be allowed. The Society has not imposed these conditions to date, although they may be applied in the future. Consequently the general advice must be to continue making contributions. However it must be borne in mind that the more cautious investment approach, which the with profits fund will now follow, may lead to lower investment returns. In addition, the actual cost of the guaranteed annuity liability could be more or less depending upon a number of factors, most importantly future interest rates. If the final liability exceeds the current best estimate then policy values would be lower than would other wise be the case.

It may also be the case that these contracts have features that are not available under alternative arrangements (e.g. personal pension plan) due to changes in Inland Revenue practice e.g. the ability to accept greater contributions.

Transfers under such contracts are not guaranteed.

(ii) Personal Pension Plans/post July 1988 individual pension plans/Free Standing AVC plans/2000 Personal Pension Plan ...

(a) With profits

Pre July 1996 plans

Benefits purchased on a with-profits basis contain a guarantee such that each contribution (after a charge to cover expenses), receives a guaranteed rate of interest of 3½% per annum.

Post July 1996 plans

The guaranteed rate of interest is not included in these plans.

For all plans, you should bear in mind that, as a result of the need for the Society to make provision for the guaranteed annuity rates available under certain older pension contracts, the more cautious investment approach, which the with profits fund will now follow, may lead to lower investment returns. In addition, the actual cost of the guaranteed annuity liability could be more or less depending upon a number of factors, most importantly future interest rates. If the final liability exceeds the current best estimate then policy values would be lower than would otherwise be the case.

Transfers of all with-profit benefits are not guaranteed.

FSA's Line Manager E provides some comments about the format of the headings and the method of distribution. The Line Manager also suggests that they should amend the explanation in relation to GARs, so that it is easier to understand.

Equitable write to FSA with details of the very limited circumstances where they feel they should continue to write new business. Equitable also enclose a further copy of their advice to policyholders on whether or not to continue to pay premiums.

12/12/2000 [17:51] FSA's Consumer Relations Department inform the Director of Insurance that the OFT had telephoned asking for help from FSA on complaints that they had received about Equitable's application of a market value adjuster. FSA note that their contact is timely, in view of an FSA Director's Committee meeting the following day at which a paper on FSA taking on unfair contract terms powers was to be discussed.

12/12/2000 [18:00] FSA send Equitable's solicitors a copy of their instructions to Counsel and a note of the subsequent conference.

12/12/2000 [entry 9] The OFT write to FSA, explaining:

> *We are considering whether we need to take enforcement action in relation to reports that Equitable Life has imposed a new charge of 10% on transfers of assets out of the Society. We are beginning to receive complaints and enquiries about this charge. The relevant terms and conditions could be unfair if they give the Society discretion to make new charges or to vary existing ones.*
>
> *The Director General of Fair Trading has powers to prevent the use of unfair terms, by seeking an injunction in the High Court. The Office is prepared to move swiftly on the matter to protect the interests of consumers. However, we know insufficient about the basis on which Equitable is making the charge to justify formal action at this stage.*
>
> *Whatever light you can throw on the question would therefore be most welcome.*

12/12/2000 [entry 10] In advance of a meeting that afternoon, the Director of GCD provides FSA's Chairman with a note of legal issues in relation to Equitable. These issues include:

- *confirmation by Counsel that compensation would be available, subject to checking original purpose of Equitable's article 4;*
- *transferability to new providers: Inland Revenue difficulties likely to be surmountable by extra statutory concession;*
- *validity of "market value adjuster" may need to be considered to ensure used for proper purpose and not invalid as an unfair contract term;*
- *scope for closing down rights to take out additional guaranteed policy: advice that this cannot generally be done: possibility in some special cases (eg where new staff members join a pension scheme) to be explored;*
- *scope for action by way of redress or discipline for misselling: note by* [Chief Counsel B] *attached;*
- *risk that Equitable's subordinated loans could be triggered by decision to close the doors to new business.*

Attached to the note are briefing notes on various types of inquiry that might be commissioned to review the role of the regulators and on the options for seeking redress for mis-selling.

13/12/2000 [entry 1] The German regulatory authority writes to FSA, further to FSA's letter of 07/08/2000.

13/12/2000 [entry 2] FSA prepare a paper for their Insurance Supervisory Committee advising that the Committee should recommend to HMT that they agree Equitable's requested section 68 Order to raise the limit on the admissibility of shareholdings in certain companies.

FSA's analysis notes that Equitable's request '*follows the pattern of many other requests for this concession from companies based on the argument that adequate market weightings of certain equities can not be held (as admissible) because of the AVR restrictions*'.

13/12/2000 [09:46] PIA thank FSA for the information sent the previous day. PIA suggest that both regulators meet the following day to discuss their '*information wish lists*' and to see what of the information they already had could be shared.

[**10:12**] FSA's Line Manager E says that it would be useful to meet '*not least so that we can prioritise and coordinate what we are doing*'. The Line Manager explains to PIA that:

2000

Equitable currently have a number of things to deal with and we must be careful not to distract them too much from dealing with priority matters, such as getting information to policyholders and looking after the funds.

I do not wish to imply that reviews, enforcement, redress etc are not important but we have to be realistic about what the company can do at any one time. I think in terms of [conduct of business] *issues, our senior management will consider looking into sales post 20 July as the absolute priority. But we also need to ensure that we prioritise information requests. We have asked the company to establish a working level contact (I will act in that capacity here) through whom we will channel requests.*

13/12/2000 [10:05] FSA's Head of Press Office provides Managing Director A, the Director of Insurance and the Head of Life Insurance with a summary of press coverage about Equitable, under the heading '*Today's pasting and strategy going forward*'.

The Head of Press Office says that, when asked about wider systemic issues in relation to annuity guarantees, FSA have said that '*the other 50* [companies] *writing GARs have been able to take the hit*'. The head of Press Office asks the Director of Insurance for his views on this.

Under '*Strategy*', the head of Press Office says: '*The sooner we can say something one way or another about an inquiry the better. Otherwise things will carry on in dribs and drabs with no real prospect of our being able to draw a line under things or put up a case that knocks them down. The reserving point issue is a classic example. Our line so far has been "too early to talk about it at this stage", but clearly the pressure will intensify. It will also allow us to stop being drawn into "on the hoof defensive mode" on things to which we don't have the full answers*'.

[**10:31**] The Head of Life Insurance replies:

Our line on the other 50 or so companies which wrote GAR policies is that the Equitable's position is different because of a unique combination of circumstances which do not apply more generally. In particular:

- *it does not have an estate of surplus assets;*
- *the terms of its guarantees were unusually generous;*
- *pensions are a major element of its business.*

[**11:02**] FSA forward the summary of the press coverage to GAD and say that it would be helpful for them to put together a factual account of the position that FSA have taken on Equitable's reserving for annuity guarantees. FSA suggest that this might set out:

- *when and how we became aware of the extent of the problem from the industry review conducted in early 98;*
- *the reserving standards that we insisted on and the Equitable's reluctance to accept these;*
- *the particular arrangements which Equitable adopted to address the problem, including in the reinsurance cover and the implicit item;*
- *our view of these both at the time and now. (I think we need to be clearer than we have been able to be so far about the extent to which the reinsurance arrangement provided genuine protection, at least against the circumstances then envisaged);* [and]
- *our view on the Equitable's position now, both in steady state, and faced with significant lapses. In particular any assessment on the extent and the timing of the necessary rebalancing towards fixed interest securities would be very helpful.*

[**13:08**] GAD say that they would give priority to producing the factual account requested. GAD also say that, subject to FSA's agreement, a GAD staff member would be situated permanently at FSA during the Equitable crisis, and that Directing Actuary B would be that person in the run-up to Christmas.

[**14:03**] GAD provide FSA with a seven-page draft document entitled '*Equitable Life Assurance Society: timetable of GAD involvement since 1996*'.

[**15:00**] FSA's Director of Insurance circulates a copy of GAD's chronology.

13/12/2000 [10:51] FSA's Line Manager E circulates the OFT's letter of 12/12/2000 and asks if others have any views on whether Equitable's practice might be in breach of the Unfair Terms in Consumer Contracts Regulations 1999. The Line Manager says: '*The approach is a fairly standard one adopted in the industry for transfer values, even if it* [is] *usually not made quite so explicit*'.

13/12/2000 [12:29] HMT prepare a response to a tabled question in the House of Lords, which asked whether FSA had taken adequate action to safeguard the interests of Equitable's policyholders. HMT send FSA a copy of the reply, saying that it had only been finalised late the previous night and had been revised by special advisers. However, HMT hoped that it was acceptable to FSA and '*there is nothing nasty in it*'.

The text of the suggested answer was: '*The FSA is working with The Equitable Life Assurance Society to look after the interests of its policyholders*'.

The following drafting is recorded on the answer as having been removed:

> *The Equitable Life is seeking to act prudently in closing to new business in order to allow the best opportunity to stabilise the business in the interests of existing policyholders. The FSA will maintain a watching brief and will not hesitate to step in if necessary.*

In their background note to the proposed answer, HMT write:

> *The Society's difficulties stem from with profit guaranteed annuity rate policies (GARs) which it wrote up until the late 1980s. These pension policies gave policyholders the contractual right to an annuity at a specific percentage rate when the policyholder retired, which although appropriate for the time in which the policies were offered, can be seen in today's low inflation environment as generous.*
>
> *During the 1990s, when interest rates fell, the GARs began to exceed current annuity rates. Reserving standards were increased to reflect the revised expectations of investment performance in a low inflation environment, but it became apparent to the Society that the increased costs of reserving for these increased GAR benefits would add a significant financial burden on the company, with one set of members getting a larger slice of the assets of the mutual than another.*

The note continues:

> *The Directors of the Society took the view that it would be inappropriate for one set of members to disproportionately benefit in this way and they put in place a bonus policy that differentiated between GAR and non-GAR policyholders on maturity of the investment.*
>
> *This policy caused resentment amongst some GAR policyholders who felt that they were being deprived of their full entitlement. The Equitable responded by funding a representative action in Court to decide the issue.*

After setting out the result of the litigation up to the House of Lords' judgment, the background note concludes:

> *The result of the judgment meant that, although the solvency of the Equitable was unaffected, the cost of the GAR liability would curtail its investment freedom and so a decision was made by the Board that it would be in the best interests of policyholders to*

seek a buyer for the Society. When this option failed to materialise, the Society took the decision to close to new business in order to concentrate on safeguarding the interests of its existing policyholders.

HMT then set out possible supplementary questions and suggested replies. In response to the question: '*Why didn't the FSA require the Equitable to honour its guarantees and to hold adequate reserves against them in the first place?*', HMT state:

> *The Society was fully reserved for all of the guarantees it made based on its differential bonus policy. Prior to the House of Lords' judgment this was deemed to be in line with the then understanding of the law where it could be justified.*

In response to the question: '*Has there been a failure of regulation in allowing this to happen?*', HMT say:

> *It is not possible for regulation to remove all risk and possible failure from the financial system. FSA as regulator takes a risk-based approach, operating its regulatory techniques in partnership with the proper responsibilities of consumers themselves and with firms' own management to realise realistic aims and performance.*

In answer to the question: '*What is the point of regulation if it does not prevent this sort of problem occurring?*', HMT explain:

> *The regulations have ensured that the Society has maintained a strong reserving basis. It is because of this that the Society should be able to enter a period of solvent run-off and meet its liabilities as they fall due.*

In answer to the question: '*Why didn't the FSA take action sooner – how could they allow the Equitable to keep taking new business?*', HMT say:

> *The Company remained solvent and able to meet its obligations. Although the long-term investment freedom was curtailed by the judgment, there was a realistic prospect of a sale which would have brought a new injection of funds to safeguard the long term interests of policyholders. The prospect of a sale seemed likely until recently, so the decision was taken to allow the Company to seek a buyer.*

In response to the question: '*What about policyholders reasonable expectations (PRE) and bonuses?*', HMT explain:

> *PRE cannot be precisely defined.*
>
> *The company has long maintained a policy of paying out bonuses as fully as possible to policyholders and not holding back reserves well in excess of those needed to match liabilities. This means that the company did not have the resources needed to fund the large unexpected costs that stemmed from the Judgment.*
>
> *The Equitable must now seek a more prudent investment strategy in order to provide greater security for its policyholders. PRE and bonus performance is never guaranteed, being based on the performance of the company during the term of the policy. It is likely that bonus levels will be reduced, but this is both a symptom of the weaker fund and also of the low interest rate environment. Bonus rates are reducing across the industry.*

13/12/2000 [13:19] The then Department of Social Security ask FSA for information in order to brief their Secretary of State, including: general briefing on Equitable; the number of policyholders affected; details of any occupational pension and AVC schemes run by Equitable; and any information on likely policyholder losses. FSA record that they supplied a copy of their press office briefing.

13/12/2000 [15:34] GAD's Chief Actuary C provides FSA with an explanation of Equitable's reinsurance arrangement. The Chief Actuary explains:

> *The following is, hopefully, a simple explanation of the Equitable reinsurance arrangement. Any explanation needs to be prefaced by some background on the reserving requirements.*
>
> *Insurance companies are required to set aside reserves sufficient to cover their liabilities based upon prudent assumptions. Where a company has GAR liabilities, a prudent assumption would be that policyholders would be expected to exercise their GAR option if it is likely to be the most expensive option for the insurer. In practice, policyholders may choose to take a less financially attractive option for personal reasons, for example to take a tax free lump sum rather than the guaranteed pension.*
>
> *A reinsurer takes a commercial view of the situation reflecting, for example, the fact that policyholders might prefer to receive lump sum and take a reduced pension or to take their pension in a more convenient form than that offered under the GAR. The reinsurance is an effective and legitimate way of taking liabilities off the balance sheet of the Equitable by transferring the top slice of the liability on GARs to the reinsurer. In other words, the Equitable ends up setting up a liability on its balance sheet calculated on the commercial basis (reflecting a GAR take-up rate of 60% in the Equitable case) and the reinsurer bears the risk and cost if more than 60% of policyholders take the GAR.*
>
> *The initial reinsurance treaty entered into by the Equitable was based on a 25% take-up rate but was made conditional on the Equitable being able to continue to operate its then bonus policy. The 25% rate reflected the low take-up rate then being experienced by the Equitable as a consequence of that bonus policy.*

[**15:48**] FSA's Director of Insurance thanks him for the '*very helpful*' explanation, suggests that the Head of FSA's Press Office pursue directly with the Chief Actuary any follow-up questions he might have and asks that they put together something similar on the section 68 Orders for future profits implicit items which had been granted to Equitable.

The Director of Insurance says: '*The point again, I think, that this is a relatively routine arrangement, for which provision is made in the European legislation, which recognises that profits on in force business, prudently calculated, represent an asset for which credit can be taken. There was nothing novel or unusual in the* [Equitable] *case which would have made it inappropriate to allow this*'.

[**15:51**] FSA's Head of Press Office replies: '*I'm sorry, but this does not really help in killing the story nor the implication it carries (that we helped a cover up). We need a rebuttal of the points in the Independent article.* [An official from the Press Office] *is on the way to talk to* [the Director of Insurance] *about it. We need clearer and more robust lines*'.

[**16:29**] GAD's Chief Actuary C says:

> *There appears to be little more that we can add to our explanation of the treaty.*
>
> *GAD and FSA reviewed the treaty and were eventually satisfied that it was reasonable for the actuary to take credit for the cover provided by the reinsurer. We were aware of the cancellation clause that gave the reinsurer the right to cancel the treaty. We pointed out to the company that professional actuarial guidance to the Appointed Actuary required him to consider whether he should make any additional provision for the contingency that the reinsurance might cease. At the time the company were confident that they would win their Court case and believed that they need make no provision for the risk. This subsequently proved to be a false expectation and they renegotiated the treaty. The revised treaty is satisfactory.*

Placing a value on future profits (the implicit item) is permitted by the EC directives and UK legislation. Equitable have been granted an order which allows it to count this item for at least four years. The amount that the Equitable value is determined strictly in accordance with the legislation. A number of other insurance companies place a value on future profits in their statutory returns that demonstrate solvency and the Equitable were treated consistently with those insurers. Those returns show the amount of future profits in a clear manner.

13/12/2000 [15:52] FSA's Director of Insurance asks Legal Adviser A for some brief and simple guidance on FSA's 'fit and proper' powers, as FSA's Press Office were coming under some pressure from the Press on the standing of Equitable's Board members.

[**15:56**] The Head of Press Office explains that: '*It also needs to cover any obligations the directors have in relation to the selling of products – so, in other words, what could we "get them" for under the FS Act 86 and/or the Insurance Companies Act*'.

[**17:13**] Legal Adviser A explains that most breaches of ICA 1982 were criminal by virtue of section 71: '*So if a breach has been proved, then prosecution possible but Secretary of State/Treasury consent required i.e. not contracted out to FSA*'. The Legal Adviser says:

> *What follows is largely theoretical in this case*
>
> *The powers under the ICA are aimed at companies not directors. So if a director is not fit and proper to hold the position, proceedings would be taken under section 11 to withdraw authorisation of the company to effect contracts of insurance. Technically the grounds are a combination of 11(1)(b) (there exists a ground on which* [The Treasury] *would be prohibited from issuing an authorisation) and section 7(3) which says an authorisation cannot be granted if any director is not fit and proper. Alternative ground is that the criteria of sound and prudent management is not/may not/will not be fulfilled. The criteria of sound and prudent management also require directors* [to] *be fit and proper.*
>
> *Obviously, a company normally will sack its director if it is likely to have its authorisation withdrawn but it is not much of a threat if the company is not effecting any new contracts anyway.*
>
> *Conceivably we could direct a company under section 45 to remove a director for the purposes of ensuring the criteria of sound and prudent management be fulfilled but that is uncharted territory.*
>
> *There are powers under section 54 of the Act to present a petition to wind up in the public interest which could possibly be used in the case of a board of dishonest/incompetent directors.*

[**18:01**] Chief Counsel B advises on the relevant conduct of business powers, saying: '*There is a power in section 59* [of the FS Act] *1986 to prohibit individuals from being employed in connection with investment business if it appears that an individual is not fit and proper. This is a high hurdle and has been used very infrequently – I doubt whether it would be applicable here*'.

13/12/2000 [16:13] FSA's Legal Adviser A sends the Director of GCD a draft note of his meeting with Counsel on 11/12/2000 [**16:00**]. The Legal Adviser says that, while the note had not yet been formally approved by Counsel, it had been discussed with his junior and Legal Adviser A did not anticipate any material changes. The Legal Adviser highlights that the view that Article 4 reduces Equitable's liabilities to the amount of their available assets, while not unarguable, was the one least likely to find favour with the courts. The Legal Adviser notes that the other two meanings discussed '*will not have the effect of expunging the liability of the Society such as to cause difficulties under the* [Policyholders Protection Act 1975] *and compensation scheme under* [FSMA 2000]'.

[**16:56**] The Director of GCD says: '*I am happy to follow this advice, but am not really convinced by it – hopefully the full Opinion will be more convincing*'.

[**19:12**] Chief Counsel A adds that FSA might also receive a '*sanity check*', via work being undertaken by Equitable's solicitors.

13/12/2000 [16:30] HMT and FSA hold their eighth quarterly meeting on insurance regulation issues. HMT give an outline of the discussion following the answer given to a parliamentary question that had just taken place in the House of Lords.

FSA's Director of Insurance explains that it is hoped that the advice posted on their website would prove useful in providing policyholders with guidance and reassurance.

In response to HMT asking if there were to be an internal FSA inquiry, the Director states that: '*a paper was being prepared to be put before the FSA Board on options available for the company, and whether there are any lessons to be learned in hindsight, but that any decision-making that would have contributed to the problems of the Equitable would have been the responsibility of DTI and pre-*[Securities and Investments Board]'.

HMT's note then records:

> *Discussion turned to questions about the events leading to the closure of Equitable; why the company and the FSA did not realise sooner the potential problems caused by the uncapped liability of GAR options, and why a sale could not be arranged. Turning to the sale first,* [the Director of Insurance] *explained that there had been three heavyweight bidders at the outset, but* [Prospective Bidder A] *was the most realistic and likely option. However, discussions about ring-fencing the GAR liability by buying out the options would have cost* [Prospective Bidder A] *over £1bn and the company could not afford to do this in addition to the launch of stakeholder funding.* [The Director of Insurance] *then explained that neither the Equitable nor the FSA realised the extent of the GAR liability. The company had thought the liability capped, and the FSA had not appreciated the scale of the problem ...* [The Director of Insurance] *assured* [HMT's Head of Home Financial Services] *that this has served as a "wake-up call" for the FSA and the industry to review their structure and their strategies.*
>
> *Broadening the discussion,* [HMT's Head of Home Financial Services] *asked about whether the* [Policyholders Protection Act 1975] *would be effective.* [FSA's Head of Life Insurance] *explained that the company was not insolvent and so policyholders would not be eligible for the scheme.*
>
> [HMT's Head of Home Financial Services] *mentioned that there may be allegations of mis-selling following the House of Lords' Judgement.* [FSA's Head of Life Insurance] *explained that although the script provided to the salesforce did not deal with the problems, it would have been unreasonable to stop the company from continuing as a going-concern while a sale was anticipated.*

13/12/2000 [16:42] FSA send Equitable a '*PIA wish list*' ahead of their meeting the following day. The list sets out a number of questions, including how Equitable were dealing with telephone enquiries, what new business activities had ceased and how Equitable were dealing with requests for the transfer of funds to other providers and for switches of funds to unit-linked policies.

13/12/2000 [19:41] FSA's Director of GCD says to the Head of Press Office that, while he had not seen the note prepared by FSA on whether they could require Equitable directors '*to go*':

... I should have thought the press line should be "If a director were not fit and proper to be involved in [investment business] *we have powers to ban him. If a director loses the confidence of those to whom he is accountable, they have their own remedies."*

13/12/2000 [21:43] FSA's Chief Counsel A reports that she had had a very long conversation with Equitable's solicitors that evening, which had mostly concerned the compensation scheme but also GAR top up rights.

Chief Counsel A records: '*He explained the Equitable's policy wording which led in his view pretty inexorably to the conclusion that the company can stop top-ups extending to GARs only where a policyholder has missed a top up and so given up the right to top-ups in future. The policies make clear that the company can exercise its discretion nevertheless to allow top-ups in future, but can exercise this discretion on the basis that top-ups will not extend to GARs. The Equitable proposes to notify policyholders that in future it will exercise its discretion in this way. That should mean that the only argument which might be raised against this is one of estoppel (due to the Equitable's history of exercising its discretion so as to allow top-ups to extend to GARs)*'.

The Chief Counsel concludes that Equitable's solicitors' reasoning seemed persuasive and seeks the view of other FSA lawyers.

13/12/2000 [20:00] In response to Line Manager E circulating the OFT's letter that morning [**10:51**], Chief Counsel A says that Legal Adviser A would have to take forward the legal work, but notes that the Director of Insurance had agreed at an update meeting that morning that FSA would need to do some further work on this issue.

13/12/2000 [entry 16] The Consumers' Association write to FSA, asking whether FSA were planning to hold an inquiry into what had happened to Equitable. The Consumers' Association raise a number of detailed questions about the actions of Equitable, including: why they had not adopted an incremental approach to managing their exposure to guaranteed annuities; why a sale had not happened and whether Equitable were unwilling to accept an offer; whether FSA could have influenced Equitable to accept a deal in the consumer interest; and whether there had been any attempt to put together an industry rescue. The Consumers' Association ask if FSA would be updating their advice to consumers and the industry on guaranteed annuities. The Association explain that there was a real fear that Equitable would increase the size of their market value adjustment to dissuade policyholders from taking their funds elsewhere.

14/12/2000 [entry 1] Equitable notify FSA that their Chief Executive had resigned on 7 December 2000 and that they proposed to appoint their current Appointed Actuary as Chief Executive.

14/12/2000 [entry 2] An official sends an FSA Director a note for a Heads of Department briefing meeting, arranged for the following day. Under '*Other Issues*' and '*Equitable Life*', the note reads:

Invite [FSA's Head of Life Insurance] *or* [the Director of Insurance] *(depending on which of them is there) to talk about the situation and FSA's stance*

Invite [FSA's Director of Consumer Relations] *(who is a trustee) to talk about the implications for the FSA Pension Scheme.*

14/12/2000 [entry 3] FSA provide a statement for BBC *Watchdog*. FSA say that they had always acted in what they had considered were the best interests of policyholders since they had taken over prudential regulation in January 1999. FSA explain that Equitable were a '*special case*', being a mutual with no inherited estate and a higher proportion of guaranteed annuity business than other insurers, with Equitable also offering more generous and flexible benefits than was usual. FSA say that their current priorities were to do all they could to protect policyholders' interests by ensuring Equitable provided relevant information to those policyholders as quickly as possible. FSA state:

> *Equitable Life has closed to new business, but continues to run its business for existing policyholders. Equitable remains solvent – it has enough assets to meet its projected future pay-outs, even after allowing a cushion for likely market movements.*

FSA say that they were warning Independent Financial Advisers that FSA would be protecting policyholders by monitoring any advice provided and that FSA would highlight to policyholders that: '*It is essential that no adviser seeks to take advantage of your situation by panicking you into unwise decisions*'.

On compensation schemes, FSA state: '*As the Equitable remains solvent, the need for any back-stop arrangements in the event of insolvency are remote. However, should the need ever arise, there is a scheme designed to provide compensation. The immediate objective of the scheme would be to arrange for your contract to be transferred to another provider to ensure continuity of cover – or pay-out – as the case may be. If that were not possible, the scheme provides for you to be paid compensation, generally of 90% of the guaranteed amount, up to an unlimited amount for pensions and life insurance*'.

14/12/2000 [09:53] FSA's Public Affairs and Accountability Department send Line Manager E the transcript of an answer in the House of Lords about Equitable from the previous day.

[**10:19**] Line Manager E comments that the response did not look too bad '*– it balances reassurance and realism*'.

14/12/2000 [10:34] FSA ask GAD for comments on a note for use in dealing with policyholder queries about the market value adjuster. FSA explain that, before it is used, they also want to send the note to Equitable for their comments.

[**11:53**] GAD suggest some amendments.

14/12/2000 [10:36] GAD's Chief Actuary C forwards the discussion on Equitable's reinsurance treaty (see 13/12/2000 [**15:34**]) to Directing Actuary B.

[**12:10**] The Directing Actuary replies (copied to FSA):

> *Our understanding from the meeting with* [Equitable's Appointed Actuary] *is that the reinsurance cover should remain in place even after the society closes to new business. If the reinsurer is now seeking to terminate this agreement, then I would expect the Equitable to challenge this (possibly even in Court), but FSA might wish to verify developments on this front with the society in due course.*
>
> *For the implicit item on future profits, there is also the 1984 DTI Guidance Note which we believe to have been followed by Equitable. Incidentally, we could add that they should only need to earn an additional investment return of around 1% per annum in excess of the valuation rate of interest on with profit funds (ie probably around 4.5% p.a. in total) in order to justify the present £900 million implicit item.*

14/12/2000 [c12:00] FSA post information on their website for Equitable policyholders. In relation to their role, FSA explain:

The FSA is:

- *monitoring the Equitable's position closely;*
- *making sure that policyholders are given timely and comprehensive information so that they can consider their options fully;*
- *requiring the Equitable to have effective arrangements for dealing with any complaints they receive; and*
- *the Equitable has, with the encouragement of the FSA, established a process for helping policyholders to decide whether they should take any immediate action.*

Since current Equitable policyholders may be asking other firms for advice, the regulators will shortly be reminding all firms of their obligations to give suitable advice, taking properly into account the personal circumstances and aspirations of their customers.

14/12/2000 [14:36] GAD's Directing Actuary B comments to Chief Actuary C and FSA's Director of Insurance (in reply to 13/12/2000 [**13:08**]), on the issue of Equitable's asset mix, that:

If they are seeking to ensure to a high degree of probability that all guaranteed benefits can be met in full, and are no longer willing to incur additional investment risk to be spread across all with-profit policyholders, then I would expect to see them switch progressively towards a portfolio where some 80-90% of their with-profit liabilities are covered by fixed interest securities of appropriately matched duration. This will though of course lock them into some fairly low bonus declarations in future years.

The Directing Actuary also says that he had seen '*a reference recently to their Deed of Settlement which apparently contains a provision that allows a rateable reduction of benefits in the event of the society incurring any unexpected losses. It would be interesting to know more about this provision*'.

14/12/2000 [16:22] FSA's Line Manager E advises the Head of Life Insurance and the Director of Insurance that Prospective Bidder B have indicated that they might still wish to make a bid for Equitable. The Line Manager explains that Equitable were unaware of this.

[**16:50**] Managing Director A suggests that this was potentially good news and that FSA should consider how the different types of policyholder would be treated by such a proposal.

14/12/2000 [16:38] FSA's Chief Counsel B sends Managing Director A, the Director of Insurance and the Head of Life Insurance a copy of advice that he had given to PIA, concerning advice given by trustees of group schemes in response to a query from the National Association of Pension Funds.

14/12/2000 [before 18:51] FSA and PIA meet Equitable. Equitable agree to provide FSA with regular updates on the service provided to policyholders (numbers of telephone calls answered, access to advice and requests for transfers and surrenders).

[**18:51**] Following the meeting, Equitable provide FSA with copies of information Equitable had provided to policyholders on their closure to new business.

14/12/2000 [18:08] FSA's Managing Director A sends the Chairman and two Directors a draft paper for FSA's Board which seeks to: bring the Board up to date with events; identify the work currently in hand; note the main issues to be resolved; and set out the options for review of what had happened and how best FSA might identify lessons for the future.

14/12/2000 [18:11]	GAD advise FSA that a particular condition of the subordinated loan might be interpreted to mean that loan holders could require full repayment plus interest if Equitable ceased to write new business and could petition for winding up if this were not paid. GAD say: '*While they clearly have the resources to make this payment (the usual concern of banking regulators) this would almost certainly mean that they would be unable to meet the full resilience test that we would normally require in the FSA returns. However, they should still be solvent at the present time in Company Act terms*'.
14/12/2000 [18:18]	GAD send FSA a copy of Equitable's leaflet setting out their approach to transfers, which they had initially provided on 14/12/1995. GAD say that they expected that Equitable were applying the same principles now, with one exception. GAD suggest that Equitable's statement in the leaflet: *The financial adjustment is not a "penalty" in the normal sense of the word. The current value based on the value of the underlying assets is being paid, and there is no attempt at recouping initial acquisition expenses that have not as yet been met.* might no longer be relevant for a closed fund '*where all expenses do have to be recovered from existing policyholders, and also the GAO cost has to be taken into account*'.
14/12/2000 [18:46]	FSA's Head of Life Insurance provides Managing Director A with a note for use by FSA's helpdesk and correspondence units, explaining Equitable's announcement that they are increasing the '*exit charge*' (i.e. the market value adjuster) for policyholders surrendering a with-profits policy, from 5% to 10%. In the note, FSA accept that, in current market conditions, this charge was not excessive. FSA say they '*will continue to monitor the Equitable's practice*' and explain that they '*have the powers to intervene at any time, if we consider the figure to be excessive*'. FSA's note also draws policyholders' attention to the fact that: *... there may be one or more points in your policy, such as contractual review dates, when a withdrawal can be made without such a deduction. You can check this in your contract and if in doubt refer to the Equitable.* and that policyholders: *... should consider very carefully the implications before deciding to make a withdrawal. This is explained in more detail in our information material available on the* [FSA's] *website or on request.* The note reflects comments by GAD and Equitable. An earlier version included the statement that Equitable would consult FSA if they needed to raise the rate further. This was removed at the request of Equitable. The Head of Life Insurance comments: *We could take up* [this point] *with* [Equitable]. *But it is not vital, and in the interests of speed I recommend you approve this version for use by helpdesk and correspondence units. Any improvements can be incorporated in a Mark II version later.*
14/12/2000 [entry 16]	FSA attend a meeting of the Tripartite Standing Committee. FSA report to HMT and the Bank of England on developments since the last meeting on 06/12/2000. HMT ask FSA to produce a paper for the next meeting of the Committee in January 2001, which would set out the issues and priorities arising from the Equitable case.

15/12/2000 [08:10]	FSA's Managing Director A agrees with the Head of Life Insurance's recommendation to approve the note on Equitable's use of a market value adjuster (see 14/12/2000 [**18:46**]), but warns that he would leave Equitable in no doubt that if they raised their rates again without consulting FSA this would be '*at their peril*'.
15/12/2000 [10:21]	HMT ask FSA for help with a response to a Parliamentary question, which asked the Chancellor of the Exchequer to make a statement on the performance of FSA in regulating the insurance sector, with particular reference to Equitable.
15/12/2000 [13:32]	Equitable's solicitors respond to the note of FSA's conference with Counsel, sent to them on 12/12/2000 [**18:00**]. The solicitors say that they were due to speak with Equitable about this on 18 December 2000 and could not really say much before then. The solicitors do, however, confirm, as had already been indicated to FSA on 13 December 2000, that: '*I find it difficult to square* [Counsel's] *"Second Meaning" with the express wording of Regulation 4. Also I cannot follow the logic of the "Third Meaning", on which his conclusion relies*'.
15/12/2000 [17:23]	Equitable provide FSA with details of calls to Equitable's helpline over the last three days and the value of transfers, surrenders and switches on the previous day. This did not include information about contact with branch offices. Equitable also provide policyholder and membership data as follows: *i.* *Number of individual policyholders (includes members of 2400* [group pension plan policies]*)* — *700,000* *ii.* *Number of Group Schemes (excluding* [group pension plan policies]*; including AVC)* — *6,000* *iii.* *Number of members within group schemes (remember that our contract is with the Trustees, not the members)* — *760,000* *iv.* *Membership of the Society* — *528,000*
15/12/2000 [18:51]	Equitable write to FSA about the '*exit charge*'. Equitable say that the fact that the full value was not guaranteed had been built into the terms of each contract. Equitable explain that they would provide a copy of the relevant extract from the policy booklet, with other information on '*the MVA justification*' that they were preparing for FSA.
15/12/2000 [19:06]	FSA's Director of Insurance provides FSA's Head of Consumer Education with a note, setting out an explanation of the figure of £1.5bn given for Equitable's reserve for annuity guarantees. The Director of Insurance says that, in their 1998 and 1999 returns, Equitable had set up provision of the order of £1.5bn '*at our insistence*'. The Director explains that this sum had been calculated on an extremely prudent view of the percentage of policyholders who would choose the guaranteed annuity option, as '*statutory reserving requires a worst case assumption about liabilities*'. The Director of Insurance notes that, in their 1998 Companies Act accounts, Equitable had showed a provision of £50m. (Note: Equitable had in fact made a provision of £200m.) The Director of Insurance explains that such accounts were prepared on a '*"true and fair" (ie realistic) basis*' and so the '*extreme prudence*' in the returns was not required. He explains that Equitable's figure of £50m – which had been accepted as reasonable by their auditors – was their best estimate, based on their experience to date and on their advice about the probability of success in the court proceedings. The Director of Insurance notes that take-up of GAOs had been relatively light and that this was:

... not surprising since bonuses of those doing so were reduced to fund the GAR cost so that there was no advantage in doing so, and in many cases some disadvantage.

The Director of Insurance explains that, after success in the High Court and an adverse, but not particularly damaging, decision in the Court of Appeal, the House of Lords' ruling '*was devastating and entirely overturned the assumptions underlying the Companies Act figure*'. In addition, the ruling had meant that more policyholders would probably exercise their rights to take guaranteed annuities and invest more funds in the '*in the money*' options.

The Director of Insurance notes that there would be additional costs in identifying policyholders who had chosen not to exercise the right to a guaranteed annuity because their bonus had been cut, and in compensating them.

The Director of Insurance explains that:

The Equitable estimated that the effect of the [House of Lords] *judgment would cost them a* <u>*further*</u> [£]*1.5bn. They met this by cutting bonuses. But to remain commercially viable they needed to find additional capital to reverse this and to maintain bonuses at competitive rates going forward. Hence the search for a purchaser*.

The Director adds that, during negotiations with prospective purchasers:

... things got still worse. Equity markets fell and their solvency cover (in worst case statutory terms) became very thin. This made them even more vulnerable to fluctuations in the equity market which could leave their statutory capital requirement uncovered. This in turn meant that they would need to move progressively out of equities and into gilts (which would both reduce their exposure to volatility in their asset values and also – because of the way in which the liability valuation rules work – reduce the value of their liabilities). But this would also reduce probable investment returns to policyholders (probable because a stock market crash could in theory wipe out the investment advantage in equity holdings). This reduced return made it commercially impossible for them to remain in business.

The Director of Insurance explains that, in addition, Equitable's '*very thin capital cover*' meant they did not have the working capital to continue, or the capacity to finance '*new business strain*' (i.e. the difference between the amount that has to be reserved when a new policy is put on the books and the income received, which in the initial stages is generally negative).

The Director of Insurance expresses the hope that his analysis is helpful, although he suspects '*it will give actuarial colleagues a fit*'. He copies his email to GAD and invites them to correct any errors.

15/12/2000 [entry 7] PIA issue a '*Regulatory Update*' on Equitable to remind financial advisers of the need to follow the standards that were expected by PIA, when advising customers in the wake of Equitable's closure to new business.

15/12/2000 [entry 8] PIA write to FSA about the implications of Equitable's problems for the pensions review. PIA note that policyholders may not want any redress they received as a result of the review to be paid into their existing with-profits policy.

PIA explain that they are minded to encourage Equitable to allow policyholders to apply the redress to a fund other than the with-profits fund, or to the fund of a new provider. PIA ask if FSA see any difficulties with this approach.

PIA explain that, under their guidance, redress could be calculated in one of two ways, either: '*The amount available for transfer to another contract*'; or: '*Where this amount does not reflect the ongoing value of the contract, an adjusted amount which takes account of the* [Securities and Investments Board's] *assumptions as to future interest rates*'.

PIA say that Equitable were considering switching from one approach to the other, and say that this could significantly increase Equitable's costs and therefore their required reserves. PIA also explain that, under Equitable's new approach, the redress is increased to reflect the transfer penalty and thus more policyholders might be encouraged to transfer out.

15/12/2000 [entry 9] FSA issue a statement in '*rebuttal*' of an article in a national newspaper criticising their actions over Equitable. FSA do not accept that: '*rivals pressed regulators to do something about the fact that by industry standards, Equitable was hugely under provisioned*'; or that FSA: '*treated the Society in any special way. All life insurers including ELAS have been and continue to be subject to the same valuation rules*'.

FSA explain that they could not demand that companies hold reserves beyond the legal requirements. FSA say that, following FSA/GAD guidance to the industry, Equitable had increased their reserves by around £1.5bn and had entered into a reinsurance agreement, but that the adverse House of Lords' ruling then had led to increased financial costs.

FSA explain that companies' use of future profits when determining their solvency: '*is a standard practice and adopted by many UK life insurers. The basis for attributing this item is laid down in the EC Insurance Directives and UK legislation and reflects only part of the embedded value of the business. This accounting treatment is perfectly normal, we require companies to project forward the liabilities arising under the policies written by them, so it is only right that they should be entitled to take into account part of the profits that will be earned on these policies*'.

18/12/2000 [entry 1] Equitable write to FSA about a number of issues recently discussed on the telephone. Equitable explain that, between 20 July and 8 December 2000, they had enlisted about 18,900 new policyholders, of which about 46% had taken out with-profits policies. Equitable say that, because of the tax implications for policyholders, they did not offer the option of converting a with-profits policy to a paid-up policy.

18/12/2000 [08:58] FSA's Director of Insurance suggests to Managing Director A that FSA may need to clarify the position on the availability of compensation following a newspaper article which reported that a law firm had expressed doubts that the Compensation Scheme would pay out on all of Equitable's products. The Director of Insurance suggest that FSA should be prepared to add the following to their public statements on this:

> *We recognise that this is an unprecedented situation. We are looking urgently at the implications but, in the light of the advice we have taken, we believe that the Compensation Scheme would deliver the protection it is designed to provide.*

The Director of Insurance says that FSA should talk to Equitable and HMT with a view to also saying:

> *If, on examination, there is any doubt about whether the scheme would operate as it is designed to do this doubt will be removed. But bear in mind that the company is solvent and that the prospect of insolvency is very remote.*

However, the Director emphasises that this line should definitely not be used at this stage and explains the possible ways in which he believed that the relevant doubt might be removed.

	[**10:19**] Line Manager E reports that he had spoken to HMT, who were aware that this might be an issue. The Line Manager says that he had explained the position and FSA's legal advice in more detail and '[the Economic Secretary to the Treasury] *may be more inclined to support the idea that if necessary the Government would look to amend the law to ensure that all policyholders are protected in the way we had ... assumed they were.* [HMT's Head of Home Financial Services] *however seems to think that it is enough just to remind people that Equitable is solvent*'. [**12:50**] The Director of GCD believes that FSA should be more cautious and instead say: '*We recognise that this is an unprecedented situation. We are looking urgently at the implications but the advice we have received is that the Compensation Scheme would deliver the protection it is designed to provide*'.
18/12/2000 [09:49]	FSA's Director of GCD replies to the note of 11/12/2000 [**16:26**]. The Director of GCD suggests possible guidance that FSA could provide: • *if I withdraw now, would this weaken my case for compensation. Answer "no"* • *should I exercise rights under my policy to change from with-profits to unit linked ("yes")* • *could Equitable impede this by imposing an MVA (doubt it)* • *could non-GAR policyholders challenge any specific decision by the Equitable as to meeting costs of GARs in court, (and possibly get more clarity as to the impact of the case)? – yes* • *are there any advantages in keeping with Equitable? (There may be tax advantages, and costs of moving, but these need to be weighed against the uncertainty of its current position)* • *how is an Equitable annuity in payment affected? (only at risk if becomes insolvent?)* • *if I have a right to take an annuity now, or postpone doing so, would it be sensible to take the annuity now rather than wait (yes, but you should consider exercising your "open market option"?)* • *if I have a right to withdraw a with profits investment at any time (eg because it is paid up?) Should I do so ("yes" – its profitability will be reduced)* [**11:12**] PIA say that they would not disagree with what the Director has '*hazarded as* [essential] *advice for the average Joe. But our information for consumers so far has kept just this side of giving advice at all. Some big issues involved, I suggest, in stepping over that line*'. [**20:11**] Chief Counsel A says to Legal Adviser A that she perceives that the Director of GCD was attempting to push FSA into an adviser role '*which is potentially highly risky*'. The Chief Counsel asks to discuss the issue.
18/12/2000 [10:27]	FSA's Legal Adviser A informs the Director of GCD that FSA's Insurance Supervisory Committee are to consider that afternoon Equitable's application for a section 68 Order to increase the admissibility limits for shareholdings in certain companies, as while this is a '*perfectly standard concession ... anything we do will be under scrutiny; I* [therefore] *thought I should tell you*'. [**11:55**] The Director of GCD thanks the Legal Adviser for keeping him informed.
18/12/2000 [10:40]	FSA's Director of GCD suggests to Managing Director A that FSA should have a short '*brainstorm*' to look at the possible proposals put forward by Prospective Bidder B on 14/12/2000 [**16:22**].

18/12/2000 [10:44]	Further to FSA's note on section 68 Orders on admissibility limits for shareholdings (see 12/12/2000 [**13:41**]), GAD ask FSA whether Equitable had significant holdings in the two companies who were expected to merge before the year-end. GAD say: '*It would be unfortunate if they end up with a large amount of inadmissible assets at this year end*'.

18/12/2000 [10:51] Equitable apply to FSA for a section 68 Order to allow them to calculate the valuation interest rates for fixed interest securities in an aggregate form. The Society explains that:

> *The purpose of the Order would be to enable the rates of interest to be used in calculating the present value of future payments under fixed interest securities to be calculated on an aggregate yield basis. That rate of interest would, therefore, be the rate which equates the discounted value of the aggregate cash flows on the fixed interest portfolio with the total market value of that portfolio. The yield used to justify the valuation rate of interest would be adjusted for risk in the usual way.*

Equitable ask FSA to confirm that the use of such an Order would only be compulsory once it had first been used. On FSA's file behind this letter are manuscript notes, including: '*need to know why help should be given*'; and: '*Doesn't help Equitable*'.

18/12/2000 [12:41] Equitable provide PIA with their draft briefing for company representatives and sales staff on issues arising following their closure to new business. Equitable seek PIA's urgent comments.

(Note: this correspondence was held on FSA's regulatory file with other items around this date, although it is not clear when PIA passed it to them.)

18/12/2000 [12:42] FSA's Line Manager E prepares a response to the OFT's letter of 12/12/2000, which draws on the 'line to take' already agreed by FSA. The Line Manager checks that others were happy that it could be sent.

[**12:52**] GAD say that the letter looked fine and point to the correspondence with Equitable in 1995 which had explained that a similar 10% charge had been applied at that time (a copy of which was sent to FSA on 14/12/2000 [**18:18**]).

GAD also advise:

> *Incidentally, we also need to bear in mind that the Equitable would very likely become insolvent if they were to remove this adjustment at the present time and experienced a large number of surrenders. This is a result of the combination of GAO costs, a negative investment return in the present year, the final bonus additions for which no provision is required under the regulations, and unrecovered "deferred acquisition costs".*
>
> *I hope that FSA will therefore not insist on them removing or reducing this adjustment factor on surrenders without considering the impact on their solvency.*

[**13:13**] The Line Manager replies:

> *Yes, I have seen the material that you sent to* [the Head of Life Insurance]. *I did wonder about including copies with the letter but then decided it might look like we thought that OFT had a basis for taking action. I agree that solvency is a concern if they are not applying the MVA and have made the point on the phone to OFT. Naturally GAD would be consulted if we in* [FSA] *thought the MVA were going too far.*

[**13:22**] The Director of GCD says that he had asked a colleague (Legal Adviser C), as FSA's expert on unfair contract terms, to look at the issue and the draft letter to the OFT. The Director of GCD asks that the Legal Adviser is supplied with the relevant Equitable documents.

[**13:25**] Line Manager E says that he does not have the relevant documentation, but understands that Equitable were going to provide it. The Line Manager explains that the sentence in the draft letter, '*I understand that the fact that the full value of a policy is not guaranteed other than on contractual dates is built into the contract terms and explained in various documents issued to relevant policyholders, such as the Key Features documents, annual statements and the Society's with-profits guide*', is so worded because his contact at Equitable had assured him that this was the case.

18/12/2000 [13:08] PIA inform FSA that Equitable have told them that they planned to stop offering advice, as from that evening, and that their sales force would instead concentrate on giving information only.

PIA list a number of their thoughts on this so far, including: '*We should try to resist* [Equitable] *abandoning clients in this way*'; '[Equitable] *should consider offering more constructive directions than just "contact an* [Independent Financial Adviser]"'; and: '*The Client Information Sheet needs more clarity on when the MVA is applied*'.

[**13:16**] FSA's Managing Director A agrees that this sounded like a worrying development that PIA should discourage. The Managing Director says that PIA needed to check that there were no regulatory reasons for Equitable to stop giving advice. If the answer was no, then PIA should try and talk Equitable out of taking the proposed action and PIA should also establish whether they could force Equitable not to do so.

[**15:53**] PIA inform the Managing Director that PIA could not intervene to force Equitable to provide advice. PIA say that there was no reason why Equitable should stop giving advice and that it was not clear why the Society proposed to take this line now.

[**16:18**] FSA's Head of Consumer Education notes that Equitable's plan was likely to be bad news for FSA, who had stated publicly that '*the Equitable has, with the encouragement of the FSA, established a process for helping policyholders to decide whether they should take any immediate action*'. She says that '*While it doesn't state that this includes giving customers advice, the natural assumption is that Equitable's advisers can advise their clients, and we will be seen as being ineffectual for not being able to ensure this happens*'.

[**16:27**] The Director of Insurance says that the Managing Director was going to speak with Equitable to express concern about their proposed approach, to ask them to explain their reasons and to ask how they could reconcile their proposed approach with their responsibilities under the criteria of sound and prudent management.

[**16:31**] PIA report that Equitable had said that the briefing note withdrawing advice would not now go out that evening.

18/12/2000 [14:30] FSA's Insurance Supervisory Committee approve, without discussion, the recommendations put forward in 22 papers on various issues (as modified in correspondence), in relation to different companies. These include the paper recommending approval of Equitable's application for a section 68 Order to increase the admissibility limits for shareholdings in certain companies (see 13/12/2000 [**entry 2**]).

The Committee also discuss, at length, the matter of the expected merger of two companies as they expected a number of insurance companies would request section 68 Orders on the admissibility limits for shareholdings for the new merged company. The minutes of the Committee meeting record:

... the committee agreed our policy line. This differs somewhat from that originally set out in [the Committee member's] *earlier e-mail* [12/12/2000 [**13:41**]], *and supervisors should take note of the following. Supervisors will also need to inform their companies of the position.*

As before, we will not offer anticipatory Orders for the new [merged company] *stock. However once the merger has been effected and the shares in the new company are trading, with a market capitalisation available (expected to be 27 December 2000) then either of the following scenarios will apply:*

a) For companies currently holding a substantive concession(s)
... we will be prepared to recommend to Treasury that a reporting concession be given to allow the insurance company to take credit in its year end returns for the holding it will have in [the merged company] *from 27 December 2000.*

... Companies will obviously need to inform supervisors that they would like such a concession, but they do not need to go back to the [Insurance Supervisory Committee] *for approval.*

b) For companies that do not currently have a substantive concession, but do hold [shares in the companies that plan to merge]
... We will similarly be prepared to recommend to Treasury that a reporting concession be issued to such firms ...

Applications for these concessions do need to go to the [Insurance Supervisory Committee] *...*

It should be noted that the above does not change our general policy that "cosmetic" reporting concessions should not be considered.

18/12/2000 [17:19] Equitable provide FSA with a breakdown of calls to Equitable's helpline over the previous three days. Equitable offer to supply this information on a daily basis. Equitable explain that no company representatives had resigned since 8 December 2000.

18/12/2000 [18:06] FSA's Managing Director A informs the Director of Insurance of a telephone conversation that he had had with Equitable, in which he had expressed FSA's concerns about their plans to stop offering advice to policyholders. The Managing Director records that: '*they're clearly worried about the accusation subsequently that they overrepresented the merits of staying with* [Equitable]. *They also can't say anything about where else to put the money*'. The Managing Director notes that he had told Equitable that they must attend a meeting to discuss their plans with PIA and FSA.

18/12/2000 [22:10] FSA's Director of Insurance writes to HMT, following a meeting that evening with the Economic Secretary to the Treasury, to update HMT on the possibility of a new approach to Equitable.

The Director of Insurance says that he had spoken to Equitable's Chief Executive that evening and it was clear that an approach from the interested company had not yet happened. However, '*the* [Chief Executive] *was very bullish about other, more piecemeal, approaches reporting ('though have you heard this before?) "keen interest"*'.

The Director of Insurance also reports that Equitable were to meet with a policyholder action group the following day to look at the possibility of an arrangement or reconstruction under the Companies Act.

18/12/2000 [entry 15] A policyholder action group write to FSA. The action group ask:

... whether the FSA have at any times over the last 3 years or so had any concerns about either the conduct, or the performance of The Equitable Life Assurance Society, and whether these concerns were raised with the Society, and what their response was.

19/12/2000 [10:18]	FSA's Line Manager E sends the Director of GCD and Legal Adviser C the latest draft of the reply to the OFT's letter of 12/12/2000 which took account of comments which had been provided the previous day. The Line Manager says that Equitable would send over some further information later that day.
19/12/2000 [12:34]	FSA's Consumer Relations Department prepare a note on policyholder protection and the availability of compensation, along with a list of defensive questions and answers. [**15:57**] The Director of Insurance says: '*This all looks good stuff. But I am slightly nervous about referring callers to the* [Policyholders Protection Board]. *We have not consulted with them over the "unprecedented" nature of the* [Equitable] *situation or over the legal issues concerning the operation of the scheme. In any case the prospect of an insolvency is so remote that the prospect of the* [Policyholders Protection Board] *having to act rather than the new scheme is surely infinitesimal*'. [**22:04**] Chief Counsel A comments that there were some tricky legal issues involved and asks whether anyone had obtained legal advice on the note, as she did not have time to assist. Chief Counsel A sends the note, and discussion of it, to the Director of GCD and Legal Adviser A.
19/12/2000 [13:49]	FSA's Line Manager E reports to the Director of Insurance (in response to 18/12/2000 [**22:10**]) that he had not been able to contact representatives of the company who had told FSA that they would be putting a proposal to Equitable for the purchase of some of their business.
19/12/2000 [16:08]	Equitable send FSA a note entitled '*Application of financial adjuster by Equitable Life*'. [**18:41**] FSA's Director of Insurance replies to Equitable's solicitors, having spoken to them, stating: *I am concerned that the penultimate part appears problematic for the reasons we discussed. If so the company is clearly exposed. I should be grateful for your urgent views. As I said, we have not yet considered whether there are any other issues raised by the note which we would wish to take up.* The Director highlights the following excerpt of the note: '*The move away from a percentage of final bonus to a percentage of policy value (where the value could therefore be lower than the accumulated guaranteed fund that would be available on contractual termination) was for reasons of fairness*'.
19/12/2000 [16:29]	Equitable provide FSA with copies of the information sent to policyholders about the rectification scheme and their briefing for staff on frequently asked questions.
19/12/2000 [entry 6]	FSA ask GAD to look at a draft paper on Equitable's application for a section 68 Order of 18/12/2000 [**10:51**], for submission to the Insurance Supervisory Committee. Line Manager E also asks Legal Adviser A for his thoughts, explaining: *We want to give ELAS the chance to decide whether to take advantage of this concession for the 2000* [year-end] *returns. But once it has done so, it would be required to continue on the same valuation basis. To achieve that it seems to me that the <u>conditions</u> in para 5* [should] *be <u>requirements</u> (are they enforceable?) and that the condition should be that the company has confirmed it is going to act in accordance with the order by [30/6/01].*

19/12/2000 [16:32] FSA's Legal Adviser A advises Line Manager E on Equitable's application for a section 68 Order (18/12/2000 [**10:51**]). The Legal Adviser notes that both Equitable and GAD consider Equitable's proposed method to be more accurate than that prescribed by the regulations, that two other companies had been granted similar concessions and that it was estimated that the Order would improve Equitable's financial position by around £300m. Legal Adviser A says:

> *You have ... asked for advice on two points only. First, if it is granted, can it be drafted in such a way that the Company cannot thereafter choose to change the valuation basis back to that provided for in the 1994 Regulations. Secondly, because the* [Appointed Actuary]/[Managing Director] *wishes to re-check his figures before deciding whether or not they want the Order, can it be drafted in such a way that the Company can take advantage of the Order, or not, provided it tells us before an agreed date.*

Legal Adviser A considers that the Order could be drafted in such a way that Equitable could not '*be relieved from using it if some time in the future it results in a more onerous reserving requirement*'. The Legal Adviser says that the second point was more difficult and advises that:

> *... it does seem to me that it would have the effect of "changing" the financial position of the Company as at the year-end. As such, if it is to be effective, it must be in force at the year-end.*

The Legal Adviser advises that he is '*uncomfortable*' with the prospect of granting an Order now, on the basis that it would become effective at the end of 2000, according to a post-year-end decision by Equitable:

> *i.e. they should not (effectively) be allowed to pick and choose the method of valuation they prefer some time after the date to which the valuation refers.*

Legal Adviser A adds:

> *Should the Order be granted some time after the year-end then it will be effective <u>going forward</u>. If it is granted before the 2000 returns are required to be deposited, then the granting of the Order could be mentioned in those returns as a post balance sheet event. There is nothing in the regulations to stop companies adding extra information in the returns.*

[**16:48**] Line Manager E tells Line Supervisor C and the Head of Life Insurance that, in the light of Legal Adviser A's advice, '*it would cause real problems if we were to proceed on the basis* [Equitable] *want us to*'. The Line Manager suggests that FSA might be able to offer some comfort to Equitable:

> *... while it is not very clear from* [Legal Adviser A's] *minute, we can in fact express the order in terms that would enable them to present the returns using the valuation method they decide on, with a footnote explaining that the concession has been granted and the returns have been produced on a basis consistent with the current requirements.*

Line Manager E adds that Equitable have asked what had happened to their application for a section 68 Order to allow them to raise the limit on the admissibility of shareholdings in certain companies (see 11/12/2000 [**entry 1**], 13/12/2000 [**entry 2**] and 18/12/2000 [**14:30**]).

[**22:07**] The Director of Insurance comments to Chief Counsel A: '*All this has a faintly unreal air. While we clearly must consider any application put to us on its merits we need to be careful that we do not get sucked into facilitating ingenious ways of presenting the* [Equitable] *in a more favourable light*'.

[**22:18**] Chief Counsel A passes the comments to Legal Adviser A.

19/12/2000 [17:43] GAD (Scrutinising Actuary F) send FSA (Director of Insurance, the Head of Life Insurance and Line Manager E) a 13-page report (dated 20 December 2000) that they had prepared in response to FSA's request of 13/12/2000 [**11:02**]. The report, entitled '*Reserving and related issues*', states that it has been prepared in order to '*demonstrate the substantial dialogue that has been held between FSA (previously HMT), GAD, and the Society over recent years in respect of their reserving practices*'.

GAD deal with the following:

<u>Guaranteed Annuity Options: the 1998 Industry Review</u>
GAD summarise events in 1998 following the survey (see 20/06/1998). They explain:

> *In GAD's Detailed Scrutinies of the 1998 Returns, particular attention was paid to the presence of, and reserves held in respect of,* [GAOs]. *To place the cost of GAOs in context, long term interest yields were 7.6% at end 1996 but had slipped to 6.4% by end 1997, and crashed to 4.4% by end 1998. The situation eased slightly over 1999, but by end November 2000 the same yield was back to 4.5%.*

<u>Equitable's reserving approach</u>
GAD summarise Equitable's approach to reserving, noting that, up until the end of 1997, Equitable had made no addition to their reserves for annuity guarantees. GAD explain that, in the 1996 and 1997 returns, Equitable had stated that '*it was considered unnecessary in current conditions*' to reserve for annuity guarantees. GAD state:

> *GAO reserves were not a point of discussion at this time, as by the above statement it appeared the guarantees were not at that time biting.*

GAD further explain that Equitable's '*exceptional position*' (compared with the practice of most companies) of not reserving had become apparent following the Society's response to the survey, and that HMT and GAD had considered, at the time, that that was unacceptable. (Note: it has been suggested to me that GAD's view that the Society took an '*exceptional position*' does not fairly reflect the findings of the actuarial profession's Annuity Guarantees Working Party.)

GAD set out the correspondence and dialogue which had ensued (from September 1998 to May 1999). GAD explain that further consideration was then deferred, pending the outcome of the court case, but that GAD had returned to the issue in their scrutiny of the 1999 returns (see 24/11/2000 [**entry 1**]) and in subsequent correspondence with Equitable. GAD note that Equitable were yet to reply to the letter of 04/12/2000.

GAD explain that, since June 2000, they had monitored Equitable's solvency position on a monthly basis.

<u>The development of the GAO Reinsurance Arrangement</u>
GAD describe the treaty in general terms, noting that the '*most controversial*' aspect is that it could be cancelled in the event of Equitable's affairs being wound up. GAD summarise the discussions that had taken place between Equitable and HMT/FSA and GAD from the end of 1998 onwards. GAD note HMT's willingness to consider the arrangement as being in place from the end of 1998 (see 07/12/1998). GAD explain that FSA and GAD had reviewed the treaty in the early part of 1999 and '*were eventually satisfied that it was reasonable for the actuary to take credit for the cover provided*'. GAD state:

> *We were aware of the cancellation clause that gave the reinsurer the right to cancel the treaty in certain conditions. We pointed out to the company that professional actuarial guidance to the Appointed Actuary required him to consider whether he should make any additional provision for the contingency that the reinsurance might cease. At the time the*

company were confident that they would win their Court case and believed that they need make no provision for this risk. This subsequently proved to be a false expectation.

GAD continue:

> *Such treaties continue to depend on regulatory arbitrage to achieve the desired result. (It is unlikely that the reassurer, Irish European, will currently be setting up compensating reserves to those removed from the balance sheet of the Equitable.) ...*
>
> *The reliance on an offshore reassurer, and the cancellation clause leave the treaty as a more controversial device by the Society, but the treaty has been accepted as satisfactory in statutory reserving terms up until now.*

GAD explain that, following the House of Lords' ruling, Equitable had renegotiated the treaty. GAD say that Equitable had said that the take-up rate of GARs, following the ruling, was 44%, compared with their statement on 30/10/1998 that no policyholders were choosing this option. GAD conclude:

> *An important aspect of the treaty is that should claims fall upon* [the reinsurer] *under the treaty, they would seek to recover the cost in future years from Equitable's future profits. This has implications for Equitable's implicit items ...*

Implicit Items
GAD set out in tabular form Equitable's applications for future profits implicit items from 1994 onwards. GAD note that, while Equitable were not required to state the assumptions they used in calculating future profits, the 1984 DTI Guidance Note (which was still current) had stated that these should be '*cautious* [and] *in many respects similar to those required for the minimum basis for calculating mathematical reserves*'. GAD say that they:

> *... will normally only question the detail of the future profits implicit item calculation where they have reason to doubt whether the Actuary's calculations satisfy the 1984 Guidance. We believe that Equitable to date have been following this Guidance.*

GAD explain that, when reviewing Equitable's applications, they were not always satisfied with the company's calculation of past profits, but did always feel that a correct calculation would have produced an amount at least as large. GAD say they never had cause to question the calculation of future profits.

GAD reiterate that the calculation of future profits now needed to take account of the reinsurance treaty. GAD say that the subordinated loan would also be repayable from future profits.

Resilience Reserves
GAD set out Equitable's practice of reporting their net premium valuation as an appendix to their returns. GAD explain that:

> *... in recent years, the resilience reserve reported by the Society in their bonus reserve valuation has been such that the free asset position in the net premium valuations and the bonus reserve valuations has been the same. This means that the resilience reserve in the* [bonus reserve valuation] *is simply a balancing item, and so the robustness of the* [bonus reserve valuation] *is somewhat dubious. However ... GAD do not use the* [bonus reserve valuation] *to monitor solvency*.

GAD note that, in the early 1990s, the Society '*took advantage of its use of a bonus reserve valuation in the statutory returns to hide its resilience reserve*'. They say that Equitable's disclosure improved following the implementation of the ICAS Regulations 1996. GAD quote the statement in the 1996 returns:

For accumulating with profits pensions business, ½% pa of the benefit value has been deducted for each year up to the date it is assumed that benefits will be taken as a charge for expenses.

GAD explain that this:

... was never questioned by GAD; it appeared to be a part of the Society's overall provision for renewal expenses. However, in our Scrutiny of the 1999 Returns – in October/November 2000 – and in discussion with potential purchasers of the Society, this was identified as an unusual statement. [Equitable] *confirmed to GAD in* [their] *letter of 16 November 2000 that this was an allowance, not for renewal expenses, as we had understood, but a mechanism to recover as yet unrecouped acquisition expenses. GAD view this as totally unsatisfactory, since it anticipates that future premiums will be paid on the recurrent single premium pensions contracts, when there is no obligation on the policyholder to do so, and furthermore the Society is taking credit in advance for expense margins in those premiums, to reduce the accrued liability*.

GAD set out how they had pursued the matter at the end of 2000. They conclude that '*there has been a history of unsatisfactory disclosure regarding the Society's approach to resilience*' and that the statement in the 1996 returns '*is particularly opaque*'. (Note: see also 30/06/1997.)

Other Reserving Issues
GAD state that, in their scrutiny of the 1995 returns (see 01/11/1996 [**entry 1**]), they had noted that Equitable had taken the view that their interests were best served by using a weak valuation basis in order to show as strong a free asset position as possible. GAD say that Equitable had made the same point at the visit on 09/12/1994. However, GAD note that, as Equitable had built up very little by way of an estate, their free asset position had also been relatively weak.

GAD refer to the concerns identified in the scrutiny of the 1995 returns about the sustainability of Equitable's present contract structures (see 01/11/1996 [**entry 1**]). GAD explain that they had not written to Equitable about these matters, but had taken them up at the meeting on 08/11/1996. GAD set out Equitable's comments at the meeting and conclude:

GAD were left with the firm opinion that the Society had to be very careful that customers were not misled about their eventual benefits.

Equitable's current position
GAD explain that Equitable had not followed the more onerous resilience test set out in the Government Actuary's letter (DAA14) of 15/05/2000. Had they done so, an increase in the reserve of £600m would be needed. GAD say that Equitable would now reserve on this basis, but would offset half of the increased reserve by use of a section 68 Order. This would allow them to show a higher rate of interest on their fixed interest securities by calculating the valuation interest rate in an aggregate form (see 18/12/2000). GAD confirm that other companies adopted this approach.

GAD explain that information attached to Equitable's letter of 09/10/2000, and in their auditor's reports (see 16/11/2000 [**entry 2**]), showed that they were vulnerable to unfavourable market movements. GAD also explain that Equitable reported that, as at 31 October 2000, they had free assets of £1.08bn above a required minimum margin of £1.22bn. However, GAD consider the true position was '*less favourable*' than those figures indicated. GAD refer to the adjustments they had advised Equitable about on 01/12/2000 and say that the net effect of these:

... is to increase reserves by £1,060m, and reduce the Society's free assets at 31.10.00 from £1,080m to £20m. This demonstrates that, despite what the Society say, GAD believe they are very close to not covering their solvency margin.

GAD note that, if the reinsurance treaty were terminated, Equitable's liabilities would increase by a further £500m.

GAD refer to the 10% '*penalty*' that Equitable were applying to non-contractual withdrawals. GAD say that, without further information from Equitable, they could not say what the correct level of penalty should be. GAD note:

> *However, we understand from figures supplied* [by Equitable's auditors to Prospective Bidder A] *last month, that Equitable are overpaying (on monies leaving the fund) at 30.09.00 at the rate of £2.3bn (across the whole portfolio) and this suggests that some correction to the level of payouts is overdue. In the normal course, the Society would seek to recover this overpayment in future years, but in the situation they now find themselves in, this would be to the particular detriment of the remaining policyholders.*

GAD conclude:

> *The Insurance Companies' Regulations and the actuarial guidance do not require companies to reserve for Terminal Bonus in statutory valuations, and most companies/societies take advantage of this exemption. When Terminal Bonus is paid on a claim, the cost is met from the Society's free assets. However, as shown ... above, we do not believe the Equitable have any free assets of any size. There is therefore a danger that if the Equitable allow out-going policyholders to leave the fund on terms which are too generous, there could then be insufficient assets available to meet the guaranteed benefits of the remaining policyholders. The whole situation is very delicate, and needs to be handled carefully.*

19/12/2000 [17:48] GAD's Directing Actuary B thanks Scrutinising Actuary F for his paper and says:

> *I gather that* [the Economic Secretary to the Treasury] *has now announced that FSA will be conducting its own internal inquiry into the FSA's role in dealing with the Equitable.*
>
> *This is likely to be conducted by a group of auditors so we need to ensure that all our files are ready for inspection, and in the meantime to ensure that we keep them locked away overnight.*

19/12/2000 [18:06] FSA thank GAD for their report and tell them that FSA were not now going ahead with Equitable's application for a section 68 Order in respect of the valuation rates of interest for fixed interest securities at this stage, as:

> *Lawyers have advised that it causes problems to give directors powers to decide whether the law applies to them! (A fair point, perhaps.)*

As a result, GAD are now asked to ignore the paper prepared for the Insurance Supervisory Committee relating to Equitable's application for a section 68 Order copied to them earlier that day (see 19/12/2000 [**entry 6**]).

19/12/2000 [18:52] FSA's Managing Director A reports to the Director of Insurance that:

> *I saw the OFT tonight ... they said they have had complaints about the Equitable's MVA and were considering it as a possible Unfair Contract Term issue. I offered our input which was flatly refused – along the lines of "we'll analyse the position and tell you when we've decided".*

[**19:06**] FSA's Consumer Relations Department say that FSA had good links with the OFT.

[**20:09**] The Director of GCD informs officials that Line Manager E had been consulted by the OFT and had circulated a draft reply to their letter.

19/12/2000 [21:56]	FSA's Director of Insurance writes to GAD's Directing Actuary B having just read GAD's report. The Director of Insurance says: *I think this raises, particularly in its final paragraphs, some very difficult issues on which we need to take very clear and measured views. I am concerned particularly that, if the OFT – to whom complaints have been made – were to take the view that the mva as currently operated (or perhaps a matter of principle) amounted to an unfair contract term, the position could become highly problematic.* *Perhaps we might have a word on the telephone fairly early tomorrow (Wednesday). I will need to brief senior management here, and we will together need to devise a strategy for handling all this. But I am concerned that I should understand the position better than I currently do.*
19/12/2000 [entry 13]	HMT's Deputy Director of Finance Regulation and Industry prepares a note entitled '*Secret Warning on Equitable*' for the Chancellor of the Exchequer, following the leak to the press of HMT's note to FSA of 05/11/1998. The Deputy Director attaches a copy of the note, on which Line Manager E writes: '*We were subsequently satisfied that* [Equitable] *was solvent and it remains solvent today*'. The Deputy Director explains that, following the note, FSA's Head of Life Insurance and others had begun meetings with Equitable which had clarified the position and had led to adequate reserving; FSA then had issued new guidance on reserving (see 13/01/1999 [**entry 1**]). The Deputy Director points out that Equitable had also complained that HMT/FSA were being too tough (see 30/04/1999).
20/12/2000 [entry 1]	An FSA legal adviser provides Legal Adviser A with a draft note on whether the Unfair Terms in Consumer Contracts Regulations 1999 apply to Article 4 of Equitable's Articles of Association. The draft note concludes that the terms of the Article were not unfair.
20/12/2000 [morning]	FSA's Managing Director A advises his Chairman that Prospective Bidder B's current proposals were very unlikely to be successful unless they dropped their demand for exclusive negotiations, which he considered unlikely. The Managing Director says that Equitable, supported by their advisers for the sale, had decided not to enter into exclusive talks because: • [Prospective Bidder B's] *bid before* [Prospective Bidder A] *dropped out was flaky in a number of ways. In particular, it was unclear whether the Southern European members of* [the company] *were persuaded of the case for buying Equitable even before the latter had stopped writing business.* • *The business model proposed by* [Prospective Bidder B] *for the purchase had been changed without warning at the last minute (27 November) and made a number of untested/implausible assumptions about how the business could be taken forward. Equitable had concluded that – even if* [Prospective Bidder B] *were serious – the chance of a viable bid coming forward was low.* • *The money being offered by* [Prospective Bidder B] *was not sufficiently great to justify taking the chance of losing the more attainable targets of the sale of viable parts of the company. The pre-closure offer had involved only £300mn for goodwill upfront; the offer now appeared to be nothing upfront, with a maximum of £300mn if everything went as well as it possibly could. Equitable judge that a month's exclusivity would seriously jeopardise their current discussions with* [a friendly society] *and others for parts of the group.*

20/12/2000 [entry 3] FSA's Director of Insurance writes to Managing Director A, having reflected on Equitable's situation now that they knew that Prospective Bidder B would not, after all, be making a bid '*and (more seriously) the possibility that OFT will find that Equitable's MVA constitutes an unfair contract term*'.

The Director of Insurance says that FSA '*know that the Equitable is very thinly capitalised. On prudent assumptions it only covers its required margin by a whisker*'.

The Director of Insurance notes that Equitable's recent bonuses had been higher than justified by their investment performance. He expresses concern that, if Equitable were not allowed to use a market value adjustment for those transferring or surrendering, this would be at the expense of policyholders who remained. He speculates that this could reach a point where Equitable could not meet contractual obligations.

The Director of Insurance proposes a '*proactive approach*' of convening a meeting of major life companies to consider an industry-led rescue. He explains:

> *What I have in mind is a demutualisation of the Equitable into a proprietary company to be owned jointly by a number of the major players. The* [new company] *would run on 90:10 lines and the court sanctioned Schedule 2c transfer would provide that where policyholders had accumulated funds under GAR policies those funds would convert to annuities at the guaranteed rate but that "top ups" would not attract GARs. It might be possible too to provide that existing GAR funds had access only to new money injected into the fund so that the "piranhas" could not eat the "goldfish". While this would probably not have been acceptable to the policyholders 2 weeks ago it might well be so now.*

20/12/2000 [entry 4] FSA meet the Association of British Insurers to discuss the possibility of an industry-led buy out of Equitable. The Association report that leading life companies were unenthusiastic because they saw Equitable's situation as unique and not likely to lead to wider problems. The Association consider the situation had arisen due to a conflict between policyholders at Equitable, and question why money from other policyholders and shareholders should be used to resolve this. FSA explain that:

> *... while an orderly run off of the Equitable might be tolerable we believed anything worse would have wider reputational implications. This was not a impossible scenario. Falling equity prices would put the Equitable under severe pressure. It would almost certainly trigger an increase in the mva. The mva was already subject to review by the OFT following complaints to it. Even if the mva was not struck down by the* [OFT] *it was not certain that it would prevent a run.*

FSA record that they had said that, if a run on the fund were to happen, then Equitable would have to make a greater change to their asset mix than expected, away from equities and into gilts, which, due to a current shortage of gilts, would not provide as much relief as would normally be expected. FSA continue:

> *The key to the problem, as they recognised, was to find some way of securing an accommodation between the groups of policyholders. This might, in theory be achieved:*
>
> > *Through a Schedule 2c transfer into a* [new company]*, with the court endorsing a majority decision to give up some GAR right (perhaps the right to "top up" with full GAR protection*

Through a Companies Act reconstruction/arrangement promoted by the company

Through a "just and equitable" winding up by the FSA/HMT which (if the [Policyholders Protection Act 1975] *applied (they were already aware of the legal doubts surrounding this), might allow the* [Policyholders Protection Board] *to provide funds to facilitate a transfer (the funds in question being raised by a levy on the industry)*

Of these the first was what we thought stood most chance of success. It would offer all policyholders some benefit, and this might be the key to securing the necessary degree of consent. But it would clearly need to offer commercial benefits to the purchasers. These might be, the prospect of future business (the Equitable sales force was efficient and productive, and if the business were operated through a new 90/10 fund the initial strain would be less). The reduction of reputational damage to the industry and greater market stability would be beneficial too. The second was a serious contender and was being pursued by the Company with our encouragement. However it might be less likely to be achievable with no upfront benefit to all policyholders. The third was presentationally awful, legally uncertain and would involve the costs falling on the industry. But it could not be excluded.

The Association of British Insurers agree to consider the matter further.

20/12/2000 [entry 5]	FSA meet to discuss Equitable. The note of the meeting (dated 2 January 2001) records the actions agreed in relation to producing a '*Report on lessons to be learned*' (i.e. what became the Baird Report).
20/12/2000 [10:02]	FSA's Public Affairs and Accountability Department distribute copies of an adjournment debate held in the House of Commons the previous day about the situation at Equitable.
20/12/2000 [10:14]	In response to being informed that FSA were not now going to accept Equitable's application for a section 68 Order (see 19/12/2000 [**18:06**]), GAD's Scrutinising Actuary F says:

Presumably this means that [Equitable's Appointed Actuary] *will be less enthusiastic about recognising the new resilience test 2. We understand that the artificial bond approach would have led to reserves £300m. lower than otherwise in this scenario.*

The adjustments which we believe need to be made to the Society's liabilities (see §8.6 of the Report sent yesterday) become an increase of £1,360m. (instead of £1,060m.), when there are only £1,080m. of assets available (at end-October 2000).

It is all very tight, to say the least.

[**10:20**] Directing Actuary B comments:

I think therefore that it is very likely that Equitable will publish their 2000 returns with a less demanding resilience test than that recommended by the Government Actuary. It will be difficult to do much about this as our advice to companies is not mandatory and they are already closed to new business. However, it will highlight their vulnerability to adverse movements in the financial markets.

[**11:08**] FSA's Line Manager E replies:

I am well aware of the possible difficulties, at least in presentational terms. However, to a degree the issue is academic in that no new liability is being created and no money is disappearing. Arguably the effect is simply that they would end up over-reserving for a *period. We will have to consider the question of the annual returns once they have decided about the valuation method.*

Separately, [**10:24**] a GAD actuary queries why the Order had been refused, as two similar Orders, which had required the companies to always use the aggregate yield, had been granted that year.

[**10:28**] Scrutinising Actuary F explains that Equitable had been seeking an Order which gave them the choice as to when they first wanted to use it.

20/12/2000 [12:32]	GAD advise FSA that, subject to a query about transfers into policies with GARs, Equitable's approach to writing further business (see 12/12/2000) '*seems reasonable*'. GAD suggest that FSA should take up with Equitable an outstanding point about whether transfers could be made from another provider into policies that had guaranteed annuity rates.
20/12/2000 [15:21]	PIA hold a liaison meeting with Equitable. PIA advise FSA that Equitable would delay implementing their proposal to prevent company representatives giving advice until the New Year. PIA say that they would liaise further with FSA about their briefing to sales staff and their plans to handle the '*public message*'.
20/12/2000 [15:44]	As part of giving comments to an FSA actuary concerning draft rules on the valuation of liabilities for eventual inclusion in the new FSA handbook, GAD's Directing Actuary B writes: '*One particular omission is the present Regulation 64(f). This is an important aspect of PRE that may also effect reserving (as may become apparent shortly in the context of Equitable)*'.
20/12/2000 [16:20]	FSA's Friendly Societies Division inform Equitable's supervisors and GAD that Liverpool Victoria Friendly Society had informed them that they proposed to purchase Permanent Insurance for £150m (being £120m for the in-force business and £30m for goodwill).
20/12/2000 [18:03]	Equitable provide Line Manager E with updated information from the previous day on the value of payments made on surrenders, transfers and switches and calls to Equitable's helpline.
21/12/2000 [entry 1]	Equitable's Appointed Actuary writes to GAD in response to their letter of 04/12/2000 about their 1999 returns. Equitable express surprise that GAD considered the letter of 22/12/1999 led to a minimum assumed take-up rate of 90%. Equitable point out that, at 31 December 1999, the pre-House of Lords bonus structure applied, the actual take-up rate at that time had been below 4%, and that an assumed rate of 85% was therefore extremely conservative. Equitable say that they would take GAD's comments into account when considering reserving levels following the House of Lords' judgment and the consequential change in bonus structure. Equitable accept that there should be a stronger basis for the rate of decrement on recurrent single premium business. Equitable dispute that the new regulations required an assumed retirement age of 50 on the basis that the draft guidance in GN8 would seem to require prudent allowance for proportions of policyholders likely to exercise the option if more valuable, rather than that all policyholders did so. Equitable say that they consider that that assumption of retirement age of 55 was sufficiently prudent, on the basis that the average retirement age for this business was still well over 60. Equitable note GAD's comments on the resilience reserve:

... but feel that such an interpretation of the current regulations raises serious issues about the future of with profits business. Views have been expressed by the industry and professional bodies that the effect of current regulation and guidance leads to layers of prudency which make with-profits business unattractive to write compared to other categories of business ...

A change to the way in which the return on equities is assessed for the purpose of the regulations, which was the subject of earlier consultation, would have been helpful in that regard. Because those proposals have not been pursued we seem currently to have a particularly onerous combination of requirements.

Equitable also note, however, GAD's expectation that reserves in the 2000 returns would be established in accordance with these comments. Equitable say they intended to introduce a more sophisticated hypothecation of assets to liabilities in the resilience test and this would be fully presented in the 2000 returns.

Equitable explain that they reduced the reserves for expenses in the resilience scenario to a level closer to that experienced in 1999, in order to avoid holding unnecessary margins. Equitable explain that they were currently assessing the expenses that would be reserved for in the 2000 returns, following their closure to new business.

21/12/2000 [entry 2] Equitable send FSA information about Equitable Investment Fund Managers Limited to help FSA consider whether the company could continue to take on investment-only business.

21/12/2000 [entry 3] FSA write to Equitable in response to their letters of 12/12/2000 and 18/12/2000.

FSA seek clarification on the basis of advice from GAD of Equitable's proposals concerning transfers into existing policies with GARs (see entry at 20/12/2000). FSA also state that they were '*uncomfortable*' with Equitable's proposal to allow new members to join existing group schemes. Finally, FSA ask for a more precise estimate of new policies written between 20 July and 8 December 2000.

21/12/2000 [08:56] Equitable's solicitors send FSA a copy of a note to Equitable (dated 20 December 2000), along with draft instructions to Counsel about the general interpretation of Article 4 and its specific interpretation in the context of the application of the Policyholders Protection Act 1975. The solicitors seek comments from FSA on the draft instructions.

21/12/2000 [10:01] FSA's Legal Adviser C advises the Director of GCD that a proposed response to the OFT's letter of 12/12/2000 about market value adjustments was accurate, in light of his review of a bundle of documents received from Equitable, upon FSA's request. The Legal Adviser suggests, however, that the point in the draft that companies' considerations when applying an adjuster include:

The need to prevent sales of the fund's assets at disadvantageous prices, meaning a poorer deal for policyholders staying in the fund

could be amended to reflect more closely Equitable's point that the adjuster was to '*protect the future solvency and investment freedom of the fund*'.

Legal Adviser C advises:

The Unfair Terms in Consumer Contracts Regulations 1999 are not restricted in their application: they are capable of applying to insurance contracts. So the question arises whether the provision in [Equitable] *documents, which in theory would allow them to pay nothing in relation to a with-profits policy which is surrendered or transferred would be an "unfair term" for the provisions of these regulations.*

The definition of "unfair term" in Regulation 5 is one which:

> *(i) has not been individually negotiated; and*
>
> *(ii) contrary to the requirement of good faith, causes a significant imbalance in the parties' rights and obligations arising under the contract, to the detriment of the consumer.*

By Regulation 5(2), a term [is] *not individually negotiated where it has been drafted in advance and has therefore been unable to be influenced by the consumer. I take it as read that this condition is satisfied.*

I also take it as read that a term which would allow [Equitable] *to pay nothing if a policy were surrendered after (say) 24 years of a 25 year term would cause a significant imbalance in the parties' rights and obligations, and one which would lead to obvious detriment to the consumer.*

However, under Regulation 6(2):

> *"In so far as it is in plain intelligible language, the assessment of the fairness of a term shall not relate –*
>
> *(a) to the definition of the main subject of the contract, or*
>
> *(b) to the adequacy of the price or remuneration, as against the goods or services supplied in exchange."*

Legal Adviser C continues:

The analysis at paragraphs 5-6 above indicates, I think, that the language used by [Equitable] *is both clear and intelligible. And I also think that it could plausibly be argued that Regulation 6(2)(b) is relevant here. The effect of that regulation is to make it impossible for a consumer to argue that he has paid too much for what he has actually acquired, provided that the "price" is spelt out in plain intelligible language. Applying the regulation to the* [Equitable] *case, the* [Equitable] *"defence" to a claim by an investor that a term allowing a reduction in the value of the with profits policy potentially to zero was unfair would be that, in effect, that term concerned the price that the investor had agreed to pay for the contract. It might indeed be that in certain circumstances the price paid would be very heavy, since the investor might receive nothing for 20 years of contributions. However, as that point had been made clear to the investor in plain intelligible language, it was not open to the investor to argue that the term was unfair. As I say, I find this argument plausible.*

If this interpretation of Regulation 6(2) is not correct, then the key issue becomes whether the term is "contrary to the requirement of good faith" under Regulation 5.

This I think would be difficult to prove, and I think we would not be able to make it out. Those who transfer or surrender the policy may not - indeed, almost certainly will not in any circumstances - receive the full "value" of the policy as at the date of transfer or surrender.

Legal Adviser C continues:

Given that:

- *the issues concerned do not involve the person transferring/surrendering the policy and the* [Equitable] *alone, but also impact on the position of other policyholders who remain with* [Equitable] *(for the reasons explained in* [Line Manager E's] *draft letter);*

- *other life offices operate a similar policy (which means, as* [the] *letter points out, that even after the increase in charges to 10%,* [Equitable's] *surrender values are not out of line with those elsewhere in the industry); and*
- *the regulators under the Financial Services Act have since 1988 been content for life offices (including* [Equitable]*) to market their products on this basis,*

it would seem to be odd were we to be taking action against [Equitable] *on the grounds that the 10% deduction was contrary to the Unfair Terms in Consumer Contracts Regulations (particularly where similar reductions appear to have been imposed in the past by* [Equitable] *without adverse regulator comment). I would also think that it would be odd, given the above considerations, for the OFT to consider taking action under those regulations against* [Equitable]*, thought that of course is a matter for the OFT.*

I therefore conclude that the "exit charge" imposed by [Equitable] *is unlikely to be contrary to the Unfair Terms in Consumer Contracts regulations.*

[**10:32**] The Director of GCD requests a meeting to discuss this.

21/12/2000 [10:39] FSA's Director of GCD replies to discussion on 19/12/2000 [**12:34**] about the note that FSA had prepared on policyholder protection and the availability of compensation. The Director of GCD says that he expected to go back to Counsel in the new year '*for him to confirm that nothing we have found about the history of such clauses undermines his advice*'.

21/12/2000 [11:38] FSA's Director of GCD writes to Legal Adviser A about the advice that FSA are to seek from Counsel on compensation that might be available to Equitable policyholders. The Director of GCD comments:

The case you found ... seemed to be very helpful to reaching the conclusion that compensation should be available. As you described it to me, it involved a mutual with a clause of the kind concerned which was wound up as insolvent due to debts due to policyholders, and where the court was asked to use its powers to order reduction of liabilities to policyholders, so that the company could continue as solvent.

As we discussed, it would also be worthwhile discussing in further instructions the possibility that the clause might be invalid under the unfair contract terms regulations, or, for inadequate disclosure, under the "utmost good faith" principle which applies each way in insurance contracts. [See 20/12/2000.] *...*

Finally, I think it would be useful to focus the debate on how the courts would interpret the scope of the policyholders Protection Act. There seems to me to be some force in the argument that references to "liability" in that Act should be construed as references to the full amount of any current liability of the company even if, in a private law context, the liability of the company, and so the members should be limited to the amount of the available assets.

21/12/2000 [11:39] FSA's Director of GCD writes to the Director of Insurance, who had mentioned that it might be possible to achieve a '*desirable outcome*' by winding up Equitable on just and equitable grounds and seeking to transfer the business through the policyholder protection scheme.

The Director of GCD says that, although the issue had been raised with Counsel on 11/12/2000 [**16:00**], FSA had not yet pursued this '*given the reluctance to go down this route, and the advice from Counsel that the better view was that article 4 did not prevent payment of compensation*'. The Director of GCD asks whether there were any specific legal issues that they would like to be addressed with Counsel, as they were about to go back to seek confirmation on the advice already given.

[**11:46**] Managing Director A says that just and equitable grounds had to be a possible way forward and any related legal issues should be explored.

[**11:55**] The Director of Insurance replies to the Director of GCD:

> *I don't see it as a runner to avoid potential* [Policyholders Protection Act 1975] *problems. I see it, instead, as a way in which* [Policyholders Protection Act 1975] *action to facilitate (ie partly fund) a transfer, through which a court blessed accommodation between the various policyholder interests (including some giving up of extreme GAR rights), might be made possible. In other words it would be another way of achieving a Companies Act type arrangement, but with the advantage of a cash injection to sweeten the deal and improve the fund. It would, of course, require a willing transferee, and the* [Policyholders Protection Board] *contribution would be a necessary part of that.*
>
> *I think it is not a very likely runner (and it may be completely flawed legally). It is presentationally awful and there may well be no willing transferee. But I am reluctant at this stage to rule out any possible options, however remote, and think we should be prepared to think the unthinkable.*
>
> *I leave it to you to decide whether it is worth asking Counsel to consider. It may be that in-house legal advice will shoot it down sufficiently comprehensively to make counsel's advice unnecessary.*

21/12/2000 [12:12] FSA's Director of Insurance reports to Managing Director A on a further conversation that he had had with the Association of British Insurers where, as agreed, he had said that FSA did not think it appropriate that they engage advisers to work up their proposition but might meet Equitable's advisers for the sale to explain their thinking and to see if they thought it merited further work.

The Director of Insurance says that the Association of British Insurers were comfortable with this '*but stressed that his members were very sensitive about all this. There should be no suggestion that they were in any way involved in this or would be likely to look with favour on any proposals that might emerge*'.

21/12/2000 [13:12] An FSA official informs Equitable's FSA supervisors that a named company had called FSA's Chairman about their interest in Equitable and were looking at '*picking up the whole package*'. The official reports:

> [The company] *would not do this out of the goodness of their heart but would also not be looking to make a killing out of it. They had not met Equitable yet and were still trying to get hold of* [Equitable's President]. [The company] *had met* [Equitable's Appointed Actuary] *last week but that meeting had not really been effective hence the move to pitching this at Chairman level.*

The official says that it had been agreed that the company would keep in touch with FSA.

21/12/2000 [13:34] FSA's Director of Insurance advises Managing Director A that Equitable's auditors had said, in confidence, that Equitable have been referred to the Financial Reporting Review Panel over their last accounts. (Note: the Panel was one of the Financial Reporting Council's two operational bodies – see 24/08/2000.)

21/12/2000 [14:01] FSA's Director of GCD thanks the Director of Insurance for sending him a copy of Equitable's solicitor's note and instructions to Counsel (see 21/12/2000 [**08:56**]). The Director of GCD says he did not think that Equitable's solicitors should attend the planned meeting with Counsel and recommends that if FSA were to go jointly to Counsel, it should be with HMT and/or the Policyholders Protection Board. The Director explains:

This is because the key question is whether, in the light of article 4, the Equitable has liabilities to its policyholders within the meaning of that expression in the Policyholders Protection Act or, subsequently, our own compensation scheme. The views of the Equitable on this are, in one sense, neither here nor there.

The Director of GCD says that he shared Equitable's solicitor's uncertainty about Counsel's 'third meaning'.

21/12/2000 [14:01] FSA's Director of GCD thanks Legal Adviser C for his note of that day [**10:01**] about Equitable's use of the market value adjuster and the Unfair Terms in Consumer Contracts Regulations 1999. The Director says that he found the analysis convincing and:

While it may not be sufficiently strong to be clear that there is no problem, it is in my view sufficiently strong for us to regard there as being no prima facie problem which would make us wish to change our own approach now.

The Director of GCD asks Legal Adviser C to consider whether his analysis needed to distinguish between the validity of the term and the validity of the level of the adjuster. The Director says that he would be happy for the draft reply to be sent to the OFT.

[**14:31**] Line Manager E agrees that Legal Adviser C's analysis was convincing but adds:

I had also wondered about whether there was a distinction between an MVA applied in the anticipated way – as explained in my draft letter – and an MVA applied on terms that are designed to meet the company's objectives by imposing an irrational charge on the policyholder. My personal view is that there probably is a difference, and that in those circumstances there would be an unfair term (whether or not it is contrary to the Regulations).

[**14:49**] Legal Adviser C says that he is content for the reply to be sent and that their further work may throw up further points to make to the OFT, but that this could be done when such points arose.

21/12/2000 [15:00] GAD send FSA a copy of a reply to FSA's Friendly Societies Division about the value of Permanent Insurance, where GAD state that they were unable, without further information, to comment on the reasonableness of the amount that Liverpool Victoria were prepared to pay for Permanent Insurance.

21/12/2000 [15:09] FSA respond to the OFT's letter of 12/12/2000. FSA explain the background to exit charges, clarifying that they only applied to surrenders or transfers at non-contractual dates.
FSA conclude:

Equitable announced last week that its "exit charge" would be increased to 10% from its previous level of charges which averaged around 5%. On the basis of information available to the Government Actuary's Department, we understand that, even following this increase, surrender values of Equitable policies are not out of line with the industry average. The FSA will be monitoring the adjustments made by Equitable and we have powers to intervene at any time, if we consider the figure to be excessive.

21/12/2000 [17:06] FSA's Line Manager E seeks comments on some standard lines to take that had been prepared in response to '*the more difficult*' enquiries that FSA had received.

21/12/2000 [17:15] FSA's Line Manager E circulates a draft agenda for '*the urgently needed supervisory meeting with Equitable*'. The Line Manager says that FSA should try to arrange the meeting for the first week in January 2001. (Note: the meeting actually took place on 16/01/2001.)

The Line Manager's suggestions include: a progress report on disposals of Permanent Insurance and other subsidiaries; an update on customer handling issues and consumer trends (rate of surrenders and transfers); discussion of their reserving and future strategy (including: the way Equitable envisage going forward; their solvency position; any further reserving issues; and issues arising from taking on new obligations and new contracts with existing customers and group schemes); an update on requested section 68 Orders for admissible assets and the valuation interest rates for fixed interest securities; a review of sales after 20 July 2000; the rectification scheme; and the position on both income drawdown policies and pensions review issues.

[**18:44**] In response, GAD's Scrutinising Actuary F suggests additional items:

- *Details of the actual/anticipated year-end bonus declaration: what this is & impact on reserves.*
- *Further details on the current level of payouts, i.e. how do payouts on retirement & non-contractual exits compare with aggregate asset shares. Is the 10% MVA a true penalty, or just a mechanism to restore payouts to a "fair" level? How is Terminal Bonus being managed currently? Can they explain why, according to* [Equitable's auditor's] *figures, the "deficit on the smoothing account to recover in future" stood at £2.3bn. at 30.09.2000. This suggests that the underlying amounts payable on termination are currently too high. Answers to these questions will help us to understand the dynamics of the business and the ramifications of those leaving the fund on the continuing policyholders.*
- *GAO reserves: what level of statutory reserves (before & after reassurance) do they envisage holding as at 31.12.2000?*

21/12/2000 [18:10] FSA's Line Manager E sends Managing Director A a draft letter to Equitable on the market value adjuster.

[**18:51**] The Managing Director says that he was happy with it, as far as it went, but queries one point.

Behind this correspondence on FSA's file is a copy of a letter from the OFT to Equitable, requesting an explanation as to why the market value adjuster had been increased to 10% and copies of standard contracts which contained the term on which Equitable had relied to increase the adjuster.

21/12/2000 [18:45] FSA's Consumer Relations Department circulates the final draft of FSA's defensive briefing note on policyholder protection and the availability of compensation (see 19/12/2000 [**12:34**] and 21/12/2000 [**10:39**]).

[**20:13**] The Director of GCD expresses reluctance about including the first question.

21/12/2000 [19:03] Equitable provide FSA with updated information from the previous day on the value of payments made on surrenders, transfers and switches and calls to Equitable's helpline.

This information is accompanied by a copy of a press release and an open letter, in which Equitable's President updates policyholders about the sale process. Equitable say that this letter is to be placed as an advert in newspapers the following day.

22/12/2000 [entry 1] Equitable's advisers for the sale send FSA a summary of their discussions with Prospective Bidder B.

22/12/2000 [entry 2]	The President of the Institute of Actuaries writes to FSA's Director of Insurance, following a discussion earlier in the week. The President encloses a copy of '*With Profits Without Mystery*' and comments: *As you will see it was presented in 1989. Indeed, you might well have been in the audience for the discussion!*
22/12/2000 [entry 3]	FSA reply to The Consumers' Association's letter of 13/12/2000. FSA explain that they intend to report on events from January 1999 (when they took over the prudential regulation of insurance companies). The report would also cover the exercise of PIA's functions under the FS Act 1986. FSA set out the action they have taken to assist policyholders following the closure to new business. They explain that '*we are monitoring the size of the Market valuation adjustment being imposed by Equitable and would not hesitate to use our powers if we judged it excessive*'. FSA also state, for the avoidance of doubt, that: *... there never was a formal offer lodged by any of those who expressed an interest in buying Equitable after it had put itself up for sale. What the last of the interested parties did on 7 December was to notify the Equitable that it did not wish to move to making a formal offer.*
22/12/2000 [entry 4]	GAD send FSA's Head of Life Insurance a copy of the completed '*Expenses*' section of their 1999 annual report on the life insurance industry.
22/12/2000 [09:42]	FSA's Line Manager E writes to the Director of Insurance (copied to the Head of Life Insurance) following the correspondence the previous day on the Financial Reporting Review Panel. The Line Manager says that he had remembered that, at some point, he had received a call from the Secretary to the Panel asking about FSA's conflicts of interest policy, as some of their accounting advisers had Equitable policies.
22/12/2000 [10:13]	FSA's Director of GCD asks Legal Adviser A to provide legal advice on FSA's '*Most Frequently Asked Questions*' (see 21/12/2000 [**17:06**]).
22/12/2000 [10:22]	Liverpool Victoria Friendly Society announce that they have entered into a binding agreement for the purchase from Equitable of Permanent Insurance.
22/12/2000 [10:24]	FSA's Line Manager E advises the Chairman and others of a banking group's possible interest in a rescue plan for Equitable.
22/12/2000 [10:26]	In reply to 21/12/2000 [**11:55**], the Director of GCD asks the Director of Insurance if he was right to assume that FSA did not require any further legal advice over the Christmas period on the issue of a possible just and equitable winding up of Equitable.
22/12/2000 [10:42]	FSA's Line Manager E asks whether anyone wanted copies of the information regularly supplied by Equitable on calls to their helpline and on requests for transfers and switches. The Line Manager also asks if they would like a summary of this information.
22/12/2000 [13:33]	FSA's Legal Adviser A invites comments from Chief Counsel A, Chief Counsel B and Legal Adviser C on draft instructions to Counsel. [**16:06**] FSA seek formal advice from Counsel on:

Counsel will recall that at the consultation of 11 December 2000 it was agreed that Instructing Solicitor would do some further research before Counsel prepared a formal written advice. The results of this research is set out in paragraphs 2.1 to 2.5 below. The further advice of Counsel is sought on the point raised in the earlier instructions in the light of the additional research.

In addition, at the consultation Instructing Solicitor mentioned 3 further matters although Counsel was not specifically asked to advise on them. These were (i) the possibility that the Society could change its articles and offer to amend its policies (ii) the Society being put into liquidation on a petition in the public interest (iii) the application of the Unfair Terms in Consumer Contracts Regulations 1999.

Counsel is now asked to advise additionally on the possible application of the Unfair Terms in Consumer Contracts Regulations (although this would only be relevant if the "First Meaning" was correct). This is dealt with in paragraphs 5.1 to 5.6 of these Instructions.

22/12/2000 [18:20] FSA's Director of Insurance says that Line Manager E's list of topics (see 21/12/2000 [**17:15**]) to be discussed with Equitable:

Looks ok. But I think we will also have to discuss with them how they think they can manage their bonus problem in February.

27/12/2000 [entry 1] FSA's Line Supervisor C, in response to a query from Line Manager E, explains that he had told Equitable what FSA's conclusion had been on their application for a section 68 Order in respect of the calculation of the rates of interest on fixed interest assets (see 18/12/2000). (Note: it is not clear when he did this. Also see 23/03/2001 (and 06/03/2001).)

27/12/2000 [11:05] FSA's Line Manager E seeks approval from the Director of GCD, Legal Adviser C and the Head of Life Insurance on a revised draft letter to be sent by Managing Director A to Equitable on the market value adjuster.

[**12:51**] Legal Adviser C questions whether it was '*really the case that what Equitable have done "could (and in some cases should) reduce surrender levels to <u>below contractual levels</u>" [my emphasis]?*'.

[**13:09**] Line Manager E agrees with Legal Adviser C, noting: '*The distinction being drawn is, as I understood it, between the value of the policy at the time of surrender and a share of any accrued bonus since the last declaration or any expectation of a share of a future terminal bonus. As you say, the words "at first glance" aim to deal with the point, but not very successfully I will try and make this clearer in the letter*'.

27/12/2000 [13:35] PIA send FSA a copy of a letter to Equitable, sent that day, about their pensions review. In their letter, PIA had encouraged Equitable to allow policyholders to pay any redress into a unit-linked fund or to a policy with a different provider. PIA also had asked Equitable to let them know what they had decided.

27/12/2000 [14:19] FSA ask Equitable, following a query raised by an FSA employee who is an Equitable policyholder, whether members of group schemes would receive the same information as individual policyholders.

27/12/2000 [14:27] Equitable write to FSA's Line Manager E with two queries relating to how the Society is to handle policyholder complaints connected with its GAR rectification scheme.

27/12/2000 [16:02]	An FSA official circulates a revised version of FSA's '*Most Frequently Asked Questions*' and seeks comments.
27/12/2000 [17:24]	Equitable provide FSA with updated information from the previous day on the value of payments made on surrenders, transfers and switches, and calls to Equitable's helpline.
28/12/2000 [09:06]	FSA's General Counsel's Division prepare a chronology of the legal advice provided in relation to Equitable.
28/12/2000 [10:23]	FSA's Line Manager E sends Legal Adviser A a copy of Equitable's deed of settlement and says: *I have only skimmed through it (which may not be wise for a legal document of this vintage) but in so doing I was struck by clause 68 – with the side heading "call, when to be made". It may be (if I have understood it correctly) that the effect is not out of line with Counsel's idea that Article 4 was referring to the availability of assets to pay claims at any point in time. In short, the clause seems to require all members to meet a call in the event the society is unable to meet claims arising from the death of assured members and that such calls are to be treated as deposits which would be repaid with interest when the society has enough money.*
28/12/2000 [11:42]	FSA send GAD a copy of Equitable's letter of 21/12/2000 about Equitable Investment Fund Managers Limited, along with a copy of their 1999 report and accounts.
28/12/2000 [12:38]	An insurance company (not one of the three which had originally expressed an interest in bidding for Equitable) provide FSA with copies of recent letters to Equitable, which set out proposals which involved the transfer of Equitable's sales force, business infrastructure and investment operations. FSA's Head of Life Insurance comments to the Director of Insurance that the correspondence shows that '*at least one interested party has put to* [Equitable] *rather fuller ideas than we had been made aware of by Equitable themselves*'.
28/12/2000 [17:40]	Equitable's solicitors write to FSA about the market value adjuster (in response to 19/12/2000 [**18:41**]). The Society's solicitors say: *I am responding somewhat belatedly to your fax of Tuesday evening, 19 December, with which you enclosed a copy of* [Equitable's Appointed Actuary's] *fax to* [FSA's Managing Director A] *of the same day.* [The Appointed Actuary] *had enclosed a note on the Society's application of the "financial adjuster". You were concerned as to any possible legal implications of the application of a financial adjuster that would reduce the amount paid on a surrender (or other non-contractual termination) to an amount that would be "lower than the accumulated guaranteed fund that would be available on contractual termination". I think you were concerned as to whether any such move might in some way be contrary to the House of Lords' decision.* *I think this concern is misconceived. The main point is that the House of Lords' decision was specifically about the principles of contractual interpretation, and possible implied limits on the exercise of the discretion granted by a contract. One of the key statements in Lord Steyn's judgment (which I have to say has been roundly ignored by one or two commentators) was that any attempt to imply terms into a contract should be "sparingly and cautiously used and may never be employed to imply a term in conflict with the expressed terms of the text. The legal test for the implication of such a term is a standard of strict necessity."*

The solicitors continue:

> *The Society refers to such events as surrenders and premature withdrawals as "non-contractual", and does so for a very good reason – these are occasions when the policyholder generally has no contractual right to make a withdrawal from the policy. Any withdrawal depends on reaching an agreement with the Society outside the terms of any existing contract. As a result, the Society has always made it clear that such withdrawals will only be permitted on terms that are agreed by the Society itself. These terms are at the discretion of the Society – and, indeed, could in many cases amount to a complete refusal to entertain a request for early termination. This is not a question of the exercise of a discretion that is available to the Society under a contract (as was the case in the House of Lords' decision). Rather, it is a case where the policyholder wishes to do something entirely outside the terms of the contract, and the Society is contemplating whether or not to agree to such terms.*
>
> *In these circumstances, the fact that the financial adjuster may result in the policyholder receiving less than the accumulated guaranteed fund that would be available on contractual termination is legally of no significance.*
>
> *Obviously the FSA has other discretions (most notably under sections 37 to 45 of the Insurance Companies Act) that may in theory be brought into play to protect policyholders in these circumstances. However, given the fact that the Equitable is clearly acting even-handedly towards all policyholders, and the balance that the Equitable is very properly seeking to maintain between the interests of departing and remaining policyholders, when contemplating any request for a non-contractual policy termination, I would find it difficult to believe that any of these powers of intervention would be properly exercisable in the present case.*

28/12/2000 [17:44] FSA's Chief Counsel B suggests to the Director of GCD that:

> *I think it would be helpful if you were to commission some advice on the benefits/disbenefits of the FSA seeking to wind up the Equitable on just and equitable grounds with particular emphasis on the differences this might make on the payouts to policyholders with or without the addition of the benefit of the* [Policyholders Protection Act 1975]. *I see this as something which will be needed going forward. It is probably a piece of advice on which we would need external advice after we have sorted out an internal legal line and also something which we could get on and do without waiting for instructions from an internal client*.

28/12/2000 [18:18] Equitable provide FSA with updated information from the previous day on calls to Equitable's helpline. The usual data on the value of payments made on surrenders, transfers and switches is '*not available yet*'.

29/12/2000 [entry 1] HMT write to Equitable to explain that, on FSA's advice, they had agreed the application for a section 68 Order to raise the limit on the admissibility of shareholdings in certain companies (see 11/12/2000 [**entry 1**]). HMT enclose the Order.

29/12/2000 [entry 2] FSA write to Equitable about Equitable Investment Fund Managers Limited (see 21/12/2000 [**entry 2**]). FSA say that they would like to take up the offer of a meeting. FSA state that, at this time, they were inclined to take the view that Equitable Investment Fund Managers Limited should be allowed to continue to take on investment business but that FSA wanted a clearer understanding of the arrangements proposed.

29/12/2000 [11:56]	FSA discuss the proposed letter to be sent by Managing Director A to Equitable (see 27/12/2000 [**11:05**]).

[**14:56**] Line Manager E circulates to colleagues and to GAD a slightly extended version of the draft letter, in which FSA accepted that an adjustment of 10% was not unreasonable. This asks Equitable to discuss any further increase in advance, wherever practicable, as the level had the potential to raise prudential concerns by having the opposite effect to that intended, that is:

> *... rather than encouraging people to stay, an increase could cause people to panic into surrendering.*

FSA point out that Equitable should not have extended the adjustment to Republic of Ireland policies without informing FSA. FSA also query Equitable's decision to change the calculation from a proportion of bonus to a proportion of market value, in order to allow an adjustment greater than the total amount of the bonus. FSA state:

> *At first glance, this might appear to amount to the exercise of the discretion provided by the MVA clause in such a way as to avoid the bargain originally struck between the parties. On this basis, we should need to see very persuasive arguments that this represents a legitimate use of the MVA.*

[**16:43**] Legal Adviser C comments:

> *Having raised the question of whether it was sensible to speak of "contractual levels", I am very happy that this draft simply speaks of "bonus amounts".*
>
> *You will have seen* [the Director of GCD's] *earlier e-mail which asked me to look at the issue of "contractual entitlement" in more depth. I am about to go on leave for a fortnight, and* [Chief Counsel B] *has kindly agreed to take over in my absence – including considering whether we need to instruct Counsel on this point.*
>
> *For what it is worth, I think that although we can all identify quite easily circumstances where the MVA could be used in an obviously inequitable way – such as reducing the value of a 25 year policy to zero when the holder wished to transfer it, or surrender it, in the 24th year – we are much more likely to be faced with circumstances which are not clear-cut. For instance, if (as I assume we do) we are content that 10% is "fair" (or at least "not unfair"), where on the scale should we place 12%? Or 15%? Or 20%? It seems to me to be very difficult to come up with a simple formula that will supply an answer in each case. The issue appears to boil down to defining what would be reasonable (or unreasonable) conduct – and this will surely depend to a large extent upon the facts: the economic position that the life office faces being one of them I also suspect that this will in essence be the view that Counsel will take – or indeed a court, were matters to go that far.*
>
> *It may well be, as* [Chief Counsel B] *suggested to me, that the House of Lords in considering the Equitable guaranteed annuities touched on these issues, and we can certainly look into that.*

29/12/2000 [11:57]	FSA's Director of GCD informs Chief Counsel B that he agreed with the suggestion that FSA should undertake some work on the benefits/disbenefits of seeking to wind up Equitable.
29/12/2000 [15:30]	Equitable's solicitors send FSA a copy of revised instructions to Counsel (see 21/12/2000 [**08:56**]). The solicitors ask for comments by 4 January 2001, ahead of conference with Counsel on 9 January 2001.

29/12/2000 [16:21]	An FSA official distributes the latest version of FSA's '*Most Frequently Asked Questions*', which incorporates comments made on the draft of 27/12/2000 [**16:02**].
29/12/2000 [16:52]	Equitable provide FSA with updated information from the previous day on the value of payments made on surrenders, transfers and switches, and calls to Equitable's helpline.
29/12/2000 [17:15]	Equitable reply to FSA's query of 27/12/2000, concerning how members of group schemes were being provided with information. Equitable also respond to the request of the previous day for a meeting, suggesting the week commencing 8 January 2001, and to a query about their application of the market value adjuster, saying they would respond in due course.

January 2001

02/01/2001 [entry 1] FSA and PIA meet to discuss Equitable. FSA's note of the meeting records the conclusions and action points agreed on the issues related to '*Media*', '*MVA*' and '*Policyholder Information*'.

In relation to the market value adjuster, the note records that:

> *No information about OFT timetable available; FSA wrote to OFT* [week ending] *22/12 and OFT requested information from Equitable – Equitable have not responded to date.*
>
> [FSA's Director of Insurance] *wrote to* [Equitable's solicitors] *on 19 December about any possible legal implications of the application of the MVA that would reduce the amount paid on a surrender (or other non-contractual termination) to an amount that would be "lower than the accumulated guaranteed fund that would be available on contractual termination" and in particular whether any such move might in some way be contrary to the House of Lords' decision. Equitable's response appeared robust but required further work on presentation.*

FSA's note continues, stating that:

> *Attendees were concerned about potential implications of any further increase in MVA.* [The Director of Insurance] *explained FSA's responsibilities and powers in this area and the complications caused by the competing interests of different groups of policyholders. FSA's powers were separate to any consideration under Unfair Contract Terms (currently within OFT's responsibility but soon to move to FSA).*

It is agreed that Managing Director A would draft a letter to Equitable's Appointed Actuary, informing him that FSA would be concerned if the market value adjuster were increased from its current level without '*significant justification*'.

FSA's note goes on to record that FSA's Chairman has requested more information to verify that the market value adjuster was in line with other insurers. Attendees confirm that GAD had provided an oral briefing to FSA, which had said that Equitable's application of the market value adjuster was more transparent than others in the industry.

It is agreed that Line Manager E would request a briefing note from GAD on industry comparisons.

[**15:50**] Line Manager E requests the briefing note from GAD, comparing Equitable's surrender values with the rest of the industry.

02/01/2001 [entry 2] The Government Actuary writes to an Equitable policyholder in response to a complaint about the regulation of Equitable. After noting that GAD had never been responsible for insurance regulation, the Government Actuary says:

> *The Government Actuary's Department has provided actuarial advice to each of these regulatory bodies but it would not be appropriate for us to disclose details of the professional advice given to our clients.*

The Government Actuary continues:

> *I would emphasise that ELAS has always met the statutory solvency margin requirements, which are substantially more stringent than a normal test of insolvency. UK insurance legislation, based on the requirements of EU directives, but in common with insurance legislation in many countries, envisages intervention by the supervisory authorities if and only if the solvency margins are breached.*

> *ELAS has prudently decided ... that they should cease to accept new business. However, they expect to be able to meet all their liabilities as they fall due.*

The Government Actuary had sought advice from Chief Actuary C on a draft of the letter, asking whether the draft was appropriate or '*should I be even less forthcoming*'. The following drafting was removed from the final sentence quoted above: '*so there is no question of insolvency, the approach of which would have triggered regulatory intervention*'.

Reference to the continuing ability of Equitable to meet their solvency requirements was also omitted.

(Note: I am told that the statement was omitted from the final version in line with established policy and practice at GAD not to say anything about a company's solvency position that was not in the public domain.)

02/01/2001 [08:31] FSA's Director of Insurance asks Legal Adviser A to consider Equitable's draft instructions to Counsel, received on 28/12/2000 [**15:30**], as he was very anxious that FSA and Equitable should keep closely in step over this issue.

02/01/2001 [12:45] FSA's Line Manager E circulates draft '*lines to take*' for dealing with enquiries from members of the public.

02/01/2001 [13:15] GAD's Directing Actuary B writes to Scrutinising Actuary F about Equitable's letter on their 1999 returns (see 21/12/2001 [**entry 1**]). The Directing Actuary says that the Scrutinising Actuary needed to suggest to FSA that they should take legal advice on the interpretation of Regulation 72(3). The Directing Actuary gives his view that the regulation did require that the actuary should look at whether the payment could be covered by existing resources, should the option be exercised, and that there was no indication that the actuary would be allowed to assume that only a small percentage of clients would exercise that option. He believes that the relevant paragraph of a draft revision to Guidance Note 8, which was currently being consulted on, relates to Regulation 72(1), not to Regulation 72(3) directly – and that GAD's interpretation was in line with the recommendations in the professional working party paper. The Directing Actuary concludes that, if GAD's interpretation were not correct:

> *... actuaries would be able to circumvent their basic premise that the reserve should be at least equal to the PRE surrender value on mass discontinuance (the reference here to "mass" being largely at the insistence of Equitable!)*

02/01/2001 [15:38] FSA's Head of Press Office informs senior officials and Equitable's supervisors that Equitable's press office were stressing that the market value adjuster applied to the projected final bonus as well as to the guaranteed element, and had said that they were only being criticised about this as other insurance companies were less transparent about the final benefits of their policies. The Head of Press Office gives, as an example of Equitable's more transparent approach, the fact that '*Equitable send a statement each year identifying the guaranteed bonuses and a projection of the final bonus*'.

The Head of Press Office also reports that Equitable have also conducted an analysis of final surrender values which had confirmed that, even with the adjuster, they compared '*pretty well*' with the market. However, he says that '*that is not a message they are keen to peddle at this stage since their main priority is to encourage people to stay rather than leave*'.

The Head of Press Office concludes by saying that: '*The main focus for* [Equitable] ... *is the OFT and getting a powerful response to them on the MVA*'.

02/01/2001 [16:42] FSA's Line Manager E provides FSA's Press Office (and others) with a summary of the information supplied by Equitable on the levels of policy surrenders, transfers to another company, and switches to unit-linked policies. The Line Manager also provides a summary of Equitable's handling of calls to their customer enquiry line.

02/01/2001 [17:39] In response to his suggestion of 28/12/2000 [**17:44**] that FSA should look at the benefits or disbenefits of seeking to wind up Equitable on just and equitable grounds, Chief Counsel A suggests to Chief Counsel B that he should initially undertake a broad brush overview about which they could then take stock and discuss next steps. She explains that: '*Anything more thorough would require to be worked up with supervisors and GAD*'.

03/01/2001 [entry 1] FSA meet Equitable and their advisers to discuss progress on the sale of the business.

Equitable's advisers provide an overview of the position of discussions with the key interested parties ('Prospective Bidder D', 'Prospective Bidder E', 'Prospective Bidder F' and Halifax) and say that they expect to receive indicative proposals the following week. The advisers say that each party was working on slightly different proposals, with Prospective Bidder E's bid appearing to be the most comprehensive. This envisaged acquisition of Equitable's infrastructure first, and later looking to achieve an '*accommodation*' with GAR policyholders, followed by a transfer of the ongoing business pursuant to Schedule 2C of ICA 1982. The bidder hoped to continue both with-profit and unit-linked business.

Equitable's advisers say that discussions with Prospective Bidder B were facing difficulties, as the bidder desired exclusive negotiations. The advisers confirm that, nevertheless, all the other bidders:

> *... were looking to buy the infrastructure and leave a closed Equitable fund. However, they were also looking at ways of enabling the existing policyholders to transfer from Equitable into new funds within the purchaser's group on favourable terms. He thought that none were looking to inject large amounts of shareholders funds but all the proposals involved some form of capital support to the ongoing fund.*

FSA's Chairman says that FSA's interest in the discussions was to ascertain what input potential bidders might seek from them, and:

> [FSA's Chairman] *noted that it was likely that if there was to be a transfer or accommodation subject to court approval, the court could place considerable reliance on any views expressed by us. He noted that we were willing to be involved and would make ourselves available when required ...* [The Director of Insurance] *said that there was a limit to how far we could commit ourselves in advance, but we would do our best to give an indicative view. He added that it would be useful to have early discussions so we could better understand the proposals, and that not all the regulatory hurdles would necessarily be easy to overcome.*

After discussion about the effects of various sale scenarios on the sales force, FSA's Chairman asks whether the market value adjuster had been raised. In response:

> [Equitable's adviser] *said he believed most were expecting it to remain. There were essentially three options under all the proposals: a policyholder could stay in the closed fund, leave the fund and suffer the mva, or they could transfer to the acquirer, who would look to enhance the value of the transferred funds (eg on the basis of low acquisition costs).*

Equitable's advisers continue: '*The level of surrenders had remained fairly stable, running at about four times the usual rate*'.

Equitable's Appointed Actuary says that there were no plans to increase the level '*which continued to operate marginally in favour of those remaining in the fund, but* [he] *noted that the current value of shares meant the margin was very thin*'. Equitable say that they were yet to respond to the OFT, who had asked about the justification for the adjuster.

Equitable's President informs FSA that Equitable had sold a substantial quantity of equities and that their equities to fixed interest ratio was now 55:45 (from 60:40).

The potential benefits of some form of compromise between the different policyholder groups are discussed. FSA's note records that:

> *... even in isolation there were potential benefits ... whether by a s.425 scheme, a Schedule 2C transfer or even a contractual buying out of GAR rights. The latter would not be a complete solution, compared with a court solution, as some GAR policyholders would almost certainly not sign up. It was not, however, ruled out.*

FSA ask about whether Equitable's sales force might stop giving advice. FSA later receive revised proposals, which clarify to staff the extent to which they could provide advice and when those staff should refer policyholders to an independent financial adviser.

Under the heading '*Post 20 July sales*', FSA's note records: '[FSA's Managing Director A] *asked if there had been any developments on the post 20 July 2000 sales.* [Equitable's Appointed Actuary] *said that there had not, since there was no real indication from the behaviour of policyholders that there was a particular issue about the most recent sales.* [The Director of Insurance] *said that it would be useful to develop a general approach to complaints handling, and that it might be helpful to discuss that at an early stage with the* [Financial Ombudsman]'.

Following the meeting, FSA's Chairman talks to Equitable's President about Equitable's Board and, in particular, about the position of their Appointed Actuary. The President explains that the charges being incurred, as part of the search for '*headhunters*' to assist with finding new non-executives, were, in his view, '*hugely inflated*'. FSA's Chairman says that he had advised Equitable's President:

> *... to point out to them that, in present circumstances, the costs of the assignment would be highly likely to become known, and they would need to watch out for their reputation if it looked as if they were picking over a corpse too extravagantly.*

FSA's Chairman records that he had expressed surprise when informed that Equitable's Appointed Actuary would sit on Equitable's Nomination Committee that would vet applications for non-executives, as it was '*highly unusual for executives to be involved in choosing the non-executives on the Board*'.

(Note: it has been explained to me that, historically, Equitable's Nominations Committee had been comprised wholly of non-executive directors. In the unusual situation of early 2001, when all the non-executive directors had announced their intention of resigning as soon as replacements could be found, those non-executive directors had felt that it would be inappropriate for them alone to decide on new director appointments and had asked the Society's Chief Executive to join the Committee to provide some continuity. When FSA's Chairman raised his concern, Equitable's Chief Executive had relinquished his membership of the Committee and the Society had reverted to the historical norm.)

FSA's Chairman says that FSA did not want the individual to remain in the Chief Executive and Appointed Actuary roles concurrently for any longer than was necessary, to which Equitable's President agreed. The Chairman also says that '[the Appointed Actuary] *had been associated with some propositions in relation to reserving for GARs which were particularly extreme, and any review of regulation in the past would be bound to draw attention to that*'. Equitable's President again apologises for the position that the Society had got itself into, adding that he did not know what it could have done in the last two or three years to avoid it. FSA's Chairman suggests that '[there] *were policy holders, of course, who thought they should have* [attempted] *to do a deal earlier, rather than take the case all the way to the Lords*' to which the President replied that Equitable: '*had thought about that, but had been strongly advised that the only way to get certainty was to take a case. But that was now all water under the bridge*'.

On the following day, FSA's Chairman informs the Director of Insurance, Managing Director A, the Head of Life Insurance and Line Manager E of this discussion.

03/01/2001 [10:57] FSA's Managing Director A seeks confirmation from the Director of GCD that there are no legal objections with a draft letter to Equitable about their use of the market value adjuster. [**14:21**] Chief Counsel B later sends Line Manager E and Legal Adviser A some drafting points. (The letter is sent the following day.)

03/01/2001 [12:53] FSA send Equitable's solicitors a copy of their further instructions to Counsel to advise on the application of the Unfair Terms in Consumer Contracts Regulations 1999.

03/01/2001 [16:31] FSA's Director of Insurance writes to Managing Director A about a meeting with the action group planned for 5 February 2001. The Director of Insurance suggests that, while the exact nature of any statement depended on the outcome of the meeting, a possible public line to take might be:

> *FSA is keeping closely in touch with all interested parties. Much of our effort has been directed to ensuring that policyholders are given the fullest possible information (both by the Company and via our helpline/website etc). Moreover policyholders, both as policyholders and owners of the company, are likely to have an important role to play in future developments – particularly in any which might involve some resolution of conflicting interests between different categories of policyholders. It is therefore right that we should* [hear] *what policyholders think both of the adequacy of the information etc which has been made available and on possible future developments.*

03/01/2001 [16:41] Equitable let FSA know when they hope to provide information on briefing for sales staff, client serving information and their availability for a meeting with FSA. Equitable ask whether FSA have any comments on the content of the Society's website and invite Equitable's views on a proposal that their representatives should telephone policyholders to see if they had any questions.

03/01/2001 [18:31] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

04/01/2001 [entry 1] FSA meet Halifax's Chief Executive, who wanted to inform Equitable of the possibility that they might make an offer for parts of Equitable. The Chief Executive explains that Halifax had been interested in acquiring Equitable prior to closure to new business '*but had not pursued it previously because they were concerned about the balance sheet implications for the group and were not sure that they would be in a position to support the business going forward*'. The Chief Executive says that they had revisited this in the light of Equitable's closure to new business. The Chief Executive outlines their two stage proposition where they, first, buy Equitable's infrastructure (with Equitable then contracting out those services to Halifax) and, secondly, seek to reach an accommodation between different groups of policyholders. He explains that the second stage was key to realising the value of their investment in the sales force. He says that Halifax were also looking at the possibility of buying Equitable's unit-linked business.

FSA's Managing Director A notes that:

... the FSA was not there to be involved in the commercial considerations behind a possible deal. However, he said that we would be willing to help to deal quickly with regulatory issues. He also noted the FSA's potential involvement in any court based procedures, where [the case of another company] *had demonstrated that a judge might attach considerable weight to any evidence submitted by the FSA.* [FSA's Director of Insurance] *added that a court based procedure would be necessary both for a section 425 reconstruction or a Schedule 2C transfer.* [The Managing Director] *also pointed out that it was important not to overlook any banking regulatory issues.*

FSA's note records:

[Halifax's Chief Executive] *said that the condition of the closed fund was a matter of concern. Part of the problem was the GARs, which was widely acknowledged, but he thought also that the general inadequacy of capital in the fund was a real problem. He asked about our position on the concessions that had already been granted to Equitable, to which we replied that we saw no reason for our attitude to change following any deal.* [Halifax's Chief Executive] *also asked our view if the statutory solvency requirements were breached. Halifax were concerned that if they were, they would wish to be able to continue to make bonus allocations while working on a longer term plan for the restoration of the financial position. If bonuses could not be paid in such circumstances until after the solvency position had been corrected, that could seriously damage the goodwill of the customers they were seeking to attract.* [FSA's Director of Insurance] *expressed sympathy over the problem but said it would be difficult to give assurances on this point since it might depend on wider market conditions that could not be predicted with certainty.*

Halifax's Chief Executive also asks: '*if it was consistent with the closure to new business for Equitable to continue to take on further funds and premiums. We confirmed that this was acceptable where the policies, or rights to a further policy, existed before the closure announcement*'.

04/01/2001 [entry 2] FSA write to Equitable, following discussions '*on a number of occasions*' about the market value adjuster. FSA explain that they had sought to make clear that:

- *the level of the MVA for <u>any</u> insurance company is of legitimate concern for the FSA because of its implications for policyholders' reasonable expectations and for directors responsibilities under the "criterion of sound and prudent management".*
- *in the circumstances in which the Equitable currently finds itself, there are particular prudential risks of any further rise in your present MVA – namely that it might cause the obverse of what is intended, by leading people to panic into early surrender.*

FSA say that they had indicated that FSA expected to be consulted on any plans to raise the market value adjuster applied to policies, and that consulting would:

... reduce the risk that might otherwise arise (and which would be of no benefit to either the Society or to policyholders) that if you were to raise MVAs the FSA might then find it appropriate to take formal action, on PRE or "sound or prudent management" grounds to secure a reduction in them.

FSA continue:

I understand the point you have made to me in response, namely that there are circumstances in which you might wish to move very quickly – most obviously in the event of a sharp sudden fall in asset prices. In such an event, the FSA recognises that adjustment of the MVA can be one way of seeking to ensure a balance between the legitimate interests of policy-holders that stay with the company and those that wish to *terminate their policies. Let us hope that such circumstances do not arise. If, however, they do I should be grateful if we could discuss the issue urgently before any decision is taken.*

FSA note:

Obviously, while the circumstances currently facing the Equitable are specific to your Society, MVAs are a topic of general interest to the life assurance industry. Recent circumstances suggest that there may be a case for the FSA to consider providing general guidance on how it views this topic and the main circumstances it would take into account in deciding at any point in time whether to exercise its powers.

04/01/2001 [11:21] FSA's Director of Insurance writes to Line Manager E about restrictions on distributions by a holding company with an insurance subsidiary with a life fund in deficit. The Director sets out his understanding of the issue with discussion of the relevant sections of ICA 1982, as well as FSMA 2000. The Director of Insurance notes that:

- section 29(7) of ICA 1982 would prevent any company from declaring a dividend where the long term fund or funds of a subsidiary insurance company were in deficit on the regulatory basis;
- a section 68 Order could in theory disapply section 29(7), but only where the company was an insurance company – it was '*not immediately clear that it is available in respect of non-insurance companies*'; and
- the position would change when FSMA 2000 and associated rules and regulations came into effect.

In the light of the above, the Director of Insurance sets out the following options:

- It was arguable that, due to Article 4 of Equitable's constitution, their long term fund could never be in deficit. FSA were sceptical of this view and it was inconsistent with initial advice received from Counsel.
- It might be that HMT could make a section 68 Order to disapply section 29(7), which could raise policy problems said to be '*difficult*' but '*in the circumstances probably not insuperable*' for FSA. The Order would have limited use, as such an order would have no effect once ICA 1982 was replaced by FSMA 2000.
- There was no provision within FSMA 2000 similar to section 68 in ICA 1982 which would allow HMT to waive any requirement under the regulations due to come into force. A '*generic, but suitably restricted*' draft of the regulation was suggested, so as to prevent other companies in a similar position to Equitable exploiting a possible loophole which could be created by that regulation. It was said, however, that this option '*looks fraught with difficulty*'.
- HMT regulations could not be waived but an exemption could be provided in respect of the FSA rule. If granted, no breach would occur and the HMT regulation would not be triggered. The Director of Insurance says:

  This seems a much more promising way forward – not least because it would keep the issue under our own control and would not be subject to the vagaries of HMT drafting and Parliamentary process. To be acceptable it might well be necessary to accompany the exemption by a bespoke requirement on the Equitable (perhaps restraining the Equitable from moving assets out of the long term fund except in certain defined circumstances).

FSA's Director of Insurance concludes that the last option appeared to be the only '*serious contender*'.

[**12:59**] Line Manager E says:

I think there is a fundamental policy issue we need to address here before we can work out the detail. However, it does seem that even if there are short term difficulties, there may be scope for overcoming them from N2 – it really depends what restrictions we think are necessary across the board.

The Line Manager notes further that:

The provisions in section 142 [of FSMA 2000] *were included because of an (ie my) understanding at the Treasury that the general prohibitions on making distributions or charges would be continued in FSA rules.*

Your account of the proposals for funds in deficit suggest that the de facto prohibition on paying dividends will not apply (although a dim view will presumably be taken in the event a company whose fund is in deficit makes distributions at a time that it can ill afford to do so). However, this change of approach is significant, and not something I had appreciated. The power of the Treasury was intended to back onto the requirements that would be imposed on the insurance companies themselves. However, if the primary requirements are not to be imposed on the insurance companies themselves, I am not sure I (if I were still in my previous [incarnation]*) would see the grounds for imposing secondary restrictions on the parents of insurance companies. It is even arguable whether the lack of corresponding "asset identification rules" might even have the effect of narrowing the Treasury's discretion to make the Regulations we had talked about.*

Before we can produce an analysis of the future impact of the regime, I think we need to work out quite what the restrictions are that we would be looking to impose on parent companies, and then explain our position to the Treasury ...

Perhaps [the Insurance Division's Head of Policy (the Head of Insurance Policy)] *and I could discuss?*

[**13:22**] FSA's Director of Insurance thanks him for his comments and asks Line Manager E to discuss this urgently with the Head of Insurance Policy.

[**14:08**] The Head of Insurance Policy writes:

Happy to discuss. But you might like to note that [the Director of Insurance's] *memo is not quite right in one important respect which I think might be the key driver of the concern you express.*

FSA rules, not HMT [Regulations]*, prohibit the insurer from paying a dividend when its long-term insurance fund is in deficit – see rule 3.2(6) in Consultation Paper 41a. The HMT* [Regulations] *(will, when drafted) merely reinforce this by also prohibiting the holding company from paying a dividend.*

[**15:50**] The Director of GCD gives some comments, following '*useful discussions*', including:

Under the existing law, the legal position would be straightforward, I believe, if the company wishing to pay the dividend were a UK authorised insurer. In that case, a section 68 order could in my view lift the section 29(7) requirement from it both as an insurer and as a holding company. Since the section 68 powers are for HMT to exercise, it would need to be HMT lawyers who advise on this, but it is in my view the correct position.

However, the position under the existing law would be more difficult if the holding company were not an insurer. This is because section 68 powers allows us to lift requirements only for insurers. I have not yet found a way to resolve this issue. (I have not researched the idea that section 29(7) applies only to holding companies within the UK jurisdiction, but this seems to me pretty improbable.)

I am, however, more optimistic about the prospect for dealing with the problem under the new legislation ...

As I understand it, the existing outright ban on distribution by holding companies creates many anomalies. We could therefore modify the rules we have currently proposed, not only to extend them to holding companies who are authorised, but also to avoid these anomalies, for example, by creating a group derogation. This could allow distribution by a holding company where the assets of the group are such that the group could have made the distribution if it had been a single insurer, or where the insurer with the life fund has been required by a group on terms designed to ringfence its funds (and their liabilities).

[**17:44**] Legal Adviser A notes that:

... the starting point is Article 21(2). In general, we cannot restrict the free disposal of assets. I agree with your comment on Article 24(3) which is reflected in section 32 and 45(2) and 37(3)(d). The only obligation to restrict seems to be in [the] *second paragraph of Article 26. I can find nothing to suggest that we must impose a restriction on the holding company.*

[**18:05**] The Director of GCD asks: '*does this mean that the existing s29(7) is inconsistent with the directive and could be repealed under* [the European Communities Act 1972] *S 2(2)?*'.

04/01/2001 [11:28] FSA thank Equitable for the information supplied on 03/01/2001 [**16:41**], including that on call handling and surrenders, transfers and switches [**18:31**]. FSA say that they have no comments on Equitable's website, as it had since been updated and that the suggestion to proactively contact policyholders would be welcomed. FSA say that the subject matter of a forthcoming meeting with Equitable would be '*primarily about prudential issues involving actuaries (eg reserving and solvency)*'.

04/01/2001 [16:13] GAD provide FSA with a short note '*prepared to give some background information on the relative level of surrender values offered by Equitable*', in response to their request on 02/01/2001 [**15:50**].

GAD's note reproduces the results of a Money Management survey carried out in February 2000 (and published in April 2000). GAD explain that the survey showed that Equitable's maturity payouts were slightly below average in February 2000 '*(and indeed they have been in the third quartile on their 20 and 25 year policies since around 1990)*', but that their surrender values at most durations (and original terms) were above average in February 2000 (except for policies approaching maturity).

GAD go on to explain that the application of a 10% market value adjuster would reduce these payments on surrender but that they would still be close to the average for endowment policies at most terms and durations, and indeed higher than average for short duration policies.

GAD also point out that other companies were also likely to have reduced their surrender values to reflect the negative investment returns of around -2% to -7% that most companies were likely to have experienced on their with-profits funds during the year 2000. Accordingly, '*we would expect to find that surrender values on with-profit endowments offered by Equitable Life are still likely to be fairly close to the average for all companies, even after the application of the 10% MVA factor*'.

GAD explain that Equitable had only a relatively small portfolio of with-profits endowment policies (which was the main type of contract on which published surrender value surveys were carried out) and that: '*We do not have any corresponding survey figures for the transfer values available on accumulating with-profit pension policies (the Equitable's main product line) but we would expect the pattern to be similar ie close to average surrender values.*

(Maturity values on pension policies were though shown to be around 5 to 10% below the market average in a March 2000 survey.)'

05/01/2001 [09:55]	FSA's Director of GCD queries how the market value adjuster was deducted from the guaranteed amount of a policy (see 02/01/2001 [**15:38**]). The Director of GCD asks: '*Does this mean that if a policy has a guaranteed value of £10,000, and a projected final bonus of £5,000, the MVA is £1,500 and this is deducted from the £15,000 so that the policyholder gets back £13,500?*'. Line Manager E confirms that FSA's understanding was that this was done on that basis, clarifying that the final bonus would '*only be the share of the terminal bonus earned after x years, not the amount that would have been earned had the policy run its course*'.
05/01/2001 [10:33]	FSA send GAD a copy of the information Equitable had sent to them on 19/12/2000 [**16:08**] about their application of market value adjusters.
05/01/2001 [12:23]	An FSA Legal Adviser writes to the Director of GCD about restriction on dividends and makes the following observations regarding whether section 29(7) is inconsistent with the First Life Directive: *I ... conclude that the inconsistency exists. The payment of a dividend is a form of disposal of assets. The existence of a deficit on the long term business does not justify restricting, under the Life Insurance Directives, the payment of a dividend. Section 29(7) could therefore be repealed under section 2(2) of the* [European Communities Act 1972], *since in effecting the repeal we would be implementing a Community obligation not to restrict the free disposal of free assets.* *I should imagine that if we were to remove the inconsistency we would wish (how urgently I can only speculate) to do so by replacing it with a provision that goes at least some way towards achieving the same policy objective (for instance requiring the insurance company to notify FSA if a dividend were declared where the deficit existed). That would then raise the question whether the replacement provision itself could be effected under section 2(2) and whether, if not, we could make use of other powers.* [**14:32**] The Director of GCD agrees with this view, saying: *... we will not be in a position to replicate such a provision in our rules, as currently proposed ...* *This does not necessarily provide a complete answer before N2. Assuming HMT agree with our view, they could repeal the existing current Insurance Companies Act requirement by regulations under the European Communities Act. We will need to give further thought to whether the* [provision] *has any legal effect in the interim.*
05/01/2001 [13:51]	GAD's Scrutinising Actuary F declines an invitation from FSA's Head of Life Insurance to a meeting with Equitable Investment Fund Managers Limited. The Scrutinising Actuary explains that he would be happy to attend but that, in view of his heavy workload, it might be preferable for him not to do so on this occasion. He advises that GAD believe that the company could continue to take investment-only business, subject to their marketing expenses being met by the margins generated by the company, and there being no cross-subsidy between it and the Society. An official subsequently notes that Equitable Investment Fund Managers Limited had no marketing expenses.

05/01/2001 [13:56] Equitable send FSA a draft briefing note that they planned to send to their representatives, which included information sheets for issuing to clients. Equitable ask for FSA's and PIA's comments.

Equitable also send FSA two communications that have '*come my way*' which showed the advice being given to policyholders by two Independent Financial Advisers. In one of the two Independent Financial Adviser communications, it says, in response to the question, '*Is our money safe?*':

> *Yes – the Society has closed to new business. It remains solvent and will continue to meet its contractual obligations under existing policies. Should this position alter 90% of investors' funds will be met under the Policyholder's Protection Act.*

The advice given also states:

- that future returns were likely to be poor;
- that, as a closed fund, the Society was forced to be more cautious by investing in gilts rather than equities. This would also impact on future returns;
- that Equitable were likely to increase future charges;
- that anyone with unit trusts was advised to sell and reinvest, as these funds had historically under-performed and there would be no penalty for selling;
- that investors with with-profit bonds should surrender at the first penalty-free opportunity;
- that those with endowment plans should generally surrender their plan if they were still in the early years. Otherwise, they should continue with the premium but arrange to fund any shortfalls from the Equitable Life plan. It was recommended that investors '*Please seek our advice before surrendering your plan, as there may be tax implications*';
- that holders of with-profits pensions were most affected. Those with less than five years to normal retirement should remain invested, as Equitable would impose an exit penalty. Those with more than five years to retirement should consider transferring, as the exit penalty would be made up by better growth elsewhere. Investors who had GAR policies should seek individual advice as: '*The value of the "guarantee" lost on transfer needs to be weighed against the inevitable loss of growth in remaining invested. We would strongly recommend that anyone with this type of plan bring us their policy document in order that we can fully assess the implications*'.

The advice also noted that the exit penalty was currently 10%, but that this might change. It concluded by informing policyholders that:

> *It is essential that all Equitable Policyholders review their contract in light of the current circumstances and we would suggest that you contact one of our advisers as soon as possible.*

FSA's Line Manager E notes that Equitable had planned not to make a public comment about this type of advice. However, he says that Equitable '*were considering if they could privately raise it with the media as a way of alerting policyholders to the need for care when taking independent advice, and to rubbish scare stories*'.

05/01/2001 [17:54] FSA's Chief Counsel B informs the Director of GCD that he had had a '*satisfactory* [conference]' with Counsel that morning in relation to advice on the operation of the Policyholders Protection Act 1975, in the light of Article 4 of Equitable's Articles of Association. Chief Counsel B reports:

[Counsel] *has firmed up on his advice as to the preferred meaning which is the "Third meaning" identified at the previous* [conference] *that the reference to "assets" in* [Article] *4 should be taken as referring to the gross assets of the Society – this means that a policyholders rights under a policy would only fall to be scaled down (by the operation of the Article) where the liabilities under that policy exceeded the total gross assets of the Society – what you don't do is net off all policy liabilities and then assess whether there is a deficiency and if so scale down.*

05/01/2001 [19:26] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

08/01/2001 [entry 1] Equitable write to FSA in response to their letter of 21/12/2000 on new sales following Equitable's closure to new business. Equitable set out their position on group schemes and explain that, on transfers, they had sought confirmation of the exact position from their solicitors. Equitable also set out figures regarding new policyholders who had joined after 20 July 2000. Total new policies effected were 17,832 – of those, 8,841 had been with-profits contracts. Of this total, 10,500 were new clients and, of these, less than 6,000 had effected a with-profits contract.

08/01/2001 [entry 2] FSA's Director of GCD provides Managing Director A with advice on how to deal with concerns that had been expressed about FSA's regulatory approach to Equitable's advertising in the period after the House of Lords' ruling. The Director of GCD suggests that the following questions might need to be addressed by FSA and should be considered:

Was it in fact your view, after the House of Lords judgement, that failure to sell the company would lead to closure to new business?

along with the following '*other*' questions:

a) whether, short of acquiring a disclosure along these lines, we were concerned about the scale of advertising on the part of the Equitable in this period, whether we took any action to express that concern to the company, or ask it to reduce the scale of that advertising;

b) whether we formed any view on the accuracy of the statements made in that advertising or of the company's ability to meet the policyholder expectations it was creating;

c) whether we believe that the scale of the advertising during that period was normal for the company concerned, or whether we believe that it was specifically designed with a view to a possible sale;

d) whether we are happy with the response which we gave when concern was expressed to us about the Equitable's ongoing advertising or whether, with the benefit of hindsight, we believe that that could have been better handled;

e) whether we undertook any particular enhanced monitoring of Equitable's advertising during the period concerned;

f) how far we think that the split accountability for prudential regulation, to HMT, and conduct of business regulation, to PIA, may have affected our response;

g) how the move to the new regulatory structure might make a difference, either in strengthening or reducing our powers.

The Director of GCD suggests producing a briefing regarding FSA's approach to investment advertising in the context of consideration of the European Directive on misleading advertising.

08/01/2001 [entry 3] FSA (Head of Life Insurance and Line Supervisor C) and IMRO meet Equitable to discuss new business issues for Equitable Investment Fund Managers Limited, following Equitable's closure to new business. According to FSA's note of the meeting, the following points are considered:

- that Equitable Investment Fund Managers Limited had not actively marketed themselves or sought business since Equitable's closure to new business;
- that Individual Savings Account (ISA) business would roll forward into the following tax year, unless an investor wished to cancel. Equitable Investment Fund Managers Limited wished to continue offering ISAs to existing clients; and
- that Equitable Investment Fund Managers Limited also sought clarification on whether it would be appropriate for them to invest money in, for example, an Open Ended Investment Company, if approached by a client to do so.

FSA and IMRO confirm that the continuation by Equitable Investment Fund Managers Limited of business in this passive manner should not pose problems in the light of the current situation, but that this would need to be revisited should there be a sale and/or restructuring, as '*there could be an issue regarding viability of* [Equitable Investment Fund Managers Limited] *on a stand alone basis*'.

It is noted that IMRO had seen the financial information provided by Equitable Investment Fund Managers Limited prior to the meeting and that it had been thought that any potential problems would be human resource-based rather than financial.

FSA's note records that Equitable Investment Fund Managers Limited had provided IMRO with some financial information prior to the meeting. FSA record that in this information, Equitable Investment Fund Managers Limited acknowledged that they faced a heavy administrative workload, having to deal with queries and surrenders. The information noted that there appeared to be a fair amount of uncertainty in investors' minds, however, those investors did not appreciate that Equitable Investment Fund Managers Limited investors were not affected by the GAR uncertainty which affected the Society's with-profits fund. Equitable Investment Fund Managers Limited were considering writing to investors to clarify the difference between an investment between Equitable Investment Fund Managers Limited and the Society.

08/01/2001 [entry 4] FSA's Director of GCD establishes an 'Equitable Life Lawyers Group' whose purpose it was: '*to review legal points already raised in connection with the Equitable case and confirm that they have been adequately dealt with; to deal with any outstanding legal points; to address legal issues as they arise; to consider other legal issues that may arise; to provide legal advice to our colleagues where necessary*'.

08/01/2001 [09:53] In response to Chief Counsel B's note of the clarification from Counsel (see 05/01/2001 [**17:54**]), the Director of Insurance says:

> *This advice is clearly helpful. I am concerned however about the possibility that* [Equitable] *may take a contrary view – particularly if this leads them to take action which might be unhelpful to policyholders and which (a fortiori) we would consider unnecessary. That said I am not* [clear] *what that action might be. But, if for example they came to the view that the* [Equitable] *couldn't become insolvent in* [Policyholders Protection Act 1975] *terms they might* [feel] *it appropriate to warn policyholders about this. It would clearly be relevant to any policyholder in deciding whether to surrender a policy. But such a warning, if inaccurate, could produce the "wrong" decision. If we do end up taking different views we will presumably need to provide rather clearer guidance to policyholders and to the Equitable on the availability of compensation in the event of insolvency. Are we comfortable that unequivocal guidance be given?*

Against this background I have been one of those who have thought ([in] *my simple non-lawyer sort of way) that it might be a good idea if we and the* [Equitable] *could contrive to get the best, most reliable and most consistent advice so that we could ensure that policyholders are, in turn, best advised and protected. Happy to discuss.* [There] *are clearly issues here which I do not understand!*

[**10:58**] The Director of GCD comments:

I would be concerned in this event that the [Policyholders Protection Board] *might take the narrower view, or at least be reluctant to agree* [with] *the advice we have received, because of concern to protect their fund. We need to guard against this – hence my desire to get support from* [government] *lawyers*. [Chief Counsel B] *has suggested that this needs to be done on the back of scenario planning as to how the issue might arise*. *Could* [Legal Adviser A] *prepare this, discussing with* [Chief Counsel B] *what he has in mind?*

[**16:41**] Chief Counsel B replies that he had discussed the matter with Legal Adviser A and they had agreed to start work on the scenario planning.

09/01/2001 [entry 1] GAD write to Equitable in response to their letter of 21/12/2000 about their 1999 returns. GAD:

- note that Equitable were considering what reserving basis for GARs was appropriate following the House of Lords' decision;
- note that Equitable intend to strengthen their assumptions in respect of payments of future GAR premiums;
- note the comments made on the assumed retirement age for personal pension business. However, GAD '*take the view at present that Regulation 72 (3) overrides Regulation 72 (1) and requires the actuary to set up a liability sufficient to cover the cash payments that would result from an exercising of the vesting option, at any time that that option may be exercised. In our opinion, the revised GN8, in paragraph 3.8.2, is referring to Regulation 72 (1), and not Regulation 72 (3)*';
- in relation to the quasi-zillmer adjustment used in the resilience test, assume that Equitable have accepted GAD's interpretation of the Regulations and note that Equitable would be applying a more sophisticated hypothecation of assets; and
- note that Equitable were reviewing the level of provision required for expenses in the resilience scenario.

GAD send a copy of their letter to FSA, explaining that there remained disagreement over the retirement age assumptions used (that is, over the interpretation of Regulation 72) and suggest that the matter is referred to FSA's lawyers for a definitive view.

By way of background, GAD explain:

... that in his valuation, [Equitable's Appointed Actuary] *assumes that benefits are taken at age 60 on retirement annuities, and at age 55 on personal pension contracts. On the retirement annuities, benefits may in practice be taken at full value (i.e. without applying an MVA) at any time between the ages 60 and 75. In his letter of 29 November,* [the Appointed Actuary] *said that the actual average age of retirement is closer to 65 [than 60] on these contracts, but a reasonable proportion of clients retire at 60 or shortly thereafter, and so age 60 was chosen as a prudent assumption in the valuation. Indeed, this is the strongest age assumption he could be expected to make.*

On the personal pensions, benefits may be taken at any time after age 50 at full value. [The Appointed Actuary] *told us in his 29 November letter that the average retirement age on these contracts is still well over 60, but since retirement in the late 50's is more* *popular than previously,* [he] *felt it appropriate to "introduce an extra degree of prudence into the valuation" by using an assumed retirement age of 55. (In previous valuations, he assumed a retirement age of 60 on this business also.)*

Because the valuation discounts the guaranteed retirement benefits from the assumed retirement age to the valuation date, the sooner the benefits are assumed to be taken, the stronger the reserving basis becomes. Indeed, the strongest reserving basis would be to assume that all personal pensions policyholders take their benefits at age 50. We advised [the Appointed Actuary] *in our letter of 04 December 2000 that the Regulations required this.*

[Equitable's Appointed Actuary] *appears to be arguing that Regulation 72(1) requires a prudent assumption to be made on when the vesting option may be exercised. He cites the actuarial guidance GN8 in support of this (presumably referring to 3.8.1 and 3.8.2 – attached.) He then considers that Regulation 72(3) allows him to take account of the assumed vesting dates when assessing the liability, i.e. he considers that the words in the Regulations "if the assumptions adopted for the valuation of the contract are fulfilled in practice" includes the assumption as to the date when the option will be exercised.*

However, we take the view that Regulation 72(3) overrides that Regulation 72(1) and requires the actuary to set up a liability sufficient to cover the cash payment that would result from an exercising of the vesting option, at anytime that that option may be exercised.

Regulation 64(3)(c) requires the amount of the long term liabilities to take into account "all options available to the policyholder under the terms of the contract".

09/01/2001 [09:11] Prospective Bidder B sends FSA a copy of a letter to Equitable dated 8 January 2001, which stated, in the light of events, a revised interest in purchasing parts of the business. This was on a revised basis from that prior to closure, due to:

... the need to restructure our initial first round proposal in order to limit the risk of deteriorating investment markets as well as a fall in interest rates. We also concluded that it would not be possible to pay a bonus in 2000 and that by not paying bonuses, persistency and new business could suffer significantly. Finally, we felt that we could not write new with-profits pensions business in the long term fund of Equitable without a capital commitment far larger than we could economically justify.

The four key components of the revised proposals were:

a) a deferred purchase of the non-with-profits value of insurance in force;

b) contingent loan financing of the with-profits fund;

c) reduced payment for goodwill; and

d) an offer to transfer non-with-profits business to a '*New Equitable*' at a reduced market value adjuster.

09/01/2001 [13:57] FSA's Director of GCD provides a note to the Director of Insurance confirming the advice that the Director of GCD had given at a meeting on 8 January 2001 on the issue of the restriction on dividends. The Director of GCD advises:

There is more than one view about the extent of the impact of Community Law on this situation. But all are agreed about one point. This is that it would in our view be contrary to Community Law for the restriction on declaration of dividends by a holding company to be applied to a holding company which was itself an insurer which was home state regulated in another member state.

... It is not necessarily a complete answer to the issue. This would depend on HMT taking the same view.

This is for two reasons. The first is that HMT will need to decide whether to continue the existing restrictions in their current form, or in a modified form, when the Insurance Companies Act provisions are repealed. It will be desirable to ensure that HMT do not continue the existing restrictions. Second, in the interim, if action were required to bring UK legislation in line with Community Law, it would need to be HMT which took this action.

There is also a wider, policy question, about whether it makes sense to apply controls on holding companies to insurers, but not to other firms we regulate.

09/01/2001 [15:06] Further to discussion on 08/01/2001 [**09:53**], Legal Adviser A informs the Director of GCD that Counsel had advised Equitable's solicitors that he was '*sure the* [Policyholders Protection Act 1975] *provisions will apply and that the court will interpret regulation 4 and that the policy condition in such a way that the liabilities to policyholders will not be extinguished*'.

09/01/2001 [18:37] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

09/01/2001 [20:11] FSA's Director of Insurance provides the Financial Services Compensation Scheme with a briefing paper about Equitable and arranges to attend a briefing for the Scheme's Board on 20 February 2001. The briefing note provides background about the Society and its closure to new business. It also deals with a number of current issues, including:

- Solvency and compensation arrangements.
- Review of FSA regulation.
- Future performance.
- Help for policyholders.
- Other FSA activity.
- Adjustments to policy values.

In relation to solvency, FSA say that '*the Equitable continues to be solvent in Companies Act terms, as well as satisfying the more onerous requirements under the Insurance Companies Act 1982. The compensation arrangements under the Policyholders Protection Act 1975 and in future under the Financial Services and Markets Act 2000 are not, therefore, of immediate relevance*'.

10/01/2001 [entry 1] Equitable provide FSA with their briefing notes for representatives, some of which had been provided to policyholders on 18 December 2000.

10/01/2001 [morning] FSA meet with Prospective Bidder D. The purpose of the meeting was to keep FSA informed so that any regulatory issues could be spotted in advance. The Bidder outlines its proposals and gives FSA a copy of a letter, dated 8 January 2001, to Equitable setting out those proposals. These are summarised as follows:

- Prospective Bidder D strongly supports Equitable's approach to business. The bidder intends to build a company which mirrored the characteristics of Equitable's strategy and infrastructure.
- The bidder intends to make a substantial payment into Equitable's closed fund in consideration for all of Equitable's ongoing business.

- Part of the consideration would be deferred to reflect the success of the ongoing business.
- Equitable's closed fund would be managed by a service company operated by Prospective Bidder D.

The proposals note that the potential buyer '*intends to enter into immediate discussions regarding partial demutualisation of The Equitable to achieve a substantive resolution of its current capitalisation problems. This is expected to provide significant benefits for existing policyholders of The Equitable*'.

FSA's note of the meeting states that the potential buyer:

> *... thought that a resolution of the problem between GAR and non GAR policyholders was required for the* [Prospective Bidder D] *proposal to work. Some thought had been given as to what the form of compromise could be and this largely appeared to be some form of cash settlement to all GAR policyholders, but this needed further work. The final settlement of this issue would lead to a c£1bn "estate" from the release of regulatory capital which could then be used to buy the GAR policyholders out.*
>
> *At the next stage policyholders of both camps would have the option of transferring to an* [Prospective Bidder D] *company (possibly a dormant subsidiary of* [an insurance company]*) this would be recapitalised with a further £1bn from* [Prospective Bidder D]. *This should help maintain investment freedom.*

10/01/2001 [11:49] An FSA official distributes a revised version of FSA's lines to take, which had received plain language comments. In response to a question, which asked whether Equitable were justified/legally entitled to withhold seven months' bonus/interest, it is stated that:

> *Life Insurance companies can only pay bonuses to their with-profits policyholders when they have surplus assets. Most of the Equitable's surplus funds have had to be earmarked to cover the costs of correcting the position of certain policyholders in line with the recent House of Lords judgment. It had been hoped that the sale of the business would have provided additional capital, so the bonus could be restored. However, as the Equitable were unable to find a buyer, it has announced that it is unlikely now to be able to restore the bonus.*

In response to a question, which asked whether '*previous accounts should have mentioned or taken account of these liabilities even though the legal position was still being considered*', it is stated that: '*The Companies Acts require a company to prepare its accounts, based on a "true and fair" valuation of its assets and liabilities, and for the auditors to give an opinion as to whether this has been done*'.

When asked '*What advice have you given* [Independent Financial Advisers?]', the FSA line is that: '*independent financial advisers are required to act in accordance with the rules made by the Personal Investment Authority. The PIA has recently issued a regulatory bulletin to remind* [Independent Financial Advisers] *of their duties and responsibilities*'.

In relation to the degree to which the GAR issue had wider implications, it is said that:

> *The practice of offering pension plans with guaranteed annuity options was fairly common some years ago. However, the circumstances leading to the Equitable's decision not to accept new business were specific to the Equitable. This arose from the combination of a number of factors, including the generous terms of the guarantees and the significant proportion of its business which had the benefit of such guarantees.*

It is also noted that: '*Unlike many companies, the Equitable did not maintain large levels of unallocated assets, often referred to as "orphan" or "inherited estates". Instead, the Equitable preferred to distribute surpluses to its fund to policyholders as and when they arose*'.

10/01/2001 [12:27]	FSA's Director of Insurance informs the Director of GCD about a conversation he had had with HMT about the issue of the restriction on dividends. The Director of Insurance reports that, while HMT understood the need for a common position, this could prove difficult if it were dependent on action needed to repeal/amend section 29(7) of ICA 1982 as: '*Action under s2(2) of the* [European Communities Act 1972] *required an affirmative resolution (and also the involvement of the Law Officers). Advice to HMT was that early implementation of the relevant part of* [FSMA 2000] *would "raise difficulties"*'.
10/01/2001 [13:57]	PIA send FSA the minutes of a meeting held on 8 January 2001 with the Association of Independent Financial Advisers about PIA's Free Standing Additional Voluntary Contributions review. The issues discussed included Equitable.
10/01/2001 [16:00]	FSA meet Equitable and their advisers to discuss their thinking on the indicative bids received. FSA's note records:

> [Equitable's adviser for the sale] *said that since* [indicative] *bids had been received,* [they] *had been trying to analyse them on a consistent basis (eg some attributed value to assets but on the basis that future intra-group charges would be on a cost or profit basis while others maintained existing charges but offered no consideration). They also needed to consider whether the bids carried any risks (in terms of delivery or price), the number of conditions and the timetables. He expressed some disappointment that the submissions were thin on detail and would need considerable further investigation.*
>
> [The advisers] *first outlined the* [Prospective Bidder E's] *proposition. They were looking at a two stage process. First they would acquire the parts of the company relevant to new business acquisition. The second stage was dependent on an accommodation between policyholders and would involve a Schedule 2C transfer of the business to a company in the* [Prospective Bidder E] *group. The administration platform would only be taken over at that stage.*
>
> *The offer included £100 million by way of consideration, £100m for goodwill and up to a further £300 million which was contingent on certain factors. Further capital would be generated on restructuring the fund and buying out the in-force business. They would be looking to transfer existing business into an open fund. The bid made certain assumptions about the adequacy of funds to maintain equity ratios, the sales force not leaving and litigation and publicity being under control.* [Equitable's advisers] *thought the key issues were whether the numbers would work generally and in particular whether the assumptions on the GAR/non-GAR were realistic.*
>
> *On Halifax,* [the advisers] *noted the similarities to other bids, but also the philosophical differences. In particular, Halifax were clear that they wished to leave the old closed fund as a self-standing entity for which they would have no responsibility. The offer was for £100m, with a further £400m (made up as a number of components) as a carrot for resolution of the GAR issues. They would also offer a further £250m by way of a loan, which would help demonstrate confidence. Equitable wanted to find out more about their "not-for-profit" proposals, to compensate policyholders for the mva when transferring from Equitable to a Halifax company with-profits fund. There could however be implications for the closed fund that would need to be considered. Fuller details are recorded on file in a draft proposal given to us by Halifax before it was submitted.*
>
> [Equitable's advisers] *noted that the* [Prospective Bidder D] *proposal was also broadly similar to the others although parts of it were unclear through lack of detail. Equitable would need to explore this further to understand it better. Again, fuller details of the proposal are on file (copy of the submission from* [Prospective Bidder D] *and a note of a*

meeting on 10 January 2001). [The advisers] *said he was particularly unclear about what would happen with in-force business – was it to transfer to* [a Prospective Bidder D] *company or remain mutual.* [FSA's Line Manager E] *explained what he had understood from the discussion with* [them] *that morning, and summarised in that meeting note. Broadly, the plan appeared to be to seek a resolution to Equitable's problems within the company, but then to propose a Schedule 2C transfer to* [a Prospective Bidder D] *group company, with policyholders having the option to remain in a closed Equitable fund.*

[Equitable's advisers] *said that the* [Prospective Bidder F] *bid was disappointing. A simple cash offer of £50m and a contingent loan of £1 billion. They had no interest in resolving the issues surrounding the closed fund.*

[The advisers] *said at this stage, they were not minded to proceed with the bid from* [Prospective Bidder F]. *Of the rest, they all had attractions but it was too early to say which would be the most favourable. They hoped to be in a position to select a preferred bidder before an Equitable board meeting on 17 January.* [FSA's Director of Insurance] *said we would make ourselves available if bidders wished to discuss any regulatory issues with us.*

11/01/2001 [08:51] An FSA official asks Legal Adviser A whether the Policyholders Protection Act 1975 applied to group policies such as a company's Group Money Purchase Pension Plan.

[**11:03**] Legal Adviser A says that he would look into it. The Legal Adviser also highlights that FSA's frequently asked questions stated categorically that the Policyholders Protection Act 1975 did not apply in respect of policies sold through Equitable's Guernsey branch. He says that he did not '*think it is that easy*' and would advise further.

On 15 January 2001 [**09:42**], the Director of GCD asks Legal Adviser A to ensure that their answer was amended and that '*no answer is given*' until Legal Adviser A had reviewed it.

11/01/2001 [09:57] Equitable send FSA a copy of the policyholder update that they had issued that day, by way of a press notice, which started by saying that '*the sale process is going well*'.

FSA send the Personal Investment Authority Ombudsman a copy of Equitable's policyholder update '*as it covers some of the issues we discussed the other day*'.

11/01/2001 [10:16] FSA's Line Manager E writes to GAD about an article in a national newspaper that day which concerned the reinsurance treaty. Line Manager E says: '*As I understand it, ... the journalist was trying to imply that there was something fishy about a reinsurance with an offshore company etc, perhaps that it was not really worth very much etc*'.

[**10:56**] GAD's Directing Actuary B replies that GAD were looking back through their file for more information. The Directing Actuary says he believed that there were '*a number of inaccuracies*' in the article and states:

1) *Irish European is currently AAA rated (*[Standard & Poor's]*) reinsurer.*
2) *Equitable Life is fully reserved to cover all guaranteed benefits including* [GAOs] *up to the threshold, and held reserves of close to £1 billion (including a resilience provision for adverse experience) as at 31 December 1999 for this purpose.*
3) *We accept though that bonuses would be reduced to meet GAO costs. This is a direct result of the House of Lords judgment last year which required these costs to be spread across all policyholders.*

[**12:20**] GAD's Scrutinising Actuary F sends Line Manager E a copy of his report of 19/12/2000 [**17:43**] and directs him to what he had said there.

11/01/2001 [14:46]	FSA's Line Manager E sends FSA's Press Office an updated summary of the information on Equitable's levels of policy surrenders, transfers to another company and switches to unit-linked policies and on their handling of calls to their customer enquiry line.
11/01/2001 [18:26]	Equitable send FSA further information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.
12/01/2001 [entry 1]	FSA's Head of Life Insurance circulates a copy of a letter from Equitable to Prospective Bidder B, dated 11 January 2001, saying they were not '*actively pursuing*' their proposals for the purchase of the asset management function of the Society, as it was Equitable's view that the '*value to members is likely to be maximised if substantially all of the Society's operations can be transferred in a single transaction*'. The Head of Life Insurance informs other officials that the bidder had told him that afternoon that Equitable's advisers had in fact subsequently asked them to put in a bid for the asset management part of the business.
12/01/2001 [entry 2]	Equitable apply to FSA for a section 68 Order in respect of the admissibility limits on shares held in the newly merged company, which had been the subject of discussion within FSA's Insurance Supervisory Committee during December 2000 (see 12/12/2000 [**13:41**] and 18/12/2000 [**14:30**]). Equitable say that: '*As discussed, I would be grateful if you could grant the order with effect from 31 December 2000*'.
12/01/2001 [entry 3]	FSA's Company Secretary writes to the Director of GCD about the latest position regarding any potential conflicts of interest among FSA's Board. Information is provided on personal Board conflicts, detailing the Equitable policies held by Board members or their partners. Four of the twelve members declared that they held an Equitable policy (all of which were for not insignificant sums), one member declared that their partner held a policy (again, for a not insignificant sum) and one member had not made a declaration, as they were currently abroad. The Company Secretary states that two members (who did not hold Equitable policies) have indicated that they would be conflicted if their company were interested in acquiring the sales force or other parts of Equitable's business. The Company Secretary goes on to say: *I have discussed the conflicts issue with* [FSA's Chairman] *and he agreed that this represents part of the study of risks faced by the Board in achieving its function, which I believe* [FSA's Director of Internal Audit] *is undertaking. In the meantime, the Articles currently provide for a materiality test, but I believe we need some advice on exactly how we can interpret this, whether we need to change the relevant Article for the future, and if so, how.*
12/01/2001 [12:45]	An FSA official distributes a revised version of the lines to take (version 3) and asks for any comments.
15/01/2001 [entry 1]	FSA and GAD meet Prospective Bidder E to discuss their indicative bid. Equitable and their advisers for the sale, their actuarial consultants and solicitors, also attend the meeting. Prospective Bidder E explain that they had been looking to expand their distribution and product range and had been interested in Equitable at an earlier stage but: '*at that time it was difficult to come up with a scheme that would work. He noted that in the changed circumstances, there was more scope to conduct a realistic deal which would enable them to restore confidence among Equitable policyholders*'. Prospective Bidder E explain their proposals and several issues are discussed. On regulatory issues, they say that one concern to them was the continuing availability of Equitable's implicit items and subordinated loan. GAD say that they had considered the implicit items and saw no reason in principle why this could

not continue. On the subordinated loan, FSA say that they would not intend to apply a different test to those normally adopted.

Equitable leave the meeting and Prospective Bidder E ask about FSA's approach to Equitable's reserving basis, noting that they had seen correspondence on the issue. Prospective Bidder E seeks comfort that FSA were not expecting to raise any new issues. GAD confirm that there had been a recent exchange on reserving but say that the disputed issues had largely been resolved.

15/01/2001 [entry 2] FSA and GAD meet Prospective Bidder D to discuss their indicative bid. Equitable and their advisers for the sale, their actuarial consultants and solicitors, also attend the meeting.

Prospective Bidder D takes FSA through a paper that they had prepared, setting out how their proposals would work – and several issues are discussed.

15/01/2001 [entry 3] Equitable write to FSA about Equitable Investment Fund Managers Limited to confirm the points that had been agreed at the meeting of 08/01/2001.

On 16 January 2001, FSA's Head of Life Insurance notes to Line Manager E that he believed the letter reflected the points agreed.

15/01/2001 [entry 4] FSA send Equitable a suggested agenda for the meeting to be held on 16/01/2001. The agenda items include: updates on customer handling issues, consumer trends and market value adjuster issues; reserving and future strategy; update on requests for section 68 Orders; and other issues (including PIA's review of sales after 20 July 2000, pension fund withdrawal contracts and Pensions Review issues). Line Manager E notes that '*The key issue for discussion is on the current financial position*'.

15/01/2001 [entry 5] FSA's Director of GCD asks Chief Counsel B (copied to FSA's Chairman and Company Secretary) to advise the Company Secretary on any conflicts regarding members of FSA's Board (see 12/01/2001 [**entry 3**]). The Director of GCD says:

> *At the last Board, I among others disclosed conflicts re* [Equitable]. *Those do not generally inhibit me advising on* [Equitable], *given the disclosure, but should inhibit me taking responsibility for advice on how conflicts themselves should be handled – or at least make it desirable that someone else should be involved.*

15/01/2001 [10:33] HMT write to FSA asking for information on Equitable's '*key numbers ... ie an official take on all the* [figures] *that are in the press*'.

[**10:36**] FSA's Line Manager E asks Line Supervisor C to deal with the request.

15/01/2001 [12:54] A Bank of England official writes to FSA's Managing Director A following a '[Managing Director A]/[the Bank of England's Executive Director of Financial Stability] *dinner*', at which the issue had arisen as to whether the Financial Law Panel should be asked to assist with the '*uncertainty*' following the House of Lords' decision. The official asks if FSA had followed up the issue.

FSA's Managing Director A suggests to the Director of GCD:

> *... my own feeling about this is that the* [Financial Law Panel] *is something of a red herring (though* [the Bank of England official] *would argue it does allow subjects to be raised informally with "the right people").*
>
> *We have 2 main options it seems to me:*
>
> > *a) we understand Equitable itself is seeking legal advice and we should not pre-empt that. Absent developments there, it might be worth the* [Financial Law Panel] *being involved but it would make much more sense for the* [Association of British Insurers]

> *or the Equitable or another firm to approach them rather than us, as so much seems to rest upon particular circumstances (about which we by definition are not best placed to speak).*
>
> *b) The other route is ... for us (or for us to ask* [the Bank of England] *to raise it for us) to raise the issue with the* [Financial Law Panel] *and see what bright ideas* [the Financial Law Panel] *come up with for going forward.*

The Director of GCD replies: '*A supervisory matter, but not sure what help this would be at this stage*'.

15/01/2001 [14:44] FSA's Director of GCD replies to the FSA official about FSA's lines to take (see 12/01/2001 [**12:45**]). The Director of GCD says:

> *... the essence of the* [House of Lords'] *judgment is that GAR liabilities are binding liabilities of the company. All company assets are available to satisfy them. Given this,* [it is] *not clear how the FSA "keeping a very close watch" could help.*
>
> *The answer to the second and third questions says that "there is no obvious statutory basis" for the regulators organising an accommodation among the different classes of policyholders/a rescue. This need not inhibit action of this kind. Organising rescues without public money falls to us under the Tripartite* [Memorandum of Understanding].
>
> *We could surely require the company to call an EGM under usual intervention powers – eg to secure PRE/sound and prudent management.*

[**17:21**] Line Manager E queries whether the use of section 45 of ICA 1982 to order an extraordinary general meeting would be an appropriate use of that power.

[**18:13**] Legal Adviser A advises further on this question.

16/01/2001 [09:30] FSA and GAD meet Equitable. Equitable's handling of customer enquiries is discussed, along with the level of requests from individuals for policy surrenders and transfers. Equitable say that cash reserves had already been built up to meet the demand of these withdrawals and no assets had to be sold for this specific purpose. FSA record that the position on withdrawals for group schemes was unclear, because moving such schemes took time to process and employers needed to research the alternatives. Equitable confirm that the market value adjuster for group schemes was negotiated with them. FSA's note also records that there had been a higher level of surrenders in the Republic of Ireland '*where there was less of an MVA because of a separate hypothecation of Irish assets*'.

Equitable report that they expected to show in the 2000 returns around £500m of free assets above their required minimum margin, subject to work by their new appointed actuary '*and to confirmation by* [FSA] *of some technical waivers to the valuation rules as intimated to us last year (and as given recently to some other companies)*'. Equitable say that this valuation included the various changes agreed in recent correspondence '*(other than the possible additional £250 million for personal pension policies on which we await legal advice), but does not include a contingent liability for any possible redress for pension fund withdrawal contracts that might be imposed by PIA (estimated by the PIA as £40m on a worse case scenario)*'.

FSA note that Equitable were expecting to fail to declare any bonus that year, as they did not have sufficient emerging surplus, and that they were currently reviewing the interim bonus of 9% that was applied to maturing policies, or on death. FSA note that Equitable would also need to review the bonus rate applied to with-profits annuities in payment that were held by '*a particularly sensitive group of policyholders (who have no ability to transfer their policies to another company)*'.

FSA record that Equitable:

> *... explained that the present 10% MVA is* [needed] *to cover the additional cost of* [guaranteed annuity options] *arising following the* [House of Lords'] *judgment (probably around 5%), along with the relatively poor investment return last year (around 2.5%), and the need to recover all initial expenses incurred (around 2.5%). They have made a robust response to the OFT on this topic.*
>
> *The MVA is applied of course to the full policy value which was increased on an interim basis by around 4% last year, as compared with an actual investment return on the fund of around 2-2.5%. Meanwhile, they are not keen to draw any further attention to the MVA and its link to investment conditions in view of the possible adverse publicity. They stressed to us that the MVA is not intended to act as a penalty; rather the objective is that payments on non-contractual termination should be fair to both outgoing and remaining policyholders.*

FSA's note of the meeting records the actions to be taken:

- FSA '*owed*' Equitable a note on new business issues.
- Equitable were to submit formal notification of their new Appointed Actuary.
- FSA were to liaise with Equitable on the treatment of the section 68 Order for the calculation of the valuation rates of interest for fixed interest securities.
- FSA were to consider whether they wished to see Equitable's submission to the OFT.
- FSA were to consider how Permanent Insurance should be valued in Equitable's 2000 returns, noting that Equitable would need to apply for a section 68 Order.

16/01/2001 [11:19] FSA's Director of GCD suggests to the Head of Life Insurance that FSA should formulate '*criteria for judging*' the proposals for purchasing Equitable's assets.

[**11:31**] Managing Director A says that he was '*not in favour of this*' as the '*commercial decision is for Equitable*' not FSA. The Managing Director says that FSA's role was to ensure that the offer Equitable decided to proceed with was sound in regulatory terms: '*(bidder can afford it, Equitable policy-holders fairly treated etc)*'.

16/01/2001 [11:30] FSA hold an '*Equitable Life Lawyers Group*' meeting. The minutes of that meeting include:

- Chief Counsel A informs the group that: '*a breach of PRE investigation had been on hold since the judgement of the Court of Appeal. The evidence gathered was consequently incomplete and the likely outcome of the investigation could now only be a matter of speculation*'.
- Legal Adviser A explains that, if Equitable were to have a deficit on the long term fund, then any holding company would be prevented by section 29(7) of ICA 1982 from paying a dividend.
- The group note: '*The internal view on the market value adjuster (MVA) was that the Insurance Regulations do not bite on MVAs ... A brief discussion on intervention powers (in relation to MVAs) was held. It was noted that judging when it was appropriate to intervene should MVAs be increased would be a difficult task. It was agreed that* [Line Manager E] *would be contacted to see what public statements had been made by Equitable on MVAs*'.
- The issues of compromising GAR rights and winding up are discussed and the group note that the Policyholders Protection Board would be involved where policyholders' rights were to be compromised, stating: '[The case of a named company] *was a good*

comparison for Equitable on this point as it slipped from solvency to insolvency during run-off. A scheme of Arrangement or analogous measures under a Schedule 2C Scheme may be more appropriate in circumstances where solvency was likely, and as it would cap all the uncapped GAR liabilities its relevance is unlikely to be limited to insolvency alone.'

It is agreed that the minutes of the group's meetings should be sent to Line Manager E, the Head of Life Insurance and the Director of Insurance and PIA.

16/01/2001 [16:06] GAD's Directing Actuary B sends FSA (Managing Director A, the Head of Life Insurance, Line Manager E and Line Supervisor C) and Scrutinising Actuary F his conclusions on the present financial position of Equitable, following their meeting with them that morning. Directing Actuary B reports:

At a meeting today with Equitable, they outlined to us their draft financial result for the year 2000. They expect to be able to show free reserves of some £500 million in excess of the required margin of solvency, subject of course to further work by the newly appointed actuary in examining the methodology and assumptions, and to confirmation by [FSA] *of some technical waivers to the valuation rules as intimated to us last year (and as given recently to some other companies).*

This result includes a provision of around £1.8 billion net of reinsurance for Guaranteed Annuity Options, and the various changes to the valuation basis as agreed in recent correspondence (other than the possible additional £250 million for personal pension policies on which we await legal advice), but does not include a contingent liability for any possible redress for pension fund withdrawal contracts that might be imposed by PIA.

The net provision for [guaranteed annuity options] *has therefore increased over the year by around £1.2 billion (in addition to a £200 million provision for redress to already retired policyholders), mainly as a result of the changes to the reinsurance cover (following the* [House of Lords'] *judgment), the lower interest rates assumed (both as a result of changing market conditions and the more conservative approach required by the changes to the regulations), and an increased allowance (following the* [House of Lords'] *judgment) for the payment of future premiums on GAO policies.*

Directing Actuary B's note continues:

They are not expecting to make any bonus declaration this year (as they do not have sufficient emerging surplus), and are reviewing the present 9% p.a interim bonus that is added for claims on maturity (or death). They will also need to review the bonus rate applied to the with-profit annuities in payment that are held by a particularly sensitive group of policyholders (who have no ability at present to transfer their policies to another company).

They explained that the present 10% MVA is need to cover the additional cost of [guaranteed annuity options] *arising following the* [House of Lords'] *judgment (probably around 5%), along with the relatively poor investment return last year (around 2.5%), and the need to recover all initial expenses incurred (around 2.5%). They have made a robust response to the OFT on this topic.*

The MVA is applied of course to the full policy value which was increased on an interim basis by around 4% last year, as compared with an actual investment return on the fund of around 2-2.5%. Meanwhile, they are not keen to draw any further attention to the MVA and its link to investment conditions in view of the possible adverse publicity. They stressed to us that the MVA is not intended to act as a penalty; rather the objective is that payments on non-contractual termination should be fair to both outgoing and remaining policyholders.

The Directing Actuary's note continues:

> *They sold around £740 million overseas equities last December, along with £530 million UK equities, and then held most of this in cash. In January, they have sold so far a further £375 million equities and £50 million investment trusts and are planning some further sales to reduce the equity proportion from around 72% last autumn to possibly 60%, depending of course also on the progress on the potential sale of the society. They have invested around £400 million this month in fixed-interest securities but are also mindful of the need to maintain liquidity.*
>
> *They are estimating at present cash outflow of up to £3 billion this year, based on an outflow of around £200 million over the last month (and a fairly steady rate of requests for surrender continuing at around 1,000 policies per day). Their investment manager is somewhat nervous though about the capacity of the market to absorb possible sales at this continuing level. They are not looking actively to sell properties at this stage but will take advantage of any such opportunities that may arise.*

Directing Actuary B concludes:

> *Generally, they remain of course quite vulnerable to adverse investment conditions, and meanwhile, the equity market will be aware that further significant sales by the society can be expected to continue. Their best prospect is a link to one of the potential bidders that allows a less defensive investment strategy to be implemented.*

16/01/2001 [19:02] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

16/01/2001 [entry 6] FSA meet to discuss Equitable. FSA note that they next expected to hear from Equitable on potential bidders on 17 January 2001. They discuss a note that had been prepared by the Head of Life Insurance on FSA's criteria for assessing any bids. It is agreed that the Head of Life Insurance should amend his note. (Note: this was recorded in the note of the meeting, which was written up the following day, as having been done). FSA note that HMT had asked for early notice of any decisions that would have to be put to Ministers. Line Manager E says that there would be decisions for Ministers but '*all were of a technical nature and precedents existed, however they would need to be agreed quickly*'. It is agreed that the Head of Life Insurance should press PIA for an update on possible enforcement action. On Equitable's financial position, Managing Director A refers to GAD's note of 16/01/2001 [**16:06**] and asks for a further breakdown of the increase to net provisions. He says that he was concerned about the value of the future profits implicit item and the impact of any ruling by the OFT on Equitable's application of the market value adjuster.

16/01/2001 [entry 7] FSA's Head of Life Insurance informs Managing Director A of the '*considerations*' which FSA '*are taking into account in discussing with the Equitable and various interested parties the proposals to purchase some or all of the business*'. The Head of Life Insurance's note says:

> *Our basic approach is that it is for the directors of Equitable Life to decide which proposal, if any, to choose to put to policyholders. The FSA's primary aim is to ensure that any regulatory issues arising from these proposals are exposed in good time, so they can be either resolved or taken into account before decisions are taken. We are also offering our good offices to facilitate discussions between the parties to assist the prospect of a satisfactory agreement being reached.*
>
> *As regards to the proposals themselves, and the various bidders, we are taking the following factors into account:*

- *The fairness of the proposal to policyholders in general, and to each of the main classes of policyholder (GAR and non-GAR);*
- *Financial factors, notably the impact of the proposal on the strength of the Equitable fund or any replacement to it and the wider group of which Equitable may become a part;*
- *The commitment of the bidder to the deal, and to the longer term interests of the Equitable policyholders in the way the deal is followed through;*
- *How convincing the proposal is, in terms both of how well the proposal fits the strategic objectives of the bidder, and how attractive it is likely to be to policyholders;*
- *The strength of the management, and its ability to carry through the proposal;*
- *The regulatory standing of the bidder, both in the UK and (in the case of overseas bidders) in its own jurisdiction;*
- *Whether the bid is likely to produce a better outcome overall compared with a continuation of the closed fund.*

17/01/2001 [entry 1] Equitable send FSA a copy of a letter from them to the OFT, dated 8 January 2001, about their use of a market value adjuster. The letter contains information on the financial adjuster, as requested by the OFT. Equitable's letter concludes:

> *It will be worth your bearing in mind one overriding fact – a contract without a financial adjustment mechanism could not be fair to all with profits policyholders since it could at any point in time place on the fund and hence on continuing policyholders an unfair burden to finance continuing with profits policyholders. The timing of surrender is entirely at the discretion of the policyholders in question and therefore creates considerable scope for them to act to the disadvantage of other with profits policyholders.*

17/01/2001 [entry 2] Equitable send FSA a copy of an investment strategy paper which had been discussed at their Investment Committee meeting on 10 January 2001.

17/01/2001 [entry 3] FSA prepare a paper on the proposed appointment of a new Chief Executive of Equitable and Controller of Permanent Insurance. FSA's paper discusses the sections of ICA 1982 relevant to such appointments. It recommends that FSA do not object to the appointments, and concludes '*I do not believe we have any firm grounds for making an objection on the basis of the above. Furthermore Section 60 would not appear to confer the powers for us to attach conditions or restrictions on any approval*'.

17/01/2001 [entry 4] FSA's Head of Life Insurance seeks advice from Legal Adviser A on FSA's powers under ICA 1982 to object to or to approve the proposed appointment of a new Managing Director of Equitable. The Head of Life Insurance says:

> *From a policy point of view, we may not be happy with* [the person] *as* [Managing Director] *on a long term basis; but there are strong practical grounds for not objecting to him performing this role during the interim period while the future of the company is in doubt, and they are negotiating with third parties over a possible sale. The new owners (if any) may well have views on the future of the existing Equitable management.*
>
> *... I would like you to consider ... whether it would be possible to give, in effect, a qualified or conditional approval, for example giving approval for a limited period of say 6 months ...*

Whatever the legal position, we shall probably want to discuss the issue with [the proposed Managing Director] *and* [Equitable's President] *(or his successor, if appointed), before giving a formal response to the application. But before we do so, it would be helpful to be clear whether there is any flexibility in the statutory position.*

17/01/2001 [08:24] FSA's Managing Director A informs FSA's Chairman that a foreign regulatory authority had informed him that morning that they could see no obvious problem in principle as to why a deal with Prospective Bidder D should not go ahead. The Managing Director also informs him that Halifax had called that morning to let FSA know that they had pulled out. The Managing Director says: '*He says the main reason is that the more they looked at the prospects for the sales force (whose future performance he thought the City would regard as the key indicator of the success of any deal) the more they had worried. I asked whether he thought a foreign bidder would be likely to come to the same conclusion. He said not necessarily. There were some issues specific to Halifax – the City was doubtful about whether Halifax could do all it was currently doing, and people would see this as* [the Chief Executive's] *personal speculative foray. He also thought some foreign firms could get even more value out of aspects of Equitable than they could. He is frustrated by all this, as he still thinks there is real value in Equitable for someone's shareholders*'.

17/01/2001 [09:25] Prospective Bidder B send FSA a copy of a letter the bidder had sent to Equitable's advisers the previous day, giving the details of their preliminary proposal to purchase the investment management activities of Equitable.

17/01/2001 [13:28] GAD provide FSA with further information that had been requested by Managing Director A at the meeting on 16/01/2001 about Equitable's future profits implicit item. GAD say:

Under the present rules and guidance, this has to be substantiated both by a historical test against actual profits achieved, and also by a certificate from the actuary relating to the sustainability of these profits.

The application, accompanied by such a certificate, for an amount of £1.1 Bn for the year ending 31/12/00 was made by Equitable in June 2000, and I believe has now following perusal by GAD and FSA been granted by FSA/HMT.

The information provided with this application indicated that the formal historical test (as required by the EU Directives) would be satisfied even if all policies were assumed to run off over the next 3 years.

The actuary has not provided us with details of the calculations made for the purpose of his certification that future profits of the required amount will emerge. However, if we assume that they need to generate profits of around £450 million for the next 5 years in order to cover both the reinsurance offset of £800 million and the future profits item of £1100 million, then we believe that they would need to earn an average investment rate of return on their with-profit fund of around 5.5% each year.

The figure of 5.5% is circled by FSA's Chairman.

GAD explain that, if the market value adjuster remained in place, solvency should continue to be covered:

However, if the MVA has to be removed while the FTSE Index remains at present levels, then they will incur a loss on all their surrenders. This would not only invalidate the implicit item for future profits but would also mean that additional provisions would almost certainly need to be established in the balance sheet for potential surrenders. This would be likely to mean that the society would be declared technically insolvent.

GAD suggest that FSA should ask the new Appointed Actuary to recertify the item and provide details of his key assumptions before the 2000 returns were submitted.

GAD also provide figures for the increased cost of annuity guarantees. These provide an analysis of the increase in the reserve for annuity guarantees between 31 December 1999 and 31 December 2000 (based on the draft year-end 2000 figures so far available from Equitable). GAD highlight that the main sensitivities of this reserve were the interest rates and future premiums that might be payable. They explain:

> *The potential variability in this reserve is then one of the main reasons that Equitable are hoping to arrange some deal between the GAR and non-GAR policyholders that would buy out these GAOs.*

17/01/2001 [17:13] Equitable send FSA some policies data, which is presented as follows:

Data at 31/12/2001	*With profit*	*Unit linked*	*Total (see notes)*
Number of policies in force	*720,000*	*189,000*	*909,000*
Number of Group Schemes (excluding [group pension plan policies] *but including AVCs)*	*5,400*	*2,500*	*7,900*
Number of members within Group Schemes	*656,000*	*132,000*	*788,000*
Number of individual GAR policies	*110,000*	*N/A*	*110,000*

Please note the following points:

- *ULAS policies are included.*
- *Non Profit policies are excluded from the number of policies/schemes in force.*
- [Equitable Investment Fund Managers Limited] *business is excluded.*
- *Where a policy/scheme has both unit linked and with profit investments, they will be counted in both sets of data.*
- *For information, please note that the GAR figure of 90,000 which is frequently quoted relates to the approximate number of clients with an interest in GAR policies at the time of the court case.*

17/01/2001 [17:21] In response to a query from the press as to whether FSA would be providing more specific advice to policyholders, FSA's Line Manager E notes that he is:

> *... sure that we should* not *be giving information of that kind to policyholders. We have made it clear – and should continue to do so – that everyone's circumstances are different and people should take proper advice before taking action. It is all very well making generic assumptions about people's circumstances, but while that may be right for the majority, it will not be right for everyone. Eg someone in their late 20s or early 30s who has taken out an endowment with their home loan and a couple of years later is found to be suffering from a terminal illness should not surrender if they want their families to be protected.*

Other FSA officials agree with this '*cautious view*'.

17/01/2001 [17:30]	FSA's Head of Life Insurance relays to Managing Director A a summary of a '*more substantive*' conversation that the Director of Insurance had had with the foreign regulatory authority about Prospective Bidder D's proposals. The Head of Life Insurance reports that that Authority had had no concerns about the way that the company, which they regulated, had described themselves. He comments that: '*this gives us the comfort we were looking for as regards* [the foreign regulatory authority's] *attitude to* [Prospective Bidder D] *in general. It is for us to consider the details of the proposal as they emerge, and seek comfort on any aspects which appear not to be tied down, or which are unclear*'.
17/01/2001 [18:16]	FSA's Chief Counsel A asks the Head of Life Insurance and Line Manager E (copied to the Director of GCD and Line Manager D (who is now carrying out work connected to the Baird investigation)) whether FSA should request accelerated returns from Equitable '*or more realistically, part returns (not for publication but to give us better info than what we are getting now)*'.
18/01/2001 [entry 1]	Equitable send FSA a copy of a briefing note dated 17 January 2001 for managers on the subject of the supervision for conduct of business purposes of authorised representatives and the advice that they could give to clients following Equitable's closure to new business.
18/01/2001 [entry 2]	FSA reply to Equitable's letter of 12/12/2000 about new business and to record FSA's position in response to a number of discussions about the issue. FSA say that the explanation in Equitable's letter of 08/01/2001 was acceptable and '*provides sufficient comfort for the time being, but this is something we can perhaps review further when the future of the relevant group schemes is clearer*'. FSA also say that they would not object to Equitable issuing new policies for new directors, given that Equitable's '*constitution requires board members also to be members of the Society*'.
18/01/2001 [entry 3]	FSA's Chairman informs officials of a telephone conversation that he had had with Prospective Bidder A on 16 January 2001. The Chairman reports: *I first wanted to confirm with him that the message we had sent, via the* [Association of British Insurers]*, about our willingness to discuss a collective package for the Equitable had got through. He confirmed it had done so, and thought it had been reasonable of us to ask. But there was no interest among his colleagues in discussing a collective rescue. They were concerned about the moral hazard point, since they believed that Equitable had run with too little capital for a long time. And they could not see how the economics could be made to work. If there was any value in the Equitable which might justify an additional contribution to the with profits fund, then that depended on the goodwill and the access to the Equitable's customer base. It was hard to see how that value could be realised for the benefit of a group of firms, rather than one. So he simply did not think that any industry-wide deal was a runner.* FSA's Chairman's note continues: *As for the position of the Society itself, he confirmed his view that* [Equitable] *was simply short of capital, and had been for some time. There had apparently been some discussions with the Society a few years back about the possibility of a conversion and acquisition, at a time when it would have been possible to reconstruct the fund on a viable long term basis. But the management had not been interested. And he thought that, once the court case had begun, the die was cast. In his view, half the problem lay in the approach to reserving which the government actuary had taken in the past. Although he agreed that, for many insurance policyholders, had the Society been required to have*

larger reserves in the past, their current position would not be materially different from what it is now, since they would have had lower distributions along the way.

18/01/2001 [entry 4] FSA meet with PIA to discuss enforcement issues. FSA record the discussion under the following headings.

<u>Pension Fund Withdrawals</u>
PIA say that Equitable had '*agreed to do a past business review*' (note: said to be around 20,000 cases), although '*It was currently thought that the scope of the review was not fully acceptable to* [Enforcement]*, but Equitable were moving in the right direction*'. It is noted that Equitable did not accept that their sales process had been flawed. FSA record: '*It was thought that typically a mis-selling case of this nature might attract a fine of about £500,000. It was thought that on a worse case scenario the total cost of this to the Equitable could be £40m including compensation and expenses*'.

<u>Pensions review</u>
PIA say that the '*remedial action*' required from Equitable for failings with regard to PIA's Pension Review had been signed off by Enforcement. However: '*the issues that arose from this case following a June 2nd visit would normally lead to some form of penalty from* [Enforcement]*. A possible fine of £300,000-£500,000. It was not thought that there were any remaining additional costs to the Society in respect of the review*'.

<u>Discipline</u>
FSA record:

> [FSA's Head of Life Insurance] *was concerned that any disciplinary action could harm the delicate sales process and any goodwill payment which would be in the overall interest of policyholders.* [The Head of Life Insurance] *outlined the sensitivities and the proposed sales timetable.*
>
> [One of PIA's Enforcement Heads of Department] *was sympathetic to* [FSA's] *concerns and agreed to talk to the Chairman of the disciplinary committee that day to outline these. He thought that the committee should be able to take a decision in principle on this issue. But it was important not to sacrifice the principle that those that have lost out should be compensated – on this both* [FSA] *and* [PIA Enforcement] *were agreed.*

FSA's supervisory file includes a letter from PIA to Equitable, dated 18 January 2001, about their pension fund withdrawal contracts enforcement investigation. PIA seek clarification of a number of points concerning Equitable's proposed review.

18/01/2001 [09:37] FSA's Director of GCD says that Chief Counsel A's suggestion of requiring Equitable to provide accelerated returns: '*Sounds sensible to me!*'.

[**09:59**] The Head of Life Insurance comments:

> *We are in communication with the company on their current financial position. I am inclined to think that asking for returns as at end 2000 will not add to our knowledge; and since they won't be in the normal publishable form, they won't assist public disclosure either (which would be the strongest argument for early submission, but is outweighed by the need to avoid imposing distractions on the management from getting a deal).*

[**13:44**] The Director of GCD replies '*ok*'.

18/01/2001 [09:54] FSA send HMT the information about Equitable that FSA had received the previous day (see 17/01/2001 [**17:13**]).

[**20:20**] HMT ask FSA to contact the Department of Social Security, who were seeking some similar general information about Equitable.

18/01/2001 [10:20]	PIA write to FSA about the situations in which Equitable were writing new policies for existing group schemes and about the ability of personal pension policyholders aged over 50 to avoid the application of a market value adjuster by transferring to income drawdown policies and then transferring to another provider. FSA later (on 19 January 2001) confirm the situation in which new policies were being written and, on 22 January 2001, that they were aware of, and had spoken to Equitable about, policyholders being able to transfer out while avoiding the market value adjuster.
18/01/2001 [10:27]	Further to Line Manager E's comments about giving advice to policyholders (see 17/01/2001 [**16:29**]), the Director of GCD says: *I believe it would be possible to give generic advice of the kind* [suggested] *without any risk that we would be giving authorisable investment advice.* *This would be similar to the decision trees we are working on for a stakeholder pensions. But I can understand reluctance to give advice on these issues in the immediate future particularly if its effect could be destabilising on the Equitable and/or its sale prospects. This is a difficult balancing judgement.*
18/01/2001 [11:30]	Equitable's advisers for the sale send FSA a copy of letters of that day to Prospective Bidder E and Prospective Bidder D, seeking clarification of their proposals.
18/01/2001 [11:57]	FSA's Line Supervisor C tells other officials that FSA had received Equitable's formal notification of the appointment of their new Managing Director on 20 December 2000 and that, therefore, they would need to make any objection in early February to meet the three-month statutory deadline.
18/01/2001 [12:33]	FSA's Head of Life Insurance informs Managing Director A of a conversation that morning with Equitable about the outcome of a Board meeting the previous day, at which Equitable had decided to continue discussions with both Prospective Bidder E and Prospective Bidder D. The Head of Life Insurance records: '[Equitable's Chief Executive] *commented that, following Halifax's withdrawal, he had been nervous that the other parties may do likewise. But both had seemed genuinely enthusiastic, and relieved to find that they were still in the running*'.
18/01/2001 [12:49]	FSA's Head of Life Insurance forwards GAD's note of 17/01/2001 [**13:28**] to Managing Director A, commenting that, at first sight, this might seem alarming but that it was a '*hypothetical worst case scenario*'. The Head of Life Insurance says that if the market value adjuster did disappear, the effect on solvency would be severe, but this: '*is a highly unlikely scenario, and if it did arise, we as prudential regulator would have to consider intervention to protect policyholders (which might take the form of preventing the company from making any payouts on policies except those which were contractually required – ie even more severe in its effect than the MVA?*'. The Head of Life Insurance also writes: '*As regards the reserve for GAOs, the figure has increased partly as a result of discussions which we and GAD have had with the company over recent months about the appropriate prudent level*'. [**13:03**] The Managing Director sends GAD's note and the Head of Life Insurance's comments to FSA's Chairman, who later replies on 23 January 2001, saying: '*My worry (if I understand all this, which is not guaranteed!) is that the "future profits" figure appears to assume fund growth of 5.5% p.a., whereas I understand their Friday announcement as saying that the figure for last year was 2.7%*'.

18/01/2001 [17:40]	FSA's Legal Adviser A provides the Head of Life Insurance with advice on whether FSA's powers under ICA 1982 allowed them to give qualified conditional approval of a new managing director. The Legal Adviser advises that it was legally permissible for FSA to impose the condition that the appointment is limited to six months. This advice was based on the use of the sound and prudent management criteria set out in Schedule 2A of ICA 1982. The Legal Adviser says: *Paragraph 3 of Schedule 2D to the Act gives some flexibility. The position is as follows. If we are entitled to serve a notice of objection (effectively because we consider that the criteria of sound and prudent management may not be fulfilled or continue to be fulfilled in respect of the company if the appointment is made) but we consider the criteria will be fulfilled if certain conditions are complied with, we can impose conditions instead of objecting outright. Conditions can be imposed on the company or the managing director.* *Before serving such a notice, we have to go through a similar procedure to that involved in serving a notice of objection. That is, we have to serve a preliminary notice and allow one month for the making of written and oral representations.* *The preliminary notice will have to state the conditions we propose to impose and the criteria of sound and prudent management which we consider will not be fulfilled if we neither serve such a notice nor a notice of objection.* *It is necessary, therefore, to first identify the criteria of sound and prudent management that will not be fulfilled if the appointment is made. In this case, because we consider that "a controller" (*[the Managing Director]*) is not fit and proper to hold the position (the second criteria). We would then have to "consider" that if a condition was imposed the criteria would be fulfilled.* *The suggested condition is that the company should make the appointment only for a limited period of time. It seems to me legally permissible to form the view that a person is fit and proper to be managing director of a company, particularly one having difficulties, as an interim measure but not in the long term.* Legal Adviser A concludes by stating that his advice '*pre-supposes that you have good grounds for considering* [the Managing Director] *not to be fit and proper in the first place*'.
18/01/2001 [18:16]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches. They also say that none of their sales force have so far left.
18/01/2001 [18:48]	FSA's Head of Life Insurance informs the Director of GCD and Chief Counsel A that he has told Equitable that, in considering proposals for compromising GAR rights as part of a sale, one factor on which FSA would need to be satisfied is the '*fairness of the arrangement to relevant classes of policyholder*'. The Head of Life Insurance says that Equitable had agreed to send them a note on possible mechanisms tomorrow and that he planned to send them a note on the considerations against which FSA would judge the acceptability of any such proposals. The Head of Life Insurance also notes that Equitable's advisers would send a note regarding the Society's constitution. [**20:41**] The Director of GCD thanks the Head of Life Insurance and says that FSA should put the notes, when they received them, to Counsel.
18/01/2001 [entry 16]	FSA's Managing Director A presents to the FSA Board his '*Managing Director's Report: Financial Supervision*'. The report includes recent developments on Equitable. The report states: *Discussions continue between the Equitable and other parties interested in a variety of possible transactions. At the time of writing, the Equitable has sold only one subsidiary,*

Permanent Insurance Group. We are keeping in close touch with the Equitable on these discussions, and are participating in discussions with interested third parties, as almost any deal will require rather more than usual regulatory action. We are also meeting various action groups, and continue to work closely with the Equitable on handling representations from policyholders and members of the public. Dedicated units have been set up to deal with correspondence on this issue, and to prepare material for [the] *Treasury Select Committee (TSC) and for the FSA's internal enquiry.*

18/01/2001 [entry 17] FSA's supervisory file contains a note prepared by Line Manager E, entitled '*Impact of disciplinary and enforcement action*'. It is not clear what prompted him to prepare this, whether it was discussed with PIA or what use FSA put it to. A copy of the note is also held on the Head of Life Insurance's working papers. The note reads:

Following the High Court ruling and the subsequent decisions to seek a buyer for the business and then to close to new business, the prospect of any enforcement action has had the impact [of] *damaging the interests of the members of the Equitable and its other non-member policyholders. The impact needs to be looked at in three ways: a fine, public censure or rectification. It is also important that the value of securing a rescue is of benefit to all policyholders of the Equitable since it could restore its investment freedom and give greater confidence over its long term security.*

On the impact of imposing a fine, FSA say:

As it is a mutual, any fine imposed on the Society will impact directly on the members and other policyholders. This may well be the right outcome in normal circumstances since the same people could well benefit from the upside to any improper behaviour by the Society. However, given the difficult financial circumstances of the Equitable following the adverse ruling in the House of Lords, any financial penalty would simply erode the already thin cover that the Society has over its solvency margin and could lead it into statutory insolvency. As recent developments have shown, in realistic terms the business already has negative value in simple economic terms, and a further deterioration could destroy any "good will" value that a potential rescuer might see at this late stage and completely jeopardise the prospects of any kind of sale.

On the impact of public censure, FSA say:

A public censure would not of itself cause financial damage, but is not without difficulty. The terms of any statement would be highly material. As noted above, the current positive value of the Society is marginal and anything that would have the impact of further eroding confidence of the Equitable's client base in the company could tip the balance and scare off the possible rescuers. A statement that had the effect of identifying shortcomings but at the same time confirmed that the issue was a past issue and that it had been rectified already, or an indication that a sale of the business and allied changes in management arrangements address the issues, could mitigate the risk of damage, but the position is extremely sensitive.

On the impact of rectifying Equitable's mis-selling, FSA state:

Rectification raises some different issues. There can be no suggestion that we should permit a small number of policyholders to suffer disproportionately to the marginal benefit of the majority. However, it is important that proposals for review and appropriate compensation should be properly assessed. Action could have a number of impacts – the direct costs of compensation, the distraction of management from priorities and associated internal costs and the risk of reputational damage. These costs, if significant, could also have the effect of jeopardising a possible sale.

19/01/2001 [10:38]	FSA write to Equitable to set out the considerations that they were taking into account in relation to the sale. FSA state:

Our basic approach is that it is for the directors of Equitable Life to decide which proposal, if any, to choose to put to policyholders. The FSA's primary aim is to ensure that any regulatory issues arising from these proposals are exposed in good time, so they can be either resolved or taken into account before decisions are taken. We are also offering our good offices to facilitate discussions between the parties to assist the prospect of a satisfactory agreement being reached.

The letter continues:

As regards the proposals themselves, and the various bidders, we are taking the following factors into account:

- *The fairness of the proposal to Equitable policyholders in general, and to each relevant class of policyholder;*
- *Financial factors, notably the impact of the proposal on the strength of the Equitable fund or any replacement to it and the wider group of which Equitable may become a part;*
- *The commitment of the bidder to the deal;*
- *How credible the proposal is, in terms both of how well the proposal fits the strategic objectives of the bidder, and how attractive it is likely to be to policyholders;*
- *The strength of the on-going management, and its ability to carry through the proposal;*
- *The regulatory standing of the bidder, at group and solo level, both in the UK and (in the case of overseas bidders) in its own jurisdiction;*
- *Whether the bid is likely to produce a better outcome for the policyholders of the Equitable compared with a continuation of a stand alone fund;*
- *Whether the bid might have an adverse effect on the reasonable expectations of any relevant policyholders of a bidder;*
- *The fairness and thoroughness of the process by which the Equitable Board make the decision on what structure to propose to policyholders going forward.*

FSA copy the letter to Equitable's advisers for the sale and ask that they should forward copies to interested parties.

19/01/2001 [10:41]	FSA's Director of GCD responds to Legal Adviser A's advice of 18/01/2001 [**17:40**], saying that it had produced '*the right result*', but that he had three doubts about his analysis. These were:

... it looks as though conditions can be imposed where the doubt is about sound and prudent management, but not where it is about whether the individual is fit and proper.

It looks a bit odd to say that someone is fit for six months but ceased to be automatically one day later.

The ... conditions look like conditions requiring action by the company – not merely the [effluxion] *of time.*

The Director concludes by saying that '*we should consider (if you think it works) allowing him to remain as acting* [Chief Executive], *but on the basis that we do not for the time being wish to form a view on fitness to be* [Chief Executive]'.

19/01/2001 [10:58]	FSA's Director of GCD tells Line Manager E that, following an FSA Board meeting the previous day, at which '*One of the Board members mentioned that this could be vulnerable to a decision by* [the OFT] *that the MVA is contrary to the* [unfair] *contract terms legislation*', the Director of GCD had '*suggested privately to* [FSA's Chairman]*, and he agreed, that it would be sensible to find a way to make clear to the OFT that a considerable amount could depend on their decision*'. The Director of GCD asks the Line Manager to take this forward.
19/01/2001 [10:58]	FSA's Director of GCD asks Chief Counsel B to advise on the respective treatment of the rights of GAR and non-GAR policyholders in the event of a winding up. [**11:26**] Chief Counsel A says that she would ask Legal Adviser A and another legal adviser to look at this.
19/01/2001 [12:37]	FSA's Director of GCD queries with the Head of Life Insurance how Prospective Bidder D's proposals to allow with-profits policyholders to convert to unit-linked policies would help. [**12:51**] The Head of Life Insurance says that he was not sure that Equitable understood the proposal either and that was why they had sought clarification on it.
19/01/2001 [12:54]	FSA's Line Manager E speaks to an OFT case officer about their work on Equitable's use of the market value adjuster. The Line Manager records the OFT's provisional views as being that they accepted the '*explanation we gave them and the criteria that Equitable apply in calculating a suitable adjustment*', while not being in a position to form a view on whether the 10% level was a reasonable one. The Line Manager says '*the "bad" news*' is that the OFT took exception to the terms of the policies which said that Equitable had absolute discretion on making such adjustments. [**16:57**] The Director of GCD suggests to Line Manager E that '*This would be understandable, if the conclusion is reached that the unfair contract terms legislation applies*'. FSA show the OFT their legal advice, which suggested that the Unfair Terms in Consumer Contracts Regulations 1999 did not apply. [**17:34**] Line Manager E queries whether the legal advice had said that the regulations could be said to apply if the policy terms were being used in a way that was not justifiable. The Line Manager records that he had informed the OFT of FSA's powers to intervene under section 45 of ICA 1982, if FSA considered that the application of a market value adjuster was unfair to a group of policyholders. He notes that the OFT had found this '*reassuring*'.
19/01/2001 [13:39]	Equitable send FSA a paper that they had prepared entitled '*Buying out GAR options*', along with a note by their solicitors on the legal mechanisms that were available for achieving an accommodation between GAR and non-GAR policyholders.
19/01/2001 [14:10]	FSA's Legal Adviser A updates the '*Equitable Life Lawyers Group*' list of legal issues to include work on FSA's powers in relation to the proposed appointment of the new Managing Director of Equitable.
19/01/2001 [14:52]	Equitable send FSA a copy of a policyholder update notice to be published in the press the following day.
19/01/2001 [17:52]	FSA's Legal Adviser A writes to Line Manager E in response to his request for advice '*on the dispute between* [Equitable's previous Appointed Actuary] *and GAD relating to the interpretation of regulation 72*'. The Legal Adviser says that he could not give any definitive advice unless he received some input from GAD on the nuances of the regulations.

	[**18:01**] Line Manager E thanks Legal Adviser A for his comments and asks GAD for '*help with the detail ... asked for*'.
19/01/2001 [19:01]	FSA's Chief Counsel A speaks with Equitable's solicitors about the Society's compromise proposals (see 18/01/2001 [**11:30**]).
20/01/2001 [10:54]	FSA's Director of GCD writes to Chief Counsel A about various issues that might arise in relation to any compromise of the claims of GAR policyholders. In relation to identifying classes of policyholders for participation in such a scheme, the Director of GCD notes that: '*The papers seem optimistic in believing that it will be possible to limit the classes affected to two. Query the position of those with annuities in payment, those with unit-linked policies, and those of different ages within each class. There is an obscure reference to a legal difficulty ... that needs to be explored*'.
22/01/2001 [09:09]	FSA ask GAD to consider Equitable's proposal that they should apply for a concession '*so enhanced value can be given to the value of Permanent* [Insurance] *in the 31/12/00 returns*'. FSA note that the sale had been agreed in principle prior to the year-end, but would not be completed '*until later this year*'. FSA say that, therefore, '*I thought that this could only be treated as a post balance sheet event but you may have some other ideas*'. [**10:56**] GAD say that they would need to see the sale agreement before they could advise on how the value of Permanent Insurance ought to be treated. GAD suggest that FSA should ask Equitable how their auditors intended to treat Permanent Insurance in their Companies Act accounts. GAD also ask FSA if they wanted to request early submission of Equitable's 2000 returns. GAD say: '*Although we were given comfort about their solvency position at last week's meeting, the wider world would presumably benefit from such disclosure sooner than 30.06.01?*'. [**11:24**] FSA say that they will send GAD a copy of the sale agreement.
22/01/2001 [10:00]	FSA hold the second meeting of their Equitable Life Lawyers Group.
22/01/2001 [10:07]	FSA's Head of Life Insurance writes to the Head of Consumer Education about: *... whether we could put on to the FSA website some sort of decision tree similar to that published recently in the Financial Times ... I remain of the view that the difficulties and risks of the exercise outweigh any benefits. The average Equitable policyholder is fairly sophisticated and articulate, and is looking for quite specific assistance in relation to his or her policy. This is the best given by the company. As you know you have been encouraging the company to improve its own material for policyholders, and their own website now contains a lot of extremely useful material. I think we now need to concentrate on the efforts to find a* [compromise] *solution to take the company forward.*
22/01/2001 [10:42]	GAD's Directing Actuary B advises FSA's Head of Life Insurance and Director of Insurance: *I am concerned to see that some press reports are seemingly attempting to raise policyholder expectations about higher bonus rates this year. After a 2.7% investment return last year and equity values still close to end-2000 levels, it is very doubtful that the Equitable could afford to increase the 9% interim bonus rate applied last year, and smoothing surely implies that their figure should now be reduced.* *Similarly, I believe that it is very unlikely that they have the capacity at present to make any significant reduction in the present 10% MVA.*

22/01/2001 [11:06]	GAD respond to FSA's request for help of 19/01/2001, by suggesting a meeting to discuss the issue further. [**10:15**] Internally, GAD suggest sending FSA's Legal Adviser A a copy of the actuarial profession's Guidance Note 8.
22/01/2001 [11:29]	FSA's Director of GCD tells Line Manager E, in reply to 19/01/2001 [**17:34**] about the OFT and the market value adjuster, that Legal Adviser C would draft a letter to be sent to the OFT.
22/01/2001 [14:54]	A draft letter to be sent by FSA's Chairman to the Chancellor of the Exchequer is circulated to officials for comment. The Director of GCD comments that a proposed statement that FSA were '*tightening up the reserving requirements for GARs will be taken as acceptance that existing levels of reserving are too low, or defective. We must clearly tighten them up, if that is the case, but we should be wary, in the light of possible future litigation, of seeming to concede that the current approach is inadequate*'. Managing Director A agrees with the Director's concerns, adding '*One way to deal with this would be to talk instead about the prospective integrated source book and to say that we will before long be going out with consultation on ways of harmonising insurance and banking regulation*'.
22/01/2001 [15:46]	GAD write to FSA regarding possible policyholder classes for a compromise scheme. GAD note that: *... there are a number of potential sub-classes that could be identified. For example, among the GAR group, there would be those with an immediate right to retire, those with 3.5% annual bonus guarantees, and those with the right to pay future premiums. There will also be groups with different levels of GAR (ie the actual rate written into the contract), and groups with various levels of availability of GAR.*
22/01/2001 [16:41]	HMT ask FSA for a copy of an open letter from Equitable to policyholders that had appeared in a national newspaper.
22/01/2001 [entry 10]	FSA's Head of Life Insurance speaks on the telephone with Equitable's Chief Executive. The Head of Life Insurance's note of the call records: *... that the results of* [the] *weekend discussions looked promising on both fronts ...* *I mentioned our concern that FSA would have sufficient time to consider the bids against our own "hurdles" for acceptability, before the Equitable Board make a decision between the two on Friday.* [The Chief Executive] *said that, under pressure from both bidders, the Board was now hoping to reach a decision on Wednesday. I said that I thought this would be very difficult for FSA. We had already thought that the Friday deadline would be tight for the work we needed to do.* [The Chief Executive] *said that he would pass that consideration on to the bidders.* *... Meanwhile, we are preparing a short checklist of issues which we will need to consider under the various possible scenarios (e.g. rival bids on different basis; only one bid; or no bid at all).* FSA's Chairman notes that '[clearly] *we have to do a thorough job. But equally we don't want to hold things up if we can avoid it*'.

22/01/2001 [entry 11] FSA send the Department for Social Security some data on the numbers of policyholders. FSA inform the department that '[on] *solvency all we can state at the moment is that the Company remains solvent, I do not think we have a regulatory gateway to discuss the sensitivities of the position*'.

23/01/2001 [entry 1] FSA's Chairman writes to the Chancellor of the Exchequer to set out what FSA were doing in response to Equitable's closure to new business.

The Chairman says that FSA's '*immediate focus is on resolving the future status of the company, and attempting to create a more certain prospect for its policyholders, who continue to face great uncertainty*'.

FSA's Chairman writes:

> *There is no interest in the insurance industry in a collective rescue, but some individual companies have been interested in acquiring all or part of its operations. These offers would be likely to involve a restructuring of the with-profits fund, to cap the liabilities to policyholders with guaranteed annuities. So any deal in prospect would involve some cost for policyholders, both with and without guaranteed annuities. The upside might be a fund with a large company behind it in the future, and therefore able to hold a larger proportion of equities, and yield a higher return.*
>
> *Since the reconstruction proposals would depend on support from different groups of policyholders, we have also been in discussions with the associations representing policyholders, who generally understand the need for concessions on all sides.*

The Chairman explains that the negotiations with the prospective purchasers '*are at a delicate stage, and there is no guarantee of success*', and he notes in parentheses that: '*If no new purchaser is prepared to do a deal, then reconstruction of the fund will still be necessary. But without the associated benefit of strong future backing it would be more difficult to "sell" to policyholders*'.

FSA's Chairman goes on to explain the internal review of their regulation of Equitable in the period from 1 January 1999 to 8 December 2000 that FSA's Board had commissioned (the Baird Review). He notes that such a review could not address the full history of the case, but FSA aimed to learn what lessons they could from an assessment of their actions as regulator. The Chairman continues by stating:

> *We had already, in fact, reached one conclusion about the prudential regulation of insurance companies which is that, by comparison with other forms of financial regulation, it has been under-resourced in the past. And part of our reconstruction of the FSA as a single regulator will involve an increase in resources for insurance supervision, within a broadly flat overall total, therefore involving some reallocation of staff from elsewhere. That has been part of our planning for the last year. But there may be other lessons, too.*

The Chairman also outlines the longer term actions that FSA were to undertake, being:

- Setting rules under the new regulatory regime to come into force at 1 December 2001, requiring companies to include more information about their with-profits contracts within their returns.
- Conducting a review of with-profits policies, which would look particularly at the extent of discretion inherent in policies and at how to improve the transparency of policies.
- Giving consideration to whether discussions with companies over distribution of inherited estates could be done through a more transparent process.

23/01/2001 [entry 2] FSA and GAD meet Equitable's new Appointed Actuary. The main purpose of the meeting '*was to exchange views on the society's current position, and in particular its reserving position*'. According to FSA's note of the meeting:

> [The Appointed Actuary] *was clearly nervous about his professional responsibilities, especially that of being satisfied at all times that the company was meeting its solvency requirement. He stressed that he had only been in the job seven days, and could not with hand on heart* [confirm] *that the solvency requirement was currently being met (although he had no reason to suppose that it was not). He also wondered whether the FSA would look to the appointed actuary in place at the year end to certify the year end returns of the Equitable, as we had often done in the past when there was a change of appointed actuary between the year end and the time that the return had to be submitted.*

FSA's note records that they had told Equitable that:

> *... in this particular case, given the special circumstances of the Equitable, including widespread public concerns about the financial position, we would expect the new appointed actuary to form his own opinion of the financial position, and be prepared to certify to that opinion in the returns. We would regard this as a significant element of comfort, especially as he himself was a highly respected and senior member of the profession, and would be bringing a fresh mind to the position of the Equitable Life.*

FSA's note continues:

> [Equitable's Appointed Actuary] *speculated that it could turn out that the Equitable Life was clearly and comfortably solvent in Companies Act terms, but that there might be a period when it would be difficult or impossible to meet the margin of solvency required in the Insurance Companies Act. What would the FSA's attitude be to that situation? It could be in the interest of policyholders to accept a short period when the margin of solvency was breached, if in the long run that enabled the fund to recover and produce better returns for policyholders than going into insolvency. In the case of a closed fund, the arguments for maintaining the solvency margin were weaker than the case of a fund open to new business, not least because there were no competitive issues.*

FSA record that they told Equitable: '*that we would not wish to enforce the regulations in an unhelpfully restrictive way, if there were good arguments for flexibility; but any departure from the norm would have to be* [open] *and transparent, and capable of being justified*'.

The House of Lords' judgment is also mentioned, and: '[The Appointed Actuary] *repeated his well-known views that the judgement had rendered illegal practices which lay at the heart of the management of with-profits funds right across the industry. But he accepted that there was no realistic prospect of a challenge to that judgement*'.

The note recorded that no detailed discussion on the sale had taken place '*as the position was so fluid*'. However:

> *... we discussed possible ways of reaching an accommodation with the GAR and non-GAR policyholders.* [The Appointed Actuary] *shared my hope that the classes of policyholder who would need to vote separately on any proposal could be restricted to two (GAR and non-GAR); although it would be very easy to identify a number of categories, it was not clear that their interests were so special that they should be given a vote of their own; and the greater the number of policyholder classes, the less likely that any proposal would secure the necessary agreement.*

FSA's note continues that:

In the context of the Treasury Select Committee enquiry, [the Appointed Actuary] *was surprised that the Equitable's position had aroused public consternation. He contrasted this with the actual failure of a large number of other financial institutions which had not aroused the same public dismay; yet the Equitable was still solvent. I said that we had made that point ourselves, but it would not be an easy one to put across in the current climate.*

FSA's note concludes by recording that:

[Equitable's Appointed Actuary] *said that he had got the impression that we had had some difficulties and disagreements with his new colleagues. We said that the Equitable had a reputation in the market place as a company which was confident of the rightness of its position, and that we have found the same in our dealings. But our current relationship was very open and co-operative.* [His] *own comment was that the company had tended to rely on* [home] *grown talent for much longer than other life offices; and that the effects of this were still apparent.*

23/01/2001 [entry 3] Equitable send FSA a list of action points from the meeting on 16/01/2001 for them to check. The list records progress on those points.

23/01/2001 [entry 4] FSA receive Counsel's Opinion on Article 4 of Equitable's Articles of Association and on the potential impact of the Unfair Terms in Consumer Contracts Regulations 1994 and 1999 on related issues. In relation to the Regulations, the Opinion states that:

On any basis the impact of the Regulations on The Equitable Life's policies would be limited. These and the predecessor 1994 Regulations would only have potential effect on policies issued after 1st July 1995. This is likely to represent a modest proportion of the total number of policies issued by the Equitable Life.

The Opinion then goes on to offer some '*tentative*' conclusions. First, it is suggested that, on balance, Equitable's members and those holding investments who were not members '*would qualify as consumers*'. Secondly:

Taking a broad view of the matter, we would have thought that there was a plainly arguable case for saying that [Article 4] *was "unfair", in that its operation and effect could indeed cause a "significant imbalance in the parties' rights and obligations ... to the detriment of the* [policyholder]*".*

... it would be open to a policyholder to seek a declaration from the Court to this effect or to deploy the Regulations against The Equitable Life if and to the extent that the company sought to deny liability to the policyholder ...

23/01/2001 [entry 5] Equitable provide FSA with further information in support of their application for a section 68 Order on the admissibility limits of certain shares.

23/01/2001 [entry 6] FSA's Line Supervisor C submits a paper to FSA's Insurance Supervisory Committee, recommending that they should support Equitable's application for a section 68 Order on the admissibility limits of certain shares for the year-end 2000. (See 12/01/2001 [**entry 2**].)

The paper states that the request for the Order followed the guidance that had been issued by the Committee. (See 18/12/2000 [**14:30**].)

23/01/2001 [entry 7] FSA issue instructions to Counsel in relation to '*the regulatory functions of the FSA related to current and possible future bids for the Equitable ...* [and] *the deal which might be struck with the Equitable's policyholders so as to cap the company's liabilities to holders of policies containing a guaranteed annuity rate (GAR)*'.

23/01/2001 [11:58] PIA ask FSA for updated figures on Equitable's new business following the House of Lords' judgment.

[**12:01**] Line Manager E asks Line Supervisor C whether this had been covered in the information received '*the other day*', which they had been '*told not to disclose*'.

23/01/2001 [14:37] An FSA legal adviser writes to Chief Counsel A about the powers of a liquidator to compromise claims. The legal adviser says:

> *The answer is yes. The power to compromise claims is expressed in very wide terms in Schedule 4 of the Insolvency Act 1986.*
>
> *... This power is exercised with the sanction of an extraordinary resolution of the company in the case of members voluntary winding up, the sanction of the liquidation committee in the case of creditors' voluntary winding up and the sanction of the liquidation committee or the court in the case of a compulsory winding up.*
>
> *Section 55(1) of the Insurance Companies Act 1982 provides that long term insurance companies cannot be voluntarily wound up. Section 366 of* [FSMA 2000] *will allow such companies to be voluntarily wound up with the consent of FSA.*

23/01/2001 [15:27] An FSA official circulates version four of their public '*lines to take*'.

23/01/2001 [15:29] GAD provide FSA with their comments on Equitable's paper '*Buying out GAR options*' (see 19/01/2001 [**13:39**]). GAD say that they support the objectives of the proposal, although the relative emphasis given to each objective needed fine-tuning. GAD note that '*the GAR/non-GAR issue is rather more fundamental than the term "incidental" might suggest*'.

GAD note that, while '*Equitable would like to restrict the number of policyholder classes to 2*', there were at least 11 different ways of distinguishing between groups of policyholder. However:

> *There would seem to be three underlying categories:*
>
> 1. *Those with-profit policyholders who potentially benefit at the expense of others (e.g. the GAR policies);*
> 2. *Those with-profits policyholders who provide such benefit (e.g. the non-GAR with-profit policies);*
> 3. *Those who neither provide nor receive benefit (e.g. non-profit policyholders), but who ultimately benefit from a stronger solvency position.*

GAD continue:

> *Those in (or potentially in) category 1 are the GAR policyholders, those non-GAR policyholders with a minimum 3.5% bonus rate, and those with-profit policyholders who can terminate without penalty, either now or at some future date.*
>
> *In category 2 we have the with-profit policyholders without a minimum bonus rate and who can only leave subject to an MVA, and with-profit annuities in payment. Income drawdown may also be in this category, but the policy wording would need to be examined to understand the extent to which any MVA might be applied.*
>
> *In category 3 we have all the non-profit (including non-profit annuities in payment) and unit-linked policyholders.*

GAD continue:

> *However, the fundamental issue at stake, following the House of Lords judgement, is how to distribute the available funds between GAR and non-GAR policyholders such that both groups are satisfied that their share of the "cake" is in accordance with their expectations. Whilst, for example, some cross subsidy may arise separately between policyholders with a minimum roll-up of 3.5% and those without such a guarantee (indeed, investment returns during 2000, when the with-profits fund secured a growth of, we understand, about 2%, were such that cross subsidy may well have arisen over that year), there is no evidence of any dissatisfaction between these two "classes" of policyholders. However,* [Equitable's solicitors'] *note (§2.8) comments that "it may be that policyholders benefiting from a 3½% p.a. investment return guarantee would also need to be treated as a separate class".*
>
> [Equitable's solicitors] *also say (§2.9) that "it is in theory possible ... that policyholders with both GAR and non-GAR policies should be placed in a separate class" because of the impossibility of knowing that they might vote otherwise.*

GAD state that:

> [The] *distinction between those retired and those who have not yet retired could be reflected rather better in the terms of the "deal"; to seek to divide these into groups (according to duration to retirement, presumably), would involve some inevitably arbitrary divisions. However, so far as we can tell, there is no "tapering" of the proposed deal, and we think this is unsatisfactory. For example, if the GAR is currently worth 30% more than CAR, and the proposal were to give policyholders a 20% uplift, this does not look equitable to the policyholder 1 year away from retirement, but it may be quite acceptable to a policyholder 15 years away from retirement.*
>
> [Also, we] *believe that non-profit policyholders are in separate category. As noted above, they would ultimately benefit from a stronger solvency position (and certainty of outcome).* [Equitable's solicitors] *do not appear to comment on these, but it seems to us that they constitute a separate "policyholder class".*

GAD conclude that:

> *We therefore appear to have potentially 5 (or more) policyholder classes. This is unfortunate, since the higher the number, the more likely it is that one of the classes will not vote in favour. These five are:*
>
> - *GAR policyholders;*
> - *Non-GAR with-profit pension policyholders;*
> - *With-profit life policyholders;*
> - *Policyholders with policies that fall into more than one class;*
> - *Non-profit (including unit-linked) policyholders.*
>
> *... it is for the lawyers to decide on the appropriate number of classes.*

23/01/2001 [18:24]	Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.
24/01/2001 [09:00]	FSA and GAD meet Equitable's Chief Executive and advisers to discuss the latest position on potential bids for Equitable's business. Counsel for FSA is also present. FSA's note of the meeting records the current position of all bidders.

Equitable report that Prospective Bidder E had decided to withdraw from the process, but would not make this public knowledge yet. Equitable say that they had had concerns about the implications of the time it would take to transfer the business and had been advised that it would take longer than anticipated. Equitable say that, given that Prospective Bidder D were the only company left, they would continue exclusive negotiations with them for two weeks and attempt to improve on any offer.

FSA's note records: '*The latest proposal was disappointing and the chances of securing improvements would be better if* [Prospective Bidder D] *did not know they were the only party left*'.

The details of the proposals are discussed. FSA's Managing Director A expresses concern about the scale of the effective reduction in policy values envisaged by Prospective Bidder D's requirement that Equitable should establish an estate of £1bn and about the proposed increase in the level of the market value adjuster, pending adoption of a scheme of arrangement between GAR and non-GAR policyholders.

FSA's Director of Insurance states that it was important to consider realistic alternatives to a deal: '*For example, thought would need to be given to whether or not a section 425 scheme was likely to be achievable under a bid or closed fund option. The analysis would also need to compare the possible outcomes compared with a winding up of the Society*'.

In an '*aide memoire*' sent by the Director of GCD to Managing Director A in advance of the meeting, the Director notes, among other matters, that '*the proposal to increase the mva to avoid adverse selection in light of reduction in policy values arising from the offer*' was a '*critical issue for us, given our commitment to keep this under review and the OFT angle*'.

He notes further that all this '*suggests the deal* [is] *not* [very good] *for policyholders*'.

24/01/2001 [morning] FSA's Head of Life Insurance talks with Prospective Bidder E about the background to their decision to withdraw. Prospective Bidder E says that there had been a combination of factors that had led to their decision, including:

> <u>*Fund Strength*</u>
> [Prospective Bidder E] *had been keen to achieve an outcome which produced a fund which was both robust and seen to be robust; they attached importance to the realistic possibility of the fund reopening in due course, in a way which would engender policyholder confidence. In this context, he claimed that* [Prospective Bidder E] *thought this would be difficult to explain convincingly to policyholders, not least because of the impact on the Equitable of the new valuation regulations in respect of unitised with-profits business (these require companies to take more account in their reserving of terminal bonuses, which are not guaranteed). He said that this provision would be particularly hard on the Equitable, because of the unusually explicit reference in their sales material to the use of MVAs.*

Other factors noted by FSA were:

> *... the difficulty of selling any proposal to policyholders, in a way which would reduce the risk of challenge to acceptable proportions. These problems of timing also affected the value of the salesforce, which was a wasting asset.*

> *... a number of issues surrounding the salesforce. Equitable were keen for the salesforce to be able quickly to start selling with-profits policies again; but* [Prospective Bidder E] *had doubts about this. There were also concerns about problems arising from Equitable's past sales practices (though no suggestion that these were worse than other companies'); and about the ability to retain the salesforce – they had received a large retention payment already, and had been led to expect large redundancy payments; these factors made it less likely that they would stay on in the longer term.*

24/01/2001 [entry 3] Prospective Bidder E write to FSA to formally notify FSA of their decision to withdraw from negotiations on the purchase of part of Equitable.

Prospective Bidder E explains: '*Our decision to withdraw arose not from a single factor but from a combination of emerging concerns over the last few days – particularly on our ability to re-open, successfully, the Equitable Life With Profit Fund (given the required visibility of MVA and associated issues in the light of Equitable Life's reserving position) and the prospect of the transfer process becoming substantially more complex than we or our lawyers had initially anticipated (with the potential for the process to fail or, at least, the likelihood of there being lengthy delays in implementation)*'.

On 26 January 2001, FSA's Director of Insurance comments:

> *As expected. A bit thin – they could have reached this decision much more quickly – but we always doubted their commitment.*

24/01/2001 [12:40] FSA's Director of GCD sends the Head of Life Insurance a note of actions that FSA had agreed to take after the meeting with Equitable that morning, which reads:

> *You will prepare a letter to go to Equitable pretty rapidly asking them for more detail about the deal for policyholders. This is partly to ensure that their own Board has a proper understanding of what this might mean for policyholders, partly to enable us to give our assessment of it from this viewpoint; and partly to put them in a position where they can answer questions regarding this if and when this deal is agreed and announced. This material should compare the deal that is being offered to different classes of policyholders with what they would get without the deal, whether on winding up or otherwise.*
>
> *This is against the background of advice from* [Counsel] *that a schedule 2 scheme could not credibly be used to modify the rights of the GAR holders, and that a section 425 scheme would be long and difficult. Policyholders need to be put in a position where they can see an attractive outcome from the start if such a process is to have a chance of success. This meshes in with* [FSA's Managing Director A's] *concern that the action groups should be in a position where they can support the process.*
>
> *We also noted that part of the possible counter factual might be intervention action by FSA, depending on the financial situation, the safeguards for policyholders expectations, and what intervention could achieve. We should consider this in its own right as well as a counter factual to section 425 scheme.*

It concludes by stating:

> [Legal Adviser C] *is asked to advise rapidly on whether OFT's view that the width of the discretion is inconsistent with UCTA could call into question the validity of a reasonable MVA imposed under that discretion.*

24/01/2001 [14:47] FSA's Director of GCD writes to Chief Counsel A (copied to others in FSA and GAD and to Counsel) about GAD's paper of 23/01/2001, asking if GAD could suggest how a proposal for a compromise scheme could be put together to appeal to the groups in different positions in each policy class that GAD had identified.

24/01/2001 [15:08] An FSA official informs the Director of Insurance and the Head of Life Insurance that Managing Director A had just returned from meeting Equitable and had reported that their Board had decided to proceed with the offer from Prospective Bidder D.

24/01/2001 [entry 7] FSA's Chief Counsel A sends the Director of GCD and Counsel a copy of GAD's paper '*Reserving and related issues*' of 19/12/2000 [**17:43**].

25/01/2001 [entry 1] Equitable write to FSA about new business in Germany. Equitable ask for FSA's agreement to allow them to write new with-profits immediate annuity policies for existing with-profits policyholders whose policy terms only allowed for a non-profit annuity on retirement.

25/01/2001 [11:06] GAD's Directing Actuary B says that he was surprised by the comments about reserving requirements made by Prospective Bidder E on 24/01/2001, as FSA had been assured by Equitable that the new valuation regulations would not have a material impact on them: '*However, this did depend on the Society retaining a substantial amount of discretion on its surrender values, an issue that is known to be under review by OFT at present*'.

25/01/2001 [11:42] FSA's Line Manager E seeks advice from GAD's Scrutinising Actuary F. The Line Manager says:

> [Chief Counsel A] *just raised with me a question about the reinsurance treaty. Counsel has spotted that there is a provision that terminates the contract on insolvency. (I should point out here that we are not sure whether he was looking at the current treaty.) I know you are familiar with it and so wondered if you could confirm the position.*
>
> *As I understood it, the treaty simply provides cover for excessive take up of the GARs and so reduces the overall reserving requirements. If there were an insolvency, those people saving under pension plans including the GAR option would not be able to exercise their right to the guarantee – rather they would receive their share of the fund which they would have to switch to another provider with whom they had started a new pension scheme.*
>
> *If that is right, there would be no basis for a claim under the treaty in the event of actual insolvency in any event, so its automatic termination would not seem to be an issue.*
>
> *But do you know if the provision features in the existing reinsurance agreement and whether or not "insolvency" in this context means insolvency in the Companies Act sense or in the sense of failing to cover the ICA requirements?*

[**11:55**] Chief Counsel A clarifies to Line Manager E and GAD that: '*I do not think Counsel was talking about the reinsurance covering GAR take-up, but rather the contract which was replaced after the* [House of Lords'] *judgment. I would be grateful if GAD would check to see if present contracts can be voided on insolvency and, if any of them can, that does not matter*'.

25/01/2001 [12:57] Equitable send FSA information on the calls to Equitable's helpline and on the value of transfers, surrenders and switches.

25/01/2001 [13:21] FSA seek comments internally and externally from PIA and GAD on a draft letter to the OFT about Equitable's use of a market value adjuster. FSA explain:

> *OFT's position is that* [they] *accept our arguments that the mva is necessary for prudential reasons, and given that its effect is to achieve fairness, it is not by definition unfair, in practice. However, they are unhappy about the absolute discretion reserved to the society to decide what if anything should be paid on surrender and are thinking of asking Equitable to change the wording so that it will clarify the circumstances in which adjustments would be made and the criteria that are used in calculating the adjustment.*
>
> *At the end of the day, we share the same underlying thought – the mva is necessary, but it should be used fairly. Where we differ is that OFT want to use their powers (which we are not clear they have in this context) to modify the terms of the contract. I think (and hope* [others] *will agree) that we need to be careful that we do not inadvertently prevent the mva being applied in circumstances where it is necessary, just because it is not spelt out in any modified terms. That points to us relying on our general intervention powers under the ICA 1982.*

FSA's Line Manager E suggests sending the draft letter to the OFT, pointing out the common ground between them, and suggests that they meet to '*explore the best method for achieving our common objective*'.

[**14:41**] GAD's Directing Actuary B notes the need '*to be careful that any imposed surrender value term takes reasonable account of the interests of both departing and continuing policyholders*' and suggests: '*As a possible way forward for further debate, this term might be phrased for example as being the latest "policy value" less an adjustment for any element of unrealised profits within that "policy value". These unrealised profits would include both profits not fully earned at the last balance sheet date (and the Society could be asked to disclose the relevant proportion publicly) together with any investment or other losses (relative to any interim bonus rate applied) sustained since then (which again could be disclosed at regular intervals)*'.

[**15:31**] FSA's Director of Insurance says that he is '*a little nervous*' about leading the OFT to the conclusion that the Unfair Terms in Consumer Contracts Regulations 1999 did not apply.

[**19:15**] PIA reply to FSA, saying that they agreed with earlier comments, and that:

> *More generally I do think it looks like (though I'm sure this isn't actually the case) we are taking* [Equitable's] *interpretation/advice pretty much without question and then drawing conclusions from it, which might be dangerous to this particular audience?*
>
> *My other issue though is that the interpretation itself looks ... not to be entirely consistent with that given to us recently by leading counsel in relation to mortgage endowments.* [Counsel] *has told us that in providing compensation for contractual "product flaws" breaches, we should be looking to firms to compensate people who have <u>surrendered</u> policies (even though the contractual promise is likely only to relate to <u>maturity</u> value), as policies should behave during their life in a way consistent with the eventual outcome, in terms of the relationship between costs and investment returns. That doesn't seem to me to support the pretty wide management discretion view expressed in the draft OFT letter.*

PIA ask that FSA's General Counsel's Division consider whether their concern was misplaced. (See 26/02/2001 [**11:37**])

25/01/2001 [entry 6] FSA write to Equitable, following their meeting the previous day. FSA say that they had no major issues regarding the Society's update on the negotiations for the sale. FSA say that the discussions had highlighted the importance of presenting as clear a picture as possible of the sale proposals and how any accommodation of annuity rate guarantees would work. FSA say that policyholders also needed to know that any accommodation would most likely require a scheme under section 425 of the Companies Act 1985 and that any such scheme '*stands the best chance of success if the scope and implications ... can be explained in broad terms to policyholders at the time the deal is announced*'. Given this, FSA ask Equitable to provide more detail as to how they would handle the issue, the key questions being: '*what classes of policyholders need to be separately identified for the purposes of voting under a Section 425 scheme*[?]*; and in what terms will the proposition be put to each separate class of policyholder – in other words, what is the selling point?*'.

FSA suggest that the minimum number of policyholder classes was two (GAR and non-GAR) and that the scheme was a '*"graded" proposal which addresses the main differences of interest between policyholders within any one class*'. FSA explain:

> *The FSA will need to assess any "deal" that might be offered to different classes of policyholder taking into account what they would get absent a "deal", whether on a winding up or otherwise. We should be grateful if, as your discussions with third parties*

proceed, you could keep us abreast of how the Equitable itself is assessing these alternatives.

This information will assist us in carrying out our responsibility to consider, for example, whether we should object to any proposal which may be put forward (you will recall that an important criterion for us in this regard is the fairness of any deal to relevant groups of policy holder). An important aspect of this is whether we are satisfied that the Equitable Board has itself addressed the issues in a proper and thorough way before reaching its own decision.

25/01/2001 [entry 7]	FSA write to alert HMT to their work on the application of the Policyholders Protection Act 1975 in relation to Equitable policyholders and to inform them of the legal advice received on the meaning and effect of Article 4 of the Society's Articles of Association.
25/01/2001 [entry 8]	FSA send HMT a copy of Equitable's open letter to policyholders, requested on 22/01/2001.
25/01/2001 [entry 9]	FSA attend a meeting of the All Party Insurance and Financial Services Group, as part of FSA's programme of keeping in touch with key parliamentary groups. FSA are questioned by Members of Parliament on Equitable, FSA's risk-based model, endowments and stakeholder pensions.
26/01/2001 [10:26]	FSA's Line Manager E circulates a further update, summarising the data received from Equitable, as at 23 January 2001, on the levels of surrenders and transfers and on the number of customer enquiries handled. The Line Manager says that the information showed that the situation seemed to have '*stabilised considerably*'. The Line Manager also explains that FSA's correspondence unit were receiving around 10-15 enquiries a day from members of the public (down from around 30 a day) and around 15 enquiries a week from Members of Parliament. The Line Manager says that these were normally being responded to within 48 hours of receipt by the correspondence unit, although FSA had discovered that there was a delay of about a week from when letters arrived in the building to when they reached the unit.
26/01/2001 [10:59]	FSA's Director of GCD informs Legal Adviser A that his division had been asked '*for some urgent advice*' as to whether policyholders or the FSA could call an emergency general meeting before Equitable took a decision on the sale of their assets. On the FSA element of the advice, the Director of GCD says: '*what powers FSA may have to require an* [emergency general meeting]*: I have so far prevented our briefing from saying that we have no powers for this purpose, on the basis that we might do so, if this were necessary to secure policyholders' reasonable expectations and we can see a sensible outcome arising from the exercise of the powers*'.
26/01/2001 [11:37]	FSA's Chief Counsel B provides comments on FSA's proposed letter to the OFT, in response to PIA's request of 25/02/2001 [**19:15**], including: *... the legal view which we have taken is one which has proceeded from our examination of the policy documents and the Regulations themselves.* *It is important to be clear that we have not advised that the Equitable has a complete unfettered discretion to apply whatever MVA it chooses. What we have said is that a Court approaching the policy terms which allow it to apply the MVA would be likely to construe those terms as involving an implied term that it should exercise the MVA on a reasonable basis.*

As [Line Manager E] *has pointed out, the FSA does have powers under ICA 1982 to intervene should it appear that the Equitable is exercising its powers in an unreasonable way.*

Turning to your reference to the work on endowment mortgages, I am unsure about the point you are seeking to make. The fact that someone who surrenders a policy might be entitled to some form of compensation as a result of losses attributable to the original misselling of policy does not it seems to me impact on whether the existence of the MVA clause in the policy is unfair for the purposes of the Regulations. The MVA is a factor which determines how much is paid to the policyholder on surrender.

26/01/2001 [13:14] FSA's Director of GCD provides comments on the draft letter to Equitable of 25/01/2001, after the final version is sent. The Director of GCD suggests that it would be useful to formally confirm the Director of Insurance's summing up of FSA's position at the end of the meeting on 24/01/2001, that being:

- *the Board must compare this offer with realistic alternatives;*
- *it will be necessary for them to be completely transparent about the genuine value of the offer to policyholders: we could not lend our support to anything which misleads them;*
- *it is highly desirable to segment the section 425 scheme aspects, so that the position can be no worse with them than without them;*
- *if it is possible to produce an overall package, this might be better than the section 425 scheme on its own, but the section 425 scheme on its own would constitute a benchmark against which an offer would need to be judged;*
- *it would be difficult for us to be able to conclude that the offer is reasonable and fair to policyholders if it involves the sort of reduction in policy values described in the paper, or the proposed uplift in the MVA.*

[**13:31**] The Head of Life Insurance says that the letter had already been sent and that he had understood that the Director of GCD did not have any comments on the draft.

[**13:44**] FSA's Director of Insurance believes that the last point '*overstates*' FSA's position and that FSA would need to look very carefully at any proposals that included reductions in policy values or increases to the level of the market value adjuster '*of the scale envisaged*'.

26/01/2001 [13:31] FSA's Director of GCD queries GAD's Directing Actuary B's comments about the meeting with Prospective Bidder E (see 25/01/2001 [**11:06**]), saying that it was less likely to be the OFT's role that was the cause, but Prospective Bidder E's assessment of the impact that the new regulations would have.

[**13:58**] Directing Actuary B clarifies that:

The new regulations do not refer to terminal bonus (though it is generally recognised within the actuarial profession that they have the effect of requiring a partial provision for possible terminal bonus).

However, the amended regulations do require that insurers should establish adequate provisions to cover the lower of the amount of cash payment that would reasonably be expected on surrender, and the amount of cash payment that would be expected disregarding all discretionary adjustments.

I suppose that there could be some ambiguity in the latter phrase, but we understand that Equitable would interpret this to mean the amount of the contractual liability (on death or maturity), excluding therefore the potential final bonus (which is discretionary).

If this interpretation were incorrect and instead the potential final bonus does have to be included, then they would indeed have a major reserving problem at the end of last year.

[A similar point could arise for other insurers though they would be able to say that they had not disclosed the level of potential terminal bonus to policyholders and therefore that any terminal bonus addition must clearly be a discretionary adjustment. Equitable have tried to be more open by showing the potential amount of this bonus in their annual bonus notices].

The Directing Actuary concludes:

Even if Equitable are right in their interpretation, there would also be an increased reserving requirement if the OFT concluded that they had no discretion on surrenders, and had then to pay out 10% more on surrenders than is being paid at present.

26/01/2001 [16:56] GAD provide the following advice to FSA in response to their request of 25/01/2001 [**11:42**]:

We confirm that the reinsurance treaty includes a provision that terminates the contract on insolvency. This is provided by Article X.2 which states that:

"Each party is entitled to terminate the treaty without giving prior notice if ...

2. The other party becomes insolvent or goes into liquidation or a Receiver/Administrator is appointed or has its licence to conduct insurance business revoked as defined in Section 13 of the Insurance Companies Act 1982".

The treaty goes on to say that "In the event of cancellation under part 2 ... of this clause the portfolio at the date of termination will be withdrawn and the Reinsured shall refund to the Reinsurer at the same point in time any Reinsurance Claims Amount and any outstanding cash balance in full, subject to the requirement that in the event of cancellation under part 2 of this clause such refund will be subordinate to the Reinsured's liabilities in liquidation towards its policyholders under the terms of its long term policies. However, the Reinsurer will retain the right of offset against future Recovery Amounts due."

The above extracts are as per the original treaty. They were not amended in any of the subsequent Addenda.

We suggest that the lawyers answer the part of your question as to what "type" of insolvency this is.

We would just add that it is not unusual for a financial reinsurance treaty to terminate on insolvency.

26/01/2001 [afternoon] FSA (Director of Insurance and Head of Life Insurance) meet the person who goes on to become Equitable's President to discuss his possible appointment. The meeting was held at the individual's request. According to FSA's note: '[He] *believed very strongly that the Equitable situation had to be "sorted out", that it was doing immense damage to confidence and that, while it looked to be a complex and difficult task it was one which he was prepared to take on "pro bono"*'.

26/01/2001 [entry 8] FSA's Head of Life Insurance provides Managing Director A with a paper on the options for FSA on whether or not to give their formal approval to Equitable's proposed Managing Director. The Head of Life Insurance sets out his view that FSA had three broad options, namely:

1. *Seek to arrange that he remains as acting* [Managing Director], *without the need for us to either approve or object at this stage. To achieve this, we would need to persuade the company voluntarily to withdraw the notice of proposed appointment. Normally we*

would not wish to do this, as leaving someone as an acting [Managing Director] *without submitting a notification can be used by a company as a device to put in place de facto someone whom they suspect we would not approve. But in the special circumstances of this case, it could be justifiable on an interim basis.*

2. We could approve the appointment, subject to the condition that the appointment was for a limited time (say 6 months) after which a fresh application would have to be made to us. The Insurance Companies Act provides a mechanism by which this could be done; but we would still need to issue a provisional notice, and we would still need to state the grounds on which we would object, if the conditions were not met. This would boil down to stating that we did not find him a fit and proper person, or that the criteria of sound and prudent management would not be met. This is a high test, and we would have to think very carefully indeed whether we judged it to be met.

3. We could approve the appointment (or simply let the time limit lapse without objection, which would have the same practical effect). Under this option, we would have to accept that in formal terms the appointment was open-ended. But we could nevertheless speak to the Chairman on an informal basis, to say that we saw merit in the appointment being made for a limited period in the first instance, until the situation clarified; and that we would expect to see the Managing Director supported by a particularly strong and independent Board, given his close involvement in the problems of the past.

FSA's Head of Life Insurance continues:

You may wish to discuss the options further. My view is that the second option would be difficult to justify. The other two options both involve informal persuasion rather than formal use of powers. One disadvantage of the first is that failure to confirm the appointment would eventually become public knowledge, and this could raise fresh public doubts about the soundness of the company. I therefore come down in favour of the third option. Although we take some risk in giving an approval which in formal terms is unconditional, in practice the risk is limited. The company is now in run-off, so that the job of Managing Director is less significant than in the case of a going concern; and if a bid is successful, the new owner of the business will have a major say in the composition of the Equitable's Board, and indeed the identity of the [Managing Director].

26/01/2001 [entry 9] FSA's Insurance Division's Policy Department prepare a paper (which is copied to Equitable's supervisory team) on how current banking regulation and supervision would have dealt with exposures such as Equitable's GAR issue. The paper includes the following description of how Equitable's policies work:

Equitable Life issued individual with profits annuity policies with Guaranteed Annuity Rates ("GARs"). (Annuity = pension). The GARs are applied to the pot of money in the policy at the selected retirement age to calculate the pension payable.

These policies also included an option whereby at the selected retirement age, rather than taking an annuity with [Equitable] *using the GARs, policyholders could either take an annuity with* [Equitable] *but without the GAR ie at current annuity rates, or take the fund they had built up with* [Equitable] *to the market and a different provider the open market option. In practice this is likely to happen (not exercising the GAR) if the market is offering better annuity rates than the GAR written into the GAR policies. Or perhaps if the policyholder wanted to structure their annuity in a way not allowed under the GAR policies eg to include a spouse's pension. The policyholder makes this decision once at the point of retirement.*

26/01/2001 [entry 10] GAD's files contain a paper prepared by Scrutinising Actuary F which further develops the implications of the policyholder classes which had been set out in the paper of 23/01/2001. (Note: this was presumably prepared in response to FSA's request of 24/01/2001. However, the paper is marked '*NOT SENT – not approved by* [Directing Actuary B]'.)

26/01/2001 [entry 11] PIA produce a paper on a project to review the conduct of Equitable from the Court of Appeal's decision of 21/01/2000 to the Society's closure to new business on 08/12/2000. The paper is distributed to FSA. PIA explain:

> *Throughout the period 21st January to 8th December 2000 the risk profile of the with profits fund was potentially different to that which applied before the* [Court of Appeal's] *decision against Equitable. It potentially changed after the* [Court of Appeal's] *ruling and again after the* [House of Lords'] *decision. The project needs to:*
>
> *1) Analyse whether appropriate disclosure and/or appropriate advice was given to investors by Equitable to fulfil its regulatory obligations under PIA and Adopted Lautro Rules...*
>
> *In the light of this analysis establish whether Equitable's post* [Court of Appeal] *and/or post* [House of Lords] *with profits investors have been disadvantaged and, if so, what action should be taken if problems are widespread. For example, should a wide scale review be required and redress be paid or would an approach more focused on individual clients be more appropriate?*
>
> *If a review is required we will establish which groups of clients are affected and what further action needs to be taken.*
>
> *2) Establish and assess the basis of Equitable's adjudication of complaints from investors advised into the with profits fund post* [Court of Appeal] *and/or post* [House of Lords'] *ruling [this element will extend to the period post closure to new business].*

Under the section '*How will this work be done?*', PIA list the questions they would be asking in order to assess Equitable's actions, which were as follows:

> *3) How did Equitable assess its regulatory obligations post* [Court of Appeal] *judgement? ...*
>
> *4) How did Equitable assess its regulatory obligations post* [House of Lords'] *decision? ...*
>
> *5) What it did to alter its marketing and advice positions in response to these obligations.*
>
> *6) Were Equitable's actions in compliance with their regulatory obligations in its marketing and advice to new with profits fund clients? How many clients were affected?*
>
> *7) How are Equitable dealing with complaints from clients who say they should have been told of the risks inherent in the potential future for the with profits fund.*
>
> *8) Should Equitable be undertaking a full or focused review of their sales of with profits business? If so, over what period?*
>
> *9) Have any clients entered into the with profits fund post closure to new business?*

28/01/2001 [entry 1] FSA's Director of GCD sends Managing Director A a copy of GAD's paper '*Reserving and related issues*' (see 19/12/2000 [**17:43**]). The Director of GCD says:

> *You should see this, if you have not seen it before. It suggests that the basis for taking the view that the Society is in compliance with solvency requirements is tenuous, and depends on various forms of special treatment agreed for the Society.*

28/01/2001 [10:15] Halifax's Chief Executive writes to FSA's Head of Life Insurance. The Chief Executive says:

> *You will no doubt recall the very helpful discussions I had with you and your colleagues earlier in the month. A number of your observations were then and still are today, material to the judgement we have had to make on this difficult transaction. Subsequently, on behalf of the FSA,* [an FSA official] *confirmed that you were comfortable with the way in which we had represented your position in an internal report.*
>
> *I'd like to give you the opportunity today of reviewing again the relevant parts of the paper (copy attached).*
>
> *In section 13 of the same paper we refer also to our need for a waiver of the marketing group rules so as to enable us to operate the* [Halifax Equitable] *and* [Halifax] *field forces alongside each other but with separate product portfolios. We would only require the waiver for a matter of months but without it we will be unable to put* [Equitable's] *field force back into action for months. It is therefore a matter of significant commercial importance and I would like your guidance on the FSA's position on this point.*
>
> *Finally, I would ideally like some "off the record" feedback on* [Equitable's] *compliance performance and standing. We know from our due diligence that* [the Society] *is currently reviewing its advice in relation to a substantial number of income drawdown cases. If this is, in the FSA's opinion, likely to result in a public reprimand it is an issue that would, at the very least, need to be taken very fully in account in our final judgement today.*

The relevant sections of the internal Halifax document are:

> *10. THE FSA*
>
> *<u>The FSA's attitude to any proposals we may make is of crucial importance</u>. A preliminary, and necessarily high level discussion on the basis of the proposition outlined in this paper revealed that:–*
>
> - *in principle (and subject to the detail) <u>they would be likely to approve of the structure;</u>*
> - *should they approve any final proposal <u>they would give public endorsement on announcement;</u>*
> - *they are prepared to commit unambiguously (again publicly) to the fact that <u>in no circumstances will they regard</u>* <u>[Halifax]</u> *<u>as standing behind the ultimate fortunes of the closed fund;</u>*
> - *<u>they are committed to move with pace, resource and considerable flexibility</u> to help put in place the detail of any proposals that may be agreed (as between all three parties).*
>
> *In practice we could not pursue any proposition that did not get this sort of response from the FSA*;

and:

> *<u>Resolution of the GAR/non GAR uncertainty will be seen by most audiences to have substantially resolved</u>* <u>[Equitable's]</u> *<u>financial problem</u>. Therefore, should the FSA respond to any short term technical insolvency by insisting on draconian action (for example, passing reversionary bonuses) this would bring the closed fund's financial position back into very sharp focus and damage both our reputation and any equity inherent in the acquisition. We cannot expect the FSA to stand back in all market circumstances (for example a 50% bear market in equities which materially impacted the whole with profits industry). However, we are optimistic that in most circumstances the closed fund would*

> *be allowed to pursue a planned recovery over a number of years. Although it would be for the Board of* [Equitable] *to oversee this process and they might well take a quite different approach.*
>
> *... the feasibility of transferring our existing bancassurance business on to* [Equitable's] *operating infrastructure ... we need to review* [Equitable's] *administration and systems capability, the timetable for any transfer, and its organisational and financial implications. Almost certainly we will need more help from the FSA as we will need a waiver to operate two product sets and marketing groups under* [Halifax Equitable] *and* [Halifax]*; for a period of up to a year.*

On 1 February 2001, the Head of Life Insurance passes the papers to Line Manager E, saying: '*Papers faxed to me at home last weekend + dealt with in subsequent discussion + correspondence*'.

28/01/2001 [21:52] FSA's Director of GCD advises Managing Director A on the legal considerations relevant to a decision on whether or not FSA should require Equitable to call an emergency general meeting or to consult policyholders in some other way. The Director of GCD says that FSA's relevant power was section 45 of ICA 1982, which '*is exercisable if the action required appears to be appropriate for the purpose of ensuring that the criteria of sound and prudent management are fulfilled*'. The Director of GCD advises:

> *A company is not to be regarded as conducting its business in a sound and prudent manner if it fails to conduct its business with due regard to the interests of policyholders and potential policyholders.*

The Director continues:

> *So to require consultation we would need to consider that without it the company would be failing to conduct its business with due regard to the interests of policyholders.*
>
> *The test allows us to form our own view about what is needed to have due regard to the interests of policyholders. We are not in my view limited to considering whether as a matter of process the company has considered the issue + reached a view on it. But to exercise the power we must conclude that the company is acting without due regard to those interests.*
>
> *In determining whether a company is having due regard to the interests of policyholders, we are entitled to look at the full range of policyholder interests, including both their interest in being consulted + their interest in getting the best deal. The company must pay due regard to the interests of all policyholders, not merely those of a particular group.*

The Director of GCD then asks:

> *Can we conclude that the company is not having due regard to the interests of policyholders if it goes ahead without consultation?*
>
> *In favour of consulting would be the possibility that the deal is not the best course for all classes of* [policyholders]*: though there are no other deals around, some may prefer to see the company liquidated: this would allow the GAR policyholders their rights, and probably stop these being increased by further top ups.*
>
> *This consideration might be less significant if the deal did not prejudice liquidation, or meant a clear net increase in value over that which would be likely to be obtained on a liquidation. This evaluation would need to take into account both the wasting asset of the sales force and the risk of increased liabilities through the top ups.*

The Director continues:

We should also bear in mind that consultation is the course favoured by the only director we expect to stay with the company long term.

In favour of the company going ahead with the deal without consultation would be any real reason to believe the deal would not be maintained for the time it would take to consult: this has been suggested so far but not explained. The bidder will presumably have given an indication of its approach and [Equitable's advisers] *should have advised on the prospects in practice.*

Consulting may not be as big a risk for the bidder as going ahead without policyholder support, if the value lies in the possibility of repeat business from customers with goodwill. It may be possible to keep the salesforce in position during the consultation phase if they are given the right incentives.

It would be extremely unattractive if any reluctance to consult were based on a view that the policyholders, properly advised, would not agree to the deal. (The need for an increased mva to prevent adverse policyholder selection suggests something of the kind for the s 425 scheme, though not as I understand it for the deal as a whole.) If this were the case it would be a strong reason to require consultation, since it would show disregard of their wishes if not their interests.

10% of policyholders can requisition an [extraordinary general meeting]. *If policyholders know all relevant facts this provides an alternative to action by FSA, but would still allow us to take action if it was needed sooner, and we believed their interests were not being paid due regard.*

The Director of GCD concludes that:

Possible next steps would be:

- *bring forward analysis of effect of liquidation;*
- *ask the* [company] *for its analysis of policyholders interests;*
- *ask to see what the bidder has said and the advice* [Equitable's advisers for the sale] *have given;*
- *consider whether the action groups should be consulted + if so who by + on what terms.*

29/01/2001 [09:03] FSA's Managing Director A calls for a meeting that morning (at 10:00) to discuss the '*key issues with the last bidder*'. The issues being:

- enforcement;
- extraordinary general meeting;
- whether FSA would be able to support the GAR/non-GAR deal;
- details of the draft contract;
- number of classes of policyholder;
- situation with Prospective Bidder D; and
- press handling.

The Managing Director distributes a draft letter to be sent to Equitable that he has prepared, which states FSA's view on whether Equitable had to put the bid to policyholders before the deal was agreed.

	Managing Director A also distributes Halifax's draft bid, which had been received by FSA on 28 January 2001.
29/01/2001 [10:10]	FSA's Director of GCD sends Managing Director A a note summarising advice on whether FSA had the power to require Equitable to consult their policyholders before accepting a bid. On a copy of this note, the Director of GCD has written: '*Advised at meeting 29.1 that: entitled to form own view about whether due regard being paid – not merely* [company] *has considered*'.
29/01/2001 [12:02]	FSA's Managing Director A informs the head of Press Office that he had just spoken to Equitable's Chief Executive, who had said that they were going to keep '*a low profile*' regarding the withdrawal of Prospective Bidder D from possible purchase negotiations. The Managing Director also says to FSA's Chairman and the Director of GCD that: '*I told him a letter would be on the way from us; it isn't as urgent as he was thinking yesterday so if it can't go today it isn't the end of the world*'. (Note: this appears to be regarding the draft letter distributed by the Managing Director earlier that day.)
29/01/2001 [12:55]	Equitable's solicitors send FSA a note of a conference that they had held with Counsel on 22 January 2001. The purpose of the conference had been to discuss the relative merits of achieving a GAR/non-GAR compromise and the transfer of Equitable's business to a potential purchaser.
29/01/2001 [15:06]	FSA's Line Manager E receives details of the amount of correspondence about Equitable that FSA had received since the Society's closure to new business. The figures supplied show:

Letters	*Received*	*Completed*
Public/Interested Parties	*253*	*150*
MPs (House of Commons)	*32*	*11*
MPs (Treasury)	*1*	*1*
Total	*286*	*162*
Emails	*180*	*130*

29/01/2001 [15:09]	FSA's Managing Director A informs the Chairman (copied to other senior officials) that he had received a telephone call from an Equitable Director about progress on finding a President. Managing Director A also records that: '*we discussed the need for an* [emergency general meeting]. [The Equitable Director] *has backed off a bit. If the legal advice is unquestionably that they have powers and if it really would be a deal breaker then he is prepared to back down and go ahead without calling an* [emergency general meeting]. *I outlined the kind of letter we were likely to be able to send to* [Equitable] *and he said that would be very helpful*'.
29/01/2001 [15:13]	FSA's Managing Director's office circulates a note of the telephone conversation with the Equitable Director. On the need to involve policyholders before a bid went ahead, they record: '[The Equitable Director] *reported the Equitable Board was divided on the issue.* [He] *himself was adamant that no decision could take place without policyholder approval – he considered that it would be improper use of the Board's powers given that all Board members had indicated their intention to resign.* [FSA's Managing Director A] *indicated that Equitable should take advice on this matter and needed to consider process for ensuring that policyholders interests were taken into account*'.

29/01/2001 [16:09]	FSA's Director of GCD sends Managing Director A a revised draft of the letter about the need to consult policyholders on a deal to be sent to Equitable that had been discussed that morning (see 29/01/2001 [**09:03**]).
29/01/2001 [17:00]	FSA hold an Equitable Life Lawyers Group meeting. The minutes of the meeting record that an update had been given on attempts to sell parts of Equitable. It was noted that two interested parties had dropped out. However, a new bidder had expressed '*serious interest*'. The minutes record '*that the combination of a short timescale and the likelihood that detailed information would not be available ... meant that the FSA would not be able to approve the purchase but at most say that it did not object*'.
29/01/2001 [17:18]	In response to FSA's Head of Life Insurance's paper of 26/01/2001 on approval of Equitable's managing director, FSA's Chairman says that FSA should avoid responding until they knew that a deal with a purchaser would be done. The Chairman says that Equitable's Chief Executive was unlikely to be a positive factor in any GAR/non-GAR accommodation and '*I cannot see why he should win a prize for having been so comprehensively wrong*'. [**19:56**] Managing Director A agrees that FSA should aim to see the Chief Executive depart but says that there needed to be '*due process to an objection*'. The Managing Director says that he would prefer FSA to encourage Equitable to put the application on hold, pending further information.
29/01/2001 [17:30]	FSA meet Halifax (at Halifax's request). FSA's note records that they had discussed three possible stumbling blocks to a deal taking place: *<u>Not waiting for an EGM.</u>* [Halifax's Chief Executive] *stressed that he couldn't take the risk of waiting.* [FSA's Chairman] *confirmed that we think the Equitable Board does have the power to take this decision itself provided that they satisfy themselves that it is in the best interests of policyholders. He added that we have the power to insist on a meeting but would not exercise this provided we were satisfied with Equitable's due process; rather, we would look for an exchange of letters with them over key issues.* *<u>The legal construction of phase 2 of the deal.</u>* [FSA's Chairman] *noted that we would have to say in due course whether the deal was a reasonable offer to put to policy-holders. Our view was that a Section 425 would be needed – Section 2c being "too fragile" for the purpose. We might – as with* [another life insurance company] *– put an explanatory memorandum to policy-holders.* [The Chief Executive] *asked for an early sight of what we might be able to say about the deal – assuming that we would find it reasonable.* <u>*[*[Action] [FSA's Director of GCD] + [the Head of Life Insurance] [please] *to produce draft.]*</u> *<u>Discipline</u>.* [FSA's Chairman] *asked why* [the Chief Executive] *attached such importance to this, given that any fine or censure would clearly relate to the past?* [Halifax's Chief Executive] *stressed that the reputation of the Equitable brand and sales force had suffered greatly already this was one risk too far.* [FSA's Chairman] *said that we would be prepared to put a proposal to the PIA Enforcement Committee. However, we would need an undertaking from Equitable that they would pay compensation in full and timely fashion (after it had been established by due process) and that the PIA could only reach agreement (if willing) in respect of currently known problems.* [The Chief Executive] *wondered whether Equitable needed to know why this undertaking was being required – he saw no problem in the undertaking being given.* <u>*[*[Action] *We need to revert to* [Halifax] *after Tuesday's PIA Committee meeting, with proposed wording and reach agreement on whether Equitable need to know the background – we think it would be better if they did.]*</u>

The extent of Halifax's influence on Equitable's Board is also discussed and '[Halifax's Chief Executive] *warmed to our suggestion that a single Director out of say 10 would better establish the desired relationship and avoid any suggestion that Halifax was in fact controlling Equitable*'.

29/01/2001 [17:54] FSA's Director of GCD comments on FSA's meeting with the prospective President of Equitable on 26/01/2001, saying that the fact that Equitable's Chairman had a GAR interest might be helpful '*if what is needed is to encourage GAR holders to give up guarantees. It would be clearly understood that a deal he was prepared to recommend could not be that bad for GAR holders!*'.

[**18:07**] The Director of Insurance gives his views on the problems that could arise if the individual, as a GAR policyholder, were to become Equitable's President. These included whether this might enable a challenge to any scheme to compromise the competing claims and a destabilising effect any controversy might have.

The following day, the Director of GCD says that, during the discussions with Halifax (on 29/01/2001), they had contemplated that '*a range of stronger and higher profile candidates might be available, who might not be affected by this problem*'.

29/01/2001 [19:08] PIA send FSA a draft paper to be given to their disciplinary committee the following morning. PIA ask for comments '*by 8am tomorrow*' and that Line Manager E should attend the committee meeting at 10:30.

[**19:21**] Line Manager E circulates the paper to other FSA officials, commenting that it had been '*prepared at some haste by enforcement colleagues*'. The Line Manager says that he had had '*a very quick look through*' and did not see anything immediately worrying.

[**19:33**] FSA's Managing Director A replies:

> *I don't think any of us can access this so comments will be few and far between. What I can say from the meeting tonight with* [Halifax's Chief Executive] *is that:*
>
> > *a) he confirms the importance of an understanding in this area to his willingness to proceed with the deal (he thinks the Equitable brand and sales force has suffered greatly already and Halifax's name would inevitably be associated with any discipline no matter how hard we tried to make it relate to the past)*
> >
> > *b) he understands that Equitable would have to commit to full and timely compensation once established by PIA after due process*
> >
> > *c) he also understands that PIA can't commit to how they would deal with anything they currently don't know about.*

[**19:33**] Line Manager E recirculates the paper.

[**19:49**] The Director of GCD says that Chief Counsel B had confirmed that PIA had a '*useful*' rule, which required companies to assess and pay compensation due to their customers.

[**20:35**] The Director of Insurance says that the paper looked fine to him, and:

> *If, against expectation, the* [Disciplinary Committee] *do not accept this advice we may need to consider the issue of consultation with the prudential regulator as provided in* [Schedule 10 of the FS Act 1986]. *In this context I am not clear:*
>
> - *whether* [self-regulatory organisations], *as opposed to the* [Securities and Investments Board] *(now FSA) are bound by the requirement to consult;*
> - *whether the Prudential Authority for this purpose is HMT or FSA (ie whether the relevant function was contracted out)*

- *whether, before the* [self-regulatory organisation] *has formed an intention to discipline (as opposed simply to refusing to rule it out) there is anything to consult about.*

But given the Schedule 10 arrangements it might seem pretty odd not to consider whether the possibility of damaging disciplinary action could be prevented by "prudential override".

But, of course, the expectation must be that the need will not arise.

[**20:58**] Chief Counsel A asks the Director of GCD and Chief Counsel B to look at the Schedule 10 issue raised by the Director of Insurance.

c29/01/2001	Having received a letter from an Equitable member asking that FSA give assurance that Equitable were not allowed to sell off any more of their assets without members having a chance to express their views, FSA's Chairman asks Managing Director A whether a sale would be subject to member approval.
30/01/2001 [09:02]	FSA's Chairman tells Managing Director A that he would be '*firmer*' than his suggestion for dealing with the approval of Equitable's Managing Director. [**09:55**] The Head of Life Insurance suggests asking Equitable to withdraw the notice and replace it with one where the appointment was for a limited time (he suggests six months). [**11:24**] Legal Adviser A reminds the Head of Life Insurance that FSA only had three months to serve notice of objection to the application, which had been received on 20 December 2000, and that they needed to allow one month for making oral representations. [**13:29**] The Head of Life Insurance suggests to Legal Adviser A that they should discuss, with a view to the Adviser drafting the best notice they could devise.
30/01/2001 [09:02]	FSA's Chairman comments that PIA's paper for the Disciplinary Committee '*Looks good*'.
30/01/2001 [09:47]	Equitable express their concern to FSA about an article that had appeared in a national newspaper, which had included the alleged views of a PIA Director that all Equitable policyholders over the age of 50 should exit the Society. FSA's supervision file includes a letter, dated 31 January 2001, from the PIA Director to the newspaper explaining that her comments had been made in her role as Director of a firm of independent financial advisers. She notes that some investors had wrongly construed her comments to be a regulatory endorsement to move funds from Equitable. Equitable also chase a response to the questions they had raised about the way that the GAR rectification scheme could handle complaints. Line Manager E asks Line Supervisor C to find out what their questions were.
30/01/2001 [10:00]	HMT and FSA hold their ninth quarterly meeting on insurance regulation issues. The meeting includes discussion on Equitable. FSA explain that a bid by another company had been made and that an announcement would be made on 4 February 2001. FSA say that the proposals were similar to another that had been put forward, in that it included the need to accommodate the issues of GAR policies. HMT express concern that the bid would be acceptable to policyholders. HMT also express concern that the bidder did not wish any disciplinary judgements in relation to mis-selling if the deal were to go ahead, but agreed that it was important to consider the public interest. HMT suggest that PIA might be content with intervention instead of disciplinary action, for example compensation by the bidder, for mis-selling.

30/01/2001 [10:30] PIA's Disciplinary Committee convene at the request of their Enforcement division to consider a paper on whether disciplinary action on conduct of business issues against Equitable would be appropriate. FSA (Line Manager E) attend. The note of the meeting records:

> *The Committee considered the details of the two matters that had been referred to them by Regulatory Enforcement in respect of Equitable, these being Pension Fund Withdrawals details of which were contained in Appendix 3 and the Pension Review failings in Appendix 4. In respect of Pension Fund Withdrawals, Regulatory Enforcement had estimated that if disciplinary action were to be taken the likely penalty in these circumstances would have been in the region of £500,000, whilst the current assessment of the likely fine in respect of the Pension Review failings was likely to be in the region of £250,000 – £350,000. The Committee noted that the Equitable were in discussions with PIA staff regarding the review of past Pension Fund Withdrawals business and were, at this point, co-operating fully with PIA.*
>
> *With the Equitable seeking a purchaser and only one bidder remaining, it was noted that if a public disciplinary action were mounted by PIA, the bidder would withdraw from the prospective purchase in order to avoid the reputational damage that would be likely in such circumstances. The principal question that the Committee therefore needed to address was whether or not PIA should discipline the Firm, taking into account the unique circumstances of the case when balanced out against the aims and provisions of PIA's disciplinary policy. By issuing disciplinary proceedings, PIA would destroy the chances of the rescue bid being successful, which in turn would not be to the advantage of Equitable's policyholders.*

The Committee decide to take no action against Equitable on the sale of Pension Fund Withdrawal contracts and on Pension Review failings, provided remedial action acceptable to PIA was taken.

The Committee note that PIA would not hesitate to take disciplinary action should Equitable fail to carry out the required remedial action. This applied also to any future failure in respect of the Pension Review and to any issues not covered by the current referrals to Regulatory Enforcement. Should the bidder withdraw, the Committee would require submissions from Regulatory Enforcement as to the desirability of bringing disciplinary action against the Society.

30/01/2001 [11:43] Equitable send FSA the latest information (as at 28 January 2001) on the GAR buy-out proposals. This begins by stating that: '*Our current best estimate of the GAR cost is about £1.5bn and the extra statutory reserve against that liability is similar. Of this, about £200m is the expected cost of the rectification scheme which is unlikely to vary much because we know most of the factors affecting its calculation. However, the remainder is subject to considerable possible variation depending on the trend of annuity rates, future premiums and take-up rates*'.

The information provided by Equitable continues:

> *This variation, although covered to some extent by a reinsurance arrangement, is undesirable. There would seem to be considerable merit in a scheme, if possible, whereby we buy out those GAR options now, for an affordable and fair cost. The purpose of this note is to set out the objectives of the proposal and a particular way forward.*

Appendix 2 to the note, under a heading '*Buying Out The Guaranteed Annuity Options*', states:

> *The proposal is to cancel both the prospective GAR liability entirely (in respect of both accrued fund and future premiums) and future minimum guaranteed 3.5% increases on GAR guaranteed fund. In compensation for giving up these guarantees, both the policy values and guaranteed fund of GAR policyholders is to be increased by a fixed 20%*

regardless of age or policy contract. These enhancements are made as part of a compulsory scheme.

Equitable's note then sets out detailed information as to '*the estimated pre and post-buy out impact on the statutory position of the fund, if the buy out were to take effect at 31 December 2000*', noting that '*it has been assumed that no reversionary bonus is declared during 2000 and that the end of 2000* [equity backing ratio] *is 67%*'.
