| Table 3: Recipient families receiving CTC and WTC in each Westminster Constituency | 13 |
| Table 3A: Recipient families receiving CTC and WTC in each Constituency for the Scottish Parliament | 26 |
| Appendix: Sampling method and sampling error | 28 |

Introduction

These tables show the number of recipient families receiving Child Tax Credit (CTC) and Working Tax Credit (WTC) in each local authority (county, district and unitary authority) and in each Westminster and Scottish parliament constituency at 1 December 2009.

The tables are consistent with the figures of recipient families in each country of the United Kingdom, and in each Government Office Region, shown in Table 8.2 of "Child and Working Tax Credit Statistics. December 2009" (the "main publication"). This table is reproduced in this volume.

The local authority and constituency of each sample case was identified using the postcode held on the tax credits computer system. These postcodes were matched to the August 2009 Postcode Directory supplied by the Office for National Statistics.

Some cases had postcodes not appearing in these Directories. These, and cases with no postcode, are allocated to "Foreign and not known" in Table 1.

Changes from earlier issues

Two changes made to the tables in the main publication are also reflected in these tables. For further details, see the main publication.

First, the tables cover only families with positive entitlements at the reference date, excluding families with entitlements tapered to zero.

Second, the tables show the numbers of out of work families with children. These numbers include both such families receiving CTC and those instead receiving the equivalent amounts via the child and related allowances in Income Support or income-based Jobseeker's Allowance.

The figures are estimates based on a sample comprising 10 per cent of single adults (and couples receiving their child support via benefits) and 20 per cent of other couples with awards at the reference date. The Appendix shows how to find the sampling uncertainties associated with the figures shown in these tables; and the uncertainties associated with the "Total (with or without children)" figures are shown in the tables. These uncertainties can be quite large in relation to the sizes of the estimates themselves, so care should be taken to ensure that any inferences drawn from the figures are statistically valid. This particularly applies to the number of families receiving WTC only, and to inferred changes over time.

Changes to this publication

Following user consultation we have expanded our published statistics to separately identify those families who are benefiting from help with their childcare costs. The overall number of families already appears at regional level in Table 8.3 of the main publication, but we have expanded our tables to include estimates of the number of families at both Local Authority and Parliamentary Constituency level.

As a result of the local government changes that came into effect for parts of England from 1st April 2009, there have been a number of newly created unitary authorities along with the abolition of several counties and districts. As these statistics are for a period of time after the changes, they are presented using the latest boundaries.

Table 1 : Recipient families receiving Child or Working Tax Credit in each country, and in each Government Office Region in England, December 2009

¹ Subtract and add this to obtain the boundaries of the 95% confidence interval for the number: See Appendix.

² Families benefiting from the childcare element are included in those receiving CTC above the family element and are not counted separately in the total numbers

Appendix: Sampling method and sampling error

The tables are based on a random sample of families receiving CTC or WTC at the reference date. The sample comprises 10 per cent of such single adults (with or without children) and 20 per cent of such couples. Each figure in the tables is derived by weighting the relevant sample cases by the inverses of these sampling fractions¹.

The figures in the tables are therefore estimates, but we know how accurate they are. For example, suppose that there are 10,000 couples in an area. This number is not known, and we are to estimate it via the sample. Each couple is sampled with a probability of 0.2. Statistical theory says that there is a 95 per cent probability that the number sampled will lie between 1,922 and 2,078, and that the resulting estimate will lie between 9,610 and 10,390. At least approximately, then, where an estimate of 10,000 is derived from the sample, the true figure lies between these figures, with a 95 per cent probability. That is, the "95 per cent confidence interval" for the estimate is the estimate itself plus or minus 390.

The width of the confidence interval varies with the size of the estimate and the sampling fraction, as shown in the table below. For estimates that comprise a mixture of couples and single adults, the figures will lie between the two sets shown, according to the mix.

| Confidence intervals for estimates of families with CTC or WTC awards | | | | |
|--|--------------------------------|----------------------|-----------------------------|----------------------|
| Estimated value | 95% confidence interval | | As % of the estimate | |
| | Couples | Single adults | Couples | Single adults |
| '000 | '000 | '000 | | |
| 1 | ± 0.1 | ± 0.2 | ± 12% | ± 19% |
| 2 | ± 0.2 | ± 0.3 | ± 8% | ± 12% |
| 5 | ± 0.3 | ± 0.4 | ± 6% | ± 8% |
| 10 | ± 0.4 | ± 0.6 | ± 4% | ± 6% |
| 25 | ± 0.6 | ± 0.9 | ± 2.5% | ± 4% |
| 50 | ± 0.9 | ± 1.3 | ± 1.8% | ± 2.6% |
| 100 | ± 1.2 | ± 1.9 | ± 1.2% | ± 1.9% |
| 250 | ± 2.0 | ± 2.9 | ± 0.8% | ± 1.2% |
| 500 | ± 2.8 | ± 4.2 | ± 0.6% | ± 0.8% |
| 1,000 | ± 3.9 | ± 5.9 | ± 0.4% | ± 0.6% |

¹ Each case is further weighted so that the overall total equals an independent count of recipient families.
