

Extracted from Outlook email that was sent to BEIS

Good afternoon,

Please find Economy Energy's response to the Smart Metering Implementation Programme Amendments Questions 1 to 5 and 17 -18.

1. *Do you agree that the legal drafting implements reactive I&L policy as proposed? Please provide a rationale for your views.*

Yes, Economy Energy agree with the legal drafting of reactive I&L policy.

2. *Do you agree with the proposed approach for the implementation of proactive I&L for new connections and replacement meters? Please provide a rationale for your views.*

Yes, Economy Energy agree with the approach for the implementation of proactive I&L policy.

3. *Do you agree that the legal drafting implements proactive I&L policy as proposed? Please provide a rationale for your views.*

Yes, Economy energy agree with the legal drafting of proactive I&L policy.

4. *Do you agree that the proposed legal drafting accurately reflects our policy intention on maintenance and replacement of smart metering systems? Please provide a rationale for your views.*

Economy Energy agrees with the policy intention on maintenance and replacement of smart metering systems in theory, however sometimes it is not physically possible for the to happen and a situation can call for a Smart meter to be replaced with a dumb meter.

This could happen when the industry information is incorrect and industry states a different meter type than what is installed at the property. In this situation it made lead to a step back, particularly if it is an emergency and a customer is off supply. Furthermore, it can also depend on meter availability and again in an emergency may need to install a lesser device.

5. *Do you agree with the legal drafting of the proposed amendment to the electricity supply licence condition 50 regarding change of suppliers? Please provide a rationale for your views.*

We agree with this as long as the appropriate mandatory fields are included in the D0150 flow.

17. *Do you agree with our proposals for how multiple Technical Specifications and GBCS should be managed within the Code and do you have any comments on the proposed changes to supply licence conditions, the DCC licence and the SEC in order to give effect to them?*

18. *Do you agree with our proposed approach to facilitating multiple versions of DUIS (and associated versions of the Message Mapping Catalogue and Parse and Correlate software)?*

Economy Energy agree with the proposals for how the multiple Technical Specifications and GBCS would be managed as long as there is enough notice for when the cross overs and end dates would be. We also agree with the proposed approach.

The remaining questions we agree with the changes but do not have any comments to add.
