# National Energy Efficiency Data-Framework

## Summary of Analysis using the National Energy Efficiency Data-Framework 2014

### Local Authority Table CSVs: Accompanying notes

All data in these CSV files are based on analysis from the National Energy Efficiency Data-Framework. More information on how the outputs are produced is published at <https://www.gov.uk/government/statistics/national-energy-efficiency-data-framework-need-report-summary-of-analysis-2014>.

For queries on the data please contact: [EnergyEfficiency.Stats@decc.gsi.gov.uk](mailto:EnergyEfficiency.Stats@decc.gsi.gov.uk).

Tables include estimates of mean and median consumption and number of records in sample for each local authority. A separate file is provided for gas and electricity for each attribute or characteristic:

- Table LA1: Gas consumption by floor area, 2012
- Table LA2: Electricity consumption by floor area, 2012
- Table LA3: Gas consumption by number of bedrooms, 2012
- Table LA4: Electricity consumption by number of bedrooms, 2012
- Table LA5: Gas consumption by property type, 2012
- Table LA6: Electricity consumption by property type, 2012
- Table LA7: Gas consumption by property age, 2012
- Table LA8: Electricity consumption by property age 2012
- Table LA9: Gas consumption by tenure, 2012
- Table LA10: Electricity consumption by tenure, 2012
- Table LA11: Gas consumption by household income, 2012
- Table LA12: Electricity consumption by household income, 2012

**Table LA13:** Gas consumption by number of adult occupants, 2012

**Table LA14:** Electricity consumption by number of adult occupants, 2012

## Notes

1. All figures are for 2012 and are derived from a sample of data for England and Wales.
2. Sample sizes have been rounded to the nearest 10 and consumption to the nearest 100kWh.
3. Only households with valid gas consumption (between 100 kWh and 50,000kWh) in 2012 have been included in the gas tables.
4. Only households with valid electricity consumption between (100 kWh and 25,000kWh) in 2012 have been included in the electricity tables.
5. Households with suspected estimated gas or electricity readings have been excluded.
6. Property attribute information is based on data from the Valuation Office Agency, floor area is in square metres.
7. Household information (tenure, household income and number of adults) is based on modelled data from Experian.
8. The following symbols are used in the tables:
  - x not shown in order to protect confidentiality (i.e. less than 30 records in the sample for this category).
  - .. not applicable (i.e. no households in sample for this category).
9. Column headings start with the prefix "N\_" for number of households in sample, "Mean\_" for mean consumption (kWh) and "Median\_" for median consumption (kWh).
10. County, region and country totals are also included in the tables. The relevant names and codes are included in the LAName and LACode columns.
