Syndromic Surveillance System: England

09 June 2015

Year: 2015 Week: 23

In This Issue:

Key messages.

Diagnostic indicators at a glance.

GP practices and denominator population.

National syndromic indicators.

Notes and further information.

Appendix.

Key messages

Data to: 08 June 2015

There has been a slight increase in allergic rhinitis consultations, in line with seasonal expectations.

A new indicator for insect bites has been included for the first time this week, which will become one of our heat-related indicators. A Heat-Health Watch system operates in England from 1 June to 15 September each year. As part of the Heatwave Plan for England, the PHE Real-time Syndromic Surveillance team will be routinely monitoring the public health impact of hot weather using syndromic surveillance system during this period. Heat-health watch level (current reporting week): level 1 Summer preparedness http://www.metoffice.gov.uk/weather/uk/heathealth/

Diagnostic indicators at a glance:

lu di seten	Tuond	Laval
Indicator	Trend	Level
Upper respiratory tract infection	decreasing	similar to baseline levels
Influenza-like illness	no trend	similar to baseline levels
Pharyngitis	no trend	similar to baseline levels
Scarlet fever	decreasing	similar to baseline levels
Lower respiratory tract infection	decreasing	similar to baseline levels
Pneumonia	no trend	similar to baseline levels
Gastroenteritis	no trend	similar to baseline levels
Vomiting	no trend	above baseline levels
Diarrhoea	no trend	similar to baseline levels
Severe asthma	decreasing	similar to baseline levels
Wheeze	no trend	similar to baseline levels
Allergic rhinitis	increasing	
Conjunctivitis	no trend	below baseline levels
Mumps	no trend	below baseline levels
Measles	no trend	below baseline levels
Rubella	no trend	similar to baseline levels
Pertussis	no trend	above baseline levels
Chickenpox	increasing	similar to baseline levels
Herpes zoster	no trend	similar to baseline levels
Cellulitis	no trend	similar to baseline levels
Impetigo	no trend	similar to baseline levels
Heat/sunstroke	no trend	similar to baseline levels
Insect Bites	increasing	similar to baseline levels

GP practices and denominator population:

Year	Week	GP Practices Reporting**	Population size**
2015	23	4247	31.4 million

**based on the average number of practices and denominator population in the reporting working week.

GP In Hours

1: Upper respiratory tract infection (URTI)

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

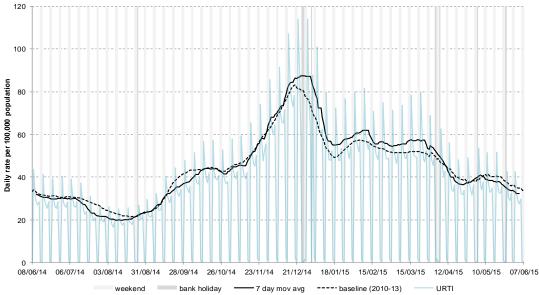

2: Influenza-like illness (ILI)

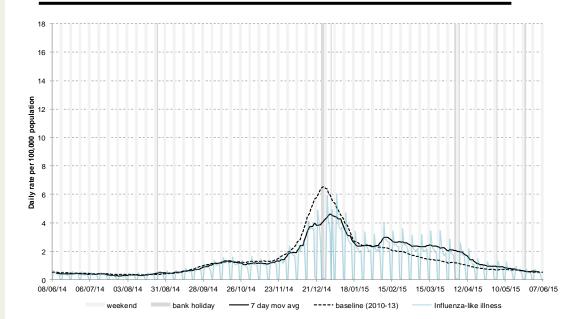

Daily incidence rates (and 7-day moving average*) per 100,000 population (all England, all ages).

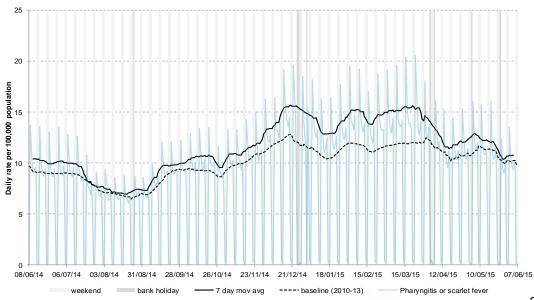

3: Pharyngitis or scarlet fever

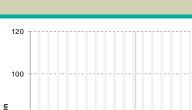

Daily incidence rates (and 7-day moving average*) per 100,000 population (all England, all ages).

* 7-day moving average adjusted for bank holidays.

4: Scarlet fever

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, based on a population denominator of approximately 5.5 million patients).

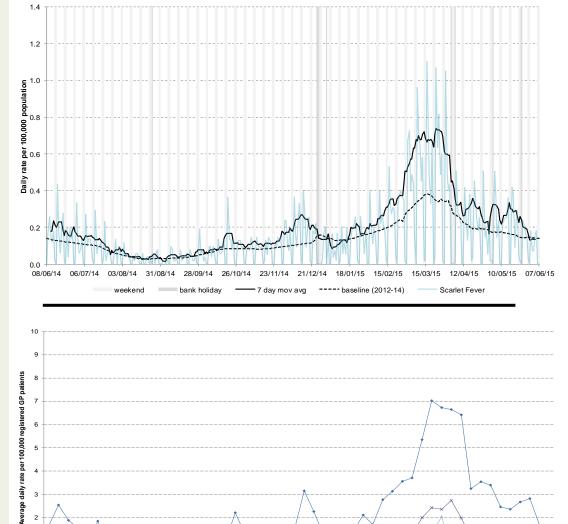

Average daily incidence rate by week per 100,000 population (all England, based on a population denominator of approximately 5.5 million patients).

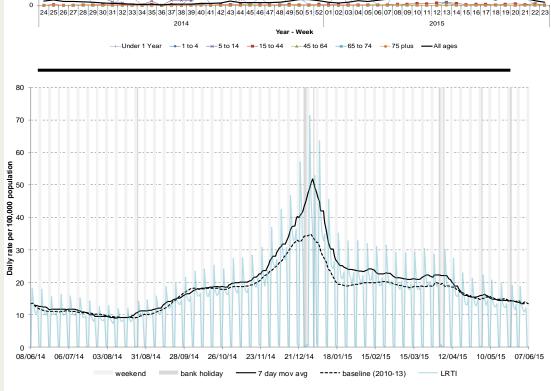

2

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

* 7-day moving average adjusted for bank holidays.

Heat stroke

09 June 2015	Year: 2015 Week: 23
Notes and further information	 The Public Health England GP in hours surveillance system is a syndromic surveillance system monitoring community-based morbidity recorded by GP practices. GP consultation data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team. This system captures anonymised GP morbidity data from two GP clinical software systems, EMIS, from version 1 of the QSurveillance® database, and TPP SystmOne. Historic baselines are smoothed to remove bank holiday effects. Data from 2009 has been excluded for selected indicators which were affected by the H1N1 influenza pandemic. No baseline is currently included for allergic rhinitis. The appendix illustrates weekly GP in hours consultation data for influenza-like illness (ILI). Each PHE Centre is represented by a thematic map showing its constituent local authorities (LA) coloured according to the weekly consultation rate of ILI per 100,000 population. LAs where less than 5 cases of ILI have been reported are supressed and illustrated as no data. The maps on the following pages contains Ordnance Survey data © Crown copyright and database right 2014. Contains National Statistics data © Crown copyright and database right 2014.
