

Appendix N Priority order of blood analytes

Original authors: Sonja Nicholson, Katie Dearnley, Birgit Teucher and Alison Lennox

Updated by: Sonja Nicholson, Lorna Cox, Stephen Young and Amanda McKillon

Tables N.1 to N.3 provide information about the priority order for analysis of blood analytes in NDNS. For each age group, analytes are shown firstly, by the order in which the blood tubes were collected from the participant and, secondly, by the order in which the analyses were performed within each tube.

Blood analyte priorities are shown for all age groups. Now that four years' worth of NDNS RP data has been accumulated, this report includes, for the first time, results for participants aged 1.5 to 3 years, 4 to 10 years and 65 years and over.
