

FOOT AND MOUTH DISEASE UPDATE

Attached are two maps to illustrate the impact of Foot and Mouth Disease (FMD) on the trial areas.

The first map plots the point locations of infected premises in and around trial areas, as at 3 April. A total of 28 infected premises occur within trial areas, half of them in triplet area J3. It should be noted that livestock on contiguous farms are being culled as well, so the impact of FMD might be multiplied by at least two; but not all premises will have had cattle.

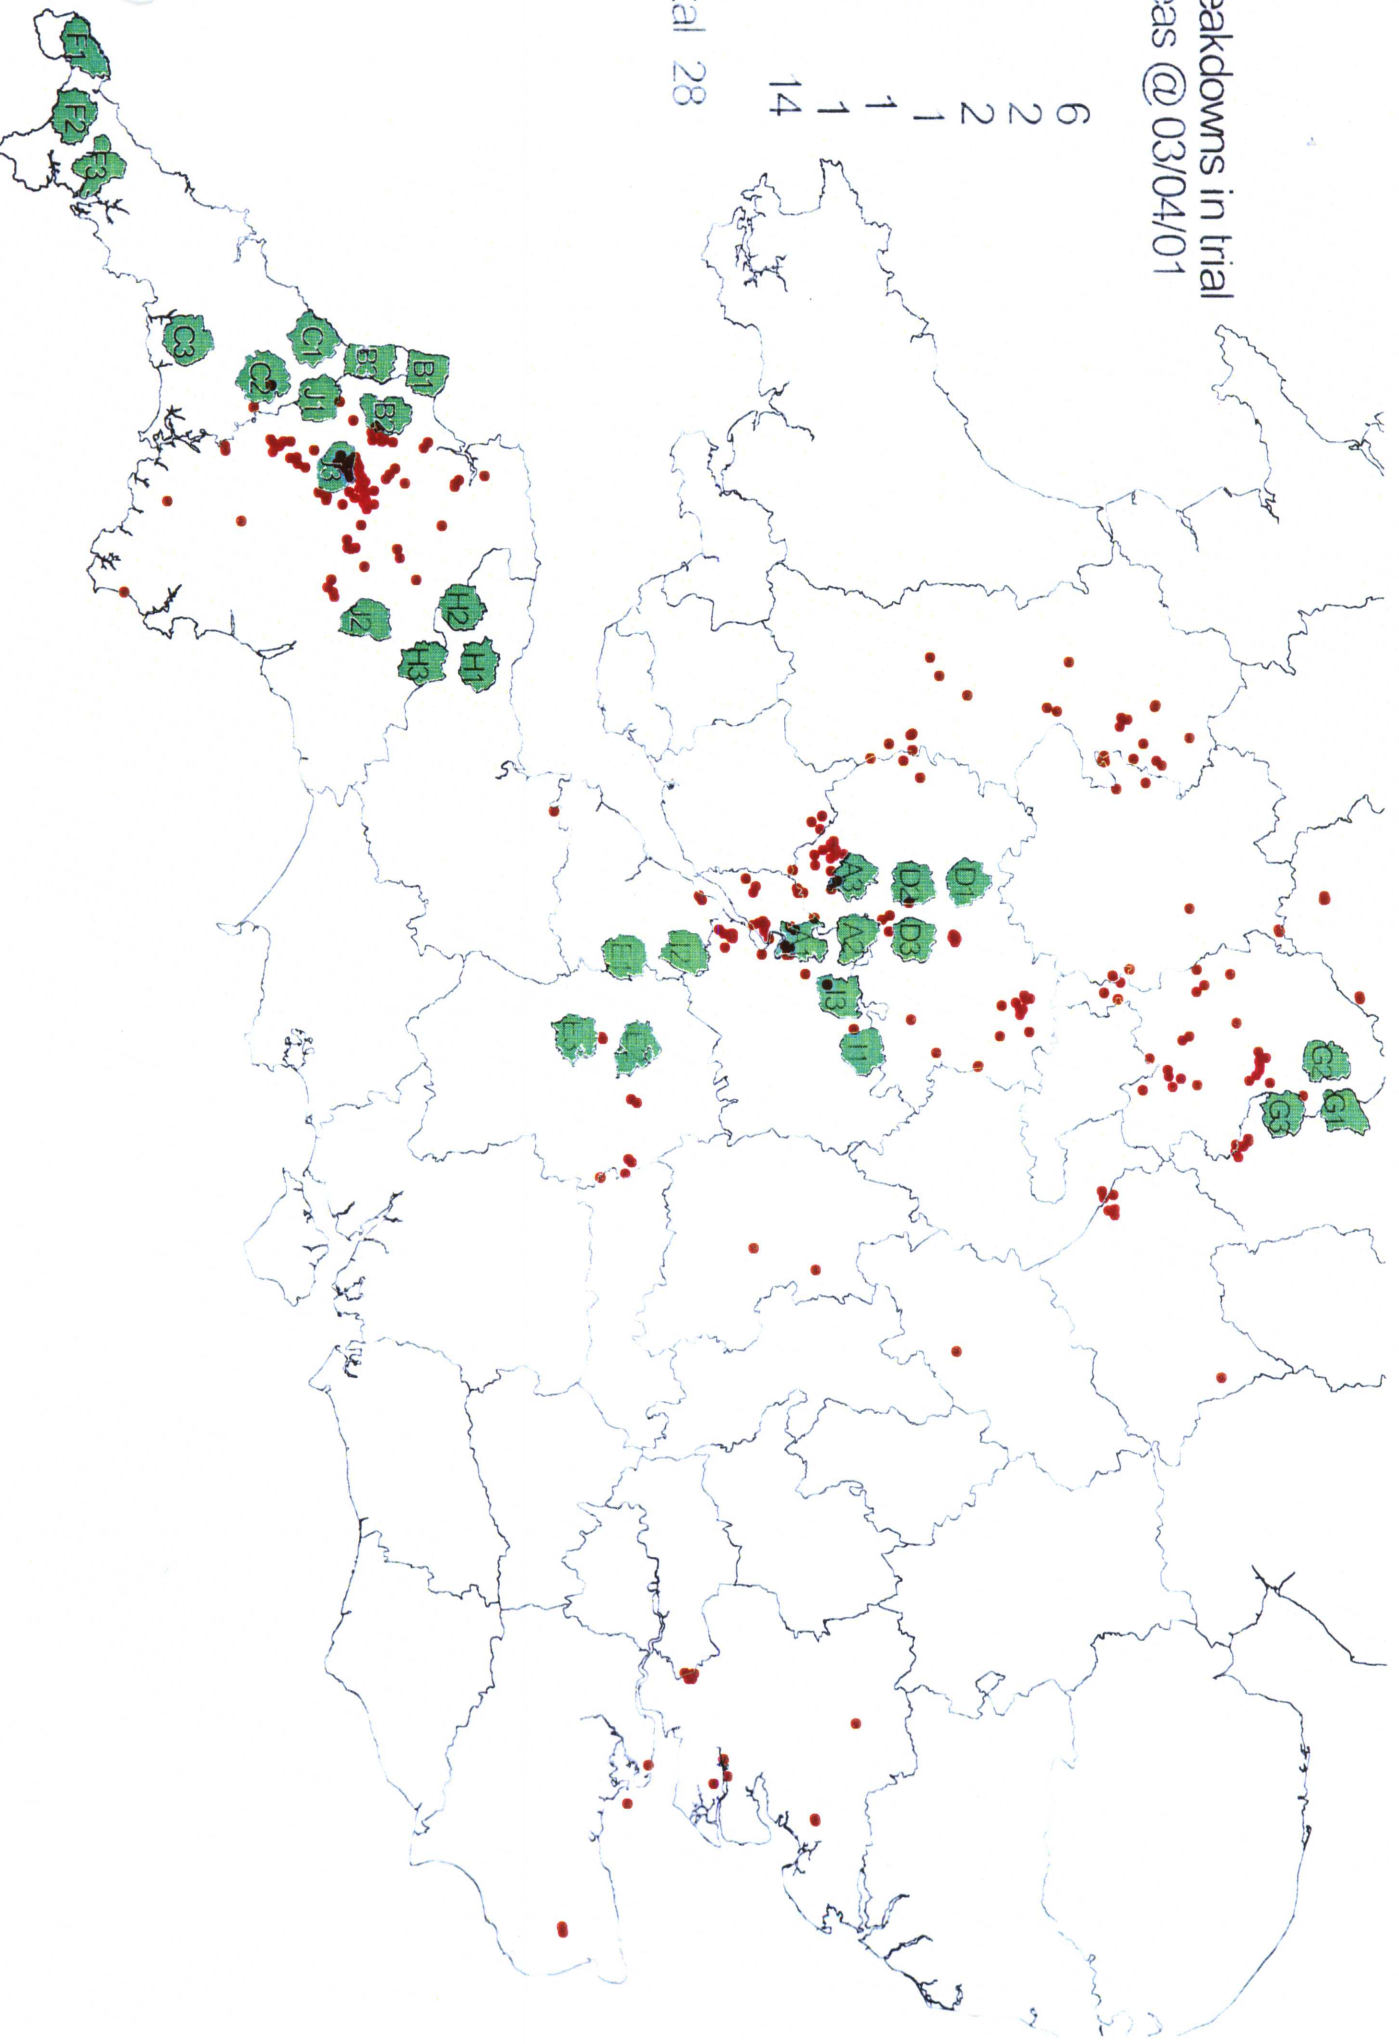

The second map shows the extent of the FMD restricted areas in relation to trial areas. Only two triplets (F and H) remain fully outside FMD restricted areas.
