

Figure 1 – a) Badgers per km² taken in all culls and b) badgers per trapping opportunity taken in culls in 2002 or later in 500m rings from the treatment area boundary summarised across triplets. Note – operation 7 (M4) is based on a single cull in triplet B.

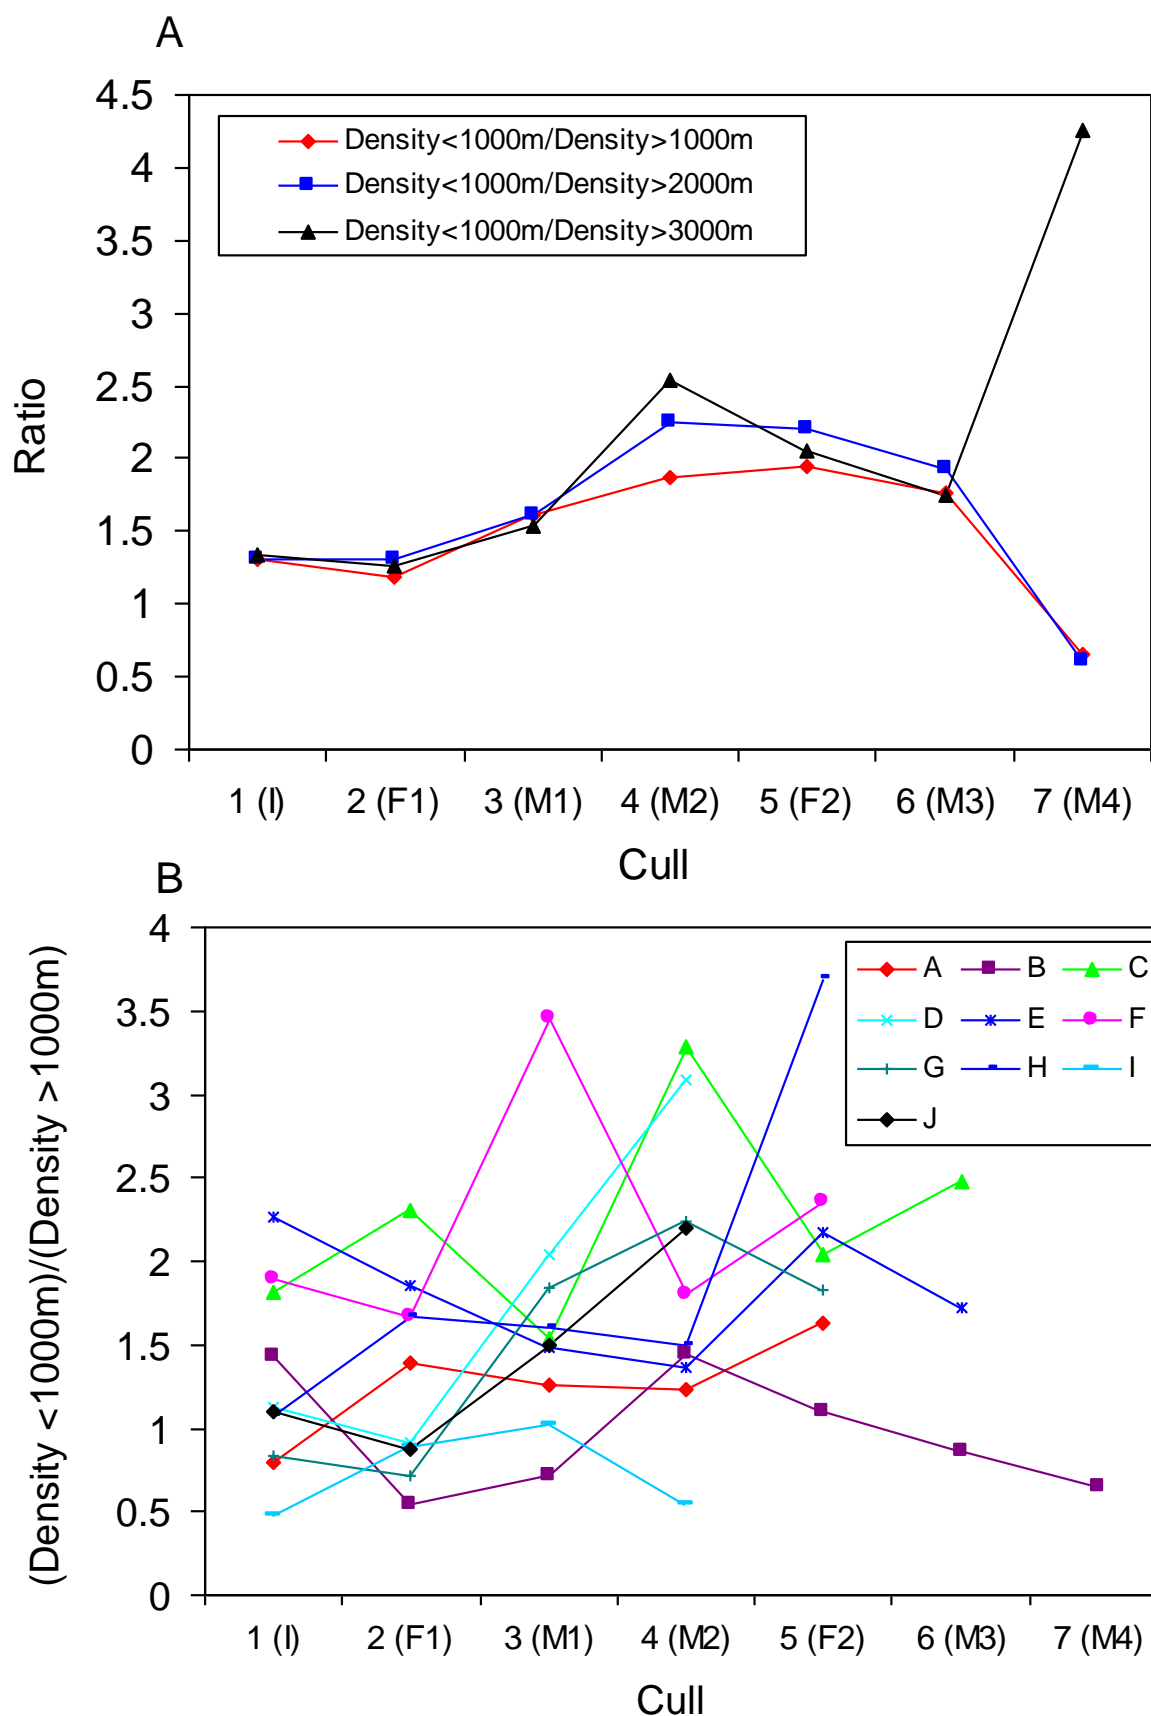

Figure 2 – a) Ratio of the density of 'outer' ring badgers (<1000m from the treatment area) to 'inner' ring badgers where the inner ring was defined as either >1000m, >2000m or >3000m from the treatment area boundary for each cull summarised across triplets. b) ratio of badger densities in outer (<1000m) to inner (>1000m) rings by triplet and cull
