## Message Implementation Guidelines for PAYE NINO Verification Request

---

### Glossary of Terms

Term	Description
AORef	Employer Accounts Office Reference
Bureau	An organisation transmitting PAYE information on behalf of a PAYE employer
EAS	Employer Alignment Submission
EDI	Electronic Data Interchange
EDIFACT	Electronic Data Interchange for Administration, Commerce and Transport
Employer PAYE Reference	Unique reference supplied by the HMRC Office
EPS	Employment Payment Summary
EYU	Earlier Year Update
FPS	Full Payment Submission
GFF	Generic Flat File
HMRC	HM Revenue & Customs
HMRC Office Number	Also known as Tax District Number and Tax Office Number
ICR	Interchange Control Reference
MIG	Message Implementation Guidelines
NIC	National Insurance Contributions
NINO	National Insurance Number
NVREP	NINO Verification Response
NVREQ	NINO Verification Request
PAYE Scheme	HMRC Office Number followed by the Employer PAYE Reference
RTI	Real Time Information
Trading Partner	An EDI term for the Employer or Bureau exchanging data with HMRC
Vendor ID	A unique number allocated by HMRC to Software Developers

### 1 GETTING STARTED

#### 1.1 Who Should Read This?

This document is aimed at everyone involved in the development of the NINO Verification Request (NVREQ) via EDI, particularly software designers and programmers producing the software for extracting these details.

#### 1.2 What is this Message About?

The NVREQ message allows employers to validate or obtain a new NINO for their employees.

This document describes the information which must be sent by Employers/Bureaux to make these requests to HMRC.

The NVREQ was introduced as part of the Real Time Information (RTI) programme.

The other messages in the suite are:

**Employer Alignment Submission (EAS):** allows employers and HMRC to align employee records before the employer joins RTI.

**Employer Payment Summary (EPS):** includes data to enable HMRC to calculate the employer's liability.

**Earlier Year Update (EYU):** this message is used to send data which will enable HMRC to update employee's payments for the previous Tax Year.

**Full Payment Submission (FPS):** this message is required each time an employer makes a payment to an employee and includes Year to Date figures.

**NINO Verification Reply (NVREP):** the HMRC reply to employers in response to a NINO Verification Request. It can also be generated in response to Full Payment Submission and Employer Alignment Submission messages.

#### 1.3 Frequency

The NVREQ request is sent by an Employer/Bureau to HMRC as necessary, with a maximum number of 100 records per interchange.

### 1.4 Summary of Changes

Minor change made Section 2.4 2.4 Acknowledgement Reports from the EDI Translation Service as detailed below.

#### **New fields:**

- None

#### **Amended Fields:**

- None

#### **Deleted Fields:**

- None

#### **Documentation:**

- **Section 2.4 Acknowledgement Reports from the EDI Translation Service**  
Second paragraph changed to confirm that the CorrelationID will only be provided for Live submissions, not Test submissions.

#### **1.4.1 Changes from Version 4.1 to Version 4.2**

The following changes have been made to the document at Issue 4.2 as detailed below:

#### **Documentation:**

- **APPENDIX B – Valid National Insurance Number Prefixes:** Renamed as **National Insurance Number Prefix Validation** and content changed to replace the details of allowable prefixes with 3 validation rules

## 2 PROCESS OVERVIEW

### 2.1 The NINO Verification Request

This document explains how employers can send their NINO Verification Request by EDI.

There are separate EDI Message Implementation Guidelines for the Full Payment Submission (FPS), the Employer Payment Summary (EPS), the Employer Alignment Submission (EAS), the Earlier Year Update (EYU) and the NINO Verification Response (NVREP).

### 2.2 RTI Messages

#### 2.2.1 Employer Payment Summary (EPS)

The Employer Payment Summary (EPS) submission will include data to enable HMRC to calculate the employer's liability.

#### 2.2.2 Full Payment Submission (FPS)

This is the main RTI submission type giving a breakdown of the PAYE calculation for each employee/pensioner on each payday.

#### 2.2.3 Employer Alignment Submission (EAS)

This message allows employers and HMRC to align employee records before the employer joins RTI.

#### 2.2.4 Earlier Year Update (EYU)

This message is used to send data which will enable HMRC to update Employee's payments for the previous Tax Year.

#### 2.2.5 NINO Verification Request (NVREQ)

This message allows employers to validate or obtain a new NINO for their employees. Up to 100 requests may be made in one submission.

#### 2.2.6 NINO Verification Response (NVREP)

The HMRC reply to employers in response to a NINO Verification Request. It can also be generated in response to RTI core processing, namely Employer Alignment Submission and Full Payment Submission messages..

## Message Implementation Guidelines for PAYE NINO Verification Request

### 2.3 Data Flow

RTI data, transferred from the employer payroll or HR system to the HMRC system, undergoes 3 levels of validation. An Acknowledgement Report (as indicated below) is generated after each stage of validation and indicates the acceptance or rejection of the submission.

**Level 1** – the submission is transferred from the employer to the EDI Translation Service. If structural validation and certain RTI validation rules are successful, the data is transferred on to Level 2.

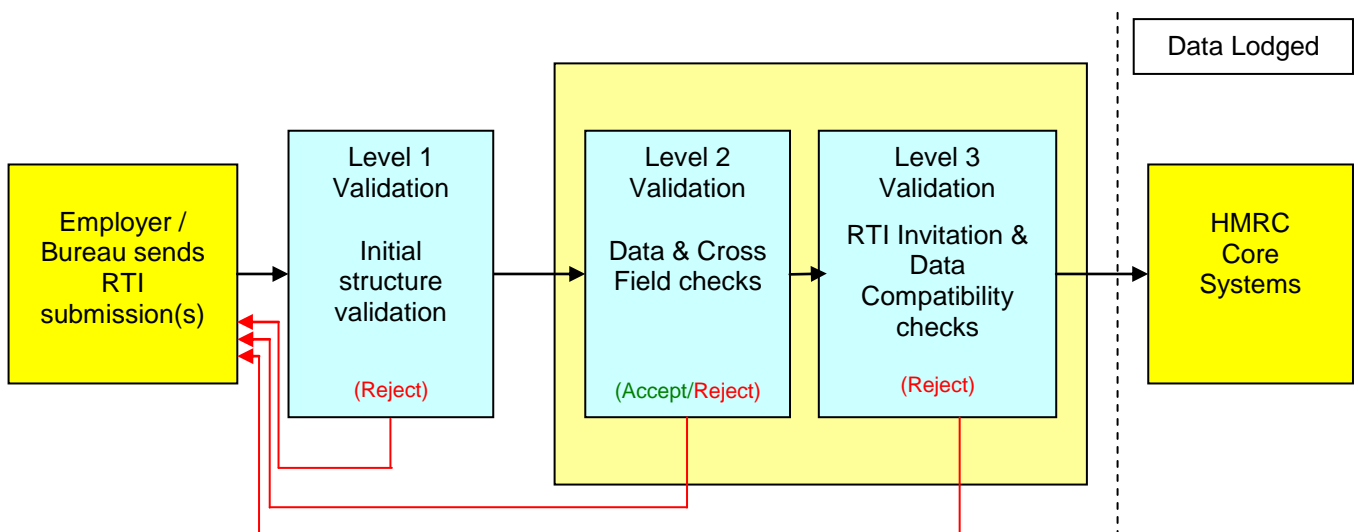

An Acknowledgement Report from Level 1 is emailed to the sender to report the rejection of each submission. Success reports are not generated at this level of validation.

**Level 2** – the submission(s) undergoes data and cross-field checks. Each submission is validated separately. The acceptance of a submission at Level 2 indicates that it has been successfully validated against the HMRC business rules and can progress on to Level 3.

An Acknowledgement Report from Level 2 is emailed to the sender to report the acceptance or rejection of each submission accordingly.

**Level 3** – Validation is performed to ensure that the submitter has been invited to make submissions via RTI. If so, further checks are made to ensure the validity of the submission. e.g. the PAYE Scheme Reference and the Employer Accounts Office Reference are compatible. If successful, the submission is passed to the HMRC core processing systems.

An Acknowledgement Report from Level 3 is only emailed to the sender to report the rejection of the RTI submission. Success reports are suppressed.

### 2.4 Acknowledgement Reports from the EDI Translation Service

An Acknowledgement Report is issued via email for every file submitted. As a transmission file can contain a mixture of RTI messages the acknowledgement report can also contain details for all these message types. This reports the acceptance or rejection of each GFF Interchange / EDIFACT message in a file.

For Live submissions, the NVREQ report will contain the CorrelationID allocated to each interchange and can be used by the submitter to reconcile the receipt of NVREP messages for all entries within each interchange. A maximum of 8000 errors will be reported for a GFF Interchange or EDIFACT message.

Email systems, whilst usually reliable, are not a guaranteed form of communication. You should expect to receive the email Acknowledgement Report within 24 hours of submitting your file (typically much sooner).

If you do not receive this email, please contact the Online Services Helpdesk giving details of your file contents, e.g. a PAYE Scheme within the file. The Helpdesk will then investigate and respond to your query.

**Online Services Helpdesk: 0845 60 55 999 or [helpdesk@ir-efile.gov.uk](mailto:helpdesk@ir-efile.gov.uk)**

The report will arrive as an attachment to the email. The attachment filename has a .csv extension and can be viewed using Microsoft Excel (or similar spreadsheet program).

As the report is generated as a .csv file, you will find some reformatting of cells may be required when it is opened, e.g. Format, Column, Autofit to display full details in each column. The report shows the status of each submission within the file as either "Accepted" or "Rejected".

Submissions which are shown as "Rejected" need to be corrected and re-submitted. To correct some errors, particularly structural errors, you may need to contact the Online Services Helpdesk for further explanation. In these cases, please quote the reference given in the Subject line of the email.

Please note that the email containing the Acknowledgement Report is automatically generated. If you just "reply" to the email with a query, you will not receive a response.

#### 2.4.1 Acknowledgement Reports from Levels 1 & 2

An example of a .csv file issued by Level 1 or 2 is attached:

NVREQ Sample  
Ack.csv

#### 2.4.2 Acknowledgement Reports from Level 3

As further validation is performed following Levels 1 & 2 it may be possible for an error to be identified following the issue of a Level 2 acceptance acknowledgement.

An example of a .csv file issued by Level 3 is attached. N.B. This will only be issued if an error is found:

NVREQ Sample L3  
Resp.csv

## 2.5 Testing and Recognition

### 2.5.1 Test Service

HMRC has a test service for Software Developers who want to test their system development, and for employers and payroll bureaux to test extracts from their payroll systems.

(Employers/Bureaux who develop their own "in-house" software can be classed as Software Developers for testing purposes.)

All users must register with HMRC prior to submitting tests (see Section 7.1).

When they register, Software Developers will be supplied with a Vendor ID. This should be present in all requests.

All test returns must have the Test Flag set in the 4\* header record or UNB segment.

### 2.5.2 Recognition

Software Developers can ask HMRC to recognise that their product conforms to the system requirements. Details are on the HMRC website:

[http://www.hmrc.gov.uk/ebu/rec\\_scheme.htm](http://www.hmrc.gov.uk/ebu/rec_scheme.htm)

Before HMRC can recognise a product, Software Developers must complete a series of scenarios, which are available from HMRC:

**Online Services Helpdesk: 0845 60 55 999 or [helpdesk@ir-efile.gov.uk](mailto:helpdesk@ir-efile.gov.uk)**

### 3 DATA FORMAT - GFF AND EDIFACT

There are two formats that the EDI data can be sent in – Generic Flat File (GFF) or EDIFACT.

#### 3.1 Generic Flat File Format (GFF)

This is a flat file of data containing a number of named records with the data in fixed length fields in the record - See Section 6.1 for detailed GFF layout.

A GFF transmission file, which is sent within a single communications session, can contain one or more GFF interchanges.

Interchanges within the transmission file can be for any RTI message type but interchanges of other message types are not allowed and will be rejected.

##### 3.1.1 GFF Interchange

A GFF interchange starts with a 4\* header record, which provides the data communication routing information, and ends with the CNT record.

The 4\* header also contains the 'message type' – in this case the NVREQ message.

Each GFF interchange must be uniquely identified by an Interchange Control Reference (ICR). The ICR is contained within the 4\* header.

##### 3.1.2 GFF Submissions

A transmission file from a GFF Trading Partner may contain one or more GFF interchanges, i.e. 4\* batches of records.

A Bureau may submit one transmission file containing several interchanges - one interchange per Employer PAYE Reference.

##### 3.1.3 EDI Translation Service Validation / Rejection

Each GFF interchange is separately validated. If an interchange is rejected, only that rejected interchange will be discarded; subsequent interchanges will be processed, and if validated successfully, will be forwarded to HMRC. The Trading Partner will be informed of the interchange rejection and expected to resubmit only the corrected interchange.

### 3.2 EDIFACT Format

EDIFACT is an EDI standard which is a file containing a number of named records with the data in delimited fields in the record – See Section 6.2 for detailed EDIFACT layout.

A transmission file, which is sent within a single communications session, can contain one or more interchanges.

Interchanges within the transmission file can be for any RTI message type but interchanges of other message types are not allowed and will be rejected.

#### 3.2.1 EDIFACT Interchange

An EDIFACT interchange normally starts with a UNB Interchange Header, which provides the data communication routing information, and ends with a UNZ trailer. However, HMRC require the RTI messages to accommodate a wider ranging character set and so UNOC has been used within UNB to incorporate the additional characters, replacing UNOA and UNOB. This means that in order to avoid transmission problems, especially for trading partners using the VANs, the character set separators need to be reset. This has been effected by using the UNA Service String Advice segment.

The UNA Service String Advice segment has a simple fixed format, and defines the codes which are being used as standard separators throughout the rest of the interchange, namely:

Apostrophe	'	segment terminator
Plus sign	+	segment tag and data element separator
Colon	:	component data element separator
Period	.	decimal point (in numeric data elements only)
Space		reserved for future use
Question Mark	?	release character

Each EDIFACT interchange must be uniquely identified by an Interchange Control Reference (ICR). The ICR is contained within the UNB Interchange Header.

An EDIFACT interchange can contain one or more EDIFACT messages.

All EDIFACT messages within the interchange must be of the same type, e.g. all NVREQ messages; there must not be a mix of messages within the one interchange.

#### 3.2.2 EDIFACT Message

An EDIFACT message starts with a UNH header and ends with a UNT trailer.

The UNH header also contains the 'message type' – in this case the NVREQ message.

## Message Implementation Guidelines for PAYE NINO Verification Request

---

### 3.2.3 EDIFACT Submissions

A transmission file from an EDIFACT Trading Partner may contain one or more interchanges (UNA-UNZ) and each interchange may contain one or more messages.

An Employer/Bureau has a choice of how data can be submitted for multiple Employer PAYE References:

1. One transmission file containing only one interchange (UNA-UNZ), and have multiple messages (UNH-UNT) within that single interchange - one message per Employer PAYE Reference.
2. One transmission file containing several interchanges (UNA-UNZ) - one interchange per Employer PAYE Reference.
3. One transmission file per Employer PAYE Reference.

See examples below.

#### Example 1.

Transmission File1:

UNA

UNB

UNH - UNT for NVREQ for Employer 1

UNH - UNT for NVREQ for Employer 2

UNH - UNT for NVREQ for Employer 3

UNZ

#### Example 2.

Transmission File 1:

UNA, UNB, UNH - UNT, UNZ for EAS for Employer 1

UNA, UNB, UNH - UNT, UNZ for EPS14 for Employer 2

UNA, UNB, UNH - UNT, UNZ for NVREQ for Employer 3

#### Example 3.

Transmission File 1: UNA, UNB, UNH - UNT, UNZ for EAS for Employer 1

Transmission File 2: UNA, UNB, UNH - UNT, UNZ for EPS14 for Employer 2

Transmission File 3: UNA, UNB, UNH - UNT, UNZ for NVREQ for Employer 3

### 3.2.4 EDI Translation Service Validation / Rejection

Each EDIFACT message is separately validated. If a message is rejected, only that rejected message will be discarded; subsequent messages will be processed, and if validated successfully, will be forwarded to HMRC. The Trading Partner will be informed of the message rejection and expected to resubmit only the corrected message.

## Message Implementation Guidelines for PAYE NINO Verification Request

---

### 4 THE NVREQ MESSAGE

The following page shows the NVREQ branching diagram which, on the whole, applies to both the GFF interchange and the EDIFACT message.

The UNH and UNT segments, shown on the branching diagram, only apply to the EDIFACT message; they do not apply to the GFF interchange, which starts with a 4\* header record and is followed by a BGM1 record.

The diagram shows the sequence the data appears in, whether the data record/segment is mandatory or conditional and the maximum number of repetitions of the record/segment.

The diagram is presented in two sections, the Header section and the Summary section which both appear once.

A segment is shown as a box with the segment name. It also shows whether it is mandatory or conditional and the number of times it may occur. The BGM, Beginning of Message segment, is Mandatory and can only occur once in the message.

A segment group is shown enclosed in its group box, with the mandatory or conditional status of the group and the number of times it may occur given in the bottom right hand corner.

In this example, Group 1 is mandatory; it must occur once and can occur up to 99 times. The sequence of the data within the group is that it must start with a NAD (Name and Address segment) and can be followed by up to 99 ATT (Attribute segments).

The normal structure in the NVREQ message is for a NAD segment qualified with qualifier BG (Employer) to be followed by an ATT segment qualified with qualifier 7 (Employer reference) and an ATT segment qualified with qualifier 103 (Employer Accounts Office Reference). The Group then repeats with a NAD qualified with qualifier TC (HMRC Office) followed by an ATT segment qualified with qualifier 17 (HMRC Office Number).

GFF

NAD1A BG  
ATT1 7 AZ12345  
ATT1 103 123PQ7654321X

ATT+ZZZ++17:2:IR:123'

# Message Implementation Guidelines for PAYE NINO Verification Request

### 5 NVREQ DATA ITEMS

The table in Section 5.1.3 below lists the NVREQ **business fields** that need to be extracted from the Payroll System.

The table also indicates the segments and qualifier used to contain each of the business fields and indicates whether the field is Mandatory or Optional.

e.g. Section 5.1.3 states that the HMRC Office Number is Mandatory and must be contained within the ATT segment with qualifier = 17.

#### 5.1 Field Status

##### 5.1.1 Mandatory Fields

Mandatory fields are required by HMRC and must be provided by the Employer.

Mandatory fields must appear in the correct format.

If mandatory fields are omitted or provided in an incorrect format, the message will be rejected. See Section 6 for further details of record layouts and the format of specific fields.

##### 5.1.2 Optional Fields

Optional fields should be provided if available to the employer as they will help speed up processing by HMRC. **Optional fields may become mandatory due to the content or presence / absence of other optional fields**, e.g. If Foreign Country is present at least two lines of Employee address must be present.

When optional fields are provided, they must appear in the correct format.

If optional fields are provided in an incorrect format the message will be rejected. See Section 6 for further detail of Record Layouts.

## Message Implementation Guidelines for PAYE NINO Verification Request

### 5.1.3 Validation Rules

Validation Rule /Data Item Number	NVREQ Field Name <i>Validation Rules</i>	Maximum Field Length	Status	Format / Character Set	Segment / Record Name	Qualifier (incorrectly qualified segments will cause the message to be rejected)
1	<b>HMRC Office Number</b> <i>Must be Numeric in the range 001 – 999. Leading zeros must be present.</i>	3	<b>Mandatory</b>	Numeric	ATT/ATT1	17
2	<b>Employer PAYE Reference</b> <i>Allowable characters shown in Character Set B.</i> <i>The first character must not be a space</i> <i>The combination of HMRC Office Number and Employer PAYE Ref must be valid for live submissions</i>	10	<b>Mandatory</b>	Alphanumeric	ATT/ATT1	7
3	<b>Employer Accounts Office Reference Number</b> <i>The Employer Accounts Office Reference Number must be in the format</i> <ul style="list-style-type: none"> <li>• <i>characters 1-3 must be numeric</i></li> <li>• <i>character 4 must be 'P'</i></li> <li>• <i>character 5 must be alpha</i></li> <li>• <i>characters 6-12 must be numeric</i></li> <li>• <i>character 13 must be numeric or 'X'</i></li> </ul> <i>Note: leading zero's should be used to pad out fields 1-3 and 6-13 if necessary</i>	13	<b>Mandatory</b>	Alphanumeric	ATT/ATT1	103

EB5 (PAYE) / NVREQ

## Message Implementation Guidelines for PAYE NINO Verification Request

Validation Rule /Data Item Number	NVREQ Field Name <i>Validation Rules</i> Alpha = A-Z (upper case) a-z (lower case), Numeric = 0-9 Alphanumeric = any character within the <i>designated character set</i> – see <i>Appendix A</i>	Maximum Field Length	Status	Format / Character Set	Segment / Record Name	Qualifier (incorrectly qualified segments will cause the message to be rejected)
4	<b>Employer Name</b> <i>Character 1 must be Alphanumeric and not a space; remaining characters must conform to Character Set A</i>	35	<b>Mandatory</b>	Alphanumeric	NAD/ NAD1	BG
5	<b>National Insurance Number</b> <i>Must be valid format if specified: Characters 1 &amp; 2 must be alpha and must be a valid prefix – See Appendix B Characters 3 – 8 must be numeric Character 9 must be A, B, C, D or space</i>	9	Optional	Alphanumeric	ATT/ATT2	11
5a	<b>Title</b> <i>Character 1 must be Alpha and not a space; remaining characters must conform to Character Set C.</i>	35	Optional	Alphanumeric	NAD/ NAD2	BV
6	<b>Surname or Family Name</b> <i>Character 1 must be Alpha and not a space; remaining characters must conform to Character Set D.</i>	35	<b>Mandatory</b>	Alphanumeric	NAD/ NAD2	BV
7	<b>Forename or Given Name</b> <i>Character 1 must be Alpha and not a space; remaining characters must conform to Character Set D.</i>	35	<b>Mandatory</b>	Alphanumeric	NAD/ NAD2	BV

EB5 (PAYE) / NVREQ

## Message Implementation Guidelines for PAYE NINO Verification Request

Validation Rule /Data Item Number	NVREQ Field Name <i>Validation Rules</i> Alpha = A-Z (upper case) a-z (lower case), Numeric = 0-9 Alphanumeric = any character within the <i>designated character set</i> – see <i>Appendix A</i>	Maximum Field Length	Status	Format / Character Set	Segment / Record Name	Qualifier (incorrectly qualified segments will cause the message to be rejected)
9	<b>Second Forename or Given Name</b>  <i>Character 1 must be Alpha and not a space; remaining characters must conform to Character Set D.</i>  <i>Must not be present if Forename or Given Name not present.</i>	35	Optional	Alphanumeric	NAD/ NAD2	BV
10	<b>Date of Birth</b>  <i>Must be a valid calendar date in the appropriate format.</i> <i>Must be today or earlier.</i> <i>Must be later than 130 years before today</i>	8	<b>Mandatory</b>	Numeric	DTM/ DTM2	329
11	<b>Current Gender</b>  <i>Must be “M” (male) or “F” (female)</i>	1	<b>Mandatory</b>	Alpha	ATT/ATT2	9
13	<b>Address Line 1</b>  <b><i>Mandatory if NINO is absent.</i></b> <i>If present must conform to Character Set B</i> <i>First Character must be 0-9, A-Z or a-z.</i> <i>Must be present if Foreign Country is present</i>	35	Optional	Alphanumeric	NAD/ NAD2	BV

EB5 (PAYE) / NVREQ

EB5 (PAYE) / NVREQ

### 6 RECORD LAYOUTS

#### 6.1 GFF Layout

A GFF interchange is made up of a 4\* Header Record followed by several fixed-length records specific to the NVREQ.

These NVREQ records are made up of fixed-length fields which are delimited by a space character (not shown in table below).

Each NVREQ interchange is made up of a Header Section (records BGM1 to UNS1), containing data relating to the whole interchange e.g. HMRC Office Number; a Detail section (records LIN1 to UNS2) containing one or more individual employee details and a Trailer section (record CNT1) containing a control count.

Each record starts with a name, e.g. NAD1A is the Header Section Name and Address record, ATT2 is in the Detail Section and contains an Attribute of the employee (the numbers in the Record Names relate to the occurrence of the record within the interchange, they do not necessarily relate to the section of the interchange).

Fixed length records vary in length, e.g. all NAD1A records are 189 characters long: all ATT1 records are 45 characters long.

Records may be terminated with either a line feed LF or a carriage return/line feed CR/LF.

The format of the data is indicated as follows:-

- a = alpha
- n = numeric
- an = alphanumeric

The length is indicated by the number following the format type:-

- a4 = alpha field 4 characters in length
- n4 = numeric field 4 characters in length
- an4 = alphanumeric field 4 characters in length

The data format within the record contents may be shown with .. between the format type and length. This means the data length is up to the length stated.

- an..10 = alphanumeric field of up to 10 characters
- n..11 = numeric field with a maximum value of up to 11 digits

Alpha and Alphanumeric data is left justified and padded with trailing spaces.

Numeric data is right justified and padded with leading zeroes.

The records and their contents used in the NVREQ interchange are shown in the following table.

**GFF field contents with fixed values are shown in Bold in the table below.**

Fields with variable contents are shown in Normal font.

### 6.1.1 GFF NVREQ Example

An example of a NVREQ GFF message can be found on the HMRC Website at: [http://www.hmrc.gov.uk/ebu/ebu\\_paye\\_ts.htm](http://www.hmrc.gov.uk/ebu/ebu_paye_ts.htm)

## Message Implementation Guidelines for PAYE NINO Verification Request

### 6.2 EDIFACT Layout

An EDIFACT message is made up of segments of data.

The segments used in the NVREQ message are shown below.

Each segment is made up of Composite elements and Stand-Alone elements. Generally, Composite Element names begin with "C" for Composite, e.g. C002 in the BGM segment below. Composite Elements within Service segments (UNB, UNH, UNT, UNZ) are different - their names begin with "S" for Service, e.g. S001 in the UNB segment below.

Composite elements are made up of several Simple elements, each of which has its own identifying number, e.g. 1001 in the C002 Composite element in the BGM segment below.

Stand-Alone elements are just like Simple Elements, except that they are not part of a Composite Element, e.g. 3035 in the NAD segment below.

**Composite and Stand-Alone elements are shown in BOLD in the table below.**

Simple Elements are shown in Normal font.

**EDIFACT element contents with fixed values are shown in BOLD in the table below.**

Contents with variable values are shown in Normal font.

The information above is important because it defines how the EDIFACT data is constructed.

EDIFACT uses Special Characters (+ : ? and ') to identify the position of data in the segment and consequently the meaning of the data, as detailed below:

' is the Segment Terminator,

+ is the Segment Tag and Composite/Stand-Alone Element Separator,

: is the Simple Element Separator and

? is the Release Character.

The Release Character ? immediately preceding one of the Special Characters ' + : ? restores its normal meaning, e.g. O?'CONNOR means O'CONNOR.

The use of the other Special Characters is explained further below.

Each segment starts with a Segment Tag or Name, e.g. ATT is the Segment Tag for the Attribute segment.

A plus sign + always follows the segment name. Therefore, ATT+ means this is an Attribute segment.

The Attribute segment carries data which is an attribute of the Employer or Employee as named in the preceding NAD segment.

The first element of data follows the first plus sign +.

## Message Implementation Guidelines for PAYE NINO Verification Request

The ATT segment layout below shows that the first element is a Stand-Alone element, (it does not start with an S or C), numbered 9017. The data carried in 9017 is the Attribute Function Qualifier which, in the NVREQ message, is ZZZ.

ATT+ZZZ means this is an Attribute segment with an element Attribute Function Qualifier of ZZZ.

The plus sign + also marks the end of a Composite or Stand-alone element (except at the end of a segment – see later), giving ATT+ZZZ+

The next element in the ATT segment is a Composite element - C955 Attribute Type. This element is not used in the NVREQ message, so to signify this the plus sign is used to show the start of the next element giving ATT+ZZZ++

The next element in the ATT segment is a Composite element - C956 Attribute Details. This element is a Composite element containing 4 Simple elements:

- 9019 Attribute coded
- 1131 Code List Qualifier
- 3055 Code list Agency and
- 9018 Attribute.

Data is present in each of these 4 Simple elements.

A colon : is used to separate each Simple element within a Composite element, e.g. ATT+ZZZ++7:2:IR:1234567

As there are no more elements in this segment the + is not used to show the end of this element.

Instead the apostrophe or segment terminator ' is used to signify the end of the segment, thus giving the complete segment as ATT+ZZZ++7:2:IR:1234567'

The data content sent in each segment and an example of how the EDIFACT segment will look is given in the following table.

The format of the data is indicated as follows:-

- a = alpha
- n = numeric
- an = alphanumeric

The length is indicated by the number following the format type:-

- a4 = alpha field 4 characters in length
- n4 = numeric field 4 characters in length
- an4 = alphanumeric field 4 characters in length

The data format within the record contents may be shown with .. between the format type and length. This means the data length is up to the length stated.

- an..10 = alphanumeric field of up to 10 characters
- n..11 = numeric field with a maximum value of up to 11 digits

## Message Implementation Guidelines for PAYE NINO Verification Request

Segment Name	EDIFACT Element Name	Segment Content	Contents		Notes
<b>ATT – Attribute of Employer</b>			Mandatory Segment		
	<b>9017</b>	<b>ATTRIBUTE FUNCTION QUALIFIER</b>	Must contain	<b>ZZZ</b>	ZZZ = qualifier for Mutually defined
	<b>C955</b>	<b>ATTRIBUTE TYPE</b>	Not used		
	<b>C956</b>	<b>ATTRIBUTE DETAILS</b>			
	9019	Attribute, coded	Must contain	<b>103</b>	103 = qualifier for Employer Accounts Office Reference Number
	1131	Code list qualifier	Must contain	<b>2</b>	
	3055	Code list agency	Must contain	<b>IR</b>	
	9018	Attribute	Must contain	Employer Accounts Office Reference Number - format an13	See Validation Rule 3
<b>EDIFACT example: ATT+ZZZ++103:2:IR:123PQ7654321X'</b>					
<b>NAD – Name and Address</b>			Mandatory Segment		<b>Required to qualify the following ATT segment</b>
	<b>3035</b>	<b>PARTY QUALIFIER</b>	Must contain	<b>TC</b>	TC = qualifier for HMRC Office
	<b>C082</b>	<b>PARTY IDENTIFICATION DETAILS</b>	Not used		
	<b>C058</b>	<b>NAME AND ADDRESS</b>	Not used		
	<b>C080</b>	<b>PARTY NAME</b>	Not used		
<b>EDIFACT example: NAD+TC'</b>					
<b>ATT – Attribute of HM Revenue &amp; Customs Office</b>			Mandatory Segment		
	<b>9017</b>	<b>ATTRIBUTE FUNCTION QUALIFIER</b>	Must contain	<b>ZZZ</b>	ZZZ = qualifier for Mutually defined
	<b>C955</b>	<b>ATTRIBUTE TYPE</b>	Not used		
	<b>C956</b>	<b>ATTRIBUTE DETAILS</b>			
	9019	Attribute, coded	Must contain	<b>17</b>	17 = qualifier for HMRC Office Number
	1131	Code list qualifier	Must contain	<b>2</b>	
	3055	Code list agency	Must contain	<b>IR</b>	
	9018	Attribute	Must contain	HMRC Office Number, 001 to 999	See Validation Rule 1
<b>EDIFACT example: ATT+ZZZ++17:2:IR:123'</b>

## Message Implementation Guidelines for PAYE NINO Verification Request

Segment Name	EDIFACT Element Name	Segment Content	Contents		Notes
<b>DTM – Date and Time</b>			Mandatory Segment		
	<b>C507</b>	<b>DATE/TIME/PERIOD</b>			
	2005	Date period qualifier	Must contain	<b>243</b>	243 = qualifier for Date of Message
	2380	Date period	Must contain	Date of Message - format CCYYMMDD	
	2379	Date period format qualifier	Must contain	<b>102</b>	102 = qualifier for format CCYYMMDD
<b>EDIFACT example: DTM+243:20130414:102'</b>					
<b>UNS – Section Identifier</b>			Mandatory Segment		
	0081	Section Identifier	Must contain	<b>D</b>	D = qualifier for Detail
<b>EDIFACT example: UNS+D'</b>					
<p>The Detail section (LIN to DTM) can be repeated for each employee included in the message up to a maximum of 100 employees.</p>					
<b>LIN – Line Item</b>			Mandatory Segment		
	<b>1082</b>	<b>LINE ITEM NUMBER</b>	Must contain	Employee record Number within this message - format n..6	
<b>EDIFACT example: LIN+1'</b>					

## Message Implementation Guidelines for PAYE NINO Verification Request

Segment Name	EDIFACT Element Name	Segment Content	Contents		Notes
<b>NAD – Name and Address</b>			Mandatory Segment		
	<b>3035</b>	<b>PARTY QUALIFIER</b>	Must contain	<b>BV</b>	BV = qualifier for Employee
	<b>C082</b>	<b>PARTY IDENTIFICATION DETAILS</b>	Not used		
	<b>C058</b>	<b>NAME AND ADDRESS</b>			
	3124	Name and address line	May contain	Address Line 1 – format an..35	See Validation Rule 13
	3124	Name and address line	May contain	Address Line 2 – format an..35	See Validation Rule 14
	3124	Name and address line	May contain	Address Line 3 – format an..35	See Validation Rule 15
	3124	Name and address line	May contain	Address Line 4 – format an..35	See Validation Rule 16
	3124	Name and address line	May contain	Foreign Country – format an..35	See Validation Rule 18
	<b>C080</b>	<b>PARTY NAME</b>			
	3036	Party name	Must contain	Surname or Family Name – format an..35	See Validation Rule 6
	3036	Party name	Must contain	Forename or Given Name – format an..35	See Validation Rule 7
	3036	Party name	May contain	Second Forename or Given Name – format an..35	See Validation Rule 9
	3036	Party name	May contain	Title – format an..35	See Validation rule 5a
	<b>C059</b>	<b>STREET</b>	Not used		
	<b>3164</b>	<b>CITY NAME</b>	Not used		
	<b>3229</b>	<b>COUNTRY SUB-ENTITY IDENTIFICATION</b>	Not used		
	<b>3251</b>	<b>POSTCODE IDENTIFICATION</b>	May contain	UK Postcode – format an..10	See Validation Rule 17
<b>EDIFACT example: NAD+BV++1 CARDBOARD LANE:TELFORD:SHROPSHIRE+THYME:JUSTIN:EDWARD:MR+++TL9 9ZZ'</b>					
<b>ATT – Attribute of Employee</b>			Optional Segment		<b>This record is Optional. It should only be provided if a NINO needs to be included in the return</b>
	<b>9017</b>	<b>ATTRIBUTE FUNCTION QUALIFIER</b>	Must contain	<b>ZZZ</b>	ZZZ = qualifier for Mutually defined
	<b>C955</b>	<b>ATTRIBUTE TYPE</b>	Not used		
	<b>C956</b>	<b>ATTRIBUTE DETAILS</b>			
	9019	Attribute, coded	Must contain	<b>11</b>	11 = qualifier for NINO
	1131	Code list qualifier	Must contain	<b>2</b>	
	3055	Code list agency	Must contain	<b>IR</b>	
	9018	Attribute	Must contain	National Insurance Number (NINO) – format an..9	See Validation Rule 5
<b>EDIFACT example: ATT+ZZZ++11:2:IR:AB123456C'</b>

## Message Implementation Guidelines for PAYE NINO Verification Request

Segment Name	EDIFACT Element Name	Segment Content	Contents	Notes
<b>Further employee details (LIN through DTM segments) may be included here</b>				
<b>UNS – Section Identifier</b>			Mandatory Segment	
	0081	Section Identifier	Must contain	<b>S</b>
<b>EDIFACT example: UNS+S'</b>				
<b>CNT - Control</b>			Mandatory Segment	
	<b>C270</b>	<b>CONTROL</b>		
	6069	Control qualifier	Must contain	<b>2</b>
	6066	Control value	Must contain	Number of LIN through DTM segments (same as Number of Employees) – format n..8
<b>EDIFACT example: CNT+2:1'</b>				
<b>UNT – Message Trailer</b>			Mandatory Segment	
	<b>0074</b>	<b>NUMBER OF SEGMENTS</b>	Must contain	Message segment count including UNH and UNT segments, format n..10
	<b>0062</b>	<b>MESSAGE REFERENCE NUMBER</b>	Must contain	Same value as in UNH, format an..14
<b>EDIFACT example: UNT+79+1'</b>				
<b>UNZ – Interchange Trailer</b>			Mandatory Segment	
	<b>0036</b>	<b>INTERCHANGE CONTROL COUNT</b>	Must contain	Count of messages within interchange, e.g. 1 – format n..6
	<b>0020</b>	<b>INTERCHANGE CONTROL REFERENCE</b>	Must contain	Same value as 0020 in UNB – format n..14
<b>EDIFACT example: UNZ+1+2'</b>				

### 6.2.1 EDIFACT NVREQ Example

An example of a NVREQ EDIFACT message can be found on the HMRC Website at: [http://www.hmrc.gov.uk/ebu/ebu\\_paye\\_ts.htm](http://www.hmrc.gov.uk/ebu/ebu_paye_ts.htm)'

EB5 (PAYE) / NVREQ

### 7 PROCESSING CHECKLIST

#### 7.1 Registration

All EDI users, whether Software Providers, Employers or Bureaux, must register with HMRC before they can test their data. It is recommended that you register your intent to use EDI as soon as possible after commencing development.

Online Services Helpdesk: 0845 60 55 999 or [helpdesk@ir-efile.gov.uk](mailto:helpdesk@ir-efile.gov.uk)

#### 7.2 Character Set

All EDI data submitted to HMRC must be within a defined character set. The character set which must be used within the message is given in Appendix A.

Any message containing characters outside this specific character set will be rejected before reaching the HMRC system. The error will be reported to the sender.

#### 7.3 Interchange Control References

Each interchange sent by an Employer/Bureau must contain a unique "Interchange Control Reference" (ICR) in its header.

For EDIFACT submissions, the ICR is contained within the UNB segment; for GFF submissions, the ICR is contained within the 4\* header.

If any problems occur with the transmission or validation of the data prior to it being processed by HMRC, the ICR will be used to reference the interchange that has failed.

It is essential that the ICR is unique for each NVREQ interchange sent. It is recommended that the ICR is sequential and increments, i.e. maintain one sequence of ICRs for the messages within this group.

#### 7.4 GFF Record Lengths

All GFF records must be the correct length as defined in Section 6.1.

A common problem is that the GFF records are the incorrect length, this often occurs when a previously unused optional record is produced. As part of your development please ensure all record lengths, especially optional records, are correct.

#### 7.5 Sending Data to HMRC

The Employer/Bureau is responsible for ensuring transmitted data has been received either by the Value Added Network (VAN) or intermediary communication provider.

This is normally achieved by either checking reports issued by the VAN or setting your communication software to request End to End Responses (EERPs) and checking they are successful.

### 7.6 Error Correction

The Employer/Bureau is responsible for correcting and resubmitting data reported as faulty. See Sections 2.5 and 2.6 for details of Acknowledgement Reports generated by the EDI Translation Service and HMRC.

Acknowledgement Reports from the EDI Translation Service will quote the Interchange Control Reference (ICR), and also the PAYE Scheme.

Acknowledgement Reports from HMRC will quote the PAYE Scheme.

In both cases the Employer/Bureau will then be expected to correct and resubmit the data.

## Message Implementation Guidelines for PAYE NINO Verification Request

### Appendix A: Character Sets

Any message containing characters outside this specific character set, will be classed as an error and will be reported to the sender. e.g. ~ |

**N.B.** EDIFACT uses the characters + : ? and ' to identify the position of the business data in the segment and consequently the meaning of the data.

The ? is used as a release character immediately preceding one of the characters ' + : ? to restore their normal meaning, e.g. O?'CONNOR means O'CONNOR.

		<i>Employer Name</i>	<i>Employer PAYE Reference, Address Line, Foreign Country &amp; Payroll Id</i>	<i>Title</i>	<i>Surname, Forename &amp; Second Forename</i>	<i>UK Postcode</i>

## APPENDIX B: National Insurance Number Prefix Validation

### National Insurance Number Prefix Validation Rules

1. The characters D, F, I, Q, U and V are not used as either the first or second letter of a NINO prefix.
2. The letter O is not used as the second letter of a NINO prefix.
3. Prefixes BG, GB, KN, NK, NT, TN and ZZ are not to be used.
