Re: Additional right angle TNC connector on GPS cable

In your letter dated 11th November 2010, you requested authorisation for the optional addition of a right angle TNC connector to reduce strain on the GPS cable in the roadside RID unit

We are pleased to inform you that this change is acceptable, and no testing will be required before the amendment can be used. It is understood that there will be no other changes in the approved hardware or software.

This additional component is a Gigatronix TN17-10-A06-2 (TNC right angle plug to jack adaptor) with RedSpeed part number 575-158.

Our records will be amended to incorporate this optional change.

Ian Humphrey
