

Protecting and improving the nation's health

Public Health Outcomes Framework

Indicators at a glance (August 2016)

Notes:

- Value cells are shaded red, amber or green where the England value can be benchmarked against a goal.
- In the change columns, prev refers to the change in value compared to the previous data point; base refers to the change in value compared to the baseline value.
- Increases or decreases are only shown if they are statistically significant. An upwards arrow (↑, ↑ or ↑) represents a significant increase in the indicator value, a downwards arrow (↓, ↓ or ↓) represents a significant decrease. A sidewards arrow (⇔) is displayed if there has been no significant change.
- Statistically significant changes highlighted in this document have been calculated by comparing the confidence intervals for the respective time points. If the confidence intervals do not overlap, the change has been flagged as significant.
- Where no arrow is shown, no comparison has been made. This may be due to the fact that the required data to make the comparison is not available for the time point, or that no confidence interval values are available for the indicator.
- The arrows are coloured green and red for those indicators where a change can be described as improving or worsening respectively.
- Additional information on recent trends has been added to the online PHOF tool. This is calculated in a different way to the information in this summary. This summary will be developed to show the information from the web tool in future versions.
- Indicators where data has been updated or revised in the latest update have been shaded in the tables.
- Indicators where the value is marked with * have a data note attached to them. See www.phoutcomes.info for full details
- Indicators where inequalities data is available in the webtool are marked with a \neq .

Summary for England

Domain: Overarching indicators						
				Change	Change	
Indicator	Period	Value	Unit	from	from
