

Dear Madam and Sir,

I would like to reply on your Applications.

I am an individual, working in nuclear power in Germany

I would like to know, Way the plant Design of the uk-abwr is described as baseload capable on page 18 of the. NQIA -Justifikation. Bwr s Are capable of load following and flexible power Output and fit perfectly to viable renewable Energy sources such as wind and Solar power. For the duration of the 60 years the Reactor is made of Grid conditions and demands may change so it Might be Worth Taking flexibility from the beginning into designconsiderations into Account as we experienced in Germany.

Kind regards

Dagmar Hallfarth
