

Runnel Stone Marine Conservation Zone

This document sets out why this site is important, the features protected and general management information.

17 January 2016

Overview

This site becomes a Marine Conservation Zone (MCZ) in January 2016. This means that specific features within this area are protected and, where necessary, regulators will manage marine activities.

Where is the site

Runnel Stone MCZ is an inshore site on the west Cornwall coast in the south west of England, at the southern tip of Penwith peninsula. The site covers an area of 20 km². The seaward boundary runs in an arc 3.5km from a central point that overlaps the lookout station at Gwennap Head.

Why it's important

MCZs, together with other types of marine protected areas, will form the UK contribution to an international network of protected sites in the north east Atlantic. The network will help to deliver the government's vision of clean, healthy, safe, productive and biologically diverse oceans and seas. MCZs protect typical, rare or declining habitats and species found in our seas.

This site protects a range of habitats from soft sediments to exposed rock, important for a range of life. It also contains the Runnel Stone reef which is important for a range of species.

The MCZ's position at the southern tip of the Penwith peninsula exposes it to the full force of the Atlantic, creating very exposed rocky shores which are home to a diverse variety of wildlife. These

habitats support a range of seaweeds and animals including mussels, limpets and barnacles. Infralittoral rock, found in shallow waters, provides a habitat for seaweeds which in turn provides a home for various small marine creatures which shelter and feed amongst the seaweeds. Circalittoral rocks are found in deeper waters and the species that live on them can include sea-fans, anemones or sponges.

The sandy beaches protected in this site host a range of species, such as shrimp-like sandhoppers, cockles, sea nails and worms burrowed beneath the surface.

Designation of this site as a Marine Conservation Zone protects the following features. You can find detailed explanations of each feature at <http://jncc.defra.gov.uk/page-4527>.

Protected features	General management approach
High energy intertidal rock	Maintain in favourable condition
Intertidal coarse sediment	Maintain in favourable condition
Intertidal sand and muddy sand	Maintain in favourable condition
High energy infralittoral rock	Maintain in favourable condition
High energy circalittoral rock	Maintain in favourable condition
Moderate energy circalittoral rock	Maintain in favourable condition
Subtidal coarse sediment	Maintain in favourable condition
Subtidal sand	Maintain in favourable condition
Pink sea-fan (<i>Eunicella verrucosa</i>)	Maintain in favourable condition

Management of the site

Now that this site has been designated, some activities may need additional management. Activities and the management measures used to regulate them may need to change if new evidence becomes available.

Most marine activity is already regulated by the relevant regulatory bodies. There are existing byelaws, national laws and European Regulations which regulators use to manage fishing, coastal development, recreation and pollution. These also apply in MCZs.

Regulators will manage each site according to the features and activities in, or near, a specific area. Management measures will be implemented at sites most at risk of damage first, regulating only those activities which have a detrimental impact on the designated features. Any management measures that are required for MCZs will be applied on a case-by-case basis.

Management in MCZs can take several different forms, from using existing licensing framework, specific byelaws and orders or an EU Regulation for a site. There has to be public consultation on permanent byelaws and orders. For activities that already need a marine licence, regulators consider the MCZ in their decision as soon as the site is consulted on. Find out more about marine licensing in MCZs at <https://www.gov.uk/government/publications/marine-conservation-zones-mczs-and-marine-licensing>.

Regulators

This table lists the authorities responsible for MCZs and the activities they manage.

Lead regulator	What it manages
Inshore Fisheries and Conservation Authorities (IFCAs) http://www.association-ifca.org.uk	<ul style="list-style-type: none"> Fisheries in the inshore area (0-6 nautical miles (nm)) including commercial fisheries and recreational sea angling
Marine Management Organisation (MMO) https://www.gov.uk/government/organisations/marine-management-organisation	<ul style="list-style-type: none"> Fisheries in the 6-12nm area Fisheries: enforcement of national and EU legislation Licensable activities such as dredging and disposal of dredged material, removal of gravel below mean high water springs, subsea cables (up to 12nm), construction (including renewables below 100MW generating capacity, ports and coastal protection) Harbour Orders and Harbour Empowerment Orders Section 36 of the Electricity Act 1989 and safety zones for offshore renewable energy installations consents Enforcement of licensable activity and other consents (including deemed marine licences) Development of marine plans Activities requiring a wildlife licence
Environment Agency (EA) https://www.gov.uk/government/organisations/environment-agency	<ul style="list-style-type: none"> Fisheries for migratory and freshwater fish Coastal protection and flood management Water quality Permitted discharges from terrestrial sources
Department of Energy and Climate Change (DECC) https://www.gov.uk/government/organisations/department-of-energy-climate-change	<ul style="list-style-type: none"> Oil and gas related activities Renewable energy related activities
Harbour Authorities and local planning authorities	<ul style="list-style-type: none"> Harbour authorities have management responsibilities for the port and coastal waters within their jurisdiction Local authorities manage activities at the coast. These include coastal recreation, tourism, economic regeneration, flood protection and planning on coasts and estuaries. For further information contact your local authority or IFCA
Department for Transport (DfT) https://www.gov.uk/government/organisations/department-for-transport	<ul style="list-style-type: none"> Ports, shipping, harbours, ship pollution and offshore safety
Natural England (NE) https://www.gov.uk/government/organisations/natural-england	<ul style="list-style-type: none"> Public access
