An important subject. Mainly copies with FCO in the lead but some original material. Very inconclusive, with no indication of the files where action continued. There will probably be better versions of this story but K? as long stop. I have expanded the t  
Lots of copies but some significant original material on an important subject. Includes submissions to SoS.

Lots more copies and less original material; all of a more routine nature than Pt B. Briefing for high level meetings rather than development of policy. A marginal case for retention

Interesting for AWB's rejection of officials' original proposals for increased petrol taxation to reduce consumption (Mar 79). But CIP in overall lead and their files should provide a better record.

The main file with significant original input and development of policy

Nothing vital, but includes, eg interesting, original exchange with the Chancellor at final doc

Plenty of meaty material and Ministerial input to policy, some of it original, including original letter of 29/12/80 from Geoffrey Howe as C of E.

The subject matter certainly merits retention, but PP Div's files in the PET series should provide a better record: there is little original material on this file

Pressure for recognition of impact of prices on energy intensive industries: received sympathetically. The main file with original material

Mostly copies but subject of interest.

Original papers.

Copy papers but subject of interest. Keep.

Original papers.

Original papers.

Original papers.

Proposals for replacement by higher tax on petrol etc. DTp and Treasury in the lead and it seems that earlier parts D. Quite interesting, but better versions in files of other depts, which will include D/En input on energy implications.

SECRET These are copies but the minute to the PM is of interest. If we do not have the original ( It should be held by the Cabinet Office) PRO may wish to keep.

I have expanded the title as the file title is far too vague. This is the main D/En file with substantial original input raising constitutional and other issues. Interesting with substantial implications. Pt B not seen but Pt A well worth K

The main D/En file with original material recording D/En's reargurd action fighting proposals for lead free petrol

## Originals

Some originals. Subject of interest.

Some originals. Subject of interest.

Some original papers. Subject of interest.

Original input on an important subject.

Really meaty, original material, with this the lead file.

Continues a very interesting story. Pt E still to be reviewed.

Some overlap with ENP 600/403/03, but wider ranging. Complementary, with greater insight into Ministerial thinking - at least without having seen later parts of other file. Treasury being difficult! Worth K
