K/D	Reviewers Comment	CM Confirmation
K	A number of Energy policy discussions which are important enough to K. They included: gas appliances, nuclear,depletion policy, coal, and energy supply and use.	
K	Probably worth keeping a record to record TUC attitude to energy policy( Intervention/ job protection etc.). It is not obvious that this record will appear elsewhere	
K	A look at the many factors affecting energy supply and pricing in all areas e.g. coal ,oil gas, nuclear etc etc . As expected there is much input from all areas with action at Ministerial and Dep Sec level. There is some doubt as to how much Energy Policy DIV is in charge , but its seems to have sufficient co-ordinating influence to say K	
k	Ditto Ditto	
K	A pre research discussion not the actual research. So D	
K	An examination of the potential for conservation rather than the actual measures eg insulation, although they are discussed in part. There will be much more data on conservation in many records, and more positive data. But this is an original slant to the conservation story that just might justify a K.? Energy Policy partly in lead.	
K	Ditto Ditto	

K                      The pricing studies seem to have been jointly led by EIP Energy International Policy and the EPU the Energy Policy Unit so perhaps K. - But there will be many such studies so the added value of this record is doubtful. The study itself looks predictable but interesting enough.

K                      EIP in the lead and individual and interesting enough to K . No decision reached in this file but the balance of opinion is against aid
