

Monthly UK Sea Fisheries Landings: November 2014

Note to users

Figures for the current year will be affected by lags in getting data finalised on our systems. This will affect the year on year comparisons as the 2013 data are more complete. Please refer to Explanatory Notes point 9 for further details.

Key points

- The total quantity of **landings by the UK fleet** for the period January to November 2014 has increased by 20 per cent compared with the same period in 2013. This was driven by a 74 per cent increase in mackerel landings, a result of the large increase in quota for this species. The total value of fish landed was up by 15 per cent.
- The mackerel season runs from October to February. Early on in the year, prices for the **UK fleet** had been relatively high, averaging over £1 a kilo in February. But latest figures show average prices down to 66p a kilo in November, presumably because of the large increase in supply this autumn.
- Early closure of skate and ray fisheries is reflected in November **UK fleet landings** of 35 tonnes, compared with 191 tonnes in October.
- The average price for haddock **landed into the UK by UK vessels** for the period January to November 2014 is 25 per cent higher than in the same period last year. The average price of herring is down by 25 per cent to 27p per kilo. Scallop prices are up 16 per cent for the year so far.
- **Foreign vessels** accounted for 10 per cent of the quantity landed **into the UK** during November while 31 per cent of the quantity landed by the **UK fleet was abroad**.
- In January to November 2014, the **UK fleet landed** 155 thousand tonnes into Peterhead. This is more than three times the quantity of landings for Lerwick, the second highest port. The English port with the highest landings was Brixham (11 thousand tonnes) but Newlyn's fish had the highest value (£20.4 million).

Excel versions of the following tables, along with an excel file containing the underlying data are available at:

Background

This notice provides an overview of the weight and value of landings by UK vessels into the UK and abroad, and by foreign vessels into the UK. The data are based on those landings data to date that have been fully validated. Final figures for the year will be provided in our annual UK Sea Fisheries Statistics publication, released in October.

Comparisons of monthly data should be made with care due to timing lags in the data.

The contents of this report have recently been revised following a user consultation in early 2014. We welcome any further comments or suggestions on this release. Please contact the MMO Statistics team if you have any questions, queries or comments on this release:

Revisions Policy

Revisions to previously published figures for individual months are not provided in this release. However, the figures in this month's release and the accompanying dataset are the latest currently available.

Explanatory Notes

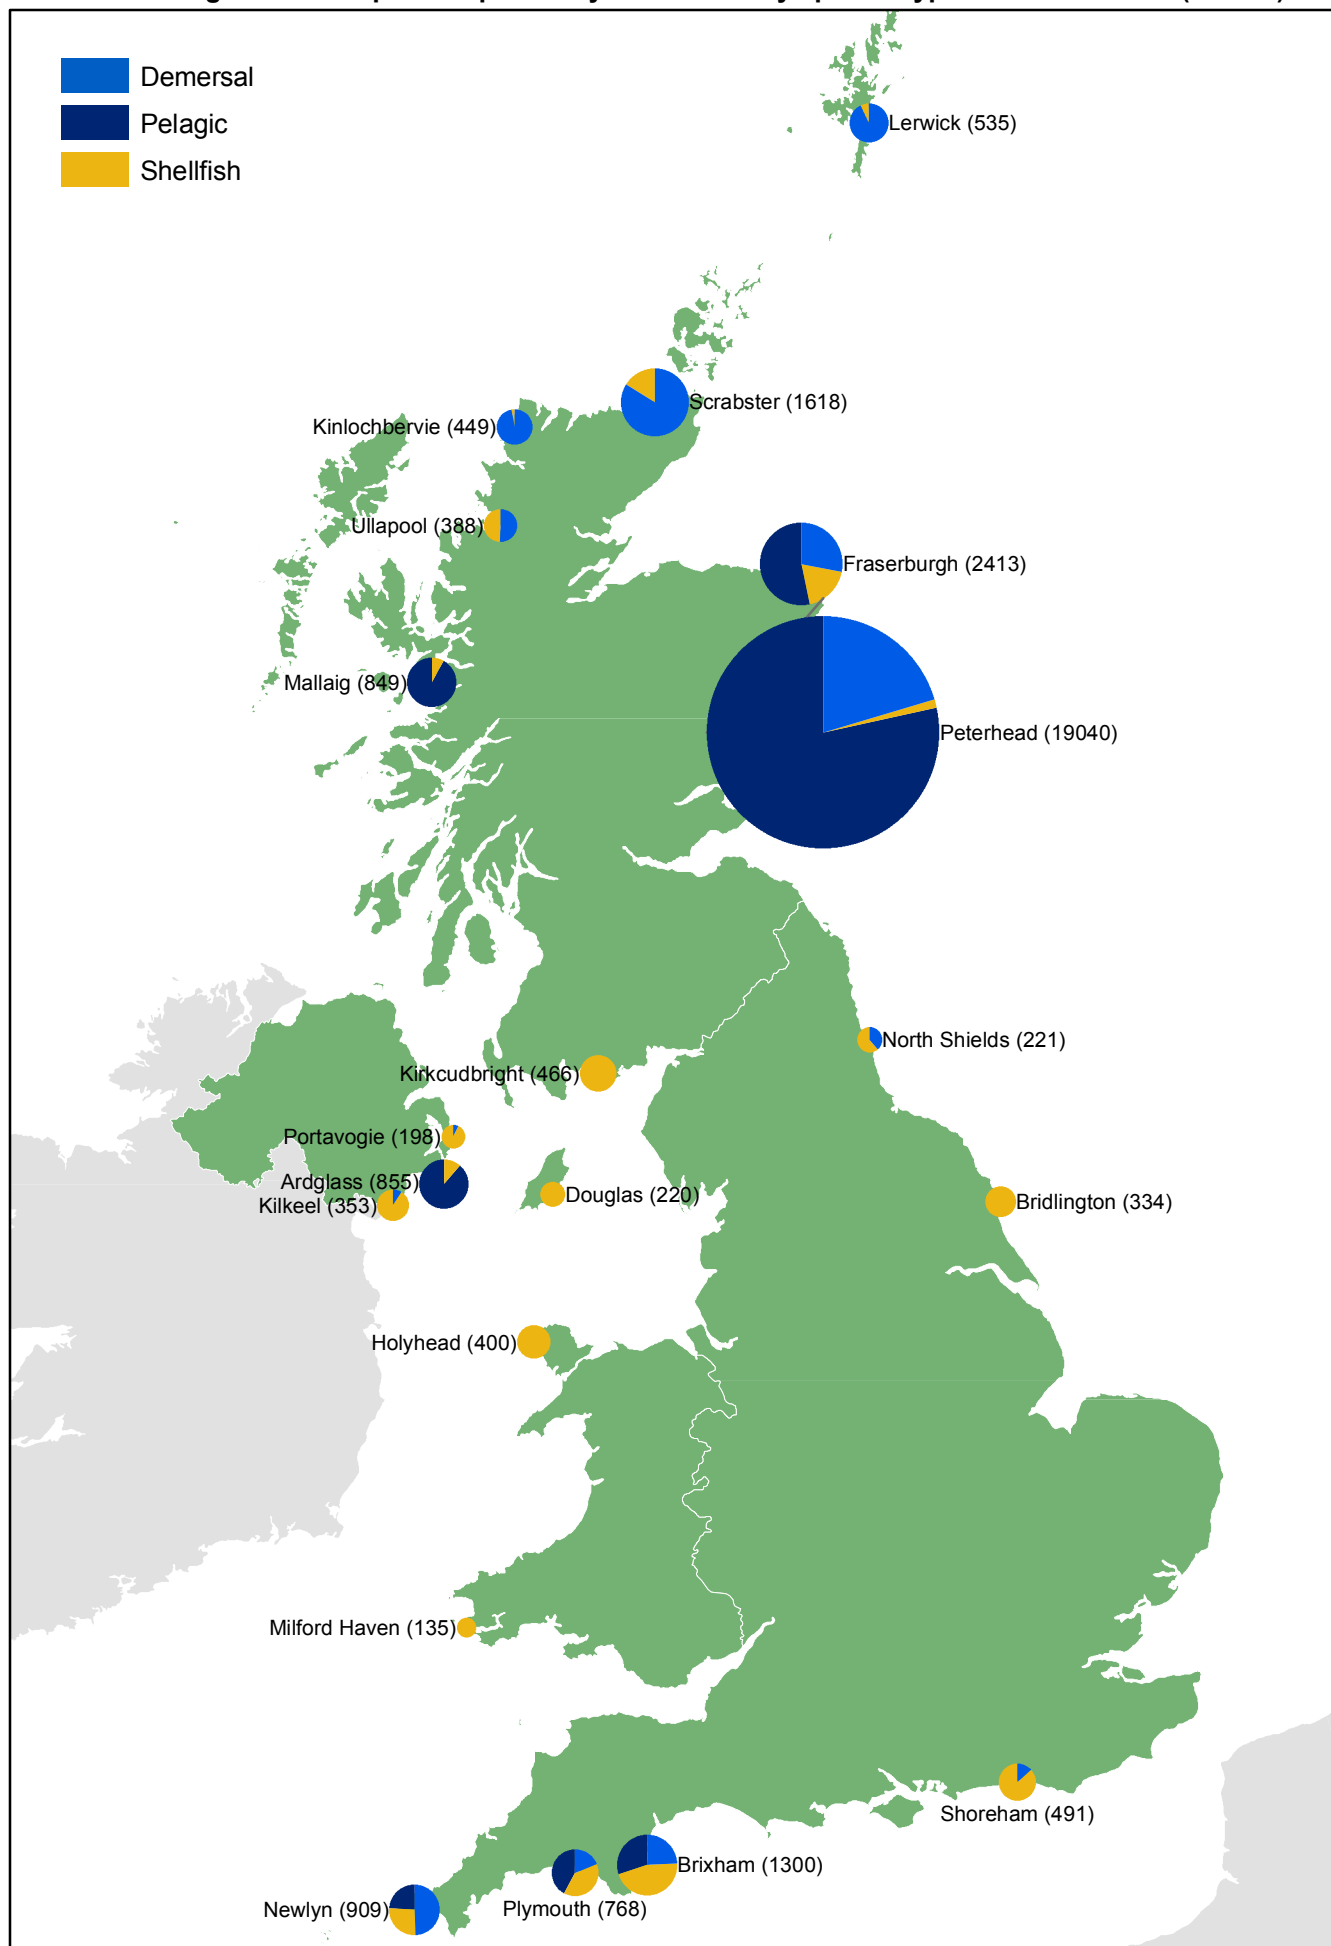

1. Quantities are shown in terms of the live weight of the fish caught.
2. The values shown are based on information from first-hand sales of fish to all outlets, i.e. for human consumption as well as other uses, such as fishmeal and animal feed.
3. The calculation of average prices excludes landings with zero value to better reflect the price of the fish.
4. The category 'Other demersal' includes fish roes and livers.
5. Data include figures for the Isle of Man fleet and landings by some of the larger Channel Islands' vessels. Relatively small amounts of landings by the remainder of the Channel Islands' fleet are not included. Landings into England in Table 7a exclude data for these islands.
6. The individual ports reported in this publication represent those ports which were identified as the top 20 UK ports in terms of quantity landed or the top 20 UK ports in terms of value of landings, in the annual publication - UK Sea Fisheries Statistics 2012
<https://www.gov.uk/government/collections/uk-sea-fisheries-annual-statistics>
7. Landings by foreign vessels into the UK do not include carrier landings. These are however included in our annual publication (see link above).

8. Details of the methodology can be found at <https://www.gov.uk/government/collections/monthly-uk-sea-fisheries-statistics#methodology>
9. Data are based on landings data to date which have been fully validated. The summary tables include a year on year comparison of cumulative landings up to and including the latest month. However, the later year's figures will be less complete due to delays in getting all landings data onto the system, and this will have an effect on the percentage change figures shown. Whilst the size of this effect varies by species, a rough guide is that at the total levels, the percentage change shown could be out by up to 5 percentage points, based on analysis of the Monthly Returns published throughout 2013.
10. The following symbols apply throughout:
 - means "nil"
 - .. means "negligible" (less than half the last digit shown)
 - na means "not applicable"
