

Well reports

The definition of well report is very wide and the intention is that in the medium term all reports will be transported digitally as pdf files. Associated with each report will be a set of cataloguing terms.

In the medium term any well reports required to be delivered to DECC will be transported to the UK Oil Portal as “signed” pdf files. The nature of the “signature” will be defined at such time as this facility is required. The “signed” document will be accompanied by an XML catalogue description that will follow the emerging Energistics cataloguing standards.
