

# Project Pathfinder

Enabling the supply chain to pinpoint and **TARGET** up-and-coming developments

We believe Information on emerging projects and developments is a key tool for the Supply Chain to pinpoint and target potential contracts. It's then the task of individual companies to pursue the opportunities and to offer a "best value" solution.

This online tool provides a real-time look at the oil and gas projects for both new field developments and decommissioning of redundant facilities in the UKCS over the next few years.

[www.og.decc.gov.uk/ppath/index.htm](http://www.og.decc.gov.uk/ppath/index.htm)

It is an easy to access site which gives specific project details including location, type of development, timing of the opportunities and an appropriate contact.

It has been developed to provide increased visibility to the supply chain and contracting community and to further enhance the information available from both the PILOT Share Fair and the PILOT Forward Workplan lists on the FPAL website.

Quote from Neil Gordon, Chief Executive from Subsea UK:-

“The UKCS continues to be a vibrant region for new project prospects which have significant requirements for subsea development. Our subsea industry in the UK is a world leader where our innovation and technology have met challenges on a global scale. The opportunities to maximise recovery and efficiency in the UKCS require our supply chain to be adaptable to the market needs, and the project information that DECC provides is a valuable tool to allow the supply chain visibility of the prospects. We strongly encourage businesses at all levels to take advantage of the Pathfinder initiative to exploit opportunities and maximise their potential.”

Quote from Ken Cruickshank, Supply Chain Manager from Oil & Gas UK:-

“We welcome this new initiative from DECC. One of the most frequent requests made by our supply chain members is for up to date information dealing with future projects in the UKCS. We can expect resources to remain a key challenge and the more visibility we receive about these projects enables the supply chain to respond appropriately.”

## DECC – Industry & Technology Development Team

The Industry Development team supports the supply chain serving the Oil and Gas Industry in the UK and abroad by encouraging growth and improving prosperity through greater competitiveness.

We do this by encouraging:

- Progressive business practices
- Consideration of UK content in developments
- Strategic and innovative technology developments
- UK supply chain companies to develop internationally while remaining anchored in the UK
- Workforce skills development

The team also works to ensure the success of initiatives and work areas from PILOT which aims to maximise recovery of the nation's indigenous hydrocarbon reserves.
