This is a National Statistics publication

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the UK Statistics Authority: Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet indentified user needs
- are well explained and readily accessible
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

EXPLANATORY NOTES ARE TO BE FOUND INSIDE THE BACK COVER

International Comparisons in Section 5

Tables 5.3.1, 5.5.1, 5.7.1 & 5.9.1

The annual international comparison tables in Section 5 based on data collected by the IEA have been amended in this issue of Quarterly Energy Prices as the IEA have stopped collecting and publishing data from non-OECD countries.

Tables 5.3.1, 5.5.1, 5.7.1 and 5.9.1 will continue to be published, but data will no longer be available for the following countries: Bulgaria, Cyprus, Latvia, Lithuania, Malta and Romania.

As a result of this change, we will no longer publish an EU-27 median figure as we will only have data for 21 of the 27 countries. We will continue to publish an EU 15 & G7 median figure.

Data for these 6 countries will still be available in the comparison tables that use 6-monthly EU data.

If you have any queries on this matter, please contact Alexandra Barrington, Alexandra.barrington@decc.gsi.gov.uk, tel: 0300 068 5057.

Tables 5.4.1 – 5.4.4, 5.6.1 – 5.6.3, 5.8.1 – 5.8.3 & 5.10.1 – 5.10.3

The 6-monthly EU comparison tables in this edition of Quarterly Energy Prices have not been updated to show the first 6 months of 2012, as scheduled. This is due to a delay in publication of the data by Eurostat.

We plan to publish data for January – June 2012 on the DECC website at the end of October, subject to Eurostat's publication schedule. The data will also be shown in the next edition of Quarterly Energy Prices, published on the 20th December.

If you have any queries on this matter, please contact Alexandra Barrington, Alexandra.barrington@decc.gsi.gov.uk, tel: 0300 068 5057.

Section 1 – Introduction

- 1.1 This is the forty-sixth issue of the 'Quarterly Energy Prices' publication, which covers the price data formerly included in 'Energy Trends' and the 'Digest of UK Energy Statistics'. The publication, including all the tables as Excel files, is available on the Internet at http://decc.gov.uk/en/content/cms/statistics/publications/prices/prices.aspx. Monthly updates on the prices of petroleum products are posted at the same address, as are any tables affected by changes in the GDP deflator.
- 1.2 There are analyses of provisional Q2 2012 quarterly prices and annual 2011 prices for industrial consumers and major power producers in this issue. There are 2011 gas and electricity bills for domestic consumers using our new methodology (for more details see the Energy Trends article: http://www.decc.gov.uk/en/content/cms/statistics/publications/trends/trends.aspx). There is also a comparison of prices in the EU and G7 countries with those in the UK for 2011, sourced from IEA data. The petroleum product prices are provisional September 2012 prices, whilst the international unleaded petrol and diesel prices are for August 2012.
- 1.3 This issue also includes analyses of electricity and gas prices in the EU 15 and EU 27 countries compared to those in the UK, by size of consumer. These tables are based upon data published by Eurostat, the EU statistical office, in their Statistics in Focus series. From January 2008, prices are for the 6-month periods from January June and July December for each year. The tables cover the 6-month periods from July December 2008 to July December 2011.
- 1.4 The next issue, published on 20 December 2012, will present provisional Q3 2012 energy prices for the manufacturing sector, industrial and domestic fuel price indices, and the price of fuels for major power producers. The petroleum product prices table will have provisional prices for December 2012 and there will be international petrol and diesel prices as at November 2012. International comparisons for the period January June 2012 will be published, and there will also be provisional 2012 gas and electricity bills for domestic consumers.
- 1.5 Data in the tables are mainly in cash prices. However, price comparisons (unless otherwise stated) refer to movements in data in real terms. These are prices from which the effects of inflation, as measured by the Gross Domestic Product (GDP) market prices deflator, have been removed. The GDP deflator provides an index of inflation in the whole economy and therefore is applicable consistently to domestic and industrial prices.
- 1.6 For most fuels there is a difference in the prices paid by smaller consumers, typically households, and those paid by larger consumers, usually those in the industrial sector. Indeed, there are differences in prices between large and small industrial users. In a competitive energy market, larger consumers can negotiate lower prices. A household's energy demands may be more variable through the day and year (and therefore higher in peak price times) than those of industrial customers who use energy for continuous processes or can load manage. For these reasons the tables show prices separately for domestic and industrial consumers. Although no prices are given for commercial consumers, prices for the domestic sector should be fairly close to those for smaller commercial consumers and industrial prices should provide a reasonable proxy for larger customers in the commercial sector. The source of all data is the Department of Energy and Climate Change unless otherwise stated.

The main points in this edition are presented below:

Domestic

- Overall the price paid for fuel and light in real terms has risen by 7.9 per cent between Q2 2011 and Q2 2012. In that period, domestic electricity prices rose by 5.5 per cent in real terms and gas prices rose by 13.0 per cent. The price of heating oils decreased by 4.5 per cent in real terms, whilst the price of coal and smokeless fuels rose by 2.4 per cent in real terms.
- 2011 figures show that an average standard credit electricity bill increased by £37, compared to 2010, to £472. Average direct debit and prepayment bills increased by £36 to £434 and by £33 to £479 respectively. The average 2011 electricity bill across all payment types increased by £36 (8.5 per cent), compared to 2010, to £453.
- 2011 figures show an average standard credit gas bill rose by £68, compared to average 2010 bills, to £749. Average direct debit bills increased by £58 to £697, and prepayment bills increased by £60 to £743. The average 2011 gas bill across all payment types rose by £61 (9.3 per cent), compared to 2010, to £719.
- At the end of June 2012, 16.1 million (62 per cent) domestic electricity customers and 12.6 million (58 per cent) domestic gas customers were no longer with their home supplier.
- The average rate of transfers in the domestic gas and electricity markets in the three months March-May 2012 decreased to the lowest levels seen in that period since 2003.

Industrial

Average industrial electricity prices, including the Climate Change Levy (CCL), increased in real
terms by 4.5 per cent between Q2 2011 and Q2 2012. Over the same period, industrial gas
prices, including CCL, increased by 6.4 per cent in real terms, while average coal prices
decreased by 4.2 per cent in real terms. The inclusion of CCL increases the average price of
coal by 6.0 per cent and the average price of electricity and gas by 3.5 and 3.7 per cent
respectively in Q2 2012.

Oil and petroleum product prices

- The average cost of crude oil acquired by refineries in August 2012 was 4.0 per cent higher than a year ago.
- In mid September 2012, a litre of unleaded petrol (ULSP) was 139.4 pence on average. Diesel prices were 5.0 pence per litre (3.6 per cent) higher than a year ago, at 144.2 pence. ULSP prices were 4.7 pence per litre (3.5 per cent) higher than a year ago.

International

- In August 2012, average UK unleaded petrol prices, including taxes, were the sixth highest in the EU27, at 134.1 pence per litre, when presented in a common currency basis. The highest price was in Sweden at 144.2 pence per litre, whilst the lowest price was in Romania at 101.1 pence per litre. Average UK diesel prices including taxes in August 2012 were the highest within the EU27, at 139.4 pence per litre, whilst the lowest price was in Luxembourg at 100.8 pence per litre.
- In the second half of 2011, UK industrial electricity prices, including taxes, were above the EU15
 median for medium, large and extra large consumers, and below the median for small
 consumers. UK industrial gas prices were the lowest in the EU 15 for all sizebands of consumer
 including and excluding tax. UK domestic gas and electricity prices, including taxes, for medium
 consumers were the lowest and fourth lowest in the EU15 respectively.
- The pound has depreciated against the euro by around 25 per cent between 2007 and 2011.
 This means that, for recent years, countries that use the euro will show increased prices when expressed in pounds sterling.

Section 2 - Domestic Prices

Highlights

- The price paid for fuel and light in real terms has risen by 7.9 per cent between Q2 2011 and Q2 2012, and by 7.8 per cent in real terms between 2010 and 2011 to reach a new high 2 per cent above the previous high in 2009.
- There were no changes announced to domestic prices by the 6 major energy suppliers in quarter 2 of 2012, following the price cuts in quarter 1.
- The rate of transfers in the domestic gas and electricity markets remained at the low levels seen in quarter one 2012.

Retail price of fuels for the domestic sector

2.1.1 Domestic fuel prices in the form of retail price indices are published in Tables 2.1.1 to 2.1.3. Table 2.1.3 also contains data on the average actual prices of coal, smokeless fuel and heating oil.

UK wholesale gas prices have been increasing since the early 2000's, due to upward pressure on prices in Europe and the decline of UK Continental Shelf gas production. Electricity prices have risen as gas is an important part of the UK generation mix, and also as a result of higher coal prices, wholesale electricity prices rising from unsustainably low levels, and the introduction of the EU Emissions Trading scheme in 2005.

- 2.1.2 Heating oil prices typically follow crude oil prices. Between 2004 and 2008, prices increased strongly, following crude oil price rises, although they began to decrease after a peak in mid-2008. Since 2009, heating oil prices have increased again, along with crude oil prices, and prices in 2011 reached a new high in real terms.
- 2.1.3 Petrol prices also follow crude oil prices, with variations according to Budget increases in the duty payable on petrol and diesel and changes to the rate of VAT.

Domestic gas and electricity bills

- 2.2.1 Gas and electricity prices in the domestic sector are presented in Tables 2.2.1 to 2.3.3 in the form of average annual bills. These bills relate to the total amount charged during the year, rather than a bill based on the latest prices, and are calculated assuming annual consumptions of 3,300 kWh for standard electricity and 18,000 kWh for gas. Consistent consumption over time enables comparisons of the effects of actual price changes to be made whilst excluding any change in consumption. Actual average domestic consumption in both gas and electricity changes from year to year due to changes in weather, energy efficiency improvements, etc. An estimate of domestic bills, based on actual consumption, is published in this quarter's edition of Energy Trends: http://decc.gov.uk/en/content/cms/statistics/publications/trends/trends.aspx
- 2.2.2 Average gas bills in 2011 were higher than 2010 bills due to the Big 6 energy companies increasing their gas prices twice in 2011, in quarter 1 and quarter 3 or 4. Average electricity bills in 2011 were also higher than 2010 bills, again due to price rises instigated by all six major GB domestic energy suppliers. The full impact of the price increases in late 2011 will be seen in 2012 bills.
- 2.2.3 In the first quarter of 2012, all six of the major GB energy companies implemented price cuts to gas or electricity of around 5 per cent: four companies cut gas prices and two companies

cut electricity prices. Prices then remained stable during Q2 and Q3, although one energy company has already announced planned price increases for Q4.

- 2.2.4 The tables show gas and electricity customers on direct debit paid, on average, less than customers on other payment methods. For domestic customers, electricity and gas bills in 2011 are, on average, higher for home suppliers (the original supplier in any given area) than for non-home suppliers.
- 2.2.5 In 2011, the average bill for direct debit customers on online tariffs was less than for those on non-online tariffs. Standard electricity online direct debit customers paid an average of 4 per cent (£19) less than those on non-online tariffs, and domestic gas online direct debit customers paid an average of 6 per cent (£45) less than those on non-online tariffs.

Domestic gas and electricity competition

- 2.3.1 Competition in domestic electricity supply began on 14 September 1998 with 750,000 consumers in four areas and was gradually extended to all consumers in Great Britain by 24 May 1999. The first trial in competitive gas supply started in April 1996 in South West England, with all customers able to choose their gas supplier by May 1998. At present, the electricity market in Northern Ireland is largely monopolistic and subject to the Utility Regulator price controls, although the market has started to open to competition. Gas is not yet widely available in Northern Ireland.
- 2.3.2 Transfer statistics for June 2012 are not yet available. The number of transfers in the domestic electricity market decreased by 29 per cent between the period March-May 2011 and March-May 2012, with an estimated 797,000 transfers in this period in 2012, compared to 1,116,000 transfers in the same period last year. This is the lowest number of transfers in the March-May period since our records began in 2003. The number of transfers in the domestic gas market decreased by 34 per cent over the same period, with an estimated 568,000 transfers in March-May 2012, compared to 861,000 in the same period a year earlier. This transfer rate is also the lowest level seen in this period since our records began.

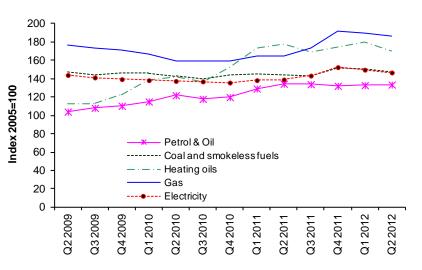

2.1 Retail price of fuels for the domestic sector

Table 2.1.1: Retail prices index: fuel components in the UK

Table 2.1.2: Retail prices index: fuel components, relative to GDP deflator

Table 2.1.3: Retail prices index: fuel components, monthly figures *

Chart 2.1.1 Fuel price indices in the domestic sector in real terms⁽¹⁾ Q2 2009 to Q2 2012

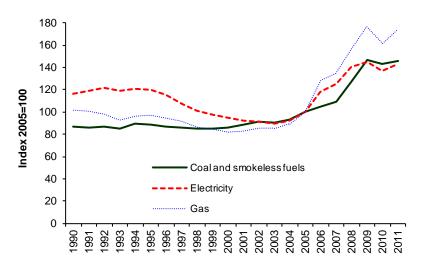

Source: ONS, Retail prices index

(1) Adjusted for inflation using the GDP (market prices) deflator.

- The prices paid for all fuel and light rose by 7.9 per cent in real terms between Q2 2011 and Q2 2012.
- Domestic electricity prices, including VAT, rose by 5.5 per cent in real terms between Q2 2011 and Q2 2012. Domestic gas prices, including VAT, rose by 13.0 per cent in real terms over the same period.
- Prices of heating oil, including VAT, fell by 4.5 per cent in real terms between Q1 2011 and Q1 2012.
 Petrol and oil prices, including VAT, fell by 0.7 per cent in real terms over the same period.

Chart 2.1.2 Fuel price indices in the domestic sector in real terms⁽¹⁾ 1990 to 2011

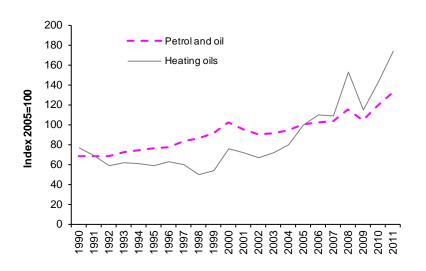

Source: ONS, Retail prices index

(1) Adjusted for inflation using the GDP (market prices) deflator.

- The prices paid by domestic customers for all fuel and light rose by 7.8 per cent in real terms between 2010 and 2011.
- Annual average domestic electricity prices, including VAT, rose by 4.6 per cent in real terms between 2010 and 2011.
 Domestic gas prices, including VAT, rose by 7.9 per cent in real terms during the same period.
- Prices for domestic coal and smokeless fuels rose by 2.2 per cent in real terms between 2010 and 2011.
- Despite increases, prices for these fuels in 2011 in real terms are below the highs reached in 2009.

Chart 2.1.3 Fuel price indices in the domestic sector in real terms⁽¹⁾ 1990 to 2011

- Prices of petroleum products in 2011 reached a new high in real terms, above those of 2008.
- The annual average price of domestic heating oil increased by 21.9 per cent between 2010 and 2011, and is 14.4 per cent above prices in 2008.
- Petrol and oil prices rose by 11.6 per cent between 2010 and 2011, and are 15.2 per cent above prices in 2008.

(1) Adjusted for inflation using the GDP (market prices) deflator.

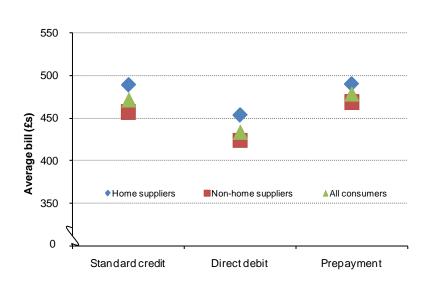

2.2 Domestic electricity bills

Table 2.2.1: Average annual domestic electricity bills, by home and non-home supplier

Table 2.2.2: Average annual domestic electricity bills for UK countries

Table 2.2.3: Average annual domestic electricity bills for selected towns and cities in the UK

Chart 2.2.1 Average UK annual domestic standard electricity bills 2011

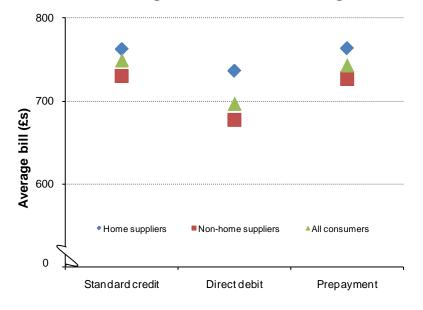

- Average electricity bills in 2011 increased by £36 compared to average 2010 bills.
- Figures for 2011 show that a standard credit customer with a non-home supplier, on average, paid £32 less than a customer who had not changed supplier.
 Equivalent savings for direct debit customers were £30.
- Figures for 2011 show that prepayment customers with a nonhome supplier, on average, paid £21 less than those with their home supplier.

2.3 Domestic gas bills

Table 2.3.1: Average annual domestic gas bills, by home and non-home supplier Table 2.3.2: Average annual domestic gas bills for GB countries Table 2.3.3: Average annual domestic gas bills for selected towns and cities in Great Britain.

Chart 2.3.1 Average GB annual domestic gas bills 2011

- Average gas bills in 2011 increased by £61 compared to average 2010 bills.
- Figures for 2011 show that a standard credit customer with a non-home supplier, on average, paid £32 less than a customer who had not changed supplier. Equivalent savings for direct debit customers were £59.
- Figures for 2011 show that prepayment customers with a nonhome supplier, on average, paid £36 less than those with their home supplier.

2.4 Domestic electricity competition

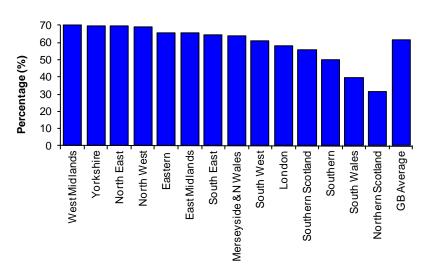

Table 2.4.1: Percentage of domestic electricity customers by region by supplier type

Table 2.4.2: Regional variation of payment method for standard electricity

Table 2.4.3: Regional variation of payment method for Economy 7 electricity*

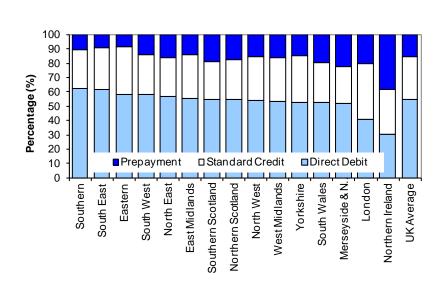

Chart 2.4.1 Percentage of GB domestic electricity customers not with home supplier

by region, June 2012

- At the end of June 2012, 16.1 million (62 per cent) domestic electricity customers were no longer with their home supplier.
- Direct Debit customers were most likely to have transferred, with 66 per cent of customers no longer with their home supplier.
- Customers paying by Standard Credit were the least likely to have switched supplier, with only 54 per cent of customers with a non home supplier at the end of June 2012.
- Overall, customers in Northern Scotland were the least likely to have switched, at around 30 per cent.

Chart 2.4.2 Regional variation of payment method for standard electricity, June 2012

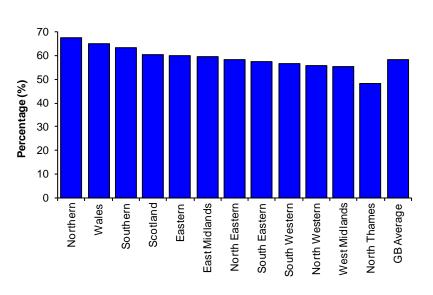

- In June 2012, 30 per cent of standard electricity customers in the UK paid by standard credit, 54 per cent paid by direct debit, and 16 per cent paid by pre-payment meter. Direct debit is the cheapest payment method for domestic fuel.
- The Southern and South East regions had the highest proportion of standard electricity customers paying by direct debit, at 62 per cent. The lowest percentage of direct debit customers was in Northern Ireland, where 30 per cent of customers paid by this method.
- Northern Ireland had the highest percentage of pre-payment customers in the UK, at 38 per cent. The South-East and Eastern regions of England had the lowest percentage of pre-payment customers, at 9 per cent.

2.5 Domestic gas competition

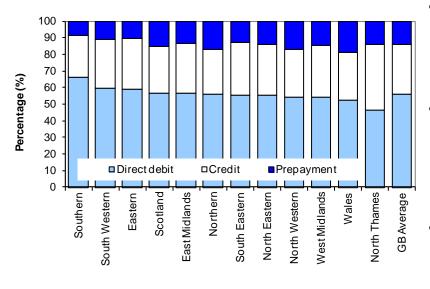

Table 2.5.1: Percentage of domestic gas customers by region by supplier type Table 2.5.2: Regional variation of payment method for gas

Chart 2.5.1 Percentage of domestic gas customers not with home supplier by region, June 2012

- At the end of June 2012, 12.6 million (58 per cent) domestic gas customers in Great Britain were no longer with their home supplier.
- Direct Debit customers were most likely to have transferred, with 67 per cent of customers no longer with their home supplier.
- Customers paying for their gas by Standard Credit were the least likely to have switched supplier, with only 43 per cent of customers with a non home supplier.
- Overall, customers in the North Thames region were the least likely to have switched.

Chart 2.5.2 Regional variation of payment method for gas, June 2012

- At the end of June 2012, 30 per cent of gas customers in Great Britain paid by standard credit, 56 per cent paid by direct debit, and 14 per cent paid by pre-payment meter.
- The Southern region of England had the highest proportion of gas customers paying by direct debit, at 66 per cent. Direct debit is the cheapest payment method for domestic fuel.
- Wales had the highest percentage of gas pre-payment customers in GB, at 19 per cent. The Southern region of England had the lowest percentage of gas pre-payment customers, at 9 per cent.

⁽¹⁾ Series are annually weighted. Figures include VAT where applicable. The VAT rate for coal and coke, gas, electricity and heating oils was 8% from the 2nd quarter of 1994 and 5% from the 4th quarter of 1997 (the rate changed during the 3rd quarter, on 1st September.)

⁽²⁾ Rebased to 2005 by DECC from original ONS indices.

⁽³⁾ Monthly figures are available in Table 2.1.3 on the DECC website.

⁽⁴⁾ Including bottled gas and domestic heating oils, but excluding paraffin from February 1986.

⁽⁵⁾ Data for the aggregate series fuel, light, petrol and oil have been recalculated using a chained index calculated by ONS, constructed by weighting together the unpublished, within-year series for each of the 5 component series and chain linking the resulting aggregate to obtain a long run series. Previously this series had been derived by DECC weighting together published chain linked series.

⁽¹⁾ Bills up to (and including) 2006 relate to total bill received in the year, e.g. covering consumption from Q4 of the previous year to Q3 of the named year. Bills up to 1998 relate to home supplier only.

⁽²⁾ All bills are calculated assuming an annual consumption of 3,300 kWh. Figures are inclusive of VAT.

⁽³⁾ Home supplier denotes the former public electricity suppliers within their own distribution areas.

⁽⁴⁾ Non-home suppliers are new entrant suppliers and the former electricity suppliers outside of their own areas.

⁽⁵⁾ Direct debit as a payment method not widely available for earlier years.

⁽⁶⁾ Bills deflated to 2005 terms using the GDP (market prices) deflator.

⁽⁷⁾ Bills from 2007 on are subject to a change in methodology. Bills relate to the calendar year, i.e. covering consumption from Q1 to Q4 of the named year. More information can be found in the methodology note at: http://www.decc.gov.uk/en/content/cms/statistics/prices/prices.aspx

Table 2.2.2 Average annual domestic standard electricity bills⁽¹⁾⁽²⁾ for UK countries

	Smallest in any region	12.88	425	11.67	385	13.32	439		

⁽¹⁾ All bills are calculated assuming an annual consumption of 3,300 kWh. Bills and unit costs reflect the prices of all suppliers and include standing charges. Figures are inclusive of VAT. Bills relate to calendar year, i.e.covering consumption from Q1 to Q4 of the named year

⁽²⁾ Unit costs are calculated by dividing the bills shown by the relevant consumption levels.

⁽³⁾ The towns/cities specified indicate which electricity region these bills apply to. (See Table A2 in Annex A)

⁽⁴⁾ Largest and smallest bills: Taking a subset of tariffs which are available to all customers within a region and have been open throughout the year with at least 200 customers - broadly speaking this excludes all fixed tariffs running from previous years, social and short-term internet tariffs - the largest and smallest bills have been identified as the maximum and minimum tariff they relate to within that region.

⁽⁵⁾ There is only limited competition in electricity in Belfast, therefore no smallest/largest tariffs are available.

⁽⁶⁾ For the UK, the largest and smallest bills may relate to tariffs not available within all regions.

Table 2.3.1 Average annual domestic gas bills⁽¹⁾⁽²⁾ by home⁽³⁾ and non-home supplier⁽⁴⁾

⁽¹⁾ Bills up to (and including) 2006 relate to total bill received in the year, i.e. covering consumption from Q4 of the previous year to Q3 of the named year. Bills to 1995 for home supplier only (i.e. British Gas).

⁽²⁾ All bills are calculated using an annual consumption of 18,000 kWh. Figures are inclusive of VAT.

⁽³⁾ Home supplier denotes British Gas Trading.

⁽⁴⁾ Non-home suppliers are all other suppliers.

⁽⁵⁾ Direct debit as a payment method not widely available for earlier years.

⁽⁶⁾ Bills deflated to 2005 terms using the GDP (market prices) deflator.

⁽⁷⁾ Bills from 2007 on are subject to a change in methodology. Bills relate to the calendar year, i. e. covering consumption from Q1 to Q4 of the named year. The assumed gas consumption pattern has also been altered to more accurately reflect real consumption patterns. More information can be found in the methodology note at: http://www.decc.gov.uk/en/content/cms/statistics/prices/prices.aspx

- (1) Includes both standard electricity and Economy 7 electricity customers.
- (2) The regions used in this table are the distribution areas of the former public electricity suppliers.
- (3) Home supplier denotes the former public electricity suppliers within their own distribution areas, or their parent company. Non-home suppliers are new entrant suppliers and the former electricity suppliers outside of their distribution areas.
- (4) Competition is still limited in scope for domestic customers in Northern Ireland and so the region has been excluded from this table.

⁽²⁾ Home supplier denotes British Gas Trading.(3) Non-home suppliers are all other suppliers.

⁽⁴⁾ Gas is not yet widely available in Northern Ireland and so the region has been excluded from this table.

Section 3 - Industrial Prices

Highlights

- Between Q2 2011 and Q2 2012, average industrial prices in real terms including the Climate Change Levy (CCL) increased by 4.5 per cent for electricity and by 6.4 per cent for gas but coal has decreased by 4.2 per cent.
- Annual prices between 2010 and 2011 in real terms including CCL decreased by 1 per cent for electricity, but increased by 20 per cent for gas and by 8 per cent for coal.

Prices presented in this section will vary depending on sectoral coverage (manufacturing industry, all industry, or non-domestic consumers) and consumption levels (Tables 3.1.1 – 3.1.4 and Tables 3.4.1 & 3.4.2). The price of a fuel may move to a different degree, or even in a different direction, depending on the sectors and/or consumption sizebands being compared. Changes in price may vary depending on the time period used, i.e. changes in annual average prices may be different to changes in price between quarters a year apart. Price indices in Table 3.3.1 aim to be reflective of all industrial users and are quoted in the key points on page 7.

Energy Prices in the manufacturing sector

- 3.1.1 Gas and electricity prices for the manufacturing sector, excluding CCL, for various sizebands of consumer are presented in Tables 3.1.1 to 3.1.4. Prices tend to vary by consumption, reflecting the bargaining position of the larger users and factors such as length of contracts and the relative (to size) impact of crude prices on fuel prices. Larger consumers may be more dependent on wholesale spot prices, and therefore more vulnerable to price spikes, whereas smaller consumers tend to be on more stable contracts.
- 3.1.2 In general, average fuel prices increased each year between 2004 and 2008, fell in 2009, and rose once more in 2010 and 2011. The exception was electricity, where average prices rose in 2009 and fell in 2010 before increasing again in 2011. Prices of most fuels follow the price of crude oil, which has been on an upward trend since 2004 apart from a fall in 2009.

Average prices of fuels purchased by the major UK power producers and of gas at UK delivery points

- 3.2.1 Average purchase costs of fuels used to generate electricity are presented in Table 3.2.1. Generation costs are also affected by non-fuel costs, and by the efficiency with which fuel is converted into electricity in different types of power station, therefore comparing the fuel input costs in common units does not necessarily provide a picture of full costs.
- 3.2.2 Gas wholesale prices have generally been higher and more volatile since 2008, in line with crude oil prices. Prices in 2009 started high but showed the usual seasonal summer fall, then increased steadily throughout 2010 and 2011. In February 2012, wholesale gas prices spiked to over 100 pence per therm in response to cold weather in Europe and Russia increasing demand, but returned to levels of around 60 pence per therm in March and started to fall in May, following the usual seasonal pattern. Prices were generally in the range of 50 to 60 pence per therm over the summer period.
- 3.2.3 Wholesale coal prices increased sharply in the last quarter of 2007 and stayed high in 2008, peaking at over \$200/tonne in July before falling towards the end of the year. Coal prices were lower in 2009, although they rose in 2010 and 2011. Use of coal for generation decreased each year from 2007 to 2009 but was up slightly in 2010 and 2011. Gas used for generation

Industrial prices

increased in 2007 and 2008, fell in 2009, rose again in 2010 as nuclear generation fell, but then decreased in 2011 as demand fell and nuclear generation recovered. Since 2008, gas has been the dominant fuel used for electricity generation.

3.2.4 Oil purchased for generation, like all generation fuels, is more likely to be purchased on longer-term contracts. This, coupled with the mix of oils purchased, means that oil for generation is less closely related to spot prices than other industrial users' contracts. Between 2000 and 2011, the price of oil for generation has more than tripled.

Fuel price indices for the industrial sector

3.3.1 Fuel price indices, both excluding and including the Climate Change Levy (CCL) in real and cash terms, are presented in Tables 3.3.1 and 3.3.2. Prices in real terms (including CCL) for all fuels generally stayed below 1990 levels until 2005/06, with some of the largest annual increases occurring between 2007 and 2008, although heavy fuel oil prices increased strongly in 2010 and 2011 as crude oil prices increased.

Gas and electricity prices for the non-domestic sector in the UK

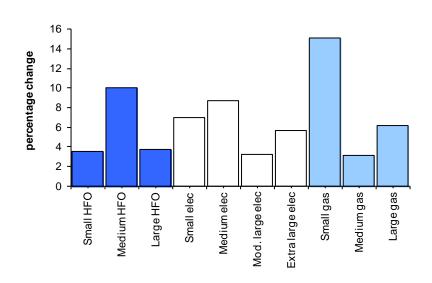

- 3.4.1 Gas and electricity prices in the non-domestic sector, both including and excluding CCL, for various sizes of consumer are presented in Tables 3.4.1 and 3.4.2.
- 3.4.2 Average electricity prices, including CCL, increased between the second quarter of 2004 and the first quarter of 2009, then generally trended down from the second quarter of 2009 before increasing between Q3 2011 and Q1 2012 and then falling in Q2 2012. Average gas prices, including CCL, show prices trending upwards, with a slight seasonal decrease in the second and third quarter of each year. This decrease was not shown in 2008 due to high wholesale gas prices, but showed once more in 2009 and 2010. In 2011 the usual seasonal fall did not show until Q3, but in 2012 the seasonal fall shows in Q2 as usual.

3.1 Energy prices in the manufacturing sector

Table 3.1.1: Quarterly prices of fuels purchased by manufacturing industry (original units)

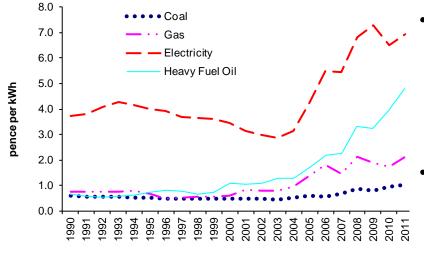

- Table 3.1.2: Quarterly prices of fuels purchased by manufacturing industry (p/kWh) *
- Table 3.1.3: Annual prices of fuels purchased by manufacturing industry (original units)
- Table 3.1.4: Annual prices of fuels purchased by manufacturing industry (p/kWh) *

Chart 3.1.1 Percentage price movements between Q2 2011 and Q2 2012 for heavy fuel oil (HFO), electricity and gas, by size of consumer, for manufacturing industry

- Compared to Q2 2011, heavy fuel oil consumers in Q2 2012 have seen prices rise by an average of 5.8 per cent in cash terms.
- Electricity consumers generally saw prices, excluding CCL, rise between Q2 2011 and Q2 2012 by an average of 5.7 per cent.
- Gas consumers saw average prices, excluding CCL, increase between Q2 2011 and Q2 2012 by 6.2 per cent.

Chart 3.1.2: Fuel prices for manufacturing industry, in cash terms 1990 to 2011

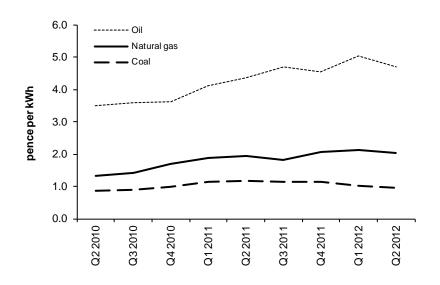

- Data for 2011 shows that over the past five years (2006 to 2011), average industrial electricity prices have risen by 26 per cent (12 per cent in real terms), with an increase of 6 per cent (4 per cent in real terms) in the last year.
- Over the same period average industrial gas prices have increased by 17 per cent (4 per cent in real terms), but by 21 per cent (18 per cent in real terms) in the last year.

3.2 Average prices of fuels purchased by the major UK power producers and of gas at UK delivery points

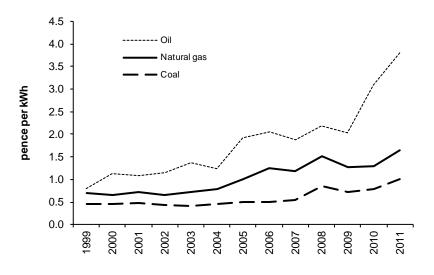

Table 3.2.1: Average price of fuels purchased by the major UK power producers and of gas at UK delivery points

Chart 3.2.1: Average price paid by UK power producers for coal, oil and natural gas Q2 2010 to Q2 2012

- Between Q2 2011 and Q2 2012 the price of coal for power stations decreased by 20.4 per cent in cash terms, whilst the price of gas increased by 6.1 per cent. In Q2 2012, the price of coal in p/kWh was less than half that of gas. Over the same period, the cost of oil has increased by 7.4 per cent.
- Compared to Q1 2012, the price of coal has decreased by 8.6 per cent in cash terms, and the price of oil by 7.0 per cent. Over the same period the price of gas has fallen by 3.7 per cent.

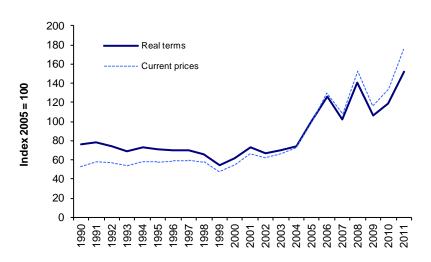

Chart 3.2.2: Average price paid in real⁽¹⁾ terms by UK power producers for coal, oil and natural gas 1999 to 2011

(1) Adjusted for inflation using the GDP (market prices) deflator.

- Compared to 2006, the annual average real terms price of natural gas used by major power producers in 2011 has increased by 33 per cent, whilst the price of coal has increased by 97 per cent. The annual average cost of oil has increased by 86 per cent in real terms since 2006.
- Oil prices increased in 2011 by 24 per cent in real terms. In comparison the annual average price of gas increased by 28 per cent and the price of coal by 25 per cent.
- Annual 2011 prices for coal, gas and oil are at new highs in real terms.

Chart 3.2.3: Average price of gas⁽¹⁾ at UK delivery points 1990 to 2011 in real⁽²⁾ and current terms

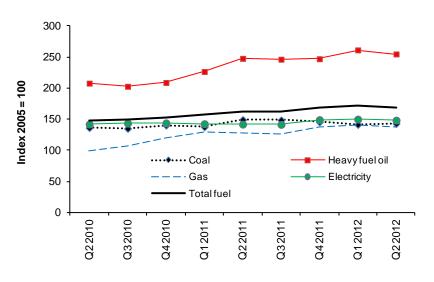

- (1) Includes the levy, the Government's tax on indigenous supplies, which was abolished on 1st April 1998.
- (2) Adjusted for inflation using the GDP (market prices) deflator.

- The average price of gas at UK delivery points doubled in real terms between 1990 and 2011.
- The majority of that change occurred between 2001 and 2011, where the price of gas increased by 108 per cent in real terms.
 Prices increased by 20 per cent in real terms between 2006 and 2011.
- In the last year, the price of gas increased by 28 per cent.

3.3 Fuel price indices for the industrial sector

Table 3.3.1: Fuel price indices for the industrial sector excluding CCL Table 3.3.2: Fuel price indices for the industrial sector including CCL

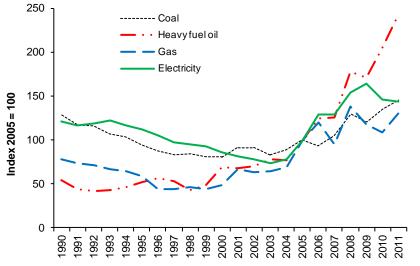

Chart 3.3.1 Fuel price indices in real terms⁽¹⁾ including the Climate Change Levy from Q2 2010 to Q2 2012

- Average industrial electricity prices including the Climate Change Levy (CCL), rose in real terms by 4.5 per cent between Q2 2011 and Q2 2012, whilst industrial gas prices including CCL rose by 6.4 per cent in real terms.
- Over the same period the price of coal decreased by 4.2 per cent in real terms and the price of heavy fuel oil increased by 2.9 per cent.
- The inclusion of CCL increases the average price of coal by 6.0 per cent and the average price of electricity and gas by 3.5 and 3.7 per cent respectively in Q2 2012.

(1) Deflated using the GDP implied deflator at market prices

Chart 3.3.2: Industrial fuel price indices in real terms⁽¹⁾ including the Climate Change Levy 1990 to 2011

(1) Deflated using the GDP implied deflator at market prices

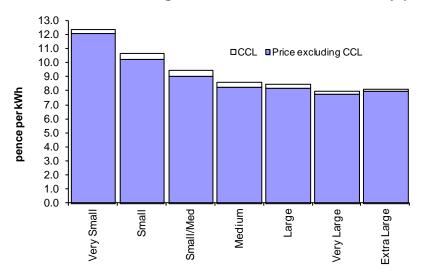

- Compared to 2001, the average price of heavy fuel oil in 2011 has increased by 256 per cent in real terms, including an increase of 18.3 per cent in 2011.
- In comparison, the annual average price of gas, including CCL, has increased by 95 per cent in real terms since 2001, with a rise of 20.0 per cent in the latest year.
- The average price of electricity, including CCL, has risen by 77 per cent in real terms since 2001, and decreased by 1.1 per cent in the latest year.

3.4 Gas and electricity prices for the non-domestic sector in the UK

Table 3.4.1: Price of fuels purchased by non-domestic consumers in the UK (excluding the Climate Change Levy)

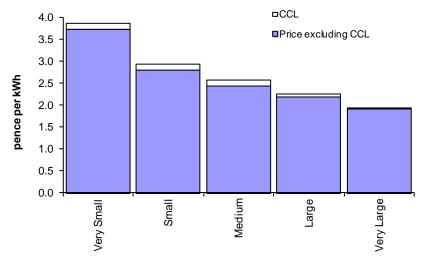

Table 3.4.2: Price of fuels purchased by non-domestic consumers in the UK (including the Climate Change Levy)

Chart 3.4.1: Average UK non-domestic electricity prices Q2 2012

- Average electricity prices, excluding CCL, have risen in cash terms between Q2 2011 and Q2 2012 by an average of 10 per cent.
- Price changes have varied by sizeband, rising by between 5 and 12 per cent for very small to very large consumers, and by 20 per cent for extra large consumers.
- Average prices in Q2 2012 are 9 per cent lower than the high reached in Q1 2009.
- The inclusion of CCL increases the average price of electricity by between 2 and 4 per cent.

Chart 3.4.2: Average UK non-domestic gas prices Q2 2012

- Average gas prices excluding CCL have risen in cash terms between Q2 2011 and Q2 2012 by an average of 9 per cent.
- Price changes have varied by sizeband, falling by 8 per cent for very large consumers but rising by between 6 and 17 per cent for all other consumers.
- Average prices in Q2 2012 are 11 per cent lower than the high reached in Q1 2009.
- The inclusion of CCL increases the average price of gas by between 2 and 5 per cent.

For notes see notes page

Notes for Tables 3.1.1 to 3.1.4

- (1) Average prices paid (exclusive of VAT) by respondents to a Department of Energy and Climate Change (DECC) survey of some 800 manufacturing sites. The average price for each size of consumer is obtained by dividing the total quantity of purchases, for each fuel, into their total value. Prices vary widely around the average values shown (see footnote 2). Purchases of fuels used as raw materials in manufacturing are excluded. For further details, see Annex A.
- (2) The 10% decile is the point within the complete range of prices below which the bottom 10% of those prices fall. Similarly the 90% decile is the point above which the top 10% of prices occur. The median is the midway point. Thus, these values show the spread of prices paid. The deciles and the median are calculated by giving equal 'weight' to each purchaser, whereas the average prices, for each size-band and all consumers are given 'weight' according to the quantity purchased. The 10% and 90% deciles are not published from Q1 2005 onwards, except for gas and electricity.
- (3) Oil product prices include hydrocarbon oil duty. From 23 March 2011 the effective duty rates per tonne are £108.18 for Heavy Fuel Oil and £128.77 for gas oil.
- (4) Covers all supplies of natural gas including, for example, those purchased direct from onshore/offshore gas fields. Respondents purchasing more than one type of supply (firm contract and interruptible contract) are treated as separate entities in respect of each type of supply.
- (5) From Q1 1998 tariff gas prices are not collected separately and are included in the firm contract prices. The 90% decile and average firm contract price will be affected by contributors who previously had separate contracts for tariff and firm contract gas. In Q4 1997, tariff gas represented a weight of around 1% of the sample.
- (6) It should be noted that prices for these fuels are drawn from small samples.
- (7) Excludes breeze and blast furnace supplies.
- (8) Following a consultation with users, this data is no longer published.
- (9) Extra-large and moderately large splits are no longer published (from Q2 2008)
- (10) Only large and average prices are published (from Q1 2010). Average prices will be produced with the provisional prices, large prices with the final prices.

Prices are shown for various sizes of consumers. These sizebands are defined in terms of the approximate annual purchases by the consumers purchasing them, as shown in the table below.

Range of annual purchases of which:

Fuel	Large	Extra large	Moderately large	Medium	Small
	Greater than	Greater than			Less than
Coal (tonnes)	7,600	n/a	n/a	760 to 7,600	760
Heavy fuel oil (tonnes)	4,900	15,000	4,900 to 15,000	490 to 4,900	490
Gas oil (tonnes)	175	n/a	n/a	35 to 175	35
Electricity (thousand kWh)	8,800	150,000	8,800 to 150,000	880 to 8,800	880
Gas* (thousand kWh)	8,800	n/a	n/a	1,500 to 8,800	1,500

^{*}Respondents purchasing more than one type of supply (firm contract and interruptible contract) are treated as separate entities in respect of each type of supply.

The Climate Change Levy (CCL) came into effect in April 2001. Information on the operation of the CCL is available on the HM Revenue and Customs web site at http://www.hmrc.gov.uk

Although data from the Quarterly Fuels Inquiry cannot currently be used to produce estimates of the amount of levy paid by size of consumer, it has been used to give an estimate of the average amount of levy paid for coal. Data from suppliers has been used to produce estimates of the average amount of levy paid on gas and electricity.

Table of the average amount of Climate Change Levy paid by fuel type⁽ⁱ⁾

Fuel	Full rate of Levy ⁽ⁱⁱ⁾		Average amount paid (iii)				
		Q3/11	Q4/11	Q1/12	Q2/12		
Coal	£13.87/tonne	£6.0/tonne	£6.0/tonne	£6.2/tonne	£6.3/tonne		
Electricity	0.509p/kWh	0.30p/kWh	0.30p/kWh	0.29p/kWh	0.31p/kWh		
Gas	0.177p/kWh	0.09p/kWh	0.10p/kWh	0.10p/kWh	0.10p/kWh		
LPG	£11.37/tonne		•	·	•		

⁽i) The full levy rate for coke is £12.81 per tonne, however, in practice most use of coke by manufacturers is exempt from the levy.

⁽ii) The levy rates shown here are the rates from April 2012. Previous rates are shown in Annex A

⁽iii) estimated

- (1) Companies that produce electricity from nuclear sources plus all companies whose prime purpose is the generation of electricity are included under the heading "Major Power Producers". A list of these companies is given in Annex A.
- (2) The series represents gas supplied to the UK (i.e exports are excluded)
- (3) Includes slurry.
- (4) Includes oil for burning, for gas turbines and for internal combustion engines (other than for use in road vehicles). Excludes any natural gas liquids burnt at Peterhead power station.
- (5) Includes hydrocarbon oil duty.
- (6) Includes sour gas.
- (7) A quarterly series consistent with the annual series is available back to quarter two 1987. An article describing this series was published in Energy Trends in November 1996.
- (8) Quarterly data is not available from Quarter 2 2004 onwards.
- (9) The levy is the Government's tax on indigenous supplies introduced in 1981 and abolished on 1 April 1998. The levy was reduced from 4 to 3 pence per therm for 1997/8.
- (10) Percentage change relates to the corresponding period a year earlier. The annual percentage change varies depending on the units used as the calorific values change each year. For further information see Annex B.

Source: DECC survey of energy suppliers.

Notes: The average price (excluding VAT) for each size of consumer is obtained by dividing the total quantity of purchases, for each fuel, into their total value.

The electricity and gas sizebands shown in table 3.4.1 and 3.4.2 are defined in terms of the approximate annual purchases by the consumers purchasing them, as shown in the table below. Some electricity sizebands were renamed in Q1 2008; however, the consumptions are unchanged.

Annual Consumption			
Electricity	MWh	Gas	MWh
Very Small	0 -20	Very Small	<278
Small	20 - 499	Small	278 - 2,777
Small/Medium	500 - 1,999	Medium	2,778 - 27,777
Medium	2,000 - 19,999	Large	27,778 - 277,777
Large	20,000 - 69,999	Very Large	277,778 - 1,111,112
Very Large	70,000 - 150,000	, 0	
Extra Large	>150,000		

The Climate Change Levy (CCL) came into effect in April 2001. More information is available on the HM Revenue and Customs web site at http://www.hmrc.gov.uk. From 1 April 2012 the full rate of levy for electricity is 0.509p/kWh and for gas 0.177/kWh. Previous rates are shown in Annex A.

Section 4 – Oil and Petroleum Product Prices

Highlights

- In September, petrol and diesel prices had fallen by 2 3 pence since their peaks in April 2012.
- The price of petrol in September 2012 is 3.5 per cent higher than a year ago, and diesel is 3.6 per cent higher.
- The price of crude oil in August 2012 was 4.0 per cent higher than a year ago.

Typical retail prices of petroleum prices

- 4.1.1 Prices of petroleum products, including road fuels, are presented in Tables 4.1.1 to 4.1.3. Prices of unleaded petrol (ULSP) and diesel (ULSD) reached new highs in April 2012, mainly due to the cost of crude oil (see paragraph 4.2.2) but fell in May as crude oil prices declined. Prices increased once more in August and September.
- 4.1.2 Chart 4.1.3 shows the price of ULSP and ULSD excluding VAT and duty. Prices are affected by duty rate changes, as listed in Annex C, and more recently also by changes in the general rate of VAT. On 26 June 2012, the Chancellor of the Exchequer announced that the road fuel duty increase planned for 1 August would be postponed to 1 January 2013.
- 4.1.3 Standard grade burning oil and gas oil have duty rates considerably lower than those on ULSP and ULSD, and VAT is charged at the lower rate of 5%. The retail prices of these fuels are therefore more directly influenced by the price of crude oil.

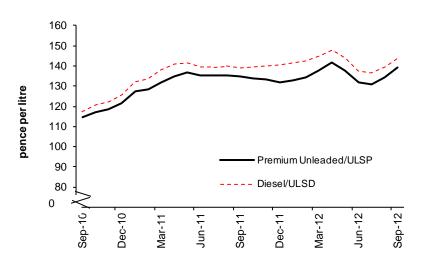

Crude oil prices

- 4.2.1 A price index for crude oil is presented in Tables 4.1.1 and 4.1.2 for comparison against the prices of petroleum products.
- 4.2.2 OPEC'S 161st Meeting took place on 14 June 2012 in Vienna. The Conference observed that the heightened price volatility during early 2012 was a reflection of geopolitical tensions and speculation in the commodities markets rather than supply/demand fundamentals. The Conference therefore decided that Member Countries should adhere to the production ceiling of 30.0 million barrels per day (mb/d). The next meeting will be held on 12 December 2012 in Vienna.
- 4.2.3 Movements in the price of crude oil affect the prices of various domestic and industrial fuels, as well as petroleum products. The price of crude oil can change for a variety of reasons, such as: oil shortages (1973); over-supply and weaker demand (1998); Hurricanes (Katrina and Rita, 2005); geopolitical tensions (2007-8); and the global recession (2009 current). In July 2008, average monthly crude oil prices reached a new high in real terms, 10.5% higher than the late 1970's. Prices fell back sharply in the latter part of 2008, then rose through 2009 and 2010 to reach over \$100 towards the end of 2010 due to concerns over the global economic recovery and renewed Middle East tensions. In 2011 prices stayed above \$100/barrel, mainly due to concerns that unrest in Libya would spread to other oil-producing countries in the Middle East, the financial situation in Europe and the USA, and a fluctuating dollar. Prices reached \$125/barrel by the end of February 2012; however concerns about deepening recession in Europe resulted in prices falling in April, and by the beginning of June prices had dipped to just under \$100/barrel. Prices rose again to over \$100/barrel by early-July, and trended upwards, reaching over \$115 in August and fluctuating around that level throughout September.

4.1 Typical retail prices of petroleum products

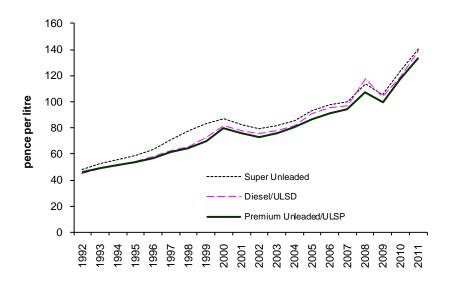

Table 4.1.1: Typical monthly retail prices of petroleum products and a crude oil index Table 4.1.2: Average annual retail prices of petroleum products and a crude oil price index Table 4.1.3: Typical retail prices of petroleum products 1975 to 2008 *

Chart 4.1.1: Typical retail prices of motor spirits from September 2010 to September 2012

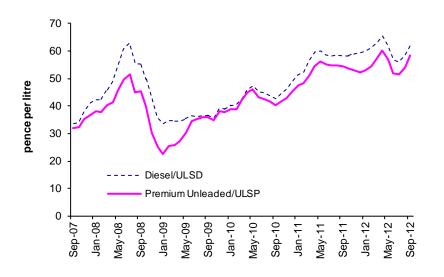

- In mid September 2012 a litre of ULSP was on average 139.4 pence, 5.3 pence higher than the previous month and 4.7 pence per litre higher than a year ago.
- Diesel prices were 144.2 pence per litre, 4.8 pence higher than the previous month and 5.0 pence per litre higher than a year ago.
- The price differential between ULSP and ULSD in September 2012 is 4.8 pence per litre. The differential has been on a decreasing trend since the beginning of 2012.

Chart 4.1.2: Annual average retail price of motor spirit and diesel 1992 to 2011

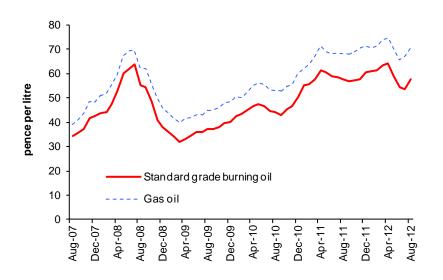

- 2011 prices of ULSP and ULSD reached new record highs, respectively 14.0 per cent and 16.3 per cent higher than the previous peak in 2010.
- The differential between ULSP and ULSD in 2011 was 5.4 pence per litre, the highest level since 2008.
- Motor fuel prices increased at a steady rate from the Gulf crisis in 1990/91 to 2000, chiefly as a result of duty changes. Since 2000, prices have followed oil prices, increasing strongly in 2008, falling back in 2009, then increasing strongly once more in 2010 and 2011.

Chart 4.1.3: Price of unleaded petrol and diesel excluding taxes September 2007 to September 2012

- The price of unleaded petrol, excluding tax, has fallen from the peak in April 2012, by 3.2 per cent.
- The price of diesel, excluding taxes, has also fallen from the April 2012 peak, by 4.6 per cent.
- In September 2012 the price differential between ULSP and diesel, excluding tax, is 4.0 pence per litre, compared to the high of 11.9 pence per litre in November 2008.

Chart 4.1.4: Typical retail prices of standard grade burning oil and gas oil August 2007 to August 2012

- The price of SGBO in August 2012 was 10.1 per cent lower than in April 2012, which was the highest level since July 2008.
- The price of SGBO in August 2012 was 0.3 per cent higher than a year ago.
- The price of gas oil in August 2012 was 4.7 per cent lower than April 2012, which was the highest level since April 2011.
- The price of gas oil in August 2012 was 4.5 per cent higher than a year ago.

4.2 Crude oil prices

Table 4.1.1: Typical monthly retail prices of petroleum products and a crude oil index Table 4.1.2: Average annual retail prices of petroleum products and a crude oil price index

Chart 4.2.1: Index⁽¹⁾ of crude oil prices August 2007 to August 2012

(1)The index represents the average price paid by refineries for the month and is calculated in sterling on a cif basis, see Annex A.

- The average cost of crude oil acquired by refineries in August 2012 has risen since the low of December 2008 by 159 per cent. Prices are 11 per cent lower than March 2012, which was the highest level since our records began in 1989.
- Since reaching a peak in April last year, crude oil prices fell a small amount but remained at a high level before further increasing to reach a new record level in March 2012. Prices then fell between April and June, before rising once more in July and August.
- High prices throughout the year meant that 2011 prices were 35.7 per cent above 2010 prices and 35.3 per cent above the previous annual high in 2008.
- Compared to a year ago, the price in August is 4.0 per cent higher.
- Over the past five years (August 2007 to August 2012) the average cost of crude oil acquired by refineries has almost doubled.

⁽¹⁾ These estimates are generally representative of prices paid on or about the 15th of the month. Estimates are based on information provided by oil marketing companies until December 1994. From January 1995, data from super/hypermarket chains have been included. The very latest data for motor spirit and diesel are provisional, based on a smaller sample than used for preceding months.

⁽²⁾ These estimates are for deliveries of 2,000 to 5,000 litres; such deliveries attracted 8 per cent VAT from 1 April 1994. With effect from 1 September 1997 the rate of VAT was reduced to 5 per cent.

⁽³⁾ Price index for supplies received by refineries in the UK from both indigenous and imported sources. It represents the average for the month calculated in sterling on a cif basis.

⁽¹⁾ Estimates are based on information provided by oil marketing companies until December 1994. From January 1995, data from super/hypermarket chains have been included.

⁽²⁾ From October 1999, Four Star prices represent 'Lead Replacement Petrol' (LRP). Pump prices for both petrols are broadly the same.

⁽³⁾ From April 2001, Premium unleaded prices represent Ultra Low Sulphur Petrol (ULSP), which now accounts for virtually all Premium unleaded sold. The pump prices for both fuels were broadly the same.

⁽⁴⁾ From July 1999, diesel prices represent average prices for Ultra Low Sulphur Diesel which now accounts for virtually all diesel sold. Prices for the period March - June 1999 represent a mixture of both types of diesel as companies switched to only selling ULSD. Pump prices for both diesels are broadly the same.

⁽⁵⁾ These estimates are for deliveries of up to 1,000 litres; such deliveries attract 8 per cent VAT from 1 April 1994. With effect from 1 September 1997 the rate of VAT has been reduced to 5 per cent.

⁽⁶⁾ These estimates are for deliveries of 2,000 to 5,000 litres; such deliveries attract 8 per cent VAT from 1 April 1994. With effect from 1 September 1997 the rate of VAT has been reduced to 5 per cent.

⁽⁷⁾ Price index for supplies received by refineries in the UK from both indigenous and imported sources. It represents the average for the month calculated in sterling on a cif basis.

Section 5 – International Comparisons

Highlights

- In August 2012 the UK price for petrol was sixth highest in the EU 15 at 134.1 pence per litre, whilst the UK price for diesel was the highest in the EU 15 at 139.4 pence per litre.
- For July December 2011, UK industrial electricity prices were the seventh highest in the EU 15, whilst industrial gas prices were the lowest in the EU 15. UK domestic gas and electricity prices were lowest and fourth lowest respectively in the EU 15.
- We are unable to publish data for January June 2012 due to delays in Eurostat's publication.

International prices vary for many reasons including differences in indigenous resources and market structures, and varying exchange rates and inflation rates. Prices for gas and electricity in this section will vary depending on the periodicity (6-monthly or annual) and consumption (banded or an overall average) of the tables. In general, the 6-monthly Eurostat EU27 tables have more timely data and reflect changes on a shorter timescale, but comparisons with the USA, Canada or Japan require the annual IEA tables. Rankings may differ between the IEA and Eurostat tables.

Premium unleaded petrol prices and diesel prices in the EU

5.1.1 Prices of road fuels in the EU are shown in Tables 5.1.1 and 5.2.1. Including tax, the UK has the 6th highest price for petrol and the highest price for diesel. The tax component of UK petrol and diesel prices is around 60 per cent, generally one of the highest rates in Europe.

Average industrial and domestic electricity prices, EU and G7

- 5.3.1 IEA data for 2011 in Table 5.3.1 shows that the UK was above the EU/G7 median including and excluding tax.
- 5.4.1 Eurostat data in Tables 5.4.1 to 5.4.4 shows that, for July to December 2011, UK industrial electricity prices were above the EU15 median for all consumers including and excluding tax, except for small consumers including tax, which were below the median.
- 5.5.1 IEA data for 2011 in Table 5.5.1 shows that the UK was below the median including tax but above the median excluding tax.
- 5.6.1 Eurostat data in Table 5.6.2 shows that, for July to December 2011, UK domestic electricity prices for medium consumers were below the EU15 median including tax and above the median excluding tax.

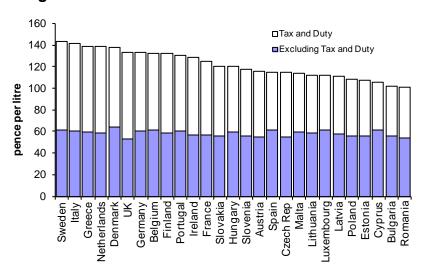

Average industrial and domestic gas prices, EU and G7

- 5.7.1 IEA data for 2011 in Table 5.7.1 shows that the UK had the lowest prices in the EU/G7 including tax and the second lowest excluding tax.
- 5.8.1 Eurostat data in Tables 5.8.1 to 5.8.3 shows that, for July to December 2011, UK industrial gas prices including and excluding tax were the lowest in the EU15 for all sizebands of consumer.
- 5.9.1 IEA data for 2011 in Table 5.9.1 shows that the UK was below the EU/G7 median including and excluding tax.
- 5.10.1 Eurostat data in Tables 5.10.2 shows that, for July to December 2011, UK domestic gas prices for medium consumers were the lowest in the EU15 including tax and the fourth lowest excluding tax.

5.1 Premium unleaded petrol prices in the EU

Table 5.1.1: Premium unleaded petrol prices in the EU

Chart 5.1.1 Average EU premium unleaded petrol prices in pence per litre as at August 2012

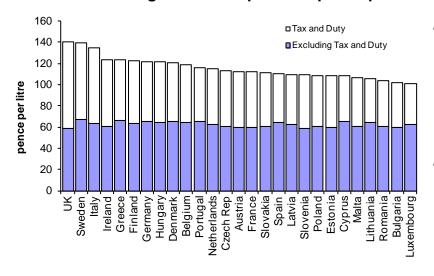

- In August 2012 average UK unleaded petrol prices, including taxes, were the sixth highest in the EU at 134.1 pence per litre when presented in a common currency basis.
- The highest price was in Sweden at 144.2 pence per litre, whilst the lowest price was in Romania at 101.1 pence per litre.

Source: European Commission Oil Bulletin

5.2 Diesel prices in the EU

Table 5.2.1: Diesel prices in the EU

Chart 5.2.1 Average EU diesel prices in pence per litre as at August 2012

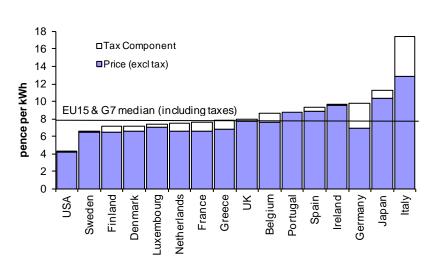

- Average UK diesel prices including taxes in August 2012 were the highest within the EU at 139.4 pence per litre, whilst the lowest price was in Luxembourg at 100.8 pence per litre.
- The high UK Diesel price is mainly due to the taxes levied, which formed 58 per cent of the total price for diesel in August 2012, compared to a range of 39 to 53 per cent in the rest of the EU.

5.3 Average annual industrial electricity prices, EU and G7

Table 5.3.1: Industrial electricity prices in the EU and G7 countries including and excluding taxes

Chart 5.3.1 Average industrial electricity prices in 2011, EU and G7

- In 2011, average UK industrial electricity prices, including taxes, were the eighth highest in the EU15, fourth highest in the G7, and were 0.8 per cent above the EU15 and G7 median price.
- Prices in the UK excluding taxes were the sixth highest in the EU15, third highest in the G7, and were 10.6 per cent above the EU15 and G7 median price.
- Prices relative to the median for some countries have been estimated.
- Data for 2011 is not available for all countries.

Notes: Data are not available for Austria, Bulgaria, Canada, Cyprus, Estonia, Latvia, Lithuania, Malta, and Romania.

The excluding tax price for the USA has been estimated using a weighted average of general sales taxes and fuel taxes levied by individual states.

5.4 Average industrial electricity prices in the EU by size of consumer

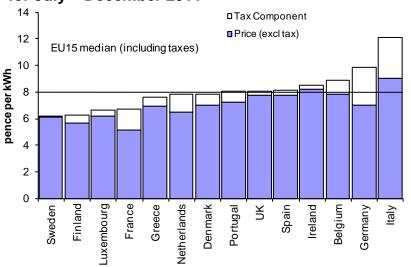

Table 5.4.1: Average industrial electricity prices for small consumers in the EU *

Table 5.4.2: Average industrial electricity prices for medium consumers in the EU

Table 5.4.3: Average industrial electricity prices for large consumers in the EU *

Table 5.4.4: Average industrial electricity prices for extra large consumers in the EU 15 *

Chart 5.4.1 Average industrial electricity prices for medium consumers in the EU 15 for July – December 2011

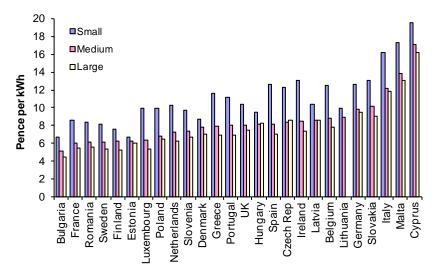

- Average UK industrial electricity prices including taxes for medium consumers for the period July to December 2011 were the seventh highest in the EU15 and were 0.3% above the estimated EU15 median.
- The UK prices for medium consumers excluding taxes were the fifth highest in the EU15 and were 10.7 per cent above the median price.
- Data for July December 2011 is not available for all countries.

Notes: Prices are not available for Austria.

Medium consumers are defined as having an annual consumption of 2,000 - 19,999 MWh per annum.

Source: Eurostat Statistics in Focus Electricity prices for EU Industry July – December 2011

Chart 5.4.2 Average industrial electricity prices⁽¹⁾ in the EU for small, medium and large consumers July – December 2011 (ordered on medium sizeband)

- Data for all sizebands shows that, for all countries reporting data, small consumers pay the highest unit prices.
- The median price for small industrial electricity consumers in the EU, including tax, was 28 per cent higher than prices paid by medium consumers.
- The median price for large industrial electricity consumers in the EU was 12 per cent lower than prices paid by medium consumers.

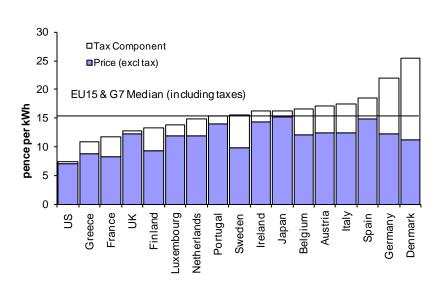

(1) Including taxes where not refunded

5.6 Average domestic electricity prices in the EU by size of consumer

Table 5.6.1: Average domestic electricity prices for small consumers in the EU * Table 5.6.2: Average domestic electricity prices for medium consumers in the EU Table 5.6.3: Average domestic electricity prices for large consumers in the EU *

Chart 5.6.1 Average domestic electricity prices for medium consumers in the EU 15 for July – December 2011

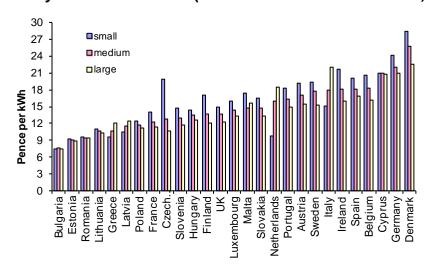

- The average UK domestic electricity price including taxes for medium consumers for July to December 2011 was the fourth lowest in the EU 15 and was 19.4 per cent below the median price.
- The UK price excluding taxes was the fourth highest in the EU15, and was 8.2 per cent above the median level.

Notes:

Medium consumers are defined as having an annual consumption of 2,500 -4,999 kWh per annum.

Source: Eurostat Statistics in Focus Electricity prices for EU households, July - December 2011

Chart 5.6.2 Average domestic electricity prices⁽¹⁾ in the EU by size of consumer July – December 2011 (ordered on medium sizeband)

- Data for all sizebands shows that, in general, small consumers pay the highest prices. The most notable exception is The Netherlands, where small consumers pay 38 per cent less than medium consumers.
- The median price for small domestic electricity consumers in the EU, including tax, was 11 per cent higher than the price paid by medium consumers.
- The median price for large domestic electricity consumers in the EU was 7 per cent lower than the price paid by medium consumers.

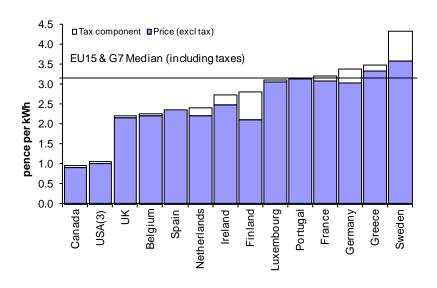

(1) Including taxes where not refunded

5.8 Average industrial gas prices in the EU by size of consumer

Table 5.8.1: Average industrial gas prices for small consumers in the EU * Table 5.8.2: Average industrial gas prices for medium consumers in the EU Table 5.8.3: Average industrial gas prices for large consumers in the EU *

Chart 5.8.1 Average industrial gas prices for medium consumers in the EU 15 for July – December 2011

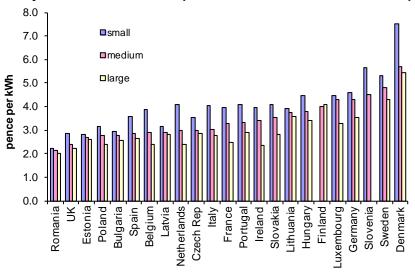

- Average UK industrial gas prices for the period July to December 2011, including taxes, for medium consumers were the lowest in the EU15 and were 27.4 per cent below the median price.
- UK prices excluding taxes for medium consumers were also the lowest in the EU15 and were 28.1 per cent below the EU15 median.
- Data for July December 2011 is not available for all countries.

Notes: Prices are not available for Austria, Cyprus, Greece and Malta.

Medium consumers are defined as having an annual consumption of 2,778 – 27,777 MWh.

Source: Eurostat Statistics in Focus Electricity prices for EU Industry July - December 2011.

Chart 5.8.2 Average industrial gas prices(1) in the EU by size of consumer July – December 2011 (ordered on medium sizeband)

- Data for all sizebands shows that, for all countries reporting data, small consumers pay the highest prices.
- The median price for small industrial gas consumers in the EU, including tax, was 21 per cent higher than the price paid by medium consumers.
- The median price for large industrial gas consumers in the EU was 14 per cent lower than the price paid by medium consumers.

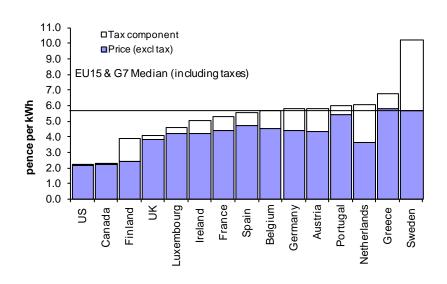

(1) Including taxes where not refunded

Source: Derived from the International Energy Agency publication, Energy Prices and Taxes

The relevant median is the EU15/G7 median for EU15 and G7 data and the EU27 median for EU 27 data

⁽¹⁾ Prices converted to pounds sterling using annual average exchange rates.(2) Prices include all taxes where not refundable on purchase.

⁽³⁾ Prices excluding taxes have been estimated using a weighted average of general sales taxes and fuel taxes levied by individual states.

⁽⁴⁾ As of 2011 data will no longer be available for these countries.

^{..} Data unavailable.

DECC estimates that the price is likely to be below the relevant median.

^{+/-} DECC estimates that the price is likely to be around the relevant median.

⁺ DECC estimates that the price is likely to exceed the relevant median.

⁽¹⁾ Medium consumers: consuming 2,000 - 19,999 MWh per annum for periods January - June and July - December each year

⁽²⁾ Prices converted to sterling using exchange rates in the appropriate period.

⁽³⁾ See paragraphs A38 to A45 in the Technical notes for an explanation of the estimating methodology.

⁽⁴⁾ Median price is based upon the available data, including those cases where DECC have estimated the position of prices relative to the EU median.

⁽⁵⁾ Prices include all taxes where not refundable on purchase.

⁽⁶⁾ There is no tax.

⁽⁷⁾ Some ex-tax data is missing

Source: Derived from the International Energy Agency publication, Energy Prices and Taxes

⁽¹⁾ Prices converted to pounds sterling using annual average exchange rates.

⁽²⁾ Prices include all taxes where not refundable on purchase.
(3) Prices excluding taxes have been estimated using a weighted average of general sales taxes and fuel taxes levied by individual states.

⁽⁴⁾ As of 2011 data will no longer be available for these countries.

^{..} Data unavailable.

⁺ DECC estimates that the price is likely to exceed the relevant median.

^{+/-} DECC estimates that the price is likely to be around the relevant median.
- DECC estimates that the price is likely to be below the relevant median.

The relevant median is the EU15/G7 median for EU15/G7

Source: Derived from the International Energy Agency publication, Energy Prices and Taxes

- (1) Prices converted to pounds sterling using annual average exchange rates.
- (2) Prices include all taxes where not refundable on purchase.
- (3) Prices for Finland are for district heating not central heating as is the case in other countries.
- (4) Prices excluding taxes have been estimated using a weighted average of general sales taxes and fuel taxes levied by individual states.
- (5) As of 2011 data will no longer be available for these countries.
- .. Data unavailable.
- + DECC estimates that the price is likely to exceed the relevant median.
- +/- DECC estimates that the price is likely to be around the relevant median.
- DECC estimates that the price is likely to be below the relevant median.

The relevant median is the EU15/G7 median for EU15/G7 data

Source: Eurostat Statistics in Focus

⁽¹⁾ Medium consumers consuming 5,557 - 55,556 kWh per annum, for periods January - June and July - December each year.

⁽²⁾ Prices converted to sterling using exchange rates in the appropriate month and year.(3) See paragraphs A389to A46 in the Technical notes for an explanation of the estimating methodology.

⁽⁴⁾ From July 2001 the price is for natural gas rather than gas works gas.

⁽⁵⁾ Median price is based upon the available data, including those cases where DECC have stimated the position of prices relative to the EU median.

⁽⁶⁾ Prices include all taxes where not refundable on purchase.

Missing data estimation

- + DECC estimates that the price is likely to exceed the relevant median. +/- DECC estimates that the price is likely to be around the relevant median.
- DECC estimates that the price is likely to be below the relevant median.

The relevant median is the EU15 median for EU15 data and the EU27 median for accession countries.

Annex A – Technical Notes

- A1. The source of the prices in this table is the Retail Prices Index (RPI), published by the Office for National Statistics (ONS). The fuel components within the RPI are published, together with the all items RPI. Table A1 below gives the weights within the total index, in parts per 1,000, of the fuel components. The RPI is calculated using prices collected on a day near the middle of the month.
- A2. Quarterly data is published three months in arrears. Any revised data is marked with an "r". Provisional annual data is published in the March edition of QEP, with final data being published in June.

Table A1:Retail pr	ice index, fuel	component	weights
--------------------	-----------------	-----------	---------

	All	Fuel and	Coal and			Oil and	Petrol and
	items	light	solid fuels	Gas	Electricity	other fuels	lubricating oil
1975	1,000	53	11	12	25	5	47
1980	1,000	59	9	16	29	4	43
1985	1,000	65	8	24	29	4	50
1990	1,000	50	4	19	24	3	33
1995	1,000	45	2	18	23	2	37
2000	1,000	32	1	13	16	2	43
2005	1,000	31	1	13	15	2	35
2006	1,000	33	1	14	15	3	40
2007	1,000	39	1	18	18	2	36
2008	1,000	33	1	13	16	3	43
2009	1,000	49	1	23	23	2	36
2010	1,000	40	1	17	18	4	49
2011	1,000	42	1	18	20	3	46
2012	1,000	46	1	21	21	3	47

The following notes apply to Table 2.1.1:

- A3. **Coal and smokeless fuel (coal and solid fuels)** Retail prices of one standard grade of household coal and of the boiler/room heater grade of smokeless fuel sold by the retailer, obtained from local retailers in up to 146 areas throughout the United Kingdom.
- A4. **Gas and electricity** The indices are calculated using published tariff information from British Gas (and since April 1996 other suppliers), the Public Electricity Supply Companies and Northern Ireland Electricity (NIE). When prices change in an area (including discounts and lump sum rebates), an index is re-calculated for a selection of the tariffs in use in that area at typical levels of consumption at each tariff. Electricity area indices are weighted together using the total receipts of each Public Electricity Supply Company and NIE from their sales to domestic consumers under each tariff. Gas companies are weighted by customer numbers. Both indices are calculated using mainly credit tariffs only.
- A5. **Heating oils -** This comprises bottled gas and paraffin until January 1986, and domestic heating oils. Prices of heating oil are provided by the main suppliers.
- A6. **Petrol and oil** Retail prices of the different grades of motor spirit and engine oil are obtained from garages in more than 180 areas throughout the United Kingdom.

Tables 2.2.1 to 2.5.2

A7. Tables 2.2.1 and 2.3.1 show representative gas and electricity bills by payment type in each of the 15 Public Electricity Supply (PES) areas in the UK and 12 gas Local Distribution Zones

Technical Notes

(LDZ) in Great Britain. The unit cost represents the total cost to the consumer per unit consumed and is calculated by dividing the bill shown by the number of units consumed (18,000 kWh for gas, 3,300 kWh for electricity). The electricity PES areas and gas LDZ associated with each of the towns and cities are shown in Table A2:

Table A2: Towns and cities by LDZ and PES area					
	Gas LDZ	Electricity PES area			
Aberdeen	Scotland	Northern Scotland			
Belfast	n/a	Northern Ireland			
Birmingham	West Midlands	West Midlands			
Canterbury	South East	South East			
Cardiff	Wales	South Wales			
Edinburgh	Scotland	Southern Scotland			
Ipswich	Eastern	Eastern			
Leeds	North East	Yorkshire			
Liverpool	North West	Merseyside & North Wales			
London	London	London			
Manchester	North West	North West			
Newcastle	Northern	North East			
Nottingham	East Midlands	East Midlands			
Plymouth	South West	South West			
Southampton	Southern	Southern			

- A8. Provisional annual data is published in the December edition of QEP, with final data being published in March.
- A9. Bills and unit costs are based on published prices and include standing charges where applicable. No allowances are made for introductory offers or non-cash benefits that may be available from new suppliers. Both electricity and gas bills and costs reflect the prices of all suppliers. This basis is used for all the domestic bills and cost data used in Tables 2.2.1 to 2.3.3. The bills shown relate to the total bill including VAT in cash terms received during the calendar year, for the tariff type shown, including all tariff changes and rebates. Averages are weighted by the number of domestic customers. For electricity, an annual consumption of 3,300 kWh is used whilst the equivalent figure for gas is 18,000 kWh.
- A10. The weighted average of all supplier gas bills are based on equivalent tariffs of British Gas and other gas supply companies. From 2007 onwards, due to a methodology change, the estimates are based on bills received during the calendar year. As part of the methodology change, it is now assumed that, of the 18,000 kWh of gas consumed per annum (see A9), 7,200 kWh are consumed in the first quarter, 3,600 kWh in Q2, 1,800 kWh in Q3 and 5,400 kWh in Q4.
- A11. Internet tables 2.4.2, 2.4.3 and 2.5.2 show data for 'Economy 7' tariffs, where a lower unit cost is applied to off-peak (night) consumption. For the total consumption of 6,600 kWh, off-peak consumption has been taken as 3,600 kWh.
- A12. Internet tables 2.2.4 and 2.3.4 are experimental statistics, used together with modelled energy consumption in the calculation of household notional energy bills for use in the modelling of the level of fuel poverty in England. These data are not suitable for calculating the average bills of low use consumers. The data reported is an average of the fixed and variable costs across the four quarters in the year. In the calculation, more weight is given to costs in Q1 and Q4, when it is assumed that more electricity and gas is consumed (and hence the price at this time should contribute more to the average). Therefore, these values should not be used to determine current average bills. For more information see the Fuel Poverty Methodology Handbook on the DECC website: http://www.decc.gov.uk/en/content/cms/statistics/fuelpov_stats/fuelpov_stats.aspx

Table 2.6.1

A13. Household final consumption expenditure comprises household expenditure in the United Kingdom on the fuels specified and fuel purchases by foreign tourists. It excludes expenditure on fuels by businesses. VAT was levied on domestic fuels at 8 per cent in April 1994, reduced to 5 per cent in September 1997, and is included in the table from 1994 onwards. For coal, coke and petroleum products it was assumed that all consumers paid VAT from the date of its introduction. For electricity and gas an estimate was made that 5 per cent of electricity sales and 4 per cent of gas sales were covered by customers pre-paying their bills to avoid VAT in 1994 and 1995. Figures for total consumers' expenditure are also shown for comparison.

Due to the reclassification of Household Expenditure to conform to the European Systems of Accounts 1995 (ESA 95), COICOP (Classification of Individual Consumption by Purpose) headings have been rearranged.

The following notes apply to Table 2.6.1:

- A14. **Solid Fuels** Household final consumption expenditure on these fuels is based on estimates of inland sales of solid fuels to domestic consumers. Expenditure in Northern Ireland is estimated based on values of colliery despatches of house coal to Northern Ireland.
- A15. **Gas** Personal consumption in the United Kingdom is taken as sales to domestic premises. Estimates of the quantity and value of liquid gases purchased by domestic consumers are provided by the petroleum industry. The average price used is the average revenue per kWh for public supply sales of gas to domestic consumers.
- A16. **Electricity** Sales from the public electricity supply system to domestic consumers in the United Kingdom plus estimates of the domestic element included in sales to dual use premises. Sales are valued at the average revenue per unit for electricity sold to domestic consumers, which takes into account discounts and lump sum rebates.
- A17. **Liquid fuels** (domestic heating and lighting oil) For fuel oils and heating oils, information is available from the petroleum industry on quantities delivered to domestic consumers. The figures for domestic consumption are then valued using monthly prices collected by the department from oil companies.
- A18. **Vehicle fuels and lubricants** (petrol, diesel, LPG, oil and lubricants, brake and other fluids, coolants) Estimates of the quantity and value of lubricating oil purchased by domestic customers are provided by the petroleum industry. For motor spirit and diesel, estimates of business purchases of the fuels are made and deducted from total deliveries to arrive at purchases by domestic consumers. The figures for domestic consumption are then valued using monthly prices collected by the department from oil companies.

Table 2.6.2

A19. Figures for Internet Table 2.6.2 are taken from the Expenditure and Food Survey (EFS) conducted by the ONS. The figures are estimates based upon a representative sample of households. The averages in the table have been calculated on the basis of consuming households, i.e. only those households who consumed the particular fuel in question are included in the calculation of the average expenditure. These estimates therefore differ from those published by the ONS in the report, "Family Spending", where the total of all households is used to calculate average fuel expenditure. After the publication of data for 1993 the survey moved to a financial year basis until 2005/06, then returned to a calendar year basis from 2006. The data presented on expenditure on fuel as a proportion of total expenditure in table 2.6.2 are based on all households, not just those consuming the fuel or other commodity, for ease of comparison.

Tables 3.1.1 to 3.1.4

- A20. Prices are derived from information collected via the Quarterly Fuels Inquiry on fuel purchases from a panel of about 600 establishments within manufacturing industry (which excludes electricity generation). The panel consists of companies purchasing fuels in small and large quantities. To maximise the coverage of each fuel type and minimise the burden on business, larger users are surveyed proportionally more than smaller users.
- A21. Provisional quarterly data is published three months in arrears, with final data being published six months in arrears. Any revised data is marked with an "r". Provisional annual data is published in the March edition of QEP, with final annual data being published in June. The entire year's quarterly data is reviewed in June to ensure that each of the contributors who supply data have been placed in the correct size band based upon their actual annual consumption. This means that there can be revisions made to data from Q1 to Q4.
- A22. For each size of consumer the average price for a fuel (exclusive of VAT) is calculated by dividing the total quantity of purchases into their total value. The "all consumers-average" price uses base weighting and weights the prices for each size band according to purchases by businesses in the size band recorded in the 1984 Purchases Inquiry. (This is a large scale survey conducted every 5 years until 1989, and conducted annually for a rotating selection of industries from 1994 to 1999. From 1999 the inquiry has once again covered all industries, providing information on the purchases of materials and fuels by the whole of UK industry.) The weights will be reviewed when comprehensive up-to-date purchases data are available. The size bands are defined, for each fuel individually, according to the approximate range of annual purchases covered. (See Table A3).
- A23. As described above the prices given are representative market prices. This means trades that, because of their size or dominance of total consumption would produce an unrepresentative price, are excluded. For example, coal purchased by the iron and steel sector is excluded, as is gas purchased for electricity generation.
- A24. For some fuels, the relative size in volume terms of the largest users can have the effect of moving the weighted average more towards the large user price. This is true for gas where, because of the growth in consumption, the weights provided by the 1984 purchases survey may be out of date. Therefore, for some fuels (e.g. gas and gas oil), the median price (the price at which 50 per cent of the prices paid are higher and 50 per cent lower) may be another useful guide to average prices.
- A25. From Q1 2010, for coal only average prices and prices for large consumers are available due to the small number of companies reporting data. Data for medium fuel oil, liquefied petroleum gases and hard coke were discontinued from Q1 2005, and there was no sub-division into size bands due to the small number of sites purchasing each of these fuels. The small sample sizes reflect the small overall consumption, relative to the major fuels covered, which meant that, although the prices were still representative, they could be subject to more sample effects than the other fuels (e.g. if a relatively large purchaser switches fuel).
- A26. To enable coal prices to be calculated in common units, companies record the calorific value of the coal they purchase. Conversion factors for fuel oil (both heavy and medium), gas oil, liquefied petroleum gas and hard coke are given in Annex B.
- A27. The 10 per cent and 90 per cent deciles and the median price for each fuel are presented in addition to the prices for each size band. The 10 per cent decile is the point within the complete range of prices below which the lowest 10 per cent of those prices fall. Similarly, the 90 per cent decile is the point above which the highest 10 per cent of the prices occur. These values give some indication of the spread of prices paid by purchasers. The deciles and the median are calculated by giving equal "weight" to each purchaser, but are scaled to represent the mix of fuel users by size in the industrial population that the panel represents. From Q1 2007, decile information is only published for gas and electricity.

Table A3: Range of annual	purchases for the Quarterly	y Fuels Inquiry

	Large	Of which:		Medium	Small
		Extra large	Moderately large		
Fuel	Greater than	Greater than	iai go		Less than
Coal (tonnes)	7,600			760 to 7,600	760
Heavy fuel oil (tonnes)	4,900	15,000	4,900 to 15,000	490 to 4,900	490
Gas oil (tonnes)	175		**	35 to 175	35
Electricity (thousand kWh)	8,800	150,000	8,800 to 150,000	880 to 8,800	880
Gas ⁽¹⁾ (thousand kWh)	8,800			1,500 to 8,800	1,500

(1) Respondents purchasing more than one type of supply (firm contract and interruptible contract) are treated as separate entities in respect of each type of supply.

Table 3.2.1

- A28. The prices for fuels used in electricity generation are collected via a quarterly inquiry of electricity generators in the United Kingdom. This covers companies that produce electricity from nuclear sources plus all companies whose prime purpose is the generation of electricity. The companies are: AES Electric Ltd., Barking Power Ltd., Centrica plc., Coryton Energy Company Ltd., Derwent Cogeneration Ltd., Eggborough Power Ltd., E.On UK plc., Fellside Heat and Power Ltd., Fibrogen Ltd., Fibropower Ltd., Fibrothetford Ltd., GDF Suez, International Power, Premier Power Ltd., Rocksavage Power Company Ltd., RWE Npower plc., Scottish Power plc., Scottish and Southern Energy plc., SELCHP Ltd., Spalding Energy Company Ltd.
- A29. The data reported are the value and volume of fuel purchased during the quarter and may not always reflect the fuel actually used (i.e. there can be stocking and destocking, especially of coal). The prices reported are typically for long-term contracts, with price escalator factors, some of which may have been entered into some time ago. As such, the prices can be higher than those paid by large industrial users who typically negotiate contracts each year.
- A30 Provisional quarterly data is published three months in arrears, with final data being published six months in arrears. Any revised data is marked with an "r". Provisional annual data is published in the March edition of QEP, with final data being published in June.
- A31. The gas beach price series is derived from gas sales by licensees in the UKCS to delivery points in the UK. It excludes exported gas and is adjusted to include imported gas. It is calculated as follows:

where the UKCS sales value and volume data are derived from DECC's statistical inquiry into oil and gas extraction (PQ1100). Returns from the inquiry give the value and volume of gas sold by each licensee from a particular field (or group of fields). Data from the inquiry on sales and expenditure by licensees are covered and further explained in Annex G of the internet version of the Digest of UK Energy Statistics. Trade data are supplied by Revenue and Customs and published in the internet version of the Digest in Annex G, Chart G1.0.

A32. The gas levy applied to gas purchased under certain contracts originally entered into before July 1975. The cost of gas under these pre-July 1975 contracts had historically been substantially less than the prevailing market price. Gas sold under these contracts was not subject to Petroleum Revenue Tax (PRT) because the contracts were classified as "tax-exempt" when PRT was introduced in 1975. Instead, under the Gas Levy Act 1981, the purchaser of gas subject to the relevant contracts had to pay a levy on every therm of such gas that they purchased. The purpose

Technical Notes

of the gas levy was to capture for the Exchequer the bulk of the economic rent which would otherwise accrue to the purchaser from purchasing this gas at below market prices. However, current and expected future gas market prices are now below the average cost of this gas (even before adding the cost of the levy). The gas levy was abolished from 1 April 1998.

Tables 3.3.1 and 3.3.2

A33. Provisional quarterly data is published three months in arrears, with final data being published six months in arrears. Any revised data is marked with an "r". Provisional annual data is published in March, with final data being published in June. The entire year's quarterly data for coal and HFO is reviewed in June to ensure that each of the contributors who supply data to the Quarterly Fuels Inquiry have been placed in the correct size band based upon their actual annual consumption. This means that there can be revisions made to data from Q1 to Q4.

A34. The Climate Change Levy (CCL) came into effect in April 2001. The rates were increased in April 2007, 2008, 2009 and 2011. The rates are shown in the table below.

	April 2001	April 2007	April 2008	April 2009	April 2011	April 2012
Coal	£11.7/tonne	£12.01/tonne	£12.42/tonne	£12.81/tonne	£13.21/tonne	£13.87/tonne
Electricity	0.43p/kWh	0.441p/kWh	0.456 p/kWh	0.470 p/kWh	0.485 p/kWh	0.509 p/kWh
Gas	0.15p/kWh	0.154p/kWh	0.159 p/kWh	0.164 p/kWh	0.169 p/kWh	0.177 p/kWh
LPG	£9.60/tonne	£9.85/tonne	£10.18/tonne	£10.50/tonne	£10.83/tonne	£11.37/tonne

Tables 3.4.1 and 3.4.2

A35. The prices for gas and electricity consumed by non-domestic users in the United Kingdom are collected via a quarterly inquiry of gas and electricity suppliers. The data reported are the value and volume of energy sold during the quarter, for each of the sizebands below:

Table A4: Range of annual purchases for the Price Transparency survey						
	Annual consumption MWh		-	Annual consumption MWh		
Electricity Very Small	0 - 20	Gas	Very Small	<278		
Small	20 - 499		Small	278 - 2,777		
Small/Medium	500 - 1,999		Medium	2,778 – 27,777		
Medium	2,000 - 19,999		Large	27,778 – 277,777		
Large	20,000 - 69,999		Very Large	277,778 - 1,111,112		
Very Large	70,000 – 150,000					
Extra Large	>150,000					

Tables 4.1.1 to 4.1.3

A36. The data published are national average prices calculated from prices supplied by all major motor fuel marketing companies. Prior to 1977, price data were collated from a variety of sources, mainly the published scheduled wholesale prices of the oil companies to which retailers margins were added. The results of various consumers' surveys were also taken into consideration in arriving at a typical price. Users of the table should bear in mind that, because of the multiplicity of petroleum marketing companies operating in the United Kingdom and the diversity of their pricing policies, prices differ from dealer to dealer and from area to area. From January 1995 sales by super/hyper markets are included in the price estimates.

A37 Crude oil prices are shown in Table 4.1.1 as an index based on a "basket" of both indigenous and imported crude oil prices that are used as an input, along with other fuel prices, for

the Producer Prices Index (produced by ONS). The index represents the average price paid by refineries for the month and is calculated in sterling on a cif basis.

A38. Provisional monthly prices are usually revised in the month following their original publication, with revisions being marked with an "r". Provisional annual prices are published in December with revisions being made during the following two months as more data becomes available.

Tables 5.1.1 to 5.10.3

- A39. International comparisons are based on data published by international organisations. Motor fuel prices are taken from the European Commission's 'Oil Bulletin'.
- A40. For the analysis of annual electricity and gas prices (Tables 5.3.1, 5.5.1, 5.7.1 and 5.9.1), the data used are collated and published by the International Energy Agency in 'Energy Prices and Taxes'. Individual countries supply data to the IEA, so methodology can vary between countries. In 2011, the IEA ceased publishing prices for non-OECD countries, resulting in the loss of data for 6 of the EU 17 member states: Bulgaria, Cyprus, Latvia, Lithuania, Malta and Romania.
- A41. The data presented in Sections 5.4, 5.6, 5.8 and 5.10 are derived from Eurostat's Statistics in Focus series.
- A42. Eurostat changed the methodology used to compile the Price Transparency data shown in sections 5.4, 5.6, 5.8 and 5.10. From 1st January 2008, data shows average prices over 6-month periods (January June and July December), and each sizeband covers a range of consumption. Previously, the Price Transparency data was for a single point in time (1st January and 1st July), and each sizeband was represented by a single consumption figure.
- A43. The change to the methodology has created a discontinuity within the price series. We have published the new methodology prices within the same tables, with a clear distinction between old and new data. Whilst prices using the old and new methodologies will not be comparable, the UK ranking and UK price relative to the EU median should be broadly comparable across the old and new data. The sizebands for consumers from January 2008 onwards are defined as follows:

Industrial Electricity	Eurostat size band	Annual consumption (MWh)
Small	Band IB	20 - 499
Medium	Band ID	2,000 - 19,999
Large	Band IE	20,000 - 69,999
Very Large	Band IF	70,000 – 150,000

Industrial Gas	Eurostat size band	Annual consumption (MWh)
Small	Band I2	278 – 2,777
Medium	Band I3	2,778 – 27,777
Large	Band I4	27,778 – 277,777

Domestic Electricity	Eurostat size band	Annual consumption (kWh)
Small	Band DB	1,000 – 2,499
Medium	Band DC	2,500 – 4,999
Large	Band DD	5,000 – 15,000

Domestic Gas	Eurostat size band	Annual consumption (kWh)
Small	Band D1	< 5,557
Medium	Band D2	5,557 – 55,557
Large	Band D3	>55,557

Technical Notes

- A44. Eurostat publishes data on gas and electricity prices six months after the end of the reference period. Prior to 2005, the Eurostat data was mainly for selected cities in the EU, but from 2005 onwards national prices are used.
- A45. It is important when comparing international prices to keep in mind the impact of exchange rates (as the data are presented in a common pound sterling basis, the changing level of the pound will cause some changes in relative prices) and inflation rates in individual countries. The relative strength of the pound in 1997, 1998 and 1999 (e.g. sterling appreciated by 21 per cent against the German Mark between 1996 and 1999) to some extent will have had an adverse effect on comparisons of UK data. The pound has depreciated against the euro by around 25 per cent between 2007 and 2011. This means that, for recent years, countries that use the euro will show increased prices when expressed in pounds sterling.
- A46. For tables 5.3.1 to 5.10.3, where data is not available, we have estimated the price in relation to the EU 15 median. A '+' indicates that the price is likely to exceed the median and is given a high price, '+/-' indicates that the price is likely to be around the median, '-' indicates that the price is likely to be below the median price and is given a low price. This methodology is intended to give a better indication of the UK position when compared with those countries where up-to-date data is not available.

Annex B – Calorific values and conversion factors

B1: Estimated average gross calorific values of fuels 2011

	GJ per tonr	ne	GJ per tonne
Coal:	•	Renewable sources:	·
All consumers (weighted average) ⁽¹⁾	26.9	Domestic wood (2)	13.9
Power stations (1)	25.2	Industrial wood (3)	13.7
Coke ovens ⁽¹⁾	32.0	Straw	15.8
Low temperature carbonisation	28.4	Poultry litter	9.1
plants and manufactured fuel		Meat and bone	20.0
plants		General industrial waste	16.0
Collieries	29.0	Hospital waste	14.0
Agriculture	29.5	Municipal solid waste (4)	9.5
Iron and steel	31.4	Refuse derived waste (4)	18.5
Other industries	26.8	Short rotation coppice (5)	11.1
(weighted average)		Tyres	32.0
Non-ferrous metals	25.1	Wood pellets	17.2
Food, beverages and tobacco	29.5	Biodiesel	38.7
Chemicals	26.7	Bioethanol	29.7
Textiles, clothing, leather etc.	29.5	Petroleum:	
Pulp, paper, printing etc.	24.2	Crude oil (weighted average)	45.7
Mineral products	27.6	Petroleum products	46.2
Engineering (mechanical and	29.5	(weighted average)	
electrical engineering and		Ethane	50.7
vehicles)		Butane and propane (LPG)	49.3
Other industries	32.6	Light distillate feedstock for gasworks	47.7
		Aviation spirit and wide cut	47.4
		gasoline	
Domestic		Aviation turbine fuel	46.2
House coal	30.2	Motor spirit	47.1
Anthracite and dry steam coal	34.6	Burning oil	46.4
Other consumers	26.4	Gas/diesel oil	45.4
Imported coal (weighted average)	27.5	DERV	45.7
Exports (weighted average)	32.3	Fuel oil	43.3
Coke (including low temperature	29.8	Power station oil	43.3
carbonisation cokes)		Non-fuel products (notional value)	43.1
Coke breeze	29.8	,	
Other manufactured solid fuel	32.6		MJ per m ³
		Natural gas produced ⁽⁶⁾	39.8
		Natural gas consumed ⁽⁷⁾	39.5
		Coke oven gas	18.0
		Blast furnace gas	3.0
		Landfill gas ⁽⁸⁾	21 – 25
		Sewage gas ⁽⁸⁾	21 – 25

- (1) Applicable to UK consumption based on calorific value for home produced coal plus imports and, for "All consumers" net of exports.
- (2) On an 'as received' basis; seasoned logs at 25% moisture content. On a 'dry' basis 18.6 GJ per tonne.
- (3) Average figure covering a range of possible feedstock; at 25% moisture content. On a 'dry' basis 18.6 GJ per tonne.
- (4) Average figure based on survey returns.
- (5) On an "as received" basis; at 40% moisture content. On a "dry" basis 18.6 GJ per tonne.
- (6) The gross calorific value of natural gas can also be expressed as 11.066 kWh per cubic metre. This value represents the average calorific value seen for gas when extracted. At this point it contains not just methane, but also some other hydrocarbon gases (ethane, butane, propane). These gases are removed before the gas enters the National Transmission System for sale to final consumers. As such, this calorific value will differ from that readers will see quoted on their gas bills.
- (7) UK produced and imported gas. This weighted average of calorific values will approximate the average for the year that readers will see guoted on their gas bills. It can also be expressed as 10.978 kWh per cubic metre.
- (8) Calorific value varies depending on the methane content of the gas.

Note: The above estimated average gross calorific values apply only to the year 2011. For calorific values of fuels in earlier years see Table B2. The calorific values for coal other than imported coal are based on estimates provided by the main coal producers. The calorific values for petroleum products have been calculated using the method described in Chapter 1, paragraph 1.31 of the Digest of UK Energy Statistics (DUKES). The calorific values for coke oven gas and blast furnace gas are currently being reviewed jointly by DECC and the Iron and Steel Statistics Bureau (ISSB).

B2: Estimated average gross calorific values of fuels 1980, 1990, 2000 and 2008 to 2011 GJ per tonne (gross)

and 200	5 to 2011				(3J per	tonne (gross)

⁽¹⁾ Weighted averages.

⁽²⁾ Home produced coal only.

⁽³⁾ From 2001 onwards almost entirely sourced from imports.

⁽⁴⁾ Based on information provided by the British Cement Industry Association; almost all coal used by this sector in the latest 4 years was imported.

⁽⁵⁾ Mechanical engineering and metal products, electrical and instrument engineering and vehicle manufacture.

⁽⁶⁾ Includes construction.

⁽⁷⁾ Since 1995 the source of these figures has been the ISSB.

⁽⁸⁾ Natural gas figures are shown in MJ per cubic metre.

⁽⁹⁾ DERV included within gas/diesel oil until 2005

B3: Standard conversion factors

1 tonne of oil equivalent (toe) = 10⁷ kilocalories = 396.83 therms = 41.868 GJ = 11.630 kWh

1 therm = 100,000 British thermal units (Btu)

The following prefixes are used for multiples of joules, watts and watt hours:

kilo (k) = 1,000 or 10^3 mega (M) = 1,000,000 or 10^6 giga (G) = 1,000,000,000 or 10^9 tera (T) = 1,000,000,000,000 or 10^{12} peta (P) = 1,000,000,000,000 or 10^{15}

WEIGHT VOLUME

1 kilogramme (kg) = 2.2046 pounds (lb) 1 cubic metre (cu m) = 35.31 cu ft

1 pound (lb) = 0.4536 kg 1 cubic foot (cu ft) = 0.02832 cu m

1 litre = 0.22 Imperial gallons

1 tonne (t) = 1,000 kg

= 0.9842 long ton 1 UK gallon = 8 UK pints

= 1.102 short ton = 1.201 U.S. gallons = 4.54609 litres

1 Statute or long ton = 2,240 lb

= 1.016 t = 1.120 sh tn

1 barrel = 159.0 litres

= 34.97 UK gal = 42 US gal

LENGTH

1 mile = 1.6093 kilometres 1 kilometre (km) = 0.62137 miles

TEMPERATURE

1 scale degree Celsius (C) = 1.8 scale degrees Fahrenheit (F)

For conversion of temperatures: $^{\circ}C = 5/9$ ($^{\circ}F - 32$); $^{\circ}F = 9/5$ $^{\circ}C + 32$

B4: Average conversion factors for petroleum

23 March	2011	37.700	24.700	10.700	11.140	

 ⁽³⁾ From 14 March 1989 until 20 March 1990, the rate of duty for 2-star and 3-star leaded motor spirit was 21.220 pence per litre.
 (4) With the separate duty rate abolished, duty on these fuels is now charged at the rate appropriate to unleaded petrol or ultra low

sulphur petrol, dependent upon the sulphur and aromatic content of the fuel.

⁽⁵⁾ Duty now charged at the rate appropriate to ultra low sulphur petrol.
(6) For industrial and commercial consumers these fuels became liable to the standard rate of VAT on 1 July 1990 (see note 2), recoverable by the majority of such consumers. These fuels attracted VAT for domestic consumers from 1 April 1994 at an initial rate of 8%. This was reduced to 5% from 1 September 1997.

AVTUR (aviation turbine fuel) attracted the gas oil rate until 18 March 1986 after which it was zero-rated.

 ⁽⁸⁾ From 29 November 1994 this duty is priced in pence per kilogram as the relative calorific values of the different types of road fuel gases are very similar when related to mass (kilogram).
 (9) Duty now charged at the rate appropriate to ultra low sulphur diesel

Explanatory notes

Notes to tables

- Figures for the latest periods and the corresponding averages (or totals) are provisional and are liable to subsequent revision.
- The figures have not been adjusted for temperature or seasonal factors except where noted.
- Due to rounding the sum of the constituent items may not equal the totals.
- Percentage changes relate to the corresponding period a year ago. They are calculated from unrounded figures but are shown only as (+) or (-) when the percentage change is very large.
- All figures relate to the United Kingdom unless otherwise indicated.

Abbreviations

GDP Gross domestic product

UKCS United Kingdom Continental Shelf

VAT Value added tax

Symbols used in the tables

- .. not available.
- nil or less than half the final digit shown.
- p provisional.
- r revised; where a column or row shows 'r' at the beginning, most, but not necessarily all, of the data have been revised.
- e estimated; totals of which the figures form a constituent part are therefore partly estimated.

Conversion factors

All conversion of 1 tonne of UK crude oil = 7.55 barrels fuels from original 1 tonne = 1,000 kilograms units to units of 1 gallon (UK) =4.54609 litres energy is carried out on the basis of the 1 kilowatt (kW) =1,000 watts gross calorific value 1 megawatt (MW) = 1,000 kilowatts of the fuel. 1 gigawatt (GW) = 1,000 megawatts 1 terawatt (TW) = 1,000 gigawatts

Conversion matrices

To convert from the units on the left hand side to the units across the top multiply by the values in the table.

Climate Change Levy

The Climate Change Levy came into effect on 1 April 2001. This levy is designed to encourage businesses to reduce their energy consumption so as to reduce global warming. For information about the Climate Change Levy please contact the HM Revenue & Customs National Advice Service on 0845 010 9000.

QUARTERLY ENERGY PRICES

Energy is a major natural resource and a key factor in the economy and environment of the United Kingdom. Data on energy supply and demand, energy prices and values and trade in energy are essential components of this country's main economic and environmental indicators.

"QUARTERLY ENERGY PRICES", which began in mid 2001, is a quarterly publication produced by the Department of Energy and Climate Change. This replaces the energy prices information formerly available in the monthly publication "ENERGY TRENDS" and the annual "DIGEST OF UK ENERGY STATISTICS". It contains tables, charts and commentary covering energy prices to domestic and industrial consumers for all the major fuels, as well as presenting comparisons of fuel prices in the European Union and G7 countries. Information on production and consumption of energy continues to be available in the new quarterly editions of "Energy Trends", and the annual "Digest of UK Energy Statistics".

Quarterly Energy Prices and Energy Trends
