

Vehicle Licensing Statistics, Great Britain: Quarter 3 2012

This publication presents information on motor vehicles in Great Britain that were licensed on 30 September 2012 (the end of quarter 3), or were registered for the first time during quarter 3 (July to September 2012).

The statistics are derived from data held by the Driver and Vehicle Licensing Agency (DVLA), which administers vehicle registration and licensing records in Great Britain.

Key findings	1
Licensed vehicle stock	2
Vehicles registered for the first time	3
Strengths & weaknesses of the data	5
Background notes	6

The key findings from the Vehicle Licensing Statistics: Quarter 3 2012 include:

- There were 34.7 million vehicles licensed for use on the roads in Great Britain on 30 September 2012. Of these vehicles, 28.8 million were cars. The all vehicle figure represents a 0.7 per cent increase on the quarter 3 2011 figure.
- The prevailing economic situation has a noticeable influence on trends in the number of licensed vehicles, especially commercial vehicles. The numbers of licensed Heavy Goods Vehicles and Buses & Coaches have been on a generally downward trend since the economic downturn began in 2008/09, and the rate of increase in other types of vehicles has slowed. But the previously increasing trends for all vehicle types had already moderated somewhat several years earlier in the mid-2000s.
- A total of 681.3 thousand vehicles were registered for the first time in Great Britain during quarter 3 2012. This represents a 6.4 per cent increase in the number of first registrations from quarter 3 2011. There have now been five consecutive quarters with year-on-year increases, of which the latest is the largest. In general, however, first registration numbers have been on a downward trend since 2002.
- During quarter 3 2012, a total of 987 new ultra-low emission vehicles were registered for the first time (in the UK). Of these, 736 were cars or quadricycles, up from 343 in quarter 3 2011.
- Average CO₂ emissions from new cars fell from 133.2 g/km in quarter 2 2012 to 131.9 g/km in quarter 3 2012.

1. Licensed vehicle stock

- There were 34.7 million vehicles licensed for use on the roads in Great Britain on 30 September 2012. Of these vehicles, 28.8 million were cars.
- The total number of vehicles in quarter 3 2012 was 0.4 per cent higher than at the end of quarter 2 2012 and 0.7 per cent higher than at the end of quarter 3 2011. There is seasonality in quarterly licensed vehicle figures, with more vehicles being licensed and used during the summer months than in the winter months. This quarter continues the year-on-year increases that have happened every quarter since quarterly data were introduced in 1994.
- The number of licensed cars was 0.7 per cent higher at the end of quarter 3 2012 than it was at the end of the same quarter in 2011. As with total vehicles, the number of licensed cars has risen year-on-year since the start of the series in 1994. Similarly, aside from during 2009, the number of licensed light vans has increased every year; with the number at the end of quarter 3 2012 up 0.9 per cent on a year previously.
- Although the numbers of cars and light vans continue to increase, the current growth rates are historically quite low. These vehicle types account for nearly 93 per cent of all licensed vehicles, therefore the trend in the total number of licensed vehicles is similar. Since mid-2008, the year-on-year increase in the number of licensed cars has averaged 0.4 per cent per quarter. Between 1994 and mid-2008 the year-on-year increase averaged 2.2 per cent.

Licensed vehicles: Great Britain, 1994 to 2012 Q3

(Vehicles web table veh0101)

Number of licensed vehicles, Great Britain, quarterly

- The numbers of licensed heavy goods vehicles (HGVs) and buses / coaches decreased by 1.1 per cent and 0.9 per cent respectively over the year to end quarter 3 2012.
- The prevailing economic situation has a noticeable influence on trends in the number of licensed vehicles, especially commercial vehicles. The numbers of licensed Heavy Goods Vehicles and Buses & Coaches have been on a generally downward trend since the economic downturn began in 2008/09, and the rate of increase in other types of vehicles has slowed. However, it should be noted that the previously increasing trends had already started to moderate to some extent for all vehicle types several years earlier, around the mid-2000s.

Licensed vehicles by body type (indexed): Great Britain, 1994 to 2012 Q3

Index of licensed vehicles by body type, GB, quarterly

2. Vehicles registered for the first time

- A total of 681.3 thousand vehicles were registered for the first time in Great Britain during quarter 3 2012. This represents a 6.4 per cent increase in the number of first registrations from quarter 3 2011. The last five quarters have now shown year-on-year increases in the number of first registrations. Before this, apart from the period from mid 2009 to mid 2010, which was affected by the Vehicle Scrappage Scheme⁶, the last quarter showing year-on-year growth was quarter 1 2008.
- During quarter 3 2012 555 thousand cars were registered for the first time. This was a 7.5 per cent increase on the same period in 2011 and, aside from the mid 2009 to mid 2010 period affected by the Vehicle Scrappage Scheme, the largest time a year-on-year increase since this

series began in 2002.

- The number of vehicles registered for the first time is usually higher in quarters 1 and 3 than it is in quarters 2 and 4. This is influenced by the release of new number plates in March and September.

Vehicles registered for the first time in Great Britain: Jan 2002 to Oct 2012 (12 month rolling average, indexed to January 2002)

(Vehicles web table veh0150)

- Aside from the effects of the two recent recessions, first registrations have generally been on a downward trend since the mid 2000s. The first registration figures for both cars and total vehicles are over 20 per cent lower for quarter 3 2012 than they were for quarter 3 2001.
- The decrease in numbers of motorcycles being registered for the first time is even more marked. Fifty three thousand motorcycles were registered for the first time in quarter 3 2001. By quarter 3 2012, this had fallen by 46 per cent to 28.8 thousand.
- The average CO₂ emissions from new cars continues to fall. The average emissions of cars registered in quarter 3 2012 was 131.9 g/km, down from 133.2 g/km for cars registered in quarter 2 2012 and 136.6 g/km for cars registered in quarter 3 2011. Since the first quarter of 2003, the average emissions from new cars have fallen by 41 g/km, a decrease of around 24 per cent. Much of this fall has been driven by tighter environmental regulations, emissions targets imposed on manufacturers, and demands by consumers for cars with higher fuel efficiencies / lower vehicle excise duty rates.

-
- During quarter 3 2012, a total of 987 new ultra-low emission vehicles⁷ was registered for the first time. These figures are for the UK as a whole. This was an increase of 91 per cent from 516 in the same quarter of the previous year. The number of ultra-low emission cars and quadricycles among these increased from 343 to 736 over the same period. The Plug-In Car Grant, which started in January 2011, is likely to have made a major contribution to this increase⁸. Of the first registrations in quarter 3 2012, 626 were Grant-eligible cars. An increase in supply of electric cars to the UK market will have also played a part.
 - The most popular car registered for the first time during the first 9 months of quarter 3 2012 was the Ford Fiesta, with 86 thousand new registrations. The Vauxhall Corsa was the second most popular with 71 thousand registrations, followed by the Ford Focus (63 thousand), Volkswagen Golf (51 thousand) and Vauxhall Astra (46 thousand).
 - The Peugeot 208 and the Volkswagen Up have been the most popular new car models that have appeared on the market so far during 2012, with both achieving 10,000 new registrations from January to September.

3. Strengths and weaknesses of the data

The DVLA database can be regarded as being completely accurate in terms of the number of licensed vehicles and vehicles with a SORN (Statutory Off-Road Notification). However, there will be some errors in some of the specific details of individual vehicles, mostly less important details. DfT estimates that under 2 per cent of the vehicles records have an inaccuracy in one of the variables used for the statistics published.

Other factors to consider in interpreting these statistics include: changes in legislation, revisions to the series, seasonal variation which affects some vehicle types, vehicle excise duty evasion and other types of failure to inform DVLA of relevant facts about the status of a vehicle, and the fact that Northern Ireland and foreign registered vehicles may also use British roads without being registered with DVLA. Most of these factors will only have a marginal effect for most uses of the data.

For further information see the Notes and Definitions available via the Vehicle Licensing Statistics web page.

4. Background notes

1. The Vehicle Licensing Statistics web page at <https://www.gov.uk/government/organisations/department-for-transport/series/vehicle-licensing-statistics> provides further detail of the key findings presented in this statistical release and statistics on other vehicle topics.
2. The following tables have been updated as part of this release:

veh0101	licensed stock by body type
veh0120	number of licensed vehicles by make and model
veh0121	number of SORN vehicles by make and model
veh0122	number of licensed vehicles by postcode district
veh0123	number of SORN vehicles by postcode district
veh0128	number of licensed vehicles by generic model name
veh0129	number of SORN vehicles by generic model name
veh0150	first registrations by body type
veh0160	first registrations by make and model
veh0161	first registrations by generic model name
veh0170	new ultra-low emission vehicle registrations (UK data)
veh0256	first registrations of cars by CO ₂ emission band
veh0301	number of licensed motor cycles
3. Please note that some tables have recently had the order of columns reversed. Instead of having data for the latest quarter in the left column they have been moved to the right hand column. This is to help with data production.
4. National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.
5. Details of ministers and officials who receive pre-release access to these statistics up to 24 hours before release can be accessed from the [Vehicle Licensing Statistics web page](#).
6. Further information about what the Vehicle Scrappage Scheme was is available at http://webarchive.nationalarchives.gov.uk/+/www.direct.gov.uk/en/motoring/buyingandsellingavehicle/adviceonbuyingandsellingavehicle/dg_177693. The scheme ran between May 2009 and April 2010.
7. The Department for Transport uses the term 'ultra-low emission vehicles' to refer to vehicles with significantly lower levels of tailpipe emissions than conventional vehicles. All vehicles with fully electric powertrains and cars with tailpipe emissions below 75 g/km of CO₂ are included.
8. Further information on the Plug-In Car Grant is available at http://www.direct.gov.uk/en/Environmentandgreenerliving/Greenertravel/Greenercarsanddriving/DG_191976.
