Dear Sir,

Government's threat to DLA Benefits

I now receive the low rate of two DLA Benefits:

- 1.- Care Component awarded for life due to orthopaedic, STROKES and other medical conditions.
- 2.- Mobility Component again for life due sight impairment.

Prior to the awarding of each benefits I had to endure severe hardships which badly affected my standard of life at the time. It seemed as if the extra money from the benefits came at a time when various assessments were advising me to improve insulation, lighting and to join support groups - some of these are now in danger of closing because of Government cuts.

If I now have a reasonable life style it has been because I have used the benefit income for the purposes intended.. The vast majority of people like me are not bankers or millionaires and it seems very unfair that after recent reduction in calculating pension increases that we should be expected to lower our standards in favour of all those much better off.

It seems as if the Government is hell bent on making life harder for the less fortunate as loss of benefit could mean loss of the BLUE BADGE for parking coming on top of possible cuts in public transport and even the demise of the free bus pass. In short my present life style could deteriorate to a level that I would care help from is now an almost non-existent care system. In short maybe this is what the present Government want - kill off the disabled and elderly.

Yours faithfully
