Provisional: these data should be interpreted with caution

1. These data are based on 96.0 % of Trusts responding to the January 2013 survey and have not been extrapolated to cover all PCTs.
2. The national figures are provisional and may vary following further data validation checks.
3. The national uptake figures have increased by 4.9 % (59.4%) compared to 54.5 % in January 2013.
4. The denominator is determined as the number of pregnant women with an estimated date of delivery in the survey month.
5. The numerator is determined or defined as the number of pregnant women with an estimated date of delivery in the survey month that received a dose of Repevax® past the 28th week of their pregnancy
6. The data was provided from GP Practices to Primary Care Trusts (PCTs) and include uptake from 1 January 2013 to 31 January 2013 inclusive.
7. This is the fourth data collection for the new programme; there remains wide variation in the reported number of pregnant women between PCTs that suggests variation in collection of relevant data.
8. There are anomalies in the data so the uptake estimate needs to be interpreted with caution.
9. For those PCTs that did not return data for the January 2013 survey the rows contain no figures. For PCTs who informed us of problems with their data collection the row contains a (-) symbol.
